Reference	<b>configure</b> <a href="#">qos</a> <a href="#">slope-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**connector**

Synopsis	Enter the <b>connector</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">connector</a>
Tree	<a href="#">connector</a>
Description	Commands in this context configure connector ports and modes.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **breakout** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port breakout of the transceiver used in the connector
Context	<b>configure</b> <b>port</b> <i>string</i> <b>connector</b> <b>breakout</b> <i>keyword</i>
Tree	<b>breakout</b>
Description	<p>This command defines the port breakout of the transceiver used in the connector. Specifying the type triggers the creation of the ports that will be accessible under the connector.</p> <p>When a QSFP28 connector uses an SFP+ optical module with the QSFP28-to-SFP+/SFP28 adapter, set this command to c1-10g. This value indicates the presence of the adapter.</p> <p>For some connectors (for example, QSFPDD), there can be overlap in the breakout for different host interfaces. The same port breakout can be supported on an optical modules that uses a host interface of CAUI-4 as another optical module that uses 100GAUI-2. To distinguish from the CAUI-4 host interface, the '-aui2' suffix is used on some breakout options. This is only necessary where there is overlap. In other situations, the SR OS will set the host interface correctly without requiring the distinction in the breakout option.</p>
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g, c4-100g, c1-10g, c1-25g, c1-50g, c8-50g, c1-800g, c3-100g, c8-100g, c2-400g, c1-1g, c2-1g, c1-100g-aui2, c2-100g-aui2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rs-fec-mode** *keyword*

Synopsis	RS-FEC mode for the Ethernet connector
Context	<b>configure</b> <b>port</b> <i>string</i> <b>connector</b> <b>rs-fec-mode</b> <i>keyword</i>
Tree	<b>rs-fec-mode</b>
Description	<p>This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet connector.</p> <p>See "Forward Error Correction" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide</i> for more information about FEC settings.</p>

---

Options	cl91-514-528, cl91-514-544
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ddm-events** *boolean*

Synopsis	Enable Digital Diagnostic Monitoring (DDM) events
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <b>ddm-events</b> <i>boolean</i>
Tree	<a href="#">ddm-events</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **dist-cpu-protection**

Synopsis	Enter the <b>dist-cpu-protection</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <b>dist-cpu-protection</b>
Tree	<a href="#">dist-cpu-protection</a>
Introduced	21.5.R1
Platforms	All

### **policy** *reference*

Synopsis	Distributed CPU protection policy name
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <b>dist-cpu-protection</b> <i>policy reference</i>
Tree	<a href="#">policy</a>

Reference	<b>configure system security dist-cpu-protection policy</b> <i>string</i>
Introduced	21.5.R1
Platforms	All

## dwdm

Synopsis	Enter the <b>dwdm</b> context
Context	<b>configure port</b> <i>string dwdm</i>
Tree	<a href="#">dwdm</a>
Description	Commands in this context configure the Dense Wavelength Division Multiplexing (DWDM) parameters for the port.
Introduced	16.0.R1
Platforms	All

## coherent

Synopsis	Enter the <b>coherent</b> context
Context	<b>configure port</b> <i>string dwdm coherent</i>
Tree	<a href="#">coherent</a>
Description	Commands in this context configure the coherent optical module.
Introduced	16.0.R1
Platforms	All

## compatibility *keyword*

Synopsis	Optical mode and rate of operation
Context	<b>configure port</b> <i>string dwdm coherent compatibility keyword</i>
Tree	<a href="#">compatibility</a>
Options	long-haul, metro, access, interop, interop2, interop3, long-haul-non-differential, oif-400g-zr, open-zrp-ofec1, open-zrp-ofec2
Default	long-haul
Introduced	16.0.R1
Platforms	All

**cpr-window-size** *number*

Synopsis	Window size for the carrier phase recovery
Context	<b>configure</b> port <i>string</i> <i>dwdm coherent cpr-window-size number</i>
Tree	<a href="#">cpr-window-size</a>
Description	This command configures the window size for the carrier phase recovery. When this command is changed, the link bounces because the receiver needs to be reconfigured.
Range	2   4   8   16   32   64
Units	symbols
Default	32
Introduced	16.0.R1
Platforms	All

**dispersion** *number*

Synopsis	Residual chromatic dispersion compensation
Context	<b>configure</b> port <i>string</i> <i>dwdm coherent dispersion number</i>
Tree	<a href="#">dispersion</a>
Description	This command specifies the residual chromatic dispersion compensation when the coherent receiver is operating in manual dispersion control mode.
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	16.0.R1
Platforms	All

**mode** *keyword*

Synopsis	Mode used to compensate for chromatic dispersion
Context	<b>configure</b> port <i>string</i> <i>dwdm coherent mode keyword</i>
Tree	<a href="#">mode</a>
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

## report-alarm

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>report-alarm</b>
Tree	<a href="#">report-alarm</a>
Description	Commands in this context configure the alarms reported for the coherent module.
Introduced	16.0.R1
Platforms	All

## hosttx *boolean*

Synopsis	Report the host (electrical side) transmit alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>report-alarm</b> <b>hosttx</b> <i>boolean</i>
Tree	<a href="#">hosttx</a>
Default	true
Introduced	16.0.R1
Platforms	All

## mod *boolean*

Synopsis	Report the module alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>report-alarm</b> <b>mod</b> <i>boolean</i>
Tree	<a href="#">mod</a>
Default	true
Introduced	16.0.R1
Platforms	All

## modflt *boolean*

Synopsis	Report the module fault alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>report-alarm</b> <b>modflt</b> <i>boolean</i>
Tree	<a href="#">modflt</a>
Default	true
Introduced	16.0.R1
Platforms	All

**netrx boolean**

Synopsis	Report the network (optical side) receive alarm
Context	<b>configure</b> port string <i>dwdm coherent report-alarm netrx boolean</i>
Tree	<a href="#">netrx</a>
Default	true
Introduced	16.0.R1
Platforms	All

**nettx boolean**

Synopsis	Report the network (optical side) transmit alarm
Context	<b>configure</b> port string <i>dwdm coherent report-alarm nettx boolean</i>
Tree	<a href="#">nettx</a>
Default	true
Introduced	16.0.R1
Platforms	All

**rx-los-reaction keyword**

Synopsis	Reaction to an RX LOS
Context	<b>configure</b> port string <i>dwdm coherent rx-los-reaction keyword</i>
Tree	<a href="#">rx-los-reaction</a>
Description	This command configures the reaction to an RX LOS.  <b>Note:</b> If this command is disabled for some coherent DWDM transceivers, the transceiver only reports local fault alarms when an RX LOS condition occurs; however, the port returns to service faster after the LOS condition is cleared. For these transceivers, if this command is enabled, there is better visibility of individual alarms (for example, signal-fail, local fault, no-am-lock), but the port takes longer to service after the LOS condition is cleared.
Options	none, squelch
Default	squelch
Introduced	16.0.R1
Platforms	All

**rx-los-thresh** *decimal-number*

Synopsis	Average input power LOS threshold
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>rx-los-thresh</b> <i>decimal-number</i>
Tree	<a href="#">rx-los-thresh</a>
Range	-30 to -13
Units	decibel-milliwatts
Default	-23
Introduced	16.0.R1
Platforms	All

**sweep**

Synopsis	Enter the <b>sweep</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent</a> <b>sweep</b>
Tree	<a href="#">sweep</a>
Description	Commands in this context allow users to configure the dispersion sweep <b>start</b> and <b>end</b> values for the automatic mode of coherent control. If the user knows the approximate or theoretical residual dispersion of the link, these commands can be used to limit the range of sweeping for the automatic control mode and therefore achieve a faster link up.
Introduced	16.0.R1
Platforms	All

**end** *number*

Synopsis	Upper bound of the dispersion compensation range
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">dwdm coherent sweep</a> <b>end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	2000
Introduced	16.0.R1
Platforms	All

**start** *number*

Synopsis	Lower bound of the dispersion compensation range
----------	--

Context	<b>configure</b> <i>port string</i> <b>dwdm coherent sweep start</b> <i>number</i>
Tree	<b>start</b>
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	-25500
Introduced	16.0.R1
Platforms	All

### **target-power** *decimal-number*

Synopsis	Average output power target for the port
Context	<b>configure</b> <i>port string</i> <b>dwdm coherent target-power</b> <i>decimal-number</i>
Tree	<b>target-power</b>
Range	-20 to 3
Units	decibel-milliwatts
Default	1
Introduced	16.0.R1
Platforms	All

### **frequency** *number*

Synopsis	Center frequency for tunable DWDM optical interface
Context	<b>configure</b> <i>port string</i> <b>dwdm frequency</b> <i>number</i>
Tree	<b>frequency</b>
Description	<p>This command configures the center frequency to use for a tunable DWDM optical interface. This command can be used to specify any frequency in the C band.</p> <p>To set the DWDM frequency, the port must be a physical port and the provisioned MDA type must have DWDM tunable optics (for example, p1-100g-tun-b), or the MDA must support the option of tunable DWDM optic modules.</p> <p>This command replaces the <b>configure port dwdm channel</b> command.</p>
Range	191100000 to 196150000
Units	megahertz
Introduced	21.10.R3
Platforms	All

**ethernet**

Synopsis	Enter the <b>ethernet</b> context
Context	<b>configure port string ethernet</b>
Tree	<a href="#">ethernet</a>
Description	Commands in this context configure Ethernet port attributes. This context can only be used when configuring Fast Ethernet, Gigabit, or 10-Gb Ethernet LAN ports on an appropriate MDA.
Introduced	16.0.R1
Platforms	All

**access**

Synopsis	Enter the <b>access</b> context
Context	<b>configure port string ethernet access</b>
Tree	<a href="#">access</a>
Description	Commands in this context configure Ethernet access port commands.
Introduced	16.0.R1
Platforms	All

**bandwidth *number***

Synopsis	Administrative bandwidth assigned to Ethernet ports
Context	<b>configure port string ethernet access bandwidth <i>number</i></b>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

**booking-factor *number***

Synopsis	Booking factor applied to the Ethernet port
Context	<b>configure port string ethernet access booking-factor <i>number</i></b>
Tree	<a href="#">booking-factor</a>
Range	1 to 1000

Default	100
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">port string ethernet access egress</a>
Tree	<a href="#">egress</a>
Description	Commands in this context configure Ethernet access egress port commands.
Introduced	16.0.R1
Platforms	All

## queue-group [[queue-group-name](#)] *reference instance-id number*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure</b> <a href="#">port string ethernet access egress queue-group reference instance-id number</a>
Tree	<a href="#">queue-group</a>
Introduced	16.0.R1
Platforms	All

## [\[queue-group-name\]](#) *reference*

Synopsis	Queue group name
Context	<b>configure</b> <a href="#">port string ethernet access egress queue-group reference instance-id number</a>
Tree	<a href="#">queue-group</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## instance-id *number*

Synopsis	Instance ID for the egress queue group
Context	<b>configure</b> <a href="#">port string ethernet access egress queue-group reference instance-id number</a>

Tree	<a href="#">queue-group</a>
Range	1 to 65535
MD-CLI	1
Default	
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy for the Ethernet port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **aggregate-rate**

Synopsis	Enter the <b>aggregate-rate</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">aggregate-rate</a>
Tree	<a href="#">aggregate-rate</a>
Introduced	16.0.R1
Platforms	All

### **limit-unused-bandwidth** *boolean*

Synopsis	Control unused bandwidth
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">aggregate-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

**queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on policers and queues
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">aggregate-rate</a> <a href="#">queue-frame-based-accounting</a> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

**rate** (*number* | *keyword*)

Synopsis	Aggregate rate for all queues
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">aggregate-rate</a> <a href="#">rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
----------	------------------

Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## host-match

Synopsis	Enter the <b>host-match</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match
Tree	host-match
Introduced	16.0.R1
Platforms	All

## int-dest-id [*destination-string*] *string*

Synopsis	Add a list entry for <b>int-dest-id</b>
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match int-dest-id <i>string</i>
Tree	int-dest-id
Introduced	16.0.R1
Platforms	All

## [*destination-string*] *string*

Synopsis	Host match destination ID
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> host-match int-dest-id <i>string</i>
Tree	int-dest-id
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**hs-turbo** *boolean*

Synopsis	Enable HS turbo queues for higher throughput
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> hs-turbo <i>boolean</i>
Tree	hs-turbo
Description	When configured to <b>true</b> , this command enables HS turbo queues that allow the corresponding HSQ queue group queues to achieve a higher throughput.  This command is not applicable to 10G ports and is ignored when it is configured under a queue group instance on a 10G port.  When configured to <b>false</b> , HS turbo queues are disabled.
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**queue-overrides**

Synopsis	Enter the <b>queue-overrides</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides
Tree	queue-overrides
Introduced	16.0.R1
Platforms	All

**queue** [*queue-id*] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i>
Tree	queue
Introduced	16.0.R1
Platforms	All

**[queue-id]** *reference*

Synopsis	Queue ID
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i>

Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">queue-overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">queue-overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">queue-overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**burst-limit** (*number* | *keyword*)

Synopsis	Override for the shaping burst size for the queue
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> burst-limit ( <i>number</i>   <i>keyword</i> )
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	CBS for the template queue
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> cbs ( <i>number</i>   <i>keyword</i> )
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail
Tree	drop-tail
Description	Commands in this context configure queue drop tail commands.
Introduced	16.0.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
----------	------------------------------

Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail low
Tree	low
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	16.0.R1
Platforms	All

### percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> drop-tail low percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### mbs (*number* | *keyword*)

Synopsis	MBS for the template queue
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> mbs ( <i>number</i>   <i>keyword</i> )
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth
Tree	monitor-queue-depth
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth fast-polling <i>boolean</i>
Tree	fast-polling
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

## violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> monitor-queue-depth violation-threshold <i>decimal-number</i>
Tree	violation-threshold
Description	This command specifies threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> parent
Tree	parent
Description	<p>Commands in this context define the weight of the queue treatment by the parent scheduler that further governs the available bandwidth given to the queue, aside from the queue PIR setting.</p> <p>When multiple schedulers or queues share a child status with the parent scheduler, the weight or level commands define how the queue contends with the other children for the parent bandwidth.</p>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR that overrides the parent for the queue group
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
----------	---------------------------------------

Context	<b>configure</b> <i>port string ethernet access egress queue-group reference instance-id number queue-overrides queue reference percent-rate</i>
Tree	<a href="#">percent-rate</a>
Description	Commands in this context specify percent rates.  These commands are ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the percent rate is performed under the <b>hs-wrr-group</b> command within the egress queue group template.
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	CIR for the queue
Context	<b>configure</b> <i>port string ethernet access egress queue-group reference instance-id number queue-overrides queue reference percent-rate cir decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR for the queue
Context	<b>configure</b> <i>port string ethernet access egress queue-group reference instance-id number queue-overrides queue reference percent-rate pir decimal-number</i>
Tree	<a href="#">pir</a>

### **rate**

Synopsis	Enter the <b>rate</b> context
----------	-------------------------------

Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	cir
Description	<p>This command specifies the administrative CIR used by the queue. When the <b>rate</b> command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent <b>cir-level</b> and <b>cir-weight</b> commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	pir
Description	<p>This command specifies the administrative PIR used by the queue. When the <b>rate</b> command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is</p>

dependent on the queue's **adaptation-rule** commands and the actual hardware where the queue is provisioned.

The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## scheduler-policy

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy
Tree	scheduler-policy
Description	Commands in this context configure a scheduler policy for the egress queue group.
Introduced	16.0.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	All

## scheduler [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> port <i>string</i> ethernet access egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy overrides scheduler <i>string</i>
Tree	scheduler

**Description** Commands in this context are used to override specific attributes of the specified scheduler name. A scheduler defines bandwidth controls that limit each child (other schedulers and queues) associated with the scheduler. Scheduler objects are created within the hierarchical tiers of the policy. It is assumed that each scheduler created has queues or other schedulers defined as child associations. The scheduler can be a child which takes bandwidth from a scheduler in a higher tier.

A total of 32 schedulers can be created within a single scheduler policy with no restriction on the distribution between the tiers. The scheduler name must exist in the applied scheduler policy.

**Introduced** 16.0.R1

**Platforms** All

### [scheduler-name] *string*

**Synopsis** Scheduler name

**Context** **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string*

**Tree** scheduler

**Description** This command specifies the scheduler name. Valid names consist of any string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**String Length** 1 to 32

**Notes** This element is part of a list key.

**Introduced** 16.0.R1

**Platforms** All

### parent

**Synopsis** Enter the **parent** context

**Context** **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string* parent

**Tree** parent

**Description** Commands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy.

The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.

Introduced 16.0.R1  
 Platforms All

### **cir-weight** *number*

Synopsis CIR that overrides the parent  
 Context **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string* parent cir-weight *number*  
 Tree [cir-weight](#)  
 Range 0 to 100

 Introduced 16.0.R1  
 Platforms All

### **rate**

Synopsis Enter the **rate** context  
 Context **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string* rate  
 Tree [rate](#)  
 Description Commands in this context override specific attributes of the specified scheduler rate. The actual operating rate of the scheduler is limited by bandwidth constraints other than its maximum rate. The scheduler's parent scheduler may not have the available bandwidth to meet the scheduler's needs. The bandwidth available to the parent scheduler could be allocated to other child schedulers or the child queues on the parent scheduler may be based on a higher priority. The children of the scheduler may not need the maximum rate available to the scheduler due to an insufficient offered load or limits to their own maximum rates.  
 Introduced 16.0.R1

Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR for the scheduler

Context **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string* rate cir (*number* | *keyword*)

Tree [cir](#)

Description This command specifies the CIR. When a parent is associated with the scheduler, this command provides the amount of bandwidth to be considered during the parent scheduler's within-cir distribution phase. When the **rate** command is executed, a valid PIR setting must be explicitly defined before specifying the CIR. If the CIR is set to **max**, the CIR rate is set to infinity.

The **sum** keyword specifies that the CIR be used as the summed CIR values of the children schedulers, policers, or queues.

Range 0 to 6400000000

Units kilobps

Options sum, max

Introduced 16.0.R1

Platforms All

### **pir** (*number* | *keyword*)

Synopsis PIR for the scheduler

Context **configure** port *string* ethernet access egress queue-group *reference* instance-id *number* scheduler-policy overrides scheduler *string* rate pir (*number* | *keyword*)

Tree [pir](#)

Description This command specifies the PIR. When the **rate** command is executed, a valid PIR setting must be explicitly defined. Any other value results in an error without modifying the current PIR rate.

Range 1 to 6400000000

Units kilobps

Options max

Introduced 16.0.R1

## monitor-hw-agg-shaper-scheduler *boolean*

Synopsis	Enable monitoring hardware aggregate shaper scheduler
Context	<b>configure</b> port <i>string</i> ethernet access egress virtual-port <i>string</i> monitor-hw-agg-shaper-scheduler <i>boolean</i>
Tree	monitor-hw-agg-shaper-scheduler

Description	When configured to <b>true</b> , enables congestion monitoring of the hardware aggregate shaper scheduler on the specified vport.
Default	false
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **monitor-port-scheduler** *boolean*

Synopsis	Enable congestion monitoring on egress port scheduler
Context	<b>configure</b> port <i>string</i> ethernet access egress virtual-port <i>string</i> monitor-port-scheduler <i>boolean</i>
Tree	<a href="#">monitor-port-scheduler</a>
Description	The command enables congestion monitoring on an EPS that is applied to a Vport. Congestion monitoring must be further configured under the port-scheduler CLI hierarchy. Once the congestion monitoring is in effect, the offered rate (incoming traffic) is compared to the configured port-scheduler congestion threshold. The results of these measurements are stored as the number of samples representing the number of times the offered rates exceeded the configured congestion threshold since the last clearing of the stats. Therefore, the results represent the number of times that the port-scheduler that is applied to a Vport was congested since the last reset of the stats using a <b>clear</b> command.
Default	false
Introduced	16.0.R4
Platforms	All

### **multicast-hqos-adjustment** *boolean*

Synopsis	Apply HQoS Adjustment (egress rate modification)
Context	<b>configure</b> port <i>string</i> ethernet access egress virtual-port <i>string</i> multicast-hqos-adjustment <i>boolean</i>
Tree	<a href="#">multicast-hqos-adjustment</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **port-scheduler-policy** *reference*

Synopsis	Port scheduler policy name
----------	----------------------------

Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">virtual-port</a> <i>string</i> <a href="#">port-scheduler-policy</a> <i>reference</i>

Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Description	Commands in this context configure Ethernet access ingress port commands.

Introduced	16.0.R1
Platforms	All

### **queue-group** [[queue-group-name](#)] *reference*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>reference</i>
Tree	<a href="#">queue-group</a>
Description	<p>Commands in this context create an ingress queue group on the Ethernet port. Queue groups created on access ports are used as an alternative queue destination for SAPs.</p> <p>Queue groups can be created on both access and network oriented ports. When the port is in access mode, the queue groups must be created within the port access node. Access ingress queue groups can only be used by ingress SAP forwarding classes and only a single ingress queue group per port is supported. When the queue group is created in an ingress port context, the queue group name must be an existing ingress queue group template. Two ingress queue groups with the same name cannot be created on the same port.</p> <p>When creating a queue group, the system will attempt to allocate queue resources based on the queues defined in the queue group template. If the appropriate queue resources do not currently exist, the queue group will not be created. Ingress port queue groups do not support shared-queuing or multipoint shared queuing behavior.</p> <p>A port queue group cannot be removed from the port when a forwarding class is currently redirected to the group. All forwarding class redirections must first be removed prior to removing the queue group.</p>
Introduced	16.0.R1
Platforms	All

### **[queue-group-name]** *reference*

Synopsis	Queue group name
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>reference</i>
Tree	<a href="#">queue-group</a>
Description	This command specifies the queue group name. The specified queue group name must exist as an ingress or egress queue group template depending on the ingress or egress context of the port queue group. Only a single queue group may be created on an ingress port.
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Notes	This element is part of a list key.

**monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

**fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">ingress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>

Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR for the queue
Context	<b>configure</b> <a href="#">port string</a> <a href="#">ethernet access ingress queue-group</a> <a href="#">reference queue-overrides queue</a> <a href="#">reference rate cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Description	<p>This command specifies the administrative CIR used by the queue. When the <b>rate</b> command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent <b>cir-level</b> and <b>cir-weight</b> commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR for the queue
Context	<b>configure</b> <a href="#">port string</a> <a href="#">ethernet access ingress queue-group</a> <a href="#">reference queue-overrides queue</a> <a href="#">reference rate pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Description	<p>This command specifies the administrative PIR used by the queue. When the <b>rate</b> command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's <b>adaptation-rule</b> commands and the actual hardware where the queue is provisioned.</p> <p>The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that</p>

the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy
Tree	<a href="#">scheduler-policy</a>
Description	Commands in this context configure a scheduler policy for the ingress queue group.
Introduced	16.0.R1
Platforms	All

## **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Description	Commands in this context specify the set of attributes specifying values specific to the given queue-group instance.
Introduced	16.0.R1
Platforms	All

## **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy <a href="#">overrides</a> scheduler <i>string</i>
Tree	<a href="#">scheduler</a>
Description	Commands in this context are used to override specific attributes of the specified scheduler name. A scheduler defines bandwidth controls that limit each child (other schedulers and queues) associated with the scheduler. Scheduler objects are created

within the hierarchical tiers of the policy. It is assumed that each scheduler created has queues or other schedulers defined as child associations. The scheduler can be a child which takes bandwidth from a scheduler in a higher tier.

A total of 32 schedulers can be created within a single scheduler policy with no restriction on the distribution between the tiers. The scheduler name must exist in the applied scheduler policy.

Introduced	16.0.R1
Platforms	All

### [scheduler-name] *string*

Synopsis	Scheduler name
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i>
Tree	<a href="#">scheduler</a>
Description	This command specifies the scheduler name. Valid names consist of any string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> parent
Tree	<a href="#">parent</a>
Description	<p>Commands in this context are used to override the scheduler's parent weight and CIR weight. The weights apply to the associated level or CIR level configured in the applied scheduler policy.</p> <p>The override weights are ignored if the scheduler does not have a parent command configured in the scheduler policy. This allows the parent of the scheduler to be removed from the scheduler policy without having to remove all of the queue group overrides. If the parent scheduler does not exist, causing the configured scheduler to be fostered on an egress port scheduler, then the override weights are ignored.</p>
Introduced	16.0.R1
Platforms	All

**cir-weight** *number*

Synopsis	CIR that overrides the parent
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> parent cir-weight <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	PIR that overrides the parent
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> rate
Tree	<a href="#">rate</a>
Description	Commands in this context override specific attributes of the specified scheduler rate. The actual operating rate of the scheduler is limited by bandwidth constraints other than its maximum rate. The scheduler's parent scheduler may not have the available bandwidth to meet the scheduler's needs. The bandwidth available to the parent scheduler could be allocated to other child schedulers or the child queues on the parent scheduler may be based on a higher priority. The children of the scheduler may not need the maximum rate available to the scheduler due to an insufficient offered load or limits to their own maximum rates.
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR for the scheduler
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Description	<p>This command specifies the CIR. When a parent is associated with the scheduler, this command provides the amount of bandwidth to be considered during the parent scheduler's within-cir distribution phase. When the <b>rate</b> command is executed, a valid PIR setting must be explicitly defined before specifying the CIR. If the CIR is set to <b>max</b>, the CIR rate is set to infinity.</p> <p>The <b>sum</b> keyword specifies that the CIR be used as the summed CIR values of the children schedulers, policers, or queues.</p>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR for the scheduler
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy overrides scheduler <i>string</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Description	<p>This command specifies the PIR. When the <b>rate</b> command is executed, a valid PIR setting must be explicitly defined. Any other value results in an error without modifying the current PIR rate.</p>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> port <i>string</i> ethernet access ingress queue-group <i>reference</i> scheduler-policy <i>policy-name</i> <i>reference</i>

Tree	<a href="#">policy-name</a>
Reference	<b>configure qos scheduler-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy for the Ethernet port
Context	<b>configure port</b> <i>string</i> <a href="#">ethernet accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure log accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **autonegotiate** *keyword*

Synopsis	Speed and duplex autonegotiation on the Ethernet port
Context	<b>configure port</b> <i>string</i> <a href="#">ethernet autonegotiate</a> <i>keyword</i>
Tree	<a href="#">autonegotiate</a>
Description	<p>This command enables speed and duplex autonegotiation on Fast Ethernet ports and enables far-end fault indicator support on Gb ports. When autonegotiation is enabled on a port, the link attempts to automatically negotiate the link <b>speed</b> and <b>duplex</b> commands. If autonegotiation is enabled, the configured <b>duplex</b> and <b>speed</b> commands are ignored.</p> <p>When autonegotiation is disabled on a port, the port does not attempt to autonegotiate and will only operate at the <b>speed</b> and <b>duplex</b> command settings configured for the port. Note that disabling autonegotiation on Gb ports is not allowed as the IEEE 802.3 specification for Gb Ethernet requires autonegotiation be enabled for far end fault indication.</p> <p>It is required for autonegotiation to be limited for ports in a LAG to guarantee a specific port speed.</p>
Options	true, false, limited
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
----------	---

Context	<b>configure</b> port <i>string</i> ethernet collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	16.0.R1
Platforms	All

### crc-monitor

Synopsis	Enter the <b>crc-monitor</b> context
Context	<b>configure</b> port <i>string</i> ethernet crc-monitor
Tree	crc-monitor
Description	Commands in this context configure Ethernet Cyclic Redundancy Check (CRC) monitoring.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### signal-degrade

Synopsis	Enter the <b>signal-degrade</b> context
Context	<b>configure</b> port <i>string</i> ethernet crc-monitor signal-degrade
Tree	signal-degrade
Description	Commands in this context specify the error rate at which to declare the Signal Degrade (SD) condition on an Ethernet interface. The value represents $M \cdot 10E^{-N}$ , which is the ratio of errored frames over the total frames received over $W$ seconds of the sliding window. The CRC errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### multiplier *number*

Synopsis	SD multiplier
Context	<b>configure</b> port <i>string</i> ethernet crc-monitor signal-degrade multiplier <i>number</i>
Tree	multiplier
Range	1 to 9
Default	1
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **threshold** *number*

Synopsis SD threshold  
 Context **configure** [port](#) [string](#) [ethernet](#) [crc-monitor](#) [signal-degrade](#) [threshold](#) *number*  
 Tree [threshold](#)  
 Range 1 to 9  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **signal-failure**

Synopsis Enter the **signal-failure** context  
 Context **configure** [port](#) [string](#) [ethernet](#) [crc-monitor](#) [signal-failure](#)  
 Tree [signal-failure](#)  
 Description Commands in this context specify the error rate at which to declare the Signal Fail (SF) condition on an Ethernet interface. The value represents  $M \cdot 10^E - N$  errored frames over total frames received over  $W$  seconds of the sliding window. The CRC errors on the interface are sampled once per second.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *number*

Synopsis SF multiplier  
 Context **configure** [port](#) [string](#) [ethernet](#) [crc-monitor](#) [signal-failure](#) [multiplier](#) *number*  
 Tree [multiplier](#)  
 Range 1 to 9  
 Default 1  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **threshold** *number*

Synopsis SF threshold

Context	<b>configure port string ethernet crc-monitor signal-failure threshold number</b>
Tree	<b>threshold</b>
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **window-size** *number*

Synopsis	Sliding window size over which errors are measured
Context	<b>configure port string ethernet crc-monitor window-size number</b>
Tree	<b>window-size</b>
Description	This command specifies the sliding window size over which the Ethernet frames are sampled to detect SF or SD conditions. The command is used jointly with the <b>signal-failure</b> and the <b>signal-degrade</b> commands to configure the sliding window size.
Range	5 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dampening**

Synopsis	Enter the <b>dampening</b> context
Context	<b>configure port string ethernet dampening</b>
Tree	<b>dampening</b>
Description	Commands in this context configure Exponential Port Dampening (EPD) for the Ethernet port.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of exponential port dampening
Context	<b>configure port string ethernet dampening admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	All

### **half-life** *number*

Synopsis	Half-life decay time
Context	<b>configure</b> port <i>string</i> ethernet dampening half-life <i>number</i>
Tree	half-life
Description	This command specifies the time that must pass before penalties decay to one-half the initial amount. The half-life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half-life must be less than or equal to 49 and greater than or equal to one.
Range	1 to 2000
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

### **max-suppress-time** *number*

Synopsis	Maximum suppression time
Context	<b>configure</b> port <i>string</i> ethernet dampening max-suppress-time <i>number</i>
Tree	max-suppress-time
Description	This command specifies the maximum suppression time, which is the time it can take after the physical link comes up before the worst case accumulated penalties have decayed to the reuse threshold. The maximum penalty is derived from the maximum suppression time, half life, and reuse threshold, using the following equation:  $\text{maximum penalty} = (\text{reuse threshold})^2 \text{expo}:(\text{maximum suppression time}/\text{half life})$ <p>The half life and maximum suppression time values must be set at the same time and the ratio of the maximum suppression time and half life must be less than or equal to 49 and greater than or equal to one.</p>
Range	1 to 43200
Units	seconds
Default	20
Introduced	16.0.R1
Platforms	All

**reuse-threshold** *number*

Synopsis	Threshold which port-up state is no longer suppressed
Context	<b>configure</b> port <i>string</i> ethernet dampening reuse-threshold <i>number</i>
Tree	reuse-threshold
Description	This command specifies the threshold at which the port-up state is no longer suppressed, after the port has been in a suppressed state and the accumulated penalties decay drops below this threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	1000
Introduced	16.0.R1
Platforms	All

**suppress-threshold** *number*

Synopsis	Threshold at which the port-up state is suppressed
Context	<b>configure</b> port <i>string</i> ethernet dampening suppress-threshold <i>number</i>
Tree	suppress-threshold
Description	This command specifies the threshold at which the port-up state is suppressed until the accumulated penalties drop below the reuse threshold. The reuse threshold value must be less than the suppress threshold value.
Range	1 to 20000
Units	penalties
Default	2000
Introduced	16.0.R1
Platforms	All

**discard-rx-pause-frames** *boolean*

Synopsis	Discard received pause frames
Context	<b>configure</b> port <i>string</i> ethernet discard-rx-pause-frames <i>boolean</i>
Tree	discard-rx-pause-frames
Description	When configured to <b>true</b> , the router discards received pause frames. Pause frames are used for local link flow control.

When configured to **false**, pause frames are processed upon reception and the transmit side of the receiving port pauses in its transmissions.

Default	false
Introduced	20.10.R1
Platforms	All

### **dot1q-etype** *string*

Synopsis	Ethertype expected if port encapsulation type is dot1q
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">dot1q-etype</a> <i>string</i>
Tree	<a href="#">dot1q-etype</a>
Description	This command specifies the Ethertype expected when the port encapsulation type is dot1q. Dot1q encapsulation is supported only on Ethernet interfaces.
Default	33024
Introduced	16.0.R1
Platforms	All

### **dot1x**

Synopsis	Enter the <b>dot1x</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">dot1x</a>
Tree	<a href="#">dot1x</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of dot1x packet extraction to CPM
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">dot1x</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	All

**macsec**

Synopsis	Enter the <b>macsec</b> context
Context	<b>configure</b> port <i>string</i> ethernet dot1x macsec
Tree	macsec
Description	Commands in this context configure Media Access Control Security (MACsec) under the port.
Introduced	16.0.R1
Platforms	All

**exclude-mac-policy** *reference*

Synopsis	MAC policy excluded from MACsec encryption
Context	<b>configure</b> port <i>string</i> ethernet dot1x macsec exclude-mac-policy <i>reference</i>
Tree	exclude-mac-policy
Reference	<b>configure</b> macsec mac-policy <i>number</i>
Introduced	16.0.R5
Platforms	All

**exclude-protocol**

Synopsis	Enter the <b>exclude-protocol</b> context
Context	<b>configure</b> port <i>string</i> ethernet dot1x macsec exclude-protocol
Tree	exclude-protocol
Introduced	16.0.R1
Platforms	All

**cdp** *boolean*

Synopsis	Disable MACsec for all packets on the link for CDP
Context	<b>configure</b> port <i>string</i> ethernet dot1x macsec exclude-protocol cdp <i>boolean</i>
Tree	cdp
Default	false
Introduced	16.0.R1
Platforms	All

**eapol-start** *boolean*

Synopsis	Disable MACsec for all packets on the link for EAPOL
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">dot1x</a> <a href="#">macsec</a> <a href="#">exclude-protocol</a> <b>eapol-start</b> <i>boolean</i>
Tree	<a href="#">eapol-start</a>
Default	false
Introduced	16.0.R1
Platforms	All

**efm-oam** *boolean*

Synopsis	Disable MACsec for all packets on the link for EFM-OAM
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">dot1x</a> <a href="#">macsec</a> <a href="#">exclude-protocol</a> <b>efm-oam</b> <i>boolean</i>
Tree	<a href="#">efm-oam</a>
Default	false
Introduced	16.0.R1
Platforms	All

**eth-cfm** *boolean*

Synopsis	Disable MACsec for all packets on the link for ETH-CFM
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">dot1x</a> <a href="#">macsec</a> <a href="#">exclude-protocol</a> <b>eth-cfm</b> <i>boolean</i>
Tree	<a href="#">eth-cfm</a>
Default	false
Introduced	16.0.R1
Platforms	All

**lACP** *boolean*

Synopsis	Disable MACsec for all packets on the link for LACP
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">dot1x</a> <a href="#">macsec</a> <a href="#">exclude-protocol</a> <b>lACP</b> <i>boolean</i>
Tree	<a href="#">lACP</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **lldp** *boolean*

Synopsis	Disable MACsec for all packets on the link for LLDP
Context	<b>configure</b> <i>port string ethernet dot1x macsec exclude-protocol lldp boolean</i>
Tree	<a href="#">lldp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ptp** *boolean*

Synopsis	Disable MACsec for all packets on the link for PTP
Context	<b>configure</b> <i>port string ethernet dot1x macsec exclude-protocol ptp boolean</i>
Tree	<a href="#">ptp</a>
Default	false
Introduced	19.5.R1
Platforms	All

### **ubfd** *boolean*

Synopsis	Disable MACsec for all packets on the link for uBFD
Context	<b>configure</b> <i>port string ethernet dot1x macsec exclude-protocol ubfd boolean</i>
Tree	<a href="#">ubfd</a>
Default	false
Introduced	19.5.R1
Platforms	All

### **rx-must-be-encrypted** *boolean*

Synopsis	Drop all port traffic that is not MACsec-secured
Context	<b>configure</b> <i>port string ethernet dot1x macsec rx-must-be-encrypted boolean</i>
Tree	<a href="#">rx-must-be-encrypted</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sub-port** [[sub-port-id](#)] *number*

Synopsis	Enter the <b>sub-port</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port</a> <i>number</i>
Tree	<a href="#">sub-port</a>
Introduced	16.0.R1
Platforms	All

**[sub-port-id]** *number*

Synopsis	Sub-port ID
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port</a> <i>number</i>
Tree	<a href="#">sub-port</a>
Range	1 to 1023
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MACsec on the port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**ca-name** *reference*

Synopsis	Connectivity association linked to the MACsec sub-port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port</a> <i>number</i> <a href="#">ca-name</a> <i>reference</i>
Tree	<a href="#">ca-name</a>
Reference	<b>configure</b> <a href="#">macsec connectivity-association</a> <i>string</i>
Introduced	16.0.R1

Platforms All

### **eapol-destination-address** *string*

Synopsis EAPOL destination MAC address

Context **configure** [port](#) [string](#) [ethernet dot1x macsec sub-port](#) [number](#) [eapol-destination-address](#) [string](#)

Tree [eapol-destination-address](#)

Introduced 16.0.R1

Platforms All

### **encap-match**

Synopsis Enter the **encap-match** context

Context **configure** [port](#) [string](#) [ethernet dot1x macsec sub-port](#) [number](#) [encap-match](#)

Tree [encap-match](#)

Introduced 19.5.R1

Platforms All

### **all-match** *boolean*

Synopsis Match and encrypt all traffic patterns

Context **configure** [port](#) [string](#) [ethernet dot1x macsec sub-port](#) [number](#) [encap-match](#) [all-match](#) [boolean](#)

Tree [all-match](#)

Default true

Notes The following elements are part of a choice: **all-match**, **double-tag**, **single-tag**, or **untagged**.

Introduced 19.5.R1

Platforms All

### **double-tag** *string*

Synopsis QinQ double tag traffic pattern to match

Context **configure** [port](#) [string](#) [ethernet dot1x macsec sub-port](#) [number](#) [encap-match](#) [double-tag](#) [string](#)

Tree	<a href="#">double-tag</a>
String Length	1 to 11
Notes	The following elements are part of a choice: <b>all-match</b> , <b>double-tag</b> , <b>single-tag</b> , or <b>untagged</b> .
Introduced	19.5.R1
Platforms	All

### **single-tag** *string*

Synopsis	Dot1q single tag traffic pattern to match
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port number</a> <a href="#">encap-match</a> <a href="#">single-tag</a> <i>string</i>
Tree	<a href="#">single-tag</a>

Notes	The following elements are part of a choice: <b>all-match</b> , <b>double-tag</b> , <b>single-tag</b> , or <b>untagged</b> .
Introduced	19.5.R1
Platforms	All

### **untagged** *boolean*

Synopsis	Match and encrypt untagged traffic only
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x macsec sub-port number</a> <a href="#">encap-match</a> <a href="#">untagged</a> <i>boolean</i>
Tree	<a href="#">untagged</a>
Notes	The following elements are part of a choice: <b>all-match</b> , <b>double-tag</b> , <b>single-tag</b> , or <b>untagged</b> .
Introduced	19.5.R1
Platforms	All

### **max-peers** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of peers supported on the port
----------	---

Context	<b>configure</b> <a href="#">port string ethernet dot1x macsec sub-port number max-peers number</a>
Tree	<a href="#">max-peers</a>
Range	1 to 32
Introduced	16.0.R1
Platforms	All

### **max-authentication-requests** *number*

Synopsis	Maximum number of RADIUS retries
Context	<b>configure</b> <a href="#">port string ethernet dot1x max-authentication-requests number</a>
Tree	<a href="#">max-authentication-requests</a>
Range	1 to 10
Default	2
Introduced	16.0.R1
Platforms	All

### **per-host-authentication**

Synopsis	Enter the <b>per-host-authentication</b> context
Context	<b>configure</b> <a href="#">port string ethernet dot1x per-host-authentication</a>
Tree	<a href="#">per-host-authentication</a>
Introduced	20.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of per-host authentication
Context	<b>configure</b> <a href="#">port string ethernet dot1x per-host-authentication admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	All

**allowed-source-macs**

Synopsis	Enter the <b>allowed-source-macs</b> context
Context	<b>configure</b> port <i>string</i> ethernet dot1x per-host-authentication allowed-source-macs
Tree	<a href="#">allowed-source-macs</a>
Introduced	20.7.R1
Platforms	All

**mac-address** [*mac*] *string*

Synopsis	Add a list entry for <b>mac-address</b>
Context	<b>configure</b> port <i>string</i> ethernet dot1x per-host-authentication allowed-source-macs mac-address <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	20.7.R1
Platforms	All

**[mac]** *string*

Synopsis	Source MAC address of a host selected for authentication
Context	<b>configure</b> port <i>string</i> ethernet dot1x per-host-authentication allowed-source-macs mac-address <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

**authenticator-init** *boolean*

Synopsis	Initiate per-host authentication
Context	<b>configure</b> port <i>string</i> ethernet dot1x per-host-authentication authenticator-init <i>boolean</i>
Tree	<a href="#">authenticator-init</a>
Default	true
Introduced	21.2.R1
Platforms	All

**port-control** *keyword*

Synopsis	802.1x authentication mode
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">port-control</a> <i>keyword</i>
Tree	<a href="#">port-control</a>
Options	force-unauthorized, auto, force-authorized
Default	force-authorized
Introduced	16.0.R1
Platforms	All

**quiet-period** *number*

Synopsis	Time between two sessions when no EAPOL frames are sent
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">quiet-period</a> <i>number</i>
Tree	<a href="#">quiet-period</a>
Range	1 to 3600
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	All

**radius-policy** *reference*

Synopsis	RADIUS policy used for 802.1x authentication
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">radius-policy</a> <i>reference</i>
Tree	<a href="#">radius-policy</a>
Reference	<b>configure</b> <a href="#">system security dot1x</a> <a href="#">radius-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**radius-server-policy** *reference*

Synopsis	RADIUS server policy name
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">radius-server-policy</a> <i>reference</i>
Tree	<a href="#">radius-server-policy</a>
Reference	<b>configure</b> <a href="#">aaa radius</a> <a href="#">server-policy</a> <i>string</i>

Notes	The following elements are part of a choice: <b>radius-server-policy</b> or ( <b>radius-server-policy-acct</b> and <b>radius-server-policy-auth</b> ).
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-server-policy-acct** *reference*

Synopsis	RADIUS server policy name for accounting
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet dot1x</a> <a href="#">radius-server-policy-acct</a> <i>reference</i>
Tree	<a href="#">radius-server-policy-acct</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">server-policy</a> <i>string</i>
Notes	The following elements are part of a choice: <b>radius-server-policy</b> or ( <b>radius-server-policy-acct</b> and <b>radius-server-policy-auth</b> ).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-server-policy-auth** *reference*

Synopsis	RADIUS server policy name for authentication
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet dot1x</a> <a href="#">radius-server-policy-auth</a> <i>reference</i>
Tree	<a href="#">radius-server-policy-auth</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">server-policy</a> <i>string</i>
Notes	The following elements are part of a choice: <b>radius-server-policy</b> or ( <b>radius-server-policy-acct</b> and <b>radius-server-policy-auth</b> ).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **re-authentication**

Synopsis	Enable the <b>re-authentication</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet dot1x</a> <a href="#">re-authentication</a>
Tree	<a href="#">re-authentication</a>
Introduced	16.0.R1
Platforms	All

**period** *number*

Synopsis	Delay before re-authentication is performed
Context	<b>configure</b> port <i>string</i> ethernet dot1x re-authentication period <i>number</i>
Tree	period
Range	1 to 9000
Units	seconds
Default	3600
Introduced	16.0.R1
Platforms	All

**server-timeout** *number*

Synopsis	Wait time for a response from the RADIUS server
Context	<b>configure</b> port <i>string</i> ethernet dot1x server-timeout <i>number</i>
Tree	server-timeout
Range	1 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**supplicant-timeout** *number*

Synopsis	Wait time for a response to EAPOL messages
Context	<b>configure</b> port <i>string</i> ethernet dot1x supplicant-timeout <i>number</i>
Tree	supplicant-timeout
Range	1 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**transmit-period** *number*

Synopsis	Time after which a new EAPOL request message is sent
----------	--

---

Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">transmit-period</a> <i>number</i>
Tree	<a href="#">transmit-period</a>
Range	1 to 3600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **tunnel-dot1q** *boolean*

Synopsis	Enable dot1x tunneling for 802.1q tagged packets
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">tunnel-dot1q</a> <i>boolean</i>
Tree	<a href="#">tunnel-dot1q</a>
Default	true
Introduced	21.2.R1
Platforms	All

### **tunnel-qinq** *boolean*

Synopsis	Enable dot1x tunneling for QinQ tagged packets
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">tunnel-qinq</a> <i>boolean</i>
Tree	<a href="#">tunnel-qinq</a>
Default	true
Introduced	21.2.R1
Platforms	All

### **tunneling** *boolean*

Synopsis	Allow tunneling of untagged 802.1x frames
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet dot1x</a> <a href="#">tunneling</a> <i>boolean</i>
Tree	<a href="#">tunneling</a>
Default	false
Introduced	16.0.R1
Platforms	All

## down-on-internal-error

Synopsis	Enable the <b>down-on-internal-error</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">down-on-internal-error</a>
Tree	<a href="#">down-on-internal-error</a>
Introduced	16.0.R1
Platforms	All

## tx-laser *keyword*

Synopsis	Remote laser state on internal MAC transmit error
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">down-on-internal-error</a> <a href="#">tx-laser</a> <i>keyword</i>
Tree	<a href="#">tx-laser</a>
Options	off, on
Default	on
Introduced	16.0.R1
Platforms	All

## down-when-looped

Synopsis	Enter the <b>down-when-looped</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">down-when-looped</a>
Tree	<a href="#">down-when-looped</a>
Description	Commands in this context configure Ethernet loop detection.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of Ethernet loop detection
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">down-when-looped</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1

---

Platforms All

### **keep-alive** *number*

Synopsis Time interval between keep-alive PDUs

Context **configure** [port](#) [string](#) [ethernet](#) [down-when-looped](#) [keep-alive](#) *number*

Tree [keep-alive](#)

Range 1 to 120

Units seconds

Default 10

Introduced 16.0.R1

Platforms All

### **retry-timeout** *number*

Synopsis Wait time before re-enabling port after loop detection

Context **configure** [port](#) [string](#) [ethernet](#) [down-when-looped](#) [retry-timeout](#) *number*

Tree [retry-timeout](#)

Range 0 | 10 to 160

Units seconds

Default 120

Introduced 16.0.R1

Platforms All

### **use-broadcast-address** *boolean*

Synopsis Use broadcast MAC address for destination MAC address

Context **configure** [port](#) [string](#) [ethernet](#) [down-when-looped](#) [use-broadcast-address](#) *boolean*

Tree [use-broadcast-address](#)

Default false

Introduced 16.0.R1

Platforms All

**duplex** *keyword*

Synopsis	Duplex type for the fast Ethernet port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">duplex</a> <i>keyword</i>
Tree	<a href="#">duplex</a>
Description	This command configures the duplex of a Fast Ethernet port when autonegotiation is disabled. This command setting is ignored if autonegotiation is enabled for the port.
Options	full, half
Introduced	16.0.R1
Platforms	All

**efm-oam**

Synopsis	Enter the <b>efm-oam</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a>
Tree	<a href="#">efm-oam</a>
Introduced	16.0.R1
Platforms	All

**accept-remote-loopback** *boolean*

Synopsis	Enable reactions to loopback control OAMPDUs from peers
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">accept-remote-loopback</a> <i>boolean</i>
Tree	<a href="#">accept-remote-loopback</a>
Default	false
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the EFM OAM operation
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced	16.0.R1
Platforms	All

## discovery

Synopsis	Enter the <b>discovery</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">discovery</a>
Tree	<a href="#">discovery</a>
Introduced	16.0.R1
Platforms	All

## advertise-capabilities

Synopsis	Enter the <b>advertise-capabilities</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">discovery</a> <a href="#">advertise-capabilities</a>
Tree	<a href="#">advertise-capabilities</a>
Description	Commands in this context specify settings that enable the advertisement of specific capabilities.
Introduced	16.0.R1
Platforms	All

## link-monitoring *boolean*

Synopsis	Advertise link monitoring capabilities to peer
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">discovery</a> <a href="#">advertise-capabilities</a> <a href="#">link-monitoring</a> <i>boolean</i>
Tree	<a href="#">link-monitoring</a>
Description	When configured to <b>true</b> , the link monitoring capability is advertised to the peer through the EFM-OAM protocol. When configured to <b>false</b> , the router suppresses the advertisement of capabilities to a remote peer.
Default	true
Introduced	16.0.R1
Platforms	All

**dying-gasp-tx-on-reset** *boolean*

Synopsis	Enable generation of the Information OAMPDU off-cycle
Context	<b>configure</b> port <i>string</i> ethernet efm-oam dying-gasp-tx-on-reset <i>boolean</i>
Tree	dying-gasp-tx-on-reset
Description	<p>When configured to <b>true</b>, this command enables the generation of the Information OAMPDU off-cycle when the soft reset notification is received by the EFM application.</p> <p>The local port state remains under the control of the soft reset application and does not change based on the EFM function. If the port is operationally up, then the local node will continue to consider the port as available for service data and forwarding. If the upstream node requires a notification to route around the local node undergoing the soft reset, then a notification must be sent to those nodes. This is a disruptive function.</p> <p>When both the <b>grace-tx</b> and <b>dying-gasp-tx-on-reset</b> commands are active on the same port, the <b>grace-tx</b> command takes precedence when a soft reset is invoked if the peer vendor OUI being received is 00:16:4D or the configured <b>grace-vendor-oui</b> value.</p> <p>When configured to <b>false</b>, the generation of the Information OAMPDU off-cycle is disabled.</p>
Default	true
Introduced	16.0.R1
Platforms	All

**grace-tx** *boolean*

Synopsis	Enable the sending of Grace TLV for EFM-OAM
Context	<b>configure</b> port <i>string</i> ethernet efm-oam grace-tx <i>boolean</i>
Tree	grace-tx
Description	<p>When configured to <b>true</b>, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval.</p> <p>By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to <b>true</b>, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period.</p> <p>The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer.</p> <p>When configured to <b>false</b>, the Nokia Vendor Specific Grace TLV is not sent.</p>
Introduced	16.0.R1
Platforms	All

**grace-vendor-oui** *string*

Synopsis	Peer vendor OUI to support grace function
Context	<b>configure</b> <i>port string</i> <i>ethernet efm-oam grace-vendor-oui string</i>
Tree	<i>grace-vendor-oui</i>
Default	00:16:4D
Introduced	16.0.R1
Platforms	All

**hold-time** *number*

Synopsis	Wait time before protocol returns to operational state
Context	<b>configure</b> <i>port string ethernet efm-oam hold-time number</i>
Tree	<i>hold-time</i>
Range	1 to 50
Units	seconds
Introduced	16.0.R1
Platforms	All

**ignore-efm-state** *boolean*

Synopsis	Suppress port state changes for EFM-OAM faults
Context	<b>configure</b> <i>port string ethernet efm-oam ignore-efm-state boolean</i>
Tree	<i>ignore-efm-state</i>
Description	When configured to <b>true</b> , the ETH-OAM protocol does not impact the state of the port when there is a failure in the protocol state machine (discovery, configuration, timeout, loops, and so on). There is only a protocol warning message on the port. When configured to <b>false</b> , the port state is affected by any existing EFM-OAM protocol fault condition.
Default	false
Introduced	16.0.R1
Platforms	All

**link-monitoring**

Synopsis	Enter the <b>link-monitoring</b> context
----------	--

---

Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring
Tree	<a href="#">link-monitoring</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring admin-state <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **errored-frame**

Synopsis	Enter the <b>errored-frame</b> context
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame
Tree	<a href="#">errored-frame</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame admin-state <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**event-notification** *boolean*

Synopsis	Transmit Event Notification OAMPDU with link event TLV
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame event-notification <i>boolean</i>
Tree	<a href="#">event-notification</a>
Default	true
Introduced	16.0.R4
Platforms	All

**sd-threshold** *number*

Synopsis	SD threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame sd-threshold <i>number</i>
Tree	<a href="#">sd-threshold</a>
Range	1 to 1000000
Introduced	16.0.R4
Platforms	All

**sf-threshold** *number*

Synopsis	SF threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame sf-threshold <i>number</i>
Tree	<a href="#">sf-threshold</a>
Range	1 to 1000000
Default	1
Introduced	16.0.R4
Platforms	All

**window** *number*

Synopsis	Window size
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame window <i>number</i>
Tree	<a href="#">window</a>
Range	10 to 600

---

Units	deciseconds
Default	10
Introduced	16.0.R4
Platforms	All

### **errored-frame-period**

Synopsis	Enter the <b>errored-frame-period</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-period</a>
Tree	<a href="#">errored-frame-period</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-period</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **event-notification** *boolean*

Synopsis	Transmit Event Notification OAMPDU with link event TLV
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-period</a> <a href="#">event-notification</a> <i>boolean</i>
Tree	<a href="#">event-notification</a>
Default	true
Introduced	16.0.R4
Platforms	All

**sd-threshold** *number*

Synopsis	SD threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-period sd-threshold <i>number</i>
Tree	sd-threshold
Range	1 to 1000000
Introduced	16.0.R4
Platforms	All

**sf-threshold** *number*

Synopsis	SF threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-period sf-threshold <i>number</i>
Tree	sf-threshold
Range	1 to 1000000
Default	1
Introduced	16.0.R4
Platforms	All

**window** *number*

Synopsis	Window size
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-period window <i>number</i>
Tree	window
Range	1 to 4294967295
Units	packets
Default	1488095
Introduced	16.0.R4
Platforms	All

**errored-frame-seconds**

Synopsis	Enter the <b>errored-frame-seconds</b> context
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-seconds

Tree	<a href="#">errored-frame-seconds</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	<b>configure</b> port <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-seconds</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**event-notification** *boolean*

Synopsis	Transmit Event Notification OAMPDU with link event TLV
Context	<b>configure</b> port <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-seconds</a> <a href="#">event-notification</a> <i>boolean</i>
Tree	<a href="#">event-notification</a>
Default	true
Introduced	16.0.R4
Platforms	All

**sd-threshold** *number*

Synopsis	SD threshold
Context	<b>configure</b> port <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">errored-frame-seconds</a> <a href="#">sd-threshold</a> <i>number</i>
Tree	<a href="#">sd-threshold</a>
Range	1 to 900
Introduced	16.0.R4
Platforms	All

**sf-threshold** *number*

Synopsis	SF threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-seconds sf-threshold <i>number</i>
Tree	sf-threshold
Range	1 to 900
Default	1
Introduced	16.0.R4
Platforms	All

**window** *number*

Synopsis	Window size
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-frame-seconds window <i>number</i>
Tree	window
Range	100 to 9000
Units	deciseconds
Default	600
Introduced	16.0.R4
Platforms	All

**errored-symbols**

Synopsis	Enter the <b>errored-symbols</b> context
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-symbols
Tree	errored-symbols
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-symbols admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **event-notification** *boolean*

Synopsis	Transmit Event Notification OAMPDU with link event TLV
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-symbols event-notification <i>boolean</i>
Tree	<a href="#">event-notification</a>
Default	true
Introduced	16.0.R4
Platforms	All

### **sd-threshold** *number*

Synopsis	SD threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-symbols sd-threshold <i>number</i>
Tree	<a href="#">sd-threshold</a>
Range	1 to 1000000
Introduced	16.0.R4
Platforms	All

### **sf-threshold** *number*

Synopsis	SF threshold
Context	<b>configure</b> port <i>string</i> ethernet efm-oam link-monitoring errored-symbols sf-threshold <i>number</i>
Tree	<a href="#">sf-threshold</a>
Range	1 to 1000000
Default	1
Introduced	16.0.R4
Platforms	All

**window number**

Synopsis	Window size
Context	<b>configure</b> port string ethernet efm-oam link-monitoring errored-symbols window number
Tree	window
Range	10 to 600
Units	deciseconds
Default	10
Introduced	16.0.R4
Platforms	All

**local-sf-action**

Synopsis	Enter the <b>local-sf-action</b> context
Context	<b>configure</b> port string ethernet efm-oam link-monitoring local-sf-action
Tree	local-sf-action
Introduced	16.0.R4
Platforms	All

**event-notification-burst number**

Synopsis	Number of OAMPDUs to send when SF threshold is reached
Context	<b>configure</b> port string ethernet efm-oam link-monitoring local-sf-action event-notification-burst number
Tree	event-notification-burst
Range	1 to 5
Units	packets
Default	1
Introduced	16.0.R4
Platforms	All

**info-notification**

Synopsis	Enter the <b>info-notification</b> context
Context	<b>configure</b> port string ethernet efm-oam link-monitoring local-sf-action info-notification

Tree	<a href="#">info-notification</a>
Introduced	16.0.R4
Platforms	All

**critical-event** *boolean*

Synopsis	Set critical event flag when SF threshold is reached
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">local-sf-action</a> <a href="#">info-notification</a> <a href="#">critical-event</a> <i>boolean</i>
Tree	<a href="#">critical-event</a>
Default	false
Introduced	16.0.R4
Platforms	All

**dying-gasp** *boolean*

Synopsis	Set dying gasp flag when SF threshold is reached
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">local-sf-action</a> <a href="#">info-notification</a> <a href="#">dying-gasp</a> <i>boolean</i>
Tree	<a href="#">dying-gasp</a>
Default	false
Introduced	16.0.R4
Platforms	All

**local-port-action** *keyword*

Synopsis	Local port action when SF threshold is reached
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">efm-oam</a> <a href="#">link-monitoring</a> <a href="#">local-sf-action</a> <a href="#">local-port-action</a> <i>keyword</i>
Tree	<a href="#">local-port-action</a>
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	16.0.R4
Platforms	All

**mode** *keyword*

Synopsis	Mode of OAM operation for the Ethernet port
Context	<b>configure</b> port <i>string</i> ethernet efm-oam mode <i>keyword</i>
Tree	mode
Options	passive, active
Default	active
Introduced	16.0.R1
Platforms	All

**multiplier** *number*

Synopsis	Multiplier for the transmit interval of OAMPDUs
Context	<b>configure</b> port <i>string</i> ethernet efm-oam multiplier <i>number</i>
Tree	multiplier
Range	2 to 5
Default	5
Introduced	16.0.R1
Platforms	All

**peer-rdi-rx**

Synopsis	Enter the <b>peer-rdi-rx</b> context
Context	<b>configure</b> port <i>string</i> ethernet efm-oam peer-rdi-rx
Tree	peer-rdi-rx
Introduced	16.0.R1
Platforms	All

**critical-event** *keyword*

Synopsis	Action taken upon receipt of critical event flag
Context	<b>configure</b> port <i>string</i> ethernet efm-oam peer-rdi-rx critical-event <i>keyword</i>
Tree	critical-event
Options	log-only, port-out-of-service
Default	port-out-of-service
Introduced	16.0.R1

Platforms All

### **dying-gasp** *keyword*

Synopsis Action taken upon receipt of dying gasp flag

Context **configure** [port](#) [string](#) [ethernet](#) [efm-oam](#) [peer-rdi-rx](#) **dying-gasp** *keyword*

Tree [dying-gasp](#)

Options log-only, port-out-of-service

Default port-out-of-service

Introduced 16.0.R1

Platforms All

### **event-notification** *keyword*

Synopsis Action taken upon receipt of event TLVs

Context **configure** [port](#) [string](#) [ethernet](#) [efm-oam](#) [peer-rdi-rx](#) **event-notification** *keyword*

Tree [event-notification](#)

Options log-only, port-out-of-service

Default log-only

Introduced 16.0.R1

Platforms All

### **link-fault** *keyword*

Synopsis Action taken upon receipt of link fault flag

Context **configure** [port](#) [string](#) [ethernet](#) [efm-oam](#) [peer-rdi-rx](#) **link-fault** *keyword*

Tree [link-fault](#)

Options log-only, port-out-of-service

Default port-out-of-service

Introduced 16.0.R1

Platforms All

### **transmit-interval** *number*

Synopsis Transmit interval of OAMPDUs

Context	<b>configure</b> port <i>string</i> ethernet efm-oam transmit-interval <i>number</i>
Tree	transmit-interval
Range	1 to 600
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

### **trigger-fault** *keyword*

Synopsis	Flag setting in the information OAMPDU
Context	<b>configure</b> port <i>string</i> ethernet efm-oam trigger-fault <i>keyword</i>
Tree	trigger-fault
Options	dying-gasp, critical-event
Introduced	16.0.R1
Platforms	All

### **tunneling** *boolean*

Synopsis	Enable EFM-OAM PDU tunneling
Context	<b>configure</b> port <i>string</i> ethernet efm-oam tunneling <i>boolean</i>
Tree	tunneling
Default	false
Introduced	16.0.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress
Tree	egress
Introduced	16.0.R1
Platforms	All

**eth-bn-rate-changes** *boolean*

Synopsis	Allow rate changes in ETH-BN messages on port-based MEP
Context	<b>configure</b> port <i>string</i> ethernet egress eth-bn-rate-changes <i>boolean</i>
Tree	<a href="#">eth-bn-rate-changes</a>
Description	When configured to <b>true</b> , this command allows rate changes received in ETH-BN messages on a port-based MEP to update the egress rate used on the port. This command is not supported for all MDA types. When configured to <b>false</b> , rate changes in ETH-BN messages are denied.
Default	false
Introduced	16.0.R1
Platforms	All

**hs-port-pool-policy** *reference*

Synopsis	HS port pool policy
Context	<b>configure</b> port <i>string</i> ethernet egress hs-port-pool-policy <i>reference</i>
Tree	<a href="#">hs-port-pool-policy</a>
Reference	<b>configure</b> qos hs-port-pool-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-scheduler-policy**

Synopsis	Enter the <b>hs-scheduler-policy</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress hs-scheduler-policy
Tree	<a href="#">hs-scheduler-policy</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress hs-scheduler-policy overrides
Tree	<a href="#">overrides</a>
Introduced	19.10.R1

Platforms 7750 SR-7/12/12e

### **group** [group-id] *number*

Synopsis Enter the **group** list instance

Context **configure** port *string* ethernet egress hs-scheduler-policy overrides group *number*

Tree [group](#)

Introduced 19.10.R1

Platforms 7750 SR-7/12/12e

### **[group-id]** *number*

Synopsis Group ID

Context **configure** port *string* ethernet egress hs-scheduler-policy overrides group *number*

Tree [group](#)

Range 1

Notes This element is part of a list key.

Introduced 19.10.R1

Platforms 7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis Maximum rate

Context **configure** port *string* ethernet egress hs-scheduler-policy overrides group *number* rate (*number* | *keyword*)

Tree [rate](#)

Range 1 to 100000

Units megabps

Options max

Introduced 19.10.R1

Platforms 7750 SR-7/12/12e

### **max-rate** (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-scheduler-policy</a> <a href="#">overrides</a> <a href="#">max-rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-rate</a>
Range	1 to 100000
Units	megabps
Options	max
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

### **scheduling-class** [[class-number](#)] *number*

Synopsis	Enter the <b>scheduling-class</b> list instance
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduling-class</a> <i>number</i>
Tree	<a href="#">scheduling-class</a>
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

### **[class-number]** *number*

Synopsis	Scheduling class value
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduling-class</a> <i>number</i>
Tree	<a href="#">scheduling-class</a>
Range	1 to 6
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduling-class</a> <i>number</i> <a href="#">rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 100000

Units	megabps
Options	max
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**weight number**

Synopsis	Weight of the scheduling class within the group
Context	<b>configure</b> port <i>string</i> ethernet egress hs-scheduler-policy overrides scheduling-class number weight number
Tree	weight
Range	1 to 127
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**policy-name reference**

Synopsis	HS scheduler policy name
Context	<b>configure</b> port <i>string</i> ethernet egress hs-scheduler-policy policy-name reference
Tree	policy-name
Reference	<b>configure</b> qos hs-scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-secondary-shaper [secondary-shaper-name] string**

Synopsis	Enter the <b>hs-secondary-shaper</b> list instance
Context	<b>configure</b> port <i>string</i> ethernet egress hs-secondary-shaper <i>string</i>
Tree	hs-secondary-shaper
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**[secondary-shaper-name] string**

Synopsis	Secondary shaper name
----------	-----------------------

Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-secondary-shaper</a> <i>string</i>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

## aggregate

Synopsis	Enter the <b>aggregate</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-secondary-shaper</a> <i>string</i> <a href="#">aggregate</a>
Tree	<a href="#">aggregate</a>
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

## low-burst-max-class *number*

Synopsis	Highest scheduling class mapped to the low burst limit
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-secondary-shaper</a> <i>string</i> <a href="#">aggregate</a> <a href="#">low-burst-max-class</a> <i>number</i>
Tree	<a href="#">low-burst-max-class</a>
Range	1 to 6
Default	6
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

## rate (*number* | *keyword*)

Synopsis	Rate allowed for the HS secondary shaper aggregate
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">hs-secondary-shaper</a> <i>string</i> <a href="#">aggregate</a> <a href="#">rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 100000000
Units	kilobps
Options	max

Default	max
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**class** [*class-number*] *number*

Synopsis	Enter the <b>class</b> list instance
Context	<b>configure</b> <i>port string ethernet egress hs-secondary-shaper string class number</i>
Tree	<i>class</i>
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**[class-number]** *number*

Synopsis	HS secondary shaper class ID
Context	<b>configure</b> <i>port string ethernet egress hs-secondary-shaper string class number</i>
Tree	<i>class</i>
Range	1 to 6
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**rate** (*number* | *keyword*)

Synopsis	Rate allowed for the HS secondary shaper class
Context	<b>configure</b> <i>port string ethernet egress hs-secondary-shaper string class number rate (number   keyword)</i>
Tree	<i>rate</i>
Range	1 to 100000000
Units	kilobps
Options	max
Default	max
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**description** *string*

Synopsis	Text description
Context	<b>configure</b> port <i>string</i> ethernet egress hs-secondary-shaper <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

**hw-aggr-shaper-scheduler**

Synopsis	Enter the <b>hw-aggr-shaper-scheduler</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress hw-aggr-shaper-scheduler
Tree	hw-aggr-shaper-scheduler
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**monitor** *boolean*

Synopsis	Allow monitoring of the HW aggregate shaper scheduler
Context	<b>configure</b> port <i>string</i> ethernet egress hw-aggr-shaper-scheduler monitor <i>boolean</i>
Tree	monitor
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**policy-name** *reference*

Synopsis	Name of HW aggregate shaper scheduler policy
Context	<b>configure</b> port <i>string</i> ethernet egress hw-aggr-shaper-scheduler policy-name <i>reference</i>
Tree	policy-name
Reference	<b>configure</b> qos hw-aggr-shaper-scheduler-policy <i>string</i>
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **monitor-port-scheduler** *boolean*

Synopsis	Enable monitoring of egress scheduler
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">monitor-port-scheduler</a> <i>boolean</i>
Tree	<a href="#">monitor-port-scheduler</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **port-scheduler-policy**

Synopsis	Enter the <b>port-scheduler-policy</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">port-scheduler-policy</a>
Tree	<a href="#">port-scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Description	Commands in this context configure egress scheduler overrides.
Introduced	16.0.R4
Platforms	All

### **level** [[priority-level](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Introduced	16.0.R4
Platforms	All

**[priority-level] number**

Synopsis	Port priority level to be overridden
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R4
Platforms	All

**cir decimal-number**

Synopsis	CIR for the port scheduler policy
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R4
Platforms	All

**pir decimal-number**

Synopsis	PIR for the the port scheduler policy
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir

Range	0.01 to 100.00
Units	percent
Introduced	16.0.R4
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R4
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R4
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy overrides level <i>number</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	pir
Range	1 to 6400000000
Units	kilobps
Options	max

Introduced	16.0.R4
Platforms	All

**max-rate**

Synopsis	Enter the <b>max-rate</b> context
Context	<b>configure</b> <a href="#">port string ethernet egress port-scheduler-policy overrides max-rate</a>
Tree	<a href="#">max-rate</a>
Description	Commands in this context override the <b>max-rate</b> command found in the port scheduler policy associated with the port. When a maximum rate is defined at the port or channel level, the port scheduler's policy <b>max-rate</b> command is ignored.
Introduced	16.0.R4
Platforms	All

**percent-rate** *decimal-number*

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">port string ethernet egress port-scheduler-policy overrides max-rate percent-rate decimal-number</a>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R4
Platforms	All

**rate** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">port string ethernet egress port-scheduler-policy overrides max-rate rate (number   keyword)</a>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Options	max

Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R4
Platforms	All

### **policy-name** *reference*

Synopsis	Egress scheduler policy name
Context	<b>configure</b> port <i>string</i> ethernet egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	<b>configure</b> qos port-scheduler-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Rate of egress traffic
Context	<b>configure</b> port <i>string</i> ethernet egress rate <i>number</i>
Tree	rate
Description	This command configures the rate of traffic leaving the network. An event log is generated each time the egress rate is modified unless the port is part of a LAG. This command is not supported for all MDA types.
Max. Range	-2147483648 to 2147483647
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **elmi**

Synopsis	Enter the <b>elmi</b> context
Context	<b>configure</b> port <i>string</i> ethernet elmi
Tree	elmi
Introduced	16.0.R4
Platforms	All

**mode keyword**

Synopsis	Ethernet LMI mode
Context	<b>configure</b> port string ethernet elmi mode keyword
Tree	mode
Options	uni-n
Introduced	16.0.R4
Platforms	All

**n393 number**

Synopsis	Monitored count of consecutive errors
Context	<b>configure</b> port string ethernet elmi n393 number
Tree	n393
Range	2 to 10
Default	4
Introduced	16.0.R4
Platforms	All

**t391 number**

Synopsis	Polling timer for UNI-C
Context	<b>configure</b> port string ethernet elmi t391 number
Tree	t391
Range	5 to 30
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	All

**t392 number**

Synopsis	Polling verification timer for UNI-N
Context	<b>configure</b> port string ethernet elmi t392 number
Tree	t392

Range	5 to 30
Units	seconds
Default	15
Introduced	16.0.R4
Platforms	All

### **encap-type** *keyword*

Synopsis	Encapsulation method for the Ethernet port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">encap-type</a> <i>keyword</i>
Tree	<a href="#">encap-type</a>
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
----------	------------------------------

Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Reference	<b>configure</b> eth-cfm domain string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Reference	<b>configure</b> eth-cfm domain string association string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state keyword
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ais

Synopsis	Enable the <b>ais</b> context
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number <b>ais</b>
Tree	<b>ais</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number <b>ais</b> client-meg-level <i>number</i>
Tree	<b>client-meg-level</b>
Range	1 to 7
Max.	7
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number <b>ais</b> interface-support <i>boolean</i>
Tree	<b>interface-support</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**interval number**

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number
Tree	interval
Range	1   60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low-priority-defect keyword**

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais low-priority-defect keyword
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority number**

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
----------	---

Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification
Tree	alarm-notification
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** number

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number
Tree	fng-alarm-time
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** number

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number
Tree	fng-reset-time
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** boolean

Synopsis	Generate CCM messages
----------	-----------------------

Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b>) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-tlv-ignore** *keyword*

Synopsis	TLV to ignore on reception
----------	----------------------------

Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-tlv-ignore keyword
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine.  When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. Instances	2
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-stats boolean

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-stats boolean
Tree	collect-lmm-stats
Description	When configured to <b>true</b> , this command enables the collection of statistics on the facility MEPs. (Facility is at a different level of the hierarchy than the collection of LMM statistics for service SAPs and MPLS SDP bindings.)The collection of LMM statistics must be enabled if a MEP is launching or responding to ETH-LMM packets.  This command is mutually exclusive with the <b>collect-lmm-fc-stats</b> command when there is entity resource contention.  When configured to <b>false</b> , this command disables the collection of statistics on the facility MEPs. If LMM statistics collection is disabled, the counters in the LMM and LMR PDU do not represent accurate measurements and all measurements should be ignored.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf
Tree	csf

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">csf</a> <b>multiplier</b> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-bn**

Synopsis	Enter the <b>eth-bn</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-bn</b>
Tree	<a href="#">eth-bn</a>
Description	Commands in this context configure Ethernet Bandwidth Notification (ETH-BN) message handling.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**receive boolean**

Synopsis	Enable the reception and processing of ETH-BN messages
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn receive boolean
Tree	receive
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-update-pacing number**

Synopsis	Pace of messages to and from ETH-CFM to QoS subsystems
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-bn rx-update-pacing number
Tree	rx-update-pacing
Range	1 to 600
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold number**

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number

Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>test-pattern</b> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>test-pattern</b> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **facility-fault** *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number facility-fault <i>boolean</i>
Tree	facility-fault
Description	When configured to <b>true</b> , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition.  When configured to <b>false</b> , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> port <i>string</i> ethernet eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id number grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <a href="#">number</a>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <a href="#">number</a>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <a href="#">boolean</a>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <i>port string ethernet eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</i>
Tree	<a href="#">mac-address</a>
Description	<p>This command specifies the MAC address of the MEP.</p> <p>When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### one-way-delay-threshold *number*

Synopsis Threshold time limit for the one-way delay test

Context **configure** port *string* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*

Tree [one-way-delay-threshold](#)

Range 0 to 600

Units seconds

Default 3

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### vlan (*number* | *keyword*)

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Outer VLAN ID of the tunnel

Context **configure** port *string* ethernet eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* vlan (*number* | *keyword*)

Tree [vlan](#)

Range 1 to 4094

Options none

Default none

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### hold-time

Synopsis Enter the **hold-time** context

Context **configure** port *string* ethernet hold-time

Tree [hold-time](#)

Introduced 16.0.R1

Platforms All

### **down** *number*

Synopsis Delay after interface goes from up state to down state

Context **configure** port *string* ethernet hold-time down *number*

Tree down

Description This command specifies the delay to notify the upper layers after an interface transitions from an up state to a down state.

When an interface transitions from an up state to a down state, it is immediately advertised to the rest of the system if the down interval is zero, but if the down interval is greater than zero, interface down transitions are not advertised to upper layers until the down interval has expired.

Range 1 to 3600000

Introduced 16.0.R1

Platforms All

### **units** *keyword*

Synopsis Hold time units

Context **configure** port *string* ethernet hold-time units *keyword*

Tree units

Options seconds, centiseconds

Default seconds

Introduced 16.0.R1

Platforms All

### **up** *number*

Synopsis Delay after interface goes from down state to up state

Context **configure** port *string* ethernet hold-time up *number*

Tree up

Description This command specifies the delay to notify the upper layers after an interface transitions from a down state to an up state.

When an interface transitions from a down state to an up state, it is immediately advertised as up to the rest of the system if the up interval is zero, but if the up interval is greater than zero, up transitions are not advertised until the up interval has expired.

Range	1 to 3600000
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">port string ethernet ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## rate number

Synopsis	Maximum ingress bandwidth
Context	<b>configure</b> <a href="#">port string ethernet ingress rate number</a>
Tree	<a href="#">rate</a>
Max. Range	-2147483648 to 2147483647
Units	megabps
Introduced	16.0.R1
Platforms	All

## lACP-tunnel boolean

Synopsis	Enable LACP packet tunneling for the Ethernet port
Context	<b>configure</b> <a href="#">port string ethernet lACP-tunnel boolean</a>
Tree	<a href="#">lACP-tunnel</a>
Default	false
Introduced	16.0.R1
Platforms	All

## lldp

Synopsis	Enter the <b>lldp</b> context
Context	<b>configure</b> <a href="#">port string ethernet lldp</a>

Tree	<a href="#">lldp</a>
Description	Commands in this context configure the Link Layer Discovery Protocol (LLDP) on the port.
Introduced	16.0.R1
Platforms	All

### **dest-mac** [[mac-type](#)] *keyword*

Synopsis	Enter the <b>dest-mac</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i>
Tree	<a href="#">dest-mac</a>
Description	Commands in this context configure destination MAC address commands.
Introduced	16.0.R1
Platforms	All

### **[mac-type]** *keyword*

Synopsis	Destination MAC address type
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i>
Tree	<a href="#">dest-mac</a>
Options	nearest-bridge, nearest-non-tpmr, nearest-customer
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **notification** *boolean*

Synopsis	Enable LLDP notifications
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i> <a href="#">notification</a> <i>boolean</i>
Tree	<a href="#">notification</a>
Default	false
Introduced	16.0.R1
Platforms	All

**port-id-subtype** *keyword*

Synopsis	Port ID TLV encoding method for transmission to peer
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet lldp dest-mac</a> <i>keyword</i> <a href="#">port-id-subtype</a> <i>keyword</i>
Tree	<a href="#">port-id-subtype</a>
Options	tx-if-alias, tx-if-name, tx-local
Default	tx-local
Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Enable LLDP agent to receive but not transmit frames
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet lldp dest-mac</a> <i>keyword</i> <a href="#">receive</a> <i>boolean</i>
Tree	<a href="#">receive</a>
Default	false
Introduced	16.0.R1
Platforms	All

**transmit** *boolean*

Synopsis	Enable the LLDP agent to transmit frames
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet lldp dest-mac</a> <i>keyword</i> <a href="#">transmit</a> <i>boolean</i>
Tree	<a href="#">transmit</a>
Default	false
Introduced	16.0.R1
Platforms	All

**tunnel-nearest-bridge** *boolean*

Synopsis	Allow received LLDP packets to be tunneled
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet lldp dest-mac</a> <i>keyword</i> <a href="#">tunnel-nearest-bridge</a> <i>boolean</i>
Tree	<a href="#">tunnel-nearest-bridge</a>
Default	false
Introduced	16.0.R1
Platforms	All

**tx-mgmt-address** [[mgmt-address-system-type](#)] *keyword*

Synopsis	Enter the <b>tx-mgmt-address</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i> <b>tx-mgmt-address</b> <i>keyword</i>
Tree	<a href="#">tx-mgmt-address</a>
Introduced	16.0.R1
Platforms	All

**[mgmt-address-system-type]** *keyword*

Synopsis	Management address to transmit
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i> <b>tx-mgmt-address</b> <i>keyword</i>
Tree	<a href="#">tx-mgmt-address</a>
Options	oob, system, system-ipv6, oob-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of transmitting management address
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i> <b>tx-mgmt-address</b> <i>keyword</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**tx-tlvs**

Synopsis	Enter the <b>tx-tlvs</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">lldp</a> <a href="#">dest-mac</a> <i>keyword</i> <b>tx-tlvs</b>
Tree	<a href="#">tx-tlvs</a>
Introduced	16.0.R1

Platforms All

### **port-desc** *boolean*

Synopsis Transmit port description TLVs  
Context **configure** [port](#) *string* [ethernet](#) [lldp](#) [dest-mac](#) *keyword* [tx-tlvs](#) [port-desc](#) *boolean*  
Tree [port-desc](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **sys-cap** *boolean*

Synopsis Transmit system capabilities TLVs  
Context **configure** [port](#) *string* [ethernet](#) [lldp](#) [dest-mac](#) *keyword* [tx-tlvs](#) [sys-cap](#) *boolean*  
Tree [sys-cap](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **sys-desc** *boolean*

Synopsis Transmit system description TLVs  
Context **configure** [port](#) *string* [ethernet](#) [lldp](#) [dest-mac](#) *keyword* [tx-tlvs](#) [sys-desc](#) *boolean*  
Tree [sys-desc](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **sys-name** *boolean*

Synopsis Transmit system name TLVs  
Context **configure** [port](#) *string* [ethernet](#) [lldp](#) [dest-mac](#) *keyword* [tx-tlvs](#) [sys-name](#) *boolean*  
Tree [sys-name](#)  
Default false

Introduced	16.0.R1
Platforms	All

### **load-balancing-algorithm** *keyword*

Synopsis	Load balancing algorithm for the Ethernet port
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet</b> <b>load-balancing-algorithm</b> <i>keyword</i>
Tree	<b>load-balancing-algorithm</b>
Options	default, include-l4, exclude-l4
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address of the Ethernet port
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet</b> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Description	This command specifies the MAC address of the Ethernet port. Allowed values are any non-broadcast, non-multicast MAC, and non-IEEE reserved MAC addresses.  The default value indicates that an operation MAC address is to be assigned from the chassis MAC address pool.
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

### **min-frame-length** *number*

Synopsis	Minimum transmitted frame length
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet</b> <b>min-frame-length</b> <i>number</i>
Tree	<b>min-frame-length</b>
Description	This command configures the minimum transmitted frame length.  The option 72 is only supported on FP4 and newer generations of XMA, MDA-e-XP, and MDA-s.
Range	64   68   72
Units	bytes
Default	64

Introduced	16.0.R1
Platforms	All

### **mode** *keyword*

Synopsis	Operation mode for the Ethernet port
Context	<b>configure</b> <i>port string ethernet mode keyword</i>
Tree	<a href="#">mode</a>
Options	access, network, hybrid
Introduced	16.0.R1
Platforms	All

### **mtu** *number*

Synopsis	Maximum payload MTU size for the Ethernet port
Context	<b>configure</b> <i>port string ethernet mtu number</i>
Tree	<a href="#">mtu</a>
Description	<p>This command configures the maximum payload MTU size for the Ethernet port. This command indirectly defines the largest physical packet the port can transmit or the far-end Ethernet port can receive. Packets that cannot be fragmented at egress and exceed the MTU size are discarded.</p> <p>The MTU size includes the destination MAC address, source MAC address, the Ethertype or length field, and the complete Ethernet payload. This value does not include the preamble, start of frame delimiter, or the trailing CRC.</p>
Range	512 to 9800
Units	bytes
Introduced	16.0.R1
Platforms	All

### **network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <i>port string ethernet network</i>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

**accounting-policy** *reference*

Synopsis	Accounting policy that applies to the network port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet network</a> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet network</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Description	<p>When configured to <b>true</b>, this command enables the collection of accounting and statistical data for the network interface. When applying accounting policies, by default the data is collected in the appropriate records and written to the designated billing file.</p> <p>When configured to <b>false</b>, the statistics are still accumulated by the XCM or IOM cards. However, the CPU does not obtain the results and write them to the billing file.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet network</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

**port-queues**

Synopsis	Enter the <b>port-queues</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet network</a> <a href="#">egress</a> <a href="#">port-queues</a>
Tree	<a href="#">port-queues</a>

Introduced	20.10.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">port string ethernet network egress port-queues overrides</a>
Tree	<a href="#">overrides</a>
Description	Commands in this context configure Ethernet network egress port queue override parameters.
Introduced	20.10.R1
Platforms	All

## queue [[queue-id](#)] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">port string ethernet network egress port-queues overrides queue number</a>
Tree	<a href="#">queue</a>
Description	Commands in this context configure an Ethernet network queue.
Introduced	20.10.R1
Platforms	All

## [\[queue-id\]](#) *number*

Synopsis	Queue ID
Context	<b>configure</b> <a href="#">port string ethernet network egress port-queues overrides queue number</a>
Tree	<a href="#">queue</a>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
----------	---

Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">port-queues</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">port-queues</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">port-queues</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">number</a> <a href="#">monitor-queue-depth</a> <a href="#">violation-threshold</a> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **queue-group** [[queue-group-name](#)] [reference](#) [instance-id](#) *number*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <i>number</i>

Tree	<a href="#">queue-group</a>
Introduced	16.0.R1
Platforms	All

### **[queue-group-name] reference**

Synopsis	Queue group name
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i>
Tree	<a href="#">queue-group</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **instance-id number**

Synopsis	Instance ID for the egress queue group
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i>
Tree	<a href="#">queue-group</a>
Range	1 to 65535
MD-CLI	1
Default	
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy reference**

Synopsis	Accounting policy for the Ethernet port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1

Platforms All

### aggregate-rate

Synopsis Enter the **aggregate-rate** context

Context **configure** port *string* ethernet network egress queue-group *reference* instance-id *number* **aggregate-rate**

Tree [aggregate-rate](#)

Introduced 16.0.R1

Platforms All

### limit-unused-bandwidth *boolean*

Synopsis Control unused bandwidth

Context **configure** port *string* ethernet network egress queue-group *reference* instance-id *number* **aggregate-rate** **limit-unused-bandwidth** *boolean*

Tree [limit-unused-bandwidth](#)

Default false

Introduced 16.0.R1

Platforms All

### queue-frame-based-accounting *boolean*

Synopsis Enable frame-based accounting on policers and queues

Context **configure** port *string* ethernet network egress queue-group *reference* instance-id *number* **aggregate-rate** **queue-frame-based-accounting** *boolean*

Tree [queue-frame-based-accounting](#)

Default false

Introduced 16.0.R1

Platforms All

### rate (*number* | *keyword*)

Synopsis Aggregate rate for all queues

Context **configure** port *string* ethernet network egress queue-group *reference* instance-id *number* **aggregate-rate** **rate** (*number* | *keyword*)

Tree [rate](#)

Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**hs-turbo** *boolean*

Synopsis	Enable HS turbo queues for higher throughput
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number hs-turbo <i>boolean</i>
Tree	hs-turbo
Description	<p>When configured to <b>true</b>, this command enables HS turbo queues that allow the corresponding HSQ queue group queues to achieve a higher throughput.</p> <p>This command is not applicable to 10G ports and is ignored when it is configured under a queue group instance on a 10G port.</p>

	When configured to <b>false</b> , HS turbo queues are disabled.
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer-control-policy** *reference*

Synopsis	Policer control policy for the QoS egress queue group
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number <b>policer-control-policy</b> <i>reference</i>
Tree	<a href="#">policer-control-policy</a>
Reference	<b>configure</b> qos <a href="#">policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue-overrides**

Synopsis	Enter the <b>queue-overrides</b> context
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number <b>queue-overrides</b>
Tree	<a href="#">queue-overrides</a>
Description	Commands in this context define queue command overrides for each queue within the queue group.
Introduced	16.0.R1
Platforms	All

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id number <b>queue-overrides</b> <b>queue</b> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id] reference**

Synopsis	Queue ID
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i>
Tree	queue
Reference	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> adaptation-rule
Tree	adaptation-rule
Description	<p>Commands in this context specify the method used by the system to derive the operational CIR and PIR settings when the queue is provisioned in hardware. For the CIR and PIR commands individually, the system attempts to find the best operational rate depending on the defined constraint.</p> <p>Commands in this context are ignored for egress HSQ queue group queues that are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the adaptation rule is performed under the <b>hs-wrr-group</b> command within the egress queue group template.</p>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> adaptation-rule cir <i>keyword</i>
Tree	cir
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**cbs (number | keyword)**

Synopsis	CBS for the template queue
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">cbs</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a>
Tree	<a href="#">drop-tail</a>
Description	Commands in this context configure queue drop tail commands.
Introduced	16.0.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>

Tree	<a href="#">low</a>
Description	Commands in this context configure the queue low drop tail commands. The low drop tail defines the queue depth beyond which the out-of-profile packets are not accepted into the queue and discarded.
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">queue-overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Description	This command overrides the low queue drop tail as a percentage reduction from the MBS of the queue. For example, if a queue has an MBS of 600 kbytes and this percentage is configured to be 30% for the low drop tail, the low drop tail is set to 420 kbytes and the out-of-profile packets are not accepted into the queue if its depth is greater than this value, and is therefore discarded.
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### **mbs** (*number* | *keyword*)

Synopsis	MBS for the template queue
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>reference</i> <a href="#">instance-id</a> <i>number</i> <a href="#">queue-overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

## violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">network</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">reference</a> <a href="#">instance-id</a> <a href="#">number</a> <a href="#">queue-overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate
Tree	percent-rate
Description	<p>Commands in this context specify percent rates.</p> <p>This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the percent rate is performed under the <b>hs-wrr-group</b> command within the egress queue group template.</p>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## cir decimal-number

Synopsis	CIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	All

## pir decimal-number

Synopsis	PIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> <b>rate</b>
Tree	<b>rate</b>
Description	<p>Commands in this context specify the administrative PIR and CIR for the queue. Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.</p> <p>This command can be executed at anytime, altering the PIR and CIR rates for all queues created through the association of the SAP egress QoS policy with the queue ID.</p> <p>This command is ignored for egress HSQ queue group queues, which are attached to an HS WRR group within an associated HS attachment policy. In this case, the configuration of the rate is performed under the <b>hs-wrr-group</b> command within the egress queue group template.</p>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Description	<p>This command specifies the administrative CIR used by the queue. When the <b>rate</b> command is executed, a CIR setting is optional. Fractional values are not allowed and must be given as a positive integer.</p> <p>The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth. In-profile then out-of-profile packets are preferentially queued by the system at egress and at subsequent next hop nodes where the packet can traverse. To be properly handled throughout the network, the packets must be marked accordingly for profiling at each hop.</p> <p>The CIR can be used by the queue's parent <b>cir-level</b> and <b>cir-weight</b> commands to define the amount of bandwidth considered to be committed for the child queue during bandwidth allocation by the parent scheduler.</p>
Range	0 to 2000000000
Units	kilobps
Options	max

Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR for the queue
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> queue-overrides queue <i>reference</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	pir
Description	<p>This command specifies the administrative PIR used by the queue. When the <b>rate</b> command is executed, a valid PIR setting must be explicitly defined. Fractional values are not allowed and must be given as a positive integer. The actual PIR rate is dependent on the queue's <b>adaptation-rule</b> commands and the actual hardware where the queue is provisioned.</p> <p>The PIR defines the maximum rate that the queue can transmit packets out an egress interface (for SAP egress queues). Defining a PIR does not necessarily guarantee that the queue can transmit at the intended rate. The actual rate sustained by the queue can be limited by oversubscription factors or available egress bandwidth.</p>
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy
Tree	scheduler-policy
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy for the QoS egress queue group
Context	<b>configure</b> port <i>string</i> ethernet network egress queue-group <i>reference</i> instance-id <i>number</i> scheduler-policy policy-name <i>reference</i>

Tree	<a href="#">policy-name</a>
Reference	<b>configure qos scheduler-policy</b> <i>string</i>
Introduced	22.2.R1
Platforms	All

### **queue-policy** *reference*

Synopsis	Network queue policy
Context	<b>configure port</b> <i>string</i> <a href="#">ethernet network egress queue-policy</a> <i>reference</i>
Tree	<a href="#">queue-policy</a>
Reference	<b>configure qos network-queue</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **pbb-etype** *string*

Synopsis	Ethertype for PBB encapsulation
Context	<b>configure port</b> <i>string</i> <a href="#">ethernet pbb-etype</a> <i>string</i>
Tree	<a href="#">pbb-etype</a>
Default	35047
Introduced	16.0.R1
Platforms	All

### **ptp-asymmetry** *number*

Synopsis	PTP asymmetry delay on the Ethernet port
Context	<b>configure port</b> <i>string</i> <a href="#">ethernet ptp-asymmetry</a> <i>number</i>
Tree	<a href="#">ptp-asymmetry</a>
Description	This command configures the PTP asymmetry delay on the Ethernet port. This command is used to correct known asymmetry as part of time of day or phase recovery using PTP packets on both local and downstream PTP clocks.
Max. Range	-2147483648 to 2147483647
Units	nanoseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **qinq-etype** *string*

Synopsis	Ethertype for QinQ encapsulation
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">qinq-etype</a> <a href="#">string</a>
Tree	<a href="#">qinq-etype</a>
Default	33024
Introduced	16.0.R1
Platforms	All

### **report-alarm**

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Description	Commands in this context specify the settings for alarm generation and alarm clear notifications for the port. <b>Note:</b> For some DWDM transceivers, if the <b>configure port dwdm coherent rx-los-reaction squelch</b> command is disabled, the signal-fail and no-am-lock alarm conditions are not reported when the media side of the transceiver has an RX LOS condition.
Introduced	16.0.R1
Platforms	All

### **alignment-marker-not-locked** *boolean*

Synopsis	Report 40G/100G PCS Alignment Marker Loss of Lock
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">alignment-marker-not-locked</a> <a href="#">boolean</a>
Tree	<a href="#">alignment-marker-not-locked</a>
Description	When configured to <b>true</b> , Alignment Marker Loss of Lock alarms are reported for this port.
Introduced	16.0.R2
Platforms	All

### **block-not-locked** *boolean*

Synopsis	Report 40G/100G PCS Lanes Not Block Locked
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">block-not-locked</a> <a href="#">boolean</a>

---

Tree	<a href="#">block-not-locked</a>
Introduced	16.0.R2
Platforms	All

### **duplicate-lane** *boolean*

Synopsis	Report 40G/100G PCS Duplicate Lane Marker alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">duplicate-lane</a> <i>boolean</i>
Tree	<a href="#">duplicate-lane</a>
Introduced	16.0.R1
Platforms	All

### **frame-not-locked** *boolean*

Synopsis	Report "not locked on the Ethernet framing sequence"
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">frame-not-locked</a> <i>boolean</i>
Tree	<a href="#">frame-not-locked</a>
Introduced	16.0.R2
Platforms	All

### **high-ber** *boolean*

Synopsis	Report High Bit Error Rate
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">high-ber</a> <i>boolean</i>
Tree	<a href="#">high-ber</a>
Introduced	16.0.R1
Platforms	All

### **local** *boolean*

Synopsis	Report local faults
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">report-alarm</a> <a href="#">local</a> <i>boolean</i>
Tree	<a href="#">local</a>
Introduced	16.0.R1
Platforms	All

**remote** *boolean*

Synopsis	Report remote faults
Context	<b>configure</b> port string ethernet report-alarm remote <i>boolean</i>
Tree	remote
Introduced	16.0.R1
Platforms	All

**signal-fail** *boolean*

Synopsis	Report Ethernet signal lost alarm
Context	<b>configure</b> port string ethernet report-alarm signal-fail <i>boolean</i>
Tree	signal-fail
Introduced	16.0.R1
Platforms	All

**rs-fec-mode** *keyword*

Synopsis	RS-FEC mode on the Ethernet port
Context	<b>configure</b> port string ethernet rs-fec-mode <i>keyword</i>
Tree	rs-fec-mode
Description	This command specifies the RS-FEC (Reed-Solomon Forward Error Correction) mode on the Ethernet port.  See "Forward Error Correction" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide</i> for more information about FEC settings.
Options	cl91-514-528, cl74, cl108
Introduced	16.0.R1
Platforms	All

**single-fiber** *boolean*

Synopsis	Enable packet gathering from a single fiber port
Context	<b>configure</b> port string ethernet single-fiber <i>boolean</i>
Tree	single-fiber
Description	When configured to <b>true</b> , this command enables packet gathering and redirection of IP packets from a single fiber (Rx) port of the Ethernet or SONET/SDH interface and

redistributes packets to other interfaces through static routes or policy-based forwarding. Traffic is no longer transmitted out of the port.

