Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">hello-interval</a> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Units	seconds
Default	9
Introduced	16.0.R1
Platforms	All

**hello-multiplier** *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
----------	---

Context	<b>configure</b> <i>router string isis number interface string level keyword hello-multiplier number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	16.0.R1
Platforms	All

### **hello-padding** *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <i>router string isis number interface string level keyword hello-padding keyword</i>
Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv4 multicast
Context	<b>configure</b> <i>router string isis number interface string level keyword ipv4-multicast-metric number</i>
Tree	<a href="#">ipv4-multicast-metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv6 multicast
Context	<b>configure</b> <i>router string isis number interface string level keyword ipv6-multicast-metric number</i>
Tree	<a href="#">ipv6-multicast-metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**ipv6-unicast-metric** *number*

Synopsis	IS-IS interface metric applied for IPv6 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-unicast-metric</b> <i>number</i>
Tree	<b>ipv6-unicast-metric</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**metric** *number*

Synopsis	IS-IS interface metric applied for IPv4 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Passive interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1
Platforms	All

**priority** *number*

Synopsis	Router to become the designated router on a multi-access network
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 127
Default	64

Introduced 16.0.R1  
 Platforms All

### **sd-offset** *number*

Synopsis Value of the signal degrade offset  
 Context **configure** *router string isis number interface string level keyword sd-offset number*  
 Tree [sd-offset](#)  
 Range 1 to 16777215  
 Introduced 16.0.R1  
 Platforms All

### **sf-offset** *number*

Synopsis Value of the signal fail offset  
 Context **configure** *router string isis number interface string level keyword sf-offset number*  
 Tree [sf-offset](#)  
 Range 1 to 16777215  
 Introduced 16.0.R1  
 Platforms All

### **level-capability** *keyword*

Synopsis IS-IS levels for this interface  
 Context **configure** *router string isis number interface string level-capability keyword*  
 Tree [level-capability](#)  
 Options 1, 2, 1/2  
 Default 1/2  
 Introduced 16.0.R1  
 Platforms All

### **load-balancing-weight** *number*

Synopsis Load balancing weight  
 Context **configure** *router string isis number interface string load-balancing-weight number*

---

Tree	<a href="#">load-balancing-weight</a>
Max. Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

## loopfree-alternate

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

## exclude *boolean*

Synopsis	Enable/disable Loopfree Alternative at interface level.
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <b>exclude</b> <i>boolean</i>
Tree	<a href="#">exclude</a>
Default	false
Introduced	16.0.R3
Platforms	All

## policy-map

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a>
Tree	<a href="#">policy-map</a>
Introduced	16.0.R3
Platforms	All

## route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a> <a href="#">route-nh-template</a> <i>reference</i>
Tree	<a href="#">route-nh-template</a>

Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

### **lsp-pacing-interval** *number*

Synopsis	Interval for sending LSPs from interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **mesh-group**

Synopsis	Enable the <b>mesh-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">mesh-group</a>
Tree	<a href="#">mesh-group</a>
Introduced	16.0.R1
Platforms	All

### **blocked**

Synopsis	Prevent the interface from flooding LSPs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">mesh-group</a> <a href="#">blocked</a>
Tree	<a href="#">blocked</a>
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

**value** *number*

Synopsis	Mesh group for the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>mesh-group</b> <b>value</b> <i>number</i>
Tree	<b>value</b>
Range	1 to 2000000000
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

**passive** *boolean*

Synopsis	Passive interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1
Platforms	All

**retransmit-interval** *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>retransmit-interval</b> <i>number</i>
Tree	<b>retransmit-interval</b>
Range	1 to 65535
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

**sid-protection** *boolean*

Synopsis	Allow adjacency SID protection by LFA and remote LFA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>sid-protection</b> <i>boolean</i>
Tree	<b>sid-protection</b>
Default	true

Introduced	16.0.R1
Platforms	All

### **tag number**

Synopsis	Route tag for IP address of interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">tag</a> <i>number</i>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-routing keyword**

Synopsis	IS-IS topology for IPv4 multicast routing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv4-multicast-routing</a> <i>keyword</i>
Tree	<a href="#">ipv4-multicast-routing</a>
Options	false, native, mt
Default	native
Introduced	16.0.R1
Platforms	All

### **ipv4-routing boolean**

Synopsis	Support IPv4 routing for IS-IS instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv4-routing</a> <i>boolean</i>
Tree	<a href="#">ipv4-routing</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast-routing keyword**

Synopsis	Topology to populate the IPv6 multicast RTM
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv6-multicast-routing</a> <i>keyword</i>

---

Tree	<a href="#">ipv6-multicast-routing</a>
Options	false, native, mt
Introduced	16.0.R1
Platforms	All

### **ipv6-routing** *keyword*

Synopsis	Routing topology for IPv6
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ipv6-routing</a> <i>keyword</i>
Tree	<a href="#">ipv6-routing</a>
Options	false, native, mt
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp-over-rsvp** *boolean*

Synopsis	Allow LDP over RSVP processing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp-sync** *boolean*

Synopsis	Use IGP-LDP synchronization feature on all interfaces participating in IS-IS routing protocol
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">ldp-sync</a> <i>boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

**level** [*level-number*] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <i>advertise-router-capability</i> <i>boolean</i>
Tree	<i>advertise-router-capability</i>
Default	true
Introduced	16.0.R1
Platforms	All

**authentication-key** *string*

Synopsis	Authentication key to verify PDUs sent on the interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <i>authentication-key</i> <i>string</i>
Tree	<i>authentication-key</i>
Description	This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.

Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The **authentication-type** command must also be included.

String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type to be used
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">authentication-type</a> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **bier**

Synopsis	Enter the <b>bier</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">bier</a>
Tree	<a href="#">bier</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BIER
----------	------------------------------

Context	<b>configure</b> <i>router string isis number level keyword bier admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **template** *reference*

Synopsis	BIER template name
Context	<b>configure</b> <i>router string isis number level keyword bier template reference</i>
Tree	<a href="#">template</a>
Reference	<b>configure</b> <i>router string bier template string</i>
Introduced	16.0.R4
Platforms	All

### **csnp-authentication** *boolean*

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	<b>configure</b> <i>router string isis number level keyword csnp-authentication boolean</i>
Tree	<a href="#">csnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **database-export-exclude** *boolean*

Synopsis	Exclude IGP link-state information of a specific IS-IS level from being exported into extended TE-DB
Context	<b>configure</b> <i>router string isis number level keyword database-export-exclude boolean</i>
Tree	<a href="#">database-export-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

**default-ipv4-multicast-metric** *number*

Synopsis	Default metric for IPv4 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <b>default-ipv4-multicast-metric</b> <i>number</i>
Tree	<a href="#">default-ipv4-multicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-ipv6-multicast-metric** *number*

Synopsis	Default metric for IPv6 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <b>default-ipv6-multicast-metric</b> <i>number</i>
Tree	<a href="#">default-ipv6-multicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-ipv6-unicast-metric** *number*

Synopsis	Default metric for IPv6 unicast
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <b>default-ipv6-unicast-metric</b> <i>number</i>
Tree	<a href="#">default-ipv6-unicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

**default-metric** *number*

Synopsis	Default metric
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> <b>default-metric</b> <i>number</i>
Tree	<a href="#">default-metric</a>
Range	1 to 16777215

Default	10
Introduced	16.0.R1
Platforms	All

### **external-preference** *number*

Synopsis	External route preference for IS-IS level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>external-preference</b> <i>number</i>
Tree	<b>external-preference</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **hello-authentication** *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>hello-authentication</b> <i>boolean</i>
Tree	<b>hello-authentication</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **hello-padding** *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>hello-padding</b> <i>keyword</i>
Tree	<b>hello-padding</b>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate-exclude** *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>level</b> <i>keyword</i> <b>loopfree-alternate-exclude</b> <i>boolean</i>

Tree	<a href="#">loopfree-alternate-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **lsp-mtu-size** *number*

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">lsp-mtu-size</a> <i>number</i>
Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Units	bytes
Default	1492
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	External route preference at level
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **psnp-authentication** *boolean*

Synopsis	Enable authentication on PSNP IS-IS protocol packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">psnp-authentication</a> <i>boolean</i>
Tree	<a href="#">psnp-authentication</a>
Default	true
Introduced	16.0.R1

Platforms All

### **wide-metrics-only** *boolean*

Synopsis Use wide metrics advertisements in the LSPs  
 Context **configure** *router string isis number level keyword wide-metrics-only boolean*  
 Tree [wide-metrics-only](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **level-capability** *keyword*

Synopsis Routing level for instance  
 Context **configure** *router string isis number level-capability keyword*  
 Tree [level-capability](#)  
 Options 1, 2, 1/2  
 Default 1/2  
 Introduced 16.0.R1  
 Platforms All

### **link-group** [*link-group-name*] *string*

Synopsis Enter the **link-group** list instance  
 Context **configure** *router string isis number link-group string*  
 Tree [link-group](#)  
 Introduced 16.0.R1  
 Platforms All

### **[link-group-name]** *string*

Synopsis Link group name for the IS-IS protocol  
 Context **configure** *router string isis number link-group string*  
 Tree [link-group](#)  
 String Length 1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>link-group</i> <i>string</i> <i>description</i> <i>string</i>
Tree	<i>description</i>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

**level** [*level-number*] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>link-group</i> <i>string</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <b>router</b> <i>string</i> <i>isis</i> <i>number</i> <i>link-group</i> <i>string</i> <i>level</i> <i>keyword</i>
Tree	<i>level</i>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 multicast address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv4-multicast-metric-offset</b> <i>number</i>
Tree	<a href="#">ipv4-multicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv4-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 unicast address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv4-unicast-metric-offset</b> <i>number</i>
Tree	<a href="#">ipv4-unicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv6-multicast-metric-offset** *number*

Synopsis	Offset value for the IPv6 multicast address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-multicast-metric-offset</b> <i>number</i>
Tree	<a href="#">ipv6-multicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv6 unicast address family
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>ipv6-unicast-metric-offset</b> <i>number</i>
Tree	<a href="#">ipv6-unicast-metric-offset</a>
Range	1 to 16777215

Introduced 16.0.R1  
 Platforms All

### **member** [[interface-name](#)] *reference*

Synopsis Add a list entry for **member**  
 Context **configure** [router](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [member](#) *reference*  
 Tree [member](#)  
 Max. Instances 8  
 Introduced 16.0.R1  
 Platforms All

### **[interface-name]** *reference*

Synopsis Router interface name for this link group  
 Context **configure** [router](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [member](#) *reference*  
 Tree [member](#)  
 Reference **configure** [router](#) *string* [isis](#) *number* [interface](#) *string*  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **oper-members** *number*

Synopsis Minimum number of operational links  
 Context **configure** [router](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [oper-members](#) *number*  
 Tree [oper-members](#)  
 Range 1 to 8  
 Introduced 16.0.R1  
 Platforms All

**revert-members** *number*

Synopsis	Minimum number of operational links to return link group to normal state and remove offsets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>link-group</b> <i>string</i> <b>level</b> <i>keyword</i> <b>revert-members</b> <i>number</i>
Tree	<a href="#">revert-members</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

**loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

**augment-route-table** *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b> <b>augment-route-table</b> <i>boolean</i>
Tree	<a href="#">augment-route-table</a>
Description	When configured to <b>true</b> , this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP. When configured to <b>false</b> , rLFA-specific information is not added to RTM entries.
Default	false
Introduced	19.10.R1
Platforms	All

**exclude**

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>loopfree-alternate</b> <b>exclude</b>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3

Platforms All

### **prefix-policy** *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">exclude</a> <a href="#">prefix-policy</a> <i>reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

### **multi-homed-prefix**

Synopsis	Enable the <b>multi-homed-prefix</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">multi-homed-prefix</a>
Tree	<a href="#">multi-homed-prefix</a>
Description	Commands in this context enable multihomed prefix LFA for IS-IS routes (IP FRR), SR-ISIS tunnels, and SRv6-ISIS tunnels.  This feature uses the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.  This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of intra-area anycast prefixes.  The computed IP next hop-based backup path is added to IS-IS routes of external /32 prefixes or /128 prefixes and intra-area /32 or /128 anycast prefixes in the RTM if the prefix is not protected by the base LFA or if the user set leaf preference command option is configured to all. The user must enable the <b>configure routing-options ip-fast-reroute</b> command to have these backup paths programmed into the FIB in the datapath.  The computed IP next hop or repair tunnel-based backup path is also programmed for:

- SR-ISIS node SID tunnels of external /32 IPv4 prefixes and /128 IPv6 prefixes, and node SID tunnels of intra-area /32 IPv4 anycast prefixes and /128 anycast IPv6 prefixes, in both algorithm 0 and flexible-algorithms
- SRv6-ISIS locator routes and tunnels of external prefixes and of intra-area anycast prefixes of any size, in both algorithm 0 and flexible algorithm numbers.

As a result, an SR-TE LSP, an SR-MPLS policy, or an SRv6 policy which uses an SR-ISIS SID or an SRv6-ISIS SID of those same prefixes in its configured or computed SID list benefits from the multihomed prefix LFA protection.

Once the IP next-hop based multihomed prefix LFA is enabled, the extensions to compute an SR-TE repair tunnel for the multihomed prefix LFA in the case of SR-ISIS and SRv6-ISIS are automatically enabled if the user also enabled TI-LFA or Remote LFA. The computation reuses the SID list of the primary path or of the TI-LFA or Remote LFA backup path of the alternate ABR or ASBR or alternate owner router.

Introduced 22.7.R1

Platforms All

### preference *keyword*

Synopsis Multihomed prefix LFA backup path preference

Context **configure** *router string isis number loopfree-alternate multi-homed-prefix preference keyword*

Tree [preference](#)

Options none, all

Default none

Introduced 22.7.R1

Platforms All

### remote-lfa

Synopsis Enable the **remote-lfa** context

Context **configure** *router string isis number loopfree-alternate remote-lfa*

Tree [remote-lfa](#)

Introduced 16.0.R1

Platforms All

### max-pq-cost *number*

Synopsis Maximum cost of destination node during reverse SPF calculation

Context	<b>configure</b> <i>router string isis number loopfree-alternate remote-lfa max-pq-cost number</i>
Tree	<a href="#">max-pq-cost</a>
Max. Range	0 to 4294967295
Default	4261412864
Introduced	16.0.R1
Platforms	All

## node-protect

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <i>router string isis number loopfree-alternate remote-lfa node-protect</i>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R4
Platforms	All

## max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF's
Context	<b>configure</b> <i>router string isis number loopfree-alternate remote-lfa node-protect max-pq-nodes number</i>
Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R4
Platforms	All

## ti-lfa

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa</i>
Tree	<a href="#">ti-lfa</a>
Description	Commands in this context configure the Topology-Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this IS-IS instance.
Introduced	16.0.R1
Platforms	All

**max-sr-frr-labels** *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa max-sr-frr-labels number</i>
Tree	<a href="#">max-sr-frr-labels</a>
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	16.0.R1
Platforms	All

**max-srv6-frr-sids** *number*

Synopsis	Maximum number of SIDs the TI-LFA backup path can use
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa max-srv6-frr-sids number</i>
Tree	<a href="#">max-srv6-frr-sids</a>
Description	This command configures the maximum number of SRv6 SIDs allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path
Range	0 to 3
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <i>router string isis number loopfree-alternate ti-lfa node-protect</i>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R5
Platforms	All

## ***lsp-lifetime number***

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid
Context	<b>configure</b> <i>router string isis number lsp-lifetime number</i>
Tree	<a href="#">lsp-lifetime</a>
Range	350 to 65535
Units	seconds
Default	1200
Introduced	16.0.R1
Platforms	All

## ***lsp-minimum-remaining-lifetime number***

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	<b>configure</b> <i>router string isis number lsp-minimum-remaining-lifetime number</i>
Tree	<a href="#">lsp-minimum-remaining-lifetime</a>
Range	350 to 65535
Units	seconds
Introduced	19.7.R1
Platforms	All

## ***lsp-mtu-size number***

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <i>router string isis number lsp-mtu-size number</i>
Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Units	bytes
Default	1492

---

Introduced	16.0.R1
Platforms	All

## **lsp-refresh**

Synopsis	Enter the <b>lsp-refresh</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">lsp-refresh</a>
Tree	<a href="#">lsp-refresh</a>
Introduced	16.0.R1
Platforms	All

## **half-lifetime** *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">lsp-refresh</a> <a href="#">half-lifetime</a> <i>boolean</i>
Tree	<a href="#">half-lifetime</a>
Default	true
Introduced	16.0.R1
Platforms	All

## **interval** *number*

Synopsis	Refresh timer interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">lsp-refresh</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	150 to 65535
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

## **mru-mismatch-detection** *boolean*

Synopsis	Enable detection of MRU mismatch
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">mru-mismatch-detection</a> <i>boolean</i>

Tree	<a href="#">mru-mismatch-detection</a>
Description	<p>When configured to <b>true</b>, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to <b>false</b>, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p>
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multi-topology

Synopsis	Enable the <b>multi-topology</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multi-topology</a>
Tree	<a href="#">multi-topology</a>
Introduced	16.0.R1
Platforms	All

## ipv4-multicast *boolean*

Synopsis	Support IPv4 topology (MT3)
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multi-topology</a> <a href="#">ipv4-multicast</a> <i>boolean</i>
Tree	<a href="#">ipv4-multicast</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6-multicast *boolean*

Synopsis	Support IPv6 topology (MT4)
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multi-topology</a> <a href="#">ipv6-multicast</a> <i>boolean</i>
Tree	<a href="#">ipv6-multicast</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast** *boolean*

Synopsis	Support multi-topology TLVs
Context	<b>configure</b> <i>router string isis number multi-topology ipv6-unicast boolean</i>
Tree	<a href="#">ipv6-unicast</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **multicast-import**

Synopsis	Enter the <b>multicast-import</b> context
Context	<b>configure</b> <i>router string isis number multicast-import</i>
Tree	<a href="#">multicast-import</a>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Submit IPv4 routes into the multicast RPF of the RTM
Context	<b>configure</b> <i>router string isis number multicast-import ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Submit IPv6 routes into the multicast RPF of the RTM
Context	<b>configure</b> <i>router string isis number multicast-import ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload

Synopsis	Enable the <b>overload</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>overload</b>
Tree	<a href="#">overload</a>
Introduced	16.0.R1
Platforms	All

## max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload</a> <b>max-metric</b> <i>boolean</i>
Tree	<a href="#">max-metric</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload-export-external *boolean*

Synopsis	Advertise the external routes when router is in overloaded
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-export-external</a> <i>boolean</i>
Tree	<a href="#">overload-export-external</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload-export-interlevel *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-export-interlevel</a> <i>boolean</i>
Tree	<a href="#">overload-export-interlevel</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload-fib-error-notify-only

Synopsis	Enable the <b>overload-fib-error-notify-only</b> context
Context	<b>configure</b> <i>router string isis number</i> <b>overload-fib-error-notify-only</b>
Tree	<b>overload-fib-error-notify-only</b>
Description	<p>Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP.</p> <p><b>Note:</b> Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled.</p> <p>When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state.</p> <p>The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the <b>retry</b> command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information.</p> <p>When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.</p>
Introduced	23.7.R1
Platforms	All

## retry number

Synopsis	Time to retry programming failed entries in the FIB
Context	<b>configure</b> <i>router string isis number</i> <b>overload-fib-error-notify-only</b> <i>retry number</i>
Tree	<b>retry</b>
Description	<p>This command configures the time the router uses to retry programming the failed entries in the FIB.</p> <p>The <b>overload-fib-error-notify-only</b> command must be configured to use the retry timer. The removal of the <b>overload-fib-error-notify-only</b> configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.</p>
Range	10 to 1800
Units	seconds
Default	10
Introduced	23.7.R1
Platforms	All

**overload-include-locators** *boolean*

Synopsis	Advertise SRv6 locators if IS-IS instance overloads
Context	<b>configure</b> <i>router string isis number</i> <b>overload-include-locators</b> <i>boolean</i>
Tree	<b>overload-include-locators</b>
Description	When configured to <b>true</b> , if the IS-IS instance goes into overload (because of resource depletion or manual configuration), the router includes SRv6 locators when it advertises links and prefixes with <b>max-metric</b> .
Default	false
Introduced	23.10.R1
Platforms	All

**overload-on-boot**

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure</b> <i>router string isis number</i> <b>overload-on-boot</b>
Tree	<b>overload-on-boot</b>
Introduced	16.0.R1
Platforms	All

**max-metric** *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	<b>configure</b> <i>router string isis number</i> <b>overload-on-boot</b> <b>max-metric</b> <i>boolean</i>
Tree	<b>max-metric</b>
Default	false
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Time during which the router operates in overload state after reboot
Context	<b>configure</b> <i>router string isis number</i> <b>overload-on-boot</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	60 to 1800
Units	seconds

Introduced 16.0.R1  
Platforms All

### **poi-tlv** *boolean*

Synopsis Purge Originator Identification TLV  
Context **configure** *router string isis number poi-tlv boolean*  
Tree [poi-tlv](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **prefix-attributes-tlv** *boolean*

Synopsis Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information  
Context **configure** *router string isis number prefix-attributes-tlv boolean*  
Tree [prefix-attributes-tlv](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **prefix-limit**

Synopsis Enable the **prefix-limit** context  
Context **configure** *router string isis number prefix-limit*  
Tree [prefix-limit](#)  
Introduced 16.0.R1  
Platforms All

### **limit** *number*

Synopsis Maximum number of prefixes for IS-IS instance  
Context **configure** *router string isis number prefix-limit limit number*  
Tree [limit](#)  
Range 1 to 4294967295

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message when the prefix limit is reached
Context	<b>configure</b> <b>router</b> <i>string isis number prefix-limit log-only boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-timeout** (*number | keyword*)

Synopsis	Time in overload state when prefix limit is reached
Context	<b>configure</b> <b>router</b> <i>string isis number prefix-limit overload-timeout (number   keyword)</i>
Tree	<a href="#">overload-timeout</a>
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	16.0.R1
Platforms	All

### **warning-threshold** *number*

Synopsis	Threshold value to trigger a warning message to be sent
Context	<b>configure</b> <b>router</b> <i>string isis number prefix-limit warning-threshold number</i>
Tree	<a href="#">warning-threshold</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

### **psnp-authentication** *boolean*

Synopsis	Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>psnp-authentication</b> <i>boolean</i>
Tree	<b>psnp-authentication</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **reference-bandwidth** *number*

Synopsis	Reference bandwidth for bandwidth relative costing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>reference-bandwidth</b> <i>number</i>
Tree	<b>reference-bandwidth</b>
Range	1 to 18446744073709551615
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **rib-priority**

Synopsis	Enter the <b>rib-priority</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>rib-priority</b>
Tree	<b>rib-priority</b>
Introduced	16.0.R1
Platforms	All

### **high**

Synopsis	Enter the <b>high</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>rib-priority</b> <b>high</b>
Tree	<b>high</b>
Introduced	16.0.R1
Platforms	All

**prefix-list reference**

Synopsis	List used to select routes processed at higher priority through OSPF route calculation process
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">rib-priority</a> <a href="#">high</a> <a href="#">prefix-list</a> <i>reference</i>
Tree	<a href="#">prefix-list</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Notes	The following elements are part of a choice: <b>prefix-list</b> or <b>tag</b> .
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	All

### **adj-sid-hold** (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <b>adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">adj-sid-hold</a>
Description	<p>This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.</p> <p>When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.</p> <ul style="list-style-type: none"> <li>• IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.</li> <li>• The adjacency SID hold timer starts.</li> <li>• The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.</li> <li>• If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.</li> <li>• If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.</li> <li>• A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.</li> </ul>
Range	1 to 1800
Units	seconds
Options	none

Default	15
Introduced	16.0.R1
Platforms	All

### **adjacency-set** [*id*] *number*

Synopsis	Enter the <b>adjacency-set</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing</b> <b>adjacency-set</b> <i>number</i>
Tree	<b>adjacency-set</b>
Introduced	16.0.R1
Platforms	All

### **[id]** *number*

Synopsis	Identifier for specified adjacency set
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing</b> <b>adjacency-set</b> <i>number</i>
Tree	<b>adjacency-set</b>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertise** *boolean*

Synopsis	Advertise the adjacency set when all links terminate on the same neighboring node
Context	<b>configure</b> <b>router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing</b> <b>adjacency-set</b> <i>number</i> <b>advertise</b> <i>boolean</i>
Tree	<b>advertise</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **family** *keyword*

Synopsis	Address family for the adjacency set
----------	--------------------------------------

Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6
Default	ipv4
Introduced	16.0.R1
Platforms	All

### **parallel** *boolean*

Synopsis	Require all members of the adjacency set to terminate on the same neighboring node
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number parallel boolean</i>
Tree	<i>parallel</i>
Default	true
Introduced	16.0.R1
Platforms	All

### **sid**

Synopsis	Enable the <b>sid</b> context
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number sid</i>
Tree	<i>sid</i>
Introduced	16.0.R1
Platforms	All

### **label** *number*

Synopsis	Adjacency SID label
Context	<b>configure</b> <i>router string isis number segment-routing adjacency-set number sid label number</i>
Tree	<i>label</i>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

**adjacency-sid**

Synopsis	Enter the <b>adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a>
Tree	<a href="#">adjacency-sid</a>
Introduced	22.7.R1
Platforms	All

**allocate-dual-sids** *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a> <a href="#">allocate-dual-sids</a> <i>boolean</i>
Tree	<a href="#">allocate-dual-sids</a>
Description	<p>When configured to <b>true</b>, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.</p> <p>When configured to <b>false</b>, the router disables the support of two SR-MPLS adjacency SIDs per interface.</p>
Default	false
Introduced	22.7.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**class-forwarding** *boolean*

Synopsis	Allow CBF with ECMP over RSVP-TE LSPs as IGP shortcuts
----------	--

Context	<b>configure</b> <i>router string isis number segment-routing class-forwarding boolean</i>
Tree	<a href="#">class-forwarding</a>
Description	<p>When configured to <b>true</b>, this command enables Class-Based Forwarding (CBF) with ECMP for SR-ISIS resolved to RSVP-TE LSPs as IGP shortcuts.</p> <p>For CBF with ECMP to be effective, a class forwarding policy must be defined, as well as FC to set associations and RSVP-TE LSPs to set associations.</p> <p>When configured to <b>false</b>, CBF over IGP shortcuts is disabled.</p>
Default	false
Introduced	20.2.R1
Platforms	All

### egress-statistics

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics</i>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

### adj-set *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	<p>When configured to <b>true</b>, this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.</p>
Default	false
Introduced	19.10.R1
Platforms	All

### adj-sid *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string isis number segment-routing egress-statistics adj-sid boolean</i>

Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **entropy-label** *boolean*

Synopsis	Enable processing of received ELC signaled in the IGP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">entropy-label</a> <i>boolean</i>
Tree	<a href="#">entropy-label</a>
Introduced	16.0.R1
Platforms	All

### **export-tunnel-table** *keyword*

Synopsis	Tunnel table export policies to export tunneled routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">export-tunnel-table</a> <i>keyword</i>
Tree	<a href="#">export-tunnel-table</a>
Options	ldp
Introduced	16.0.R1
Platforms	All

## ingress-statistics

Synopsis	Enter the <b>ingress-statistics</b> context
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics</i>
Tree	<a href="#">ingress-statistics</a>
Introduced	19.10.R1
Platforms	All

## adj-set *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics adj-set boolean</i>
Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

## adj-sid *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <i>router string isis number segment-routing ingress-statistics adj-sid boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">ingress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>

**ip-prefix string**

Synopsis	Prefix of a mapping server Prefix-SID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">isis</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <a href="#">number</a> <a href="#">ip-prefix</a> <a href="#">string</a>
Tree	<a href="#">ip-prefix</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**level-capability keyword**

Synopsis	Flags to assign in SID Label Binding TLV advertised by Segment Routing Mapping Server
----------	---

Context	<b>configure</b> <i>router string isis number segment-routing mapping-server node-sid-map number level-capability keyword</i>
Tree	<a href="#">level-capability</a>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

### **range** *number*

Synopsis	Range of addresses and their associated prefix SIDs
Context	<b>configure</b> <i>router string isis number segment-routing mapping-server node-sid-map number range number</i>
Tree	<a href="#">range</a>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **set-flags**

Synopsis	Enter the <b>set-flags</b> context
Context	<b>configure</b> <i>router string isis number segment-routing mapping-server node-sid-map number set-flags</i>
Tree	<a href="#">set-flags</a>
Introduced	16.0.R1
Platforms	All

### **bit-s** *boolean*

Synopsis	SID Label Binding TLV to be flooded across the entire routing domain
Context	<b>configure</b> <i>router string isis number segment-routing mapping-server node-sid-map number set-flags bit-s boolean</i>
Tree	<a href="#">bit-s</a>
Default	false
Introduced	16.0.R1

Platforms All

## maximum-sid-depth

Synopsis Enter the **maximum-sid-depth** context

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#)

Tree [maximum-sid-depth](#)

Introduced 20.2.R1

Platforms All

## override-bmi *number*

Synopsis Value to override the announced node MSD-BMI value

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#) [override-bmi](#) *number*

Tree [override-bmi](#)

Description This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.

When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.

Range 0 to 12

Introduced 20.2.R1

Platforms All

## override-erld *number*

Synopsis Value to override the announced node MSD-ERLD value

Context **configure** [router](#) [string](#) [isis](#) [number](#) [segment-routing](#) [maximum-sid-depth](#) [override-erld](#) *number*

Tree [override-erld](#)

Description This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing.

When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.

Range	0 to 15
Introduced	20.2.R1
Platforms	All

## micro-loop-avoidance

Synopsis	Enable the <b>micro-loop-avoidance</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">micro-loop-avoidance</a>
Tree	<a href="#">micro-loop-avoidance</a>
Description	Commands in this context configure the micro-loop avoidance feature in the IGP instance. This feature prevents micro-loops from using Segment Routing (SR) loop-free tunnels for packets that are forwarded over SR IS-IS node SID tunnels.
Introduced	19.10.R1
Platforms	All

## fib-delay *number*

Synopsis	FIB delay before programming new primary next-hops
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">micro-loop-avoidance</a> <a href="#">fib-delay</a> <i>number</i>
Tree	<a href="#">fib-delay</a>
Description	This command specifies the delay time before programming the new next-hops for the SR tunnel.
Range	1 to 300
Units	deciseconds
Default	15
Introduced	19.10.R1
Platforms	All

## multi-topology

Synopsis	Enter the <b>multi-topology</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">multi-topology</a>
Tree	<a href="#">multi-topology</a>
Introduced	23.10.R1
Platforms	All

## **mt2** *boolean*

Synopsis	Support IPv6 routing topology (MT2)
Context	<b>configure</b> <i>router string isis number segment-routing multi-topology mt2 boolean</i>
Tree	<a href="#">mt2</a>
Description	When configured to <b>true</b> , the router enables SR-MPLS for MS-ISIS MT, which enables Segment Routing in MT2.
Default	false
Introduced	23.10.R1
Platforms	All

## **prefix-sid-range**

Synopsis	Enable the <b>prefix-sid-range</b> context
Context	<b>configure</b> <i>router string isis number segment-routing prefix-sid-range</i>
Tree	<a href="#">prefix-sid-range</a>
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	16.0.R1
Platforms	All

## **global**

Synopsis	Allocate labels from the SRBG space
Context	<b>configure</b> <i>router string isis number segment-routing prefix-sid-range global</i>
Tree	<a href="#">global</a>
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the <b>configure router mpls-labels sr-labels</b> context.
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## max-index *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	<b>configure</b> <i>router string isis number segment-routing prefix-sid-range max-index number</i>
Tree	<a href="#">max-index</a>
Range	0 to 524287
Default	1
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## start-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	<b>configure</b> <i>router string isis number segment-routing prefix-sid-range start-label number</i>
Tree	<a href="#">start-label</a>
Range	0 to 524287
Default	0
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R1
Platforms	All

## srlb *reference*

Synopsis	Segment routing local block
Context	<b>configure</b> <i>router string isis number segment-routing srlb reference</i>
Tree	<a href="#">srlb</a>
Reference	<b>configure</b> <i>router string mpls-labels reserved-label-block string</i>
Introduced	16.0.R1

### **tunnel-mtu** *number*

Synopsis Tunnel MTU size

Context **configure** *router string isis number segment-routing tunnel-mtu number*

Tree [tunnel-mtu](#)

Range 512 to 9786

Introduced 16.0.R1

Platforms All

### **tunnel-table-pref** *number*

Synopsis Preference of SR tunnels created by the IGP instance

Context **configure** *router string isis number segment-routing tunnel-table-pref number*

Tree [tunnel-table-pref](#)

Description This command configures the TTM preference of SR tunnels created by the IGP instance. This is used in the case of BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the new tunnel binding commands are configured to the **any** value which parses the TTM for tunnels in the protocol preference order. The user can choose to either go with the global TTM preference or list explicitly the tunnel types they want to use. When they list the tunnel types explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected one fails. Also, a reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to TTM a SR tunnel entry for each resolved remote node SID prefix and programs the data path with the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the setting of the default preference of the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as **SR-ISIS** and **SR-OSPF**).

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8
- ROUTE\_PREF\_LDP 9
- ROUTE\_PREF\_OSPF\_TTM 10
- ROUTE\_PREF\_ISIS\_TTM 11
- ROUTE\_PREF\_BGP\_TTM 12

- `ROUTE_PREF_GRE 255`

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-ISIS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on lowest IGP instance-id.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	11
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

Synopsis	Enter the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string isis number</i> <b>segment-routing-v6</b>
Tree	<a href="#">segment-routing-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <i>router string isis number</i> <b>segment-routing-v6 adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">adj-sid-hold</a>

**Description** This command specifies the length of time the system holds the SRv6 adjacency route and tunnel entries programmed in datapath while the adjacency is down.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its SRv6 End.X SID sub-TLV
- The adjacency SID hold timer starts.
- The route table, FIB, and tunnel table entries are kept for as long as the adjacency SID hold timer is running. This allows packets to flow over the LFA backup path, if the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of a SRv6 policy after IGP converges.

- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change when a new LFA SPF is run while the adjacency SID hold timer is running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the SID value returned into the locator subnet where it was drawn from. Users of the adjacency (for example, SRv6 policy) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static SID value or a new dynamic SID value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by tunnel of the local adjacency SID and of all remote locator routes that resolve to a next hop over this adjacency.

Each IS-IS instance runs a single timer per adjacency that IPv4 SR-MPLS, IPv6 SR-MPLS, and SRv6 adjacency SIDs share. When you enable both SR-MPLS (**configure router isis segment-routing**) and SRv6 (**configure router isis segment-routing-v6**) in the IS-IS instance, the system programs the higher of the two timer values for all SIDs on the adjacency.

Range	1 to 1800
Units	seconds
Options	none
Default	15
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing SRv6
Context	<b>configure router</b> <i>string</i> <b>isis</b> <i>number</i> <b>segment-routing-v6</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	21.5.R1

Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **metric number**

Synopsis	IS-IS metric to advertise in the locator level list
Context	<b>configure router string isis number segment-routing-v6 locator reference level keyword metric number</b>
Tree	<b>metric</b>
Range	1 to 16777215
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **level-capability keyword**

Synopsis	IS-IS routing level capability
Context	<b>configure router string isis number segment-routing-v6 locator reference level-capability keyword</b>
Tree	<b>level-capability</b>
Description	This command configures the routing level capability for an instance of the IS-IS routing process.  The level capability configured on the instance must match the level capability on the interface to form an adjacency.
Options	1, 2, 1/2
Default	1/2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **multi-topology**

Synopsis	Enter the <b>multi-topology</b> context
Context	<b>configure router string isis number segment-routing-v6 locator reference multi-topology</b>
Tree	<b>multi-topology</b>
Description	Commands in this context enable the use of a local SRv6 locator in an IS-IS IPv6 topology. A user can enable one or more locators in an IS-IS instance. Each locator can be enabled in a single topology of an IS-IS instance, topology 0 (MT0) or topology 2 (MT2). A local locator can be used in multiple IS-IS instances, but can only be assigned to at most one IPv6 topology independently within each IS-IS instance.

Use the **configure router isis segment-routing-v6 admin-state** command to enable the processing of local and remote IPv6 prefixes and SRv6 locators in MT0 and MT2. In addition, to enable SRv6 forwarding in the MT0, MT2, or both topologies, set the **configure router isis ipv6-routing** command to **native**, the **configure router isis multi-topology ipv6-unicast** command to **true**, or both.

Introduced 22.5.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mt0** *boolean*

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[level-number]** *keyword*

Synopsis	ISIS protocol level number
----------	----------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **metric** *number*

Synopsis	IS-IS metric to advertise in the locator level list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level</a> <i>keyword</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **level-capability** *keyword*

Synopsis	IS-IS routing level capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">level-capability</a> <i>keyword</i>
Tree	<a href="#">level-capability</a>
Description	This command configures the routing level capability for an instance of the IS-IS routing process.  The level capability configured on the instance must match the level capability on the interface to form an adjacency.
Options	1, 2, 1/2
Default	1/2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **multi-topology**

Synopsis	Enter the <b>multi-topology</b> context
----------	---

Context	<b>configure router string isis number segment-routing-v6 micro-segment-locator reference multi-topology</b>
Tree	<a href="#">multi-topology</a>
Description	<p>Commands in this context enable the use of a local SRv6 locator in an IS-IS IPv6 topology. A user can enable one or more locators in an IS-IS instance. Each locator can be enabled in a single topology of an IS-IS instance, topology 0 (MT0) or topology 2 (MT2). A local locator can be used in multiple IS-IS instances, but can only be assigned to at most one IPv6 topology independently within each IS-IS instance.</p> <p>Use the <b>configure router isis segment-routing-v6 admin-state</b> command to enable the processing of local and remote IPv6 prefixes and SRv6 locators in MT0 and MT2. In addition, to enable SRv6 forwarding in the MT0, MT2, or both topologies, set the <b>configure router isis ipv6-routing</b> command to <b>native</b>, the <b>configure router isis multi-topology ipv6-unicast</b> command to <b>true</b>, or both.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mt0 boolean**

Synopsis	Support standard topology (MT0)
Context	<b>configure router string isis number segment-routing-v6 micro-segment-locator reference multi-topology mt0 boolean</b>
Tree	<a href="#">mt0</a>
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mt2 boolean**

Synopsis	Support IPv6 routing topology (MT2)
Context	<b>configure router string isis number segment-routing-v6 micro-segment-locator reference multi-topology mt2 boolean</b>
Tree	<a href="#">mt2</a>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **tag number**

Synopsis	Route tag to advertise in the locator
----------	---------------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <a href="#">reference</a> <a href="#">tag</a> <i>number</i>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **standard-multi-instance** *boolean*

Synopsis	Enable RFC standards compliant multi-instance behavior
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">standard-multi-instance</a> <i>boolean</i>
Tree	<a href="#">standard-multi-instance</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **strict-adjacency-check** *boolean*

Synopsis	Enable strict checking of address families for IS-IS adjacencies
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">strict-adjacency-check</a> <i>boolean</i>
Tree	<a href="#">strict-adjacency-check</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **summary-address** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>summary-address</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">summary-address</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">summary-address</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for the summary address
----------	-----------------------------------

Context	<b>configure router string isis number summary-address</b> ( <i>ipv4-prefix   ipv6-prefix</i> )
Tree	<a href="#">summary-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **algorithm number**

Synopsis	Algorithm topology for the summary address
Context	<b>configure router string isis number summary-address</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">algorithm number</a>
Tree	<a href="#">algorithm</a>
Range	0   128 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **level-capability keyword**

Synopsis	IS-IS level for the summary address
Context	<b>configure router string isis number summary-address</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">level-capability keyword</a>
Tree	<a href="#">level-capability</a>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

### **route-tag number**

Synopsis	Route tag assigned to the summary address
Context	<b>configure router string isis number summary-address</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">route-tag number</a>
Tree	<a href="#">route-tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**suppress-attached-bit** *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	<b>configure</b> <i>router string isis number suppress-attached-bit boolean</i>
Tree	<a href="#">suppress-attached-bit</a>
Default	false
Introduced	16.0.R1
Platforms	All

**system-id** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System ID
Context	<b>configure</b> <i>router string isis number system-id string</i>
Tree	<a href="#">system-id</a>
String Length	14
Default	0000.0000.0000
Introduced	16.0.R1
Platforms	All

**timers**

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <i>router string isis number timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R1
Platforms	All

**lsp-wait**

Synopsis	Enter the <b>lsp-wait</b> context
Context	<b>configure</b> <i>router string isis number timers lsp-wait</i>
Tree	<a href="#">lsp-wait</a>

Introduced	16.0.R1
Platforms	All

### **lsp-initial-wait** *number*

Synopsis	Initial LSP generation delay
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-initial-wait</a> <i>number</i>
Tree	<a href="#">lsp-initial-wait</a>
Range	10 to 100000
Units	milliseconds
Default	10
Introduced	16.0.R1
Platforms	All

### **lsp-max-wait** *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-max-wait</a> <i>number</i>
Tree	<a href="#">lsp-max-wait</a>
Range	10 to 120000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

### **lsp-second-wait** *number*

Synopsis	Delay between first and second LSP generation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">timers</a> <a href="#">lsp-wait</a> <a href="#">lsp-second-wait</a> <i>number</i>
Tree	<a href="#">lsp-second-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

## spf-wait

Synopsis	Enter the <b>spf-wait</b> context
Context	<b>configure router string isis number timers spf-wait</b>
Tree	<a href="#">spf-wait</a>
Introduced	16.0.R1
Platforms	All

## spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after topology change
Context	<b>configure router string isis number timers spf-wait spf-initial-wait number</b>
Tree	<a href="#">spf-initial-wait</a>
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

## spf-max-wait *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	<b>configure router string isis number timers spf-wait spf-max-wait number</b>
Tree	<a href="#">spf-max-wait</a>
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

## spf-second-wait *number*

Synopsis	Hold time between first and second SPF calculations
Context	<b>configure router string isis number timers spf-wait spf-second-wait number</b>
Tree	<a href="#">spf-second-wait</a>

Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

### **traffic-engineering** *boolean*

Synopsis	Enable traffic engineering for the router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">traffic-engineering</a> <i>boolean</i>
Tree	<a href="#">traffic-engineering</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **traffic-engineering-options**

Synopsis	Enter the <b>traffic-engineering-options</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">traffic-engineering-options</a>
Tree	<a href="#">traffic-engineering-options</a>
Introduced	19.10.R1
Platforms	All

### **advertise-delay** *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">traffic-engineering-options</a> <a href="#">advertise-delay</a> <i>boolean</i>
Tree	<a href="#">advertise-delay</a>
Description	<p>When configured to <b>true</b>, the router advertises link delay in the IGP LSDB within legacy Traffic Engineering (TE) attributes in IS-IS or within the Application-Specific Link Attribute (ASLA) when ASLA is enabled for SR-TE or RSVP-TE applications.</p> <p>When the <b>application-link-attributes legacy</b> command is configured for SR-TE or RSVP-TE, link delay is advertised as a legacy TE TLV with the ASLA legacy bit set.</p> <p>When configured to <b>false</b>, the router disables link delay advertisement.</p>
Default	false
Introduced	22.10.R1

Platforms All

### application-link-attributes

Synopsis Enable the **application-link-attributes** context

Context **configure** [router](#) [string](#) [isis](#) [number](#) [traffic-engineering-options](#) [application-link-attributes](#)

Tree [application-link-attributes](#)

Description Commands in this context configure the traffic engineering behavior for the advertisement of TE attributes for each link on a per-application basis for RSVP-TE and SR-TE applications.

Introduced 19.10.R1

Platforms All

### legacy *boolean*

Synopsis Advertise legacy TE attributes

Context **configure** [router](#) [string](#) [isis](#) [number](#) [traffic-engineering-options](#) [application-link-attributes](#) [legacy](#) *boolean*

Tree [legacy](#)

Description When configured to **true**, the router supports the legacy mode of advertising TE attributes.  
When configured to **false**, legacy mode is disabled.

Default false

Introduced 19.10.R1

Platforms All

### ipv6 *boolean*

Synopsis Advertise IS-IS IPv6 Traffic Engineering

Context **configure** [router](#) [string](#) [isis](#) [number](#) [traffic-engineering-options](#) [ipv6](#) *boolean*

Tree [ipv6](#)

Default false

Introduced 19.10.R1

Platforms All

## unicast-import

Synopsis	Enter the <b>unicast-import</b> context
Context	<b>configure</b> <i>router string isis number</i> <b>unicast-import</b>
Tree	<b>unicast-import</b>
Introduced	16.0.R1
Platforms	All

## ipv4 boolean

Synopsis	Submit IPv4 routes into unicast RTM
Context	<b>configure</b> <i>router string isis number unicast-import</i> <b>ipv4 boolean</b>
Tree	<b>ipv4</b>
Default	true
Introduced	16.0.R1
Platforms	All

## ipv6 boolean

Synopsis	Submit IPv6 routes into unicast RTM
Context	<b>configure</b> <i>router string isis number unicast-import</i> <b>ipv6 boolean</b>
Tree	<b>ipv6</b>
Default	true
Introduced	16.0.R1
Platforms	All

## I2tp

Synopsis	Enter the <b>I2tp</b> context
Context	<b>configure</b> <i>router string</i> <b>I2tp</b>
Tree	<b>I2tp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of L2TP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**avp-hiding** *keyword*

Synopsis	Attribute of the Value Pair (AVP) hiding algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>avp-hiding</b> <i>keyword</i>
Tree	<b>avp-hiding</b>
Options	sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**challenge** *boolean*

Synopsis	Use challenge-response authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>challenge</b> <i>boolean</i>
Tree	<b>challenge</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>destruct-timeout</b> <i>number</i>
Tree	<b>destruct-timeout</b>
Range	60 to 86400
Units	seconds
Default	60

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet-tunnel

Synopsis	Enter the <b>ethernet-tunnel</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">ethernet-tunnel</a>
Tree	<a href="#">ethernet-tunnel</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## reconnect-timeout (*number* | *keyword*)

Synopsis	Timeout for a session setup retry
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">ethernet-tunnel</a> <a href="#">reconnect-timeout</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">reconnect-timeout</a>
Range	10 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## exclude-avps

Synopsis	Enter the <b>exclude-avps</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">exclude-avps</a>
Tree	<a href="#">exclude-avps</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## calling-number *boolean*

Synopsis	Calling Number AVP to exclude
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">exclude-avps</a> <a href="#">calling-number</a> <i>boolean</i>

Tree	<a href="#">calling-number</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **initial-rx-lcp-conf-req** *boolean*

Synopsis	Exclude the Initial Received LCP CONFREQ AVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">exclude-avps</a> <a href="#">initial-rx-lcp-conf-req</a> <i>boolean</i>
Tree	<a href="#">initial-rx-lcp-conf-req</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-max-session-lifetime** *number*

Synopsis	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">recovery-max-session-lifetime</a> <i>number</i>
Tree	<a href="#">recovery-max-session-lifetime</a>
Range	2 to 4294967295
Units	centiseconds
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**recovery-method** *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp failover recovery-method</b> <i>keyword</i>
Tree	<b>recovery-method</b>
Options	mcs, recovery-tunnel
Default	mcs
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**recovery-time** *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp failover recovery-time</b> <i>number</i>
Tree	<b>recovery-time</b>
Range	0 to 900
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**track-srrp** [*id*] *reference*

Synopsis	Enter the <b>track-srrp</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp failover track-srrp</b> <i>reference</i>
Tree	<b>track-srrp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[id]** *reference*

Synopsis	SRRP instance ID for multi-chassis redundancy failover
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp failover track-srrp</b> <i>reference</i>
Tree	<b>track-srrp</b>
Reference	<b>configure</b> <b>redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>sync track-srrp</b> <i>number</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer reference**

Synopsis	Multi-chassis peer address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">track-srrp</a> <a href="#">reference</a> <a href="#">peer</a> <a href="#">reference</a>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> )
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag string**

Synopsis	Synchronization tag on the multi-chassis peer
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">failover</a> <a href="#">track-srrp</a> <a href="#">reference</a> <a href="#">sync-tag</a> <a href="#">string</a>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group [tunnel-group-name] string**

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[tunnel-group-name] string**

Synopsis	Tunnel group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the L2TP tunnel group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**avp-hiding keyword**

Synopsis	The AVP hiding algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>avp-hiding</b> <i>keyword</i>
Tree	<b>avp-hiding</b>
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**challenge keyword**

Synopsis	Enable use of challenge-response authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>challenge</b> <i>keyword</i>
Tree	<b>challenge</b>
Options	false, true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description

Context **configure** [router](#) *string* [l2tp group](#) *string* [description](#) *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis Destruction timeout

Context **configure** [router](#) *string* [l2tp group](#) *string* [destruct-timeout](#) *number*

Tree [destruct-timeout](#)

Range 60 to 86400

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet-tunnel**

Synopsis Enter the **ethernet-tunnel** context

Context **configure** [router](#) *string* [l2tp group](#) *string* [ethernet-tunnel](#)

Tree [ethernet-tunnel](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reconnect-timeout** (*number* | *keyword*)

Synopsis Timeout for a session setup retry at group level

Context **configure** [router](#) *string* [l2tp group](#) *string* [ethernet-tunnel](#) [reconnect-timeout](#) (*number* | *keyword*)

Tree [reconnect-timeout](#)

Range 10 to 3600

Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">failover</a> <a href="#">recovery-method</a> <a href="#">keyword</a>
Tree	<a href="#">recovery-method</a>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">failover</a> <a href="#">recovery-time</a> <a href="#">number</a>
Tree	<a href="#">recovery-time</a>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## hello-interval (*number* | *keyword*)

Synopsis	Hello interval
----------	----------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp group</i> <i>string</i> <i>hello-interval</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">hello-interval</a>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp group</i> <i>string</i> <i>idle-timeout</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">idle-timeout</a>
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp group</i> <i>string</i> <i>l2tpv3</i>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cookie-length** (*number* | *keyword*)

Synopsis	Cookie field length
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp group</i> <i>string</i> <i>l2tpv3</i> <i>cookie-length</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cookie-length</a>
Range	4   8
Options	disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **digest-type** *keyword*

Synopsis Hashing algorithm that calculates the message digest  
 Context **configure** *router string l2tp group string l2tpv3 digest-type keyword*  
 Tree [digest-type](#)  
 Options none, md5, sha1  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nonce-length** *number*

Synopsis Length for the local L2TPv3 nonce (random number)  
 Context **configure** *router string l2tp group string l2tpv3 nonce-length number*  
 Tree [nonce-length](#)  
 Range 0 | 16 to 64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis L2TPv3 password  
 Context **configure** *router string l2tp group string l2tpv3 password string*  
 Tree [password](#)  
 String Length 1 to 115  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** (*number* | *keyword*)

Synopsis TCP maximum segment size (MSS) on private network  
 Context **configure** *router string l2tp group string l2tpv3 private-tcp-mss-adjust (number | keyword)*  
 Tree [private-tcp-mss-adjust](#)  
 Range 512 to 9000

Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP Maximum Segment Size (MSS) on public network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">l2tpv3</a> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pw-cap-list**

Synopsis	Enter the <b>pw-cap-list</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">l2tpv3</a> <b>pw-cap-list</b>
Tree	<a href="#">pw-cap-list</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet pseudowire type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">l2tpv3</a> <b>pw-cap-list</b> <b>ethernet</b> <i>boolean</i>
Tree	<a href="#">ethernet</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ethernet-vlan *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Advertise Ethernet VLAN pseudowire type

Context **configure** [router](#) [string](#) [l2tp](#) [group](#) [string](#) [l2tpv3](#) [pw-cap-list](#) [ethernet-vlan](#) *boolean*

Tree [ethernet-vlan](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### rem-router-id *string*

Synopsis Filter on remote router ID

Context **configure** [router](#) [string](#) [l2tp](#) [group](#) [string](#) [l2tpv3](#) [rem-router-id](#) *string*

Tree [rem-router-id](#)

Default 0.0.0.0

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### track-password-change *boolean*

Synopsis Enable tracking of password changes

Context **configure** [router](#) [string](#) [l2tp](#) [group](#) [string](#) [l2tpv3](#) [track-password-change](#) *boolean*

Tree [track-password-change](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### lac

Synopsis Enter the **lac** context

Context	<b>configure</b> <i>router string l2tp group string lac</i>
Tree	<a href="#">lac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **df-bit** *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	<b>configure</b> <i>router string l2tp group string lac df-bit keyword</i>
Tree	<a href="#">df-bit</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **Ins**

Synopsis	Enter the <b>Ins</b> context
Context	<b>configure</b> <i>router string l2tp group string Ins</i>
Tree	<a href="#">Ins</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **Ins-group** *reference*

Synopsis	ISA LNS group
Context	<b>configure</b> <i>router string l2tp group string Ins Ins-group reference</i>
Tree	<a href="#">Ins-group</a>
Reference	<b>configure</b> <i>isa Ins-group number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **load-balance-method** *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure</b> <i>router string l2tp group string Ins load-balance-method keyword</i>

Tree	<a href="#">load-balance-method</a>
Options	per-session, per-tunnel
Default	per-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mlppp

Synopsis	Enter the <b>mlppp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a>
Tree	<a href="#">mlppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## **admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## endpoint

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <b>endpoint</b>
Tree	<a href="#">endpoint</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## **ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
----------	------------------------------

Context	<b>configure</b> <i>router string l2tp group string lns mlppp endpoint ip (ipv4-address   keyword)</i>
Tree	<a href="#">ip</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **mac** (*mac-address | keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <i>router string l2tp group string lns mlppp endpoint mac (mac-address   keyword)</i>
Tree	<a href="#">mac</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **interleave** *boolean*

Synopsis	Enable link fragmentation and interleaving
Context	<b>configure</b> <i>router string l2tp group string lns mlppp interleave boolean</i>
Tree	<a href="#">interleave</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-fragment-delay** (*number | keyword*)

Synopsis	Maximum fragment delay caused by transmission on a link
Context	<b>configure</b> <i>router string l2tp group string lns mlppp max-fragment-delay (number   keyword)</i>
Tree	<a href="#">max-fragment-delay</a>
Range	5 to 1000
Units	milliseconds

---

Options	no-fragmentation
Default	no-fragmentation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis	Maximum MLPPP links
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">max-links</a> <i>number</i>
Tree	<a href="#">max-links</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **reassemble-timeout** *number*

Synopsis	Reassembly timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">reassemble-timeout</a> <i>number</i>
Tree	<a href="#">reassemble-timeout</a>
Range	100   1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **short-sequence-numbers** *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">short-sequence-numbers</a> <i>boolean</i>
Tree	<a href="#">short-sequence-numbers</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## ppp

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a>
Tree	<a href="#">ppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">authentication</a> <i>keyword</i>
Tree	<a href="#">authentication</a>
Options	pap, chap, pref-chap, pref-pap
Default	pref-chap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">authentication-policy</a> <i>string</i>
Tree	<a href="#">authentication-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## chap-challenge-length

Synopsis	Enter the <b>chap-challenge-length</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a>
Tree	<a href="#">chap-challenge-length</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**end number**

Synopsis	Upper bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	8 to 64
Units	octets
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**start number**

Synopsis	Lower bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a> <a href="#">start</a> <i>number</i>
Tree	<a href="#">start</a>
Range	8 to 64
Units	octets
Default	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**default-group-interface**

Synopsis	Enter the <b>default-group-interface</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a>
Tree	<a href="#">default-group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface string**

Synopsis	Group interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>

String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

Synopsis Administrative service name  
Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp default-group-interface](#) *service-name* *string*  
Tree [service-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipcp-subnet-negotiation** *boolean*

Synopsis Allow IPCP subnet negotiation for PPPoE hosts  
Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp ipcp-subnet-negotiation](#) *boolean*  
Tree [ipcp-subnet-negotiation](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keepalive**

Synopsis Enter the **keepalive** context  
Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp keepalive](#)  
Tree [keepalive](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis PPP keepalive interval  
Context **configure** [router](#) *string* [l2tp group](#) *string* [lns ppp keepalive interval](#) *number*  
Tree [interval](#)

Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis	PPP keepalive multiplier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-force-ack-accm** *boolean*

Synopsis	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">lcp-force-ack-accm</a> <i>boolean</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-ignore-magic-numbers** *boolean*

Synopsis	Check magic number in echo request and reply messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">lcp-ignore-magic-numbers</a> <i>boolean</i>
Tree	<a href="#">lcp-ignore-magic-numbers</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mtu number**

Synopsis	Maximum PPP MTU size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>ins</b> <b>ppp</b> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	512 to 9212
Units	octets
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-authentication boolean**

Synopsis	Use authentication AVPs that are received from LAC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>ins</b> <b>ppp</b> <b>proxy-authentication</b> <i>boolean</i>
Tree	<b>proxy-authentication</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-lcp boolean**

Synopsis	Proxy LCP AVPs that are received from LAC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>ins</b> <b>ppp</b> <b>proxy-lcp</b> <i>boolean</i>
Tree	<b>proxy-lcp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**reject-disabled-ncp boolean**

Synopsis	Force LCP Protocol Reject for IPv6CP Configure Request
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>ins</b> <b>ppp</b> <b>reject-disabled-ncp</b> <i>boolean</i>
Tree	<b>reject-disabled-ncp</b>
Default	false
Introduced	16.0.R6

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **user-db string**

Synopsis Local user database for PPP PAP and CHAP authentication  
Context **configure** [router string](#) [l2tp group string](#) [lns ppp user-db string](#)  
Tree [user-db](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-address string**

Synopsis Local address  
Context **configure** [router string](#) [l2tp group string](#) [local-address string](#)  
Tree [local-address](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name string**

Synopsis Local host name used to distinguish tunnels  
Context **configure** [router string](#) [l2tp group string](#) [local-name string](#)  
Tree [local-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab number**

Synopsis Maximum retries for established tunnels  
Context **configure** [router string](#) [l2tp group string](#) [max-retries-estab number](#)  
Tree [max-retries-estab](#)  
Range 2 to 7  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis Maximum retries for unestablished tunnels  
 Context **configure** *router string l2tp group string max-retries-not-estab number*  
 Tree [max-retries-not-estab](#)  
 Range 2 to 7  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis Password between L2TP LAC and LNS  
 Context **configure** *router string l2tp group string password string*  
 Tree [password](#)  
 String Length 1 to 115  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **protocol** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Protocol version  
 Context **configure** *router string l2tp group string protocol keyword*  
 Tree [protocol](#)  
 Options v2, v3, v3draft  
 Default v2  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>radius-accounting-policy</b> <i>reference</i>
Tree	<b>radius-accounting-policy</b>
Reference	<b>configure</b> <b>aaa</b> <b>radius</b> <b>l2tp-accounting-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>receive-window-size</b> <i>number</i>
Tree	<b>receive-window-size</b>
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-assign-method** *keyword*

Synopsis	Session assignment method
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>session-assign-method</b> <i>keyword</i>
Tree	<b>session-assign-method</b>
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit** (*number* | *keyword*)

Synopsis	Session limit
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>session-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>session-limit</b>
Range	1 to 250000
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tunnel** [**tunnel-name**] *string*

Synopsis	Enter the <b>tunnel</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i>
Tree	<b>tunnel</b>
Max. Instances	31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[tunnel-name]** *string*

Synopsis	Tunnel name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i>
Tree	<b>tunnel</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the L2TP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**auto-establish** *boolean*

Synopsis	Allow the tunnel to be automatically set up by the system
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>auto-establish</b> <i>boolean</i>
Tree	<b>auto-establish</b>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**avp-hiding** *keyword*

Synopsis	The AVP hiding algorithm
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>avp-hiding</b> <i>keyword</i>
Tree	<b>avp-hiding</b>
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**challenge** *keyword*

Synopsis	Enable use of challenge-response authentication
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>challenge</b> <i>keyword</i>
Tree	<b>challenge</b>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>destruct-timeout</b> <i>number</i>

Tree	<a href="#">destruct-timeout</a>
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>failover</b>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">failover</a> <a href="#">recovery-method</a> <i>keyword</i>
Tree	<a href="#">recovery-method</a>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">failover</a> <a href="#">recovery-time</a> <i>number</i>
Tree	<a href="#">recovery-time</a>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>hello-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">hello-interval</a>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>idle-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">idle-timeout</a>
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>l2tpv3</b>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**private-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">l2tpv3</a> <b>private-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">private-tcp-mss-adjust</a>

Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number | keyword*)

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">l2tpv3</a> <b>public-tcp-mss-adjust</b> ( <i>number   keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lac**

Synopsis	Enter the <b>lac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>lac</b>
Tree	<a href="#">lac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **df-bit** *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <i>group</i> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>lac</b> <b>df-bit</b> <i>keyword</i>
Tree	<a href="#">df-bit</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Ins

Synopsis	Enter the <b>Ins</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a>
Tree	<a href="#">Ins</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Ins-group *reference*

Synopsis	ISA LNS group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">Ins-group reference</a>
Tree	<a href="#">Ins-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">Ins-group</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">load-balance-method</a> <i>keyword</i>
Tree	<a href="#">load-balance-method</a>
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mlppp

Synopsis	Enter the <b>mlppp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">Ins</a> <a href="#">mlppp</a>
Tree	<a href="#">mlppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>endpoint</b>
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>endpoint</b> <b>ip</b> ( <i>ipv4-address</i>   <i>keyword</i> )
Tree	<b>ip</b>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

**mac** (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns</b> <b>mlppp</b> <b>endpoint</b> <b>mac</b> ( <i>mac-address</i>   <i>keyword</i> )
Tree	<b>mac</b>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **interleave** *keyword*

Synopsis Use of Link fragmentation and interleaving  
Context **configure** *router string l2tp group string tunnel string lns mlppp interleave keyword*  
Tree [interleave](#)  
Options false, true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-fragment-delay** *number*

Synopsis Maximum fragment delay caused by transmission on a link  
Context **configure** *router string l2tp group string tunnel string lns mlppp max-fragment-delay number*  
Tree [max-fragment-delay](#)  
Range 5 to 1000  
Units milliseconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis Maximum MLPPP links  
Context **configure** *router string l2tp group string tunnel string lns mlppp max-links number*  
Tree [max-links](#)  
Range 1 to 8  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **reassembly-timeout** *number*

Synopsis Reassembly timeout

Context	<b>configure</b> <i>router string l2tp group string tunnel string lns mlppp reassembly-timeout number</i>
Tree	<a href="#">reassembly-timeout</a>
Range	100   1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **short-sequence-numbers** *keyword*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <i>router string l2tp group string tunnel string lns mlppp short-sequence-numbers keyword</i>
Tree	<a href="#">short-sequence-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **ppp**