When configured to **false**, packet gathering is disabled.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## speed number

Synopsis	Ethernet port speed
Context	<b>configure</b> port string ethernet speed number
Tree	speed
Description	<p>This command configures the port speed for ports that support multiple speeds. This applies to the following:</p> <ul style="list-style-type: none"> <li>• Fast Ethernet when autonegotiation is not enabled</li> <li>• 10/100/1000 Mb/s Ethernet when autonegotiation is not enabled</li> <li>• 10/1G ports supporting 10G SFP+ or 1G SFP</li> <li>• 40/100G ports supporting QSFP28s on non connector-based MDAs</li> </ul> <p>If autonegotiation is enabled for the port, this command setting is ignored. Speed cannot be configured for ports that are part of a LAG.</p>
Range	10   100   1000   10000   25000   40000   50000   100000
Units	megabps
Introduced	16.0.R1
Platforms	All

## ssm

Synopsis	Enter the <b>ssm</b> context
Context	<b>configure</b> port string ethernet ssm
Tree	ssm
Description	<p>Commands in this context configure the Ethernet Synchronization Messaging Channel (ESMC) for the Ethernet port. The ESMC carries the Synchronization Status Message (SSM) code representing the quality level of the source of the frequency of the central clock of the node.</p>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the ESMC for the Ethernet port
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet ssm admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**code-type** *keyword*

Synopsis	Encoding of synchronization status messages
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet ssm code-type</b> <i>keyword</i>
Tree	<b>code-type</b>
Options	sonet, sdh
Default	sdh
Introduced	16.0.R1
Platforms	All

**esmc-tunnel** *boolean*

Synopsis	Tunnel ESMC frames in Epipe or VPLS services
Context	<b>configure</b> <b>port</b> <i>string</i> <b>ethernet ssm esmc-tunnel</b> <i>boolean</i>
Tree	<b>esmc-tunnel</b>
Description	<p>When configured to <b>true</b>, ESMC frames that are received into the Ethernet port can be tunneled in an Epipe or VPLS service. This is not recommended because it breaks the concepts inherent in Synchronous Ethernet, however it is required for compliance to MEF 6.1.1 EPL Option 2.</p> <p>When configured to <b>false</b>, ESMC frames are extracted upon reception by the port and are not tunneled through the service.</p>
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-dus** *boolean*

Synopsis	Force QL value transmitted be set to QL-DNU or QL-DUS
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">ssm</a> <a href="#">tx-dus</a> <i>boolean</i>
Tree	<a href="#">tx-dus</a>
Introduced	16.0.R1
Platforms	All

**symbol-monitor**

Synopsis	Enter the <b>symbol-monitor</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">symbol-monitor</a>
Tree	<a href="#">symbol-monitor</a>
Description	Commands in this context configure Ethernet symbol monitoring. Support for symbol monitoring is hardware dependent. An error message indicating that the port setting cannot be modified is presented when attempting to enable the feature or configure the individual commands on unsupported hardware.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of symbol monitoring on the port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">symbol-monitor</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**signal-degrade**

Synopsis	Enter the <b>signal-degrade</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">symbol-monitor</a> <a href="#">signal-degrade</a>
Tree	<a href="#">signal-degrade</a>
Description	Commands in this context specify the error rate at which to declare the SD condition on an Ethernet interface. The value represents M*10E-N, which is the ratio of errored

frames over the total frames received over the sliding window interval. The symbol errors on the interface are sampled once per second.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *number*

Synopsis	SD multiplier used to scale the symbol error ratio
Context	<b>configure</b> <a href="#">port string</a> <a href="#">ethernet symbol-monitor signal-degrade multiplier number</a>
Tree	<a href="#">multiplier</a>
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **threshold** *number*

Synopsis	SD threshold for symbol errors
Context	<b>configure</b> <a href="#">port string</a> <a href="#">ethernet symbol-monitor signal-degrade threshold number</a>
Tree	<a href="#">threshold</a>
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **signal-failure**

Synopsis	Enter the <b>signal-failure</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">ethernet symbol-monitor signal-failure</a>
Tree	<a href="#">signal-failure</a>
Description	Commands in this context specify the error rate at which to declare the SF condition on an Ethernet interface. The value represents $M \cdot 10E-N$ , which is the ratio of errored frames over the total frames received over the sliding window interval. The symbol errors on the interface are sampled once per second.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**multiplier** *number*

Synopsis	SF multiplier used to scale the symbol error ratio
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">symbol-monitor</a> <a href="#">signal-failure</a> <b>multiplier</b> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 9
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**threshold** *number*

Synopsis	SF threshold for symbol errors
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">symbol-monitor</a> <a href="#">signal-failure</a> <b>threshold</b> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**window-size** *number*

Synopsis	Sliding window size over which errors are measured
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">symbol-monitor</a> <b>window-size</b> <i>number</i>
Tree	<a href="#">window-size</a>
Description	This command specifies the sliding window size over which the symbols are sampled to detect SF or SD conditions.
Range	5 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**util-stats-interval** *number*

Synopsis	Interval to calculate utilization statistics
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <b>util-stats-interval</b> <i>number</i>

Tree	<a href="#">util-stats-interval</a>
Description	<p>This command configures the interval used to calculate the utilization statistics.</p> <p>Port utilization statistics are only available for physical Ethernet ports on a host system. These statistics are not available for the following:</p> <ul style="list-style-type: none"> <li>• Ethernet ports on an Ethernet satellite</li> <li>• Ethernet ports on a VSR</li> <li>• PXC ports</li> <li>• vsm-cca-xp ports</li> </ul>
Range	30 to 600
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	All

### **xgig** keyword

Synopsis	Ethernet port mode
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">xgig</a> <i>keyword</i>
Tree	<a href="#">xgig</a>
Description	<p>This command configures a 10 Gb/s interface to be in LAN or WAN mode.</p> <p>When configuring the port to be in WAN mode, certain SONET/SDH commands can be changed to reflect the SONET/SDH requirements for the port. When configuring the port to be in LAN mode, all SONET/SDH commands are pre-determined and not configurable.</p>
Options	lan, wan
Introduced	16.0.R1
Platforms	All

### **gnss**

Synopsis	Enter the <b>gnss</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">gnss</a>
Tree	<a href="#">gnss</a>
Description	Commands in this context configure GNSS port attributes.
Introduced	22.10.R1

Platforms 7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **antenna-cable-delay** *number*

Synopsis Signal delay resulting from GNSS antenna cable length

Context **configure** *port string gnss antenna-cable-delay number*

Tree [antenna-cable-delay](#)

Description This command configures the expected signal delay resulting from the length of the GNSS antenna cable.  
**Note:** 7750 SR FP5 GNSS platforms support a value range of 0 to 1000.

Range 0 to 32767

Units nanoseconds

Default 0

Introduced 22.10.R1

Platforms 7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **constellation**

Synopsis Enter the **constellation** context

Context **configure** *port string gnss constellation*

Tree [constellation](#)

Description Commands in this context configure the GNSS systems that are used by the GNSS receiver.

Introduced 22.10.R1

Platforms 7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **galileo** *boolean*

Synopsis Enable GNSS receiver to use GALILEO constellation type

Context **configure** *port string gnss constellation galileo boolean*

Tree [galileo](#)

Description When configured to **true**, this command enables the use of the European Galileo GNSS system.

Default false

Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **glonass** *boolean*

Synopsis	Enable GNSS receiver to use GLONASS constellation type
Context	<b>configure</b> port string <a href="#">gnss constellation glonass</a> <i>boolean</i>
Tree	<a href="#">glonass</a>
Description	When configured to <b>true</b> , the system enables the use of the Russian GLONASS GNSS system. <b>Note:</b> The <b>glonass</b> command is currently not supported.
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **gps** *boolean*

Synopsis	Enable GNSS receiver to use GPS constellation type
Context	<b>configure</b> port string <a href="#">gnss constellation gps</a> <i>boolean</i>
Tree	<a href="#">gps</a>
Description	When configured to <b>true</b> , this command enables the use of the American GPS GNSS system. When configured to <b>false</b> , this command disables the use of the American GPS GNSS system.
Default	true
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### **elevation-mask-angle** *number*

Synopsis	Minimum elevation mask angle
Context	<b>configure</b> port string <a href="#">gnss elevation-mask-angle</a> <i>number</i>
Tree	<a href="#">elevation-mask-angle</a>

Description	This command configures the elevation mask angle, which provides a method of filtering satellites used by the system.  Satellites with low elevation may provide degraded accuracy because of the long signal path through the atmosphere. Signals from satellites below the configured minimum satellite elevation are not used.  Nokia does not recommend configuring an elevation mask angle below 10.
Range	0 to 89
Units	degrees angle
Default	10
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

### hybrid-buffer-allocation

Synopsis	Enter the <b>hybrid-buffer-allocation</b> context
Context	<b>configure</b> port <i>string</i> hybrid-buffer-allocation
Tree	hybrid-buffer-allocation
Introduced	16.0.R1
Platforms	All

### egress-weight

Synopsis	Enter the <b>egress-weight</b> context
Context	<b>configure</b> port <i>string</i> hybrid-buffer-allocation egress-weight
Tree	egress-weight
Introduced	16.0.R1
Platforms	All

### access number

Synopsis	Access weight for the hybrid port
Context	<b>configure</b> port <i>string</i> hybrid-buffer-allocation egress-weight access <i>number</i>
Tree	access
Range	0 to 100
Default	50

Introduced	16.0.R1
Platforms	All

### **network number**

Synopsis	Access weight for the hybrid port
Context	<b>configure port string hybrid-buffer-allocation egress-weight network number</b>
Tree	<a href="#">network</a>
Range	0 to 100
Default	50
Introduced	16.0.R1
Platforms	All

### **ingress-weight**

Synopsis	Enter the <b>ingress-weight</b> context
Context	<b>configure port string hybrid-buffer-allocation ingress-weight</b>
Tree	<a href="#">ingress-weight</a>
Introduced	16.0.R1
Platforms	All

### **access number**

Synopsis	Access weight for the hybrid port
Context	<b>configure port string hybrid-buffer-allocation ingress-weight access number</b>
Tree	<a href="#">access</a>
Range	0 to 100
Default	50
Introduced	16.0.R1
Platforms	All

### **network number**

Synopsis	Access weight for the hybrid port
Context	<b>configure port string hybrid-buffer-allocation ingress-weight network number</b>

Tree	<a href="#">network</a>
Range	0 to 100
Default	50
Introduced	16.0.R1
Platforms	All

## modify-buffer-allocation

Synopsis	Enter the <b>modify-buffer-allocation</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">modify-buffer-allocation</a>
Tree	<a href="#">modify-buffer-allocation</a>
Description	Commands in this context to configure ingress and egress percentage of rate commands. These commands only apply to physical ports (for example, it does not work on APS or similar logical ports). The percentage of rate commands are used to define a percentage value that affects the amount of buffers used by ingress and egress port managed buffer space.
Introduced	16.0.R1
Platforms	All

## percentage-of-rate

Synopsis	Enter the <b>percentage-of-rate</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">modify-buffer-allocation</a> <a href="#">percentage-of-rate</a>
Tree	<a href="#">percentage-of-rate</a>
Description	Commands in this context increase or decrease the active bandwidth associated with the egress or ingress port that affects the amount of egress or ingress buffer space managed by the port. Changing a ports active bandwidth using the commands in this context are an effective means of artificially lowering the buffers managed by one egress or ingress port and giving them to the other egress or ingress ports on the same MDA.
Introduced	16.0.R1
Platforms	All

## egress *number*

Synopsis	Egress rate percentage
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">modify-buffer-allocation</a> <a href="#">percentage-of-rate</a> <a href="#">egress</a> <i>number</i>
Tree	<a href="#">egress</a>

Range	1 to 1000
Introduced	16.0.R1
Platforms	All

### **ingress** *number*

Synopsis	Ingress rate percentage
Context	<b>configure</b> <a href="#">port string</a> <a href="#">modify-buffer-allocation</a> <a href="#">percentage-of-rate</a> <b>ingress</b> <i>number</i>
Tree	<a href="#">ingress</a>
Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **monitor-agg-egress-queue-stats** *boolean*

Synopsis	Monitor aggregate queue statistics
Context	<b>configure</b> <a href="#">port string</a> <a href="#">monitor-agg-egress-queue-stats</a> <i>boolean</i>
Tree	<a href="#">monitor-agg-egress-queue-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **monitor-oper-group** *reference*

Synopsis	Operational group to monitor
Context	<b>configure</b> <a href="#">port string</a> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures the operational group to monitor the operational group state. The state of the operational group affects the state of this port. When the operational group is inactive, the state of the port goes down and powers off the port to signal to the CE that the connected port is not available.
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	22.7.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <i>port string</i> <b>network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <i>port string</i> <b>network egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	All

## pool [*name*] *string*

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure</b> <i>port string</i> <b>network egress pool</b> <i>string</i>
Tree	<b>pool</b>
Introduced	16.0.R1
Platforms	All

## [*name*] *string*

Synopsis	Pool name
Context	<b>configure</b> <i>port string</i> <b>network egress pool</b> <i>string</i>
Tree	<b>pool</b>
String Length	1 to 32
MD-CLI Default	default
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**amber-alarm-threshold** *number*

Synopsis	Threshold for the amber alarm on oversubscription
Context	<b>configure</b> <i>port string network egress pool string</i> <b>amber-alarm-threshold</b> <i>number</i>
Tree	<a href="#">amber-alarm-threshold</a>
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**red-alarm-threshold** *number*

Synopsis	Threshold for the red alarm on oversubscription
Context	<b>configure</b> <i>port string network egress pool string</i> <b>red-alarm-threshold</b> <i>number</i>
Tree	<a href="#">red-alarm-threshold</a>
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**resv-cbs**

Synopsis	Enter the <b>resv-cbs</b> context
Context	<b>configure</b> <i>port string network egress pool string</i> <b>resv-cbs</b>
Tree	<a href="#">resv-cbs</a>
Introduced	16.0.R1
Platforms	All

**amber-alarm-action**

Synopsis	Enter the <b>amber-alarm-action</b> context
Context	<b>configure</b> <i>port string network egress pool string</i> <b>resv-cbs</b> <b>amber-alarm-action</b>
Tree	<a href="#">amber-alarm-action</a>
Introduced	16.0.R1
Platforms	All

**max number**

Synopsis	Maximum percentage for reserved CBS of the pool
Context	<b>configure</b> port string network egress pool string resv-cbs amber-alarm-action max number
Tree	max
Description	<p>This command specifies the maximum percentage for the reserved CBS of the pool. The maximum reserved CBS must not be less than the value of the reserved CBS.</p> <p>To enable adaptive CBS sizing the <b>max</b>, <b>step</b>, and <b>cbs</b> commands must be configured. The <b>cbs</b> command must also be configured to a percentage other than the default value.</p> <p>When unconfigured, CBS adaptive sizing is not enabled.</p>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

**step number**

Synopsis	Step-size percentage for reserved CBS of the pool
Context	<b>configure</b> port string network egress pool string resv-cbs amber-alarm-action step number
Tree	step
Description	<p>This command specifies the step-size percentage for the reserved CBS of the pool.</p> <p>To enable adaptive CBS sizing the <b>max</b>, <b>step</b>, and <b>cbs</b> commands must be configured. The <b>cbs</b> command must also be configured to a percentage other than the default value.</p> <p>When unconfigured, CBS adaptive sizing is not enabled.</p>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

**cbs (number | keyword)**

Synopsis	Percentage of the pool buffer space reserved for CBS
Context	<b>configure</b> port string network egress pool string resv-cbs cbs (number   keyword)

Tree	<a href="#">cbs</a>
Range	0 to 100
Units	percent
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **slope-policy** *reference*

Synopsis	Policy for the RED slope and TAF values
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">network egress pool</a> <i>string</i> <a href="#">slope-policy</a> <i>reference</i>
Tree	<a href="#">slope-policy</a>
Reference	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group ID
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **otu**

Synopsis	Enable the <b>otu</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">otu</a>
Tree	<a href="#">otu</a>
Introduced	16.0.R1
Platforms	All

### **async-mapping** *boolean*

Synopsis	Allow asynchronous mapping of the payload inside OTU
Context	<b>configure</b> port <i>string</i> otu <b>async-mapping</b> <i>boolean</i>
Tree	<a href="#">async-mapping</a>
Introduced	16.0.R1
Platforms	All

### **fec** *keyword*

Synopsis	Forwarding Error Correction (FEC) encapsulation on port
Context	<b>configure</b> port <i>string</i> otu <b>fec</b> <i>keyword</i>
Tree	<a href="#">fec</a>
Options	none, g709, enhanced
Introduced	16.0.R1
Platforms	All

### **fine-granularity-ber**

Synopsis	Enter the <b>fine-granularity-ber</b> context
Context	<b>configure</b> port <i>string</i> otu <b>fine-granularity-ber</b>
Tree	<a href="#">fine-granularity-ber</a>
Introduced	16.0.R1
Platforms	All

### **signal-degrade**

Synopsis	Enter the <b>signal-degrade</b> context
Context	<b>configure</b> port <i>string</i> otu <b>fine-granularity-ber</b> <b>signal-degrade</b>
Tree	<a href="#">signal-degrade</a>
Introduced	16.0.R1
Platforms	All

### **clear**

Synopsis	Enter the <b>clear</b> context
----------	--------------------------------

Context	<b>configure</b> port <i>string</i> otu fine-granularity-ber signal-degrade clear
Tree	clear
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Multiplier of the SD clear threshold
Context	<b>configure</b> port <i>string</i> otu fine-granularity-ber signal-degrade clear multiplier <i>number</i>
Tree	multiplier
Range	10 to 99
Default	10
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	SD clear threshold
Context	<b>configure</b> port <i>string</i> otu fine-granularity-ber signal-degrade clear threshold <i>number</i>
Tree	threshold
Range	3 to 10
Default	8
Introduced	16.0.R1
Platforms	All

### **raise**

Synopsis	Enter the <b>raise</b> context
Context	<b>configure</b> port <i>string</i> otu fine-granularity-ber signal-degrade raise
Tree	raise
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Multiplier of the SD raise threshold
Context	<b>configure</b> port <i>string</i> otu <i>fine-granularity-ber</i> signal-degrade raise multiplier <i>number</i>
Tree	<a href="#">multiplier</a>
Range	10 to 99
Default	10
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	SD raise threshold
Context	<b>configure</b> port <i>string</i> otu <i>fine-granularity-ber</i> signal-degrade raise threshold <i>number</i>
Tree	<a href="#">threshold</a>
Range	3 to 9
Default	7
Introduced	16.0.R1
Platforms	All

### **signal-failure**

Synopsis	Enter the <b>signal-failure</b> context
Context	<b>configure</b> port <i>string</i> otu <i>fine-granularity-ber</i> signal-failure
Tree	<a href="#">signal-failure</a>
Introduced	16.0.R1
Platforms	All

### **clear**

Synopsis	Enter the <b>clear</b> context
Context	<b>configure</b> port <i>string</i> otu <i>fine-granularity-ber</i> signal-failure clear
Tree	<a href="#">clear</a>
Introduced	16.0.R1
Platforms	All

**multiplier number**

Synopsis	Threshold for the Multiplier of SD clear
Context	<b>configure</b> port string otu fine-granularity-ber signal-failure clear multiplier number
Tree	multiplier
Range	10 to 99
Default	10
Introduced	16.0.R1
Platforms	All

**threshold number**

Synopsis	Threshold for the Multiplier of SD clear
Context	<b>configure</b> port string otu fine-granularity-ber signal-failure clear threshold number
Tree	threshold
Range	3 to 9
Default	6
Introduced	16.0.R1
Platforms	All

**raise**

Synopsis	Enter the <b>raise</b> context
Context	<b>configure</b> port string otu fine-granularity-ber signal-failure raise
Tree	raise
Introduced	16.0.R1
Platforms	All

**multiplier number**

Synopsis	SF raise threshold
Context	<b>configure</b> port string otu fine-granularity-ber signal-failure raise multiplier number
Tree	multiplier
Range	10 to 99
Default	10

Introduced 16.0.R1  
Platforms All

### **threshold** *number*

Synopsis SF raise threshold  
Context **configure** port *string* otu *fine-granularity-ber* signal-failure raise threshold *number*  
Tree [threshold](#)  
Range 3 to 8  
Default 5  
Introduced 16.0.R1  
Platforms All

### **otu2-lan-data-rate** *keyword*

Synopsis Data rate for 10GE LAN OTU2 on the port  
Context **configure** port *string* otu otu2-lan-data-rate *keyword*  
Tree [otu2-lan-data-rate](#)  
Units gigabps  
Options 11.049, 11.096  
Introduced 16.0.R1  
Platforms All

### **path-monitoring**

Synopsis Enter the **path-monitoring** context  
Context **configure** port *string* otu [path-monitoring](#)  
Tree [path-monitoring](#)  
Introduced 16.0.R4  
Platforms All

### **trail-trace-identifier**

Synopsis Enter the **trail-trace-identifier** context  
Context **configure** port *string* otu [path-monitoring](#) [trail-trace-identifier](#)

Tree	<a href="#">trail-trace-identifier</a>
Introduced	16.0.R4
Platforms	All

### expected

Synopsis	Enter the <b>expected</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">expected</a>
Tree	<a href="#">expected</a>
Introduced	16.0.R4
Platforms	All

### auto-generated

Synopsis	Use the system generated TTI
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">expected</a> <a href="#">auto-generated</a>
Tree	<a href="#">auto-generated</a>
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

### bytes *string*

Synopsis	TTI as a sequence of bytes
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">expected</a> <a href="#">bytes</a> <a href="#">string</a>
Tree	<a href="#">bytes</a>
String Length	0 to 192
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

### string *string*

Synopsis	TTI as a sequence of printable ASCII
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">expected</a> <a href="#">string</a> <a href="#">string</a>

Tree	<a href="#">string</a>
String Length	0 to 64
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

### **mismatch-reaction** *keyword*

Synopsis	Reaction to a mismatched TTI
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">mismatch-reaction</a> <i>keyword</i>
Tree	<a href="#">mismatch-reaction</a>
Options	squelch-rx
Introduced	16.0.R4
Platforms	All

### **transmit**

Synopsis	Enter the <b>transmit</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a>
Tree	<a href="#">transmit</a>
Introduced	16.0.R4
Platforms	All

### **auto-generated**

Synopsis	Use the system generated TTI
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a> <a href="#">auto-generated</a>
Tree	<a href="#">auto-generated</a>
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

**bytes** *string*

Synopsis	TTI as a sequence of bytes
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a> <a href="#">bytes</a> <i>string</i>
Tree	<a href="#">bytes</a>
String Length	0 to 192
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

**string** *string*

Synopsis	TTI as a sequence of printable ASCII
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">path-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a> <a href="#">string</a> <i>string</i>
Tree	<a href="#">string</a>
String Length	0 to 64
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

**payload-structure-identifier**

Synopsis	Enter the <b>payload-structure-identifier</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">payload-structure-identifier</a>
Tree	<a href="#">payload-structure-identifier</a>
Introduced	16.0.R4
Platforms	All

**payload**

Synopsis	Enter the <b>payload</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">payload-structure-identifier</a> <a href="#">payload</a>
Tree	<a href="#">payload</a>
Introduced	16.0.R4
Platforms	All

**expected** *keyword*

Synopsis	Configure the port's PSI payload expected parameters.
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">payload-structure-identifier</a> <a href="#">payload</a> <b>expected</b> <i>keyword</i>
Tree	<a href="#">expected</a>
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82, reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Default	auto
Introduced	16.0.R4
Platforms	All

**mismatch-reaction** *keyword*

Synopsis	Reaction to a mismatched payload
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">payload-structure-identifier</a> <a href="#">payload</a> <b>mismatch-reaction</b> <i>keyword</i>
Tree	<a href="#">mismatch-reaction</a>
Options	squelch-rx
Introduced	16.0.R4
Platforms	All

**transmit** *keyword*

Synopsis	Transmit payload type
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">payload-structure-identifier</a> <a href="#">payload</a> <b>transmit</b> <i>keyword</i>
Tree	<a href="#">transmit</a>
Options	auto, experimental, asynchronous-cbr, bit-synchronous-cbr, atm, gfp, vcat, gmp, bit-stream-octet, bit-stream-non-octet, odu-mux, reserved-80, reserved-81, reserved-82, reserved-83, reserved-84, reserved-85, reserved-86, reserved-87, reserved-88, reserved-89, reserved-8a, reserved-8b, reserved-8c, reserved-8d, reserved-8e, reserved-8f, null-test, prbs-test
Default	auto
Introduced	16.0.R4
Platforms	All

## report-alarm

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Introduced	16.0.R1
Platforms	All

## fec-fail *boolean*

Synopsis	Report FEC mode mismatch alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">fec-fail</a> <i>boolean</i>
Tree	<a href="#">fec-fail</a>
Default	false
Introduced	16.0.R1
Platforms	All

## fec-sd *boolean*

Synopsis	Report Signal Degrade alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">fec-sd</a> <i>boolean</i>
Tree	<a href="#">fec-sd</a>
Default	false
Introduced	16.0.R1
Platforms	All

## fec-sf *boolean*

Synopsis	Report Signal Fail alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">fec-sf</a> <i>boolean</i>
Tree	<a href="#">fec-sf</a>
Default	true
Introduced	16.0.R1
Platforms	All

**fec-uncorr** *boolean*

Synopsis	Report one or more Uncorrectable FEC errors alarm
Context	<b>configure</b> <i>port string otu report-alarm fec-uncorr boolean</i>
Tree	<i>fec-uncorr</i>
Default	false
Introduced	16.0.R1
Platforms	All

**loc** *boolean*

Synopsis	Report OTU alarm for loss of clock
Context	<b>configure</b> <i>port string otu report-alarm loc boolean</i>
Tree	<i>loc</i>
Default	true
Introduced	16.0.R1
Platforms	All

**lof** *boolean*

Synopsis	Report alarm for the loss of OTU framing
Context	<b>configure</b> <i>port string otu report-alarm lof boolean</i>
Tree	<i>lof</i>
Default	true
Introduced	16.0.R1
Platforms	All

**lom** *boolean*

Synopsis	Report alarm for the loss of multi-frame
Context	<b>configure</b> <i>port string otu report-alarm lom boolean</i>
Tree	<i>lom</i>
Default	true
Introduced	16.0.R1
Platforms	All

**los** *boolean*

Synopsis	Report alarm for the loss of signal transitions on data
Context	<b>configure</b> <i>port string otu report-alarm los boolean</i>
Tree	<a href="#">los</a>
Default	true
Introduced	16.0.R1
Platforms	All

**odu-ais** *boolean*

Synopsis	Report ODU Alarm Indication Signal alarm
Context	<b>configure</b> <i>port string otu report-alarm odu-ais boolean</i>
Tree	<a href="#">odu-ais</a>
Default	false
Introduced	16.0.R1
Platforms	All

**odu-bdi** *boolean*

Synopsis	Report PM Backward Defect Indication alarm
Context	<b>configure</b> <i>port string otu report-alarm odu-bdi boolean</i>
Tree	<a href="#">odu-bdi</a>
Default	false
Introduced	16.0.R1
Platforms	All

**odu-lck** *boolean*

Synopsis	Report ODU Locked alarm
Context	<b>configure</b> <i>port string otu report-alarm odu-lck boolean</i>
Tree	<a href="#">odu-lck</a>
Default	false
Introduced	16.0.R1
Platforms	All

**odu-oci** *boolean*

Synopsis	Report ODU Open Connection Indication alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">odu-oci</a> <i>boolean</i>
Tree	<a href="#">odu-oci</a>
Default	false
Introduced	16.0.R1
Platforms	All

**odu-tim** *boolean*

Synopsis	Report PM Trace ID Mismatch alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">odu-tim</a> <i>boolean</i>
Tree	<a href="#">odu-tim</a>
Default	false
Introduced	16.0.R1
Platforms	All

**opu-plm** *boolean*

Synopsis	Report PSI Payload Type Mismatch alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">opu-plm</a> <i>boolean</i>
Tree	<a href="#">opu-plm</a>
Default	false
Introduced	16.0.R1
Platforms	All

**otu-ais** *boolean*

Synopsis	Report OTU Alarm Indication Signal alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">otu-ais</a> <i>boolean</i>
Tree	<a href="#">otu-ais</a>
Default	false
Introduced	16.0.R1
Platforms	All

**otu-bdi** *boolean*

Synopsis	Report SM Backward Defect Indication alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">otu-bdi</a> <i>boolean</i>
Tree	<a href="#">otu-bdi</a>
Default	true
Introduced	16.0.R1
Platforms	All

**otu-ber-sd** *boolean*

Synopsis	Report SM Signal Degrade alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">otu-ber-sd</a> <i>boolean</i>
Tree	<a href="#">otu-ber-sd</a>
Default	false
Introduced	16.0.R1
Platforms	All

**otu-ber-sf** *boolean*

Synopsis	Report SM Signal Fail alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">otu-ber-sf</a> <i>boolean</i>
Tree	<a href="#">otu-ber-sf</a>
Default	true
Introduced	16.0.R1
Platforms	All

**otu-biae** *boolean*

Synopsis	Report SM Backward Incoming Alignment Error alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">report-alarm</a> <a href="#">otu-biae</a> <i>boolean</i>
Tree	<a href="#">otu-biae</a>
Default	false
Introduced	16.0.R1
Platforms	All

**otu-iae** *boolean*

Synopsis	Report SM Incoming Alignment Error alarm
Context	<b>configure</b> <i>port string otu report-alarm otu-iae boolean</i>
Tree	<a href="#">otu-iae</a>
Default	false
Introduced	16.0.R1
Platforms	All

**otu-tim** *boolean*

Synopsis	Report SM Trace ID Mismatch alarm
Context	<b>configure</b> <i>port string otu report-alarm otu-tim boolean</i>
Tree	<a href="#">otu-tim</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sd-threshold** *number*

Synopsis	Error rate at which to declare signal degrade condition
Context	<b>configure</b> <i>port string otu sd-threshold number</i>
Tree	<a href="#">sd-threshold</a>
Range	5 to 9
Default	7
Introduced	16.0.R1
Platforms	All

**section-monitoring**

Synopsis	Enter the <b>section-monitoring</b> context
Context	<b>configure</b> <i>port string otu section-monitoring</i>
Tree	<a href="#">section-monitoring</a>
Introduced	16.0.R4
Platforms	All

## trail-trace-identifier

Synopsis	Enter the <b>trail-trace-identifier</b> context
Context	<b>configure</b> port <i>string</i> otu section-monitoring trail-trace-identifier
Tree	trail-trace-identifier
Introduced	16.0.R4
Platforms	All

## expected

Synopsis	Enter the <b>expected</b> context
Context	<b>configure</b> port <i>string</i> otu section-monitoring trail-trace-identifier expected
Tree	expected
Introduced	16.0.R4
Platforms	All

## auto-generated

Synopsis	Use the system generated TTI
Context	<b>configure</b> port <i>string</i> otu section-monitoring trail-trace-identifier expected auto-generated
Tree	auto-generated
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

## bytes *string*

Synopsis	TTI as a sequence of bytes
Context	<b>configure</b> port <i>string</i> otu section-monitoring trail-trace-identifier expected bytes <i>string</i>
Tree	bytes
String Length	0 to 192
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

**string** *string*

Synopsis	TTI as a sequence of printable ASCII
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">section-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">expected</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	0 to 64
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	All

**mismatch-reaction** *keyword*

Synopsis	Reaction to a mismatched TTI
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">section-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">mismatch-reaction</a> <a href="#">keyword</a>
Tree	<a href="#">mismatch-reaction</a>
Options	squelch-rx
Introduced	16.0.R4
Platforms	All

**transmit**

Synopsis	Enter the <b>transmit</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">section-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a>
Tree	<a href="#">transmit</a>
Introduced	16.0.R4
Platforms	All

**auto-generated**

Synopsis	Use the system generated TTI
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">otu</a> <a href="#">section-monitoring</a> <a href="#">trail-trace-identifier</a> <a href="#">transmit</a> <a href="#">auto-generated</a>
Tree	<a href="#">auto-generated</a>
Notes	The following elements are part of a choice: <b>auto-generated</b> , <b>bytes</b> , or <b>string</b> .
Introduced	16.0.R4

Platforms All

### **bytes** *string*

Synopsis TTI as a sequence of bytes

Context **configure** [port](#) [string](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) [transmit](#) **bytes** *string*

Tree [bytes](#)

String Length 0 to 192

Notes The following elements are part of a choice: **auto-generated**, **bytes**, or **string**.

Introduced 16.0.R4

Platforms All

### **string** *string*

Synopsis TTI as a sequence of printable ASCII

Context **configure** [port](#) [string](#) [otu](#) [section-monitoring](#) [trail-trace-identifier](#) [transmit](#) **string** *string*

Tree [string](#)

String Length 0 to 64

Notes The following elements are part of a choice: **auto-generated**, **bytes**, or **string**.

Introduced 16.0.R4

Platforms All

### **sf-sd-method** *keyword*

Synopsis Method used to determine the SF and SD alarms

Context **configure** [port](#) [string](#) [otu](#) **sf-sd-method** *keyword*

Tree [sf-sd-method](#)

Options fec, bip8

Default fec

Introduced 16.0.R1

Platforms All

### **sf-threshold** *number*

Synopsis Error rate at which to declare signal fail condition

Context	<b>configure port string otu sf-threshold number</b>
Tree	<a href="#">sf-threshold</a>
Range	3 to 6
Default	5
Introduced	16.0.R1
Platforms	All

## sonet-sdh

Synopsis	Enter the <b>sonet-sdh</b> context
Context	<b>configure port string sonet-sdh</b>
Tree	<a href="#">sonet-sdh</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## clock-source *keyword*

Synopsis	Clock used for transmitted data
Context	<b>configure port string sonet-sdh clock-source keyword</b>
Tree	<a href="#">clock-source</a>
Options	loop-timed, node-timed
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## framing *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SONET or SDH framing
Context	<b>configure port string sonet-sdh framing keyword</b>
Tree	<a href="#">framing</a>
Options	sonet, sdh
Default	sonet
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **group** [group-index] *string*

Synopsis Enter the **group** list instance  
 Context **configure** port *string* sonet-sdh group *string*  
 Tree [group](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[group-index]** *string*

Synopsis Components making up the specified SONET/SDH path  
 Context **configure** port *string* sonet-sdh group *string*  
 Tree [group](#)  
 Notes This element is part of a list key.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **payload** *keyword*

Synopsis SONET/SDH group payload  
 Context **configure** port *string* sonet-sdh group *string* payload *keyword*  
 Tree [payload](#)  
 Options vt15, vt2, tu3  
 Default tu3  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hold-time**

Synopsis Enter the **hold-time** context  
 Context **configure** port *string* sonet-sdh hold-time  
 Tree [hold-time](#)  
 Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **down** *number*

Synopsis Hold timer for link down event dampening  
 Context **configure** *port string sonet-sdh hold-time down number*  
 Tree [down](#)  
 Range 0 to 100  
 Units deciseconds  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **up** *number*

Synopsis Hold timer for link up event dampening  
 Context **configure** *port string sonet-sdh hold-time up number*  
 Tree [up](#)  
 Range 0 to 100  
 Units deciseconds  
 Default 5  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **loopback** *keyword*

Synopsis Loopback to activate on SONET port  
 Context **configure** *port string sonet-sdh loopback keyword*  
 Tree [loopback](#)  
 Options line, internal  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **path** [[path-index](#)] *string*

Synopsis Enter the **path** list instance

---

Context	<b>configure port string sonet-sdh path string</b>
Tree	<a href="#">path</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[path-index] string**

Synopsis	SONET/SDH path index
Context	<b>configure port string sonet-sdh path string</b>
Tree	<a href="#">path</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state keyword**

Synopsis	Administrative state of the SONET/SDH path
Context	<b>configure port string sonet-sdh path string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**crc number**

Synopsis	Cyclic redundancy check
Context	<b>configure port string sonet-sdh path string crc number</b>
Tree	<a href="#">crc</a>
Range	16   32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**port-scheduler-policy**

Synopsis	Enter the <b>port-scheduler-policy</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">egress</a> <a href="#">port-scheduler-policy</a>
Tree	<a href="#">port-scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**level** [[priority-level](#)] *number*

Synopsis	Enter the <b>level</b> list instance
----------	--------------------------------------

Context	<b>configure</b> <i>port string sonet-sdh path string egress port-scheduler-policy overrides level number</i>
Tree	<a href="#">level</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[priority-level]** *number*

Synopsis	Port priority levels override
Context	<b>configure</b> <i>port string sonet-sdh path string egress port-scheduler-policy overrides level number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <i>port string sonet-sdh path string egress port-scheduler-policy overrides level number percent-rate</i>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis	CIR for the priority level
Context	<b>configure</b> <i>port string sonet-sdh path string egress port-scheduler-policy overrides level number percent-rate cir decimal-number</i>
Tree	<a href="#">cir</a>
Range	0 to 100
Units	percent
Default	100

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis	PIR for the priority level
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy overrides level <i>number</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis PIR for the priority level

Context **configure** port *string* sonet-sdh path *string* egress port-scheduler-policy overrides level *number* rate pir (*number* | *keyword*)

Tree pir

Range 1 to 3200000000

Units kilobps

Options max

Default max

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rate**

Synopsis Enter the **max-rate** context

Context **configure** port *string* sonet-sdh path *string* egress port-scheduler-policy overrides max-rate

Tree max-rate

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate** *decimal-number*

Synopsis PIR

Context **configure** port *string* sonet-sdh path *string* egress port-scheduler-policy overrides max-rate percent-rate *decimal-number*

Tree percent-rate

Range 0.01 to 100

Units percent

Default 100

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rate** (*number* | *keyword*)

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy overrides max-rate rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policy-name** *reference*

Synopsis	Port egress scheduler policy name
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	<b>configure</b> qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**load-balancing-algorithm** *keyword*

Synopsis	Load balancing algorithm
Context	<b>configure</b> port <i>string</i> sonet-sdh path <i>string</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address for the SONET/SDH path
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">mac-address string</a>
Tree	<a href="#">mac-address</a>
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation port mode for the SONET/SDH path
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">mode keyword</a>
Tree	<a href="#">mode</a>
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mtu** *number*

Synopsis	Maximum payload MTU size
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">mtu number</a>
Tree	<a href="#">mtu</a>
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">sonet-sdh path string</a> <a href="#">network</a>
Tree	<a href="#">network</a>

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **accounting-policy** *reference*

Synopsis Accounting policy  
 Context **configure** *port string sonet-sdh path string network accounting-policy reference*  
 Tree [accounting-policy](#)  
 Reference **configure** *log accounting-policy number*  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-stats** *boolean*

Synopsis Collect accounting and statistical data  
 Context **configure** *port string sonet-sdh path string network collect-stats boolean*  
 Tree [collect-stats](#)  
 Default false  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queue-policy** *reference*

Synopsis Queue policy on the SONET/SDH network path  
 Context **configure** *port string sonet-sdh path string network queue-policy reference*  
 Tree [queue-policy](#)  
 Reference **configure** *qos network-queue string*  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **payload** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

---

Synopsis	SONET/SDH path payload
Context	<b>configure</b> port string sonet-sdh path string payload keyword
Tree	payload
Options	sts3, tug3, vt15, vt2, ds3, e3, ds1, e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### report-alarm

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> port string sonet-sdh path string report-alarm
Tree	report-alarm
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### pais boolean

Synopsis	Report path alarm indication signal errors
Context	<b>configure</b> port string sonet-sdh path string report-alarm pais boolean
Tree	pais
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### plcd boolean

Synopsis	Report path loss of code group delineation errors
Context	<b>configure</b> port string sonet-sdh path string report-alarm plcd boolean
Tree	plcd
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**plop** *boolean*

Synopsis	Report path loss of pointer errors as a trap
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">path</a> <i>string</i> <a href="#">report-alarm</a> <a href="#">plop</a> <i>boolean</i>
Tree	<a href="#">plop</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pplm** *boolean*

Synopsis	Report a path payload mismatch trap
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">path</a> <i>string</i> <a href="#">report-alarm</a> <a href="#">pplm</a> <i>boolean</i>
Tree	<a href="#">pplm</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**prdi** *boolean*

Synopsis	Report path remote defect indication errors
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">path</a> <i>string</i> <a href="#">report-alarm</a> <a href="#">prdi</a> <i>boolean</i>
Tree	<a href="#">prdi</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**prei** *boolean*

Synopsis	Report a path error condition as a result of b3 error
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">path</a> <i>string</i> <a href="#">report-alarm</a> <a href="#">prei</a> <i>boolean</i>
Tree	<a href="#">prei</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **puneq** *boolean*

Synopsis	Report path unequipped errors
Context	<b>configure</b> port string sonet-sdh path string report-alarm puneq boolean
Tree	puneq
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scramble** *boolean*

Synopsis	Enable SONET/SDH payload scrambling
Context	<b>configure</b> port string sonet-sdh path string scramble boolean
Tree	scramble
Description	When configured to <b>true</b> , the SONET/SDH frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking.  When configured to <b>false</b> , the strings of all 1s or all 0s are continuous.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **signal-label** *string*

Synopsis	C2 byte value that communicates the payload type
Context	<b>configure</b> port string sonet-sdh path string signal-label string
Tree	signal-label
String Length	1 to 4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **trace-string** (*keyword* | *string*)

Synopsis	J1 path-trace string that identifies the circuit
Context	<b>configure</b> port string sonet-sdh path string trace-string ( <i>keyword</i>   <i>string</i> )
Tree	trace-string

---

String Length	0 to 62
Options	zeros
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## report-alarm

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">sonet-sdh</a> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## lais *boolean*

Synopsis	Report Line Indication Signal Errors alarm
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">sonet-sdh</a> <a href="#">report-alarm</a> <a href="#">lais</a> <i>boolean</i>
Tree	<a href="#">lais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## lb2er-sd *boolean*

Synopsis	Report line and section alarms for SONET/SDH ports
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">sonet-sdh</a> <a href="#">report-alarm</a> <a href="#">lb2er-sd</a> <i>boolean</i>
Tree	<a href="#">lb2er-sd</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## lb2er-sf *boolean*

Synopsis	Report alarm line signal failure BER errors
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">sonet-sdh</a> <a href="#">report-alarm</a> <a href="#">lb2er-sf</a> <i>boolean</i>

Tree	<a href="#">lb2er-sf</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**loc boolean**

Synopsis	Report alarm for a loss of clock
Context	<b>configure</b> <a href="#">port string sonet-sdh report-alarm loc boolean</a>
Tree	<a href="#">loc</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**lrdi boolean**

Synopsis	Report Line Remote Defect Indication Errors alarm
Context	<b>configure</b> <a href="#">port string sonet-sdh report-alarm lrdi boolean</a>
Tree	<a href="#">lrdi</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**lrei boolean**

Synopsis	Report alarm for a line error condition
Context	<b>configure</b> <a href="#">port string sonet-sdh report-alarm lrei boolean</a>
Tree	<a href="#">lrei</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**slof boolean**

Synopsis	Report alarm for section loss of frame errors
----------	---

---

Context	<b>configure port string sonet-sdh report-alarm slof boolean</b>
Tree	<b>slof</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **slos boolean**

Synopsis	Report alarm for section loss of signal error on send
Context	<b>configure port string sonet-sdh report-alarm slos boolean</b>
Tree	<b>slos</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ss1f boolean**

Synopsis	Report alarm for section synchronization failure
Context	<b>configure port string sonet-sdh report-alarm ss1f boolean</b>
Tree	<b>ss1f</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sd-threshold number**

Synopsis	Threshold for line signal failure BER
Context	<b>configure port string sonet-sdh sd-threshold number</b>
Tree	<b>sd-threshold</b>
Range	3 to 9
Default	6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## section-trace

Synopsis	Enter the <b>section-trace</b> context
Context	<b>configure</b> port <i>string</i> sonet-sdh section-trace
Tree	section-trace
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## byte *string*

Synopsis	Section trace bytes in the SONET section header
Context	<b>configure</b> port <i>string</i> sonet-sdh section-trace byte <i>string</i>
Tree	byte
String Length	1 to 4
Default	1
Notes	The following elements are part of a choice: <b>byte</b> , <b>increment-z0</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## increment-z0

Synopsis	Configure incrementing STM ID instead of a static value
Context	<b>configure</b> port <i>string</i> sonet-sdh section-trace increment-z0
Tree	increment-z0
Notes	The following elements are part of a choice: <b>byte</b> , <b>increment-z0</b> , or <b>string</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## string *string*

Synopsis	Text string that identifies the section
Context	<b>configure</b> port <i>string</i> sonet-sdh section-trace string <i>string</i>
Tree	string
String Length	0 to 16
Notes	The following elements are part of a choice: <b>byte</b> , <b>increment-z0</b> , or <b>string</b> .

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sf-threshold** *number*

Synopsis	Threshold for line signal failure BER
Context	<b>configure</b> <i>port string sonet-sdh sf-threshold number</i>
Tree	<a href="#">sf-threshold</a>
Range	3 to 6
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **single-fiber** *boolean*

Synopsis	Allow packet gathering and redirection from single port
Context	<b>configure</b> <i>port string sonet-sdh single-fiber boolean</i>
Tree	<a href="#">single-fiber</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **speed** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SONET/SDH port speed
Context	<b>configure</b> <i>port string sonet-sdh speed keyword</i>
Tree	<a href="#">speed</a>
Options	oc3, oc12, oc48, oc192, oc768, oc1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**suppress-low-order-alarms** *boolean*

Synopsis	Suppress low order alarms
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">suppress-low-order-alarms</a> <i>boolean</i>
Tree	<a href="#">suppress-low-order-alarms</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-dus** *boolean*

Synopsis	Force the QL value to be set to QL-DUS/QL-DNU
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">sonet-sdh</a> <a href="#">tx-dus</a> <i>boolean</i>
Tree	<a href="#">tx-dus</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tdm**

Synopsis	Enter the <b>tdm</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm</a>
Tree	<a href="#">tdm</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**buildout** *keyword*

Synopsis	Line buildout for physical DS1/DS3 ports
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm</a> <a href="#">buildout</a> <i>keyword</i>
Tree	<a href="#">buildout</a>
Options	short, long
Default	short
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**ds1** [[ds1-index](#)] *string*

Synopsis	Enter the <b>ds1</b> list instance
Context	<b>configure port string tdm ds1 string</b>
Tree	<a href="#">ds1</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[ds1-index]** *string*

Synopsis	DS-1 channel ID
Context	<b>configure port string tdm ds1 string</b>
Tree	<a href="#">ds1</a>
MD-CLI	physical
Default	
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**admin-state** *keyword*

Synopsis	Administrative state of the DS1 channel
Context	<b>configure port string tdm ds1 string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**ber-threshold**

Synopsis	Enter the <b>ber-threshold</b> context
Context	<b>configure port string tdm ds1 string ber-threshold</b>
Tree	<a href="#">ber-threshold</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **signal-degrade** *number*

Synopsis BER signal degradation threshold  
 Context **configure** port *string* tdm ds1 *string* ber-threshold signal-degrade *number*  
 Tree [signal-degrade](#)  
 Range 1 | 5 | 10 | 50 | 100  
 Default 5  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **signal-failure** *number*

Synopsis BER signal failure threshold  
 Context **configure** port *string* tdm ds1 *string* ber-threshold signal-failure *number*  
 Tree [signal-failure](#)  
 Range 1 | 5 | 10 | 50 | 100  
 Default 50  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **channel-group** [[ds0-index](#)] *number*

Synopsis Enter the **channel-group** list instance  
 Context **configure** port *string* tdm ds1 *string* channel-group *number*  
 Tree [channel-group](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **[ds0-index]** *number*

Synopsis Channel group ID  
 Context **configure** port *string* tdm ds1 *string* channel-group *number*  
 Tree [channel-group](#)

Range	1 to 24
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **admin-state** *keyword*

Synopsis	Administrative state of the DS1 channel group
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 160
Default	DS0GRP
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## port-scheduler-policy

Synopsis	Enter the <b>port-scheduler-policy</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy
Tree	port-scheduler-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## level [*priority-level*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## [*priority-level*] *number*

Synopsis	Port priority levels override
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## cir decimal-number

Synopsis	CIR for the priority level
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate cir decimal-number
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pir decimal-number

Synopsis	PIR for the priority level
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**cir** (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**pir** (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**max-rate**

Synopsis	Enter the <b>max-rate</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**percent-rate** *decimal-number*

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**rate** (*number* | *keyword*)

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides max-rate rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**policy-name** *reference*

Synopsis	Port egress scheduler policy name
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy <i>policy-name reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**encap-type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> encap-type <i>keyword</i>
Tree	<a href="#">encap-type</a>
Options	cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**idle-payload-fill**

Synopsis	Enter the <b>idle-payload-fill</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill
Tree	<a href="#">idle-payload-fill</a>
Description	<p>Commands in this context configure the data pattern to be transmitted when the circuit emulation service is not operational or temporarily experiences under-run conditions.</p> <p>This command is only valid for CESoPSN and CESoPSN CAS circuit emulation services. It is blocked with a warning for unstructured (SATOP) circuit emulation services.</p>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## all-ones

Synopsis	Transmit 8-bit value to be 11111111
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pattern *number*

Synopsis	User-defined pattern to be transmitted
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-payload-fill pattern <i>number</i>
Tree	pattern
Range	0 to 255
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## idle-signal-fill

Synopsis	Enter the <b>idle-signal-fill</b> context
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill
Tree	idle-signal-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## all-ones

Synopsis	Transmit 8-bit value as 11111111
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**pattern** *number*

Synopsis	User-defined pattern to be transmitted
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> idle-signal-fill <b>pattern</b> <i>number</i>
Tree	<b>pattern</b>
Range	0 to 15
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**load-balancing-algorithm** *keyword*

Synopsis	Load balancing algorithm to be used on the port
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> load-balancing-algorithm <i>keyword</i>
Tree	<b>load-balancing-algorithm</b>
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mac-address** *string*

Synopsis	MAC address for the port
Context	<b>configure</b> port <i>string</i> tdm ds1 <i>string</i> channel-group <i>number</i> mac-address <i>string</i>
Tree	<b>mac-address</b>
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode for the TDM channel group
Context	<b>configure</b> port string tdm ds1 string channel-group number mode keyword
Tree	mode
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### mtu number

Synopsis	Maximum payload MTU size for the port
Context	<b>configure</b> port string tdm ds1 string channel-group number mtu number
Tree	mtu
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> port string tdm ds1 string channel-group number network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### accounting-policy reference

Synopsis	Accounting policy
Context	<b>configure</b> port string tdm ds1 string channel-group number network accounting-policy reference
Tree	accounting-policy
Reference	<b>configure</b> log accounting-policy number
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">network</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**queue-policy** *reference*

Synopsis	Queue policy on the TDM DS0 network channel group
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">network</a> <a href="#">queue-policy</a> <i>reference</i>
Tree	<a href="#">queue-policy</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">network-queue</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**speed** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Speed of the DS0 channels in the channel group
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">speed</a> <i>number</i>
Tree	<a href="#">speed</a>
Range	56   64
Default	64
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**timeslot** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Timeslot for the channel group
Context	<b>configure</b> <i>port string tdm ds1 string channel-group number timeslot number</i>
Tree	<a href="#">timeslot</a>
Range	1 to 24
Max.	24
Instances	
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**clock-source** *keyword*

Synopsis	Clock source for data transmission
Context	<b>configure</b> <i>port string tdm ds1 string clock-source keyword</i>
Tree	<a href="#">clock-source</a>
Description	This command specifies the clock source to use for the link transmit timing. The options are to use the locally recovered clock from the line's receive data stream, the node central reference, or an adaptively recovered clock using the received packets.
Options	loop-timed, node-timed, adaptive, differential
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**framing** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing for the DS1 channel
Context	<b>configure</b> <i>port string tdm ds1 string framing keyword</i>
Tree	<a href="#">framing</a>
Options	extended-super-frame, super-frame, ds1-unframed
Default	extended-super-frame

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **loopback** *keyword*

Synopsis Loopback mode for the port  
Context **configure** port string tdm ds1 string loopback keyword  
Tree loopback  
Options line, internal, fdl-ansi, fdl-bellcore, payload-ansi, inband-ansi, inband-bellcore  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **remote-loop-respond** *boolean*

Synopsis Respond to requests for remote loopbacks  
Context **configure** port string tdm ds1 string remote-loop-respond boolean  
Tree remote-loop-respond  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **report-alarm**

Synopsis Enter the **report-alarm** context  
Context **configure** port string tdm ds1 string report-alarm  
Tree report-alarm  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ais** *boolean*

Synopsis Report alarm indication signal errors  
Context **configure** port string tdm ds1 string report-alarm ais boolean  
Tree ais  
Default true

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ber-sd** *boolean*

Synopsis Report the BER that specifies signal degradation  
Context **configure** port string tdm ds1 string report-alarm ber-sd boolean  
Tree [ber-sd](#)  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ber-sf** *boolean*

Synopsis Report the BER that species signal failure  
Context **configure** port string tdm ds1 string report-alarm ber-sf boolean  
Tree [ber-sf](#)  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **looped** *boolean*

Synopsis Report looped packet errors  
Context **configure** port string tdm ds1 string report-alarm looped boolean  
Tree [looped](#)  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **los** *boolean*

Synopsis Report loss of signal errors  
Context **configure** port string tdm ds1 string report-alarm los boolean  
Tree [los](#)

Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**oof** *boolean*

Synopsis	Report out-of-frame errors
Context	<b>configure</b> port string tdm ds1 string report-alarm oof boolean
Tree	oof
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**rai** *boolean*

Synopsis	Report resource availability indicator events
Context	<b>configure</b> port string tdm ds1 string report-alarm rai boolean
Tree	rai
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**signal-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal mode on the channel
Context	<b>configure</b> port string tdm ds1 string signal-mode keyword
Tree	signal-mode
Description	This command configures the signal mode on the channel. When enabled, it uses routing information to direct the payload of voice or data to its destination.
Options	channel-associated-signaling
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ds3** [[ds3-index](#)] *string*

Synopsis Enter the **ds3** list instance  
Context **configure** [port](#) *string* [tdm ds3](#) *string*  
Tree [ds3](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **[ds3-index]** *string*

Synopsis TDM DS3 index  
Context **configure** [port](#) *string* [tdm ds3](#) *string*  
Tree [ds3](#)  
MD-CLI physical  
Default  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **admin-state** *keyword*

Synopsis Administrative state of the DS3 port  
Context **configure** [port](#) *string* [tdm ds3](#) *string* [admin-state](#) *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**channelized** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Channelization of the DS3
Context	<b>configure</b> port string tdm ds3 string channelized keyword
Tree	channelized
Options	ds1, e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**clock-source** *keyword*

Synopsis	Clock for data transmission
Context	<b>configure</b> port string tdm ds3 string clock-source keyword
Tree	clock-source
Options	loop-timed, node-timed
Default	node-timed
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**crc** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precision of the cyclic redundancy check (CRC)
Context	<b>configure</b> port string tdm ds3 string crc number
Tree	crc
Range	16   32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port string tdm ds3 string description string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Default	DS3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress</a>
Tree	<a href="#">egress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **port-scheduler-policy**

Synopsis	Enter the <b>port-scheduler-policy</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress port-scheduler-policy</a>
Tree	<a href="#">port-scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress port-scheduler-policy overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**level** [*priority-level*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure port string tdm ds3 string egress port-scheduler-policy overrides level number</b>
Tree	<a href="#">level</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[priority-level]** *number*

Synopsis	Port priority levels override
Context	<b>configure port string tdm ds3 string egress port-scheduler-policy overrides level number</b>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure port string tdm ds3 string egress port-scheduler-policy overrides level number percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**cir** *decimal-number*

Synopsis	CIR for the priority level
Context	<b>configure port string tdm ds3 string egress port-scheduler-policy overrides level number percent-rate cir decimal-number</b>
Tree	<a href="#">cir</a>
Range	0 to 100
Units	percent

Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **pir** *decimal-number*

Synopsis	PIR for the priority level
Context	<b>configure</b> <a href="#">port string</a> <a href="#">tdm ds3 string</a> <a href="#">egress port-scheduler-policy overrides level number</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">port string</a> <a href="#">tdm ds3 string</a> <a href="#">egress port-scheduler-policy overrides level number</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **cir** (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	<b>configure</b> <a href="#">port string</a> <a href="#">tdm ds3 string</a> <a href="#">egress port-scheduler-policy overrides level number</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **pir** (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress port-scheduler-policy overrides level number rate pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **max-rate**

Synopsis	Enter the <b>max-rate</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress port-scheduler-policy overrides max-rate</a>
Tree	<a href="#">max-rate</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **percent-rate** *decimal-number*

Synopsis	PIR
Context	<b>configure</b> <a href="#">port string tdm ds3 string egress port-scheduler-policy overrides max-rate percent-rate decimal-number</a>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rate** (*number* | *keyword*)

Synopsis PIR

Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy overrides max-rate **rate** (*number* | *keyword*)

Tree [rate](#)

Range 1 to 3200000000

Units kilobps

Options max

Default max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **policy-name** *reference*

Synopsis Port egress scheduler policy name

Context **configure** port *string* tdm ds3 *string* egress port-scheduler-policy *policy-name* *reference*

Tree [policy-name](#)

Reference **configure** qos port-scheduler-policy *string*

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **encap-type** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Encapsulation method

Context **configure** port *string* tdm ds3 *string* **encap-type** *keyword*

Tree [encap-type](#)

Options cem

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **feac-loop-respond** *boolean*

Synopsis Enable DS-3 interface to respond to remote loop signals  
 Context **configure** *port string tdm ds3 string feac-loop-respond boolean*  
 Tree [feac-loop-respond](#)  
 Default false  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **framing** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Framing for the DS3 channel  
 Context **configure** *port string tdm ds3 string framing keyword*  
 Tree [framing](#)  
 Options c-bit, m23, ds3-unframed  
 Default c-bit  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **idle-cycle-flag** *keyword*

Synopsis Value transmitted during idle cycles  
 Context **configure** *port string tdm ds3 string idle-cycle-flag keyword*  
 Tree [idle-cycle-flag](#)  
 Options flags, ones  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **load-balancing-algorithm** *keyword*

Synopsis	Load balancing algorithm to be used on the port
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> load-balancing-algorithm <i>keyword</i>
Tree	load-balancing-algorithm
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **loopback** *keyword*

Synopsis	Loopback mode on the channel
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> loopback <i>keyword</i>
Tree	loopback
Options	line, internal, remote
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **mac-address** *string*

Synopsis	MAC address for the port
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> mac-address <i>string</i>
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **maintenance-data-link**

Synopsis	Enter the <b>maintenance-data-link</b> context
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> maintenance-data-link
Tree	maintenance-data-link
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**equipment-id-code** *string*

Synopsis	Equipment ID Code (EIC) of the MDL
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">maintenance-data-link</a> <a href="#">equipment-id-code</a> <i>string</i>
Tree	<a href="#">equipment-id-code</a>
String Length	0 to 10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**facility-id-code** *string*

Synopsis	Facility ID Code sent in the MDL Path message
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">maintenance-data-link</a> <a href="#">facility-id-code</a> <i>string</i>
Tree	<a href="#">facility-id-code</a>
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**frame-id-code** *string*

Synopsis	Frame ID Code (FIC) of the MDL
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">maintenance-data-link</a> <a href="#">frame-id-code</a> <i>string</i>
Tree	<a href="#">frame-id-code</a>
String Length	0 to 10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**generator-string** *string*

Synopsis	Generator number string sent in MDL test signal message
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">maintenance-data-link</a> <a href="#">generator-string</a> <i>string</i>
Tree	<a href="#">generator-string</a>
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### location-id-code *string*

Synopsis	Location ID Code (LIC) of the MDL
Context	<b>configure</b> <a href="#">port string tdm ds3 string maintenance-data-link location-id-code string</a>
Tree	<a href="#">location-id-code</a>
String Length	0 to 11
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### port-string *string*

Synopsis	Port number string sent in the MDL idle signal message
Context	<b>configure</b> <a href="#">port string tdm ds3 string maintenance-data-link port-string string</a>
Tree	<a href="#">port-string</a>
String Length	0 to 38
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### transmit-message-type

Synopsis	Enter the <b>transmit-message-type</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string maintenance-data-link transmit-message-type</a>
Tree	<a href="#">transmit-message-type</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### idle-signal *boolean*

Synopsis	Enable transmission of MDL idle signal messages
Context	<b>configure</b> <a href="#">port string tdm ds3 string maintenance-data-link transmit-message-type idle-signal boolean</a>
Tree	<a href="#">idle-signal</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**path** *boolean*

Synopsis	Enable transmission of MDL path messages
Context	<b>configure</b> port string tdm ds3 string maintenance-data-link transmit-message-type path <i>boolean</i>
Tree	path
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**test-signal** *boolean*

Synopsis	Enable transmission of MDL test signal messages
Context	<b>configure</b> port string tdm ds3 string maintenance-data-link transmit-message-type test-signal <i>boolean</i>
Tree	test-signal
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**unit-id-code** *string*

Synopsis	Unit ID Code (UIC) of the MDL
Context	<b>configure</b> port string tdm ds3 string maintenance-data-link unit-id-code <i>string</i>
Tree	unit-id-code
String Length	0 to 6
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	<b>configure</b> port string tdm ds3 string mode <i>keyword</i>

---

Tree	<a href="#">mode</a>
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **mtu number**

Synopsis	Maximum payload MTU size for the port
Context	<b>configure</b> <a href="#">port string tdm ds3 string mtu number</a>
Tree	<a href="#">mtu</a>
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">port string tdm ds3 string network</a>
Tree	<a href="#">network</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **accounting-policy reference**

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">port string tdm ds3 string network accounting-policy reference</a>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log accounting-policy number</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **collect-stats boolean**

Synopsis	Collect accounting and statistical data
----------	---

Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">network</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **queue-policy** *reference*

Synopsis	Queue policy on the TDM DS3 network channel
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">network</a> <a href="#">queue-policy</a> <i>reference</i>
Tree	<a href="#">queue-policy</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">network-queue</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **report-alarm**

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ais** *boolean*

Synopsis	Report alarm indication signal errors
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm ds3</a> <i>string</i> <a href="#">report-alarm</a> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **looped** *boolean*

Synopsis	Report looped packet errors
----------	-----------------------------

---

Context	<b>configure port string tdm ds3 string report-alarm looped boolean</b>
Tree	<b>looped</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **los boolean**

Synopsis	Report loss of signal errors
Context	<b>configure port string tdm ds3 string report-alarm los boolean</b>
Tree	<b>los</b>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **oof boolean**

Synopsis	Report out-of-frame errors
Context	<b>configure port string tdm ds3 string report-alarm oof boolean</b>
Tree	<b>oof</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rai boolean**

Synopsis	Report resource availability indicator events
Context	<b>configure port string tdm ds3 string report-alarm rai boolean</b>
Tree	<b>rai</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**scramble** *boolean*

Synopsis	Enable TDM DS3 payload scrambling
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> scramble <i>boolean</i>
Tree	scramble
Description	When configured to <b>true</b> , the TDM DS3 frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking. When configured to <b>false</b> , the strings of all 1s or all 0s are continuous.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**subrate**

Synopsis	Enter the <b>subrate</b> context
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> subrate
Tree	subrate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**csu-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Channel Service Unit (CSU) compatibility mode
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> subrate csu-mode <i>keyword</i>
Tree	csu-mode
Options	digital-link, larscom
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**rate-step** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Subrate for the associated DS3
Context	<b>configure</b> port <i>string</i> tdm ds3 <i>string</i> subrate rate-step <i>number</i>
Tree	rate-step
Range	0 to 147
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**e1** [**e1-index**] *string*

Synopsis	Enter the <b>e1</b> list instance
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i>
Tree	e1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[e1-index]** *string*

Synopsis	E-1 channel
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i>
Tree	e1
MD-CLI	physical
Default	
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**admin-state** *keyword*

Synopsis	Administrative state of the E1 channel
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> admin-state <i>keyword</i>
Tree	admin-state

---

Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ber-threshold**

Synopsis	Enter the <b>ber-threshold</b> context
Context	<b>configure</b> port string tdm e1 string ber-threshold
Tree	ber-threshold
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **signal-degrade** *number*

Synopsis	BER signal degradation threshold
Context	<b>configure</b> port string tdm e1 string ber-threshold signal-degrade <i>number</i>
Tree	signal-degrade
Range	1   5   10   50   100
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **signal-failure** *number*

Synopsis	BER signal failure threshold
Context	<b>configure</b> port string tdm e1 string ber-threshold signal-failure <i>number</i>
Tree	signal-failure
Range	1   5   10   50   100
Default	50
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**channel-group** [ds0-index] *number*

Synopsis	Enter the <b>channel-group</b> list instance
Context	<b>configure port string tdm e1 string channel-group number</b>
Tree	<a href="#">channel-group</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[ds0-index]** *number*

Synopsis	DS0 channel group in a channelized DS1 or E1 circuit
Context	<b>configure port string tdm e1 string channel-group number</b>
Tree	<a href="#">channel-group</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**admin-state** *keyword*

Synopsis	Administrative state of the E1 channel group
Context	<b>configure port string tdm e1 string channel-group number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**description** *string*

Synopsis	Text description
Context	<b>configure port string tdm e1 string channel-group number description string</b>
Tree	<a href="#">description</a>
String Length	1 to 160
Default	DS0GRP
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## egress

Synopsis Enter the **egress** context

Context **configure** *port string tdm e1 string channel-group number egress*

Tree [egress](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## port-scheduler-policy

Synopsis Enter the **port-scheduler-policy** context

Context **configure** *port string tdm e1 string channel-group number egress port-scheduler-policy*

Tree [port-scheduler-policy](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## overrides

Synopsis Enable the **overrides** context

Context **configure** *port string tdm e1 string channel-group number egress port-scheduler-policy overrides*

Tree [overrides](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## level [[priority-level](#)] *number*

Synopsis Enter the **level** list instance

Context **configure** *port string tdm e1 string channel-group number egress port-scheduler-policy overrides level number*

Tree [level](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[priority-level]** *number*

Synopsis	Port priority levels override
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i>
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**cir** *decimal-number*

Synopsis	CIR for the priority level
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> egress port-scheduler-policy overrides level <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**pir** *decimal-number*

Synopsis	PIR for the priority level
----------	----------------------------

Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides level number percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides level number rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## cir (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides level number rate cir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">cir</a>
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pir (*number* | *keyword*)

Synopsis	PIR for the priority level
----------	----------------------------

Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides level number rate pir</b> ( <i>number   keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **max-rate**

Synopsis	Enter the <b>max-rate</b> context
Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides max-rate</b>
Tree	<a href="#">max-rate</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **percent-rate decimal-number**

Synopsis	PIR
Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides max-rate percent-rate decimal-number</b>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rate (number | keyword)**

Synopsis	PIR
----------	-----

Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy overrides max-rate rate</b> ( <i>number   keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **policy-name** *reference*

Synopsis	Port egress scheduler policy name
Context	<b>configure port string tdm e1 string channel-group number egress port-scheduler-policy policy-name reference</b>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos port-scheduler-policy string</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **encap-type** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method used on a port, path, or channel
Context	<b>configure port string tdm e1 string channel-group number encap-type keyword</b>
Tree	<a href="#">encap-type</a>
Options	cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## idle-payload-fill

Synopsis	Enter the <b>idle-payload-fill</b> context
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill
Tree	idle-payload-fill
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## all-ones

Synopsis	Transmit 8-bit value to be 11111111
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill all-ones
Tree	all-ones
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pattern *number*

Synopsis	User-defined pattern to be transmitted
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-payload-fill <i>pattern number</i>
Tree	pattern
Range	0 to 255
Notes	The following elements are part of a choice: <b>all-ones</b> or <b>pattern</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## idle-signal-fill

Synopsis	Enter the <b>idle-signal-fill</b> context
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> idle-signal-fill
Tree	idle-signal-fill
Description	Commands in this context configure the signaling pattern to be transmitted when the circuit emulation service is not operational or temporarily experiences under-run conditions.

This command is only valid for CESoPSN-CAS circuit emulation services. It is blocked with a warning for unstructured (SATOP) and basic CESoPSN circuit emulation services.

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## all-ones

Synopsis Transmit 8-bit value as 11111111  
 Context **configure** port string tdm e1 string channel-group number idle-signal-fill all-ones  
 Tree [all-ones](#)  
 Notes The following elements are part of a choice: **all-ones** or **pattern**.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pattern number

Synopsis User-defined pattern to be transmitted  
 Context **configure** port string tdm e1 string channel-group number idle-signal-fill pattern number  
 Tree [pattern](#)  
 Range 0 to 15  
 Notes The following elements are part of a choice: **all-ones** or **pattern**.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## load-balancing-algorithm keyword

Synopsis Load balancing algorithm to be used on this port  
 Context **configure** port string tdm e1 string channel-group number load-balancing-algorithm keyword  
 Tree [load-balancing-algorithm](#)  
 Options default, include-l4, exclude-l4  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mac-address** *string*

Synopsis	MAC address for the port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">mode</a> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mtu** *number*

Synopsis	Maximum payload MTU
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">mtu</a> <i>number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e1</a> <i>string</i> <a href="#">channel-group</a> <i>number</i> <a href="#">network</a>
Tree	<a href="#">network</a>

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **accounting-policy** *reference*

Synopsis Accounting policy  
 Context **configure** [port string tdm e1 string channel-group number network accounting-policy reference](#)  
 Tree [accounting-policy](#)  
 Reference **configure** [log accounting-policy number](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **collect-stats** *boolean*

Synopsis Collect accounting and statistical data  
 Context **configure** [port string tdm e1 string channel-group number network collect-stats boolean](#)  
 Tree [collect-stats](#)  
 Default false  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **queue-policy** *reference*

Synopsis Network queue policy on TDM E0 network channel group  
 Context **configure** [port string tdm e1 string channel-group number network queue-policy reference](#)  
 Tree [queue-policy](#)  
 Reference **configure** [qos network-queue string](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## speed *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Speed of the E0 channels in this channel group
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> speed <i>number</i>
Tree	speed
Range	56   64
Default	64
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## timeslot *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Timeslot list for the channel group
Context	<b>configure</b> port <i>string</i> tdm e1 <i>string</i> channel-group <i>number</i> timeslot <i>number</i>
Tree	timeslot
Description	This command configures the list of timeslots to be used in a channel group.  For the list of DS-0 timeslots to be used in the DS-1 or E1 channel-group, the timeslots are defaulted as defined by the encapsulation type. ATM channel groups do not allow timeslots to change.
Range	1 to 32
Max.	32
Instances	
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## clock-source *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clock source for data transmission
Context	<b>configure</b> port string tdm e1 string clock-source keyword
Tree	clock-source
Description	This command specifies the clock source to use for the link transmit timing. The options are to use the locally recovered clock from the line's receive data stream, the node central reference, or an adaptively recovered clock using the received packets.
Options	loop-timed, node-timed, adaptive, differential
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### framing keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing on the E1 channel
Context	<b>configure</b> port string tdm e1 string framing keyword
Tree	framing
Description	This command specifies the E1 framing to use with the associated channel.
Options	no-crc-g704, g704, e1-unframed
Default	g704
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### loopback keyword

Synopsis	Loopback mode
Context	<b>configure</b> port string tdm e1 string loopback keyword
Tree	loopback
Options	line, internal
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## **national-bits**

Synopsis	Enter the <b>national-bits</b> context
Context	<b>configure port string tdm e1 string national-bits</b>
Tree	<a href="#">national-bits</a>
Description	Commands in this context configure the national use bits.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## **sa4 boolean**

Synopsis	Enable bit Sa4
Context	<b>configure port string tdm e1 string national-bits sa4 boolean</b>
Tree	<a href="#">sa4</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## **sa5 boolean**

Synopsis	Enable bit Sa5
Context	<b>configure port string tdm e1 string national-bits sa5 boolean</b>
Tree	<a href="#">sa5</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## **sa6 boolean**

Synopsis	Enable bit Sa6
Context	<b>configure port string tdm e1 string national-bits sa6 boolean</b>
Tree	<a href="#">sa6</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**sa7 boolean**

Synopsis	Enable bit Sa7
Context	<b>configure</b> port string tdm e1 string national-bits sa7 boolean
Tree	sa7
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**sa8 boolean**

Synopsis	Enable bit Sa8
Context	<b>configure</b> port string tdm e1 string national-bits sa8 boolean
Tree	sa8
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**report-alarm**

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> port string tdm e1 string report-alarm
Tree	report-alarm
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**ais boolean**

Synopsis	Report alarm indication signal errors
Context	<b>configure</b> port string tdm e1 string report-alarm ais boolean
Tree	ais
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**ber-sd** *boolean*

Synopsis	Enable/disable ber-sd alarm.
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">tdm e1</a> <a href="#">string</a> <a href="#">report-alarm</a> <a href="#">ber-sd</a> <i>boolean</i>
Tree	<a href="#">ber-sd</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**ber-sf** *boolean*

Synopsis	Enable/disable ber-sf alarm.
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">tdm e1</a> <a href="#">string</a> <a href="#">report-alarm</a> <a href="#">ber-sf</a> <i>boolean</i>
Tree	<a href="#">ber-sf</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**looped** *boolean*

Synopsis	Report looped packet errors
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">tdm e1</a> <a href="#">string</a> <a href="#">report-alarm</a> <a href="#">looped</a> <i>boolean</i>
Tree	<a href="#">looped</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**los** *boolean*

Synopsis	Report loss of signal errors
Context	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">tdm e1</a> <a href="#">string</a> <a href="#">report-alarm</a> <a href="#">los</a> <i>boolean</i>
Tree	<a href="#">los</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**oof** *boolean*

Synopsis	Report out-of-frame errors
Context	<b>configure</b> <i>port string tdm e1 string report-alarm oof boolean</i>
Tree	<i>oof</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**rai** *boolean*

Synopsis	Report resource availability indicator events
Context	<b>configure</b> <i>port string tdm e1 string report-alarm rai boolean</i>
Tree	<i>rai</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**signal-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal mode on the channel
Context	<b>configure</b> <i>port string tdm e1 string signal-mode keyword</i>
Tree	<i>signal-mode</i>
Description	This command configures the signal mode on the channel. When enabled, it uses routing information to direct the payload of voice or data to its destination.
Options	channel-associated-signaling
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**e3** [[e3-index](#)] *string*

Synopsis	Enter the <b>e3</b> list instance
Context	<b>configure port string tdm e3 string</b>
Tree	<a href="#">e3</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**[e3-index]** *string*

Synopsis	Components making up the SONET/SDH Path
Context	<b>configure port string tdm e3 string</b>
Tree	<a href="#">e3</a>
MD-CLI Default	physical
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**admin-state** *keyword*

Synopsis	Administrative state of the E3 channel
Context	<b>configure port string tdm e3 string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**clock-source** *keyword*

Synopsis	Clock for data transmission
Context	<b>configure port string tdm e3 string clock-source keyword</b>
Tree	<a href="#">clock-source</a>
Options	loop-timed, node-timed
Default	node-timed

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**crc number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precision of the CRC
Context	<b>configure</b> port string tdm e3 string crc number
Tree	crc
Range	16   32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**description string**

Synopsis	Text description
Context	<b>configure</b> port string tdm e3 string description string
Tree	description
String Length	1 to 160
Default	E3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> port string tdm e3 string egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## port-scheduler-policy

Synopsis	Enter the <b>port-scheduler-policy</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">egress</a> <a href="#">port-scheduler-policy</a>
Tree	<a href="#">port-scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## level [[priority-level](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## [[priority-level](#)] *number*

Synopsis	Port priority levels override
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">egress</a> <a href="#">port-scheduler-policy</a> <a href="#">overrides</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <i>port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate</i>
Tree	<i>percent-rate</i>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## cir decimal-number

Synopsis	CIR for the priority level
Context	<b>configure</b> <i>port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate cir decimal-number</i>
Tree	<i>cir</i>
Range	0 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## pir decimal-number

Synopsis	PIR for the priority level
Context	<b>configure</b> <i>port string tdm e3 string egress port-scheduler-policy overrides level number percent-rate pir decimal-number</i>
Tree	<i>pir</i>
Range	0.01 to 100
Units	percent
Default	100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## rate

Synopsis	Enter the <b>rate</b> context
----------	-------------------------------

Context	<b>configure port string tdm e3 string egress port-scheduler-policy overrides level number rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **cir** (*number* | *keyword*)

Synopsis	CIR for the priority level
Context	<b>configure port string tdm e3 string egress port-scheduler-policy overrides level number rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **pir** (*number* | *keyword*)

Synopsis	PIR for the priority level
Context	<b>configure port string tdm e3 string egress port-scheduler-policy overrides level number rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **max-rate**

Synopsis	Enter the <b>max-rate</b> context
----------	-----------------------------------

Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> egress port-scheduler-policy overrides max-rate
Tree	max-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **percent-rate** *decimal-number*

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> egress port-scheduler-policy overrides max-rate percent-rate <i>decimal-number</i>
Tree	percent-rate
Range	0.01 to 100
Units	percent
Default	100
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rate** (*number* | *keyword*)

Synopsis	PIR
Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> egress port-scheduler-policy overrides max-rate rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **policy-name** *reference*

Synopsis	Port egress scheduler policy name
----------	-----------------------------------

Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> egress port-scheduler-policy policy-name <i>reference</i>
Tree	policy-name
Reference	<b>configure</b> qos port-scheduler-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### encap-type keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Encapsulation method used on a port, path, or channel
Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> encap-type keyword
Tree	encap-type
Options	cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### framing keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Framing for the E3 channel
Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> framing keyword
Tree	framing
Options	g751, g832, e3-unframed
Default	g751
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### idle-cycle-flag keyword

Synopsis	Value transmitted by channel group during idle cycle
Context	<b>configure</b> port <i>string</i> tdm e3 <i>string</i> idle-cycle-flag keyword

---

Tree	<a href="#">idle-cycle-flag</a>
Options	flags, ones
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **load-balancing-algorithm** *keyword*

Synopsis	Load balancing algorithm to be used on this port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">load-balancing-algorithm</a> <i>keyword</i>
Tree	<a href="#">load-balancing-algorithm</a>
Options	default, include-l4, exclude-l4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **loopback** *keyword*

Synopsis	Loopback mode
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">loopback</a> <i>keyword</i>
Tree	<a href="#">loopback</a>
Options	line, internal
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **mac-address** *string*

Synopsis	MAC address for the port
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Default	00:00:00:00:00:00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Operation mode
Context	<b>configure</b> port string tdm e3 string mode keyword
Tree	mode
Options	access, network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**mtu** *number*

Synopsis	Maximum payload MTU size
Context	<b>configure</b> port string tdm e3 string mtu number
Tree	mtu
Range	512 to 9208
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> port string tdm e3 string network
Tree	network
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> port string tdm e3 string network accounting-policy reference
Tree	accounting-policy
Reference	<b>configure</b> log accounting-policy number

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **collect-stats** *boolean*

Synopsis Collect accounting and statistical data  
 Context **configure** port string tdm e3 string network collect-stats boolean  
 Tree [collect-stats](#)  
 Default false  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **queue-policy** *reference*

Synopsis Queue policy on the TDM E3 network channel  
 Context **configure** port string tdm e3 string network queue-policy reference  
 Tree [queue-policy](#)  
 Reference **configure** qos network-queue string  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **report-alarm**

Synopsis Enter the **report-alarm** context  
 Context **configure** port string tdm e3 string report-alarm  
 Tree [report-alarm](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **ais** *boolean*

Synopsis Report alarm indication signal errors  
 Context **configure** port string tdm e3 string report-alarm ais boolean  
 Tree [ais](#)  
 Default true

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **looped** *boolean*

Synopsis Report looped packet errors  
Context **configure** port string tdm e3 string report-alarm looped boolean  
Tree looped  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **los** *boolean*

Synopsis Report loss of signal errors  
Context **configure** port string tdm e3 string report-alarm los boolean  
Tree los  
Default true  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **oof** *boolean*

Synopsis Report out-of-frame errors  
Context **configure** port string tdm e3 string report-alarm oof boolean  
Tree oof  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **rai** *boolean*

Synopsis Report resource availability indicator events  
Context **configure** port string tdm e3 string report-alarm rai boolean  
Tree rai

---

Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **scramble** *boolean*

Synopsis	Enable TDM E3 payload scrambling
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm e3</a> <i>string</i> <b>scramble</b> <i>boolean</i>
Tree	<a href="#">scramble</a>
Description	When configured to <b>true</b> , the TDM E3 frame carries randomized patterns of 1s and 0s, which prevents continuous strings of all 1s or all 0s. This meets the needs of physical layer protocols that rely on sufficient transitions between 1s and 0s to maintain clocking. When configured to <b>false</b> , the strings of all 1s or all 0s are continuous.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm</a> <b>hold-time</b>
Tree	<a href="#">hold-time</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **down** *number*

Synopsis	Hold timer for link down event dampening
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">tdm</a> <a href="#">hold-time</a> <b>down</b> <i>number</i>
Tree	<a href="#">down</a>
Range	0 to 100
Default	5
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**up number**

Synopsis	Hold timer for link up event dampening
Context	<b>configure</b> port <i>string</i> tdm hold-time up <i>number</i>
Tree	up
Range	1 to 100
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**transceiver**

Synopsis	Enter the <b>transceiver</b> context
Context	<b>configure</b> port <i>string</i> transceiver
Tree	transceiver
Introduced	16.0.R4
Platforms	All

**digital-coherent-optics boolean**

Synopsis	Enable digital coherent optics module for transceiver
Context	<b>configure</b> port <i>string</i> transceiver digital-coherent-optics <i>boolean</i>
Tree	digital-coherent-optics
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**optical-line-system**

Synopsis	Enable the <b>optical-line-system</b> context
Context	<b>configure</b> port <i>string</i> transceiver optical-line-system
Tree	optical-line-system
Description	Commands in this context configure the QSFP-LS pluggable optical line system, used in conjunction with 400G ZR/ZR+ coherent pluggable modules.
Introduced	23.10.R1
Platforms	All

**egress-amplifier-gain** *decimal-number*

Synopsis	Gain for the egress amplifier
Context	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">transceiver</a> <a href="#">optical-line-system</a> <a href="#">egress-amplifier-gain</a> <i>decimal-number</i>
Tree	<a href="#">egress-amplifier-gain</a>
Range	0.00 to 25.00
Units	dB
Default	25.00
Introduced	23.10.R1
Platforms	All

### 3.33 port-policy commands

```
configure
- port-policy string
- apply-groups reference
- apply-groups-exclude reference
- description string
- egress-port-scheduler-policy reference
```

### 3.33.1 port-policy command descriptions

#### **port-policy** [[name](#)] *string*

Synopsis	Enter the <b>port-policy</b> list instance
Context	<b>configure</b> <a href="#">port-policy</a> <i>string</i>
Tree	<a href="#">port-policy</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### **[name]** *string*

Synopsis	Port policy name
Context	<b>configure</b> <a href="#">port-policy</a> <i>string</i>
Tree	<a href="#">port-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### **egress-port-scheduler-policy** *reference*

Synopsis	Policy for egress port scheduler
Context	<b>configure</b> <a href="#">port-policy</a> <i>string</i> <a href="#">egress-port-scheduler-policy</a> <i>reference</i>

---

Tree	<a href="#">egress-port-scheduler-policy</a>
Reference	<b>configure</b> <a href="#">qos port-scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 3.34 port-xc commands

```
configure
- port-xc
  - apply-groups reference
  - apply-groups-exclude reference
  - pxc number
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - description string
    - port-id reference
```

### 3.34.1 port-xc command descriptions

#### port-xc

Synopsis	Enter the <b>port-xc</b> context
Context	<b>configure port-xc</b>
Tree	<a href="#">port-xc</a>
Description	Commands in this context configure port cross-connect (PXC) functionality.
Introduced	16.0.R1
Platforms	All

#### pxc [[pxc-id](#)] *number*

Synopsis	Enter the <b>pxc</b> list instance
Context	<b>configure port-xc pxc number</b>
Tree	<a href="#">pxc</a>
Description	Commands in this context configure port cross-connect (PXC) information.
Introduced	16.0.R1
Platforms	All

#### [\[pxc-id\]](#) *number*

Synopsis	PXC ID
Context	<b>configure port-xc pxc number</b>
Tree	<a href="#">pxc</a>
Range	1 to 256
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

#### **admin-state** *keyword*

Synopsis	Administrative state of the PXC
Context	<b>configure port-xc pxc number admin-state keyword</b>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">port-xc pxc number</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **port-id** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PXC port ID
Context	<b>configure</b> <a href="#">port-xc pxc number</a> <a href="#">port-id reference</a>
Tree	<a href="#">port-id</a>
Reference	<b>configure</b> <a href="#">port string</a>
Introduced	16.0.R1
Platforms	All

### 3.35 pw-port commands

```

configure
- pw-port number
- apply-groups reference
- apply-groups-exclude reference
- description string
- dot1q-etype string
- encap-type keyword
- epipe reference
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- down-on-peer-tldp-pw-status-faults boolean
- egress
- shaper
  - intermediate-destination-id string
  - virtual-port string
- fpe-id reference
- monitor-oper-group reference
- oper-up-on-mh-standby boolean
- oper-group reference
- qinq-etype string
- sdp reference
- admin-state keyword
- adv-service-mtu number
- apply-groups reference
- apply-groups-exclude reference
- control-word boolean
- egress
- shaper
  - intermediate-destination-id string
  - pw-sap-secondary-shaper string
  - virtual-port string
- vc-label number
- entropy-label boolean
- ingress
- vc-label number
- monitor-oper-group reference
- vc-id number
- vc-type keyword
- vlan-vc-tag number

```

### 3.35.1 pw-port command descriptions

#### **pw-port** [*pw-port-id*] *number*

Synopsis	Enter the <b>pw-port</b> list instance
Context	<b>configure</b> <i>pw-port number</i>
Tree	<i>pw-port</i>
Introduced	16.0.R4
Platforms	All

#### **[pw-port-id]** *number*

Synopsis	Pseudowire port ID
Context	<b>configure</b> <i>pw-port number</i>
Tree	<i>pw-port</i>
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

#### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>pw-port number description string</i>
Tree	<i>description</i>
String Length	1 to 255
Default	PW Port
Introduced	16.0.R4
Platforms	All

#### **dot1q-etype** *string*

Synopsis	Dot1q Ethertype on the PW port
Context	<b>configure</b> <i>pw-port number dot1q-etype string</i>
Tree	<i>dot1q-etype</i>

Default	33024
Introduced	16.0.R4
Platforms	All

### **encap-type** *keyword*

Synopsis	Encap type of the pseudo-wire port
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">encap-type keyword</a>
Tree	<a href="#">encap-type</a>
Options	dot1q, qinq
Default	dot1q
Introduced	16.0.R4
Platforms	All

### **epipe** [[service-name](#)] *reference*

Synopsis	Enter the <b>epipe</b> list instance
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a>
Tree	<a href="#">epipe</a>
Max. Instances	1
Notes	The following elements are part of a choice: <b>epipe</b> or <b>sdp</b> .
Introduced	16.0.R4
Platforms	All

### **[service-name]** *reference*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a>
Tree	<a href="#">epipe</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">epipe string</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the pseudowire port
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">epipe</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**down-on-peer-tldp-pw-status-faults** *boolean*

Synopsis	Force PW port to go down for certain PW status bits
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">epipe</a> <i>reference</i> <a href="#">down-on-peer-tldp-pw-status-faults</a> <i>boolean</i>
Tree	<a href="#">down-on-peer-tldp-pw-status-faults</a>
Description	<p>When configured to <b>true</b>, the router causes the PW port configured on an Epipe to go locally operationally down if any of the following status bits are received on a mate spoke SDP across an FPE:</p> <ul style="list-style-type: none"> <li>• 0x00000001 - Pseudowire Not Forwarding</li> <li>• 0x00000002 - Local Attachment Circuit (ingress) Receive Fault</li> <li>• 0x00000004 - Local Attachment Circuit (egress) Transmit Fault</li> <li>• 0x00000008 - Local PSN-facing PW (ingress) Receive Fault</li> <li>• 0x00000010 - Local PSN-facing PW (egress) Transmit Fault</li> </ul> <p>When configured to <b>false</b>, the mate PW status fault bits are not taken into account in the operational state of the PW port.</p>
Default	false
Introduced	22.2.R1
Platforms	All

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">epipe</a> <i>reference</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R4
Platforms	All

## shaper

Synopsis	Enter the <b>shaper</b> context
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a> <a href="#">egress shaper</a>
Tree	<a href="#">shaper</a>
Introduced	16.0.R4
Platforms	All

## intermediate-destination-id *string*

Synopsis	Intermediate destination ID for ESM PW SAPs
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a> <a href="#">egress shaper intermediate-destination-id string</a>
Tree	<a href="#">intermediate-destination-id</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

## virtual-port *string*

Synopsis	Virtual port name of the egress shaper
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a> <a href="#">egress shaper virtual-port string</a>
Tree	<a href="#">virtual-port</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

## fpe-id *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding Path Extension ID
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">epipe reference</a> <a href="#">fpe-id reference</a>
Tree	<a href="#">fpe-id</a>

Reference	<b>configure</b> <a href="#">fwd-path-ext fpe number</a>
Introduced	16.0.R4
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Name of the operational group to monitor
Context	<b>configure</b> <a href="#">pw-port number epipe reference</a> <a href="#">monitor-oper-group reference</a>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	16.0.R4
Platforms	All

### **oper-up-on-mh-standby** *boolean*

Synopsis	Sets PW port to operationally up on MH standby
Context	<b>configure</b> <a href="#">pw-port number epipe reference</a> <a href="#">oper-up-on-mh-standby boolean</a>
Tree	<a href="#">oper-up-on-mh-standby</a>
Description	<p>When configured to <b>true</b>, this command allows the PW port to remain operationally up on the non-DF PE and all the PW SAPs contained in the PW port.</p> <p>The PW port status shows operationally up status with a flag MH Standby.</p> <p>When configured to <b>false</b>, this command causes the PW port to remain operationally down on the non-DF PE and all the PW SAPs contained in the PW port.</p>
Default	false
Introduced	22.2.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group ID
Context	<b>configure</b> <a href="#">pw-port number oper-group reference</a>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **qinq-etype** *string*

Synopsis	QinQ Ethertype encapsulation on the PW port
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">qinq-etype string</a>
Tree	<a href="#">qinq-etype</a>
Default	33024
Introduced	16.0.R4
Platforms	All

### **sdp** [[sdp-id](#)] *reference*

Synopsis	Enter the <b>sdp</b> list instance
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">sdp reference</a>
Tree	<a href="#">sdp</a>
Max. Instances	1
Notes	The following elements are part of a choice: <b>epipe</b> or <b>sdp</b> .
Introduced	16.0.R4
Platforms	All

### **[sdp-id]** *reference*

Synopsis	SDP ID
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">sdp reference</a>
Tree	<a href="#">sdp</a>
Reference	<b>configure</b> <a href="#">service sdp number</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the pseudowire port
Context	<b>configure</b> <a href="#">pw-port number</a> <a href="#">sdp reference</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>

---

Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **adv-service-mtu** *number*

Synopsis	Service MTU size to be used
Context	<b>configure</b> <a href="#">pw-port number sdp reference</a> <a href="#">adv-service-mtu number</a>
Tree	<a href="#">adv-service-mtu</a>
Range	0 to 9782
Units	bytes
Introduced	21.7.R1
Platforms	All

### **control-word** *boolean*

Synopsis	Allow control word bit setting in the label message
Context	<b>configure</b> <a href="#">pw-port number sdp reference</a> <a href="#">control-word boolean</a>
Tree	<a href="#">control-word</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">pw-port number sdp reference</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R4
Platforms	All

### **shaper**

Synopsis	Enter the <b>shaper</b> context
----------	---------------------------------

---

Context	<b>configure</b> <a href="#">pw-port number sdp reference egress shaper</a>
Tree	<a href="#">shaper</a>
Introduced	16.0.R4
Platforms	All

### **intermediate-destination-id** *string*

Synopsis	Intermediate destination ID applicable to ESM PW SAPs
Context	<b>configure</b> <a href="#">pw-port number sdp reference egress shaper intermediate-destination-id string</a>
Tree	<a href="#">intermediate-destination-id</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

### **pw-sap-secondary-shaper** *string*

Synopsis	Secondary shaper applicable to PW SAPs
Context	<b>configure</b> <a href="#">pw-port number sdp reference egress shaper pw-sap-secondary-shaper string</a>
Tree	<a href="#">pw-sap-secondary-shaper</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

### **virtual-port** *string*

Synopsis	Virtual port applicable to all PW SAPs
Context	<b>configure</b> <a href="#">pw-port number sdp reference egress shaper virtual-port string</a>
Tree	<a href="#">virtual-port</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	All

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress VC label representing the PW port
Context	<b>configure</b> <i>pw-port number sdp reference egress vc-label number</i>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	16.0.R4
Platforms	All

**entropy-label** *boolean*

Synopsis	Enable entropy level insertion on the PW port
Context	<b>configure</b> <i>pw-port number sdp reference entropy-label boolean</i>
Tree	<a href="#">entropy-label</a>
Description	<p>When configured to <b>true</b>, the entropy label and ELI are inserted in packets for which at least one LSP in the stack for the far-end of the tunnel used by the service has advertised entropy label capability.</p> <ul style="list-style-type: none"> <li>For RSVP or SR-TE tunnels, the <b>entropy-label</b> command must be set to <b>true</b> under the <b>configure router mpls</b> or <b>configure router mpls lsp</b> context.</li> <li>For SR-ISIS, SR-OSPF, or SR-TE tunnels, the <b>override-tunnel-elic</b> command must be set to <b>true</b> under the <b>configure router isis entropy-label</b> or <b>configure router ospf entropy-label</b> context.</li> <li>For LDP tunnels, the <b>entropy-label-capability</b> command must be set to <b>true</b> under the <b>configure router ldp</b> context.</li> </ul> <p>When configured to <b>false</b>, entropy label insertion on the PW port is not allowed.</p> <p>The entropy label is only applicable to PW ports bound to a static port; it is not applicable to ports using an FPE.</p>
Default	false
Introduced	21.5.R1
Platforms	All

**ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <i>pw-port number sdp reference ingress</i>

Tree	<a href="#">ingress</a>
Introduced	16.0.R4
Platforms	All

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress VC label representing the PW-port
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">sdp</a> <i>reference</i> <a href="#">ingress</a> <a href="#">vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	16.0.R4
Platforms	All

**monitor-oper-group** *reference*

Synopsis	Name of the operational group to monitor
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">sdp</a> <i>reference</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R4
Platforms	All

**vc-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Virtual Circuit ID signaled to the peer
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">sdp</a> <i>reference</i> <a href="#">vc-id</a> <i>number</i>
Tree	<a href="#">vc-id</a>
Range	1 to 4294967295

---

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **vc-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Forwarding mode for the PW-port
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">sdp</a> <i>reference</i> <a href="#">vc-type</a> <i>keyword</i>
Tree	<a href="#">vc-type</a>
Options	ether, vlan
Default	ether
Introduced	16.0.R4
Platforms	All

### **vlan-vc-tag** *number*

Synopsis	VLAN VC tag
Context	<b>configure</b> <a href="#">pw-port</a> <i>number</i> <a href="#">sdp</a> <i>reference</i> <a href="#">vlan-vc-tag</a> <i>number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R4
Platforms	All