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure</b> <i>router string l2tp group string tunnel string lns ppp</i>
Tree	<a href="#">ppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authentication** *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	<b>configure</b> <i>router string l2tp group string tunnel string lns ppp authentication keyword</i>
Tree	<a href="#">authentication</a>
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**authentication-policy** *string*

Synopsis	Authentication policy when a DHCP message is received
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp authentication-policy</a> <i>string</i>
Tree	<a href="#">authentication-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**chap-challenge-length**

Synopsis	Enter the <b>chap-challenge-length</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp chap-challenge-length</a>
Tree	<a href="#">chap-challenge-length</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**end** *number*

Synopsis	Upper bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp chap-challenge-length</a> <i>end number</i>
Tree	<a href="#">end</a>
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**start** *number*

Synopsis	Lower bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp chap-challenge-length</a> <i>start number</i>
Tree	<a href="#">start</a>
Range	8 to 64
Units	octets

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-group-interface**

Synopsis Enter the **default-group-interface** context  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#)  
Tree [default-group-interface](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** *string*

Synopsis Group interface  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#) [interface](#) *string*  
Tree [interface](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

Synopsis Administrative service name  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#) [service-name](#) *string*  
Tree [service-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipcp-subnet-negotiation** *keyword*

Synopsis Use of IPCP subnet negotiation for PPPoE hosts  
Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [ipcp-subnet-negotiation](#) *keyword*

Tree	<a href="#">ipcp-subnet-negotiation</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## keepalive

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interval *number*

Synopsis	PPP keepalive interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a> <i>interval</i> <i>number</i>
Tree	<a href="#">interval</a>
Range	10 to 300
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multiplier *number*

Synopsis	PPP keepalive multiplier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a> <i>multiplier</i> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**lcp-force-ack-accm** *keyword*

Synopsis	Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp</a> <b>lcp-force-ack-accm</b> <i>keyword</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**lcp-ignore-magic-numbers** *keyword*

Synopsis	Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp</a> <b>lcp-ignore-magic-numbers</b> <i>keyword</i>
Tree	<a href="#">lcp-ignore-magic-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mtu** *number*

Synopsis	Maximum PPP MTU size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp</a> <b>mtu</b> <i>number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-authentication** *keyword*

Synopsis	Authentication AVPs that are received from LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns ppp</a> <b>proxy-authentication</b> <i>keyword</i>

Tree	<a href="#">proxy-authentication</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-lcp** *keyword*

Synopsis	Use the Proxy LCP AVPs that are received from the LAC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <b>proxy-lcp</b> <i>keyword</i>
Tree	<a href="#">proxy-lcp</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reject-disabled-ncp** *keyword*

Synopsis	Force LCP Project Reject for IPv6CP Configure Request
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <b>reject-disabled-ncp</b> <i>keyword</i>
Tree	<a href="#">reject-disabled-ncp</a>
Options	false, true
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *string*

Synopsis	Local user database for PPP PAP and CHAP authentication
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <b>user-db</b> <i>string</i>
Tree	<a href="#">user-db</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-address** *string*

Synopsis	Local address
----------	---------------

Context        **configure router string l2tp group string tunnel string local-address string**  
 Tree            **local-address**  
 Introduced     16.0.R1  
 Platforms     7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name string**

Synopsis        Local host name used to distinguish tunnels  
 Context        **configure router string l2tp group string tunnel string local-name string**  
 Tree            **local-name**  
 String Length 1 to 64  
 Introduced     16.0.R1  
 Platforms     7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab number**

Synopsis        Maximum retries for established tunnels  
 Context        **configure router string l2tp group string tunnel string max-retries-estab number**  
 Tree            **max-retries-estab**  
 Range          2 to 7  
 Introduced     16.0.R1  
 Platforms     7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab number**

Synopsis        Maximum retries for unestablished tunnels  
 Context        **configure router string l2tp group string tunnel string max-retries-not-estab number**  
 Tree            **max-retries-not-estab**  
 Range          2 to 7  
 Introduced     16.0.R1  
 Platforms     7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password string**

Synopsis        Password between L2TP LAC and LNS

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">password</a> <i>string</i>
Tree	<a href="#">password</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**peer** *string*

Synopsis	Peer address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">peer</a> <i>string</i>
Tree	<a href="#">peer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preference** *number*

Synopsis	Tunnel preference number with its group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	0 to 16777215
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">radius-accounting-policy</a> <i>reference</i>
Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>receive-window-size</b> <i>number</i>
Tree	<b>receive-window-size</b>
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**remote-name** *string*

Synopsis	Remote tunnel host name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>remote-name</b> <i>string</i>
Tree	<b>remote-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit** (*number* | *keyword*)

Synopsis	L2TP session limit for each tunnel of this router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <i>group</i> <i>string</i> <b>tunnel</b> <i>string</i> <b>session-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>session-limit</b>
Range	1 to 65534
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**group-session-limit** *number*

Synopsis	L2TP session limit for each group of this router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>group-session-limit</b> <i>number</i>
Tree	<b>group-session-limit</b>
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>hello-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>hello-interval</b>
Range	10 to 3600
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>idle-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>idle-timeout</b>
Range	0 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ignore-avps**

Synopsis	Enter the <b>ignore-avps</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>ignore-avps</b>
Tree	<b>ignore-avps</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sequencing-required** *boolean*

Synopsis	Ignore Sequencing Required AVP
----------	--------------------------------

Context	<b>configure router</b> <i>string</i> <a href="#">l2tp ignore-avps sequencing-required</a> <i>boolean</i>
Tree	<a href="#">sequencing-required</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">l2tp l2tpv3</a>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cookie-length** *number*

Synopsis	Cookie field length
Context	<b>configure router</b> <i>string</i> <a href="#">l2tp l2tpv3 cookie-length</a> <i>number</i>
Tree	<a href="#">cookie-length</a>
Range	4   8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **digest-type** *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	<b>configure router</b> <i>string</i> <a href="#">l2tp l2tpv3 digest-type</a> <i>keyword</i>
Tree	<a href="#">digest-type</a>
Options	md5, sha1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nonce-length** *number*

Synopsis	Length of the local L2TPv3 nonce (random number)
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp l2tpv3</i> <i>nonce-length</i> <i>number</i>
Tree	<a href="#">nonce-length</a>
Range	0   16 to 64
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	L2TPv3 password
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp l2tpv3</i> <i>password</i> <i>string</i>
Tree	<a href="#">password</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp l2tpv3</i> <i>private-tcp-mss-adjust</i> <i>number</i>
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** *number*

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure</b> <i>router</i> <i>string</i> <i>l2tp l2tpv3</i> <i>public-tcp-mss-adjust</i> <i>number</i>
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## transport-type

Synopsis	Enter the <b>transport-type</b> context
Context	<b>configure</b> <i>router string l2tp l2tpv3 transport-type</i>
Tree	<i>transport-type</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip *boolean*

Synopsis	Use IP as the transport type for the L2TPv3 tunnel
Context	<b>configure</b> <i>router string l2tp l2tpv3 transport-type ip boolean</i>
Tree	<i>ip</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lac

Synopsis	Enter the <b>lac</b> context
Context	<b>configure</b> <i>router string l2tp lac</i>
Tree	<i>lac</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## calling-number-format *string*

Synopsis	Calling Number AVP for L2TP control messages
Context	<b>configure</b> <i>router string l2tp lac calling-number-format string</i>
Tree	<i>calling-number-format</i>
String Length	1 to 255
Default	%S %s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **cisco-nas-port**

Synopsis	Enter the <b>cisco-nas-port</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">cisco-nas-port</a>
Tree	<a href="#">cisco-nas-port</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **ethernet** *string*

Synopsis	L2TP Cisco NAS port AVP with binary patterns for Ethernet
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">cisco-nas-port</a> <a href="#">ethernet</a> <a href="#">string</a>
Tree	<a href="#">ethernet</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **df-bit** *boolean*

Synopsis	Send all L2TP packets with DF bit set to 1
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">lac</a> <a href="#">df-bit</a> <a href="#">boolean</a>
Tree	<a href="#">df-bit</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **local-address** *string*

Synopsis	Local address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">local-address</a> <a href="#">string</a>
Tree	<a href="#">local-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**local-name** *string*

Synopsis	Local host name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>local-name</b> <i>string</i>
Tree	<b>local-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-retries-estab** *number*

Synopsis	Maximum retries for established tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>max-retries-estab</b> <i>number</i>
Tree	<b>max-retries-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-retries-not-estab** *number*

Synopsis	Maximum retries for unestablished tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>max-retries-not-estab</b> <i>number</i>
Tree	<b>max-retries-not-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**next-attempt** *keyword*

Synopsis	Tunnel that is selected when previous session setup failed
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>next-attempt</b> <i>keyword</i>
Tree	<b>next-attempt</b>
Options	same-preference-level, next-preference-level
Default	next-preference-level

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis L2TP password  
 Context **configure** [router](#) *string* [l2tp](#) [password](#) *string*  
 Tree [password](#)  
 String Length 1 to 115  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer-address-change-policy** *keyword*

Synopsis Reaction for L2TP response from a different address  
 Context **configure** [router](#) *string* [l2tp](#) [peer-address-change-policy](#) *keyword*  
 Tree [peer-address-change-policy](#)  
 Options accept, ignore, reject  
 Default reject  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis RADIUS accounting policy  
 Context **configure** [router](#) *string* [l2tp](#) [radius-accounting-policy](#) *reference*  
 Tree [radius-accounting-policy](#)  
 Reference **configure** [aaa](#) [radius](#) [l2tp-accounting-policy](#) *string*  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis L2TP receive window size  
 Context **configure** [router](#) *string* [l2tp](#) [receive-window-size](#) *number*

---

Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **replace-result-code**

Synopsis	Enter the <b>replace-result-code</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a>
Tree	<a href="#">replace-result-code</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-invalid-dst** *boolean*

Synopsis	Replace result code with general error code
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a> <a href="#">cdn-invalid-dst</a> <i>boolean</i>
Tree	<a href="#">cdn-invalid-dst</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-permanent-no-facilities** *boolean*

Synopsis	Replace result code with general error
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a> <a href="#">cdn-permanent-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-permanent-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities** *boolean*

Synopsis	Replace result code with general error
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">replace-result-code</a> <a href="#">cdn-temporary-no-facilities</a> <i>boolean</i>
Tree	<a href="#">cdn-temporary-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rtm-debounce-time** (*number* | *keyword*)

Synopsis	Debounce timer that declares L2TP action for route table management events
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">rtm-debounce-time</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rtm-debounce-time</a>
Range	0 to 5000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-assign-method** *keyword*

Synopsis	Session assignment method
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">session-assign-method</a> <i>keyword</i>
Tree	<a href="#">session-assign-method</a>
Options	existing-first, weighted, weighted-random
Default	existing-first
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis	L2TP session limit of this router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">l2tp</a> <a href="#">session-limit</a> <i>number</i>
Tree	<a href="#">session-limit</a>
Range	1 to 250000
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-selection-blacklist**

Synopsis Enter the **tunnel-selection-blacklist** context  
Context **configure** [router](#) *string* [l2tp](#) [tunnel-selection-blacklist](#)  
Tree [tunnel-selection-blacklist](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **add-tunnel-on**

Synopsis Enter the **add-tunnel-on** context  
Context **configure** [router](#) *string* [l2tp](#) [tunnel-selection-blacklist](#) [add-tunnel-on](#)  
Tree [add-tunnel-on](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address-change-timeout** *boolean*

Synopsis Enable a timed-out tunnel to be forced to the denylist  
Context **configure** [router](#) *string* [l2tp](#) [tunnel-selection-blacklist](#) [add-tunnel-on](#) [address-change-timeout](#) *boolean*  
Tree [address-change-timeout](#)  
Default false  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-err-code** *boolean*

Synopsis Add to deny if CDN is received with code: General error  
Context **configure** [router](#) *string* [l2tp](#) [tunnel-selection-blacklist](#) [add-tunnel-on](#) [cdn-err-code](#) *boolean*  
Tree [cdn-err-code](#)  
Default false  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-invalid-dst** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 6

Context **configure** **router** *string* **I2tp** **tunnel-selection-blacklist** **add-tunnel-on** **cdn-invalid-dst** *boolean*

Tree [cdn-invalid-dst](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-permanent-no-facilities** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 5

Context **configure** **router** *string* **I2tp** **tunnel-selection-blacklist** **add-tunnel-on** **cdn-permanent-no-facilities** *boolean*

Tree [cdn-permanent-no-facilities](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 4

Context **configure** **router** *string* **I2tp** **tunnel-selection-blacklist** **add-tunnel-on** **cdn-temporary-no-facilities** *boolean*

Tree [cdn-temporary-no-facilities](#)

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-err-code** *boolean*

Synopsis Add to denylist if received with general error code

Context **configure** **router** *string* **I2tp** **tunnel-selection-blacklist** **add-tunnel-on** **stop-ccn-err-code** *boolean*

---

Tree	<a href="#">stop-ccn-err-code</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-other** *boolean*

Synopsis	Add to denylist if StopCCN received with general error
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp</a> <a href="#">tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">stop-ccn-other</a> <i>boolean</i>
Tree	<a href="#">stop-ccn-other</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tx-cdn-not-established-in-time** *boolean*

Synopsis	Add to denylist if CDN transmitted with result code
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp</a> <a href="#">tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">tx-cdn-not-established-in-time</a> <i>boolean</i>
Tree	<a href="#">tx-cdn-not-established-in-time</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-list-length** (*number* | *keyword*)

Synopsis	Number of tunnels or peers in the denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">l2tp</a> <a href="#">tunnel-selection-blacklist</a> <a href="#">max-list-length</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-list-length</a>
Range	1 to 65535
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**max-time** *number*

Synopsis	Time that a tunnel or peer can remain in the denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>tunnel-selection-blacklist</b> <b>max-time</b> <i>number</i>
Tree	<b>max-time</b>
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**timeout-action** *keyword*

Synopsis	Action when a tunnel or peer exceeds time in denylist
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>tunnel-selection-blacklist</b> <b>timeout-action</b> <i>keyword</i>
Tree	<b>timeout-action</b>
Options	remove-from-blacklist, try-one-session
Default	remove-from-blacklist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tunnel-session-limit** *number*

Synopsis	L2TP session limit for each tunnel of this router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>l2tp</b> <b>tunnel-session-limit</b> <i>number</i>
Tree	<b>tunnel-session-limit</b>
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ldp**

Synopsis	Enable the <b>ldp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b>
Tree	<b>ldp</b>

---

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of LDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **aggregate-prefix-match**

Synopsis	Enable the <b>aggregate-prefix-match</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>aggregate-prefix-match</b>
Tree	<b>aggregate-prefix-match</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the LDP aggregate prefix match
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>aggregate-prefix-match</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **prefix-exclude** *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>aggregate-prefix-match</b> <b>prefix-exclude</b> <i>reference</i>

Tree	<a href="#">prefix-exclude</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **class-forwarding** *keyword*

Synopsis	Forwarding mode for LDP over RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">class-forwarding</a> <i>keyword</i>
Tree	<a href="#">class-forwarding</a>
Options	lsr – Class-based forwarding for LSR/SWAP only ler – Class-based forwarding for LER/PUSH only lsr-and-ler – Class-based forwarding for LER/PUSH and LSR/SWAP
Introduced	16.0.R1
Platforms	All

### **consider-system-ip-in-gep** *boolean*

Synopsis	Apply global export policy for system IP FEC creation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">consider-system-ip-in-gep</a> <i>boolean</i>
Tree	<a href="#">consider-system-ip-in-gep</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **egress-statistics**

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	16.0.R1
Platforms	All

**fec-prefix** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>fec-prefix</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp egress-statistics</b> <a href="#">fec-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">fec-prefix</a>
Introduced	16.0.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp egress-statistics</b> <a href="#">fec-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">fec-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**accounting-policy** *reference*

Synopsis	Accounting policy ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp egress-statistics</b> <a href="#">fec-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <b>log</b> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP egress statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp egress-statistics</b> <a href="#">fec-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced 16.0.R1  
 Platforms All

### **collect-stats** *boolean*

Synopsis Collect statistics  
 Context **configure** **router** *string* **ldp** **egress-statistics** **fec-prefix** (*ipv4-prefix | ipv6-prefix*) **collect-stats** *boolean*  
 Tree [collect-stats](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **entropy-label-capability** *boolean*

Synopsis Enable entropy label capability on the LDP instance  
 Context **configure** **router** *string* **ldp** **entropy-label-capability** *boolean*  
 Tree [entropy-label-capability](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **export-policy** *reference*

Synopsis Export policies to determine routes exported to LDP  
 Context **configure** **router** *string* **ldp** **export-policy** *reference*  
 Tree [export-policy](#)  
 Reference **configure** **policy-options** **policy-statement** *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

**export-tunnel-table** *reference*

Synopsis	Tunnel table export policies to export tunneled routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>export-tunnel-table</b> <i>reference</i>
Tree	<a href="#">export-tunnel-table</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**fast-reroute**

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fast-reroute</b>
Tree	<a href="#">fast-reroute</a>
Introduced	16.0.R1
Platforms	All

**backup-sr-tunnel** *boolean*

Synopsis	Use SR tunnel as a remote LFA backup tunnel next-hop by an LDP FEC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fast-reroute</b> <b>backup-sr-tunnel</b> <i>boolean</i>
Tree	<a href="#">backup-sr-tunnel</a>
Default	false
Introduced	16.0.R1
Platforms	All

**fec-originate** [[fec-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>fec-originate</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">fec-originate</a>
Introduced	16.0.R1
Platforms	All

**[fec-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Static FEC IP prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>fec-originate</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertised-label** *number*

Synopsis	Label that is advertised to upstream peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>advertised-label</b> <i>number</i>
Tree	<b>advertised-label</b>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

**interface** *string*

Synopsis	Interface name for this static FEC prefix
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	0 to 32
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

**next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>next-hop</b>

Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **pop** *boolean*

Synopsis	Pop the label and transmit without the label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>pop</b> <i>boolean</i>
Tree	<a href="#">pop</a>
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **swap-label** *number*

Synopsis	Value mapped to egress label associated with next-hop entry that LSR uses to swap incoming label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>fec-originate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>swap-label</b> <i>number</i>
Tree	<a href="#">swap-label</a>
Range	6 to 1048575
Notes	The following elements are part of a choice: ( <b>interface</b> , <b>next-hop</b> , and <b>swap-label</b> ) or <b>pop</b> .
Introduced	16.0.R1
Platforms	All

### **generate-basic-fec-only** *boolean*

Synopsis	Enable mLDP to generate a basic FEC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>generate-basic-fec-only</b> <i>boolean</i>
Tree	<a href="#">generate-basic-fec-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

## graceful-restart

Synopsis	Enter the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## helper-mode *boolean*

Synopsis	Enable graceful restart helper
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp graceful-restart helper-mode</a> <i>boolean</i>
Tree	<a href="#">helper-mode</a>
Default	false
Introduced	16.0.R1
Platforms	All

## maximum-recovery-time *number*

Synopsis	Value for the local maximum recovery time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp graceful-restart maximum-recovery-time</a> <i>number</i>
Tree	<a href="#">maximum-recovery-time</a>
Range	15 to 1800
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

## neighbor-liveness-time *number*

Synopsis	Value for the neighbor liveness timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp graceful-restart neighbor-liveness-time</a> <i>number</i>
Tree	<a href="#">neighbor-liveness-time</a>
Range	5 to 300
Units	seconds

Default	120
Introduced	16.0.R1
Platforms	All

### **implicit-null-label** *boolean*

Synopsis	Signal the implicit null label value for all LDP FECs for which the node is the egress LER
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <b>implicit-null-label</b> <i>boolean</i>
Tree	<a href="#">implicit-null-label</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **import-mcast-policy** *reference*

Synopsis	Import policy for mLDP FECs arriving on the node
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <b>import-mcast-policy</b> <i>reference</i>
Tree	<a href="#">import-mcast-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

### **import-pmsi-routes**

Synopsis	Enter the <b>import-pmsi-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <b>import-pmsi-routes</b>
Tree	<a href="#">import-pmsi-routes</a>
Introduced	19.5.R1
Platforms	All

**mvpn *boolean***

Synopsis	Import BGP MVPN inter-AS routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-pmsi-routes</a> <a href="#">mvpn</a> <i>boolean</i>
Tree	<a href="#">mvpn</a>
Default	false
Introduced	19.5.R1
Platforms	All

**mvpn-no-export-community *boolean***

Synopsis	Import BGP MVPN intra-AS routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-pmsi-routes</a> <a href="#">mvpn-no-export-community</a> <i>boolean</i>
Tree	<a href="#">mvpn-no-export-community</a>
Default	false
Introduced	19.5.R1
Platforms	All

**import-policy *reference***

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**import-tunnel-table *reference***

Synopsis	Tunnel table import policies for non-host prefixes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">import-tunnel-table</a> <i>reference</i>
Tree	<a href="#">import-tunnel-table</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## interface-parameters

Synopsis	Enter the <b>interface-parameters</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a>
Tree	<a href="#">interface-parameters</a>
Introduced	16.0.R1
Platforms	All

## interface [[ip-int-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

## [[ip-int-name](#)] *reference*

Synopsis	Interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the LDP interface
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Allow BFD tracking of IPv4 LDP Session for interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6 boolean**

Synopsis	Allow BFD tracking of IPv6 LDP session for interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">bfd-liveness</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## fec-type-capability

Synopsis	Enter the <b>fec-type-capability</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">fec-type-capability</a>
Tree	<a href="#">fec-type-capability</a>
Introduced	16.0.R1
Platforms	All

## p2mp-ipv4 *boolean*

Synopsis	Enable IPv4 P2MP FEC capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">fec-type-capability</a> <a href="#">p2mp-ipv4</a> <i>boolean</i>
Tree	<a href="#">p2mp-ipv4</a>
Default	true
Introduced	16.0.R1

Platforms All

### **p2mp-ipv6** *boolean*

Synopsis Enable IPv6 P2MP FEC capability

Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [fec-type-capability](#) [p2mp-ipv6](#) *boolean*

Tree [p2mp-ipv6](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv4** *boolean*

Synopsis Enable IPv4 prefix FEC capability

Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [fec-type-capability](#) [prefix-ipv4](#) *boolean*

Tree [prefix-ipv4](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv6** *boolean*

Synopsis Enable IPv6 prefix FEC capability

Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [fec-type-capability](#) [prefix-ipv6](#) *boolean*

Tree [prefix-ipv6](#)

Default true

Introduced 16.0.R1

Platforms All

### **hello**

Synopsis Enable the **hello** context

Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [hello](#)

Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Factor value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout number**

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**keepalive**

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

**factor number**

Synopsis	Factor value for keepalive
----------	----------------------------

Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **local-lsr-id**

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>local-lsr-id</b>
Tree	<b>local-lsr-id</b>
Introduced	16.0.R1
Platforms	All

### **interface-name** *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>local-lsr-id</b> <b>interface-name</b> <i>reference</i>
Tree	<b>interface-name</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv4</b> <b>transport-address</b> <i>keyword</i>
Tree	<b>transport-address</b>
Options	interface, system
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LDP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv6</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**fec-type-capability**

Synopsis	Enter the <b>fec-type-capability</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>interface</b> <i>reference</i> <b>ipv6</b> <b>fec-type-capability</b>
Tree	<b>fec-type-capability</b>
Introduced	16.0.R1

Platforms All

### **p2mp-ipv4** *boolean*

Synopsis Enable IPv4 P2MP FEC capability

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **fec-type-capability** **p2mp-ipv4** *boolean*

Tree [p2mp-ipv4](#)

Default true

Introduced 16.0.R1

Platforms All

### **p2mp-ipv6** *boolean*

Synopsis Enable IPv6 P2MP FEC capability

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **fec-type-capability** **p2mp-ipv6** *boolean*

Tree [p2mp-ipv6](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv4** *boolean*

Synopsis Enable IPv4 prefix FEC capability

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **fec-type-capability** **prefix-ipv4** *boolean*

Tree [prefix-ipv4](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv6** *boolean*

Synopsis Enable IPv6 prefix FEC capability

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **fec-type-capability** **prefix-ipv6** *boolean*

---

Tree	<a href="#">prefix-ipv6</a>
Default	true
Introduced	16.0.R1
Platforms	All

## hello

Synopsis	Enable the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>hello</b>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <i>reference</i> <a href="#">ipv6</a> <b>hello</b> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## keepalive

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv6</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Factor value for keepalive
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv6</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv6</a> <a href="#">keepalive</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## local-lsr-id

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">interface</a> <a href="#">reference</a> <a href="#">ipv6</a> <a href="#">local-lsr-id</a>
Tree	<a href="#">local-lsr-id</a>
Introduced	16.0.R1
Platforms	All

**format-32bit** *boolean*

Synopsis	Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>interface</i> <i>reference</i> <i>ipv6</i> <i>local-lsr-id</i> <i>format-32bit</i> <i>boolean</i>
Tree	<i>format-32bit</i>
Default	false
Introduced	16.0.R1
Platforms	All

**interface-name** *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>interface</i> <i>reference</i> <i>ipv6</i> <i>local-lsr-id</i> <i>interface-name</i> <i>reference</i>
Tree	<i>interface-name</i>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i>
Introduced	16.0.R1
Platforms	All

**transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>interface</i> <i>reference</i> <i>ipv6</i> <i>transport-address</i> <i>keyword</i>
Tree	<i>transport-address</i>
Options	interface, system
Introduced	16.0.R1
Platforms	All

**load-balancing-weight** *number*

Synopsis	Load balancing weight for the LDP interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ldp</i> <i>interface-parameters</i> <i>interface</i> <i>reference</i> <i>load-balancing-weight</i> <i>number</i>
Tree	<i>load-balancing-weight</i>

---

Max. Range	0 to 4294967295
Introduced	20.2.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## hello

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Value for the Hello factor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a> <i>factor</i> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">hello</a> <i>timeout</i> <i>number</i>
Tree	<a href="#">timeout</a>

Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

## keepalive

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Value for the keep-alive factor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">keepalive</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">interface-parameters</a> <a href="#">ipv4</a> <a href="#">keepalive</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv4</b> <b>transport-address</b> <i>keyword</i>
Tree	<b>transport-address</b>
Options	interface, system
Default	system
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>hello</b>
Tree	<b>hello</b>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Value for the Hello factor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>hello</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

**keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>keepalive</b>
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

**factor** *number*

Synopsis	Value for the keep-alive factor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535

---

Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **transport-address** *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>interface-parameters</b> <b>ipv6</b> <b>transport-address</b> <i>keyword</i>
Tree	<a href="#">transport-address</a>
Options	interface, system
Default	system
Introduced	16.0.R1
Platforms	All

### **label-withdrawal-delay** *number*

Synopsis	Time interval during which LDP delays for the withdrawal of FEC-label binding
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>label-withdrawal-delay</b> <i>number</i>
Tree	<a href="#">label-withdrawal-delay</a>
Range	3 to 120
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ldp-shortcut**

Synopsis	Enter the <b>ldp-shortcut</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b>
Tree	<a href="#">ldp-shortcut</a>
Introduced	16.0.R1
Platforms	All

**ipv4 *boolean***

Synopsis	Forward IPv4 packets by using LDP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6 *boolean***

Synopsis	Forward IPv6 packets by using LDP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>ldp-shortcut</b> <b>ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**legacy-ipv4-lsr-interop *boolean***

Synopsis	Allow interoperability with legacy IPv4 LSR implementations
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>legacy-ipv4-lsr-interop</b> <i>boolean</i>
Tree	<a href="#">legacy-ipv4-lsr-interop</a>
Default	false
Introduced	16.0.R1
Platforms	All

**lsp-bfd [[prefix-list](#)] *reference***

Synopsis	Enter the <b>lsp-bfd</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>lsp-bfd</b> <i>reference</i>
Tree	<a href="#">lsp-bfd</a>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

**[prefix-list] reference**

Synopsis	Name of a router policy options prefix list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">lsp-bfd</a> <i>reference</i>
Tree	<a href="#">lsp-bfd</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bfd-liveness boolean**

Synopsis	Enable BFD on LDP LSPs with FECs that match the prefix list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">lsp-bfd</a> <i>reference</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template reference**

Synopsis	BFD template to apply to BFD sessions associated with the prefix list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">lsp-bfd</a> <i>reference</i> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**failure-action keyword**

Synopsis	Reaction to BFD session failure for the prefix list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">lsp-bfd</a> <i>reference</i> <a href="#">failure-action</a> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Options	down
Introduced	16.0.R1

Platforms All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis LSP ping transmit interval for periodic verification

Context **configure** **router** *string* **ldp** **lsp-bfd** *reference* **lsp-ping-interval** (*number* | *keyword*)

Tree **lsp-ping-interval**

Range 60 to 300

Units seconds

Options none

Default 60

Introduced 16.0.R1

Platforms All

### **priority** *number*

Synopsis Prefix list to control the search order

Context **configure** **router** *string* **ldp** **lsp-bfd** *reference* **priority** *number*

Tree **priority**

Range 1 to 99

Default 1

Introduced 16.0.R1

Platforms All

### **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Source address in LSP ping packets and BFD control packets associated with prefix list

Context **configure** **router** *string* **ldp** **lsp-bfd** *reference* **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **source-address**

Introduced 16.0.R1

Platforms All

### **max-ecmp-routes** *number*

Synopsis Maximum ECMP value for LDP

Context	<b>configure router</b> <i>string</i> <b>ldp max-ecmp-routes</b> <i>number</i>
Tree	<b>max-ecmp-routes</b>
Description	This command sets the maximum number of ECMP routes that LDP may use to resolve the next hop for a FEC as permitted by the RTM or TTM.  The system-wide maximum number of ECMP routes is set by the <b>configure router ecmp</b> command; therefore, the operational maximum number used by LDP is set to the lesser of the values configured by this command and the <b>configure router ecmp</b> command.
Range	1 to 64
Default	32
Introduced	19.10.R1
Platforms	All

### **mcast-upstream-asbr-frr** *boolean*

Synopsis	Enable ASBR MoFRR to allow local leaf to perform MoFRR for multiple ASBRs
Context	<b>configure router</b> <i>string</i> <b>ldp mcast-upstream-asbr-frr</b> <i>boolean</i>
Tree	<b>mcast-upstream-asbr-frr</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-upstream-frr** *boolean*

Synopsis	Use fast upstream switchover for mLDP FECs
Context	<b>configure router</b> <i>string</i> <b>ldp mcast-upstream-frr</b> <i>boolean</i>
Tree	<b>mcast-upstream-frr</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mp-mbb-time** *number*

Synopsis	MP MBB time
Context	<b>configure router</b> <i>string</i> <b>ldp mp-mbb-time</b> <i>number</i>
Tree	<b>mp-mbb-time</b>

Range	0 to 10
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	All

### **prefer-mcast-tunnel-in-tunnel** *boolean*

Synopsis	Use T-LDP session to the peer for FEC resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>prefer-mcast-tunnel-in-tunnel</b> <i>boolean</i>
Tree	<a href="#">prefer-mcast-tunnel-in-tunnel</a>
Default	true
Introduced	21.2.R1
Platforms	All

### **prefer-protocol-stitching** *boolean*

Synopsis	Stitch LDP ILM to SR NHLFE even if LDP NHLFE exists
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>prefer-protocol-stitching</b> <i>boolean</i>
Tree	<a href="#">prefer-protocol-stitching</a>
Description	When configured to <b>true</b> , an LDP ILM stitches to an SR NHLFE, even if an LDP NHLFE exists. When configured to <b>false</b> , the stitching preference of an LDP ILM is to an LDP NHLFE.
Default	false
Introduced	21.7.R1
Platforms	All

### **prefer-tunnel-in-tunnel** *boolean*

Synopsis	Preference tunnel-in-tunnel over a simple LDP tunnel
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>prefer-tunnel-in-tunnel</b> <i>boolean</i>
Tree	<a href="#">prefer-tunnel-in-tunnel</a>
Default	true
Introduced	16.0.R1
Platforms	All

**resolve-root-using** *keyword*

Synopsis	Resolution route table for multicast FECs
Context	<b>configure</b> <i>router string</i> <b>ldp</b> <b>resolve-root-using</b> <i>keyword</i>
Tree	<b>resolve-root-using</b>
Options	ucast-rtm, mcast-rtm
Default	ucast-rtm
Introduced	16.0.R1
Platforms	All

**session-parameters**

Synopsis	Enter the <b>session-parameters</b> context
Context	<b>configure</b> <i>router string</i> <b>ldp</b> <b>session-parameters</b>
Tree	<b>session-parameters</b>
Introduced	16.0.R1
Platforms	All

**peer** [*ip-address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string</i> <b>ldp</b> <b>session-parameters</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	<b>configure</b> <i>router string</i> <b>ldp</b> <b>session-parameters</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **adv-adj-addr-only** *boolean*

Synopsis Distribute only the local addresses used to establish the Hello adjacencies with a peer

Context **configure** **router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **adv-adj-addr-only** *boolean*

Tree [adv-adj-addr-only](#)

Default false

Introduced 16.0.R1

Platforms All

### **adv-local-lsr-id** *boolean*

Synopsis Advertise local LSR ID over a specified LDP session

Context **configure** **router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **adv-local-lsr-id** *boolean*

Tree [adv-local-lsr-id](#)

Default false

Introduced 16.0.R1

Platforms All

### **community** *string*

Synopsis Community string associated with a session to a specified peer

Context **configure** **router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **community** *string*

Tree [community](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms All

### **dod-label-distribution** *boolean*

Synopsis Use LDP Downstream-on-Demand (DoD) label distribution procedures

Context **configure** **router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **dod-label-distribution** *boolean*

Tree	<a href="#">dod-label-distribution</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **export-addresses** *reference*

Synopsis	Export policies to determine which local addresses should be distributed to this peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp session-parameters</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">export-addresses</a> <i>reference</i>
Tree	<a href="#">export-addresses</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **export-prefixes** *reference*

Synopsis	Export policies to determine which FEC prefixes are redistributed to LDP and TLDP peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp session-parameters</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">export-prefixes</a> <i>reference</i>
Tree	<a href="#">export-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **fec-limit**

Synopsis	Enter the <b>fec-limit</b> context
----------	------------------------------------

Context	<b>configure router string ldp session-parameters peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>fec-limit</b>
Tree	<b>fec-limit</b>
Introduced	16.0.R1
Platforms	All

### **limit number**

Synopsis	Maximum number of FECs to be accepted from this peer LSR
Context	<b>configure router string ldp session-parameters peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>fec-limit limit number</b>
Tree	<b>limit</b>
Range	0   1 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

### **log-only boolean**

Synopsis	Trap and syslog message to generate when reaching the threshold and limit
Context	<b>configure router string ldp session-parameters peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>fec-limit log-only boolean</b>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold number**

Synopsis	Threshold that generates trap and warning when reached
Context	<b>configure router string ldp session-parameters peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>fec-limit threshold number</b>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1

Platforms All

### **fec-type-capability**

Synopsis Enter the **fec-type-capability** context

Context **configure** [router](#) *string* [ldp session-parameters peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [fec-type-capability](#)

Tree [fec-type-capability](#)

Introduced 16.0.R1

Platforms All

### **p2mp** *boolean*

Synopsis Enable P2MP FEC capability for the session

Context **configure** [router](#) *string* [ldp session-parameters peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [fec-type-capability p2mp](#) *boolean*

Tree [p2mp](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv4** *boolean*

Synopsis Enable IPv4 prefix FEC capability for the session

Context **configure** [router](#) *string* [ldp session-parameters peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [fec-type-capability prefix-ipv4](#) *boolean*

Tree [prefix-ipv4](#)

Default true

Introduced 16.0.R1

Platforms All

### **prefix-ipv6** *boolean*

Synopsis Enable IPv6 prefix FEC capability

Context **configure** [router](#) *string* [ldp session-parameters peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [fec-type-capability prefix-ipv6](#) *boolean*

Tree [prefix-ipv6](#)

Default	true
Introduced	16.0.R1
Platforms	All

### **fec129-cisco-interop** *boolean*

Synopsis	Allow translation between non-compliant FEC 129 formats of Cisco
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>fec129-cisco-interop</b> <i>boolean</i>
Tree	<a href="#">fec129-cisco-interop</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-prefixes** *reference*

Synopsis	FEC prefixes to be redistributed to this LDP peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>import-prefixes</b> <i>reference</i>
Tree	<a href="#">import-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **pe-id-mac-flush-interop** *boolean*

Synopsis	Send PE-ID TLV in LDP MAC withdrawal message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp session-parameters peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>pe-id-mac-flush-interop</b> <i>boolean</i>
Tree	<a href="#">pe-id-mac-flush-interop</a>
Default	false
Introduced	16.0.R1
Platforms	All

**shortcut-local-ttl-propagate** *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets
Context	<b>configure</b> <i>router string ldp shortcut-local-ttl-propagate boolean</i>
Tree	<a href="#">shortcut-local-ttl-propagate</a>
Default	true
Introduced	16.0.R1
Platforms	All

**shortcut-transit-ttl-propagate** *boolean*

Synopsis	Enable TTL propagation over LSP shortcut
Context	<b>configure</b> <i>router string ldp shortcut-transit-ttl-propagate boolean</i>
Tree	<a href="#">shortcut-transit-ttl-propagate</a>
Default	true
Introduced	16.0.R1
Platforms	All

**targeted-session**

Synopsis	Enter the <b>targeted-session</b> context
Context	<b>configure</b> <i>router string ldp targeted-session</i>
Tree	<a href="#">targeted-session</a>
Introduced	16.0.R1
Platforms	All

**auto-rx**

Synopsis	Enter the <b>auto-rx</b> context
Context	<b>configure</b> <i>router string ldp targeted-session auto-rx</i>
Tree	<a href="#">auto-rx</a>
Description	Commands in this context specify the LDP session configuration to accept targeted Hello messages from any peer.
Introduced	20.10.R1
Platforms	All

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">auto-rx</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">auto-rx</a> <a href="#">ipv4</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**tunneling** *boolean*

Synopsis	Enable tunneling for targeted peers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">auto-rx</a> <a href="#">ipv4</a> <b>tunneling</b> <i>boolean</i>
Tree	<a href="#">tunneling</a>
Description	<p>When configured to <b>true</b>, this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.</p> <p>If the <b>auto-rx</b> and <b>auto-tx</b> contexts are both administratively enabled, this command must be set to <b>true</b> for LDP rLFA to function properly.</p> <p>When configured to <b>false</b>, FEC label bindings are not sent via the LDP session.</p>
Default	false
Introduced	20.10.R1
Platforms	All

**auto-tx**

Synopsis	Enter the <b>auto-tx</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b>
Tree	<b>auto-tx</b>
Description	Commands in this context specify the LDP session configuration to send targeted Hello messages toward PQ nodes determined by the rLFA algorithm.
Introduced	20.10.R1
Platforms	All

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of IPv4 capabilities for peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**tunneling** *boolean*

Synopsis	Enable tunneling for targeted peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>auto-tx</b> <b>ipv4</b> <b>tunneling</b> <i>boolean</i>
Tree	<b>tunneling</b>
Description	When configured to <b>true</b> , this command enables the local system to use the targeted LDP session to send FEC label bindings that are advertised to other LDP peers. For LDP rLFA, the source node requires the PQ node's label binding information in order to reach the destination.

If the **auto-rx** context is administratively disabled, this command should be set to **true** for LDP rLFA to function properly.

When configured to **false**, FEC label bindings are not sent via the LDP session.

Default	false
Introduced	20.10.R1
Platforms	All

### **export-prefixes** *reference*

Synopsis	Export route policy to determine which routes are exported to this targeted LDP session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">export-prefixes</a> <i>reference</i>
Tree	<a href="#">export-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **import-prefixes** *reference*

Synopsis	Import route policy to determine which routes are accepted from targeted LDP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">import-prefixes</a> <i>reference</i>
Tree	<a href="#">import-prefixes</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>

---

Introduced	16.0.R1
Platforms	All

## hello

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello</a>
Tree	<a href="#">hello</a>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	45
Introduced	16.0.R1
Platforms	All

## hello-reduction

Synopsis	Enter the <b>hello-reduction</b> context
----------	--

---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello-reduction</a>
Tree	<a href="#">hello-reduction</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello-reduction</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R3
Platforms	All

### **factor** *number*

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">hello-reduction</a> <a href="#">factor</a> <i>number</i>
Tree	<a href="#">factor</a>
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">ipv4</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	All

### **factor number**

Synopsis	Factor value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv4</b> <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	4
Introduced	16.0.R1
Platforms	All

### **timeout number**

Synopsis	Timeout value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv4</b> <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Default	40
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

### **hello**

Synopsis	Enter the <b>hello</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello</b>
Tree	<b>hello</b>
Introduced	16.0.R1
Platforms	All

### **factor** *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Default	45
Introduced	16.0.R1
Platforms	All

### **hello-reduction**

Synopsis	Enter the <b>hello-reduction</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello-reduction</b>
Tree	<b>hello-reduction</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>ipv6</b> <b>hello-reduction</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable

Default	disable
Introduced	16.0.R3
Platforms	All

### **factor number**

Synopsis	Hello reduction dampening factor
Context	<b>configure router string ldp targeted-session ipv6 hello-reduction factor number</b>
Tree	<b>factor</b>
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **keepalive**

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure router string ldp targeted-session ipv6 keepalive</b>
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

### **factor number**

Synopsis	Factor value for keepalive
Context	<b>configure router string ldp targeted-session ipv6 keepalive factor number</b>
Tree	<b>factor</b>
Range	1 to 255
Default	4
Introduced	16.0.R1
Platforms	All

### **timeout number**

Synopsis	Timeout value for keepalive
----------	-----------------------------

Context	<b>configure</b> <i>router string ldp targeted-session ipv6 keepalive timeout number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Default	40
Introduced	16.0.R1
Platforms	All

### **peer** [[ip-address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>router string ldp targeted-session peer (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">peer</a>
Introduced	16.0.R1
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the LDP peer
Context	<b>configure</b> <i>router string ldp targeted-session peer (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">peer</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the LDP peer
Context	<b>configure</b> <i>router string ldp targeted-session peer (ipv4-address-no-zone   ipv6-address-no-zone) admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1

Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD tracking of LDP session for the peer

Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **bfd-liveness** *boolean*

Tree [bfd-liveness](#)

Default false

Introduced 16.0.R1

Platforms All

### **hello**

Synopsis Enable the **hello** context

Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello**

Tree [hello](#)

Introduced 16.0.R1

Platforms All

### **factor** *number*

Synopsis Factor value for Hello

Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello** **factor** *number*

Tree [factor](#)

Range 1 to 255

Introduced 16.0.R1

Platforms All

### **timeout** *number*

Synopsis Timeout value for Hello

Context **configure** **router** *string* **ldp** **targeted-session** **peer** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **hello** **timeout** *number*

Tree [timeout](#)

Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## hello-reduction

Synopsis	Enable the <b>hello-reduction</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>hello-reduction</b>
Tree	<b>hello-reduction</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>hello-reduction</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R3
Platforms	All

## factor *number*

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>hello-reduction</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	3 to 20
Introduced	16.0.R1
Platforms	All

## keepalive

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>keepalive</b>
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

## factor number

Synopsis	Factor value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## timeout number

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>keepalive</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## local-lsr-id

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>local-lsr-id</b>
Tree	<b>local-lsr-id</b>
Introduced	16.0.R1

Platforms All

### **format-32bit** *boolean*

Synopsis Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR

Context **configure** *router* *string* *ldp* *targeted-session* *peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*) *local-lsr-id* **format-32bit** *boolean*

Tree [format-32bit](#)

Default false

Introduced 16.0.R1

Platforms All

### **interface-name** *reference*

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Context **configure** *router* *string* *ldp* *targeted-session* *peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*) *local-lsr-id* **interface-name** *reference*

Tree [interface-name](#)

Reference **configure** *router* *string* *interface* *string*

Introduced 16.0.R1

Platforms All

### **mcast-tunneling**

Synopsis Enable the **mcast-tunneling** context

Context **configure** *router* *string* *ldp* *targeted-session* *peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mcast-tunneling**

Tree [mcast-tunneling](#)

Introduced 21.2.R1

Platforms All

### **lsp** [*lsp-name*] *string*

Synopsis Add a list entry for **lsp**

Context **configure** *router* *string* *ldp* *targeted-session* *peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **mcast-tunneling** **lsp** *string*

Tree	<a href="#">lsp</a>
Max. Instances	4
Introduced	21.2.R1
Platforms	All

**[lsp-name]** *string*

Synopsis	LSP name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">mcast-tunneling</a> <a href="#">lsp</a> <i>string</i>
Tree	<a href="#">lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

**tunneling**

Synopsis	Enable the <b>tunneling</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">tunneling</a>
Tree	<a href="#">tunneling</a>
Introduced	16.0.R1
Platforms	All

**lsp** [[lsp-name](#)] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer</a> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">tunneling</a> <a href="#">lsp</a> <i>string</i>
Tree	<a href="#">lsp</a>
Max. Instances	4
Introduced	16.0.R1
Platforms	All

**[lsp-name]** *string*

Synopsis	LSP name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunneling</b> <b>lsp</b> <i>string</i>
Tree	<b>lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**peer-template** [**template-name**] *string*

Synopsis	Enter the <b>peer-template</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i>
Tree	<b>peer-template</b>
Max. Instances	500
Introduced	16.0.R1
Platforms	All

**[template-name]** *string*

Synopsis	Name for the targeted peer template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i>
Tree	<b>peer-template</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the peer template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**adv-local-lsr-id** *boolean*

Synopsis	Advertise local LSR ID over a specified LDP session
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template</a> <i>string</i> <b>adv-local-lsr-id</b> <i>boolean</i>
Tree	<a href="#">adv-local-lsr-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD tracking of LDP session for sessions created by peer template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template</a> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**community** *string*

Synopsis	Community string associated with a session to a specified peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ldp</a> <a href="#">targeted-session</a> <a href="#">peer-template</a> <i>string</i> <b>community</b> <i>string</i>
Tree	<a href="#">community</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## hello

Synopsis	Enable the <b>hello</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b>
Tree	<b>hello</b>
Introduced	16.0.R1
Platforms	All

## factor *number*

Synopsis	Factor value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout value for Hello
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

## hello-reduction

Synopsis	Enable the <b>hello-reduction</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello-reduction</b>
Tree	<b>hello-reduction</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of suppression of Hello messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello-reduction</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R3
Platforms	All

**factor** *number*

Synopsis	Hello reduction dampening factor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>hello-reduction</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	3 to 20
Introduced	16.0.R1
Platforms	All

**keepalive**

Synopsis	Enable the <b>keepalive</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>keepalive</b>
Tree	<b>keepalive</b>
Introduced	16.0.R1
Platforms	All

**factor** *number*

Synopsis	Factor value for keepalive
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>keepalive</b> <b>factor</b> <i>number</i>
Tree	<b>factor</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Time that LDP waits before tearing down session
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string keepalive timeout number</i>
Tree	<a href="#">timeout</a>
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**local-lsr-id**

Synopsis	Enter the <b>local-lsr-id</b> context
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string local-lsr-id</i>
Tree	<a href="#">local-lsr-id</a>
Introduced	16.0.R1
Platforms	All

**interface-name** *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string local-lsr-id interface-name reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <i>router string interface string</i>
Introduced	16.0.R1
Platforms	All

**mcast-tunneling** *boolean*

Synopsis	Enable MLDP over RSVP-TE tunnels for the template
Context	<b>configure</b> <i>router string ldp targeted-session peer-template string mcast-tunneling boolean</i>
Tree	<a href="#">mcast-tunneling</a>

Default	false
Introduced	21.2.R1
Platforms	All

### **tunneling** *boolean*

Synopsis	Allow LDP over tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i> <b>tunneling</b> <i>boolean</i>
Tree	<b>tunneling</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **peer-template-map** [**template-map-name**] *reference*

Synopsis	Enter the <b>peer-template-map</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template-map</b> <i>reference</i>
Tree	<b>peer-template-map</b>
Max. Instances	500
Introduced	16.0.R1
Platforms	All

### **[template-map-name]** *reference*

Synopsis	Name to identify the targeted peer template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template-map</b> <i>reference</i>
Tree	<b>peer-template-map</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**policy-map** *reference*

Synopsis	Targeted peer template to apply to the given policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>peer-template-map</b> <i>reference</i> <b>policy-map</b> <i>reference</i>
Tree	<b>policy-map</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**resolve-v6-prefix-over-shortcut** *boolean*

Synopsis	Resolve IPv6 prefix over IGP shortcuts
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>resolve-v6-prefix-over-shortcut</b> <i>boolean</i>
Tree	<b>resolve-v6-prefix-over-shortcut</b>
Description	When configured to <b>true</b> , the system enables the resolution of IPv6 LDP unicast prefix FECs over IGP shortcuts. When configured to <b>false</b> , the resolution is not allowed.
Default	false
Introduced	22.7.R1
Platforms	All

**sdp-auto-targeted-session** *boolean*

Synopsis	Allow auto-creation of targeted sessions by SDP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>targeted-session</b> <b>sdp-auto-targeted-session</b> <i>boolean</i>
Tree	<b>sdp-auto-targeted-session</b>
Default	true
Introduced	16.0.R1
Platforms	All

## tcp-session-parameters

Synopsis	Enter the <b>tcp-session-parameters</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b>
Tree	<b>tcp-session-parameters</b>
Introduced	16.0.R1
Platforms	All

## authentication-key *string*

Synopsis	Authentication key between LDP peers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	This command specifies the authentication key used to establish a session between LDP peers.

Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.

The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.

String Length	1 to 370
Introduced	21.2.R1
Platforms	All

## authentication-keychain *reference*

Synopsis	Authentication keychain to use for the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b> <b>authentication-keychain</b> <i>reference</i>
Tree	<b>authentication-keychain</b>
Description	This command configures the authentication keychain to use for the TCP session.  The per-peer authentication configuration takes precedence over the global authentication configuration.
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	21.2.R1

Platforms All

Platforms All

### **authentication-key** *string*

Synopsis Authentication key between LDP peers

Context **configure** [router](#) *string* [ldp](#) [tcp-session-parameters](#) [peer-transport](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [authentication-key](#) *string*

Tree [authentication-key](#)

Description This command specifies the authentication key used to establish a session between LDP peers.

Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.

The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.

String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	Authentication keychain to use for the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b> <b>peer-transport</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command configures the authentication keychain to use for the TCP session. The per-peer authentication configuration takes precedence over the global authentication configuration.
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>keychains</b> <b>keychain</b> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **path-mtu-discovery** *boolean*

Synopsis	Allow Path MTU Discovery for associated TCP connections
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b> <b>peer-transport</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for incoming packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tcp-session-parameters</b> <b>peer-transport</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>ttl-security</b> <i>number</i>
Tree	<a href="#">ttl-security</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **tunnel-down-damp-time** *number*

Synopsis	Time interval for an LDP to damp a tunnel down event before posting to the Route Table Manager (RTM)
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tunnel-down-damp-time</b> <i>number</i>
Tree	<b>tunnel-down-damp-time</b>
Range	0 to 20
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref** *number*

Synopsis	Tunnel table preference value for address FECs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>tunnel-table-pref</b> <i>number</i>
Tree	<b>tunnel-table-pref</b>
Description	<p>This command configures the tunnel table preference for an LDP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	9
Introduced	21.10.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Allow weighted ECMP load-balancing
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ldp</b> <b>weighted-ecmp</b> <i>boolean</i>
Tree	<b>weighted-ecmp</b>

Description	When configured to <b>true</b> , the system allows weighted ECMP on LDP using RSVP LSPs or SR-TE LSPs. LDP labeled packets are sprayed across the RSVP or SR-TE LSP ECMP set in proportion to the configured load-balancing weight of LSPs. When configured to <b>false</b> , the system removes weighted ECMP load-balancing.
Default	false
Introduced	16.0.R1
Platforms	All

## leak-export

Synopsis	Enter the <b>leak-export</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>leak-export</b>
Tree	<b>leak-export</b>
Introduced	16.0.R4
Platforms	All

## leak-export-limit *number*

Synopsis	Maximum limit on number of GRT routes leaked into VPRNs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>leak-export</b> <b>leak-export-limit</b> <i>number</i>
Tree	<b>leak-export-limit</b>
Range	1 to 10000
Default	5
Introduced	16.0.R4
Platforms	All

## policy-name (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>leak-export</b> <b>policy-name</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<b>policy-name</b>
String Length	1 to 255
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4

Platforms All

## **lsp-bfd**

Synopsis Enter the **lsp-bfd** context  
Context **configure router string lsp-bfd**

Tree	<i>query-interval</i>
Range	2 to 1024
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-last-member-interval</b> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-response-interval</b> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**query-source-address** *string*

Synopsis	Source address for MLD queries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-source-address</b> <i>string</i>
Tree	<a href="#">query-source-address</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis Allow MLD traffic from known hosts only

Context **configure** **router** *string* **mld** **forwarding-group-interface** **forwarding-service** *string* **group-interface-name** *reference* **sub-hosts-only** *boolean*

Tree [sub-hosts-only](#)

Default true

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis Enable subnet checking

Context **configure** **router** *string* **mld** **forwarding-group-interface** **forwarding-service** *string* **group-interface-name** *reference* **subnet-check** *boolean*

Tree [subnet-check](#)

Default true

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *keyword*

Synopsis MLD protocol version

Context **configure** **router** *string* **mld** **forwarding-group-interface** **forwarding-service** *string* **group-interface-name** *reference* **version** *keyword*

Tree [version](#)

Options 1, 2

Default 2

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-if-query-source-address** *string*

Synopsis Source address in queries for group interfaces when not configured at group interface level

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-if-query-source-address</i> <i>string</i>
Tree	<a href="#">group-if-query-source-address</a>
Introduced	16.0.R1
Platforms	All

### **group-interface** [[group-interface-name](#)] *reference*

Synopsis	Enter the <b>group-interface</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i>
Tree	<a href="#">group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[group-interface-name]** *reference*

Synopsis	Group interface name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i>
Tree	<a href="#">group-interface</a>
Reference	<b>configure</b> <i>service</i> <i>ies</i> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the MLD interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i> <i>admin-state</i> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**import-policy** *reference*

Synopsis	Import policy to filter MLD packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>

Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mcac

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mld</a> <a href="#">group-interface</a> <a href="#">reference</a> <a href="#">mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mld</a> <a href="#">group-interface</a> <a href="#">reference</a> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mld</a> <a href="#">group-interface</a> <a href="#">reference</a> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
----------	---------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i> <i>mcac</i> <i>bandwidth</i> <i>total</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">total</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i> <i>mcac</i> <i>interface-policy</i> <i>reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <i>mcac</i> <i>interface-policy</i> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mld</i> <i>group-interface</i> <i>reference</i> <i>mcac</i> <i>policy</i> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>

---

Reference	<b>configure</b> <a href="#">mcac policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">router string mld group-interface reference query-interval number</a>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">router string mld group-interface reference query-last-member-interval number</a>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">router string mld group-interface reference query-response-interval number</a>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for MLD queries
----------	--------------------------------

---

Context        **configure** [router](#) *string* [mld](#) [group-interface](#) *reference* [query-source-address](#) *string*  
Tree            [query-source-address](#)  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis        Enable router alert checking for IGMP or MLD messages  
Context        **configure** [router](#) *string* [mld](#) [group-interface](#) *reference* [router-alert-check](#) *boolean*  
Tree            [router-alert-check](#)  
Default        true  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis        Allow MLD traffic from known hosts only  
Context        **configure** [router](#) *string* [mld](#) [group-interface](#) *reference* [sub-hosts-only](#) *boolean*  
Tree            [sub-hosts-only](#)  
Default        true  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis        Enable subnet checking  
Context        **configure** [router](#) *string* [mld](#) [group-interface](#) *reference* [subnet-check](#) *boolean*  
Tree            [subnet-check](#)  
Default        true  
Introduced     16.0.R1  
Platforms      7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *keyword*

Synopsis        MLD protocol version

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">version</a> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface** [[ip-interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

### **[ip-interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the MLD interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy to filter MLD packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">maximum-number-sources</a> <i>number</i>

Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

## mcac

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	All

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

## total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
----------	---------------------------

Context	<b>configure router</b> <i>string</i> <b>mld interface</b> <i>string</i> <b>mcac bandwidth total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure router</b> <i>string</i> <b>mld interface</b> <i>string</i> <b>mcac interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure mcac interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **mc-constraints**

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure router</b> <i>string</i> <b>mld interface</b> <i>string</i> <b>mcac mc-constraints</b>
Tree	<b>mc-constraints</b>
Introduced	16.0.R1
Platforms	All

### **level** [**level-id**] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure router</b> <i>string</i> <b>mld interface</b> <i>string</i> <b>mcac mc-constraints level</b> <i>number</i>
Tree	<b>level</b>
Introduced	16.0.R1
Platforms	All

**[level-id] number**

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>level</b> <i>number</i>
Tree	<b>level</b>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bandwidth number**

Synopsis	Bandwidth available for this level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>level</b> <i>number</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**number-down [number-lag-port-down] number**

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>number-down</b> <i>number</i>
Tree	<b>number-down</b>
Introduced	16.0.R1
Platforms	All

**[number-lag-port-down] number**

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>number-down</b> <i>number</i>
Tree	<b>number-down</b>
Range	1 to 64

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level number**

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">mcac mc-constraints</a> <a href="#">number-down</a> <i>number level number</i>
Tree	<a href="#">level</a>
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight boolean**

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">mcac mc-constraints</a> <a href="#">use-lag-port-weight</a> <i>boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>

Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure router</b> <i>string mld interface string query-interval number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure router</b> <i>string mld interface string query-last-member-interval number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>query-response-interval</b> <i>number</i>
Tree	<b>query-response-interval</b>
Range	1 to 1023
Introduced	16.0.R1
Platforms	All

**router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>router-alert-check</b> <i>boolean</i>
Tree	<b>router-alert-check</b>
Default	true
Introduced	16.0.R1
Platforms	All

**ssm-translate**

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>ssm-translate</b>
Tree	<b>ssm-translate</b>
Introduced	16.0.R1
Platforms	All

**group-range** *start string end string*

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>ssm-translate</b> <b>group-range</b> <i>start string end string</i>
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

**start string**

Synopsis	Lower bound of the group range
Context	<b>configure</b> <a href="#">router string mld interface string ssm-translate group-range start string end string</a>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end string**

Synopsis	Upper bound of the group range
Context	<b>configure</b> <a href="#">router string mld interface string ssm-translate group-range start string end string</a>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source [source-address] string**

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router string mld interface string ssm-translate group-range start string end string source string</a>
Tree	<a href="#">source</a>
Min. Instances	1
Introduced	16.0.R1
Platforms	All

**[source-address] string**

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">router string mld interface string ssm-translate group-range start string end string source string</a>
Tree	<a href="#">source</a>

Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

## static

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <b>static</b>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

## group [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <b>static</b> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

## [[group-address](#)] *string*

Synopsis	Group address of multicast channel
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <b>static</b> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## source [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">interface</a> <i>string</i> <b>static</b> <a href="#">group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .

Introduced 16.0.R1  
 Platforms All

### **[source-address]** *string*

Synopsis Source IP address  
 Context **configure** *router string mld interface string static group string source string*  
 Tree *source*  
 Notes This element is part of a list key.  
 Introduced 16.0.R2  
 Platforms All

### **starg**

Synopsis any source address (\*,G)  
 Context **configure** *router string mld interface string static group string starg*  
 Tree *starg*  
 Notes The following elements are part of a mandatory choice: **source** or **starg**.  
 Introduced 16.0.R2  
 Platforms All

### **group-range** *start string end string step string*

Synopsis Enter the **group-range** list instance  
 Context **configure** *router string mld interface string static group-range start string end string step string*  
 Tree *group-range*  
 Introduced 16.0.R1  
 Platforms All

### **start** *string*

Synopsis Lower bound of the static multicast group  
 Context **configure** *router string mld interface string static group-range start string end string step string*  
 Tree *group-range*

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end string**

Synopsis	Upper bound of the static multicast group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**step string**

Synopsis	Step interval for the group-range addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i>
Tree	<a href="#">group-range</a>
MD-CLI Default	::1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>interface</b> <i>string</i> <b>static</b> <b>group-range</b> <b>start</b> <i>string</i> <b>end</b> <i>string</i> <b>step</b> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address
Context	<b>configure</b> <i>router string mld interface string static group-range start string end string step string source string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <i>router string mld interface string static group-range start string end string step string starg</i>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**version** *keyword*

Synopsis	MLD protocol version
Context	<b>configure</b> <i>router string mld interface string version keyword</i>
Tree	<a href="#">version</a>
Options	1, 2
Default	2
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <i>router string mld query-interval number</i>
Tree	<a href="#">query-interval</a>

---

Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>query-last-member-interval</b> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>query-response-interval</b> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mld</b> <b>robust-count</b> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 10
Default	2

---

Introduced	16.0.R1
Platforms	All

## **ssm-translate**

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">ssm-translate</a>
Tree	<a href="#">ssm-translate</a>
Introduced	16.0.R1
Platforms	All

## **group-range** [start](#) *string* [end](#) *string*

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">group-range</a>
Introduced	16.0.R1
Platforms	All

## **start** *string*

Synopsis	Lower bound of the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **end** *string*

Synopsis	Upper bound of the group range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mld</a> <a href="#">ssm-translate</a> <a href="#">group-range</a> <a href="#">start</a> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **source** [[source-address](#)] *string*

Synopsis Add a list entry for **source**

Context **configure** [router](#) *string* [mld](#) [ssm-translate](#) [group-range](#) [start](#) *string* [end](#) *string* [source](#) *string*

Tree [source](#)

Min. Instances 1

Introduced 16.0.R1

Platforms All

### **[source-address]** *string*

Synopsis Source IP address

Context **configure** [router](#) *string* [mld](#) [ssm-translate](#) [group-range](#) [start](#) *string* [end](#) *string* [source](#) *string*

Tree [source](#)

Notes This element is part of a list key.