### 3.36 python commands

```

### 3.36.1 python command descriptions

#### python

Synopsis	Enter the <b>python</b> context
Context	<b>configure</b> <a href="#">python</a>
Tree	<a href="#">python</a>
Introduced	16.0.R1
Platforms	All

#### python-policy [[name](#)] *string*

Synopsis	Enter the <b>python-policy</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Tree	<a href="#">python-policy</a>
Max. Instances	64
Introduced	16.0.R1
Platforms	All

#### [\[name\]](#) *string*

Synopsis	Python policy name
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Tree	<a href="#">python-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

#### cache

Synopsis	Enable the <b>cache</b> context
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a>
Tree	<a href="#">cache</a>

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Python cache
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **entry-size** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum data structure size for Python cache entry
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <b>entry-size</b> <i>number</i>
Tree	<a href="#">entry-size</a>
Range	32 to 2048
Units	bytes
Default	256
Introduced	16.0.R1
Platforms	All

### **max-entries** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of Python cache entries to be stored
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <b>max-entries</b> <i>number</i>
Tree	<a href="#">max-entries</a>

Range	1 to 1000000
Default	128000
Introduced	16.0.R1
Platforms	All

### **max-entry-lifetime** *number*

Synopsis	Maximum lifetime for each Python cache entry
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">max-entry-lifetime</a> <i>number</i>
Tree	<a href="#">max-entry-lifetime</a>
Range	1 to 604800
Units	seconds
Default	86400
Introduced	16.0.R1
Platforms	All

### **mcs-peer**

Synopsis	Enable the <b>mcs-peer</b> context
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">mcs-peer</a>
Tree	<a href="#">mcs-peer</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** *reference*

Synopsis	IP address of the MCS peer
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">mcs-peer</a> <a href="#">ip-address</a> <i>reference</i>
Tree	<a href="#">ip-address</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **sync-tag** *string*

Synopsis	Tag to synchronize the cached entries in the policy
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">mcs-peer</a> <b>sync-tag</b> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **minimum-lifetimes**

Synopsis	Enter the <b>minimum-lifetimes</b> context
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <b>minimum-lifetimes</b>
Tree	<a href="#">minimum-lifetimes</a>
Introduced	16.0.R1
Platforms	All

### **high-availability** *number*

Synopsis	Minimum lifetime of a cache entry to be synced with CPM
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">minimum-lifetimes</a> <b>high-availability</b> <i>number</i>
Tree	<a href="#">high-availability</a>
Range	1 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

### **multi-chassis-redundancy** *number*

Synopsis	Minimum lifetime for synchronization with the MCS peer
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">minimum-lifetimes</a> <b>multi-chassis-redundancy</b> <i>number</i>
Tree	<a href="#">multi-chassis-redundancy</a>
Range	1 to 600

Units	seconds
Introduced	16.0.R1
Platforms	All

### **persistence** *number*

Synopsis	Minimum lifetime for cache entry to be made persistent
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">minimum-lifetimes</a> <a href="#">persistence</a> <i>number</i>
Tree	<a href="#">persistence</a>
Range	1 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

### **persistence** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow persistence for cached entries
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">cache</a> <a href="#">persistence</a> <i>boolean</i>
Tree	<a href="#">persistence</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dhcp** [message-type] keyword direction keyword

Synopsis	Enter the <b>dhcp</b> list instance
Context	<b>configure</b> python python-policy string dhcp keyword direction keyword
Tree	dhcp
Introduced	16.0.R1
Platforms	All

**[message-type]** keyword

Synopsis	DHCP message type
Context	<b>configure</b> python python-policy string dhcp keyword direction keyword
Tree	dhcp
Options	discover, offer, request, decline, ack, nak, release, inform, force-renew, lease-query, lease-unassigned, lease-unknown, lease-active
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**direction** keyword

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> python python-policy string dhcp keyword direction keyword
Tree	dhcp
Options	ingress, egress
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**script** reference

Synopsis	Python script to handle the message
Context	<b>configure</b> python python-policy string dhcp keyword direction keyword script reference
Tree	script
Reference	<b>configure</b> python python-script string

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **dhcp6** [[message-type](#)] *keyword direction keyword*

Synopsis	Enter the <b>dhcp6</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">dhcp6</a> <i>keyword direction keyword</i>
Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	All

### **[message-type]** *keyword*

Synopsis	DHCPv6 message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">dhcp6</a> <i>keyword direction keyword</i>
Tree	<a href="#">dhcp6</a>
Options	solicit, advertise, request, confirm, renew, rebind, reply, release, decline, reconfigure, info-request, relay-forward, relay-reply
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **direction** *keyword*

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">dhcp6</a> <i>keyword direction keyword</i>
Tree	<a href="#">dhcp6</a>
Options	ingress, egress
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">dhcp6</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**diameter** [[message-type](#)] *keyword* [direction](#) *keyword*

Synopsis	Enter the <b>diameter</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">diameter</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">diameter</a>
Introduced	16.0.R1
Platforms	All

**[message-type]** *keyword*

Synopsis	Diameter message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">diameter</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">diameter</a>
Options	ccr, cca, rar, raa, cer, cea, dwr, dwa, dpr, dpa, asr, asa, aar, aaa
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**direction** *keyword*

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">diameter</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">diameter</a>
Options	ingress, egress
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

### **script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">diameter</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **gtpv1-c** [[message-type](#)] *keyword* [direction](#) *keyword*

Synopsis	Enter the <b>gtpv1-c</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv1-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv1-c</a>
Introduced	16.0.R1
Platforms	All

### **[message-type]** *keyword*

Synopsis	GTPv1-C message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv1-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv1-c</a>
Options	echo-request, echo-response, version-not-supported, create-pdp-context-request, create-pdp-context-response, delete-pdp-context-request, delete-pdp-context-response, error-indication, end-marker
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**direction** *keyword*

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv1-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv1-c</a>
Options	ingress, egress
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv1-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**gtpv2-c** [[message-type](#)] *keyword* [direction](#) *keyword*

Synopsis	Enter the <b>gtpv2-c</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv2-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv2-c</a>
Introduced	16.0.R1
Platforms	All

**[message-type]** *keyword*

Synopsis	GTPv2-C message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv2-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv2-c</a>
Options	echo-request, echo-response, version-not-supported, create-session-request, create-session-response, modify-bearer-request, modify-bearer-response, delete-session-request, delete-session-response, delete-bearer-request,

delete-bearer-response, release-access-bearers-request, release-access-bearers-response, downlink-data-notification, downlink-data-notification-ack, change-notification-request, change-notification-response, stop-paging-indication

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **direction** *keyword*

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv2-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">gtpv2-c</a>
Options	ingress, egress
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">gtpv2-c</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **nat-group** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT ISA group for this Python policy
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">nat-group</a> <i>reference</i>

Tree	<a href="#">nat-group</a>
Reference	<b>configure</b> <a href="#">isa nat-group</a> <i>number</i>
Notes	The following elements are part of a choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **pfcp** [[message-type](#)] *keyword direction keyword*

Synopsis	Enter the <b>pfcp</b> list instance
Context	<b>configure</b> <a href="#">python python-policy</a> <i>string pfcp keyword direction keyword</i>
Tree	<a href="#">pfcp</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[message-type]** *keyword*

Synopsis	Message type applied to the script
Context	<b>configure</b> <a href="#">python python-policy</a> <i>string pfcp keyword direction keyword</i>
Tree	<a href="#">pfcp</a>
Options	heartbeat-request, heartbeat-response, association-setup-request, association-setup-response, association-update-request, association-update-response, association-release-request, association-release-response, node-report-request, node-report-response, session-estab-request, session-estab-response, session-mod-request, session-mod-response, session-del-request, session-del-response, session-report-request, session-report-response
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **direction** *keyword*

Synopsis	Event that is either incoming or outgoing
Context	<b>configure</b> <a href="#">python python-policy</a> <i>string pfcp keyword direction keyword</i>
Tree	<a href="#">pfcp</a>
Options	ingress, egress
Notes	This element is part of a list key.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">pfcf</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pppoe** [[message-type](#)] *keyword* [direction](#) *keyword*

Synopsis	Enter the <b>pppoe</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">pppoe</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	All

**[message-type]** *keyword*

Synopsis	PPPoE message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">pppoe</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">pppoe</a>
Options	session-lcp, session-pap, session-chap, session-ipcp, session-ip6cp, pado, padi, padr, pads, padt
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**direction** *keyword*

Synopsis	Event that is either incoming or outgoing
----------	---

Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">pppoe</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">pppoe</a>
Options	ingress, egress
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **script** *reference*

Synopsis	Python script to handle the message
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">pppoe</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i> <a href="#">script</a> <i>reference</i>
Tree	<a href="#">script</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **radius** [[message-type](#)] *keyword* [direction](#) *keyword*

Synopsis	Enter the <b>radius</b> list instance
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">radius</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">radius</a>
Introduced	16.0.R1
Platforms	All

### **[message-type]** *keyword*

Synopsis	RADIUS message type
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i> <a href="#">radius</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">radius</a>
Options	access-request, access-accept, access-reject, accounting-request, accounting-response, access-challenge, disconnect-request, change-of-authorization-request
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **direction** *keyword*

Synopsis Event that is either incoming or outgoing

Context **configure** [python](#) [python-policy](#) *string* [radius](#) *keyword* **direction** *keyword*

Tree [radius](#)

Options ingress, egress

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **script** *reference*

Synopsis Python script to handle the message

Context **configure** [python](#) [python-policy](#) *string* [radius](#) *keyword* **direction** *keyword* **script** *reference*

Tree [script](#)

Reference **configure** [python](#) [python-script](#) *string*

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **syslog**

Synopsis Enable the **syslog** context

Context **configure** [python](#) [python-policy](#) *string* **syslog**

Tree [syslog](#)

Introduced 16.0.R1

Platforms All

### **script** *reference*

Synopsis Python script name for outgoing syslog messages

Context **configure** [python](#) [python-policy](#) *string* **syslog** **script** *reference*

Tree [script](#)

Reference	<b>configure</b> <a href="#">python python-script</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### wlan-gw-group *reference*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN ISA group for this Python policy
Context	<b>configure</b> <a href="#">python python-policy</a> <i>string</i> <a href="#">wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure</b> <a href="#">isa wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

### python-script [[name](#)] *string*

Synopsis	Enter the <b>python-script</b> list instance
Context	<b>configure</b> <a href="#">python python-script</a> <i>string</i>
Tree	<a href="#">python-script</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

### [[name](#)] *string*

Synopsis	Python script policy name
Context	<b>configure</b> <a href="#">python python-script</a> <i>string</i>
Tree	<a href="#">python-script</a>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **action-on-fail** *keyword*

Synopsis Action taken when the Python execution fails  
Context **configure** [python](#) [python-script](#) *string* **action-on-fail** *keyword*  
Tree [action-on-fail](#)  
Options passthrough, drop  
Default drop  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the Python script  
Context **configure** [python](#) [python-script](#) *string* **admin-state** *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [python](#) [python-script](#) *string* **description** *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **protection**

Synopsis Enter the **protection** context

Context	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i> <a href="#">protection</a>
Tree	<a href="#">protection</a>
Introduced	16.0.R1
Platforms	All

### **hmac-sha256** *string*

Synopsis	Hash value to include as first line in Python script
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i> <a href="#">protection</a> <a href="#">hmac-sha256</a> <i>string</i>
Tree	<a href="#">hmac-sha256</a>
String Length	1 to 199
Introduced	16.0.R1
Platforms	All

### **run-as-user** *string*

Synopsis	User authenticated for scripts
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i> <a href="#">run-as-user</a> <i>string</i>
Tree	<a href="#">run-as-user</a>
Description	This command configures a user that is different from the current user of the session. Script authentication, authorization, accounting, and any activity within the script, is run as the specified user.  If this command is not configured, the current user of the session is used.
String Length	1 to 32
Introduced	22.10.R1
Platforms	All

### **urls** *string*

Synopsis	Script location in URL format
Context	<b>configure</b> <a href="#">python</a> <a href="#">python-script</a> <i>string</i> <a href="#">urls</a> <i>string</i>
Tree	<a href="#">urls</a>
String Length	1 to 180
Max. Instances	3
Notes	This element is ordered by the user.

Introduced 16.0.R4  
Platforms All

### **version** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Python version the script is written for  
Context **configure** `python` `python-script` *string* `version` *keyword*  
Tree `version`  
Options python2, python3  
Default python2  
Introduced 21.2.R1  
Platforms All

### 3.37.1 qos command descriptions

#### qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure qos</b>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

#### **adv-config-policy** [[adv-config-policy-name](#)] *string*

Synopsis	Enter the <b>adv-config-policy</b> list instance
Context	<b>configure qos</b> <a href="#">adv-config-policy</a> <i>string</i>
Tree	<a href="#">adv-config-policy</a>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

#### [[adv-config-policy-name](#)] *string*

Synopsis	Advanced QoS policy name
Context	<b>configure qos</b> <a href="#">adv-config-policy</a> <i>string</i>
Tree	<a href="#">adv-config-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

#### child-control

Synopsis	Enter the <b>child-control</b> context
Context	<b>configure qos</b> <a href="#">adv-config-policy</a> <i>string</i> <b>child-control</b>
Tree	<a href="#">child-control</a>

Introduced 16.0.R1  
 Platforms All

### **bandwidth-distribution**

Synopsis Enter the **bandwidth-distribution** context  
 Context **configure qos adv-config-policy** *string* *child-control* *bandwidth-distribution*  
 Tree [bandwidth-distribution](#)  
 Introduced 16.0.R1  
 Platforms All

### **above-offered-allowance**

Synopsis Enter the **above-offered-allowance** context  
 Context **configure qos adv-config-policy** *string* *child-control* *bandwidth-distribution* *above-offered-allowance*  
 Tree [above-offered-allowance](#)  
 Description Commands in this context control the child's above offered allowance bandwidth. The configuration is only applicable when the port scheduler is configured to use the **above-offered-allowance-control** algorithm (specified via the **configure qos port-scheduler-policy hqos-algorithm** command).  
 Introduced 19.10.R2  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **delta-consumed-agg-rate**

Synopsis Enter the **delta-consumed-agg-rate** context  
 Context **configure qos adv-config-policy** *string* *child-control* *bandwidth-distribution* *above-offered-allowance* *delta-consumed-agg-rate*  
 Tree [delta-consumed-agg-rate](#)  
 Introduced 19.10.R2  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent** *decimal-number*

Synopsis Percentage of the delta consumed aggregate rate

Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control bandwidth-distribution above-offered-allowance delta-consumed-agg-rate percent</b> <i>decimal-number</i>
Tree	<b>percent</b>
Description	This command configures the percentage of the delta (from the beginning to the end of the current H-QoS below CIR or above CIR pass) of the aggregate rate consumed by other members that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass.  This command is only applicable when the port scheduler is configured to use the <b>above-offered-allowance-control</b> algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	20.00
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### delta-consumed-higher-tier-rate

Synopsis	Enter the <b>delta-consumed-higher-tier-rate</b> context
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control bandwidth-distribution above-offered-allowance delta-consumed-higher-tier-rate</b>
Tree	<b>delta-consumed-higher-tier-rate</b>
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### percent *decimal-number*

Synopsis	Percentage of the delta consumed higher-tier rate
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control bandwidth-distribution above-offered-allowance delta-consumed-higher-tier-rate percent</b> <i>decimal-number</i>
Tree	<b>percent</b>
Description	This command configures the percentage of the delta (from the beginning to the end of the current H-QoS below CIR or above CIR pass) of the higher-tier rate consumed by its other members that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. Higher tier refers to the Vport aggregate rate and port scheduler level, group, and maximum rates.  This command is only applicable when the port scheduler is configured to use the <b>above-offered-allowance-control</b> algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	5.00
Introduced	19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### unconsumed-agg-rate

Synopsis Enter the **unconsumed-agg-rate** context

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-agg-rate

Tree [unconsumed-agg-rate](#)

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### percent *decimal-number*

Synopsis Percentage of the unconsumed aggregate rate

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-agg-rate percent *decimal-number*

Tree [percent](#)

Description This command configures the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. This command is only applicable when the port scheduler is configured to use the **above-offered-allowance-control** algorithm; otherwise it is ignored.

Range 0.00 to 100.00

Default 100.00

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### unconsumed-higher-tier-rate

Synopsis Enter the **unconsumed-higher-tier-rate** context

Context **configure** qos adv-config-policy *string* child-control bandwidth-distribution above-offered-allowance unconsumed-higher-tier-rate

Tree [unconsumed-higher-tier-rate](#)

Introduced 19.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**percent** *decimal-number*

Synopsis	Percentage of the unconsumed higher-tier rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-allowance unconsumed-higher-tier-rate percent <i>decimal-number</i>
Tree	<a href="#">percent</a>
Description	This command configures the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS below CIR pass and above CIR pass. Higher tier refers to the Vport aggregate rate and port scheduler level, group, and maximum rates.  This command is only applicable when the port scheduler is configured to use the <b>above-offered-allowance-control</b> algorithm; otherwise it is ignored.
Range	0.00 to 100.00
Default	100.00
Introduced	19.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**above-offered-cap**

Synopsis	Enter the <b>above-offered-cap</b> context
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap
Tree	<a href="#">above-offered-cap</a>
Introduced	16.0.R1
Platforms	All

**percent** *decimal-number*

Synopsis	Percentage of PIR used as the fair share increase limit
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap percent <i>decimal-number</i>
Tree	<a href="#">percent</a>
Range	0.00 to 100.00
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**rate** (*number* | *keyword*)

Synopsis	Explicit rate as the fair share increase limit
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution above-offered-cap rate ( <i>number</i>   <i>keyword</i> )
Tree	rate
Range	0 to 100000000
Options	max
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**enqueue-on-pir-zero** *boolean*

Synopsis	Queue packets when bandwidth distribution set to zero
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution enqueue-on-pir-zero <i>boolean</i>
Tree	enqueue-on-pir-zero
Default	false
Introduced	16.0.R1
Platforms	All

**granularity**

Synopsis	Enter the <b>granularity</b> context
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution granularity
Tree	granularity
Introduced	16.0.R1
Platforms	All

**percent** *decimal-number*

Synopsis	Rounding percentage value for administrative PIR
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution granularity percent <i>decimal-number</i>
Tree	percent
Range	0.00 to 100.00

Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**rate number**

Synopsis	Rounding rate step value
Context	<b>configure</b> <a href="#">qos adv-config-policy string</a> <a href="#">child-control bandwidth-distribution granularity</a> <a href="#">rate number</a>
Tree	<a href="#">rate</a>
Range	0 to 100000000
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**internal-scheduler-weight-mode keyword**

Synopsis	Weight mode applied to this advanced QoS policy
Context	<b>configure</b> <a href="#">qos adv-config-policy string</a> <a href="#">child-control bandwidth-distribution internal-scheduler-weight-mode keyword</a>
Tree	<a href="#">internal-scheduler-weight-mode</a>
Options	auto, force-equal, offered-load, capped-offered-load
Introduced	16.0.R1
Platforms	All

**limit-pir-zero-drain boolean**

Synopsis	Throttle draining when operational PIR set to zero
Context	<b>configure</b> <a href="#">qos adv-config-policy string</a> <a href="#">child-control bandwidth-distribution limit-pir-zero-drain boolean</a>
Tree	<a href="#">limit-pir-zero-drain</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **lub-init-min-pir** *boolean*

Synopsis	Apply minimal PIR for new queues when LUB is enabled
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control bandwidth-distribution lub-init-min-pir <i>boolean</i>
Tree	lub-init-min-pir
Default	false
Introduced	16.0.R1
Platforms	All

### **offered-measurement**

Synopsis	Enter the <b>offered-measurement</b> context
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement
Tree	offered-measurement
Introduced	16.0.R1
Platforms	All

### **add**

Synopsis	Enter the <b>add</b> context
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement add
Tree	add
Introduced	16.0.R1
Platforms	All

### **active-min-only** *boolean*

Synopsis	Use minimum offered rate for active queues or policers
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement add active-min-only <i>boolean</i>
Tree	active-min-only
Default	false
Introduced	16.0.R1
Platforms	All

**min-only** *boolean*

Synopsis	Use increase in operational PIR as minimum offered rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement add min-only <i>boolean</i>
Tree	<a href="#">min-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

**percent** *decimal-number*

Synopsis	Percentage of child PIR to add to offered rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement add percent <i>decimal-number</i>
Tree	<a href="#">percent</a>
Range	0.00 to 100.00
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**rate** *number*

Synopsis	Rate value to add to child's offered rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement add rate <i>number</i>
Tree	<a href="#">rate</a>
Range	0 to 100000000
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**fast-start** *boolean*

Synopsis	Allow fast detection of initial bandwidth
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement fast-start <i>boolean</i>

Tree	<a href="#">fast-start</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-stop** *boolean*

Synopsis	Allow fast detection of lack of offered rate
Context	<b>configure</b> <a href="#">qos adv-config-policy</a> <i>string</i> <a href="#">child-control</a> <a href="#">offered-measurement</a> <a href="#">fast-stop</a> <i>boolean</i>
Tree	<a href="#">fast-stop</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **granularity**

Synopsis	Enter the <b>granularity</b> context
Context	<b>configure</b> <a href="#">qos adv-config-policy</a> <i>string</i> <a href="#">child-control</a> <a href="#">offered-measurement</a> <a href="#">granularity</a>
Tree	<a href="#">granularity</a>
Introduced	16.0.R1
Platforms	All

### **percent** *decimal-number*

Synopsis	Percentage of PIR used as threshold sensitivity to offered rate change
Context	<b>configure</b> <a href="#">qos adv-config-policy</a> <i>string</i> <a href="#">child-control</a> <a href="#">offered-measurement</a> <a href="#">granularity</a> <a href="#">percent</a> <i>decimal-number</i>
Tree	<a href="#">percent</a>
Range	0.00 to 100.00
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Rate as child's offered rate change sensitivity value
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control offered-measurement granularity</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	0 to 100000000
Notes	The following elements are part of a choice: <b>percent</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control offered-measurement hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

### **active-min-only** *boolean*

Synopsis	Use minimum offered rate for active queues or policers
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control offered-measurement hold-time</b> <b>active-min-only</b> <i>boolean</i>
Tree	<b>active-min-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **high-rate** *number*

Synopsis	Time to maintain current offered rate
Context	<b>configure qos adv-config-policy</b> <i>string</i> <b>child-control offered-measurement hold-time</b> <b>high-rate</b> <i>number</i>
Tree	<b>high-rate</b>
Range	0 to 60
Default	0

Introduced 16.0.R1  
Platforms All

### **max-decrement**

Synopsis Enter the **max-decrement** context  
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement  
Tree [max-decrement](#)  
Introduced 16.0.R1  
Platforms All

### **percent** *decimal-number*

Synopsis percentage as decrement limit to offered rate change  
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement percent *decimal-number*  
Tree [percent](#)  
Range 0.00 to 100.00  
Notes The following elements are part of a choice: **percent** or **rate**.  
Introduced 16.0.R1  
Platforms All

### **rate** *number*

Synopsis Value to use as decrement limit to offered rate change  
Context **configure** qos adv-config-policy *string* child-control offered-measurement max-decrement rate *number*  
Tree [rate](#)  
Range 0 to 100000000  
Notes The following elements are part of a choice: **percent** or **rate**.  
Introduced 16.0.R1  
Platforms All

**sample-interval** *number*

Synopsis	Interval for sampling the child's offered rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement sample-interval <i>number</i>
Tree	sample-interval
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**time-average-factor**

Synopsis	Enter the <b>time-average-factor</b> context
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor
Tree	time-average-factor
Introduced	16.0.R1
Platforms	All

**dec-only** *boolean*

Synopsis	Apply time adjustment when the offered rate decreases
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor dec-only <i>boolean</i>
Tree	dec-only
Default	false
Introduced	16.0.R1
Platforms	All

**weighting-factor** *number*

Synopsis	New offered rate with a sample of the previous offered rate
Context	<b>configure</b> qos adv-config-policy <i>string</i> child-control offered-measurement time-average-factor weighting-factor <i>number</i>
Tree	weighting-factor
Range	0 to 64

Default	0
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos adv-config-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**fp-resource-policy** [**fp-resource-policy-name**] *string*

Synopsis	Enter the <b>fp-resource-policy</b> list instance
Context	<b>configure</b> qos fp-resource-policy <i>string</i>
Tree	fp-resource-policy
Max. Instances	15
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[fp-resource-policy-name]** *string*

Synopsis	FP resource policy name
Context	<b>configure</b> qos fp-resource-policy <i>string</i>
Tree	fp-resource-policy
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## aggregate-shapers

Synopsis	Enter the <b>aggregate-shapers</b> context
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers
Tree	aggregate-shapers
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

## auto-creation *boolean*

### WARNING:

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enables auto-creation of hardware aggregate shapers
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers auto-creation <i>boolean</i>
Tree	auto-creation
Description	When configured to <b>true</b> , enables the auto-creation of hardware aggregate shapers on the specified FP. After enabling, the corresponding FP is rebooted.
Default	false
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

## hw-agg-shapers

Synopsis	Enter the <b>hw-agg-shapers</b> context
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers
Tree	hw-agg-shapers
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**saps** *boolean***WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enable hardware aggregate shapers for SAPs
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers saps <i>boolean</i>
Tree	saps
Default	false
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**subscribers** *boolean***WARNING:**

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Enable hardware aggregate shapers for subscribers
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers hw-agg-shapers subscribers <i>boolean</i>
Tree	subscribers
Default	false
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**queue-sets**

Synopsis	Enter the <b>queue-sets</b> context
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets
Tree	queue-sets
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**default-size**

Synopsis	Enter the <b>default-size</b> context
Context	<b>configure</b> qos fp-resource-policy string aggregate-shapers queue-sets default-size
Tree	default-size
Description	Commands in this context configure the default queue-set size for individual object types.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**queue-groups** (*number* | *keyword*)

Synopsis	Default size of queue-groups
Context	<b>configure</b> qos fp-resource-policy string aggregate-shapers queue-sets default-size queue-groups ( <i>number</i>   <i>keyword</i> )
Tree	queue-groups
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**saps** (*number* | *keyword*)

Synopsis	Default queue-set size for SAPs
Context	<b>configure</b> qos fp-resource-policy string aggregate-shapers queue-sets default-size saps ( <i>number</i>   <i>keyword</i> )
Tree	saps
Description	This command configures the default queue-set size for SAPs.  When the <b>non-shaper-queues</b> keyword is configured, SAPs do not use hardware aggregate shapers on FPs where the specified FP resource policy is applied.
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**subscribers** (*number* | *keyword*)

Synopsis	Default queue-set size for subscribers
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets default-size subscribers ( <i>number</i>   <i>keyword</i> )
Tree	subscribers
Description	This command configures the default queue-set size for subscribers. When the <b>non-shaper-queues</b> keyword is configured, SAPs do not use hardware aggregate shapers on FPs where the specified FP resource policy is applied.
Range	2 to 8
Options	non-shaper-queues
Default	8
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**size** [*qset-size*] *number*

Synopsis	Enter the <b>size</b> list instance
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i>
Tree	size
Description	Commands in this context configure parameters for the specified queue-set size.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**[qset-size]** *number*

Synopsis	Size of the queue-sets
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i>
Tree	size
Range	2 to 8
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**allocation-weight** *number*

Synopsis	Allocation weight of the queue-set size
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers queue-sets size <i>number</i> allocation-weight <i>number</i>
Tree	allocation-weight
Description	This command configures the allocation weight for the specified queue-set size. The available queue-sets are distributed based on the allocation weight among different queue-set sizes.
Range	0 to 100
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**reserved-non-shaper-queues** *number*

Synopsis	Number of queues reserved for non-shaper queues
Context	<b>configure</b> qos fp-resource-policy <i>string</i> aggregate-shapers reserved-non-shaper-queues <i>number</i>
Tree	reserved-non-shaper-queues
Description	This command configures the number of egress queues that will not be used by hardware aggregate shapers.
Range	2048 to 262144
Default	8192
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos fp-resource-policy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## ports

Synopsis	Enter the <b>ports</b> context
Context	<b>configure qos fp-resource-policy string ports</b>
Tree	<a href="#">ports</a>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

## hqos-mode *keyword*

### WARNING:

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Default HQOS mode of the port
Context	<b>configure qos fp-resource-policy string ports hqos-mode keyword</b>
Tree	<a href="#">hqos-mode</a>
Options	port-scheduler, hw-agg-shaping
Default	port-scheduler
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

## queues

Synopsis	Enter the <b>queues</b> context
Context	<b>configure qos fp-resource-policy string queues</b>
Tree	<a href="#">queues</a>
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## ingress-percent-of-total *decimal-number*

### WARNING:

Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Percentage of total ingress queues allocated
Context	<b>configure qos fp-resource-policy</b> <i>string</i> <b>queues ingress-percent-of-total</b> <i>decimal-number</i>
Tree	<b>ingress-percent-of-total</b>
Description	<p>This command configures the percentage of the total number of queues on the FP on which the policy is applied that are allocated to ingress, with the remainder allocated to egress. The ingress and egress buffer pool sizes are not affected by the queue allocation.</p> <p>The allocation is performed in sets of 8192 queues, with a minimum of 8192 queues at ingress and 8192 queues at egress. If the percentage configured results in the queue allocation not being a multiple of 8192, the number of queues at ingress is rounded down to the next 8192 boundary, and consequently the number of queues at egress is rounded up to the next 8192 boundary, both while respecting the minimum at ingress and egress.</p> <p>If the FP resource policy is applied to any FP and the updated allocation is not achievable with the current ingress or egress queue consumption on any of the related FPs, the command fails.</p> <p>The configuration of this command (which includes removing the configuration) causes the router to immediately reset the associated cards, XIOMs and MDAs on all FPs on which the FP resource policy is applied, except on the 7750 SR-1, where the configuration must be saved and the router rebooted, immediately after committing the configuration transaction.</p>
Range	4.00 to 97.00
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **hs-attachment-policy** [*name*] *string*

Synopsis	Enter the <b>hs-attachment-policy</b> list instance
Context	<b>configure qos hs-attachment-policy</b> <i>string</i>
Tree	<b>hs-attachment-policy</b>

Tree	<b>mid-pool</b>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**[mid-pool-id]** *number*

Synopsis	Mid-pool identifier for the HS pool policy
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>mid-tier mid-pool</b> <i>number</i>
Tree	<b>mid-pool</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**allocation-percent** *decimal-number*

Synopsis	Root pool size to derive the mid-pool size
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>mid-tier mid-pool</b> <i>number</i> <b>allocation-percent</b> <i>decimal-number</i>
Tree	<b>allocation-percent</b>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## parent-root-pool

Synopsis	Enter the <b>parent-root-pool</b> context
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <i>mid-tier</i> <i>mid-pool</i> <i>number</i> <b>parent-root-pool</b>
Tree	<b>parent-root-pool</b>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## none

Synopsis	Assign no buffers to the mid-tier pool
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <i>mid-tier</i> <i>mid-pool</i> <i>number</i> <b>parent-root-pool none</b>
Tree	<b>none</b>
Notes	The following elements are part of a choice: <b>none</b> or <b>pool-id</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## pool-id reference

Synopsis	Parent root pool to which the mid-pool is associated
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <i>mid-tier</i> <i>mid-pool</i> <i>number</i> <b>parent-root-pool pool-id reference</b>
Tree	<b>pool-id</b>
Reference	<b>configure qos hs-pool-policy</b> <i>string</i> <i>root-tier</i> <i>root-pool</i> <i>number</i>
Notes	The following elements are part of a choice: <b>none</b> or <b>pool-id</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## port-bw-oversubscription-factor *number*

Synopsis	Over subscription factor for port-class pool sizes
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <i>mid-tier</i> <i>mid-pool</i> <i>number</i> <b>port-bw-oversubscription-factor</b> <i>number</i>
Tree	<b>port-bw-oversubscription-factor</b>
Description	This command modifies the size of the mid-pool when calculating the port-class pool sizes based on port bandwidth ratios. The over subscription factor for a mid-pool can

be modified at any time, causing the corresponding port-class pool dynamic sizes to be recalculated. A similar behavior can be obtained by increasing the mid-pool's allocation-percent of its parent root-pool. However, the major difference in using this command is that it provides larger port-class pools without allowing the mid-pool to use a higher number of buffers in the root pool.

Range	1 to 10
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **slope-policy** *reference*

Synopsis	Slope policy to define high, low, and exceed slopes
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>mid-tier mid-pool</b> <i>number</i> <b>slope-policy</b> <i>reference</i>
Tree	<a href="#">slope-policy</a>
Reference	<b>configure qos slope-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **root-tier**

Synopsis	Enter the <b>root-tier</b> context
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>root-tier</b>
Tree	<a href="#">root-tier</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **root-pool** [**root-pool-id**] *number*

Synopsis	Enter the <b>root-pool</b> list instance
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>root-tier root-pool</b> <i>number</i>
Tree	<a href="#">root-pool</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**[root-pool-id] number**

Synopsis	Root pool identifier for the HS pool policy
Context	<b>configure</b> qos hs-pool-policy string root-tier root-pool number
Tree	root-pool
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**allocation-weight number**

Synopsis	Root pool allocation weight used to calculate pool size
Context	<b>configure</b> qos hs-pool-policy string root-tier root-pool number allocation-weight number
Tree	allocation-weight
Description	<p>This command specifies the weight that is applied to the root pool and is divided by the sum of all root pool weights to derive the pool's buffer allocation factor. The amount of buffers remaining after the system-reserve percentage is applied is multiplied by the buffer allocation factor to derive the pool size.</p> <p>A root pool with an allocation weight set to "0" is considered inactive and is not allocated buffers.</p> <p>When a root pool's allocation weight is modified, all root pools, mid-tier pools, and port class pool sizes are reevaluated and modified when necessary.</p>
Range	0 to 100
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**slope-policy reference**

Synopsis	Slope policy to define high, low, and exceed slopes
Context	<b>configure</b> qos hs-pool-policy string root-tier root-pool number slope-policy reference
Tree	slope-policy
Reference	<b>configure</b> qos slope-policy string
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**system-reserve** *decimal-number*

Synopsis	Percentage of buffers reserved for internal system use
Context	<b>configure qos hs-pool-policy</b> <i>string</i> <b>system-reserve</b> <i>decimal-number</i>
Tree	<a href="#">system-reserve</a>
Range	1.00 to 30.00
Default	5.00
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-port-pool-policy** [*name*] *string*

Synopsis	Enter the <b>hs-port-pool-policy</b> list instance
Context	<b>configure qos hs-port-pool-policy</b> <i>string</i>
Tree	<a href="#">hs-port-pool-policy</a>
Max. Instances	2047
Introduced	16.0.R1

## group

Synopsis Enable the **group** context

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group

Tree [group](#)

Notes The following elements are part of a choice: **group** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

## group-id *number*

Synopsis Associated group associated with this scheduling class

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group group-id *number*

Tree [group-id](#)

Range 1

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

## weight *number*

Synopsis Weight associated with this scheduling class

Context **configure** qos hs-scheduler-policy *string* scheduling-class *number* group weight *number*

Tree [weight](#)

Range 1 to 127

Default 1

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

## rate (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context	<b>configure qos hs-scheduler-policy</b> <i>string scheduling-class number rate (number   keyword)</i>
Tree	<a href="#">rate</a>
Range	1 to 100000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>group</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hw-agg-shaper-scheduler-policy** [[name](#)] *string*

Synopsis	Enter the <b>hw-agg-shaper-scheduler-policy</b> list instance
Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i>
Tree	<a href="#">hw-agg-shaper-scheduler-policy</a>
Description	Commands in this context configure the attributes of a hardware aggregate shaper scheduler policy.
Max. Instances	127
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **[name]** *string*

Synopsis	Name of the hardware aggregate shaper scheduler policy
Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i>
Tree	<a href="#">hw-agg-shaper-scheduler-policy</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **congestion-threshold** *number*

Synopsis	Congestion threshold of the scheduler
----------	---------------------------------------

Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i> <b>congestion-threshold</b> <i>number</i>
Tree	<b>congestion-threshold</b>
Description	This command configures the congestion threshold for the hardware aggregate shaper scheduler policy, which, if exceeded, triggers the hardware aggregate scheduler algorithm. The value is expressed as a percentage of the scheduler rate.
Range	0 to 100
Default	90
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **description** *string*

Synopsis	Text description
Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **group** [*group-name*] *string*

Synopsis	Add a list entry for <b>group</b>
Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i> <b>group</b> <i>string</i>
Tree	<b>group</b>
Max. Instances	6
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **[group-name]** *string*

Synopsis	Name of the HW aggregate shaper scheduler policy group
Context	<b>configure qos hw-agg-shaper-scheduler-policy</b> <i>string</i> <b>group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **max-percent-rate** *decimal-number*

Synopsis	Maximum frame-based bandwidth percentage
Context	<b>configure qos hw-aggr-shaper-scheduler-policy</b> <i>string</i> <b>max-percent-rate</b> <i>decimal-number</i>
Tree	<b>max-percent-rate</b>
Description	This command configures the rate of the hardware aggregate shaper scheduler expressed as a percentage of the port rate.
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>max-percent-rate</b> or <b>max-rate</b> .
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure qos hw-aggr-shaper-scheduler-policy</b> <i>string</i> <b>max-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-rate</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>max-percent-rate</b> or <b>max-rate</b> .
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **monitor-threshold** *number*

Synopsis	Monitor threshold for the scheduler
Context	<b>configure qos hw-aggr-shaper-scheduler-policy</b> <i>string</i> <b>monitor-threshold</b> <i>number</i>
Tree	<b>monitor-threshold</b>
Description	This command configures the monitor threshold for the hardware aggregate shaper scheduler policy, which is used for egress scheduler monitoring. The value is expressed

as a percentage of the scheduler rate, which is considered as a limit for determining congestion.

Range	0 to 100
Default	0
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **sched-class** [[class-id](#)] *number*

Synopsis	Enter the <b>sched-class</b> list instance
Context	<b>configure</b> qos hw-aggr-shaper-scheduler-policy <i>string</i> <a href="#">sched-class</a> <i>number</i>
Tree	<a href="#">sched-class</a>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **[class-id]** *number*

Synopsis	Scheduling class ID for the scheduler policy
Context	<b>configure</b> qos hw-aggr-shaper-scheduler-policy <i>string</i> <a href="#">sched-class</a> <i>number</i>
Tree	<a href="#">sched-class</a>
Range	1 to 6
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **group** *reference*

Synopsis	Group associated with the scheduling class
Context	<b>configure</b> qos hw-aggr-shaper-scheduler-policy <i>string</i> <a href="#">sched-class</a> <i>number</i> <a href="#">group</a> <i>reference</i>
Tree	<a href="#">group</a>
Description	This command assigns the specified scheduling class to a group within a hardware aggregate shaper scheduler policy.
Reference	<b>configure</b> qos hw-aggr-shaper-scheduler-policy <i>string</i> <a href="#">group</a> <i>string</i>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**weight** *number*

Synopsis	Weight associated with the scheduling class
Context	<b>configure</b> qos hw-agg-shaper-scheduler-policy <i>string</i> sched-class <i>number</i> weight <i>number</i>
Tree	weight
Description	This command configures the weight for a scheduling class within the specified group.
Range	1 to 8
Default	1
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**match-list**

Synopsis	Enter the <b>match-list</b> context
Context	<b>configure</b> qos match-list
Tree	match-list
Introduced	16.0.R1
Platforms	All

**ip-prefix-list** [*prefix-list-name*] *string*

Synopsis	Enter the <b>ip-prefix-list</b> list instance
Context	<b>configure</b> qos match-list ip-prefix-list <i>string</i>
Tree	ip-prefix-list
Max. Instances	512
Introduced	16.0.R1
Platforms	All

**[*prefix-list-name*]** *string*

Synopsis	IP prefix list name
Context	<b>configure</b> qos match-list ip-prefix-list <i>string</i>
Tree	ip-prefix-list
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R3
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos match-list ip-prefix-list</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **prefix** [[ip-prefix](#)] *string*

Synopsis	Add a list entry for <b>prefix</b>
Context	<b>configure qos match-list ip-prefix-list</b> <i>string prefix string</i>
Tree	<a href="#">prefix</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** *string*

Synopsis	IPv4 address prefix
Context	<b>configure qos match-list ip-prefix-list</b> <i>string prefix string</i>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R3
Platforms	All

### **ipv6-prefix-list** [[prefix-list-name](#)] *string*

Synopsis	Enter the <b>ipv6-prefix-list</b> list instance
----------	---

Context	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>
Tree	<a href="#">ipv6-prefix-list</a>
Max. Instances	128
Introduced	16.0.R4
Platforms	All

**[prefix-list-name]** *string*

Synopsis	IP prefix list name
Context	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>
Tree	<a href="#">ipv6-prefix-list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

**prefix** [[ipv6-prefix](#)] *string*

Synopsis	Add a list entry for <b>prefix</b>
Context	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i> <b>prefix</b> <i>string</i>
Tree	<a href="#">prefix</a>
Max. Instances	128
Introduced	16.0.R4
Platforms	All

**[ipv6-prefix]** *string*

Synopsis	Ipv6 address prefix
Context	<b>configure qos match-list ipv6-prefix-list</b> <i>string prefix string</i>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**port-list** [[port-list-name](#)] *string*

Synopsis	Enter the <b>port-list</b> list instance
Context	<b>configure qos match-list port-list</b> <i>string</i>
Tree	<a href="#">port-list</a>
Max. Instances	16
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[port-list-name]** *string*

Synopsis	Port list name
Context	<b>configure qos match-list port-list</b> <i>string</i>
Tree	<a href="#">port-list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure qos match-list port-list</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port** [*value*] *number*

Synopsis Add a list entry for **port**  
 Context **configure qos match-list port-list** *string port number*  
 Tree [port](#)  
 Description Commands in this context specify ports for a port match list.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[value]** *number*

Synopsis Port number  
 Context **configure qos match-list port-list** *string port number*  
 Tree [port](#)  
 Range 0 to 65535  
 Notes This element is part of a list key.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **range** [*start*] *number end number*

Synopsis Add a list entry for **range**  
 Context **configure qos match-list port-list** *string range number end number*  
 Tree [range](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[start]** *number*

Synopsis Lower bound for the port range  
 Context **configure qos match-list port-list** *string range number end number*  
 Tree [range](#)

---

Range	0 to 65534
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **end number**

Synopsis	Upper bound for the port range
Context	<b>configure</b> qos match-list port-list <i>string range number end number</i>
Tree	<a href="#">range</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-auto-id**

Synopsis	Enter the <b>md-auto-id</b> context
Context	<b>configure</b> qos md-auto-id
Tree	<a href="#">md-auto-id</a>
Introduced	16.0.R1
Platforms	All

### **qos-policy-id-range**

Synopsis	Enable the <b>qos-policy-id-range</b> context
Context	<b>configure</b> qos md-auto-id qos-policy-id-range
Tree	<a href="#">qos-policy-id-range</a>
Introduced	16.0.R1
Platforms	All

**end number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the ID range
Context	<b>configure qos md-auto-id qos-policy-id-range end number</b>
Tree	<a href="#">end</a>
Range	2 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**start number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the ID range
Context	<b>configure qos md-auto-id qos-policy-id-range start number</b>
Tree	<a href="#">start</a>
Range	2 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**network [network-policy-name] string**

Synopsis	Enter the <b>network</b> list instance
Context	<b>configure qos network string</b>
Tree	<a href="#">network</a>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

**[network-policy-name] string**

Synopsis	QoS network policy name
Context	<b>configure qos network string</b>
Tree	<b>network</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure qos network string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure qos network string egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	All

**dscp [dscp-name] keyword**

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure qos network string egress dscp keyword</b>
Tree	<b>dscp</b>
Introduced	16.0.R1
Platforms	All

**[dscp-name]** *keyword*

Synopsis	DSCP name to perform reclassification actions
Context	<b>configure qos network</b> <i>string egress dscp keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string egress dscp keyword fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile to use for the ingressing traffic
Context	<b>configure qos network</b> <i>string egress dscp keyword profile keyword</i>
Tree	<b>profile</b>
Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**fc** [*fc-name*] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure qos network</b> <i>string egress fc keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name
Context	<b>configure qos network</b> <i>string egress fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**de-mark**

Synopsis	Enable the <b>de-mark</b> context
Context	<b>configure qos network</b> <i>string egress fc keyword de-mark</i>
Tree	<b>de-mark</b>
Introduced	16.0.R1
Platforms	All

**force** *number*

Synopsis	DE value
Context	<b>configure qos network</b> <i>string egress fc keyword de-mark force number</i>
Tree	<b>force</b>
Range	0 to 1
Introduced	16.0.R1
Platforms	All

**dot1p-in-profile** *number*

Synopsis	Dot1p marking for in-profile marking
Context	<b>configure qos network</b> <i>string egress fc keyword dot1p-in-profile number</i>
Tree	<a href="#">dot1p-in-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

**dot1p-out-profile** *number*

Synopsis	Dot1p marking for out-of-profile marking
Context	<b>configure qos network</b> <i>string egress fc keyword dot1p-out-profile number</i>
Tree	<a href="#">dot1p-out-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

**dscp-in-profile** *keyword*

Synopsis	DSCP marking for in-profile marking
Context	<b>configure qos network</b> <i>string egress fc keyword dscp-in-profile keyword</i>
Tree	<a href="#">dscp-in-profile</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**dscp-out-profile** *keyword*

Synopsis	DSCP marking for out-of-profile marking
Context	<b>configure qos network</b> <i>string egress fc keyword dscp-out-profile keyword</i>
Tree	<a href="#">dscp-out-profile</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31,

cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1  
Platforms All

### **lsp-exp-in-profile** *number*

Synopsis LSP-EXP marking for in-profile marking  
Context **configure qos network** *string* **egress fc** *keyword* **lsp-exp-in-profile** *number*  
Tree [lsp-exp-in-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **lsp-exp-out-profile** *number*

Synopsis LSP-EXP marking for out-of-profile marking  
Context **configure qos network** *string* **egress fc** *keyword* **lsp-exp-out-profile** *number*  
Tree [lsp-exp-out-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **port-redirect-group**

Synopsis Enter the **port-redirect-group** context  
Context **configure qos network** *string* **egress fc** *keyword* **port-redirect-group**  
Tree [port-redirect-group](#)  
Introduced 16.0.R1  
Platforms All

### **policer** *number*

Synopsis Policer to be used  
Context **configure qos network** *string* **egress fc** *keyword* **port-redirect-group** **policer** *number*

Tree	<a href="#">policer</a>
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **queue** *number*

Synopsis	Queue to be used
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress fc keyword</a> <a href="#">port-redirect-group</a> <a href="#">queue</a> <i>number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

### **ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a>
Tree	<a href="#">ip-criteria</a>
Introduced	16.0.R1
Platforms	All

### **entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

### [[entry-id](#)] *number*

Synopsis	Entry ID for match criterion and corresponding action
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>

Description	This command uniquely identifies a match criterion and the corresponding action. Nokia recommends that multiple entries be given entry IDs in staggered increments. This allows users to insert a new entry in an existing policy without requiring renumbering all of the existing entries.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### action

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action</b>
Tree	<b>action</b>
Introduced	16.0.R1
Platforms	All

### fc keyword

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action fc keyword</b>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### port-redirect-group

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action port-redirect-group</b>
Tree	<b>port-redirect-group</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policer number**

Synopsis	Policer ID to be used for the matched traffic
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action port-redirect-group</b> <b>policer number</b>
Tree	<b>policer</b>
Range	1 to 16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue number**

Synopsis	Queue to be used for post-policed traffic
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action port-redirect-group</b> <b>queue number</b>
Tree	<b>queue</b>
Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile keyword**

Synopsis	Profile reclassification action
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action profile</b> <i>keyword</i>
Tree	<b>profile</b>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Action for criteria entry
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number action type</b> <i>keyword</i>
Tree	<b>type</b>
Options	ignore-match, accept
Default	ignore-match

Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number match</b>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

Synopsis	DSCP value to match in the packet
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number match dscp</b> <i>keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

### **dst-ip**

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry number match dst-ip</b>

Tree	<a href="#">dst-ip</a>
Introduced	16.0.R1
Platforms	All

### **address** (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Destination IPv4 address to match
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match dst-ip</a> <a href="#">address</a> ( <i>ipv4-prefix-with-host-bits</i>   <i>ipv4-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ip-prefix-list** *reference*

Synopsis	IP prefix list as the match criterion
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match dst-ip</a> <a href="#">ip-prefix-list</a> <i>reference</i>
Tree	<a href="#">ip-prefix-list</a>
Description	This command specifies an IP prefix list used as a match criterion for an IP address.
Reference	<b>configure</b> <a href="#">qos match-list</a> <a href="#">ip-prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask** *string*

Synopsis	Subnet mask
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match dst-ip</a> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## dst-port

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos network string egress ip-criteria entry number match dst-port</b>
Tree	<b>dst-port</b>
Introduced	16.0.R1
Platforms	All

## eq number

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos network string egress ip-criteria entry number match dst-port eq number</b>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

## gt number

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos network string egress ip-criteria entry number match dst-port gt number</b>
Tree	<b>gt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

## lt number

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos network string egress ip-criteria entry number match dst-port lt number</b>
Tree	<b>lt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>

Introduced 16.0.R1  
 Platforms All

### **port-list** *reference*

Synopsis Name of the port list as the match criterion  
 Context **configure** qos network *string* egress ip-criteria entry *number* match dst-port port-list *reference*  
 Tree [port-list](#)  
 Reference **configure** qos match-list port-list *string*  
 Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **range**

Synopsis Enter the **range** context  
 Context **configure** qos network *string* egress ip-criteria entry *number* match dst-port range  
 Tree [range](#)  
 Notes The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.  
 Introduced 16.0.R1  
 Platforms All

### **end** *number*

Synopsis Upper bound of port range to match  
 Context **configure** qos network *string* egress ip-criteria entry *number* match dst-port range end *number*  
 Tree [end](#)  
 Range 0 to 65535  
 Introduced 16.0.R1  
 Platforms All

### **start** *number*

Synopsis Lower bound of port range to match

Context	<b>configure qos network</b> <i>string</i> <i>egress ip-criteria entry number match dst-port range start number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **fragment** *keyword*

Synopsis	Fragmentation state as the match criterion
Context	<b>configure qos network</b> <i>string</i> <i>egress ip-criteria entry number match fragment keyword</i>
Tree	<a href="#">fragment</a>
Description	This command configures fragmented or non-fragmented IP packets as a network QoS policy match criterion. When unconfigured, all packets match regardless of whether they are fragmented.
Options	false, true
Introduced	16.0.R1
Platforms	All

### **icmp-type** *number*

Synopsis	ICMP type in the ICMP header of IPv4 packet to match
Context	<b>configure qos network</b> <i>string</i> <i>egress ip-criteria entry number match icmp-type number</i>
Tree	<a href="#">icmp-type</a>
Description	This command configures matching on the ICMP type field in the ICMP header of an IPv4 packet as a network QoS match criterion. An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

**protocol** (*number | keyword*)

Synopsis	IP protocol to match
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match protocol</b> ( <i>number   keyword</i> )
Tree	<a href="#">protocol</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-ip</b>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

**address** (*ipv4-prefix-with-host-bits | ipv4-address*)

Synopsis	Source IPv4 address to match
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-ip address</b> ( <i>ipv4-prefix-with-host-bits   ipv4-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix-list** *reference*

Synopsis	IP prefix list as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-ip ip-prefix-list reference</b>
Tree	<a href="#">ip-prefix-list</a>

Description	This command specifies an IP prefix list used as a match criterion for an IP address.
Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask** *string*

Synopsis	Subnet mask
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-ip mask</b> <i>string</i>
Tree	<b>mask</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-port</b>
Tree	<b>src-port</b>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos network</b> <i>string</i> <b>egress ip-criteria entry</b> <i>number</i> <b>match src-port eq</b> <i>number</i>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos network string egress ip-criteria entry number match src-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**lt number**

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos network string egress ip-criteria entry number match src-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**port-list reference**

Synopsis	Name of the port list as the match criterion
Context	<b>configure qos network string egress ip-criteria entry number match src-port port-list reference</b>
Tree	<a href="#">port-list</a>
Reference	<b>configure qos match-list port-list string</b>
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network string egress ip-criteria entry number match src-port range</b>
Tree	<a href="#">range</a>

Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of port range to match
Context	<b>configure qos network string egress ip-criteria entry number match src-port range end number</b>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of port range to match
Context	<b>configure qos network string egress ip-criteria entry number match src-port range start number</b>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure qos network string egress ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

**entry [entry-id] number**

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos network string egress ipv6-criteria entry number</b>

Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

**[entry-id] number**

Synopsis	Entry ID for match criterion and corresponding action
Context	<b>configure qos network</b> <i>string</i> <a href="#">egress</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Description	This command uniquely identifies a match criterion and the corresponding action. Nokia recommends that multiple entries be given entry IDs in staggered increments. This allows users to insert a new entry in an existing policy without requiring renumbering all of the existing entries.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos network</b> <i>string</i> <a href="#">egress</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string</i> <a href="#">egress</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <b>port-redirect-group</b>
Tree	<b>port-redirect-group</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policer number**

Synopsis	Policer ID to be used for the matched traffic
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <b>port-redirect-group</b> <i>policer</i> <i>number</i>
Tree	<b>policer</b>
Range	1 to 16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue number**

Synopsis	Queue to be used for post-policed traffic
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <b>port-redirect-group</b> <i>queue</i> <i>number</i>
Tree	<b>queue</b>
Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile keyword**

Synopsis	Profile reclassification action
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>action</i> <b>profile</b> <i>keyword</i>
Tree	<b>profile</b>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Action for criteria entry
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria entry number action type keyword</i>
Tree	<i>type</i>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria entry number description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria entry number match</i>
Tree	<i>match</i>
Introduced	16.0.R1
Platforms	All

**dscp keyword**

Synopsis	DSCP value to match in the packet
Context	<b>configure qos network</b> <i>string</i> <i>egress</i> <i>ipv6-criteria entry number match dscp keyword</i>
Tree	<i>dscp</i>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

## dst-ip

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-ip</b>
Tree	<a href="#">dst-ip</a>
Introduced	16.0.R1
Platforms	All

## address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Destination IPv6 address to match
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-ip address</b> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-ip ipv6-prefix-list reference</b>
Tree	<a href="#">ipv6-prefix-list</a>
Description	This command specifies an IPv6 prefix list used as a match criterion for an IP address.
Reference	<b>configure qos match-list ipv6-prefix-list string</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask string**

Synopsis	Address mask
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-ip mask string</b>
Tree	<b>mask</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-port</b>
Tree	<b>dst-port</b>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-port eq number</b>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos network string egress ipv6-criteria entry number match dst-port gt number</b>
Tree	<b>gt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .

Introduced	16.0.R1
Platforms	All

**lt number**

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry number match dst-port lt number</b>
Tree	<b>lt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**port-list reference**

Synopsis	Name of the port list as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry number match dst-port port-list reference</b>
Tree	<b>port-list</b>
Reference	<b>configure qos match-list port-list string</b>
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry number match dst-port range</b>
Tree	<b>range</b>
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <i>egress ipv6-criteria entry number match dst-port range end number</i>
Tree	<i>end</i>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <i>egress ipv6-criteria entry number match dst-port range start number</i>
Tree	<i>start</i>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment keyword**

Synopsis	Fragmentation state as the match criterion
Context	<b>configure qos network</b> <i>string</i> <i>egress ipv6-criteria entry number match fragment keyword</i>
Tree	<i>fragment</i>
Description	This command configures fragmented or non-fragmented IPv6 packets as a network QoS policy match criterion.  When unconfigured, all packets match regardless of whether they are fragmented.
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

**icmp-type number**

Synopsis	ICMPv6 type in ICMPv6 header of IPv6 packet to match
Context	<b>configure qos network</b> <i>string</i> <i>egress ipv6-criteria entry number match icmp-type number</i>
Tree	<i>icmp-type</i>

Description	This command configures matching on the ICMPv6 type field in the ICMPv6 header of an IPv6 packet as a network QoS match criterion.  An entry containing Layer 4 non-zero match criteria does not match non-initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing a match criteria of zero may not match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

### **next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry</b> <i>number</i> <b>match next-header</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">next-header</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

### **src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry</b> <i>number</i> <b>match src-ip</b>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

### **address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Source IPv6 address to match
Context	<b>configure qos network</b> <i>string</i> <b>egress ipv6-criteria entry</b> <i>number</i> <b>match src-ip address</b> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>

Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ipv6-criteria entry number match src-ip</a> <b>ipv6-prefix-list</b> <i>reference</i>
Tree	<a href="#">ipv6-prefix-list</a>
Description	This command specifies an IPv6 prefix list used as a match criterion for an IP address.
Reference	<b>configure</b> <a href="#">qos match-list</a> <b>ipv6-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask** *string*

Synopsis	Address mask
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ipv6-criteria entry number match src-ip</a> <b>mask</b> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">egress ipv6-criteria entry number match</a> <b>src-port</b>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos network string egress ipv6-criteria entry number match src-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos network string egress ipv6-criteria entry number match src-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos network string egress ipv6-criteria entry number match src-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

### **port-list reference**

Synopsis	Name of the port list as the match criterion
----------	--

Context	<b>configure qos network</b> <i>string</i> egress ipv6-criteria entry <i>number</i> match src-port port-list <i>reference</i>
Tree	<a href="#">port-list</a>
Reference	<b>configure qos match-list port-list</b> <i>string</i>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network</b> <i>string</i> egress ipv6-criteria entry <i>number</i> match src-port range
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of port range to match
Context	<b>configure qos network</b> <i>string</i> egress ipv6-criteria entry <i>number</i> match src-port range <i>end number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of port range to match
Context	<b>configure qos network</b> <i>string</i> egress ipv6-criteria entry <i>number</i> match src-port range <i>start number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1

Platforms All

### **prec** [*prec-value*] *number*

Synopsis Enter the **prec** list instance  
 Context **configure qos network** *string* **egress prec** *number*  
 Tree **prec**  
 Introduced 16.0.R1  
 Platforms All

### **[prec-value]** *number*

Synopsis Precedence value for which mapping is performed  
 Context **configure qos network** *string* **egress prec** *number*  
 Tree **prec**  
 Range 0 to 7  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **fc** *keyword*

Synopsis Forwarding class  
 Context **configure qos network** *string* **egress prec** *number* **fc** *keyword*  
 Tree **fc**  
 Options be, l2, af, l1, h2, ef, h1, nc  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **profile** *keyword*

Synopsis Default profile to use for the ingressing traffic  
 Context **configure qos network** *string* **egress prec** *number* **profile** *keyword*  
 Tree **profile**

Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## remark-trusted

Synopsis	Enable the <b>remark-trusted</b> context
Context	<b>configure qos network</b> <i>string</i> egress remark-trusted
Tree	<a href="#">remark-trusted</a>
Introduced	16.0.R1
Platforms	All

## force-egress-marking *boolean*

Synopsis	Remark DSCP bits in the internal IP header
Context	<b>configure qos network</b> <i>string</i> egress remark-trusted force-egress-marking <i>boolean</i>
Tree	<a href="#">force-egress-marking</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure qos network</b> <i>string</i> ingress
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## default-action

Synopsis	Enter the <b>default-action</b> context
Context	<b>configure qos network</b> <i>string</i> ingress default-action
Tree	<a href="#">default-action</a>

Introduced	16.0.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class used when classifying ingress traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress default-action fc keyword</b>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R1
Platforms	All

**profile keyword**

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress default-action profile keyword</b>
Tree	<b>profile</b>
Options	in, out, exceed, inplus
Default	out
Introduced	16.0.R1
Platforms	All

**dot1p [dot1p-value] number**

Synopsis	Enter the <b>dot1p</b> list instance
Context	<b>configure qos network</b> <i>string</i> <b>ingress dot1p number</b>
Tree	<b>dot1p</b>
Introduced	16.0.R1
Platforms	All

**[dot1p-value] number**

Synopsis	Dot1p value to match in the packet
Context	<b>configure qos network</b> <i>string</i> <b>ingress dot1p number</b>

Tree	<a href="#">dot1p</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">ingress dot1p</a> <i>number</i> <b>fc</b> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **profile** *keyword*

Synopsis	Default profile to be used for the ingressing traffic
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">ingress dot1p</a> <i>number</i> <a href="#">profile</a> <i>keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, de, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **dscp** [[dscp-name](#)] *keyword*

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure</b> <a href="#">qos network</a> <i>string</i> <a href="#">ingress dscp</a> <i>keyword</i>
Tree	<a href="#">dscp</a>
Introduced	16.0.R1
Platforms	All

**[dscp-name]** *keyword*

Synopsis	DSCP associated with the forwarding class
Context	<b>configure qos network</b> <i>string</i> <b>ingress dscp</b> <i>keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string</i> <b>ingress dscp</b> <i>keyword</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile to use for the ingressing traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress dscp</b> <i>keyword</i> <b>profile</b> <i>keyword</i>
Tree	<b>profile</b>
Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
----------	-----------------------------------

Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[fc-name]** *keyword*

Synopsis	Forwarding class name
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i> <b>fp-redirect-group</b>
Tree	<b>fp-redirect-group</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **broadcast-policer** *number*

Synopsis	Policer to be used for broadcast traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i> <b>fp-redirect-group broadcast-policer</b> <i>number</i>
Tree	<b>broadcast-policer</b>
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**multicast-policer** *number*

Synopsis	Policer to be used for multicast traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i> <b>fp-redirect-group multicast-policer</b> <i>number</i>
Tree	<b>multicast-policer</b>
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policer** *number*

Synopsis	Policer to be used for unicast traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i> <b>fp-redirect-group policer</b> <i>number</i>
Tree	<b>policer</b>
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**unknown-policer** *number*

Synopsis	Policer to be used for unknown traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress fc</b> <i>keyword</i> <b>fp-redirect-group unknown-policer</b> <i>number</i>
Tree	<b>unknown-policer</b>
Range	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria</b>
Tree	<b>ip-criteria</b>
Introduced	16.0.R1
Platforms	All

**entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos network</b> <i>string</i> <a href="#">ingress ip-criteria entry number</a>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

**[entry-id]** *number*

Synopsis	Network Ingress IP Criteria Entry Index
Context	<b>configure qos network</b> <i>string</i> <a href="#">ingress ip-criteria entry number</a>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos network</b> <i>string</i> <a href="#">ingress ip-criteria entry number action</a>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string</i> <a href="#">ingress ip-criteria entry number action fc keyword</a>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the matching traffic
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number action profile</b> <i>keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number action type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match</b>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

**dscp keyword**

Synopsis	DSCP to be used as network QoS policy match criterion
Context	<b>configure qos network string ingress ip-criteria entry number match dscp keyword</b>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**dst-ip**

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos network string ingress ip-criteria entry number match dst-ip</b>
Tree	<a href="#">dst-ip</a>
Introduced	16.0.R1
Platforms	All

**address (ipv4-prefix-with-host-bits | ipv4-address)**

Synopsis	Destination IPv4 address for network QoS policy match
Context	<b>configure qos network string ingress ip-criteria entry number match dst-ip address (ipv4-prefix-with-host-bits   ipv4-address)</b>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix-list reference**

Synopsis	IPv4 prefix list containing IPv4 prefixes to match
Context	<b>configure qos network string ingress ip-criteria entry number match dst-ip ip-prefix-list reference</b>
Tree	<a href="#">ip-prefix-list</a>

Reference	<b>configure qos match-list ip-prefix-list string</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R4
Platforms	All

### **mask string**

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos network string ingress ip-criteria entry number match dst-ip mask string</b>
Tree	<b>mask</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos network string ingress ip-criteria entry number match dst-port</b>
Tree	<b>dst-port</b>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Exact destination port as the match criterion
Context	<b>configure qos network string ingress ip-criteria entry number match dst-port eq number</b>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Greater than destination port value as match criterion
----------	--

Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match dst-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Less than destination port value as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match dst-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **port-list reference**

Synopsis	Port list used as match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match dst-port port-list reference</b>
Tree	<a href="#">port-list</a>
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	<b>configure qos match-list port-list</b> <i>string</i>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match dst-port range</b>

Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of port range to match
Context	<b>configure</b> <a href="#">qos network string</a> <a href="#">ingress ip-criteria entry number match dst-port range end number</a>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of port range to match
Context	<b>configure</b> <a href="#">qos network string</a> <a href="#">ingress ip-criteria entry number match dst-port range start number</a>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment keyword**

Synopsis	Fragmentation state as the match criterion
Context	<b>configure</b> <a href="#">qos network string</a> <a href="#">ingress ip-criteria entry number match fragment keyword</a>
Tree	<a href="#">fragment</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**protocol** (*number | keyword*)

Synopsis	IP protocol to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match protocol</b> ( <i>number   keyword</i> )
Tree	<b>protocol</b>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-ip</b>
Tree	<b>src-ip</b>
Introduced	16.0.R1
Platforms	All

**address** (*ipv4-prefix-with-host-bits | ipv4-address*)

Synopsis	Source IPv4 address for network QoS policy match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-ip address</b> ( <i>ipv4-prefix-with-host-bits   ipv4-address</i> )
Tree	<b>address</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix-list** *reference*

Synopsis	IPv4 prefix list containing IPv4 prefixes to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-ip ip-prefix-list reference</b>
Tree	<b>ip-prefix-list</b>

Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R4
Platforms	All

### **mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-ip mask</b> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-port</b>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Exact source port as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry</b> <i>number</i> <b>match src-port eq</b> <i>number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt** *number*

Synopsis	Greater than source port value as match criterion
----------	---

Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Less than destination port value as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **port-list reference**

Synopsis	Port list used as match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port port-list reference</b>
Tree	<a href="#">port-list</a>
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	<b>configure qos match-list port-list</b> <i>string</i>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port range</b>

Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **end number**

Synopsis	Upper bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port range end number</b>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **start number**

Synopsis	Lower bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ip-criteria entry number match src-port range start number</b>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

### **entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
----------	--------------------------------------

Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number</b>
Tree	<b>entry</b>
Introduced	16.0.R1
Platforms	All

### **[entry-id]** *number*

Synopsis	Network Ingress IPv6 Criteria Entry Index
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number</b>
Tree	<b>entry</b>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number action</b>
Tree	<b>action</b>
Introduced	16.0.R1
Platforms	All

### **fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number action fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### **profile** *keyword*

Synopsis	Default profile for the matching traffic
----------	--

Context	<b>configure qos network</b> <i>string ingress ipv6-criteria entry number action profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure qos network</b> <i>string ingress ipv6-criteria entry number action type keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos network</b> <i>string ingress ipv6-criteria entry number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos network</b> <i>string ingress ipv6-criteria entry number match</i>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

**dscp keyword**

Synopsis	DSCP value to match in the packet
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dscp keyword</b>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**dst-ip**

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-ip</b>
Tree	<b>dst-ip</b>
Introduced	16.0.R1
Platforms	All

**address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Destination IPv6 address for network QoS policy match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-ip address</b> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<b>address</b>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list reference**

Synopsis	IPv6 prefix list containing IPv6 prefixes to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-ip ipv6-prefix-list reference</b>
Tree	<b>ipv6-prefix-list</b>
Reference	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>

Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R4
Platforms	All

### **mask string**

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos network string ingress ipv6-criteria entry number match dst-ip mask string</b>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos network string ingress ipv6-criteria entry number match dst-port</b>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Exact destination port as the match criterion
Context	<b>configure qos network string ingress ipv6-criteria entry number match dst-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Greater than destination port value as match criterion
----------	--

Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Less than destination port value as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

### **port-list reference**

Synopsis	Port list used as match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port port-list reference</b>
Tree	<a href="#">port-list</a>
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	<b>configure qos match-list port-list</b> <i>string</i>
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **range**

Synopsis	Enter the <b>range</b> context
----------	--------------------------------

Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port range</b>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port range</b> <a href="#">end number</a>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match dst-port range</b> <a href="#">start number</a>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment keyword**

Synopsis	Fragmentation state as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match fragment</b> <a href="#">keyword</a>
Tree	<a href="#">fragment</a>
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

**next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match next-header</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">next-header</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-ip</b>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

**address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Source IPv6 address for network QoS policy match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-ip address</b> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list containing IPv6 prefixes to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-ip ipv6-prefix-list</b> <i>reference</i>
Tree	<a href="#">ipv6-prefix-list</a>

Reference	<b>configure qos match-list ipv6-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R4
Platforms	All

### **mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-ip mask</b> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-port</b>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Exact source port as the match criterion
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry</b> <i>number</i> <b>match src-port eq</b> <i>number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**gt number**

Synopsis	Greater than source port value as match criterion
Context	<b>configure qos network string ingress ipv6-criteria entry number match src-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**lt number**

Synopsis	Less than destination port value as the match criterion
Context	<b>configure qos network string ingress ipv6-criteria entry number match src-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	16.0.R1
Platforms	All

**port-list reference**

Synopsis	Port list used as match criterion
Context	<b>configure qos network string ingress ipv6-criteria entry number match src-port port-list reference</b>
Tree	<a href="#">port-list</a>
Description	This command assigns a port list to a matching criteria entry in the network QoS policy. Each entry can use only a single port list. Port lists and prefix lists are mutually exclusive.
Reference	<b>configure qos match-list port-list string</b>
Notes	The following elements are part of a choice: <b>eq, gt, lt, port-list, or range.</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match src-port range</b>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , <b>port-list</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match src-port range</b> <a href="#">end number</a>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of port range to match
Context	<b>configure qos network</b> <i>string</i> <b>ingress ipv6-criteria entry number match src-port range</b> <a href="#">start number</a>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## ler-use-dscp boolean

Synopsis	Honor the DSCP markings instead of the LSP-EXP bits
Context	<b>configure qos network</b> <i>string</i> <b>ingress ler-use-dscp</b> <i>boolean</i>
Tree	<a href="#">ler-use-dscp</a>
Default	false
Introduced	16.0.R1

Platforms All

### **lsp-exp** [**lsp-exp-value**] *number*

Synopsis Enter the **lsp-exp** list instance  
 Context **configure qos network** *string ingress lsp-exp number*  
 Tree **lsp-exp**  
 Introduced 16.0.R1  
 Platforms All

### **[lsp-exp-value]** *number*

Synopsis LSP EXP value to associate with the forwarding class  
 Context **configure qos network** *string ingress lsp-exp number*  
 Tree **lsp-exp**  
 Range 0 to 7  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **fc** *keyword*

Synopsis Forwarding class  
 Context **configure qos network** *string ingress lsp-exp number fc keyword*  
 Tree **fc**  
 Options be, l2, af, l1, h2, ef, h1, nc  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **profile** *keyword*

Synopsis Default profile to use for the ingress traffic  
 Context **configure qos network** *string ingress lsp-exp number profile keyword*  
 Tree **profile**

Options	in, out, exceed, inplus
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **policy-id** *number*

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	QoS network policy ID
Context	<b>configure qos network</b> <i>string policy-id number</i>
Tree	<i>policy-id</i>
Description	<p>This command specifies the QoS network policy ID and uniquely identifies the policy on the router.</p> <p>Network <b>policy-id 1</b> exists as the default policy that is applied to all network interfaces by default. The network policy-id 1 cannot be modified or deleted. It defines the default DSCP-to-FC mapping and MPLS EXP-to-FC mapping for the ingress. For the egress, it defines forwarding classes that represent individual queues and the packet marking criteria.</p> <p>Network <b>policy-id 1</b> exists as the default policy that is applied to all network ports by default. This default policy cannot be modified or deleted. It defines the default DSCP-to-FC mapping and default unicast meters for ingress IP traffic. For the egress, it defines the forwarding class to dot1p and DSCP values and the packet marking criteria.</p> <p>If a new network policy is created (for instance, <b>policy-id 3</b>), only the default action and egress forwarding class parameters are identical to the default policy. A new network policy does not contain the default DSCP-to-FC and MPLS-EXP-to-FC mapping for network QoS policy of type <b>ip-interface</b> or the DSCP-to-FC mapping (for network QoS policy of type <b>port</b>). The default network policy can be copied to create a new network policy that includes the default ingress DSCP-to-FC and MPLS EXP-to-FC mapping (as appropriate).</p>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## **scope** *keyword*

Synopsis	Scope of the policy
Context	<b>configure qos network</b> <i>string scope keyword</i>

Tree	<a href="#">scope</a>
Options	exclusive, template
Default	template
Introduced	16.0.R1
Platforms	All

### **network-queue** [[network-queue-policy](#)] *string*

Synopsis	Enter the <b>network-queue</b> list instance
Context	<b>configure qos network-queue</b> <a href="#">string</a>
Tree	<a href="#">network-queue</a>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

### **[network-queue-policy]** *string*

Synopsis	Name for network queue policy
Context	<b>configure qos network-queue</b> <a href="#">string</a>
Tree	<a href="#">network-queue</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos network-queue</b> <a href="#">string</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure qos network-queue</b> <i>string fc keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name
Context	<b>configure qos network-queue</b> <i>string fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**multicast-queue** *reference*

Synopsis	Multicast queue for packets in this forwarding class
Context	<b>configure qos network-queue</b> <i>string fc keyword multicast-queue reference</i>
Tree	<b>multicast-queue</b>
Reference	<b>configure qos network-queue</b> <i>string queue number</i>
Introduced	16.0.R1
Platforms	All

**queue** *reference*

Synopsis	Queue for packets in this forwarding class
Context	<b>configure qos network-queue</b> <i>string fc keyword queue reference</i>
Tree	<b>queue</b>
Reference	<b>configure qos network-queue</b> <i>string queue number</i>
Introduced	16.0.R1
Platforms	All

### **hs-attachment-policy** *reference*

Synopsis	HS attachment policy applied
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-attachment-policy</b> <i>reference</i>
Tree	<a href="#">hs-attachment-policy</a>
Reference	<b>configure qos</b> <b>hs-attachment-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *number*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **[group-id]** *number*

Synopsis	HS WRR group identifier
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i>
Tree	<a href="#">hs-wrr-group</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>adaptation-rule</b>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>adaptation-rule</b> <b>pir</b> <i>keyword</i>
Tree	<b>pir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-class-weight number**

Synopsis	Weight of scheduling class
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>hs-class-weight</b> <i>number</i>
Tree	<b>hs-class-weight</b>
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**rate number**

Synopsis	PIR rate
Context	<b>configure qos network-queue</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	1 to 100
Units	kilobps
Default	100
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**queue [queue-id] number**

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos network-queue</b> <i>string</i> <b>queue</b> <i>number</i>

Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id] number**

Synopsis	Queue identifier
Context	<b>configure</b> <a href="#">qos network-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Tree	<a href="#">queue</a>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">qos network-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">qos network-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**fir keyword**

Synopsis	Constraint used when deriving the operational FIR value
----------	---

Context	<b>configure qos network-queue</b> <i>string queue number adaptation-rule fir keyword</i>
Tree	<a href="#">fir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos network-queue</b> <i>string queue number adaptation-rule pir keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**avg-frame-overhead decimal-number**

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure qos network-queue</b> <i>string queue number avg-frame-overhead decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

**cbs decimal-number**

Synopsis	Reserved buffer space for the queue
Context	<b>configure qos network-queue</b> <i>string queue number cbs decimal-number</i>
Tree	<a href="#">cbs</a>
Range	0.00 to 100.00
Units	centipercen

Introduced 16.0.R1  
Platforms All

## drop-tail

Synopsis Enter the **drop-tail** context  
Context **configure qos network-queue** *string queue number drop-tail*  
Tree [drop-tail](#)  
Introduced 16.0.R1  
Platforms All

## low

Synopsis Enter the **low** context  
Context **configure qos network-queue** *string queue number drop-tail low*  
Tree [low](#)  
Introduced 16.0.R1  
Platforms All

## percent-reduction-from-mbs (*number | keyword*)

Synopsis Low drop-tail percent from MBS that is reduced  
Context **configure qos network-queue** *string queue number drop-tail low percent-reduction-from-mbs* (*number | keyword*)  
Tree [percent-reduction-from-mbs](#)  
Range 0 to 100  
Options auto  
Default auto  
Introduced 16.0.R1  
Platforms All

## hs-alt-port-class-pool *boolean*

Synopsis Use HS alternate class port pool buffer for traffic  
Context **configure qos network-queue** *string queue number hs-alt-port-class-pool boolean*  
Tree [hs-alt-port-class-pool](#)

---

Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Scheduling class weight
Context	<b>configure qos network-queue</b> <i>string queue number hs-class-weight number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-mbs** *decimal-number*

Synopsis	Percentage of buffer space allowed for the HS queue
Context	<b>configure qos network-queue</b> <i>string queue number hs-mbs decimal-number</i>
Tree	<a href="#">hs-mbs</a>
Range	0.00 to 100.00
Default	100.00
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure qos network-queue</b> <i>string queue number hs-wred-queue</i>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policy reference**

Synopsis	Slope policy name
----------	-------------------

Context	<b>configure qos network-queue</b> <i>string queue number hs-wred-queue policy reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure qos slope-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis	WRR weight with which queue parents into the scheduler
Context	<b>configure qos network-queue</b> <i>string queue number hs-wrr-weight number</i>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **mbs** *decimal-number*

Synopsis	Percentage of buffer space allowed for the queue
Context	<b>configure qos network-queue</b> <i>string queue number mbs decimal-number</i>
Tree	<a href="#">mbs</a>
Range	0.00 to 100.00
Units	centipercen
Introduced	16.0.R1
Platforms	All

### **multipoint** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Apply as a multicast queue
Context	<b>configure qos network-queue</b> <i>string queue number multipoint boolean</i>
Tree	<a href="#">multipoint</a>
Introduced	16.0.R1

Platforms All

### port-parent

Synopsis Enable the **port-parent** context  
Context **configure qos network-queue** *string queue number* **port-parent**  
Tree [port-parent](#)  
Introduced 16.0.R1  
Platforms All

### cir-level *number*

Synopsis Port priority to receive bandwidth for within-CIR pass  
Context **configure qos network-queue** *string queue number* **port-parent cir-level** *number*  
Tree [cir-level](#)  
Range 0 to 8  
Default 0  
Introduced 16.0.R1  
Platforms All

### cir-weight *number*

Synopsis Weight to receive bandwidth at the within-CIR level  
Context **configure qos network-queue** *string queue number* **port-parent cir-weight** *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Default 0  
Introduced 16.0.R1  
Platforms All

### level *number*

Synopsis Port priority level for above-CIR behavior  
Context **configure qos network-queue** *string queue number* **port-parent level** *number*  
Tree [level](#)

Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure qos network-queue</b> <i>string queue number port-parent weight number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **queue-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority that this queue receives from the hardware level schedulers
Context	<b>configure qos network-queue</b> <i>string queue number queue-type keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos network-queue</b> <i>string queue number rate</i>
Tree	<a href="#">rate</a>
Introduced	16.0.R1
Platforms	All

### ***cir number***

Synopsis	CIR percentage rate
Context	<b>configure qos network-queue</b> <i>string queue number rate cir number</i>
Tree	<b>cir</b>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### ***fir number***

Synopsis	FIR percentage
Context	<b>configure qos network-queue</b> <i>string queue number rate fir number</i>
Tree	<b>fir</b>
Description	This command defines an additional percentage at which the system prioritizes the queue over other queues competing for the same bandwidth above that used by the CIR percentage.
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### ***pir number***

Synopsis	PIR percentage rate
Context	<b>configure qos network-queue</b> <i>string queue number rate pir number</i>
Tree	<b>pir</b>
Range	1 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

**policer-control-policy** [**policer-control-policy-name**] *string*

Synopsis	Enter the <b>policer-control-policy</b> list instance
Context	<b>configure qos policer-control-policy</b> <i>string</i>
Tree	<a href="#">policer-control-policy</a>
Max. Instances	2047
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-control-policy-name]** *string*

Synopsis	Policer control policy name
Context	<b>configure qos policer-control-policy</b> <i>string</i>
Tree	<a href="#">policer-control-policy</a>
Description	This command specifies the policer control policy name. Each policer control policy must be created with a unique policy name.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure qos policer-control-policy</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**root**

Synopsis	Enter the <b>root</b> context
Context	<b>configure qos policer-control-policy</b> <i>string</i> <b>root</b>
Tree	<a href="#">root</a>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **max-percent-rate** *decimal-number*

Synopsis Maximum rate of the arbiter  
Context **configure** qos policer-control-policy *string* root max-percent-rate *decimal-number*  
Tree [max-percent-rate](#)  
Range 0.01 to 100.00  
Notes The following elements are part of a choice: **max-percent-rate** or **max-rate**.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **max-rate** (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit of the arbiter  
Context **configure** qos policer-control-policy *string* root max-rate (*number* | *keyword*)  
Tree [max-rate](#)  
Range 1 to 6400000000  
Options max  
Default max  
Notes The following elements are part of a choice: **max-percent-rate** or **max-rate**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority-mbs-thresholds**

Synopsis Enter the **priority-mbs-thresholds** context  
Context **configure** qos policer-control-policy *string* root priority-mbs-thresholds  
Tree [priority-mbs-thresholds](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum separation between policer discard thresholds
Context	<b>configure</b> qos policer-control-policy <i>string</i> root priority-mbs-thresholds min-thresh-separation ( <i>number</i>   <i>keyword</i> )
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Synopsis	Enter the <b>tier</b> list instance
Context	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i> <a href="#">tier</a> <i>number</i>
Tree	<a href="#">tier</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[tier-id] number**

Synopsis	Tier for policer control policer arbiter
Context	<b>configure qos policer-control-policy string tier number</b>
Tree	<a href="#">tier</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter [arbiter-name] string**

Synopsis	Enter the <b>arbiter</b> list instance
Context	<b>configure qos policer-control-policy string tier number arbiter string</b>
Tree	<a href="#">arbiter</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[arbiter-name] string**

Synopsis	Arbiter name
Context	<b>configure qos policer-control-policy string tier number arbiter string</b>
Tree	<a href="#">arbiter</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos policer-control-policy string tier number arbiter string arbiter-parent</b>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter-name** *string*

Synopsis	Arbiter name
Context	<b>configure</b> qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> arbiter-parent <i>arbiter-name</i> <i>string</i>
Tree	<i>arbiter-name</i>
Description	This command specifies the arbiter name. In tier 1, the arbiter name is not allowed and only the system reversed name "root" is accepted. The specified arbiter name must exist within the policer control policy at tier 1 or the parent command fails. When a tiered arbiter is acting as a parent for another tiered arbiter, the parent arbiter cannot be removed from the policy. The child arbiter receives all bandwidth directly from its parent arbiter (that receives bandwidth from the root arbiter).
String Length	1 to 32
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**level** *number*

Synopsis	Level the child arbiter uses on its parent
Context	<b>configure</b> qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> arbiter-parent <i>level</i> <i>number</i>
Tree	<i>level</i>
Range	1 to 8
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight** *number*

Synopsis	Weight attribute at parent level applied to children
Context	<b>configure</b> qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> arbiter-parent <i>weight</i> <i>number</i>
Tree	<i>weight</i>
Description	This command defines how multiple children at the same parent strict level compete when insufficient bandwidth exists on the parent for that level. Each child's weight is divided by the sum of the active children's weights and the result is multiplied by the available bandwidth. If a child cannot receive its entire weighted fair share of bandwidth due to a defined child rate limit, the remainder of its bandwidth is distributed between the other children based on their weights.

Range	1 to 100
Default	1
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> qos policer-control-policy <i>string</i> tier <i>number</i> arbiter <i>string</i> description <i>string</i>

Platforms All

### **monitor-threshold** *number*

Synopsis Congestion monitoring threshold

Context **configure** qos port-scheduler-policy *string* group *string* monitor-threshold *number*

Tree [monitor-threshold](#)

Description This command defines the congestion monitoring threshold for the desired monitoring entity under the port scheduler for per aggregate port scheduler rate, per individual level, and per group that is aggregating multiple levels.

The congestion threshold is specified as a percentage of the configured PIR for the entity for which congestion monitoring is desired. For example, if the configured PIR for level 1 is 100000 kb/s, and the monitoring threshold is set to 90%, an event where the offered rate is greater than 90,000 kb/s is recorded. This event is shown as part of the cumulative count of congestion threshold exceeds since the last clearing of the counters.

Range 0 to 100

Default 0

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** qos port-scheduler-policy *string* group *string* percent-rate

Tree	match
Description	This command specifies the value of the field in the ingress or egress packet. When there is a match, the packet is redirected to the specified queue group instance. The field must be a valid VXLAN VNI.
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **instance** *number*

Synopsis Queue group instance for traffic redirection  
Context **configure qos queue-group-redirect-list** *string match number instance number*  
Tree [instance](#)  
Range 1 to 65535  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **type** *keyword*

Synopsis Type for queue-group redirect list  
Context **configure qos queue-group-redirect-list** *string type keyword*  
Tree [type](#)  
Options vxlan-vni  
Default vxlan-vni  
Introduced 16.0.R1  
Platforms All

### **queue-group-templates**

Synopsis Enter the **queue-group-templates** context  
Context **configure qos queue-group-templates**  
Tree [queue-group-templates](#)  
Introduced 16.0.R1  
Platforms All

### **egress**

Synopsis Enter the **egress** context  
Context **configure qos queue-group-templates egress**  
Tree [egress](#)

Introduced 16.0.R1  
 Platforms All

### **queue-group** [[egress-queue-group-name](#)] *string*

Synopsis Enter the **queue-group** list instance  
 Context **configure** [qos queue-group-templates egress queue-group](#) *string*  
 Tree [queue-group](#)  
 Introduced 16.0.R1  
 Platforms All

### **[egress-queue-group-name]** *string*

Synopsis Egress queue group template name  
 Context **configure** [qos queue-group-templates egress queue-group](#) *string*  
 Tree [queue-group](#)  
 Description This command specifies the name of the egress queue group template. Each ingress queue group template must be uniquely named within the system. Multiple ingress queue group templates may not share the same name. An ingress and egress queue group template may share the same name.  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **description** *string*

Synopsis Text description  
 Context **configure** [qos queue-group-templates egress queue-group](#) *string* [description](#) *string*  
 Tree [description](#)

 Introduced 16.0.R1  
 Platforms All

**fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[fc-name]** *keyword*

Synopsis	Forwarding class name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue**

Synopsis	Enter the <b>queue</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i> <b>queue</b>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**none**

Synopsis	No mid-pool is associated with this parent-pool
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> <b>fc</b> <i>keyword</i> <b>queue</b> <b>none</b>
Tree	<b>none</b>
Notes	The following elements are part of a choice: <b>none</b> or <b>queue-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue-id** *reference*

Synopsis	Queue defined in forwarding class mapping
Context	<b>configure</b> qos queue-group-templates egress queue-group string fc keyword queue queue-id <i>reference</i>
Tree	queue-id
Reference	<b>configure</b> qos queue-group-templates egress queue-group string queue number
Notes	The following elements are part of a choice: <b>none</b> or <b>queue-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**hs-attachment-policy** *reference*

Synopsis	HS attachment policy applied
Context	<b>configure</b> qos queue-group-templates egress queue-group string hs-attachment-policy <i>reference</i>
Tree	hs-attachment-policy
Reference	<b>configure</b> qos hs-attachment-policy string
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-group** [group-id] *number*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group string hs-wrr-group number
Tree	hs-wrr-group
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**[group-id]** *number*

Synopsis	HS WRR group identifier
Context	<b>configure</b> qos queue-group-templates egress queue-group string hs-wrr-group number
Tree	hs-wrr-group
Range	1 to 2

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-class-weight *number*

Synopsis	Weight of scheduling class
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> hs-wrr-group <i>number</i> hs-class-weight <i>number</i>
Tree	hs-class-weight
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**percent-rate** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i> <a href="#">percent-rate</a> <i>decimal-number</i>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**rate** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i> <a href="#">rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**policer** [[policer-id](#)] *number*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Description	Commands in this context configure a QoS egress queue-group policer.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id] number**

Synopsis	Egress queue-group policer ID
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number
Tree	policer
Description	This command specifies the queue-group policer that will either be created or edited within the queue group template. For VSR, the queue group template may only have up to eight policers (numbered 1 through 8).
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number adaptation-rule cir keyword
Tree	cir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
----------	---

Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **adv-config-policy** *reference*

Synopsis	Advanced QoS policy name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> adv-config-policy <i>reference</i>
Tree	adv-config-policy
Reference	<b>configure</b> qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent
Tree	arbiter-parent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-name** *string*

Synopsis	Arbiter name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> arbiter-parent arbiter-name <i>string</i>
Tree	arbiter-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**level number**

Synopsis	Priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number arbiter-parent level number
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight number**

Synopsis	Weight in the priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number arbiter-parent weight number
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs (number | keyword)**

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> qos queue-group-templates egress queue-group string policer number cbs (number   keyword)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <i>description</i> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**exceed-pir** *boolean*

Synopsis	Forward packets exceeding the PIR as exceed-profile
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <i>exceed-pir</i> <i>boolean</i>
Tree	<a href="#">exceed-pir</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <i>high-prio-only</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs** (*number* | *keyword*)

Synopsis	Maximum buffer size for the template queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <i>mbs</i> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">packet-byte-offset number</a>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	Administrative CIR
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">percent-rate cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00

Default	0.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** *decimal-number*

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	local-limit, reference-port-limit
Default	local-limit
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile-capped** *boolean*

Synopsis	Enforce a limit on the profile
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> profile-capped <i>boolean</i>
Tree	profile-capped
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <b>rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> policer <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue** [*queue-id*] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *number*

Synopsis	Egress Queue-Group queue identifier
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i>
Tree	<b>queue</b>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <b>adaptation-rule</b>
Tree	<b>adaptation-rule</b>

Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adaptation-rule cir <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**adv-config-policy reference**

Synopsis	Name of the advanced configuration policy
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> adv-config-policy <i>reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure</b> qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

**burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> burst-limit ( <i>number</i>   <i>keyword</i> )
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> cbs ( <i>number</i>   <i>keyword</i> )
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	All

## exceed

Synopsis	Enter the <b>exceed</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail <b>exceed</b>
Tree	<a href="#">exceed</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail <b>exceed</b> percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## high

Synopsis	Enter the <b>high</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail <b>high</b>
Tree	<a href="#">high</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail <b>high</b> percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100

Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## highplus

Synopsis	Enter the <b>highplus</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail highplus
Tree	highplus
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail highplus percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> drop-tail low percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**dynamic-mbs** *boolean*

Synopsis	Allow MBS size modification to maintain maximum latency
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> dynamic-mbs <i>boolean</i>
Tree	dynamic-mbs
Default	false
Introduced	16.0.R1
Platforms	All

**hs-alt-port-class-pool** *boolean*

Synopsis	Use HS alternate class port pool buffer for traffic
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> hs-alt-port-class-pool <i>boolean</i>
Tree	hs-alt-port-class-pool
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-class-weight** *number*

Synopsis	Scheduling class weight
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> hs-class-weight <i>number</i>

Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-wred-queue

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <a href="#">hs-wred-queue</a>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## policy *reference*

Synopsis	Slope policy name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <a href="#">hs-wred-queue</a> <i>policy reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> qos <a href="#">slope-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-weight *number*

Synopsis	WRR weight with which queue parents into the scheduler
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> <a href="#">hs-wrr-weight</a> <i>number</i>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**mbs** (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string queue number mbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**packet-byte-offset** *number*

Synopsis	Packet byte offset for addition of policing information
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string queue number</i> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string queue number</i> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** *decimal-number*

Synopsis	Administrative CIR percent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate cir <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

**pir** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	<a href="#">reference-rate</a>
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	20.10.R1
Platforms	All

**port-parent**

Synopsis	Enable the <b>port-parent</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent

Tree	<a href="#">port-parent</a>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

### **cir-level** *number*

Synopsis	Port priority to receive bandwidth for within-CIR pass
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">port-parent</a> <b>cir-level</b> <i>number</i>
Tree	<a href="#">cir-level</a>
Range	0 to 8
Introduced	16.0.R1
Platforms	All

### **cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">port-parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **level** *number*

Synopsis	Port priority for bandwidth for above-CIR offered load
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">port-parent</a> <b>level</b> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used at above-CIR port priority level
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> port-parent <i>weight</i> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**queue-delay** *number*

Synopsis	Target queue delay for forwarding packets through queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> queue-delay <i>number</i>
Tree	<a href="#">queue-delay</a>
Range	1 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

**queue-type** *keyword*

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> queue-type <i>keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, best-effort
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> rate
Tree	<a href="#">rate</a>

Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">rate</a> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">rate</a> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

### **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a>
Tree	<a href="#">scheduler-parent</a>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .

Introduced 16.0.R1  
Platforms All

### **cir-level** *number*

Synopsis Level of priority while feeding to the parent  
Context **configure** qos queue-group-templates egress queue-group *string* queue *number*  
scheduler-parent cir-level *number*  
Tree [cir-level](#)  
Range 0 to 8  
Default 0  
Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level  
Context **configure** qos queue-group-templates egress queue-group *string* queue *number*  
scheduler-parent cir-weight *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Default 1  
Introduced 16.0.R1  
Platforms All

### **level** *number*

Synopsis Level of priority while feeding to the parent  
Context **configure** qos queue-group-templates egress queue-group *string* queue *number*  
scheduler-parent level *number*  
Tree [level](#)  
Range 1 to 8  
Default 1  
Introduced 16.0.R1  
Platforms All

**scheduler-name** *string*

Synopsis	Parent scheduler name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> scheduler-parent scheduler-name <i>string</i>
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used by the scheduler for feeding the queue
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> scheduler-parent weight <i>number</i>
Tree	weight
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**wred-queue**

Synopsis	Enter the <b>wred-queue</b> context
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue
Tree	wred-queue
Introduced	16.0.R1
Platforms	All

**mode keyword**

Synopsis	Pool association to allow queue-specific WRED slopes
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue <i>mode</i> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	native, pool-per-queue
Introduced	16.0.R1
Platforms	All

**policy reference**

Synopsis	Slope policy name
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue <i>policy</i> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> qos slope-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

**usage keyword**

Synopsis	Congestion control type
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queue <i>number</i> wred-queue <i>usage</i> <i>keyword</i>
Tree	<a href="#">usage</a>
Options	auto, exceed-low
Introduced	16.0.R1
Platforms	All

**queues-hqos-manageable boolean**

Synopsis	Manage queues through the Hierarchical QoS process
Context	<b>configure</b> qos queue-group-templates egress queue-group <i>string</i> queues-hqos-manageable <i>boolean</i>
Tree	<a href="#">queues-hqos-manageable</a>
Default	true

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> qos queue-group-templates ingress
Tree	ingress
Introduced	16.0.R1
Platforms	All

## queue-group [[ingress-queue-group-name](#)] *string*

Synopsis	Enter the <b>queue-group</b> list instance
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i>
Tree	queue-group
Introduced	16.0.R1
Platforms	All

## [[ingress-queue-group-name](#)] *string*

Synopsis	Ingress queue group template name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i>
Tree	queue-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> description <i>string</i>
Tree	description

String Length 1 to 80  
 Introduced 16.0.R1  
 Platforms All

### **policer** [**policer-id**] *number*

Synopsis Enter the **policer** list instance  
 Context **configure qos queue-group-templates ingress queue-group** *string policer number*  
 Tree **policer**  
 Introduced 16.0.R1  
 Platforms All

### **[policer-id]** *number*

Synopsis Ingress Queue-Group Policer identifier  
 Context **configure qos queue-group-templates ingress queue-group** *string policer number*  
 Tree **policer**  
 Range 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **adaptation-rule**

Synopsis Enter the **adaptation-rule** context  
 Context **configure qos queue-group-templates ingress queue-group** *string policer number adaptation-rule*  
 Tree **adaptation-rule**  
 Introduced 16.0.R1  
 Platforms All

### **cir** *keyword*

Synopsis Constraint used when deriving the operational CIR value  
 Context **configure qos queue-group-templates ingress queue-group** *string policer number adaptation-rule cir keyword*

Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

### **pir** *keyword*

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

### **adv-config-policy** *reference*

Synopsis	Advanced QoS policy name
Context	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">adv-config-policy</a> <i>reference</i>
Tree	<a href="#">adv-config-policy</a>
Reference	<b>configure</b> <a href="#">qos adv-config-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string</i> <a href="#">policer number</a> <a href="#">arbiter-parent</a>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	All

**arbiter-name** *string*

Synopsis	Arbiter name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> arbiter-parent arbiter-name <i>string</i>
Tree	arbiter-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> arbiter-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> arbiter-parent weight <i>number</i>
Tree	weight
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
----------	---

Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number cbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number</i> <a href="#">high-prio-only</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **mbs** (*number* | *keyword*)

Synopsis	Maximum buffer size for the template queue
----------	--

Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number mbs (number   keyword)</i>
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number packet-byte-offset number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number percent-rate</i>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.2.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	Administrative CIR
Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string policer number percent-rate cir decimal-number</i>

Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	20.2.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	Administrative PIR
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.2.R1
Platforms	All

### **profile-capped** *boolean*

Synopsis	Enforce a limit on the profile
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">profile-capped</a> <i>boolean</i>
Tree	<a href="#">profile-capped</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> rate <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> rate <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> policer <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Default	minimal
Introduced	16.0.R1

Platforms All

### **queue** *[queue-id] number*

Synopsis Enter the **queue** list instance

Context **configure** qos queue-group-templates ingress queue-group *string queue number*

Tree [queue](#)

Introduced 16.0.R1

Platforms All

### **[queue-id] number**

Synopsis Ingress Queue-Group Queue identifier

Context **configure** qos queue-group-templates ingress queue-group *string queue number*

Tree [queue](#)

Range 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **adaptation-rule**

Synopsis Enter the **adaptation-rule** context

Context **configure** qos queue-group-templates ingress queue-group *string queue number*  
[adaptation-rule](#)

Tree [adaptation-rule](#)

Introduced 16.0.R1

Platforms All

### **cir** *keyword*

Synopsis Constraint for deriving operational CIR for the queue

Context **configure** qos queue-group-templates ingress queue-group *string queue number*  
[adaptation-rule cir keyword](#)

Tree [cir](#)

Options max, min, closest

Default	closest
Introduced	16.0.R1
Platforms	All

**fir keyword**

Synopsis	Constraint for deriving operational FIR for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule fir <i>keyword</i>
Tree	fir
Options	max, min, closest
Default	closest
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**pir keyword**

Synopsis	Constraint for deriving operational FIR for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adaptation-rule pir <i>keyword</i>
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**adv-config-policy reference**

Synopsis	Advanced QoS policy name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> adv-config-policy <i>reference</i>
Tree	adv-config-policy
Reference	<b>configure</b> qos adv-config-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

**burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> burst-limit ( <i>number</i>   <i>keyword</i> )
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> cbs ( <i>number</i>   <i>keyword</i> )
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**cir-non-profiling** *boolean*

Synopsis	Prevent profile modification of CIR dependent packet
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> cir-non-profiling <i>boolean</i>
Tree	cir-non-profiling
Description	<p>When configured to <b>true</b>, the system prevents the modification of the profile of a packet-dependent queue rate compared to its configured CIR. The CIR continues to be used to affect the scheduling priority of a queue.</p> <p>This command is only supported on hardware that is FP4-based and later and is ignored when the related policy is applied to FP3-based hardware.</p>

This command should not be configured under an ingress queue group template queue associated with a LAG which spans FP4-based and later and FP3-based hardware as the resulting operation could be different depending on which hardware type the traffic ingresses.

Default	false
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> drop-tail low percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**mbs** (*number* | *keyword*)

Synopsis	Maximum buffer space that is allowed for queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> mbs ( <i>number</i>   <i>keyword</i> )
Tree	mbs
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**multipoint** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create an ingress multipoint queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> multipoint <i>boolean</i>
Tree	multipoint
Default	false
Introduced	16.0.R1
Platforms	All

**packet-byte-offset** *number*

Synopsis	Packet size modification for queue accounting
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-32 to 31
Default	0
Introduced	16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure qos queue-group-templates ingress queue-group** *string queue number*  
**percent-rate**

Tree **percent-rate**

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms All

### **cir decimal-number**

Synopsis Administrative CIR

Context **configure qos queue-group-templates ingress queue-group** *string queue number*  
**percent-rate cir decimal-number**

Tree **cir**

Range 0.00 to 100.00

Default 0.00

Notes The following elements are part of a choice: (**cir** and **fir**) or **police**.

Introduced 20.10.R1

Platforms All

### **fir decimal-number**

Synopsis Administrative FIR

Context **configure qos queue-group-templates ingress queue-group** *string queue number*  
**percent-rate fir decimal-number**

Tree **fir**

Range 0.00 to 100.00

Default 0.00

Notes The following elements are part of a choice: (**cir** and **fir**) or **police**.

Introduced 20.10.R1

Platforms All

**pir** *decimal-number*

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

**police**

Synopsis	Drop out-of-profile traffic feeding into physical queue
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate police
Tree	police
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	20.10.R1
Platforms	All

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	20.10.R1
Platforms	All

**queue-mode** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Queue operational mode for explicitly profiled packets
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number queue-mode <i>keyword</i>
Tree	queue-mode
Options	priority, profile
Default	priority
Introduced	16.0.R1
Platforms	All

### queue-type *keyword*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Priority that this queue receives from the hardware level schedulers
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number queue-type <i>keyword</i>
Tree	queue-type
Options	expedited, best-effort
Default	best-effort
Introduced	16.0.R1
Platforms	All

### rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### cir (*number* | *keyword*)

Synopsis	Administrative CIR
----------	--------------------

Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number rate <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

### **fir** (*number* | *keyword*)

Synopsis	Administrative FIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number rate <b>fir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>fir</b>
Range	0 to 2000000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue number rate <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 2000000000
Units	kilobps
Options	max
Default	max

Introduced	16.0.R1
Platforms	All

## police

Synopsis	Drop out-of-profile traffic feeding into queue instance
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> rate <b>police</b>
Tree	<b>police</b>
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

## scheduler-parent

Synopsis	Enter the <b>scheduler-parent</b> context
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> <b>scheduler-parent</b>
Tree	<b>scheduler-parent</b>
Introduced	16.0.R1
Platforms	All

## cir-level *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> <b>scheduler-parent</b> cir-level <i>number</i>
Tree	<b>cir-level</b>
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
----------	---

Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> scheduler-parent cir-weight <i>number</i>
Tree	cir-weight
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> scheduler-parent level <i>number</i>
Tree	level
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**scheduler-name** *string*

Synopsis	Scheduler name
Context	<b>configure</b> qos queue-group-templates ingress queue-group <i>string</i> queue <i>number</i> scheduler-parent scheduler-name <i>string</i>
Tree	scheduler-name
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	Weight used by the scheduler for feeding the queue
----------	--

Context	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number scheduler-parent weight number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **sap-egress** [[sap-egress-policy-name](#)] *string*

Synopsis	Enter the <b>sap-egress</b> list instance
Context	<b>configure qos sap-egress</b> <i>string</i>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

### **[sap-egress-policy-name]** *string*

Synopsis	Policy name
Context	<b>configure qos sap-egress</b> <i>string</i>
Tree	<a href="#">sap-egress</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure qos sap-egress</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dot1p** [dot1p-value] *number*

Synopsis	Enter the <b>dot1p</b> list instance
Context	<b>configure qos sap-egress</b> <i>string dot1p number</i>
Tree	<b>dot1p</b>
Introduced	16.0.R1
Platforms	All

**[dot1p-value]** *number*

Synopsis	Dot1p value to match in the packet
Context	<b>configure qos sap-egress</b> <i>string dot1p number</i>
Tree	<b>dot1p</b>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string dot1p number fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos sap-egress</b> <i>string dot1p number profile keyword</i>
Tree	<b>profile</b>
Options	in, out, de, exceed, inplus
Introduced	16.0.R1
Platforms	All

**dscp** [*dscp-name*] *keyword*

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure qos sap-egress</b> <i>string dscp keyword</i>
Tree	<a href="#">dscp</a>
Introduced	16.0.R1
Platforms	All

**[dscp-name]** *keyword*

Synopsis	DSCP name to perform reclassification actions
Context	<b>configure qos sap-egress</b> <i>string dscp keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string dscp keyword fc keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos sap-egress</b> <i>string dscp keyword profile keyword</i>
Tree	<a href="#">profile</a>

Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

### **ethernet-ctag** *boolean*

Synopsis	Tag value for dot1p and DE (Drop-Eligible) that are used by all dot1-p entries
Context	<b>configure</b> qos sap-egress string ethernet-ctag boolean
Tree	ethernet-ctag
Default	false
Introduced	16.0.R1
Platforms	All

### **fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> qos sap-egress string fc keyword
Tree	fc
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *keyword*

Synopsis	Forwarding class
Context	<b>configure</b> qos sap-egress string fc keyword
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **de-mark**

Synopsis	Enable the <b>de-mark</b> context
Context	<b>configure</b> qos sap-egress string fc keyword de-mark

---

Tree	<a href="#">de-mark</a>
Introduced	16.0.R1
Platforms	All

### **force number**

Synopsis	DE value
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark force number</i>
Tree	<a href="#">force</a>
Range	0 to 1
Introduced	16.0.R1
Platforms	All

### **de-mark-inner**

Synopsis	Enable the <b>de-mark-inner</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark-inner</i>
Tree	<a href="#">de-mark-inner</a>
Introduced	16.0.R1
Platforms	All

### **force number**

Synopsis	DE value to set in inner VLAN tag
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark-inner force number</i>
Tree	<a href="#">force</a>
Range	0 to 1
Introduced	16.0.R1
Platforms	All

### **de-mark-outer**

Synopsis	Enable the <b>de-mark-outer</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark-outer</i>
Tree	<a href="#">de-mark-outer</a>

---

Introduced	16.0.R1
Platforms	All

### **force number**

Synopsis	DE value to set in outer VLAN tag
Context	<b>configure qos sap-egress</b> <i>string fc keyword de-mark-outer force number</i>
Tree	<a href="#">force</a>
Range	0 to 1
Introduced	16.0.R1
Platforms	All

### **dot1p**

Synopsis	Enter the <b>dot1p</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword dot1p</i>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

### **exceed-profile number**

Synopsis	Dot1p value for exceed-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword dot1p exceed-profile number</i>
Tree	<a href="#">exceed-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **in-profile number**

Synopsis	Dot1p value for in-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword dot1p in-profile number</i>
Tree	<a href="#">in-profile</a>
Range	0 to 7

---

Introduced	16.0.R1
Platforms	All

### **out-profile** *number*

Synopsis	Dot1p value for out-of-profile frames
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> dot1p out-profile <i>number</i>
Tree	<a href="#">out-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **dot1p-inner**

Synopsis	Enter the <b>dot1p-inner</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> dot1p-inner
Tree	<a href="#">dot1p-inner</a>
Introduced	16.0.R1
Platforms	All

### **exceed-profile** *number*

Synopsis	Inner Dot1p value for exceed-profile frames
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> dot1p-inner exceed-profile <i>number</i>
Tree	<a href="#">exceed-profile</a>
Range	0 to 7
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **in-profile** *number*

Synopsis	Inner Dot1p value for in-profile frames
Context	<b>configure</b> qos sap-egress <i>string</i> fc <i>keyword</i> dot1p-inner in-profile <i>number</i>
Tree	<a href="#">in-profile</a>
Range	0 to 7

Introduced 16.0.R1  
Platforms All

### **out-profile** *number*

Synopsis Inner Dot1p value for out-of-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p-inner out-profile number*  
Tree [out-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **dot1p-outer**

Synopsis Enter the **dot1p-outer** context  
Context **configure qos sap-egress** *string fc keyword dot1p-outer*  
Tree [dot1p-outer](#)  
Introduced 16.0.R1  
Platforms All

### **exceed-profile** *number*

Synopsis Outer Dot1p value for exceed-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p-outer exceed-profile number*  
Tree [exceed-profile](#)  
Range 0 to 7  
Introduced 16.0.R1  
Platforms All

### **in-profile** *number*

Synopsis Outer Dot1p value for in-profile frames  
Context **configure qos sap-egress** *string fc keyword dot1p-outer in-profile number*  
Tree [in-profile](#)  
Range 0 to 7

Introduced	16.0.R1
Platforms	All

### **out-profile** *number*

Synopsis	Outer Dot1p value for out-of-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword dot1p-outer out-profile number</i>
Tree	<a href="#">out-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **dscp**

Synopsis	Enter the <b>dscp</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword dscp</i>
Tree	<a href="#">dscp</a>
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **exceed-profile** *keyword*

Synopsis	DSCP name for exceed-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword dscp exceed-profile keyword</i>
Tree	<a href="#">exceed-profile</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**in-profile keyword**

Synopsis	DSCP name for in-profile frames
Context	<b>configure qos sap-egress</b> <i>string</i> <b>fc keyword dscp in-profile keyword</b>
Tree	<b>in-profile</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**out-profile keyword**

Synopsis	DSCP name for out-of-profile frames
Context	<b>configure qos sap-egress</b> <i>string</i> <b>fc keyword dscp out-profile keyword</b>
Tree	<b>out-profile</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**policer reference**

Synopsis	Policer to forward the traffic
Context	<b>configure qos sap-egress</b> <i>string</i> <b>fc keyword policer reference</b>
Tree	<b>policer</b>
Reference	<b>configure qos sap-egress</b> <i>string</i> <b>policer number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**port-redirect-group-queue**

Synopsis	Enable the <b>port-redirect-group-queue</b> context
----------	---

---

Context	<b>configure qos sap-egress</b> <i>string fc keyword port-redirect-group-queue</i>
Tree	<a href="#">port-redirect-group-queue</a>
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **queue** *number*

Synopsis	Queue to forward the traffic
Context	<b>configure qos sap-egress</b> <i>string fc keyword port-redirect-group-queue queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

### **prec**

Synopsis	Enter the <b>prec</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword prec</i>
Tree	<a href="#">prec</a>
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **exceed-profile** *number*

Synopsis	Precedence for exceed-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword prec exceed-profile number</i>
Tree	<a href="#">exceed-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **in-profile** *number*

Synopsis	Precedence value for in-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword prec in-profile number</i>
Tree	<a href="#">in-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **out-profile** *number*

Synopsis	Precedence value for out-of-profile frames
Context	<b>configure qos sap-egress</b> <i>string fc keyword prec out-profile number</i>
Tree	<a href="#">out-profile</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **queue** *reference*

Synopsis	Queue to forward the traffic
Context	<b>configure qos sap-egress</b> <i>string fc keyword queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos sap-egress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **queue-group-queue**

Synopsis	Enable the <b>queue-group-queue</b> context
Context	<b>configure qos sap-egress</b> <i>string fc keyword queue-group-queue</i>
Tree	<a href="#">queue-group-queue</a>
Notes	The following elements are part of a choice: <b>port-redirect-group-queue</b> , <b>queue</b> , or <b>queue-group-queue</b> .

Introduced 16.0.R1  
 Platforms All

### **instance** *number*

Synopsis Instance ID  
 Context **configure** qos sap-egress *string fc keyword queue-group-queue instance number*  
 Tree [instance](#)  
 Range 1 to 65535  
 Introduced 16.0.R1  
 Platforms All

### **queue** *reference*

Synopsis SAP egress queue ID  
 Context **configure** qos sap-egress *string fc keyword queue-group-queue queue reference*  
 Tree [queue](#)  
 Reference **configure** qos queue-group-templates egress queue-group *string queue number*  
 Introduced 16.0.R1  
 Platforms All

### **queue-group-name** *reference*

Synopsis Queue group to forward traffic  
 Context **configure** qos sap-egress *string fc keyword queue-group-queue queue-group-name reference*  
 Tree [queue-group-name](#)  
 Reference **configure** qos queue-group-templates egress queue-group *string*  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **hs-attachment-policy** *reference*

Synopsis HS attachment policy applied

Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-attachment-policy</b> <i>reference</i>
Tree	<a href="#">hs-attachment-policy</a>
Reference	<b>configure qos hs-attachment-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *number*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **[group-id]** *number*

Synopsis	HS WRR group identifier
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i>
Tree	<a href="#">hs-wrr-group</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>adaptation-rule</b>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **pir** *keyword*

Synopsis	Constraint used when deriving the operational PIR value
----------	---

Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>adaptation-rule</b> <b>pir</b> <i>keyword</i>
Tree	<b>pir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Weight of scheduling class
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>hs-class-weight</b> <i>number</i>
Tree	<b>hs-class-weight</b>
Range	1   2   4   8
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>percent-rate</b> <i>decimal-number</i>
Tree	<b>percent-rate</b>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos sap-egress</b> <i>string</i> <b>hs-wrr-group</b> <i>number</i> <b>rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>rate</b>
Range	1 to 2000000000
Units	kilobps
Options	max

Default	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hw-agg-shaper-queues

Synopsis	Enter the <b>hw-agg-shaper-queues</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">hw-agg-shaper-queues</a>
Tree	<a href="#">hw-agg-shaper-queues</a>
Description	Commands in this context configure the queue resources from which to draw for a given object (for example, a subscriber host or SAP).
Introduced	23.10.R1
Platforms	7750 SR-1, 7750 SR-s

## queue-set-size (*number* | *keyword*)

Synopsis	Queue resource allocation for the SAP egress policy
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">hw-agg-shaper-queues</a> <a href="#">queue-set-size</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">queue-set-size</a>
Description	This command configures the queue-set size or non-shaper-queue to use for this SAP egress policy.
Range	2 to 8
Options	non-shaper-queues
Introduced	23.10.R1
Platforms	7750 SR-1, 7750 SR-s

## ip-criteria

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a>
Tree	<a href="#">ip-criteria</a>
Introduced	16.0.R1
Platforms	All

**entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

**[entry-id]** *number*

Synopsis	IP Criteria Entry Index
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### **policer** *reference*

Synopsis	Policer identifier for the matched traffic
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number action policer reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress</b> <i>string policer number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **port-redirect-group-queue** *boolean*

Synopsis	Use queue specified in egress access port queue group
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number action port-redirect-group-queue boolean</i>
Tree	<a href="#">port-redirect-group-queue</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **profile** *keyword*

Synopsis	Default profile for the matching traffic
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number action profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

### **queue** *number*

Synopsis	Queue used for matched traffic policed by local policer
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number action queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1

Platforms All

### **type** *keyword*

Synopsis Action for criteria entry  
 Context **configure** qos sap-egress *string ip-criteria entry number action type keyword*  
 Tree [type](#)  
 Options ignore-match, accept  
 Default ignore-match  
 Introduced 16.0.R1  
 Platforms All

### **use-fc-mapped-queue** *boolean*

Synopsis Redirect policer output to the configured queues  
 Context **configure** qos sap-egress *string ip-criteria entry number action use-fc-mapped-queue boolean*  
 Tree [use-fc-mapped-queue](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **description** *string*

Synopsis Text description  
 Context **configure** qos sap-egress *string ip-criteria entry number description string*  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R1  
 Platforms All

### **match**

Synopsis Enter the **match** context  
 Context **configure** qos sap-egress *string ip-criteria entry number match*  
 Tree [match](#)

Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

Synopsis	DSCP value to match in the packet
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match dscp keyword
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

### **dst-ip**

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	All

### **address** (*ipv4-prefix-with-host-bits | ipv4-address*)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match dst-ip address ( <i>ipv4-prefix-with-host-bits   ipv4-address</i> )
Tree	address
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ip-prefix-list** *reference*

Synopsis	List of IPv4 prefixes for the match criteria
----------	--

Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match dst-ip ip-prefix-list reference</i>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match dst-ip mask string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match dst-port</i>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq** *number*

Synopsis	Value 'equal to' as match condition
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match dst-port eq number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt** *number*

Synopsis	Value 'greater than' as match condition
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match dst-port <b>gt</b> <i>number</i>
Tree	<b>gt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt** *number*

Synopsis	Value 'less than' as match condition
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match dst-port <b>lt</b> <i>number</i>
Tree	<b>lt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match dst-port <b>range</b>
Tree	<b>range</b>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **end** *number*

Synopsis	Upper bound of the port range
Context	<b>configure</b> qos sap-egress <i>string</i> ip-criteria entry <i>number</i> match dst-port range end <i>number</i>
Tree	<b>end</b>

Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the port range
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment keyword**

Synopsis	Fragmented packets as the match criterion
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match fragment keyword
Tree	fragment
Options	false, true
Introduced	16.0.R1
Platforms	All

**protocol (number | keyword)**

Synopsis	IP protocol to match
Context	<b>configure</b> qos sap-egress string ip-criteria entry number match protocol (number   keyword)
Tree	protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match src-ip</i>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

**address** (*ipv4-prefix-with-host-bits | ipv4-address*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match src-ip address (ipv4-prefix-with-host-bits   ipv4-address)</i>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix-list** *reference*

Synopsis	List of IPv4 prefixes for the match criteria
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match src-ip ip-prefix-list reference</i>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure qos sap-egress</b> <i>string ip-criteria entry number match src-ip mask string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1

Platforms All

### src-port

Synopsis Enter the **src-port** context  
 Context **configure qos sap-egress string ip-criteria entry number match src-port**  
 Tree [src-port](#)  
 Introduced 16.0.R1  
 Platforms All

### eq number

Synopsis Value 'equal to' as match condition  
 Context **configure qos sap-egress string ip-criteria entry number match src-port eq number**  
 Tree [eq](#)  
 Range 0 to 65535  
 Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
 Introduced 16.0.R1  
 Platforms All

### gt number

Synopsis Value 'greater than' as match condition  
 Context **configure qos sap-egress string ip-criteria entry number match src-port gt number**  
 Tree [gt](#)  
 Range 0 to 65535  
 Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
 Introduced 16.0.R1  
 Platforms All

### lt number

Synopsis Value 'less than' as match condition  
 Context **configure qos sap-egress string ip-criteria entry number match src-port lt number**  
 Tree [lt](#)

---

Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## **end number**

Synopsis	Upper bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## **start number**

Synopsis	Lower bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ip-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a> <a href="#">start</a> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## ipv6-criteria

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure qos sap-egress string ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

## entry [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos sap-egress string ipv6-criteria entry number</b>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

## [[entry-id](#)] *number*

Synopsis	IP Criteria Entry Index
Context	<b>configure qos sap-egress string ipv6-criteria entry number</b>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## action

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos sap-egress string ipv6-criteria entry number action</b>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number action fc keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**policer reference**

Synopsis	Policer identifier for the matched traffic
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number action policer reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress</b> <i>string policer number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**port-redirect-group-queue boolean**

Synopsis	Use queue specified in egress access port queue group
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number action port-redirect-group-queue boolean</i>
Tree	<a href="#">port-redirect-group-queue</a>
Default	false
Introduced	16.0.R1
Platforms	All

**profile keyword**

Synopsis	Default profile for the matching traffic
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number action profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**queue number**

Synopsis	Queue used for matched traffic policed by local policer
Context	<b>configure qos sap-egress string ipv6-criteria entry number action queue number</b>
Tree	<a href="#">queue</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Action for criteria entry
Context	<b>configure qos sap-egress string ipv6-criteria entry number action type keyword</b>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

**use-fc-mapped-queue boolean**

Synopsis	Redirect policer output to the configured queues
Context	<b>configure qos sap-egress string ipv6-criteria entry number action use-fc-mapped-queue boolean</b>
Tree	<a href="#">use-fc-mapped-queue</a>
Default	false
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure qos sap-egress string ipv6-criteria entry number description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80

Introduced	16.0.R1
Platforms	All

## match

Synopsis	Enter the <b>match</b> context
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number match</i>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

## dscp keyword

Synopsis	DSCP value to match in the packet
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number match dscp keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

## dst-ip

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number match dst-ip</i>
Tree	<a href="#">dst-ip</a>
Introduced	16.0.R1
Platforms	All

## address (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Destination IPv6 address for SAP QoS policy match
Context	<b>configure qos sap-egress</b> <i>string ipv6-criteria entry number match dst-ip address (ipv6-prefix-with-host-bits   ipv6-address)</i>

---

Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure</b> <a href="#">qos sap-egress</a> <a href="#">string</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-ip</a> <a href="#">ipv6-prefix-list</a> <a href="#">reference</a>
Tree	<a href="#">ipv6-prefix-list</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">match-list</a> <a href="#">ipv6-prefix-list</a> <a href="#">string</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask** *string*

Synopsis	IP address mask to match with destination IP of packet
Context	<b>configure</b> <a href="#">qos sap-egress</a> <a href="#">string</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-ip</a> <a href="#">mask</a> <a href="#">string</a>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **dst-port**

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <a href="#">string</a> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">dst-port</a>
Tree	<a href="#">dst-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' as match condition
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port eq number</b>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, or range.</b>
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' as match condition
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port gt number</b>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, or range.</b>
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Value 'less than' as match condition
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port lt number</b>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq, gt, lt, or range.</b>
Introduced	16.0.R1
Platforms	All

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-egress string ipv6-criteria entry number match dst-port range</b>
Tree	<a href="#">range</a>

Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the port range
Context	<b>configure</b> qos sap-egress string ipv6-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the port range
Context	<b>configure</b> qos sap-egress string ipv6-criteria entry number match dst-port range start number
Tree	start
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure</b> qos sap-egress string ipv6-criteria entry number match next-header ( <i>number</i>   <i>keyword</i> )
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

**address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	Source IPv6 address for SAP QoS policy match
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">address</a> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">ipv6-prefix-list</a> <i>reference</i>
Tree	<a href="#">ipv6-prefix-list</a>
Reference	<b>configure qos match-list</b> <a href="#">ipv6-prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mask** *string*

Synopsis	IP address mask to match with source IP of the packet
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .

Introduced	16.0.R1
Platforms	All

### **src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

### **eq number**

Synopsis	Value 'equal to' as match condition
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a> <a href="#">eq number</a>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **gt number**

Synopsis	Value 'greater than' as match condition
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a> <a href="#">gt number</a>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

### **lt number**

Synopsis	Value 'less than' as match condition
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a> <a href="#">lt number</a>

Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of the port range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">ipv6-criteria</a> <i>entry</i> <i>number</i> <a href="#">match</a> <a href="#">src-port</a> <a href="#">range</a> <a href="#">start</a> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**parent-location** *keyword*

Synopsis	Location where queues look to find parent scheduler
Context	<b>configure</b> qos sap-egress <i>string</i> parent-location <i>keyword</i>
Tree	parent-location
Options	auto, sla
Default	auto
Introduced	16.0.R1
Platforms	All

**policer** [*policer-id*] *number*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i>
Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id]** *number*

Synopsis	SAP egress policer ID
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> adaptation-rule
Tree	adaptation-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adaptation-rule cir</b> <i>keyword</i>
Tree	<b>cir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adaptation-rule pir</b> <i>keyword</i>
Tree	<b>pir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adv-config-policy reference**

Synopsis	Advanced QoS policy name
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adv-config-policy</b> <i>reference</i>
Tree	<b>adv-config-policy</b>
Reference	<b>configure qos adv-config-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>arbiter-parent</b>
Tree	<b>arbiter-parent</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-name** *string*

Synopsis Arbiter name

Context **configure** qos sap-egress *string* policer *number* arbiter-parent arbiter-name *string*

Tree [arbiter-name](#)

Description This command specifies an arbiter name. The policer is intended to become a child to one of the tiered arbiters with the specified arbiter name where an instance of the policer is created. If the specified arbiter name does not exist, the policer is placed in the orphan state.

String Length 1 to 32

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level** *number*

Synopsis Level of priority while feeding to the parent

Context **configure** qos sap-egress *string* policer *number* arbiter-parent level *number*

Tree [level](#)

Range 1 to 8

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **weight** *number*

Synopsis Weight used by the arbiter for feeding the policer

Context **configure** qos sap-egress *string* policer *number* arbiter-parent weight *number*

Tree [weight](#)

Range 1 to 100

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**dscp-prec-remarking** *boolean*

Synopsis	Remark DSCP/precedence based on packet profile state
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">dscp-prec-remarking</a> <i>boolean</i>
Tree	<a href="#">dscp-prec-remarking</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**exceed-pir** *boolean*

Synopsis	Forward packets exceeding the PIR as exceed-profile
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">exceed-pir</a> <i>boolean</i>
Tree	<a href="#">exceed-pir</a>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>high-prio-only</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	Maximum burst tolerance allowed by the policer
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure qos sap-egress string policer number percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir decimal-number

Synopsis	Administrative CIR percent
Context	<b>configure qos sap-egress string policer number percent-rate cir decimal-number</b>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir decimal-number

Synopsis	Administrative PIR percent
Context	<b>configure qos sap-egress string policer number percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## reference-rate keyword

Synopsis	Reference rate
Context	<b>configure qos sap-egress string policer number percent-rate reference-rate keyword</b>
Tree	<a href="#">reference-rate</a>
Options	local-limit, reference-port-limit
Default	local-limit

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## port-parent

Synopsis	Enable the <b>port-parent</b> context
Context	<b>configure qos sap-egress string policer number port-parent</b>
Tree	<a href="#">port-parent</a>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir-level number

Synopsis	Port priority level for within-CIR offered load
Context	<b>configure qos sap-egress string policer number port-parent cir-level number</b>
Tree	<a href="#">cir-level</a>
Description	This command defines the port priority that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the port schedulers with-CIR pass and the <b>cir-weight</b> command is ignored.
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir-weight number

Synopsis	Weight to use in the within-CIR port priority level
Context	<b>configure qos sap-egress string policer number port-parent cir-weight number</b>
Tree	<a href="#">cir-weight</a>
Description	This command defines the weight that the policer uses at the within-CIR port priority level.  All CIR weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight

is considered active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.

When this command is set to the default value, the policer receives bandwidth only after other children with a non-zero weight at this level have been serviced.

Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level number**

Synopsis	Port priority level for above-CIR behavior
Context	<b>configure qos sap-egress</b> <i>string policer number port-parent level number</i>
Tree	<b>level</b>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **weight number**

Synopsis	Weight to use in the above-CIR port priority level
Context	<b>configure qos sap-egress</b> <i>string policer number port-parent weight number</i>
Tree	<b>weight</b>
Description	<p>This command defines the weight that the policer uses at the above-CIR port priority level.</p> <p>All weight values from all weighted active policers, queues, and schedulers with a common port parent are added together. Each individual active weight is then divided by the total to determine the percentage of remaining bandwidth provided to the policer, queue, or scheduler after the higher priority level children have been serviced. A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after other children with a non-zero weight at this level.</p>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile-capped** *boolean*

Synopsis	Enforce overall in-profile burst limit to CIR bucket
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> profile-capped <i>boolean</i>
Tree	profile-capped
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**profile-out-preserve** *boolean*

Synopsis	Preserve the color of offered out-of-profile traffic
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> profile-out-preserve <i>boolean</i>
Tree	profile-out-preserve
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> rate
Tree	rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	cir
Range	0 to 6400000000
Units	kilobps
Options	max

Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b>
Tree	<b>scheduler-parent</b>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir-level** *number*

Synopsis	Port priority level for within-CIR offered load
Context	<b>configure qos sap-egress</b> <i>string</i> <b>policer</b> <i>number</i> <b>scheduler-parent</b> <b>cir-level</b> <i>number</i>
Tree	<b>cir-level</b>
Description	This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the schedulers within-CIR pass and the <b>cir-weight</b> command is ignored.
Range	0 to 8

Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir-weight** *number*

Synopsis	Weight to use in the within-CIR port priority level
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">scheduler-parent</a> <a href="#">cir-weight</a> <i>number</i>
Tree	<a href="#">cir-weight</a>
Description	<p>The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.</p> <p>A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.</p> <p>When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.</p>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level** *number*

Synopsis	Priority level for bandwidth on the parent scheduler
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">scheduler-parent</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Description	<p>This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.</p> <p>Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.</p>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**scheduler-name** *string*

Synopsis	Scheduler name
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> scheduler-parent scheduler-name <i>string</i>
Tree	<a href="#">scheduler-name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**weight** *number*

Synopsis	Policer weight at the above-CIR priority level
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> scheduler-parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos sap-egress <i>string</i> policer <i>number</i> stat-mode <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policers-hqos-manageable** *boolean*

Synopsis	Manage policers through the Hierarchical QoS process
Context	<b>configure</b> qos sap-egress <i>string</i> policers-hqos-manageable <i>boolean</i>

Tree	<a href="#">policers-hqos-manageable</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, VSR

### **policy-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Egress SAP QoS policy ID
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policy-id</a> <i>number</i>
Tree	<a href="#">policy-id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **post-policer-mapping** *reference*

Synopsis	Post policer mapping policy applied to this policy
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">post-policer-mapping</a> <i>reference</i>
Tree	<a href="#">post-policer-mapping</a>
Reference	<b>configure</b> <a href="#">qos post-policer-mapping</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **prec** [[prec-value](#)] *number*

Synopsis	Enter the <b>prec</b> list instance
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">prec</a> <i>number</i>
Tree	<a href="#">prec</a>
Introduced	16.0.R1
Platforms	All

**[prec-value]** *number*

Synopsis	Precedence value for which mapping is performed
Context	<b>configure qos sap-egress</b> <i>string prec number</i>
Tree	<a href="#">prec</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure qos sap-egress</b> <i>string prec number fc keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**profile** *keyword*

Synopsis	Default profile for the ingressing traffic
Context	<b>configure qos sap-egress</b> <i>string prec number profile keyword</i>
Tree	<a href="#">profile</a>
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

**queue** [[queue-id](#)] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos sap-egress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id] number**

Synopsis	Egress Queue-Group queue identifier
Context	<b>configure qos sap-egress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-egress</b> <i>string queue number adaptation-rule pir keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Default	closest

Introduced 16.0.R1  
 Platforms All

### **adv-config-policy** *reference*

Synopsis Name of the advanced configuration policy  
 Context **configure qos sap-egress** *string queue number adv-config-policy reference*  
 Tree [adv-config-policy](#)  
 Reference **configure qos adv-config-policy** *string*  
 Introduced 16.0.R1  
 Platforms All

### **agg-shaper-weight** *number*

Synopsis Aggregate shaper weight of the sap-egress queue  
 Context **configure qos sap-egress** *string queue number agg-shaper-weight number*  
 Tree [agg-shaper-weight](#)  
 Range 1 to 100  
 Default 1  
 Introduced 21.7.R1  
 Platforms 7750 SR-1, 7750 SR-s

### **avg-frame-overhead** *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead  
 Context **configure qos sap-egress** *string queue number avg-frame-overhead decimal-number*  
 Tree [avg-frame-overhead](#)  
 Range 0.00 to 100.00  
 Default 0.00  
 Introduced 16.0.R1  
 Platforms All

### **burst-limit** (*number | keyword*)

Synopsis Explicit shaping burst size of a queue

Context	<b>configure qos sap-egress</b> <i>string queue number burst-limit</i> ( <i>number   keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number | keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure qos sap-egress</b> <i>string queue number cbs</i> ( <i>number   keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **exceed**

Synopsis	Enter the <b>exceed</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number drop-tail exceed</i>
Tree	<a href="#">exceed</a>
Introduced	16.0.R1

Platforms All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail

Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [exceed percent-reduction-from-mbs](#) (*number* | *keyword*)

Tree [percent-reduction-from-mbs](#)

Range 0 to 100

Options auto

Default auto

Introduced 16.0.R1

Platforms All

### **high**

Synopsis Enter the **high** context

Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [high](#)

Tree [high](#)

Introduced 16.0.R1

Platforms All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail

Context **configure** [qos sap-egress](#) *string* [queue](#) *number* [drop-tail](#) [high](#) [percent-reduction-from-mbs](#) (*number* | *keyword*)

Tree [percent-reduction-from-mbs](#)

Range 0 to 100

Options auto

Default auto

Introduced 16.0.R1

Platforms All

## highplus

Synopsis	Enter the <b>highplus</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> drop-tail highplus
Tree	highplus
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> drop-tail highplus percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> drop-tail low percent-reduction-from-mbs ( <i>number</i>   <i>keyword</i> )
Tree	percent-reduction-from-mbs
Range	0 to 100
Options	auto

Default	auto
Introduced	16.0.R1
Platforms	All

### **fir-burst-limit** (*number* | *keyword*)

Synopsis	Burst limit for FIR
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> fir-burst-limit ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">fir-burst-limit</a>
Description	This command configures a burst limit for the FIR of the specified queue. If the keyword <b>auto</b> is used, the FIR burst limit is based on the PIR. In this case, it is recommended to use the explicit PIR value in the queue configuration.
Range	1 to 102400
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **hs-alt-port-class-pool** *boolean*

Synopsis	Use HS alternate class port pool buffer for traffic
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> hs-alt-port-class-pool <i>boolean</i>
Tree	<a href="#">hs-alt-port-class-pool</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Scheduling class weight
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> hs-class-weight <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Default	1

Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### hs-wred-queue

Synopsis Enter the **hs-wred-queue** context  
 Context **configure qos sap-egress** *string queue number hs-wred-queue*  
 Tree [hs-wred-queue](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### policy reference

Synopsis Slope policy name  
 Context **configure qos sap-egress** *string queue number hs-wred-queue policy reference*  
 Tree [policy](#)  
 Reference **configure qos slope-policy** *string*  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### hs-wrr-weight *number*

Synopsis WRR weight with which queue parents into the scheduler  
 Context **configure qos sap-egress** *string queue number hs-wrr-weight number*  
 Tree [hs-wrr-weight](#)  
 Range 1 to 127  
 Default 1  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### maximum-data-transmission (*number* | *keyword*)

Synopsis Maximum data transmitted at each scheduling opportunity  
 Context **configure qos sap-egress** *string queue number maximum-data-transmission (number | keyword)*

Tree	<a href="#">maximum-data-transmission</a>
Description	This command sets the maximum amount of data transmitted at a single scheduling opportunity. If the frame to be scheduled is longer than the configured amount of data, the entire frame is still transmitted.  This command is applicable only to FP4 and FP5 chipsets.
Range	512 to 32768
Units	bytes
Options	auto
Default	auto
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **mbs** (*number* | *keyword*)

Synopsis	Buffer space allowed for the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **packet-byte-offset** *number*

Synopsis	Packet byte offset for addition of policing information
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 32
Default	0
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir decimal-number**

Synopsis	Administrative CIR percent
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> percent-rate cir decimal-number
Tree	cir
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1
Platforms	All

**pir decimal-number**

Synopsis	Administrative PIR percent
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> percent-rate pir decimal-number
Tree	pir
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

**reference-rate keyword**

Synopsis	Reference rate
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> percent-rate reference-rate keyword
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	16.0.R1

Platforms All

### **port-parent**

Synopsis Enable the **port-parent** context

Context **configure qos sap-egress** *string queue number* **port-parent**

Tree [port-parent](#)

Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.

Introduced 16.0.R1

Platforms All

### **cir-level number**

Synopsis Port priority to receive bandwidth for within-CIR pass

Context **configure qos sap-egress** *string queue number* **port-parent** *cir-level number*

Tree [cir-level](#)

Range 0 to 8

Default 0

Introduced 16.0.R1

Platforms All

### **cir-weight number**

Synopsis Weight used at the within-CIR port priority level

Context **configure qos sap-egress** *string queue number* **port-parent** *cir-weight number*

Tree [cir-weight](#)

Range 0 to 100

Default 0

Introduced 16.0.R1

Platforms All

### **level number**

Synopsis Port priority for bandwidth for above-CIR offered load

Context **configure qos sap-egress** *string queue number* **port-parent** *level number*

Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used at above-CIR port priority level
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">port-parent</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **queue-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">queue-type</a> <i>keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .

Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos sap-egress</b> <i>string queue number rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos sap-egress</b> <i>string queue number rate pir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**sched-class** (*number* | *keyword*)

Synopsis	Scheduler class for the sap-egress queue
Context	<b>configure qos sap-egress</b> <i>string queue number sched-class</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">sched-class</a>
Description	This command configures a scheduling class for the specified queue. If the keyword <b>auto</b> is used, the scheduling class mapping is done automatically.
Range	1 to 6

Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

## **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> scheduler-parent
Tree	<a href="#">scheduler-parent</a>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	16.0.R1
Platforms	All

## **cir-level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> scheduler-parent cir-level <i>number</i>
Tree	<a href="#">cir-level</a>
Range	0 to 8
Default	0
Introduced	16.0.R1
Platforms	All

## **cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> qos sap-egress <i>string</i> queue <i>number</i> scheduler-parent cir-weight <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**level number**

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-egress string queue number scheduler-parent level number</b>
Tree	<b>level</b>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**scheduler-name string**

Synopsis	Parent scheduler name
Context	<b>configure qos sap-egress string queue number scheduler-parent scheduler-name string</b>
Tree	<b>scheduler-name</b>
Description	This command associates a scheduler name to a queue. The scheduler name must have previously been defined within an existing scheduler policy and exist on each SAP the queue is created on. There are no checks performed to ensure that the scheduler name exists within an existing scheduler policy. Until the scheduler name exists on the egress SAP, the queue operates in an orphaned state.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Weight used by the scheduler for feeding the queue
Context	<b>configure qos sap-egress string queue number scheduler-parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

## wred-queue

Synopsis	Enter the <b>wred-queue</b> context
Context	<b>configure qos sap-egress</b> <i>string queue number wred-queue</i>
Tree	<a href="#">wred-queue</a>
Introduced	16.0.R1
Platforms	All

## mode keyword

Synopsis	Pool association to allow queue-specific WRED slopes
Context	<b>configure qos sap-egress</b> <i>string queue number wred-queue mode keyword</i>
Tree	<a href="#">mode</a>
Options	native, pool-per-queue
Introduced	16.0.R1
Platforms	All

## policy reference

Synopsis	Slope policy name
Context	<b>configure qos sap-egress</b> <i>string queue number wred-queue policy reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure qos slope-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## usage keyword

Synopsis	Congestion control type
Context	<b>configure qos sap-egress</b> <i>string queue number wred-queue usage keyword</i>
Tree	<a href="#">usage</a>
Options	auto, exceed-low
Introduced	16.0.R1
Platforms	All

**sched-class-elevation**

Synopsis	Enter the <b>sched-class-elevation</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <b>sched-class-elevation</b>
Tree	<b>sched-class-elevation</b>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**sched-class** [**class-id**] *number*

Synopsis	Enter the <b>sched-class</b> list instance
Context	<b>configure qos sap-egress</b> <i>string</i> <b>sched-class-elevation sched-class</b> <i>number</i>
Tree	<b>sched-class</b>
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**[class-id]** *number*

Synopsis	Scheduling class associated with this SAP egress
Context	<b>configure qos sap-egress</b> <i>string</i> <b>sched-class-elevation sched-class</b> <i>number</i>
Tree	<b>sched-class</b>
Range	1 to 6
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

**weight** *number*

Synopsis	Weight of the schedule class
Context	<b>configure qos sap-egress</b> <i>string</i> <b>sched-class-elevation sched-class</b> <i>number</i> <b>weight</b> <i>number</i>
Tree	<b>weight</b>
Range	1 to 8
Default	1
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

### **scope** *keyword*

Synopsis	Scope of the policy
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">scope</a> <i>keyword</i>
Tree	<a href="#">scope</a>
Options	exclusive, template
Default	template
Introduced	16.0.R1
Platforms	All

### **subscriber-mgmt**

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a>
Tree	<a href="#">subscriber-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dynamic-policer**

Synopsis	Enter the <b>dynamic-policer</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-policer</a>
Tree	<a href="#">dynamic-policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-policer</a> <a href="#">arbiter-parent</a>
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**arbiter-name** *string*

Synopsis	Arbiter name
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent arbiter-name <i>string</i>
Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent level <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**weight** *number*

Synopsis	Weight to be used by the arbiter for feeding this policer
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	1 to 100
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-policer cbs ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mbs** (*number* | *keyword*)

Synopsis	High priority 'violate' threshold of PIR leaky bucket of this policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policer-id-range**

Synopsis	Enable the <b>policer-id-range</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer policer-id-range</a>

Tree	<a href="#">policer-id-range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**end number**

Synopsis	Upper bound of the dynamic policer ID range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer policer-id-range end number</a>
Tree	<a href="#">end</a>
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the dynamic policer ID range
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer policer-id-range start number</a>
Tree	<a href="#">start</a>
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**stat-mode keyword**

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt dynamic-policer stat-mode keyword</a>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dynamic-queue

Synopsis	Enter the <b>dynamic-queue</b> context
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-queue</a>
Tree	<a href="#">dynamic-queue</a>
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## cbs (*number* | *keyword*)

Synopsis	Committed buffer space reserved for the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-queue</a> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Description	This command configures the committed buffer space (CBS) that is reserved for the queue. The CBS is applied to each dynamic queue and is not shared.
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mbs (*number* | *keyword*)

Synopsis	Maximum buffer space allowed for the queue
Context	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-queue</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Description	This command configures the maximum buffer space (MBS) allowed for the queue. The MBS is applied to each dynamic queue and is not shared.
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-byte-offset** *number*

Synopsis Packet byte offset used to modify the input packet size

Context **configure** qos sap-egress *string* subscriber-mgmt dynamic-queue packet-byte-offset *number*

Tree [packet-byte-offset](#)

Description This command configures the packet-byte offset the system uses to modify the size of the input packets. This also applies to any charging statistics.

Range -64 to 31

Default 0

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **port-parent**

Synopsis Enable the **port-parent** context

Context **configure** qos sap-egress *string* subscriber-mgmt dynamic-queue port-parent

Tree [port-parent](#)

Description Commands in this context configure the queue treatment by the port parent, that governs the available bandwidth for the queue. They define how this queue contends with the other children for the parent bandwidth.

See the *7750 SR and VSR BNG CUPS User Plane Function Guide*, "PCC rules based QoS" for more information about Dynamic QoS based on PCC rules for FWA sessions.

See the *7450 ESS, 7750 SR, 7950 XRS, and VSR Quality of Service Guide* for general information about configuring QoS.

Notes The following elements are part of a choice: **port-parent** or **scheduler-parent**.

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cir-level** *number*

Synopsis Port priority for within-CIR passes

Context **configure** qos sap-egress *string* subscriber-mgmt dynamic-queue port-parent cir-level *number*

Tree [cir-level](#)

Range	0 to 8
Default	0
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cir-weight** *number*

Synopsis	Weight used for the within-CIR port-priority level
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-queue port-parent cir-weight <i>number</i>
Tree	<a href="#">cir-weight</a>
Description	This command configures the weight the queue uses to receive bandwidth at the within-CIR port priority level. This also applies to any charging statistics.
Range	0 to 100
Default	0
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **level** *number*

Synopsis	Port priority level for above-CIR offered load
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-queue port-parent level <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **weight** *number*

Synopsis	Weight used for the above-CIR port-priority level
Context	<b>configure</b> qos sap-egress <i>string</i> subscriber-mgmt dynamic-queue port-parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100

Default	1
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## queue-id-range

Synopsis	Enable the <b>queue-id-range</b> context
Context	<b>configure</b> qos sap-egress string subscriber-mgmt dynamic-queue queue-id-range
Tree	queue-id-range
Description	<p>Commands in this context configure the range of IDs from which dynamic queues are allocated. You cannot use these IDs for static queues within the same policy.</p> <p>See the <i>7750 SR and VSR BNG CUPS User Plane Function Guide</i>, "PCC rules based QoS" for more information about Dynamic QoS based on PCC rules for FWA sessions.</p> <p>See the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Quality of Service Guide</i> for general information about configuring QoS.</p>
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## end number

Synopsis	Upper bound of the dynamic queue range
Context	<b>configure</b> qos sap-egress string subscriber-mgmt dynamic-queue queue-id-range end number
Tree	end
Range	1 to 8
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## start number

Synopsis	Lower bound of dynamic queue range
Context	<b>configure</b> qos sap-egress string subscriber-mgmt dynamic-queue queue-id-range start number
Tree	start
Range	1 to 8

Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **scheduler-parent**

Synopsis	Enable the <b>scheduler-parent</b> context
Context	<b>configure</b> qos sap-egress string subscriber-mgmt dynamic-queue scheduler-parent
Tree	<a href="#">scheduler-parent</a>
Description	<p>Commands in this context configure the queue treatment by the parent scheduler that governs the available bandwidth for the queue. They define how this queue contends with the other children for the parent bandwidth.</p> <p>See the <i>7750 SR and VSR BNG CUPS User Plane Function Guide</i>, "PCC rules based QoS" for more information about Dynamic QoS based on PCC rules for FWA sessions.</p> <p>See the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Quality of Service Guide</i> for general information about configuring QoS.</p>
Notes	The following elements are part of a choice: <b>port-parent</b> or <b>scheduler-parent</b> .
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **cir-level number**

Synopsis	Priority for feeding the parent for within-CIR passes
Context	<b>configure</b> qos sap-egress string subscriber-mgmt dynamic-queue scheduler-parent <a href="#">cir-level number</a>
Tree	<a href="#">cir-level</a>
Description	This command configures the priority level the system uses to feed to the parent for within-CIR passes.
Range	0 to 8
Default	0
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **cir-weight number**

Synopsis	Weight used for the within-CIR port-priority level
----------	--

Context	<b>configure qos sap-egress string subscriber-mgmt dynamic-queue scheduler-parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Default	1
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **level number**

Synopsis	Priority level for the above-CIR offered load
Context	<b>configure qos sap-egress string subscriber-mgmt dynamic-queue scheduler-parent level number</b>
Tree	<b>level</b>
Description	This command configures the priority level of the queue (as compared to other competing schedulers and queues) for the above-CIR offered load bandwidth, when feeding the parent scheduler.
Range	1 to 8
Default	1
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **scheduler-name string**

Synopsis	Name of the parent scheduler
Context	<b>configure qos sap-egress string subscriber-mgmt dynamic-queue scheduler-parent scheduler-name string</b>
Tree	<b>scheduler-name</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **weight number**

Synopsis	Weight used for the above-CIR port priority level
----------	---

Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-queue</a> <a href="#">scheduler-parent</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pcc-rule-entry**

Synopsis	Enter the <b>pcc-rule-entry</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">pcc-rule-entry</a>
Tree	<a href="#">pcc-rule-entry</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **range**

Synopsis	Enable the <b>range</b> context
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">pcc-rule-entry</a> <a href="#">range</a>
Tree	<a href="#">range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the filter and QoS policy entries range
Context	<b>configure qos sap-egress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">pcc-rule-entry</a> <a href="#">range</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the filter and QoS policy entries range
Context	<b>configure</b> qos sap-egress string subscriber-mgmt pcc-rule-entry range start number
Tree	start
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**use-policer-result-marking-dot1p-inner boolean**

Synopsis	Enable using egress policer for Dot1p inner marking
Context	<b>configure</b> qos sap-egress string use-policer-result-marking-dot1p-inner boolean
Tree	use-policer-result-marking-dot1p-inner
Description	When configured, this command enables using the egress policer profile result to mark dot1p-inner bits.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**sap-ingress [sap-ingress-policy-name] string**

Synopsis	Enter the <b>sap-ingress</b> list instance
Context	<b>configure</b> qos sap-ingress string
Tree	sap-ingress
Introduced	16.0.R1
Platforms	All

**[sap-ingress-policy-name] string**

Synopsis	Policy name
Context	<b>configure</b> qos sap-ingress string
Tree	sap-ingress
String Length	1 to 64
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **default-fc** *string*

Synopsis Default forwarding class for non-matching traffic  
Context **configure** qos sap-ingress *string default-fc string*  
Tree [default-fc](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms All

### **default-priority** *keyword*

Synopsis Priority for packets received on an ingress SAP  
Context **configure** qos sap-ingress *string default-priority keyword*  
Tree [default-priority](#)  
Options low, high  
Default low  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** qos sap-ingress *string description string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **dot1p** [[dot1p-value](#)] *number*

Synopsis Enter the **dot1p** list instance  
Context **configure** qos sap-ingress *string dot1p number*

---

Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

**[dot1p-value]** *number*

Synopsis	Dot1p value to match in the packet
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">dot1p</a> <i>number</i>
Tree	<a href="#">dot1p</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching specified dot1p
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">dot1p</a> <i>number</i> <b>fc</b> <i>string</i>
Tree	<a href="#">fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**priority** *keyword*

Synopsis	Priority for packets that match the Dot1p value
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">dot1p</a> <i>number</i> <b>priority</b> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**dscp** [*dscp-name*] *keyword*

Synopsis	Enter the <b>dscp</b> list instance
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword</i>
Tree	<i>dscp</i>
Introduced	16.0.R1
Platforms	All

**[dscp-name]** *keyword*

Synopsis	Name for the Differentiated Services Code Point (DSCP)
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword</i>
Tree	<i>dscp</i>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching specified DSCP
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword fc string</i>
Tree	<i>fc</i>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**priority** *keyword*

Synopsis	Priority for the packet
Context	<b>configure qos sap-ingress</b> <i>string dscp keyword priority keyword</i>
Tree	<i>priority</i>
Options	low, high, auto

Default	auto
Introduced	16.0.R1
Platforms	All

**fc** [**fc-name**] *string*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure qos sap-ingress string fc string</b>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

**[fc-name]** *string*

Synopsis	Forwarding class (and optional subclass) name
Context	<b>configure qos sap-ingress string fc string</b>
Tree	<b>fc</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**broadcast-policer** *number*

Synopsis	Policer ID for multicast traffic in forwarding class
Context	<b>configure qos sap-ingress string fc string broadcast-policer number</b>
Tree	<b>broadcast-policer</b>
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**broadcast-queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure</b> qos sap-ingress string fc string broadcast-queue reference
Tree	<a href="#">broadcast-queue</a>
Reference	<b>configure</b> qos sap-ingress string queue number
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**broadcast-queue-group-queue**

Synopsis	Enable the <b>broadcast-queue-group-queue</b> context
Context	<b>configure</b> qos sap-ingress string fc string broadcast-queue-group-queue
Tree	<a href="#">broadcast-queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure</b> qos sap-ingress string fc string broadcast-queue-group-queue queue reference
Tree	<a href="#">queue</a>
Reference	<b>configure</b> qos queue-group-templates ingress queue-group string queue number
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**queue-group-name** *reference*

Synopsis	Queue group name to forward traffic
Context	<b>configure</b> qos sap-ingress string fc string broadcast-queue-group-queue queue-group-name reference

Tree	<a href="#">queue-group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **de-1-out-profile** *boolean*

Synopsis	Frames with DE value to be assigned as out of profile
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">de-1-out-profile</a> <i>boolean</i>
Tree	<a href="#">de-1-out-profile</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **egress-fc** *keyword*

Synopsis	Forwarding class for egress QoS processing
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">egress-fc</a> <i>keyword</i>
Tree	<a href="#">egress-fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### **fp-redirect-group-broadcast-policer**

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">fc</a> <i>string</i> <a href="#">fp-redirect-group-broadcast-policer</a>
Tree	<a href="#">fp-redirect-group-broadcast-policer</a>
Notes	The following elements are part of a choice: ( <b>broadcast-policer</b> and <b>fp-redirect-group-broadcast-policer</b> ), <b>broadcast-queue</b> , or <b>broadcast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## fp-redirect-group-multicast-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-multicast-policer</b>
Tree	<a href="#">fp-redirect-group-multicast-policer</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## fp-redirect-group-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-policer</b>
Tree	<a href="#">fp-redirect-group-policer</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## fp-redirect-group-unknown-policer

Synopsis	Use policer as defined in FP queue-group for the SAP
Context	<b>configure qos sap-ingress string fc string fp-redirect-group-unknown-policer</b>
Tree	<a href="#">fp-redirect-group-unknown-policer</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## in-remark

Synopsis	Enter the <b>in-remark</b> context
Context	<b>configure qos sap-ingress string fc string in-remark</b>
Tree	<a href="#">in-remark</a>
Introduced	16.0.R1

Platforms All

### **dscp** *keyword*

Synopsis DSCP to override DSCP bits of the matching packet

Context **configure qos sap-ingress** *string fc string in-remark dscp keyword*

Tree [dscp](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Notes The following elements are part of a choice: **dscp** or **prec**.

Introduced 16.0.R1

Platforms All

### **prec** *number*

Synopsis Value to override precedence bits of matching packet

Context **configure qos sap-ingress** *string fc string in-remark prec number*

Tree [prec](#)

Range 0 to 7

Notes The following elements are part of a choice: **dscp** or **prec**.

Introduced 16.0.R1

Platforms All

### **multicast-policer** *number*

Synopsis Policer ID for multicast traffic in forwarding class

Context **configure qos sap-ingress** *string fc string multicast-policer number*

Tree [multicast-policer](#)

Range 1 to 63

Notes The following elements are part of a choice: (**fp-redirect-group-multicast-policer** and **multicast-policer**), **multicast-queue**, or **multicast-queue-group-queue**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**multicast-queue** *reference*

Synopsis	Broadcast queue to assign for packets in this forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-queue reference</i>
Tree	<a href="#">multicast-queue</a>
Reference	<b>configure qos sap-ingress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**multicast-queue-group-queue**

Synopsis	Enable the <b>multicast-queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-queue-group-queue</i>
Tree	<a href="#">multicast-queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-multicast-policer</b> and <b>multicast-policer</b> ), <b>multicast-queue</b> , or <b>multicast-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

**queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string multicast-queue-group-queue queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**queue-group-name** *reference*

Synopsis	Queue group name to forward traffic
----------	-------------------------------------

Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>multicast-queue-group-queue</b> <b>queue-group-name</b> <i>reference</i>
Tree	<a href="#">queue-group-name</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### out-remark

Synopsis	Enter the <b>out-remark</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>out-remark</b>
Tree	<a href="#">out-remark</a>
Introduced	16.0.R1
Platforms	All

### dscp keyword

Synopsis	DSCP to override DSCP bits of the matching packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>out-remark dscp</b> <i>keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### prec number

Synopsis	Value to override precedence bits of matching packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>fc</b> <i>string</i> <b>out-remark prec</b> <i>number</i>
Tree	<a href="#">prec</a>
Range	0 to 7

Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **policer** *number*

Synopsis	Policer ID for unicast traffic in the forwarding class
Context	<b>configure</b> qos sap-ingress string fc string policer number
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **profile** *keyword*

Synopsis	Packets profile associated with the forwarding class
Context	<b>configure</b> qos sap-ingress string fc string profile keyword
Tree	profile
Options	in, out, exceed, inplus
Introduced	16.0.R1
Platforms	All

### **queue** *reference*

Synopsis	Queue to assign for packets in this forwarding class
Context	<b>configure</b> qos sap-ingress string fc string queue reference
Tree	queue
Reference	<b>configure</b> qos sap-ingress string queue number
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

## queue-group-queue

Synopsis	Enable the <b>queue-group-queue</b> context
Context	<b>configure</b> qos sap-ingress string fc string queue-group-queue
Tree	queue-group-queue
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-policer</b> and <b>policer</b> ), <b>queue</b> , or <b>queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

## queue reference

Synopsis	Queue to assign for packets in this forwarding class
Context	<b>configure</b> qos sap-ingress string fc string queue-group-queue queue reference
Tree	queue
Reference	<b>configure</b> qos queue-group-templates ingress queue-group string queue number
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## queue-group-name reference

Synopsis	Queue group to forward traffic
Context	<b>configure</b> qos sap-ingress string fc string queue-group-queue queue-group-name reference
Tree	queue-group-name
Reference	<b>configure</b> qos queue-group-templates ingress queue-group string
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## unknown-policer number

Synopsis	Policer ID for multicast traffic in forwarding class
Context	<b>configure</b> qos sap-ingress string fc string unknown-policer number
Tree	unknown-policer

Range	1 to 63
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **unknown-queue** *reference*

Synopsis	Broadcast queue to assign for packets in this forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string unknown-queue reference</i>
Tree	<a href="#">unknown-queue</a>
Reference	<b>configure qos sap-ingress</b> <i>string queue number</i>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **unknown-queue-group-queue**

Synopsis	Enable the <b>unknown-queue-group-queue</b> context
Context	<b>configure qos sap-ingress</b> <i>string fc string unknown-queue-group-queue</i>
Tree	<a href="#">unknown-queue-group-queue</a>
Notes	The following elements are part of a choice: ( <b>fp-redirect-group-unknown-policer</b> and <b>unknown-policer</b> ), <b>unknown-queue</b> , or <b>unknown-queue-group-queue</b> .
Introduced	16.0.R1
Platforms	All

### **queue** *reference*

Synopsis	Broadcast queue for packets in the forwarding class
Context	<b>configure qos sap-ingress</b> <i>string fc string unknown-queue-group-queue queue reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string queue number</i>
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **queue-group-name** *reference*

Synopsis Queue group name to forward traffic

Context **configure qos sap-ingress** *string* **fc** *string* **unknown-queue-group-queue** **queue-group-name** *reference*

Tree [queue-group-name](#)

Reference **configure qos queue-group-templates ingress queue-group** *string*

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **ip-criteria**

Synopsis Enter the **ip-criteria** context

Context **configure qos sap-ingress** *string* **ip-criteria**

Tree [ip-criteria](#)

Introduced 16.0.R1

Platforms All

### **entry** [[entry-id](#)] *number*

Synopsis Enter the **entry** list instance

Context **configure qos sap-ingress** *string* **ip-criteria** **entry** *number*

Tree [entry](#)

Introduced 16.0.R1

Platforms All

### **[entry-id]** *number*

Synopsis IP criteria entry to create or edit for the policy

Context **configure qos sap-ingress** *string* **ip-criteria** **entry** *number*

Tree [entry](#)

Range 1 to 65535

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **action**

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos sap-ingress string ip-criteria entry number action</b>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

### **fc string**

Synopsis	Forwarding class for traffic matching the criteria
Context	<b>configure qos sap-ingress string ip-criteria entry number action fc string</b>
Tree	<a href="#">fc</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **policer reference**

Synopsis	Policer ID for traffic matching the criteria
Context	<b>configure qos sap-ingress string ip-criteria entry number action policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-ingress string policer number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority keyword**

Synopsis	Priority for the packet
Context	<b>configure qos sap-ingress string ip-criteria entry number action priority keyword</b>
Tree	<a href="#">priority</a>

Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry number action type <i>keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry number description <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> ip-criteria entry number match
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

Synopsis	DSCP value to match in the packet
----------	-----------------------------------

Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dscp keyword</i>
Tree	<a href="#">dscp</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

### dst-ip

Synopsis	Enter the <b>dst-ip</b> context
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-ip</i>
Tree	<a href="#">dst-ip</a>
Introduced	16.0.R1
Platforms	All

### address (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Destination IPv4 address for SAP QoS policy match
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-ip address (ipv4-prefix-with-host-bits   ipv4-address)</i>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### ip-prefix-list *reference*

Synopsis	IP-prefix list as match criterion
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match dst-ip ip-prefix-list reference</i>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure qos match-list ip-prefix-list</b> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1

Platforms All

### **mask string**

Synopsis IP address to match with source IP of the packet  
 Context **configure qos sap-ingress string ip-criteria entry number match dst-ip mask string**  
 Tree [mask](#)  
 Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.  
 Introduced 16.0.R1  
 Platforms All

### **dst-port**

Synopsis Enter the **dst-port** context  
 Context **configure qos sap-ingress string ip-criteria entry number match dst-port**  
 Tree [dst-port](#)  
 Introduced 16.0.R1  
 Platforms All

### **eq number**

Synopsis Value 'equal to' assigned as match condition  
 Context **configure qos sap-ingress string ip-criteria entry number match dst-port eq number**  
 Tree [eq](#)  
 Range 0 to 65535  
 Notes The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.  
 Introduced 16.0.R1  
 Platforms All

### **gt number**

Synopsis Value 'greater than' assigned as match condition  
 Context **configure qos sap-ingress string ip-criteria entry number match dst-port gt number**  
 Tree [gt](#)  
 Range 0 to 65535

Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**lt number**

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match dst-port lt number
Tree	lt
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match dst-port range
Tree	range
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the port range
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match dst-port range end number
Tree	end
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-ingress string ip-criteria entry number match dst-port range start number</b>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**fragment keyword**

Synopsis	Fragmented packets as the match criterion
Context	<b>configure qos sap-ingress string ip-criteria entry number match fragment keyword</b>
Tree	<a href="#">fragment</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**protocol (number | keyword)**

Synopsis	IP protocol to match
Context	<b>configure qos sap-ingress string ip-criteria entry number match protocol (number   keyword)</b>
Tree	<a href="#">protocol</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

**src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-ip</b>
Tree	<a href="#">src-ip</a>

Introduced	16.0.R1
Platforms	All

### **address** (*ipv4-prefix-with-host-bits* | *ipv4-address*)

Synopsis	Source IPv4 address for SAP QoS policy match criterion
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match src-ip address ( <i>ipv4-prefix-with-host-bits</i>   <i>ipv4-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ip-prefix-list** *reference*

Synopsis	IP-prefix list as match criterion
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match src-ip ip-prefix-list <i>reference</i>
Tree	<a href="#">ip-prefix-list</a>
Reference	<b>configure</b> qos match-list ip-prefix-list string
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure</b> qos sap-ingress string ip-criteria entry number match src-ip mask string
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ip-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## src-port

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match src-port</i>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

## eq number

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match src-port eq number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## gt number

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match src-port gt number</i>
Tree	<a href="#">gt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## lt number

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string ip-criteria entry number match src-port lt number</i>
Tree	<a href="#">lt</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .

Introduced	16.0.R1
Platforms	All

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port range</b>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of the port range
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port range end number</b>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-ingress string ip-criteria entry number match src-port range start number</b>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## vxlan-vni

Synopsis	Enter the <b>vxlan-vni</b> context
Context	<b>configure qos sap-ingress string ip-criteria entry number match vxlan-vni</b>

Tree	<a href="#">vxlan-vni</a>
Introduced	16.0.R1
Platforms	All

**eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni</a> <i>eq</i> <i>number</i>
Tree	<a href="#">eq</a>
Range	1 to 16777215
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni</a> <i>range</i>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the VNI range
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ip-criteria</a> <i>entry</i> <i>number</i> <a href="#">match vxlan-vni</a> <i>range</i> <i>end</i> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the VNI range
Context	<b>configure qos sap-ingress string ip-criteria entry number match vxlan-vni range start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**tag number**

Synopsis	Tag ID associated with the criteria entry
Context	<b>configure qos sap-ingress string ip-criteria entry number tag number</b>
Tree	<b>tag</b>
Description	This command associates a tag with the criteria entry. Tag identifiers are not supported in SAP ingress QoS policies, MAC criteria statements, or in SAP egress QoS policies.
Range	0 to 255
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type keyword****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 criteria entry type
Context	<b>configure qos sap-ingress string ip-criteria type keyword</b>
Tree	<b>type</b>
Description	This command specifies the type of entries that can be configured for IPv4 match criteria.
Options	normal, vxlan-vni, tagged-entries
Default	normal
Introduced	16.0.R1
Platforms	All

## ipv6-criteria

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure qos sap-ingress string ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	16.0.R1
Platforms	All

## entry [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure qos sap-ingress string ipv6-criteria entry number</b>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	All

## [[entry-id](#)] *number*

Synopsis	IPv6 criteria entry to create or edit for the policy
Context	<b>configure qos sap-ingress string ipv6-criteria entry number</b>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## action

Synopsis	Enter the <b>action</b> context
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action</b>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	All

**fc string**

Synopsis	Forwarding class for traffic matching the criteria
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action fc string</b>
Tree	<b>fc</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**policer reference**

Synopsis	Policer ID for traffic matching the criteria
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action policer reference</b>
Tree	<b>policer</b>
Reference	<b>configure qos sap-ingress string policer number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority keyword**

Synopsis	Priority for the packet
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action priority keyword</b>
Tree	<b>priority</b>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Action for criteria entry
Context	<b>configure qos sap-ingress string ipv6-criteria entry number action type keyword</b>
Tree	<b>type</b>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1

Platforms All

### **description** *string*

Synopsis Text description

Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* **description** *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms All

### **match**

Synopsis Enter the **match** context

Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* **match**

Tree [match](#)

Introduced 16.0.R1

Platforms All

### **dscp** *keyword*

Synopsis DSCP value to match in the packet

Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* **match** **dscp** *keyword*

Tree [dscp](#)

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms All

### **dst-ip**

Synopsis Enter the **dst-ip** context

Context **configure** qos sap-ingress *string* ipv6-criteria entry *number* **match** **dst-ip**

Tree [dst-ip](#)

Introduced	16.0.R1
Platforms	All

### **address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv6 address to match destination IP of the packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-ip</i> <i>address</i> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

### **ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-ip</i> <i>ipv6-prefix-list</i> <i>reference</i>
Tree	<a href="#">ipv6-prefix-list</a>
Reference	<b>configure qos match-list</b> <i>ipv6-prefix-list</i> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-ip</i> <i>mask</i> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

## dst-port

Synopsis	Enter the <b>dst-port</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <b>dst-port</b>
Tree	<b>dst-port</b>
Introduced	16.0.R1
Platforms	All

## eq number

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <b>dst-port eq</b> <i>number</i>
Tree	<b>eq</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## gt number

Synopsis	Value 'greater than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <b>dst-port gt</b> <i>number</i>
Tree	<b>gt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## lt number

Synopsis	Value 'less than' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <b>dst-port lt</b> <i>number</i>
Tree	<b>lt</b>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .

Introduced	16.0.R1
Platforms	All

## range

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-port</i> <i>range</i>
Tree	<a href="#">range</a>
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of the port range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-port</i> <i>range</i> <i>end</i> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>dst-port</i> <i>range</i> <i>start</i> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

## fragment keyword

Synopsis	Fragmented packets as the match criterion
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>fragment</i> <i>keyword</i>

Tree	<a href="#">fragment</a>
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

### **next-header** (*number* | *keyword*)

Synopsis	IP protocol to match
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">next-header</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">next-header</a>
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	All

### **src-ip**

Synopsis	Enter the <b>src-ip</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-ip</a>
Tree	<a href="#">src-ip</a>
Introduced	16.0.R1
Platforms	All

### **address** (*ipv6-prefix-with-host-bits* | *ipv6-address*)

Synopsis	IPv4 address to match
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">src-ip</a> <a href="#">address</a> ( <i>ipv6-prefix-with-host-bits</i>   <i>ipv6-address</i> )
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**ipv6-prefix-list** *reference*

Synopsis	IPv6 prefix list as match criterion for IPv6 addresses
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-ip</a> <a href="#">ipv6-prefix-list reference</a>
Tree	<a href="#">ipv6-prefix-list</a>
Reference	<b>configure</b> <a href="#">qos match-list</a> <a href="#">ipv6-prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mask** *string*

Synopsis	IP address to match with source IP of the packet
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-ip</a> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>
Notes	The following elements are part of a choice: ( <b>address</b> and <b>mask</b> ) or <b>ipv6-prefix-list</b> .
Introduced	16.0.R1
Platforms	All

**src-port**

Synopsis	Enter the <b>src-port</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a>
Tree	<a href="#">src-port</a>
Introduced	16.0.R1
Platforms	All

**eq** *number*

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">ipv6-criteria entry</a> <i>number</i> <a href="#">match src-port</a> <a href="#">eq</a> <i>number</i>
Tree	<a href="#">eq</a>
Range	0 to 65535
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>lt</b> , or <b>range</b> .
Introduced	16.0.R1

Platforms All

### **gt number**

Synopsis Value 'greater than' assigned as match condition

Context **configure qos sap-ingress string ipv6-criteria entry number match src-port gt number**

Tree [gt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **lt number**

Synopsis Value 'less than' assigned as match condition

Context **configure qos sap-ingress string ipv6-criteria entry number match src-port lt number**

Tree [lt](#)

Range 0 to 65535

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **range**

Synopsis Enter the **range** context

Context **configure qos sap-ingress string ipv6-criteria entry number match src-port range**

Tree [range](#)

Notes The following elements are part of a choice: **eq, gt, lt, or range**.

Introduced 16.0.R1

Platforms All

### **end number**

Synopsis Upper bound of the port range

Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>src-port</i> <i>range</i> <i>end</i> <i>number</i>
Tree	<a href="#">end</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the port range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>src-port</i> <i>range</i> <i>start</i> <i>number</i>
Tree	<a href="#">start</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

**vxlan-vni**

Synopsis	Enter the <b>vxlan-vni</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>vxlan-vni</i>
Tree	<a href="#">vxlan-vni</a>
Introduced	16.0.R1
Platforms	All

**eq number**

Synopsis	Value 'equal to' assigned as match condition
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match</i> <i>vxlan-vni</i> <i>eq</i> <i>number</i>
Tree	<a href="#">eq</a>
Range	1 to 16777215
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match vxlan-vni</i> <b>range</b>
Tree	<b>range</b>
Notes	The following elements are part of a choice: <b>eq</b> or <b>range</b> .
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the VNI range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match vxlan-vni</i> <b>range end number</b>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the VNI range
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <i>match vxlan-vni</i> <b>range start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**tag number**

Synopsis	Tag ID associated with the criteria entry
Context	<b>configure qos sap-ingress</b> <i>string</i> <i>ipv6-criteria</i> <i>entry</i> <i>number</i> <b>tag number</b>
Tree	<b>tag</b>
Description	This command associates a tag with the criteria entry. Tag identifiers are not supported in SAP ingress QoS policies, MAC criteria statements, or in SAP egress QoS policies.
Range	0 to 255

Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 criteria entry type
Context	<b>configure</b> qos sap-ingress <i>string</i> ipv6-criteria <i>type</i> <i>keyword</i>
Tree	<i>type</i>
Description	This command specifies the type of entries that can be configured for IPv6 match criteria.
Options	normal, vxlan-vni, tagged-entries
Default	normal
Introduced	16.0.R1
Platforms	All

**lsp-exp** [*lsp-exp-value*] *number*

Synopsis	Enter the <b>lsp-exp</b> list instance
Context	<b>configure</b> qos sap-ingress <i>string</i> lsp-exp <i>number</i>
Tree	<i>lsp-exp</i>
Introduced	16.0.R1
Platforms	All

**[lsp-exp-value]** *number*

Synopsis	LSP EXP value to match the LSP EXP rule
Context	<b>configure</b> qos sap-ingress <i>string</i> lsp-exp <i>number</i>
Tree	<i>lsp-exp</i>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **fc string**

Synopsis Forwarding class for traffic matching the LSP EXP value  
 Context **configure qos sap-ingress string lsp-exp number fc string**  
 Tree **fc**  
 String Length 1 to 32  
 Introduced 16.0.R1  
 Platforms All

### **priority keyword**

Synopsis Priority for the matching traffic  
 Context **configure qos sap-ingress string lsp-exp number priority keyword**  
 Tree **priority**  
 Options low, high, auto  
 Default auto  
 Introduced 16.0.R1  
 Platforms All

### **mac-criteria**

Synopsis Enter the **mac-criteria** context  
 Context **configure qos sap-ingress string mac-criteria**  
 Tree **mac-criteria**  
 Introduced 16.0.R1  
 Platforms All

### **entry [entry-id] number**

Synopsis Enter the **entry** list instance  
 Context **configure qos sap-ingress string mac-criteria entry number**  
 Tree **entry**  
 Introduced 16.0.R1

Platforms All

### **[entry-id] number**

Synopsis Entry ID  
 Context **configure qos sap-ingress string mac-criteria entry number**  
 Tree **entry**  
 Range 1 to 65535  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **action**

Synopsis Enter the **action** context  
 Context **configure qos sap-ingress string mac-criteria entry number action**  
 Tree **action**  
 Introduced 16.0.R1  
 Platforms All

### **fc string**

Synopsis Forwarding class for traffic matching the criteria  
 Context **configure qos sap-ingress string mac-criteria entry number action fc string**  
 Tree **fc**  
 String Length 1 to 32  
 Introduced 16.0.R1  
 Platforms All

### **policer reference**

Synopsis Policer ID for traffic matching the criteria  
 Context **configure qos sap-ingress string mac-criteria entry number action policer reference**  
 Tree **policer**  
 Reference **configure qos sap-ingress string policer number**

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** *keyword*

Synopsis	Priority for the packet
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">action</a> <a href="#">priority</a> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Action for criteria entry
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">action</a> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Options	ignore-match, accept
Default	ignore-match
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
----------	--------------------------------

---

Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match</i>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	All

## dot1p

Synopsis	Enable the <b>dot1p</b> context
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match dot1p</i>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

## mask *number*

Synopsis	3-bit mask for the 802.1p value
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match dot1p mask number</i>
Tree	<a href="#">mask</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

## priority *number*

Synopsis	802.1P priority value to use as the match criterion
Context	<b>configure qos sap-ingress</b> <i>string mac-criteria entry number match dot1p priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## dst-mac

Synopsis	Enable the <b>dst-mac</b> context
Context	<b>configure qos sap-ingress string mac-criteria entry number match dst-mac</b>
Tree	<a href="#">dst-mac</a>
Introduced	16.0.R1
Platforms	All

## address string

Synopsis	Destination MAC address as QoS policy match criterion
Context	<b>configure qos sap-ingress string mac-criteria entry number match dst-mac address string</b>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## mask string

Synopsis	Mask for destination MAC address
Context	<b>configure qos sap-ingress string mac-criteria entry number match dst-mac mask string</b>
Tree	<a href="#">mask</a>
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

## etype string

Synopsis	Ethernet type
Context	<b>configure qos sap-ingress string mac-criteria entry number match etype string</b>
Tree	<a href="#">etype</a>
String Length	5 to 6
Introduced	16.0.R1
Platforms	All

### **frame-type** *keyword*

Synopsis	Match MAC criteria for ingress SAP QoS policy
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match frame-type <i>keyword</i>
Tree	<a href="#">frame-type</a>
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Introduced	16.0.R1
Platforms	All

### **inner-tag**

Synopsis	Enable the <b>inner-tag</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match inner-tag
Tree	<a href="#">inner-tag</a>
Introduced	16.0.R1
Platforms	All

### **mask** *number*

Synopsis	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match inner-tag mask <i>number</i>
Tree	<a href="#">mask</a>
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	All

### **vlan** *number*

Synopsis	Value to match against the VID of the second VLAN tag
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match inner-tag vlan <i>number</i>
Tree	<a href="#">vlan</a>
Range	0 to 4095

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## llc-dsap

Synopsis	Enable the <b>llc-dsap</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match llc-dsap
Tree	llc-dsap
Introduced	16.0.R1
Platforms	All

## dsap number

Synopsis	DSAP value
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match llc-dsap dsap <i>number</i>
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## mask number

Synopsis	DSAP mask
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria entry <i>number</i> match llc-dsap mask <i>number</i>
Tree	mask
Range	0 to 255
Default	255
Introduced	16.0.R1
Platforms	All

## llc-ssap

Synopsis	Enable the <b>llc-ssap</b> context
Context	<b>configure qos sap-ingress string mac-criteria entry number match llc-ssap</b>
Tree	<a href="#">llc-ssap</a>
Introduced	16.0.R1
Platforms	All

## mask number

Synopsis	Source SAP mask
Context	<b>configure qos sap-ingress string mac-criteria entry number match llc-ssap mask number</b>
Tree	<a href="#">mask</a>
Range	0 to 255
Default	255
Introduced	16.0.R1
Platforms	All

## ssap number

Synopsis	SSAP value
Context	<b>configure qos sap-ingress string mac-criteria entry number match llc-ssap ssap number</b>
Tree	<a href="#">ssap</a>
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## outer-tag

Synopsis	Enable the <b>outer-tag</b> context
Context	<b>configure qos sap-ingress string mac-criteria entry number match outer-tag</b>
Tree	<a href="#">outer-tag</a>
Introduced	16.0.R1
Platforms	All

**mask number**

Synopsis	First tag carried transparently through the service
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match outer-tag mask number
Tree	mask
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	All

**vlan number**

Synopsis	Match against VID of the first VLAN tag in the packet carried transparently through service
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match outer-tag vlan number
Tree	vlan
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**snap-oui keyword**

Synopsis	Parameter snap-oui as MAC filter match criteria
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match snap-oui keyword
Tree	snap-oui
Options	zero, non-zero
Introduced	16.0.R1
Platforms	All

**snap-pid number**

Synopsis	Parameter snap-pid as MAC filter match criteria
Context	<b>configure</b> qos sap-ingress string mac-criteria entry number match snap-pid number

Tree	<a href="#">snap-pid</a>
Range	0 to 65535
Introduced	16.0.R1
Platforms	All

### **src-mac**

Synopsis	Enable the <b>src-mac</b> context
Context	<b>configure qos sap-ingress</b> <a href="#">string</a> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-mac</a>
Tree	<a href="#">src-mac</a>
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	Source MAC address as QoS policy match criterion
Context	<b>configure qos sap-ingress</b> <a href="#">string</a> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-mac</a> <a href="#">address</a> <a href="#">string</a>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **mask string**

Synopsis	Mask for source MAC address
Context	<b>configure qos sap-ingress</b> <a href="#">string</a> <a href="#">mac-criteria</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a> <a href="#">src-mac</a> <a href="#">mask</a> <a href="#">string</a>
Tree	<a href="#">mask</a>
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

**type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC criteria filter type
Context	<b>configure</b> qos sap-ingress <i>string</i> mac-criteria <i>type</i> <i>keyword</i>
Tree	<i>type</i>
Options	normal, vid
Default	normal
Introduced	16.0.R1
Platforms	All

**policer** [*policer-id*] *number*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i>
Tree	<i>policer</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id]** *number*

Synopsis	SAP-ingress policer identifier
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i>
Tree	<i>policer</i>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> adaptation-rule
Tree	adaptation-rule

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adaptation-rule cir</b> <i>keyword</i>
Tree	<b>cir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adaptation-rule pir</b> <i>keyword</i>
Tree	<b>pir</b>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**adv-config-policy reference**

Synopsis	Advanced QoS policy name
Context	<b>configure qos sap-ingress</b> <i>string</i> <b>policer</b> <i>number</i> <b>adv-config-policy</b> <i>reference</i>
Tree	<b>adv-config-policy</b>
Reference	<b>configure qos adv-config-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**arbiter-parent**

Synopsis	Enter the <b>arbiter-parent</b> context
----------	---

---

Context        **configure qos sap-ingress string policer number arbiter-parent**  
Tree            **arbiter-parent**  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **arbiter-name string**

Synopsis        Arbiter name  
Context        **configure qos sap-ingress string policer number arbiter-parent arbiter-name string**  
Tree            **arbiter-name**  
String Length  1 to 32  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **level number**

Synopsis        Level of priority while feeding to the parent  
Context        **configure qos sap-ingress string policer number arbiter-parent level number**  
Tree            **level**  
Range          1 to 8  
Default        1  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **weight number**

Synopsis        Weight used by the arbiter for feeding the policer  
Context        **configure qos sap-ingress string policer number arbiter-parent weight number**  
Tree            **weight**  
Range          1 to 100  
Default        1  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**high-prio-only** (*number* | *keyword*)

Synopsis	Percentage of MBS reserved for high priority traffic
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">high-prio-only</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">high-prio-only</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs** (*number* | *keyword*)

Synopsis	High priority violate threshold of PIR leaky bucket
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	Administrative CIR percent
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Default	0.00
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis Administrative PIR percent  
 Context **configure qos sap-ingress** *string* **policer** *number* **percent-rate** **pir** *decimal-number*  
 Tree [pir](#)  
 Range 0.01 to 100.00  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **reference-rate** *keyword*

Synopsis Reference rate  
 Context **configure qos sap-ingress** *string* **policer** *number* **percent-rate** **reference-rate** *keyword*  
 Tree [reference-rate](#)  
 Options local-limit, reference-port-limit  
 Default local-limit  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **profile-capped** *boolean*

Synopsis Enforce overall in-profile burst limit to CIR bucket  
 Context **configure qos sap-ingress** *string* **policer** *number* **profile-capped** *boolean*  
 Tree [profile-capped](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis Enter the **rate** context  
 Context **configure qos sap-ingress** *string* **policer** *number* **rate**  
 Tree [rate](#)

Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> rate cir ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> rate pir ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **scheduler-parent**

Synopsis	Enter the <b>scheduler-parent</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> scheduler-parent
Tree	<a href="#">scheduler-parent</a>
Introduced	22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

### **cir-level** *number*

Synopsis Port priority level for within-CIR offered load

Context **configure** qos sap-ingress *string* policer *number* scheduler-parent **cir-level** *number*

Tree **cir-level**

Description This command defines the hierarchy priority level when compared with other policers, queues, and schedulers that the policer uses to receive bandwidth for its within-CIR offered load. If this command is set to the default value, the policer does not receive bandwidth during the within-CIR pass of the scheduler and the **cir-weight** command is ignored.

Range 0 to 8

Default 0

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

### **cir-weight** *number*

Synopsis Weight to use in the within-CIR port priority level

Context **configure** qos sap-ingress *string* policer *number* scheduler-parent **cir-weight** *number*

Tree **cir-weight**

Description The command defines the relative weight of the policer in comparison with other child policers, queues, or schedulers competing for bandwidth on the parent scheduler name at the within-CIR priority level.

A weight is considered to be active when the applicable policer, queue, or scheduler has not reached its maximum rate and still has packets to transmit.

When this command is set to a value of 0, the policer receives bandwidth only after the other children with a non-zero weight at this level have been serviced.

Range 0 to 100

Default 1

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**level number**

Synopsis	Priority level for bandwidth on the parent scheduler
Context	<b>configure qos sap-ingress string policer number scheduler-parent level number</b>
Tree	<a href="#">level</a>
Description	This command defines the priority level when compared with other policers, queues, and schedulers when competing for bandwidth on the parent scheduler.  Children of the parent scheduler with a lower priority do not receive bandwidth until all children with a higher priority have either reached their maximum bandwidth or are idle. Children with the same level are serviced in relation to their relative weights.
Range	1 to 8
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**scheduler-name string**

Synopsis	Scheduler name
Context	<b>configure qos sap-ingress string policer number scheduler-parent scheduler-name string</b>
Tree	<a href="#">scheduler-name</a>
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**weight number**

Synopsis	Policer weight at the above-CIR priority level
Context	<b>configure qos sap-ingress string policer number scheduler-parent weight number</b>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos sap-ingress <i>string</i> policer <i>number</i> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir, offered-profile-with-discards
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policers-hqos-manageable** *boolean*

Synopsis	Manage policers through the hierarchical QoS process
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>policers-hqos-manageable</b> <i>boolean</i>
Tree	<a href="#">policers-hqos-manageable</a>
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-1s, 7750 SR-1se, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s

**policy-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ingress SAP QoS policy ID
Context	<b>configure</b> qos sap-ingress <i>string</i> <b>policy-id</b> <i>number</i>
Tree	<a href="#">policy-id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**prec** [*prec-value*] *number*

Synopsis	Enter the <b>prec</b> list instance
----------	-------------------------------------

Context	<b>configure qos sap-ingress string prec number</b>
Tree	<b>prec</b>
Introduced	16.0.R1
Platforms	All

**[prec-value]** *number*

Synopsis	Precedence value for which mapping is performed
Context	<b>configure qos sap-ingress string prec number</b>
Tree	<b>prec</b>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**fc** *string*

Synopsis	Forwarding class for traffic matching precedence value
Context	<b>configure qos sap-ingress string prec number fc string</b>
Tree	<b>fc</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**priority** *keyword*

Synopsis	Priority for the matching traffic
Context	<b>configure qos sap-ingress string prec number priority keyword</b>
Tree	<b>priority</b>
Options	low, high, auto
Default	auto
Introduced	16.0.R1
Platforms	All

**queue** [*queue-id*] *number*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure qos sap-ingress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *number*

Synopsis	SAP-ingress policer identifier
Context	<b>configure qos sap-ingress</b> <i>string queue number</i>
Tree	<a href="#">queue</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule</i>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir** *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure qos sap-ingress</b> <i>string queue number adaptation-rule cir keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**fir keyword**

Synopsis	Constraint used when deriving the operational FIR value
Context	<b>configure</b> qos sap-ingress string queue number adaptation-rule fir keyword
Tree	fir
Options	max, min, closest
Default	closest
Introduced	16.0.R2
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> qos sap-ingress string queue number adaptation-rule pir keyword
Tree	pir
Options	max, min, closest
Default	closest
Introduced	16.0.R1
Platforms	All

**adv-config-policy reference**

Synopsis	Advanced QoS policy name
Context	<b>configure</b> qos sap-ingress string queue number adv-config-policy reference
Tree	adv-config-policy
Reference	<b>configure</b> qos adv-config-policy string
Introduced	16.0.R1
Platforms	All

**burst-limit (number | keyword)**

Synopsis	Explicit shaping burst size of a queue
Context	<b>configure</b> qos sap-ingress string queue number burst-limit (number   keyword)
Tree	burst-limit
Range	1 to 14000000

Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	Reserved buffer space for the queue
Context	<b>configure qos sap-ingress</b> <i>string queue number cbs</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

### **cir-non-profiling** *boolean*

Synopsis	Prevent profile modification of CIR dependent packets
Context	<b>configure qos sap-ingress</b> <i>string queue number cir-non-profiling</i> <i>boolean</i>
Tree	<a href="#">cir-non-profiling</a>
Default	false
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure qos sap-ingress string queue number drop-tail low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure qos sap-ingress string queue number drop-tail low percent-reduction-from-mbs (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## mbs (*number* | *keyword*)

Synopsis	Maximum buffer space that is allowed for queue
Context	<b>configure qos sap-ingress string queue number mbs (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

**multipoint *boolean*****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Apply as a multicast queue
Context	<b>configure qos sap-ingress</b> <i>string queue number multipoint boolean</i>
Tree	<a href="#">multipoint</a>
Introduced	16.0.R1
Platforms	All

**packet-byte-offset *number***

Synopsis	Packet size modification for queue accounting
Context	<b>configure qos sap-ingress</b> <i>string queue number packet-byte-offset number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 30
Default	0
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate</i>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir *decimal-number***

Synopsis	Administrative CIR percent
Context	<b>configure qos sap-ingress</b> <i>string queue number percent-rate cir decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00

Default	0.00
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

### **fir** *decimal-number*

Synopsis	Administrative FIR percent
Context	<b>configure</b> <a href="#">qos sap-ingress string queue number percent-rate fir decimal-number</a>
Tree	<a href="#">fir</a>
Range	0.00 to 100.00
Default	0.00
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R2
Platforms	All

### **pir** *decimal-number*

Synopsis	Administrative PIR percent
Context	<b>configure</b> <a href="#">qos sap-ingress string queue number percent-rate pir decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **police**

Synopsis	Drop out-of-profile traffic feeding into queue instance
Context	<b>configure</b> <a href="#">qos sap-ingress string queue number percent-rate police</a>
Tree	<a href="#">police</a>
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

**reference-rate** *keyword*

Synopsis	Reference rate
Context	<b>configure</b> qos sap-ingress <i>string</i> queue <i>number</i> percent-rate reference-rate <i>keyword</i>
Tree	reference-rate
Options	port-limit, local-limit, reference-port-limit
Default	port-limit
Introduced	16.0.R1
Platforms	All

**queue-mode** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operating mode for this queue
Context	<b>configure</b> qos sap-ingress <i>string</i> queue <i>number</i> queue-mode <i>keyword</i>
Tree	queue-mode
Options	priority, profile
Default	priority
Introduced	16.0.R1
Platforms	All

**queue-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure</b> qos sap-ingress <i>string</i> queue <i>number</i> queue-type <i>keyword</i>
Tree	queue-type
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure qos sap-ingress string queue number rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## cir (*number* | *keyword*)

Synopsis	Administrative CIR
Context	<b>configure qos sap-ingress string queue number rate cir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

## fir (*number* | *keyword*)

Synopsis	Administrative FIR
Context	<b>configure qos sap-ingress string queue number rate fir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">fir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Default	0
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R2
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	Administrative PIR
Context	<b>configure qos sap-ingress</b> <i>string queue number rate</i> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	All

**police**

Synopsis	Drop the traffic feeding into queue above the PIR rate
Context	<b>configure qos sap-ingress</b> <i>string queue number rate</i> <b>police</b>
Tree	<a href="#">police</a>
Notes	The following elements are part of a choice: ( <b>cir</b> and <b>fir</b> ) or <b>police</b> .
Introduced	16.0.R1
Platforms	All

**scheduler-parent**

Synopsis	Enter the <b>scheduler-parent</b> context
Context	<b>configure qos sap-ingress</b> <i>string queue number</i> <b>scheduler-parent</b>
Tree	<a href="#">scheduler-parent</a>
Introduced	16.0.R1
Platforms	All

**cir-level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure qos sap-ingress</b> <i>string queue number scheduler-parent</i> <b>cir-level</b> <i>number</i>
Tree	<a href="#">cir-level</a>
Range	0 to 8

Default	0
Introduced	16.0.R1
Platforms	All

**cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

**level** *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a> <b>level</b> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	All

**scheduler-name** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i> <a href="#">scheduler-parent</a> <b>scheduler-name</b> <i>string</i>
Tree	<a href="#">scheduler-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> qos sap-ingress <i>string</i> queue <i>number</i> scheduler-parent <i>weight</i> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Default	1
Introduced	16.0.R1
Platforms	All

### **scope** *keyword*

Synopsis	Scope of the policy
Context	<b>configure</b> qos sap-ingress <i>string</i> scope <i>keyword</i>
Tree	<a href="#">scope</a>
Options	exclusive, template
Default	template
Introduced	16.0.R1
Platforms	All

### **subscriber-mgmt**

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt
Tree	<a href="#">subscriber-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dynamic-policer**

Synopsis	Enter the <b>dynamic-policer</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer
Tree	<a href="#">dynamic-policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-parent

Synopsis	Enter the <b>arbiter-parent</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent
Tree	<a href="#">arbiter-parent</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arbiter-name *string*

Synopsis	Arbiter name
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent <a href="#">arbiter-name</a> <i>string</i>
Tree	<a href="#">arbiter-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## level *number*

Synopsis	Level of priority while feeding to the parent
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent level <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## weight *number*

Synopsis	Weight used by the arbiter for feeding the policer
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer arbiter-parent weight <i>number</i>
Tree	<a href="#">weight</a>
Range	1 to 100

Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cbs** (*number* | *keyword*)

Synopsis	Exceed threshold of the CIR leaky bucket of the policer
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mbs** (*number* | *keyword*)

Synopsis	High priority violate threshold of PIR leaky bucket of this policer
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>

---

Range	-32 to 31
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policer-id-range**

Synopsis	Enable the <b>policer-id-range</b> context
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-policer</a> <a href="#">policer-id-range</a>
Tree	<a href="#">policer-id-range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the dynamic policer ID range
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-policer</a> <a href="#">policer-id-range</a> <b>end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis	Lower bound of the dynamic policer ID range
Context	<b>configure qos sap-ingress</b> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dynamic-policer</a> <a href="#">policer-id-range</a> <b>start</b> <i>number</i>
Tree	<a href="#">start</a>
Range	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt dynamic-policer stat-mode <i>keyword</i>
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Default	minimal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pcc-rule-entry**

Synopsis	Enter the <b>pcc-rule-entry</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt pcc-rule-entry
Tree	pcc-rule-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**range**

Synopsis	Enable the <b>range</b> context
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt pcc-rule-entry range
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**end** *number*

Synopsis	Upper bound of the filter and QoS policy entries range
Context	<b>configure</b> qos sap-ingress <i>string</i> subscriber-mgmt pcc-rule-entry range end <i>number</i>
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis Lower bound of the filter and QoS policy entries range  
 Context **configure qos sap-ingress** *string* **subscriber-mgmt pcc-rule-entry range** *start number*

 Tree [scheduler-policy](#)  
 Max. 2047  
 Instances  
 Introduced 16.0.R1  
 Platforms All

### **[scheduler-policy-name]** *string*

Synopsis Scheduler policy name  
 Context **configure qos scheduler-policy** *string*  
 Tree [scheduler-policy](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **description** *string*

Synopsis Text description

---

Context	<b>configure qos scheduler-policy</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **frame-based-accounting** *boolean*

Synopsis	Use frame-based accounting for queues and schedulers
Context	<b>configure qos scheduler-policy</b> <i>string frame-based-accounting boolean</i>
Tree	<a href="#">frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **tier** [[tier-id](#)] *number*

Synopsis	Enter the <b>tier</b> list instance
Context	<b>configure qos scheduler-policy</b> <i>string tier number</i>
Tree	<a href="#">tier</a>
Introduced	16.0.R1
Platforms	All

### **[tier-id]** *number*

Synopsis	Tier for scheduler-policy scheduler
Context	<b>configure qos scheduler-policy</b> <i>string tier number</i>
Tree	<a href="#">tier</a>
Range	1 to 3
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**parent-location** *keyword*

Synopsis	Expected location of parent schedulers
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> parent-location <i>keyword</i>
Tree	parent-location
Options	auto, sub, vport
Default	auto
Introduced	16.0.R1
Platforms	All

**scheduler** [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> scheduler <i>string</i>
Tree	scheduler
Introduced	16.0.R1
Platforms	All

**[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> qos scheduler-policy <i>string</i> tier <i>number</i> scheduler <i>string</i>
Tree	scheduler
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **description** *string*

Synopsis Text description

Context **configure** qos scheduler-policy *string tier number scheduler string description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms All

### **limit-unused-bandwidth** *boolean*

Synopsis Enable aggregate rate overrun protection

Context **configure** qos scheduler-policy *string tier number scheduler string limit-unused-bandwidth boolean*

Tree [limit-unused-bandwidth](#)

Default false

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** qos scheduler-policy *string tier number scheduler string percent-rate*

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms All

### **cir** (*keyword* | *decimal-number*)

Synopsis Scheduler CIR

Context **configure** qos scheduler-policy *string tier number scheduler string percent-rate cir (keyword | decimal-number)*

Tree [cir](#)

Range	0.00 to 100.00
Options	sum
Default	sum
Introduced	20.10.R1
Platforms	All

Synopsis	Text description
Context	<b>configure qos shared-queue</b> <i>string description</i> <i>string</i>
Tree	<a href="#">description</a>
String Length	0 to 80
Introduced	16.0.R1
Platforms	All

**fc** [[fc-name](#)] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure qos shared-queue</b> <i>string fc</i> <i>keyword</i>
Tree	<a href="#">fc</a>
Introduced	16.0.R1
Platforms	All

**[fc-name] keyword**

Synopsis	Forwarding class mapping to queue mapping
Context	<b>configure qos shared-queue</b> <i>string fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**broadcast-queue number**

Synopsis	ID of queue to forward all broadcast traffic
Context	<b>configure qos shared-queue</b> <i>string fc keyword broadcast-queue number</i>
Tree	<b>broadcast-queue</b>
Range	9 to 32
Introduced	16.0.R1
Platforms	All

**multicast-queue number**

Synopsis	ID of queue to forward multicast traffic
Context	<b>configure qos shared-queue</b> <i>string fc keyword multicast-queue number</i>
Tree	<b>multicast-queue</b>
Range	9 to 32
Introduced	16.0.R1
Platforms	All

**queue number**

Synopsis	ID of queue to forward all traffic
Context	<b>configure qos shared-queue</b> <i>string fc keyword queue number</i>
Tree	<b>queue</b>
Range	1 to 8
Introduced	16.0.R1

Platforms All

### **unknown-queue** *number*

Synopsis ID of queue to forward unknown unicast traffic  
 Context **configure qos shared-queue** *string fc keyword unknown-queue number*  
 Tree [unknown-queue](#)  
 Range 9 to 32  
 Introduced 16.0.R1  
 Platforms All

### **queue** [[queue-id](#)] *number*

Synopsis Enter the **queue** list instance  
 Context **configure qos shared-queue** *string queue number*  
 Tree [queue](#)  
 Introduced 16.0.R1

### **[queue-id]** *number*

Synopsis Shared queue identifier  
 Context **configure qos shared-queue** *string queue number*  
 Tree [queue](#)  
 Range 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **cbs** *number*

Synopsis Committed burst size as a percentage of the MBS  
 Context **configure qos shared-queue** *string queue number cbs number*  
 Tree [cbs](#)  
 Range 0 to 100

Units	percent
Introduced	16.0.R1
Platforms	All

## drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure qos shared-queue</b> <i>string</i> <i>queue number</i> <b>drop-tail</b>
Tree	<b>drop-tail</b>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure qos shared-queue</b> <i>string</i> <i>queue number</i> <b>drop-tail low</b>
Tree	<b>low</b>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Low drop-tail percent from MBS that is reduced
Context	<b>configure qos shared-queue</b> <i>string</i> <i>queue number</i> <b>drop-tail low percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>percent-reduction-from-mbs</b>
Range	0 to 100
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	All

## mbs *number*

Synopsis	Maximum buffers for the ingress shared queue
Context	<b>configure qos shared-queue</b> <i>string</i> <i>queue number</i> <b>mbs</b> <i>number</i>

Tree	<a href="#">mbs</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **multipoint** *boolean*

Synopsis	Apply as a multicast queue
Context	<b>configure</b> <a href="#">qos shared-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>multipoint</b> <i>boolean</i>
Tree	<a href="#">multipoint</a>
Introduced	16.0.R1
Platforms	All

### **queue-type** *keyword*

Synopsis	Method used to service queue from hardware perspective
Context	<b>configure</b> <a href="#">qos shared-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>queue-type</b> <i>keyword</i>
Tree	<a href="#">queue-type</a>
Options	expedited, auto-expedited, best-effort
Default	auto-expedited
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">qos shared-queue</a> <i>string</i> <a href="#">queue</a> <i>number</i> <b>rate</b>
Tree	<a href="#">rate</a>
Introduced	16.0.R1
Platforms	All

### **cir** *number*

Synopsis	CIR percentage rate
----------	---------------------

Context	<b>configure qos shared-queue</b> <i>string queue number rate cir number</i>
Tree	<a href="#">cir</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

**fir number**

Synopsis	FIR percentage rate
Context	<b>configure qos shared-queue</b> <i>string queue number rate fir number</i>
Tree	<a href="#">fir</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R2
Platforms	All

**pir number**

Synopsis	PIR percentage rate
Context	<b>configure qos shared-queue</b> <i>string queue number rate pir number</i>
Tree	<a href="#">pir</a>
Range	1 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

**slope-policy** [[slope-policy-name](#)] *string*

Synopsis	Enter the <b>slope-policy</b> list instance
Context	<b>configure qos slope-policy</b> <i>string</i>
Tree	<a href="#">slope-policy</a>

---

Max. Instances	511
Introduced	16.0.R1
Platforms	All

**[slope-policy-name]** *string*

Synopsis	Slope policy name
Context	<b>configure qos slope-policy</b> <i>string</i>
Tree	<a href="#">slope-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description

**max-avg** *number*

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure</b> <a href="#">qos slope-policy</a> <i>string</i> <a href="#">highplus-slope</a> <b>max-avg</b> <i>number</i>
Tree	<a href="#">max-avg</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**max-prob** *number*

Synopsis	Drop probability increase at highplus start-average
Context	<b>configure qos slope-policy</b> <i>string</i> <a href="#">highplus-slope</a> <b>max-prob</b> <i>number</i>
Tree	<a href="#">max-prob</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure qos slope-policy</b> <i>string</i> <a href="#">highplus-slope</a> <b>start-avg</b> <i>number</i>
Tree	<a href="#">start-avg</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**low-slope**

Synopsis	Enter the <b>low-slope</b> context
Context	<b>configure qos slope-policy</b> <i>string</i> <a href="#">low-slope</a>
Tree	<a href="#">low-slope</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the low priority RED slope
Context	<b>configure qos slope-policy</b> <i>string</i> <a href="#">low-slope</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**max-avg** *number*

Synopsis	Buffer percentage after which drop probability is one
Context	<b>configure</b> qos slope-policy <i>string</i> low-slope max-avg <i>number</i>
Tree	max-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**max-prob** *number*

Synopsis	Drop probability to increase at low start-average
Context	<b>configure</b> qos slope-policy <i>string</i> low-slope max-prob <i>number</i>
Tree	max-prob
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**start-avg** *number*

Synopsis	Buffer percentage after which drop probability starts to rise above zero
Context	<b>configure</b> qos slope-policy <i>string</i> low-slope start-avg <i>number</i>
Tree	start-avg
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**time-average-factor** *number*

Synopsis	Weighting factor to calculate shared buffer utilization
Context	<b>configure</b> qos slope-policy <i>string</i> time-average-factor <i>number</i>
Tree	time-average-factor
Range	0 to 15
Default	7
Introduced	16.0.R1
Platforms	All

### 3.38 redundancy commands

```

configure
- redundancy
  - apply-groups reference
  - apply-groups-exclude reference
  - bgp-evpn
    - ethernet-segment
      - activation-timer number
      - apply-groups reference

### 3.38.1 redundancy command descriptions

#### redundancy

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure</b> <a href="#">redundancy</a>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	All

#### bgp-evpn

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

#### ethernet-segment

Synopsis	Enter the <b>ethernet-segment</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a> <a href="#">ethernet-segment</a>
Tree	<a href="#">ethernet-segment</a>
Introduced	16.0.R1
Platforms	All

#### activation-timer *number*

Synopsis	Time before Ethernet segment activated on DF-elected PE
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-evpn</a> <a href="#">ethernet-segment</a> <a href="#">activation-timer</a> <i>number</i>
Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Default	3
Introduced	16.0.R1

Platforms All

### **boot-timer** *number*

Synopsis	Time before BGP EVPN multi-homing DF election algorithm
Context	<b>configure</b> <b>redundancy</b> <b>bgp-evpn</b> <b>ethernet-segment</b> <b>boot-timer</b> <i>number</i>
Tree	<b>boot-timer</b>
Description	<p>This command allows the necessary time for the control plane protocols to come up upon PE boot-up before bringing up the ESs and running the DF algorithm.</p> <p>The following considerations apply to this command:</p> <ul style="list-style-type: none"> <li>• The <b>boot-timer</b> command must provide enough time to allow the IOMs and BGP sessions to come up before exchanging ES routes and running the DF election for each EVI or ISID.</li> <li>• The boot-timer is synchronized across CPMs and is relative to the system up time; it is not changed or reset upon CPM switchover.</li> <li>• The boot-timer is never interrupted (the <b>es-activation-timer</b>, however, can be interrupted if there is a new event triggering the DF election).</li> <li>• The boot-timer runs per EVI or ISID on the ESs in the system. If the system up time (time the system has been up since the last reboot) is less than the <b>boot-timer</b> value, the system does not run the DF election for any EVI or ISID. When the <b>boot-timer</b> value expires, the DF election runs, and if the system is elected DF for the EVI or ISID, the <b>es-activation-timer</b> is triggered.</li> <li>• The system does not advertise ES routes until the boot timer expires, which guarantees that the peer ES PEs only run the DF election when the PE is ready to become the DF, if required.</li> </ul>
Range	0 to 1800
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **bgp-mh**

Synopsis	Enter the <b>bgp-mh</b> context
Context	<b>configure</b> <b>redundancy</b> <b>bgp-mh</b>
Tree	<b>bgp-mh</b>
Introduced	16.0.R1
Platforms	All

## site

Synopsis	Enter the <b>site</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a>
Tree	<a href="#">site</a>
Introduced	16.0.R1
Platforms	All

## activation-timer *number*

Synopsis	Time to wait for BGP updates from remote PEs
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">activation-timer</a> <i>number</i>
Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Default	2
Introduced	16.0.R1
Platforms	All

## boot-timer *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">boot-timer</a> <i>number</i>
Tree	<a href="#">boot-timer</a>
Range	0 to 600
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

## min-down-timer *number*

Synopsis	Min downtime for BGP multi-homing site after transition
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">bgp-mh</a> <a href="#">site</a> <a href="#">min-down-timer</a> <i>number</i>
Tree	<a href="#">min-down-timer</a>

Description	<p>This command configures the BGP multi-homing site minimum down time. When this value is set and the site goes operationally down, it remains operationally down for at least the length of time configured by this timer, regardless of whether other state changes might cause the site to go operationally up. This timer is restarted every time the site transitions from operationally up to down.</p> <p>This timer is optimized in the following circumstances:</p> <ul style="list-style-type: none"> <li>• If the site goes down on the DF but there are no BGP multi-homing peers with the same site in an up state, this timer is not used.</li> <li>• If the site goes down on the DF but there are no active BGP multi-homing peers, this timer is not used.</li> <li>• If this timer is active and a BGP multihoming update is received from the DF indicating its site is down, this timer is immediately terminated and the BGP multihoming algorithm is triggered to determine whether this PE should become the DF.</li> </ul>
Range	1 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

### **cert-sync** *boolean*

Synopsis	Automatically synchronize certificate files
Context	<b>configure</b> <a href="#">redundancy</a> <b>cert-sync</b> <i>boolean</i>
Tree	<a href="#">cert-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mgmt-ethernet**

Synopsis	Enable the <b>mgmt-ethernet</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <b>mgmt-ethernet</b>
Tree	<a href="#">mgmt-ethernet</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**revert number**

Synopsis	Time before reverting the management CPM Ethernet port
Context	<b>configure</b> <a href="#">redundancy mgmt-ethernet revert number</a>
Tree	<a href="#">revert</a>
Description	This command allows the administrator to control when to revert to the management Ethernet port of the primary CPM after it comes up again.
Range	1 to 300
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**multi-chassis**

Synopsis	Enter the <b>multi-chassis</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis</a>
Tree	<a href="#">multi-chassis</a>
Description	Commands in this context configure the attributes of multi-chassis redundancy.
Introduced	16.0.R1
Platforms	All

**ipsec-domain [id] number**

Synopsis	Enter the <b>ipsec-domain</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis ipsec-domain number</a>
Tree	<a href="#">ipsec-domain</a>
Description	Commands in this context configure an IPsec domain used for N:M IPsec redundancy.
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[id] number**

Synopsis	IPsec domain ID
----------	-----------------

Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i>
Tree	<a href="#">ipsec-domain</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **designated-role** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designated role for the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <a href="#">designated-role</a> <i>keyword</i>
Tree	<a href="#">designated-role</a>
Description	This command configures the designated role of the tunnel group in the IPsec domain.
Options	standby, active
Default	standby
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **priority** *number*

Synopsis	Priority for the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <a href="#">priority</a> <i>number</i>

Tree	<a href="#">priority</a>
Description	This command configures the priority for the tunnel group in the IPsec domain. The node with the higher priority is more likely to be elected as active within the domain.
Range	0 to 255
Default	100
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **revertive** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable revertive behavior for the tunnel group
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <a href="#">revertive</a> <i>boolean</i>
Tree	<a href="#">revertive</a>
Description	When configured to <b>true</b> , the router enables the revertive behavior of the tunnel group, which allows a router in an N:M domain to automatically take over as the active router in the domain when it becomes eligible to do so.  When configured to <b>false</b> , the revertive behavior of the tunnel group is disabled.
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-group** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID for an IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i> <a href="#">tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Description	This command specifies the tunnel group ID for the IPsec domain.
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">tunnel-group</a> <i>number</i>
Introduced	22.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis Enter the **options** context

Context **configure** [redundancy multi-chassis options](#)

Tree [options](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-mgmt

Synopsis Enter the **sub-mgmt** context

Context **configure** [redundancy multi-chassis options sub-mgmt](#)

Tree [sub-mgmt](#)

Description Commands in this context configure subscriber management options for multi-chassis redundancy.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp-leasedtime-threshold *number*

Synopsis DHCP lease threshold to skip MCS synchronization

Context **configure** [redundancy multi-chassis options sub-mgmt dhcp-leasedtime-threshold](#) *number*

Tree [dhcp-leasedtime-threshold](#)

Description This command configures the DHCP lease time threshold to skip MCS synchronization. DHCP leases for the **sub-mgmt** MCS applications are eligible to skip synchronization if the committed lease time is less than the active threshold on a multi-chassis peer. The active threshold is the minimum value of the thresholds configured on the nodes at each end of a multi-chassis peer. The threshold is inactive when it is unconfigured on at least one end of the multi-chassis peer.

Range 0 to 86400

Units seconds

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Description	This command configures the IP address of the peer in a redundant multi-chassis setup, and enters the context for further application-specific configuration options.
Max. Instances	20
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Peer IP address
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the MC redundancy peer
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## authentication-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Authentication key used between the node and MC peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 54
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## mc-endpoint

Synopsis	Enable the <b>mc-endpoint</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint</a>
Tree	<a href="#">mc-endpoint</a>
Introduced	22.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the MC-EP
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-endpoint</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	All

### **bfd boolean**

Synopsis	Enable BFD detection for the MC-EP peering tunnel
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-endpoint bfd boolean</a>
Tree	<a href="#">bfd</a>
Description	When configured to <b>true</b> , the system uses Bidirectional Forwarding Detection (BFD) to control the state of the associated protocol interface, where the state of the protocol interface is tied to the state of the BFD session between the local and remote nodes.  The BFD settings are configured in the IP interface contexts.
Default	false
Introduced	22.10.R1
Platforms	All

### **boot-timer number**

Synopsis	Time to attempt connection before declaring failure
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-endpoint boot-timer number</a>
Tree	<a href="#">boot-timer</a>
Description	This command configures the time interval to attempt connection that applies after the node reboots. This command specifies the time the multi-chassis endpoint (MC-EP) protocol takes to establish a connection before declaring a connection failure with the remote peer. When the time interval expires, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	1 to 600
Units	seconds
Default	300
Introduced	22.10.R1
Platforms	All

**hold-on-neighbor-failure** *number*

Synopsis	Number of keepalive intervals to wait for packets
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>hold-on-neighbor-failure</b> <i>number</i>
Tree	<a href="#">hold-on-neighbor-failure</a>
Description	This command configures the number of keepalive intervals that the local node waits for packets from the MC-EP peer before declaring a connection failure. When the number of intervals is reached, all configured MC-EPs revert to single chassis behavior, activating the best local pseudowire.
Range	2 to 25
Default	3
Introduced	22.10.R1
Platforms	All

**keep-alive-interval** *number*

Synopsis	Interval for exchange of keepalive messages
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>keep-alive-interval</b> <i>number</i>
Tree	<a href="#">keep-alive-interval</a>
Description	This command configures the interval for which keepalive messages are exchanged between two systems participating as MC-EP when BFD is not active. The fast keepalive messages are used to detect remote node failure.
Range	5 to 500
Default	10
Introduced	22.10.R1
Platforms	All

**passive-mode** *boolean*

Synopsis	Enable passive mode for the MC-EP tunnel
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-endpoint</b> <b>passive-mode</b> <i>boolean</i>
Tree	<a href="#">passive-mode</a>
Description	When configured to <b>true</b> , the system enables passive mode behavior for the MC-EP protocol. Assuming the remote pair is configured with regular MC-EP in passive mode, the MC-EP pair remains dormant until two of the pseudowires in an MC-EP are activated by the remote PEs.

When one pseudowire is active, the dormant MC-EP pair becomes active. The regular mechanism to select the best pseudowire between the active pair is initiated, and the system blocks the Rx and Tx directions of the other pseudowire.

Default	false
Introduced	22.10.R1
Platforms	All

### **system-priority** *number*

Synopsis	System priority of the MC-EP
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-endpoint system-priority</a> <i>number</i>
Tree	<a href="#">system-priority</a>
Description	This command configures the system priority of the MC-EP. The peer configured with the lower value is selected as the master. If the system priority values are equal, the peer with the higher system ID (chassis MAC address) becomes the master.
Range	0 to 255
Default	0
Introduced	22.10.R1
Platforms	All

### **mc-ipsec**

Synopsis	Enable the <b>mc-ipsec</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a>
Tree	<a href="#">mc-ipsec</a>
Description	This command enables the context to configure multi-chassis peer parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ipsec bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### discovery-interval

Synopsis	Enter the <b>discovery-interval</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval</a>
Tree	<a href="#">discovery-interval</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### boot number

Synopsis	Maximum interval after system bootup
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval boot</a> <i>number</i>
Tree	<a href="#">boot</a>
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### interval-secs number

Synopsis	Maximum discovery interval
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ipsec discovery-interval interval-secs</a> <i>number</i>
Tree	<a href="#">interval-secs</a>
Range	1 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**domain** [*id*] *reference*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i>
Tree	<a href="#">domain</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[id]** *reference*

Synopsis	IPsec domain ID
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i>
Tree	<a href="#">domain</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">ipsec-domain</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the IPsec domain
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">domain</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**hold-on-neighbor-failure** *number*

Synopsis	Hold time on neighbor failure
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec</a> <a href="#">hold-on-neighbor-failure</a> <i>number</i>

Tree	<a href="#">hold-on-neighbor-failure</a>
Range	2 to 25
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keep-alive-interval** *number*

Synopsis	Keepalive interval
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec keep-alive-interval</a> <i>number</i>
Tree	<a href="#">keep-alive-interval</a>
Range	5 to 500
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-group** [[tunnel-group-id](#)] *reference*

Synopsis	Enter the <b>tunnel-group</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[tunnel-group-id]** *reference*

Synopsis	Tunnel group ID
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ipsec tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Reference	<b>configure</b> <a href="#">isa tunnel-group</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the peer IPsec tunnel group

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec tunnel-group](#) *reference* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-group** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Peer tunnel group

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec tunnel-group](#) *reference* [peer-group](#) *number*

Tree [peer-group](#)

Range 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **priority** *number*

Synopsis Tunnel group priority

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [mc-ipsec tunnel-group](#) *reference* [priority](#) *number*

Tree [priority](#)

Range 0 to 255

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mc-lag

Synopsis	Enter the <b>mc-lag</b> context
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-lag</b>
Tree	<b>mc-lag</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of MC-LAG
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-lag</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## hold-on-neighbor-failure *number*

Synopsis	Time to wait for packets before node failure assumed
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-lag</b> <b>hold-on-neighbor-failure</b> <i>number</i>

**ring-node** [*name*] *string*

Synopsis	Enter the <b>ring-node</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i>
Tree	<a href="#">ring-node</a>
Introduced	16.0.R1
Platforms	All

**[name]** *string*

Synopsis	Name of the multi-chassis ring access node
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i>
Tree	<a href="#">ring-node</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the ring node verification
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**dst-ip** *string*

Synopsis	Destination IP address for access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <a href="#">dst-ip</a> <i>string</i>
Tree	<a href="#">dst-ip</a>

Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Connection verification interval
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 6000
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

### **service-name** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>service-name</b> <i>string</i>
Tree	<b>service-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **src-ip** *string*

Synopsis	Source IP address for access node connection
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>mc-ring</b> <b>ring</b> <i>string</i> <b>ring-node</b> <i>string</i> <b>src-ip</b> <i>string</i>
Tree	<b>src-ip</b>
Introduced	16.0.R1
Platforms	All

**src-mac** (*keyword* | *ring-node-mac-address*)

Synopsis	Source MAC address for the access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <b>src-mac</b> ( <i>keyword</i>   <i>ring-node-mac-address</i> )
Tree	<a href="#">src-mac</a>
Options	system-mac-address
Default	system-mac-address
Introduced	16.0.R1
Platforms	All

**vlan** *string*

Synopsis	VLAN ID for access node connection
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <a href="#">ring-node</a> <i>string</i> <b>vlan</b> <i>string</i>
Tree	<a href="#">vlan</a>
String Length	1 to 11
Introduced	16.0.R1
Platforms	All

**srrp-instance** [*id*] *number*

Synopsis	Add a list entry for <b>srrp-instance</b>
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <b>srrp-instance</b> <i>number</i>
Tree	<a href="#">srrp-instance</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[id]** *number*

Synopsis	SRRP instance ID
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <b>srrp-instance</b> <i>number</i>

Tree	<a href="#">srrp-instance</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of the multi-chassis ring
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">mc-ring</a> <a href="#">ring</a> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Options	layer-2, layer-3
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **peer-name** *string*

Synopsis	Multi-chassis peer name
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">peer-name</a> <i>string</i>
Tree	<a href="#">peer-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **source-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source address to communicate with the MC peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">source-address</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> )
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	All

## sync

Synopsis	Enable the <b>sync</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync</a>
Tree	<a href="#">sync</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the peer synchronization
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## diameter-node

Synopsis	Enable the <b>diameter-node</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync diameter-node</a>
Tree	<a href="#">diameter-node</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**node** [*host-name*] *reference*

Synopsis	Enter the <b>node</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i>
Tree	<a href="#">node</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[host-name]** *reference*

Synopsis	Origin-Host of the node
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i>
Tree	<a href="#">node</a>
Reference	<b>configure</b> <a href="#">aaa diameter node</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sync-tag** *string*

Synopsis	Sync tag to be used for synchronization
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync diameter-node node</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**igmp** *boolean*

Synopsis	Synchronize IGMP protocol information with the MC peer
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync igmp</a> <i>boolean</i>
Tree	<a href="#">igmp</a>

---

Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-snooping** *boolean*

Synopsis	Synchronize IGMP snooping information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync</a> <b>igmp-snooping</b> <i>boolean</i>
Tree	<a href="#">igmp-snooping</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipsec** *boolean*

Synopsis	Synchronize IPsec information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync</a> <b>ipsec</b> <i>boolean</i>
Tree	<a href="#">ipsec</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **l2tp** *boolean*

Synopsis	Synchronize Layer Two Tunnel Protocol (L2TP)
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync</a> <b>l2tp</b> <i>boolean</i>
Tree	<a href="#">l2tp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **local-dhcp-server** *boolean*

Synopsis	Synchronize DHCP Server information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync local-dhcp-server</a> <i>boolean</i>
Tree	<a href="#">local-dhcp-server</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mc-ring** *boolean*

Synopsis	Synchronize ring information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync mc-ring</a> <i>boolean</i>
Tree	<a href="#">mc-ring</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mld** *boolean*

Synopsis	Synchronize MLD protocol information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync mld</a> <i>boolean</i>
Tree	<a href="#">mld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mld-snooping** *boolean*

Synopsis	Synchronize MLD snooping information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync mld-snooping</a> <i>boolean</i>
Tree	<a href="#">mld-snooping</a>
Default	false

Introduced	16.0.R1
Platforms	All

**nat**

Synopsis	Enable the <b>nat</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync nat</a>
Tree	<a href="#">nat</a>
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-group [id] reference**

Synopsis	Enter the <b>nat-group</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync nat nat-group reference</a>
Tree	<a href="#">nat-group</a>
Description	Commands in this context configure multi-chassis synchronization (MCS) for a NAT group. NAT group health information is exchanged between the pair of redundant NAT nodes. The system elects one of the nodes as the active node for the NAT group and the other node becomes the standby node.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[id] reference**

Synopsis	NAT group ID
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync nat nat-group reference</a>
Tree	<a href="#">nat-group</a>
Reference	<b>configure</b> <a href="#">isa nat-group number</a>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sync-tag *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group synchronization tag
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync nat nat-group</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
Description	This command configures the synchronization tag for the NAT group. The tag must match the synchronization tag for the NAT group on the peering node.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pim-snooping

Synopsis	Enter the <b>pim-snooping</b> context
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping</a>
Tree	<a href="#">pim-snooping</a>
Introduced	16.0.R1
Platforms	All

## saps *boolean*

Synopsis	Synchronize PIM snooping data with the multi-chassis peer on SDP endpoints
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping saps</a> <i>boolean</i>
Tree	<a href="#">saps</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **spoke-sdps** *boolean*

Synopsis	Synchronize spoke SDPs with the multi-chassis peer
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync pim-snooping spoke-sdps</a> <i>boolean</i>
Tree	<a href="#">spoke-sdps</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **python** *boolean*

Synopsis	Synchronize Python
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync python</a> <i>boolean</i>
Tree	<a href="#">python</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **srrp** *boolean*

Synopsis	Synchronize SRRP information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync srrp</a> <i>boolean</i>
Tree	<a href="#">srrp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sub-host-trk** *boolean*

Synopsis	Synchronize subscriber host tracking information
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync sub-host-trk</a> <i>boolean</i>
Tree	<a href="#">sub-host-trk</a>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-mgmt

Synopsis	Enter the <b>sub-mgmt</b> context
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>sync</b> <b>sub-mgmt</b>
Tree	<b>sub-mgmt</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe *boolean*

Synopsis	Synchronize subscriber management IPoE information
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>sync</b> <b>sub-mgmt</b> <b>ipoe</b> <i>boolean</i>
Tree	<b>ipoe</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pppoe *boolean*

Synopsis	Synchronize subscriber management PPPoE information
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>sync</b> <b>sub-mgmt</b> <b>pppoe</b> <i>boolean</i>
Tree	<b>pppoe</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw *boolean*

Synopsis	Synchronize state between BNGs for ESM over soft-GRE
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>sync</b> <b>sub-mgmt</b> <b>wlan-gw</b> <i>boolean</i>

Tree	<a href="#">wlan-gw</a>
Description	When configured to <b>true</b> , this command enables the synchronization of ESM state and tunnel state to an MCS peer for ESM over soft-GRE tunnels.
Default	false
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tags

Synopsis	Enter the <b>tags</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags</a>
Tree	<a href="#">tags</a>
Introduced	16.0.R1
Platforms	All

## lag [[lag-name](#)] *reference*

Synopsis	Enter the <b>lag</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags lag</a> <i>reference</i>
Tree	<a href="#">lag</a>
Introduced	16.0.R1
Platforms	All

## [[lag-name](#)] *reference*

Synopsis	LAG name
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags lag</a> <i>reference</i>
Tree	<a href="#">lag</a>
Reference	<b>configure lag</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

**range** *start string end string*

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>tags</b> <b>lag</b> <i>reference</i> <b>range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i>
Tree	<b>range</b>
Introduced	16.0.R1
Platforms	All

**start** *string*

Synopsis	First encapsulation value
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>tags</b> <b>lag</b> <i>reference</i> <b>range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i>
Tree	<b>range</b>
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end** *string*

Synopsis	Last encapsulation value
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>tags</b> <b>lag</b> <i>reference</i> <b>range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i>
Tree	<b>range</b>
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**sync-tag** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags lag reference range start string end string sync-tag string</a>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **sync-tag** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags lag reference sync-tag string</a>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **port** [*id*] *reference*

Synopsis	Enter the <b>port</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags port reference</a>
Tree	<a href="#">port</a>
Introduced	16.0.R1
Platforms	All

### **[id]** *reference*

Synopsis	ID of port to be synchronized with multi-chassis peer
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags port reference</a>

Tree	<a href="#">port</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **range** [start](#) *string* [end](#) *string*

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <a href="#">tags</a> <a href="#">port</a> <a href="#">reference</a> <a href="#">range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>

Platforms	All

### **start** *string*

Synopsis	First encapsulation value
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <a href="#">tags</a> <a href="#">port</a> <a href="#">reference</a> <a href="#">range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">range</a>
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **end** *string*

Synopsis	Last encapsulation value
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">sync</a> <a href="#">tags</a> <a href="#">port</a> <a href="#">reference</a> <a href="#">range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">range</a>
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Synchronization tag

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync tags](#) [port reference](#) [range start string end string](#) **sync-tag** *string*

Tree [sync-tag](#)

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Synchronization tag

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync tags](#) [port reference](#) **sync-tag** *string*

Tree [sync-tag](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms All

### **pw-port** [[id](#)] *reference*

Synopsis Enter the **pw-port** list instance

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync tags](#) **pw-port** *reference*

Tree [pw-port](#)

Introduced 16.0.R4

Platforms All

### [id] reference

Synopsis ID of pseudowire port to be synchronized with MC peer

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [pw-port](#) [reference](#)

Tree [pw-port](#)

Reference **configure** [pw-port](#) *number*

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms All

### range start string end string

Synopsis Enter the **range** list instance

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [pw-port](#) [reference](#) [range](#) [start](#) [string](#) [end](#) [string](#)

Tree [range](#)

Introduced 16.0.R4

Platforms All

### start string

Synopsis First encapsulation value

Context **configure** [redundancy](#) [multi-chassis peer](#) ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#)) [sync](#) [tags](#) [pw-port](#) [reference](#) [range](#) [start](#) [string](#) [end](#) [string](#)

Tree [range](#)

String Length 1 to 11

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms All

### end string

Synopsis Last encapsulation value

Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags pw-port reference range start string end string</a>
Tree	<a href="#">range</a>
String Length	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync tags pw-port reference range start string end string sync-tag string</a>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag

### **track-srrp** [*id*] *number*

Synopsis	Enter the <b>track-srrp</b> list instance
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>track-srrp</b> <i>number</i>
Tree	<b>track-srrp</b>
Introduced	16.0.R1
Platforms	All

### [*id*] *number*

Synopsis	Tracked SRRP instance ID
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>track-srrp</b> <i>number</i>
Tree	<b>track-srrp</b>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **I2tp-tunnel-id-range**

Synopsis	Enter the <b>I2tp-tunnel-id-range</b> context
Context	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>sync</b> <b>track-srrp</b> <i>number</i> <b>I2tp-tunnel-id-range</b>
Tree	<b>I2tp-tunnel-id-range</b>
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the L2TP tunnel ID range
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync track-srrp number l2tp-tunnel-id-range end number</a>
Tree	<a href="#">end</a>
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of the L2TP tunnel ID range
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync track-srrp number l2tp-tunnel-id-range start number</a>
Tree	<a href="#">start</a>
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

**transport-encryption**

Synopsis	Enter the <b>transport-encryption</b> context
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync transport-encryption</a>
Tree	<a href="#">transport-encryption</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**application** [[application-id](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync transport-encryption application keyword</a>
Tree	<a href="#">application</a>
Description	Commands in this context configure the MCS application for transport encryption. The application-id configures an application and a keychain defines the key used for the encryption.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[application-id]** *keyword*

Synopsis	Application using transport encryption
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync transport-encryption application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Description	This command configures an MCS application for the transport encryption method.
Options	igmp, igmp-snooping, sub-mgmt-ipoe, srrp, mc-ring, mld-snooping, dhcp-server, sub-host-trk, sub-mgmt-pppoe, ipsec, mld, python, l2tp, diam-proxy, pim-snpg-sap, pim-snpg-sdp, diam-node, nat, sub-mgmt-wlan-gw
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keychain** *reference*

Synopsis	Keychain containing the authentication keys
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync transport-encryption application</a> <i>keyword</i> <a href="#">keychain</a> <i>reference</i>
Tree	<a href="#">keychain</a>
Description	This command specifies a keychain that contains authentication keys for the application.
Reference	<b>configure</b> <a href="#">system security keychains</a> <a href="#">keychain</a> <i>string</i>
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-group** [[tunnel-group-id](#)] *number*

Synopsis	Enter the <b>tunnel-group</b> list instance
Context	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">sync tunnel-group</a> <i>number</i>
Tree	<a href="#">tunnel-group</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[tunnel-group-id] number**

Synopsis Multi-active tunnel group ID

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number*

Tree **tunnel-group**

Range 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag string**

Synopsis Tag to synchronize the tunnel group with the MC peer

Context **configure** **redundancy** **multi-chassis** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **sync** **tunnel-group** *number* **sync-tag** *string*

Tree **sync-tag**

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rollback-sync keyword**

Synopsis Parameters for redundancy rollback synchronization

Context **configure** **redundancy** **rollback-sync** *keyword*

Tree **rollback-sync**

Options *rollback-single*, *rollback-all*

Introduced 16.0.R1

Platforms All

### **srrp**

Synopsis Enter the **srrp** context

Context	<b>configure</b> <a href="#">redundancy srrp</a>
Tree	<a href="#">srrp</a>
Description	Commands in this context configure system attributes for SRRP.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-srrp-id-range**

Synopsis	Enable the <b>auto-srrp-id-range</b> context
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range</a>
Tree	<a href="#">auto-srrp-id-range</a>
Description	Commands in this context reserve IDs for internal SRRP objects created for inter-BNG-UP resiliency. Manually provisioned SRRP instances cannot use these reserved IDs.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the ID range
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range end number</a>
Tree	<a href="#">end</a>
Range	2 to 4294967295
Default	4294967295
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis	Lower bound of the ID range
Context	<b>configure</b> <a href="#">redundancy srrp auto-srrp-id-range start number</a>
Tree	<a href="#">start</a>
Range	1 to 4294967294
Default	2147483648
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**switchover-exec** *string*

Synopsis	CLI script file executed after a redundancy switchover
Context	<b>configure</b> <b>redundancy</b> <b>switchover-exec</b> <i>string</i>
Tree	<b>switchover-exec</b>
Description	<p>This command specifies the location and name of the CLI script file executed following a redundancy switchover from the previously active CPM card. A switchover can happen because of a fatal failure or by manual action.</p> <p>The CLI script file can contain commands for environment settings, classic CLI debug configuration (excluding mirroring settings), and other commands not maintained by the configuration redundancy.</p> <p>The following commands are not supported in the switchover-exec file: <b>clear</b>, <b>configure</b>, <b>candidate</b>, <b>oam</b>, <b>tools</b>, <b>oam</b>, <b>ping</b>, <b>traceroute</b>, <b>mstat</b>, <b>mtrace</b>, and <b>mrinfo</b>.</p>
String Length	1 to 100
Introduced	16.0.R1
Platforms	All

**synchronize** *keyword*

Synopsis	Parameters for redundancy synchronization
Context	<b>configure</b> <b>redundancy</b> <b>synchronize</b> <i>keyword</i>
Tree	<b>synchronize</b>
Options	off, config, boot-env
Introduced	16.0.R1
Platforms	All