Introduced 16.0.R2

Platforms All

### **mpls**

Synopsis Enable the **mpls** context

Context **configure** [router](#) *string* [mpls](#)

Tree [mpls](#)

Introduced 16.0.R1

Platforms All

### **admin-group-frr** *boolean*

Synopsis Use admin group constraints for FRR path computation

Context **configure** [router](#) *string* [mpls](#) [admin-group-frr](#) *boolean*

Tree [admin-group-frr](#)

Default	false
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the MPLS instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **auto-bandwidth-multipliers**

Synopsis	Enter the <b>auto-bandwidth-multipliers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>auto-bandwidth-multipliers</b>
Tree	<a href="#">auto-bandwidth-multipliers</a>
Introduced	16.0.R1
Platforms	All

### **adjust-multiplier** *number*

Synopsis	Collection intervals in a sample interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <b>auto-bandwidth-multipliers</b> <b>adjust-multiplier</b> <i>number</i>
Tree	<a href="#">adjust-multiplier</a>
Range	1 to 16383
Default	288
Introduced	16.0.R1
Platforms	All

### **sample-multiplier** *number*

Synopsis	Collection intervals in a sample interval
----------	---

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <i>auto-bandwidth-multipliers</i> <i>sample-multiplier</i> <i>number</i>
Tree	<a href="#">sample-multiplier</a>
Range	1 to 511
Default	1
Introduced	16.0.R1
Platforms	All

### **auto-lsp** [[template-name](#)] *reference*

Synopsis	Enter the <b>auto-lsp</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <i>auto-lsp</i> <i>reference</i>
Tree	<a href="#">auto-lsp</a>
Max. Instances	500
Introduced	16.0.R1
Platforms	All

### **[template-name]** *reference*

Synopsis	LSP template name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <i>auto-lsp</i> <i>reference</i>
Tree	<a href="#">auto-lsp</a>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <i>lsp-template</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **one-hop** *boolean*

Synopsis	Enable one-hop point-to-point LSP automatic signaling
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls</i> <i>auto-lsp</i> <i>reference</i> <b>one-hop</b> <i>boolean</i>
Tree	<a href="#">one-hop</a>
Description	This command enables the automatic signaling of one-hop point-to-point LSPs.
Default	false
Notes	The following elements are part of a choice: <b>one-hop</b> or <b>policy</b> .

Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Peer prefix policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls auto-lsp</a> <i>reference</i> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	The following elements are part of a choice: <b>one-hop</b> or <b>policy</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **aux-stats**

Synopsis	Enable the <b>aux-stats</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls aux-stats</a>
Tree	<a href="#">aux-stats</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sr boolean**

Synopsis	Traffic type count in MPLS statistics table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls aux-stats sr</a> <i>boolean</i>
Tree	<a href="#">sr</a>
Description	This command configures the type of traffic to count in the auxiliary MPLS statistics table. It refers to any type of segment routing traffic (SR-OSPF, SR-ISIS, SR-TE, and so on).
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**bypass-resignal-timer** *number*

Synopsis	Resignal timer for bypass
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>bypass-resignal-timer</b> <i>number</i>
Tree	<a href="#">bypass-resignal-timer</a>
Range	1 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

**class-forwarding-policy** [[policy-name](#)] *string*

Synopsis	Enter the <b>class-forwarding-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>class-forwarding-policy</b> <i>string</i>
Tree	<a href="#">class-forwarding-policy</a>
Max. Instances	15
Introduced	16.0.R1
Platforms	All

**[policy-name]** *string*

Synopsis	Name of class forwarding policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>class-forwarding-policy</b> <i>string</i>
Tree	<a href="#">class-forwarding-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**default-set** *number*

Synopsis	Default forwarding set ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>class-forwarding-policy</b> <i>string</i> <b>default-set</b> <i>number</i>
Tree	<a href="#">default-set</a>

Range	1 to 6
Default	1
Introduced	16.0.R1
Platforms	All

**fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls class-forwarding-policy</b> <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls class-forwarding-policy</b> <i>string</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**forwarding-set** *number*

Synopsis	Forwarding set ID for forwarding classes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls class-forwarding-policy</b> <i>string</i> <b>fc</b> <i>keyword</i> <b>forwarding-set</b> <i>number</i>
Tree	<b>forwarding-set</b>
Range	1 to 6
Default	1
Introduced	16.0.R1
Platforms	All

**cspf-on-loose-hop** *boolean*

Synopsis	Calculate CSPF until next loose hop on LSR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>cspf-on-loose-hop</b> <i>boolean</i>
Tree	<a href="#">cspf-on-loose-hop</a>
Default	false
Introduced	16.0.R1
Platforms	All

**dynamic-bypass** *boolean*

Synopsis	Create dynamic bypass LSPs in FRR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>dynamic-bypass</b> <i>boolean</i>
Tree	<a href="#">dynamic-bypass</a>
Default	true
Introduced	16.0.R1
Platforms	All

**entropy-label**

Synopsis	Enter the <b>entropy-label</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>entropy-label</b>
Tree	<a href="#">entropy-label</a>
Introduced	16.0.R1
Platforms	All

**rsvp-te** *boolean*

Synopsis	Apply entropy labels to RSVP-TE LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>entropy-label</b> <b>rsvp-te</b> <i>boolean</i>
Tree	<a href="#">rsvp-te</a>
Introduced	16.0.R1
Platforms	All

**sr-te** *boolean*

Synopsis	Apply entropy labels to SR-TE LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>entropy-label</b> <b>sr-te</b> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Introduced	16.0.R1
Platforms	All

**exponential-backoff-retry** *boolean*

Synopsis	Use exponential back-off timer when retrying an LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>exponential-backoff-retry</b> <i>boolean</i>
Tree	<a href="#">exponential-backoff-retry</a>
Default	false
Introduced	16.0.R1
Platforms	All

**forwarding-policies**

Synopsis	Enable the <b>forwarding-policies</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>forwarding-policies</b>
Tree	<a href="#">forwarding-policies</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MPLS forwarding policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>forwarding-policies</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**forwarding-policy** [*policy-name*] *string*

Synopsis	Enter the <b>forwarding-policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i>
Tree	<b>forwarding-policy</b>
Max. Instances	65536
Introduced	16.0.R1
Platforms	All

**[policy-name]** *string*

Synopsis	Forwarding policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i>
Tree	<b>forwarding-policy</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the MPLS forwarding policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**binding-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Binding label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>binding-label</b> <i>number</i>
Tree	<b>binding-label</b>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

### **egress-statistics**

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>egress-statistics</b>
Tree	<b>egress-statistics</b>
Introduced	19.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of egress or ingress statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>egress-statistics admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	All

### **endpoint** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure endpoint address.
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>endpoint</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )

Tree	<a href="#">endpoint</a>
Introduced	16.0.R4
Platforms	All

## ingress-statistics

Synopsis	Enable the <b>ingress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">ingress-statistics</a>
Tree	<a href="#">ingress-statistics</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of egress or ingress statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">ingress-statistics admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## metric *number*

Synopsis	Metric of an MPLS forwarding policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	16.0.R4
Platforms	All

## next-hop-group [[index](#)] *number*

Synopsis	Enter the <b>next-hop-group</b> list instance
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number</a>
Tree	<a href="#">next-hop-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**[index]** *number*

Synopsis	Index for next hop group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number</a>
Tree	<a href="#">next-hop-group</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of NHG in MPLS forwarding policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**backup-next-hop**

Synopsis	Enable the <b>backup-next-hop</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number</a> <b>backup-next-hop</b>
Tree	<a href="#">backup-next-hop</a>

Introduced 16.0.R1  
 Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Next hop address  
 Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number backup-next-hop next-hop (ipv4-address-no-zone | ipv6-address-no-zone)*  
 Tree [next-hop](#)  
 Introduced 16.0.R1  
 Platforms All

### **pushed-labels** [[index](#)] *number*

Synopsis Enter the **pushed-labels** list instance  
 Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number backup-next-hop pushed-labels number*  
 Tree [pushed-labels](#)  
 Max. Instances 10  
 Introduced 16.0.R4  
 Platforms All

### **[index]** *number*

Synopsis Index for push label  
 Context **configure** *router string mpls forwarding-policies forwarding-policy string next-hop-group number backup-next-hop pushed-labels number*  
 Tree [pushed-labels](#)  
 Range 1 to 10  
 Notes This element is part of a list key.  
 Introduced 16.0.R4  
 Platforms All

**label number**

Synopsis	Label value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number backup-next-hop pushed-labels</a> <i>number</i> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	1 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**load-balancing-weight number**

Synopsis	Load balancing weight of an NHG entry
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number load-balancing-weight</a> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	16.0.R4
Platforms	All

**primary-next-hop**

Synopsis	Enable the <b>primary-next-hop</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls forwarding-policies forwarding-policy</a> <i>string</i> <a href="#">next-hop-group number primary-next-hop</a>
Tree	<a href="#">primary-next-hop</a>

**resolution-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Resolution type for next hop group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>next-hop-group</b> <i>number</i> <b>resolution-type</b> <i>keyword</i>
Tree	<b>resolution-type</b>
Options	direct, indirect
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**preference** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference number
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

**revert-timer** *number*

Synopsis	Revert timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>revert-timer</b> <i>number</i>
Tree	<b>revert-timer</b>
Range	1 to 600
Units	seconds

Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref** *number*

Synopsis	Tunnel table preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies forwarding-policy</b> <i>string</i> <b>tunnel-table-pref</b> <i>number</i>
Tree	<b>tunnel-table-pref</b>
Description	<p>This command configures the TTM preference value of an MPLS forwarding policy. It is used by applications to select one tunnel type to bind to in TTM when multiple tunnel types are enabled for the application.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

### **reserved-label-block** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls forwarding-policies reserved-label-block</b> <i>reference</i>
Tree	<b>reserved-label-block</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>mpls-labels reserved-label-block</b> <i>string</i>
Introduced	16.0.R1

### **interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Description	<p>Commands in this context configure the attributes for MPLS protocol support on an IP interface.</p> <p>MPLS commands are not executed on an IP interface where MPLS is not enabled. An MPLS interface must be explicitly enabled (admin-state enabled).</p> <p>The MPLS interface must be admin-state disabled to delete the interface definition.</p> <p>A corresponding RSVP interface must also be configured. The MPLS interface cannot be deleted without also deleting the RSVP interface.</p>
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *reference*

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-group** *reference*

Synopsis	Administrative groups supported by the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">interface</a> <i>reference</i> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Description	This command specifies the administrative groups that the interface supports.

This information is advertised as part of OSPF and IS-IS to help CSPF compute constrained LSPs that must include or exclude certain administrative groups. An MPLS interface is assumed to belong to all the administrative groups unless this command is issued under the interface configuration. With this command configured, the interface is assumed to belong to only the groups specifically configured in this command.

Only the administrative groups bound to an MPLS interface are advertised in TE link TLVs and sub-TLVs when the **traffic-engineering** option is enabled in IS-IS or OSPF. IES and VPRN interfaces do not have their attributes advertised in TE TLVs.

Reference	<b>configure</b> <a href="#">routing-options if-attribute admin-group string</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the MPLS interface
Context	<b>configure</b> <a href="#">router string mpls interface reference admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Introduced	16.0.R1
Platforms	All

### **percent** *number*

Synopsis	Minimum difference in percent
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth adjust-down percent number</i>
Tree	<i>percent</i>
Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

### **adjust-up**

Synopsis	Enter the <b>adjust-up</b> context
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth adjust-up</i>
Tree	<i>adjust-up</i>
Introduced	16.0.R1
Platforms	All

### **bw** *number*

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth adjust-up bw number</i>
Tree	<i>bw</i>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

**percent** *number*

Synopsis	Minimum difference in percent
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth adjust-up percent number</i>
Tree	<i>percent</i>
Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

**fc** [*fc-name*] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth fc keyword</i>
Tree	<i>fc</i>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth fc keyword</i>
Tree	<i>fc</i>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**sampling-weight** *number*

Synopsis	Forwarding class weight for LSP
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth fc keyword sampling-weight number</i>

Tree	<a href="#">sampling-weight</a>
Range	0 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

### **max-bandwidth** *number*

Synopsis	Maximum bandwidth of auto-bandwidth to request for LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">max-bandwidth</a> <i>number</i>
Tree	<a href="#">max-bandwidth</a>
Range	0 to 6400000
Units	megabps
Default	100000
Introduced	16.0.R1
Platforms	All

### **min-bandwidth** *number*

Synopsis	Minimum bandwidth of auto-bandwidth to request for the LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">min-bandwidth</a> <i>number</i>
Tree	<a href="#">min-bandwidth</a>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

### **monitor-bandwidth** *boolean*

Synopsis	Collect and display auto-bandwidth measurements for the LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">monitor-bandwidth</a> <i>boolean</i>
Tree	<a href="#">monitor-bandwidth</a>
Default	false

---

Introduced	16.0.R1
Platforms	All

## multipliers

Synopsis	Enter the <b>multipliers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a>
Tree	<a href="#">multipliers</a>
Introduced	16.0.R1
Platforms	All

## adjust-multiplier *number*

Synopsis	Number of collection intervals in the adjust interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a> <a href="#">adjust-multiplier</a> <i>number</i>
Tree	<a href="#">adjust-multiplier</a>
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

## sample-multiplier *number*

Synopsis	Multiplier for collection intervals in a sample interval
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">multipliers</a> <a href="#">sample-multiplier</a> <i>number</i>
Tree	<a href="#">sample-multiplier</a>
Range	1 to 511
Introduced	16.0.R1
Platforms	All

## overflow-limit

Synopsis	Enable the <b>overflow-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a>
Tree	<a href="#">overflow-limit</a>

Introduced	16.0.R1
Platforms	All

**bw number**

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <a href="#">router string</a> <a href="#">mpls lsp string</a> <a href="#">auto-bandwidth overflow-limit bw number</a>
Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

**number number**

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <a href="#">router string</a> <a href="#">mpls lsp string</a> <a href="#">auto-bandwidth overflow-limit number number</a>
Tree	<a href="#">number</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**threshold number**

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <a href="#">router string</a> <a href="#">mpls lsp string</a> <a href="#">auto-bandwidth overflow-limit threshold number</a>
Tree	<a href="#">threshold</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

**underflow-limit**

Synopsis	Enable the <b>underflow-limit</b> context
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth underflow-limit</i>
Tree	<a href="#">underflow-limit</a>
Introduced	16.0.R1
Platforms	All

**bw number**

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth underflow-limit bw number</i>
Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

**number number**

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth underflow-limit number number</i>
Tree	<a href="#">number</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**threshold number**

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <i>router string mpls lsp string auto-bandwidth underflow-limit threshold number</i>
Tree	<a href="#">threshold</a>
Range	0 to 100
Units	percent
Default	0

Introduced	16.0.R1
Platforms	All

### **use-last-adj-bw**

Synopsis	Enable the <b>use-last-adj-bw</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">use-last-adj-bw</a>
Tree	<a href="#">use-last-adj-bw</a>
Introduced	16.0.R5
Platforms	All

### **secondary-retry-limit** (*number* | *keyword*)

Synopsis	Maximum number of retry limits for secondary paths
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">use-last-adj-bw</a> <a href="#">secondary-retry-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">secondary-retry-limit</a>
Description	This command configures the maximum number of retry attempts for secondary paths. After each successful attempt, the counter is reset to zero.
Range	1 to 10000
Options	infinite
Default	5
Introduced	16.0.R5
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>bfd</b> <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, LSP BFD is enabled on the RSVP LSP or S-BFD is enabled for the SR-TE LSP.</p> <p>LSP BFD must also be configured under the <b>configure router</b> context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template.</p> <p>When configured to <b>false</b>, LSP BFD is disabled on the RSVP LSP or S-BFD on the SR-TE LSP.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>bfd</b> <b>bfd-template</b> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <b>bfd</b> <b>bfd-template</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**failure-action** *keyword*

Synopsis	Action when LSP BFD fails on the RSVP SR-TE LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>bfd</b> <b>failure-action</b> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Description	<p>The command specifies the action when LSP BFD fails on an RSVP, SR-TE, or LDP LSP.</p> <p>Regardless of the failure action specified, when the BFD session goes down on the LSP, the system generates an SNMP trap.</p>
Options	none, down, failover, failover-or-down
Default	none
Introduced	16.0.R1

Platforms All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis Interval for periodic LSP ping for BFD bootstrapping

Context **configure** **router** *string* **mpls** **lsp** *string* **bfd** **lsp-ping-interval** (*number* | *keyword*)

Tree **lsp-ping-interval**

Range 60 to 300

Units seconds

Options none

Default 60

Introduced 16.0.R1

Platforms All

### **return-path-label** *number*

Synopsis S-BFD return-path label

Context **configure** **router** *string* **mpls** **lsp** *string* **bfd** **return-path-label** *number*

Tree **return-path-label**

Description This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.

The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.

If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.

Range 32 to 1048512

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis Time to wait for BFD to become operationally available

Context **configure** **router** *string* **mpls** **lsp** *string* **bfd** **wait-for-up-timer** *number*

Tree **wait-for-up-timer**

Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

### **bgp-shortcut** *boolean*

Synopsis	Include LSP for BGP routes
Context	<b>configure</b> <i>router string mpls lsp string bgp-shortcut boolean</i>
Tree	<a href="#">bgp-shortcut</a>
Introduced	16.0.R1
Platforms	All

### **bgp-transport-tunnel** *boolean*

Synopsis	Include LSP as transport LSP for labeled BGP routes
Context	<b>configure</b> <i>router string mpls lsp string bgp-transport-tunnel boolean</i>
Tree	<a href="#">bgp-transport-tunnel</a>
Introduced	16.0.R1
Platforms	All

### **binding-sid** *number*

Synopsis	Binding SID for the LSP
Context	<b>configure</b> <i>router string mpls lsp string binding-sid number</i>

Tree	<a href="#">binding-sid</a>
Description	This command binds a label to the LSP. The label value must belong to the reserved label block that is configured with the <b>configure router mpls lsp-bsid-block</b> command.
Range	32 to 1048575
Introduced	22.10.R1
Platforms	All

## class-forwarding

Synopsis	Enable the <b>class-forwarding</b> context
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>class-forwarding</b>
Tree	<a href="#">class-forwarding</a>
Introduced	16.0.R1
Platforms	All

## forwarding-set

Synopsis	Enter the <b>forwarding-set</b> context
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>class-forwarding forwarding-set</b>
Tree	<a href="#">forwarding-set</a>
Notes	The following elements are part of a choice: ( <b>default-lsp</b> and <b>fc</b> ) or <b>forwarding-set</b> .
Introduced	16.0.R1
Platforms	All

## policy reference

Synopsis	Name for the class based forwarding policy for LSP instances
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>class-forwarding forwarding-set policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure router</b> <i>string</i> <b>mpls class-forwarding-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **set number**

Synopsis	Forwarding set ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-forwarding forwarding-set</a> <i>set number</i>
Tree	<a href="#">set</a>
Range	1 to 6
Introduced	16.0.R1
Platforms	All

### **class-type number**

Synopsis	Class type for an LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">class-type</a> <i>number</i>
Tree	<a href="#">class-type</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

### **egress-statistics**

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	16.0.R1
Platforms	All

### **accounting-policy reference**

Synopsis	Accounting policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">egress-statistics</a> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of statistics for the LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>egress-statistics</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect LSP statistics
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>egress-statistics</b> <b>collect-stats</b> <i>boolean</i>
Tree	<b>collect-stats</b>
Description	<p>When configured to <b>true</b>, this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.</p> <p>When configured to <b>false</b>, the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**stat-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>egress-statistics</b> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	per-fc, aggregate
Introduced	21.10.R1

Platforms All

### **entropy-label** *keyword*

Synopsis Entropy label  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [entropy-label](#) *keyword*  
 Tree [entropy-label](#)  
 Options false, true  
 Introduced 16.0.R1  
 Platforms All

### **exclude-admin-group** *reference*

Synopsis Name of admin group excluded when LSP is set up  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [exclude-admin-group](#) *reference*  
 Tree [exclude-admin-group](#)  
 Reference **configure** [routing-options](#) *if-attribute* [admin-group](#) *string*  
 Max. Instances 32  
 Introduced 16.0.R1  
 Platforms All

### **exclude-node** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Exclude Routers object to be included in the bypass path message  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [exclude-node](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)  
 Tree [exclude-node](#)  
 Introduced 16.0.R1  
 Platforms All

### **fallback-path-computation-method** *keyword*

Synopsis Fallback path computation method  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [fallback-path-computation-method](#) *keyword*  
 Tree [fallback-path-computation-method](#)

Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	21.2.R1
Platforms	All

## fast-reroute

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure</b> <i>router string mpls lsp string fast-reroute</i>
Tree	<a href="#">fast-reroute</a>
Introduced	16.0.R1
Platforms	All

## frr-method *keyword*

Synopsis	Fast Reroute method
Context	<b>configure</b> <i>router string mpls lsp string fast-reroute frr-method keyword</i>
Tree	<a href="#">frr-method</a>
Options	one-to-one, facility
Introduced	16.0.R1
Platforms	All

## hop-limit *number*

Synopsis	Total number of hops a detour or backup LSP can take
Context	<b>configure</b> <i>router string mpls lsp string fast-reroute hop-limit number</i>
Tree	<a href="#">hop-limit</a>
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

**node-protect** *boolean*

Synopsis	Enable node and link protection for the specified LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>node-protect</b> <i>boolean</i>
Tree	<b>node-protect</b>
Introduced	16.0.R1
Platforms	All

**propagate-admin-group** *boolean*

Synopsis	Enable admin group constraints on a FRR backup LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>fast-reroute</b> <b>propagate-admin-group</b> <i>boolean</i>
Tree	<b>propagate-admin-group</b>
Default	false
Introduced	16.0.R1
Platforms	All

**from** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address of this LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>from</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>from</b>
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Maximum number of hops that an LSP can traverse including ingress and egress routers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>hop-limit</b> <i>number</i>
Tree	<b>hop-limit</b>
Range	2 to 255

Default	255
Introduced	16.0.R1
Platforms	All

## igp-shortcut

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of LSP for shortcut or forwarding
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## allow-sr-over-srte *boolean*

Synopsis	Use as eligible SRv4 or SRv6 IGP shortcut
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">allow-sr-over-srte</a> <i>boolean</i>
Tree	<a href="#">allow-sr-over-srte</a>
Description	When configured to <b>true</b> , the router performs the local SPF and the SR-TE LSP is used as an eligible IGP SR-MPLS shortcut for SR-MPLS SRv4 or SRv6 only if the SR-TE is explicitly allowed using this command when the top SID in the SR-TE LSP is an adjacency SID.
Default	false
Introduced	23.3.R1
Platforms	All

**lfa-type** *keyword*

Synopsis	LSP usage in LFA SPF
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>igp-shortcut</b> <b>lfa-type</b> <i>keyword</i>
Tree	<b>lfa-type</b>
Options	lfa-protect, lfa-only
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

**relative-metric** *number*

Synopsis	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>igp-shortcut</b> <b>relative-metric</b> <i>number</i>
Tree	<b>relative-metric</b>
Range	-10 to 10
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

**include-admin-group** *reference*

Synopsis	Admin group name included when LSP is set up
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>include-admin-group</b> <i>reference</i>
Tree	<b>include-admin-group</b>
Reference	<b>configure</b> <b>routing-options</b> <b>if-attribute</b> <b>admin-group</b> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**label-stack-reduction** *boolean*

Synopsis	Enable/disable label compression for LSP path.
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>label-stack-reduction</b> <i>boolean</i>
Tree	<b>label-stack-reduction</b>

Default	false
Introduced	19.7.R1
Platforms	All

### **ldp-over-rsvp** *boolean*

Synopsis	Include this LSP in LDP over RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Introduced	16.0.R1
Platforms	All

### **least-fill** *boolean*

Synopsis	Enable least-fill path selection for this LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">least-fill</a> <i>boolean</i>
Tree	<a href="#">least-fill</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight for an MPLS LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">load-balancing-weight</a> <i>number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **local-sr-protection** *keyword*

Synopsis	Local SR protection preference for LSP path computation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">local-sr-protection</a> <i>keyword</i>
Tree	<a href="#">local-sr-protection</a>

Options	none, preferred, mandatory
Default	preferred
Introduced	19.7.R1
Platforms	All

### **lsp-self-ping** *keyword*

Synopsis	LSP Self Ping activation status on the RSVP-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">lsp-self-ping</a> <i>keyword</i>
Tree	<a href="#">lsp-self-ping</a>
Description	When configured, the system uses this setting for the LSP regardless of the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> . When unconfigured, the command inherits the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> .
Options	false, true
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **main-ct-retry-limit** *number*

Synopsis	Maximum number of retries before reverting to backup CT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">main-ct-retry-limit</a> <i>number</i>
Tree	<a href="#">main-ct-retry-limit</a>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

### **max-sr-labels**

Synopsis	Enter the <b>max-sr-labels</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">max-sr-labels</a>
Tree	<a href="#">max-sr-labels</a>
Introduced	16.0.R1
Platforms	All

**additional-frr-labels** *number*

Synopsis	Value for the maximum additional overhead labels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">max-sr-labels</a> <a href="#">additional-frr-labels</a> <i>number</i>
Tree	<a href="#">additional-frr-labels</a>
Range	0 to 4
Default	1
Introduced	16.0.R1
Platforms	All

**label-stack-size** *number*

Synopsis	Maximum label stack size
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">max-sr-labels</a> <a href="#">label-stack-size</a> <i>number</i>
Tree	<a href="#">label-stack-size</a>
Description	This command configures the maximum label stack size of the primary path of the SR-TE LSP.
Range	1 to 11
Introduced	16.0.R1
Platforms	All

**metric** *number*

Synopsis	LSP metric that forces to a constant value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

**metric-type** *keyword*

Synopsis	Metric type used for LSP path computation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">metric-type</a> <i>keyword</i>
Tree	<a href="#">metric-type</a>
Options	igp, te

Default	igp
Introduced	19.7.R1
Platforms	All

### **override-tunnel-elc** *boolean*

Synopsis	Override any received entropy label capability
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <b>override-tunnel-elc</b> <i>boolean</i>
Tree	<a href="#">override-tunnel-elc</a>
Description	When configured to <b>true</b> , this command allows the system to override any received entropy label capability advertisement. When configured to <b>false</b> , this command disables the override.
Default	false
Introduced	21.10.R1
Platforms	All

### **p2mp-id** *number*

Synopsis	Unique identifier as Point-to-Multipoint (P2MP) identifier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <b>p2mp-id</b> <i>number</i>
Tree	<a href="#">p2mp-id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **path-computation-method** *keyword*

Synopsis	Path computation method
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <b>path-computation-method</b> <i>keyword</i>
Tree	<a href="#">path-computation-method</a>
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP.

See "SR-TE LSP path computation using hop-to-label translation" in the *7750 Service Router and 7950 Extensible Routing System Segment Routing nad PCE User Guide* for more information.

Options	local-cspf, pce
Introduced	19.7.R1
Platforms	All

### **path-profile** [[profile-id](#)] *number*

Synopsis	Enter the <b>path-profile</b> list instance
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>path-profile</b> <i>number</i>
Tree	<a href="#">path-profile</a>
Description	Commands in this context configure the attributes of the PCE path profile.
Max. Instances	5
Introduced	16.0.R1
Platforms	All

### **[profile-id]** *number*

Synopsis	Profile ID for the specified LSP
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>path-profile</b> <i>number</i>
Tree	<a href="#">path-profile</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **path-group** *number*

Synopsis	Path-group ID for the specified LSP
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>path-profile</b> <i>number</i> <b>path-group</b> <i>number</i>
Tree	<a href="#">path-group</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1

Platforms All

## **pce-associations**

Synopsis Enter the **pce-associations** context

Context **configure** [router](#) *string* [mpls lsp](#) *string* [pce-associations](#)

Tree [pce-associations](#)

Description Commands in this context configure the LSP binding with one or more PCEP associations.

Introduced 22.5.R1

Platforms All

## **diversity** [[diversity-name](#)] *reference*

Synopsis Add a list entry for **diversity**

Context **configure** [router](#) *string* [mpls lsp](#) *string* [pce-associations](#) [diversity](#) *reference*

Tree [diversity](#)

Description Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.

Max. Instances 5

Introduced 22.5.R1

Platforms All

## **[diversity-name]** *reference*

Synopsis Name of the PCE association configured under the PCC

Context **configure** [router](#) *string* [mpls lsp](#) *string* [pce-associations](#) [diversity](#) *reference*

Tree [diversity](#)

Reference **configure** [router](#) *string* [pcep pcc](#) [pce-associations](#) [diversity](#) *string*

Notes This element is part of a list key.

Introduced 22.5.R1

Platforms All

**policy** [*policy-name*] *reference*

Synopsis	Add a list entry for <b>policy</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>pce-associations</b> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

**[policy-name]** *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>pce-associations</b> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc</b> <b>pce-associations</b> <b>policy</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**pce-control** *boolean*

Synopsis	Enable PCE controlled LSP mode of operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>pce-control</b> <i>boolean</i>
Tree	<b>pce-control</b>
Description	<p>When configured to <b>true</b>, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to <b>false</b>, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**pce-report** *keyword*

Synopsis	Global configuration of reporting to PCE to override
Context	<b>configure</b> <i>router string mpls lsp string pce-report keyword</i>
Tree	<a href="#">pce-report</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**primary** [[path-name](#)] *reference*

Synopsis	Enter the <b>primary</b> list instance
Context	<b>configure</b> <i>router string mpls lsp string primary reference</i>
Tree	<a href="#">primary</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[path-name]** *reference*

Synopsis	Path name
Context	<b>configure</b> <i>router string mpls lsp string primary reference</i>
Tree	<a href="#">primary</a>
Reference	<b>configure</b> <i>router string mpls path string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptive** *boolean*

Synopsis	Enable make-before-break functionality
Context	<b>configure</b> <i>router string mpls lsp string primary reference adaptive boolean</i>
Tree	<a href="#">adaptive</a>
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the LSP path  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R1  
 Platforms All

### **backup-class-type** *number*

Synopsis Class-type for the LSP or LSP path  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [backup-class-type](#) *number*  
 Tree [backup-class-type](#)  
 Range 0 to 7  
 Introduced 16.0.R1  
 Platforms All

### **bandwidth** *number*

Synopsis Amount of bandwidth to be reserved  
 Context **configure** [router](#) *string* [mpls lsp](#) *string* [primary](#) *reference* [bandwidth](#) *number*  
 Tree [bandwidth](#)  
 Range 0 to 6400000  
 Units megabps  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

### **bfd**

Synopsis Enter the **bfd** context

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, LSP BFD is enabled on the RSVP LSP or S-BFD is enabled for the SR-TE LSP.</p> <p>LSP BFD must also be configured under the <b>configure router</b> context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template.</p> <p>When configured to <b>false</b>, LSP BFD is disabled on the RSVP LSP or S-BFD on the SR-TE LSP.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">lsp-ping-interval</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">lsp-ping-interval</a>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

### **return-path-label** *number*

Synopsis	S-BFD return-path label
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">return-path-label</a> <i>number</i>
Tree	<a href="#">return-path-label</a>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">wait-for-up-timer</a> <i>number</i>
Tree	<a href="#">wait-for-up-timer</a>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p>

- a path undergoing MBB when BFD is up
- the initial administrative state of the LSP
- the retry signaling of non-standby secondary paths

Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

### **class-type** *number*

Synopsis	Class-type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>primary</b> <i>reference</i> <b>class-type</b> <i>number</i>
Tree	<b>class-type</b>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **exclude-admin-group**

Synopsis	Enable the <b>exclude-admin-group</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>primary</b> <i>reference</i> <b>exclude-admin-group</b>
Tree	<b>exclude-admin-group</b>
Introduced	16.0.R1
Platforms	All

### **group** *reference*

Synopsis	Groups to exclude when the LSP path is setup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>primary</b> <i>reference</i> <b>exclude-admin-group</b> <b>group</b> <i>reference</i>
Tree	<b>group</b>
Reference	<b>configure</b> <b>routing-options</b> <b>if-attribute</b> <b>admin-group</b> <i>string</i>
Max. Instances	32

Min. Instances	1
Introduced	16.0.R1
Platforms	All

### **hop-limit** *number*

Synopsis	Total number of hops that an LSP traverses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">hop-limit</a> <i>number</i>
Tree	<a href="#">hop-limit</a>
Range	2 to 255
Introduced	16.0.R1
Platforms	All

### **include-admin-group**

Synopsis	Enable the <b>include-admin-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">include-admin-group</a>
Tree	<a href="#">include-admin-group</a>
Introduced	16.0.R1
Platforms	All

### **group** *reference*

Synopsis	Groups that are included when LSP path is setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">primary</a> <i>reference</i> <a href="#">include-admin-group</a> <a href="#">group</a> <i>reference</i>
Tree	<a href="#">group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>

### **propagate-admin-group** *boolean*

Synopsis	Enable admin groups via session attribute object
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp</a> <i>string</i> <a href="#">propagate-admin-group</a> <i>boolean</i>
Tree	<a href="#">propagate-admin-group</a>
Default	false
Introduced	16.0.R1
Platforms	All

**retry-limit** *number*

Synopsis	Number of attempts to re-establish LSP after it fails
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>retry-limit</b> <i>number</i>
Tree	<b>retry-limit</b>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

**retry-timer** *number*

Synopsis	Time for LSP re-establishment attempts after failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>retry-timer</b> <i>number</i>
Tree	<b>retry-timer</b>
Range	1 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**revert-timer** *number*

Synopsis	Revert timer for the LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>revert-timer</b> <i>number</i>
Tree	<b>revert-timer</b>
Range	1 to 4320
Units	minutes
Introduced	16.0.R1
Platforms	All

**rsvp-resv-style** *keyword*

Synopsis	Reservation style for RSVP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>rsvp-resv-style</b> <i>keyword</i>
Tree	<b>rsvp-resv-style</b>
Options	se, ff

Default	se
Introduced	16.0.R1
Platforms	All

### **secondary** [\[path-name\]](#) *reference*

Synopsis	Enter the <b>secondary</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i>
Tree	<a href="#">secondary</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### [\[path-name\]](#) *reference*

Synopsis	Path name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i>
Tree	<a href="#">secondary</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls path</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptive** *boolean*

Synopsis	Enable make-before-break functionality
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">adaptive</a> <i>boolean</i>
Tree	<a href="#">adaptive</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the LSP path
----------	--------------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	Amount of bandwidth to be reserved
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">bandwidth</a> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	19.7.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , LSP BFD is enabled on the RSVP LSP or S-BFD is enabled for the SR-TE LSP.

LSP BFD must also be configured under the **configure router** context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template.

When configured to **false**, LSP BFD is disabled on the RSVP LSP or S-BFD on the SR-TE LSP.

Default	false
Introduced	19.7.R1
Platforms	All

### **bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <i>bfd-template</i> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <b>bfd</b> <i>bfd-template</i> <i>string</i>
Introduced	19.7.R1
Platforms	All

### **lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <i>lsp-ping-interval</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">lsp-ping-interval</a>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	19.7.R1
Platforms	All

### **return-path-label** *number*

Synopsis	S-BFD return-path label
Context	<b>configure router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>bfd</b> <i>return-path-label</i> <i>number</i>
Tree	<a href="#">return-path-label</a>

Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <i>router string mpls lsp string secondary reference bfd wait-for-up-timer number</i>
Tree	<a href="#">wait-for-up-timer</a>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

### **class-type** *number*

Synopsis	Class-type
Context	<b>configure</b> <i>router string mpls lsp string secondary reference class-type number</i>

Tree	<a href="#">class-type</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	All

### **exclude-admin-group**

Synopsis	Enable the <b>exclude-admin-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">exclude-admin-group</a>
Tree	<a href="#">exclude-admin-group</a>
Introduced	16.0.R1
Platforms	All

### **group reference**

Synopsis	Groups to exclude when the LSP path is setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">exclude-admin-group</a> <a href="#">group</a> <a href="#">reference</a>
Tree	<a href="#">group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Min. Instances	1
Introduced	16.0.R1
Platforms	All

### **hop-limit number**

Synopsis	Total number of hops that an LSP traverses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">hop-limit</a> <i>number</i>
Tree	<a href="#">hop-limit</a>
Range	2 to 255
Introduced	16.0.R1
Platforms	All

## include-admin-group

Synopsis	Enable the <b>include-admin-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">include-admin-group</a>
Tree	<a href="#">include-admin-group</a>
Introduced	16.0.R1
Platforms	All

## group *reference*

Synopsis	Groups that are included when LSP path is setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">include-admin-group</a> <a href="#">group</a> <a href="#">reference</a>
Tree	<a href="#">group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Min. Instances	1
Introduced	16.0.R1
Platforms	All

## path-preference *number*

Synopsis	Path preference for the secondary standby path
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">path-preference</a> <i>number</i>
Tree	<a href="#">path-preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

## priority

Synopsis	Enter the <b>priority</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <a href="#">reference</a> <a href="#">priority</a>

Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	All

### **hold-priority** *number*

Synopsis	Priority of an LSP session at preemption action
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">priority</a> <a href="#">hold-priority</a> <i>number</i>
Tree	<a href="#">hold-priority</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

### **setup-priority** *number*

Synopsis	Priority when insufficient bandwidth for LSP setup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">priority</a> <a href="#">setup-priority</a> <i>number</i>
Tree	<a href="#">setup-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

### **record** *boolean*

Synopsis	Enable recording of all hops that an LSP path traverses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp</a> <i>string</i> <a href="#">secondary</a> <i>reference</i> <a href="#">record</a> <i>boolean</i>
Tree	<a href="#">record</a>
Default	true
Introduced	16.0.R1
Platforms	All

**record-label** *boolean*

Synopsis	Enable recording of labels at each node or instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>record-label</b> <i>boolean</i>
Tree	<b>record-label</b>
Default	true
Introduced	16.0.R1
Platforms	All

**srlg** *boolean*

Synopsis	Use SRLG constraint in secondary path computation for an LSP at the head-end LER
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>srlg</b> <i>boolean</i>
Tree	<b>srlg</b>
Default	false
Introduced	16.0.R1
Platforms	All

**standby** *boolean*

Synopsis	Keep secondary path indefinitely in hot standby state
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>secondary</b> <i>reference</i> <b>standby</b> <i>boolean</i>
Tree	<b>standby</b>
Default	false
Introduced	16.0.R1
Platforms	All

**soft-preemption** *boolean*

Synopsis	Enable soft preemption
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp</b> <i>string</i> <b>soft-preemption</b> <i>boolean</i>
Tree	<b>soft-preemption</b>
Description	When configured to <b>true</b> , the P2MP LSP preemption is governed by the <b>configure router rsvp preemption-timer</b> value. When configured to <b>false</b> , the preemption timer value is set to 0 and the P2MP LSPs are hard preempted.

For P2P LSPs, soft preemption is always enabled and cannot be disabled.

Introduced 22.2.R1  
Platforms All

### **to** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Destination IP address or the egress router for the LSP  
Context **configure** *router string mpls lsp string to* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
Tree **to**  
Introduced 16.0.R1  
Platforms All

### **type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis LSP for bypass protection, point to multipoint, segment routing or MPLS-TP static LSP  
Context **configure** *router string mpls lsp string type keyword*  
Tree **type**  
Options p2p-rsvp, p2p-static-mpls, p2p-rsvp-bypass, p2mp-rsvp, p2mp-rsvp-auto, p2p-rsvp-mesh, p2p-rsvp-one-hop, p2p-sr-te, p2p-sr-te-mesh, p2p-sr-te-one-hop, p2p-sr-te-pce-init, p2p-sr-te-on-demand  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **vprn-auto-bind** *boolean*

Synopsis Include this LSP in auto-bind for VPRN services  
Context **configure** *router string mpls lsp string vprn-auto-bind boolean*  
Tree **vprn-auto-bind**

Introduced	16.0.R1
Platforms	All

### **lsp-bsid-block** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block for binding SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-bsid-block</a> <i>reference</i>
Tree	<a href="#">lsp-bsid-block</a>
Description	This command references a pre-existing reserved label block for statically configured binding SIDs.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	22.7.R1
Platforms	All

### **lsp-history**

Synopsis	Enable the <b>lsp-history</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-history</a>
Tree	<a href="#">lsp-history</a>
Description	<p>Commands in this context control the recording of LSP history events.</p> <p>When the context is created, memory is allocated for storing up to 100 of the most recent LSP history events.</p> <p>When the context is deleted, memory is deallocated.</p>
Introduced	22.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of LSP history recording
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-history</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	enable
Introduced	22.10.R1
Platforms	All

### **lsp-init-retry-timeout** *number*

Synopsis	LSP initial retry timeout
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-init-retry-timeout</b> <i>number</i>
Tree	<a href="#">lsp-init-retry-timeout</a>
Range	10 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **lsp-self-ping**

Synopsis	Enter the <b>lsp-self-ping</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-self-ping</b>
Tree	<a href="#">lsp-self-ping</a>
Description	<p>Commands in this context configure LSP Self Ping parameters.</p> <p>LSP Self Ping checks that the datapath of an RSVP LSP has been programmed by all LSRs along its path before switching the traffic to it. If enabled, LSP Self Ping packets are sent periodically at a configurable interval following the receipt of the RESV message for an RSVP LSP path following an MBB or other event where the active path changes while the previous active path stayed up. The router will not switch traffic to the new path until an LSP Self Ping reply is received from the far-end LER.</p> <p>When configured under the MPLS context, LSP Self Ping is enabled for all RSVP LSPs, unless it is explicitly disabled for a given LSP.</p>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	MPLS periodic LSP Self Ping interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-self-ping</b> <b>interval</b> <i>number</i>
Tree	<a href="#">interval</a>

Description	This command configures the interval at which LSP Self Ping packets are periodically sent on a candidate path of an RSVP LSP. This value is used for all LSPs that have LSP Self Ping enabled.
Range	1 to 10
Units	seconds
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rsvp-te boolean**

Synopsis	Activate LSP Self Ping on RSVP-TE LSPs
Context	<b>configure</b> <i>router string</i> <b>mpls lsp-self-ping rsvp-te boolean</b>
Tree	<b>rsvp-te</b>
Description	When configured to <b>true</b> , this command enables LSP Self Ping on all RSVP-TE LSPs, unless an individual LSP has this explicitly disabled under the <b>configure router mpls lsp lsp-self-ping</b> command or in the LSP template. When configured to <b>false</b> , this command disables LSP Self Ping on all RSVP-TE LSPs.
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **timeout number**

Synopsis	MPLS LSP Self Ping timeout
Context	<b>configure</b> <i>router string</i> <b>mpls lsp-self-ping timeout number</b>
Tree	<b>timeout</b>
Description	This command configures a timeout value for the LSP Self Ping timer. The LSP Self Ping timer starts when the RESV message is received for an LSP. The system periodically sends LSP Self Ping packets until the timer expires or the first LSP Self Ping reply is received, whichever comes first. If the timer expires before an LSP Self Ping packet is received, the configured timeout action is performed.
Range	3 to 3600
Units	seconds
Default	300
Introduced	19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **timeout-action** *keyword*

Synopsis Action taken when LSP Self Ping timer expires  
 Context **configure** *router string mpls lsp-self-ping timeout-action keyword*  
 Tree [timeout-action](#)  
 Options retry, switch  
 Default retry  
 Introduced 20.5.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lsp-template** [[template-name](#)] *string*

Synopsis Enter the **lsp-template** list instance  
 Context **configure** *router string mpls lsp-template string*  
 Tree [lsp-template](#)  
 Description Commands in this context configure the attributes of an LSP template that can be referenced by a client application when dynamic LSPs must be created.  
 Max. Instances 4096  
 Introduced 16.0.R1  
 Platforms All

### **[template-name]** *string*

Synopsis LSP template name  
 Context **configure** *router string mpls lsp-template string*  
 Tree [lsp-template](#)  
 Description This command specifies the name of the LSP template. An LSP template name and LSP name must not be the same.  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

**adaptive** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable make-before-break functionality
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">adaptive</a> <i>boolean</i>
Tree	<a href="#">adaptive</a>
Default	true
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**admin-tag** [[name](#)] *reference*

Synopsis	Add a list entry for <b>admin-tag</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">admin-tag</a> <i>reference</i>
Tree	<a href="#">admin-tag</a>
Max. Instances	4
Introduced	16.0.R1
Platforms	All

**[name]** *reference*

Synopsis	Name of the admin tags
----------	------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">admin-tag</a> <i>reference</i>

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[fc-name]** *keyword*

Synopsis	Forwarding class name for LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sampling-weight** *number*

Synopsis	Forwarding class weight for LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>auto-bandwidth</b> <b>fc</b> <i>keyword</i> <b>sampling-weight</b> <i>number</i>
Tree	<b>sampling-weight</b>
Range	0 to 100
Units	percent
Default	100
Introduced	16.0.R1
Platforms	All

### **max-bandwidth** *number*

Synopsis	Maximum bandwidth of auto-bandwidth to request for LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>auto-bandwidth</b> <b>max-bandwidth</b> <i>number</i>
Tree	<b>max-bandwidth</b>
Range	0 to 6400000
Units	megabps
Default	100000
Introduced	16.0.R1
Platforms	All

### **min-bandwidth** *number*

Synopsis	Minimum bandwidth of auto-bandwidth to request for the LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>auto-bandwidth</b> <b>min-bandwidth</b> <i>number</i>
Tree	<b>min-bandwidth</b>
Range	0 to 6400000
Units	megabps
Default	0

Introduced 16.0.R1  
Platforms All

### **monitor-bandwidth** *boolean*

Synopsis Collect and display auto-bandwidth measurements for the LSP  
Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [auto-bandwidth](#) [monitor-bandwidth](#) *boolean*  
Tree [monitor-bandwidth](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **multipliers**

Synopsis Enter the **multipliers** context  
Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [auto-bandwidth](#) [multipliers](#)  
Tree [multipliers](#)  
Introduced 16.0.R1  
Platforms All

### **adjust-multiplier** *number*

Synopsis Number of collection intervals in the adjust interval  
Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [auto-bandwidth](#) [multipliers](#) [adjust-multiplier](#) *number*  
Tree [adjust-multiplier](#)  
Range 1 to 16383  
Introduced 16.0.R1  
Platforms All

### **sample-multiplier** *number*

Synopsis Multiplier for collection intervals in a sample interval  
Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [auto-bandwidth](#) [multipliers](#) [sample-multiplier](#) *number*

Tree	<a href="#">sample-multiplier</a>
Range	1 to 511
Introduced	16.0.R1
Platforms	All

## overflow-limit

Synopsis	Enable the <b>overflow-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a>
Tree	<a href="#">overflow-limit</a>
Introduced	16.0.R1
Platforms	All

## bw *number*

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <a href="#">overflow-limit</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth overflow-limit</a> <b>threshold</b> <i>number</i>
Tree	<a href="#">threshold</a>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

**underflow-limit**

Synopsis	Enable the <b>underflow-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth</a> <b>underflow-limit</b>
Tree	<a href="#">underflow-limit</a>
Introduced	16.0.R1
Platforms	All

**bw** *number*

Synopsis	Minimum difference in absolute bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth underflow-limit</a> <b>bw</b> <i>number</i>
Tree	<a href="#">bw</a>
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">auto-bandwidth underflow-limit</a> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>

Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>auto-bandwidth</b> <b>underflow-limit</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

### **backup-class-type** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup class type for this LSP template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>backup-class-type</b> <i>number</i>
Tree	<b>backup-class-type</b>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	Amount of bandwidth reserved for the P2MP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>

Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

## bfd

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

## bfd-liveness *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, LSP BFD is enabled on the RSVP LSP or S-BFD is enabled for the SR-TE LSP.</p> <p>LSP BFD must also be configured under the <b>configure router</b> context. The named BFD template provides the configuration settings for the BFD session, which must be configured and associated with the service using the BFD template.</p> <p>When configured to <b>false</b>, LSP BFD is disabled on the RSVP LSP or S-BFD on the SR-TE LSP.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>bfd</b> <b>bfd-template</b> <i>reference</i>
Tree	<b>bfd-template</b>
Reference	<b>configure</b> <b>bfd</b> <b>bfd-template</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**failure-action** *keyword*

Synopsis	Action to take when LSP BFD session fails
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>bfd</b> <b>failure-action</b> <i>keyword</i>
Tree	<b>failure-action</b>
Options	none, down, failover-or-down
Default	none
Introduced	16.0.R1
Platforms	All

**lsp-ping-interval** (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>bfd</b> <b>lsp-ping-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>lsp-ping-interval</b>
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

**return-path-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>bfd return-path-label</b> <i>number</i>
Tree	<b>return-path-label</b>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **wait-for-up-timer** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to wait for BFD to become operationally available
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>bfd wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> <li>• a path undergoing MBB when BFD is up</li> <li>• the initial administrative state of the LSP</li> <li>• the retry signaling of non-standby secondary paths</li> </ul>
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bgp-shortcut** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable/disable use of RSVP LSP for IPv4 BGP routes.  
 Context **configure** *router string mpls lsp-template string bgp-shortcut boolean*  
 Tree [bgp-shortcut](#)  
 Introduced 16.0.R1  
 Platforms All

### **bgp-transport-tunnel** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Allow use of RSVP-TE LSP as transport for tunnel routes  
 Context **configure** *router string mpls lsp-template string bgp-transport-tunnel boolean*  
 Tree [bgp-transport-tunnel](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **binding-sid** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Request to allocate and bind a label  
 Context **configure** *router string mpls lsp-template string binding-sid boolean*  
 Tree [binding-sid](#)  
 Description When configured to **true**, the system allocates and binds a label to any LSP that is created using the template.

When configured to **false**, this command removes the configuration but this does not affect LSPs that were already created using the template.

Default	false
Introduced	22.10.R1
Platforms	All

## class-forwarding

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>class-forwarding</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">class-forwarding</a>
Tree	<a href="#">class-forwarding</a>
Introduced	16.0.R1
Platforms	All

## forwarding-set

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>forwarding-set</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">class-forwarding forwarding-set</a>
Tree	<a href="#">forwarding-set</a>
Notes	The following elements are part of a choice: ( <b>default-lsp</b> and <b>fc</b> ) or <b>forwarding-set</b> .
Introduced	16.0.R1
Platforms	All

## policy reference

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name for the class based forwarding policy for LSP instances
----------	--

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">class-forwarding-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### set number

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Forwarding set ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">class-forwarding</a> <a href="#">forwarding-set</a> <a href="#">set</a> <a href="#">number</a>
Tree	<a href="#">set</a>
Range	1 to 6
Introduced	16.0.R1
Platforms	All

### class-type number

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Class type for an LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i> <a href="#">class-type</a> <a href="#">number</a>
Tree	<a href="#">class-type</a>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

## default-path *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default path to be used for signaling LSP instances
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls lsp-template</a> <a href="#">string</a> <a href="#">default-path</a> <a href="#">reference</a>
Tree	<a href="#">default-path</a>
Reference	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls path</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

## egress-statistics

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls lsp-template</a> <a href="#">string</a> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	16.0.R1
Platforms	All

## accounting-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy ID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">mpls lsp-template</a> <a href="#">string</a> <a href="#">egress-statistics</a> <a href="#">accounting-policy</a> <a href="#">reference</a>
Tree	<a href="#">accounting-policy</a>

Reference	<b>configure</b> <a href="#">log accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Collect LSP statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a> <b>collect-stats</b> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Description	<p>When configured to <b>true</b>, this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.</p> <p>When configured to <b>false</b>, the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **stat-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">egress-statistics</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

**entropy-label** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Entropy label for an LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">entropy-label</a> <i>keyword</i>
Tree	<a href="#">entropy-label</a>
Options	false, true
Introduced	16.0.R1
Platforms	All

**exclude-admin-group** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Admin group name excluded when LSP is set up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">exclude-admin-group</a> <i>reference</i>
Tree	<a href="#">exclude-admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <i>if-attribute</i> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**fallback-path-computation-method** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Fallback path computation method
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">fallback-path-computation-method</a> <i>keyword</i>
Tree	<a href="#">fallback-path-computation-method</a>

Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	21.10.R1
Platforms	All

### family keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Address family that specifies template use in SR-TE LSP
Context	<b>configure router string mpls lsp-template string family keyword</b>
Tree	<b>family</b>
Description	This command specifies the address family for which the LSP template applies in an SR-TE LSP. An LSP template is required for each address family.
Options	ipv4, ipv6
Default	ipv4
Introduced	20.5.R1
Platforms	All

### fast-reroute

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>fast-reroute</b> context
Context	<b>configure router string mpls lsp-template string fast-reroute</b>
Tree	<b>fast-reroute</b>
Introduced	16.0.R1
Platforms	All

**frr-method** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Fast Reroute method for the LSPs that are dynamically created using this LSP template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>frr-method</b> <i>keyword</i>
Tree	<b>frr-method</b>
Options	one-to-one, facility
Default	facility
Introduced	16.0.R1
Platforms	All

**hop-limit** *number*

Synopsis	Total number of hops a detour or backup LSP can take
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>hop-limit</b> <i>number</i>
Tree	<b>hop-limit</b>
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

**node-protect** *boolean*

Synopsis	Enable node and link protection for the specified LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>fast-reroute</b> <b>node-protect</b> <i>boolean</i>
Tree	<b>node-protect</b>
Default	false
Introduced	16.0.R1
Platforms	All

**propagate-admin-group** *boolean*

Synopsis	Enable admin group constraints on a FRR backup LSP
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>fast-reroute</i> <i>propagate-admin-group</i> <i>boolean</i>
Tree	<i>propagate-admin-group</i>
Default	false
Introduced	16.0.R1
Platforms	All

### **from** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the ingress router for the LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>from</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<i>from</i>
Introduced	16.0.R1
Platforms	All

### **hop-limit** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum hops for an LSP created using this LSP template
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> <i>hop-limit</i> <i>number</i>
Tree	<i>hop-limit</i>
Range	2 to 255
Introduced	16.0.R1
Platforms	All

## igp-shortcut

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of LSP for shortcut or forwarding
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## allow-sr-over-srte *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use as eligible SRv4 or SRv6 IGP shortcut
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">allow-sr-over-srte</a> <i>boolean</i>
Tree	<a href="#">allow-sr-over-srte</a>
Description	When configured to <b>true</b> , the router performs local SPF and the SR-TE LSP template is used as an eligible IGP SR-MPLS shortcut for SR-MPLS SRv4 or SRv6 only if the SR-TE is explicitly allowed using this command and when the top SID in the SR-TE LSP is an adjacency SID.

Default	false
Introduced	23.3.R1
Platforms	All

### **lfa-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP usage in LFA SPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">lfa-type</a> <i>keyword</i>
Tree	<a href="#">lfa-type</a>
Options	lfa-protect, lfa-only
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

### **relative-metric** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Shortest IGP cost between the endpoints of the LSP plus the configured offset
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">igp-shortcut</a> <a href="#">relative-metric</a> <i>number</i>
Tree	<a href="#">relative-metric</a>
Range	-10 to 10
Notes	The following elements are part of a choice: <b>lfa-type</b> or <b>relative-metric</b> .
Introduced	16.0.R1
Platforms	All

## include-admin-group *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Admin group name included when LSP is set up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">include-admin-group</a> <i>reference</i>
Tree	<a href="#">include-admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

## label-stack-reduction *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable label compression for LSP path
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">label-stack-reduction</a> <i>boolean</i>
Tree	<a href="#">label-stack-reduction</a>
Default	false
Introduced	19.7.R1
Platforms	All

## ldp-over-rsvp *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include this LSP in LDP over RSVP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	true

Introduced 16.0.R1  
 Platforms All

### least-fill *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable least-fill path selection for this LSP template  
 Context **configure** *router string mpls lsp-template string least-fill boolean*  
 Tree [least-fill](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### load-balancing-weight *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Load balancing weight for an MPLS LSP template  
 Context **configure** *router string mpls lsp-template string load-balancing-weight number*  
 Tree [load-balancing-weight](#)  
 Range 1 to 4294967295  
 Introduced 16.0.R1  
 Platforms All

### local-sr-protection *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local SR protection preference for LSP path computation  
 Context **configure** *router string mpls lsp-template string local-sr-protection keyword*  
 Tree [local-sr-protection](#)

Options	none, preferred, mandatory
Default	preferred
Introduced	19.7.R1
Platforms	All

### **lsp-self-ping** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	LSP Self Ping activation status on RSVP-TE LSP template
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>lsp-self-ping</b> <i>keyword</i>
Tree	<b>lsp-self-ping</b>
Description	When configured, the system uses this setting for the LSP template regardless of the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> . When unconfigured, the command inherits the value configured under <b>configure router mpls lsp-self-ping rsvp-te</b> .
Options	false, true
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **main-ct-retry-limit** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of retries before reverting to backup CT
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>lsp-template</b> <i>string</i> <b>main-ct-retry-limit</b> <i>number</i>
Tree	<b>main-ct-retry-limit</b>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

## max-sr-labels

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-sr-labels</b> context
Context	<b>configure</b> <i>router string mpls lsp-template string max-sr-labels</i>
Tree	<a href="#">max-sr-labels</a>
Introduced	16.0.R1
Platforms	All

## additional-frr-labels *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of additional overhead labels
Context	<b>configure</b> <i>router string mpls lsp-template string max-sr-labels additional-frr-labels number</i>
Tree	<a href="#">additional-frr-labels</a>
Range	0 to 4
Default	1
Introduced	16.0.R1
Platforms	All

## label-stack-size *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size for the maximum segment routing label stack
Context	<b>configure</b> <i>router string mpls lsp-template string max-sr-labels label-stack-size number</i>
Tree	<a href="#">label-stack-size</a>
Range	1 to 11
Introduced	16.0.R1

Platforms All

### **metric number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis LSP template metric  
 Context **configure** *router string mpls lsp-template string metric number*  
 Tree [metric](#)  
 Range 0 to 16777215  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

### **metric-type keyword**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Metric type used for LSP path computation  
 Context **configure** *router string mpls lsp-template string metric-type keyword*  
 Tree [metric-type](#)  
 Options igp, te  
 Default igp  
 Introduced 19.7.R1  
 Platforms All

### **override-tunnel-elic boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Override any received entropy label capability  
 Context **configure** *router string mpls lsp-template string override-tunnel-elic boolean*

Tree	<a href="#">override-tunnel-enc</a>
Description	When configured to <b>true</b> , this command allows the system to override any received entropy label capability advertisement. When configured to <b>false</b> , this command disables the override.
Default	false
Introduced	21.10.R1
Platforms	All

### **path-computation-method** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Path computation method
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">path-computation-method</a> <i>keyword</i>
Tree	<a href="#">path-computation-method</a>
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP. See "SR-TE LSP path computation using hop-to-label translation" in the <i>7750 Service Router and 7950 Extensible Routing System Segment Routing and PCE User Guide</i> for more information.
Options	local-cspf, pce
Introduced	19.7.R1
Platforms	All

### **path-profile** [[profile-id](#)] *number*

Synopsis	Enter the <b>path-profile</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">path-profile</a> <i>number</i>
Tree	<a href="#">path-profile</a>
Description	Commands in this context configure the attributes of the PCE path profile.
Max. Instances	5
Introduced	21.10.R1

Platforms All

### **[profile-id]** *number*

Synopsis Profile ID for the specified LSP

Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [path-profile](#) *number*

Tree [path-profile](#)

Range 1 to 4294967295

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms All

### **path-group** *number*

Synopsis Path-group ID for the specified LSP

Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [path-profile](#) *number* [path-group](#) *number*

Tree [path-group](#)

Max. Range 0 to 4294967295

Default 0

Introduced 21.10.R1

Platforms All

### **pce-associations**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **pce-associations** context

Context **configure** [router](#) *string* [mpls lsp-template](#) *string* [pce-associations](#)

Tree [pce-associations](#)

Description Commands in this context configure the LSP binding with one or more PCEP associations.