### 3.39 router commands

```

configure
- router string
- aggregates
  - aggregate (ipv4-prefix | ipv6-prefix)
    - aggregator

### 3.39.1 router command descriptions

#### **router** [**router-name**] *string*

Synopsis	Enter the <b>router</b> list instance
Context	<b>configure router</b> <i>string</i>
Tree	<b>router</b>
Description	Commands in this context configure a router instance that represents a virtual router in the system. There will always be at least two instances in the system. The Base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. Instances	4
Introduced	16.0.R1
Platforms	All

#### **[router-name]** *string*

Synopsis	Administrative router name
Context	<b>configure router</b> <i>string</i>
Tree	<b>router</b>
String Length	1 to 64
MD-CLI Default	Base
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

#### **aggregates**

Synopsis	Enter the <b>aggregates</b> context
Context	<b>configure router</b> <i>string aggregates</i>
Tree	<b>aggregates</b>
Introduced	16.0.R1
Platforms	All

**aggregate** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>aggregate</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Description	<p>Commands in this context add aggregate routes to the routing table when there are one or more component routes. A component route is any route installed in the forwarding table that is a more-specific match of the aggregate.</p> <p>The use of aggregate routes can lead to smaller routing table sizes by reducing the number of routes that need to be advertised to neighbor routes.</p>
Introduced	16.0.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**aggregator**

Synopsis	Enter the <b>aggregator</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">aggregator</a>
Tree	<a href="#">aggregator</a>
Description	Commands in this context configure the BGP AGGREGATOR path attribute for the aggregate route.
Introduced	16.0.R1
Platforms	All

**address** *string*

Synopsis	Aggregator IP address
----------	-----------------------

Context	<b>configure router string aggregates aggregate (ipv4-prefix   ipv6-prefix) aggregator address string</b>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

### **as-number number**

Synopsis	Aggregator AS number
Context	<b>configure router string aggregates aggregate (ipv4-prefix   ipv6-prefix) aggregator as-number number</b>
Tree	<b>as-number</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **as-set boolean**

Synopsis	Use AS_SET path segment type for the aggregate route
Context	<b>configure router string aggregates aggregate (ipv4-prefix   ipv6-prefix) as-set boolean</b>
Tree	<b>as-set</b>
Description	<p>When configured to <b>true</b>, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to <b>false</b>, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **blackhole**

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure router string aggregates aggregate (ipv4-prefix   ipv6-prefix) blackhole</b>
Tree	<b>blackhole</b>
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .

Introduced	16.0.R1
Platforms	All

### **generate-icmp** *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>blackhole</b> <b>generate-icmp</b> <i>boolean</i>
Tree	<b>generate-icmp</b>
Description	When configured to <b>true</b> , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to <b>false</b> , ICMP unreachable messages are not generated.
Default	false
Introduced	16.0.R2
Platforms	All

### **community** *string*

Synopsis	Community name that is added to the aggregate route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>community</b> <i>string</i>
Tree	<b>community</b>
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>

String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **discard-component-communities** *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>discard-component-communities</b> <i>boolean</i>
Tree	<b>discard-component-communities</b>
Default	false
Introduced	19.7.R1
Platforms	All

### **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>indirect</b>
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Local preference used when aggregate route is exported
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>local-preference</b> <i>number</i>
Tree	<b>local-preference</b>

Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Policy name for the aggregated route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>policy reference</b>
Tree	<b>policy</b>
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **summary-only boolean**

Synopsis	Advertise the aggregate route only
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>summary-only boolean</b>
Tree	<b>summary-only</b>
Description	<p>When configured to <b>true</b>, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to <b>false</b>, the router advertises both the aggregate route and its contributing routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**tunnel-group** *number*

Synopsis	Tunnel group from which to associate the MC IPsec state
Context	<b>configure</b> <b>router</b> <i>string</i> <b>aggregates</b> <b>aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>tunnel-group</b> <i>number</i>
Tree	<b>tunnel-group</b>
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

**allow-bgp-to-igp-export** *boolean*

Synopsis	Enable the distribution of BGP routes into the IGP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>allow-bgp-to-igp-export</b> <i>boolean</i>
Tree	<b>allow-bgp-to-igp-export</b>
Description	When configured to <b>true</b> , the router can export base BGP RTM routes into the IGP routing instance within the base router. This command applies to already exported BGP prefixes and to newly received BGP prefixes.
Default	true
Introduced	23.7.R1
Platforms	All

**allow-icmp-redirect** *boolean*

Synopsis	Allow ICMP redirects on the management interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>allow-icmp-redirect</b> <i>boolean</i>
Tree	<b>allow-icmp-redirect</b>
Description	When configured to <b>true</b> , ICMP redirect messages can be received on the management interface. When configured to <b>false</b> , all received ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **allow-icmp6-redirect** *boolean*

Synopsis	Allow IPv6 ICMP redirects on the management interface
Context	<b>configure</b> <i>router string</i> <b>allow-icmp6-redirect</b> <i>boolean</i>
Tree	<b>allow-icmp6-redirect</b>
Description	When configured to <b>true</b> , IPv6 ICMP redirect messages can be received on the management interface. When configured to <b>false</b> , all received IPv6 ICMP redirect messages are dropped. This command cannot be configured on a non-management interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **autonomous-system** *number*

Synopsis	AS number advertised to peers for this router
Context	<b>configure</b> <i>router string</i> <b>autonomous-system</b> <i>number</i>
Tree	<b>autonomous-system</b>
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated. If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string</i> <b>bfd</b>
Tree	<b>bfd</b>
Introduced	19.7.R1
Platforms	All

**seamless-bfd**

Synopsis	Enter the <b>seamless-bfd</b> context
Context	<b>configure router</b> <i>string</i> <b>bfd seamless-bfd</b>
Tree	<b>seamless-bfd</b>
Introduced	19.7.R1
Platforms	All

**peer** [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure router</b> <i>string</i> <b>bfd seamless-bfd peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Max. Instances	8000
Introduced	19.7.R1
Platforms	All

**[address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Address of the remote node
Context	<b>configure router</b> <i>string</i> <b>bfd seamless-bfd peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

**discriminator** *number*

Synopsis	Discriminator of the remote node
Context	<b>configure router</b> <i>string</i> <b>bfd seamless-bfd peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>discriminator</b> <i>number</i>
Tree	<b>discriminator</b>
Range	1 to 4294967295
Introduced	19.7.R1

Platforms All

## bgp

Synopsis Enable the **bgp** context  
Context **configure router string bgp**  
Tree **bgp**  
Introduced 16.0.R1  
Platforms All

## add-paths

Synopsis Enable the **add-paths** context  
Context **configure router string bgp add-paths**  
Tree **add-paths**  
Description Commands in this context configure add-paths support for the specified address families of the BGP instance. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.  
Introduced 16.0.R1  
Platforms All

## evpn

Synopsis Enter the **evpn** context  
Context **configure router string bgp add-paths evpn**  
Tree **evpn**  
Description Commands in this context configure the Add-Paths capability for EVPN routes. By default, Add-Paths is not enabled for EVPN routes.  
Introduced 21.10.R1  
Platforms All

## receive boolean

Synopsis Receive multiple EVPN paths per prefix from a peer  
Context **configure router string bgp add-paths evpn receive boolean**  
Tree **receive**

Default	false
Introduced	21.10.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum number of EVPN paths to send
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths evpn send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	21.10.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths ipv4</b>
Tree	<b>ipv4</b>
Description	Commands in this context configure add-paths support for the IPv4 unicast address family.
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple routes per unlabeled IPv4 prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv4 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send** (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths ipv6</b>
Tree	<b>ipv6</b>
Description	Commands in this context configure add-paths support for the IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Receive multiple routes per unlabeled IPv6 prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1

Platforms All

### **send** (*number* | *keyword*)

Synopsis Maximum paths per unlabeled IPv6 unicast prefix

Context **configure router** *string* **bgp add-paths ipv6 send** (*number* | *keyword*)

Tree **send**

Description This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per unlabeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, add-paths send capability is not enabled for unlabeled IPv6 unicast routes.

Range 1 to 16

Options multipaths – Number of best multipaths for each NLRI

Introduced 16.0.R1

Platforms All

### **label-ipv4**

Synopsis Enter the **label-ipv4** context

Context **configure router** *string* **bgp add-paths label-ipv4**

Tree **label-ipv4**

Description Commands in this context configure add-paths support for the labeled IPv4 unicast address family.

Introduced 16.0.R1

Platforms All

### **receive** *boolean*

Synopsis Receive multiple labeled-unicast routes per IPv4 prefix

Context **configure router** *string* **bgp add-paths label-ipv4 receive** *boolean*

Tree **receive**

Description When configured to **true**, this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Paths advertised per labeled IPv4 unicast prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths label-ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

### **label-ipv6**

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths label-ipv6</b>
Tree	<b>label-ipv6</b>
Description	Commands in this context configure add-paths support for the labeled IPv6 unicast address family.
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths label-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Paths advertised per labeled IPv6 unicast prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths label-ipv6 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv4**

Synopsis	Enter the <b>mcast-vpn-ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths mcast-vpn-ipv4</b>
Tree	<b>mcast-vpn-ipv4</b>
Description	Commands in this context configure add-paths support for the multicast IPv4 VPN address family.
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple multicast routes per IPv4 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp add-paths mcast-vpn-ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths advertised per multicast IPv4 VPN prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths mcast-vpn-ipv4 send number</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for multicast IPv4 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv6**

Synopsis	Enter the <b>mcast-vpn-ipv6</b> context
Context	<b>configure router string</b> <a href="#">bgp add-paths mcast-vpn-ipv6</a>
Tree	<a href="#">mcast-vpn-ipv6</a>
Description	Commands in this context configure add-paths support for the multicast IPv6 VPN address family.
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple multicast routes per IPv6 VPN prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths mcast-vpn-ipv6 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv6 VPN prefix to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths advertised per multicast IPv6 VPN prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths mcast-vpn-ipv6 send number</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv6 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for multicast IPv6 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv4**

Synopsis	Enter the <b>mvpn-ipv4</b> context
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv4</a>
Tree	<a href="#">mvpn-ipv4</a>
Description	Commands in this context configure add-paths support for the multicast VPN IPv4 address family.
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple routes per multicast VPN IPv4 NRLI
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv4 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple routes per multicast VPN IPv4 NRLI to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths advertised per multicast VPN IPv4 NRLI
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv4 send number</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv4 NRLI. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for multicast VPN IPv4 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv6**

Synopsis	Enter the <b>mvpn-ipv6</b> context
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv6</a>
Tree	<a href="#">mvpn-ipv6</a>
Description	Commands in this context configure add-paths support for the multicast VPN IPv6 address family.
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple routes per multicast VPN IPv6 NRLI
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv6 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple routes per multicast VPN IPv6 NRLI to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send number**

Synopsis	Maximum paths advertised per multicast VPN IPv6 NRLI
Context	<b>configure router string</b> <a href="#">bgp add-paths mvpn-ipv6 send number</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv6 NRLI. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for multicast VPN IPv6 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4**

Synopsis	Enter the <b>vpn-ipv4</b> context
Context	<b>configure router string</b> <a href="#">bgp add-paths vpn-ipv4</a>
Tree	<a href="#">vpn-ipv4</a>
Description	Commands in this context configure add-paths support for the VPN-IPv4 address family.
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	<b>configure router string</b> <a href="#">bgp add-paths vpn-ipv4 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple routes per VPN-IPv4 prefix to be received from a peer.

	When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum paths advertised per VPN-IPv4 prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths vpn-ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6**

Synopsis	Enter the <b>vpn-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths vpn-ipv6</b>
Tree	<b>vpn-ipv6</b>
Description	Commands in this context configure add-paths support for the VPN-IPv6 address family.
Introduced	16.0.R1
Platforms	All

### **receive** *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <b>bgp add-paths vpn-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple routes per VPN-IPv6 prefix to be received from a peer.

When configured to **false**, the ADD-PATH receive capability is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **send** (*number* | *keyword*)

Synopsis	Maximum paths advertised per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <a href="#">bgp add-paths vpn-ipv6 send</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, add-paths send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the BGP instance
Context	<b>configure</b> <i>router string</i> <a href="#">bgp admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **advertise-external**

Synopsis	Enter the <b>advertise-external</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp advertise-external</a>
Tree	<a href="#">advertise-external</a>

---

Description	Commands in this context allow BGP to advertise its best external route to a destination for specified address families even when its best overall route is an internal route.
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>advertise-external</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>advertise-external</b> <b>ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>advertise-external</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp advertise-external label-ipv6</b> <i>boolean</i>
Tree	<b>label-ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **advertise-inactive** *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-inactive</b> <i>boolean</i>
Tree	<b>advertise-inactive</b>
Description	When configured to <b>true</b> , this command allows any inactive BGP route to be advertised, even though it is not the used route.  When configured to <b>false</b> , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **advertise-ipv6-next-hops**

Synopsis	Enter the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops</b>
Tree	<b>advertise-ipv6-next-hops</b>
Description	Commands in this context allow specified BGP address family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.  This command context has no effect on routes advertised to IPv4 peers.
Introduced	16.0.R1
Platforms	All

### **evpn** *boolean*

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops evpn</b> <i>boolean</i>
Tree	<b>evpn</b>

Description	When configured to <b>true</b> , EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to <b>false</b> , EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.
Default	false
Introduced	19.5.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <b>bgp advertise-ipv6-next-hops</b> <i>ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Description	When configured to <b>true</b> , IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.  When configured to <b>false</b> , IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	19.5.R1
Platforms	All

### **label-ipv4 boolean**

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <b>bgp advertise-ipv6-next-hops</b> <i>label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Description	When configured to <b>true</b> , label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.  When configured to <b>false</b> , label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.

Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	<p>When configured to <b>true</b>, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp advertise-ipv6-next-hops vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Description	<p>When configured to <b>true</b>, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <a href="#">bgp advertise-ipv6-next-hops</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Description	When configured to <b>true</b> , VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.  When configured to <b>false</b> , VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.
Default	false
Introduced	16.0.R1
Platforms	All

**aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	<b>configure</b> <i>router string</i> <a href="#">bgp aggregator-id-zero</a> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Description	When configured to <b>true</b> , the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.  When configured to <b>false</b> , the AS number and router ID are added to the AGGREGATOR path attribute.
Default	false
Introduced	16.0.R1
Platforms	All

**asn-4-byte** *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	<b>configure</b> <i>router string</i> <a href="#">bgp asn-4-byte</a> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Default	true
Introduced	16.0.R1
Platforms	All

**authentication-key *string***

Synopsis	BGP authentication key for all peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

**authentication-keychain *reference***

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure</b> <a href="#">system security keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

**backup-path**

Synopsis	Enter the <b>backup-path</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp backup-path</a>
Tree	<a href="#">backup-path</a>
Description	<p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp backup-path ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp backup-path ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp backup-path label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp backup-path label-ipv6 boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

## best-path-selection

Synopsis	Enter the <b>best-path-selection</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection</a>
Tree	<a href="#">best-path-selection</a>
Introduced	16.0.R1
Platforms	All

## always-compare-med

Synopsis	Enter the <b>always-compare-med</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection always-compare-med</a>
Tree	<a href="#">always-compare-med</a>
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	16.0.R1
Platforms	All

## med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection always-compare-med med-value keyword</a>
Tree	<a href="#">med-value</a>
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	16.0.R1
Platforms	All

## strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection always-compare-med strict-as boolean</a>
Tree	<a href="#">strict-as</a>
Description	When configured to <b>true</b> , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.

When configured to **false**, the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.

Default	true
Introduced	16.0.R1
Platforms	All

## as-path-ignore

Synopsis	Enter the <b>as-path-ignore</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection as-path-ignore</b>
Tree	<a href="#">as-path-ignore</a>
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	16.0.R1
Platforms	All

## ipv4 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection as-path-ignore ipv4 <i>boolean</i></b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6 *boolean*

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection as-path-ignore ipv6 <i>boolean</i></b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***l2-vpn boolean***

Synopsis	Ignore AS path length for L2-VPN routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection as-path-ignore l2-vpn boolean</a>
Tree	<a href="#">l2-vpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***label-ipv4 boolean***

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection as-path-ignore label-ipv4 boolean</a>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***label-ipv6 boolean***

Synopsis	Ignore AS path length for labeled-unicast IPv6 routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection as-path-ignore label-ipv6 boolean</a>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ***mcast-ipv4 boolean***

Synopsis	Ignore AS path length for IPv4 multicast routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection as-path-ignore mcast-ipv4 boolean</a>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv6** *boolean*

Synopsis	Ignore AS path length for IPv6 multicast routes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">as-path-ignore</a> <a href="#">mcast-ipv6</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv4** *boolean*

Synopsis	Ignore AS path length for IPv4 MVPN routes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">as-path-ignore</a> <a href="#">mvpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv6** *boolean*

Synopsis	Ignore AS path length for IPv6 MVPN routes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">as-path-ignore</a> <a href="#">mvpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Ignore AS path length for VPN IPv4 (SAFI 128) routes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">best-path-selection</a> <a href="#">as-path-ignore</a> <a href="#">vpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Ignore AS path length for VPN IPv6 (SAFI 128) routes
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection as-path-ignore vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**compare-origin-validation-state** *boolean*

Synopsis	Compare RPKI origin validation state of usable routes
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection compare-origin-validation-state</a> <i>boolean</i>
Tree	<a href="#">compare-origin-validation-state</a>
Description	<p>When configured to <b>true</b>, the RPKI origin validation state is compared between BGP routes, where a Valid state is preferred over a Not-Found state, and a Not-Found state is preferred over an Invalid state.</p> <p>When configured to <b>false</b>, the RPKI origin validate state comparison is not performed as part of the BGP route selection process.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**d-path-length-ignore** *boolean*

Synopsis	Enable D-PATH length ignore
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp best-path-selection d-path-length-ignore</a> <i>boolean</i>
Tree	<a href="#">d-path-length-ignore</a>
Description	<p>When configured to <b>true</b>, this command, enables the router to ignore the D-PATH domain segment length during best-path selection.</p> <p>At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.</p> <p>At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.</p>

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

### **deterministic-med** *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection deterministic-med</a> <i>boolean</i>
Tree	<a href="#">deterministic-med</a>
Description	<p>When configured to <b>true</b>, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.</p> <p>When configured to <b>false</b>, paths are not grouped and the overall best-path selection can depend on the order of route arrival.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ebgp-ibgp-equal**

Synopsis	Enter the <b>ebgp-ibgp-equal</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a>
Tree	<a href="#">ebgp-ibgp-equal</a>
Description	<p>Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGp learned route over an IBGP learned route.</p>
Introduced	16.0.R1
Platforms	All

### **evpn** *boolean*

Synopsis	Consider EBGP and IBGP EVPN routes equal
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal evpn</a> <i>boolean</i>
Tree	<a href="#">evpn</a>
Default	false
Introduced	22.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Consider EBGP and IBGP IPv4 routes equal
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Consider EBGP and IBGP IPv6 routes equal
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	<b>configure</b> <i>router string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection ebgp-ibgp-equal label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv4 routes equal
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection ebgp-ibgp-equal vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Consider EBGP and IBGP VPN-IPv6 routes equal
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection ebgp-ibgp-equal vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ignore-nh-metric** *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp best-path-selection ignore-nh-metric</b> <i>boolean</i>
Tree	<a href="#">ignore-nh-metric</a>
Description	When configured to <b>true</b> , BGP ignores the resolved distance to the BGP next hop in its route selection process.  When configured to <b>false</b> , BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router

	BGP peers (in the <b>router</b> context) or IP prefix learned from VPRN BGP peers (in the <b>vprn</b> context).
Default	false
Introduced	16.0.R1
Platforms	All

## ignore-router-id

Synopsis	Enable the <b>ignore-router-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection</a> <a href="#">ignore-router-id</a>
Tree	<a href="#">ignore-router-id</a>
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	16.0.R1
Platforms	All

## include-internal

Synopsis	Enter the <b>include-internal</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection</a> <a href="#">ignore-router-id</a> <a href="#">include-internal</a>
Tree	<a href="#">include-internal</a>
Description	Commands in this context specify the internal address families for which the router ID values are ignored, even when comparing two IBGP paths or an EBGP and an IBGP path.
Introduced	16.0.R1
Platforms	All

## mvpn-ipv4 *boolean*

Synopsis	Ignore the router IDs of MVPN-IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection</a> <a href="#">ignore-router-id</a> <a href="#">include-internal</a> <a href="#">mvpn-ipv4</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false

Introduced	16.0.R1
Platforms	All

### **mvpn-ipv6** *boolean*

Synopsis	Ignore the router IDs of MVPN-IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection ignore-router-id include-internal mvpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **origin-invalid-unusable** *boolean*

Synopsis	Deem invalid routes unusable for best-path selection
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp best-path-selection origin-invalid-unusable</a> <i>boolean</i>
Tree	<a href="#">origin-invalid-unusable</a>
Description	<p>When configured to <b>true</b>, routes that have an RPKI origin validation state of Invalid are considered unusable by the best-path selection algorithm. These routes cannot be used for forwarding and cannot be advertised to BGP peers.</p> <p>When configured to <b>false</b>, routes with an RPKI origin validation state of Invalid are compared to other usable routes for the same prefix according to the BGP decision process.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations.</p> <p>When configured to <b>false</b>, BFD is not enabled globally for all BGP sessions.</p>
Default	false

Introduced	16.0.R1
Platforms	All

## **bfd-strict-mode**

Synopsis	Enter the <b>bfd-strict-mode</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">bfd-strict-mode</a>
Tree	<a href="#">bfd-strict-mode</a>
Introduced	23.7.R1
Platforms	All

## **advertise**

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">bfd-strict-mode</a> <a href="#">advertise</a>
Tree	<a href="#">advertise</a>
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"><li>• The inherited or configured value for the <b>bfd-liveness</b> command that applies to the peer is <b>true</b>.</li><li>• The interface associated with the peer has a valid BFD configuration.</li></ul> <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	23.7.R1
Platforms	All

## **holdtime** *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">bfd-strict-mode</a> <a href="#">advertise</a> <a href="#">holdtime</a> <i>number</i>
Tree	<a href="#">holdtime</a>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

---

Range	1 to 65535
Units	seconds
Default	30
Introduced	23.7.R1
Platforms	All

### **next-hop-reachability** *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>bfd-strict-mode</b> <b>next-hop-reachability</b> <i>boolean</i>
Tree	<b>next-hop-reachability</b>
Description	<p>When configured to <b>true</b>, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"><li>• The BFD session to the peer is in a down state.</li><li>• There is a valid interface BFD configuration that applies to the peer.</li><li>• There is a valid BFD liveness configuration that applies to the peer.</li></ul> <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is <b>true</b> does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to <b>true</b> only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"><li>• IPv4</li><li>• IPv6</li><li>• IPv4 VPN</li><li>• IPv6 VPN</li><li>• labeled unicast IPv4</li><li>• labeled unicast IPv6</li><li>• EVPN</li><li>• IPv4 multicast</li><li>• IPv6 multicast</li><li>• IPv4 VPN multicast</li><li>• IPv6 VPN multicast</li></ul>

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Default	false
Introduced	23.7.R1
Platforms	All

## bgp-tunnel-metric

Synopsis	Enter the <b>bgp-tunnel-metric</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <b>bgp-tunnel-metric</b>
Tree	<b>bgp-tunnel-metric</b>
Description	Commands in this context control the tunnel table metrics associated with BGP label unicast routes.
Introduced	20.5.R1
Platforms	All

## prefer-aigp *boolean*

Synopsis	Use the AIGP attribute as tunnel metric when present
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <b>bgp-tunnel-metric</b> <b>prefer-aigp</b> <i>boolean</i>
Tree	<b>prefer-aigp</b>
Description	When configured to <b>true</b> , the TTM metric is based on the AIGP metric if the route has the path attribute. When the BGP-LU route is selected for installation in TTM and it is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the resolved cost to the BGP next-hop of the route; otherwise, the metric is set to the value in the <b>value</b> setting.  When configured to <b>false</b> , the AIGP attribute is ignored for purposes to TTM metric derivation.
Default	false
Introduced	20.5.R1
Platforms	All

## prefer-med *boolean*

Synopsis	Use the MED attribute as tunnel metric when present
Context	<b>configure</b> <i>router string</i> <b>bgp</b> <b>bgp-tunnel-metric</b> <b>prefer-med</b> <i>boolean</i>

Tree	<a href="#">prefer-med</a>
Description	<p>When configured to <b>true</b>, the TTM metric is based on the MED metric value of the BGP-LU route. When a BGP-LU route is selected for installation in TTM and is not matched by a BGP import policy entry that overrides the BGP tunnel metric action, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the resolved cost to the BGP next hop of the route added to it. Otherwise, the metric is set to the value configured using the <b>value</b> command.</p> <p>When configured to <b>false</b>, the MED attribute is ignored for TTM metric derivation.</p> <p><b>Note:</b> <b>prefer-aigp</b> takes precedence over this command if the received BGP-LU has both attributes.</p>
Default	false
Introduced	23.3.R1
Platforms	All

### **value** *number*

Synopsis	BGP tunnel metric value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">bgp-tunnel-metric</a> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Description	<p>This command configures a BGP tunnel metric for label IPv4 routes that do not have their metric set by more specific means.</p> <p>If a BGP-LU route is selected for installation in the TTM and there is no tunnel metric policy action that applies to the route, the TTM metric of the associated tunnel is set to this value if either:</p> <ul style="list-style-type: none"> <li>• <b>prefer-aigp</b> is set to <b>false</b></li> <li>• <b>prefer-aigp</b> is set to <b>true</b> but the BGP-LU route does not have an AIGP attribute</li> </ul>
Range	0 to 4294967295
Default	1000
Introduced	20.5.R1
Platforms	All

### **bgp-tunnel-preference** *number*

Synopsis	BGP tunnel table preference
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">bgp-tunnel-preference</a> <i>number</i>
Tree	<a href="#">bgp-tunnel-preference</a>
Description	This command configures the tunnel table preference for BGP-LU tunnel type.

The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.

This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the **mixed-lsp-mode** option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.

Range	1 to 255
Default	12
Introduced	21.10.R1
Platforms	All

### **block-prefix-sid** *boolean*

Synopsis	Block the prefix SID attribute
Context	<b>configure</b> <i>router string</i> <i>bgp block-prefix-sid boolean</i>
Tree	<a href="#">block-prefix-sid</a>
Description	<p>When configured to <b>true</b>, all prefix SID attributes are removed from label IPv4 and label IPv6 routes when they are exchanged with EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to <b>false</b>, all prefix SID attributes associated with label IPv4 and label IPv6 routes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	<b>configure</b> <i>router string</i> <i>bgp client-reflect boolean</i>
Tree	<a href="#">client-reflect</a>
Description	<p>When configured to <b>true</b>, routes received from neighbors considered to be RR clients are reflected to other peers as expected.</p> <p>When configured to <b>false</b>, routes received from neighbors considered to be RR clients are not reflected to other clients.</p>
Default	true
Introduced	16.0.R1
Platforms	All

**cluster**

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure router string bgp cluster</b>
Tree	<b>cluster</b>
Introduced	16.0.R1
Platforms	All

**allow-local-fallback boolean**

Synopsis	Allow fallback to RR topology location for ORR
Context	<b>configure router string bgp cluster allow-local-fallback boolean</b>
Tree	<b>allow-local-fallback</b>
Description	When configured to <b>true</b> , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to <b>true</b> .  When configured to <b>false</b> , no route is advertised to the clients when there are no reachable routes from the client's ORR location.
Default	false
Introduced	16.0.R1
Platforms	All

**cluster-id string**

Synopsis	Route reflector cluster ID
Context	<b>configure router string bgp cluster cluster-id string</b>
Tree	<b>cluster-id</b>
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	16.0.R1
Platforms	All

**orr-location number**

Synopsis	Optimal route reflection location for the cluster
Context	<b>configure router string bgp cluster orr-location number</b>

Tree	<a href="#">orr-location</a>
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.  With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp connect-retry</a> <i>number</i>
Tree	<a href="#">connect-retry</a>
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	16.0.R1
Platforms	All

### **convergence**

Synopsis	Enter the <b>convergence</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp convergence</a>
Tree	<a href="#">convergence</a>
Introduced	19.7.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp convergence</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>

---

Description	Commands in this context configure route convergence options for a specific BGP address family, specifically, the maximum amount of time BGP waits until it advertises the routes of the address family to its BGP peers.
Introduced	19.7.R1
Platforms	All

**[family-type] keyword**

Synopsis	Address family for which convergence selection applies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

**max-wait-to-advertise number**

Synopsis	Maximum wait time before advertising routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence family</b> <i>keyword</i> <b>max-wait-to-advertise</b> <i>number</i>
Tree	<b>max-wait-to-advertise</b>
Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

**min-wait-to-advertise number**

Synopsis	Minimum wait time before advertising routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp convergence min-wait-to-advertise</b> <i>number</i>
Tree	<b>min-wait-to-advertise</b>
Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

## damp-peer-oscillations

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp damp-peer-oscillations</b>
Tree	<b>damp-peer-oscillations</b>
Description	Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, <i>A Border Gateway Protocol 4 (BGP-4)</i> .  When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.
Introduced	16.0.R1
Platforms	All

## error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <i>router string</i> <b>bgp damp-peer-oscillations error-interval</b> <i>number</i>
Tree	<b>error-interval</b>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

## idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp damp-peer-oscillations idle-hold-time</b>
Tree	<b>idle-hold-time</b>
Description	Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset.  In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.
Introduced	16.0.R1
Platforms	All

### **initial-wait** *number*

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp damp-peer-oscillations idle-hold-time initial-wait</b> <i>number</i>
Tree	<b>initial-wait</b>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

### **max-wait** *number*

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp damp-peer-oscillations idle-hold-time max-wait</b> <i>number</i>
Tree	<b>max-wait</b>
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

### **second-wait** *number*

Synopsis	Time that doubles after each session failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp damp-peer-oscillations idle-hold-time second-wait</b> <i>number</i>
Tree	<b>second-wait</b>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

### **damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp damping</b> <i>boolean</i>
Tree	<b>damping</b>
Description	<p>When configured to <b>true</b>, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none"> <li>• Half-life: 15 minutes</li> <li>• Max-suppress: 60 minutes</li> <li>• Suppress-threshold: 3000</li> <li>• Reuse-threshold: 750</li> </ul> <p>When configured to <b>false</b>, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure router</b> <i>string</i> <b>bgp def-recv-evpn-encap</b> <i>keyword</i>
Tree	<b>def-recv-evpn-encap</b>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
Options	mpls, vxlan
Default	mpls
Introduced	16.0.R1
Platforms	All

### **default-label-preference**

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp default-label-preference</b>
Tree	<b>default-label-preference</b>
Introduced	19.5.R1
Platforms	All

### **ebgp number**

Synopsis	Default preference for EBGp
Context	<b>configure</b> <i>router string</i> <i>bgp default-label-preference ebgp number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <i>router string</i> <i>bgp default-label-preference ibgp number</i>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **default-preference**

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp default-preference</i>
Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

### **ebgp number**

Synopsis	Default preference for EBGp
Context	<b>configure</b> <i>router string</i> <i>bgp default-preference ebgp number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Default	0

---

Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure router string bgp default-preference ibgp number</b>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **description string**

Synopsis	Text description
Context	<b>configure router string bgp description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dynamic-neighbor-limit number**

Synopsis	Max dynamic BGP sessions to accept from remote peers
Context	<b>configure router string bgp dynamic-neighbor-limit number</b>
Tree	<a href="#">dynamic-neighbor-limit</a>
Description	This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

## **ebgp-default-reject-policy**

Synopsis	Enter the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp ebgp-default-reject-policy</a>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

## **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp ebgp-default-reject-policy export</a> <i>boolean</i>
Tree	<a href="#">export</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp ebgp-default-reject-policy import</a> <i>boolean</i>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **egress-peer-engineering**

Synopsis	Enable the <b>egress-peer-engineering</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp egress-peer-engineering</a>
Tree	<a href="#">egress-peer-engineering</a>
Introduced	21.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	<b>configure</b> <i>router string</i> <i>bgp egress-peer-engineering admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

**enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <i>router string</i> <i>bgp enforce-first-as boolean</i>
Tree	<a href="#">enforce-first-as</a>
Description	<p>When configured to <b>true</b> for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the <b>update-fault-tolerance</b> command in the <b>error-handling</b> context is set to <b>false</b>) or the session is left up but the route is treated as withdrawn (if <b>update-fault-tolerance</b> is set to <b>true</b>).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When configured to <b>false</b>, received routes are not checked for compliance with the rule.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**error-handling**

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp error-handling</i>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

**update-fault-tolerance** *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp error-handling update-fault-tolerance</b> <i>boolean</i>
Tree	<b>update-fault-tolerance</b>
Description	When configured to <b>true</b> , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.  When configured to <b>false</b> , most errors trigger a session reset.
Default	false
Introduced	16.0.R1
Platforms	All

**export**

Synopsis	Enable the <b>export</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp export</b>
Tree	<b>export</b>
Description	Commands in this context specify route policies that control the handling of outbound routes transmitted to all peers. Route policies are configured in the <b>configure policy-options</b> context.  When no export policies are specified in this context, BGP-learned routes are advertised by default and non-BGP routes are not advertised.
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	List of export policy names
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp export policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	This command specifies route policies that control the handling of outbound routes transmitted to certain peers.  Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.

Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).

When no export policies are specified, BGP-learned routes are advertised by default and non-BGP routes are not advertised.

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### extended-nh-encoding

Synopsis	Enter the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp extended-nh-encoding</a>
Tree	<a href="#">extended-nh-encoding</a>
Description	Commands in this context specify the IPv4-related address families that can receive IPv6 next hops from peers. The peers should not send such routes unless the peers receive notification of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.
Introduced	16.0.R1
Platforms	All

### ipv4 boolean

Synopsis	Advertise encoding capability for IPv4 routes
Context	<b>configure</b> <i>router string</i> <a href="#">bgp extended-nh-encoding ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.5.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Advertise encoding capability for label-IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp extended-nh-encoding label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise encoding capability for VPN-IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp extended-nh-encoding vpn-ipv4 boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**family**

Synopsis	Enter the <b>family</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp family</i>
Tree	<a href="#">family</a>
Description	Commands in this context specify the BGP address families supported by the base router BGP sessions.
Introduced	16.0.R1
Platforms	All

**bgp-ls** *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp family bgp-ls boolean</i>
Tree	<a href="#">bgp-ls</a>
Default	false
Introduced	16.0.R1
Platforms	All

**evpn boolean**

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp family evpn boolean</i>
Tree	<a href="#">evpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv4 boolean**

Synopsis	Advertise support for the flowspec-IPv4 address family
Context	<b>configure</b> <i>router string</i> <i>bgp family flow-ipv4 boolean</i>
Tree	<a href="#">flow-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv6 boolean**

Synopsis	Advertise support for the flowspec-IPv6 address family
Context	<b>configure</b> <i>router string</i> <i>bgp family flow-ipv6 boolean</i>
Tree	<a href="#">flow-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-vpn-ipv4 boolean**

Synopsis	Advertise support for FlowSpec-VPN IPv4 address family
Context	<b>configure</b> <i>router string</i> <i>bgp family flow-vpn-ipv4 boolean</i>
Tree	<a href="#">flow-vpn-ipv4</a>
Default	false
Introduced	22.7.R1
Platforms	All

**flow-vpn-ipv6** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv6 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>flow-vpn-ipv6</i> <i>boolean</i>
Tree	<a href="#">flow-vpn-ipv6</a>
Default	false
Introduced	22.7.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>ipv4</i> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>ipv6</i> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**l2-vpn** *boolean*

Synopsis	Advertise MP-BGP support for the L2-VPN address family
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>family</i> <i>l2-vpn</i> <i>boolean</i>
Tree	<a href="#">l2-vpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Advertise support for the label-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>mcast-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>mcast-ipv6</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-vpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	<b>configure</b> <i>router string bgp family mcast-vpn-ipv4 boolean</i>
Tree	<a href="#">mcast-vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mcast-vpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	<b>configure</b> <i>router string bgp family mcast-vpn-ipv6 boolean</i>
Tree	<a href="#">mcast-vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mdt-safi** *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	<b>configure</b> <i>router string bgp family mdt-safi boolean</i>
Tree	<a href="#">mdt-safi</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ms-pw** *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	<b>configure</b> <i>router string bgp family ms-pw boolean</i>
Tree	<a href="#">ms-pw</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 MCAST VPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mvpn-ipv4 boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 MCAST VPN address family
Context	<b>configure</b> <i>router string</i> <i>bgp family mvpn-ipv6 boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**route-target** *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	<b>configure</b> <i>router string</i> <i>bgp family route-target boolean</i>
Tree	<a href="#">route-target</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	<b>configure</b> <i>router string</i> <i>bgp family sr-policy-ipv4 boolean</i>
Tree	<a href="#">sr-policy-ipv4</a>
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false

---

Introduced	16.0.R1
Platforms	All

### **sr-policy-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>sr-policy-ipv6</b> <i>boolean</i>
Tree	<a href="#">sr-policy-ipv6</a>
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	19.10.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>family</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
----------	---

Context	<b>configure router</b> <i>string</i> <b>bgp fast-external-failover</b> <i>boolean</i>
Tree	<b>fast-external-failover</b>
Description	When configured to <b>true</b> , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to <b>false</b> , the BGP session remains up until the hold time expires.
Default	true
Introduced	16.0.R1
Platforms	All

## flowspec

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp flowspec</b>
Tree	<b>flowspec</b>
Introduced	16.0.R1
Platforms	All

## validate-dest-prefix *boolean*

Synopsis	Validate destination prefix in FlowSpec-IPv4/IPv6 route
Context	<b>configure router</b> <i>string</i> <b>bgp flowspec validate-dest-prefix</b> <i>boolean</i>
Tree	<b>validate-dest-prefix</b>
Description	When configured to <b>true</b> , this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent. A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true: <ul style="list-style-type: none"> <li>• it was originated outside the local AS of the receiving BGP router</li> <li>• the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix</li> </ul> An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers. When configured to <b>false</b> , destination-prefix validation is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

**validate-redirect-ip** *boolean*

Synopsis	Validate the redirect-to-IPv4 action in FlowSpec route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>flowspec</b> <b>validate-redirect-ip</b> <i>boolean</i>
Tree	<a href="#">validate-redirect-ip</a>
Description	<p>When configured to <b>true</b>, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.</p> <p>A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.</p> <p>When configured to <b>false</b>, the validation check is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>graceful-restart</b>
Tree	<a href="#">graceful-restart</a>
Description	Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.
Introduced	16.0.R1
Platforms	All

**gr-notification** *boolean*

Synopsis	Perform Graceful Restart procedures
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>graceful-restart</b> <b>gr-notification</b> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	<p>When configured to <b>true</b>, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to <b>false</b>, NOTIFICATION messages are not supported.</p>
Default	false

Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived</a>
Tree	<a href="#">long-lived</a>
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	16.0.R1
Platforms	All

## advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived advertise-stale-to-all-neighbors</a> <i>boolean</i>
Tree	<a href="#">advertise-stale-to-all-neighbors</a>
Default	false
Introduced	16.0.R1
Platforms	All

## advertised-stale-time *number*

Synopsis	LLGR stale routes time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp graceful-restart long-lived advertised-stale-time</a> <i>number</i>
Tree	<a href="#">advertised-stale-time</a>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1

Platforms All

### **family** [[family-type](#)] *keyword*

### **advertised-stale-time** *number*

Synopsis LLGR stale routes time for family override

Context **configure** [router](#) *string* [bgp graceful-restart long-lived family](#) *keyword* [advertised-stale-time](#) *number*

Tree [advertised-stale-time](#)

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

Platforms All

### **helper-override-stale-time** *number*

Synopsis Locally-configured stale routes override time

Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived family keyword helper-override-stale-time number</a>
Tree	<a href="#">helper-override-stale-time</a>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived forwarding-bits-set keyword</a>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

### **helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <i>router string</i> <a href="#">bgp graceful-restart long-lived helper-override-restart-time number</a>
Tree	<a href="#">helper-override-restart-time</a>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1

Platforms All

### **helper-override-stale-time** *number*

Synopsis Locally-configured stale routes override time

Context **configure** *router string* **bgp graceful-restart long-lived helper-override-stale-time** *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range 0 to 16777215

Introduced 16.0.R1

Platforms All

### **without-no-export** *boolean*

Synopsis Advertise LLGR stale routes to non-LLGR peers

Context **configure** *router string* **bgp graceful-restart long-lived without-no-export** *boolean*

Tree [without-no-export](#)

Description When configured to **true**, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO\_EXPORT standard community is automatically added to the routes.

Default false

Introduced 16.0.R1

Platforms All

### **restart-time** *number*

Synopsis Restart time advertised by GR capability

Context **configure** *router string* **bgp graceful-restart restart-time** *number*

Tree [restart-time](#)

Range	0 to 4095
Default	120
Introduced	16.0.R1
Platforms	All

**stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>graceful-restart</b> <b>stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

**group** [*group-name*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
Description	Commands in this context define BGP peer groups and their group-specific command options. The options in this context are identical to the global BGP options. Any options that are not overridden by the group-specific commands inherit the configuration settings from the BGP global level.
Introduced	16.0.R1
Platforms	All

**[group-name]** *string*

Synopsis	BGP peer group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## add-paths

Synopsis	Enable the <b>add-paths</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths</b>
Tree	<b>add-paths</b>
Description	<p>Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn</b>
Tree	<b>evpn</b>
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	21.10.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn receive</b> <i>boolean</i>
Tree	<b>receive</b>
Default	false
Introduced	21.10.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>add-paths evpn send</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">send</a>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	21.10.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a> <a href="#">receive</a> <i>boolean</i>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv4 unicast prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">add-paths</a> <a href="#">ipv4</a> <a href="#">send</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple routes per IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6 receive boolean</i>
Tree	<i>receive</i>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths ipv6 send (number   keyword)</i>
Tree	<i>send</i>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## label-ipv4

Synopsis	Enter the <b>label-ipv4</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b>
Tree	<b>label-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b> <i>receive boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv4 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv4</b> <i>send (number   keyword)</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## label-ipv6

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b>
Tree	<b>label-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b> <i>receive boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>label-ipv6</b> <i>send (number   keyword)</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv4

Synopsis	Enter the <b>mcast-vpn-ipv4</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b>
Tree	<b>mcast-vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast routes per IPv4 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b> <b>receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast IPv4 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv4</b> <b>send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.

	When not configured, ADD-PATH send capability is not enabled for multicast IPv4 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv6

Synopsis	Enter the <b>mcast-vpn-ipv6</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv6</b>
Tree	<b>mcast-vpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast routes per IPv6 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv6</b> <b>receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv6 VPN prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast IPv6 VPN prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths</i> <b>mcast-vpn-ipv6</b> <b>send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv6 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast IPv6 VPN routes.

Range	1 to 16
Introduced	16.0.R1
Platforms	All

## **mvpn-ipv4**

Synopsis	Enter the <b>mvpn-ipv4</b> context

Introduced	16.0.R1
Platforms	All

**receive** *boolean*

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths vpn-ipv6 receive boolean</i>
Tree	<i>receive</i>
Description	When configured to <b>true</b> , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send** (*number* | *keyword*)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>add-paths vpn-ipv6 send (number   keyword)</i>
Tree	<i>send</i>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the BGP group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**advertise-inactive** *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>advertise-inactive</b> <i>boolean</i>
Tree	<a href="#">advertise-inactive</a>
Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> <li>• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> <li>• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> </ul> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

**advertise-ipv6-next-hops**

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>

Description	Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.  When unconfigured, command settings are inherited from a higher level BGP configuration.
Introduced	16.0.R1
Platforms	All

### **evpn boolean**

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure</b> <i>router string bgp group string advertise-ipv6-next-hops evpn boolean</i>
Tree	<a href="#">evpn</a>
Description	When configured to <b>true</b> , EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.  When configured to <b>false</b> , EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.
Default	false
Introduced	19.5.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string bgp group string advertise-ipv6-next-hops ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Description	When configured to <b>true</b> , IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.  When configured to <b>false</b> , IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	19.5.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Description	<p>When configured to <b>true</b>, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>label-ipv6 boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	<p>When configured to <b>true</b>, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>advertise-ipv6-next-hops</i> <i>vpn-ipv4 boolean</i>
Tree	<a href="#">vpn-ipv4</a>

Description	<p>When configured to <b>true</b>, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">advertise-ipv6-next-hops</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Description	<p>When configured to <b>true</b>, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">aggregator-id-zero</a> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

### **aigp** *boolean*

Synopsis	Add AIGP attribute to advertised routes
----------	---

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>aigp boolean</i>
Tree	<i>aigp</i>
Description	When configured to <b>true</b> , this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance. When configured to <b>false</b> , the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.
Default	false
Introduced	16.0.R1
Platforms	All

### **as-override** *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>as-override boolean</i>
Tree	<i>as-override</i>
Description	When configured to <b>true</b> , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute. This command should be used with caution, as it breaks BGP's loop detection mechanism. When configured to <b>false</b> , no AS override is performed.
Default	false
Introduced	19.7.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>asn-4-byte boolean</i>
Tree	<i>asn-4-byte</i>
Description	When this command inherits a value of <b>true</b> , the use of 4-byte ASNs is supported. When unconfigured, the command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> . When configured to <b>false</b> , this command disables the use of 4-byte ASNs.
Introduced	16.0.R1
Platforms	All

**authentication-key** *string*

Synopsis	BGP authentication key for peers in the group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

**authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BFD is removed from the associated protocol adjacency.</p>
Introduced	16.0.R1
Platforms	All

## bfd-strict-mode

Synopsis	Enter the <b>bfd-strict-mode</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>bfd-strict-mode</b>
Tree	<b>bfd-strict-mode</b>
Introduced	23.7.R1
Platforms	All

## advertise

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>bfd-strict-mode</b> <b>advertise</b>
Tree	<b>advertise</b>
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> <li>• The inherited or configured value for the <b>bfd-liveness</b> command that applies to the peer is <b>true</b>.</li> <li>• The interface associated with the peer has a valid BFD configuration.</li> </ul> <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	23.7.R1
Platforms	All

## holdtime *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>bfd-strict-mode</b> <b>advertise</b> <b>holdtime</b> <i>number</i>
Tree	<b>holdtime</b>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds

Default	30
Introduced	23.7.R1
Platforms	All

### **next-hop-reachability** *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>bfd-strict-mode</b> <b>next-hop-reachability</b> <i>boolean</i>
Tree	<b>next-hop-reachability</b>
Description	<p>When configured to <b>true</b>, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> <li>• The BFD session to the peer is in a down state.</li> <li>• There is a valid interface BFD configuration that applies to the peer.</li> <li>• There is a valid BFD liveness configuration that applies to the peer.</li> </ul> <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is <b>true</b> does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to <b>true</b> only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> <li>• IPv4 VPN</li> <li>• IPv6 VPN</li> <li>• labeled unicast IPv4</li> <li>• labeled unicast IPv6</li> <li>• EVPN</li> <li>• IPv4 multicast</li> <li>• IPv6 multicast</li> <li>• IPv4 VPN multicast</li> <li>• IPv6 VPN multicast</li> </ul> <p>When configured to <b>false</b>, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.</p>

Introduced	23.7.R1
Platforms	All

### **block-prefix-sid** *boolean*

Synopsis	Block the prefix SID attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">block-prefix-sid</a> <i>boolean</i>
Tree	<a href="#">block-prefix-sid</a>
Description	<p>When configured to <b>true</b>, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to <b>false</b>, all prefix SID attributes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### **capability-negotiation** *boolean*

Synopsis	Enable capability negotiation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">capability-negotiation</a> <i>boolean</i>
Tree	<a href="#">capability-negotiation</a>
Description	<p>When configured to <b>true</b>, this command enables the exchange of capabilities.</p> <p>When configured to <b>false</b> and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">client-reflect</a> <i>boolean</i>
Tree	<a href="#">client-reflect</a>
Description	When unconfigured, this command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> .

When the command inherits a value of **true**, client reflection of routes is enabled.  
 When configured to **false**, this command disables client reflection of routes.

Introduced 16.0.R1  
 Platforms All

## cluster

Synopsis Enter the **cluster** context  
 Context **configure router string bgp group string cluster**  
 Tree **cluster**  
 Introduced 16.0.R1  
 Platforms All

## allow-local-fallback *boolean*

Synopsis Allow fallback to RR topology location  
 Context **configure router string bgp group string cluster allow-local-fallback boolean**  
 Tree **allow-local-fallback**  
 Description When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**.  
 When configured to **false**, no route is advertised to the client.  
 Default false  
 Introduced 16.0.R1  
 Platforms All

## cluster-id *string*

Synopsis Route reflector cluster ID  
 Context **configure router string bgp group string cluster cluster-id string**  
 Tree **cluster-id**  
 Introduced 16.0.R1  
 Platforms All

**orr-location** *number*

Synopsis	Optimal route reflection location for the cluster
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>cluster</b> <b>orr-location</b> <i>number</i>
Tree	<b>orr-location</b>
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.  With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs are calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>connect-retry</b> <i>number</i>
Tree	<b>connect-retry</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>damp-peer-oscillations</b>
Tree	<b>damp-peer-oscillations</b>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.  When unconfigured, command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

**error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <i>router string bgp group string damp-peer-oscillations error-interval number</i>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

**idle-hold-time**

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <i>router string bgp group string damp-peer-oscillations idle-hold-time</i>
Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1
Platforms	All

**initial-wait** *number*

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure</b> <i>router string bgp group string damp-peer-oscillations idle-hold-time initial-wait number</i>
Tree	<a href="#">initial-wait</a>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

**max-wait** *number*

Synopsis	Maximum session idle time after repeated instability
----------	--

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>max-wait number</i>
Tree	<a href="#">max-wait</a>
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

### **second-wait** *number*

Synopsis	Time that doubles after each repeated session failure
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>second-wait number</i>
Tree	<a href="#">second-wait</a>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

### **damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>damping</i> <i>boolean</i>
Tree	<a href="#">damping</a>
Introduced	16.0.R1
Platforms	All

### **def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>def-recv-evpn-encap</i> <i>keyword</i>
Tree	<a href="#">def-recv-evpn-encap</a>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.

When unconfigured, the setting for this command is inherited from the BGP global-level configuration.

Options	mpls, vxlan
Introduced	16.0.R1
Platforms	All

## default-label-preference

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-label-preference</a>
Tree	<a href="#">default-label-preference</a>
Introduced	19.5.R1
Platforms	All

## ebgp *number*

Synopsis	Default preference for EBGp
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-label-preference</a> <a href="#">ebgp</a> <i>number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## ibgp *number*

Synopsis	Default preference for IBGP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-label-preference</a> <a href="#">ibgp</a> <i>number</i>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## default-preference

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-preference</a>

Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

**ebgp number**

Synopsis	Default preference for EBGp
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-preference</a> <a href="#">ebgp</a> <i>number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-preference</a> <a href="#">ibgp</a> <i>number</i>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**default-route-target boolean**

Synopsis	Send default RTC route (zero prefix length) to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">default-route-target</a> <i>boolean</i>
Tree	<a href="#">default-route-target</a>
Description	When configured to <b>true</b> , this command sends the default RTC route (zero prefix length) toward the selected peers. When configured to <b>false</b> , a default RTC route is not sent.
Default	false
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dynamic-neighbor**

Synopsis	Enter the <b>dynamic-neighbor</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor</b>
Tree	<b>dynamic-neighbor</b>
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

**interface** [*interface-name*] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Description	Commands in this context configure an unnumbered base router network interface for dynamic neighbors.

If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.

The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.

When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.

Introduced	22.10.R1
------------	----------

Platforms All

### **[interface-name]** *string*

Synopsis Name of the dynamic neighbor interface

Context **configure** [router](#) *string* [bgp group](#) *string* [dynamic-neighbor](#) [interface](#) *string*

Tree [interface](#)

String Length 1 to 32

Notes This element is part of a list key.

Introduced 22.10.R1

### **allowed-peer-as** *string*

Synopsis Allowed peer AS value or range of acceptable values

Context **configure** [router](#) *string* [bgp group](#) *string* [dynamic-neighbor](#) [interface](#) *string* [allowed-peer-as](#) *string*

Tree [allowed-peer-as](#)

Description This command specifies a singular allowed peer AS value or a range of acceptable values in the format *n1..n2*.  
  
All values greater than or equal to *n1* and less than or equal to *n2* are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].

Max. Instances 32

Notes This element is ordered by the user.

Introduced 22.10.R1

Platforms All

### **max-sessions** *number*

Synopsis Maximum number of dynamic sessions allowed

Context **configure** [router](#) *string* [bgp group](#) *string* [dynamic-neighbor](#) [interface](#) *string* [max-sessions](#) *number*

Tree [max-sessions](#)

Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	22.10.R1
Platforms	All

## match

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b>
Tree	<b>match</b>
Description	Commands in this context configure match conditions for the dynamic neighbors.
Introduced	19.5.R1
Platforms	All

## prefix [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Introduced	19.5.R1
Platforms	All

## [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor</b> <b>match</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>allowed-peer-as</b> <i>string</i>
Tree	<a href="#">allowed-peer-as</a>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .  All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

**dynamic-neighbor-limit** *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>dynamic-neighbor-limit</b> <i>number</i>
Tree	<a href="#">dynamic-neighbor-limit</a>
Description	This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.  When unconfigured, the setting is inherited from the BGP global-level configuration.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

**ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>ebgp-default-reject-policy</b>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1

Platforms All

### **egress-engineering**

Synopsis Enable the **egress-engineering** context  
 Context **configure** [router](#) *string* [bgp group](#) *string* [egress-engineering](#)  
 Tree [egress-engineering](#)  
 Introduced 21.7.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BGP egress engineering  
 Context **configure** [router](#) *string* [bgp group](#) *string* [egress-engineering](#) [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Description This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.

---

Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

### **egress-peer-engineering-label-unicast** *boolean*

Synopsis	Generate EPE label-unicast routes for group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">egress-peer-engineering-label-unicast</a> <i>boolean</i>
Tree	<a href="#">egress-peer-engineering-label-unicast</a>
Description	When configured to <b>true</b> , BGP generates a label-unicast route for each /32 or /128 prefix that corresponds to the BGP group address in the scope of the command. These routes can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. They support the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1
Platforms	All

### **enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">enforce-first-as</a> <i>boolean</i>
Tree	<a href="#">enforce-first-as</a>
Introduced	16.0.R1
Platforms	All

### **error-handling**

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">error-handling</a>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

**update-fault-tolerance** *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>error-handling</i> <i>update-fault-tolerance</i> <i>boolean</i>
Tree	<i>update-fault-tolerance</i>
Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

**export**

Synopsis	Enable the <b>export</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>export</i>
Tree	<i>export</i>
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>export policy</i> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<i>policy</i>
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p>

Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).

Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### extended-nh-encoding

Synopsis	Enable the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">extended-nh-encoding</a>
Tree	<a href="#">extended-nh-encoding</a>
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### ipv4 boolean

Synopsis	Advertise encoding capability for IPv4 routes

Introduced	16.0.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>family</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <i>router string bgp group string fast-external-failover boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <i>router string bgp group string graceful-restart</i>
Tree	<a href="#">graceful-restart</a>
Description	<p>Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.</p> <p>When the context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

### **gr-notification** *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <i>router string bgp group string graceful-restart gr-notification boolean</i>
Tree	<a href="#">gr-notification</a>
Description	When configured to <b>true</b> , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the

session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to **false**, NOTIFICATION messages are not supported.

Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure router string bgp group string graceful-restart long-lived</b>
Tree	<a href="#">long-lived</a>
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	16.0.R1
Platforms	All

## advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure router string bgp group string graceful-restart long-lived advertise-stale-to-all-neighbors boolean</b>
Tree	<a href="#">advertise-stale-to-all-neighbors</a>
Default	false
Introduced	16.0.R1
Platforms	All

## advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	<b>configure router string bgp group string graceful-restart long-lived advertised-stale-time number</b>

Tree	<a href="#">advertised-stale-time</a>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Family type for family-specific LLGR configuration
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i> <a href="#">advertised-stale-time</a> <i>number</i>
Tree	<a href="#">advertised-stale-time</a>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215

Default	86400
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<b>helper-override-stale-time</b>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>graceful-restart</b> <b>long-lived</b> <b>forwarding-bits-set</b> <i>keyword</i>
Tree	<b>forwarding-bits-set</b>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

### helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived without-no-export</b> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO\_EXPORT standard community is automatically added to the routes.

Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>graceful-restart restart-time number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

### **stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>graceful-restart stale-routes-time number</i>
Tree	<a href="#">stale-routes-time</a>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>hold-time</i>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

**minimum-hold-time** *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>hold-time</i> <b>minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. When unconfigured, the command value is inherited from the BGP global-level setting.
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>hold-time</i> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances. <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> When unconfigured, the command setting is inherited from the BGP global-level configuration.
Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

**import**

Synopsis	Enable the <b>import</b> context
----------	----------------------------------

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>import</b>
Tree	<b>import</b>
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

### **policy** (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>import policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies route policies that control the handling of inbound routes received from certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>initial-send-delay-zero</b> <i>boolean</i>

Tree	<a href="#">initial-send-delay-zero</a>
Description	<p>When configured to <b>true</b>, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">keepalive</a> <i>number</i>
Tree	<a href="#">keepalive</a>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the <b>hold-time seconds</b> context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> <li>• If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value.</li> <li>• If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval.</li> <li>• If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">label-preference</a> <i>number</i>
Tree	<a href="#">label-preference</a>

Range	1 to 255
Introduced	16.0.R1
Platforms	All

## link-bandwidth

Synopsis	Enter the <b>link-bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a>
Tree	<a href="#">link-bandwidth</a>
Description	<p>Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.</p> <p>When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.</p>
Introduced	16.0.R3
Platforms	All

## accept-from-ebgp

Synopsis	Enter the <b>accept-from-ebgp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">accept-from-ebgp</a>
Tree	<a href="#">accept-from-ebgp</a>
Introduced	16.0.R4
Platforms	All

## ipv4 *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes

**local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <i>group</i> <i>string</i> <b>local-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i>   <i>interface-name</i> )

Tree	<a href="#">local-address</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## local-as

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-as</a>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

## as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-as</a> <i>as-number</i> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-as</a> <a href="#">prepend-global-as</a> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-as</b> <b>private</b> <i>boolean</i>
Tree	<b>private</b>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-preference</b> <i>number</i>
Tree	<b>local-preference</b>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

**loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect</b> <i>keyword</i>
Tree	<b>loop-detect</b>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

**loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect-threshold</b> <i>number</i>
Tree	<b>loop-detect-threshold</b>

Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <b>min-route-advertisement</b> <i>number</i>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <b>monitor</b>
Tree	<a href="#">monitor</a>
Description	Commands in this context specify BMP-related configurations at the BGP group level. When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>all-stations</b> <i>boolean</i>
Tree	<a href="#">all-stations</a>
Description	<p>When configured to <b>true</b>, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to <b>false</b>, the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**route-monitoring**

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>route-monitoring</b>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

**post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>monitor</b> <b>route-monitoring</b> <b>post-policy</b> <i>boolean</i>
Tree	<a href="#">post-policy</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor route-monitoring pre-policy</a> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp station</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>multihop</b> <i>number</i>
Tree	<b>multihop</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **multipath-eligible** *boolean*

Synopsis	Allow routes from group peers in multipath eligibility
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>multipath-eligible</b> <i>boolean</i>
Tree	<b>multipath-eligible</b>
Default	false
Introduced	19.5.R1
Platforms	All

### **next-hop-self** *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>next-hop-self</b> <i>boolean</i>
Tree	<b>next-hop-self</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **next-hop-unchanged**

Synopsis	Enter the <b>next-hop-unchanged</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>next-hop-unchanged</b>
Tree	<b>next-hop-unchanged</b>
Description	Commands in this context specify the IP address families that allow unchanged BGP next-hops when sending BGP routes to peers in the group.
Introduced	16.0.R1
Platforms	All

**evpn boolean**

Synopsis	Advertise EVPN routes with unchanged BGP next hop
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>next-hop-unchanged evpn boolean</i>
Tree	<a href="#">evpn</a>
Default	false
Introduced	20.2.R1
Platforms	All

**label-ipv4 boolean**

Synopsis	Advertise label-IPv4 routes with unchanged BGP next hop
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>next-hop-unchanged label-ipv4 boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6 boolean**

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>next-hop-unchanged label-ipv6 boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4 boolean**

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>next-hop-unchanged vpn-ipv4 boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">next-hop-unchanged</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **origin-validation**

Synopsis	Enter the <b>origin-validation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">origin-validation</a>
Tree	<a href="#">origin-validation</a>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">origin-validation</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">origin-validation</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>origin-validation</i> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6** *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>origin-validation</i> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**outbound-route-filtering**

Synopsis	Enable the <b>outbound-route-filtering</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <b>outbound-route-filtering</b>
Tree	<a href="#">outbound-route-filtering</a>
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).  When this context is unconfigured, the group command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

**extended-community**

Synopsis	Enable the <b>extended-community</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <b>outbound-route-filtering</b> <b>extended-community</b>
Tree	<a href="#">extended-community</a>

Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities.  When this context is unconfigured, the command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

### **accept-orf** *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	<b>configure</b> <i>router string bgp group string outbound-route-filtering extended-community accept-orf boolean</i>
Tree	<a href="#">accept-orf</a>
Description	When configured to <b>true</b> , the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.  When unconfigured, the command inherits the value of the global-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> .  When this command inherits a value of <b>false</b> , the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.
Introduced	16.0.R1
Platforms	All

### **send-orf**

Synopsis	Enable the <b>send-orf</b> context
Context	<b>configure</b> <i>router string bgp group string outbound-route-filtering extended-community send-orf</i>
Tree	<a href="#">send-orf</a>
Description	Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.  When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

**route-target** [**community-name**] *string*

Synopsis	Add a list entry for <b>route-target</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>outbound-route-filtering</b> <b>extended-community</b> <b>send-orf</b> <b>route-target</b> <i>string</i>
Tree	<b>route-target</b>
Introduced	16.0.R1
Platforms	All

**[community-name]** *string*

Synopsis	Route target community name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>outbound-route-filtering</b> <b>extended-community</b> <b>send-orf</b> <b>route-target</b> <i>string</i>
Tree	<b>route-target</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Enable passive mode for BGP communication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1
Platforms	All

**path-mtu-discovery** *boolean*

Synopsis	Enable Path MTU Discovery
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<b>path-mtu-discovery</b>
Description	When configured to <b>true</b> , Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>peer-as number</i>
Tree	<a href="#">peer-as</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>peer-ip-tracking boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

**preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**prefix-limit** [**family**] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i>
Tree	<b>prefix-limit</b>
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	16.0.R1
Platforms	All

**[family]** *keyword*

Synopsis	Address family to which the limit applies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i>
Tree	<b>prefix-limit</b>
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**hold-excess** *number*

Synopsis	Percentage of maximum routes to install in route table
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>prefix-limit</b> <i>keyword</i> <b>hold-excess</b> <i>number</i>
Tree	<b>hold-excess</b>

Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the <b>post-import</b> command is configured to <b>true</b>, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the <b>idle-timeout</b> and <b>log-only</b> commands.</p>
Range	1 to 100
Introduced	23.7.R1
Platforms	All

### **idle-timeout** *number*

Synopsis	Time BGP peering remains idle before reconnecting
Context	<b>configure</b> <i>router string bgp group string prefix-limit keyword idle-timeout number</i>
Tree	<a href="#">idle-timeout</a>
Description	<p>This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.</p> <p>When unconfigured, the BGP peer stays down until the operator performs a reset. This command and <b>log-only</b> cannot be configured simultaneously.</p>
Range	1 to 1024
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	<b>configure</b> <i>router string bgp group string prefix-limit keyword log-only boolean</i>
Tree	<a href="#">log-only</a>
Description	<p>When configured to <b>true</b>, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and <b>idle-timeout</b> cannot be configured simultaneously.</p> <p>When configured to <b>false</b>, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure</b> <i>router string bgp group string prefix-limit keyword maximum number</i>
Tree	<a href="#">maximum</a>
Description	This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.  When <b>log-only</b> is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

### **post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure</b> <i>router string bgp group string prefix-limit keyword post-import boolean</i>
Tree	<a href="#">post-import</a>
Description	When configured to <b>true</b> , the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.  When configured to <b>false</b> , the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure</b> <i>router string bgp group string prefix-limit keyword threshold number</i>
Tree	<a href="#">threshold</a>

---

Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

### **limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>remove-private limited</b> <i>boolean</i>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>remove-private replace</b> <i>boolean</i>
Tree	<b>replace</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <b>remove-private skip-peer-as</b> <i>boolean</i>

Tree	<a href="#">skip-peer-as</a>
Default	false
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## route-advertisement

Synopsis	Enable the <b>route-advertisement</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">route-advertisement</a>
Tree	<a href="#">route-advertisement</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## drop-routes-with-srv6-tlvs *boolean*

Synopsis	Drop BGP routes with SRv6 TLVs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <i>group</i> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">route-advertisement</a> <a href="#">drop-routes-with-srv6-tlvs</a> <i>boolean</i>
Tree	<a href="#">drop-routes-with-srv6-tlvs</a>
Description	When configured to <b>true</b> , the router drops and does not advertise BGP routes (that belong to any address family) with SRv6 TLVs. When configured to <b>false</b> , the router advertises BGP routes with SRv6 TLVs.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement family keyword</i>
Tree	<i>family</i>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[family-type]** *keyword*

Synopsis	IP address type that SRv6 route attributes apply to
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**strip-srv6-tlvs** *boolean*

Synopsis	Strip SRv6 TLVs from BGP routes advertised to peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>segment-routing-v6 route-advertisement family keyword strip-srv6-tlvs boolean</i>
Tree	<i>strip-srv6-tlvs</i>
Description	When configured to <b>true</b> , BGP routes that belong to the address family specified using the <b>family</b> command are advertised to peers with SRv6 TLVs removed. Locally or remotely added SRv6 TLVs can be removed.  When configured to <b>false</b> , SRv6 TLVs are not stripped from BGP routes advertised to peers.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for bgp label-ipv4 routes
----------	---

Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>selective-label-ipv4-install boolean</i>
Tree	<a href="#">selective-label-ipv4-install</a>
Introduced	19.10.R1
Platforms	All

## send-communities

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>send-communities</i>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

## extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>send-communities extended boolean</i>
Tree	<a href="#">extended</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>send-communities large boolean</i>
Tree	<a href="#">large</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p>

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1  
 Platforms All

### **standard** *boolean*

Synopsis Advertise the Communities attribute to peers  
 Context **configure** *router string bgp group string send-communities standard boolean*  
 Tree [standard](#)  
 Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.  
 When this command inherits a value of **true**, BGP standard communities are sent to peers in the Communities attribute.  
 When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.  
 Introduced 16.0.R1  
 Platforms All

### **send-default**

Synopsis Enable the **send-default** context  
 Context **configure** *router string bgp group string send-default*  
 Tree [send-default](#)  
 Introduced 19.7.R1  
 Platforms All

### **export-policy** *reference*

Synopsis Export policy name  
 Context **configure** *router string bgp group string send-default export-policy reference*  
 Tree [export-policy](#)  
 Reference **configure** *policy-options policy-statement string*  
 Introduced 19.7.R1  
 Platforms All

**ipv4 boolean**

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>send-default</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

**ipv6 boolean**

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>send-default</b> <b>ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

**split-horizon boolean**

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>split-horizon</b> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

**static-group *boolean***

Synopsis	Use group for static peers
Context	<b>configure</b> <i>router string bgp group string static-group boolean</i>
Tree	<i>static-group</i>
Default	true
Introduced	16.0.R1
Platforms	All

**tcp-mss (*number | keyword*)**

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <i>router string bgp group string tcp-mss (number   keyword)</i>
Tree	<i>tcp-mss</i>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

**third-party-nexthop *boolean***

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	<b>configure</b> <i>router string bgp group string third-party-nexthop boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p>

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.

Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>ttl-security number</i>
Tree	<a href="#">ttl-security</a>
Description	This command configures the minimum TTL value that BGP accepts from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>type keyword</i>
Tree	<a href="#">type</a>
Options	no-type, internal, external
Default	no-type
Introduced	16.0.R1
Platforms	All

### **vpn-apply-export** *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure</b> <i>router string</i> <i>bgp group string</i> <i>vpn-apply-export boolean</i>
Tree	<a href="#">vpn-apply-export</a>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the export policies are not applied.

Introduced 16.0.R1

Platforms All

### **vpn-apply-import** *boolean*

Synopsis Apply base-instance BGP import policies to VPN routes

Context **configure** *router string* *bgp group string* **vpn-apply-import** *boolean*

Tree [vpn-apply-import](#)

Description When configured to **true**, base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the import policies are not applied.

Introduced 16.0.R1

Platforms All

### **hold-time**

Synopsis Enter the **hold-time** context

Context **configure** *router string* *bgp* **hold-time**

Tree [hold-time](#)

Introduced 16.0.R1

Platforms All

### **minimum-hold-time** *number*

Synopsis Minimum hold time between successive messages

Context **configure** *router string* *bgp* **hold-time** **minimum-hold-time** *number*

Tree [minimum-hold-time](#)

Description This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.

Range 0 | 3 to 65535

Default 0

Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp hold-time</b> <i>seconds</i> <i>number</i>
Tree	<b>seconds</b>
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul>
Range	0   3 to 65535
Default	90
Introduced	16.0.R1
Platforms	All

### **ibgp-multipath** *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp ibgp-multipath</b> <i>boolean</i>
Tree	<b>ibgp-multipath</b>
Description	<p>When configured to <b>true</b>, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to <b>false</b>, this command disables IBGP multipath load balancing.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## import

Synopsis	Enable the <b>import</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>import</b>
Tree	<b>import</b>
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When no import policies are specified in this context, BGP routes are accepted by default.</p>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>import</b> <b>policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies a list of objects, where each object is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by this command is allowed to be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as session comes up
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp initial-send-delay-zero</b> <i>boolean</i>
Tree	<b>initial-send-delay-zero</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **inter-as-vpn** *boolean*

Synopsis	Allow advertisement of VPN routes across AS boundaries
Context	<b>configure router</b> <i>string</i> <b>bgp inter-as-vpn</b> <i>boolean</i>
Tree	<b>inter-as-vpn</b>
Description	When configured to <b>true</b> , VPNs can exchange routes across AS boundaries, providing model B connectivity. When configured to <b>false</b> , ASBRs are prevented from advertising VPN routes to peers in other ASs.
Default	false
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure router</b> <i>string</i> <b>bgp keepalive</b> <i>number</i>
Tree	<b>keepalive</b>
Range	0 to 21845
Default	30
Introduced	16.0.R1
Platforms	All

### **label-allocation**

Synopsis	Enter the <b>label-allocation</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp label-allocation</b>
Tree	<b>label-allocation</b>
Introduced	20.10.R1

Platforms All

## label-ipv6

Synopsis Enter the **label-ipv6** context

Context **configure router string** *bgp label-allocation label-ipv6*

Tree [label-ipv6](#)

Description This command controls the label allocation behavior for labeled unicast IPv6 routes. The label options are **explicit-null** and **normal**.

Introduced 20.10.R1

Platforms All

## explicit-null *boolean*

Synopsis Apply advertised label and associated programming rules

Context **configure router string** *bgp label-allocation label-ipv6 explicit-null boolean*

Tree [explicit-null](#)

Description When configured to **true**, this command uses the advertised label and associated programming rules on this instance of BGP. The following applies:

- The router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising. It sets the BGP label value to IPv6 explicit null (value 2), forcing a POP behavior for received packets.
- The received label-unicast IPv6 routes never create tunnels in TTM that can be used to resolve other BGP routes (with an IPv6 next-hop).
- A received label-unicast IPv6 route can be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).

When configured to **false**, advertised label IPv6 programming rules are not used. The following applies

- When the router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising, it sets the BGP label value to a proper value in the dynamic label range and programs a POP or SWAP operation for that label, depending on the origin of the route and various import policy actions that could apply to the route.
- Received label-unicast IPv6 routes that have a prefix length of 128 bits are automatically installed in TTM so that they can be used to resolve other (non-labeled-unicast) BGP routes (with an IPv6 next-hop).
- A received label-unicast IPv6 route cannot be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).
- The label-ipv6 routes used for ECMP toward an IPv6 destination cannot be a mix of routes with regular label values and routes with special (IPv6 explicit null) label values.

Changes in the value of this leaf do not cause the BGP sessions of the base router to reset.

Default	true
Introduced	20.10.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>label-preference</b> <i>number</i>
Tree	<b>label-preference</b>
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

### **link-state-route-export** *boolean*

Synopsis	Allow the export of the TED NLRI database
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>link-state-route-export</b> <i>boolean</i>
Tree	<b>link-state-route-export</b>
Description	When configured to <b>true</b> , this command allows BGP to export link-state information to BGP neighbors. When configured to <b>false</b> , link-state information is not exported.
Default	false
Introduced	16.0.R1
Platforms	All

### **link-state-route-import** *boolean*

Synopsis	Allow the import of the TED NLRI database
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>link-state-route-import</b> <i>boolean</i>
Tree	<b>link-state-route-import</b>
Description	When configured to <b>true</b> , this command enables the import of link-state information into the BGP-LS address family for advertisement to other BGP neighbors. When configured to <b>false</b> , this command disables the import of link-state information.

Default	false
Introduced	16.0.R1
Platforms	All

## local-as

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">local-as</a>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

## as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">local-as</a> <a href="#">as-number</a> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## prepend-global-as *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">local-as</a> <a href="#">prepend-global-as</a> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.  When configured to <b>false</b> , the global ASN is hidden in paths announced to the EBGP peer.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp local-as private boolean</i>
Tree	<a href="#">private</a>
Description	When configured to <b>true</b> , the local ASN is hidden in paths learned from the peering. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp local-preference number</i>
Tree	<a href="#">local-preference</a>
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

**loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp loop-detect keyword</i>
Tree	<a href="#">loop-detect</a>
Options	drop-peer, ignore-loop, off, discard-route
Default	ignore-loop
Introduced	16.0.R1
Platforms	All

**loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp loop-detect-threshold number</i>

Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Default	0
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp med-out</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp min-route-advertisement</a> <i>number</i>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Default	30
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp monitor</a>
Tree	<a href="#">monitor</a>
Description	Commands in this context specify BMP-related configurations. When this context is unconfigured, the sending of BMP messages to BMP monitoring stations is disabled.
Introduced	16.0.R1

---

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BMP monitoring

Context **configure** [router](#) *string* [bgp monitor](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms All

### **all-stations** *boolean*

Synopsis Send BMP messages to all configured stations

Context **configure** [router](#) *string* [bgp monitor](#) [all-stations](#) *boolean*

Tree [all-stations](#)

Description When configured to **true**, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to **false**, the command is not used to indicate the stations which can receive BMP messages. The **station** command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.

Default false

Introduced 16.0.R1

Platforms All

### **route-monitoring**

Synopsis Enter the **route-monitoring** context

Context **configure** [router](#) *string* [bgp monitor](#) [route-monitoring](#)

Tree [route-monitoring](#)

Introduced 16.0.R1

Platforms All

**post-policy *boolean***

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp monitor route-monitoring post-policy</a> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

**pre-policy *boolean***

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp monitor route-monitoring pre-policy</a> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

**station [[station-name](#)] *reference***

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[[station-name](#)] *reference***

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp station</a> <i>string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mp-bgp-keep** *boolean*

Synopsis	Keep rejected VPN-IP routes in RIB-IN
Context	<b>configure</b> <i>router string bgp mp-bgp-keep boolean</i>
Tree	<a href="#">mp-bgp-keep</a>
Description	When configured to <b>true</b> , the RIB-IN retains all MP-BGP routes, including VPN routes rejected by import policies or not imported by any services. As a result, sending Route Refresh messages is not required when an import policy changes. When configured to <b>false</b> , these VPN routes are deleted from the RIB-IN.
Default	false
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	<b>configure</b> <i>router string bgp multihop number</i>
Tree	<a href="#">multihop</a>
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGP peer multiple hops away. This command applies only to EBGP.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **multipath**

Synopsis	Enter the <b>multipath</b> context
Context	<b>configure</b> <i>router string bgp multipath</i>
Tree	<a href="#">multipath</a>
Introduced	16.0.R1
Platforms	All

**ebgp number**

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	<b>configure router</b> <i>string</i> <b>bgp multipath ebgp number</b>
Tree	<b>ebgp</b>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

**family [family-type] keyword**

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure router</b> <i>string</i> <b>bgp multipath family keyword</b>
Tree	<b>family</b>
Introduced	19.5.R1
Platforms	All

**[family-type] keyword**

Synopsis	Address family for which multipath selection applies
Context	<b>configure router</b> <i>string</i> <b>bgp multipath family keyword</b>
Tree	<b>family</b>
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**ebgp number**

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	<b>configure router</b> <i>string</i> <b>bgp multipath family keyword ebgp number</b>
Tree	<b>ebgp</b>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.

Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	<b>configure router string bgp multipath family keyword ibgp number</b>
Tree	<a href="#">ibgp</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **max-paths number**

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	<b>configure router string bgp multipath family keyword max-paths number</b>
Tree	<a href="#">max-paths</a>
Description	<p>This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the <b>family</b> command.</p> <p>Consider the following when configuring this command:</p> <ul style="list-style-type: none"> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is configured, the limit configured in the <b>ebgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is configured, the limit configured in the <b>ibgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> </ul>
Range	1 to 64
Introduced	19.5.R1
Platforms	All

**restrict** *keyword*

Synopsis	AS path restriction for the non-best path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>multipath</b> <b>family</b> <i>keyword</i> <b>restrict</b> <i>keyword</i>
Tree	<b>restrict</b>
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	19.5.R1
Platforms	All

**unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>multipath</b> <b>family</b> <i>keyword</i> <b>unequal-cost</b> <i>boolean</i>
Tree	<b>unequal-cost</b>
Description	When configured to <b>true</b> , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	19.5.R1
Platforms	All

**ibgp** *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>multipath</b> <b>ibgp</b> <i>number</i>
Tree	<b>ibgp</b>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

**max-paths** *number*

Synopsis	Maximum multipaths per prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>multipath</b> <b>max-paths</b> <i>number</i>
Tree	<b>max-paths</b>

Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

**restrict** *keyword*

Synopsis	AS path restriction for the non-best path
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp multipath restrict</b> <i>keyword</i>
Tree	<b>restrict</b>
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	16.0.R1
Platforms	All

**unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp multipath unequal-cost</b> <i>boolean</i>
Tree	<b>unequal-cost</b>
Default	false
Introduced	19.5.R1
Platforms	All

**mvpn-vrf-import-subtype-new** *boolean*

Synopsis	Encode the IANA value of 0x010b in advertised routes
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp mvpn-vrf-import-subtype-new</b> <i>boolean</i>
Tree	<b>mvpn-vrf-import-subtype-new</b>
Description	When configured to <b>true</b> , this command encodes the value of 0x010b for the type or subtype in advertised routes.  When configured to <b>false</b> , BGP encodes the extended community type or subtype as 0x010a to preserve backwards compatibility.
Default	false
Introduced	16.0.R1

Platforms All

### **neighbor** [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis Enter the **neighbor** list instance

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [neighbor](#)

Introduced 16.0.R1

Platforms All

### **[ip-address]** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis IP address of the BGP peer router

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [neighbor](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **add-paths**

Synopsis Enable the **add-paths** context

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
[add-paths](#)

Tree [add-paths](#)

Description Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.

When unconfigured, command settings are inherited from a higher level BGP configuration.

Introduced 16.0.R1

Platforms All

### **evpn**

Synopsis Enter the **evpn** context

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths evpn</b>
Tree	<b>evpn</b>
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	21.10.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths evpn receive boolean</b>
Tree	<b>receive</b>
Default	false
Introduced	21.10.R1
Platforms	All

### **send (number | keyword)**

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths evpn send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	21.10.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1

Platforms All

### receive *boolean*

Synopsis Receive multiple labeled-unicast routes per IPv4 prefix

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths ipv4 receive** *boolean*

Tree **receive**

Description When configured to **true**, the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer.  
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

### send (*number* | *keyword*)

Synopsis Maximum paths per unlabeled IPv4 unicast prefix

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths ipv4 send** (*number* | *keyword*)

Tree **send**

Description This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  
When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range 1 to 16

Options multipaths – Number of best multipaths for each NLRI

Introduced 16.0.R1

Platforms All

### ipv6

Synopsis Enter the **ipv6** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**add-paths ipv6**

Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple routes per IPv6 prefix
Context	<b>configure router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">add-paths ipv6 receive boolean</a>
Tree	<a href="#">receive</a>
Description	When configured to <b>true</b> , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send (number | keyword)**

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	<b>configure router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">add-paths ipv6 send (number   keyword)</a>
Tree	<a href="#">send</a>
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

### **label-ipv4**

Synopsis	Enter the <b>label-ipv4</b> context
----------	-------------------------------------

Context	<b>configure router string</b> <i>bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) add-paths label-ipv4</i>
Tree	<i>label-ipv4</i>
Introduced	16.0.R1
Platforms	All

### **receive boolean**

Synopsis	Receive multiple labeled-unicast routes per IPv4 prefix
Context	<b>configure router string</b> <i>bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) add-paths label-ipv4 receive boolean</i>
Tree	<i>receive</i>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv4 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **send (number | keyword)**

Synopsis	Maximum paths per labeled IPv4 unicast prefix
Context	<b>configure router string</b> <i>bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) add-paths label-ipv4 send (number   keyword)</i>
Tree	<i>send</i>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv4 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for labeled IPv4 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## label-ipv6

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths label-ipv6</b>
Tree	<b>label-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive boolean

Synopsis	Receive multiple labeled-unicast routes per IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths label-ipv6 receive boolean</b>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple labeled-unicast routes per IPv6 prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send (*number* | *keyword*)

Synopsis	Maximum paths per labeled IPv6 unicast prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths label-ipv6 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per labeled IPv6 unicast prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for labeled IPv6 unicast routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv4

Synopsis	Enter the <b>mcast-vpn-ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>mcast-vpn-ipv4</b>
Tree	<b>mcast-vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast routes per IPv4 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>mcast-vpn-ipv4</b> <b>receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv4 VPN prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast IPv4 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths</b> <b>mcast-vpn-ipv4</b> <b>send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv4 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast IPv4 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

## mcast-vpn-ipv6

Synopsis	Enter the <b>mcast-vpn-ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6</b>
Tree	<b>mcast-vpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast routes per IPv6 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast routes per IPv6 VPN prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast IPv6 VPN prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mcast-vpn-ipv6 send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast IPv6 VPN prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast IPv6 VPN routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

## mvpn-ipv4

Synopsis	Enter the <b>mvpn-ipv4</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4</b>
Tree	<b>mvpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast VPN routes per IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast VPN routes per IPv4 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast VPN IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv4 send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv4 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

## mvpn-ipv6

Synopsis	Enter the <b>mvpn-ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6</b>
Tree	<b>mvpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

## receive *boolean*

Synopsis	Receive multiple multicast VPN routes per IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple multicast VPN routes per IPv6 prefix to be received from a peer. When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## send *number*

Synopsis	Maximum paths per multicast VPN IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths mvpn-ipv6 send</b> <i>number</i>
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv6 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

**vpn-ipv4**

Synopsis	Enter the <b>vpn-ipv4</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4</b>
Tree	<b>vpn-ipv4</b>
Introduced	16.0.R1
Platforms	All

**receive boolean**

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple VPN-IPv4 routes per prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send (number | keyword)**

Synopsis	Maximum paths per VPN-IPv4 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv4 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

**vpn-ipv6**

Synopsis	Enter the <b>vpn-ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6</b>
Tree	<b>vpn-ipv6</b>
Introduced	16.0.R1
Platforms	All

**receive boolean**

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6 receive</b> <i>boolean</i>
Tree	<b>receive</b>
Description	When configured to <b>true</b> , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer.  When configured to <b>false</b> , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**send (number | keyword)**

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>add-paths vpn-ipv6 send</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send</b>
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.  When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths – Number of best multipaths for each NLRI
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**advertise-inactive** *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-inactive</b> <i>boolean</i>
Tree	<b>advertise-inactive</b>
Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> <li>• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> <li>• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> </ul> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

**advertise-ipv6-next-hops**

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b>

Tree	<a href="#">advertise-ipv6-next-hops</a>
Description	<p>Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

### **evpn boolean**

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">advertise-ipv6-next-hops evpn boolean</a>
Tree	<a href="#">evpn</a>
Description	<p>When configured to <b>true</b>, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	19.5.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">advertise-ipv6-next-hops ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Description	<p>When configured to <b>true</b>, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false

Introduced	19.5.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Description	<p>When configured to <b>true</b>, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Description	<p>When configured to <b>true</b>, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b> <b>vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Description	<p>When configured to <b>true</b>, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to <b>false</b>, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b> <b>vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Description	<p>When configured to <b>true</b>, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to <b>false</b>, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-ldp-prefix** *boolean*

Synopsis	Advertise active /32 LDP FEC prefixes to BGP peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-ldp-prefix</b> <i>boolean</i>
Tree	<a href="#">advertise-ldp-prefix</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>aggregator-id-zero</b> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

### **aigp** *boolean*

Synopsis	Add AIGP attribute to advertised routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>aigp</b> <i>boolean</i>
Tree	<a href="#">aigp</a>
Description	<p>When configured to <b>true</b>, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.</p>
Introduced	16.0.R1
Platforms	All

### **as-override** *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>as-override</b> <i>boolean</i>
Tree	<a href="#">as-override</a>
Description	When configured to <b>true</b> , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When configured to **false**, no AS override is performed.

Introduced	19.7.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>asn-4-byte</b> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	BGP authentication key
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	16.0.R3

Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**bfd-liveness** *boolean*

Tree **bfd-liveness**

Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1

Platforms All

### **bfd-strict-mode**

Synopsis Enter the **bfd-strict-mode** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**bfd-strict-mode**

Tree **bfd-strict-mode**

Introduced 23.7.R1

Platforms All

### **advertise**

Synopsis Enable the **advertise** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**bfd-strict-mode advertise**

Tree **advertise**

Description Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:

- The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**.
- The interface associated with the peer has a valid BFD configuration.

When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced	23.7.R1
Platforms	All

### **holdtime** *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>bfd-strict-mode advertise holdtime</b> <i>number</i>
Tree	<b>holdtime</b>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	23.7.R1
Platforms	All

### **next-hop-reachability** *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>bfd-strict-mode next-hop-reachability</b> <i>boolean</i>
Tree	<b>next-hop-reachability</b>
Description	When configured to <b>true</b> , the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met: <ul style="list-style-type: none"> <li>• The BFD session to the peer is in a down state.</li> <li>• There is a valid interface BFD configuration that applies to the peer.</li> <li>• There is a valid BFD liveness configuration that applies to the peer.</li> </ul> <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p>

Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent.

Configuring this command to **true** only affects routes belonging to the following address families:

- IPv4
- IPv6
- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced	23.7.R1
Platforms	All

### **block-prefix-sid** *boolean*

Synopsis	Block the prefix SID attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>block-prefix-sid</b> <i>boolean</i>
Tree	<b>block-prefix-sid</b>
Description	When configured to <b>true</b> , all prefix SID attributes are removed from all routes exchanged between EBGp and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.  When configured to <b>false</b> , all prefix SID attributes are propagated without restriction.  A change of this configuration causes the affected BGP sessions to flap.
Default	false
Introduced	19.10.R1
Platforms	All

**capability-negotiation** *boolean*

Synopsis	Enable capability negotiation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>capability-negotiation</b> <i>boolean</i>
Tree	<b>capability-negotiation</b>
Introduced	16.0.R1
Platforms	All

**client-reflect** *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>client-reflect</b> <i>boolean</i>
Tree	<b>client-reflect</b>
Introduced	16.0.R1
Platforms	All

**cluster**

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b>
Tree	<b>cluster</b>
Introduced	16.0.R1
Platforms	All

**allow-local-fallback** *boolean*

Synopsis	Allow fallback to RR topology
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b> <b>allow-local-fallback</b> <i>boolean</i>
Tree	<b>allow-local-fallback</b>
Description	When configured to <b>true</b> , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to <b>true</b> .  When configured to <b>false</b> , this command no route is advertised to the client.
Default	false

Introduced	16.0.R1
Platforms	All

### **cluster-id** *string*

Synopsis	Route reflector cluster ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b> <b>cluster-id</b> <i>string</i>
Tree	<b>cluster-id</b>
Introduced	16.0.R1
Platforms	All

### **orr-location** *number*

Synopsis	Optimal route reflection location for the cluster
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b> <b>orr-location</b> <i>number</i>
Tree	<b>orr-location</b>
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location.  With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>connect-retry</b> <i>number</i>
Tree	<b>connect-retry</b>
Range	1 to 65535
Introduced	16.0.R1

Platforms All

### damp-peer-oscillations

Synopsis Enable the **damp-peer-oscillations** context

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations**

Tree **damp-peer-oscillations**

Introduced 16.0.R1

Platforms All

### error-interval *number*

Synopsis Time after a reset that the session must be error-free

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations error-interval** *number*

Tree **error-interval**

Description This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.

Range 0 to 2048

Default 30

Introduced 16.0.R1

Platforms All

### idle-hold-time

Synopsis Enter the **idle-hold-time** context

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **damp-peer-oscillations idle-hold-time**

Tree **idle-hold-time**

Introduced 16.0.R1

Platforms All

### initial-wait *number*

Synopsis Time session remains in idle state after stabilization

Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>initial-wait</b> <i>number</i>
Tree	<b>initial-wait</b>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

**max-wait** *number*

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>max-wait</b> <i>number</i>
Tree	<b>max-wait</b>
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

**second-wait** *number*

Synopsis	Time that doubles after each repeated session failure
Context	<b>configure</b> <i>router</i> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>second-wait</b> <i>number</i>
Tree	<b>second-wait</b>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

**damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damping</b> <i>boolean</i>
Tree	<b>damping</b>
Introduced	16.0.R1
Platforms	All

### **def-recv-evpn-encap** *keyword*

Synopsis	Default EVPN encapsulation type
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>def-recv-evpn-encap</b> <i>keyword</i>
Tree	<b>def-recv-evpn-encap</b>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.  When unconfigured, the setting for this command is inherited from the BGP group-level configuration.
Options	mpls, vxlan
Introduced	16.0.R1
Platforms	All

### **default-label-preference**

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-label-preference</b>
Tree	<b>default-label-preference</b>
Introduced	19.5.R1
Platforms	All

### **ebgp** *number*

Synopsis	Default preference for EBGp
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-label-preference</b> <b>ebgp</b> <i>number</i>
Tree	<b>ebgp</b>
Range	0 to 255
Introduced	19.5.R1

Platforms All

### **ibgp number**

Synopsis Default preference for IBGP

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**default-label-preference** **ibgp number**

Tree **ibgp**

Range 0 to 255

Introduced 19.5.R1

Platforms All

### **default-preference**

Synopsis Enter the **default-preference** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**default-preference**

Tree **default-preference**

Introduced 19.5.R1

Platforms All

### **ebgp number**

Synopsis Default preference for EBGP

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**default-preference** **ebgp number**

Tree **ebgp**

Range 0 to 255

Introduced 19.5.R1

Platforms All

### **ibgp number**

Synopsis Default preference for IBGP

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)  
**default-preference** **ibgp number**

Tree **ibgp**

Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **default-route-target** *boolean*

Synopsis	Send default RTC route (zero prefix length) to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-route-target</b> <i>boolean</i>
Tree	<b>default-route-target</b>
Description	<p>When configured to <b>true</b>, this command sends the default RTC route (zero prefix length) toward the selected peers.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, a default RTC route is not sent.</p>
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy</b>
Tree	<b>ebgp-default-reject-policy</b>
Introduced	19.5.R1
Platforms	All

### **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy export</b> <i>boolean</i>
Tree	<b>export</b>
Default	true
Introduced	19.5.R1
Platforms	All

### **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy import</b> <i>boolean</i>
Tree	<b>import</b>
Default	true
Introduced	19.5.R1
Platforms	All

### **egress-engineering**

Synopsis	Enable the <b>egress-engineering</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-engineering</b>
Tree	<b>egress-engineering</b>
Introduced	21.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-engineering admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.

Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

### **egress-peer-engineering-label-unicast** *boolean*

Synopsis	Generate EPE label-unicast routes for neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>egress-peer-engineering-label-unicast</b> <i>boolean</i>
Tree	<b>egress-peer-engineering-label-unicast</b>
Description	When configured to <b>true</b> , BGP generates a label-unicast route for the /32 or /128 prefix that corresponds to the BGP neighbor address. This route can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. This supports the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1
Platforms	All

### **enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>enforce-first-as</b> <i>boolean</i>
Tree	<b>enforce-first-as</b>
Description	<p>When configured to <b>true</b> for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the <b>update-fault-tolerance</b> command in the <b>error-handling</b> context is set to <b>false</b>) or the session is left up but the route is treated as withdrawn (if <b>update-fault-tolerance</b> is set to <b>true</b>).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, received routes are not checked for compliance with the rule.</p>
Introduced	16.0.R1
Platforms	All

## error-handling

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>error-handling</b>
Tree	<b>error-handling</b>
Introduced	16.0.R1
Platforms	All

## update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>error-handling update-fault-tolerance</b> <i>boolean</i>
Tree	<b>update-fault-tolerance</b>
Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>export</b>
Tree	<b>export</b>
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the <b>configure policy-options</b> context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>export policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**extended-nh-encoding**

Synopsis	Enable the <b>extended-nh-encoding</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>extended-nh-encoding</b>
Tree	<b>extended-nh-encoding</b>
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>

Introduced 16.0.R1  
Platforms All

### **ipv4** *boolean*

Synopsis Advertise encoding capability for IPv4 routes  
Context **configure** **router** *string* **bgp** **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*extended-nh-encoding* **ipv4** *boolean*  
Tree [ipv4](#)  
Default false  
Introduced 19.5.R1  
Platforms All

### **label-ipv4** *boolean*

Synopsis Advertise encoding capability for label-IPv4 routes  
Context **configure** **router** *string* **bgp** **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*extended-nh-encoding* **label-ipv4** *boolean*  
Tree [label-ipv4](#)

Introduced 16.0.R1  
Platforms All

### **vpn-ipv4** *boolean*

Synopsis Advertise encoding capability for VPN-IPv4 routes  
Context **configure** **router** *string* **bgp** **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
*extended-nh-encoding* **vpn-ipv4** *boolean*  
Tree [vpn-ipv4](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **family**

Synopsis Enable the **family** context

Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>family</b>
Tree	<b>family</b>
Introduced	16.0.R1
Platforms	All

**bgp-ls** *boolean*

Synopsis	Advertise MP-BGP support for the BGP-LS address family
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>family</b> <b>bgp-ls</b> <i>boolean</i>
Tree	<b>bgp-ls</b>
Default	false
Introduced	16.0.R1
Platforms	All

**evpn** *boolean*

Synopsis	Advertise MP-BGP support for the EVPN address family
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>family</b> <b>evpn</b> <i>boolean</i>
Tree	<b>evpn</b>
Default	false
Introduced	16.0.R1
Platforms	All

**flow-ipv4** *boolean*

Synopsis	Advertise support for the flowspec-IPv4 address family
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>family</b> <b>flow-ipv4</b> <i>boolean</i>
Tree	<b>flow-ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **flow-ipv6** *boolean*

Synopsis	Advertise support for the flowspec-IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family flow-ipv6</b> <i>boolean</i>
Tree	<a href="#">flow-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **flow-vpn-ipv4** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family flow-vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">flow-vpn-ipv4</a>
Default	false
Introduced	22.7.R1
Platforms	All

### **flow-vpn-ipv6** *boolean*

Synopsis	Advertise support for FlowSpec-VPN IPv6 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family flow-vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">flow-vpn-ipv6</a>
Default	false
Introduced	22.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Add support for the IPv4 address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **ipv6** *boolean*

Synopsis Advertise MP-BGP support for the IPv6 address family  
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**family** **ipv6** *boolean*  
Tree [ipv6](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **l2-vpn** *boolean*

Synopsis Advertise MP-BGP support for the L2-VPN address family  
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**family** **l2-vpn** *boolean*  
Tree [l2-vpn](#)

**family** **label-ipv4** *boolean*  
Tree [label-ipv4](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **label-ipv6** *boolean*

Synopsis Advertise support for the label-IPv6 address family

---

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family label-ipv6</b> <i>boolean</i>
Tree	<b>label-ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family mcast-ipv4</b> <i>boolean</i>
Tree	<b>mcast-ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family mcast-ipv6</b> <i>boolean</i>
Tree	<b>mcast-ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 VPN MCAST address family
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family mcast-vpn-ipv4</b> <i>boolean</i>
Tree	<b>mcast-vpn-ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-vpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 VPN MCAST address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>mcast-vpn-ipv6</b> <i>boolean</i>
Tree	<b>mcast-vpn-ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mdt-safi** *boolean*

Synopsis	Advertise MP-BGP support for MDT-SAFI address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>mdt-safi</b> <i>boolean</i>
Tree	<b>mdt-safi</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **ms-pw** *boolean*

Synopsis	Advertise support for multi-segment PW address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>ms-pw</b> <i>boolean</i>
Tree	<b>ms-pw</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv4** *boolean*

Synopsis	Advertise support for the IPv4 MCAST VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>mvpn-ipv4</b> <i>boolean</i>
Tree	<b>mvpn-ipv4</b>

Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv6** *boolean*

Synopsis	Advertise support for the IPv6 MCAST VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>mvpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **route-target** *boolean*

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>route-target</b> <i>boolean</i>
Tree	<a href="#">route-target</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-policy-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family</b> <b>sr-policy-ipv4</b> <i>boolean</i>
Tree	<a href="#">sr-policy-ipv4</a>
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false
Introduced	16.0.R1
Platforms	All

**sr-policy-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family sr-policy-ipv6</b> <i>boolean</i>
Tree	<a href="#">sr-policy-ipv6</a>
Description	This command allows the router to advertise the capability for AFI2/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	19.10.R1
Platforms	All

**vpn-ipv4** *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family vpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-ipv6** *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family vpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>fast-external-failover</b> <i>boolean</i>

Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Description	<p>Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	16.0.R1
Platforms	All

## gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart</a> <a href="#">gr-notification</a> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	<p>When configured to <b>true</b>, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to <b>false</b>, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived</b>
Tree	<b>long-lived</b>
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p> <p>The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.</p>
Introduced	16.0.R1
Platforms	All

## advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived advertise-stale-to-all-neighbors</b> <i>boolean</i>
Tree	<b>advertise-stale-to-all-neighbors</b>
Default	false
Introduced	16.0.R1
Platforms	All

## advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived advertised-stale-time</b> <i>number</i>
Tree	<b>advertised-stale-time</b>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword</b>
Tree	<b>family</b>
Introduced	16.0.R1
Platforms	All

**[family-type]** *keyword*

Synopsis	Family type for family-specific LLGR configuration
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword</b>
Tree	<b>family</b>
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword advertised-stale-time number</b>
Tree	<b>advertised-stale-time</b>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

**helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

**forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived forwarding-bits-set</b> <i>keyword</i>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

**helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>

Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived without-no-export</b> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.  When configured to <b>false</b> , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false

Introduced	16.0.R1
Platforms	All

**restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart restart-time</b> <i>number</i>
Tree	<b>restart-time</b>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

**stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

**group** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	BGP peer group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>group</b> <i>reference</i>
Tree	<b>group</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>bgp group</b> <i>string</i>
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

## minimum-hold-time *number*

Synopsis	Minimum time BGP waits between successive messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Maximum hold time between successive messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"><li>• If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li></ul>

- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP group-level configuration.

Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

## import

Synopsis	Enable the <b>import</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>import</b>
Tree	<b>import</b>
Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the <b>configure policy-options</b> context.  When this context is unconfigured, the policy association is inherited from the BGP group-level configuration.
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Names of the BGP import policies
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>import policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy</b>
Description	This command specifies route policies that control the handling of inbound routes received from certain peers.  Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.  Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).  Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>initial-send-delay-zero</b> <i>boolean</i>
Tree	<b>initial-send-delay-zero</b>
Description	When configured to <b>true</b> , BGP updates are sent as soon as the session comes up. When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> . When this command inherits a value of <b>false</b> , BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>keepalive</b> <i>number</i>
Tree	<b>keepalive</b>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### **l2vpn-cisco-interop** *boolean*

Synopsis	Allow translation from Cisco non-compliant NLRI format
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>l2vpn-cisco-interop</b> <i>boolean</i>
Tree	<b>l2vpn-cisco-interop</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>label-preference</b> <i>number</i>
Tree	<b>label-preference</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **link-bandwidth**

Synopsis	Enter the <b>link-bandwidth</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth</b>
Tree	<b>link-bandwidth</b>
Introduced	16.0.R3
Platforms	All

### **accept-from-ebgp**

Synopsis	Enable the <b>accept-from-ebgp</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth</b> <b>accept-from-ebgp</b>
Tree	<b>accept-from-ebgp</b>
Introduced	16.0.R4
Platforms	All

### **ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>link-bandwidth accept-from-ebgp</b> <b>ipv4</b> <i>boolean</i>

Tree	<a href="#">loop-detect</a>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect-threshold</b> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

**min-route-advertisement** *number*

Synopsis	Minimum interval between successive prefix updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>min-route-advertisement</b> <i>number</i>
Tree	<b>min-route-advertisement</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor</b>
Tree	<b>monitor</b>
Description	Commands in this context specify BMP-related configurations at the BGP neighbor level.  When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor all-stations</b> <i>boolean</i>
Tree	<b>all-stations</b>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.  When configured to <b>false</b> , the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

## route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring</b>
Tree	<b>route-monitoring</b>
Introduced	16.0.R1
Platforms	All

## post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring post-policy</b> <i>boolean</i>
Tree	<b>post-policy</b>
Default	false
Introduced	16.0.R1
Platforms	All

## pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring pre-policy</b> <i>boolean</i>
Tree	<b>pre-policy</b>

Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Description	This command configures the set of BMP monitoring stations for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp station</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">multihop</a> <i>number</i>
Tree	<a href="#">multihop</a>
Range	1 to 255
Introduced	16.0.R1

Platforms All

### **multipath-eligible** *boolean*

Synopsis Allow routes from this peer in multipath eligibility

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **multipath-eligible** *boolean*

Tree **multipath-eligible**

Introduced 19.5.R1

Platforms All

### **next-hop-self** *boolean*

Synopsis Advertise routes with local address as next-hop address

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-self** *boolean*

Tree **next-hop-self**

Description When configured to **true**, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.

Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the **configure router bgp rr-vpn-forwarding** command should also be configured.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 16.0.R1

Platforms All

### **next-hop-unchanged**

Synopsis Enable the **next-hop-unchanged** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged**

Tree **next-hop-unchanged**

Description Commands in this context specify the IP address families where the next hop remains unchanged when sending BGP routes to peers of the neighbor.

Introduced 16.0.R1

Platforms All

### **evpn** *boolean*

Synopsis Advertise EVPN routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**next-hop-unchanged evpn** *boolean*

Tree **evpn**

Default false

Introduced 20.2.R1

Platforms All

### **label-ipv4** *boolean*

Synopsis Advertise label-IPv4 routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**next-hop-unchanged label-ipv4** *boolean*

Tree **label-ipv4**

Default false

Introduced 16.0.R1

Platforms All

### **label-ipv6** *boolean*

Synopsis Advertise label-IPv6 routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**next-hop-unchanged label-ipv6** *boolean*

Tree **label-ipv6**

Default false

Introduced 16.0.R1

Platforms All

### **vpn-ipv4** *boolean*

Synopsis Advertise VPN IPv4 routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
**next-hop-unchanged vpn-ipv4** *boolean*

Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">next-hop-unchanged</a> <a href="#">vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	20.2.R1
Platforms	All

### **origin-validation**

Synopsis	Enable the <b>origin-validation</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-validation</a>
Tree	<a href="#">origin-validation</a>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-validation</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6 *boolean***

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv4 *boolean***

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**label-ipv6 *boolean***

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**outbound-route-filtering**

Synopsis	Enable the <b>outbound-route-filtering</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>outbound-route-filtering</b>
Tree	<a href="#">outbound-route-filtering</a>
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).

When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced 16.0.R1  
Platforms All

### extended-community

Synopsis Enable the **extended-community** context

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [outbound-route-filtering](#) [extended-community](#)

Tree [extended-community](#)

Description Commands in this context configure the ORF send and receive capabilities based on Extended Communities.

When this context is unconfigured, the command settings are inherited from the group-level configuration.

Introduced 16.0.R1  
Platforms All

### accept-orf *boolean*

Synopsis Negotiate with peer to accept BGP ORF filters

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [outbound-route-filtering](#) [extended-community](#) [accept-orf](#) *boolean*

Tree [accept-orf](#)

Description When configured to **true**, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced 16.0.R1  
Platforms All

### send-orf

Synopsis Enable the **send-orf** context

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [outbound-route-filtering](#) [extended-community](#) [send-orf](#)

Tree	<a href="#">send-orf</a>
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	16.0.R1
Platforms	All

### **route-target** [[community-name](#)] *string*

Synopsis	Add a list entry for <b>route-target</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a> <a href="#">send-orf</a> <a href="#">route-target</a> <i>string</i>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1
Platforms	All

### **[community-name]** *string*

Synopsis	Route target community name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a> <a href="#">send-orf</a> <a href="#">route-target</a> <i>string</i>
Tree	<a href="#">route-target</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

Synopsis	Use passive mode for BGP communication
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">passive</a> <i>boolean</i>
Tree	<a href="#">passive</a>
Introduced	16.0.R1

Platforms All

### **path-mtu-discovery** *boolean*

Synopsis	Enable path MTU discovery
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<b>path-mtu-discovery</b>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to <b>true</b>, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to <b>false</b> and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-as</b> <i>number</i>
Tree	<b>peer-as</b>
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**peer-creation-type** *keyword*

Synopsis	Peer creation type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-creation-type</b> <i>keyword</i>
Tree	<b>peer-creation-type</b>
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	16.0.R1
Platforms	All

**peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-ip-tracking</b> <i>boolean</i>
Tree	<b>peer-ip-tracking</b>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

**preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Description	This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

When unconfigured, the command setting is inherited from the group-level configuration.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit** [*family*] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i>
Tree	<a href="#">prefix-limit</a>
Introduced	16.0.R1
Platforms	All

### **[family]** *keyword*

Synopsis	Address family to which the limit applies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i>
Tree	<a href="#">prefix-limit</a>
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **hold-excess** *number*

Synopsis	Percentage of maximum routes to install in route table
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>hold-excess</b> <i>number</i>
Tree	<a href="#">hold-excess</a>

Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the <b>post-import</b> command is configured to <b>true</b>, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the <b>idle-timeout</b> and <b>log-only</b> commands.</p>
Range	1 to 100
Introduced	23.7.R1
Platforms	All

### **idle-timeout** *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>idle-timeout</b> <i>number</i>
Tree	<a href="#">idle-timeout</a>
Description	<p>This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.</p> <p>When unconfigured, the command inherits the value from the group-level configuration.</p>
Range	1 to 1024
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>log-only</b> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

### **post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>post-import</b> <i>boolean</i>
Tree	<b>post-import</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **remove-private**

Synopsis	Enable the <b>remove-private</b> context
----------	--

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

**limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private limited</b> <i>boolean</i>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

**replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private replace</b> <i>boolean</i>
Tree	<b>replace</b>
Default	false
Introduced	19.10.R1
Platforms	All

**skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private skip-peer-as</b> <i>boolean</i>
Tree	<b>skip-peer-as</b>
Default	false
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6</b>
Tree	<b>segment-routing-v6</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## route-advertisement

Synopsis	Enable the <b>route-advertisement</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement</b>
Tree	<b>route-advertisement</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## drop-routes-with-srv6-tlvs *boolean*

Synopsis	Drop BGP routes with SRv6 TLVs
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement drop-routes-with-srv6-tlvs</b> <i>boolean</i>
Tree	<b>drop-routes-with-srv6-tlvs</b>
Description	When configured to <b>true</b> , the router drops and does not advertise BGP routes (that belong to any address family) with SRv6 TLVs. When configured to <b>false</b> , the router advertises BGP routes with SRv6 TLVs.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## family [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i>
Tree	<b>family</b>

Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[family-type]** *keyword*

Synopsis	IP address type that SRv6 route attributes apply to
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **strip-srv6-tlvs** *boolean*

Synopsis	Strip SRv6 TLVs from BGP routes advertised to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>segment-routing-v6 route-advertisement family</b> <i>keyword</i> <b>strip-srv6-tlvs</b> <i>boolean</i>
Tree	<b>strip-srv6-tlvs</b>
Description	When configured to <b>true</b> , BGP routes that belong to the address family specified using the <b>family</b> command are advertised to peers with SRv6 TLVs removed. Locally or remotely added SRv6 TLVs can be removed.  When configured to <b>false</b> , SRv6 TLVs are not stripped from BGP routes advertised to peers.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>selective-label-ipv4-install</b> <i>boolean</i>
Tree	<b>selective-label-ipv4-install</b>
Introduced	19.10.R1
Platforms	All

## send-communities

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b>
Tree	<b>send-communities</b>
Introduced	16.0.R1
Platforms	All

## extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities extended</b> <i>boolean</i>
Tree	<b>extended</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities large</b> <i>boolean</i>
Tree	<b>large</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

**standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b> <b>standard</b> <i>boolean</i>
Tree	<b>standard</b>
Description	When unconfigured, this command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>true</b> .  When this command inherits a value of <b>true</b> , BGP standard communities are sent to peers in the Communities attribute.  When configured to <b>false</b> , all standard communities are removed from all routes advertised to BGP peers.
Introduced	16.0.R1
Platforms	All

**send-default**

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b>
Tree	<b>send-default</b>
Introduced	19.7.R1
Platforms	All

**export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Introduced	19.7.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Enable IPv4 family type
----------	-------------------------

Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Default	false
Introduced	19.7.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	19.7.R1
Platforms	All

**split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

**tcp-mss** (*number | keyword*)

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>tcp-mss</b> ( <i>number   keyword</i> )
Tree	<b>tcp-mss</b>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

**third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>third-party-nexthop</b> <i>boolean</i>
Tree	<b>third-party-nexthop</b>
Introduced	16.0.R1
Platforms	All

**ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>ttl-security</b> <i>number</i>
Tree	<b>ttl-security</b>
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.

When unconfigured, the command inherits the value of the group-level setting.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Options	no-type, internal, external
Introduced	16.0.R1
Platforms	All

### **vpn-apply-export** *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>vpn-apply-export</b> <i>boolean</i>
Tree	<b>vpn-apply-export</b>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the group-level setting ( <b>true</b> or <b>false</b> ). The command cannot be explicitly configured to <b>false</b> . When this command inherits a value of <b>false</b> , the export policies are not applied.
Introduced	16.0.R1
Platforms	All

### **vpn-apply-import** *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>vpn-apply-import</b> <i>boolean</i>
Tree	<b>vpn-apply-import</b>
Description	When configured to <b>true</b> , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the import policies are not applied.

Introduced	16.0.R1
Platforms	All

## neighbor-trust

Synopsis	Enter the <b>neighbor-trust</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor-trust</b>
Tree	<b>neighbor-trust</b>
Description	<p>Commands in this context enable a label security feature at an inter-AS boundary for the specified IP families.</p> <p>This label security feature allows the configuration of a router, acting in a PE or in an ASBR role, to accept packets of VPN-IP or EVPN prefixes only from direct EBGP neighbors to which it advertised a service label.</p> <p>The untrusted state identifies the participating interfaces. The router supports a maximum of 15 network interfaces that can participate in this feature.</p> <p>At a high level, BGP tracks each direct EBGP neighbor over an untrusted interface and to which it sent a prefix label. For each of those prefixes, BGP programs a bit map in the ILM record that indicates, on a per-untrusted interface basis, whether the matching received packets must be forwarded or dropped.</p>
Introduced	16.0.R4
Platforms	All

## evpn boolean

Synopsis	Enable inter-AS label security for the EVPN family
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor-trust evpn boolean</b>
Tree	<b>evpn</b>
Default	false
Introduced	23.3.R1
Platforms	All

## vpn-ipv4 boolean

Synopsis	Enable inter-AS label security for the VPN-IPv4 family
Context	<b>configure</b> <i>router string</i> <b>bgp neighbor-trust vpn-ipv4 boolean</b>

Tree	<a href="#">vpn-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **vpn-ipv6** *boolean*

Synopsis	Enable inter-AS label security for the VPN-IPv6 family
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp neighbor-trust vpn-ipv6</a> <i>boolean</i>
Tree	<a href="#">vpn-ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **next-hop-resolution**

Synopsis	Enter the <b>next-hop-resolution</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a>
Tree	<a href="#">next-hop-resolution</a>
Introduced	16.0.R1
Platforms	All

### **allow-unresolved-leaking** *boolean*

Synopsis	Allow unresolved BGP routes to be leaked to VPRN routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution allow-unresolved-leaking</a> <i>boolean</i>
Tree	<a href="#">allow-unresolved-leaking</a>
Description	When configured to <b>true</b> , this command instructs BGP in the base router instance to allow its routes to be leaked to other (VPRN) BGP instances even if the routes to be leaked do not have a BGP next-hop that can be resolved by the base instance. When configured to <b>false</b> , VPRN cannot import a route.
Default	false
Introduced	19.10.R1
Platforms	All

## labeled-routes

Synopsis	Enter the <b>labeled-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a>
Tree	<a href="#">labeled-routes</a>
Introduced	16.0.R1
Platforms	All

## allow-static *boolean*

Synopsis	Allow static routes to resolve BGP next-hop
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">allow-static</a> <i>boolean</i>
Tree	<a href="#">allow-static</a>
Description	<p>When configured to <b>true</b>, the BGP next-hop of label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 routes received from any EBGP or IBGP peer can be resolved using static routes, except for static default routes (0/0 and ::/0).</p> <p>A static route is less preferred than a local or interface route for resolving the BGP next-hop of labeled route but is more preferred than other IGP routes or tunnels.</p> <p>When configured to <b>false</b>, BGP next-hop resolution using static routes is not allowed.</p> <p>A label-IPv4 or label-IPv6 route can be resolved by a static blackhole route, even when this command is configured to <b>false</b>, but only if the static blackhole route is the longest prefix match (LPM) static route for the BGP next-hop address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## rr-use-route-table *boolean*

Synopsis	Use RTM to resolve BGP next-hop if TTM resolution fails
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">rr-use-route-table</a> <i>boolean</i>
Tree	<a href="#">rr-use-route-table</a>
Description	<p>When configured to <b>true</b>, this command enables BGP to perform a lookup of IGP routes in the route table to resolve the BGP next-hop of label-IPv4 and label-IPv6 routes. This is useful for a Route Reflector (RR) that does not participate in tunnel signaling protocols such as LDP and RSVP and therefore, does not have tunnels to resolve the BGP next-hops of label-unicast routes.</p> <p>Disable route table installation (via the <b>route-table-install</b> command) before setting this command to <b>true</b>; otherwise, forwarding of label routes resolved in this way will be incorrect.</p>

When configured to **false**, RTM next-hop resolution is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

## transport-tunnel

Synopsis	Enter the <b>transport-tunnel</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a>
Tree	<a href="#">transport-tunnel</a>
Description	Commands in this context configure options for the next-hop resolution of BGP labeled routes (VPN-IP and labeled-unicast) using tunnels in TTM.
Introduced	16.0.R1
Platforms	All

## family [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

## [[family-type](#)] *keyword*

Synopsis	Address family type for tunnel selection
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Options	vpn, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>allow-flex-algo-fallback</i> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	When configured to <b>true</b> , a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.  When configured to <b>false</b> , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	20.10.R1
Platforms	All

**enforce-strict-tunnel-tagging** *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>enforce-strict-tunnel-tagging</i> <i>boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Description	When configured to <b>true</b> , the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered.  When configured to <b>false</b> , matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	16.0.R1
Platforms	All

**resolution** *keyword*

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>labeled-routes</i> <i>transport-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution</i> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	none, filter, any

Default	filter
Introduced	16.0.R1
Platforms	All

## resolution-filter

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

## bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">bgp</a> <i>boolean</i>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.  When configured to <b>false</b> , BGP tunneling for next-hop resolution is not enabled.
Introduced	16.0.R1
Platforms	All

## ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">ldp</a> <i>boolean</i>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , this command enables the selection of LDP tunneling for next-hop resolution and specifies the LDP tunnels in the tunnel table corresponding to /32 IPv4 FECs and /128 IPv6 FECs.  When configured to <b>false</b> , LDP tunneling for next-hop resolution is not enabled.
Default	true

Introduced	16.0.R1
Platforms	All

### **mpls-fwd-policy** *boolean*

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">mpls-fwd-policy</a> <i>boolean</i>
Tree	<a href="#">mpls-fwd-policy</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">rib-api</a> <i>boolean</i>
Tree	<a href="#">rib-api</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">rsvp</a> <i>boolean</i>
Tree	<a href="#">rsvp</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations. This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, this command disables the selection of RSVP tunneling for next-hop resolution.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">sr-isis</a> <i>boolean</i>
Tree	<a href="#">sr-isis</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment-routing tunnel in the tunnel table submitted by the lowest preference IS-IS instance or, in case of a tie, the lowest numbered IS-IS instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family</a> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">sr-ospf</a> <i>boolean</i>
Tree	<a href="#">sr-ospf</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPF instance or, in case of a tie, the lowest numbered OSPF instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family keyword</a> <a href="#">resolution-filter</a> <b>sr-ospf3</b> <i>boolean</i>
Tree	<a href="#">sr-ospf3</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R6
Platforms	All

**sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes</a> <a href="#">transport-tunnel</a> <a href="#">family keyword</a> <a href="#">resolution-filter</a> <b>sr-policy</b> <i>boolean</i>
Tree	<a href="#">sr-policy</a>
Description	<p>When configured to <b>true</b>, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy. Next hop resolution of VPN-IP routes by SR policies is not supported.</p> <p>When configured to <b>false</b>, segment routing policies are not enabled for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution labeled-routes transport-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-te</b> <i>boolean</i>
Tree	<b>sr-te</b>
Description	When configured to <b>true</b> , this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.  In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.  When configured to <b>false</b> , the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	16.0.R1
Platforms	All

**udp** *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution labeled-routes transport-tunnel family</b> <i>keyword</i> <b>resolution-filter udp</b> <i>boolean</i>
Tree	<b>udp</b>
Default	false
Introduced	16.0.R1
Platforms	All

**use-bgp-routes**

Synopsis	Enter the <b>use-bgp-routes</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution labeled-routes use-bgp-routes</b>
Tree	<b>use-bgp-routes</b>
Introduced	21.2.R1
Platforms	All

**label-ipv6-explicit-null** *boolean*

Synopsis	Use BGP routes to resolve address family routes
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">labeled-routes use-bgp-routes label-ipv6-explicit-null</a> <i>boolean</i>
Tree	<a href="#">label-ipv6-explicit-null</a>
Description	<p>When configured to <b>true</b>, a labeled IPv6 route with the explicit-null label can be resolved by other routes, and also by unlabeled IPv4 routes and unlabeled IPv6 routes that are resolved by static routes, interface routes, or tunnels. Up to four levels of recursive resolution are supported when the top route is a labeled IPv6 route with an explicit-null label. When disabled, a labeled IPv6 route cannot be resolved by other labeled IPv6 routes.</p> <p>A labeled IPv6 route with a regular label (not explicit-null) is never resolved by other labeled IPv6 routes.</p>
Default	false
Introduced	21.2.R1
Platforms	All

### policy reference

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### shortcut-tunnel

Synopsis	Enter the <b>shortcut-tunnel</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">shortcut-tunnel</a>
Tree	<a href="#">shortcut-tunnel</a>
Description	Commands in this context configure the tunnel types that can be used to resolve unlabeled IPv4 and IPv6 BGP routes.
Introduced	16.0.R1
Platforms	All

### family [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
----------	---------------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for shortcut tunnel selection
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword</i>
Tree	<a href="#">family</a>
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword allow-flex-algo-fallback boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	<p>When configured to <b>true</b>, a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to <b>false</b>, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	20.10.R1
Platforms	All

### **disallow-igp** *boolean*

Synopsis	Do not perform route table lookup to resolve BGP route
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword disallow-igp boolean</i>
Tree	<a href="#">disallow-igp</a>

Description	When configured to <b>true</b> , no attempt is made to resolve the IPv4 or IPv6 BGP route using route table lookup if no resolving tunnel can be found in the tunnel table. When configured to <b>false</b> , route table lookup can be performed if no resolving tunnel is found in the tunnel table.
Default	false
Introduced	16.0.R1
Platforms	All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>enforce-strict-tunnel-tagging</b> <i>boolean</i>
Tree	<b>enforce-strict-tunnel-tagging</b>
Description	When configured to <b>true</b> , the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered. When configured to <b>false</b> , matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	16.0.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Options	none, filter, any
Default	none
Introduced	16.0.R1
Platforms	All

## resolution-filter

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter</b>
Tree	<b>resolution-filter</b>
Introduced	16.0.R1
Platforms	All

## bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter</b> <b>bgp</b> <i>boolean</i>
Tree	<b>bgp</b>
Description	When configured to <b>true</b> , this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes.  When configured to <b>false</b> , BGP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

## ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter</b> <b>ldp</b> <i>boolean</i>
Tree	<b>ldp</b>
Description	When configured to <b>true</b> , BGP selects the LDP FEC that is the longest prefix match to the BGP next-hop address.  When configured to <b>false</b> , LDP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

**mpls-fwd-policy** *boolean*

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>mpls-fwd-policy</i> <i>boolean</i>
Tree	<i>mpls-fwd-policy</i>
Default	false
Introduced	16.0.R4
Platforms	All

**rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>rib-api</i> <i>boolean</i>
Tree	<i>rib-api</i>
Default	false
Introduced	16.0.R4
Platforms	All

**rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp</i> <i>next-hop-resolution</i> <i>shortcut-tunnel</i> <i>family</i> <i>keyword</i> <i>resolution-filter</i> <i>rsvp</i> <i>boolean</i>
Tree	<i>rsvp</i>
Description	<p>When configured to <b>true</b>, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations.</p> <p>This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, this command disables the selection of RSVP tunneling for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-isis boolean**

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router string</i> <b>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-isis boolean</b>
Tree	<a href="#">sr-isis</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment-routing tunnel in the tunnel table submitted by the lowest preference IS-IS instance or, in case of a tie, the lowest numbered IS-IS instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-ospf boolean**

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <i>router string</i> <b>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-ospf boolean</b>
Tree	<a href="#">sr-ospf</a>
Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPF instance or, in case of a tie, the lowest numbered OSPF instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-ospf3 boolean**

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
----------	---

Context	<b>configure router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-ospf3</b> <i>boolean</i>
Tree	<b>sr-ospf3</b>
Description	<p>When configured to <b>true</b>, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R6
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-policy</b> <i>boolean</i>
Tree	<b>sr-policy</b>
Description	<p>When configured to <b>true</b>, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy.</p> <p>When configured to <b>false</b>, segment routing policies are not enabled for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure router</b> <i>string</i> <b>bgp next-hop-resolution shortcut-tunnel family</b> <i>keyword</i> <b>resolution-filter sr-te</b> <i>boolean</i>
Tree	<b>sr-te</b>

Description	<p>When configured to <b>true</b>, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to <b>false</b>, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **use-bgp-routes** *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution use-bgp-routes</a> <i>boolean</i>
Tree	<a href="#">use-bgp-routes</a>
Description	<p>This command enables the use of BGP routes to resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **use-leaked-routes**

Synopsis	Enter the <b>use-leaked-routes</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp next-hop-resolution use-leaked-routes</a>
Tree	<a href="#">use-leaked-routes</a>
Introduced	23.7.R1
Platforms	All

### **static** *boolean*

Synopsis	Use leaked static routes to resolve BGP next hop
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution use-leaked-routes static</i> <i>boolean</i>
Tree	<a href="#">static</a>
Description	<p>When configured to <b>true</b>, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP.</p> <p>When configured to <b>false</b>, the router prevents the use of leaked static routes to resolve BGP routes.</p>
Default	false
Introduced	23.7.R1
Platforms	All

### **vpn-family-policy** *reference*

Synopsis	Policy to filter routes for next-hop resolution
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution vpn-family-policy</i> <i>reference</i>
Tree	<a href="#">vpn-family-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Use weighted ECMP for next-hop tunnel selection for 6PE
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp next-hop-resolution weighted-ecmp</i> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Description	<p>When configured to <b>true</b>, this command enables weighted ECMP for next-hop tunnel selection for 6PE. When weighted ECMP is enabled, the RSVP-TE tunnel used to forward 6PE packets to the ECMP next hop that is chosen according to the outcome of the hash on the packet at the normalized load-balancing weight of the tunnel.</p> <p>When configured to <b>false</b>, weighted ECMP is disabled for next-hop tunnel selection for 6PE.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## optimal-route-reflection

Synopsis	Enter the <b>optimal-route-reflection</b> context
Context	<b>configure</b> <i>router string</i> <b>bgp optimal-route-reflection</b>
Tree	<b>optimal-route-reflection</b>
Introduced	16.0.R1
Platforms	All

## location [*location-id*] *number*

Synopsis	Enter the <b>location</b> list instance
Context	<b>configure</b> <i>router string</i> <b>bgp optimal-route-reflection location</b> <i>number</i>
Tree	<b>location</b>
Description	<p>Commands in this context configure the location ID for the route reflector. A BGP neighbor can be associated with a location if it is a route-reflector client.</p> <p>Up to three IPv4 addresses and three IPv6 addresses can be specified per location.</p> <p>If the TE DB is unable find a node in its topology database that matches a primary address of the location, it tries to find a node matching a secondary address. If this attempt also fails, the TE DB tries to find a node matching a tertiary address.</p> <p>The IP addresses specified for a location should be topologically “close” to a set of clients that should all receive the same optimal path for that location.</p>
Introduced	16.0.R1
Platforms	All

## [*location-id*] *number*

Synopsis	Optimal route reflection location ID
Context	<b>configure</b> <i>router string</i> <b>bgp optimal-route-reflection location</b> <i>number</i>
Tree	<b>location</b>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## primary-ip-address *string*

Synopsis	Primary IPv4 address of the reference location for ORR
----------	--

Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection location number</a> <a href="#">primary-ip-address string</a>
Tree	<a href="#">primary-ip-address</a>
Introduced	16.0.R1
Platforms	All

### **primary-ipv6-address** *string*

Synopsis	Primary IPv6 address of the reference location for ORR
Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection location number</a> <a href="#">primary-ipv6-address string</a>
Tree	<a href="#">primary-ipv6-address</a>
Introduced	16.0.R4
Platforms	All

### **secondary-ip-address** *string*

Synopsis	Secondary IPv4 address of reference location for ORR
Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection location number</a> <a href="#">secondary-ip-address string</a>
Tree	<a href="#">secondary-ip-address</a>
Introduced	16.0.R1
Platforms	All

### **secondary-ipv6-address** *string*

Synopsis	Secondary IPv6 address of reference location for ORR
Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection location number</a> <a href="#">secondary-ipv6-address string</a>
Tree	<a href="#">secondary-ipv6-address</a>
Introduced	16.0.R4
Platforms	All

### **tertiary-ip-address** *string*

Synopsis	Tertiary IPv4 address of the reference location for ORR
----------	---

Context	<b>configure</b> <i>router string</i> <i>bgp optimal-route-reflection location number tertiary-ip-address string</i>
Tree	<i>tertiary-ip-address</i>
Introduced	16.0.R1
Platforms	All

### **tertiary-ipv6-address** *string*

Synopsis	Tertiary IPv6 address of the reference location for ORR
Context	<b>configure</b> <i>router string</i> <i>bgp optimal-route-reflection location number tertiary-ipv6-address string</i>
Tree	<i>tertiary-ipv6-address</i>
Introduced	16.0.R4
Platforms	All

### **spf-wait**

Synopsis	Enter the <b>spf-wait</b> context
Context	<b>configure</b> <i>router string</i> <i>bgp optimal-route-reflection spf-wait</i>
Tree	<i>spf-wait</i>
Description	Commands in this context specify the interval between consecutive SPF calculations performed by the TE DB in support of BGP optimal route reflection. The time components implement an exponential back-off algorithm.
Introduced	16.0.R1
Platforms	All

### **initial-wait** *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	<b>configure</b> <i>router string</i> <i>bgp optimal-route-reflection spf-wait initial-wait number</i>
Tree	<i>initial-wait</i>
Range	1 to 300
Default	5
Introduced	16.0.R1
Platforms	All

### **max-wait** *number*

Synopsis	Maximum interval between consecutive SPF calculations
Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection spf-wait max-wait</a> <i>number</i>
Tree	<a href="#">max-wait</a>
Range	1 to 600
Default	60
Introduced	16.0.R1
Platforms	All

### **second-wait** *number*

Synopsis	Delay between first and second SPF calculation
Context	<b>configure</b> <i>router string</i> <a href="#">bgp optimal-route-reflection spf-wait second-wait</a> <i>number</i>
Tree	<a href="#">second-wait</a>
Range	1 to 300
Default	15
Introduced	16.0.R1
Platforms	All

### **outbound-route-filtering**

Synopsis	Enable the <b>outbound-route-filtering</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp outbound-route-filtering</a>
Tree	<a href="#">outbound-route-filtering</a>
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When unconfigured, the ORF capabilities are not enabled.
Introduced	16.0.R1
Platforms	All

### **extended-community**

Synopsis	Enable the <b>extended-community</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">bgp outbound-route-filtering extended-community</a>

Tree	<a href="#">extended-community</a>
Description	<p>Commands in this context configure the ORF send and receive capabilities based on Extended Communities.</p> <p>When this context is unconfigured, the ORF capabilities for Extended Communities is not enabled.</p>
Introduced	16.0.R1
Platforms	All

### **accept-orf** *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a> <b>accept-orf</b> <i>boolean</i>
Tree	<a href="#">accept-orf</a>
Description	<p>When configured to <b>true</b>, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.</p> <p>When configured to <b>false</b>, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **send-orf**

Synopsis	Enable the <b>send-orf</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">outbound-route-filtering</a> <a href="#">extended-community</a> <b>send-orf</b>
Tree	<a href="#">send-orf</a>
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, ORF send capability is not enabled.</p>
Introduced	16.0.R1
Platforms	All

**route-target** [**community-name**] *string*

Synopsis	Add a list entry for <b>route-target</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>outbound-route-filtering</b> <b>extended-community</b> <b>send-orf</b> <b>route-target</b> <i>string</i>
Tree	<b>route-target</b>
Introduced	16.0.R1
Platforms	All

**[community-name]** *string*

Synopsis	Route target community name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>outbound-route-filtering</b> <b>extended-community</b> <b>send-orf</b> <b>route-target</b> <i>string</i>
Tree	<b>route-target</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**override-tunnel-elc** *boolean*

Synopsis	Enable entropy label capability on BGP tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>override-tunnel-elc</b> <i>boolean</i>
Tree	<b>override-tunnel-elc</b>
Description	<p>When configured to <b>true</b>, this command renders all far ends for BGP tunnels as entropy-label-capable, regardless of any received capability signaling. This ensures that the entropy label will be inserted on BGP tunnels in the absence of capability signaling support by the far end.</p> <p>This is a system-wide configuration, since efficient entropy label operation requires that all LSRs in a network support entropy labels. This command should be used with care, particularly in inter-AS use cases, as entropy label capability may differ between domains.</p> <p>When configured to <b>false</b>, this command disables all far ends for BGP tunnels as entropy-label-capable.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**path-mtu-discovery** *boolean*

Synopsis	Enable Path MTU Discovery
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp path-mtu-discovery</i> <i>boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p> <p>When configured to <b>false</b>, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp peer-ip-tracking</i> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Default	false
Introduced	16.0.R1
Platforms	All

**peer-tracking-policy** *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>bgp peer-tracking-policy</i> <i>reference</i>
Tree	<a href="#">peer-tracking-policy</a>
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p>

Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Description	This command configures the route preference for routes learned from the configured peers.  The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

### **purge-timer** *number*

Synopsis	Maximum time before stale routes are purged
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">purge-timer</a> <i>number</i>
Tree	<a href="#">purge-timer</a>
Description	This command configures the maximum time before stale routes are purged.  When a route refresh request is sent to a peer for VPN-IP routes received from that peer (in the RIB-IN), the routes are set to stale and the purge timer is started. If the routes are not updated (refreshed) before the purge timer expires, the routes are removed.
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

## rapid-update

Synopsis	Enter the <b>rapid-update</b> context
Context	<b>configure router string bgp rapid-update</b>
Tree	<a href="#">rapid-update</a>
Description	Commands in this context specify the address families that are configured to support the rapid update functionality.  The rapid update functionality overrides the remaining time on a peer's MRAI timer and immediately sends routes belonging to the specified address families (and all other pending updates) to the peers receiving these routes.
Introduced	16.0.R1
Platforms	All

## evpn *boolean*

Synopsis	Include EVPN address family routes
Context	<b>configure router string bgp rapid-update evpn boolean</b>
Tree	<a href="#">evpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

## l2-vpn *boolean*

Synopsis	Include L2 VPN address family routes
Context	<b>configure router string bgp rapid-update l2-vpn boolean</b>
Tree	<a href="#">l2-vpn</a>
Default	false
Introduced	16.0.R1
Platforms	All

## label-ipv4 *boolean*

Synopsis	Include labeled IPv4 address family routes
Context	<b>configure router string bgp rapid-update label-ipv4 boolean</b>
Tree	<a href="#">label-ipv4</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **label-ipv6** *boolean*

Synopsis Include labeled IPv6 address family routes  
Context **configure** *router* *string* [bgp rapid-update label-ipv6](#) *boolean*  
Tree [label-ipv6](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mcast-vpn-ipv4** *boolean*

Synopsis Include multicast VPN IPv4 address family routes  
Context **configure** *router* *string* [bgp rapid-update mcast-vpn-ipv4](#) *boolean*  
Tree [mcast-vpn-ipv4](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mcast-vpn-ipv6** *boolean*

Synopsis Include multicast VPN IPv6 address family routes  
Context **configure** *router* *string* [bgp rapid-update mcast-vpn-ipv6](#) *boolean*  
Tree [mcast-vpn-ipv6](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mdt-safi** *boolean*

Synopsis Include MDT SAFI address family routes  
Context **configure** *router* *string* [bgp rapid-update mdt-safi](#) *boolean*  
Tree [mdt-safi](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv4** *boolean*

Synopsis	Include MVPN IPv4 address family routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp rapid-update</b> <b>mvpn-ipv4</b> <i>boolean</i>
Tree	<a href="#">mvpn-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn-ipv6** *boolean*

Synopsis	Include MVPN IPv6 address family routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp rapid-update</b> <b>mvpn-ipv6</b> <i>boolean</i>
Tree	<a href="#">mvpn-ipv6</a>
Default	false
Introduced	16.0.R1

### **route-table-import**

Synopsis	Enter the <b>route-table-import</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp rib-management ipv6 route-table-import</b>
Tree	<a href="#">route-table-import</a>
Description	This command enables the context to specify the name of a route to control the importation of active routes from the IP route table into one of the BGP RIBs.  If this command is configured, then routes dropped or rejected by the configured policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by this command then the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.  Aggregate routes are always imported into each RIB, independent of this command's policy.  Route modifications specified in the actions of this command's policy are ignored and have no effect on the imported routes.

If this command is not configured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp rib-management ipv6 route-table-import policy-name reference</a>

Tree	<a href="#">policy-name</a>
------	-----------------------------

Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.
-------------	--

When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Synopsis	Add a list entry for <b>route-target-list</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>bgp</b> <b>route-target-list</b> <i>string</i>
Tree	<b>route-target-list</b>
Description	This command specifies a route target to be accepted from or advertised to peers.

This command is only applicable if the router is a route-reflector server.

Introduced 16.0.R1  
 Platforms All

### **[community-name] string**

Synopsis Route target community name  
 Context **configure router string bgp route-target-list string**  
 Tree [route-target-list](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **router-id string**

Synopsis Router ID for the BGP instance in the AS  
 Context **configure router string bgp router-id string**  
 Tree [router-id](#)  
 Description This command specifies the router ID to be used with the BGP instance.  
 Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID.  
 When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.  
 Introduced 16.0.R1  
 Platforms All

### **rr-vpn-forwarding boolean**

Synopsis Allow route reflector to forward VPN-IP routes  
 Context **configure router string bgp rr-vpn-forwarding boolean**  
 Tree [rr-vpn-forwarding](#)  
 Description When configured to **true**, the route reflector resolves VPN-IPv4 and VPN-IPv6 routes, sets itself as the next hop, and generates new labels for all the resolved routes.  
 During this process, all received VPN-IP routes, regardless of route target, are imported into the dummy VRF, where the BGP next hops are resolved. The routes are resolved to

next-hop-self, and BGP allocates new VPRN service-label values for the routes, which are then advertised to peers.

The **transport-tunnel** command under the **configure router bgp next-hop-resolution labeled-routes** context determines what types of tunnels are eligible to resolve the next hops. If a received VPN-IP route from IBGP peer X is resolved and selected as the best path so that it can be re-advertised to an IBGP peer Y, and the BGP next-hop is modified toward peer Y (by using the **next-hop-self** command in Y's group or neighbor context or by using a next-hop action in an export policy applied to Y), BGP allocates a new VPRN service label value for the route, signals that new label value to Y, and programs the IOM to do the corresponding label swap operation. The supported combinations of X and Y are outlined below:

- from X (client) to Y (client)
- from X (client) to Y (non-client)
- from X (non-client) to Y (client)

When configured to **false**, the routes are re-advertised without signaling new VPRN labels, even if the BGP next hop is changed.

Nokia recommends setting this command to **false** for scaling and convergence reasons.

Default	false
Introduced	16.0.R1
Platforms	All

## segment-routing

Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## add-srv6-tlvs

Synopsis	Enable the <b>add-srv6-tlvs</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp segment-routing-v6 family keyword add-srv6-tlvs</a>
Tree	<a href="#">add-srv6-tlvs</a>
Description	<p>Commands in this context configure locator information for the family.</p> <p>When a locator is specified for the family, a family route that is redistributed from another protocol is advertised to BGP peers with a prefix SID attribute containing an SRv6 TLV.</p> <p>The commands also have the effect of adding a prefix SID attribute with SRv6 TLV to BGP routes received from other peers without the SRv6 TLV and propagating to other peers with next-hop-self applied.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## locator-name *reference*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp segment-routing-v6 family keyword add-srv6-tlvs locator-name reference</a>
Tree	<a href="#">locator-name</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing segment-routing-v6 base-routing-instance locator reference</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## micro-segment-locator-name *reference*

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp segment-routing-v6 family keyword add-srv6-tlvs micro-segment-locator-name reference</a>
Tree	<a href="#">micro-segment-locator-name</a>

Description	This command adds a prefix SID attribute containing an SRv6 TLV to routes that belong to the family and that are redistributed from another protocol to BGP. This command also adds a prefix SID attribute with SRv6 TLV to BGP routes that are received from other peers without the SRv6 TLV and that are propagated to other peers with next-hop-self applied.
Reference	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ignore-received-srv6-tlvs** *boolean*

Synopsis	Ignore SRv6 TLVs for received routes
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp</a> <a href="#">segment-routing-v6</a> <i>family</i> <i>keyword</i> <a href="#">ignore-received-srv6-tlvs</a> <i>boolean</i>
Tree	<a href="#">ignore-received-srv6-tlvs</a>
Description	<p>When configured to <b>true</b>, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is ignored and the route resolution is based on the BGP next-hop only.</p> <p>When configured to <b>false</b>, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is processed. Such a route is resolved only if its BGP next-hop is reachable and the locator prefix is reachable. The datapath programming and IGP cost to reach the next-hop (used by the BGP decision process) is based on the route to the locator prefix.</p>
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **resolution** *keyword*

Synopsis	Resolution options for routes
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp</a> <a href="#">segment-routing-v6</a> <i>family</i> <i>keyword</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**source-address *string***

Synopsis	Source address used in SRv6 packet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp segment-routing-v6</a> <a href="#">source-address</a> <i>string</i>
Tree	<a href="#">source-address</a>
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**selective-label-ip *keyword***

Synopsis	Label IP routes installed for local use on NHS router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp selective-label-ip</a> <i>keyword</i>
Tree	<a href="#">selective-label-ip</a>
Description	<p>This command enables selective installation of labeled unicast routes for resolution by local services and IP shortcuts on a labeled unicast Next-hop=self router.</p> <p>This command is supported for labeled unicast for both IPv4 and IPv6 routes.</p> <p>The <b>no-install</b> option installs labeled IP routes that are required by services. This option conserves labeled route table space in addition to RTM table space on BGP-LU next-hop-self route reflectors. The <b>route-table-install-only</b> option ensures that the labeled unicast routes are installed in the RTM in full. When <b>no-install</b> is specified, the download of labeled unicast routes for NHLFE resolution by services continues.</p>
Options	no-install, route-table-install-only
Introduced	22.10.R1
Platforms	All

**selective-label-ip-prioritization *boolean***

Synopsis	Enable BGP selective prioritization for labeled routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp selective-label-ip-prioritization</a> <i>boolean</i>
Tree	<a href="#">selective-label-ip-prioritization</a>
Description	When this command is set to <b>true</b> , every labeled IPv4 and IPv6 route that is received and potentially usable by a local service is automatically prioritized for fast control plane

reconvergence. When the reachability of a BGP next-hop changes, the labeled IPv4 and IPv6 routes are updated into the route table first, along with other routes manually tagged as high priority by import policies. A /32 or /128 labeled unicast route (and associated BGP-LU tunnel) is determined to be potentially usable by a local service if one of the following conditions applies:

- the route matches the far-end address of a user-provisioned SDP of a Layer 2 service and the SDP is configured to use BGP tunnels as transport
- the route matches the BGP next-hop address of a BGP-EVPN or IP VPN route, and this VPN route is either imported into a local service or readvertised by the router acting as a next-hop-self route reflector or a model-B ASBR

When this command is set to **false**, selective-label IP prioritization for BGP is not used.

Default	false
Introduced	21.10.R1
Platforms	All

### **selective-label-ipv4-install** *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp selective-label-ipv4-install</a> <i>boolean</i>
Tree	<a href="#">selective-label-ipv4-install</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp send-communities</a>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">bgp send-communities extended</a> <i>boolean</i>
Tree	<a href="#">extended</a>

---

Default	true
Introduced	16.0.R1
Platforms	All

### **large** *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-communities</a> <a href="#">large</a> <i>boolean</i>
Tree	<a href="#">large</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-communities</a> <a href="#">standard</a> <i>boolean</i>
Tree	<a href="#">standard</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-default**

Synopsis	Enter the <b>send-default</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a>
Tree	<a href="#">send-default</a>
Introduced	19.7.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

**ipv4** *boolean*

Synopsis	Enable IPv4 family type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

**ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

**split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bgp</a> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to <b>false</b>, the use of split-horizon is disabled.</p>
Default	false
Introduced	16.0.R1

Platforms All

### **sr-policy-import** *boolean*

**Synopsis** Import all segment routing policies into the BGP RIB

**Context** **configure** *router string* **bgp sr-policy-import** *boolean*

**Tree** [sr-policy-import](#)

**Description** When configured to **true**, statically-configured non-local segment routing policies from the segment routing database are imported into the BGP RIB so that they can be advertised as originated routes toward BGP peers supporting segment routing policies (**sr-policy-ipv4** IP family type).  
When configured to **false**, the SR policies are not imported into the BGP RIB.

**Default** false

**Introduced** 16.0.R1

**Platforms** All

### **subconfed-vpn-forwarding** *boolean*

**Synopsis** Allow subconfed route resolution, next hop and labels

**Context** **configure** *router string* **bgp subconfed-vpn-forwarding** *boolean*

**Tree** [subconfed-vpn-forwarding](#)

**Description** When this is set to **true**, the base router BGP instance retains all received VPN-IPv4 and VPN-IPv6 routes, including those with route targets not matching any VRF import policy of any locally configured VPRN. In addition, when the base router BGP is configured to apply a **next-hop-self** command to a peer of any type (EBGP, IBGP, or confed-EBGP), VPN-IPv4 and VPN-IPv6 routes are advertised to the peer with a new BGP label, next hop, and label-swap forwarding entry. These behaviors described above are applied when the **enable-inter-as-vpn** or **enable-rr-vpn-forwarding** commands are enabled in the **configure router bgp context**, in the same BGP instance. This applies regardless of whether the base router has a confederation configuration.  
When this command is set to **false**, subconfederation VPN forwarding is not used.

**Default** false

**Introduced** 21.10.R1

**Platforms** All

### **tcp-mss** *number*

**Synopsis** TCP maximum segment size override

Context	<b>configure router</b> <i>string</i> <b>bgp tcp-mss</b> <i>number</i>
Tree	<b>tcp-mss</b>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Introduced	21.2.R1
Platforms	All

### **third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGp peers
Context	<b>configure router</b> <i>string</i> <b>bgp third-party-nexthop</b> <i>boolean</i>
Tree	<b>third-party-nexthop</b>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-apply-export** *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
Context	<b>configure router</b> <i>string</i> <b>bgp vpn-apply-export</b> <i>boolean</i>
Tree	<b>vpn-apply-export</b>
Description	When configured to <b>true</b> , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes.

When configured to **false**, the export policies are not applied.

Default	false
Introduced	16.0.R1
Platforms	All

### **vpn-apply-import** *boolean*

Synopsis	Apply base-instance import route policies to VPN routes
Context	<b>configure</b> <i>router string</i> <b>bgp vpn-apply-import</b> <i>boolean</i>
Tree	<a href="#">vpn-apply-import</a>
Description	When configured to <b>true</b> , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When configured to <b>false</b> , the import policies are not applied.
Default	false
Introduced	16.0.R1
Platforms	All

### **bier**

Synopsis	Enable the <b>bier</b> context
Context	<b>configure</b> <i>router string</i> <b>bier</b>
Tree	<a href="#">bier</a>
Introduced	19.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BIER
Context	<b>configure</b> <i>router string</i> <b>bier admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

**bfd-liveness** *keyword*

Synopsis	BIER next-hops with BFD enabled
Context	<b>configure</b> <i>router string bier bfd-liveness keyword</i>
Tree	<a href="#">bfd-liveness</a>
Options	ipv4
Max. Instances	1
Introduced	21.7.R1
Platforms	All

**fast-reroute** *boolean*

Synopsis	Enable BIER Fast Reroute
Context	<b>configure</b> <i>router string bier fast-reroute boolean</i>
Tree	<a href="#">fast-reroute</a>
Default	false
Introduced	21.7.R1
Platforms	All

**template** [[template-name](#)] *string*

Synopsis	Enter the <b>template</b> list instance
Context	<b>configure</b> <i>router string bier template string</i>
Tree	<a href="#">template</a>
Description	Commands in this context create a BIER template to be assigned to IGP.
Introduced	19.5.R1
Platforms	All

**[template-name]** *string*

Synopsis	BIER template name
Context	<b>configure</b> <i>router string bier template string</i>
Tree	<a href="#">template</a>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced	19.5.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the BIER template
Context	<b>configure</b> <b>router</b> <i>string bier template string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

**sub-domain** [**start**] *number end number*

Synopsis	Enter the <b>sub-domain</b> list instance
Context	<b>configure</b> <b>router</b> <i>string bier template string sub-domain number end number</i>
Tree	<a href="#">sub-domain</a>
Introduced	19.5.R1
Platforms	All

**[start]** *number*

Synopsis	Lower bound of sub-domain range
Context	<b>configure</b> <b>router</b> <i>string bier template string sub-domain number end number</i>
Tree	<a href="#">sub-domain</a>
Range	0 to 255
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**end** *number*

Synopsis	Upper bound of sub-domain range
Context	<b>configure</b> <b>router</b> <i>string bier template string sub-domain number end number</i>

Tree	<a href="#">sub-domain</a>
Range	0 to 255
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **bfr-id** *number*

Synopsis	BIER ID for the sub-domain
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bier</a> <a href="#">template</a> <i>string</i> <a href="#">sub-domain</a> <i>number</i> <a href="#">end</a> <i>number</i> <a href="#">bfr-id</a> <i>number</i>
Tree	<a href="#">bfr-id</a>
Range	1 to 4096
Introduced	19.5.R1
Platforms	All

### **multi-topology** *keyword*

Synopsis	Multi-topology for the sub-domain
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bier</a> <a href="#">template</a> <i>string</i> <a href="#">sub-domain</a> <i>number</i> <a href="#">end</a> <i>number</i> <a href="#">multi-topology</a> <i>keyword</i>
Tree	<a href="#">multi-topology</a>
Options	ipv4-unicast, ipv6-unicast, ipv4-multicast, ipv6-multicast
Default	ipv4-unicast
Introduced	19.5.R1
Platforms	All

### **prefix** *string*

Synopsis	IP address used as BFR prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">bier</a> <a href="#">template</a> <i>string</i> <a href="#">sub-domain</a> <i>number</i> <a href="#">end</a> <i>number</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Description	This command specifies the IP address to be used as the BFR prefix. The prefix can be a loopback interface or system IP address.
Default	0.0.0.0

Introduced	19.5.R1
Platforms	All

### **class-forwarding** *boolean*

Synopsis	Allow class-based forwarding over IGP shortcuts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">class-forwarding</a> <i>boolean</i>
Tree	<a href="#">class-forwarding</a>
Description	When configured to <b>true</b> , this command enables class-based forwarding (CBF) over IGP shortcuts.  Weighted ECMP, at the transport-tunnel level of BGP prefixes over IGP shortcuts, and the CBF feature on a per-BGP next-hop basis are mutually exclusive.  When configured to <b>false</b> , class-based forwarding (CBF) over IGP shortcuts is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

### **confederation**

Synopsis	Enter the <b>confederation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a>
Tree	<a href="#">confederation</a>
Description	Commands in this context configure members that are to be part of a confederation.  Creating confederation autonomous systems within as AS can be used to reduce the number of IBGP sessions required within an AS.
Introduced	16.0.R1
Platforms	All

### **confed-as-num** *number*

Synopsis	Confederation AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">confed-as-num</a> <i>number</i>
Tree	<a href="#">confed-as-num</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**members** [[as-number](#)] *number*

Synopsis	Add a list entry for <b>members</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">members</a> <i>number</i>
Tree	<a href="#">members</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

**[as-number]** *number*

Synopsis	Confederation member AS number
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">confederation</a> <a href="#">members</a> <i>number</i>
Tree	<a href="#">members</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">ignore-mclt-on-takeover</a> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	<p>When configured to <b>true</b>, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to <b>false</b>, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a> <b>maximum-client-lead-time</b> <i>number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a> <b>partner-down-delay</b> <i>number</i>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Description	<p>Commands in this context define the peer-related parameters for DHCP failover.</p> <p>DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link.</p> <p>MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.</p> <p>The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>failover</b> <b>peer</b> <i>reference</i> <b>sync-tag</b> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **startup-wait-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>failover</b> <b>startup-wait-time</b> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**force-renews** *boolean*

Synopsis	Send FORCERENEW messages to force renewals of leases
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>force-renews</b> <i>boolean</i>
Tree	<a href="#">force-renews</a>
Description	When configured to <b>true</b> , FORCERENEW messages are enabled for DHCP.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**lease-hold**

Synopsis	Enter the <b>lease-hold</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b>
Tree	<a href="#">lease-hold</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**additional-scenarios**

Synopsis	Enter the <b>additional-scenarios</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b> <b>additional-scenarios</b>
Tree	<a href="#">additional-scenarios</a>
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**internal-lease-ipsec** *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>lease-hold</b> <b>additional-scenarios</b> <b>internal-lease-ipsec</b> <i>boolean</i>
Tree	<a href="#">internal-lease-ipsec</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **solicited-release** *boolean*

Synopsis Apply lease hold timer for solicited releases

Context **configure** *router* *string* **dhcp-server** *dhcpv4* *string* **lease-hold** *additional-scenarios* **solicited-release** *boolean*

Tree **solicited-release**

Description This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **time** *number*

Synopsis Lease hold time

Context **configure** *router* *string* **dhcp-server** *dhcpv4* *string* **lease-hold** *time* *number*

Tree **time**

Range 1 to 631152000

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pool** [*pool-name*] *string*

Synopsis Enter the **pool** list instance

Context **configure** *router* *string* **dhcp-server** *dhcpv4* *string* **pool** *string*

Tree **pool**

Description Commands in this context configure a DHCP address pool on the router.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [*pool-name*] *string*

Synopsis DHCP server pool name

Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string</i>
Tree	<a href="#">pool</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string failover</i>
Tree	<a href="#">failover</a>
Description	Commands in this context define DHCP failover where two DHCP servers manage the same pool of addresses, enabling them to share the load to assign leases for pool and provide backup for each in the event of network outages.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string failover admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-mclt-on-takeover** *boolean*

**Synopsis** Ignore maximum client lead during takeover from partner

**Context** **configure** *router string dhcp-server dhcpv4 string pool string failover ignore-mclt-on-takeover boolean*

**Tree** [ignore-mclt-on-takeover](#)

**Description** When configured to **true**, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.

When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.

**Default** false

**Introduced** 16.0.R1

**Platforms** 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-client-lead-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**Synopsis** Maximum time that DHCP server can extend client's lease

**Context** **configure** *router string dhcp-server dhcpv4 string pool string failover maximum-client-lead-time number*

**Tree** [maximum-client-lead-time](#)

**Description** This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.

**Range** 600 to 86399

**Units** seconds

**Default** 600

**Introduced** 16.0.R1

**Platforms** 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**partner-down-delay** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string failover partner-down-delay number</i>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string failover peer reference</i>
Tree	<a href="#">peer</a>
Description	<p>Commands in this context configure peer-related parameters for DHCP failover.</p> <p>DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link.</p> <p>MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.</p> <p>The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis</p>

communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.

Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [address] *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>peer</b> <i>reference</i>
Tree	<b>peer</b>
Reference	<b>configure</b> <b>redundancy</b> <b>multi-chassis</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>peer</b> <i>reference</i> <b>sync-tag</b> <i>string</i>
Tree	<b>sync-tag</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**startup-wait-time** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>startup-wait-time</b> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-lease-time** *number*

Synopsis	Maximum lease time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>max-lease-time</b> <i>number</i>
Tree	<a href="#">max-lease-time</a>
Range	10 to 315446399
Units	seconds
Default	864000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**min-lease-time** *number*

Synopsis	Minimum lease time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>min-lease-time</b> <i>number</i>
Tree	<a href="#">min-lease-time</a>
Range	10 to 315446399
Units	seconds

Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### minimum-free

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string minimum-free</i>
Tree	<i>minimum-free</i>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### absolute *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string minimum-free absolute number</i>
Tree	<i>absolute</i>
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### event-when-depleted *boolean*

Synopsis	Generate notification when addresses are depleted
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted boolean</i>
Tree	<i>event-when-depleted</i>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.  When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**percent** *number*

Synopsis	Minimum free addresses as a percentage
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string minimum-free percent number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**nak-non-matching-subnet** *boolean*

Synopsis	Send NAK if no match for request address pool range
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string nak-non-matching-subnet boolean</i>
Tree	<a href="#">nak-non-matching-subnet</a>
Description	When configured to <b>true</b> , a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.  When configured to <b>false</b> or unconfigured, the system drops the DHCP packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**offer-time** *number*

Synopsis	Time interval during which a DHCP offer remains valid
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string offer-time number</i>
Tree	<a href="#">offer-time</a>
Range	10 to 600

Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a>
Tree	<a href="#">options</a>
Description	Commands in this context define DHCPv4 pool options.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option [[number](#)] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Description	This command configures DHCP options at the pool level. The pool options can be overruled by the value of the same option in the local user database.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [\[number\]](#) (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis DHCP option specified as an ASCII string

Context **configure** *router string dhcp-server dhcpv4 string pool string options option (number | keyword) ascii-string string*

Tree [ascii-string](#)

String Length 1 to 127

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis DHCP option specified as time duration

Context **configure** *router string dhcp-server dhcpv4 string pool string options option (number | keyword) duration number*

Tree [duration](#)

Range 10 to 315446399

Units seconds

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis Remove DHCP option from configuration

Context **configure** *router string dhcp-server dhcpv4 string pool string options option (number | keyword) empty*

Tree [empty](#)

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### hex-string *string*

Synopsis DHCP option specified as hexadecimal string

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **options** **option** (*number* | *keyword*) **hex-string** *string*

Tree [hex-string](#)

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ipv4-address *string*

Synopsis DHCP option specified as a list of IPv4 addresses

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **options** **option** (*number* | *keyword*) **ipv4-address** *string*

Tree [ipv4-address](#)

Max. Instances 4

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.  
This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### netbios-node-type *keyword*

Synopsis DHCP option specified as a NetBIOS node type

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **options** **option** (*number* | *keyword*) **netbios-node-type** *keyword*

Tree [netbios-node-type](#)

Options b-node, p-node, m-node, h-node

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet** [ipv4-prefix] *string*

Synopsis Enter the **subnet** list instance  
 Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string*  
 Tree [subnet](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv4-prefix]** *string*

Synopsis IPv4 prefix for the subnet  
 Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string*  
 Tree [subnet](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address-range** [start] *string end string*

Synopsis Enter the **address-range** list instance  
 Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string address-range string end string*  
 Tree [address-range](#)  
 Description This command configures the range of IP addresses to be served from the pool subnet. The range includes all the IP addresses between the specified start and end addresses, other than specifically excluded addresses. The start and end addresses must be unique within the subnet.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[start]** *string*

Synopsis Lower bound of the IP address range

Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string address-range string end string</i>
Tree	<a href="#">address-range</a>
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end string**

Synopsis	Upper bound of the IP address range
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string address-range string end string</i>
Tree	<a href="#">address-range</a>
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover-control-type keyword**

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Failover control type for this range
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string address-range string end string failover-control-type keyword</i>
Tree	<a href="#">failover-control-type</a>
Options	local, remote, access-driven
Default	local
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**drain** *boolean*

Synopsis	Prevent new lease assignment from this subnet
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>pool</i> <i>string</i> <i>subnet</i> <i>string</i> <b>drain</b> <i>boolean</i>
Tree	<b>drain</b>
Description	When configured to <b>true</b> , new leases cannot be assigned and existing leases are kept up until they are released. When configured to <b>false</b> , the subnet is active and new leases can be assigned.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**exclude-addresses** [*start*] *string* *end* *string*

Synopsis	Add a list entry for <b>exclude-addresses</b>
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>pool</i> <i>string</i> <i>subnet</i> <i>string</i> <b>exclude-addresses</b> <i>string</i> <i>end</i> <i>string</i>
Tree	<b>exclude-addresses</b>
Description	This command configures an IP address to be excluded from the pool of IP addresses in the subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[start]** *string*

Synopsis	Lower bound of the IP address range
Context	<b>configure</b> <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv4</i> <i>string</i> <i>pool</i> <i>string</i> <i>subnet</i> <i>string</i> <b>exclude-addresses</b> <i>string</i> <i>end</i> <i>string</i>
Tree	<b>exclude-addresses</b>
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**end string**

Synopsis	Upper bound of the IP address range
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<i>exclude-addresses</i>
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-declined number**

Synopsis	Maximum number of declined addresses allowed
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string maximum-declined number</i>
Tree	<i>maximum-declined</i>
Max. Range	0 to 4294967295
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**minimum-free**

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free</i>
Tree	<i>minimum-free</i>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**absolute number**

Synopsis	Minimum number of free addresses in this pool or subnet
----------	---

Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string minimum-free absolute number</i>
Tree	<i>absolute</i>
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate notification when addresses are depleted
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string minimum-free event-when-depleted boolean</i>
Tree	<i>event-when-depleted</i>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted. When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **percent** *number*

Synopsis	Minimum free addresses as a percentage
Context	<b>configure router</b> <i>string dhcp-server dhcpv4 string pool string subnet string minimum-free percent number</i>
Tree	<i>percent</i>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b>
Tree	<b>options</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option [*number*] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>option</b>
Description	This command configures DHCP options at the pool subnet level. The options can be overruled by the value of the same option in the local user database.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [*number*] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>option</b>
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ascii-string</b> <i>string</i>

Tree	<a href="#">ascii-string</a>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">subnet</a> <a href="#">string</a> <a href="#">options</a> <a href="#">option</a> ( <a href="#">number</a>   <a href="#">keyword</a> ) <a href="#">duration</a> <a href="#">number</a>
Tree	<a href="#">duration</a>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">subnet</a> <a href="#">string</a> <a href="#">options</a> <a href="#">option</a> ( <a href="#">number</a>   <a href="#">keyword</a> ) <a href="#">empty</a>
Tree	<a href="#">empty</a>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4-address** *string*

Synopsis	DHCP option specified as a list of IPv4 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<a href="#">ipv4-address</a>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **netbios-node-type** *keyword*

Synopsis	DHCP option specified as a NetBIOS node type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>netbios-node-type</b> <i>keyword</i>
Tree	<a href="#">netbios-node-type</a>
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pool-selection**

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool-selection</b>
Tree	<a href="#">pool-selection</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-gi-address

Synopsis	Enable the <b>use-gi-address</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool-selection</a> <a href="#">use-gi-address</a>
Tree	<a href="#">use-gi-address</a>
Description	<p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scope keyword

Synopsis	GI address-matching scope
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool-selection</a> <a href="#">use-gi-address</a> <a href="#">scope</a> <i>keyword</i>
Tree	<a href="#">scope</a>
Options	subnet, pool
Default	subnet
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-pool-from-client

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool-selection</a> <a href="#">use-pool-from-client</a>
Tree	<a href="#">use-pool-from-client</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delimiter** *string*

Synopsis Delimiter to combine primary and secondary pool names

Context **configure** *router string dhcp-server dhcpv4 string pool-selection use-pool-from-client delimiter string*

Tree [delimiter](#)

Description This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.

String Length 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis Local user database for authentication

Context **configure** *router string dhcp-server dhcpv4 string user-db reference*

Tree [user-db](#)

### ipv6-address *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
----------	---

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string defaults options option (number   keyword) ipv6-address string</i>
Tree	<a href="#">ipv6-address</a>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** *number*

Synopsis	Time this lease remains preferred
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string defaults preferred-lifetime number</i>
Tree	<a href="#">preferred-lifetime</a>
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.  Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-time** *number*

Synopsis	Rebind time for the lease
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string defaults rebind-time number</i>
Tree	<a href="#">rebind-time</a>

Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-time** *number*

Synopsis	Renew time for the lease
Context	<b>configure</b> <i>router</i> <i>string</i> <b>dhcp-server</b> <i>dhcpv6</i> <i>string</i> <b>defaults</b> <b>renew-time</b> <i>number</i>
Tree	<b>renew-time</b>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis Time for the lease to remain valid

Context **configure** **router** *string* **dhcp-server** **dhcpv6** *string* **defaults** **valid-lifetime** *number*

Tree **valid-lifetime**

Description This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.

Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Range 300 to 315446399

Units seconds

Default 86400

Introduced 16.0.R4

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">failover</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">failover</a> <a href="#">ignore-mclt-on-takeover</a> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	<p>When configured to <b>true</b>, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to <b>false</b>, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-client-lead-time** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
----------	---

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string failover maximum-client-lead-time number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **partner-down-delay** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string failover partner-down-delay number</i>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string failover peer reference</i>

Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [address] *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### sync-tag *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### startup-wait-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>failover</b> <b>startup-wait-time</b> <i>number</i>
Tree	<b>startup-wait-time</b>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-rapid-commit** *boolean*

Synopsis	Ignore Rapid Commit option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>ignore-rapid-commit</b> <i>boolean</i>
Tree	<b>ignore-rapid-commit</b>
Description	When configured to <b>true</b> , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-id-mapping** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>interface-id-mapping</b> <i>boolean</i>
Tree	<b>interface-id-mapping</b>
Description	When configured to <b>true</b> , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based

assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-hold

Synopsis	Enter the <b>lease-hold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">lease-hold</a>
Tree	<a href="#">lease-hold</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## additional-scenarios

Synopsis	Enter the <b>additional-scenarios</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">lease-hold</a> <a href="#">additional-scenarios</a>
Tree	<a href="#">additional-scenarios</a>
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## internal-lease-ipsec *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">lease-hold</a> <a href="#">additional-scenarios</a> <a href="#">internal-lease-ipsec</a> <i>boolean</i>
Tree	<a href="#">internal-lease-ipsec</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**solicited-release** *boolean*

Synopsis	Apply lease hold timer for solicited releases
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>lease-hold</b> <b>additional-scenarios</b> <b>solicited-release</b> <i>boolean</i>
Tree	<b>solicited-release</b>
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**time** *number*

Synopsis	Lease hold time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>lease-hold</b> <b>time</b> <i>number</i>
Tree	<b>time</b>
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**lease-query** *boolean*

Synopsis	Handle and reply to lease query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>lease-query</b> <i>boolean</i>
Tree	<b>lease-query</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pool** [*pool-name*] *string*

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i>
Tree	<b>pool</b>

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[pool-name]** *string*

Synopsis DHCP server pool name  
 Context **configure** *router string dhcp-server dhcpv6 string pool string*  
 Tree *pool*  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delegated-prefix**

Synopsis Enter the **delegated-prefix** context  
 Context **configure** *router string dhcp-server dhcpv6 string pool string delegated-prefix*  
 Tree *delegated-prefix*  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **length** *number*

Synopsis Prefix length for pool if unspecified by client  
 Context **configure** *router string dhcp-server dhcpv6 string pool string delegated-prefix length number*  
 Tree *length*  
 Range 48 to 127  
 Default 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum** *number*

Synopsis Maximum delegated prefix length for this pool

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string delegated-prefix maximum number</i>
Tree	<i>maximum</i>
Range	48 to 127
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum** *number*

Synopsis	Minimum delegated prefix length for this pool
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string delegated-prefix minimum number</i>
Tree	<i>minimum</i>
Range	48 to 127
Default	48
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **exclude-prefix** [*ipv6-prefix*] *string*

Synopsis	Add a list entry for <b>exclude-prefix</b>
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string exclude-prefix string</i>
Tree	<i>exclude-prefix</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ipv6-prefix]** *string*

Synopsis	IPv6 prefix to be excluded from available pool prefixes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>exclude-prefix</b> <i>string</i>
Tree	<a href="#">exclude-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>ignore-mclt-on-takeover</b> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>

Description	When configured to <b>true</b> , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.  When configured to <b>false</b> , the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>maximum-client-lead-time</b> <i>number</i>
Tree	<b>maximum-client-lead-time</b>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>partner-down-delay</b> <i>number</i>

Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sync-tag** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover peer reference sync-tag string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**startup-wait-time** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string failover startup-wait-time number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string options</i>

Tree	<a href="#">options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option** [[number](#)] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[number]** (*number* | *keyword*)

Synopsis	DHCP option to send as identification string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**domain-string** *string*

Synopsis	DHCP option specified as a domain name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>domain-string</b> <i>string</i>
Tree	<b>domain-string</b>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<b>duration</b>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string options option (number   keyword) hex-string string</i>
Tree	<a href="#">hex-string</a>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv6-address** *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string options option (number   keyword) ipv6-address string</i>
Tree	<a href="#">ipv6-address</a>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**prefix** [[ipv6-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string</i>
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ipv6-prefix]** *string*

Synopsis	IPv6 prefix to be excluded from available pool prefixes
----------	---

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string</i>
Tree	<i>prefix</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **drain** *boolean*

Synopsis	No new leases can be assigned
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string drain boolean</i>
Tree	<i>drain</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover-control-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Failover control type for this range
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string failover-control-type keyword</i>
Tree	<i>failover-control-type</i>
Options	local, remote, access-driven
Default	local
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string options</i>
Tree	<i>options</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option** [*number*] (*number* | *keyword*)

Synopsis Enter the **option** list instance

Context **configure** **router** *string* **dhcp-server** **dhcpv6** *string* **pool** *string* **prefix** *string* **options** **option** (*number* | *keyword*)

Notes The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **duration**, **empty**, **hex-string**, or **ipv6-address**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**domain-string** *string*

Synopsis	DHCP option specified as a domain name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>domain-string</b> <i>string</i>
Tree	<b>domain-string</b>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<b>duration</b>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv6-address** *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ipv6-address</b> <i>string</i>
Tree	<b>ipv6-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preferred-lifetime** *number*

Synopsis	Time this lease remains preferred
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>preferred-lifetime</b> <i>number</i>
Tree	<b>preferred-lifetime</b>
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.  Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue

to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length-threshold** [[prefix-length](#)] *number*

Synopsis	Enter the <b>prefix-length-threshold</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">prefix-length-threshold</a> <i>number</i>
Tree	<a href="#">prefix-length-threshold</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[prefix-length]** *number*

Synopsis	Delegated prefix length for pool thresholds
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">prefix-length-threshold</a> <i>number</i>
Tree	<a href="#">prefix-length-threshold</a>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **absolute** *number*

Synopsis	Minimum number of free prefixes for this prefix length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">prefix-length-threshold</a> <i>number</i> <a href="#">absolute</a> <i>number</i>
Tree	<a href="#">absolute</a>

Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate a notification when this pool is depleted
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number event-when-depleted boolean</i>
Tree	<a href="#">event-when-depleted</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **percent** *number*

Synopsis	Minimum percentage of free prefixes for prefix length
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-length-threshold number percent number</i>
Tree	<a href="#">percent</a>
Range	1 to 100
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-type**

Synopsis	Enter the <b>prefix-type</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix string prefix-type</i>
Tree	<a href="#">prefix-type</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pd** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-PD prefixes from this prefix pool
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>prefix-type</b> <b>pd</b> <i>boolean</i>
Tree	<b>pd</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**wan-host** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-NA or SLAAC prefixes from this prefix pool
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>prefix-type</b> <b>wan-host</b> <i>boolean</i>
Tree	<b>wan-host</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rebind-time** *number*

Synopsis	Rebind time for the lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>rebind-time</b> <i>number</i>
Tree	<b>rebind-time</b>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA.</p>

The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-time number**

Synopsis	Renew time for the lease
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>renew-time number</b>
Tree	<b>renew-time</b>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**valid-lifetime** *number*

Synopsis	Time for the lease to remain valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>valid-lifetime</b> <i>number</i>
Tree	<b>valid-lifetime</b>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**prefix-length-threshold** [**prefix-length**] *number*

Synopsis	Enter the <b>prefix-length-threshold</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i>
Tree	<b>prefix-length-threshold</b>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[prefix-length]** *number*

Synopsis	Delegated prefix length for pool thresholds
----------	---

Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix-length-threshold number</i>
Tree	<a href="#">prefix-length-threshold</a>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate a notification when this pool is depleted
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix-length-threshold number event-when-depleted boolean</i>
Tree	<a href="#">event-when-depleted</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum-free-percent** *number*

Synopsis	Percentage of free prefixes for this prefix length
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool string prefix-length-threshold number minimum-free-percent number</i>
Tree	<a href="#">minimum-free-percent</a>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pool-selection**

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string pool-selection</i>
Tree	<a href="#">pool-selection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-link-address

Synopsis	Enable the <b>use-link-address</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool-selection use-link-address</b>
Tree	<a href="#">use-link-address</a>
Description	This command configures the local pool selection for DHCPv6 address or prefix assignment to use the link address. When configured, the selected pool contains a prefix covering the link address.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scope *keyword*

Synopsis	Scope of the IP address selection
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool-selection use-link-address scope</b> <i>keyword</i>
Tree	<a href="#">scope</a>
Options	subnet, pool
Default	subnet
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-pool-from-client

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool-selection use-pool-from-client</b>
Tree	<a href="#">use-pool-from-client</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## delimiter *string*

Synopsis	Delimiter to combine primary and secondary pool names
Context	<b>configure</b> <b>router</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool-selection use-pool-from-client</b> <b>delimiter</b> <i>string</i>
Tree	<a href="#">delimiter</a>

Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## server-id

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id</i>
Tree	<a href="#">server-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## duid-enterprise

Synopsis	Enter the <b>duid-enterprise</b> context
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-enterprise</i>
Tree	<a href="#">duid-enterprise</a>
Notes	The following elements are part of a choice: <b>duid-enterprise</b> or <b>duid-link-local</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-string *string*

Synopsis	DUID enterprise server ID specified as an ASCII string
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-enterprise ascii-string string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>ascii-string</b> or <b>hex-string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hex-string** *string*

Synopsis	DUID enterprise server ID specified as a hex string
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-enterprise hex-string string</i>
Tree	<a href="#">hex-string</a>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>ascii-string</b> or <b>hex-string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**duid-link-local**

Synopsis	Derive DUID server ID from a system link-layer address
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string server-id duid-link-local</i>
Tree	<a href="#">duid-link-local</a>
Notes	The following elements are part of a choice: <b>duid-enterprise</b> or <b>duid-link-local</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-identification** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
Context	<b>configure</b> <i>router string dhcp-server dhcpv6 string user-identification keyword</i>
Tree	<a href="#">user-identification</a>
Options	duid, interface-id, interface-id-link-local
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dns**

Synopsis	Enter the <b>dns</b> context
Context	<b>configure</b> <i>router string dns</i>

Tree	<a href="#">dns</a>
Introduced	20.2.R1
Platforms	All

## **redirect-vprn**

Synopsis	Enter the <b>redirect-vprn</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dns</a> <a href="#">redirect-vprn</a>
Tree	<a href="#">redirect-vprn</a>
Description	Commands in this context configure DNS resolution of all packets through the VPRN DNS server.  The VPRN DNS server must be configured before using the commands in this context. If the VPRN DNS server is not configured, all packet resolution fails.
Introduced	20.2.R1
Platforms	All

## **service** [[service-name](#)] *reference*

Synopsis	Enter the <b>service</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dns</a> <a href="#">redirect-vprn</a> <a href="#">service</a> <i>reference</i>
Tree	<a href="#">service</a>
Max. Instances	1
Introduced	20.2.R1
Platforms	All

## **[service-name]** *reference*

Synopsis	Administrative service name

Range	0 to 255
Introduced	20.2.R1
Platforms	All

**ecmp** *number*

Synopsis	Maximum equal-cost routes for routing table instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ecmp</b> <i>number</i>
Tree	<b>ecmp</b>
Description	<p>This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none"> <li>1. The system selects the lowest next hop router ID.</li> <li>2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.</li> </ol>
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

**entropy-label** *boolean*

Synopsis	Use entropy label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>entropy-label</b> <i>boolean</i>
Tree	<b>entropy-label</b>
Description	<p>When configured to <b>true</b>, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP</p>

or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the **configure router mpls** or **configure router mpls lsp** context.

This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, the use of entropy labels is disabled.

Default	false
Introduced	16.0.R1
Platforms	All

### **fib-priority** *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	<b>configure router</b> <i>string fib-priority keyword</i>
Tree	<a href="#">fib-priority</a>
Options	standard, high
Default	standard
Introduced	16.0.R1
Platforms	All

### **fib-telemetry** *boolean*

Synopsis	Collect extra state information
Context	<b>configure router</b> <i>string fib-telemetry boolean</i>
Tree	<a href="#">fib-telemetry</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **firewall**

Synopsis	Enter the <b>firewall</b> context
----------	-----------------------------------

Context	<b>configure</b> <i>router string</i> <b>firewall</b>
Tree	<b>firewall</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **domain** [*name*] *string*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure</b> <i>router string</i> <b>firewall domain</b> <i>string</i>
Tree	<b>domain</b>
Max. Instances	1024
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	Firewall domain name
Context	<b>configure</b> <i>router string</i> <b>firewall domain</b> <i>string</i>
Tree	<b>domain</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the firewall domain
Context	<b>configure</b> <i>router string</i> <b>firewall domain</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcpv6-server

Synopsis	Enter the <b>dhcpv6-server</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">dhcpv6-server</a>
Tree	<a href="#">dhcpv6-server</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### name *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">dhcpv6-server</a> <a href="#">name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">dhcpv6-server</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group for this domain
Context	<b>configure</b> <i>router string firewall domain string nat-group reference</i>
Tree	<a href="#">nat-group</a>
Reference	<b>configure</b> <i>isa nat-group number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix [[ip-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <i>router string firewall domain string prefix string</i>
Tree	<a href="#">prefix</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[ip-prefix](#)] *string*

Synopsis	IP prefix and prefix length for the domain firewall
Context	<b>configure</b> <i>router string firewall domain string prefix string</i>
Tree	<a href="#">prefix</a>
Description	This command configures a prefix for which firewall functionality applies within the domain. Prefixes cannot be shared or duplicated across multiple domains in the same routing context. A domain can contain multiple prefixes.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">firewall domain</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**wlan-gw-group reference****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">firewall domain</a> <i>string</i> <a href="#">wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**flowspec**

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">flowspec</a>
Tree	<a href="#">flowspec</a>
Description	<p>This command configures the maximum number of flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries are placed in an ingress IP filter policy in this router from the filter range between the configured offset plus 1 (embedding offset plus 1) and the value of this command (embedding offset plus <b>ip-filter-max-size</b> or <b>ipv6-filter-max-size</b>).</p> <p>The sum of the maximum-size value and the highest offset in any IP filter that embeds flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of flowspec rules is greater than the new maximum, the extra rules are removed</p>

immediately but retained in the BGP RIB. If the limit is increased, new rules are embedded only as they are received in new BGP updates.

Introduced	16.0.R1
Platforms	All

### **filter-cam-type** *keyword*

Synopsis	Filter policy type for FlowSpec embedding
Context	<b>configure</b> <b>router</b> <i>string</i> <b>flowspec</b> <b>filter-cam-type</b> <i>keyword</i>
Tree	<a href="#">filter-cam-type</a>
Description	This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.
Options	normal, packet-length
Default	normal
Introduced	20.7.R1
Platforms	All

### **ip-filter-max-size** *number*

Synopsis	Maximum number of flowspec rule entries in IPv4 filter
Context	<b>configure</b> <b>router</b> <i>string</i> <b>flowspec</b> <b>ip-filter-max-size</b> <i>number</i>
Tree	<a href="#">ip-filter-max-size</a>
Description	<p>This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

**ipv6-filter-max-size** *number*

Synopsis	Maximum number of flowspec rule entries in IPv6 filter
Context	<b>configure</b> <i>router string flowspec ipv6-filter-max-size number</i>
Tree	<a href="#">ipv6-filter-max-size</a>
Description	<p>This command configures the maximum number of IPv6 flowspec routes or rules that can be embedded into an ingress IPv6 filter policy for a specified routing instance. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv6 filter that embeds IPv6 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv6 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

**gtm**

Synopsis	Enter the <b>gtm</b> context
Context	<b>configure</b> <i>router string gtm</i>
Tree	<a href="#">gtm</a>
Introduced	19.5.R1
Platforms	All

**mvpn** *boolean*

Synopsis	Enable the configuration of MVPN-related parameters
Context	<b>configure</b> <i>router string gtm mvpn boolean</i>
Tree	<a href="#">mvpn</a>
Default	false
Introduced	19.5.R1
Platforms	All

## provider-tunnel

Synopsis	Enter the <b>provider-tunnel</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a>
Tree	<a href="#">provider-tunnel</a>
Introduced	19.5.R1
Platforms	All

## inclusive

Synopsis	Enter the <b>inclusive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a>
Tree	<a href="#">inclusive</a>
Introduced	19.5.R1
Platforms	All

## rsvp

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a> <a href="#">rsvp</a>
Tree	<a href="#">rsvp</a>
Introduced	19.5.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of P2MP RSVP as provider tunnel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a> <a href="#">rsvp</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

**lsp-template** *reference*

Synopsis	LSP template name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>inclusive</b> <b>rsvp</b> <b>lsp-template</b> <i>reference</i>
Tree	<a href="#">lsp-template</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i>
Introduced	19.5.R1
Platforms	All

**selective**

Synopsis	Enter the <b>selective</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b>
Tree	<a href="#">selective</a>
Introduced	19.5.R1
Platforms	All

**data-delay-interval** *number*

Synopsis	Delay before a PBR switches traffic to selective tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-delay-interval</b> <i>number</i>
Tree	<a href="#">data-delay-interval</a>
Range	3 to 180
Default	3
Introduced	19.5.R1
Platforms	All

**data-threshold**

Synopsis	Enter the <b>data-threshold</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b>
Tree	<a href="#">data-threshold</a>
Introduced	19.5.R1
Platforms	All

**group-prefix** [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>group-prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">data-threshold</a> <a href="#">group-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">group-prefix</a>
Introduced	19.5.R1
Platforms	All

**[ip-group-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Multicast group-prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">data-threshold</a> <a href="#">group-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">group-prefix</a>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**pe-threshold-add** *number*

Synopsis	Number of receiver PBRs to create S-PMSI
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">data-threshold</a> <a href="#">group-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">pe-threshold-add</a> <i>number</i>
Tree	<a href="#">pe-threshold-add</a>
Range	1 to 65535
Default	65535
Introduced	19.5.R1
Platforms	All

**pe-threshold-delete** *number*

Synopsis	Number of receiver PBRs to delete S-PMSI
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">data-threshold</a> <a href="#">group-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">pe-threshold-delete</a> <i>number</i>
Tree	<a href="#">pe-threshold-delete</a>
Range	2 to 65535

Default	65535
Introduced	19.5.R1
Platforms	All

### **threshold** *number*

Synopsis	Threshold for a group prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>data-threshold</b> <b>group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>threshold</b> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 4294967294
Units	kilobps
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

### **maximum-p2mp-spmsi** *number*

Synopsis	Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>maximum-p2mp-spmsi</b> <i>number</i>
Tree	<a href="#">maximum-p2mp-spmsi</a>
Range	1 to 4000
Default	10
Introduced	19.5.R1
Platforms	All

### **rsvp**

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtm</b> <b>provider-tunnel</b> <b>selective</b> <b>rsvp</b>
Tree	<a href="#">rsvp</a>
Introduced	19.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of P2MP RSVP as provider tunnel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">rsvp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

### **lsp-template** *reference*

Synopsis	LSP template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtm</a> <a href="#">provider-tunnel</a> <a href="#">selective</a> <a href="#">rsvp</a> <b>lsp-template</b> <i>reference</i>
Tree	<a href="#">lsp-template</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>lsp-template</b> <i>string</i>
Introduced	19.5.R1
Platforms	All

### **gtp**

Synopsis	Enter the <b>gtp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <b>gtp</b>
Tree	<a href="#">gtp</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **s11**

Synopsis	Enter the <b>s11</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <b>s11</b>
Tree	<a href="#">s11</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *reference*

Synopsis	Name for the S11 interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**apn-policy** *reference*

Synopsis	Access point name policy for the S11 interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11</a> <a href="#">interface</a> <i>reference</i> <a href="#">apn-policy</a> <i>reference</i>
Tree	<a href="#">apn-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">gtp</a> <a href="#">apn-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer-profile-map**

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp s11</a> <a href="#">peer-profile-map</a>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**prefix** [[peer-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">s11</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[peer-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the subnet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">s11</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer-profile** *reference*

Synopsis	GTP peer profile associated with the address prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">s11</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">peer-profile</a> <i>reference</i>
Tree	<a href="#">peer-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">gtp</a> <a href="#">peer-profile</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**upf-data-endpoint**

Synopsis	Enable the <b>upf-data-endpoint</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">upf-data-endpoint</a>
Tree	<a href="#">upf-data-endpoint</a>
Description	Commands in this context configure a GTP - User Plane (GTP-U) endpoint used by BNG CUPS FWA sessions.
Introduced	21.2.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fpe reference**

Synopsis FPE used to encapsulate and decapsulate GTP-U traffic  
Context **configure router string gtp upf-data-endpoint fpe reference**  
Tree [fpe](#)  
Reference **configure fwd-path-ext fpe number**  
Notes This element is mandatory.  
Introduced 21.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface reference**

Synopsis Interface on which the GTP-U packets terminate  
Context **configure router string gtp upf-data-endpoint interface reference**  
Tree [interface](#)  
Reference **configure router string interface string**  
Notes This element is mandatory.  
Introduced 21.2.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **uplink**

Synopsis Enable the **uplink** context  
Context **configure router string gtp uplink**  
Tree [uplink](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **apn string**

Synopsis Network identifier part of the APN for the uplink  
Context **configure router string gtp uplink apn string**  
Tree [apn](#)

String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pdn-type** *keyword*

Synopsis	Default PDN to be signaled in GTP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">pdn-type</a> <i>keyword</i>
Tree	<a href="#">pdn-type</a>
Options	ipv4, ipv6, ipv4v6
Default	ipv4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-profile-map**

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix** [[peer-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[peer-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the subnet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-profile** *reference*

Synopsis	GTP peer profile associated with the address prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>gtp uplink peer-profile-map prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>peer-profile reference</b>
Tree	<a href="#">peer-profile</a>
Reference	<b>configure</b> <b>subscriber-mgmt gtp peer-profile</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-tunneling** *boolean*

Synopsis	Allow tunneling of ICMP reply packets over MPLS LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>icmp-tunneling</b> <i>boolean</i>
Tree	<a href="#">icmp-tunneling</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp**

Synopsis	Enable the <b>igmp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b>
Tree	<a href="#">igmp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
----------	------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **forwarding-group-interface** [forwarding-service](#) *string* [group-interface-name](#) *reference*

Synopsis	Enter the <b>forwarding-group-interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **forwarding-service** *string*

Synopsis	Forwarding service for the subscriber interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface-name** *reference*

Synopsis	Group interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of IGMP

Context **configure** *router* *string* *igmp* *forwarding-group-interface* *forwarding-service* *string* *group-interface-name* *reference* *admin-state* *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis Import policy that filters IGMP packets

Context **configure** *router* *string* *igmp* *forwarding-group-interface* *forwarding-service* *string* *group-interface-name* *reference* *import-policy* *reference*

Tree [import-policy](#)

Description This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.

When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).

Reference **configure** *policy-options* *policy-statement* *string*

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis Maximum number of group sources for this interface

Context **configure** *router* *string* *igmp* *forwarding-group-interface* *forwarding-service* *string* *group-interface-name* *reference* *maximum-number-group-sources* *number*

Tree [maximum-number-group-sources](#)

Description This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than

the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.

Range	1 to 32000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>maximum-number-groups</i> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>maximum-number-sources</i> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp</i> <i>forwarding-group-interface</i> <i>forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac</i>
Tree	<a href="#">mcac</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b>
Tree	<b>bandwidth</b>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b> <b>mandatory</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mandatory</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b> <b>total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp forwarding-group-interface forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac interface-policy</i> <i>reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <i>mcac interface-policy</i> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp forwarding-group-interface forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>mcac policy</i> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to I PoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <i>mcac policy</i> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <i>router</i> <i>string</i> <i>igmp forwarding-group-interface forwarding-service</i> <i>string</i> <i>group-interface-name</i> <i>reference</i> <i>query-interval</i> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-last-member-interval</b> <i>number</i>
Tree	<b>query-last-member-interval</b>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-response-interval</b> <i>number</i>
Tree	<b>query-response-interval</b>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-source-address</b> <i>string</i>
Tree	<b>query-source-address</b>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>sub-hosts-only</b> <i>boolean</i>
Tree	<a href="#">sub-hosts-only</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>subnet-check</b> <i>boolean</i>
Tree	<a href="#">subnet-check</a>
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2, 3

Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-if-query-source-address** *string*

Synopsis	Default query-source address for all group interfaces
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-if-query-source-address</a> <i>string</i>
Tree	<a href="#">group-if-query-source-address</a>
Introduced	16.0.R1
Platforms	All

### **group-interface** [[group-interface-name](#)] *reference*

Synopsis	Enter the <b>group-interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i>
Tree	<a href="#">group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [[group-interface-name](#)] *reference*

Synopsis	Group interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i>
Tree	<a href="#">group-interface</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>import-policy</b> <i>reference</i>
Tree	<b>import-policy</b>
Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>maximum-number-group-sources</b> <i>number</i>
Tree	<b>maximum-number-group-sources</b>
Description	<p>This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.</p>
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
----------	---

Context	<b>configure</b> <i>router string igmp group-interface reference mcac bandwidth mandatory (number   keyword)</i>
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **total** (*number | keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <i>router string igmp group-interface reference mcac bandwidth total (number   keyword)</i>
Tree	<a href="#">total</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <i>router string igmp group-interface reference mcac interface-policy reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <i>mcac interface-policy string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <i>router string igmp group-interface reference mcac policy reference</i>
Tree	<a href="#">policy</a>

Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">router string igmp group-interface reference query-interval number</a>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">router string igmp group-interface reference query-last-member-interval number</a>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">query-source-address</a> <i>string</i>
Tree	<a href="#">query-source-address</a>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">sub-hosts-only</a> <i>boolean</i>
Tree	<a href="#">sub-hosts-only</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>subnet-check</b> <i>boolean</i>
Tree	<b>subnet-check</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>group-interface</b> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<b>version</b>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface** [**ip-interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

**[ip-interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Description	This command configures the interface name, which must be unique within the group of defined IP interfaces for the context. If the IP interface name does not exist or does not have an IP address configured, an error message is returned. If the IP interface exists in a different area, it is moved to this area.

An interface name cannot be in the form of an IP address.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <b>maximum-number-group-sources</b> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>

---

Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <b>router</b> <i>string igmp interface string maximum-number-groups number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <b>router</b> <i>string igmp interface string maximum-number-sources number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <b>router</b> <i>string igmp interface string mcac</i>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

**bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>bandwidth</b>
Tree	<b>bandwidth</b>
Introduced	16.0.R1
Platforms	All

**mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>bandwidth</b> <b>mandatory</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mandatory</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>bandwidth</b> <b>total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>

Reference	<b>configure</b> <a href="#">mcac interface-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mc-constraints

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">mcac mc-constraints</a>
Tree	<a href="#">mc-constraints</a>
Introduced	16.0.R1
Platforms	All

## level [[level-id](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">mcac mc-constraints level</a> <i>number</i>
Tree	<a href="#">level</a>
Description	Commands in this context configure the amount of bandwidth available within a given bundle for MC traffic for a specified level.
Introduced	16.0.R1
Platforms	All

## [[level-id](#)] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">mcac mc-constraints level</a> <i>number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## bandwidth *number*

Synopsis	Bandwidth available for this level
----------	------------------------------------

Context	<b>configure router</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>mcac mc-constraints level</b> <i>number</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **number-down** [**number-lag-port-down**] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure router</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>mcac mc-constraints number-down</b> <i>number</i>
Tree	<b>number-down</b>
Description	Commands in this context configure the number of ports down along with level for the MCAC policy on the interface.
Introduced	16.0.R1
Platforms	All

### [**number-lag-port-down**] *number*

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure router</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>mcac mc-constraints number-down</b> <i>number</i>
Tree	<b>number-down</b>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level** *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure router</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>mcac mc-constraints number-down</b> <i>number</i> <b>level</b> <i>number</i>
Tree	<b>level</b>

Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight** *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <i>router string igmp interface string mcac mc-constraints use-lag-port-weight boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <i>router string igmp interface string mcac policy reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p>

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure router</b> <i>string igmp interface string query-interval number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure router</b> <i>string igmp interface string query-last-member-interval number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure router</b> <i>string igmp interface string query-response-interval number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

**redundant-mcast** *boolean*

Synopsis	Use interface as a redundant-pair member for multicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>redundant-mcast</b> <i>boolean</i>
Tree	<b>redundant-mcast</b>
Default	false
Introduced	16.0.R1
Platforms	All

**router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>router-alert-check</b> <i>boolean</i>
Tree	<b>router-alert-check</b>
Default	true
Introduced	16.0.R1
Platforms	All

**ssm-translate**

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>ssm-translate</b>
Tree	<b>ssm-translate</b>
Description	Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.
Introduced	16.0.R1
Platforms	All

**group-range** *start string end string*

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>ssm-translate</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i>
Tree	<b>group-range</b>
Description	Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.

Introduced 16.0.R1  
 Platforms All

### **start** *string*

Synopsis Lower bound of the IP address group range  
 Context **configure** *router string igmp interface string ssm-translate group-range start string end string*  
 Tree [group-range](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **end** *string*

Synopsis Upper bound of the IP address group range  
 Context **configure** *router string igmp interface string ssm-translate group-range start string end string*  
 Tree [group-range](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **source** [[source-address](#)] *string*

Synopsis Add a list entry for **source**  
 Context **configure** *router string igmp interface string ssm-translate group-range start string end string source string*  
 Tree [source](#)  
 Min. Instances 1  
 Introduced 16.0.R1  
 Platforms All

**[source-address] string**

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>ssm-translate</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>source</b> <i>string</i>
Tree	<b>source</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b>
Tree	<b>static</b>
Description	Commands in this context configure the testing of multicast forwarding on an interface without a receiver host.
Introduced	16.0.R1
Platforms	All

**group [group-address] string**

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>static</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
Description	<p>Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records. IGMP static group memberships are used to test multicast forwarding without a receiver host.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p> <p>When the group entries are configured on point-to-point links that connect routers to a rendezvous point (RP), the static IGMP group entries do not generate join messages toward the RP.</p>
Introduced	16.0.R1
Platforms	All

**[group-address]** *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <i>router string igmp interface string static group string</i>
Tree	<i>group</i>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [*source-address*] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <i>router string igmp interface string static group string source string</i>
Tree	<i>source</i>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <i>router string igmp interface string static group string source string</i>
Tree	<i>source</i>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <i>router string igmp interface string static group string starg</i>
Tree	<i>starg</i>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2

Platforms All

### **group-range** *start string end string step string*

Synopsis Enter the **group-range** list instance

Context **configure** *router string igmp interface string static group-range start string end string step string*

Tree [group-range](#)

Description Commands in this context configure the ranges of IP addresses for the static groups.

Introduced 16.0.R1

Platforms All

### **start** *string*

Synopsis IP address for the start of the static group range

Context **configure** *router string igmp interface string static group-range start string end string step string*

Tree [group-range](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **end** *string*

Synopsis IP address for the end of the static group range

Context **configure** *router string igmp interface string static group-range start string end string step string*

Tree [group-range](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **step** *string*

Synopsis Step interval in the group-range address

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">step</a> <i>string</i>
Tree	<a href="#">group-range</a>
MD-CLI Default	0.0.0.1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">step</a> <i>string</i> <b>source</b> <i>string</i>

Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">step</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">interface</a> <i>string</i> <a href="#">static</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">step</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .

Introduced	16.0.R2
Platforms	All

**subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>subnet-check</b> <i>boolean</i>
Tree	<a href="#">subnet-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>interface</b> <i>string</i> <b>version</b> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>query-interval</b> <i>number</i>
Tree	<a href="#">query-interval</a>
Description	This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>query-last-member-interval</b> <i>number</i>
Tree	<b>query-last-member-interval</b>
Description	This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.
Range	1 to 1023
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>query-response-interval</b> <i>number</i>
Tree	<b>query-response-interval</b>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <b>router</b> <i>string</i> <b>igmp</b> <b>robust-count</b> <i>number</i>
Tree	<b>robust-count</b>
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, this value can be increased.
Range	2 to 10
Default	2
Introduced	16.0.R1

Platforms All

## ssm-translate

Synopsis Enter the **ssm-translate** context

Context **configure** [router](#) *string* [igmp](#) **ssm-translate**

Tree [ssm-translate](#)

Description Commands in this context configure a group range that is translated to SSM (S,G) entries. If a static entry needs to be created, it is translated from an IGMPv1 or v2 request to an SSM join message.

Introduced 16.0.R1

Platforms All

## group-range [start](#) *string* [end](#) *string*

Synopsis Enter the **group-range** list instance

Context **configure** [router](#) *string* [igmp](#) **ssm-translate** [group-range](#) [start](#) *string* [end](#) *string*

Tree [group-range](#)

Description Commands in this context configure the range of IP addresses that is translated to SSM (S,G) entries.