Introduced 22.5.R1

Platforms All

**diversity** [[diversity-name](#)] *reference*

Synopsis	Add a list entry for <b>diversity</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>reference</i>
Tree	<a href="#">diversity</a>
Description	Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

**[diversity-name]** *reference*

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>reference</i>
Tree	<a href="#">diversity</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**policy** [[policy-name](#)] *reference*

Synopsis	Add a list entry for <b>policy</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">pce-associations</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

**[policy-name] reference**

Synopsis	Name of the PCE association configured under the PCC
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>pce-associations</b> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc pce-associations</b> <b>policy</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**pce-control boolean****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PCE controlled LSP mode of operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>pce-control</b> <i>boolean</i>
Tree	<b>pce-control</b>
Description	<p>When configured to <b>true</b>, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to <b>false</b>, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false
Introduced	21.10.R1
Platforms	All

**pce-report keyword****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable reporting modes to PCE for RSVP-TE or SR-TE LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>pce-report</b> <i>keyword</i>
Tree	<b>pce-report</b>

Options	false, true
Introduced	16.0.R1
Platforms	All

## priority

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>priority</b> context
Context	<b>configure</b> <i>router string mpls lsp-template string priority</i>
Tree	<i>priority</i>
Introduced	16.0.R1
Platforms	All

## hold-priority *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold priority when insufficient bandwidth is available to set up LSP
Context	<b>configure</b> <i>router string mpls lsp-template string priority hold-priority number</i>
Tree	<i>hold-priority</i>
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

## setup-priority *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Setup priority when insufficient bandwidth is available to set up LSP
Context	<b>configure</b> <i>router string mpls lsp-template string priority setup-priority number</i>

Tree	<a href="#">setup-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

### **propagate-admin-group** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable admin groups via session attribute object
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">propagate-admin-group</a> <i>boolean</i>
Tree	<a href="#">propagate-admin-group</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **record** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of all hops for this LSP template
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls lsp-template</a> <i>string</i> <a href="#">record</a> <i>boolean</i>
Tree	<a href="#">record</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **record-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable recording of labels at each node or instance
Context	<b>configure</b> <i>router string mpls lsp-template string record-label boolean</i>
Tree	<a href="#">record-label</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **retry-limit** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of attempts to re-establish LSP after it fails
Context	<b>configure</b> <i>router string mpls lsp-template string retry-limit number</i>
Tree	<a href="#">retry-limit</a>
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time for LSP re-establishment attempts after failure
Context	<b>configure</b> <i>router string mpls lsp-template string retry-timer number</i>
Tree	<a href="#">retry-timer</a>
Range	1 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

**soft-preemption** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable soft preemption
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>soft-preemption</b> <i>boolean</i>
Tree	<b>soft-preemption</b>
Description	When configured to <b>true</b> , the P2MP LSP preemption is governed by the <b>configure router rsvp preemption-timer</b> value.  When configured to <b>false</b> , the preemption timer value is set to 0 and the P2MP LSPs are hard preempted.  For P2P LSPs, soft preemption is always enabled and cannot be disabled.
Introduced	22.2.R1
Platforms	All

**template-id** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Template ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls lsp-template</b> <i>string</i> <b>template-id</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>template-id</b>
Description	This command specifies the value that is signaled in the PCE to identify the LSP template.
Range	1 to 4294967295
Options	default
Introduced	16.0.R5
Platforms	All

**type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	LSP template type
Context	<b>configure</b> <i>router string mpls lsp-template string type keyword</i>
Tree	<i>type</i>
Description	This command configures the type of a template that can be referenced by a client application where dynamic LSP creation is required. The LSP template type is mandatory.
Options	p2mp-rsvp, p2p-rsvp-one-hop, p2p-rsvp-mesh, p2p-sr-te-one-hop, p2p-sr-te-mesh, p2p-sr-te-pce-init, p2p-sr-te-on-demand
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**vprn-auto-bind** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include LSP template in auto-bind for VPRN services
Context	<b>configure</b> <i>router string mpls lsp-template string vprn-auto-bind boolean</i>
Tree	<i>vprn-auto-bind</i>
Default	true
Introduced	16.0.R1
Platforms	All

**max-bypass-associations** *number*

Synopsis	Maximum number of LSPs associated with a bypass tunnel
Context	<b>configure</b> <i>router string mpls max-bypass-associations number</i>

Tree	<a href="#">max-bypass-associations</a>
Range	100 to 131072
Default	1000
Introduced	16.0.R1
Platforms	All

### **max-bypass-plr-associations** *number*

Synopsis	Maximum number of PLRs per RSVP-TE bypass LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">max-bypass-plr-associations</a> <i>number</i>
Tree	<a href="#">max-bypass-plr-associations</a>
Range	1 to 16
Default	16
Introduced	19.10.R1
Platforms	All

### **mbb-prefer-current-hops** *boolean*

Synopsis	Select preference to use the current hops for Make-Before-Break (MBB)
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">mbb-prefer-current-hops</a> <i>boolean</i>
Tree	<a href="#">mbb-prefer-current-hops</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **p2mp-resignal-timer** *number*

Synopsis	Resignal timer for P2MP LSPs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">p2mp-resignal-timer</a> <i>number</i>
Tree	<a href="#">p2mp-resignal-timer</a>
Range	60 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

**p2mp-s2l-fast-retry** *number*

Synopsis	Fast retry timer for P2MP S2L paths
Context	<b>configure</b> <i>router string mpls p2mp-s2l-fast-retry number</i>
Tree	<a href="#">p2mp-s2l-fast-retry</a>
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	All

**p2mp-ttl-propagate** *boolean*

Synopsis	Use uniform mode for TTL propagation for RSVP P2MP LSPs
Context	<b>configure</b> <i>router string mpls p2mp-ttl-propagate boolean</i>
Tree	<a href="#">p2mp-ttl-propagate</a>
Description	<p>When configured to <b>true</b>, the router configures the uniform mode of operation for P2MP LSPs.</p> <p>When configured to <b>false</b>, the router configures the pipe mode of operation for RSVP P2MP LSPs.</p> <p>When the propagation mode is modified, the new configuration applies to future RSVP P2MP LSPs only and the existing operational LSPs are not affected.</p>
Default	true
Introduced	23.7.R1
Platforms	All

**p2p-active-path-fast-retry** *number*

Synopsis	Fast retry timer for P2P active paths
Context	<b>configure</b> <i>router string mpls p2p-active-path-fast-retry number</i>
Tree	<a href="#">p2p-active-path-fast-retry</a>
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	All

**path** [*path-name*] *string*

Synopsis	Enter the <b>path</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>path</b> <i>string</i>
Tree	<b>path</b>
Max. Instances	65535
Introduced	16.0.R1
Platforms	All

**[path-name]** *string*

Synopsis	Name for this LSP path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>path</b> <i>string</i>
Tree	<b>path</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the path used for LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>path</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**hop** [*hop-index*] *number*

Synopsis	Enter the <b>hop</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>path</b> <i>string</i> <b>hop</b> <i>number</i>
Tree	<b>hop</b>

Max. Instances	255
Introduced	16.0.R1
Platforms	All

### **[hop-index]** *number*

Synopsis	Index to identify a particular hop
Context	<b>configure</b> <i>router string mpls path string hop number</i>
Tree	<a href="#">hop</a>
Range	1 to 1024
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the transit router
Context	<b>configure</b> <i>router string mpls path string hop number ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	16.0.R1
Platforms	All

### **sid-label** *number*

Synopsis	MPLS label for tunnel hop in the path of an SR-TE LSP
Context	<b>configure</b> <i>router string mpls path string hop number sid-label number</i>
Tree	<a href="#">sid-label</a>
Range	32 to 1048575

Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	19.10.R1
Platforms	All

### **type** *keyword*

Synopsis	Tunnel hop type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <i>path</i> <i>string</i> <b>hop</b> <i>number</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Options	strict, loose
Notes	The following elements are part of a mandatory choice: ( <b>ip-address</b> and <b>type</b> ) or <b>sid-label</b> .
Introduced	16.0.R1
Platforms	All

### **pce-init-lsp**

Synopsis	Enable the <b>pce-init-lsp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>pce-init-lsp</b>
Tree	<b>pce-init-lsp</b>
Introduced	16.0.R5
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>pce-init-lsp</b> <b>sr-te</b>
Tree	<b>sr-te</b>
Introduced	16.0.R5
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of SR-TE PCE-initiated LSP support
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>pce-init-lsp</b> <b>sr-te</b> <b>admin-state</b> <i>keyword</i>

---

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

### **pce-report**

Synopsis	Enter the <b>pce-report</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">pce-report</a>
Tree	<a href="#">pce-report</a>
Introduced	16.0.R1
Platforms	All

### **rsvp-te boolean**

Synopsis	Allow PCE reporting for all TE LSPs of RSVP-TE type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">pce-report</a> <a href="#">rsvp-te</a> <i>boolean</i>
Tree	<a href="#">rsvp-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-te boolean**

Synopsis	Allow PCE reporting for all TE LSPs of SR-TE type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">pce-report</a> <a href="#">sr-te</a> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **resignal-on-igp-overload boolean**

Synopsis	Resignal all RSVP-TE LSPs upon IGP overload
----------	---

Context	<b>configure</b> <i>router string mpls resignal-on-igp-overload boolean</i>
Tree	<a href="#">resignal-on-igp-overload</a>
Description	<p>When configured to <b>true</b>, the receipt of the IS-IS overload bit in the TE-DB triggers the immediate resignaling of all RSVP-TE LSPs. MPLS forces the expiry of the resignal timer and the TE-DB computes a new CSPF for each RSVP-TE LSP active path. The re-optimization causes the immediate transition of RSVP-TE LSP paths away from the IS-IS node in overload using the MBB operation.</p> <p>This command cannot be configured to <b>true</b> when the <b>retry-on-igp-overload</b> command is configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the default behavior is maintained where MBB re-optimization occurs only when a timer-based resignal is performed or a manual resignal is executed.</p>
Default	false
Introduced	20.10.R1
Platforms	All

### **resignal-timer** *number*

Synopsis	Resignal timer for RSVP LSPs
Context	<b>configure</b> <i>router string mpls resignal-timer number</i>
Tree	<a href="#">resignal-timer</a>
Range	30 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

### **retry-on-igp-overload** *boolean*

Synopsis	Tear down LSPs when IGP is in overload state
Context	<b>configure</b> <i>router string mpls retry-on-igp-overload boolean</i>
Tree	<a href="#">retry-on-igp-overload</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **secondary-fast-retry-timer** *number*

Synopsis	Fast retry timer for secondary paths
----------	--------------------------------------

Context	<b>configure</b> <i>router string mpls secondary-fast-retry-timer number</i>
Tree	<a href="#">secondary-fast-retry-timer</a>
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **shortcut-local-ttl-propagate** *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets
Context	<b>configure</b> <i>router string mpls shortcut-local-ttl-propagate boolean</i>
Tree	<a href="#">shortcut-local-ttl-propagate</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **shortcut-transit-ttl-propagate** *boolean*

Synopsis	Propagate TTL over LSP shortcut for local packets for transit packets
Context	<b>configure</b> <i>router string mpls shortcut-transit-ttl-propagate boolean</i>
Tree	<a href="#">shortcut-transit-ttl-propagate</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **sr-te-resignal**

Synopsis	Enter the <b>sr-te-resignal</b> context
Context	<b>configure</b> <i>router string mpls sr-te-resignal</i>
Tree	<a href="#">sr-te-resignal</a>
Introduced	19.10.R1
Platforms	All

**resignal-on-igp-event** *boolean*

Synopsis	Re-optimize SR-TE LSPs upon IGP link events
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls sr-te-resignal</b> <b>resignal-on-igp-event</b> <i>boolean</i>
Tree	<a href="#">resignal-on-igp-event</a>
Description	<p>When configured to <b>true</b>, the system signals the re-optimization of all SR-TE LSPs when one or more IGP link down events are received in the TE-DB. The triggered behavior is identical to the timer-based or resignal behavior or the manual-based resignal behavior used with a delay option. MPLS forces the expiry of the resignal timer and all active paths of all SR-TE LSPs are re-evaluated.</p> <p>When configured to <b>false</b>, re-optimization is not triggered by IGP events.</p>
Default	false
Introduced	19.10.R1
Platforms	All

**resignal-on-igp-overload** *boolean*

Synopsis	Enable resignaling of SR-TE LSPs upon IGP overload
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls sr-te-resignal</b> <b>resignal-on-igp-overload</b> <i>boolean</i>
Tree	<a href="#">resignal-on-igp-overload</a>
Description	<p>When configured to <b>true</b>, the system enables ad-hoc re-optimization of the CSPF paths of all SR-TE LSPs when IS-IS receives an IS-IS overload bit advertisement from a remote router.</p> <p>When this command is enabled on the router and an IGP overload bit is set in a Layer 1 or Layer 2 IS-IS LSP received from a remote router, MPLS performs an ad-hoc re-optimization of all the paths of all the SR-TE LSPs that have paths computed by the local CSPF. For each SR-TE LSP current path that transits the router in overload, the CSPF looks for a new path that avoids the router. For each SR-TE LSP current path that terminates on the router in overload, the CSPF checks if a better path exists. In both cases, if a new path is not found the system maintains the current path when operationally up.</p> <p>The ad-hoc re-optimization triggers the timer-based re-optimization by forcing the resignal timer to expire. Therefore, the user must use the <b>configure router mpls sr-te-resignal resignal-timer</b> command to configure the resignal timer for the SR-TE application.</p> <p>When configured to <b>false</b>, MPLS does not act immediately on an IS-IS overload bit from a remote router. MPLS acts on it at the next timer-based or manual re-optimization of the SR-TE LSPs.</p>
Default	false
Introduced	23.3.R1
Platforms	All

**resignal-timer** *number*

Synopsis	Resignal timer for SR-TE LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls sr-te-resignal</b> <b>resignal-timer</b> <i>number</i>
Tree	<a href="#">resignal-timer</a>
Description	This command configures the time the system waits before signaling the re-optimization of all SR-TE LSPs.
Range	30 to 10080
Units	minutes
Introduced	19.10.R1
Platforms	All

**srlg-database**

Synopsis	Enter the <b>srlg-database</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b>
Tree	<a href="#">srlg-database</a>
Introduced	16.0.R1
Platforms	All

**router-id** [[router-address](#)] *string*

Synopsis	Enter the <b>router-id</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i>
Tree	<a href="#">router-id</a>
Introduced	16.0.R1
Platforms	All

**[router-address]** *string*

Synopsis	Router ID for the system
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls srlg-database</b> <b>router-id</b> <i>string</i>
Tree	<a href="#">router-id</a>
Notes	This element is part of a list key.
Introduced	16.0.R2

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the interface entry

Context **configure** [router](#) *string* [mpls srlg-database](#) [router-id](#) *string* **admin-state** *keyword*

Options	loose, strict
Introduced	16.0.R1
Platforms	All

### **static-lsp** [[lsp-name](#)] *string*

Synopsis	Enter the <b>static-lsp</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">static-lsp</a> <i>string</i>
Tree	<a href="#">static-lsp</a>
Max. Instances	1000
Introduced	16.0.R1
Platforms	All

### [[lsp-name](#)] *string*

Synopsis	Labeled Switch path name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">static-lsp</a> <i>string</i>
Tree	<a href="#">static-lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the static LSP
Context	<b>configure</b> <i>router string mpls static-lsp string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**metric** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS static LSP metric to select an LSP
Context	<b>configure</b> <i>router string mpls static-lsp string metric number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**push**

Synopsis	Enable the <b>push</b> context
Context	<b>configure</b> <i>router string mpls static-lsp string push</i>
Tree	<a href="#">push</a>
Introduced	16.0.R1
Platforms	All

**next-hop** *string*

Synopsis	IP address for the next hop
Context	<b>configure</b> <i>router string mpls static-lsp string push next-hop string</i>
Tree	<a href="#">next-hop</a>

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **out-label** (*number* | *keyword*)

Synopsis	Push specific label onto the top of the outgoing packet's label stack
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls static-lsp</b> <i>string</i> <b>push out-label</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>out-label</b>
Range	16 to 1048575
Options	implicit-null-label
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **to string**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination IP address or the egress router for the LSP

Tree	<b>to</b>
Introduced	16.0.R1
Platforms	All

### **static-lsp-fast-retry** *number*

Synopsis	Fast retry timer for static LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls static-lsp-fast-retry</b> <i>number</i>
Tree	<b>static-lsp-fast-retry</b>
Range	1 to 30
Units	seconds
Default	30
Introduced	16.0.R1

Platforms All

### **strict-ero-nhop-direct-resolution** *boolean*

Synopsis	Resolves RSVP-TE LSP ERO to local and host routes only
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>strict-ero-nhop-direct-resolution</b> <i>boolean</i>
Tree	<b>strict-ero-nhop-direct-resolution</b>
Description	<p>When configured to <b>true</b>, the router enables the strict Explicit Route Object (ERO) next-hop direct resolution. The feature restricts the routes used to resolve the next hop of an ERO address to local and host routes. This command avoids using a next hop over a parallel link when a half link is up in the routing table.</p> <p>This command applies to an ERO when all of the following conditions are met:</p> <ul style="list-style-type: none"> <li>• the ERO next hop is an IPv4 address</li> <li>• the ERO object is a strict hop</li> <li>• the IPv4 address matches the primary subnet of a local numbered interface</li> </ul> <p>If no such route exists, RSVP rejects the PATH message with ErrCode = Routing Error (24) and SubErrCode = Bad Strict Node (2).</p> <p>When configured to <b>false</b>, the router disables the strict ERO next-hop direct resolution.</p>
Default	false
Introduced	22.5.R1
Platforms	All

### **tunnel-table-pref**

Synopsis	Enter the <b>tunnel-table-pref</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>tunnel-table-pref</b>
Tree	<b>tunnel-table-pref</b>
Description	Commands in this context configure the tunnel table preference for RSVP-TE LSP and SR-TE LSP tunnel types.
Introduced	21.10.R1
Platforms	All

### **rsvp-te** *number*

Synopsis	RSVP-TE tunnel table preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>mpls</b> <b>tunnel-table-pref</b> <b>rsvp-te</b> <i>number</i>
Tree	<b>rsvp-te</b>

Description	<p>This command configures the tunnel table preference for RSVP-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>Nokia recommends that tunnel types have unique preference values. In a situation where two or more tunnel types are set to the same preference value, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	7
Introduced	21.10.R1
Platforms	All

### **sr-te number**

Synopsis	SR-TE tunnel table preference
Context	<b>configure router</b> <i>string</i> <b>mpls tunnel-table-pref sr-te number</b>
Tree	<b>sr-te</b>
Description	<p>This command configures the tunnel table preference for SR-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the <b>mixed-lsp-mode</b> option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	8
Introduced	21.10.R1
Platforms	All

### **user-srlg-db boolean**

Synopsis	Enable the use of user SRLG database
Context	<b>configure router</b> <i>string</i> <b>mpls user-srlg-db boolean</b>

Tree	<a href="#">user-srlg-db</a>
Default	false
Introduced	16.0.R1
Platforms	All

## mpls-labels

Synopsis	Enter the <b>mpls-labels</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a>

### **local-address** *string*

Synopsis	Local end of an MSDP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	19.10.R1
Platforms	All

### **receive-message-rate**

Synopsis	Enter the <b>receive-message-rate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b>
Tree	<b>receive-message-rate</b>
Introduced	19.10.R1
Platforms	All

### **rate** *number*

Synopsis	Number of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	10 to 10000
Introduced	19.10.R1
Platforms	All

### **threshold** *number*

Synopsis	Limit for MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 1000000
Introduced	19.10.R1
Platforms	All

**time** *number*

Synopsis	Limit of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>peer</b> <i>string</i> <b>receive-message-rate</b> <b>time</b> <i>number</i>
Tree	<b>time</b>
Range	1 to 600
Units	seconds
Introduced	19.10.R1
Platforms	All

**receive-message-rate**

Synopsis	Enter the <b>receive-message-rate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b>
Tree	<b>receive-message-rate</b>
Introduced	19.10.R1
Platforms	All

**rate** *number*

Synopsis	Number of MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	10 to 10000
Introduced	19.10.R1
Platforms	All

**threshold** *number*

Synopsis	Limit for MSDP messages read from the TCP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>msdp</b> <b>group</b> <i>string</i> <b>receive-message-rate</b> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 1000000
Introduced	19.10.R1
Platforms	All

**time number**

Synopsis	Limit of MSDP messages read from the TCP session
Context	<b>configure router</b> <i>string msdp group string receive-message-rate time number</i>
Tree	<a href="#">time</a>
Range	1 to 600
Units	seconds
Introduced	19.10.R1
Platforms	All

**import-policy reference**

Synopsis	Policy to import source active state from MSDP
Context	<b>configure router</b> <i>string msdp import-policy reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**local-address string**

Synopsis	Local end of an MSDP session
Context	<b>configure router</b> <i>string msdp local-address string</i>
Tree	<a href="#">local-address</a>
Introduced	19.10.R1
Platforms	All

**peer [ip-address] string**

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure router</b> <i>string msdp peer string</i>
Tree	<a href="#">peer</a>

Introduced 19.10.R1  
Platforms All

### **[ip-address]** *string*

Synopsis IP address of the remote MSDP router for peering  
Context **configure** *router string msdp peer string*  
Tree *peer*  
Notes This element is part of a list key.  
Introduced 19.10.R1  
Platforms All

### **active-source-limit** *number*

Synopsis Maximum number of active messages accepted by MSDP  
Context **configure** *router string msdp peer string active-source-limit number*  
Tree *active-source-limit*  
Range 0 to 1000000  
Introduced 19.10.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of MSDP  
Context **configure** *router string msdp peer string admin-state keyword*  
Tree *admin-state*  
Options enable, disable  
Default enable  
Introduced 19.10.R1  
Platforms All

### **authentication-key** *string*

Synopsis MD5 authentication key for the MSDP peering session  
Context **configure** *router string msdp peer string authentication-key string*

Tree	<a href="#">authentication-key</a>
String Length	1 to 370
Introduced	19.10.R1
Platforms	All

**default-peer** *boolean*

Synopsis	Enable/Disable default peer as MSDP peer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">default-peer</a> <i>boolean</i>
Tree	<a href="#">default-peer</a>
Default	false
Introduced	19.10.R1
Platforms	All

**export-policy** *reference*

Synopsis	Policies to export source active state into MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

**import-policy** *reference*

Synopsis	Policy to import source active state from MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp peer</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced 19.10.R1  
Platforms All

### **local-address** *string*

Synopsis Local end of an MSDP session  
Context **configure** [router](#) *string* [msdp](#) [peer](#) *string* [local-address](#) *string*  
Tree [local-address](#)  
Introduced 19.10.R1  
Platforms All

### **receive-message-rate**

Synopsis Enter the **receive-message-rate** context  
Context **configure** [router](#) *string* [msdp](#) [peer](#) *string* [receive-message-rate](#)  
Tree [receive-message-rate](#)  
Introduced 19.10.R1  
Platforms All

### **rate** *number*

Synopsis Number of MSDP messages read from the TCP session  
Context **configure** [router](#) *string* [msdp](#) [peer](#) *string* [receive-message-rate](#) [rate](#) *number*  
Tree [rate](#)  
Range 10 to 10000  
Introduced 19.10.R1  
Platforms All

### **threshold** *number*

Synopsis Limit for MSDP messages read from the TCP session  
Context **configure** [router](#) *string* [msdp](#) [peer](#) *string* [receive-message-rate](#) [threshold](#) *number*  
Tree [threshold](#)  
Range 1 to 1000000  
Introduced 19.10.R1

Platforms All

### **time** *number*

Synopsis Limit of MSDP messages read from the TCP session  
 Context **configure** *router string msdp peer string receive-message-rate time number*  
 Tree [time](#)  
 Range 1 to 600  
 Units seconds  
 Introduced 19.10.R1  
 Platforms All

### **receive-message-rate**

Synopsis Enter the **receive-message-rate** context  
 Context **configure** *router string msdp receive-message-rate*  
 Tree [receive-message-rate](#)  
 Introduced 19.10.R1  
 Platforms All

### **rate** *number*

Synopsis Number of MSDP messages read from the TCP session  
 Context **configure** *router string msdp receive-message-rate rate number*  
 Tree [rate](#)  
 Range 10 to 10000  
 Introduced 19.10.R1  
 Platforms All

### **threshold** *number*

Synopsis Limit for MSDP messages read from the TCP session  
 Context **configure** *router string msdp receive-message-rate threshold number*  
 Tree [threshold](#)  
 Range 1 to 1000000

Introduced 19.10.R1  
Platforms All

### **time** *number*

Synopsis Limit of MSDP messages read from the TCP session  
Context **configure** *router string msdp receive-message-rate time number*  
Tree *time*  
Range 1 to 600  
Units seconds  
Introduced 19.10.R1  
Platforms All

### **rpf-table** *keyword*

Synopsis Route tables for RPF lookup  
Context **configure** *router string msdp rpf-table keyword*  
Tree *rpf-table*  
Options rtable-m, rtable-u, both  
Default rtable-u  
Introduced 19.10.R1  
Platforms All

### **source** [*ip-prefix*] *string*

Synopsis Enter the **source** list instance  
Context **configure** *router string msdp source string*  
Tree *source*  
Introduced 19.10.R1  
Platforms All

### [*ip-prefix*] *string*

Synopsis Source IP address for accepted active source messages  
Context **configure** *router string msdp source string*

Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **active-source-limit** *number*

Synopsis	Number of active source messages accepted by MSDP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">source</a> <i>string</i> <a href="#">active-source-limit</a> <i>number</i>
Tree	<a href="#">active-source-limit</a>
Range	0 to 1000000
Introduced	19.10.R1
Platforms	All

### **source-active-cache-lifetime** *number*

Synopsis	Lifetime of SA entries in the cache
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">msdp</a> <a href="#">source-active-cache-lifetime</a> <i>number</i>
Tree	<a href="#">source-active-cache-lifetime</a>
Range	90 to 600
Units	seconds
Default	90
Introduced	19.10.R1
Platforms	All

### **mss-adjust**

Synopsis	Enable the <b>mss-adjust</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mss-adjust</a>
Tree	<a href="#">mss-adjust</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-group** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group used for TCP-MSS adjustment
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mss-adjust</i> <i>nat-group</i> <i>number</i>
Tree	<a href="#">nat-group</a>
Max. Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**segment-size** *number*

Synopsis	TCP-MSS option value in transmitted TCP SYN requests
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mss-adjust</i> <i>segment-size</i> <i>number</i>
Tree	<a href="#">segment-size</a>
Range	160 to 10240
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mtrace2**

Synopsis	Enter the <b>mtrace2</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mtrace2</i>
Tree	<a href="#">mtrace2</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of multicast path tracing
Context	<b>configure</b> <i>router</i> <i>string</i> <i>mtrace2</i> <i>admin-state</i> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **udp-port** *number*

Synopsis	Destination and listening port for the mtrace2 command
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mtrace2</a> <a href="#">udp-port</a> <i>number</i>
Tree	<a href="#">udp-port</a>
Range	1024 to 49151
Default	5000
Introduced	16.0.R1
Platforms	All

### **multicast-info-policy** *reference*

Synopsis	Multicast policy name for virtual router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">multicast-info-policy</a> <i>reference</i>
Tree	<a href="#">multicast-info-policy</a>
Reference	<b>configure</b> <a href="#">multicast-management</a> <a href="#">multicast-info-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **nat**

Synopsis	Enable the <b>nat</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a>
Tree	<a href="#">nat</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**inside**

Synopsis	Enter the <b>inside</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a>
Tree	<a href="#">inside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**I2-aware**

Synopsis	Enter the <b>I2-aware</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a>
Tree	<a href="#">I2-aware</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**force-unique-ip-addresses** *boolean*

Synopsis	Enforce unique IPv4 addresses for L2-aware subscribers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a> <a href="#">force-unique-ip-addresses</a> <i>boolean</i>
Tree	<a href="#">force-unique-ip-addresses</a>
Description	When configured to <b>true</b> , the system enforces the uniqueness of IPv4 addresses of L2-aware subscribers in an inside routing context.  This functionality is required if multicast sourced from the inside routing context is enabled for L2-aware subscribers.
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**subscribers** [[prefix](#)] *string*

Synopsis	Add a list entry for <b>subscribers</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">I2-aware</a> <a href="#">subscribers</a> <i>string</i>
Tree	<a href="#">subscribers</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[prefix] string**

Synopsis	Layer-2 Aware NAT subscriber prefix
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">l2-aware</a> <a href="#">subscribers</a> <a href="#">string</a>
Tree	<a href="#">subscribers</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**large-scale**

Synopsis	Enter the <b>large-scale</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a>
Tree	<a href="#">large-scale</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dnat-only**

Synopsis	Enter the <b>dnat-only</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dnat-only</a>
Tree	<a href="#">dnat-only</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**source-prefix-list reference**

Synopsis	NAT prefix list that contains source IP addresses
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dnat-only</a> <a href="#">source-prefix-list</a> <a href="#">reference</a>
Tree	<a href="#">source-prefix-list</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">prefix-list</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dual-stack-lite

Synopsis	Enter the <b>dual-stack-lite</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a>
Tree	<a href="#">dual-stack-lite</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of Dual Stack Lite
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## deterministic

Synopsis	Enter the <b>deterministic</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a>
Tree	<a href="#">deterministic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix-map [[source-prefix](#)] *string nat-policy reference*

Synopsis	Enter the <b>prefix-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string nat-policy reference</i>
Tree	<a href="#">prefix-map</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[source-prefix] string**

Synopsis	List containing source IP addresses on the private side
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <a href="#">string</a> <a href="#">nat-policy</a> <a href="#">reference</a>
Tree	<a href="#">prefix-map</a>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy reference**

Synopsis	NAT policy
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <a href="#">string</a> <a href="#">nat-policy</a> <a href="#">reference</a>
Tree	<a href="#">prefix-map</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">nat-policy</a> <a href="#">string</a>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the prefix
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <a href="#">string</a> <a href="#">nat-policy</a> <a href="#">reference</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**map [from] string to string**

Synopsis	Enter the <b>map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <a href="#">string</a> <a href="#">nat-policy</a> <a href="#">reference</a> <a href="#">map</a> <a href="#">string</a> <a href="#">to</a> <a href="#">string</a>

Tree	<a href="#">map</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[from]** *string*

Synopsis	Beginning of the range for IPv6 addresses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a> <a href="#">map</a> <i>string</i> <a href="#">to</a> <i>string</i>
Tree	<a href="#">map</a>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**to** *string*

Synopsis	End of the range for IPv6 addresses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a> <a href="#">map</a> <i>string</i> <a href="#">to</a> <i>string</i>
Tree	<a href="#">map</a>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**first-outside-address** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outside IP address mapped to inside IP address range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a> <a href="#">map</a> <i>string</i> <a href="#">to</a> <i>string</i> <a href="#">first-outside-address</a> <i>string</i>
Tree	<a href="#">first-outside-address</a>
Notes	This element is mandatory.
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **endpoint** [[address](#)] *string*

Synopsis Enter the **endpoint** list instance

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) [endpoint](#) *string*

Tree [endpoint](#)

Max. Instances 128

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *string*

Synopsis Dual Stack Lite IPv6 address

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) [endpoint](#) *string*

Tree [endpoint](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-fragmentation** *keyword*

Synopsis Fragmentation control of the AFTR originated downstream IPv6 traffic

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) [endpoint](#) *string* [ip-fragmentation](#) *keyword*

Tree [ip-fragmentation](#)

Options fragment-ipv6, fragment-ipv6-unless-ipv4-df-set

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **min-first-fragment-size-rx** *number*

Synopsis Minimum MTU size for upstream packets

Context **configure** [router](#) *string* [nat](#) [inside](#) [large-scale](#) [dual-stack-lite](#) [endpoint](#) *string* [min-first-fragment-size-rx](#) *number*

Tree	<a href="#">min-first-fragment-size-rx</a>
Description	This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.
Range	512 to 1280
Default	1280
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reassemble** *boolean*

Synopsis	Reassembly of IPv6 payload datagrams
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">endpoint</a> <i>string</i> <a href="#">reassemble</a> <i>boolean</i>
Tree	<a href="#">reassemble</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-mtu** *number*

Synopsis	DS-Lite tunnel MTU for this address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">endpoint</a> <i>string</i> <a href="#">tunnel-mtu</a> <i>number</i>
Tree	<a href="#">tunnel-mtu</a>
Description	This command configures the Dual Stack Lite (DS-Lite) tunnel MTU for this address.
Range	464 to 9212
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**max-subscriber-limit** *number***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Largest value for all subscriber limits in each deterministic pool
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">max-subscriber-limit</a> <i>number</i>
Tree	<a href="#">max-subscriber-limit</a>
Range	1   2   4   8   16   32   64   128   256   512   1024   2048   4096   8192   16384   32768
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**subscriber-prefix-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	IPv6 prefix length of the Dual Stack Lite subscribers
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">dual-stack-lite</a> <a href="#">subscriber-prefix-length</a> <i>number</i>
Tree	<a href="#">subscriber-prefix-length</a>
Range	32 to 64   128
Default	128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy** *reference***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy for LSN
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat-policy</a> <i>reference</i>
Tree	<a href="#">nat-policy</a>

Reference	<b>configure service nat nat-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat44

Synopsis	Enter the <b>nat44</b> context
Context	<b>configure router</b> <i>string</i> <b>nat inside large-scale nat44</b>
Tree	<a href="#">nat44</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## destination-prefix [[ip-prefix-length](#)] *string*

Synopsis	Enter the <b>destination-prefix</b> list instance
Context	<b>configure router</b> <i>string</i> <b>nat inside large-scale nat44 destination-prefix</b> <i>string</i>
Tree	<a href="#">destination-prefix</a>
Max. Instances	6144
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [\[ip-prefix-length\]](#) *string*

Synopsis	IP prefix for the destination address
Context	<b>configure router</b> <i>string</i> <b>nat inside large-scale nat44 destination-prefix</b> <i>string</i>
Tree	<a href="#">destination-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-policy *reference*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">destination-prefix</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a>
Tree	<a href="#">nat-policy</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">nat-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## deterministic

Synopsis	Enter the <b>deterministic</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a>
Tree	<a href="#">deterministic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix-map [[source-prefix](#)] *string* [nat-policy](#) [reference](#)

Synopsis	Enter the <b>prefix-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a>
Tree	<a href="#">prefix-map</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [\[source-prefix\]](#) *string*

Synopsis	Traffic sent from sources within this prefix will be NATed
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <a href="#">reference</a>
Tree	<a href="#">prefix-map</a>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy** *reference*

Synopsis	NAT policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i>
Tree	<a href="#">prefix-map</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">nat-policy</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**map** [[from](#)] *string to string*

Synopsis	Enter the <b>map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i> <a href="#">map</a> <i>string to string</i>
Tree	<a href="#">map</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[from]** *string*

Synopsis	Beginning of the range for IPv4 addresses
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">deterministic</a> <a href="#">prefix-map</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i> <a href="#">map</a> <i>string to string</i>
Tree	<a href="#">map</a>

Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**to string**

Synopsis	End of the range for IPv4 addresses
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>inside</b> <b>large-scale</b> <b>nat44</b> <b>deterministic</b> <b>prefix-map</b> <i>string</i> <b>nat-policy</b> <b>reference</b> <b>map</b> <i>string</i> <b>to</b> <i>string</i>
Tree	<b>map</b>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**first-outside-address** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outside IP address mapped to inside IP address range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>inside</b> <b>large-scale</b> <b>nat44</b> <b>deterministic</b> <b>prefix-map</b> <i>string</i> <b>nat-policy</b> <b>reference</b> <b>map</b> <i>string</i> <b>to</b> <i>string</i> <b>first-outside-address</b> <i>string</i>
Tree	<b>first-outside-address</b>
Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**max-subscriber-limit** *number***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Largest value for all subscriber limits in each deterministic pool
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>inside</b> <b>large-scale</b> <b>nat44</b> <b>max-subscriber-limit</b> <i>number</i>
Tree	<b>max-subscriber-limit</b>
Range	1   2   4   8   16   32   64   128   256   512   1024   2048   4096   8192   16384   32768

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-import** *reference*

Synopsis	Import BGP-VPN routes in NAT inside routing context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">nat-import</a> <i>reference</i>
Tree	<a href="#">nat-import</a>
Description	<p>This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT.</p> <p>A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.</p> <p>All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **source-prefix** [[ip-prefix-length](#)] *string*

Synopsis	Enter the <b>source-prefix</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">source-prefix</a> <i>string</i>
Tree	<a href="#">source-prefix</a>
Description	<p>Commands in this context configure the source prefix used to identify traffic for NAT processing. After the traffic is diverted to the ESA-VM or vISA, its source IP address is checked to determine if it belongs to the configured prefix. If it does, the traffic is processed by NAT, otherwise, it is dropped.</p>
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[ip-prefix-length]** *string*

Synopsis	IPv4 prefix length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">source-prefix</a> <i>string</i>
Tree	<a href="#">source-prefix</a>
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy** *reference***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AT policy associated with the source prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat44</a> <a href="#">source-prefix</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i>
Tree	<a href="#">nat-policy</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">nat-policy</a> <i>string</i>
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat64**

Synopsis	Enable the <b>nat64</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a>
Tree	<a href="#">nat64</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of NAT64
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**drop-zero-ipv4-checksum** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Drop UDP datagrams with zero IPv4 checksum
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <b>drop-zero-ipv4-checksum</b> <i>boolean</i>
Tree	<a href="#">drop-zero-ipv4-checksum</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**insert-ipv6-fragment-header** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Include IPv6 fragment header to indicate that the sender allows fragmentation
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <b>insert-ipv6-fragment-header</b> <i>boolean</i>
Tree	<a href="#">insert-ipv6-fragment-header</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-fragmentation *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Control fragmentation of originated downstream IPv6 traffic
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">ip-fragmentation</a> <i>keyword</i>
Tree	<a href="#">ip-fragmentation</a>
Options	fragment-ipv6, fragment-ipv6-unless-ipv4-df-set
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6-mtu *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size of the IPv6 downstream packet in NAT64
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">ipv6-mtu</a> <i>number</i>
Tree	<a href="#">ipv6-mtu</a>
Range	1280 to 9212
Default	1520
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	IPv6 prefix to derive the IPv6 address from the IPv4 address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>

Default	64:ff9b::/96
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-prefix-length** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	IPv6 prefix length for the NAT64 subscribers
Context	<b>configure</b> <i>router string nat inside large-scale nat64 subscriber-prefix-length number</i>
Tree	<a href="#">subscriber-prefix-length</a>
Range	32 to 64   128
Default	128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tos**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>tos</b> context
Context	<b>configure</b> <i>router string nat inside large-scale nat64 tos</i>
Tree	<a href="#">tos</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## downstream

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>downstream</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">downstream</a>
Tree	<a href="#">downstream</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## use-ipv4 *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Copy TOS/DSCP bits from the incoming IPv4 frame to the outgoing IPv6 frame
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">downstream</a> <a href="#">use-ipv4</a> <i>boolean</i>
Tree	<a href="#">use-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## upstream

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>upstream</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">upstream</a>
Tree	<a href="#">upstream</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**set-tos** (*keyword* | *number*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TOS/DSCP bits in IPv4 frame in the upstream direction
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">nat64</a> <a href="#">tos</a> <a href="#">upstream</a> <b>set-tos</b> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">set-tos</a>
Range	0 to 255
Options	use-ipv6
Default	use-ipv6
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**redundancy**

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <b>redundancy</b>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer** *string*

Synopsis	IP address of the NAT redundancy peer for this virtual router instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">redundancy</a> <b>peer</b> <i>string</i>
Tree	<a href="#">peer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**peer6** *string*

Synopsis	IPv6 address of the NAT redundancy peer for this virtual router instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">redundancy</a> <b>peer6</b> <i>string</i>
Tree	<a href="#">peer6</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **steering-route** *string*

Synopsis	IP address and prefix length of the steering route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">steering-route</a> <i>string</i>
Tree	<a href="#">steering-route</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **static-port-forwards**

Synopsis	Enter the <b>static-port-forwards</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">static-port-forwards</a>
Tree	<a href="#">static-port-forwards</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **spf-nat-policy** [[nat-policy](#)] *reference*

Synopsis	Add a list entry for <b>spf-nat-policy</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">static-port-forwards</a> <a href="#">spf-nat-policy</a> <i>reference</i>
Tree	<a href="#">spf-nat-policy</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[nat-policy]** *reference*

Synopsis	NAT policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">static-port-forwards</a> <a href="#">spf-nat-policy</a> <i>reference</i>
Tree	<a href="#">spf-nat-policy</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">nat-policy</a> <i>string</i>
Notes	This element is part of a list key.

Introduced 23.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### subscriber-identification

Synopsis Enter the **subscriber-identification** context  
Context **configure** [router](#) [string](#) [nat](#) [inside](#) [large-scale](#) [subscriber-identification](#)  
Tree [subscriber-identification](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### admin-state *keyword*

Synopsis Administrative state of subscriber identification  
Context **configure** [router](#) [string](#) [nat](#) [inside](#) [large-scale](#) [subscriber-identification](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### attribute

Synopsis Enter the **attribute** context  
Context **configure** [router](#) [string](#) [nat](#) [inside](#) [large-scale](#) [subscriber-identification](#) [attribute](#)  
Tree [attribute](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### type *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	RADIUS attribute used as subscriber identifier
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">attribute</a> <a href="#">type</a> <a href="#">keyword</a>
Tree	<a href="#">type</a>
Options	alc-sub-string, user-name, class, station-id, imsi, imei
Default	alc-sub-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### vendor keyword

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The RADIUS Vendor
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">attribute</a> <a href="#">vendor</a> <a href="#">keyword</a>
Tree	<a href="#">vendor</a>
Options	standard, nokia, 3gpp
Default	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### description string

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**drop-unidentified-traffic** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Drop traffic from unidentified flows
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">drop-unidentified-traffic</a> <i>boolean</i>
Tree	<a href="#">drop-unidentified-traffic</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**radius-proxy-server**

Synopsis	Enable the <b>radius-proxy-server</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a>
Tree	<a href="#">radius-proxy-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**router-instance** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Server name
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">subscriber-identification</a> <a href="#">radius-proxy-server</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## traffic-identification

Synopsis	Enter the <b>traffic-identification</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">traffic-identification</a>
Tree	<a href="#">traffic-identification</a>
Description	Commands in this context configure traffic identification for NAT processing
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## source-prefix-only *boolean*

Synopsis	Allow traffic associated with source prefixes only
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">inside</a> <a href="#">large-scale</a> <a href="#">traffic-identification</a> <a href="#">source-prefix-only</a> <i>boolean</i>
Tree	<a href="#">source-prefix-only</a>
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## map

Synopsis	Enter the <b>map</b> context
----------	------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a>
Tree	<a href="#">map</a>
Introduced	16.0.R1
Platforms	VSR

### **map-domain** [[domain-name](#)] *reference*

Synopsis	Add a list entry for <b>map-domain</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a> <a href="#">map-domain</a> <i>reference</i>
Tree	<a href="#">map-domain</a>
Introduced	16.0.R1
Platforms	VSR

### **[domain-name]** *reference*

Synopsis	MAP domain template name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">map</a> <a href="#">map-domain</a> <i>reference</i>
Tree	<a href="#">map-domain</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">map-t</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	VSR

### **outside**

Synopsis	Enter the <b>outside</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a>
Tree	<a href="#">outside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dnat-only**

Synopsis	Enter the <b>dnat-only</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">dnat-only</a>

---

Tree	<a href="#">dnat-only</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **route-limit** *number*

Synopsis	Limit for internal routes for downstream traffic
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">dnat-only</a> <a href="#">route-limit</a> <i>number</i>
Tree	<a href="#">route-limit</a>
Range	1 to 131072
Default	32768
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filters**

Synopsis	Enter the <b>filters</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a>
Tree	<a href="#">filters</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **downstream**

Synopsis	Enter the <b>downstream</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a> <a href="#">downstream</a>
Tree	<a href="#">downstream</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4** *reference*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">filters</a> <a href="#">downstream</a> <a href="#">ipv4</a> <i>reference</i>
Tree	<a href="#">ipv4</a>

---

Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure router string nat outside filters downstream ipv6 reference</b>
Tree	<a href="#">ipv6</a>
Reference	<b>configure filter ipv6-filter string</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### upstream

Synopsis	Enter the <b>upstream</b> context
Context	<b>configure router string nat outside filters upstream</b>
Tree	<a href="#">upstream</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv4 reference

Synopsis	IPv4 filter policy name
Context	<b>configure router string nat outside filters upstream ipv4 reference</b>
Tree	<a href="#">ipv4</a>
Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure router string nat outside filters upstream ipv6 reference</b>
Tree	<a href="#">ipv6</a>

---

Reference	<b>configure filter ipv6-filter string</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu number**

Synopsis	MTU for downstream traffic
Context	<b>configure router string nat outside mtu number</b>
Tree	<b>mtu</b>
Range	512 to 9000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool [name] string**

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure router string nat outside pool string</b>
Tree	<b>pool</b>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name] string**

Synopsis	NAT pool name
Context	<b>configure router string nat outside pool string</b>
Tree	<b>pool</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**address-pooling** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Outside IP address allocation mode for a NAT subscriber
Context	<b>configure</b> <i>router</i> <i>string</i> <b>nat</b> <i>outside</i> <b>pool</b> <i>string</i> <b>address-pooling</b> <i>keyword</i>
Tree	<a href="#">address-pooling</a>
Description	<p>This command configures address pooling which defines a relationship between the NAT subscriber and its outside IP address(es).</p> <p>The behavior in NAT, as defined in RFC 7857, strongly recommends that the NAT subscribers be mapped to a single outside IP address. If this outside IP address runs out of ports, no new ports for the subscriber are allocated. This behavior is called paired address pooling.</p> <p>The alternative behavior is arbitrary address pooling, where a NAT subscriber is mapped to multiple IP addresses when the current outside IP address runs out of ports. This way, the subscriber becomes associated with multiple outside IP addresses. While this results in better resource utilization in NAT, it may negatively affect the behavior of some applications.</p>
Options	paired, arbitrary
Default	paired
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**address-range** [*start*] *string* *end* *string*

Synopsis	Enter the <b>address-range</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <b>nat</b> <i>outside</i> <b>pool</b> <i>string</i> <b>address-range</b> <i>string</i> <i>end</i> <i>string</i>
Tree	<a href="#">address-range</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[start]** *string*

Synopsis	Lower bound of the NAT address range
Context	<b>configure</b> <i>router</i> <i>string</i> <b>nat</b> <i>outside</i> <b>pool</b> <i>string</i> <b>address-range</b> <i>string</i> <i>end</i> <i>string</i>

---

Tree	<a href="#">address-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end string**

Synopsis	Upper bound of the NAT address range
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">address-range</a> <a href="#">string</a> <a href="#">end</a> <a href="#">string</a>
Tree	<a href="#">address-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">address-range</a> <a href="#">string</a> <a href="#">end</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **drain boolean**

Synopsis	Start or stop draining this NAT address range
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">address-range</a> <a href="#">string</a> <a href="#">end</a> <a href="#">string</a> <a href="#">drain</a> <a href="#">boolean</a>
Tree	<a href="#">drain</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the outside routing NAT pool
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**applications**

Synopsis	Enter the <b>applications</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">applications</a>
Tree	<a href="#">applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**agnostic** *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool to create in the outside routing context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">applications</a> <a href="#">agnostic</a> <i>boolean</i>
Tree	<a href="#">agnostic</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**flexible-port-allocation** *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocates individual ports per subscriber in a pool
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">applications</a> <a href="#">flexible-port-allocation</a> <a href="#">boolean</a>
Tree	<a href="#">flexible-port-allocation</a>
Description	When configured to <b>true</b> , the router enables LSN44 pool behavior, where a subscriber allocates ports individually and not through port blocks. The port block is removed and port logging is disabled for this application. Static port forwards can be interleaved with dynamically allocated ports when this application is enabled. A subscriber limit that is the maximum number of subscribers per outside IP address is not supported for this application.
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**icmp-echo-reply** *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">icmp-echo-reply</a> <a href="#">boolean</a>
Tree	<a href="#">icmp-echo-reply</a>
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.

In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.

In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.

In LSN, the reply from an outside IP address is generated regardless if a binding is present.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-aware

Synopsis	Enter the <b>I2-aware</b> context
Context	<b>configure</b> <i>router string nat outside pool string I2-aware</i>
Tree	<i>I2-aware</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-host

Synopsis	Enable the <b>default-host</b> context
Context	<b>configure</b> <i>router string nat outside pool string I2-aware default-host</i>
Tree	<i>default-host</i>
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inside-router-instance *string*

Synopsis	Router instance of the DMZ
----------	----------------------------

Context	<b>configure</b> <i>router string nat outside pool string l2-aware default-host inside-router-instance string</i>
Tree	<a href="#">inside-router-instance</a>
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-address** *string*

Synopsis	IP address of the default DMZ host
Context	<b>configure</b> <i>router string nat outside pool string l2-aware default-host ip-address string</i>
Tree	<a href="#">ip-address</a>
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	<b>configure</b> <i>router string nat outside pool string l2-aware default-host rate-limit number</i>
Tree	<a href="#">rate-limit</a>
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host.  Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Units	megabps
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**external-assignment** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	External IP address for Layer-2-aware
Context	<b>configure</b> <i>router</i> <i>string</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>string</i> <i>l2-aware</i> <i>external-assignment</i> <i>boolean</i>
Tree	<i>external-assignment</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port-block-extension****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>port-block-extension</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>string</i> <i>l2-aware</i> <i>port-block-extension</i>
Tree	<i>port-block-extension</i>
Description	Commands in this context configure the attributes of the port block reserved for a dynamic NAT traffic flow for each subscriber with a port forwarding entry.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ports** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per dynamic port-block
Context	<b>configure</b> <i>router</i> <i>string</i> <i>nat</i> <i>outside</i> <i>pool</i> <i>string</i> <i>l2-aware</i> <i>port-block-extension</i> <i>ports</i> <i>number</i>

Tree	<a href="#">ports</a>
Description	<p>For Carrier Grade NAT (CGN), this command represents the size of all port blocks for NAT subscribes in the NAT pool.</p> <p>For L2-Aware NAT, this command represents only the size of the initial port block of a subscriber in the L2-aware NAT pool. Additional port-blocks (extended port blocks) for the L2-Aware subscriber must be explicitly enabled under the <b>I2-aware port-block-extension</b> hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port-blocks.</p>
Range	10 to 5000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## subscriber

Synopsis	Enter the <b>subscriber</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">I2-aware</a> <a href="#">port-block-extension</a> <a href="#">subscriber</a>
Tree	<a href="#">subscriber</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">I2-aware</a> <a href="#">port-block-extension</a> <a href="#">subscriber</a> <a href="#">watermarks</a>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">I2-aware</a> <a href="#">port-block-extension</a> <a href="#">subscriber</a> <a href="#">watermarks</a> <a href="#">high</a> <a href="#">number</a>
Tree	<a href="#">high</a>

Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure</b> <i>router string nat outside pool string l2-aware port-block-extension subscriber watermarks low number</i>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-limit number**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of L2-Aware NAT subscribers per outside address
Context	<b>configure</b> <i>router string nat outside pool string l2-aware port-block-extension subscriber-limit number</i>
Tree	<a href="#">subscriber-limit</a>
Description	When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following: <ul style="list-style-type: none"> <li>• well-known port (this is a fixed and permanently allocated block of ports for all NAT types)</li> <li>• static port-forwarding range (if enabled by configuration)</li> </ul>

- port range allocated for initial port blocks of each L2-Aware subscriber
- port range allocated for extended port blocks for the remainder after the three previous port ranges

The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber.

The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.

Range	2 to 2000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <b>nat outside pool</b> <i>string</i> <b>l2-aware port-block-extension</b> <b>watermarks</b>
Tree	<b>watermarks</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure</b> <i>router</i> <i>string</i> <b>nat outside pool</b> <i>string</i> <b>l2-aware port-block-extension</b> <b>watermarks</b> <b>high</b> <i>number</i>
Tree	<b>high</b>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**low number**

Synopsis	Low watermark percentage
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat outside pool</a> <i>string</i> <a href="#">l2-aware port-block-extension watermarks</a> <a href="#">low number</a>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**large-scale**

Synopsis	Enter the <b>large-scale</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat outside pool</a> <i>string</i> <a href="#">large-scale</a>
Tree	<a href="#">large-scale</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**default-host**

Synopsis	Enable the <b>default-host</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat outside pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a>
Tree	<a href="#">default-host</a>
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**inside-router-instance** *string*

Synopsis	Router instance of the DMZ
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a> <a href="#">inside-router-instance</a> <i>string</i>
Tree	<a href="#">inside-router-instance</a>
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ip-address** *string*

Synopsis	IP address of the default DMZ host
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**rate-limit** *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">default-host</a> <a href="#">rate-limit</a> <i>number</i>
Tree	<a href="#">rate-limit</a>
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host.  Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Units	megabps
Default	10
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## deterministic

Synopsis Enter the **deterministic** context

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [deterministic](#)

Tree [deterministic](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-reservation *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Number of ports per deterministic port-block

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [deterministic](#) [port-reservation](#) *number*

Tree [port-reservation](#)

Range 1 to 65536

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis Enable the **watermarks** context

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [deterministic](#) [watermarks](#)

Tree [watermarks](#)

Description Commands in this context monitor extended (dynamic) port-block utilization per outside IP in a NAT pool in deterministic LSN.

High and low thresholds are configured in percentages of total available extended port-blocks per outside IP in a pool. Both values represent extended port-block utilization or occupancy per outside IP in a pool.

For the system to generate those events, the NAT event-id 2045 must be enabled through configuration in the log event-control.

Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis	High watermark percentage
Context	<b>configure</b> <i>router string nat outside pool string large-scale deterministic watermarks high number</i>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure</b> <i>router string nat outside pool string large-scale deterministic watermarks low number</i>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **flexible-port-allocation**

Synopsis	Enter the <b>flexible-port-allocation</b> context
----------	---

Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">large-scale</a> <a href="#">flexible-port-allocation</a>
Tree	<a href="#">flexible-port-allocation</a>
Description	Commands in this context enable LSN44 pool behavior where a subscriber allocates ports individually instead of through port blocks. The port block concept is removed for this application. Static port forwards can be interleaved with dynamically-allocated ports. Port logging is disabled when this application is enabled. A subscriber limit that is the maximum number of subscribers per outside IP address is not supported for this application.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## free-port-limit

Synopsis	Enter the <b>free-port-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">large-scale</a> <a href="#">flexible-port-allocation</a> <a href="#">free-port-limit</a>
Tree	<a href="#">free-port-limit</a>
Description	Commands in this context configure the minimal number of ports per protocol and per outside IP address in an LSN44 pool with flexible port allocations that must be free to map new subscribers to the outside IP address. This limit avoids rapid port depletion for new subscribers in paired pooling mode, or unnecessary toggling between external IP addresses for existing subscribers in arbitrary pooling mode.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Limit of free ports for ICMP per outside IP address
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">large-scale</a> <a href="#">flexible-port-allocation</a> <a href="#">free-port-limit</a> <a href="#">icmp</a> <i>number</i>
Tree	<a href="#">icmp</a>
Description	This command configures the minimum number of ports for the ICMP protocol per outside IP address in an LSN44 pool with flexible port allocations that are free so that a new subscriber is mapped to the outside IP address. This limit is set to avoid rapid port depletion for new subscribers in paired pooling mode, or unnecessary toggling between external IP addresses for existing subscribers in arbitrary pooling mode.

Range	1 to 10000
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### tcp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Limit of free ports for TCP per outside IP address
Context	<b>configure</b> <i>router string nat outside pool string large-scale flexible-port-allocation free-port-limit tcp number</i>
Tree	<a href="#">tcp</a>
Description	This command configures the minimum number of ports for TCP protocol per outside IP address in an LSN44 pool with flexible port allocations that are free so that a new subscriber is mapped to the outside IP address. This limit is set to avoid rapid port depletion for new subscribers in paired pooling mode, or unnecessary toggling between external IP addresses for existing subscribers in arbitrary pooling mode.
Range	1 to 10000
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### udp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Limit of free ports for UDP per outside IP address
Context	<b>configure</b> <i>router string nat outside pool string large-scale flexible-port-allocation free-port-limit udp number</i>
Tree	<a href="#">udp</a>
Description	This command configures the minimum number of ports for UDP protocol per outside IP address in an LSN44 pool with flexible port allocations that are free so that a new subscriber is mapped to the outside IP address. This limit is set to avoid rapid port depletion for new subscribers in paired pooling mode, or unnecessary toggling between external IP addresses for existing subscribers in arbitrary pooling mode.
Range	1 to 10000
Introduced	23.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## redundancy

Synopsis Enter the **redundancy** context

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [redundancy](#)

## monitor-route *string*

Synopsis	Monitor the peer route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">large-scale</a> <a href="#">redundancy</a> <a href="#">monitor-route</a> <i>string</i>
Tree	<a href="#">monitor-route</a>
Notes	The following elements are part of a choice: ( <b>admin-state</b> , <b>export-route</b> , and <b>monitor-route</b> ) or <b>follow</b> .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-limit** *number*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of subscribers per IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>large-scale</b> <b>subscriber-limit</b> <i>number</i>
Tree	<b>subscriber-limit</b>
Range	1 to 65535   4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Mode of operation of this NAT address pool
Context	<b>configure</b> <b>router</b> <i>string</i> <b>nat</b> <b>outside</b> <b>pool</b> <i>string</i> <b>mode</b> <i>keyword</i>
Tree	<b>mode</b>
Options	auto, napt, one-to-one
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-group** *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a NAT group
Context	<b>configure</b> <i>router string nat outside pool string nat-group reference</i>
Tree	<i>nat-group</i>
Reference	<b>configure</b> <i>isa nat-group number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port-forwarding**

Synopsis	Enter the <b>port-forwarding</b> context
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding</i>
Tree	<i>port-forwarding</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dynamic-block-reservation** *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding dynamic-block-reservation boolean</i>
Tree	<i>dynamic-block-reservation</i>
Description	<p>When configured to <b>true</b>, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p>

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### range-end *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding range-end number</i>
Tree	<a href="#">range-end</a>
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-start</b> command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the <b>range-end</b> implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0   1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### range-start *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	<b>configure</b> <i>router string nat outside pool string port-forwarding range-start number</i>
Tree	<a href="#">range-start</a>

Description	This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-end</b> command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.  Port 0 is always excluded from the port forwarding range.  Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.
Range	0   1   1025 to 65535
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-reservation

Synopsis	Enter the <b>port-reservation</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <b>port-reservation</b>
Tree	<a href="#">port-reservation</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-blocks *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <a href="#">string</a> <a href="#">port-reservation</a> <a href="#">port-blocks</a> <i>number</i>
Tree	<a href="#">port-blocks</a>
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.  For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the <b>I2-aware port-block-extension</b> hierarchy in the NAT pool.
Range	0 to 64512

Notes	The following elements are part of a choice: <b>port-blocks</b> or <b>ports</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ports** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	<b>configure</b> <i>router string nat outside pool string port-reservation ports number</i>
Tree	<i>ports</i>
Description	<p>For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool.</p> <p>For L2-aware NAT, this command specifies the size of the initial port-block of a subscriber in the pool. Additional port blocks (extended port blocks) for the L2-aware subscriber must be explicitly enabled under the <b>I2-aware port-block-extension</b> hierarchy in the NAT pool.</p> <p>This command does not affect the size of extended port blocks.</p> <p>For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.</p>
Range	0 to 64512
Notes	The following elements are part of a choice: <b>port-blocks</b> or <b>ports</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool type
Context	<b>configure</b> <i>router string nat outside pool string type keyword</i>
Tree	<i>type</i>
Options	large-scale, l2-aware, wlan-gw-anchor
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <i>router string nat outside pool string watermarks</i>
Tree	<i>watermarks</i>
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### high number

Synopsis	High watermark percentage
Context	<b>configure</b> <i>router string nat outside pool string watermarks high number</i>
Tree	<i>high</i>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### low number

Synopsis	Low watermark percentage
Context	<b>configure</b> <i>router string nat outside pool string watermarks low number</i>
Tree	<i>low</i>

Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wlan-gw-group *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a WLAN GW group for NAT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">nat</a> <a href="#">outside</a> <a href="#">pool</a> <i>string</i> <a href="#">wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### network-domains

Synopsis	Enter the <b>network-domains</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">network-domains</a>
Tree	<a href="#">network-domains</a>
Introduced	16.0.R4
Platforms	All

### network-domain [[domain-name](#)] *string*

Synopsis	Enter the <b>network-domain</b> list instance
----------	---

Context	<b>configure router</b> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i>

Max. Instances	5
Introduced	16.0.R4
Platforms	All

### **[domain-name]** *string*

Synopsis	Network domain name
Context	<b>configure router</b> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i>
Tree	<a href="#">network-domain</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure router</b> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **origin-validation**

Synopsis	Enter the <b>origin-validation</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">origin-validation</a>
Tree	<a href="#">origin-validation</a>
Introduced	19.5.R1
Platforms	All

**rpki-session** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>rpki-session</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">origin-validation</a> <a href="#">rpki-session</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">rpki-session</a>
Introduced	19.5.R1
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IPv4 or IPv6 address for the RPKI local cache server
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">origin-validation</a> <a href="#">rpki-session</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">rpki-session</a>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the RPKI session
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">origin-validation</a> <a href="#">rpki-session</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

**connect-retry** *number*

Synopsis	RPKI Connect Retry timer value
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">origin-validation</a> <a href="#">rpki-session</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">connect-retry</a> <i>number</i>
Tree	<a href="#">connect-retry</a>
Range	1 to 65535

Units	seconds
Default	120
Introduced	19.5.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>description</b> <i>string</i>

Platforms	All

### **local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local address for the TCP connection setup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>local-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-address</b>
Introduced	19.5.R1
Platforms	All

### **port** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination port number used to contact cache server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>port</b> <i>number</i>
Tree	<b>port</b>

Range	0 to 65535
Default	323
Introduced	19.5.R1
Platforms	All

## refresh-time

Synopsis	Enter the <b>refresh-time</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>refresh-time</b>
Tree	<b>refresh-time</b>
Introduced	19.5.R1
Platforms	All

## hold-time *number*

Synopsis	Length of time that the session is to be considered UP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>refresh-time</b> <b>hold-time</b> <i>number</i>
Tree	<b>hold-time</b>
Range	60 to 65535
Units	seconds
Default	600
Introduced	19.5.R1
Platforms	All

## value *number*

Synopsis	Periodic Serial Query PDUs sent for liveness detection
Context	<b>configure</b> <b>router</b> <i>string</i> <b>origin-validation</b> <b>rpki-session</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>refresh-time</b> <b>value</b> <i>number</i>
Tree	<b>value</b>
Range	30 to 32767
Units	seconds
Default	300
Introduced	19.5.R1

Platforms All

### **stale-time** *number*

Synopsis Maximum time prefix origin validation remains usable

Context **configure** **router** *string* **origin-validation** **rpki-session** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **stale-time** *number*

Tree **stale-time**

Range 60 to 3600

Units seconds

Default 3600

Introduced 19.5.R1

Platforms All

### **static-entry** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*) **upto** *number* **origin-as** *number*

Synopsis Enter the **static-entry** list instance

Context **configure** **router** *string* **origin-validation** **static-entry** (*ipv4-prefix* | *ipv6-prefix*) **upto** *number* **origin-as** *number*

Tree **static-entry**

Introduced 19.5.R1

Platforms All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IPv4 or IPv6 address with the minimum prefix and length

Context **configure** **router** *string* **origin-validation** **static-entry** (*ipv4-prefix* | *ipv6-prefix*) **upto** *number* **origin-as** *number*

Tree **static-entry**

Notes This element is part of a list key.