Introduced 16.0.R1

Platforms All

## start *string*

Synopsis Lower bound of the IP address group range

Context **configure** [router](#) *string* [igmp](#) **ssm-translate** [group-range](#) [start](#) *string* [end](#) *string*

Tree [group-range](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

## end *string*

Synopsis Upper bound of the IP address group range

Context **configure** [router](#) *string* [igmp](#) **ssm-translate** [group-range](#) [start](#) *string* [end](#) *string*

Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Min. Instances	1
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i> <a href="#">source</a> <i>string</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## static

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static</a>
Tree	<a href="#">static</a>
Description	<p>Commands in this context configure static multicast receiver hosts on a tunnel interface associated with an RSVP P2MP LSP.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p>
Introduced	16.0.R1
Platforms	All

## group [group-address] string

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	<p>Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records.</p> <p>Static multicast group joins can be assigned to a tunnel interface associated with an RSVP P2MP LSP.</p> <p>A given &lt;*,G&gt; or &lt;S,G&gt; can only be associated with a single tunnel interface.</p> <p>A multicast packet which is received on an interface and which succeeds the RPF check for the source address will be replicated and forwarded to all OIFs which correspond to the branches of the P2MP LSP. The packet is sent on each OIF with the label stack indicated in the NHLFE of this OIF. The packets will also be replicated and forwarded natively on all OIFs which have received IGMP or PIM joins for this &lt;S,G&gt;.</p> <p>The multicast packet can be received over a PIM or IGMP interface which can be an IES interface, a spoke SDP terminated IES interface, or a network interface.</p>

Introduced	16.0.R1
Platforms	All

### **[group-address]** *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	Add a starg (*,G) address entry for the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-root</a> <i>reference</i> <a href="#">sender-address</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**rsvp-p2mp-root** [[lsp-name](#)] *reference*

Synopsis	Enter the <b>rsvp-p2mp-root</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i>
Tree	<a href="#">rsvp-p2mp-root</a>
Description	Commands in this context configure the RSVP parameters for the IGMP P2MP LSP tunnel.
Introduced	16.0.R1
Platforms	All

**[lsp-name]** *reference*

Synopsis	LSP name for the RSVP P2MP LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i>
Tree	<a href="#">rsvp-p2mp-root</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## static

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a>
Tree	<a href="#">static</a>
Description	<p>Commands in this context configure static multicast receiver hosts on a tunnel interface associated with an RSVP P2MP LSP.</p> <p>When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.</p>
Introduced	16.0.R1
Platforms	All

## group [group-address] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

## [group-address] *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">igmp</a> <a href="#">tunnel-interface</a> <a href="#">rsvp-p2mp-root</a> <i>reference</i> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **source** [[source-address](#)] *string*

Synopsis Add a list entry for **source**

Context **configure** [router](#) *string* [igmp](#) [tunnel-interface](#) [rsvp-p2mp-root](#) *reference* [static](#) [group](#)  
*string* [source](#) *string*

Tree [source](#)

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 16.0.R1

Platforms All

### **[source-address]** *string*

Synopsis Source IP address of multicast channel sending data

Context **configure** [router](#) *string* [igmp](#) [tunnel-interface](#) [rsvp-p2mp-root](#) *reference* [static](#) [group](#)  
*string* [source](#) *string*

Tree [source](#)

Notes This element is part of a list key.

Introduced 16.0.R2

Platforms All

### **starg**

Synopsis Add a starg (\*,G) address entry for the group range

Context **configure** [router](#) *string* [igmp](#) [tunnel-interface](#) [rsvp-p2mp-root](#) *reference* [static](#) [group](#)  
*string* [starg](#)

Tree [starg](#)

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 16.0.R2

Platforms All

### **interface** [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance

Context **configure** [router](#) *string* [interface](#) *string*

Tree	<a href="#">interface</a>
Description	Commands in this context create a logical IP routing or unnumbered MPLS-TP interface. An IP address, port, or system can then be associated with the IP interface.
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Description	<p>This command specifies the name of the router interface. When a user enters a new name, the system creates a new logical interface and the context changes to that interface for more command processing.</p> <p>When an existing interface name is entered, the user enters the router interface context for editing and configuration.</p> <p>Nokia recommends using names that are meaningful and unique to remove ambiguity when displaying the state associated with IP interfaces either via show commands or model-driven interfaces.</p> <p>See "Router configuration overview" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about the interface name.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a>
Tree	<a href="#">cflowd-parameters</a>
Description	Commands in this context configure cflowd parameters for the associated IP interfaces.
Introduced	16.0.R1
Platforms	All

**sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	Commands in this context configure cflowd sampling behavior, which configures the collection of traffic flow samples for analysis for this IP interface.
Introduced	16.0.R1
Platforms	All

**[sampling-type]** *keyword*

Synopsis	Traffic sampling type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**direction** *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>

Tree	<a href="#">direction</a>
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R1
Platforms	All

### **sample-profile** (*keyword* | *number*)

Synopsis	Sample profile ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">sample-profile</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">sample-profile</a>
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	All

### **type** *keyword*

Synopsis	Type of cflowd analysis
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **cpu-protection** *reference*

Synopsis	CPU protection policy ID for the interface
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cpu-protection</a> <i>reference</i>
Tree	<a href="#">cpu-protection</a>
Description	This command assigns an existing CPU protection policy to the associated interface. For these interface types, the per-source rate limit is not applicable.  If no CPU-protection policy is assigned to an interface, the default policy is used to limit the overall rate.
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <i>policy</i> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	DCP policy name for interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Description	This command configures a Distributed CPU Protection (DCP) policy for the associated IP interface or SAP. The user can only assign a valid created DCP policy to a SAP or network interface (this rule does not apply to templates such as an MSAP policy).  If the operator does not assign a DCP policy to a router interface, the system uses the default network DCP policy.  See "Distributed CPU protection" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide</i> for more information.
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <i>policy</i> <i>string</i>
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <i>router string interface string egress</i>
Tree	<i>egress</i>
Description	Commands in this context configure egress network filter policies for the IP interface. The system does not filter unless an operator defines a filter.
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <i>router string interface string egress filter</i>
Tree	<i>filter</i>
Description	Commands in this context configure the names of the egress IPv4 and IPv6 network filter policies for the interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <i>router string interface string egress filter ip reference</i>
Tree	<i>ip</i>
Reference	<b>configure</b> <i>filter ip-filter string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <i>router string interface string egress filter ipv6 reference</i>
Tree	<i>ipv6</i>
Reference	<b>configure</b> <i>filter ipv6-filter string</i>

Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm</i>
Tree	<i>eth-cfm</i>
Description	Commands in this context configure the Ethernet CFM parameters for the associated IP interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## mep *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Description	Commands in this context configure an 802.1ag Maintenance Endpoint (MEP) instance.
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain string association string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.  Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-alarm-time</a> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-reset-time</a> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm** *boolean*

Synopsis	Generate CCM messages
----------	-----------------------

Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b>) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-tlv-ignore** *keyword*

Synopsis	TLV to ignore on reception
----------	----------------------------

Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-tlv-ignore keyword</i>
Tree	<a href="#">ccm-tlv-ignore</a>
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine.  When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. Instances	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats</i>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	Commands in this context configure per forwarding class (FC) LMM information collection.  The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.  This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats fc keyword</i>
Tree	<a href="#">fc</a>
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.  An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.  When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	When configured to <b>true</b> , the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <i>number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840

Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test test-pattern</a> <a href="#">crc-tlv</a> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **facility-fault** *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>facility-fault</b> <i>boolean</i>
Tree	<a href="#">facility-fault</a>
Description	When configured to <b>true</b> , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition.  When configured to <b>false</b> , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>grace</b> <b>eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b> <b>max-rx-defect-window</b> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b> <b>rx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</i>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>

Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</i>
Tree	<a href="#">lbm-svc-act-responder</a>
Description	<p>When configured to <b>true</b>, the router enables the MEP to process service activation streams encapsulated in ETH-CFM LBM frames that are directed to it.</p> <p>When configured to <b>false</b>, this command reverts to MEP LBM standard processing.</p> <p>There is interaction between this command and the <b>tools perform service id loopback eth</b> command. Nokia recommends that either the <b>lbm-svc act-responder</b> or the <b>tools perform service id loopback eth</b> command be used within a service. If both commands must be configured, and the target reflection point is the MAC Swap Loopback function, the inbound stream of data must not include ETH-CFM traffic that is equal to or lower than the domain level of any configured MEP that would otherwise extract and process the ETH-CFM message.</p> <p>See "Promiscuous ETH-LBM mode of operation" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Services Overview Guide</i> for more information.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect for fault alarm generation
Context	<b>configure</b> <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</i>

Tree	<a href="#">low-priority-defect</a>
Description	This command specifies the lowest priority defect that generates a fault alarm and also configures the fault state of the MEP that causes a network reaction.
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">one-way-delay-threshold</a> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **external-reference**

Synopsis	Enter the <b>external-reference</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">external-reference</a>

Tree	<a href="#">external-reference</a>
Description	Commands in this context configure the external reference used to map a Nokia vendor-specific configuration and the OpenConfig state.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## openconfig

Synopsis	Enter the <b>openconfig</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">external-reference</a> <a href="#">openconfig</a>
Tree	<a href="#">openconfig</a>
Description	Commands in this context configure the OpenConfig reference key used to map a Nokia vendor-specific configuration and the OpenConfig state.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## subinterface *number*

Synopsis	Reference to the subinterface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">external-reference</a> <a href="#">openconfig</a> <a href="#">subinterface</a> <i>number</i>
Tree	<a href="#">subinterface</a>
Description	<p>This command configures the subinterface used to map a Nokia vendor-specific configuration and the OpenConfig state.</p> <p>This command configures the ability to query the OpenConfig state through NETCONF, gRPC, and the MD-CLI from any configuration mode, without having to add any Open Config model configuration. As part of the configuration, a user must also add a port to the Layer 3 interface.</p>
Range	0 to 4294967295
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## flavor *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Network interface flavor
Context	<b>configure</b> <i>router string interface string flavor keyword</i>
Tree	<i>flavor</i>
Options	regular – Regular network interface pdn – PDN interface unnumbered-mpls-tp – Unnumbered MPLS-TP interface
Default	regular
Introduced	16.0.R1
Platforms	All

### **gre-termination** *boolean*

Synopsis	Terminate GRE packets on primary subnet of interface
Context	<b>configure</b> <i>router string interface string gre-termination boolean</i>
Tree	<i>gre-termination</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <i>router string interface string hold-time</i>
Tree	<i>hold-time</i>
Description	Commands in this context configure the interface-level up and down hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string interface string hold-time ipv4</i>
Tree	<i>ipv4</i>
Description	Commands in this context configure the interface-level IPv4 hold timers for the associated IP interface.

Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b>
Tree	<a href="#">down</a>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b> <a href="#">init-only</a> <i>boolean</i>
Tree	<a href="#">init-only</a>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## up

Synopsis	Enter the <b>up</b> context
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6</b>
Tree	<b>ipv6</b>
Description	Commands in this context configure the interface-level IPv6 hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6 down</b>
Tree	<b>down</b>

Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

### **init-only** *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <i>router string interface string hold-time ipv6 down</i> <b>init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	When configured to <b>true</b> , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <i>router string interface string hold-time ipv6 down</i> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <i>router string interface string hold-time ipv6</i> <b>up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1

Platforms All

### **seconds** *number*

Synopsis Up hold time for the IP interface

Context **configure** *router string interface string hold-time ipv6 up seconds number*

Tree [seconds](#)

Range 1 to 1200

Units seconds

Introduced 16.0.R1

Platforms All

### **if-attribute**

Synopsis Enter the **if-attribute** context

Context **configure** *router string interface string if-attribute*

Tree [if-attribute](#)

Description Commands in this context configure attributes of the IP interface.

Introduced 16.0.R1

Platforms All

### **admin-group** *reference*

Synopsis Administrative group name for the interface

Context **configure** *router string interface string if-attribute admin-group reference*

Tree [admin-group](#)

Description This command specifies the administrative group membership to an interface.  
The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.

Reference **configure** *routing-options if-attribute admin-group string*

Max. Instances 32

Introduced 16.0.R1

Platforms All

**delay**

Synopsis	Enter the <b>delay</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a>
Tree	<a href="#">delay</a>
Introduced	20.7.R1
Platforms	All

**delay-selection** *keyword*

Synopsis	Delay source advertised by IGP for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">delay-selection</a> <i>keyword</i>
Tree	<a href="#">delay-selection</a>
Options	static, dynamic, static-preferred, dynamic-preferred
Default	static-preferred
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**dynamic**

Synopsis	Enter the <b>dynamic</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a>
Tree	<a href="#">dynamic</a>
Description	Commands in this context configure dynamic link delay measurement options for the interface.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**measurement-template** *reference*

Synopsis	Link delay measurement template for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">measurement-template</a> <a href="#">reference</a>
Tree	<a href="#">measurement-template</a>
Reference	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i>

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## twamp-light

Synopsis	Enter the <b>twamp-light</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">twamp-light</a>
Tree	<a href="#">twamp-light</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">twamp-light</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of IPv4 TWAMP Light packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">delay</a> <a href="#">dynamic</a> <a href="#">twamp-light</a> <a href="#">ipv4</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command specifies the administrative state of the IPv4 encapsulated TWAMP Light measurement packets.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## destination *string*

Synopsis	TWAMP Light measurement packet destination IPv4 address
----------	---

Context	<b>configure</b> <i>router string interface string if-attribute delay dynamic twamp-light ipv4 destination string</i>
Tree	<i>destination</i>
Description	This command specifies the unicast destination address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source string**

Synopsis	TWAMP Light measurement packets source IPv4 address
Context	<b>configure</b> <i>router string interface string if-attribute delay dynamic twamp-light ipv4 source string</i>
Tree	<i>source</i>
Description	This command specifies the unicast source address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router string interface string if-attribute delay dynamic twamp-light ipv6</i>
Tree	<i>ipv6</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state keyword**

Synopsis	Administrative state of IPv6 TWAMP Light packets
Context	<b>configure</b> <i>router string interface string if-attribute delay dynamic twamp-light ipv6 admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **destination string**

Synopsis TWAMP Light measurement packet destination IPv6 address

Context **configure router string interface string if-attribute delay dynamic twamp-light ipv6 destination string**

Tree **destination**

Description This command specifies the unicast destination address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source string**

Synopsis TWAMP Light measurement packets source IPv6 address

Context **configure router string interface string if-attribute delay dynamic twamp-light ipv6 source string**

Tree **source**

Description This command specifies the unicast source address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **static number**

Synopsis Unidirectional link delay static information

Context **configure router string interface string if-attribute delay static number**

Tree **static**

Description This command configures the unidirectional link delay. By default there is no configured delay, and the link delay metric TLV is pruned in the IGP.

Range 1 to 16777214

Units microseconds

Introduced 20.7.R1

Platforms All

**srlg-group** [*name*] *reference*

Synopsis	Add a list entry for <b>srlg-group</b>
Context	<b>configure</b> <i>router string interface string if-attribute srlg-group reference</i>
Tree	<i>srlg-group</i>
Description	<p>Commands in this context add a list entry for a Shared Risk Link Group (SRLG) that can be associated with an IP or MPLS interface to tag IP or MPLS interfaces that share a specific outcome with the same identifier. For example, an SRLG group identifier could represent all links that use separate fibers but are carried in the same fiber conduit.</p> <p>The name and identifier of each SRLG group must be configured locally on each router before the user configures the SRLG membership of an interface. A maximum of 1024 SRLGs can be configured per system. The user can apply SRLGs to an IES, VPRN, network IP, or MPLS interface. A maximum of 64 SRLGs can be applied to an interface.</p> <p>See "Shared Risk Link Groups" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> for more information about SRLGs.</p>
Introduced	16.0.R1
Platforms	All

**[name]** *reference*

Synopsis	SRLG name
Context	<b>configure</b> <i>router string interface string if-attribute srlg-group reference</i>
Tree	<i>srlg-group</i>
Reference	<b>configure</b> <i>routing-options if-attribute srlg-group string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <i>router string interface string ingress</i>
Tree	<i>ingress</i>
Description	Commands in this context configure ingress network filter policies for the IP interface. If an ingress filter is not defined, the system performs no filtering.
Introduced	16.0.R1
Platforms	All

**destination-class-lookup** *boolean*

Synopsis	Enable BGP destination class lookup
Context	<b>configure</b> <i>router string interface string ingress destination-class-lookup boolean</i>
Tree	<a href="#">destination-class-lookup</a>
Description	When configured to <b>true</b> , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the <b>destination-class</b> match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.  When configured to <b>false</b> , destination class lookup is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

**filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <i>router string interface string ingress filter</i>
Tree	<a href="#">filter</a>
Description	Commands in this context associate an IP filter policy with an IP interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	16.0.R1
Platforms	All

**ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <i>router string interface string ingress filter ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter string</a>
Introduced	16.0.R1
Platforms	All

**ipv6 reference**

Synopsis	IPv6 filter policy name
----------	-------------------------

Context	<b>configure</b> <i>router string interface string ingress filter ipv6 reference</i>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **policy-accounting** *reference*

Synopsis	Policy accounting template applied to the interface
Context	<b>configure</b> <i>router string interface string ingress policy-accounting reference</i>
Tree	<a href="#">policy-accounting</a>
Reference	<b>configure</b> <a href="#">routing-options policy-accounting policy-acct-template</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **ingress-stats** *boolean*

Synopsis	Collect ingress statistics
Context	<b>configure</b> <i>router string interface string ingress-stats boolean</i>
Tree	<a href="#">ingress-stats</a>
Description	<p>When configured to <b>true</b>, the router configures the collection of IPv4 and IPv6 offered packets and octets. This only applies to IP statistics, not to uRPF statistics.</p> <p>Octet statistics for IPv4 and IPv6 bytes at IP interfaces include the Layer 2 frame overhead.</p> <p>When configured to <b>false</b>, the router does not collect the statistics.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ip-mtu** *number*

Synopsis	Interface IP MTU
Context	<b>configure</b> <i>router string interface string ip-mtu number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.

The operational IP MTU used for the interface is based on the configured IP MTU and the port MTU of the port bound to this interface; that is, the operational MTU is set to the lesser of the values configured by this command and the port MTU value less the Ethernet header size.

If the interface supports IPv6 packets, this command must be set to at least 1280, in accordance with RFC 2460 *Internet Protocol, Version 6 (IPv6) Specification*.

Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

## ipsec

Synopsis	Enable the <b>ipsec</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ipsec</b>
Tree	<a href="#">ipsec</a>
Description	Commands in this context configure an IPsec secured interface.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ipsec</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

## ip-exception *reference*

Synopsis	IP exception filter
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ipsec</b> <b>ip-exception</b> <i>reference</i>
Tree	<a href="#">ip-exception</a>

Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	<b>configure filter ip-exception string</b>
Introduced	22.7.R1
Platforms	VSR

### **ipsec-tunnel [name] string**

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure router string interface string ipsec ipsec-tunnel string</b>
Tree	<a href="#">ipsec-tunnel</a>
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

### **[name] string**

Synopsis	IPsec tunnel name
Context	<b>configure router string interface string ipsec ipsec-tunnel string</b>
Tree	<a href="#">ipsec-tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **admin-state keyword**

Synopsis	Administrative state of the IPsec tunnel
Context	<b>configure router string interface string ipsec ipsec-tunnel string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

## bfd

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>bfd</b>
Tree	<b>bfd</b>
Introduced	22.7.R1
Platforms	VSR

## bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>bfd bfd-designate</b> <i>boolean</i>
Tree	<b>bfd-designate</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>bfd bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.

BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.

Introduced 22.7.R1  
 Platforms VSR

### **dest-ip string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Destination address used for the BFD session  
 Context **configure** *router string interface string ipsec ipsec-tunnel string bfd bfd-liveness dest-ip string*  
 Tree *dest-ip*  
 Notes This element is mandatory.  
 Introduced 22.7.R1  
 Platforms VSR

### **interface string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Name of the interface used by the BFD session  
 Context **configure** *router string interface string ipsec ipsec-tunnel string bfd bfd-liveness interface string*  
 Tree *interface*  
 String Length 1 to 32  
 Notes This element is mandatory.  
 Introduced 22.7.R1  
 Platforms VSR

**service-name** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness service-name string</i>
Tree	<i>service-name</i>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**clear-df-bit** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i>
Tree	<i>clear-df-bit</i>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

**copy-traffic-class-upon-decapsulation** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
----------	--

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string copy-traffic-class-upon-decapsulation boolean</i>
Tree	<a href="#">copy-traffic-class-upon-decapsulation</a>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **encapsulated-ip-mtu** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string encapsulated-ip-mtu number</i>
Tree	<a href="#">encapsulated-ip-mtu</a>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## icmp-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	22.7.R1
Platforms	VSR

## frag-required

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b> <i>interval</i> <i>number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

### **message-count** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b> <i>message-count</i> <i>number</i>
Tree	<a href="#">message-count</a>

Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string icmp6-generation</i>
Tree	<a href="#">icmp6-generation</a>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string icmp6-generation packet-too-big</i>
Tree	<a href="#">packet-too-big</a>
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.</p>
Introduced	22.7.R1

Platforms VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

## message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string icmp6-generation packet-too-big message-count number</i>
Tree	<a href="#">message-count</a>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## ip-mtu *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string ip-mtu number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## key-exchange

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange</b>
Tree	<b>key-exchange</b>
Introduced	22.7.R1
Platforms	VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange dynamic</b>
Tree	<b>dynamic</b>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string</i> <b>key-exchange dynamic auto-establish</b> <i>boolean</i>
Tree	<b>auto-establish</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a>
Tree	<a href="#">cert</a>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	22.7.R1
Platforms	VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a> <a href="#">cert-profile</a> <i>reference</i>
Tree	<a href="#">cert-profile</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">cert-profile</a> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a> <a href="#">status-verify</a>
Tree	<a href="#">status-verify</a>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	22.7.R1
Platforms	VSR

**default-result** *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify</b> <b>default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	22.7.R1
Platforms	VSR

**primary** *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify</b> <b>primary</b> <i>keyword</i>
Tree	<b>primary</b>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsf
Default	crl
Introduced	22.7.R1
Platforms	VSR

**secondary** *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert status-verify</b> <b>secondary</b> <i>keyword</i>
Tree	<b>secondary</b>
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsf
Default	none

Introduced 22.7.R1  
 Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
 Context **configure** *router string interface string ipsec ipsec-tunnel string key-exchange dynamic cert trust-anchor-profile reference*  
 Tree [trust-anchor-profile](#)  
 Reference **configure** *ipsec trust-anchor-profile string*  
 Introduced 22.7.R1  
 Platforms VSR

### **id**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
 Context **configure** *router string interface string ipsec ipsec-tunnel string key-exchange dynamic id*  
 Tree [id](#)  
 Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:
 

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

 Introduced 22.7.R1  
 Platforms VSR

### **fqdn** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id fqdn string</i>
Tree	<a href="#">fqdn</a>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv4 string**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id ipv4 string</i>
Tree	<a href="#">ipv4</a>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic id ipv6 (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

## ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ike-policy</a> <i>number</i>
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	22.7.R1
Platforms	VSR

## pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange dynamic pre-shared-key string</i>
Tree	<a href="#">pre-shared-key</a>
String Length	1 to 115
Introduced	22.7.R1
Platforms	VSR

## manual

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual</i>
Tree	<a href="#">manual</a>
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## keys [[security-association](#)] *number direction keyword*

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<a href="#">keys</a>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

## [[security-association](#)] *number*

Synopsis	SA entry ID
----------	-------------

Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<a href="#">keys</a>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **direction** *keyword*

Synopsis	Direction of the IPsec tunnel
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<a href="#">keys</a>
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **authentication-key** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string key-exchange manual keys number direction keyword authentication-key string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 130
Introduced	22.7.R1
Platforms	VSR

## encryption-key *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">encryption-key</a> <i>string</i>
Tree	<a href="#">encryption-key</a>
String Length	1 to 66
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ipsec-transform</a> <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## spi *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">spi</a> <i>number</i>
Tree	<a href="#">spi</a>

Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **local-gateway-address-override** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string local-gateway-address-override</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">local-gateway-address-override</a>
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

### **max-history-key-records**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string max-history-key-records</i>
Tree	<a href="#">max-history-key-records</a>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

## esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	<b>configure</b> router string interface string ipsec ipsec-tunnel string max-history-key-records esp number
Tree	esp
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

## ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	<b>configure</b> router string interface string ipsec ipsec-tunnel string max-history-key-records ike number
Tree	ike
Range	1 to 3
Introduced	22.7.R1
Platforms	VSR

## pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	<b>configure</b> router string interface string ipsec ipsec-tunnel string pmtu-discovery-aging number
Tree	pmtu-discovery-aging

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	22.7.R1
Platforms	VSR

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string private-sap number</i>
Tree	<i>private-sap</i>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **private-service** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	<b>configure</b> <i>router string interface string ipsec ipsec-tunnel string private-service string</i>

Tree	<a href="#">private-service</a>
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String Length	1 to 64
Introduced	22.7.R1
Platforms	VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">private-tcp-mss-adjust</a> <i>number</i>
Tree	<a href="#">private-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">propagate-pmtu-v4</a> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v4</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true

Introduced 22.7.R1  
 Platforms VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv6 hosts

Context **configure** *router string interface string ipsec ipsec-tunnel string propagate-pmtu-v6 boolean*

Tree [propagate-pmtu-v6](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

### **public-tcp-mss-adjust** (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) on the public network

Context **configure** *router string interface string ipsec ipsec-tunnel string public-tcp-mss-adjust (number | keyword)*

Tree [public-tcp-mss-adjust](#)

Description This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.

Range 512 to 9000

Units bytes

Options auto

Introduced 22.7.R1

Platforms VSR

**remote-gateway-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>remote-gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>remote-gateway-address</b>
Introduced	22.7.R1
Platforms	VSR

**replay-window number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>replay-window</b> <i>number</i>
Tree	<b>replay-window</b>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32   64   128   256   512
Units	packets
Introduced	22.7.R1
Platforms	VSR

**security-policy****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>security-policy</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>security-policy</b>
Tree	<b>security-policy</b>

Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

**id number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">security-policy</a> <i>id number</i>
Tree	<a href="#">id</a>
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

**strict-match boolean****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">security-policy</a> <a href="#">strict-match</a> <i>boolean</i>
Tree	<a href="#">strict-match</a>
Description	<p>When configured to <b>true</b>, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false

Introduced 22.7.R1  
 Platforms VSR

### **ipv6-exception** *reference*

Synopsis IPv6 filter exception used to bypass encryption  
 Context **configure** *router string interface string ipsec ipv6-exception reference*  
 Tree [ipv6-exception](#)  
 Description This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.  
 Reference **configure** *filter ipv6-exception string*  
 Introduced 22.7.R1  
 Platforms VSR

### **public-sap** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Public SAP ID  
 Context **configure** *router string interface string ipsec public-sap number*  
 Tree [public-sap](#)  
 Range 0 to 4094  
 Notes This element is mandatory.  
 Introduced 22.7.R1  
 Platforms VSR

### **tunnel-group** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tunnel group ID

Context	<b>configure</b> <i>router string interface string ipsec tunnel-group reference</i>
Tree	<a href="#">tunnel-group</a>
Reference	<b>configure</b> <i>isa tunnel-group number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string interface string ipv4</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	<b>configure</b> <i>router string interface string ipv4 allow-directed-broadcasts boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Description	<p>When configured to <b>true</b>, the router forwards packets received on a local router interface to the subnet broadcast address of another IP interface.</p> <p>When configured to <b>false</b>, this router does not allow directed broadcasts and the packets are discarded.</p> <p>Allowing directed broadcasts is a well-known mechanism used for denial-of-service attacks.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## bfd

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <i>router string interface string ipv4 bfd</i>
Tree	<a href="#">bfd</a>

Description	Commands in this context configure the Bidirectional Forwarding Detection (BFD) settings for the associated IP interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>bfd</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>bfd</b> <b>echo-receive</b> <i>number</i>
Tree	<b>echo-receive</b>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>bfd</b> <b>multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1

Platforms All

### **receive number**

Synopsis BFD receive interval over this interface

Context **configure** *router string interface string ipv4 bfd receive number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

### **transmit-interval number**

Synopsis BFD transmit interval over this interface

Context **configure** *router string interface string ipv4 bfd transmit-interval number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

### **type keyword**

Synopsis Local termination point for the BFD session

Context **configure** *router string interface string ipv4 bfd type keyword*

Tree [type](#)

Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dhcp

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <i>router string interface string ipv4 dhcp</i>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <i>router string interface string ipv4 dhcp admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string interface string ipv4 dhcp description string</i>
Tree	<a href="#">description</a>

String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">gi-address</a> <i>string</i>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

### **action** *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">action</a> <i>keyword</i>
Tree	<a href="#">action</a>
Options	replace, drop, keep
Default	keep

Introduced 16.0.R1  
Platforms All

### **circuit-id**

Synopsis Enter the **circuit-id** context  
Context **configure** [router](#) *string* [interface](#) *string* [ipv4 dhcp option-82](#) [circuit-id](#)  
Tree [circuit-id](#)  
Introduced 16.0.R1  
Platforms All

### **ascii-tuple**

Synopsis Use the ASCII-encoded tuple for the circuit ID  
Context **configure** [router](#) *string* [interface](#) *string* [ipv4 dhcp option-82](#) [circuit-id](#) [ascii-tuple](#)  
Tree [ascii-tuple](#)  
Notes The following elements are part of a choice: **ascii-tuple**, **if-name**, **ifindex**, **none**, **port-id**, or **vlan-ascii-tuple**.  
Introduced 16.0.R1  
Platforms All

### **if-name**

Synopsis Use the interface name for the circuit ID  
Context **configure** [router](#) *string* [interface](#) *string* [ipv4 dhcp option-82](#) [circuit-id](#) [if-name](#)  
Tree [if-name](#)  
Notes The following elements are part of a choice: **ascii-tuple**, **if-name**, **ifindex**, **none**, **port-id**, or **vlan-ascii-tuple**.  
Introduced 16.0.R1  
Platforms All

### **ifindex**

Synopsis Use the interface index for the circuit ID  
Context **configure** [router](#) *string* [interface](#) *string* [ipv4 dhcp option-82](#) [circuit-id](#) [ifindex](#)  
Tree [ifindex](#)

Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id none</b>
Tree	<b>none</b>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## port-id

Synopsis	Use the port ID for the circuit ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id port-id</b>
Tree	<b>port-id</b>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id vlan-ascii-tuple</b>
Tree	<b>vlan-ascii-tuple</b>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.  When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-name</b> , <b>ifindex</b> , <b>none</b> , <b>port-id</b> , or <b>vlan-ascii-tuple</b> .

Introduced	16.0.R1
Platforms	All

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">remote-id</a>
Tree	<a href="#">remote-id</a>
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

## ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">remote-id</a> <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## mac

Synopsis	Use the MAC address for the remote ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">remote-id</a> <a href="#">mac</a>
Tree	<a href="#">mac</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the remote ID
----------	------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">none</a>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## vendor-specific-option

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

## client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">client-mac-address</a> <i>boolean</i>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	All

## pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">pool-name</a> <i>boolean</i>
Tree	<a href="#">pool-name</a>
Default	false
Introduced	16.0.R1
Platforms	All

**port-id** *boolean*

Synopsis	Send the port ID in the VSO
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">port-id</a> <i>boolean</i>
Tree	<a href="#">port-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">service-id</a> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">string</a> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">system-id</a> <i>boolean</i>
Tree	<a href="#">system-id</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp python-policy</b> <i>reference</i>
Tree	<a href="#">python-policy</a>
Description	This command associates a Python policy name with the interface.
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **relay-plain-bootp** *boolean*

Synopsis	Relay plain BOOTP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp relay-plain-bootp</b> <i>boolean</i>
Tree	<a href="#">relay-plain-bootp</a>
Description	When configured to <b>true</b> , the system relays plain BOOTP messages. When configured to <b>false</b> , the system considers the plain BOOTP packets as malformed DHCP packets; therefore, the system does not relay the messages.
Default	false
Introduced	16.0.R1
Platforms	All

### **release-include-gi-address** *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp release-include-gi-address</b> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server string**

Synopsis	IP addresses for DHCP server requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**src-ip-addr keyword**

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>src-ip-addr</b> <i>keyword</i>
Tree	<b>src-ip-addr</b>
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	All

**trusted boolean**

Synopsis	Relay untrusted packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>trusted</b> <i>boolean</i>
Tree	<b>trusted</b>
Description	When configured to <b>true</b> , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.  A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default	false
Introduced	16.0.R1
Platforms	All

## icmp

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a>
Tree	<a href="#">icmp</a>
Description	Commands in this context configure Internet Control Message Protocol (ICMP) parameters on a network IP interface.
Introduced	16.0.R1
Platforms	All

## mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">mask-reply</a> <i>boolean</i>
Tree	<a href="#">mask-reply</a>
Default	true
Introduced	16.0.R1
Platforms	All

## param-problem

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a>
Tree	<a href="#">param-problem</a>
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>param-problem</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>param-problem</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>param-problem</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b>
Tree	<b>redirects</b>

Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface.  The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 icmp redirects seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1

Platforms All

## **ttl-expired**

Synopsis Enter the **ttl-expired** context

Context **configure router string interface string ipv4 icmp ttl-expired**

Tree **ttl-expired**

Description Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.

Introduced 16.0.R1

Platforms All

## **admin-state keyword**

Synopsis Administrative state of sending TTL expired messages

Context **configure router string interface string ipv4 icmp ttl-expired admin-state keyword**

Tree **admin-state**

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms All

## **number number**

Synopsis Maximum number of TTL expired messages to send

Context **configure router string interface string ipv4 icmp ttl-expired number number**

Tree **number**

Range 10 to 2000

Default 100

Introduced 16.0.R1

Platforms All

## **seconds number**

Synopsis Time used to limit the number of TTL expired messages

Context	<b>configure</b> <i>router string interface string ipv4 icmp ttl-expired seconds number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

## unreachables

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure</b> <i>router string interface string ipv4 icmp unreachables</i>
Tree	<a href="#">unreachables</a>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure</b> <i>router string interface string ipv4 icmp unreachables admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Maximum number of unreachable messages to send
Context	<b>configure</b> <i>router string interface string ipv4 icmp unreachables number number</i>
Tree	<a href="#">number</a>
Range	10 to 2000
Default	100

Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables</a> <i>seconds</i> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **ip-helper-address** *string*

Synopsis	IP address of the target UDP broadcast gateway
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 ip-helper-address</a> <i>string</i>
Tree	<a href="#">ip-helper-address</a>
Description	This command configures the redirection of broadcast UDP packets received on the associated interface to the specified helper gateway address, and then to the gateway.
Introduced	16.0.R1
Platforms	All

### **local-dhcp-server** *reference*

Synopsis	DHCP server for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 local-dhcp-server</a> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>boolean</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.</li> </ul>
Default	false
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a>
Tree	<a href="#">limit</a>
Description	<p>Commands in this context configure the maximum number of dynamic neighbor entries that can be learned on the interface</p> <p>When the number of entries reaches the threshold (the configured percentage) of this limit, the system sends an SNMP trap.</p>

When the limit is exceeded, the system learns no new entries until an entry expires and traffic to these destinations is dropped. Already learned entries are refreshed.

Introduced 16.0.R1  
 Platforms All

### **log-only** *boolean*

Synopsis Generate log entries only if limit is reached  
 Context **configure** *router string interface string ipv4 neighbor-discovery limit log-only boolean*  
 Tree [log-only](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **max-entries** *number*

Synopsis Maximum number of entries learned on an IP interface  
 Context **configure** *router string interface string ipv4 neighbor-discovery limit max-entries number*  
 Tree [max-entries](#)  
 Range 0 to 524288  
 Introduced 16.0.R1  
 Platforms All

### **threshold** *number*

Synopsis Threshold value that triggers a warning message  
 Context **configure** *router string interface string ipv4 neighbor-discovery limit threshold number*  
 Tree [threshold](#)  
 Range 1 to 100  
 Units percent  
 Default 90  
 Introduced 16.0.R1  
 Platforms All

**local-proxy-arp** *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">local-proxy-arp</a>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	All

**proactive-refresh** *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proactive-refresh</a> <i>boolean</i>
Tree	<a href="#">proactive-refresh</a>
Description	When configured to <b>true</b> , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to <b>false</b> , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.
Default	false
Introduced	16.0.R1
Platforms	All

**proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-arp-policy</a> <i>reference</i>
Tree	<a href="#">proxy-arp-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced	16.0.R1
Platforms	All

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">remote-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

Synopsis	ARP retry interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">retry-timer</a> <i>number</i>
Tree	<a href="#">retry-timer</a>
Range	1 to 300
Units	deciseconds
Default	50
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">static-neighbor</a> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Description	Commands in this context configure a static ARP entry that associates an IP address with a MAC address for the core router instance.
Introduced	16.0.R1
Platforms	All

**[ipv4-address] string**

Synopsis	IPv4 address that corresponds to the physical address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**mac-address string**

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**static-neighbor-unnumbered**

Synopsis	Enable the <b>static-neighbor-unnumbered</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>static-neighbor-unnumbered</b>
Tree	<b>static-neighbor-unnumbered</b>
Description	Commands in this context configure the static ARP MAC for an unnumbered interface. This entry overrides the dynamic ARP entry on the unnumbered interface.
Introduced	16.0.R1
Platforms	All

**mac-address string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address for the static neighbor
----------	-------------------------------------

Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	All

### **primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary</b>
Tree	<b>primary</b>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary address</b> <i>string</i>
Tree	<b>address</b>
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

### **broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>primary</b> <b>broadcast</b> <i>keyword</i>
Tree	<b>broadcast</b>
Description	This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.  This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.
Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

### **gre-termination** *boolean*

Synopsis	Enable GRE termination
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>primary</b> <b>gre-termination</b> <i>boolean</i>
Tree	<b>gre-termination</b>
Description	When configured to <b>true</b> , the router terminates MPLS-over-GRE and IP-over-GRE packets for destination IP addresses from a user-defined subnet. The user defines a subnet for the termination of GRE packets by executing this command on a numbered network IP interface or a loopback interface.
Default	false
Introduced	19.10.R1
Platforms	VSR

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>primary</b> <b>prefix-length</b> <i>number</i>
Tree	<b>prefix-length</b>
Range	0 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>primary</b> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **qos-route-lookup** *keyword*

Synopsis	IP address for QoS route lookup for ingress IP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>qos-route-lookup</b> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Description	<p>This command specifies the IP address type used for QPPB enabled per-packet QoS handling (in terms of FC and priority). When using QPPB, routes are associated with a QoS treatment (FC and optionally priority) through either explicit configuration or the route policy. If an IPv4 or IPv6 packet arrives on an interface where the configuration of this command applies to the packet, the QoS treatment of the packet is based on the route that matched the destination IP address or the route that matched the source IP address.</p> <p>See "Enabling QPPB on an IP interface" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about QPPB.</p>
Options	destination, source, source-and-dest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **secondary** [[address](#)] *string*

Synopsis	Enter the <b>secondary</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>secondary</b> <i>string</i>
Tree	<a href="#">secondary</a>
Introduced	16.0.R1

Platforms All

### **[address]** *string*

Synopsis Secondary IPv4 address assigned to the interface

Context **configure** *router string interface string ipv4 secondary string*

Tree [secondary](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **broadcast** *keyword*

Synopsis Broadcast address format

Context **configure** *router string interface string ipv4 secondary string broadcast keyword*

Tree [broadcast](#)

Description This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts.

This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.

Options all-ones, host-ones

Default host-ones

Introduced 16.0.R1

Platforms All

### **igp-inhibit** *boolean*

Synopsis Disable the running IGP from recognizing secondary IP

Context **configure** *router string interface string ipv4 secondary string igp-inhibit boolean*

Tree [igp-inhibit](#)

Description When configured to **true**, the running IGP does not recognize the secondary IP address as a local interface.

Default false

Introduced 16.0.R1

Platforms All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <i>router string interface string ipv4 secondary string prefix-length number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <i>router string interface string ipv4 secondary string track-srrp number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **tcp-mss** *number*

Synopsis	TCP maximum segment size for the interface
Context	<b>configure</b> <i>router string interface string ipv4 tcp-mss number</i>
Tree	<a href="#">tcp-mss</a>
Range	384 to 9746
Introduced	16.0.R1
Platforms	All

### **unnumbered**

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <i>router string interface string ipv4 unnumbered</i>
Tree	<a href="#">unnumbered</a>

---

Description	Commands in this context configure an IP interface as an unnumbered interface and specify the IP address to use for the interface. An operator can configure unnumbered interfaces to conserve IP addresses.
Introduced	16.0.R1
Platforms	All

### **ip-address** *string*

Synopsis	IP address to associate with unnumbered IP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>unnumbered</b> <b>ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

### **ip-int-name** *string*

Synopsis	Unnumbered IP interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>unnumbered</b> <b>ip-int-name</b> <i>string</i>
Tree	<a href="#">ip-int-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

### **system**

Synopsis	Use system IP address for the unnumbered IP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>unnumbered</b> <b>system</b>
Tree	<a href="#">system</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

**urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">urpf-check</a>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	All

**ignore-default** *boolean*

Synopsis	Ignore default routes when performing a uRPF check
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">urpf-check</a> <a href="#">ignore-default</a> <i>boolean</i>
Tree	<a href="#">ignore-default</a>
Description	When configured to <b>true</b> , the router ignores default routes while performing a uRPF check to determine the validity of incoming packets. When configured to <b>false</b> , default routes are considered eligible.
Default	false
Introduced	16.0.R1
Platforms	All

**mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">urpf-check</a> <a href="#">mode</a> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	All

**vrrp** [[virtual-router-id](#)] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">vrrp</a> <i>number</i>
Tree	<a href="#">vrrp</a>

Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its Virtual Router Identifier (VRID) and a set of IP addresses.
Introduced	16.0.R1
Platforms	All

### **[virtual-router-id]** *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i>
Tree	<b>vrrp</b>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	<p>The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**authentication-key *string***

Synopsis	Password for simple text authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

**backup *string***

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>backup</b> <i>string</i>
Tree	<b>backup</b>
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	<p>Commands in this context assign a Bidirectional Forwarding Detection (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism that speeds up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP advertisement message. In addition, the standby VRRP routers transition to a master state to speed up convergence.</p> <p>The VRRP election process takes place based on the advertisement messages sent by all VRRP routers.</p> <p>Only one BFD session can be assigned to any VRRP or SRRP instance, but multiple SRRP or VRRP sessions can use the same BFD session.</p>
Introduced	16.0.R1
Platforms	All

## dest-ip *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IP address to use for BFD session
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i> <b>bfd-liveness</b> <b>dest-ip</b> <i>string</i>
Tree	<b>dest-ip</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## interface-name *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
----------	-----------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">bfd-liveness</a> <a href="#">interface-name</a> <i>string</i>
Tree	<a href="#">interface-name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **service-name** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">bfd-liveness</a> <a href="#">service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **init-delay** *number*

Synopsis	VRRP initialization delay timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">init-delay</a> <i>number</i>
Tree	<a href="#">init-delay</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">mac</a> <i>string</i>

Tree	<a href="#">mac</a>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

### **master-int-inherit** *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>master-int-inherit</b> <i>boolean</i>
Tree	<a href="#">master-int-inherit</a>
Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

### **message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>message-interval</b> <i>number</i>
Tree	<a href="#">message-interval</a>

Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.</li> </ul>
Range	1 to 2559
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i> <b>monitor-oper-group</b> <i>reference</i>
Tree	<b>monitor-oper-group</b>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <i>service oper-group string</i>
Introduced	22.2.R1

Platforms All

### **ntp-reply** *boolean*

Synopsis Allow processing of NTP requests

Context **configure** *router string interface string ipv4 vrrp number ntp-reply boolean*

Tree [ntp-reply](#)

Description When configured to **true**, the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to **false**, the router does not process NTP requests.

Default false

Introduced 20.2.R1

Platforms All

### **oper-group** *reference*

Synopsis Operational group name associated with the VRRP

Context **configure** *router string interface string ipv4 vrrp number oper-group reference*

Tree [oper-group](#)

Description This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.

Reference **configure** *service oper-group string*

Introduced 16.0.R1

Platforms All

### **owner** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Designate the virtual router instance as owner

Context **configure** *router string interface string ipv4 vrrp number owner boolean*

Tree [owner](#)

Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Description	When configured to <b>true</b> , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).  When configured to <b>false</b> , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<b>ping-reply</b>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).  When configured to <b>false</b> , ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.

Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.

Default	false
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	VRRP priority control policy
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number policy reference</i>
Tree	<i>policy</i>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <i>vrrp policy number</i>
Introduced	16.0.R1
Platforms	All

### **preempt boolean**

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <i>router string interface string ipv4 vrrp number preempt boolean</i>
Tree	<i>preempt</i>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1

Platforms All

### **priority number**

Synopsis Base priority for the VRRP

Context **configure** *router string interface string ipv4 vrrp number priority number*

Tree [priority](#)

Description This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range 1 to 255

Introduced 16.0.R1

Platforms All

### **ssh-reply boolean**

Synopsis Allow the non-owner master to reply to SSH requests

Context **configure** *router string interface string ipv4 vrrp number ssh-reply boolean*

Tree [ssh-reply](#)

Description When configured to **true**, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).

When configure to **false**, SSH requests to non-owner master virtual IP addresses are silently discarded.

Default false

Introduced 16.0.R1

Platforms All

### **standby-forwarding boolean**

Synopsis Allow standby router to forward traffic

Context **configure** *router string interface string ipv4 vrrp number standby-forwarding boolean*

Tree [standby-forwarding](#)

Description	When configured to <b>true</b> , the standby router forwards all traffic. When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp number</b> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

### traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp number</b> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	When configured to <b>true</b> , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to <b>false</b> , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <i>router string interface string</i> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

**address** [**ipv6-address**] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <i>router string interface string</i> <b>ipv6 address string</b>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

**[ipv6-address]** *string*

Synopsis	IPv6 address assigned to the interface
Context	<b>configure</b> <i>router string interface string</i> <b>ipv6 address string</b>
Tree	<b>address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**duplicate-address-detection** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <i>router string interface string</i> <b>ipv6 address string duplicate-address-detection boolean</b>
Tree	<b>duplicate-address-detection</b>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD).

When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.

Default	true
Introduced	16.0.R1
Platforms	All

### **eui-64** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	<b>configure</b> <i>router string interface string ipv6 address string eui-64 boolean</i>
Tree	<a href="#">eui-64</a>
Description	When configured to <b>true</b> , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <i>router string interface string ipv6 address string prefix-length number</i>
Tree	<a href="#">prefix-length</a>
Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **primary-preference** *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	<b>configure</b> <i>router string interface string ipv6 address string primary-preference number</i>

Tree	<a href="#">primary-preference</a>
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <i>address</i> <i>string</i> <a href="#">track-srrp</a> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <i>bfd</i>
Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <i>bfd</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd echo-receive</b> <i>number</i>
Tree	<b>echo-receive</b>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive** *number*

Synopsis	BFD receive interval over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd receive</b> <i>number</i>
Tree	<b>receive</b>
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000

Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>transmit-interval</b> <i>number</i>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **duplicate-address-detection** *boolean*

Synopsis Enable Duplicate Address Detection

Context **configure** *router string interface string ipv6 duplicate-address-detection boolean*

Tree [duplicate-address-detection](#)

Description When configured to **true**, the router enables Duplicate Address Detection (DAD) on the interface.

When configured to **false**, the router disables DAD on a per-interface basis. This prevents the router from performing a DAD check on the interface. All IPv6 addresses on an interface with DAD disabled, immediately enter a preferred state, without checking for uniqueness on the interface. This is useful for interfaces that enter a looped state during troubleshooting and are operationally disabled when the loop is detected, requiring manual intervention to clear the DAD violation.

Default true

Introduced 16.0.R1

Platforms All

### **forward-ipv4-packets** *boolean*

Synopsis Forward unencapsulated IPv4 packets

Context **configure** *router string interface string ipv6 forward-ipv4-packets boolean*

Tree [forward-ipv4-packets](#)

Description When configured to **true**, the router can use an IPv6-only interface, with no configured IPv4 addresses, to forward IPv4 packets that originate or terminate locally.

The interface reports that its IPv4 operational state is up if its IPv6 operational state is up. Not all protocols observe the interface as up from an IPv4 perspective. This command mostly supports BGP routing use cases; see RFC 5549 for details.

When configured to **false**, the router prevents IPv4 packets from being forwarded if there are no configured IPv4 subnets.

Default false

Introduced 19.5.R1

Platforms All

### **icmp6**

Synopsis Enter the **icmp6** context

Context	<b>configure</b> <i>router string interface string ipv6 icmp6</i>
Tree	<a href="#">icmp6</a>
Introduced	16.0.R1
Platforms	All

## packet-too-big

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big</i>
Tree	<a href="#">packet-too-big</a>
Description	Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	<b>configure</b> <i>router string interface string ipv6 icmp6 packet-too-big number number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit Packet Too Big messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 packet-too-big seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

**param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem</b>
Tree	<b>param-problem</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1

Platforms All

### **seconds** *number*

Synopsis Time used to limit ICMPv6 Parameter Problem messages

Context **configure** *router string interface string ipv6 icmp6 param-problem seconds number*

Tree [seconds](#)

Range 1 to 60

Default 10

Introduced 16.0.R1

Platforms All

### **redirects**

Synopsis Enter the **redirects** context

Context **configure** *router string interface string ipv6 icmp6 redirects*

Tree [redirects](#)

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of Redirect message sends

Introduced	16.0.R1
Platforms	All

**unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachables</b>
Tree	<b>unreachables</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachables admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1

Platforms All

### **number** *number*

Synopsis Number to limit Unreachable messages per time frame

Context **configure** *router string interface string ipv6 icmp6 unreachablees number number*

Tree [number](#)

Range 10 to 2000

Default 100

Introduced 16.0.R1

Platforms All

### **seconds** *number*

Synopsis Time used to limit ICMPv6 Unreachable messages

Context **configure** *router string interface string ipv6 icmp6 unreachablees seconds number*

Tree [seconds](#)

Range 1 to 60

Default 10

Introduced 16.0.R1

Platforms All

### **link-local-address**

Synopsis Enter the **link-local-address** context

Context **configure** *router string interface string ipv6 link-local-address*

Tree [link-local-address](#)

Description Commands in this context configure the IPv6 link-local address that is used as a virtual SRRP IPv6 address by the master SRRP node. This address is sent in the Router Advertisements initiated by the master SRRP node. Clients use this address as IPv6 default-gateway. Both SRRP nodes, master and backup, must be configured with the same link-local address.

Only one link-local address is allowed per interface.

**Caution:** Removing a manually configured link-local address may impact routing protocols or static routes that have a dependency on that address. Nokia does not recommend removing a link-local address when there are active IPv6 subscriber hosts on an IES or VPRN interface.

Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	IPv6 link-local address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">link-local-address</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **duplicate-address-detection** *boolean*

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">link-local-address</a> <a href="#">duplicate-address-detection</a> <i>boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD) on the interface.  When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

### **local-dhcp-server** *reference*

Synopsis	DHCP server for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">local-dhcp-server</a> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>keyword</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.</p> <p>When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.</p>
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a>
Tree	<a href="#">limit</a>
Description	<p>Commands in this context configure the maximum amount of dynamic IPv6 neighbor entries that can be learned on an IP interface.</p> <p>When the number of dynamic neighbor entries reaches the configured percentage of this limit the system sends an SNMP trap. When the limit is exceeded, no new entries are learned until an entry expires and traffic to these destinations is dropped. Entries that have already been learned are refreshed.</p>
Introduced	16.0.R1
Platforms	All

**log-only** *boolean*

Synopsis	Generate log entries when limit is reached
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit log-only</b> <i>boolean</i>
Tree	<b>log-only</b>
Description	When configured to <b>true</b> , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.  When configured to <b>false</b> , the router does not send the warning message.
Default	false
Introduced	16.0.R1
Platforms	All

**max-entries** *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit max-entries</b> <i>number</i>
Tree	<b>max-entries</b>
Description	This command configures the maximum number of entries that can be learned on an IP interface.  When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Threshold percentage that triggers a warning message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

**local-proxy-nd** *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-nd</a> <i>boolean</i>
Tree	<a href="#">local-proxy-nd</a>
Description	When configured to <b>true</b> , the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.  When configured to <b>false</b> , the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.
Default	false
Introduced	16.0.R1
Platforms	All

**proactive-refresh** *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">proactive-refresh</a> <i>keyword</i>
Tree	<a href="#">proactive-refresh</a>
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

**proxy-nd-policy** *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-nd-policy</a> <i>reference</i>
Tree	<a href="#">proxy-nd-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced 16.0.R1  
 Platforms All

### **reachable-time** *number*

Synopsis Neighbor reachability detection timer  
 Context **configure** *router string interface string ipv6 neighbor-discovery reachable-time number*  
 Tree [reachable-time](#)  
 Range 30 to 3600  
 Introduced 16.0.R1  
 Platforms All

### **secure-nd**

Synopsis MAC address for the static neighbor

Context **configure** [router](#) *string* [interface](#) *string* [ipv6](#) [neighbor-discovery](#) [static-neighbor](#) *string* [mac-address](#) *string*

Tree [mac-address](#)

Notes This element is mandatory.

Introduced 16.0.R1  
 Platforms All

**qos-route-lookup** *keyword*

Synopsis	IP address for QoS route lookup for ingress IP packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>qos-route-lookup</b> <i>keyword</i>
Tree	<b>qos-route-lookup</b>
Description	This command specifies the IP address type used for QPPB enabled per-packet QoS handling (in terms of FC and priority). When using QPPB, routes are associated with a QoS treatment (FC and optionally priority) through either explicit configuration or the route policy. If an IPv4 or IPv6 packet arrives on an interface where the configuration of this command applies to the packet, the QoS treatment of the packet is based on the route that matched the destination IP address or the route that matched the source IP address.  See "Enabling QPPB on an IP interface" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about QPPB.
Options	destination, source, source-and-dest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tcp-mss** *number*

Synopsis	TCP maximum segment size for the IPv6 interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>tcp-mss</b> <i>number</i>
Tree	<b>tcp-mss</b>
Range	1220 to 9726
Introduced	16.0.R1
Platforms	All

**urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>urpf-check</b>
Tree	<b>urpf-check</b>
Introduced	16.0.R1
Platforms	All

**ignore-default** *boolean*

Synopsis	Ignore default route when performing a uRPF check
----------	---

Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 urpf-check ignore-default</b> <i>boolean</i>
Tree	<b>ignore-default</b>
Default	false
Introduced	16.0.R1
Platforms	All

**mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 urpf-check mode</b> <i>keyword</i>
Tree	<b>mode</b>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	All

**vrrp** [**virtual-router-id**] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i>
Tree	<b>vrrp</b>
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its virtual router identifier (VRID) and a set of IP addresses.
Max. Instances	4
Introduced	16.0.R1
Platforms	All

**[virtual-router-id]** *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp</b> <i>number</i>
Tree	<b>vrrp</b>
Range	1 to 255
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **backup** *string*

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number backup string</i>
Tree	<a href="#">backup</a>
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p>

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. Instances	4
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp number</b> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	<p>Commands in this context assign a bidirectional forwarding detect (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism for use in speeding up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP Advertisement message. In addition, the standby VRRP routers transition to a Master state to speed convergence.</p> <p>The normal VRRP election process takes place based on the Advertisement messages sent by all VRRP routers.</p> <p>There can be only one BFD session assigned to any specific VRRP or SRRP instance, but there can be multiple SRRP or VRRP sessions using the same BFD session.</p>
Introduced	16.0.R1
Platforms	All

## dest-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for the BFD session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 vrrp number</b> <b>bfd-liveness</b> <b>dest-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>dest-ip</b>

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **interface-name** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">bfd-liveness</a> <a href="#">interface-name</a> <i>string</i>
Tree	<a href="#">interface-name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **service-name** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">bfd-liveness</a> <a href="#">service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **init-delay** *number*

Synopsis	VRRP initialization delay timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">init-delay</a> <i>number</i>

Tree	<a href="#">init-delay</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure</b> <a href="#">router string</a> <a href="#">interface string</a> <a href="#">ipv6 vrrp number</a> <a href="#">mac string</a>
Tree	<a href="#">mac</a>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

### **master-int-inherit boolean**

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <a href="#">router string</a> <a href="#">interface string</a> <a href="#">ipv6 vrrp number</a> <a href="#">master-int-inherit boolean</a>
Tree	<a href="#">master-int-inherit</a>
Description	When configured to <b>true</b> , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 16.0.R1

Platforms All

### **message-interval** *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** *router string interface string ipv6 vrrp number message-interval number*

Tree [message-interval](#)

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as the master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range 10 to 4095

Units centiseconds

Default 100

Introduced 16.0.R1

Platforms All

## monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number monitor-oper-group reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	22.2.R1
Platforms	All

## ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number ntp-reply boolean</i>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.  When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

## oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number oper-group reference</i>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master

router (MR), the operational group is up. The operational group is down for all other VRRP states.

Reference	<b>configure service oper-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **owner** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure router</b> <i>string interface string ipv6 vrrp number owner</i> <i>boolean</i>
Tree	<i>owner</i>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure router</b> <i>string interface string ipv6 vrrp number passive</i> <i>boolean</i>
Tree	<i>passive</i>
Description	When configured to <b>true</b> , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number ping-reply boolean</i>
Tree	<a href="#">ping-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	VRRP priority control policy
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number policy reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <i>vrrp policy number</i>

Introduced	16.0.R1
Platforms	All

### **preempt** *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number preempt boolean</i>
Tree	<i>preempt</i>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Base priority for the VRRP
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number priority number</i>
Tree	<i>priority</i>
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **standby-forwarding** *boolean*

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <i>router string interface string ipv6 vrrp number standby-forwarding boolean</i>

Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic. When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	When configured to <b>true</b> , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to <b>false</b> , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	16.0.R1

Platforms All

## lag

Synopsis Enter the **lag** context

Context **configure** *router string interface string lag*

Tree [lag](#)

Introduced 16.0.R1

Platforms All

## link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure** *router string interface string lag link-map-profile number*

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

## per-link-hash

Synopsis Enter the **per-link-hash** context

Context **configure** *router string interface string lag per-link-hash*

Tree [per-link-hash](#)

Introduced 16.0.R1

Platforms All

## class *number*

Synopsis Class used on LAG egress using weighted per-link-hash

Context	<b>configure</b> <i>router string interface string lag per-link-hash class number</i>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <i>router string interface string lag per-link-hash weight number</i>
Tree	<b>weight</b>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

### **ldp-sync-timer**

Synopsis	Enter the <b>ldp-sync-timer</b> context
Context	<b>configure</b> <i>router string interface string ldp-sync-timer</i>
Tree	<b>ldp-sync-timer</b>
Description	Commands in this context set associated parameters for the synchronization of an IGP and LDP.
Introduced	16.0.R1
Platforms	All

### **end-of-lib** *boolean*

Synopsis	Terminate LDP synchronization timer
Context	<b>configure</b> <i>router string interface string ldp-sync-timer end-of-lib boolean</i>
Tree	<b>end-of-lib</b>
Description	This command configures the system to terminate the LDP synchronization timer early for a specific session to an LDP peer, if the IGP interface receives LDP End-of-LIB Typed Wildcard FEC messages for every FEC type negotiated.
Default	false

Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time interval for the LDP synchronization timer
Context	<b>configure</b> <i>router string interface string ldp-sync-timer seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1800
Introduced	16.0.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure</b> <i>router string interface string load-balancing</i>
Tree	<i>load-balancing</i>
Description	Commands in this context configure interface per-flow load-balancing options that apply to traffic that enters this interface and that egresses over a LAG or ECMP. This is a per-interface setting. Load-balancing options enabled on the interface level overwrite options that can also be enabled on the system level.
Introduced	16.0.R1
Platforms	All

### **flow-label-load-balancing** *boolean*

Synopsis	Enable flow label load balancing
Context	<b>configure</b> <i>router string interface string load-balancing flow-label-load-balancing boolean</i>
Tree	<i>flow-label-load-balancing</i>
Description	When configured to <b>true</b> , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.  When configured to <b>false</b> , the router disables load balancing in ECMP and LAG.
Default	false
Introduced	21.5.R1
Platforms	All

### **ip-load-balancing** *keyword*

Synopsis	IP load-balancing algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>load-balancing</b> <b>ip-load-balancing</b> <i>keyword</i>
Tree	<a href="#">ip-load-balancing</a>
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the <b>I4-load-balancing</b> command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

### **lsr-load-balancing** *keyword*

Synopsis	LSR load-balancing algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>load-balancing</b> <b>lsr-load-balancing</b> <i>keyword</i>
Tree	<a href="#">lsr-load-balancing</a>
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1
Platforms	All

### **spi-load-balancing** *boolean*

Synopsis	Enable SPI use in hashing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i> <b>load-balancing</b> <b>spi-load-balancing</b> <i>boolean</i>
Tree	<a href="#">spi-load-balancing</a>
Description	When configured to <b>true</b> , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

### **teid-load-balancing** *boolean*

Synopsis	Enable use of TEID in hashing
Context	<b>configure</b> <i>router string interface string load-balancing teid-load-balancing boolean</i>
Tree	<a href="#">teid-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **loopback**

Synopsis	Use interface as a loopback interface
Context	<b>configure</b> <i>router string interface string loopback</i>
Tree	<a href="#">loopback</a>
Description	When configured, this interface is used as a loopback interface. This command and the <b>vas-if-type</b> command are mutually exclusive.
Notes	The following elements are part of a choice: <b>loopback</b> or <b>port</b> .
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	MAC address of the interface
Context	<b>configure</b> <i>router string interface string mac string</i>
Tree	<a href="#">mac</a>
Description	This command assigns a specific MAC address to an IP interface. Only one MAC address can be assigned to an IP interface. When multiple <b>mac</b> commands are entered, the last command overwrites the previous command.
Introduced	16.0.R1
Platforms	All

### **mac-accounting** *boolean*

Synopsis	Enable MAC accounting functionality
Context	<b>configure</b> <i>router string interface string mac-accounting boolean</i>

Tree	<a href="#">mac-accounting</a>
Description	When configured to <b>true</b> , the router enables MAC accounting functionality.
Default	false
Introduced	16.0.R1
Platforms	All

## network-domains

Synopsis	Enter the <b>network-domains</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">network-domains</a>
Tree	<a href="#">network-domains</a>
Introduced	16.0.R4
Platforms	All

## network-domain [[domain-name](#)] *reference*

Synopsis	Add a list entry for <b>network-domain</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>reference</i>
Tree	<a href="#">network-domain</a>
Description	<p>Commands in this context assign an interface to a network domain. The router then takes the network domain into account during SAP ingress queue allocation for VPLS SAP.</p> <p>The network domain association can only be done in the base routing context. An operator can associate a network domain with an interface without a physical port being specified, but the configuration has no effect until a corresponding port, or LAG, is defined.</p> <p>Single interfaces can be associated with multiple network domains.</p>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

## [[domain-name](#)] *reference*

Synopsis	Network domain name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>reference</i>
Tree	<a href="#">network-domain</a>

Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **port** (*port-and-encap* | *keyword*)

Synopsis	Port to bind to this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>port</b> ( <i>port-and-encap</i>   <i>keyword</i> )
Tree	<a href="#">port</a>
Description	This command creates an association between a logical IP interface and a physical port. An operator can also associate an interface with the system (loopback address).
String Length	1 to 45
Options	system
Notes	The following elements are part of a choice: <b>loopback</b> or <b>port</b> .
Introduced	16.0.R1
Platforms	All

### **ptp-hw-assist**

Synopsis	Enter the <b>ptp-hw-assist</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ptp-hw-assist</b>
Tree	<a href="#">ptp-hw-assist</a>
Description	<p>Commands in this context enable the port-based timestamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.</p> <p>Only one interface per physical port can have port-based timestamping assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the PTP timestamping assist
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ptp-hw-assist</a> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>qos</b>
Tree	<a href="#">qos</a>
Description	Commands in this context associate a network QoS policy with a network IP interface. Only one network QoS policy can be associated with an IP interface at one time. Attempts to associate a second QoS policy return an error.
Introduced	16.0.R1
Platforms	All

## egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>qos</b> <a href="#">egress-instance</a> <i>number</i>
Tree	<a href="#">egress-instance</a>
Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## egress-port-redirect-group *reference*

Synopsis	QoS queue group name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>qos</b> <a href="#">egress-port-redirect-group</a> <i>reference</i>
Tree	<a href="#">egress-port-redirect-group</a>
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group

name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.

Reference	<b>configure qos queue-group-templates egress queue-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **ingress-fp-redirect-group** *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>qos ingress-fp-redirect-group</b> <i>reference</i>
Tree	<a href="#">ingress-fp-redirect-group</a>
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	<b>configure qos queue-group-templates ingress queue-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **ingress-instance** *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>qos ingress-instance</b> <i>number</i>
Tree	<a href="#">ingress-instance</a>
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **network-policy** *reference*

Synopsis	Network policy name associated with a network interface
Context	<b>configure router</b> <i>string</i> <b>interface</b> <i>string</i> <b>qos network-policy</b> <i>reference</i>
Tree	<a href="#">network-policy</a>

Description	This command associates an existing network policy name with the IP interface.
Reference	<b>configure qos network string</b>
Introduced	16.0.R1
Platforms	All

### **strip-label boolean**

Synopsis	Strip all MPLS labels before PBR processing
Context	<b>configure router string interface string strip-label boolean</b>
Tree	<a href="#">strip-label</a>
Description	<p>When configured to <b>true</b>, the router forces packets to be stripped of all (maximum 5) MPLS labels before the packets are handed over for possible filter (PBR) processing.</p> <p>This command is supported on:</p> <ul style="list-style-type: none"> <li>• optical ports for the 7750 SR and 7450 ESS</li> <li>• null/dot1q encaps</li> <li>• network ports</li> <li>• IPv4</li> <li>• IPv6</li> </ul>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tos-marking-state keyword**

Synopsis	TOS marking state
Context	<b>configure router string interface string tos-marking-state keyword</b>
Tree	<a href="#">tos-marking-state</a>
Description	<p>This command configures the ToS marking state.</p> <p>This command is used to alter the default trusted state to a non-trusted state. When configured to <b>trusted</b> or default, the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted.</p> <p>When configured to <b>untrusted</b>, all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface.</p>
Options	trusted, untrusted

Default	trusted
Introduced	16.0.R1
Platforms	All

## untrusted

Synopsis	Enable the <b>untrusted</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>untrusted</b>
Tree	<a href="#">untrusted</a>
Description	<p>Commands in this context configure the untrusted state for a network IP interface.</p> <p>The untrusted state identifies the participating interfaces in the label security feature for prefixes of a VPN family at an inter-AS boundary. The router supports a maximum of 15 network interfaces that can participate in this feature.</p> <p>The user normally applies this command to an inter-AS interface. PIP keeps track of the untrusted status of each interface.</p>
Introduced	16.0.R4
Platforms	All

## default-forwarding *keyword*

Synopsis	Default action for selective ILM
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>untrusted</b> <a href="#">default-forwarding</a> <i>keyword</i>
Tree	<a href="#">default-forwarding</a>
Description	<p>This command specifies the default forwarding behavior of labeled packets received on this interface.</p> <p>This command sets the default behavior for an untrusted interface in the datapath and for all ILMs. When enabling the label security for VPN IPv4 or VPN IPv6 prefixes, BGP programs the data path to provide an exception to the normal way of forwarding away from the default for those VPRN ILMs.</p> <p>When the default behavior is to forward packets, the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a L2 service context.</p> <p>When the specified behavior is to drop packets, all labeled packets received on the interface are automatically dropped.</p>
Options	forward, drop
Default	forward
Introduced	16.0.R4
Platforms	All

**urpf-selected-vprns** *boolean*

Synopsis	Enable uRPF checking of incoming traffic on interface
Context	<b>configure</b> <i>router string interface string urpf-selected-vprns boolean</i>
Tree	<a href="#">urpf-selected-vprns</a>
Description	<p>When configured to <b>true</b>, the router performs uRPF checks of incoming traffic on the network interface for the following:</p> <ul style="list-style-type: none"> <li>• Packets associated with the global routing table (base router) context</li> <li>• Packets associated with VPRNs that have enabled the uRPF check using the <b>configure service vprn network ingress urpf-check</b> command</li> </ul> <p>When configured to <b>false</b>, the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router and all VPRNs) based on the IPv4 and IPv6 <b>urpf-check</b> command configuration options of the network interface.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**vas-if-type** *keyword*

Synopsis	VAS interface type
Context	<b>configure</b> <i>router string interface string vas-if-type keyword</i>
Tree	<a href="#">vas-if-type</a>
Description	This command configures the type of a Value Added Service (VAS) facing interface. This command and <b>loopback</b> command
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1
Platforms	All

**ipsec**

Synopsis	Enter the <b>ipsec</b> context
Context	<b>configure</b> <i>router string ipsec</i>
Tree	<a href="#">ipsec</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**multi-chassis-shunt-interface** [*name*] *string*

Synopsis	Enter the <b>multi-chassis-shunt-interface</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string</i>
Tree	<a href="#">multi-chassis-shunt-interface</a>
Description	This command configures the multi-chassis shunting interface name for the peer.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Multi-chassis shunt interface name
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string</i>
Tree	<a href="#">multi-chassis-shunt-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**next-hop**

Synopsis	Enter the <b>next-hop</b> context
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string next-hop</i>
Tree	<a href="#">next-hop</a>
Description	Commands in this context configure the next hop for shunting over the interface.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next hop address for the shunting interface
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunt-interface string next-hop address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">address</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**multi-chassis-shunting-profile** [*name*] *string*

Synopsis	Enter the <b>multi-chassis-shunting-profile</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Multi-chassis shunting profile name
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer** [*ip-address*] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string peer reference</i>
Tree	<a href="#">peer</a>
Max. Instances	3
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[ip-address]** *reference*

Synopsis	Peer address
Context	<b>configure</b> <i>router string ipsec multi-chassis-shunting-profile string peer reference</i>
Tree	<a href="#">peer</a>

Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunt-interface** *reference*

Synopsis	Multi-chassis shunt interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec multi-chassis-shunting-profile</a> <i>string</i> <a href="#">peer reference multi-chassis-shunt-interface</a> <i>reference</i>
Tree	<a href="#">multi-chassis-shunt-interface</a>
Description	This command configures the shunting interface name for the peer.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec multi-chassis-shunt-interface</a> <i>string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **security-policy** [*id*] *number*

Synopsis	Enter the <b>security-policy</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i>
Tree	<a href="#">security-policy</a>
Introduced	22.7.R1
Platforms	VSR

### **[id]** *number*

Synopsis	IPsec security policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i>
Tree	<a href="#">security-policy</a>
Range	1 to 32768
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	22.7.R1
Platforms	VSR

**[entry-id]** *number*

Synopsis	IPsec security policy entry ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

**local-ip**

Synopsis	Enter the <b>local-ip</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">local-ip</a>
Tree	<a href="#">local-ip</a>
Description	<p>Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p>
Introduced	22.7.R1
Platforms	VSR

**address** *string*

Synopsis	Destination IPv4 address of the aggregate route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">local-ip</a> <a href="#">address</a> <i>string</i>

Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

### **any boolean**

Synopsis	Use any IP address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ipsec security-policy</a> <a href="#">number</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">local-ip</a> <a href="#">any</a> <a href="#">boolean</a>
Tree	<a href="#">any</a>
Default	false
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

### **local-ipv6**

Synopsis	Enter the <b>local-ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ipsec security-policy</a> <a href="#">number</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">local-ipv6</a>
Tree	<a href="#">local-ipv6</a>
Description	<p>Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.</p> <p>The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.</p>
Introduced	22.7.R1
Platforms	VSR

### **address string**

Synopsis	Destination IPv6 address of the aggregate route
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ipsec security-policy</a> <a href="#">number</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">local-ipv6</a> <a href="#">address</a> <a href="#">string</a>
Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1

Platforms VSR

### **any** *boolean*

Synopsis Use any IP address

Context **configure** *router string ipsec security-policy number entry number local-ipv6 any boolean*

Tree [any](#)

Default false

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

### **remote-ip**

Synopsis Enter the **remote-ip** context

Context **configure** *router string ipsec security-policy number entry number remote-ip*

Tree [remote-ip](#)

Description Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry.

The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public.

Introduced 22.7.R1

Platforms VSR

### **address** *string*

Synopsis Destination IPv4 address of the aggregate route

Context **configure** *router string ipsec security-policy number entry number remote-ip address string*

Tree [address](#)

Notes The following elements are part of a choice: **address** or **any**.

Introduced 22.7.R1

Platforms VSR

**any *boolean***

Synopsis	Use any IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i> <b>remote-ip</b> <b>any</b> <i>boolean</i>
Tree	<b>any</b>
Default	false
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

**remote-ipv6**

Synopsis	Enter the <b>remote-ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i> <b>remote-ipv6</b>
Tree	<b>remote-ipv6</b>
Description	Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.  The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.
Introduced	22.7.R1
Platforms	VSR

**address *string***

Synopsis	Destination IPv6 address of the aggregate route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipsec</b> <b>security-policy</b> <i>number</i> <b>entry</b> <i>number</i> <b>remote-ipv6</b> <b>address</b> <i>string</i>
Tree	<b>address</b>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

**any *boolean***

Synopsis	Use any IP address
----------	--------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipsec security-policy number</i> <i>entry number</i> <i>remote-ipv6 any boolean</i>
Tree	<a href="#">any</a>
Default	false
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	22.7.R1
Platforms	VSR

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6</i>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6 neighbor-discovery</i>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## reachable-time *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ipv6 neighbor-discovery reachable-time number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Default	30
Introduced	16.0.R1
Platforms	All

**stale-time** *number*

Synopsis	Neighbor discovery cache entry stale time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>stale-time</b> <i>number</i>
Tree	<b>stale-time</b>
Range	60 to 65535
Default	14400
Introduced	16.0.R1
Platforms	All

**router-advertisement**

Synopsis	Enter the <b>router-advertisement</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b>
Tree	<b>router-advertisement</b>
Introduced	16.0.R1
Platforms	All

**dns-options**

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>dns-options</b>
Tree	<b>dns-options</b>
Introduced	16.0.R1
Platforms	All

**rdnss-lifetime** (*keyword* | *number*)

Synopsis	Maximum time over which the RDNSS address is valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>dns-options</b> <b>rdnss-lifetime</b> ( <i>keyword</i>   <i>number</i> )
Tree	<b>rdnss-lifetime</b>
Description	This command specifies the maximum time that the RDNSS address is used for name resolution by the client.
Range	0   4 to 3600
Units	seconds

Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

**server string**

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure</b> <a href="#">router string ipv6 router-advertisement dns-options server string</a>
Tree	<a href="#">server</a>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**interface [ip-int-name] string**

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router string ipv6 router-advertisement interface string</a>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

**[ip-int-name] string**

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router string ipv6 router-advertisement interface string</a>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of router advertisement
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**current-hop-limit** *number*

Synopsis	Hop limit advertised in RA messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>current-hop-limit</b> <i>number</i>
Tree	<b>current-hop-limit</b>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	All

**dns-options**

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b>
Tree	<b>dns-options</b>
Introduced	16.0.R1
Platforms	All

**include-rdnss** *boolean*

Synopsis	Include the RDNSS option in the RA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>include-rdnss</b> <i>boolean</i>
Tree	<b>include-rdnss</b>
Default	true

Introduced	16.0.R1
Platforms	All

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis	Maximum time over which the RDNSS address 25 is valid
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>rdnss-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>rdnss-lifetime</b>
Range	0   4 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **server** *string*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>dns-options</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **managed-configuration** *boolean*

Synopsis	Set the managed address configuration flag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>managed-configuration</b> <i>boolean</i>
Tree	<b>managed-configuration</b>
Default	false
Introduced	16.0.R1
Platforms	All

**max-advertisement-interval** *number*

Synopsis	Maximum time between sending advertisement messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>max-advertisement-interval</b> <i>number</i>
Tree	<b>max-advertisement-interval</b>
Range	4 to 1800
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

**min-advertisement-interval** *number*

Synopsis	Minimum interval between router advertisement messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>min-advertisement-interval</b> <i>number</i>
Tree	<b>min-advertisement-interval</b>
Range	3 to 1350
Units	seconds
Default	200
Introduced	16.0.R1
Platforms	All

**mtu** *number*

Synopsis	MTU for sending packets to the router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	1280 to 9800
Introduced	16.0.R1
Platforms	All

**nd-router-preference** *keyword*

Synopsis	Default router preference for Router Advertisements
----------	---

Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>nd-router-preference</b> <i>keyword</i>
Tree	<a href="#">nd-router-preference</a>
Description	<p>This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs.</p> <p>This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the connected host to assist in its selection of the most appropriate default gateway on a link.</p> <p>This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.</p>
Options	medium, high, low
Default	medium
Introduced	23.10.R1
Platforms	All

### **other-stateful-configuration** *boolean*

Synopsis	Set the other configuration flag
Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>other-stateful-configuration</b> <i>boolean</i>
Tree	<a href="#">other-stateful-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix** [[ipv6-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>prefix</b> <i>string</i>
Tree	<a href="#">prefix</a>
Max. Instances	254
Introduced	16.0.R1

Platforms All

### **[ipv6-prefix]** *string*

Synopsis IPv6 address prefix

Context **configure** [router](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) *string* [prefix](#) *string*

Tree [prefix](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **autonomous** *boolean*

Synopsis Set the autonomous flag value

Context **configure** [router](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) *string* [prefix](#) *string* [autonomous](#) *boolean*

Tree [autonomous](#)

Default true

Introduced 16.0.R1

Platforms All

### **on-link** *boolean*

Synopsis Use prefix for on-link determination

Context **configure** [router](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) *string* [prefix](#) *string* [on-link](#) *boolean*

Tree [on-link](#)

Default true

Introduced 16.0.R1

Platforms All

### **preferred-lifetime** (*keyword* | *number*)

Synopsis Remaining time that the prefix remains preferred

Context **configure** [router](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) *string* [prefix](#) *string* [preferred-lifetime](#) (*keyword* | *number*)

Tree	<a href="#">preferred-lifetime</a>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	604800
Introduced	16.0.R1
Platforms	All

### **valid-lifetime** (*keyword* | *number*)

Synopsis	Remaining time in which the prefix is still valid
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">valid-lifetime</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">valid-lifetime</a>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	2592000
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>string</i> <a href="#">reachable-time</a> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	All

### **retransmit-time** *number*

Synopsis	Time to advertise neighbor advertisement messages
----------	---

Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>retransmit-time</b> <i>number</i>
Tree	<a href="#">retransmit-time</a>
Range	0 to 1800000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	All

### **router-lifetime** *number*

Synopsis	Lifetime value in neighbor advertisement messages
Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>router-lifetime</b> <i>number</i>
Tree	<a href="#">router-lifetime</a>
Range	0   4 to 9000
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	All

### **use-virtual-mac** *boolean*

Synopsis	Use VRRP virtual MAC address for advertisement message
Context	<b>configure router</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>string</i> <b>use-virtual-mac</b> <i>boolean</i>
Tree	<a href="#">use-virtual-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6-te-router-id**

Synopsis	Enter the <b>ipv6-te-router-id</b> context
Context	<b>configure router</b> <i>string</i> <b>ipv6-te-router-id</b>
Tree	<a href="#">ipv6-te-router-id</a>
Introduced	19.10.R1

Platforms All

### **interface** *reference*

Synopsis Network IP interface name to obtain IP address

Context **configure** *router string ipv6-te-router-id interface reference*

Tree [interface](#)

Description This command specifies the interface name from which to obtain the IP address to use as the IPv6 TE Router ID. This router ID uniquely identifies the router to other routers as IPv6 TE capable in an IGP TE domain.

IS-IS advertises this information using the IPv6 TE Router ID TLV.

Reference **configure** *router string interface string*

Introduced 19.10.R1

Platforms All

### **isa-service-chaining**

Synopsis Enable the **isa-service-chaining** context

Context **configure** *router string isa-service-chaining*

Tree [isa-service-chaining](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-group** [*id*] *number*

Synopsis Add a list entry for **nat-group**

Context **configure** *router string isa-service-chaining nat-group number*

Tree [nat-group](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[id]** *number*

Synopsis ISA NAT group/ISA WLAN GW group ID for the EVPN pools

Context **configure** *router string isa-service-chaining nat-group number*

Tree [nat-group](#)

Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vxlan-vtep-range

Synopsis	Enable the <b>vxlan-vtep-range</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">isa-service-chaining vxlan-vtep-range</a>
Tree	<a href="#">vxlan-vtep-range</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	End address of the VXLAN VTEP range
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">isa-service-chaining vxlan-vtep-range end</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">end</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Start address of the VXLAN VTEP range
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">isa-service-chaining vxlan-vtep-range start</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">start</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## isis [[isis-instance](#)] *number*

Synopsis	Enter the <b>isis</b> list instance
----------	-------------------------------------

Context	<b>configure router string isis number</b>
Tree	<b>isis</b>
Introduced	16.0.R1
Platforms	All

### **[isis-instance] number**

Synopsis	Instance ID for the IS-IS instance
Context	<b>configure router string isis number</b>
Tree	<b>isis</b>
Range	0 to 127
MD-CLI	0
Default	
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the IS-IS instance
Context	<b>configure router string isis number admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **advertise-passive-only boolean**

Synopsis	Advertise prefixes that belong to passive interfaces
Context	<b>configure router string isis number advertise-passive-only boolean</b>
Tree	<b>advertise-passive-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *keyword*

Synopsis	Router capabilities advertisement to neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>advertise-router-capability</b> <i>keyword</i>
Tree	<a href="#">advertise-router-capability</a>
Options	area, as
Introduced	16.0.R1
Platforms	All

**advertise-tunnel-link** *boolean*

Synopsis	Allow use of forwarding adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>advertise-tunnel-link</b> <i>boolean</i>
Tree	<a href="#">advertise-tunnel-link</a>
Default	false
Introduced	16.0.R1
Platforms	All

**all-l1isis** *string*

Synopsis	Destination MAC address for all L1 IS-IS routers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>all-l1isis</b> <i>string</i>
Tree	<a href="#">all-l1isis</a>
Default	01:80:C2:00:00:14
Introduced	16.0.R1
Platforms	All

**all-l2isis** *string*

Synopsis	Destination MAC address for all L2 IS-IS routers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>all-l2isis</b> <i>string</i>
Tree	<a href="#">all-l2isis</a>
Default	01:80:C2:00:00:15
Introduced	16.0.R1
Platforms	All

**area-address** *string*

Synopsis	Area address portion of the NSAP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>area-address</b> <i>string</i>
Tree	<b>area-address</b>
String Length	2 to 38
Max. Instances	3
Introduced	16.0.R1
Platforms	All

**authentication-check** *boolean*

Synopsis	Perform authentication check to reject mismatch PDUs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-check</b> <i>boolean</i>
Tree	<b>authentication-check</b>
Default	true
Introduced	16.0.R1
Platforms	All

**authentication-key** *string*

Synopsis	Authentication key to verify PDUs sent from neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

**authentication-keychain** *reference*

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>authentication-keychain</b> <i>reference</i>
Tree	<b>authentication-keychain</b>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>

Introduced 16.0.R3  
Platforms All

### **authentication-type** *keyword*

Synopsis Authentication type  
Context **configure** [router](#) *string* [isis](#) *number* [authentication-type](#) *keyword*  
Tree [authentication-type](#)  
Options password, message-digest  
Introduced 16.0.R1  
Platforms All

### **csnp-authentication** *boolean*

Synopsis Authenticate individual IS-IS packets of the CSNP type  
Context **configure** [router](#) *string* [isis](#) *number* [csnp-authentication](#) *boolean*  
Tree [csnp-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **database-export**

Synopsis Enable the **database-export** context  
Context **configure** [router](#) *string* [isis](#) *number* [database-export](#)  
Tree [database-export](#)  
Introduced 16.0.R1  
Platforms All

### **bgp-ls-identifier**

Synopsis Enable the **bgp-ls-identifier** context  
Context **configure** [router](#) *string* [isis](#) *number* [database-export](#) [bgp-ls-identifier](#)  
Tree [bgp-ls-identifier](#)  
Introduced 16.0.R1

Platforms All

### **value** *number*

Synopsis BGP-LS identifier sent in the BGP-LS NLRI  
 Context **configure** **router** *string* **isis** *number* **database-export** **bgp-ls-identifier** *value* *number*  
 Tree [value](#)  
 Max. Range 0 to 4294967295  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

### **igp-identifier** *number*

Synopsis Unique ID of the IGP instance in the BGP-LS NLRI  
 Context **configure** **router** *string* **isis** *number* **database-export** **igp-identifier** *number*  
 Tree [igp-identifier](#)  
 Max. Range 0 to 18446744073709551615  
 Introduced 16.0.R1  
 Platforms All

### **default-route-tag** *number*

Synopsis Route tag for the default route  
 Context **configure** **router** *string* **isis** *number* **default-route-tag** *number*  
 Tree [default-route-tag](#)  
 Range 1 to 4294967295  
 Introduced 16.0.R1  
 Platforms All

### **entropy-label**

Synopsis Enter the **entropy-label** context  
 Context **configure** **router** *string* **isis** *number* **entropy-label**  
 Tree [entropy-label](#)

Introduced 16.0.R1  
Platforms All

### **override-tunnel-elc** *boolean*

Synopsis Enable override of received ELC advertisements  
Context **configure** [router](#) *string* [isis](#) *number* [entropy-label](#) [override-tunnel-elc](#) *boolean*  
Tree [override-tunnel-elc](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **export-limit**

Synopsis Enable the **export-limit** context  
Context **configure** [router](#) *string* [isis](#) *number* [export-limit](#)  
Tree [export-limit](#)  
Introduced 16.0.R1  
Platforms All

### **log-percent** *number*

Synopsis Export limit before warning and SNMP notification sent  
Context **configure** [router](#) *string* [isis](#) *number* [export-limit](#) [log-percent](#) *number*  
Tree [log-percent](#)  
Range 1 to 100  
Introduced 16.0.R1  
Platforms All

### **number** *number*

Synopsis Maximum routes or prefixes exported from route table  
Context **configure** [router](#) *string* [isis](#) *number* [export-limit](#) [number](#) *number*  
Tree [number](#)  
Range 1 to 4294967295

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **flexible-algorithms**

Synopsis	Enter the <b>flexible-algorithms</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <b>flexible-algorithms</b>
Tree	<b>flexible-algorithms</b>
Description	Commands in this context configure IS-IS parameters for flexible algorithm participation.
Introduced	20.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	20.7.R1
Platforms	All

**advertise-admin-group** *keyword*

Synopsis	Administrative group TLV to advertise
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>advertise-admin-group</b> <i>keyword</i>
Tree	<b>advertise-admin-group</b>
Description	This command configures the type of Administrative Group TLV the router advertises as an IGP link attribute. This command is configured for this IGP instance.
Options	prefer-ag, eag-only, ag-eag
Default	prefer-ag
Introduced	23.3.R1
Platforms	All

**flex-algo** [**flex-algo-id**] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>flexible-algorithms</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Description	Commands in this context configure an IS-IS flexible algorithm. When flexible algorithm is configured in an IS-IS instance, the IS-IS instance is configured for all levels (Level 1 and Level 2).
Max. Instances	7
Introduced	20.7.R1
Platforms	All

**[flex-algo-id] number**

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <a href="#">number</a>
Tree	<a href="#">flex-algo</a>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

**advertise reference**

Synopsis	Flexible Algorithm Definition advertisement
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <a href="#">number</a> <a href="#">advertise</a> <a href="#">reference</a>
Tree	<a href="#">advertise</a>
Description	<p>This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).</p> <p>The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.</p>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <a href="#">string</a>
Introduced	20.7.R1
Platforms	All

**loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">flexible-algorithms</a> <a href="#">flex-algo</a> <a href="#">number</a> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	20.7.R1
Platforms	All

**micro-loop-avoidance**

Synopsis	Enable the <b>micro-loop-avoidance</b> context
Context	<b>configure</b> <i>router string isis number flexible-algorithms flex-algo number micro-loop-avoidance</i>
Tree	<a href="#">micro-loop-avoidance</a>
Introduced	21.7.R1
Platforms	All

**participate** *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	<b>configure</b> <i>router string isis number flexible-algorithms flex-algo number participate boolean</i>
Tree	<a href="#">participate</a>
Description	When configured to <b>true</b> , the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.  When configured to <b>false</b> , flexible algorithm participation is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

**graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <i>router string isis number graceful-restart</i>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

**helper-mode** *boolean*

Synopsis	Enable the Graceful Restart helper for IS-IS
Context	<b>configure</b> <i>router string isis number graceful-restart helper-mode boolean</i>
Tree	<a href="#">helper-mode</a>
Default	true

Introduced 16.0.R1  
Platforms All

### **hello-authentication** *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets  
Context **configure** *router string isis number hello-authentication boolean*  
Tree [hello-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-padding** *keyword*

Synopsis IS-IS Hello message padding  
Context **configure** *router string isis number hello-padding keyword*  
Tree [hello-padding](#)  
Options adaptive, loose, strict, none  
Introduced 16.0.R1  
Platforms All

### **ignore-attached-bit** *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs  
Context **configure** *router string isis number ignore-attached-bit boolean*  
Tree [ignore-attached-bit](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **ignore-lsp-errors** *boolean*

Synopsis Ignore LSP packets with errors  
Context **configure** *router string isis number ignore-lsp-errors boolean*  
Tree [ignore-lsp-errors](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **ignore-narrow-metric** *boolean*

Synopsis	Ignore links with narrow metrics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ignore-narrow-metric</a> <i>boolean</i>
Tree	<a href="#">ignore-narrow-metric</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igp-shortcut**

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RSVP-TE or SR-TE shortcut
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">igp-shortcut</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## allow-sr-over-srte *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable SR over SR-TE LSPs
Context	<b>configure</b> <i>router string isis number igp-shortcut allow-sr-over-srte boolean</i>
Tree	<a href="#">allow-sr-over-srte</a>
Description	<p>When configured to <b>true</b>, the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with <b>allow-sr-over-srte</b> explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all available SR-TE LSPs as IGP shortcuts regardless of the explicit <b>allow-sr-over-srte</b> configuration.</p> <p>Under ECMP, when this command is configured to <b>true</b>, preference is given to the SR-TE LSPs with <b>allow-sr-over-srte</b> explicitly configured over the LSPs that do not have <b>allow-sr-over-srte</b> configured.</p>
Default	false
Introduced	23.3.R1
Platforms	All

## tunnel-next-hop

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop</i>
Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R1
Platforms	All

## family [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1

Platforms All

### **[family-type]** *keyword*

Synopsis Address family type for tunnel next hop

Context **configure** **router** *string* **isis** *number* **igp-shortcut** **tunnel-next-hop** **family** *keyword*

Tree **family**

Options ipv4, ipv6, srv4, srv6

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **resolution** *keyword*

Synopsis Resolution mode for IGP shortcut tunnels

Context **configure** **router** *string* **isis** *number* **igp-shortcut** **tunnel-next-hop** **family** *keyword* **resolution** *keyword*

Tree **resolution**

Options none, filter, any, match-family-ip

Default none

Introduced 16.0.R1

Platforms All

### **resolution-filter**

Synopsis Enter the **resolution-filter** context

Context **configure** **router** *string* **isis** *number* **igp-shortcut** **tunnel-next-hop** **family** *keyword* **resolution-filter**

Tree **resolution-filter**

Introduced 16.0.R1

Platforms All

### **rsvp** *boolean*

Synopsis Use RSVP tunneling for next-hop resolution

Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution-filter rsvp boolean</i>
Tree	<a href="#">rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <i>router string isis number igp-shortcut tunnel-next-hop family keyword resolution-filter sr-te boolean</i>
Tree	<a href="#">sr-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

**iid-tlv** *boolean*

Synopsis	Use IID TLVs with IS-IS multi-instance
Context	<b>configure</b> <i>router string isis number iid-tlv boolean</i>
Tree	<a href="#">iid-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy** *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	<b>configure</b> <i>router string isis number import-policy reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <i>policy-options policy-statement string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1

Platforms All

### **interface** [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance  
 Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string*  
 Tree [interface](#)  
 Introduced 16.0.R1  
 Platforms All

### **[interface-name]** *string*

Synopsis Router interface name  
 Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string*  
 Tree [interface](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **adjacency-set** [[id](#)] *reference*

Synopsis Add a list entry for **adjacency-set**  
 Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [adjacency-set](#) *reference*  
 Tree [adjacency-set](#)  
 Introduced 16.0.R1  
 Platforms All

### **[id]** *reference*

Synopsis Adjacency set ID  
 Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [adjacency-set](#) *reference*  
 Tree [adjacency-set](#)  
 Reference **configure** [router](#) *string* [isis](#) *number* [segment-routing](#) [adjacency-set](#) *number*  
 Notes This element is part of a list key.

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the IS-IS interface
Context	<b>configure</b> <b>router</b> <i>string isis number interface string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string isis number interface string bfd-liveness</i>
Tree	<a href="#">bfd-liveness</a>
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string isis number interface string bfd-liveness ipv4</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **include-bfd-tlv** *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
----------	--

Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv4</a> <a href="#">include-bfd-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">include-bfd-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

## include-bfd-tlv *boolean*

Synopsis	Enable IS-IS BFD TLVs on the interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">bfd-liveness</a> <a href="#">ipv6</a> <a href="#">include-bfd-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">include-bfd-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

## csnp-interval *number*

Synopsis	Time interval between successive CSN PDUs sent
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">csnp-interval</a> <a href="#">number</a>
Tree	<a href="#">csnp-interval</a>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**default-instance** *boolean*

Synopsis	Allow non-MI capable router to establish an adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>default-instance</b> <i>boolean</i>
Tree	<a href="#">default-instance</a>
Default	false
Introduced	16.0.R1
Platforms	All

**flex-algo** [[flex-algo-id](#)] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<a href="#">flex-algo</a>
Max. Instances	7
Introduced	20.7.R1
Platforms	All

**[flex-algo-id]** *number*

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i>
Tree	<a href="#">flex-algo</a>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

**ipv4-node-sid**

Synopsis	Enable the <b>ipv4-node-sid</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>flex-algo</b> <i>number</i> <b>ipv4-node-sid</b>
Tree	<a href="#">ipv4-node-sid</a>
Introduced	20.7.R1

Platforms All

### **index number**

Synopsis Node SID index for this interface

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [flex-algo](#) *number* [ipv4-node-sid](#) [index](#) *number*

Tree [index](#)

Range 0 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 20.7.R1

Platforms All

### **label number**

Synopsis Label value for the node SID

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [flex-algo](#) *number* [ipv4-node-sid](#) [label](#) *number*

Tree [label](#)

Range 1 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 20.7.R1

Platforms All

### **ipv6-node-sid**

Synopsis Enable the **ipv6-node-sid** context

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [flex-algo](#) *number* [ipv6-node-sid](#)

Tree [ipv6-node-sid](#)

Introduced 20.7.R1

Platforms All

### **index number**

Synopsis Node SID index for this interface

Context	<b>configure</b> <i>router string isis number interface string flex-algo number ipv6-node-sid index number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

### **label** *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <i>router string isis number interface string flex-algo number ipv6-node-sid label number</i>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	20.7.R1
Platforms	All

### **hello-authentication** *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	<b>configure</b> <i>router string isis number interface string hello-authentication boolean</i>
Tree	<a href="#">hello-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **hello-authentication-key** *string*

Synopsis	Authentication key or hash string for Hello PDUs
Context	<b>configure</b> <i>router string isis number interface string hello-authentication-key string</i>
Tree	<a href="#">hello-authentication-key</a>
String Length	1 to 366
Introduced	16.0.R1

Platforms All

### **hello-authentication-keychain** *reference*

Synopsis Authentication keychain to use for the session

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [hello-authentication-keychain](#) *reference*

Tree [hello-authentication-keychain](#)

Reference **configure** [system](#) [security](#) [keychains](#) [keychain](#) *string*

Introduced 16.0.R3

Platforms All

### **hello-authentication-type** *keyword*

Synopsis Hello authentication type

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [hello-authentication-type](#) *keyword*

Tree [hello-authentication-type](#)

Options password, message-digest

Introduced 16.0.R1

Platforms All

### **hello-padding** *keyword*

Synopsis Padding on IS-IS Hello packets

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [hello-padding](#) *keyword*

Tree [hello-padding](#)

Options adaptive, loose, strict, none

Introduced 16.0.R1

Platforms All

### **interface-type** *keyword*

Synopsis Interface type to broadcast, point-to-point, or to be default

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [interface-type](#) *keyword*

Tree [interface-type](#)

---

Options	point-to-point, broadcast
Introduced	16.0.R1
Platforms	All

### **ipv4-adjacency-sid**

Synopsis	Enable the <b>ipv4-adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-adjacency-sid</a>
Tree	<a href="#">ipv4-adjacency-sid</a>
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis	Adjacency SID label
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-adjacency-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast** *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-multicast</a> <i>boolean</i>
Tree	<a href="#">ipv4-multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv4-node-sid**

Synopsis	Enable the <b>ipv4-node-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-node-sid</a>
Tree	<a href="#">ipv4-node-sid</a>

Introduced 16.0.R1  
Platforms All

### **clear-n-flag** *boolean*

Synopsis Clear the node-sid flag (N-flag)  
Context **configure** *router string isis number interface string ipv4-node-sid clear-n-flag boolean*  
Tree [clear-n-flag](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **index** *number*

Synopsis Node SID index for this interface  
Context **configure** *router string isis number interface string ipv4-node-sid index number*  
Tree [index](#)  
Range 0 to 4294967295  
Notes The following elements are part of a choice: **index** or **label**.  
Introduced 16.0.R1  
Platforms All

### **label** *number*

Synopsis Label value for the node SID  
Context **configure** *router string isis number interface string ipv4-node-sid label number*  
Tree [label](#)  
Range 1 to 4294967295  
Notes The following elements are part of a choice: **index** or **label**.  
Introduced 16.0.R1  
Platforms All

### **ipv6-adjacency-sid**

Synopsis Enable the **ipv6-adjacency-sid** context

Context	<b>configure</b> <i>router string isis number interface string ipv6-adjacency-sid</i>
Tree	<a href="#">ipv6-adjacency-sid</a>
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis	Adjacency SID label
Context	<b>configure</b> <i>router string isis number interface string ipv6-adjacency-sid label number</i>
Tree	<a href="#">label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast** *boolean*

Synopsis	Enable IPv6 multicast routing for the interface
Context	<b>configure</b> <i>router string isis number interface string ipv6-multicast boolean</i>
Tree	<a href="#">ipv6-multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6-node-sid**

Synopsis	Enable the <b>ipv6-node-sid</b> context
Context	<b>configure</b> <i>router string isis number interface string ipv6-node-sid</i>
Tree	<a href="#">ipv6-node-sid</a>
Introduced	16.0.R1
Platforms	All

### **clear-n-flag** *boolean*

Synopsis	Clear the node-sid flag (N-flag)
Context	<b>configure</b> <i>router string isis number interface string ipv6-node-sid clear-n-flag boolean</i>

---

Tree	<a href="#">clear-n-flag</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **index number**

Synopsis	Node SID index for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6-node-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **label number**

Synopsis	Label value for the node SID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6-node-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast boolean**

Synopsis	Enable IPv6 unicast routing for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6-unicast</a> <i>boolean</i>
Tree	<a href="#">ipv6-unicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

**level** [*level-number*] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <i>router string isis number interface string level keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <i>router string isis number interface string level keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**hello-authentication-key** *string*

Synopsis	Authentication key for Hello PDUs
Context	<b>configure</b> <i>router string isis number interface string level keyword hello-authentication-key string</i>
Tree	<a href="#">hello-authentication-key</a>
Description	This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.  If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

**hello-authentication-keychain** *reference*

Synopsis	Authentication keychain to use for the session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-authentication-keychain</a> <i>reference</i>
Tree	<a href="#">hello-authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

**hello-authentication-type** *keyword*

Synopsis	Hello authentication enabled on the context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-authentication-type</a> <i>keyword</i>
Tree	<a href="#">hello-authentication-type</a>
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello <b>authentication-key</b> statement must also be included.
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

**hello-interval** *number*

Synopsis	Interval between Hello messages sent on this level