Introduced 19.5.R1

Platforms All

### **upto** *number*

Synopsis Maximum prefix length

Context	<b>configure router</b> <i>string</i> <b>origin-validation static-entry</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>upto number origin-as number</b>
Tree	<b>static-entry</b>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **origin-as** *number*

Synopsis	Origin AS number
Context	<b>configure router</b> <i>string</i> <b>origin-validation static-entry</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>upto number origin-as number</b>
Tree	<b>static-entry</b>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **valid** *boolean*

Synopsis	Designate mix of origin AS and prefix range as valid
Context	<b>configure router</b> <i>string</i> <b>origin-validation static-entry</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>upto number origin-as number valid boolean</b>
Tree	<b>valid</b>
Default	true
Introduced	19.5.R1
Platforms	All

### **ospf** [**ospf-instance**] *number*

Synopsis	Enter the <b>ospf</b> list instance
Context	<b>configure router</b> <i>string</i> <b>ospf number</b>
Tree	<b>ospf</b>
Max. Instances	32

Introduced	16.0.R1
Platforms	All

**[ospf-instance] number**

Synopsis	Value for the integrated OSPF instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i>
Tree	<a href="#">ospf</a>
Range	0 to 31
MD-CLI	0
Default	
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the OSPF instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">advertise-router-capability</a>
Options	false, link, area, as
Default	false
Introduced	16.0.R1
Platforms	All

**advertise-tunnel-link** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <i>router string ospf number advertise-tunnel-link boolean</i>
Tree	<a href="#">advertise-tunnel-link</a>
Default	false
Introduced	16.0.R1
Platforms	All

**area** [[area-id](#)] *string*

Synopsis	Enter the <b>area</b> list instance
Context	<b>configure</b> <i>router string ospf number area string</i>
Tree	<a href="#">area</a>
Introduced	16.0.R1
Platforms	All

**[area-id]** *string*

Synopsis	Area-ID attribute
Context	<b>configure</b> <i>router string ospf number area string</i>
Tree	<a href="#">area</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <i>router string ospf number area string advertise-router-capability boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true
Introduced	16.0.R1
Platforms	All

**area-range** [**ip-prefix-mask**] *string*

Synopsis	Enter the <b>area-range</b> list instance
Context	<b>configure</b> <i>router string ospf number area string area-range string</i>
Tree	<a href="#">area-range</a>
Introduced	16.0.R1
Platforms	All

**[ip-prefix-mask]** *string*

Synopsis	IP prefix and subnet mask for the range used by the ABR
Context	<b>configure</b> <i>router string ospf number area string area-range string</i>
Tree	<a href="#">area-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise** *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	<b>configure</b> <i>router string ospf number area string area-range string advertise boolean</i>
Tree	<a href="#">advertise</a>
Default	true
Introduced	16.0.R1
Platforms	All

**bier**

Synopsis	Enter the <b>bier</b> context
Context	<b>configure</b> <i>router string ospf number area string bier</i>
Tree	<a href="#">bier</a>
Description	Commands in this context configure the administrative state of BIER and the BIER template assigned to the OSPF area.
Introduced	20.5.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BIER
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>bier</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	All

**template** *reference*

Synopsis	BIER template name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>bier</b> <b>template</b> <i>reference</i>
Tree	<a href="#">template</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>bier</b> <b>template</b> <i>string</i>
Introduced	20.5.R1
Platforms	All

**blackhole-aggregate** *boolean*

Synopsis	Install a low priority blackhole route to avoid loops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>blackhole-aggregate</b> <i>boolean</i>
Tree	<a href="#">blackhole-aggregate</a>
Default	true
Introduced	16.0.R1
Platforms	All

**database-export-exclude** *boolean*

Synopsis	Exclude IGP link-state OSPF area info into TE-DB
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>database-export-exclude</b> <i>boolean</i>
Tree	<a href="#">database-export-exclude</a>
Default	false
Introduced	16.0.R1

Platforms All

### **export-policy** *reference*

Synopsis Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route

Context **configure** **router** *string* **ospf** *number* **area** *string* **export-policy** *reference*

Tree [export-policy](#)

Reference **configure** [policy-options](#) [policy-statement](#) *string*

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **import-policy** *reference*

Synopsis Route imported as Summary Type 3/Inter-Area-Prefix-LSA

Context **configure** **router** *string* **ospf** *number* **area** *string* **import-policy** *reference*

Tree [import-policy](#)

Reference **configure** [policy-options](#) [policy-statement](#) *string*

### **interface** [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance

Context **configure** **router** *string* **ospf** *number* **area** *string* **interface** *string*

Tree [interface](#)

Description Commands in this context configure the attributes of the OSPF area interface.  
Unless they are explicitly configured, interfaces are not activated by default in any interior gateway protocol such as OSPF.

Introduced 16.0.R1

Platforms All

### **[interface-name]** *string*

Synopsis Router interface name

Context **configure** *router string ospf number area string interface string*

Tree [interface](#)

Description This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for **configure router interface** and **configure service ies interface** commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

If the IP interface name does not exist or does not have an IP address configured, an error message is returned.

If the IP interface exists in a different area it is moved to this area.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **adjacency-set** [*id*] *reference*

Synopsis Add a list entry for **adjacency-set**

Context **configure** *router string ospf number area string interface string adjacency-set reference*

Tree [adjacency-set](#)

Max. Instances 1024

Introduced 16.0.R1

Platforms All

Synopsis	Adjacency SID label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>adjacency-sid</b> <b>label</b> <i>number</i>
Tree	<b>label</b>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
----------	---

Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>advertise-router-capability</i> <i>boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **advertise-subnet** *boolean*

Synopsis	Advertise point-to-point interfaces as subnet routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>advertise-subnet</i> <i>boolean</i>
Tree	<a href="#">advertise-subnet</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication key
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>authentication-key</i> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>authentication-keychain</i> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <i>system</i> <i>security</i> <i>keychains</i> <i>keychain</i> <i>string</i>
Introduced	16.0.R3
Platforms	All

**authentication-type** *keyword*

Synopsis	Authentication type used on OSPF interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>authentication-type</b> <i>keyword</i>
Tree	<b>authentication-type</b>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

**bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	16.0.R1
Platforms	All

**remain-down-on-failure** *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>remain-down-on-failure</b> <i>boolean</i>
Tree	<b>remain-down-on-failure</b>
Default	false
Introduced	16.0.R1
Platforms	All

**strict** *boolean*

Synopsis	Enable BFD strict mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>strict</b> <i>boolean</i>
Tree	<b>strict</b>
Description	When configured to <b>true</b> , the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to <b>true</b> , the router uses Link-Local Signaling (LLS)

with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default	false
Introduced	23.3.R1
Platforms	All

### **strict-mode-holddown** *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>strict-mode-holddown</b> <i>number</i>
Tree	<b>strict-mode-holddown</b>
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1
Platforms	All

### **dead-interval** *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>dead-interval</b> <i>number</i>
Tree	<b>dead-interval</b>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **flex-algo** [**flex-algo-id**] *number*

Synopsis	Enter the <b>flex-algo</b> list instance
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i>
Tree	<a href="#">flex-algo</a>
Description	Commands in this context configure the attributes of OSPFv2 flexible algorithms interface.
Max. Instances	7
Introduced	21.7.R1
Platforms	All

### **[flex-algo-id]** *number*

Synopsis	Flexible algorithm ID
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i>
Tree	<a href="#">flex-algo</a>
Range	128 to 255
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

### **node-sid**

Synopsis	Enable the <b>node-sid</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i> <i>node-sid</i>
Tree	<a href="#">node-sid</a>
Introduced	21.7.R1
Platforms	All

### **index** *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf</i> <i>number</i> <i>area</i> <i>string</i> <i>interface</i> <i>string</i> <i>flex-algo</i> <i>number</i> <i>node-sid</i> <i>index</i> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .

Introduced	21.7.R1
Platforms	All

**label** *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <b>router</b> <i>string ospf number area string interface string flex-algo number node-sid label number</i>
Tree	<b>label</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.7.R1
Platforms	All

**hello-interval** *number*

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure</b> <b>router</b> <i>string ospf number area string interface string hello-interval number</i>
Tree	<b>hello-interval</b>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**interface-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	<b>configure</b> <b>router</b> <i>string ospf number area string interface string interface-type keyword</i>
Tree	<b>interface-type</b>
Description	This command specifies the interface type. <b>broadcast</b> - Broadcast network

To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.

**non-broadcast** - Non-broadcast network

**point-to-point** - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

**p2mp-nbma** - Point-to-multipoint on a link without broadcast or multicast support

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

**secondary** - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	16.0.R1
Platforms	All

### load-balancing-weight *number*

Synopsis	Load balancing weight for an OSPF interface
Context	<b>configure</b> <i>router string ospf number area string interface string load-balancing-weight number</i>
Tree	<a href="#">load-balancing-weight</a>
Range	1 to 4294967295
Introduced	20.2.R1
Platforms	All

### loopfree-alternate

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure</b> <i>router string ospf number area string interface string loopfree-alternate</i>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

**exclude** *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>loopfree-alternate</b> <b>exclude</b> <i>boolean</i>
Tree	<b>exclude</b>
Default	false
Introduced	16.0.R3
Platforms	All

**policy-map**

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>loopfree-alternate</b> <b>policy-map</b>
Tree	<b>policy-map</b>
Introduced	16.0.R3
Platforms	All

**route-nh-template** *reference*

Synopsis	Route next hop policy template name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>loopfree-alternate</b> <b>policy-map</b> <b>route-nh-template</b> <i>reference</i>
Tree	<b>route-nh-template</b>
Reference	<b>configure</b> <b>routing-options</b> <b>route-next-hop-policy</b> <b>template</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

**lsa-filter-out** *keyword*

Synopsis	LSA flooding reduction
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>lsa-filter-out</b> <i>keyword</i>
Tree	<b>lsa-filter-out</b>
Options	none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults

Default	none
Introduced	16.0.R1
Platforms	All

### **message-digest-key** [[key-id](#)] *number*

Synopsis	Enter the <b>message-digest-key</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">message-digest-key</a> <i>number</i>
Tree	<a href="#">message-digest-key</a>
Introduced	16.0.R1
Platforms	All

### **[key-id]** *number*

Synopsis	Message digest index
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">message-digest-key</a> <i>number</i>
Tree	<a href="#">message-digest-key</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **md5** *string*

Synopsis	MD5 hash key
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">message-digest-key</a> <i>number</i> <b>md5</b> <i>string</i>
Tree	<a href="#">md5</a>
String Length	1 to 51
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**metric number**

Synopsis	Route cost metric for the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**mtu number**

Synopsis	MTU for the OSPF to use on the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

**neighbor [address] string**

Synopsis	Add a list entry for <b>neighbor</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>
Introduced	16.0.R1
Platforms	All

**[address] string**

Synopsis	IPv4 address of the OSPFv2 neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## node-sid

Synopsis	Enable the <b>node-sid</b> context
Context	<b>configure</b> <i>router string ospf number area string interface string node-sid</i>
Tree	<i>node-sid</i>
Description	<p>Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.</p> <p>In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.</p> <p>This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.</p> <p>The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.</p> <p>The <b>clear-n-flag</b> option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p> <p>The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.</p>
Introduced	16.0.R1
Platforms	All

## clear-n-flag *boolean*

Synopsis	Clear the N-flag in an OSPF prefix
Context	<b>configure</b> <i>router string ospf number area string interface string node-sid clear-n-flag boolean</i>
Tree	<i>clear-n-flag</i>
Description	When configured to <b>true</b> , this command allows the user to clear the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default	false
Introduced	16.0.R1
Platforms	All

### **index number**

Synopsis	Node SID index for this interface
Context	<b>configure router string ospf number area string interface string node-sid index number</b>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **label number**

Synopsis	Label value for the node SID
Context	<b>configure router string ospf number area string interface string node-sid label number</b>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

### **passive boolean**

Synopsis	Advertise passive interfaces as OSPF interfaces
Context	<b>configure router string ospf number area string interface string passive boolean</b>
Tree	<a href="#">passive</a>
Introduced	16.0.R1

Platforms All

### **poll-interval** *number*

Synopsis Interval for Hellos to non-adjacent OSPF NBMA neighbor

Context **configure** *router string ospf number area string interface string poll-interval number*

Tree [poll-interval](#)

Max. Range 0 to 4294967295

Units seconds

Default 120

Introduced 16.0.R1

Platforms All

### **priority** *number*

Synopsis Interface priority in the DR election on the subnet

Context **configure** *router string ospf number area string interface string priority number*

Tree [priority](#)

Range 0 to 255

Default 1

Introduced 16.0.R1

Platforms All

### **retransmit-interval** *number*

Synopsis Time before OSPF retransmits an unacknowledged LSA

Context **configure** *router string ospf number area string interface string retransmit-interval number*

Tree [retransmit-interval](#)

Range 1 to 1800

**number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <i>router string ospf number export-limit number number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <i>router string ospf number export-policy reference</i>
Tree	<i>export-policy</i>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <i>policy-options policy-statement string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## external-db-overflow

Synopsis	Enable the <b>external-db-overflow</b> context
Context	<b>configure</b> <i>router string ospf number external-db-overflow</i>
Tree	<a href="#">external-db-overflow</a>
Introduced	16.0.R1
Platforms	All

## interval *number*

Synopsis	Time during which the router operates in overload
Context	<b>configure</b> <i>router string ospf number external-db-overflow interval number</i>
Tree	<a href="#">interval</a>
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	All

## limit *number*

Synopsis	Number of external LSA at which overload is triggered
Context	<b>configure</b> <i>router string ospf number external-db-overflow limit number</i>
Tree	<a href="#">limit</a>
Range	0 to 2147483647
Default	0
Introduced	16.0.R1
Platforms	All

## external-preference *number*

Synopsis	Preference for OSPF external routes
Context	<b>configure</b> <i>router string ospf number external-preference number</i>
Tree	<a href="#">external-preference</a>
Range	1 to 255
Default	150

Introduced	16.0.R1
Platforms	All

## flexible-algorithms

Synopsis	Enter the <b>flexible-algorithms</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a>
Tree	<a href="#">flexible-algorithms</a>
Description	Commands in this context configure the OSPFv2 parameters for flexible algorithm participation.
Introduced	21.7.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

## advertise-admin-group *keyword*

Synopsis	Administrative group TLV to advertise
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">flexible-algorithms</a> <a href="#">advertise-admin-group</a> <i>keyword</i>
Tree	<a href="#">advertise-admin-group</a>
Description	This command configures the type of Administrative Group TLV the router advertises as an IGP link attribute. This command is configured for this IGP instance.
Options	prefer-ag, eag-only, ag-eag
Default	prefer-ag
Introduced	23.3.R1

Platforms All

### **flex-algo** [**flex-algo-id**] *number*

Synopsis Enter the **flex-algo** list instance

Context **configure** *router string ospf number flexible-algorithms flex-algo number*

Tree [flex-algo](#)

Description Commands in this context configure the attributes of the OSPFv2 flexible algorithm.

The maximum unique flexible algorithms can be configured on a router across all configured OSPFv2 instances. In each OSPF flexible algorithm configuration context, the OSPFv2 instance participation can be either enabled or disabled, and it configures the advertising of a locally-configured flexible algorithm definition.

When flexible algorithm is enabled in an OSPF instance, it is enabled for all areas within the OSPF instance.

Max. Instances 7

Introduced 21.7.R1

Platforms All

### **[flex-algo-id]** *number*

Synopsis Flexible algorithm ID

Context **configure** *router string ospf number flexible-algorithms flex-algo number*

Tree [flex-algo](#)

Range 128 to 255

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms All

### **advertise** *reference*

Synopsis Flexible Algorithm Definition advertisement

Context **configure** *router string ospf number flexible-algorithms flex-algo number advertise reference*

Tree [advertise](#)

Description This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD).

The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.

Reference	<b>configure routing-options flexible-algorithm-definitions flex-algo</b> <i>string</i>
Introduced	21.7.R1
Platforms	All

## loopfree-alternate

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure router</b> <i>string ospf number flexible-algorithms flex-algo number loopfree-alternate</i>
Tree	<a href="#">loopfree-alternate</a>
Introduced	21.7.R1
Platforms	All

## participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	<b>configure router</b> <i>string ospf number flexible-algorithms flex-algo number participate boolean</i>
Tree	<a href="#">participate</a>
Description	When configured to <b>true</b> , the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support.  When configured to <b>false</b> , flexible algorithm participation is not enabled.
Default	false
Introduced	21.7.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure router</b> <i>string ospf number graceful-restart</i>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1

Platforms All

### **helper-mode** *boolean*

Synopsis Enable graceful restart helper for OSPF  
Context **configure** [router](#) *string* [ospf](#) *number* [graceful-restart](#) [helper-mode](#) *boolean*  
Tree [helper-mode](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **strict-lsa-checking** *boolean*

Synopsis Perform strict LSA checking during graceful restart  
Context **configure** [router](#) *string* [ospf](#) *number* [graceful-restart](#) [strict-lsa-checking](#) *boolean*  
Tree [strict-lsa-checking](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **igp-shortcut**

Synopsis Enter the **igp-shortcut** context  
Context **configure** [router](#) *string* [ospf](#) *number* [igp-shortcut](#)  
Tree [igp-shortcut](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the IGP shortcuts  
Context **configure** [router](#) *string* [ospf](#) *number* [igp-shortcut](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Options enable, disable  
Default disable

Introduced	16.0.R1
Platforms	All

### **allow-sr-over-srte** *boolean*

Synopsis	Enable SR over SR-TE LSPs
Context	<b>configure</b> <i>router string ospf number igp-shortcut allow-sr-over-srte boolean</i>
Tree	<a href="#">allow-sr-over-srte</a>
Description	<p>When configured to <b>true</b>, the router only allows SR-MPLS SRv4 and SRv6 IGP shortcuts to use SR-TE LSPs with <b>allow-sr-over-srte</b> explicitly enabled with an adjacency SID as top SID in the SR-TE LSP. IPv4 and IPv6 addresses can use all available SR-TE LSPs as IGP shortcuts regardless of the explicit <b>allow-sr-over-srte</b> configuration.</p> <p>Under ECMP, when this command is configured to <b>true</b>, preference is given to the SR-TE LSPs with <b>allow-sr-over-srte</b> explicitly configured over the LSPs that do not have <b>allow-sr-over-srte</b> configured.</p>
Default	false
Introduced	23.3.R1
Platforms	All

### **tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <i>router string ospf number igp-shortcut tunnel-next-hop</i>
Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R1
Platforms	All

### **family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <i>router string ospf number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

**[family-type] keyword**

Synopsis	Address family type for tunnel next-hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>igp-shortcut</b> <b>tunnel-next-hop</b> <b>family</b> <i>keyword</i>
Tree	<b>family</b>
Options	ipv4, srv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**resolution keyword**

Synopsis	Resolution state for IGP shortcut tunnels
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>igp-shortcut</b> <b>tunnel-next-hop</b> <b>family</b> <i>keyword</i> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Options	none, filter, any, match-family-ip
Default	none
Introduced	16.0.R1
Platforms	All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>igp-shortcut</b> <b>tunnel-next-hop</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b>
Tree	<b>resolution-filter</b>
Introduced	16.0.R1
Platforms	All

**rsvp boolean**

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>igp-shortcut</b> <b>tunnel-next-hop</b> <b>family</b> <i>keyword</i> <b>resolution-filter</b> <b>rsvp</b> <i>boolean</i>
Tree	<b>rsvp</b>
Default	false

Introduced	16.0.R1
Platforms	All

**sr-te boolean**

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">igp-shortcut</a> <a href="#">tunnel-next-hop</a> <i>family</i> <i>keyword</i> <a href="#">resolution-filter</a> <a href="#">sr-te</a> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy reference**

Synopsis	Import policy names for routes from IGP to route table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**ldp-over-rsvp boolean**

Synopsis	Allow LSP over RSVP in this OSPF instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">ldp-over-rsvp</a> <i>boolean</i>
Tree	<a href="#">ldp-over-rsvp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ldp-sync** *boolean*

Synopsis	Configure IGP-LDP synchronization for interfaces
Context	<b>configure</b> <i>router string ospf number ldp-sync boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

**loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <i>router string ospf number loopfree-alternate</i>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

**augment-route-table** *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	<b>configure</b> <i>router string ospf number loopfree-alternate augment-route-table boolean</i>
Tree	<a href="#">augment-route-table</a>
Description	When configured to <b>true</b> , this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP. When configured to <b>false</b> , rLFA-specific information is not added to RTM entries.
Default	false
Introduced	21.10.R1
Platforms	All

**exclude**

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <i>router string ospf number loopfree-alternate exclude</i>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

**prefix-policy** *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>loopfree-alternate</b> <b>exclude</b> <b>prefix-policy</b> <i>reference</i>
Tree	<b>prefix-policy</b>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

**multi-homed-prefix**

Synopsis	Enable the <b>multi-homed-prefix</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>loopfree-alternate</b> <b>multi-homed-prefix</b>
Tree	<b>multi-homed-prefix</b>
Description	<p>Commands in this context configure a multihomed prefix LFA for both RTM routes (IP FRR) and SR-OSPF tunnels. SR-OSPF tunnels enable multihomed prefix extension in both algorithm 0 and flexible-algorithm numbers.</p> <p>This feature makes use of the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of local anycast prefixes.</p> <p>The computed IP next-hop based backup path is added to OSPF routes of external /32 prefixes (OSPFv2 routes types 3, 4, 5, and 7) and local /32 anycast prefixes in the RTM if the prefix is not protected by base LFA or if the user set leaf preference value to all. The user must enable the ip-fast-reroute leaf to have these backup paths programmed into the FIB in datapath.</p> <p>The computed IP next hop or repair tunnel based backup path is also programmed for SR-OSPF node SID tunnels of external /32 prefixes and to /32 prefixes in same area as the computing node S and which are advertised by multiple routers (anycast prefix) in both algorithm 0 and flexible-algorithm numbers.</p>

Introduced	22.2.R1
Platforms	All

### **preference** *keyword*

Synopsis	Multi-homed prefix LFA backup path preference
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">multi-homed-prefix</a> <a href="#">preference</a> <i>keyword</i>
Tree	<a href="#">preference</a>
Options	none, all
Default	none
Introduced	22.2.R1
Platforms	All

### **remote-lfa**

Synopsis	Enable the <b>remote-lfa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a>
Tree	<a href="#">remote-lfa</a>
Introduced	16.0.R1
Platforms	All

### **max-pq-cost** *number*

Synopsis	Maximum cost during reverse SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">max-pq-cost</a> <i>number</i>
Tree	<a href="#">max-pq-cost</a>
Max. Range	0 to 4294967295
Default	65535
Introduced	16.0.R1
Platforms	All

### **node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">node-protect</a>

Tree	<a href="#">node-protect</a>
Introduced	16.0.R4
Platforms	All

### **max-pq-nodes** *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPF's
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">remote-lfa</a> <a href="#">node-protect</a> <b>max-pq-nodes</b> <i>number</i>
Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R4
Platforms	All

### **ti-lfa**

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <b>ti-lfa</b>
Tree	<a href="#">ti-lfa</a>
Description	Commands in this context configure the Topology Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this OSPF instance.
Introduced	16.0.R1
Platforms	All

### **max-sr-frr-labels** *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <b>max-sr-frr-labels</b> <i>number</i>
Tree	<a href="#">max-sr-frr-labels</a>
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2

Introduced	16.0.R1
Platforms	All

## **node-protect**

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <a href="#">node-protect</a>
Tree	<a href="#">node-protect</a>
Introduced	16.0.R5
Platforms	All

## **multi-instance** *boolean*

Synopsis	Enable OSPF Multi Instance Extensions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">multi-instance</a> <i>boolean</i>
Tree	<a href="#">multi-instance</a>
Description	When configured to <b>true</b> , the Base router supports RFC 6549, OSPFv2 Multi-Instance Extensions.  This support is enabled per instance and allows flexibility when migrating a particular instance from classic OSPFv2 to a multi-instance OSPFv2.
Default	false
Introduced	19.10.R1
Platforms	All

## **multicast-import** *boolean*

Synopsis	Submit routes into the multicast Route Table Manager
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">multicast-import</a> <i>boolean</i>
Tree	<a href="#">multicast-import</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **overload** *boolean*

Synopsis	Change local router state to appear overloaded
----------	--

---

Context	<b>configure</b> <i>router string ospf number overload boolean</i>
Tree	<a href="#">overload</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-include-ext-1** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure</b> <i>router string ospf number overload-include-ext-1 boolean</i>
Tree	<a href="#">overload-include-ext-1</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **overload-include-ext-2** *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	<b>configure</b> <i>router string ospf number overload-include-ext-2 boolean</i>
Tree	<a href="#">overload-include-ext-2</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-include-stub** *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	<b>configure</b> <i>router string ospf number overload-include-stub boolean</i>
Tree	<a href="#">overload-include-stub</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload-on-boot

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure router</b> <i>string ospf number</i> <b>overload-on-boot</b>
Tree	<b>overload-on-boot</b>
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Time during which the router operates in overload state
Context	<b>configure router</b> <i>string ospf number</i> <b>overload-on-boot</b> <i>timeout number</i>
Tree	<b>timeout</b>
Range	1 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

## preference *number*

Synopsis	Preference for OSPF internal routes
Context	<b>configure router</b> <i>string ospf number</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	10
Introduced	16.0.R1
Platforms	All

## reference-bandwidth *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	<b>configure router</b> <i>string ospf number</i> <b>reference-bandwidth</b> <i>number</i>
Tree	<b>reference-bandwidth</b>
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000

Introduced 16.0.R1  
 Platforms All

## rib-priority

Tree	<a href="#">segment-routing</a>
Introduced	16.0.R1
Platforms	All

### **adj-sid-hold** (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>segment-routing</b> <b>adj-sid-hold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">adj-sid-hold</a>
Description	This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 1800
Units	seconds
Options	none
Default	15
Introduced	16.0.R1
Platforms	All

### **adjacency-set** [*id*] *number*

Synopsis	Enter the <b>adjacency-set</b> list instance
Context	<b>configure</b> <i>router string ospf number segment-routing adjacency-set number</i>
Tree	<a href="#">adjacency-set</a>
Introduced	16.0.R1
Platforms	All

**[id] number**

Synopsis	Non-zero identifier for a given adjacency set
Context	<b>configure router string ospf number segment-routing adjacency-set number</b>
Tree	<a href="#">adjacency-set</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**advertise boolean**

Synopsis	Advertise adjacency for links terminating on same node
Context	<b>configure router string ospf number segment-routing adjacency-set number advertise boolean</b>
Tree	<a href="#">advertise</a>
Default	true
Introduced	16.0.R1
Platforms	All

**parallel boolean**

Synopsis	Require adjacency members to terminate on same neighbor
Context	<b>configure router string ospf number segment-routing adjacency-set number parallel boolean</b>
Tree	<a href="#">parallel</a>
Default	true
Introduced	16.0.R1
Platforms	All

**sid**

Synopsis	Enable the <b>sid</b> context
Context	<b>configure router string ospf number segment-routing adjacency-set number sid</b>
Tree	<a href="#">sid</a>
Introduced	16.0.R1

Platforms All

### **label number**

Synopsis Adjacency SID label

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [adjacency-set](#) *number* [sid](#) [label](#) *number*

Tree [label](#)

Range 1 to 1048575

Introduced 16.0.R1

Platforms All

### **adjacency-sid**

Synopsis Enter the **adjacency-sid** context

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [adjacency-sid](#)

Tree [adjacency-sid](#)

Introduced 22.7.R1

Platforms All

### **allocate-dual-sids boolean**

Synopsis Allocate dual adjacency SIDs per interface

Context **configure** [router](#) *string* [ospf](#) *number* [segment-routing](#) [adjacency-sid](#) [allocate-dual-sids](#) *boolean*

Tree [allocate-dual-sids](#)

Description When configured to **true**, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.

When configured to **false**, the router disables the support of two SR-MPLS adjacency SIDs per interface.

Default false

Introduced 22.7.R1

Platforms All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**backup-node-sid**

Synopsis	Enable the <b>backup-node-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">backup-node-sid</a>
Tree	<a href="#">backup-node-sid</a>
Introduced	16.0.R1
Platforms	All

**index** *number*

Synopsis	Node SID index for this interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">backup-node-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

**ip-prefix** *string*

Synopsis	IP prefix and prefix length for the backup node SID
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">backup-node-sid</a> <a href="#">ip-prefix</a> <i>string</i>
Tree	<a href="#">ip-prefix</a>
Introduced	16.0.R1
Platforms	All

**label number**

Synopsis	Label value for the node SID
Context	<b>configure router string ospf number segment-routing backup-node-sid label number</b>
Tree	<a href="#">label</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	16.0.R1
Platforms	All

**class-forwarding boolean**

Synopsis	Allow CBF with ECMP over RSVP-TE LSPs as IGP shortcuts
Context	<b>configure router string ospf number segment-routing class-forwarding boolean</b>
Tree	<a href="#">class-forwarding</a>
Description	<p>When configured to <b>true</b>, this command enables Class-Based Forwarding (CBF) with ECMP for SR-OSPF resolved to RSVP-TE LSPs as IGP shortcuts.</p> <p>For CBF with ECMP to be effective, a class forwarding policy must be defined, as well as FC to set associations and RSVP-TE LSPs to set associations.</p> <p>When configured to <b>false</b>, CBF over IGP shortcuts is disabled.</p>
Default	false
Introduced	20.5.R1
Platforms	All

**egress-statistics**

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure router string ospf number segment-routing egress-statistics</b>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

**adj-set boolean**

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure router string ospf number segment-routing egress-statistics adj-set boolean</b>

Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **adj-sid** *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">adj-sid</a> <i>boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **entropy-label** *boolean*

Synopsis	Enable processing of received ELC signaled in the IGP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">entropy-label</a> <i>boolean</i>

Tree	<a href="#">entropy-label</a>
Introduced	16.0.R1
Platforms	All

### **export-tunnel-table** *keyword*

Synopsis	Export tunnel table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">export-tunnel-table</a> <i>keyword</i>
Tree	<a href="#">export-tunnel-table</a>
Options	ldp
Introduced	16.0.R1
Platforms	All

### **ingress-statistics**

Synopsis	Enter the <b>ingress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">ingress-statistics</a>
Tree	<a href="#">ingress-statistics</a>
Introduced	19.10.R1
Platforms	All

### **adj-set** *boolean*

Synopsis	Enable the allocation of statistics on adjacency sets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">ingress-statistics</a> <a href="#">adj-set</a> <i>boolean</i>
Tree	<a href="#">adj-set</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indices to each adjacency set. All adjacencies of a set share the same statistics index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

**adj-sid** *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">ingress-statistics</a> <a href="#">adj-sid</a> <i>boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

**node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">ingress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>
Default	false
Introduced	19.10.R1
Platforms	All

**mapping-server**

Synopsis	Enter the <b>mapping-server</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a>
Tree	<a href="#">mapping-server</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the OSPF mapping server
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **node-sid-map** [[sid-index](#)] *number*

Synopsis	Enter the <b>node-sid-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <i>number</i>
Tree	<a href="#">node-sid-map</a>
Introduced	16.0.R1
Platforms	All

### **[sid-index]** *number*

Synopsis	Start SID index for the node SID mapping
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <i>number</i>
Tree	<a href="#">node-sid-map</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ip-prefix** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Starting prefix of the mapping
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">mapping-server</a> <a href="#">node-sid-map</a> <i>number</i> <a href="#">ip-prefix</a> <i>string</i>
Tree	<a href="#">ip-prefix</a>
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

## range number

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel MTU size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>segment-routing</b> <b>tunnel-mtu</b> <i>number</i>
Tree	<b>tunnel-mtu</b>
Range	512 to 9786
Introduced	16.0.R1
Platforms	All

### **tunnel-table-pref** *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>segment-routing</b> <b>tunnel-table-pref</b> <i>number</i>
Tree	<b>tunnel-table-pref</b>

**Description** This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the **any** value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

**Note:** The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8

- `ROUTE_PREF_LDP 9`
- `ROUTE_PREF_OSPF_TTM 10`
- `ROUTE_PREF_ISIS_TTM 11`
- `ROUTE_PREF_BGP_TTM 12`
- `ROUTE_PREF_GRE 255`

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-ISIS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	16.0.R1
Platforms	All

## timers

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf</a> <i>number</i> <a href="#">timers</a>

Platforms	All

**advertise-delay** *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf</b> <i>number</i> <b>traffic-engineering-options</b> <b>advertise-delay</b> <i>boolean</i>
Tree	<a href="#">advertise-delay</a>
Description	When configured to <b>true</b> , the router advertises link delay in the IGP LSDB within the OSPF-TE TLV attribute or when the Application-Specific Link Attribute (ASLA) is enabled within SR-TE ASLA.

When the router is configured under the **configure router ospf traffic-engineering-options sr-te application-specific-link-attributes** command to generate SR-TE ASLA attributes, link delay is advertised as a legacy RFC 3630 TLV when RSVP-TE is enabled and as an ASLA RFC 8920 TLV for SR-TE when MPLS is enabled for an interface.

SR OS accepts and handles both legacy RSVP-TE TLVs and ASLAs for the RSVP application. However, SR OS only advertises RFC 3630 legacy RSVP-TE TLVs (as recommended by RFC 8920) to avoid compatibility issues.

When configured to **false**, the router disables link delay advertisement.

Default	false
Introduced	22.10.R1
Platforms	All

### **sr-te** keyword

Synopsis	Advertisement of link attributes for SR-TE
Context	<b>configure router</b> <i>string</i> <b>ospf number</b> <b>traffic-engineering-options sr-te</b> <i>keyword</i>
Tree	<b>sr-te</b>
Description	This command specifies the advertisement of TE attributes of each link on a per-application basis for RSVP-TE and SR-TE applications.
Options	false, legacy, application-specific-link-attributes
Default	false
Introduced	20.7.R1
Platforms	All

### **unicast-import** *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	<b>configure router</b> <i>string</i> <b>ospf number</b> <b>unicast-import</b> <i>boolean</i>

Introduced 16.0.R1

Platforms All

### **[interface-name]** *string*

Synopsis Router interface name

Context **configure** *router string ospf3 number area string interface string*

Tree *interface*

Description This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for **configure router interface** and **configure service ies interface** commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

If the IP interface name does not exist or does not have an IP address configured, an error message is returned.

If the IP interface exists in a different area it is moved to this area.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Reference	<b>configure ipsec static-sa</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

## **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure router</b> <i>string ospf3 number area string interface string</i> <b>bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

## **remain-down-on-failure** *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	<b>configure router</b> <i>string ospf3 number area string interface string</i> <b>bfd-liveness remain-down-on-failure</b> <i>boolean</i>
Tree	<a href="#">remain-down-on-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **strict** *boolean*

Synopsis	Enable BFD strict mode
Context	<b>configure router</b> <i>string ospf3 number area string interface string</i> <b>bfd-liveness strict</b> <i>boolean</i>
Tree	<a href="#">strict</a>
Description	When configured to <b>true</b> , the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to <b>true</b> , the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default	false
Introduced	23.3.R1
Platforms	All

### **strict-mode-holddown** *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>strict-mode-holddown</b> <i>number</i>
Tree	<b>strict-mode-holddown</b>
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1
Platforms	All

### **dead-interval** *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>interface</b> <i>string</i> <b>dead-interval</b> <i>number</i>

Tree	<a href="#">neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **node-sid**

Synopsis	Enable the <b>node-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">area</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>node-sid</b>
Tree	<a href="#">node-sid</a>
Description	<p>Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.</p> <p>In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.</p> <p>This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.</p>

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced	16.0.R4
Platforms	All

### **clear-n-flag** *boolean*

Synopsis	Clear the N-flag in an OSPF3 prefix
Context	<b>configure</b> <i>router string ospf3 number area string interface string node-sid clear-n-flag boolean</i>
Tree	<a href="#">clear-n-flag</a>
Description	<p>When configured to <b>true</b>, this command allows the user to clear the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system.</p> <p>When configured to <b>false</b>, the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.</p> <p>When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p>
Default	false
Introduced	16.0.R5
Platforms	All

### **index** *number*

Synopsis	Node SID index for this interface
----------	-----------------------------------

Context	<b>configure router string ospf3 number area string nssa originate-default-route type-nssa boolean</b>
Tree	<a href="#">type-nssa</a>
Default	false
Introduced	16.0.R1
Platforms	All

## redistribute-external *boolean*

Synopsis	Redistribute external routes into the NSSA
Context	<b>configure router string ospf3 number area string nssa redistribute-external boolean</b>
Tree	<a href="#">redistribute-external</a>
Default	true
Introduced	16.0.R1
Platforms	All

**summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the NSSA on an ABR
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string nssa summaries boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

**stub**

Synopsis	Enable the <b>stub</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub</i>
Tree	<a href="#">stub</a>
Introduced	16.0.R1
Platforms	All

**default-metric** *number*

Synopsis	Metric used by ABR for default route into the stub area
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub default-metric number</i>
Tree	<a href="#">default-metric</a>
Range	1 to 16777214
Default	1
Introduced	16.0.R1
Platforms	All

**summaries** *boolean*

Synopsis	Send summary (Type 3) LSAs into the stub area on an ABR
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string stub summaries boolean</i>
Tree	<a href="#">summaries</a>
Default	true
Introduced	16.0.R1
Platforms	All

**virtual-link** [*router-id*] *string* *transit-area* *reference*

Synopsis	Enter the <b>virtual-link</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>string</i> <b>virtual-link</b> <i>string</i> <i>transit-area</i> <i>reference</i>
Tree	<b>virtual-link</b>
Introduced	16.0.R1
Platforms	All

**[router-id]** *string*

Synopsis	Router ID of the virtual link neighbor
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>string</i> <b>virtual-link</b> <i>string</i> <i>transit-area</i> <i>reference</i>
Tree	<b>virtual-link</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**transit-area** *reference*

Synopsis	Transit area linking backbone and non-connected area
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>string</i> <b>virtual-link</b> <i>string</i> <i>transit-area</i> <i>reference</i>
Tree	<b>virtual-link</b>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the OSPF interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>area</i> <i>string</i> <b>virtual-link</b> <i>string</i> <i>transit-area</i> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable

Introduced 16.0.R1  
 Platforms All

## authentication

Synopsis Enable the **authentication** context  
 Context **configure** [router](#) *string ospf3 number area string virtual-link string transit-area reference authentication*  
 Tree [authentication](#)  
 Introduced 16.0.R6  
 Platforms All

## inbound reference

Synopsis sa-name  
 Context **configure** [router](#) *string ospf3 number area string virtual-link string transit-area reference authentication inbound reference*  
 Tree [inbound](#)  
 Reference **configure** [ipsec static-sa](#) *string*  
 Notes This element is mandatory.  
 Introduced 16.0.R6  
 Platforms All

## outbound reference

Synopsis sa-name  
 Context **configure** [router](#) *string ospf3 number area string virtual-link string transit-area reference authentication outbound reference*  
 Tree [outbound](#)  
 Reference **configure** [ipsec static-sa](#) *string*  
 Notes This element is mandatory.  
 Introduced 16.0.R6  
 Platforms All

**dead-interval** *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>dead-interval</b> <i>number</i>
Tree	<b>dead-interval</b>
Range	2 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**hello-interval** *number*

Synopsis	Time between OSPF Hellos of this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>hello-interval</b> <i>number</i>
Tree	<b>hello-interval</b>
Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**retransmit-interval** *number*

Synopsis	Time before OSPF retransmits an unacknowledged LSA
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>area</b> <i>string</i> <b>virtual-link</b> <i>string</i> <b>transit-area</b> <i>reference</i> <b>retransmit-interval</b> <i>number</i>
Tree	<b>retransmit-interval</b>
Range	1 to 1800
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

### **transit-delay** *number*

Synopsis	Required LSA transmit time
Context	<b>configure</b> <b>router</b> <i>string ospf3 number area string virtual-link string transit-area reference transit-delay number</i>
Tree	<a href="#">transit-delay</a>
Range	1 to 1800
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **asbr**

Synopsis	Enable the <b>asbr</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number asbr</i>
Tree	<a href="#">asbr</a>
Introduced	16.0.R1
Platforms	All

### **database-export**

Synopsis	Enable the <b>database-export</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number database-export</i>
Tree	<a href="#">database-export</a>
Introduced	16.0.R4
Platforms	All

### **bgp-ls-identifier**

Synopsis	Enable the <b>bgp-ls-identifier</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number database-export bgp-ls-identifier</i>
Tree	<a href="#">bgp-ls-identifier</a>
Introduced	16.0.R4
Platforms	All

**value number**

Synopsis	BGP-LS identifier sent in the BGP-LS NLRI
Context	<b>configure</b> <b>router</b> <i>string ospf3 number database-export bgp-ls-identifier value number</i>
Tree	<b>value</b>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	All

**igp-identifier number**

Synopsis	IGP instance in the BGP-LS NLRI
Context	<b>configure</b> <b>router</b> <i>string ospf3 number database-export igp-identifier number</i>
Tree	<b>igp-identifier</b>
Description	This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a given IGP domain when the router sends the IGP link state information using BGP-LS.
Max. Range	0 to 18446744073709551615
Introduced	16.0.R4
Platforms	All

**export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number export-limit</i>
Tree	<b>export-limit</b>
Introduced	16.0.R1
Platforms	All

**log-percent number**

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <b>router</b> <i>string ospf3 number export-limit log-percent number</i>
Tree	<b>log-percent</b>

Range	1 to 100
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>export-limit</i> <i>number</i> <i>number</i>
Tree	<i>number</i>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <i>router</i> <i>string</i> <i>ospf3</i> <i>number</i> <i>export-policy</i> <i>reference</i>
Tree	<i>export-policy</i>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <i>policy-options</i> <i>policy-statement</i> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**extended-lsa** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Extended LSA format in an OSPFv3 area
Context	<b>configure</b> <i>router string ospf3 number extended-lsa keyword</i>
Tree	<a href="#">extended-lsa</a>
Options	sparse, only
Default	sparse
Introduced	16.0.R1
Platforms	All

**external-db-overflow**

Synopsis	Enable the <b>external-db-overflow</b> context
Context	<b>configure</b> <i>router string ospf3 number external-db-overflow</i>
Tree	<a href="#">external-db-overflow</a>
Introduced	16.0.R1
Platforms	All

**interval** *number*

Synopsis	Time during which the router operates in overload
Context	<b>configure</b> <i>router string ospf3 number external-db-overflow interval number</i>
Tree	<a href="#">interval</a>
Range	0 to 2147483647
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	All

**limit** *number*

Synopsis	Number of external LSA at which overload is triggered
Context	<b>configure</b> <i>router string ospf3 number external-db-overflow limit number</i>

---

Tree	<a href="#">limit</a>
Range	0 to 2147483647
Default	0
Introduced	16.0.R1
Platforms	All

### **external-preference** *number*

Synopsis	Preference for OSPF external routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">external-preference</a> <i>number</i>
Tree	<a href="#">external-preference</a>
Range	1 to 255
Default	150
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

### **helper-mode** *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">helper-mode</a> <i>boolean</i>
Tree	<a href="#">helper-mode</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **strict-lsa-checking** *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">graceful-restart</a> <b>strict-lsa-checking</b> <i>boolean</i>
Tree	<a href="#">strict-lsa-checking</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **igp-shortcut**

Synopsis	Enter the <b>igp-shortcut</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">igp-shortcut</a>
Tree	<a href="#">igp-shortcut</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the IGP shortcuts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">igp-shortcut</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">igp-shortcut</a> <b>tunnel-next-hop</b>
Tree	<a href="#">tunnel-next-hop</a>
Introduced	16.0.R4
Platforms	All

**family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<b>family</b>
Introduced	16.0.R4
Platforms	All

**[family-type]** *keyword*

Synopsis	Address family type for the tunnel next hop
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword</i>
Tree	<b>family</b>
Options	ipv4, ipv6, srv4, srv6
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**resolution** *keyword*

Synopsis	Resolution state for IGP shortcut tunnels
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution keyword</i>
Tree	<b>resolution</b>
Options	none, filter, any, match-family-ip
Default	none
Introduced	16.0.R4
Platforms	All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number igp-shortcut tunnel-next-hop family keyword resolution-filter</i>
Tree	<b>resolution-filter</b>
Introduced	16.0.R4

Platforms All

### **rsvp** *boolean*

Synopsis Use RSVP tunneling for next-hop resolution

Context **configure** [router](#) *string* [ospf3](#) *number* [igp-shortcut](#) [tunnel-next-hop](#) *family* *keyword* [resolution-filter](#) [rsvp](#) *boolean*

Tree [rsvp](#)

Default false

Introduced 16.0.R4

Platforms All

### **sr-te** *boolean*

Synopsis Use SR-TE tunneling for next-hop resolution

Context **configure** [router](#) *string* [ospf3](#) *number* [igp-shortcut](#) [tunnel-next-hop](#) *family* *keyword* [resolution-filter](#) [sr-te](#) *boolean*

Tree [sr-te](#)

Default false

Introduced 16.0.R4

Platforms All

### **import-policy** *reference*

Synopsis Import policy names for routes from IGP to route table

Context **configure** [router](#) *string* [ospf3](#) *number* [import-policy](#) *reference*

Tree [import-policy](#)

Reference **configure** [policy-options](#) [policy-statement](#) *string*

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

**ldp-sync** *boolean*

Synopsis	Configure IGP-LDP synchronization for interfaces
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">ldp-sync</a> <i>boolean</i>
Tree	<a href="#">ldp-sync</a>
Default	true
Introduced	16.0.R1
Platforms	All

**loopfree-alternate**

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

**exclude**

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">exclude</a>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

**prefix-policy** *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">exclude</a> <a href="#">prefix-policy</a> <i>reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5

Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

## remote-lfa

Synopsis	Enable the <b>remote-lfa</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>loopfree-alternate</b> <b>remote-lfa</b>
Tree	<b>remote-lfa</b>
Introduced	16.0.R4
Platforms	All

## max-pq-cost *number*

Synopsis	Maximum cost during reverse SPF calculation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>loopfree-alternate</b> <b>remote-lfa</b> <b>max-pq-cost</b> <i>number</i>
Tree	<b>max-pq-cost</b>
Max. Range	0 to 4294967295
Default	65535
Introduced	16.0.R4
Platforms	All

## node-protect

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>loopfree-alternate</b> <b>remote-lfa</b> <b>node-protect</b>
Tree	<b>node-protect</b>
Introduced	16.0.R6
Platforms	All

## max-pq-nodes *number*

Synopsis	Maximum number of PQ nodes found in the LFA SPFs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>loopfree-alternate</b> <b>remote-lfa</b> <b>node-protect</b> <b>max-pq-nodes</b> <i>number</i>

Tree	<a href="#">max-pq-nodes</a>
Range	1 to 32
Default	16
Introduced	16.0.R6
Platforms	All

## ti-lfa

Synopsis	Enable the <b>ti-lfa</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a>
Tree	<a href="#">ti-lfa</a>
Description	Commands in this context configure the Topology Independent Loop-Free Alternate (TI-LFA) algorithm used in the LFA Shortest Path First (SPF) calculation for this OSPFv3 instance.
Introduced	16.0.R5
Platforms	All

## max-sr-frr-labels *number*

Synopsis	Maximum number of labels the TI-LFA backup path can use
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <a href="#">max-sr-frr-labels</a> <i>number</i>
Tree	<a href="#">max-sr-frr-labels</a>
Description	This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.
Range	0 to 3
Default	2
Introduced	16.0.R5
Platforms	All

## node-protect

Synopsis	Enable the <b>node-protect</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">loopfree-alternate</a> <a href="#">ti-lfa</a> <a href="#">node-protect</a>
Tree	<a href="#">node-protect</a>

Introduced 16.0.R6  
Platforms All

### **multicast-import** *boolean*

Synopsis Submit routes into the multicast Route Table Manager  
Context **configure** *router string ospf3 number multicast-import boolean*  
Tree [multicast-import](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **overload** *boolean*

Synopsis Change local router state to appear overloaded  
Context **configure** *router string ospf3 number overload boolean*  
Tree [overload](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **overload-include-ext-1** *boolean*

Synopsis Advertise routes with maximum metric value for overload  
Context **configure** *router string ospf3 number overload-include-ext-1 boolean*  
Tree [overload-include-ext-1](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **overload-include-ext-2** *boolean*

Synopsis Advertise routes with maximum metric value for overload  
Context **configure** *router string ospf3 number overload-include-ext-2 boolean*  
Tree [overload-include-ext-2](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

### **overload-include-stub** *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <b>overload-include-stub</b> <i>boolean</i>
Tree	<a href="#">overload-include-stub</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-on-boot**

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <b>overload-on-boot</b>
Tree	<a href="#">overload-on-boot</a>
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Router interval in overload before normal operations
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <b>overload-on-boot</b> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	60 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Preference for OSPF internal routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <b>preference</b> <i>number</i>

Tree	<a href="#">preference</a>
Range	1 to 255
Default	10
Introduced	16.0.R1
Platforms	All

### **reference-bandwidth** *number*

Synopsis	Bandwidth to reference default costing of interfaces
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3</i> <i>number reference-bandwidth</i> <i>number</i>
Tree	<a href="#">reference-bandwidth</a>
Range	1 to 18446744073709551615
Units	kilobps
Default	100000000
Introduced	16.0.R1
Platforms	All

### **rib-priority**

Synopsis	Enter the <b>rib-priority</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3</i> <i>number rib-priority</i>
Tree	<a href="#">rib-priority</a>
Introduced	16.0.R1
Platforms	All

### **high**

Synopsis	Enter the <b>high</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string ospf3</i> <i>number rib-priority high</i>
Tree	<a href="#">high</a>
Introduced	16.0.R1
Platforms	All

**prefix-list** *reference*

Synopsis	Higher priority list used during OSPF route calculation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">rib-priority</a> <a href="#">high</a> <a href="#">prefix-list</a> <i>reference</i>
Tree	<a href="#">prefix-list</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**router-id** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the OSPF instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">router-id</a> <i>string</i>
Tree	<a href="#">router-id</a>
Introduced	16.0.R1
Platforms	All

**rtr-adv-lsa-limit**

Synopsis	Enable the <b>rtr-adv-lsa-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">rtr-adv-lsa-limit</a>
Tree	<a href="#">rtr-adv-lsa-limit</a>
Introduced	16.0.R1
Platforms	All

**log-only** *boolean*

Synopsis	Log the event without triggering overload
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">rtr-adv-lsa-limit</a> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1

Platforms All

### **max-lsa-count** *number*

Synopsis Maximum number of LSAs one router can advertise

Context **configure** **router** *string ospf3 number rtr-adv-lsa-limit max-lsa-count number*

Tree [max-lsa-count](#)

Range 1 to 4294967295

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **overload-timeout** (*number* | *keyword*)

Synopsis Maximum time in overload after LSA limit is reached

Context **configure** **router** *string ospf3 number rtr-adv-lsa-limit overload-timeout (number | keyword)*

Tree [overload-timeout](#)

Range 1 to 1800

Units seconds

Options forever

Default forever

Introduced 16.0.R1

Platforms All

### **warning-threshold** *number*

Synopsis Percentage of the max LSA count that causes a warning

Context **configure** **router** *string ospf3 number rtr-adv-lsa-limit warning-threshold number*

Tree [warning-threshold](#)

Range 0 to 100

Units percent

Default 0

Introduced 16.0.R1

Platforms All

## segment-routing

Synopsis	Enter the <b>segment-routing</b> context
Context	<b>configure router string ospf3 number segment-routing</b>
Tree	<a href="#">segment-routing</a>
Introduced	16.0.R4
Platforms	All

## adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	<b>configure router string ospf3 number segment-routing adj-sid-hold (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">adj-sid-hold</a>
Description	This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 1800
Units	seconds
Options	none
Default	15
Introduced	16.0.R4
Platforms	All

## adjacency-sid

Synopsis	Enter the <b>adjacency-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf3</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a>
Tree	<a href="#">adjacency-sid</a>
Introduced	22.7.R1
Platforms	All

## allocate-dual-sids *boolean*

Synopsis	Allocate dual adjacency SIDs per interface
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf3</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">adjacency-sid</a> <a href="#">allocate-dual-sids</a> <i>boolean</i>
Tree	<a href="#">allocate-dual-sids</a>
Description	<p>When configured to <b>true</b>, the router supports two SR-MPLS adjacency SIDs per interface. A protected and unprotected adjacency SID is instantiated and advertised. If an SR-MPLS adjacency SID already exists, an additional complementary (protected or unprotected) adjacency SID is created on the interface.</p> <p>When configured to <b>false</b>, the router disables the support of two SR-MPLS adjacency SIDs per interface.</p>
Default	false
Introduced	22.7.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of segment routing
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">ospf3</a> <a href="#">number</a> <a href="#">segment-routing</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R4
Platforms	All

## **egress-statistics**

Synopsis	Enter the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Introduced	19.10.R1
Platforms	All

## **adj-sid** *boolean*

Synopsis	Enable the allocation of statistics on adjacency SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">adj-sid</a> <i>boolean</i>
Tree	<a href="#">adj-sid</a>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

## **node-sid** *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">egress-statistics</a> <a href="#">node-sid</a> <i>boolean</i>
Tree	<a href="#">node-sid</a>

Tree	<a href="#">tunnel-mtu</a>
Range	512 to 9786
Introduced	16.0.R4
Platforms	All

**tunnel-table-pref** *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">segment-routing</a> <a href="#">tunnel-table-pref</a> <i>number</i>
Tree	<a href="#">tunnel-table-pref</a>
Description	This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the <b>any</b> value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

**Note:** The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8
- ROUTE\_PREF\_LDP 9
- ROUTE\_PREF\_OSPF\_TTM 10
- ROUTE\_PREF\_ISIS\_TTM 11
- ROUTE\_PREF\_BGP\_TTM 12
- ROUTE\_PREF\_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-IS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	16.0.R4

### **next-hop-interface-name** *string*

Synopsis Interface name for replication segment next-hops  
 Context **configure** *router string p2mp-sr-tree replication-segment string downstream-nodes number next-hop-interface-name string*  
 Tree [next-hop-interface-name](#)  
 String Length 1 to 32  
 Introduced 21.5.R1  
 Platforms All

### **protect-nexthop-id** *reference*

Synopsis ID of the protection next hop used for FRR  
 Context **configure** *router string p2mp-sr-tree replication-segment string downstream-nodes number protect-nexthop-id reference*  
 Tree [protect-nexthop-id](#)  
 Reference **configure** *router string p2mp-sr-tree replication-segment string downstream-nodes number*  
 Introduced 21.5.R1  
 Platforms All

**instance-id** *number*

Synopsis	Instance ID for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>instance-id</b> <i>number</i>
Tree	<b>instance-id</b>
Max. Range	0 to 4294967295
Default	0
Introduced	21.5.R1
Platforms	All

**replication-sid** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment ID of the replication segment
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>replication-sid</b> <i>number</i>
Tree	<b>replication-sid</b>
Max. Range	0 to 4294967295
Default	0
Introduced	21.5.R1
Platforms	All

**root-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Root address for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>root-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>root-address</b>
Introduced	21.5.R1
Platforms	All

**sid-action** *keyword*

Synopsis	SID action for replication segment entries
Context	<b>configure</b> <b>router</b> <i>string</i> <b>p2mp-sr-tree</b> <b>replication-segment</b> <i>string</i> <b>sid-action</b> <i>keyword</i>

Tree	<a href="#">sid-action</a>
Options	none, push, pop, swap
Default	none
Introduced	21.5.R1
Platforms	All

### **tree-id** *number*

Synopsis	Tree ID for the replication segment of the P2MP SR tree
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">replication-segment</a> <i>string</i> <a href="#">tree-id</a> <i>number</i>
Tree	<a href="#">tree-id</a>
Range	0   8193 to 16286
Default	0
Introduced	21.5.R1
Platforms	All

### **reserved-label-block** *reference*

Synopsis	Reserved label block name for the P2MP SR tree
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">p2mp-sr-tree</a> <a href="#">reserved-label-block</a> <i>reference</i>
Tree	<a href="#">reserved-label-block</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	21.5.R1
Platforms	All

### **pcep**

Synopsis	Enter the <b>pcep</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a>
Tree	<a href="#">pcep</a>
Introduced	16.0.R4
Platforms	All

**pcc**

Synopsis	Enable the <b>pcc</b> context
Context	<b>configure</b> <i>router string</i> <b>pcep pcc</b>
Tree	<b>pcc</b>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the PCEP session element
Context	<b>configure</b> <i>router string</i> <b>pcep pcc admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**dead-timer** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure dead timer
Context	<b>configure</b> <i>router string</i> <b>pcep pcc dead-timer</b> <i>number</i>
Tree	<b>dead-timer</b>
Range	1 to 255
Units	seconds
Default	120
Introduced	16.0.R4
Platforms	All

## keepalive *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	<b>configure</b> <i>router string pcep pcc keepalive number</i>
Tree	<a href="#">keepalive</a>
Range	1 to 255
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	All

## local-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	<b>configure</b> <i>router string pcep pcc local-address string</i>
Tree	<a href="#">local-address</a>
Description	This command configures the local IPv4 address of the PCEP speaker.  See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv4 address to establish a PCEP session.
Introduced	16.0.R4
Platforms	All

## local-address-ipv6 *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	<b>configure</b> <i>router string pcep pcc local-address-ipv6 string</i>

Tree	<a href="#">local-address-ipv6</a>
Description	This command configures the local IPv6 address of the PCEP speaker. See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv6 address to establish a PCEP session.
Introduced	20.2.R1
Platforms	All

### **max-srte-pce-init-lsps** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure max sr te pce init LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pcc max-srte-pce-init-lsps</a> <i>number</i>
Tree	<a href="#">max-srte-pce-init-lsps</a>
Range	0 to 8191
Default	8191
Introduced	16.0.R5
Platforms	All

### **pce-associations**

Synopsis	Enter the <b>pce-associations</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pcc pce-associations</a>
Tree	<a href="#">pce-associations</a>
Description	Commands in this context configure PCE association groups.
Introduced	22.5.R1
Platforms	All

### **diversity** [[assoc-name](#)] *string*

Synopsis	Enter the <b>diversity</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pcc pce-associations diversity</a> <i>string</i>
Tree	<a href="#">diversity</a>

Description	Commands in this context create a named diversity association from which the parameters for the specified diversity association are configured.
Introduced	22.5.R1
Platforms	All

**[assoc-name]** *string*

Synopsis	Name of the association group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i>
Tree	<b>diversity</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

**association-id** *number*

Synopsis	Association ID for the diversity association group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>association-id</b> <i>number</i>
Tree	<b>association-id</b>
Description	This command configures the diversity association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	22.5.R1
Platforms	All

**association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address of the diversity association
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>association-source</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>association-source</b>
Introduced	22.5.R1
Platforms	All

**disjointness-reference** *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pcep pcc pce-associations diversity string disjointness-reference boolean</i>
Tree	<a href="#">disjointness-reference</a>
Description	<p>When configured to <b>true</b>, the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID.</p> <p>When configured to <b>false</b>, the router does not set the P-flag in the disjointness configuration TLV.</p>
Default	false
Introduced	22.5.R1
Platforms	All

**disjointness-type** *keyword*

Synopsis	Disjointness type for the association group
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pcep pcc pce-associations diversity string disjointness-type keyword</i>
Tree	<a href="#">disjointness-type</a>
Options	strict, loose
Default	loose
Introduced	22.5.R1
Platforms	All

**diversity-type** *keyword*

Synopsis	Diversity type for the association group
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pcep pcc pce-associations diversity string diversity-type keyword</i>
Tree	<a href="#">diversity-type</a>
Description	This command configures the diversity type for the association group.
Options	none, link, node, srlg-link, srlg-node
Default	none
Introduced	22.5.R1

Platforms All

### **policy** [*assoc-name*] *string*

Synopsis Enter the **policy** list instance

Context **configure** *router string pcep pcc pce-associations policy string*

Tree *policy*

Description Commands in this context create a named policy association from which the parameters for the specified policy association are configured.

Introduced 22.5.R1

Platforms All

### **[assoc-name]** *string*

Synopsis Name of the association group

Context **configure** *router string pcep pcc pce-associations policy string*

Tree *policy*

String Length 1 to 32

Notes This element is part of a list key.

Introduced 22.5.R1

Platforms All

### **association-id** *number*

Synopsis Association ID for the policy association group

Context **configure** *router string pcep pcc pce-associations policy string association-id number*

Tree *association-id*

Description This command configures the policy association ID. The user must specify an association ID.

Range 0 to 65535

Default 0

Introduced 22.5.R1

Platforms All

**association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>policy</b> <i>string</i> <b>association-source</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>association-source</b>
Description	This command configures the source IP address of the policy association.
Introduced	22.5.R1
Platforms	All

**peer** [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Max. Instances	2
Introduced	16.0.R4
Platforms	All

**[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Destination IP address of a PCE peer in a PCEP session
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the PCC peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable

Introduced 16.0.R4  
 Platforms All

### authentication-keychain *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Keychain for TCP-AO authentication between PCC and PCE  
 Context **configure** *router* *string* *pcep pcc peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
*authentication-keychain reference*  
 Tree *authentication-keychain*  
 Reference **configure** *system security keychains keychain string*  
 Introduced 23.7.R1  
 Platforms All

### preference *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Preference value of the peer  
 Context **configure** *router* *string* *pcep pcc peer* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
*preference number*  
 Tree *preference*  
 Range 0 to 100  
 Default 0  
 Introduced 16.0.R4  
 Platforms All

### route-preference *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route preference to reach the PCE server
Context	<b>configure router</b> <i>string pcep pcc peer (ipv4-address-no-zone   ipv6-address-no-zone) route-preference keyword</i>
Tree	<a href="#">route-preference</a>
Description	This command specifies the routing preference to reach the PCE server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the management routing instance are used to reach the PCE server before the in-band routes in the Base routing instance.
Options	inband, outband, both
Default	both
Introduced	21.10.R1
Platforms	All

### **tls-client-profile** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS client profile name assigned to this PCC peer
Context	<b>configure router</b> <i>string pcep pcc peer (ipv4-address-no-zone   ipv6-address-no-zone) tls-client-profile reference</i>
Tree	<a href="#">tls-client-profile</a>
Reference	<b>configure system security tls client-tls-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	All

### **tls-wait-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time the PCC waits until declaring handshake failure
Context	<b>configure router</b> <i>string pcep pcc peer (ipv4-address-no-zone   ipv6-address-no-zone) tls-wait-timer number</i>
Tree	<a href="#">tls-wait-timer</a>
Range	60 to 255

Units	seconds
Default	60
Introduced	21.10.R1
Platforms	All

### **redelegation-timer** *number*

Synopsis	Configure redelegation-timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc redelegation-timer</b> <i>number</i>
Tree	<a href="#">redelegation-timer</a>
Range	1 to 3600
Units	seconds
Default	90
Introduced	16.0.R4
Platforms	All

### **report-path-constraints** *boolean*

Synopsis	Include LSP path constraints in PCE report messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc report-path-constraints</b> <i>boolean</i>
Tree	<a href="#">report-path-constraints</a>
Default	true
Introduced	16.0.R4
Platforms	All

### **state-timer**

Synopsis	Enter the <b>state-timer</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc state-timer</b>
Tree	<a href="#">state-timer</a>
Introduced	16.0.R4
Platforms	All

**timer number**

Synopsis	Configure state-timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>state-timer</b> <b>timer</b> <i>number</i>
Tree	<b>timer</b>
Range	1 to 3600
Units	seconds
Default	180
Introduced	16.0.R4
Platforms	All

**timer-action keyword**

Synopsis	State timer action remove/none
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>state-timer</b> <b>timer-action</b> <i>keyword</i>
Tree	<b>timer-action</b>
Options	none, remove
Default	remove
Introduced	16.0.R4
Platforms	All

**unknown-message-rate number**

Synopsis	Configure unknown message rate
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>unknown-message-rate</b> <i>number</i>
Tree	<b>unknown-message-rate</b>
Range	1 to 255
Default	10
Introduced	16.0.R4
Platforms	All

**pce**

Synopsis	Enable the <b>pce</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pce</b>
Tree	<b>pce</b>

Introduced	16.0.R4
Platforms	VSR-NRC

### **admin-state** *keyword*

Synopsis	Administrative state of the PCEP session element
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pce</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR-NRC

### **authentication-keychain** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Keychain for TCP-AO authentication between PCC and PCE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pce</a> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	23.10.R1
Platforms	VSR-NRC

### **dead-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure dead timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep</a> <a href="#">pce</a> <a href="#">dead-timer</a> <i>number</i>
Tree	<a href="#">dead-timer</a>
Range	1 to 255
Units	seconds

Default	120
Introduced	16.0.R4
Platforms	VSR-NRC

### **keepalive** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure keepalive
Context	<b>configure</b> <i>router string pcep pce keepalive number</i>
Tree	<a href="#">keepalive</a>
Range	1 to 255
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	VSR-NRC

### **local-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	<b>configure</b> <i>router string pcep pce local-address string</i>
Tree	<a href="#">local-address</a>
Description	This command configures the local IPv4 address of the PCEP speaker.  See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv4 address to establish a PCEP session.
Introduced	16.0.R4
Platforms	VSR-NRC

## local-address-ipv6 *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pce</a> <a href="#">local-address-ipv6</a> <i>string</i>
Tree	<a href="#">local-address-ipv6</a>
Description	This command configures the local IPv6 address of the PCEP speaker.  See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv6 address to establish a PCEP session.
Introduced	20.2.R1
Platforms	VSR-NRC

## tls-server-profile *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS server profile name assigned to this PCE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pce</a> <a href="#">tls-server-profile</a> <i>reference</i>
Tree	<a href="#">tls-server-profile</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">tls</a> <a href="#">server-tls-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	VSR-NRC

## tls-wait-timer *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure tls-wait-timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcep pce</a> <a href="#">tls-wait-timer</a> <i>number</i>
Tree	<a href="#">tls-wait-timer</a>
Range	60 to 255

Units	seconds
Default	60
Introduced	21.10.R1
Platforms	VSR-NRC

### **unknown-message-rate** *number*

Synopsis	Configure unknown message rate
Context	<b>configure</b> <i>router string</i> <b>pcp pce</b> <i>unknown-message-rate number</i>
Tree	<a href="#">unknown-message-rate</a>
Range	1 to 255
Default	10
Introduced	16.0.R4
Platforms	VSR-NRC

### **pcp**

Synopsis	Enter the <b>pcp</b> context
Context	<b>configure</b> <i>router string</i> <b>pcp</b>
Tree	<a href="#">pcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **server** [*name*] *string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure</b> <i>router string</i> <b>pcp server</b> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	PCP server name
----------	-----------------

Context	<b>configure router string pcp server string</b>
Tree	<b>server</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the PCP server
Context	<b>configure router string pcp server string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure router string pcp server string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dual-stack-lite-address string**

Synopsis	Inside Dual Stack Lite AFTR address
Context	<b>configure router string pcp server string dual-stack-lite-address string</b>
Tree	<b>dual-stack-lite-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fwd-inside-router** *string*

Synopsis	PCP forwarding inside virtual router instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp server</b> <i>string</i> <b>fwd-inside-router</b> <i>string</i>
Tree	<b>fwd-inside-router</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface** [**name**] *reference*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp server</b> <i>string</i> <b>interface</b> <i>reference</i>
Tree	<b>interface</b>
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *reference*

Synopsis	Interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp server</b> <i>string</i> <b>interface</b> <i>reference</i>
Tree	<b>interface</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy** *reference*

Synopsis	PCP server policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcp server</b> <i>string</i> <b>policy</b> <i>reference</i>
Tree	<b>policy</b>
Reference	<b>configure</b> <b>service nat</b> <b>pcp-server-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pim

Synopsis	Enable the <b>pim</b> context
Context	<b>configure router string pim</b>
Tree	<b>pim</b>
Introduced	16.0.R1
Platforms	All

## admin-state keyword

Synopsis	Administrative state of PIM
Context	<b>configure router string pim admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## apply-to keyword

Synopsis	IES and non-IES interfaces to create in PIM
Context	<b>configure router string pim apply-to keyword</b>
Tree	<b>apply-to</b>
Options	ies, non-ies, all, none
Default	none
Introduced	16.0.R1
Platforms	All

## import

Synopsis	Enter the <b>import</b> context
Context	<b>configure router string pim import</b>
Tree	<b>import</b>
Introduced	16.0.R1
Platforms	All

**join-policy** *reference*

Synopsis	Character limit for policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>import</b> <b>join-policy</b> <i>reference</i>
Tree	<a href="#">join-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**register-policy** *reference*

Synopsis	Character limit for policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>import</b> <b>register-policy</b> <i>reference</i>
Tree	<a href="#">register-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

**interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

**[interface-name]** *string*

Synopsis	Router interface name
----------	-----------------------

Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the PIM interface
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **assert-period** *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>assert-period</b> <i>number</i>
Tree	<b>assert-period</b>
Range	1 to 300
Default	60
Introduced	16.0.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	16.0.R1
Platforms	All

**ipv4 boolean**

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>ipv4</b> <b>boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6 boolean**

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>ipv6</b> <b>boolean</b>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	All

**bier-signaling-type**

Synopsis	Enter the <b>bier-signaling-type</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bier-signaling-type</b>
Tree	<b>bier-signaling-type</b>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ipv4 boolean**

Synopsis	Enable PIM IPv4 signaling through a BIER domain
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bier-signaling-type</b> <b>ipv4</b> <b>boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ipv6 boolean**

Synopsis	Enable PIM IPv6 signaling through a BIER domain
Context	<b>configure</b> <i>router string pim interface string bier-signaling-type ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bsm-check-rtr-alert boolean**

Synopsis	Check router alert option in bootstrap messages received
Context	<b>configure</b> <i>router string pim interface string bsm-check-rtr-alert boolean</i>
Tree	<a href="#">bsm-check-rtr-alert</a>
Default	false
Introduced	16.0.R1
Platforms	All

**hello-interval number**

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	<b>configure</b> <i>router string pim interface string hello-interval number</i>
Tree	<a href="#">hello-interval</a>
Range	0 to 255
Default	30
Introduced	16.0.R1
Platforms	All

**hello-multiplier number**

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	<b>configure</b> <i>router string pim interface string hello-multiplier number</i>
Tree	<a href="#">hello-multiplier</a>
Range	20 to 100
Default	35

Introduced 16.0.R1  
 Platforms All

### **improved-assert** *boolean*

Synopsis Allow improved assert processing on interface  
 Context **configure** *router string pim interface string improved-assert boolean*  
 Tree [improved-assert](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **instant-prune-echo** *boolean*

Synopsis Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface  
 Context **configure** *router string pim interface string instant-prune-echo boolean*  
 Tree [instant-prune-echo](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **ipv4**

Synopsis Enter the **ipv4** context  
 Context **configure** *router string pim interface string ipv4*  
 Tree [ipv4](#)  
 Introduced 16.0.R1  
 Platforms All

### **monitor-oper-group**

Synopsis Enter the **monitor-oper-group** context  
 Context **configure** *router string pim interface string ipv4 monitor-oper-group*  
 Tree [monitor-oper-group](#)  
 Introduced 16.0.R1

Platforms All

### **name** *reference*

Synopsis Operational group identifier

Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) *name* *reference*

Tree [name](#)

Reference **configure** [service](#) [oper-group](#) *string*

Introduced 16.0.R1

Platforms All

### **operation** *keyword*

Synopsis Operation performed when operational group is active

Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) [operation](#) *keyword*

Tree [operation](#)

Options add, subtract, set

Introduced 16.0.R1

Platforms All

### **priority-delta** *number*

Synopsis Delta priority with operation when operational group is active

Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [monitor-oper-group](#) [priority-delta](#) *number*

Tree [priority-delta](#)

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

### **multicast** *boolean*

Synopsis Enable PIM interface operation

Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv4](#) [multicast](#) *boolean*

Tree [multicast](#)

Default	true
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

## monitor-oper-group

Synopsis	Enter the <b>monitor-oper-group</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">monitor-oper-group</a>
Tree	<a href="#">monitor-oper-group</a>
Introduced	16.0.R1
Platforms	All

## name *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">monitor-oper-group</a> <a href="#">name</a> <i>reference</i>
Tree	<a href="#">name</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## operation *keyword*

Synopsis	Operation performed when operational group is active
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">monitor-oper-group</a> <a href="#">operation</a> <i>keyword</i>
Tree	<a href="#">operation</a>
Options	add, subtract, set

Introduced	16.0.R1
Platforms	All

### **priority-delta** *number*

Synopsis	Delta priority with operation when operational group is active
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">monitor-oper-group</a> <a href="#">priority-delta</a> <i>number</i>
Tree	<a href="#">priority-delta</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **multicast** *boolean*

Synopsis	Enable PIM interface operation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">multicast</a> <i>boolean</i>
Tree	<a href="#">multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **max-groups** *number*

Synopsis	Maximum number of groups for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">max-groups</a> <i>number</i>
Tree	<a href="#">max-groups</a>
Range	0   1 to 16000
Default	0
Introduced	16.0.R1
Platforms	All

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a>

Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	All

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

## total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">total</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">total</a>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure</b> <b>mcac</b> <b>interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**mc-constraints**

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b>
Tree	<b>mc-constraints</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the multicast CAC constraints
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**level** [*level-id*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>level</b> <i>number</i>
Tree	<b>level</b>
Introduced	16.0.R1
Platforms	All

**[level-id] number**

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>level</b> <i>number</i>
Tree	<b>level</b>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bandwidth number**

Synopsis	Bandwidth available for this level
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>level</b> <i>number</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**number-down [number-lag-port-down] number**

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>number-down</b> <i>number</i>
Tree	<b>number-down</b>
Introduced	16.0.R1
Platforms	All

**[number-lag-port-down] number**

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>mcac</b> <b>mc-constraints</b> <b>number-down</b> <i>number</i>
Tree	<b>number-down</b>
Range	1 to 64

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level number**

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac mc-constraints</b> <b>number-down</b> <i>number</i> <b>level</b> <i>number</i>
Tree	<b>level</b>
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight boolean**

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac mc-constraints</b> <b>use-lag-port-weight</b> <i>boolean</i>
Tree	<b>use-lag-port-weight</b>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>mcac</b> <i>policy reference</i>
Tree	<b>policy</b>

Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac policy string</a>
Introduced	16.0.R1
Platforms	All

### **multicast-senders** *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	<b>configure</b> <a href="#">router string pim interface string multicast-senders keyword</a>
Tree	<a href="#">multicast-senders</a>
Options	auto, always, never
Default	auto
Introduced	16.0.R1
Platforms	All

### **p2mp-ldp-tree-join**

Synopsis	Enter the <b>p2mp-ldp-tree-join</b> context
Context	<b>configure</b> <a href="#">router string pim interface string p2mp-ldp-tree-join</a>
Tree	<a href="#">p2mp-ldp-tree-join</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv4 boolean**

Synopsis	Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>p2mp-ldp-tree-join</b> <b>ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6 boolean**

Synopsis	Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>p2mp-ldp-tree-join</b> <b>ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	DR election priority for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	1 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

### **sticky-dr**

Synopsis	Enable the <b>sticky-dr</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>sticky-dr</b>
Tree	<b>sticky-dr</b>
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	DR election priority for this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>sticky-dr</b> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	1 to 4294967295
Default	1024
Introduced	16.0.R1
Platforms	All

### **three-way-hello** *boolean*

Synopsis	Allow three-way hello compatibility mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>three-way-hello</b> <i>boolean</i>
Tree	<b>three-way-hello</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **tracking-support** *boolean*

Synopsis	Allow upstream routers to explicitly track join membership
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>tracking-support</b> <i>boolean</i>
Tree	<b>tracking-support</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**gtm**

Synopsis	Enter the <b>gtm</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>gtm</b>
Tree	<b>gtm</b>
Introduced	16.0.R1
Platforms	All

**auto-discovery** *keyword*

Synopsis	Method for multicast VPN membership auto-discovery
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>gtm</b> <b>auto-discovery</b> <i>keyword</i>
Tree	<b>auto-discovery</b>
Options	bgp
Introduced	16.0.R1
Platforms	All

**multicast-fast-failover** *boolean*

Synopsis	Use Multicast-Only Fast Reroute (MoFRR) functionality
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv4</b> <b>multicast-fast-failover</b> <i>boolean</i>
Tree	<b>multicast-fast-failover</b>
Default	false
Introduced	16.0.R1
Platforms	All

**rpf-table** *keyword*

Synopsis	Route tables for RPF lookup
Context	<b>configure router</b> <i>string</i> <b>pim ipv4 rpf-table</b> <i>keyword</i>
Tree	<b>rpf-table</b>
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	16.0.R1
Platforms	All

**source-address**

Synopsis	Enter the <b>source-address</b> context
Context	<b>configure router</b> <i>string</i> <b>pim ipv4 source-address</b>
Tree	<b>source-address</b>
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	23.3.R1
Platforms	All

**register-message** *string*

Synopsis	Source IPv4 address for PIM register messages
Context	<b>configure router</b> <i>string</i> <b>pim ipv4 source-address register-message</b> <i>string</i>
Tree	<b>register-message</b>
Description	<p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p>
Introduced	23.3.R1
Platforms	All

**ssm-assert-compatible-mode** *boolean*

Synopsis	Enable SSM assert compatible mode
----------	-----------------------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 ssm-assert-compatible-mode</a> <i>boolean</i>
Tree	<a href="#">ssm-assert-compatible-mode</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 ssm-default-range</a> <i>boolean</i>
Tree	<a href="#">ssm-default-range</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv6 admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **multicast-fast-failover** *boolean*

Synopsis	Use Multicast-Only Fast Reroute (MoFRR) functionality
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim ipv6 multicast-fast-failover</b> <i>boolean</i>
Tree	<b>multicast-fast-failover</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **rpf-table** *keyword*

Synopsis	Route tables for RPF lookup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim ipv6 rpf-table</b> <i>keyword</i>
Tree	<b>rpf-table</b>
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	16.0.R1
Platforms	All

### **source-address**

Synopsis	Enter the <b>source-address</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim ipv6 source-address</b>
Tree	<b>source-address</b>
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	23.3.R1
Platforms	All

### **register-message** *string*

Synopsis	Source IPv6 address for PIM register messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim ipv6 source-address register-message</b> <i>string</i>
Tree	<b>register-message</b>
Description	This command configures the source IPv6 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.

When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.

Introduced	23.3.R1
Platforms	All

### **ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim ipv6 ssm-default-range</b> <i>boolean</i>
Tree	<a href="#">ssm-default-range</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **lag-usage-optimization** *boolean*

Synopsis	Optimize LAG usage
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim lag-usage-optimization</b> <i>boolean</i>
Tree	<a href="#">lag-usage-optimization</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-balance** *boolean*

Synopsis	Enable multicast balancing of traffic over ECMP links
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim mc-ecmp-balance</b> <i>boolean</i>
Tree	<a href="#">mc-ecmp-balance</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-balance-hold** *number*

Synopsis	Hold time for multicast balancing over ECMP links
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim mc-ecmp-balance-hold</b> <i>number</i>

Tree	<a href="#">mc-ecmp-balance-hold</a>
Range	2 to 600
Units	minutes
Introduced	16.0.R1
Platforms	All

### **mc-ecmp-hashing**

Synopsis	Enable the <b>mc-ecmp-hashing</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mc-ecmp-hashing</a>
Tree	<a href="#">mc-ecmp-hashing</a>
Introduced	16.0.R1
Platforms	All

### **rebalance** *boolean*

Synopsis	Rebalance flows to newly added links immediately instead of waiting until they are pruned
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mc-ecmp-hashing rebalance</a> <i>boolean</i>
Tree	<a href="#">rebalance</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mdt-spt** *boolean*

Synopsis	Use SPT switchover for default MDT
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim mdt-spt</a> <i>boolean</i>
Tree	<a href="#">mdt-spt</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **non-dr-attract-traffic** *boolean*

Synopsis	Attract traffic when the router is not the designated one
----------	---

Context	<b>configure router</b> <i>string</i> <b>pim non-dr-attract-traffic</b> <i>boolean</i>
Tree	<b>non-dr-attract-traffic</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **pim-ssm-scaling** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PIM-SSM scaling
Context	<b>configure router</b> <i>string</i> <b>pim pim-ssm-scaling</b> <i>boolean</i>
Tree	<b>pim-ssm-scaling</b>
Description	<p>When configured to <b>true</b>, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.</p> <p>When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to <b>dynamic</b>, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.</p> <p>When PIM SSM scaling is enabled, the following multicast features are disabled:• DM• MoFRR• JP policy• SSM groups• InBand features (BIER and MLDP)• Extranet• ASM</p> <p>When configured to <b>false</b>, there is no increase of PIM SSM (S,G) scaling.</p>
Default	false
Introduced	19.7.R1
Platforms	All

### **rp**

Synopsis	Enter the <b>rp</b> context
Context	<b>configure router</b> <i>string</i> <b>pim rp</b>
Tree	<b>rp</b>

Introduced 16.0.R1  
 Platforms All

## **bootstrap**

Synopsis Enter the **bootstrap** context  
 Context **configure** [router](#) *string* [pim rp bootstrap](#)  
 Tree [bootstrap](#)  
 Introduced 16.0.R1  
 Platforms All

## **export reference**

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim rp bootstrap export reference](#)  
 Tree [export](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

## **import reference**

Synopsis Character limit for policy name  
 Context **configure** [router](#) *string* [pim rp bootstrap import reference](#)  
 Tree [import](#)  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string pim rp ipv4</i>
Tree	<i>ipv4</i>
Introduced	16.0.R1
Platforms	All

**anycast** [*ipv4-address*] *string rp-set-peer string*

Synopsis	Add a list entry for <b>anycast</b>
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Introduced	16.0.R1
Platforms	All

**[ipv4-address]** *string*

Synopsis	Loopback IP address shared by routes in RP set
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**rp-set-peer** *string*

Synopsis	Configure a peer in the anycast rp-set.
Context	<b>configure</b> <i>router string pim rp ipv4 anycast string rp-set-peer string</i>
Tree	<i>anycast</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**auto-rp-discovery** *boolean*

Synopsis	Enable auto-RP discovery mode and auto-RP listener
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 auto-rp-discovery</b> <i>boolean</i>
Tree	<a href="#">auto-rp-discovery</a>
Description	When configured to <b>true</b> , the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality.  See "Automatic discovery of group-to-RP mappings (auto-RP)" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Multicast Routing Protocols Guide</i> for more information about the auto-RP protocol and configuration guidelines.
Default	false
Introduced	16.0.R1
Platforms	All

**bsr-candidate**

Synopsis	Enter the <b>bsr-candidate</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 bsr-candidate</b>
Tree	<a href="#">bsr-candidate</a>
Introduced	16.0.R1
Platforms	All

**address** *string*

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 bsr-candidate address</b> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the Candidate BSR
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim rp ipv4 bsr-candidate admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced	16.0.R1
Platforms	All

### **hash-mask-len** *number*

Synopsis	Length for bootstrap hash mask
Context	<b>configure</b> <i>router string pim rp ipv4 bsr-candidate hash-mask-len number</i>
Tree	<a href="#">hash-mask-len</a>
Range	0 to 32
Default	30
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Bootstrap priority of the router
Context	<b>configure</b> <i>router string pim rp ipv4 bsr-candidate priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **candidate** *boolean*

Synopsis	Enable auto-RP to advertise candidate RP information
Context	<b>configure</b> <i>router string pim rp ipv4 candidate boolean</i>
Tree	<a href="#">candidate</a>
Description	<p>When configured to <b>true</b>, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.</p> <p>When configured to <b>false</b>, the candidate RP information is not specified.</p>
Default	false
Introduced	20.10.R1
Platforms	All

**mapping-agent** *boolean*

Synopsis	Enable the mapping agent on the node
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 mapping-agent</i> <i>boolean</i>
Tree	<a href="#">mapping-agent</a>
Description	When configured to <b>true</b> , the mapping agent is enabled on the node. The auto-RP MA observes the <b>auto-rp-announcement</b> messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	20.10.R1
Platforms	All

**rp-candidate**

Synopsis	Enter the <b>rp-candidate</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 rp-candidate</i>
Tree	<a href="#">rp-candidate</a>
Introduced	16.0.R1
Platforms	All

**address** *string*

Synopsis	Local RP address
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 rp-candidate</i> <i>address</i> <i>string</i>
Tree	<a href="#">address</a>
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the Candidate RP
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 rp-candidate</i> <i>admin-state</i> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **group-range** [[ipv4-prefix](#)] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 rp-candidate</a> <a href="#">group-range</a> <i>string</i>
Tree	<a href="#">group-range</a>
Introduced	16.0.R1
Platforms	All

### **[ipv4-prefix]** *string*

Synopsis	IPv4 address and prefix length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 rp-candidate</a> <a href="#">group-range</a> <i>string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **holdtime** *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 rp-candidate</a> <a href="#">holdtime</a> <i>number</i>
Tree	<a href="#">holdtime</a>
Range	5 to 255
Units	seconds
Default	150
Introduced	16.0.R1
Platforms	All

**priority number**

Synopsis	Candidate RP priority
Context	<b>configure</b> <i>router string pim rp ipv4 rp-candidate priority number</i>
Tree	<i>priority</i>
Range	0 to 255
Default	192
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <i>router string pim rp ipv4 static</i>
Tree	<i>static</i>
Introduced	16.0.R1
Platforms	All

**address [ipv4-address] string**

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <i>router string pim rp ipv4 static address string</i>
Tree	<i>address</i>
Introduced	16.0.R1
Platforms	All

**[ipv4-address] string**

Synopsis	IPv4 address for the static RP
Context	<b>configure</b> <i>router string pim rp ipv4 static address string</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**group-prefix** [[ipv4-prefix](#)] *string*

Synopsis	Add a list entry for <b>group-prefix</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 static address</a> <i>string</i> <a href="#">group-prefix</a> <i>string</i>
Tree	<a href="#">group-prefix</a>
Introduced	16.0.R1
Platforms	All

**[ipv4-prefix]** *string*

Synopsis	IPv4 address and prefix length
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 static address</a> <i>string</i> <a href="#">group-prefix</a> <i>string</i>
Tree	<a href="#">group-prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**override** *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv4 static address</a> <i>string</i> <b>override</b> <i>boolean</i>
Tree	<a href="#">override</a>
Default	false
Introduced	16.0.R1
Platforms	All

**ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim rp ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

**anycast** [ipv6-address] string rp-set-peer string

Synopsis	Add a list entry for <b>anycast</b>
Context	<b>configure</b> router string pim rp ipv6 anycast string rp-set-peer string
Tree	anycast
Introduced	16.0.R1
Platforms	All

**[ipv6-address]** string

Synopsis	Loopback IP address shared by routes in RP set
Context	<b>configure</b> router string pim rp ipv6 anycast string rp-set-peer string
Tree	anycast
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**rp-set-peer** string

Synopsis	Peer in the anycast RP set
Context	<b>configure</b> router string pim rp ipv6 anycast string rp-set-peer string
Tree	anycast
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**bsr-candidate**

Synopsis	Enter the <b>bsr-candidate</b> context
Context	<b>configure</b> router string pim rp ipv6 bsr-candidate
Tree	bsr-candidate
Introduced	16.0.R1
Platforms	All

**address string**

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	<b>configure router string pim rp ipv6 bsr-candidate address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the Candidate BSR
Context	<b>configure router string pim rp ipv6 bsr-candidate admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**hash-mask-len number**

Synopsis	Length for bootstrap hash mask
Context	<b>configure router string pim rp ipv6 bsr-candidate hash-mask-len number</b>
Tree	<a href="#">hash-mask-len</a>
Range	0 to 128
Default	126
Introduced	16.0.R1
Platforms	All

**priority number**

Synopsis	Bootstrap priority of the router
Context	<b>configure router string pim rp ipv6 bsr-candidate priority number</b>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	0
Introduced	16.0.R1

Platforms All

## embedded-rp

Synopsis Enable the **embedded-rp** context  
 Context **configure** [router](#) *string* [pim rp ipv6 embedded-rp](#)  
 Tree [embedded-rp](#)  
 Introduced 16.0.R1  
 Platforms All

## admin-state *keyword*

Synopsis Administrative state of embedded RP  
 Context **configure** [router](#) *string* [pim rp ipv6 embedded-rp admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Platforms All

## group-range [[ipv6-prefix](#)] *string*

Synopsis Add a list entry for **group-range**  
 Context **configure** [router](#) *string* [pim rp ipv6 embedded-rp group-range](#) *string*  
 Tree [group-range](#)  
 Introduced 16.0.R1  
 Platforms All

## [[ipv6-prefix](#)] *string*

Synopsis IPv6 address and prefix length  
Context **configure** *router string pim rp ipv6 static address string group-prefix string*  
Tree [group-prefix](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1

Platforms All

### **override** *boolean*

Synopsis Change the precedence for static RP over dynamically learnt RP  
Context **configure** *router string pim rp ipv6 static address string override boolean*  
Tree [override](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **rpfv**

Synopsis Enter the **rpfv** context  
Context **configure** *router string pim rpfv*  
Tree [rpfv](#)  
Introduced 16.0.R1  
Platforms All

### **core** *boolean*

Synopsis Include proxy RPF vector for core  
Context **configure** *router string pim rpfv core boolean*  
Tree [core](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mvpn** *boolean*

Synopsis Include proxy RPF vector for Inter-AS Rosen MVPN  
Context **configure** *router string pim rpfv mvpn boolean*  
Tree [mvpn](#)  
Default false  
Introduced 16.0.R1

Platforms All

### **spt-switchover** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **spt-switchover** list instance

Context **configure router** *string* [pim spt-switchover](#) (*ipv4-prefix* | *ipv6-prefix*)

Tree [spt-switchover](#)

Introduced 16.0.R1

Platforms All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis IP address and mask length

Context **configure router** *string* [pim spt-switchover](#) (*ipv4-prefix* | *ipv6-prefix*)

Tree [spt-switchover](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **threshold** (*number* | *keyword*)

Synopsis SPT switchover threshold

Context **configure router** *string* [pim spt-switchover](#) (*ipv4-prefix* | *ipv6-prefix*) [threshold](#) (*number* | *keyword*)

Tree [threshold](#)

Range 1 to 4294967294

Units kilobps

Options infinity

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **ssm-groups**

Synopsis Enter the **ssm-groups** context

Context	<b>configure</b> <i>router string</i> <b>pim ssm-groups</b>
Tree	<b>ssm-groups</b>
Introduced	16.0.R1
Platforms	All

### **group-range** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <i>router string</i> <b>pim ssm-groups group-range</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	<b>configure</b> <i>router string</i> <b>pim ssm-groups group-range</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **radius**

Synopsis	Enter the <b>radius</b> context
Context	<b>configure</b> <i>router string</i> <b>radius</b>
Tree	<b>radius</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy** [**name**] *string*

Synopsis	Enter the <b>proxy</b> list instance
Context	<b>configure</b> <i>router string</i> <b>radius proxy string</b>
Tree	<b>proxy</b>

Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	RADIUS proxy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i>
Tree	<b>proxy</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of RADIUS proxy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-matching**

Synopsis	Enter the <b>attribute-matching</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>attribute-matching</b>
Tree	<b>attribute-matching</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**entry** [[index](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[index]** *number*

Synopsis	Index of this entry
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accounting-server-policy** *string*

Synopsis	Accounting server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i> <a href="#">accounting-server-policy</a> <i>string</i>
Tree	<a href="#">accounting-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**authentication-server-policy** *string*

Synopsis	Authentication server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">attribute-matching</a> <a href="#">entry</a> <i>number</i> <a href="#">authentication-server-policy</a> <i>string</i>
Tree	<a href="#">authentication-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-string** *string*

Synopsis Prefix string

Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching entry](#) *number* [prefix-string](#) *string*

Tree [prefix-string](#)

String Length 1 to 128

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **suffix-string** *string*

Synopsis Prefix string

Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching entry](#) *number* [suffix-string](#) *string*

Tree [suffix-string](#)

String Length 1 to 128

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis Matching attribute type to RADIUS server policy

Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching type](#) *number*

Tree [type](#)

Range 1 to 255

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis Matching Vendor ID to RADIUS server policy

Context **configure** [router](#) *string* [radius proxy](#) *string* [attribute-matching vendor](#) (*number* | *keyword*)

Tree [vendor](#)

---

Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## cache

Synopsis	Enter the <b>cache</b> context
Context	<b>configure</b> <i>router string radius proxy string cache</i>
Tree	<i>cache</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the RADIUS proxy cache
Context	<b>configure</b> <i>router string radius proxy string cache admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## key

Synopsis	Enable the <b>key</b> context
Context	<b>configure</b> <i>router string radius proxy string cache key</i>
Tree	<i>key</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-type *number*

Synopsis	RADIUS attribute type to cache for this RADIUS proxy server
Context	<b>configure</b> <i>router string radius proxy string cache key attribute-type number</i>

Tree	<a href="#">attribute-type</a>
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-type** *keyword*

Synopsis	Packet type of the RADIUS messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache key</b> <b>packet-type</b> <i>keyword</i>
Tree	<a href="#">packet-type</a>
Options	access-request, access-accept
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis	RADIUS Vendor ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache key</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Idle timeout value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	60 to 3600
Units	seconds
Default	300
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## track-accounting

Synopsis Enter the **track-accounting** context

Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting](#)

Tree [track-accounting](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## accounting-off *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client

Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting accounting-off](#) *boolean*

Tree [accounting-off](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## accounting-on *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client

Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting accounting-on](#) *boolean*

Tree [accounting-on](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interim-update *boolean*

Synopsis Update the ESM host with the RADIUS client that generated the interim update

Context **configure** [router](#) *string* [radius proxy](#) *string* [cache track-accounting interim-update](#) *boolean*

Tree [interim-update](#)

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start** *boolean*

Synopsis	Update host with client that generated accounting-start
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">cache track-accounting</a> <b>start</b> <i>boolean</i>
Tree	<a href="#">start</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop** *boolean*

Synopsis	Remove ESM host and forward accounting-stop packet
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">cache track-accounting</a> <b>stop</b> <i>boolean</i>
Tree	<a href="#">stop</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-authentication**

Synopsis	Enter the <b>track-authentication</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">cache track-authentication</a>
Tree	<a href="#">track-authentication</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accept** *boolean*

Synopsis	Track Access-Accept message for mobility
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">cache track-authentication</a> <b>accept</b> <i>boolean</i>
Tree	<a href="#">accept</a>

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-delete-hold-time** *number*

Synopsis	Delete hold time
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">cache</a> <b>track-delete-hold-time</b> <i>number</i>
Tree	<a href="#">track-delete-hold-time</a>
Range	0 to 6000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **defaults**

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <b>defaults</b>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-server-policy** *string*

Synopsis	Default accounting RADIUS server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">defaults</a> <b>accounting-server-policy</b> <i>string</i>
Tree	<a href="#">accounting-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **authentication-server-policy** *string*

Synopsis	Default authentication RADIUS server policy
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">defaults authentication-server-policy</a> <i>string</i>
Tree	<a href="#">authentication-server-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface** [[interface-name](#)] *string*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## load-balance-key

Synopsis	Enter the <b>load-balance-key</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a>
Tree	<a href="#">load-balance-key</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-1

Synopsis	Enter the <b>attribute-1</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a>
Tree	<a href="#">attribute-1</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## type *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a> <a href="#">type</a> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vendor (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a> <a href="#">vendor</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-2

Synopsis Enter the **attribute-2** context

Context **configure** [router](#) *string* [radius proxy](#) *string* [load-balance-key](#) [attribute-2](#)

Tree [attribute-2](#)

Notes The following elements are part of a choice: (**attribute-1**, **attribute-2**, **attribute-3**, **attribute-4**, and **attribute-5**) or **source-ip-udp**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## type number

Synopsis Attribute type to cache for this RADIUS Proxy server

Context **configure** [router](#) *string* [radius proxy](#) *string* [load-balance-key](#) [attribute-2](#) [type](#) *number*

Tree [type](#)

Range 1 to 255

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vendor (number | keyword)

Synopsis Vendor-Id attribute

Context **configure** [router](#) *string* [radius proxy](#) *string* [load-balance-key](#) [attribute-2](#) [vendor](#) (*number* | *keyword*)

Tree [vendor](#)

Range 1 to 16777215

Options nokia

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-3

Synopsis Enter the **attribute-3** context

Context **configure** [router](#) *string* [radius proxy](#) *string* [load-balance-key](#) [attribute-3](#)

Tree	<a href="#">attribute-3</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a> <i>type number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor (number | keyword)**

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a> <i>vendor (number   keyword)</i>
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-4**

Synopsis	Enter the <b>attribute-4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-4</a>
Tree	<a href="#">attribute-4</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure router string radius proxy string load-balance-key attribute-4 type number</b>
Tree	<b>type</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor (number | keyword)**

Synopsis	Vendor-Id attribute
Context	<b>configure router string radius proxy string load-balance-key attribute-4 vendor (number   keyword)</b>
Tree	<b>vendor</b>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**attribute-5**

Synopsis	Enter the <b>attribute-5</b> context
Context	<b>configure router string radius proxy string load-balance-key attribute-5</b>
Tree	<b>attribute-5</b>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure router string radius proxy string load-balance-key attribute-5 type number</b>
Tree	<b>type</b>
Range	1 to 255

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis Vendor-Id attribute  
 Context **configure** *router string radius proxy string load-balance-key attribute-5 vendor* (*number* | *keyword*)  
 Tree [vendor](#)  
 Range 1 to 16777215  
 Options nokia  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-udp**

Synopsis Key to consist of the source IP address and source UDP port of the RADIUS message  
 Context **configure** *router string radius proxy string load-balance-key source-ip-udp*  
 Tree [source-ip-udp](#)  
 Notes The following elements are part of a choice: (**attribute-1**, **attribute-2**, **attribute-3**, **attribute-4**, and **attribute-5**) or **source-ip-udp**.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **purpose** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Purpose of the RADIUS proxy  
 Context **configure** *router string radius proxy string purpose keyword*  
 Tree [purpose](#)  
 Options accounting, authentication, accounting-authentication  
 Notes This element is mandatory.  
 Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis Python policy  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [python-policy](#) *reference*  
 Tree [python-policy](#)  
 Reference **configure** [python](#) [python-policy](#) *string*  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis Format of the secret key to access the RADIUS proxy server  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [secret](#) *string*  
 Tree [secret](#)  
 String Length 1 to 115  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **send-accounting-response** *boolean*

Synopsis Allow RADIUS proxy server to respond to Accounting-Response messages  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [send-accounting-response](#) *boolean*  
 Tree [send-accounting-response](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw**

Synopsis Enter the **wlan-gw** context  
 Context **configure** [router](#) *string* [radius proxy](#) *string* [wlan-gw](#)  
 Tree [wlan-gw](#)  
 Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis IPv4 address of the distributed RADIUS proxy server

Context **configure** [router string](#) [radius proxy string](#) [wlan-gw address string](#)

Tree [address](#)

Description This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6-address string**

Synopsis IPv6 address of the distributed RADIUS proxy server

Context **configure** [router string](#) [radius proxy string](#) [wlan-gw ipv6-address string](#)

Tree [ipv6-address](#)

Description This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group reference**

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis ISA WLAN gateway group

Context **configure** [router string](#) [radius proxy string](#) [wlan-gw-group reference](#)

Tree [wlan-gw-group](#)

Reference **configure** [isa wlan-gw-group number](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**server** [*name*] *string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure</b> <i>router string radius server string</i>
Tree	<i>server</i>
Max. Instances	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	External RADIUS server name
Context	<b>configure</b> <i>router string radius server string</i>
Tree	<i>server</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accept-coa** *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	<b>configure</b> <i>router string radius server string accept-coa boolean</i>
Tree	<i>accept-coa</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**acct-port** *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	<b>configure</b> <i>router string radius server string acct-port number</i>
Tree	<i>acct-port</i>
Range	1 to 65535
Default	1813

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auth-port** *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>auth-port</b> <i>number</i>
Tree	<b>auth-port</b>
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pending-requests-limit** *number*

Synopsis	Limit of the number for pending RADIUS requests
----------	---

---

Context	<b>configure</b> <i>router string radius server string pending-requests-limit number</i>
Tree	<a href="#">pending-requests-limit</a>
Range	1 to 4096
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python script policy to modify CoA messages
Context	<b>configure</b> <i>router string radius server string python-policy reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis	Secret key associated with this RADIUS server
Context	<b>configure</b> <i>router string radius server string secret string</i>
Tree	<a href="#">secret</a>
String Length	1 to 115
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reassembly**

Synopsis	Enable the <b>reassembly</b> context
Context	<b>configure</b> <i>router string reassembly</i>
Tree	<a href="#">reassembly</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-group** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group (including WLAN Gateway group) that executes the reassembly
Context	<b>configure</b> <i>router</i> <i>string</i> <i>reassembly</i> <i>nat-group</i> <i>number</i>
Tree	<a href="#">nat-group</a>
Max. Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**to-base-network** *boolean*

Synopsis	Allow reassembled traffic sent to network interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>reassembly</i> <i>to-base-network</i> <i>boolean</i>
Tree	<a href="#">to-base-network</a>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**rib-api**

Synopsis	Enter the <b>rib-api</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rib-api</i>
Tree	<a href="#">rib-api</a>
Introduced	16.0.R4
Platforms	All

**mpls**

Synopsis	Enter the <b>mpls</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rib-api</i> <i>mpls</i>
Tree	<a href="#">mpls</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MPLS for RIB-API gRPC service
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rib-api</b> <b>mpls</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

**label-name** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure reserved label block.
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rib-api</b> <b>mpls</b> <b>label-name</b> <i>reference</i>
Tree	<b>label-name</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>mpls-labels</b> <b>reserved-label-block</b> <i>string</i>
Introduced	16.0.R4
Platforms	All

**rip**

Synopsis	Enable the <b>rip</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b>
Tree	<b>rip</b>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the RIP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>

---

Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

### **authentication-key *string***

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

### **authentication-type *keyword***

Synopsis	Authentication type used between RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>authentication-type</b> <i>keyword</i>
Tree	<b>authentication-type</b>
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Default	none
Introduced	16.0.R4
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency. When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Default	false
Introduced	16.0.R4
Platforms	All

**check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>check-zero</b> <i>boolean</i>
Tree	<b>check-zero</b>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

**export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rip</a> <a href="#">export-limit</a>
Tree	<a href="#">export-limit</a>
Introduced	16.0.R4
Platforms	All

**log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rip</a> <a href="#">export-limit</a> <a href="#">log-percent</a> <i>number</i>
Tree	<a href="#">log-percent</a>
Range	1 to 100
Introduced	16.0.R4
Platforms	All

**number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rip</a> <a href="#">export-limit</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**export-policy** *reference*

Synopsis	Policies to determine exported routes
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rip</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced 16.0.R4  
 Platforms All

### **group** [*group-name*] *string*

Synopsis Enter the **group** list instance  
 Context **configure** *router string rip group string*  
 Tree *group*  
 Introduced 16.0.R4  
 Platforms All

### **[group-name]** *string*

Synopsis RIP group name  
 Context **configure** *router string rip group string*  
 Tree *group*  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R4  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of RIP neighbor interface group  
 Context **configure** *router string rip group string admin-state keyword*  
 Tree *admin-state*  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R4  
 Platforms All

### **authentication-key** *string*

Synopsis Authentication password passed between RIP neighbors  
 Context **configure** *router string rip group string authentication-key string*

Tree	<a href="#">authentication-key</a>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, the authentication password is removed from the configuration and authentication is disabled.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">authentication-type</a> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to <b>false</b>, this command removes BFD from the associated protocol adjacency.</p>
Introduced	16.0.R4
Platforms	All

**check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <b>check-zero</b> <i>boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.  When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	16.0.R4
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

**export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <b>export-policy</b> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

## **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <i>router string rip group string import-policy reference</i>
Tree	<a href="#">import-policy</a>
Description	<p>This command configures import route policies to determine which routes are accepted from RIP neighbors.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

## **message-size** *number*

Synopsis	Maximum number of routes per RIP update message
Context	<b>configure</b> <i>router string rip group string message-size number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

## **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <i>router string rip group string metric-in number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <i>router string rip group string metric-out number</i>
Tree	<i>metric-out</i>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**neighbor** [*interface-name*] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <i>router string rip group string neighbor string</i>
Tree	<i>neighbor</i>
Introduced	16.0.R4
Platforms	All

**[interface-name]** *string*

Synopsis	Neighbor added through the interface to the RIP group
Context	<b>configure</b> <i>router string rip group string neighbor string</i>
Tree	<i>neighbor</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	<b>configure</b> <i>router string rip group string neighbor string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**authentication-key *string***

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure</b> <i>router string rip group string neighbor string authentication-key string</i>
Tree	<a href="#">authentication-key</a>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

**authentication-type *keyword***

Synopsis	Authentication type
Context	<b>configure</b> <i>router string rip group string neighbor string authentication-type keyword</i>
Tree	<a href="#">authentication-type</a>
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

**bfd-liveness *boolean***

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <i>router string rip group string neighbor string bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency.

When configured to **false**, this command removes BFD from the associated protocol adjacency.

Introduced 16.0.R4  
 Platforms All

### **check-zero** *boolean*

Synopsis Enable checking of mandatory zero fields  
 Context **configure** *router string rip group string neighbor string check-zero boolean*  
 Tree [check-zero](#)  
 Description When configured to **true**, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.  
 When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.  
 Introduced 16.0.R4  
 Platforms All

### **description** *string*

Synopsis Text description  
 Context **configure** *router string rip group string neighbor string description string*  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R4  
 Platforms All

### **export-policy** *reference*

Synopsis Policies used to rule which routes are exported to RIP  
 Context **configure** *router string rip group string neighbor string export-policy reference*  
 Tree [export-policy](#)  
 Description This command specifies the export route policies used to determine which routes are exported to RIP.  
 If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.  
 Reference **configure** *policy-options policy-statement string*

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes per RIP update message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>message-size</b> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>metric-in</b> <i>number</i>
Tree	<a href="#">metric-in</a>

Range	1 to 16
Introduced	16.0.R4
Platforms	All

**metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>metric-out</b> <i>number</i>
Tree	<b>metric-out</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

**receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

**send** *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>send</b> <i>keyword</i>

Tree	<a href="#">send</a>
Options	none, version-1, broadcast, multicast, unicast
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

### **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>timers</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>timers</b> <b>update</b> <i>number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **unicast-address** [*address*] *string*

Synopsis	Add a list entry for <b>unicast-address</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>unicast-address</b> <i>string</i>

Tree	<a href="#">unicast-address</a>
Introduced	16.0.R4
Platforms	All

**[address]** *string*

Synopsis	Unicast address for the neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">unicast-address</a> <i>string</i>
Tree	<a href="#">unicast-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

**receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">receive</a> <i>keyword</i>
Tree	<a href="#">receive</a>
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

**send** *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">send</a> <i>keyword</i>

Tree	<a href="#">send</a>
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

### **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip group</a> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string rip group string timers timeout number</i>
Tree	<i>timeout</i>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <i>router string rip group string timers update number</i>
Tree	<i>update</i>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policies to decide routes for routing table
Context	<b>configure</b> <i>router string rip import-policy reference</i>

---

Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the RIP message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">message-size</a> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Default	25
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">metric-in</a> <i>number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">metric-out</a> <i>number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Default	1

---

Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	100
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	version-1, version-2, both, none
Default	both
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rip</i> <b>send</b> <i>keyword</i>
Tree	<b>send</b>
Options	none, version-1, broadcast, multicast
Default	broadcast
Introduced	16.0.R4
Platforms	All

**split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <i>router string rip split-horizon boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	16.0.R4
Platforms	All

**timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <i>router string rip timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

**flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <i>router string rip timers flush number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string rip timers timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <i>router string rip timers update number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **ripng**

Synopsis	Enable the <b>ripng</b> context
Context	<b>configure</b> <i>router string ripng</i>
Tree	<a href="#">ripng</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the RIPng instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency. When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Default	false
Introduced	16.0.R4
Platforms	All

**check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>check-zero</b> <i>boolean</i>
Tree	<b>check-zero</b>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string ripng description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <i>router string ripng export-limit</i>
Tree	<a href="#">export-limit</a>
Introduced	16.0.R4
Platforms	All

### **log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <i>router string ripng export-limit log-percent number</i>
Tree	<a href="#">log-percent</a>
Range	1 to 100
Introduced	16.0.R4
Platforms	All

### **number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <i>router string ripng export-limit number number</i>
Tree	<a href="#">number</a>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**export-policy** *reference*

Synopsis	Policies to determine exported routes
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

**group** [[group-name](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R4
Platforms	All

**[group-name]** *string*

Synopsis	RIP group name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of RIPng neighbor interface group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

---

Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency. When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>check-zero</b> <i>boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4

Platforms All

### **export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

**message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>message-size</b> <i>number</i>
Tree	<b>message-size</b>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

**metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>metric-in</b> <i>number</i>
Tree	<b>metric-in</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>metric-out</b> <i>number</i>
Tree	<b>metric-out</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

**neighbor** [*interface-name*] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>
Introduced	16.0.R4
Platforms	All

**[interface-name] string**

Synopsis	Neighbor added to the RIPng group through the interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the RIPng neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**bfd-liveness boolean**

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency. When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Introduced	16.0.R4
Platforms	All

**check-zero boolean**

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>check-zero</b> <i>boolean</i>

Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
----------	---

Context	<b>configure</b> <i>router string ripng group string neighbor string import-policy reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <i>router string ripng group string neighbor string message-size number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <i>router string ripng group string neighbor string metric-in number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <i>router string ripng group string neighbor string metric-out number</i>
Tree	<a href="#">metric-out</a>

Range	1 to 16
Introduced	16.0.R4
Platforms	All

**preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

**receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

**send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>send</b> <i>keyword</i>
Tree	<b>send</b>
Options	none, ripng, unicast
Introduced	16.0.R4
Platforms	All

**split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>split-horizon</b> <i>boolean</i>

Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

## timers

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

## flush *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## timeout *number*

Synopsis	RIP timeout timer
----------	-------------------

Context	<b>configure</b> <i>router string ripng group string neighbor string timers timeout number</i>
Tree	<b>timeout</b>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <i>router string ripng group string neighbor string timers update number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **unicast-address** [*address*] *string*

Synopsis	Add a list entry for <b>unicast-address</b>
Context	<b>configure</b> <i>router string ripng group string neighbor string unicast-address string</i>
Tree	<b>unicast-address</b>
Introduced	16.0.R4
Platforms	All

### **[address]** *string*

Synopsis	Unicast address for the neighbor
Context	<b>configure</b> <i>router string ripng group string neighbor string unicast-address string</i>
Tree	<b>unicast-address</b>

---

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>send</b> <i>keyword</i>
Tree	<b>send</b>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>split-horizon</b> <i>boolean</i>

Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

## timers

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <i>group</i> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

## flush *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <i>group</i> <i>string</i> <a href="#">timers</a> <i>flush</i> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## timeout *number*

Synopsis	RIP timeout timer
----------	-------------------

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">timers</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">timers</a> <a href="#">update</a> <i>number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policies to decide routes for routing table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

**message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <b>router</b> <i>string ripng message-size number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Default	25
Introduced	16.0.R4
Platforms	All

**metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <b>router</b> <i>string ripng metric-in number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

**metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <b>router</b> <i>string ripng metric-out number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

**preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string ripng preference number</i>
Tree	<a href="#">preference</a>
Range	1 to 255

---

Default	100
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>send</b> <i>keyword</i>
Tree	<b>send</b>
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>

Default	true
Introduced	16.0.R4
Platforms	All

## timers

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <b>timers</b>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

## flush *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <b>timers</b> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## timeout *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <b>timers</b> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>timers</b> <b>update</b> <i>number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **router-id** *string*

Synopsis	Unique router ID for the router in the AS
Context	<b>configure</b> <b>router</b> <i>string</i> <b>router-id</b> <i>string</i>
Tree	<b>router-id</b>
Introduced	16.0.R1
Platforms	All

### **rsvp**

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b>
Tree	<b>rsvp</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RSVP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **authentication-over-bypass** *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp authentication-over-bypass</a> <i>boolean</i>
Tree	<a href="#">authentication-over-bypass</a>
Description	<p>When configured to <b>true</b>, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, Path Err, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.</p> <p>When configured to <b>false</b>, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.</p>
Default	false
Introduced	22.10.R1
Platforms	All

### **dbw-accounting**

Synopsis	Enable the <b>dbw-accounting</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp dbw-accounting</a>

Tree	<a href="#">dbw-accounting</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **dbw-multiplier** *number*

Synopsis	Dark Bandwidth multiplier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a> <a href="#">dbw-multiplier</a> <i>number</i>
Tree	<a href="#">dbw-multiplier</a>
Range	0 to 1000
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **down-threshold**

Synopsis	Enter the <b>down-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a> <a href="#">down-threshold</a>
Tree	<a href="#">down-threshold</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **bw** *number*

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a> <a href="#">down-threshold</a> <a href="#">bw</a> <i>number</i>
Tree	<a href="#">bw</a>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**percent** *number*

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp dbw-accounting down-threshold percent</b> <i>number</i>
Tree	<b>percent</b>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**sample-interval** *number*

Synopsis	Dark Bandwidth sample interval
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp dbw-accounting sample-interval</b> <i>number</i>
Tree	<b>sample-interval</b>
Range	10 to 600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**sample-multiplier** *number*

Synopsis	Dark Bandwidth sample multiplier
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp dbw-accounting sample-multiplier</b> <i>number</i>
Tree	<b>sample-multiplier</b>
Range	1 to 10
Default	3
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**up-threshold**

Synopsis	Enter the <b>up-threshold</b> context
----------	---------------------------------------

Context	<b>configure router string rsvp dbw-accounting up-threshold</b>
Tree	<b>up-threshold</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**bw number**

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure router string rsvp dbw-accounting up-threshold bw number</b>
Tree	<b>bw</b>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**percent number**

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure router string rsvp dbw-accounting up-threshold percent number</b>
Tree	<b>percent</b>
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

**diffserv-te**

Synopsis	Enable the <b>diffserv-te</b> context
Context	<b>configure router string rsvp diffserv-te</b>
Tree	<b>diffserv-te</b>
Introduced	16.0.R1
Platforms	All

**admission-control-model** *keyword*

Synopsis	Parameters for the DiffServ TE node
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>admission-control-model</b> <i>keyword</i>
Tree	<b>admission-control-model</b>
Options	mam, rdm
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**class-type-bw**

Synopsis	Enter the <b>class-type-bw</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>class-type-bw</b>
Tree	<b>class-type-bw</b>
Introduced	16.0.R1
Platforms	All

**ct0** *number*

Synopsis	RSVP interface bandwidth percentage for class type 0
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>class-type-bw</b> <b>ct0</b> <i>number</i>
Tree	<b>ct0</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

**ct1** *number*

Synopsis	RSVP interface bandwidth percentage for class type 1
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>class-type-bw</b> <b>ct1</b> <i>number</i>
Tree	<b>ct1</b>
Range	0 to 100
Default	0
Introduced	16.0.R1

### **admin-state keyword**

Synopsis	Administrative state of RSVP on the IP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp interface</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **authentication-key string**

Synopsis	Authentication or hash key string
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp interface</a> <i>reference</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.

When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.

An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, *RSVP Cryptographic Authentication*.

The MD5 implementation does not support the authentication challenge procedures in RFC 2747.

String Length 1 to 51

Introduced 16.0.R1

Introduced	16.0.R1
Platforms	All

### **te-down-threshold**

Synopsis	Enable the <b>te-down-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-down-threshold</a>
Tree	<a href="#">te-down-threshold</a>
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	Threshold level per interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-down-threshold</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 100
Max. Instances	16
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R2
Platforms	All

### **te-up-threshold**

Synopsis	Enable the <b>te-up-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-up-threshold</a>
Tree	<a href="#">te-up-threshold</a>
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	Threshold level per interface
----------	-------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>interface</i> <i>reference</i> <i>te-up-threshold</i> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 100
Max. Instances	16
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R2
Platforms	All

### **keep-multiplier** *number*

Synopsis	Value for the keep-multiplier to declare a reservation or neighbor as down
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>keep-multiplier</i> <i>number</i>
Tree	<a href="#">keep-multiplier</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **msg-pacing**

Synopsis	Enable the <b>msg-pacing</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>msg-pacing</i>
Tree	<a href="#">msg-pacing</a>
Introduced	16.0.R1
Platforms	All

### **max-burst** *number*

Synopsis	Maximum RSVP messages that are sent over a specified period when message pacing is enabled
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>msg-pacing</i> <i>max-burst</i> <i>number</i>
Tree	<a href="#">max-burst</a>
Range	100 to 1000

---

Default	650
Introduced	16.0.R1
Platforms	All

### **period** *number*

Synopsis	Time for RSVP message pacing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">msg-pacing</a> <a href="#">period</a> <i>number</i>
Tree	<a href="#">period</a>
Range	100 to 1000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **p2mp-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for abort timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">p2mp-merge-point-abort-timer</a> <i>number</i>
Tree	<a href="#">p2mp-merge-point-abort-timer</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **p2p-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for P2P paths
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">p2p-merge-point-abort-timer</a> <i>number</i>
Tree	<a href="#">p2p-merge-point-abort-timer</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**preemption-timer** *number*

Synopsis	Preemption timer for the MPLS instance
Context	<b>configure</b> <i>router string rsvp preemption-timer number</i>
Tree	<a href="#">preemption-timer</a>
Range	0 to 1800
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	All

**rapid-retransmit-time** *number*

Synopsis	Rapid retransmission interval to reliably deliver RSVP messages
Context	<b>configure</b> <i>router string rsvp rapid-retransmit-time number</i>
Tree	<a href="#">rapid-retransmit-time</a>
Range	1 to 100
Units	deciseconds
Default	5
Introduced	16.0.R1
Platforms	All

**rapid-retry-limit** *number*

Synopsis	Rapid retry limit to reliably deliver RSVP messages
Context	<b>configure</b> <i>router string rsvp rapid-retry-limit number</i>
Tree	<a href="#">rapid-retry-limit</a>
Range	1 to 6
Default	3
Introduced	16.0.R1
Platforms	All

**refresh-reduction-over-bypass** *boolean*

Synopsis	Enable refresh reduction capabilities over tunnels
----------	--

Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>refresh-reduction-over-bypass</i> <i>boolean</i>
Tree	<a href="#">refresh-reduction-over-bypass</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **refresh-time** *number*

Synopsis	Interval between refresh messages
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>refresh-time</i> <i>number</i>
Tree	<a href="#">refresh-time</a>
Range	1 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

### **te-down-threshold** *number*

Synopsis	Value for the te-down-threshold
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>te-down-threshold</i> <i>number</i>
Tree	<a href="#">te-down-threshold</a>
Range	0 to 100
Max.	16
Instances	
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **te-threshold-update**

Synopsis	Enable the <b>te-threshold-update</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>te-threshold-update</i>
Tree	<a href="#">te-threshold-update</a>
Introduced	16.0.R1

---

Platforms All

### **on-cac-failure** *boolean*

Synopsis CAC (Call Admission Control) failure-triggered IGP update  
Context **configure** **router** *string* **rsvp** **te-threshold-update** **on-cac-failure** *boolean*  
Tree [on-cac-failure](#)  
Default false  
Introduced 16.0.R1

### **te-up-threshold** *number*

Synopsis Value for the te-up-threshold  
Context **configure** **router** *string* **rsvp** **te-up-threshold** *number*  
Tree [te-up-threshold](#)  
Range 0 to 100  
Max. 16  
Instances  
Notes This element is ordered by the user.  
Introduced 16.0.R1  
Platforms All

## segment-routing

Synopsis	Enter the <b>segment-routing</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a>
Tree	<a href="#">segment-routing</a>
Introduced	16.0.R1
Platforms	All

## maintenance-policy [[policy-name](#)] *string*

Synopsis	Enter the <b>maintenance-policy</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Tree	<a href="#">maintenance-policy</a>
Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	20.10.R1
Platforms	All

## [\[policy-name\]](#) *string*

Synopsis	Maintenance policy name
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Tree	<a href="#">maintenance-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the maintenance policy
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command sets the administrative state of the maintenance policy. A maintenance policy must be administratively disabled to change any of the parameters.

When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.

Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

### **bfd-liveness** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing maintenance-policy</a> <i>string</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session.  When configured to <b>false</b> , seamless BFD is disabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **bfd-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing maintenance-policy</a> <i>string</i> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>

Introduced	20.10.R1
Platforms	All

### **hold-down-timer** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string hold-down-timer number</i>
Tree	<a href="#">hold-down-timer</a>
Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000
Units	deciseconds
Default	0
Introduced	20.10.R1
Platforms	All

### **mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string mode keyword</i>
Tree	<a href="#">mode</a>

Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Options	none, ecmp-protected, linear
Default	none
Introduced	20.10.R1
Platforms	All

### return-path-label *number*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>return-path-label</b> <i>number</i>
Tree	<a href="#">return-path-label</a>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.10.R1
Platforms	All

### revert-timer *number*

Synopsis	Revert timer for SR policy candidate paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>revert-timer</b> <i>number</i>
Tree	<a href="#">revert-timer</a>
Description	<p>This command configures the revert timer for SR Policy candidate paths.</p> <p>The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.</p>

Range	0 to 4320
Units	minutes
Introduced	20.10.R1
Platforms	All

### **threshold** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string threshold number</i>
Tree	<i>threshold</i>
Description	This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system.  This command is only valid in the <b>ecmp-protected</b> mode.
Range	1 to 32
Default	1
Introduced	20.10.R1
Platforms	All

### **segment-routing-v6**

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6</i>
Tree	<i>segment-routing-v6</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **base-routing-instance**

Synopsis	Enter the <b>base-routing-instance</b> context
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance</i>
Tree	<i>base-routing-instance</i>

Description	Commands in this context configure SRv6 SID functions for End, End.X, and service SIDs for IPv4 and IPv6 prefixes in the base routing instance.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis	Enter the <b>function</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a>
Tree	<a href="#">function</a>
Description	Commands in this context configure the function value of SRv6 SIDs. The <b>end-dt46</b> command is mutually exclusive with the <b>end-dt4</b> and <b>end-dt6</b> commands.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end** [*value*] *number*

Synopsis	Enter the <b>end</b> list instance
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance locator reference function end number</i>
Tree	<i>end</i>
Description	Commands in this context configure the attributes of SRv6 End SID function. The End SID functions for each SRH mode must be statically allocated. The value is not automatically allocated by default for a locator.
Max. Instances	8
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[value]** *number*

Synopsis	SRv6 SID function value
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance locator reference function end number</i>
Tree	<i>end</i>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance locator reference function end number srh-mode keyword</i>
Tree	<i>srh-mode</i>
Description	This command configures the popping mode for the SID.
Options	psp, usp, psp-usd, usp-usd, psp-usp-usd
Default	psp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt4**

Synopsis	Enable the <b>end-dt4</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <b>end-dt4</b>
Tree	<a href="#">end-dt4</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <b>end-dt4</b> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt46**

Synopsis	Enable the <b>end-dt46</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <b>end-dt46</b>
Tree	<a href="#">end-dt46</a>
Description	Commands in this context assign a value for IPv4 and IPV6 routes in the VPRN service instance.  This command and the <b>end-dt4</b> command are mutually exclusive. This command and the <b>end-dt6</b> command are mutually exclusive.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <a href="#">reference</a> <a href="#">function</a> <b>end-dt46</b> <a href="#">value</a> <i>number</i>

Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-dt6

Synopsis	Enable the <b>end-dt6</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end-dt6</b>
Tree	<a href="#">end-dt6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end-dt6</b> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-x [[value](#)] *number*

Synopsis	Enter the <b>end-x</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <b>end-x</b> <i>number</i>
Tree	<a href="#">end-x</a>
Description	<p>Commands in this context configure the attributes of the End.X SID function associated with a P2P interface.</p> <p>A static function value can be configured for each combination of SRH mode and protection type. For a specific interface, the static function value associated with the same combination of protection type and SRH mode overrides any corresponding function value that is automatically allocated (<b>end.x-auto-allocate</b> list configuration).</p> <p>If more than one value is configured for an interface and combination of SRH mode and protection type, they are all advertised in IS-IS.</p>

When used in remote TI-LFA repair tunnel programming, IS-IS uses rules to select one End.X value from the multiple values received in IS-IS link advertisements.

Values assigned to loopback and system interfaces are not advertised in IS-IS.

End.X SID functions for adjacencies over broadcast interfaces are always automatically allocated based on the configuration of the **end.x-auto-allocate** list.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [value] *number*

Synopsis	SRv6 SID function value
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i>
Tree	<a href="#">end-x</a>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **interface-name** *reference*

Synopsis	Interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <a href="#">interface-name</a> <i>reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection type for the SID function
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">protection</a>
Options	unprotected, protected
Default	protected

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-x</b> <i>number</i> <b>srh-mode</b> <i>keyword</i>
Tree	<b>srh-mode</b>
Description	This command configures the popping mode for the SID.
Options	psp, usp, psp-usd, usp-usd, psp-usp-usd
Default	psp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-x-auto-allocate** [**srh-mode**] *keyword* **protection** *keyword*

Synopsis	Add a list entry for <b>end-x-auto-allocate</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-x-auto-allocate</b> <i>keyword</i> <b>protection</b> <i>keyword</i>
Tree	<b>end-x-auto-allocate</b>
Description	<p>This command adds a list entry for the automatic allocation of the End.X SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).</p> <p>A list entry is a combination of the protection type and the SRH mode. Any combinations in addition to the maximum supported by this command must be allocated statically under each P2P interface (<b>end.x</b> configuration).</p> <p>When no list entries are configured, no End.X function values are automatically allocated by default for a locator.</p>
Max. Instances	2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[srh-mode]** *keyword*

Synopsis	Segment Routing Header (SRH) mode
----------	-----------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp, psp-usd, usp-usd, psp-usp-usd
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for automatic SID function
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the adjacency protection for the automatically allocated SID function.
Options	unprotected, protected
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis	SRv6 micro-segment locator name
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>

Tree	<a href="#">micro-segment-locator</a>
Description	This command references a micro-segment locator name defined in the <b>configure router segment-routing segment-routing-v6</b> context. This command assigns a micro-segment locator to BGP for use with Base router routes.
Reference	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function

Synopsis	Enter the <b>function</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ua [*value*] *number*

Synopsis	Enter the <b>ua</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b> <b>ua</b> <i>number</i>
Tree	<a href="#">ua</a>
Description	Commands in this context configure the attributes of the uA micro-SID function associated with a P2P interface. The uA micro-SID function encodes the behavior of an adjacency SID.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## [*value*] *number*

Synopsis	SRv6 SID function value
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b> <b>ua</b> <i>number</i>
Tree	<a href="#">ua</a>

Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **interface-name** *reference*

Synopsis	Interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua</a> <i>number</i> <a href="#">interface-name</a> <i>reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection type for the SID function
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua</a> <i>number</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">protection</a>
Options	unprotected, protected
Default	protected
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua</a> <i>number</i> <a href="#">srh-mode</a> <i>keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Options	psp, usp, psp-usd, usp-usd, psp-usp-usd
Default	psp
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ua-auto-allocate** [**srh-mode**] *keyword protection keyword*

Synopsis Add a list entry for **ua-auto-allocate**

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua-auto-allocate keyword protection keyword*

Tree [ua-auto-allocate](#)

Description Commands in this context define a list entry for the automatic allocation of the uA micro-SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).

Max. Instances 2

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[srh-mode]** *keyword*

Synopsis Segment Routing Header (SRH) mode

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua-auto-allocate keyword protection keyword*

Tree [ua-auto-allocate](#)

Description This command specifies the popping mode for the automatically allocated SID.

Options psp, usp, psp-usd, usp-usd, psp-usp-usd

Notes This element is part of a list key.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis Adjacency protection for automatic SID function

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator reference function ua-auto-allocate keyword protection keyword*

Tree [ua-auto-allocate](#)

Description This command specifies the adjacency protection for the automatically allocated SID function.

Options unprotected, protected

Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt4

Synopsis	Enable the <b>udt4</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>udt4</b>
Tree	<a href="#">udt4</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	SRv6 function value
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>udt4</b> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt46

Synopsis	Enable the <b>udt46</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <i>function</i> <b>udt46</b>
Tree	<a href="#">udt46</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	SRv6 function value
----------	---------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt46</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt6

Synopsis	Enable the <b>udt6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt6</a>
Tree	<a href="#">udt6</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt6</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## locator [[locator-name](#)] *string*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i>
Tree	<a href="#">locator</a>
Max. Instances	16
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[locator-name]** *string*

Synopsis	SRv6 locator name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i>
Tree	<b>locator</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the locator
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**algorithm** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i> <b>algorithm</b> <i>number</i>
Tree	<b>algorithm</b>
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**argument-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator argument length
Context	<b>configure</b> <i>router string</i> <i>segment-routing segment-routing-v6 locator string</i> <i>argument-length number</i>
Tree	<i>argument-length</i>
Description	<p>This command configures the SRv6 locator argument length.</p> <p>The sum of the function length, argument length, and the locator prefix length must not exceed 128 bits.</p> <p>The following commands are used to configure the function length and locator prefix length:</p> <ul style="list-style-type: none"> <li>• <b>configure router segment-routing segment-routing-v6 locator function-length</b></li> <li>• <b>configure router segment-routing segment-routing-v6 locator prefix ip-prefix</b></li> </ul>
Range	0   16
Default	0
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**block-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator block address length
Context	<b>configure</b> <i>router string</i> <i>segment-routing segment-routing-v6 locator string</i> <i>block-length number</i>
Tree	<i>block-length</i>
Range	0 to 96
Default	0
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Function length
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string function-length number</i>
Tree	<i>function-length</i>
Description	This command configures the size of the function length. The sum of the function length and the locator prefix length must not exceed 128 bits. Operators can configure the locator level <b>label-block</b> command before they configure a function length of 16. If the function length is configured as 16, the locator level <b>label-block</b> must be configured rather than the static-function level <b>label-block</b> . The validation occurs when committed.
Range	16   20 to 96
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**label-block** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block name for service termination
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string label-block reference</i>
Tree	<i>label-block</i>
Reference	<b>configure</b> <i>router string mpls-labels reserved-label-block string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**prefix**

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string prefix</i>
Tree	<i>prefix</i>
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-prefix *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <a href="#">string</a> <a href="#">prefix</a> <a href="#">ip-prefix</a> <a href="#">string</a>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <a href="#">string</a> <a href="#">static-function</a>
Tree	<a href="#">static-function</a>
Description	Commands in this context configure the attributes of the function field range reserved for static End.d, End.X, and service SID assignment.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## label-block *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label block for the service SIDs of the SRv6 locator
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <a href="#">string</a> <a href="#">static-function</a> <a href="#">label-block</a> <a href="#">reference</a>

Tree	<a href="#">label-block</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels reserved-label-block</a> <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **max-entries** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing segment-routing-v6 locator</a> <i>string</i> <a href="#">static-function</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **termination-fpe** *reference*

Synopsis	List of the SRv6 termination FPE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing segment-routing-v6 locator</a> <i>string</i> <a href="#">termination-fpe</a> <i>reference</i>
Tree	<a href="#">termination-fpe</a>
Description	This command associates the Forwarding Path Extension (FPE) with the locator for terminating SRv6 in local services. Multiple locators can share the same FPE or each locator can use a different FPE. The FPE can be the same or different from the origination FPE.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**micro-segment**

Synopsis	Enable the <b>micro-segment</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a>
Tree	<a href="#">micro-segment</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**argument-length** *number*

Synopsis	Micro-segment argument length
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">argument-length</a> <i>number</i>
Tree	<a href="#">argument-length</a>
Description	<p>This command configures the micro-segment argument length.</p> <p>The sum of the function length, argument length, and the locator prefix length must not exceed 128 bits.</p> <p>The following commands are used to configure the function length and locator prefix length:</p> <ul style="list-style-type: none"> <li>• <b>configure router segment-routing segment-routing-v6 locator function-length</b></li> <li>• <b>configure router segment-routing segment-routing-v6 locator prefix ip-prefix</b></li> </ul>
Range	0   16
Default	0
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**block** [[block-name](#)] *string*

Synopsis	Enter the <b>block</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i>
Tree	<a href="#">block</a>
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[block-name]** *string*

Synopsis	Micro-SID block name
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <b>block</b> <i>string</i>
Tree	<a href="#">block</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**admin-state** *keyword*

Synopsis	Administrative state of micro-SID block
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <b>block</b> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**label-block** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <b>block</b> <i>string</i> <a href="#">label-block</a> <i>reference</i>
Tree	<a href="#">label-block</a>
Description	This command associates a pre-configured reserved label block with the micro-SID block.
Reference	<b>configure</b> <b>router</b> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## prefix

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block string</a> <a href="#">prefix</a>
Tree	<a href="#">prefix</a>
Description	Commands in this context configure the IPv6 prefix for an SRv6 micro-segment locator.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-prefix *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block string</a> <a href="#">prefix ip-prefix string</a>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment block string</a> <a href="#">static-function</a>
Tree	<a href="#">static-function</a>
Description	Commands in this context configure the function field parameters of a static uA or service micro-SID assignment.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**max-entries** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">static-function</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**termination-fpe** *reference*

Synopsis	FPE ID for SRv6 termination
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">termination-fpe</a> <i>reference</i>
Tree	<a href="#">termination-fpe</a>
Description	This command associates the FPE ID with the locator for SRv6 termination in local services.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**block-length** *number*

Synopsis	Micro-SID block length
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block-length</a> <i>number</i>
Tree	<a href="#">block-length</a>

Range	8   16   24   32   40   48   56   64
Default	32
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **global-sid-entries** *number*

Synopsis	Maximum number of micro-segment locators network wide
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">global-sid-entries</a> <i>number</i>
Tree	<a href="#">global-sid-entries</a>
Description	This command defines the maximum number of unique micro-segment locators that can be configured network wide. The value is expressed in multiples of 1024 and must be the same on every platform network wide.
Range	4 to 60
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sid-length** *number*

Synopsis	Micro-SID length
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">sid-length</a> <i>number</i>
Tree	<a href="#">sid-length</a>
Description	This command configures the length of the micro-SIDs.
Range	16
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator** [[locator-name](#)] *string*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>

Tree	<a href="#">micro-segment-locator</a>
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[locator-name]** *string*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Tree	<a href="#">micro-segment-locator</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the locator
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**algorithm** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>algorithm</b> <i>number</i>

Tree	<a href="#">algorithm</a>
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### block reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-defined micro-SID block
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">block</a> <i>reference</i>
Tree	<a href="#">block</a>
Description	This command associates a pre-defined micro-SID block with the micro-segment SRv6 locator.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### un

Synopsis	Enter the <b>un</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">un</a>
Tree	<a href="#">un</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### srh-mode keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string un srh-mode keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Options	psp, usp, psp-usd, usp-usd, psp-usp-usd
Default	psp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### value number

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 function value
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string un value number</i>
Tree	<a href="#">value</a>
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### origination-fpe reference

Synopsis	List of the SRv6 origination FPEs
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">origination-fpe</a> <i>reference</i>
Tree	<a href="#">origination-fpe</a>
Description	This command configures the origination Forwarding Path Extension (FPE) for SRv6 tunnels on local services. The origination FPE must be different from any of the SRv6 termination FPEs.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**source-address** *string*

Synopsis	Source address used in the SRv6 packet
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 source-address string</i>
Tree	<a href="#">source-address</a>
Description	<p>This command specifies the global default source IPv6 address used in the SA field of the outerIPv6 header of the SRv6 encapsulated packet.</p> <p>The value is inherited in the BGP and services contexts (for example, <b>configure router "base" bgp segment-routing-v6 source-address</b> and <b>configure service vprn bgp-ipvpn segment-routing-v6 source-address</b>), but is overwritten by the value configured in those contexts.</p> <p>A source IPv6 address must be configured in the global context or in the BGP or services context.</p> <p>The system does not check if the entered address is a valid local address.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**sr-mpls**

Synopsis	Enter the <b>sr-mpls</b> context
Context	<b>configure</b> <i>router string segment-routing sr-mpls</i>
Tree	<a href="#">sr-mpls</a>
Introduced	21.10.R1
Platforms	All

**prefix-sids** [[interface-name](#)] *reference*

Synopsis	Enter the <b>prefix-sids</b> list instance
Context	<b>configure</b> <i>router string segment-routing sr-mpls prefix-sids reference</i>
Tree	<a href="#">prefix-sids</a>
Description	Commands in this context configure the prefix SIDs for an interface.
Introduced	21.10.R1
Platforms	All

**[interface-name]** *reference*

Synopsis	Loopback interface name that owns prefix to advertise
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i>
Tree	<a href="#">prefix-sids</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

## ipv4-sid

Synopsis	Enable the <b>ipv4-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a>
Tree	<a href="#">ipv4-sid</a>
Introduced	21.10.R1
Platforms	All

## index *number*

Synopsis	Node SID index for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

## label *number*

Synopsis	Label value for the node SID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	32 to 1048575
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1

Platforms All

## ipv6-sid

Synopsis Enable the **ipv6-sid** context

Context **configure** [router](#) *string* [segment-routing](#) [sr-mpls](#) [prefix-sids](#) *reference* [ipv6-sid](#)

Tree [ipv6-sid](#)

Introduced 21.10.R1

Platforms All

## index number

Synopsis Node SID index for the interface

Context **configure** [router](#) *string* [segment-routing](#) [sr-mpls](#) [prefix-sids](#) *reference* [ipv6-sid](#) [index](#) *number*

Tree [index](#)

Range 0 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced 21.10.R1

Platforms All

## label number

Synopsis Label value for the node SID

Context **configure** [router](#) *string* [segment-routing](#) [sr-mpls](#) [prefix-sids](#) *reference* [ipv6-sid](#) [label](#) *number*

Tree [label](#)

Range 32 to 1048575

Notes The following elements are part of a choice: **index** or **label**.

Introduced 21.10.R1

Platforms All

## node-sid boolean

Synopsis Assign a node SID to the prefix referencing the router

Context **configure** [router](#) *string* [segment-routing](#) [sr-mpls](#) [prefix-sids](#) *reference* [node-sid](#) *boolean*

Tree	<a href="#">node-sid</a>
Default	true
Introduced	21.10.R1
Platforms	All

## sr-policies

Synopsis	Enter the <b>sr-policies</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a>
Tree	<a href="#">sr-policies</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of segment routing policies
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## egress-statistics

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a>
Tree	<a href="#">egress-statistics</a>
Description	Commands in this context configure the collection of egress traffic statistics for all segment routing policies.
Introduced	19.10.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	23.7.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the traffic statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Collect accounting and statistical data
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	23.7.R1
Platforms	All

### **ingress-statistics**

Synopsis	Enable the <b>ingress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">ingress-statistics</a>
Tree	<a href="#">ingress-statistics</a>
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the traffic statistics

Context **configure** [router](#) *string* [segment-routing](#) [sr-policies](#) [ingress-statistics](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms All

### **reserved-label-block** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Reserved local block for segment routing policies

Context **configure** [router](#) *string* [segment-routing](#) [sr-policies](#) [reserved-label-block](#) *reference*

Tree [reserved-label-block](#)

Reference **configure** [router](#) *string* [mpls-labels](#) [reserved-label-block](#) *string*

Introduced 16.0.R1

Platforms All

### **static-policy** [[name](#)] *string*

Synopsis Enter the **static-policy** list instance

Context **configure** [router](#) *string* [segment-routing](#) [sr-policies](#) [static-policy](#) *string*

Tree [static-policy](#)

Max. Instances 32768

Introduced 16.0.R1

Platforms All

**[name]** *string*

Synopsis	Name for the segment routing static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i>
Tree	<b>static-policy</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of segment routing static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**binding-sid** *number*

Synopsis	Segment ID that opaquely represents an SR policy to upstream routers
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>binding-sid</b> <i>number</i>
Tree	<b>binding-sid</b>
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

**color** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Traffic flows to be steered by this policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>color</b> <i>number</i>
Tree	<b>color</b>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **distinguisher** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique value for a policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>distinguisher</b> <i>number</i>
Tree	<b>distinguisher</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **endpoint** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination of the source-routed path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>endpoint</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	All

**head-end** (*ipv4-address-no-zone | ipv6-address-no-zone | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Head end address for this static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>head-end</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone   keyword</i> )
Tree	<b>head-end</b>
Options	local
Introduced	16.0.R1
Platforms	All

**maintenance-policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>maintenance-policy</b> <i>reference</i>
Tree	<b>maintenance-policy</b>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i>
Introduced	20.10.R1
Platforms	All

**preference** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference value of this static policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Max. Range	0 to 4294967295

Default	100
Introduced	16.0.R1
Platforms	All

### **segment-list** [[seg-list-index](#)] *number*

Synopsis	Enter the <b>segment-list</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[seg-list-index]** *number*

Synopsis	Index for identifying a particular segment list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment list for static policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**segment** [[segment-index](#)] *number*

Synopsis	Enter the <b>segment</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i>
Tree	<a href="#">segment</a>
Description	<p>Commands in this context configure a segment inside a segment-list of a statically-defined segment routing policy candidate path.</p> <p>A segment list of a statically-defined SR policy candidate path of type <b>sr-mpls</b> can only accept a segment of type <b>mpls-label</b>.</p> <p>A segment list of a statically-defined SR policy candidate path of type <b>srv6</b> can only accept a segment of type <b>srv6-sid</b>. However, you can mix SRv6 segments derived from both classic SRv6 and micro-segment SRv6 locators.</p>
Max. Instances	24
Introduced	16.0.R1
Platforms	All

**[segment-index]** *number*

Synopsis	Index for identifying a segment in a segment list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i>
Tree	<a href="#">segment</a>
Description	<p>This command configures the index for identifying a segment in a segment list.</p> <p>Each segment list can have up to 11 segments for SR-MPLS policies, and 24 segments for an SRv6 segment list which only includes micro-segments. For an SRv6 segment list that mixes regular and micro-segments, up to 7 regular segments can be configured.</p>
Range	1 to 24
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**behavior-and-structure**

Synopsis	Enable the <b>behavior-and-structure</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i> <a href="#">behavior-and-structure</a>

Tree	<a href="#">behavior-and-structure</a>
Description	<p>Commands in this context configure the behavior and structure of the SRv6 policy micro-segment.</p> <p>Behavior and structure are necessary (but not sufficient) for the SRv6 policy micro-segment to be compressed by a head-end.</p>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **behavior** *keyword*

Synopsis	Behavior of the SRv6 uSID
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i> <a href="#">behavior-and-structure</a> <a href="#">behavior</a> <i>keyword</i>
Tree	<a href="#">behavior</a>
Description	<p>This command configures the behavior of the SRv6 policy micro-segment (uSID).</p> <p>The only allowed values are flavorless behaviors of NEXT-CSID. The compression algorithm however supports all flavors.</p> <p>Although END.T with NEXT-CSID is a configurable value, SR OS does not support this behavior for locally-instantiated SIDs. However, configuring this value allows a traffic-engineered path to be built that includes nodes that would support such behavior.</p>
Options	<a href="#">end-next-csid</a> , <a href="#">end-x-next-csid</a> , <a href="#">end-t-next-csid</a> , <a href="#">end-b6-encaps-next-csid</a> , <a href="#">end-b6-encaps-red-next-csid</a>
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block-length** *number*

Synopsis	Locator block length of the SRv6 uSID
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i> <a href="#">behavior-and-structure</a> <a href="#">block-length</a> <i>number</i>
Tree	<a href="#">block-length</a>
Range	8   16   24   32   40   48   56   64
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function-length** *number*

Synopsis	Function length of the SRv6 uSID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-list</b> <i>number</i> <b>segment</b> <i>number</i> <b>behavior-and-structure</b> <b>function-length</b> <i>number</i>
Tree	<b>function-length</b>
Range	0   16
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**node-length** *number*

Synopsis	Length of the node part of the SRv6 uSID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-list</b> <i>number</i> <b>segment</b> <i>number</i> <b>behavior-and-structure</b> <b>node-length</b> <i>number</i>
Tree	<b>node-length</b>
Range	0   16
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**mpls-label** *number*

Synopsis	Value for the MPLS label
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-list</b> <i>number</i> <b>segment</b> <i>number</i> <b>mpls-label</b> <i>number</i>
Tree	<b>mpls-label</b>
Range	0 to 1048575
Introduced	16.0.R1
Platforms	All

**srv6-sid** *string*

Synopsis	Segment ID for segment routing IPv6
----------	-------------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">segment</a> <i>number</i> <a href="#">srv6-sid</a> <i>string</i>
Tree	<a href="#">srv6-sid</a>
Description	This command defines the 128-bit SRv6 SID for the segment.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## weight *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of this segment list
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Max. Range	0 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Description	Commands in this context configure a static SRv6 policy.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**binding-sid** [[index](#)] *number*

Synopsis	Enter the <b>binding-sid</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[index]** *number*

Synopsis	Binding SID index
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Range	1
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**ip-address** *string*

Synopsis	Remote SRv6 binding SID
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Description	<p>This command configures an SRv6 binding SID for a remote SRv6 policy. The command cannot be used with a local head-end location (<b>configure router segment-routing sr-policies static-policy head-end local</b>).</p> <p>This command and the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid locator</b> command or the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid micro-segment-locator</b> command are mutually exclusive.</p> <p>If the remote head-end is an SR OS system, the binding SID can either be a regular SID or uSID. If it is a uSID, it must be configured with a node ID in the following format: &lt;block&gt;&lt;uN&gt;&lt;uB6&gt;::)</p> <p>The format of the binding SID is a 128-bit IPv6 address.</p>

Notes	The following elements are part of a choice: <b>ip-address</b> or ( <b>locator</b> and <b>micro-segment-locator</b> ).
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## locator

Synopsis	Enable the <b>locator</b> context
Context	<b>configure</b> <i>router string</i> <i>segment-routing sr-policies static-policy string</i> <i>segment-routing-v6 binding-sid number</i> <b>locator</b>
Tree	<a href="#">locator</a>
Description	Commands in this context configure a binding SID locator for a local SRv6 policy. This command and the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid ip-address</b> command for a non-local SRv6 policy are mutually exclusive.
Notes	The following elements are part of a choice: <b>ip-address</b> or ( <b>locator</b> and <b>micro-segment-locator</b> ).
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function *keyword*

Synopsis	Behavior of the local SRv6 regular binding SID
Context	<b>configure</b> <i>router string</i> <i>segment-routing sr-policies static-policy string</i> <i>segment-routing-v6 binding-sid number</i> <i>locator</i> <i>function</i> <i>keyword</i>
Tree	<a href="#">function</a>
Options	end-b6-encaps-red
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function-value *number*

Synopsis	Value of the local SRv6 regular binding SID
Context	<b>configure</b> <i>router string</i> <i>segment-routing sr-policies static-policy string</i> <i>segment-routing-v6 binding-sid number</i> <i>locator</i> <i>function-value</i> <i>number</i>
Tree	<a href="#">function-value</a>

Description	This command configures the function value of the local SRv6 regular binding SID. If this command is not configured, the system automatically selects a value within the range of the dynamic SID function values. The value must be within the range of static SID function values, and must be available.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator-name** *reference*

Synopsis	Name of the locator of the local SRv6 regular binding SID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-routing-v6</b> <b>binding-sid</b> <i>number</i> <b>locator</b> <b>locator-name</b> <i>reference</i>
Tree	<b>locator-name</b>
Description	This command configures the name of the locator of the local SRv6 regular binding SID. The locator must exist on the system.
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>locator</b> <i>string</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator**

Synopsis	Enable the <b>micro-segment-locator</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>static-policy</b> <i>string</i> <b>segment-routing-v6</b> <b>binding-sid</b> <i>number</i> <b>micro-segment-locator</b>
Tree	<b>micro-segment-locator</b>
Description	Commands in this context configure the local SRv6 microbinding SID. This command and the <b>configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid ip-address</b> command for a non-local SRv6 policy are mutually exclusive.
Notes	The following elements are part of a choice: <b>ip-address</b> or ( <b>locator</b> and <b>micro-segment-locator</b> ).
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function** *keyword*

Synopsis	Behavior of the local SRv6 microbinding SID
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-routing-v6</i> <i>binding-sid</i> <i>number</i> <i>micro-segment-locator</i> <i>function</i> <i>keyword</i>
Tree	<i>function</i>
Options	end-b6-encaps-red-next-csid
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**function-value** *number*

Synopsis	Value of the local SRv6 microbinding SID
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-routing-v6</i> <i>binding-sid</i> <i>number</i> <i>micro-segment-locator</i> <i>function-value</i> <i>number</i>
Tree	<i>function-value</i>
Description	This command configures the function value of the local SRv6 microbinding SID. If this command is not configured, the system automatically selects a value within the range of local and dynamic SID function values. The value must be within the range of local and static SID function values, and must be available.
Range	1 to 65535
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**locator-name** *reference*

Synopsis	Name of the locator of the local SRv6 microbinding SID
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-routing-v6</i> <i>binding-sid</i> <i>number</i> <i>micro-segment-locator</i> <i>locator-name</i> <i>reference</i>
Tree	<i>locator-name</i>
Description	This command configures the name of the locator of the local SRv6 microbinding SID. The locator must be a micro-segment locator and must exist on the system.
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment-locator</i> <i>string</i>
Notes	This element is mandatory.

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **return-path-bfd-sid** *string*

Synopsis	BFD controlled return path for SRv6
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing sr-policies static-policy</a> <i>string</i> <a href="#">segment-routing-v6 return-path-bfd-sid</a> <i>string</i>
Tree	<a href="#">return-path-bfd-sid</a>
Description	This command configures the Seamless Bidirectional Forwarding Detection (S-BFD) session to echo mode and pushes an additional SRv6 SID in the SRH on S-BFD packets only.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **type** *keyword*

Synopsis	Static policy type
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">segment-routing sr-policies static-policy</a> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Description	This command configures the type of static policy. Only commands relevant to the type of the static policy can be executed. The type of the static policy can only be changed to a new type if there is no configuration present for the old type, or if all configuration for the old type is deleted.
Options	sr-mpls, srv6
Default	sr-mpls
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **selective-fib** *boolean*

Synopsis	Enable selective FIB
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">selective-fib</a> <i>boolean</i>
Tree	<a href="#">selective-fib</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## sfm-overload

Synopsis	Enable the <b>sfm-overload</b> context
Context	<b>configure</b> <i>router string sfm-overload</i>
Tree	<a href="#">sfm-overload</a>
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

## holdoff-time *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	<b>configure</b> <i>router string sfm-overload holdoff-time number</i>
Tree	<a href="#">holdoff-time</a>
Range	1 to 600
Units	seconds
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

## sgt-qos

Synopsis	Enter the <b>sgt-qos</b> context
Context	<b>configure</b> <i>router string sgt-qos</i>
Tree	<a href="#">sgt-qos</a>
Introduced	16.0.R1
Platforms	All

## dot1p

Synopsis	Enter the <b>dot1p</b> context
Context	<b>configure</b> <i>router string sgt-qos dot1p</i>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

**application** [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos dot1p application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

**[dot1p-app-name]** *keyword*

Synopsis	Dot1p application ID that generates control traffic
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos dot1p application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Options	arp, isis, pppoe
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**dot1p** (*keyword | number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos dot1p application</a> <i>keyword</i> <a href="#">dot1p</a> ( <i>keyword   number</i> )
Tree	<a href="#">dot1p</a>
Range	0 to 7
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

**dscp**

Synopsis	Enter the <b>dscp</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos dscp</a>
Tree	<a href="#">dscp</a>
Introduced	16.0.R1
Platforms	All

**application** [[dscp-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

**[dscp-app-name]** *keyword*

Synopsis	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, mpls-udp-return, pfc, ibcp, bfd
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**dscp** (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	<b>configure router</b> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">application</a> <i>keyword</i> <a href="#">dscp</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">dscp</a>
Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

**dscp-map** [[dscp-name](#)] *keyword*

Synopsis	Enter the <b>dscp-map</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">dscp-map</a> <i>keyword</i>
Tree	<a href="#">dscp-map</a>
Introduced	16.0.R2
Platforms	All

**[dscp-name]** *keyword*

Synopsis	DSCP name mapped to forwarding class
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">dscp-map</a> <i>keyword</i>
Tree	<a href="#">dscp-map</a>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**fc** *keyword*

Synopsis	Value for the forwarding class for this mapping
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dscp</a> <a href="#">dscp-map</a> <i>keyword</i> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2
Platforms	All

**static-routes**

Synopsis	Enter the <b>static-routes</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a>
Tree	<a href="#">static-routes</a>
Introduced	16.0.R1

Platforms All

## hold-down

Synopsis Enable the **hold-down** context

Context **configure** *router string static-routes hold-down*

Tree [hold-down](#)

Description Commands in this context enable the hold-down time feature globally for static routes in the system.

The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap.

The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.

Introduced 16.0.R1

Platforms All

## initial number

Synopsis Value for the initial hold-down time

Context **configure** *router string static-routes hold-down initial number*

Tree [initial](#)

Description This command specifies the initial value of the hold-down time globally for static routes in the system.

When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.

Range 1 to 65535

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

## max-value number

Synopsis Maximum value of the hold-down time

Context **configure** *router string static-routes hold-down max-value number*

Tree [max-value](#)

Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Multiplier of the previous hold-down time
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>hold-down</b> <b>multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **route** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

Synopsis	Enter the <b>route</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i>
Tree	<b>route</b>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i>
Tree	<b>route</b>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **route-type** *keyword*

Synopsis Static route type for unicast or multicast RPF

Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword*

Tree [route](#)

Options unicast, multicast

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **backup-tag** *number*

Synopsis Static route backup tag

Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword backup-tag number*

Tree [backup-tag](#)

Description This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.

The tag specified at this level of the static route causes the tag values that are configured under the **next-hop**, **black-hole**, and **indirect** contexts of the static route to be ignored.

Range 1 to 4294967295

Introduced 21.2.R1

Platforms All

### **blackhole**

Synopsis Enable the **blackhole** context

Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword blackhole*

Tree [blackhole](#)

Introduced 16.0.R1

Platforms All

**admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dynamic-bgp** *boolean*

Synopsis	Derive static route next hop from BGP next hop value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>dynamic-bgp</b> <i>boolean</i>
Tree	<b>dynamic-bgp</b>

Default	false
Introduced	16.0.R1
Platforms	All

### **generate-icmp** *boolean*

Synopsis	Send ICMP unreachable messages when received packets match a static route with black-hole next-hop
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>generate-icmp</b> <i>boolean</i>
Tree	<b>generate-icmp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

**prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

**flag** *keyword*

Synopsis	Static route match condition from prefix list
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>prefix-list</b> <b>flag</b> <i>keyword</i>
Tree	<b>flag</b>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

**name** *reference*

Synopsis	Prefix list name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>prefix-list</b> <i>name reference</i>
Tree	<b>name</b>
Reference	<b>configure</b> <b>policy-options</b> <b>prefix-list</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>tag</b> <i>number</i>
Tree	<b>tag</b>

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **indirect** [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>indirect</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>indirect</b>
Introduced	16.0.R1
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address used to reach the destination
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>indirect</b>
Description	This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the static route operation

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword**  
**indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*) **admin-state keyword**

Tree **admin-state**

Options enable, disable

Introduced 16.0.R1

Platforms All

### **community** *string*

Synopsis Community ID associated with the static route

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword**  
**indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*) **community string**

Tree **community**

String Length 1 to 72

Introduced 16.0.R1

Platforms All

### **cpe-check** [**address**] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Enter the **cpe-check** list instance

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword**  
**indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*) **cpe-check** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree **cpe-check**

Description When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.

This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

**Note:** A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the

duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

Max. Instances	1
Introduced	16.0.R1
Platforms	All

### [**address**] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>

Tree	<a href="#">interval</a>
Range	1 to 255
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">cpe-check</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">log</a> <i>boolean</i>
Tree	<a href="#">log</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">cpe-check</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">padding-size</a> <i>number</i>
Tree	<a href="#">padding-size</a>
Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">static-routes</a> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">indirect</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>

String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

**prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

**flag keyword**

Synopsis	Static route match condition from prefix list
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>prefix-list flag</b> <i>keyword</i>
Tree	<b>flag</b>
Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

**name reference**

Synopsis	Prefix list name
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>prefix-list name</b> <i>reference</i>
Tree	<b>name</b>
Reference	<b>configure policy-options prefix-list</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

**qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>qos</b>
Tree	<b>qos</b>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **forwarding-class** *keyword*

Synopsis	Forwarding class associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>qos</b> <b>forwarding-class</b> <i>keyword</i>
Tree	<b>forwarding-class</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>qos</b> <b>priority</b> <i>keyword</i>
Tree	<b>priority</b>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source-class** *number*

Synopsis	Source class for the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **tag** *number*

Synopsis	Static route tag
----------	------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## tunnel-next-hop

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b>
Tree	<b>tunnel-next-hop</b>
Introduced	16.0.R1
Platforms	All

## disallow-igp *boolean*

Synopsis	Do not resolve indirect static routes using IGP next-hops in RTM if no tunnel next-hops found in TTM
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>disallow-igp</b> <i>boolean</i>
Tree	<b>disallow-igp</b>
Default	false
Introduced	16.0.R1
Platforms	All

## flex-algo *number*

Synopsis	Flexible Algorithm ID
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255
Introduced	20.7.R1

Platforms All

### **resolution** *keyword*

Synopsis Tunnel next hop resolution to resolve indirect static route

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop** **resolution** *keyword*

Tree **resolution**

Options none, filter, any

Default none

Introduced 16.0.R1

Platforms All

### **resolution-filter**

Synopsis Enter the **resolution-filter** context

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop** **resolution-filter**

Tree **resolution-filter**

Introduced 16.0.R1

Platforms All

### **ldp** *boolean*

Synopsis Use LDP Route Forwarding Equivalence Class (FEC) tunneling for next-hop resolution

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop** **resolution-filter** **ldp** *boolean*

Tree **ldp**

Default false

Introduced 16.0.R1

Platforms All

### **mpls-fwd-policy** *boolean*

Synopsis Use MPLS forwarding policy for tunnel-next-hop

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>mpls-fwd-policy</b> <i>boolean</i>
Tree	<b>mpls-fwd-policy</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **rib-api** *boolean*

Synopsis	Set RIB API type for use with tunnel next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rib-api</b> <i>boolean</i>
Tree	<b>rib-api</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **rsvp-te**

Synopsis	Enable the <b>rsvp-te</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rsvp-te</b>
Tree	<b>rsvp-te</b>
Introduced	16.0.R1
Platforms	All

### **lsp** [*lsp-name*] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution-filter</b> <b>rsvp-te</b> <b>lsp</b> <i>string</i>
Tree	<b>lsp</b>
Introduced	16.0.R1

Platforms All

### [lsp-name] *string*

Synopsis Labeled Switch Path name

Context **configure router** *string* [static-routes route](#) (*ipv4-prefix* | *ipv6-prefix*) [route-type keyword](#) [indirect](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [tunnel-next-hop resolution-filter rsvp-te lsp](#) *string*

Tree [lsp](#)

String Length 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### sr-isis *boolean*

Synopsis Use the SR ISIS tunneling mechanism to resolve next hop for the static route

Context **configure router** *string* [static-routes route](#) (*ipv4-prefix* | *ipv6-prefix*) [route-type keyword](#) [indirect](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [tunnel-next-hop resolution-filter sr-isis](#) *boolean*

Tree [sr-isis](#)

Default false

Introduced 16.0.R1

Platforms All

### sr-ospf *boolean*

Synopsis Use SR OSPF tunneling for next-hop resolution

Context **configure router** *string* [static-routes route](#) (*ipv4-prefix* | *ipv6-prefix*) [route-type keyword](#) [indirect](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [tunnel-next-hop resolution-filter sr-ospf](#) *boolean*

Tree [sr-ospf](#)

Default false

Introduced 16.0.R1

Platforms All

**sr-ospf3 boolean**

Synopsis	Use SR OSPFv3 tunneling mechanism to resolve next-hop
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-ospf3 boolean</b>
Tree	<b>sr-ospf3</b>
Default	false
Introduced	16.0.R6
Platforms	All

**sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te</b>
Tree	<b>sr-te</b>
Introduced	16.0.R1
Platforms	All

**lsp [*lsp-name*] string**

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te lsp string</b>
Tree	<b>lsp</b>
Introduced	16.0.R1
Platforms	All

**[*lsp-name*] string**

Synopsis	Labeled Switch Path name
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te lsp string</b>
Tree	<b>lsp</b>

String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i>

Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	Router interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**community string**

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

**cpe-check [address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**drop-count number**

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>

Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 255
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Range	0 to 16384
Units	bytes

Default	56
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **load-balancing-weight** *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

### **prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

### **flag** *keyword*

Synopsis	Static route match condition from prefix list
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b> <b>flag</b> <i>keyword</i>
Tree	<b>flag</b>

Options	any, all, none
Default	any
Introduced	16.0.R1
Platforms	All

### **name** *reference*

Synopsis	Prefix list name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b> <b>name</b> <i>reference</i>
Tree	<b>name</b>
Reference	<b>configure</b> <b>policy-options</b> <b>prefix-list</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **forwarding-class** *keyword*

Synopsis	Forwarding class associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>qos</b> <b>forwarding-class</b> <i>keyword</i>
Tree	<b>forwarding-class</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority** *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>qos</b> <b>priority</b> <i>keyword</i>
Tree	<b>priority</b>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**source-class** *number*

Synopsis	Source class for the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**ipsec-tunnel** [**ipsec-tunnel-name**] *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i>
Tree	<b>ipsec-tunnel</b>
Introduced	22.7.R1

Platforms VSR

### **[ipsec-tunnel-name]** *string*

Synopsis IPsec tunnel name.

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string*

Tree **ipsec-tunnel**

String Length 1 to 32

Notes This element is part of a list key.

Introduced 22.7.R1

Platforms VSR

### **admin-state** *keyword*

Synopsis Administrative state of the static route operation

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string* **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Introduced 22.7.R1

Platforms VSR

### **community** *string*

Synopsis Community ID associated with the static route

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**ipsec-tunnel** *string* **community** *string*

Tree **community**

String Length 1 to 72

Introduced 22.7.R1

Platforms VSR

### **description** *string*

Synopsis Text description

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

**metric** *number*

Synopsis	Static route metric
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	22.7.R1
Platforms	VSR

**preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	22.7.R1
Platforms	VSR

**tag** *number*

Synopsis	Static route tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295

Introduced 22.7.R1  
 Platforms VSR

### **next-hop** [[ip-address](#)] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis Enter the **next-hop** list instance  
 Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
 Tree [next-hop](#)  
 Introduced 16.0.R1  
 Platforms All

### **[ip-address]** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis IP address of the directly-connected next hop  
 Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)  
 Tree [next-hop](#)  
 Description This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address must be associated with a network directly connected to a network configured on the node.  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the static route operation  
 Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **admin-state** *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Introduced 16.0.R1  
 Platforms All

**backup-next-hop**

Synopsis	Enter the <b>backup-next-hop</b> context
Context	<b>configure</b> <i>router string</i> <b>static-routes</b> <i>route (ipv4-prefix   ipv6-prefix)</i> <b>route-type</b> <i>keyword</i> <b>next-hop</b> <i>(ipv4-address-with-zone   ipv6-address-with-zone)</i> <b>backup-next-hop</b>
Tree	<b>backup-next-hop</b>
Description	Commands in this context configure static route entry fast failover.
Introduced	21.2.R1
Platforms	All

**address** *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Backup next-hop IP address
Context	<b>configure</b> <i>router string</i> <b>static-routes</b> <i>route (ipv4-prefix   ipv6-prefix)</i> <b>route-type</b> <i>keyword</i> <b>next-hop</b> <i>(ipv4-address-with-zone   ipv6-address-with-zone)</i> <b>backup-next-hop</b> <b>address</b> <i>(ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<b>address</b>
Description	<p>This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.</p> <p>The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.</p> <p>One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.</p> <p>The configured IP address can be either on the network or the access side.</p>
Introduced	21.2.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	<b>configure</b> <i>router string</i> <b>static-routes</b> <i>route (ipv4-prefix   ipv6-prefix)</i> <b>route-type</b> <i>keyword</i> <b>next-hop</b> <i>(ipv4-address-with-zone   ipv6-address-with-zone)</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false
Introduced	16.0.R1

Platforms All

### **community** *string*

Synopsis Community ID associated with the static route

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **community** *string*

Tree **community**

String Length 1 to 72

Introduced 16.0.R1

Platforms All

### **cpe-check** [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Enter the **cpe-check** list instance

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **cpe-check**

Description When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.

This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

**Note:** A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

Max. Instances 1

Introduced 16.0.R1

Platforms All

**[address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )

**source-class** *number*

Synopsis	Source class for the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**validate-next-hop** *boolean*

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>validate-next-hop</b> <i>boolean</i>
Tree	<b>validate-next-hop</b>
Default	false
Introduced	16.0.R1
Platforms	All

**tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## subscriber-mgmt

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">subscriber-mgmt</a>
Tree	<a href="#">subscriber-mgmt</a>
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcpv4

Synopsis	Enter the <b>dhcpv4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dhcpv4</a>
Tree	<a href="#">dhcpv4</a>
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## routed-subnet-transparent-forward *boolean*

Synopsis	Transparently forward DHCPv4 from CPE LAN over IPoE
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">dhcpv4</a> <a href="#">routed-subnet-transparent-forward</a> <i>boolean</i>
Tree	<a href="#">routed-subnet-transparent-forward</a>
Description	<p>When configured to <b>true</b>, the router transparently forwards DHCPv4 packets received on a subscriber interface with a source IP in a routed subnet that is associated with a routed IPoE session or host.</p> <p>Supported routed subnets are:</p> <ul style="list-style-type: none"> <li>• RADIUS and NASREQ framed routes</li> <li>• routes learned via an ESM dynamic BGP peer</li> <li>• managed routes that are associated with a static IPv4 host</li> </ul> <p>When configured to <b>false</b>, the system disables transparent forwarding of DHCPv4 packets.</p>
Default	false

Introduced 23.3.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **triggered-policy** *boolean*

Synopsis Trigger route policy re-evaluation  
Context **configure** *router string triggered-policy boolean*  
Tree [triggered-policy](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **ttl-propagate**

Synopsis Enter the **ttl-propagate** context  
Context **configure** *router string ttl-propagate*  
Tree [ttl-propagate](#)  
Introduced 16.0.R1  
Platforms All

### **label-route-local** *keyword*

Synopsis TTL propagation from IP header into label stack for local packets  
Context **configure** *router string ttl-propagate label-route-local keyword*  
Tree [label-route-local](#)  
Options none, all  
Default none  
Introduced 16.0.R1  
Platforms All

### **label-route-transit** *keyword*

Synopsis TTL propagation from IP header into label stack for transit packets  
Context **configure** *router string ttl-propagate label-route-transit keyword*  
Tree [label-route-transit](#)

---

Options	none, all
Default	none
Introduced	16.0.R1
Platforms	All

### **lsr-label-route** *keyword*

Synopsis	TTL propagation from IP header into label stack
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tli-propagate</b> <b>lsr-label-route</b> <i>keyword</i>
Tree	<b>lsr-label-route</b>
Options	none, all
Default	none
Introduced	16.0.R1
Platforms	All

### **vprn-local** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN local packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tli-propagate</b> <b>vprn-local</b> <i>keyword</i>
Tree	<b>vprn-local</b>
Options	none, all, vc-only
Default	vc-only
Introduced	16.0.R1
Platforms	All

### **vprn-transit** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN transit packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>tli-propagate</b> <b>vprn-transit</b> <i>keyword</i>
Tree	<b>vprn-transit</b>
Options	none, all, vc-only
Default	vc-only
Introduced	16.0.R1
Platforms	All

**tunnel-interface**

Synopsis	Enter the <b>tunnel-interface</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a>
Tree	<a href="#">tunnel-interface</a>
Introduced	16.0.R1
Platforms	All

**ldp-p2mp-leaf** [[p2mp-id](#)] *number* [sender-address](#) *string*

Synopsis	Enter the <b>ldp-p2mp-leaf</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-leaf</a> <i>number</i> <a href="#">sender-address</a> <i>string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Introduced	16.0.R1
Platforms	All

**[p2mp-id]** *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-leaf</a> <i>number</i> <a href="#">sender-address</a> <i>string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**sender-address** *string*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a> <a href="#">ldp-p2mp-leaf</a> <i>number</i> <a href="#">sender-address</a> <i>string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## twamp-light

Synopsis	Enter the <b>twamp-light</b> context
Context	<b>configure</b> <i>router string twamp-light</i>
Tree	<a href="#">twamp-light</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## reflector

Synopsis	Enable the <b>reflector</b> context
Context	<b>configure</b> <i>router string twamp-light reflector</i>
Tree	<a href="#">reflector</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of TWAMP Light functionality
Context	<b>configure</b> <i>router string twamp-light reflector admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**allow-ipv6-udp-checksum-zero** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	<b>configure</b> <i>router string twamp-light reflector allow-ipv6-udp-checksum-zero boolean</i>
Tree	<a href="#">allow-ipv6-udp-checksum-zero</a>
Description	<p>When configured to <b>true</b>, this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.</p> <p>When configured to <b>false</b>, IPv6 packets that arrive with a UDP checksum of zero are discarded.</p>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string twamp-light reflector description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**prefix** [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <i>router string twamp-light reflector prefix (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">prefix</a>
Max. Instances	50
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Source prefix for the TWAMP-Light reflector
Context	<b>configure</b> <b>router</b> <i>string twamp-light reflector prefix</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string twamp-light reflector prefix</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type** *keyword*

Synopsis	Processing behavior type for the reflector
Context	<b>configure</b> <b>router</b> <i>string twamp-light reflector type</i> <i>keyword</i>
Tree	<b>type</b>
Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is <b>twamp-light</b> the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is <b>stamp</b>, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to <b>stamp</b>. When the reflector is operating in <b>stamp</b> mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp, twamp-light
Default	twamp-light
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**udp-port** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	<b>configure</b> <i>router string twamp-light reflector udp-port number</i>
Tree	<a href="#">udp-port</a>
Range	862   64364 to 64373
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vrgw**

Synopsis	Enter the <b>vrgw</b> context
Context	<b>configure</b> <i>router string vrgw</i>
Tree	<a href="#">vrgw</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**lanext**

Synopsis	Enable the <b>lanext</b> context
Context	<b>configure</b> <i>router string vrgw lanext</i>
Tree	<a href="#">lanext</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of Home LAN Extension
Context	<b>configure</b> <i>router string vrgw lanext admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vxlan-port** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port to be used by local or remote VXLAN VTEP
Context	<b>configure</b> <i>router string vrgw lanext vxlan-port number</i>
Tree	<a href="#">vxlan-port</a>
Range	4789   8472
Default	4789
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vxlan-vtep-range**

Synopsis	Enter the <b>vxlan-vtep-range</b> context
Context	<b>configure</b> <i>router string vrgw lanext vxlan-vtep-range</i>

 Tree **portal**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [*name*] *string*

Synopsis Web portal name  
 Context **configure router string wpp portal string**  
 Tree **portal**  
 String Length 1 to 32  
 Notes This element is part of a list key.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ack-auth-retry-count** *number*

Synopsis	Number of retransmissions of an ACK_OUT message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>ack-auth-retry-count</b> <i>number</i>
Tree	<a href="#">ack-auth-retry-count</a>
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WPP portal address
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the WPP portal server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ntf-logout-retry-count** *number*

Synopsis	Number of retransmissions of an NTF_LOGOUT message
Context	<b>configure</b> <i>router string wpp portal string ntf-logout-retry-count number</i>
Tree	<a href="#">ntf-logout-retry-count</a>
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**port-format** *keyword*

Synopsis	Format of the port in the ACK_INO message
Context	<b>configure</b> <i>router string wpp portal string port-format keyword</i>
Tree	<a href="#">port-format</a>
Options	standard, vendor-specific
Default	standard
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**retry-interval** *number*

Synopsis	Time between two consecutive retransmissions
Context	<b>configure</b> <i>router string wpp portal string retry-interval number</i>
Tree	<a href="#">retry-interval</a>
Range	10 to 2000
Units	milliseconds
Default	2000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**secret** *string*

Synopsis	Message authentication between portal and BRAS by applying the secret used by WPPv2
----------	---

---

Context	<b>configure</b> <i>router string wpp portal string secret string</i>
Tree	<b>secret</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version number**

Synopsis	Protocol version to be expected by the WPP portal
Context	<b>configure</b> <i>router string wpp portal string version number</i>
Tree	<b>version</b>
Range	1   2
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 3.40 routing-options commands

```

configure
- routing-options
- admin-tags
  - admin-tag string
  - route-admin-tag-policy string
  - apply-groups reference
  - apply-groups-exclude reference
  - exclude reference
  - include reference
- apply-groups reference
- apply-groups-exclude reference
- flexible-algorithm-definitions
  - apply-groups reference
  - apply-groups-exclude reference
  - flex-algo string
  - admin-state keyword
  - apply-groups reference
  - apply-groups-exclude reference

### 3.40.1 routing-options command descriptions

#### routing-options

Synopsis	Enter the <b>routing-options</b> context
Context	<b>configure</b> <a href="#">routing-options</a>
Tree	<a href="#">routing-options</a>
Introduced	16.0.R1
Platforms	All

#### admin-tags

Synopsis	Enter the <b>admin-tags</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a>
Tree	<a href="#">admin-tags</a>
Introduced	16.0.R1
Platforms	All

#### admin-tag [[tag](#)] *string*

Synopsis	Add a list entry for <b>admin-tag</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Tree	<a href="#">admin-tag</a>
Max. Instances	256
Introduced	16.0.R1
Platforms	All

#### [[tag](#)] *string*

Synopsis	Administrative tag value
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Tree	<a href="#">admin-tag</a>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R1  
 Platforms All

### **route-admin-tag-policy** [[policy-name](#)] *string*

Synopsis Enter the **route-admin-tag-policy** list instance  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*  
 Tree [route-admin-tag-policy](#)  
 Max. Instances 2048  
 Introduced 16.0.R1  
 Platforms All

### **[policy-name]** *string*

Synopsis Name of the route admin tag policy  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string*  
 Tree [route-admin-tag-policy](#)  
 String Length 1 to 64  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### **exclude** [[tag](#)] *reference*

Synopsis Add a list entry for **exclude**  
 Context **configure** [routing-options](#) [admin-tags](#) [route-admin-tag-policy](#) *string* [exclude](#) *reference*  
 Tree [exclude](#)  
 Max. Instances 8  
 Introduced 16.0.R1  
 Platforms All

### **[tag]** *reference*

Synopsis Administrative tag value

Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">exclude</a> <a href="#">reference</a>
Tree	<a href="#">exclude</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **include** [[tag](#)] [reference](#)

Synopsis	Add a list entry for <b>include</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">include</a> <a href="#">reference</a>
Tree	<a href="#">include</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[tag]** [reference](#)

Synopsis	Administrative tag value
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">route-admin-tag-policy</a> <i>string</i> <a href="#">include</a> <a href="#">reference</a>
Tree	<a href="#">include</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">admin-tags</a> <a href="#">admin-tag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **flexible-algorithm-definitions**

Synopsis	Enter the <b>flexible-algorithm-definitions</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a>
Tree	<a href="#">flexible-algorithm-definitions</a>
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	20.7.R1

Platforms All

### **flex-algo** [[flex-algo-name](#)] *string*

Synopsis Enter the **flex-algo** list instance

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).

Max. Instances 256

Introduced 20.7.R1

Platforms All

### **[flex-algo-name]** *string*

Synopsis Flexible Algorithm Definition (FAD) name

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 20.7.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the FAD

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 20.7.R1

Platforms All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.7.R1
Platforms	All

**exclude****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>exclude</b>
Tree	<a href="#">exclude</a>
Description	<p>Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.</p>
Introduced	20.7.R1
Platforms	All

**admin-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>exclude</b> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

**[group-name] reference**

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">exclude</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

**flags-tlv boolean****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">flags-tlv</a> <i>boolean</i>
Tree	<a href="#">flags-tlv</a>
Description	<p>When configured to <b>true</b>, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to <b>false</b>, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	20.10.R1
Platforms	All

**include-all****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-all</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a>
Tree	<a href="#">include-all</a>

Description	Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.  Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.
Introduced	20.7.R1
Platforms	All

### **admin-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

### **include-any**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-any</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a>
Tree	<a href="#">include-any</a>

Description	Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.  Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph.
Introduced	20.7.R1
Platforms	All

### **admin-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

### **metric-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">metric-type</a> <i>keyword</i>
Tree	<a href="#">metric-type</a>

Options	igp, delay, te-metric
Default	igp
Introduced	20.7.R1
Platforms	All

### priority *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	20.7.R1
Platforms	All

### if-attribute

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a>
Tree	<a href="#">if-attribute</a>
Introduced	16.0.R1
Platforms	All

### admin-group [[group-name](#)] *string*

Synopsis	Enter the <b>admin-group</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Tree	<a href="#">admin-group</a>
Max. Instances	256

Introduced 16.0.R1  
 Platforms All

### [group-name] *string*

Synopsis Interface group name  
 Context **configure** [routing-options](#) [if-attribute](#) [admin-group](#) *string*  
 Tree [admin-group](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms All

### value *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Integer value associated with the group  
 Context **configure** [routing-options](#) [if-attribute](#) [admin-group](#) *string* [value](#) *number*  
 Tree [value](#)  
 Range 0 to 255  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### srlg-group [name] *string*

Synopsis Enter the **srlg-group** list instance  
 Context **configure** [routing-options](#) [if-attribute](#) [srlg-group](#) *string*  
 Tree [srlg-group](#)  
 Max. Instances 1024  
 Introduced 16.0.R1  
 Platforms All

**[name]** *string*

Synopsis	SRLG name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute srlg-group</a> <i>string</i>
Tree	<a href="#">srlg-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**penalty-weight** *number*

Synopsis	Integer value of the penalty weight assigned to SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute srlg-group</a> <i>string</i> <a href="#">penalty-weight</a> <i>number</i>
Tree	<a href="#">penalty-weight</a>
Description	This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.
Range	0 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

**value** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute srlg-group</a> <i>string</i> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**ip-fast-reroute** *boolean*

Synopsis	Enable IP fast reroute capability
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">ip-fast-reroute</a> <i>boolean</i>
Tree	<a href="#">ip-fast-reroute</a>
Default	false
Introduced	16.0.R1
Platforms	All

**policy-accounting**

Synopsis	Enter the <b>policy-accounting</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a>
Tree	<a href="#">policy-accounting</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**policy-acct-template** [[name](#)] *string*

Synopsis	Enter the <b>policy-acct-template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>
Max. Instances	1024
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[name]** *string*

Synopsis	Policy accounting template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **destination-class** [[index](#)] *number*

Synopsis Enter the **destination-class** list instance

Context **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string* **destination-class** *number*

Tree [destination-class](#)

Max. Instances 255

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **[index]** *number*

Synopsis Destination class index

Context **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string* **destination-class** *number*

Tree [destination-class](#)

Range 1 to 255

Notes This element is part of a list key.

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **policer** *reference*

Synopsis Policer ID

Context **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string* **destination-class** *number* [policer](#) *reference*

Tree [policer](#)

Reference **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string* [policer](#) *number*

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**policer** [**policer-id**] *number*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>policer</b> <i>number</i>
Tree	<a href="#">policer</a>
Description	Commands in this context configure the policer definition for the instance. Policing by action of a policy accounting template is only supported by cards and systems that are FP4 and later.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[policer-id]** *number*

Synopsis	Policer ID
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>policer</b> <i>number</i>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**max-burst-size** (*number* | *keyword*)

Synopsis	Exceed threshold to drop packets from PIR leaky bucket
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>policer</b> <i>number</i> <a href="#">max-burst-size</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-burst-size</a>
Description	This command specifies the maximum burst size for the policer. When this value is exceeded, packets are considered violating and are dropped.
Range	0 to 16777216
Units	bytes
Options	auto
Default	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**peak-rate** (*number* | *keyword*)

Synopsis	Peak rate of the policy accounting policer
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i> <b>peak-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">peak-rate</a>
Description	This command configures the peak rate of the policy accounting policer, which is the fill or drain rate of the bucket.
Range	1 to 6400000000
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**source-class** [[index](#)] *number*

Synopsis	Add a list entry for <b>source-class</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Max. Instances	255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

**[[index](#)]** *number*

Synopsis	Source-class index
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## route-next-hop-policy

Synopsis	Enter the <b>route-next-hop-policy</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a>
Tree	<a href="#">route-next-hop-policy</a>
Introduced	16.0.R1
Platforms	All

## template [[template-name](#)] *string*

Synopsis	Enter the <b>template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
Introduced	16.0.R1
Platforms	All

## [[template-name](#)] *string*

Synopsis	Template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**exclude-group** [group-name] *reference*

Synopsis	Add a list entry for <b>exclude-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Description	This command specifies the name of the administrative group.  If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**include-group** [group-name] *reference*

Synopsis	Enter the <b>include-group</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i>
Tree	<a href="#">include-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

**[group-name]** *reference*

Synopsis	Administrative group name
----------	---------------------------

Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i>
Tree	<a href="#">include-group</a>
Description	This command specifies the name of the administrative group. If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Preference number for configured admin-group.
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">include-group</a> <i>reference</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

### **nh-type** *keyword*

Synopsis	Preferred next hop
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">nh-type</a> <i>keyword</i>
Tree	<a href="#">nh-type</a>
Options	ip, tunnel
Default	ip
Introduced	16.0.R1
Platforms	All

### **protection-type** *keyword*

Synopsis	Protection type used
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">protection-type</a> <i>keyword</i>

---

Tree	<a href="#">protection-type</a>
Options	link, node
Default	node
Introduced	16.0.R1
Platforms	All

### **srlg** *boolean*

Synopsis	Select next hops from the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">srlg</a> <i>boolean</i>
Tree	<a href="#">srlg</a>
Default	false
Introduced	16.0.R1
Platforms	All

```

### 3.41.1 saa command descriptions

#### **saa**

Synopsis	Enter the <b>saa</b> context
Context	<b>configure saa</b>
Tree	<a href="#">saa</a>
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	16.0.R4
Platforms	All

#### **owner** [[owner-name](#)] [string test string](#)

Synopsis	Enter the <b>owner</b> list instance
Context	<b>configure saa owner <a href="#">string test string</a></b>
Tree	<a href="#">owner</a>
Introduced	16.0.R4
Platforms	All

#### **[owner-name]** [string](#)

Synopsis	Optional owner name of the SAA operation
Context	<b>configure saa owner <a href="#">string test string</a></b>
Tree	<a href="#">owner</a>
Description	This command configures the owner associated with the SAA operation.
String Length	1 to 32
MD-CLI	TiMOS CLI
Default	
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

#### **test** [string](#)

Synopsis	SAA test name
----------	---------------

Context	<b>configure</b> <i>saa owner string test string</i>
Tree	<i>owner</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **accounting-policy** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	<b>configure</b> <i>saa owner string test string accounting-policy reference</i>
Tree	<i>accounting-policy</i>
Reference	<b>configure</b> <i>log accounting-policy number</i>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SAA test
Context	<b>configure</b> <i>saa owner string test string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

### **continuous** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
Context	<b>configure</b> <i>saa owner string test string continuous boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to <b>true</b>, the SAA test execution is continuous, that is, it cannot be started or stopped with the <b>oam saa test start</b> or <b>stop</b> commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none"> <li>• <b>cpe-ping</b></li> <li>• <b>dns</b></li> <li>• <b>eth-cfm-loopback</b></li> <li>• <b>eth-cfm-two-way-delay</b></li> <li>• <b>eth-cfm-two-way-slm</b></li> <li>• <b>icmp-ping</b> (not applicable to <b>rapid</b> type)</li> <li>• <b>lsp-ping</b></li> <li>• <b>mac-ping</b></li> <li>• <b>sdp-ping</b></li> <li>• <b>vccv-ping</b></li> <li>• <b>vprn-ping</b></li> </ul>
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>saa owner string test string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **jitter-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>jitter-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>

Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <b>saa owner</b> <i>string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <b>saa owner</b> <i>string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold** *number*

Synopsis	Threshold jitter value
Context	<b>configure</b> <b>saa owner</b> <i>string test string jitter-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **latency-event** [*direction*] *keyword* *threshold-type* *keyword*

Synopsis	Enter the <b>latency-event</b> list instance
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <i>latency-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>latency-event</i>
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <i>latency-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>latency-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner</i> <i>string</i> <i>test</i> <i>string</i> <i>latency-event</i> <i>keyword</i> <i>threshold-type</i> <i>keyword</i>
Tree	<i>latency-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold** *number*

Synopsis	Threshold latency value
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword threshold number</i>
Tree	<b>threshold</b>
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**loss-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>loss-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

**[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<a href="#">loss-event</a>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**threshold** *number*

Synopsis	Threshold loss event value
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword threshold number</i>
Tree	<a href="#">threshold</a>
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**probe-history** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	<b>configure</b> <i>saa owner string test string probe-history keyword</i>
Tree	<a href="#">probe-history</a>
Options	keep, drop, auto
Default	auto
Introduced	16.0.R4
Platforms	All

**type**

Synopsis	Enter the <b>type</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type</a>
Tree	<a href="#">type</a>
Introduced	16.0.R4
Platforms	All

**dns**

Synopsis	Enable the <b>dns</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type dns</a>
Tree	<a href="#">dns</a>
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , <b>lsp-ping</b> , or <b>vccv-ping</b> .
Introduced	22.10.R1
Platforms	All

**count number**

Synopsis	Number of messages to send in a sample window
Context	<b>configure</b> <a href="#">saa owner string test string type dns count number</a>
Tree	<a href="#">count</a>
Description	This command specifies the number of messages to send. Each message request must either time out or receive a reply before the next message request is sent.
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

**interval number**

Synopsis	Minimum time before the next message request is sent
Context	<b>configure</b> <a href="#">saa owner string test string type dns interval number</a>
Tree	<a href="#">interval</a>

Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

### **name-server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the DNS name server used for the test
Context	<b>configure</b> <i>saa owner string test string type dns name-server</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">name-server</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **record-type** *keyword*

Synopsis	Record type
Context	<b>configure</b> <i>saa owner string test string type dns record-type keyword</i>
Tree	<a href="#">record-type</a>
Options	ipv4-a-record, ipv6-aaaa-record
Default	ipv4-a-record
Introduced	22.10.R1
Platforms	All

### **router-instance** *string*

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type dns router-instance string</i>
Tree	<a href="#">router-instance</a>
Default	_Base_and_management
Introduced	22.10.R1
Platforms	All

**source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address on the local system
Context	<b>configure</b> <i>saa owner string test string type dns source-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-address</a>
Description	This command configures the IP address on the local system. If unconfigured, the router uses a system selected local IP address.
Introduced	22.10.R1
Platforms	All

**target-address** *string*

Synopsis	DNS name to be resolved to an IP address
Context	<b>configure</b> <i>saa owner string test string type dns target-address string</i>
Tree	<a href="#">target-address</a>
String Length	1 to 255
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**timeout** *number*

Synopsis	Maximum time to wait for a reply message
Context	<b>configure</b> <i>saa owner string test string type dns timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the maximum time the router waits for a message response after sending the message request. When the timeout expires, the requesting router assumes the message response is not received. Any response received after the request times out is silently discarded.
Range	1 to 120
Units	seconds
Default	5
Introduced	22.10.R1
Platforms	All

## trap-generation

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">dns</a> <a href="#">trap-generation</a>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1
Platforms	All

## probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">dns</a> <a href="#">trap-generation</a> <a href="#">probe-fail</a> <i>boolean</i>
Tree	<a href="#">probe-fail</a>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

## probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">dns</a> <a href="#">trap-generation</a> <a href="#">probe-fail-threshold</a> <i>number</i>
Tree	<a href="#">probe-fail-threshold</a>
Description	This command configures the number of consecutive ping probe failures required to generate a trap.  This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when <b>test-fail</b> is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**icmp-ping**

Synopsis	Enable the <b>icmp-ping</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping</i>
Tree	<a href="#">icmp-ping</a>
Description	Commands in this context configure an ICMP ping test.
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , <b>lsp-ping</b> , or <b>vccv-ping</b> .
Introduced	16.0.R4
Platforms	All

**bypass-routing** *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	<b>configure</b> <i>saa owner string test string type icmp-ping bypass-routing boolean</i>
Tree	<a href="#">bypass-routing</a>
Default	false
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

**count** *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type icmp-ping count number</i>
Tree	<a href="#">count</a>
Range	1 to 100000
Units	packets
Default	5
Introduced	16.0.R4
Platforms	All

**destination-address** (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
----------	---

Context	<b>configure</b> <i>saa owner string test string type icmp-ping destination-address</i> ( <i>ipv4-address-no-zone   ipv6-address-no-zone   string-not-all-spaces</i> )
Tree	<a href="#">destination-address</a>
String Length	1 to 128
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **do-not-fragment** *boolean*

Synopsis	Prevent fragmentation of the ICMP Echo Request packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping do-not-fragment boolean</i>
Tree	<a href="#">do-not-fragment</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **interface** *string*

Synopsis	Interface name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **interval** (*number | decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interval</i> ( <i>number   decimal-number</i> )
Tree	<a href="#">interval</a>
Range	1 to 10000
Units	seconds

Default	1
Introduced	16.0.R4
Platforms	All

### **next-hop-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	<b>configure</b> <i>saa owner string test string type icmp-ping next-hop-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop-address</a>
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **pattern** (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping pattern</i> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">pattern</a>
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	16.0.R4
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos</i>
Tree	<a href="#">qos</a>
Introduced	16.0.R4
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos fc keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	nc
Introduced	16.0.R4
Platforms	All

**tos number**

Synopsis	Type of service
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos tos number</i>
Tree	<b>tos</b>
Range	0 to 255
Default	0
Introduced	16.0.R4
Platforms	All

**router-instance string**

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping router-instance string</i>
Tree	<b>router-instance</b>
Default	Base
Introduced	16.0.R4
Platforms	All

**size number**

Synopsis	Packet padding size
Context	<b>configure</b> <i>saa owner string test string type icmp-ping size number</i>
Tree	<b>size</b>
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.

Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R4
Platforms	All

### **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <i>saa owner string test string type icmp-ping source-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-address</a>
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	Time router waits for a reply after sending last probe
Context	<b>configure</b> <i>saa owner string test string type icmp-ping timeout number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Units	seconds
Default	5
Introduced	16.0.R4
Platforms	All

### **trap-generation**

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation</i>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1

Platforms All

### **probe-fail** *boolean*

Synopsis Enable the generation of probe fail notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail boolean*

Tree [probe-fail](#)

Description When configured to **true**, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  
This command is not applicable to SAA traceroute tests.

Default false

Introduced 22.10.R1

Platforms All

### **probe-fail-threshold** *number*

Synopsis Consecutive probe failure count

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail-threshold number*

Tree [probe-fail-threshold](#)

Description This command configures the number of consecutive ping probe failures required to generate a trap.  
This command has no effect if the **probe-fail** command is set to **false**.  
This command is not applicable to SAA traceroute tests.

Range 0 to 15

Default 1

Introduced 22.10.R1

Platforms All

### **test-complete** *boolean*

Synopsis Enable generation of test complete notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation test-complete boolean*

Tree [test-complete](#)

Default false

Introduced	22.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap.  This command has no effect when <b>test-fail</b> is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**ttl** *number*

Synopsis	Time to live in the IP header
Context	<b>configure</b> <i>saa owner string test string type icmp-ping ttl number</i>
Tree	<a href="#">ttl</a>
Range	1 to 128

Default	64
Introduced	16.0.R4
Platforms	All

## **lsp-ping**

Synopsis	Enable the <b>lsp-ping</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping</a>
Tree	<a href="#">lsp-ping</a>
Description	Commands in this context configure the command options to perform in-band LSP connectivity tests.  LSP ping uses the protocol and data structures defined in RFC 8029, <i>Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures</i> .
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , <b>lsp-ping</b> , or <b>vccv-ping</b> .
Introduced	22.10.R1
Platforms	All

## **interval number**

Synopsis	Minimum time before the next lsp-ping request is sent
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping interval number</a>
Tree	<a href="#">interval</a>
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

## **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos</a>
Tree	<a href="#">qos</a>
Introduced	22.10.R1
Platforms	All

**fc keyword**

Synopsis	Forwarding class
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos fc keyword</a>
Tree	<a href="#">fc</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	22.10.R1
Platforms	All

**profile keyword**

Synopsis	Profile
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos profile keyword</a>
Tree	<a href="#">profile</a>
Options	in, out
Default	out
Introduced	22.10.R1
Platforms	All

**send-count number**

Synopsis	Number of request packets to send in a sample window
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping send-count number</a>
Tree	<a href="#">send-count</a>
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

**size number**

Synopsis	Packet pad size
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping size number</a>

Tree	<a href="#">size</a>
Range	1 to 9786
Units	bytes
Default	1
Introduced	22.10.R1
Platforms	All

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Introduced	22.10.R1
Platforms	All

### **sub-type**

Synopsis	Enter the <b>sub-type</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a>
Tree	<a href="#">sub-type</a>
Introduced	22.10.R1
Platforms	All

### **bgp-label**

Synopsis	Enable the <b>bgp-label</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a> <a href="#">bgp-label</a>
Tree	<a href="#">bgp-label</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

## path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

## interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">interface string</a>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

## ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</a>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

## next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</a>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1

Platforms All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test

Context **configure** *saa owner string test string type lsp-ping sub-type bgp-label prefix* (*ipv4-prefix* | *ipv6-prefix*)

Tree [prefix](#)

Notes This element is mandatory.

Introduced 22.10.R1

Platforms All

### **ldp**

Synopsis Enable the **ldp** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp*

Tree [ldp](#)

Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 22.10.R1

Platforms All

### **path-destination**

Synopsis Enter the **path-destination** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination*

Tree [path-destination](#)

Introduced 22.10.R1

Platforms All

### **interface** *string*

Synopsis Egress router interface used with the path destination

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination interface string*

Tree [interface](#)

String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <a href="#">lsp-ping sub-type ldp path-destination ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <a href="#">lsp-ping sub-type ldp path-destination next-hop</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <b>saa owner</b> <i>string test string type</i> <a href="#">lsp-ping sub-type ldp prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**rsvp-te**

Synopsis	Enable the <b>rsvp-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te</i>
Tree	<a href="#">rsvp-te</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**lsp-name string**

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te lsp-name string</i>
Tree	<a href="#">lsp-name</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**path string**

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te path string</i>
Tree	<a href="#">path</a>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

**sr-isis**

Synopsis	Enable the <b>sr-isis</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis</i>
Tree	<a href="#">sr-isis</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .

Introduced	22.10.R1
Platforms	All

### **igp-instance** *number*

Synopsis	IGP instance for the SR IS-IS test
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping sub-type sr-isis igp-instance number</a>
Tree	<a href="#">igp-instance</a>
Range	0 to 127
Default	0
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping sub-type sr-isis path-destination</a>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping sub-type sr-isis path-destination interface string</a>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix | ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis prefix (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **sr-ospf**

Synopsis	Enable the <b>sr-ospf</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf</i>
Tree	<a href="#">sr-ospf</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**igp-instance** *number*

Synopsis	IGP instance for the SR OSPF test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31
Default	0
Introduced	22.10.R1
Platforms	All

**path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

**interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

**ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>

Introduced 22.10.R1  
 Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf path-destination next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [next-hop](#)  
 Notes The following elements are part of a choice: **interface** or **next-hop**.  
 Introduced 22.10.R1  
 Platforms All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf prefix* (*ipv4-prefix* | *ipv6-prefix*)  
 Tree [prefix](#)  
 Notes This element is mandatory.  
 Introduced 22.10.R1  
 Platforms All

### **sr-ospf3**

Synopsis Enable the **sr-ospf3** context  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf3*  
 Tree [sr-ospf3](#)  
 Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.  
 Introduced 22.10.R1  
 Platforms All

### **igp-instance** *number*

Synopsis IGP instance for the SR OSPFv3 test

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31   64 to 95
Default	0
Introduced	22.10.R1
Platforms	All

## path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

## interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

## ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

**next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination next-hop</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 prefix</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**sr-policy**

Synopsis	Enable the <b>sr-policy</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy</i>
Tree	<a href="#">sr-policy</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**color number**

Synopsis	Segment Routing color for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy color number</i>
Tree	<a href="#">color</a>
Range	0 to 4294967295

Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **endpoint** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy endpoint</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">endpoint</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **segment-list** *number*

Synopsis	Segment Routing segment list for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy segment-list number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32
Introduced	22.10.R1
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te</i>
Tree	<a href="#">sr-te</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

**lsp-name** *string*

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te lsp-name string</i>
Tree	<i>lsp-name</i>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

**path** *string*

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path string</i>
Tree	<i>path</i>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

**path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination</i>
Tree	<i>path-destination</i>
Introduced	22.10.R1
Platforms	All

**interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination interface string</i>
Tree	<i>interface</i>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .

Introduced 22.10.R1  
 Platforms All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination ip-address* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [ip-address](#)  
 Introduced 22.10.R1  
 Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
 Tree [next-hop](#)  
 Notes The following elements are part of a choice: **interface** or **next-hop**.  
 Introduced 22.10.R1  
 Platforms All

### **timeout** *number*

Synopsis Time router waits for a reply to an echo request  
 Context **configure** *saa owner string test string type lsp-ping timeout number*  
 Tree [timeout](#)  
 Range 1 to 10  
 Units seconds  
 Default 5  
 Introduced 22.10.R1  
 Platforms All

### **trap-generation**

Synopsis Enter the **trap-generation** context

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	22.10.R1
Platforms	All

### **probe-fail** *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

### **probe-fail-threshold** *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

### **test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
----------	--

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap.  This command has no effect when <b>test-fail</b> is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**tll number**

Synopsis	TTL value for the echo request MPLS label
Context	<b>configure</b> <i>saa owner string test string type lsp-ping tll number</i>
Tree	<a href="#">tll</a>
Range	1 to 255
Default	255
Introduced	22.10.R1
Platforms	All

**vccv-ping**

Synopsis	Enable the <b>vccv-ping</b> context
Context	<b>configure</b> <i>saa owner string test string type vccv-ping</i>
Tree	<a href="#">vccv-ping</a>
Description	<p>Commands in this context configure a Virtual Circuit Connectivity Verification (VCCV) ping test.</p> <p>A VCCV-ping test checks connectivity of a VLL inband. It verifies that the destination (target) PE is the egress for the Layer 2 FEC and provides for a cross-check between the data plane and the control plane. Because it is inband, the VCCV-ping message is sent using the same encapsulation and along the same path as user packets in that VLL. The VCCV-ping test is the equivalent of the LSP-ping test for a VLL service. The VCCV-ping test reuses an LSP-ping message format and can be used to test a VLL configured over both an MPLS and a GRE SDP.</p>
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , <b>lsp-ping</b> , or <b>vccv-ping</b> .
Introduced	23.10.R1
Platforms	All

**count number**

Synopsis	Number of echo request packets to send
Context	<b>configure</b> <i>saa owner string test string type vccv-ping count number</i>
Tree	<a href="#">count</a>
Range	1 to 100
Units	packets
Default	1
Introduced	23.10.R1
Platforms	All

### **interval** *number*

Synopsis	Interval between packets sent
Context	<b>configure</b> <i>saa owner string test string type vccv-ping interval number</i>
Tree	<i>interval</i>
Range	1 to 10
Units	seconds
Default	1
Introduced	23.10.R1
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <i>saa owner string test string type vccv-ping qos</i>
Tree	<i>qos</i>
Introduced	23.10.R1
Platforms	All

### **fc** *keyword*

Synopsis	QoS FC for the sent echo request packets
Context	<b>configure</b> <i>saa owner string test string type vccv-ping qos fc keyword</i>
Tree	<i>fc</i>
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	23.10.R1
Platforms	All

### **profile** *keyword*

Synopsis	QoS profile for the sent echo request packets
Context	<b>configure</b> <i>saa owner string test string type vccv-ping qos profile keyword</i>
Tree	<i>profile</i>
Options	in, out

Default	out
Introduced	23.10.R1
Platforms	All

### **size number**

Synopsis	Echo request packet pad size
Context	<b>configure</b> <i>saa owner string test string type vccv-ping size number</i>
Tree	<a href="#">size</a>
Range	1 to 9786
Units	bytes
Default	1
Introduced	23.10.R1
Platforms	All

### **sub-type**

Synopsis	Enter the <b>sub-type</b> context
Context	<b>configure</b> <i>saa owner string test string type vccv-ping sub-type</i>
Tree	<a href="#">sub-type</a>
Description	Commands in this context configure the FEC type for a remote PW segment targeted by a VCCV-ping echo request.
Introduced	23.10.R1
Platforms	All

### **fec-128**

Synopsis	Enable the <b>fec-128</b> context
Context	<b>configure</b> <i>saa owner string test string type vccv-ping sub-type fec-128</i>
Tree	<a href="#">fec-128</a>
Description	Commands in this context configure the FEC-128 sub-type.
Introduced	23.10.R1
Platforms	All

## pseudowire

Synopsis	Enable the <b>pseudowire</b> context
Context	<b>configure</b> <b>saa owner</b> <i>string test string type vccv-ping sub-type fec-128 pseudowire</i>
Tree	<a href="#">pseudowire</a>
Description	Commands in this context configure the PW that is used for performing a VCCV-ping operation.
Introduced	23.10.R1
Platforms	All

## destination-ip-address *string*

Synopsis	PW destination IP address
Context	<b>configure</b> <b>saa owner</b> <i>string test string type vccv-ping sub-type fec-128 pseudowire destination-ip-address string</i>
Tree	<a href="#">destination-ip-address</a>
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

## pw-id *number*

Synopsis	PW identifier
Context	<b>configure</b> <b>saa owner</b> <i>string test string type vccv-ping sub-type fec-128 pseudowire pw-id number</i>
Tree	<a href="#">pw-id</a>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

## source-ip-address *string*

Synopsis	PW source IP address
Context	<b>configure</b> <b>saa owner</b> <i>string test string type vccv-ping sub-type fec-128 pseudowire source-ip-address string</i>
Tree	<a href="#">source-ip-address</a>

Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

### **reply-mode** *keyword*

Synopsis	In-band or out-of-band reply
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>vccv-ping sub-type fec-128</b> <b>reply-mode</b> <i>keyword</i>
Tree	<a href="#">reply-mode</a>
Options	ip-routed, control-channel
Default	control-channel
Introduced	23.10.R1
Platforms	All

### **sdp-bind-id** *string*

Synopsis	SDP bind ID to test
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>vccv-ping sub-type fec-128</b> <b>sdp-bind-id</b> <i>string</i>
Tree	<a href="#">sdp-bind-id</a>
String Length	3 to 16
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

### **timeout** *number*

Synopsis	Wait time for a reply after sending an echo request
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>vccv-ping</b> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Units	seconds
Default	5
Introduced	23.10.R1
Platforms	All

**trap-generation**

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation</i>
Tree	<a href="#">trap-generation</a>
Introduced	23.10.R1
Platforms	All

**probe-fail** *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation probe-fail boolean</i>
Tree	<a href="#">probe-fail</a>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	23.10.R1
Platforms	All

**probe-fail-threshold** *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation probe-fail-threshold number</i>
Tree	<a href="#">probe-fail-threshold</a>
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	23.10.R1
Platforms	All

**test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	23.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	23.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type vccv-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when <b>test-fail</b> is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	23.10.R1
Platforms	All

**tll number**

Synopsis	TTL value for the echo request MPLS label
Context	<b>configure</b> <i>saa owner string test string type vccv-ping tll number</i>
Tree	<b>tll</b>
Range	1 to 255
Default	1
Introduced	23.10.R1
Platforms	All

## 3.42 satellite commands

```

configure
- satellite
- apply-groups reference
- apply-groups-exclude reference
- ethernet-satellite number
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference
- central-frequency-clock
- apply-groups reference
- apply-groups-exclude reference
- ref1
- admin-state keyword
- quality-level-override keyword
- source-port string
- ref2
- admin-state keyword
- quality-level-override keyword
- source-port string
- client-down-delay number
- console-access keyword
- description string
- dynamic-uplink boolean
- feature keyword
- mac-address string
- port-map reference
- apply-groups reference
- apply-groups-exclude reference
- primary reference
- secondary reference
- port-template string
- ptp-tc boolean
- sat-type keyword
- software-repository reference
- sync-e boolean
- uplink-distribution keyword
- file-transfer
- apply-groups reference
- apply-groups-exclude reference
- ftp boolean
- scp boolean
- port-template string
- admin-state keyword
- apply-groups reference
- apply-groups-exclude reference

- role keyword
- uplink reference
- sat-type keyword
- port-topology reference
- apply-groups reference
- apply-groups-exclude reference
- far-end-port-id reference

```

### 3.42.1 satellite command descriptions

#### satellite

Synopsis	Enter the <b>satellite</b> context
Context	<b>configure satellite</b>
Tree	<a href="#">satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### ethernet-satellite [[satellite-id](#)] *number*

Synopsis	Enter the <b>ethernet-satellite</b> list instance
Context	<b>configure satellite ethernet-satellite</b> <i>number</i>
Tree	<a href="#">ethernet-satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### [\[satellite-id\]](#) *number*

Synopsis	The unique index identifying this satellite
Context	<b>configure satellite ethernet-satellite</b> <i>number</i>
Tree	<a href="#">ethernet-satellite</a>
Range	1 to 20
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **admin-state** *keyword*

Synopsis	Administrative state of the satellite
Context	<b>configure satellite ethernet-satellite</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### central-frequency-clock

Synopsis	Enter the <b>central-frequency-clock</b> context
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a>
Tree	<a href="#">central-frequency-clock</a>
Description	Commands in this context configure frequency references used in the Ethernet satellite. The <b>configure satellite ethernet-satellite sync-e</b> command must be configured to <b>true</b> before being committed. Otherwise, an error message is generated.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### ref1

Synopsis	Enter the <b>ref1</b> context
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref1</a>
Tree	<a href="#">ref1</a>
Description	Commands in this context configure options for the first timing reference used in the Ethernet satellite. The source ports for ref1 can be either uplinks or client ports.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### admin-state *keyword*

Synopsis	Administrative state of the satellite timing reference
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref1</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**quality-level-override** *keyword*

Synopsis	Quality level of the satellite timing reference
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref1</a> <a href="#">quality-level-override</a> <i>keyword</i>
Tree	<a href="#">quality-level-override</a>
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**source-port** *string*

Synopsis	Source port for timing reference within satellite
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref1</a> <a href="#">source-port</a> <i>string</i>
Tree	<a href="#">source-port</a>
Description	This command configures the source port used for the input reference to the frequency clock.  The port can be any port of the Ethernet satellite.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ref2**

Synopsis	Enter the <b>ref2</b> context
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref2</a>
Tree	<a href="#">ref2</a>
Description	Commands in this context configure options for the second timing reference used in the Ethernet satellite.  The source ports for ref2 can be either uplinks or client ports.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the satellite timing reference
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref2</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**quality-level-override** *keyword*

Synopsis	Quality level of the satellite timing reference
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref2</a> <b>quality-level-override</b> <i>keyword</i>
Tree	<a href="#">quality-level-override</a>
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**source-port** *string*

Synopsis	Source port for timing reference within satellite
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">ethernet-satellite</a> <i>number</i> <a href="#">central-frequency-clock</a> <a href="#">ref2</a> <b>source-port</b> <i>string</i>
Tree	<a href="#">source-port</a>
Description	This command configures the source port used for the input reference to the frequency clock.  The port can be any port of the Ethernet satellite.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**client-down-delay** *number*

Synopsis	Delay between uplink as unavailable and disabling ports
----------	---

Context	<b>configure satellite ethernet-satellite</b> <i>number client-down-delay number</i>
Tree	<a href="#">client-down-delay</a>
Range	0 to 1800
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **console-access** *keyword*

Synopsis	Satellite console interface access
Context	<b>configure satellite ethernet-satellite</b> <i>number console-access keyword</i>
Tree	<a href="#">console-access</a>
Options	enable, disable
Default	disable
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure satellite ethernet-satellite</b> <i>number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dynamic-uplink** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable dynamic uplink resilience for Ethernet satellite
Context	<b>configure satellite ethernet-satellite</b> <i>number dynamic-uplink boolean</i>
Tree	<a href="#">dynamic-uplink</a>
Default	false
Introduced	22.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **feature** *keyword*

Synopsis Functionality to enable  
 Context **configure** [satellite ethernet-satellite](#) *number feature keyword*  
 Tree [feature](#)  
 Options local-forward, ptp-tc  
 Max. 2  
 Instances  
 Introduced 19.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis MAC address for the satellite chassis  
 Context **configure** [satellite ethernet-satellite](#) *number mac-address string*  
 Tree [mac-address](#)  
 Introduced 19.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port-map** [[client-port-id](#)] *reference*

Synopsis Enter the **port-map** list instance  
 Context **configure** [satellite ethernet-satellite](#) *number port-map reference*  
 Tree [port-map](#)  
 Introduced 19.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[client-port-id]** *reference*

Synopsis Satellite client port associated with the port mapping  
 Context **configure** [satellite ethernet-satellite](#) *number port-map reference*  
 Tree [port-map](#)  
 Reference **configure** [port](#) *string*

Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### primary reference

Synopsis	Primary satellite uplink for the associate client port
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i> <a href="#">primary</a> <i>reference</i>
Tree	<a href="#">primary</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### secondary reference

Synopsis	Secondary satellite uplink for associate client port
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i> <a href="#">secondary</a> <i>reference</i>
Tree	<a href="#">secondary</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### port-template *string*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port template name
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-template</a> <i>string</i>
Tree	<a href="#">port-template</a>
String Length	1 to 32
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ptp-tc** *boolean*

Synopsis	Enable the IEEE 1588 transparent clock function
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">ptp-tc</a> <i>boolean</i>
Tree	<a href="#">ptp-tc</a>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sat-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of satellite variant for the associated chassis
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56, es48-sfpp+6-qsfp28
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**software-repository** *reference*

Synopsis	Software repository bound to the associated satellite
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">software-repository</a> <i>reference</i>
Tree	<a href="#">software-repository</a>
Reference	<b>configure</b> <a href="#">system software-repository</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sync-e** *boolean*

Synopsis	Enable the synchronous Ethernet operation
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sync-e</a> <i>boolean</i>

Tree	<a href="#">sync-e</a>
Description	<p>When configured to <b>true</b>, this command enables the Ethernet satellite for synchronous Ethernet operation so that the transmit timing of the satellite access ports use the frequency of the central clock of the host router.</p> <p>To enable this functionality, both host ports on the router that connect to the U1 and U2 ports of the satellite must be synchronous Ethernet-capable ports.</p> <p>When configured to <b>false</b>, the command disables the Ethernet satellite for synchronous Ethernet operation.</p>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **uplink-distribution** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding complex type for uplink distribution
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <b>uplink-distribution</b> <i>keyword</i>
Tree	<a href="#">uplink-distribution</a>
Description	<p>This command specifies the forwarding complex used for the satellite uplink association to the ports.</p> <p>With <b>single-complex</b>, all uplinks for the associated satellite must be connected to ports using a single forwarding complex.</p> <p>With <b>dual-complex</b>, all uplinks for the associated satellite must be connected to ports using a double forwarding complex. This option optimizes the resources across the two complexes.</p>
Options	single-complex, dual-complex
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **file-transfer**

Synopsis	Enter the <b>file-transfer</b> context
Context	<b>configure</b> <a href="#">satellite file-transfer</a>
Tree	<a href="#">file-transfer</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ftp** *boolean*

Synopsis Use FTP between host and satellite

Context **configure** [satellite file-transfer ftp](#) *boolean*

Tree [ftp](#)

Description When configured to **true**, the file transfer FTP is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.

Default true

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scp** *boolean*

Synopsis Use FTP between host and satellite

Context **configure** [satellite file-transfer scp](#) *boolean*

Tree [scp](#)

Description When configured to **true**, the file transfer SCP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.

When configured to **false**, the file transfer FTP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port-template** [[template-name](#)] *string*

Synopsis Enter the **port-template** list instance

Context **configure** [satellite port-template](#) *string*

Tree [port-template](#)

Introduced 19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[template-name] string**

Synopsis	Associated port template name
Context	<b>configure satellite port-template string</b>
Tree	<b>port-template</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state keyword**

Synopsis	Administrative state of the port template
Context	<b>configure satellite port-template string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description string**

Synopsis	Text description
Context	<b>configure satellite port-template string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**port [sat-phys-port-id] string**

Synopsis	Enter the <b>port</b> list instance
Context	<b>configure satellite port-template string port string</b>
Tree	<b>port</b>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[sat-phys-port-id]** *string*

Synopsis	Satellite physical port ID
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Tree	<a href="#">port</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**role** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite port role
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">role</a> <i>keyword</i>
Tree	<a href="#">role</a>
Options	none, uplink, client
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**uplink** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Uplink association used for associated satellite port
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">uplink</a> <i>reference</i>
Tree	<a href="#">uplink</a>
Reference	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**sat-type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite type for use with the port template
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56, es48-sfpp+6-qsfp28
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**port-topology** [[local-port-id](#)] *reference*

Synopsis	Enter the <b>port-topology</b> list instance
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-topology</a> <i>reference</i>
Tree	<a href="#">port-topology</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[local-port-id]** *reference*

Synopsis	Local port identifier
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-topology</a> <i>reference</i>
Tree	<a href="#">port-topology</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## far-end-port-id *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Far end port identifier.
Context	<b>configure</b> <a href="#">satellite port-topology reference</a> <a href="#">far-end-port-id reference</a>
Tree	<a href="#">far-end-port-id</a>
Reference	<b>configure</b> <a href="#">port string</a>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Platforms	All

#### **cpipe** [[service-name](#)] *string*

Synopsis	Enter the <b>cpipe</b> list instance
Context	<b>configure service cpipe string</b>
Tree	<a href="#">cpipe</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure service cpipe string</b>
Tree	<a href="#">cpipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure service cpipe string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **customer** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">customer</a> <a href="#">reference</a>
Tree	<a href="#">customer</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <a href="#">string</a>
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **endpoint** [[name](#)] *string*

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a>
Tree	<a href="#">endpoint</a>
Max. Instances	2
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure</b> <i>service cpipe string endpoint string</i>
Tree	<i>endpoint</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>service cpipe string endpoint string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**hold-time-active** *number*

Synopsis	Time before entering standby when MC-LAG SAP goes down
Context	<b>configure</b> <i>service cpipe string endpoint string hold-time-active number</i>
Tree	<i>hold-time-active</i>
Range	1 to 60
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	<b>configure</b> <i>service cpipe string endpoint string revert-time (number   keyword)</i>
Tree	<i>revert-time</i>
Range	1 to 600

Units	seconds
Options	never, immediate
Default	immediate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sap** [**sap-id**] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service cpipe string sap string</a>
Tree	<a href="#">sap</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sap-id]** *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service cpipe string sap string</a>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service cpipe string sap string accounting-policy reference</a>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log accounting-policy number</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cem**

Synopsis	Enter the <b>cem</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b>
Tree	<a href="#">cem</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**packet**

Synopsis	Enter the <b>packet</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b> <b>packet</b>
Tree	<a href="#">packet</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**jitter-buffer** *number*

Synopsis	Jitter buffer size
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b> <b>packet</b> <b>jitter-buffer</b> <i>number</i>
Tree	<a href="#">jitter-buffer</a>
Range	1 to 250
Units	milliseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**payload-size** *number*

Synopsis	Size of payload packets transmitted to PSN by CEM SAP
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem packet</a> <a href="#">payload-size</a> <i>number</i>
Tree	<a href="#">payload-size</a>
Range	2 to 1514
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**report-alarm**

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**buffer-overflow** *boolean*

Synopsis	Report alarm for buffer overrun
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-overflow</a> <i>boolean</i>
Tree	<a href="#">buffer-overflow</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**buffer-underrun** *boolean*

Synopsis	Report alarm for buffer underrun
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-underrun</a> <i>boolean</i>
Tree	<a href="#">buffer-underrun</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**malformed-packets** *boolean*

Synopsis	Report alarm for malformed packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">malformed-packets</a> <i>boolean</i>
Tree	<a href="#">malformed-packets</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**packet-loss** *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">packet-loss</a> <i>boolean</i>
Tree	<a href="#">packet-loss</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**remote-fault** *boolean*

Synopsis	Report remote TDM interface is currently not in service
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-fault</a> <i>boolean</i>
Tree	<a href="#">remote-fault</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**remote-packet-loss** *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-packet-loss</a> <i>boolean</i>
Tree	<a href="#">remote-packet-loss</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**remote-rdi** *boolean*

Synopsis	Report remote TDM interface is currently in RDI status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-rdi</a> <i>boolean</i>
Tree	<a href="#">remote-rdi</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**stray-packets** *boolean*

Synopsis	Report alarm for stray packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">stray-packets</a> <i>boolean</i>
Tree	<a href="#">stray-packets</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rtp-header** *boolean*

Synopsis	Use RTP header for transmitted packets to the PSN
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">rtp-header</a> <i>boolean</i>
Tree	<a href="#">rtp-header</a>
Description	When configured to <b>true</b> , the router uses the RTP header when packets are transmitted to the packet service network (PSN) by the CEM SAP. This mode must be enabled for differential-timed E1s.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [description](#) *string*  
 Tree [description](#)  
 String Length 1 to 160  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dist-cpu-protection** *reference*

Synopsis Distributed CPU protection policy for SAP  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [dist-cpu-protection](#) *reference*  
 Tree [dist-cpu-protection](#)  
 Reference **configure** [system](#) [security](#) [dist-cpu-protection](#) *policy* *string*  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **egress**

Synopsis Enter the **egress** context  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#)  
 Tree [egress](#)  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **agg-rate**

Synopsis Enter the **agg-rate** context  
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#)  
 Tree [agg-rate](#)  
 Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **adaptation-rule** *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress agg-rate adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Options max, min, closest

Default closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

### **burst-limit** (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress agg-rate burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Units bytes

Options auto

Default auto

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis Enable aggregate rate overrun protection

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress agg-rate limit-unused-bandwidth](#) *boolean*

Tree [limit-unused-bandwidth](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rate number

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">rate</a> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**root**

Synopsis	Enter the <b>root</b> context
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides root max-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority-mbs-thresholds**

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>min-thresh-separation</b>
Range	0 to 16777216
Units	bytes
Options	auto

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number</a>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number</a>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number mbs-contribution (number   keyword)</a>
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**[policer-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress string policer number</b>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**mbs (number | keyword)**

Synopsis	MBS
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference mbs (number   keyword)</b>
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>adaptation-rule</b>

Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**avg-frame-overhead decimal-number**

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">avg-frame-overhead</a> <a href="#">decimal-number</a>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a>
Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low**

Synopsis	Enter the <b>low</b> context
----------	------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hs-class-weight** *number*

Synopsis	Class weight override for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a>
Tree	<a href="#">hs-wred-queue</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

**policy reference**

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos sap-egress overrides queue reference</a> <a href="#">hs-wred-queue policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">qos slope-policy string</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-weight number**

Synopsis	WRR weight to parent with the queue into the scheduler
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos sap-egress overrides queue reference</a> <a href="#">hs-wrr-weight number</a>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

**mbs (number | keyword)**

Synopsis	MBS
Context	<b>configure</b> <a href="#">service cpipe string sap string egress qos sap-egress overrides queue reference</a> <a href="#">mbs (number   keyword)</a>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
----------	---

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">violation-threshold</a> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>

Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
[reference](#) [parent](#) **cir-weight** *number*  
 Tree [cir-weight](#)  
 Range 0 to 100  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
[reference](#) [parent](#) **weight** *number*  
 Tree [weight](#)  
 Range 0 to 100  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis Enter the **percent-rate** context  
 Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
[reference](#) [percent-rate](#)  
 Tree [percent-rate](#)  
 Notes The following elements are part of a choice: **percent-rate** or **rate**.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis CIR percent rate

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <a href="#">decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <a href="#">decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **overrides**

Synopsis	Enter the <b>overrides</b> context
----------	------------------------------------

Context	<b>configure service cpipe</b> <i>string sap string egress qos scheduler-policy overrides</i>
Tree	<b>overrides</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler** [**scheduler-name**] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service cpipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<b>scheduler</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service cpipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**weight** *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>rate</b>
Tree	<a href="#">rate</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## virtual-port

Synopsis	Enter the <b>virtual-port</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">virtual-port</a>
Tree	<a href="#">virtual-port</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## vport-name *reference*

Synopsis	Virtual port assigned to the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">virtual-port</a> <a href="#">vport-name</a> <i>reference</i>
Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">virtual-port</a> <i>string</i>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## endpoint *reference*

Synopsis	Endpoint name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">endpoint</a> <i>reference</i>
Tree	<a href="#">endpoint</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a>
Tree	<a href="#">root</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
----------	-------------------------------------

Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy overrides root max-rate</i> ( <i>number   keyword</i> )
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds</i>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### min-thresh-separation (*number | keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation</i> ( <i>number   keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### priority [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds priority</i> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[priority-level]** *number*

Synopsis Priority level

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#) [priority-mbs-thresholds](#) [priority](#) *number*

Tree [priority](#)

Range 1 to 8

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs-contribution** (*number* | *keyword*)

Synopsis Minimum amount of cumulative buffer space allowed

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#) [priority-mbs-thresholds](#) [priority](#) *number* [mbs-contribution](#) (*number* | *keyword*)

Tree [mbs-contribution](#)

Range 0 to 16777216

Units bytes

Options auto

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis Policer control policy name

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos](#) [policer-control-policy](#) *string*

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## sap-ingress

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure service cpipe string sap string ingress qos sap-ingress</b>
Tree	<a href="#">sap-ingress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides</b>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ip-criteria

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides ip-criteria</b>
Tree	<a href="#">ip-criteria</a>
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## activate-entry-tag *number*

Synopsis	Tag ID activated for IPv4 criteria
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides ip-criteria activate-entry-tag <i>number</i></b>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**activate-entry-tag number**

Synopsis	Tag ID activated for IPv6 criteria
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides ipv6-criteria activate-entry-tag number</b>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policer [policer-id] reference**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**[policer-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-ingress string policer number</b>
Notes	This element is part of a list key.
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cbs** (*number* | *keyword*)

Synopsis CBS

Context **configure** [service cpipe](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides policer](#)  
reference [cbs](#) (*number* | *keyword*)

Tree [cbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs** (*number* | *keyword*)

Synopsis MBS

Context **configure** [service cpipe](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides policer](#)  
reference [mbs](#) (*number* | *keyword*)

Tree [mbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information

Context **configure** [service cpipe](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides policer](#)  
reference [packet-byte-offset](#) *number*

Tree [packet-byte-offset](#)

Range -32 to 31

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## pir *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>

Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queue** [\[queue-id\]](#) *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">string</a> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">cbs</a> <a href="#">(number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a>

Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <b>low</b>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <b>low</b> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">cir-weight</a> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
[reference](#) [parent](#) **weight** *number*

Tree [weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
[reference](#) [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
[reference](#) [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <a href="#">decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <b>policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <b>queuing-type</b> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <b>scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <b>overrides</b>

Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<b>#</b>, <b>\$</b>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**weight** *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>rate</b>
Tree	<a href="#">rate</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string sap string lag</i>
Tree	<a href="#">lag</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multi-service-site *reference*

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string sap string multi-service-site reference</i>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service customer</a> <i>string multi-service-site string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## service-id *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string service-id number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## service-mtu *number*

Synopsis	MTU size
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string service-mtu number</i>
Tree	<a href="#">service-mtu</a>
Range	1 to 9194
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis Enter the **spoke-sdp** list instance  
Context **configure service cpipe string spoke-sdp string**  
Tree **spoke-sdp**  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sdp-bind-id]** *string*

Synopsis SDP binding ID  
Context **configure service cpipe string spoke-sdp string**  
Tree **spoke-sdp**  
String Length 3 to 16  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of the SDP binding to the service  
Context **configure service cpipe string spoke-sdp string admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Default enable  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bandwidth** (*number* | *keyword*)

Synopsis Bandwidth that is reserved for this SDP binding  
Context **configure service cpipe string spoke-sdp string bandwidth (number | keyword)**  
Tree **bandwidth**

---

Range	0 to 100000000
Units	kilobps
Options	max
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## bfd

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## encap *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <a href="#">encap</a> <i>keyword</i>
Tree	<a href="#">encap</a>
Options	ipv4
Default	ipv4
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**control-word** *boolean*

Synopsis	Use control word as part of packet encapsulation
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis Enter the **qos** context

Context **configure** [service cpipe](#) *string* [spoke-sdp](#) *string* [egress qos](#)

Tree [qos](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## network

Synopsis Enter the **network** context

Context **configure** [service cpipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#)

Tree [network](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policy-name *reference*

Synopsis Network policy ID

Context **configure** [service cpipe](#) *string* [spoke-sdp](#) *string* [egress qos network policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos network](#) *string*

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## port-redirect-group

Synopsis Enter the **port-redirect-group** context

Context **configure** [service cpipe](#) *string* [spoke-sdp](#) *string* [egress qos network port-redirect-group](#)

Tree [port-redirect-group](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**group-name** *reference*

Synopsis	Name of the egress port queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**instance** *number*

Synopsis	Queue-group instance ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**endpoint**

Synopsis	Enter the <b>endpoint</b> context
----------	-----------------------------------

Context	<b>configure service cpipe string spoke-sdp string endpoint</b>
Tree	<a href="#">endpoint</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **icb boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind the SDP as the Inter-Chassis Backup (ICB) type
Context	<b>configure service cpipe string spoke-sdp string endpoint icb boolean</b>
Tree	<a href="#">icb</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **name reference**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Endpoint name to which SDP bind is attached
Context	<b>configure service cpipe string spoke-sdp string endpoint name reference</b>
Tree	<a href="#">name</a>
Reference	<b>configure service cpipe string endpoint string</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **precedence (number | keyword)**

Synopsis	Precedence when multiple SDP binds are on one endpoint
Context	<b>configure service cpipe string spoke-sdp string endpoint precedence (number   keyword)</b>
Tree	<a href="#">precedence</a>

Range	1 to 4
Options	primary
Default	4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <a href="#">string spoke-sdp</a> <a href="#">string ingress</a>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <a href="#">string spoke-sdp</a> <a href="#">string ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <a href="#">string spoke-sdp</a> <a href="#">string ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <a href="#">string spoke-sdp</a> <a href="#">string ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>

---

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **group-name** *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates</a> <a href="#">ingress queue-group</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **instance** *number*

Synopsis	Instance of FP ingress queue group for the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos network</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure</b> <i>service cpipe string spoke-sdp string ingress vc-label number</i>
Tree	<i>vc-label</i>
Range	1 to 1048575
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**test** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	<b>configure</b> <i>service cpipe string test boolean</i>
Tree	<i>test</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vc-switching** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	<b>configure</b> <i>service cpipe string vc-switching boolean</i>
Tree	<i>vc-switching</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vc-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit emulation service type signalled to the peer
Context	<b>configure</b> <i>service cpipe string vc-type keyword</i>
Tree	<i>vc-type</i>
Options	satop-e1, satop-t1, cesopsn, cesopsn-cas
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**vpn-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure</b> <i>service cpipe string vpn-id number</i>
Tree	<i>vpn-id</i>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**customer** [*customer-name*] *string*

Synopsis	Enter the <b>customer</b> list instance
Context	<b>configure</b> <i>service customer string</i>

### **scheduler** [[scheduler-name](#)] *string*

Synopsis Enter the **scheduler** list instance

Context **configure service customer** *string* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Tree [scheduler](#)

Introduced 16.0.R1

Platforms All

### **[scheduler-name]** *string*

Synopsis Scheduler name

Context **configure service customer** *string* **multi-service-site** *string* **egress scheduler-policy overrides scheduler** *string*

Tree [scheduler](#)

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (**#**, **\$**, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **parent**

Synopsis Enter the **parent** context

**policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">egress</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**ingress**

Synopsis	Enter the <b>ingress</b> context
----------	----------------------------------

Context	<b>configure service customer</b> <i>string</i> multi-service-site <i>string</i> ingress
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

### **policer-control-policy** *reference*

Synopsis	Policer control policy
Context	<b>configure service customer</b> <i>string</i> multi-service-site <i>string</i> ingress <b>policer-control-policy</b> <i>reference</i>
Tree	<a href="#">policer-control-policy</a>
Reference	<b>configure qos</b> <b>policer-control-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service customer</b> <i>string</i> multi-service-site <i>string</i> ingress <b>scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service customer</b> <i>string</i> multi-service-site <i>string</i> ingress <b>scheduler-policy</b> <b>overrides</b>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
----------	--

Context	<b>configure service customer</b> <i>string</i> <b>multi-service-site</b> <i>string</i> <b>ingress scheduler-policy overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service customer</b> <i>string</i> <b>multi-service-site</b> <i>string</i> <b>ingress scheduler-policy overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service customer</b> <i>string</i> <b>multi-service-site</b> <i>string</i> <b>ingress scheduler-policy overrides scheduler</b> <i>string</i> <b>parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

### **cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service customer</b> <i>string</i> <b>multi-service-site</b> <i>string</i> <b>ingress scheduler-policy overrides scheduler</b> <i>string</i> <b>parent cir-weight</b> <i>number</i>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Introduced	16.0.R1
Platforms	All

**cir (number | keyword)**

Synopsis	CIR for the scheduler
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

**pir (number | keyword)**

Synopsis	PIR for the scheduler
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>

Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **phone** *string*

Synopsis	Service customer telephone number information
Context	<b>configure</b> <a href="#">service customer</a> <i>string</i> <a href="#">phone</a> <i>string</i>
Tree	<a href="#">phone</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **epipe** [[service-name](#)] *string*

Synopsis	Enter the <b>epipe</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i>
Tree	<a href="#">epipe</a>
Introduced	16.0.R1
Platforms	All

**[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i>
Tree	<a href="#">epipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**bgp** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>bgp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>bgp</b> <i>number</i>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

**[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>bgp</b> <i>number</i>
Tree	<a href="#">bgp</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **adv-service-mtu** *number*

Synopsis Advertised service MTU value

Context **configure service epipe** *string* **bgp** *number* **adv-service-mtu** *number*

Tree [adv-service-mtu](#)

Description This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.

Range 0 to 9782

Introduced 22.2.R1

Platforms All

### **pw-template-binding** [[pw-template-name](#)] *reference*

Synopsis Enter the **pw-template-binding** list instance

Context **configure service epipe** *string* **bgp** *number* **pw-template-binding** *reference*

Tree [pw-template-binding](#)

Max. Instances 100

Introduced 16.0.R1

Platforms All

### **[pw-template-name]** *reference*

Synopsis Policy name

Context **configure service epipe** *string* **bgp** *number* **pw-template-binding** *reference*

Tree [pw-template-binding](#)

Reference **configure service pw-template** *string*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

**bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">pw-template-binding</a> <i>reference</i> <a href="#">bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template name for PW-Template binding
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">pw-template-binding</a> <i>reference</i> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**endpoint** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name associated with the BGP PW template
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">pw-template-binding</a> <i>reference</i> <a href="#">endpoint</a> <i>reference</i>
Tree	<a href="#">endpoint</a>
Description	This command specifies the endpoint name associated with the BGP PW template. When an endpoint is associated to the PW template binding of a BGP VPWS service, EVPN MPLS can also be configured and associated to the same endpoint in the same Epipe service.
Reference	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

**import-rt string**

Synopsis	Import route-target communities
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">number</a> <a href="#">pw-template-binding</a> <a href="#">reference</a> <b>import-rt</b> <a href="#">string</a>
Tree	<a href="#">import-rt</a>
String Length	10 to 28
Max. Instances	5
Introduced	16.0.R1
Platforms	All

**route-distinguisher** (*keyword* | *vpn-route-distinguisher*)

Synopsis	RD component for NLRI for L2VPN and EVPN families
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">number</a> <b>route-distinguisher</b> ( <i>keyword</i>   <i>vpn-route-distinguisher</i> )
Tree	<a href="#">route-distinguisher</a>
Options	auto-rd
Introduced	16.0.R1
Platforms	All

**route-target**

Synopsis	Enter the <b>route-target</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">number</a> <b>route-target</b>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1
Platforms	All

**export string**

Synopsis	Extended community name for default import policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp</a> <a href="#">number</a> <a href="#">route-target</a> <b>export</b> <a href="#">string</a>
Tree	<a href="#">export</a>
String Length	10 to 28

Introduced 16.0.R1  
Platforms All

### **import** *string*

Synopsis Extended community name for default import policy  
Context **configure** [service](#) [epipe](#) *string* [bgp](#) *number* [route-target](#) [import](#) *string*  
Tree [import](#)  
String Length 10 to 28  
Introduced 16.0.R1  
Platforms All

### **vsi-export** *reference*

Synopsis VSI export policies  
Context **configure** [service](#) [epipe](#) *string* [bgp](#) *number* [vsi-export](#) *reference*  
Tree [vsi-export](#)  
Reference **configure** [policy-options](#) [policy-statement](#) *string*  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 19.10.R1  
Platforms All

### **vsi-import** *reference*

Synopsis VSI import policies  
Context **configure** [service](#) [epipe](#) *string* [bgp](#) *number* [vsi-import](#) *reference*  
Tree [vsi-import](#)  
Reference **configure** [policy-options](#) [policy-statement](#) *string*  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 19.10.R1  
Platforms All

**bgp-evpn**

Synopsis	Enable the <b>bgp-evpn</b> context
Context	<b>configure</b> <i>service epipe string</i> <b>bgp-evpn</b>
Tree	<b>bgp-evpn</b>
Introduced	16.0.R1
Platforms	All

**evi number**

Synopsis	EVPN ID
Context	<b>configure</b> <i>service epipe string</i> <b>bgp-evpn evi number</b>
Tree	<b>evi</b>
Description	<p>This command configures an EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>The following options are supported:</p> <p>If this EVPN identifier is not specified, the value is zero and no route distinguisher or route target is automatically derived from it. If the specified EVPN identifier is lower than 65535 and no other route distinguisher or route target is configured in the service, the following applies:</p> <ul style="list-style-type: none"> <li>the route distinguisher is derived from &lt;system_ip&gt;:evi</li> <li>the route target is derived from &lt;autonomous-system&gt;:evi</li> </ul> <p>If the specified EVPN identifier is higher than 65535 and no other route distinguisher or route target is configured in the service, the following applies.</p> <ul style="list-style-type: none"> <li>The route distinguisher cannot be automatically derived. An error is generated if enabling EVPN is attempted without a route distinguisher. A manual or an <b>auto-rd</b> route distinguisher must be configured.</li> <li>The route target can only be automatically derived if the <b>evi-three-byte-auto-rt</b> command is configured. If configured, the route target is automatically derived in accordance with the rules described in RFC8365.</li> </ul>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

**local-attachment-circuit** [*name*] *string*

Synopsis	Enter the <b>local-attachment-circuit</b> list instance
----------	---

Context	<b>configure service epipe string</b> <i>bgp-evpn local-attachment-circuit string</i>
Tree	<i>local-attachment-circuit</i>
Max. Instances	2
Introduced	20.10.R1
Platforms	All

**[name]** *string*

Synopsis	Attachment circuit name
Context	<b>configure service epipe string</b> <i>bgp-evpn local-attachment-circuit string</i>
Tree	<i>local-attachment-circuit</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**bgp** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	BGP instance ID
Context	<b>configure service epipe string</b> <i>bgp-evpn local-attachment-circuit string</i> <b>bgp</b> <i>number</i>
Tree	<i>bgp</i>
Range	1 to 2
Default	1
Introduced	23.10.R1
Platforms	All

**endpoint** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn local-attachment-circuit string endpoint reference</a>
Tree	<a href="#">endpoint</a>
Reference	<b>configure service epipe string endpoint string</b>
Introduced	20.10.R1
Platforms	All

### **eth-tag** *number*

Synopsis	Ethernet tag of the attachment circuit
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn local-attachment-circuit string eth-tag number</a>
Tree	<a href="#">eth-tag</a>
Description	<p>This command configures the Ethernet tag value of the attachment circuit.</p> <p>When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.</p> <p>When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe.</p>
Range	1 to 16777215
Introduced	20.10.R1
Platforms	All

### **mpls** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>mpls</b> list instance
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn mpls number</a>
Tree	<a href="#">mpls</a>
Introduced	16.0.R1
Platforms	All

### **[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn mpls number</a>
Tree	<a href="#">mpls</a>

Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **auto-bind-tunnel**

Synopsis	Enter the <b>auto-bind-tunnel</b> context
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b>
Tree	<a href="#">auto-bind-tunnel</a>
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	<p>When configured to <b>true</b>, a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to <b>false</b>, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false

Introduced 20.10.R1  
Platforms All

### **ecmp** *number*

Synopsis Maximum ECMP routes information  
Context **configure** [service](#) [epipe](#) [string](#) [bgp-evpn](#) [mpls](#) [number](#) [auto-bind-tunnel](#) **ecmp** *number*  
Tree [ecmp](#)  
Range 1 to 32  
Default 1  
Introduced 19.10.R1  
Platforms All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis Enable/disable enforcement of strict tunnel tagging  
Context **configure** [service](#) [epipe](#) [string](#) [bgp-evpn](#) [mpls](#) [number](#) [auto-bind-tunnel](#) **enforce-strict-tunnel-tagging** *boolean*  
Tree [enforce-strict-tunnel-tagging](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **resolution** *keyword*

Synopsis Resolution method for tunnel selection  
Context **configure** [service](#) [epipe](#) [string](#) [bgp-evpn](#) [mpls](#) [number](#) [auto-bind-tunnel](#) **resolution** *keyword*  
Tree [resolution](#)  
Options none, filter, any  
Default none  
Introduced 16.0.R1  
Platforms All

**resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

**bgp boolean**

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">bgp</a> <a href="#">boolean</a>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , BGP searches the BGP LSP for the address of the BGP next hop.  When configured to <b>false</b> , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	16.0.R1
Platforms	All

**ldp boolean**

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">ldp</a> <a href="#">boolean</a>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.  When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

**mpls-fwd-policy** *boolean*

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">mpls-fwd-policy</a> <i>boolean</i>
Tree	<a href="#">mpls-fwd-policy</a>
Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.  When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

**rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rib-api</a> <i>boolean</i>
Tree	<a href="#">rib-api</a>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.  When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

**rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rsvp</a> <i>boolean</i>
Tree	<a href="#">rsvp</a>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.

When configured to **false**, the RSVP LSP is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Description	When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.  When configured to <b>false</b> , IS-IS tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-ospf</b> <i>boolean</i>
Tree	<b>sr-ospf</b>
Description	When configured to <b>true</b> , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.  When configured to <b>false</b> , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

**sr-ospf3 boolean**

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 boolean</b>
Tree	<a href="#">sr-ospf3</a>
Description	<p>When configured to <b>true</b>, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to <b>false</b>, OSPF3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	19.10.R1
Platforms	All

**sr-policy boolean**

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-policy boolean</b>
Tree	<a href="#">sr-policy</a>
Description	<p>When configured to <b>true</b>, this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to <b>false</b>, SR policies are not used for next-hop resolution.</p>
Default	false
Introduced	19.5.R1
Platforms	All

**sr-te boolean**

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te boolean</b>
Tree	<a href="#">sr-te</a>
Description	When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.

When configured to **false**, SR-TE tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

### **udp** *boolean*

Synopsis Use MPLS over UDP tunneling for next-hop resolution

Context **configure** [service](#) [epipe](#) *string* [bgp-evpn](#) [mpls](#) *number* [auto-bind-tunnel](#) [resolution-filter](#) **udp** *boolean*

Tree [udp](#)

Description When configured to **true**, BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.

When configured to **false**, MPLS over UDP tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis Allow weighted load balancing

Context **configure** [service](#) [epipe](#) *string* [bgp-evpn](#) [mpls](#) *number* [auto-bind-tunnel](#) [weighted-ecmp](#) *boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default	false
Introduced	22.7.R1
Platforms	All

**control-word** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable support for control word
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>control-word</i> <i>boolean</i>
Tree	<i>control-word</i>
Description	When configured to <b>true</b> , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	16.0.R1
Platforms	All

**default-route-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <i>default-route-tag</i> <i>string</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4

Platforms All

### domain-id *string*

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>domain-id</b> <i>string</i>
Tree	<b>domain-id</b>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> <p>The command is also supported in Epipe services with two instances. As in the case of multi-instance VPRN services, the configured domain ID in an Epipe instance is prepended to the AD per EVI route redistributed to the other instance.</p>
Introduced	23.10.R1
Platforms	All

### dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>dynamic-egress-label-limit</b> <i>boolean</i>
Tree	<b>dynamic-egress-label-limit</b>
Description	When configured to <b>true</b> , this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.

For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	22.2.R1
Platforms	All

### **ecmp number**

Synopsis	Maximum ECMP routes information
Context	<b>configure service epipe string bgp-evpn mpls number ecmp number</b>
Tree	<b>ecmp</b>
Range	1 to 32
Default	1
Introduced	16.0.R1
Platforms	All

### **entropy-label boolean**

Synopsis	Enable use of entropy-labels
Context	<b>configure service epipe string bgp-evpn mpls number entropy-label boolean</b>
Tree	<b>entropy-label</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
----------	---------------------------------------

Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>evi-three-byte-auto-rt</b> <i>boolean</i>
Tree	<b>evi-three-byte-auto-rt</b>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where: <ul style="list-style-type: none"> <li>• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken</li> <li>• A=0 (for auto-derivation)</li> <li>• Type=4 (EVI-based route-target)</li> <li>• D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance</li> <li>• Service ID=3-octet EVI</li> </ul> When configured to <b>false</b> , route target derivation is not allowed.
Default	false
Introduced	21.10.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<b>force-vc-forwarding</b>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **hash-label** *boolean*

Synopsis	Push hash label
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>hash-label</b> <i>boolean</i>
Tree	<b>hash-label</b>
Description	When configured to <b>true</b> , the router pushes the hash label based on the following: <ul style="list-style-type: none"> <li>• If <b>advertise-l2-attributes</b> (in the <b>configure service vpls bgp-evpn routes incl-mcast</b> context) is set to <b>false</b>, the hash label is pushed to a unicast EVPN destination.</li> <li>• If <b>advertise-l2-attributes</b> is set to <b>true</b>, the F bit is set to 1 in the Layer 2 Attributes Extended Community of the EVPN IMET route for the service. The hash label is</li> </ul>

pushed only if the remote PE signaled support for hash label (received F bit is set to 1).

When configured to **false**, the hash label is not pushed.

The hash label is never used for BUM packets.

Default	false
Introduced	23.10.R1
Platforms	All

### **mh-mode** *keyword*

Synopsis	Multihoming mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <b>mh-mode</b> <i>keyword</i>
Tree	<a href="#">mh-mode</a>
Description	This command configures each BGP-EVPN instance in a multi-instance Epipe service to behave as network or access.  You can only configure one network instance for the service. If the service has a provider tunnel enabled, it requires a network instance.
Options	access, network
Default	network
Introduced	23.10.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <b>oper-group</b> <i>reference</i>

Tree	<a href="#">segment-routing-v6</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state keyword**

Synopsis	Administrative state of segment routing over IPv6
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">segment-routing-v6</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **default-route-tag string**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">segment-routing-v6</a> <i>number</i> <b>default-route-tag</b> <i>string</i>
Tree	<a href="#">default-route-tag</a>

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### domain-id string

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>domain-id</b> <i>string</i>
Tree	<b>domain-id</b>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p style="margin-left: 20px;">Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p style="margin-left: 20px;">Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>

The command is also supported in Epipe services with two instances. As in the case of multi-instance VPRN services, the configured domain ID in an Epipe instance is prepended to the AD per EVI route redistributed to the other instance.

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ecmp number**

Synopsis	Maximum ECMP value configured on the service
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number ecmp number</b>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number evi-three-byte-auto-rt boolean</b>
Tree	<a href="#">evi-three-byte-auto-rt</a>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).

Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **force-vc-forwarding** *keyword*

Synopsis	Datapath forwarding to force vlan-vc-type
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Description	This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.  This command may be used in conjunction with the <b>sap ingress vlan-translation</b> command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mh-mode** *keyword*

Synopsis	Multi-homing mode
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>mh-mode</b> <i>keyword</i>
Tree	<a href="#">mh-mode</a>
Options	access, network
Default	network
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>oper-group</b> <i>reference</i>
Tree	<a href="#">oper-group</a>

Description	<p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.</p> <p>The operational group is down when it is applied on a BGP EVPN instance as well as:</p> <ul style="list-style-type: none"> <li>• the service is administratively disabled</li> <li>• the BGP EVPN MPLS and VXLAN is administratively disabled</li> <li>• all the EVPN destinations in the instance are removed</li> </ul> <p>When configured on an ES, the state of the operational group depends on the state of the SAPs contained in the ES. The operational group transitions to up if at least one SAP in the ES is up. The operational group goes down when all the associated SAPs are operationally down. Monitor the ES operational group on the LAG associated with the ES, along with single-active multihoming, so that the NDF state can be signaled to the CE by LAG standby signaling.</p>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **resolution** *keyword*

Synopsis	Resolution options for routes
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **route-next-hop**

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">route-next-hop</a>
Tree	<a href="#">route-next-hop</a>
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IP address of the next-hop for the service EVPN route

Context **configure service epipe** *string* **bgp-evpn segment-routing-v6 number route-next-hop ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [ip-address](#)

Notes The following elements are part of a choice: **ip-address**, **system-ipv4**, or **system-ipv6**.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## system-ipv4

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis System IPv4 address for service EVPN route next hop

Context **configure service epipe** *string* **bgp-evpn segment-routing-v6 number route-next-hop system-ipv4**

Tree [system-ipv4](#)

Notes The following elements are part of a choice: **ip-address**, **system-ipv4**, or **system-ipv6**.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## system-ipv6

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis System IPv6 address for service EVPN route next hop

Context	<b>configure service epipe string</b> <a href="#">bgp-evpn segment-routing-v6 number route-next-hop system-ipv6</a>
Tree	<a href="#">system-ipv6</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### source-address *string*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IPv6 address
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn segment-routing-v6 number source-address string</a>
Tree	<a href="#">source-address</a>
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### srv6

Synopsis	Enter the <b>srv6</b> context
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn segment-routing-v6 number srv6</a>
Tree	<a href="#">srv6</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**default-locator** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default route locator
Context	<b>configure</b> <i>service epipe string</i> <i>bgp-evpn segment-routing-v6 number srv6 default-locator string</i>
Tree	<i>default-locator</i>
Description	This command specifies the locator that exists in the SRv6 service instance and is used as the default locator for the service.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**instance** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Segment Routing SRv6 instance
Context	<b>configure</b> <i>service epipe string</i> <i>bgp-evpn segment-routing-v6 number srv6 instance reference</i>
Tree	<i>instance</i>
Reference	<b>configure</b> <i>service epipe string</i> <i>segment-routing-v6 number</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**vxlan** [*bgp-instance*] *number*

Synopsis	Enter the <b>vxlan</b> list instance
Context	<b>configure</b> <i>service epipe string</i> <i>bgp-evpn vxlan number</i>
Tree	<i>vxlan</i>
Introduced	16.0.R1
Platforms	All

**[bgp-instance] number**

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn vxlan</a> <i>number</i>
Tree	<a href="#">vxlan</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of BGP EVPN VXLAN
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn vxlan</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**default-route-tag string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn vxlan</a> <i>number</i> <a href="#">default-route-tag</a> <i>string</i>
Tree	<a href="#">default-route-tag</a>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> </ul>

- If a given IP-prefix route is tagged in the route-table with tag *A* and the R-VPLS, in which the route is advertised, uses *B* as the **default-route-tag**, then EVPN keeps tag *A* when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

Introduced	16.0.R4
Platforms	All

### **ecmp number**

Synopsis	Maximum ECMP routes information
Context	<b>configure service epipe string bgp-evpn vxlan number ecmp number</b>
Tree	<b>ecmp</b>
Range	1 to 32
Default	1
Introduced	16.0.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service epipe string bgp-evpn vxlan number evi-three-byte-auto-rt boolean</b>
Tree	<b>evi-three-byte-auto-rt</b>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).

Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

	When configured to <b>false</b> , route target derivation is not allowed.
Default	false
Introduced	21.10.R1
Platforms	All

## send-tunnel-encap *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send VXLAN value in encapsulation extended community
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">vxlan</a> <i>number</i> <a href="#">send-tunnel-encap</a> <i>boolean</i>
Tree	<a href="#">send-tunnel-encap</a>
Description	When configured to <b>true</b> , this command sends the VXLAN value in the encapsulation that is advertised with the EVPN routes for the service. The encapsulation is encoded in RFC5512-based tunnel encapsulation extended communities.  When configured to <b>false</b> , no encapsulation extended community is sent.
Default	true
Introduced	16.0.R1
Platforms	All

## vxlan-instance *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VXLAN instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">vxlan</a> <i>number</i> <a href="#">vxlan-instance</a> <i>reference</i>
Tree	<a href="#">vxlan-instance</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**bgp-mh-site** [[site-name](#)] *string*

Synopsis	Enter the <b>bgp-mh-site</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i>
Tree	<a href="#">bgp-mh-site</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[site-name]** *string*

Synopsis	Name for the specific site
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i>
Tree	<a href="#">bgp-mh-site</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**activation-timer** *number*

Synopsis	Time to wait for BGP updates from remote PEs
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i> <b>activation-timer</b> <i>number</i>
Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the site
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	All

**boot-timer** *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i> <b>boot-timer</b> <i>number</i>
Tree	<a href="#">boot-timer</a>
Range	0 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

**id** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Site ID for the service
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i> <b>id</b> <i>number</i>
Tree	<a href="#">id</a>
Description	This command configures the ID for the site. The ID must match between services but is local to the service.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**min-down-timer** *number*

Synopsis	Minimum down time when site goes operationally down
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-mh-site</a> <i>string</i> <b>min-down-timer</b> <i>number</i>
Tree	<a href="#">min-down-timer</a>
Range	0 to 100
Units	seconds

Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Preference to advertise in NLRI L2 extended community
Context	<b>configure</b> <a href="#">service epipe string</a> <a href="#">bgp-mh-site string</a> <a href="#">preference number</a>
Tree	<a href="#">preference</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **sap** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to be associated with this site
Context	<b>configure</b> <a href="#">service epipe string</a> <a href="#">bgp-mh-site string</a> <a href="#">sap string</a>
Tree	<a href="#">sap</a>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

### **bgp-vpws**

Synopsis	Enable the <b>bgp-vpws</b> context
Context	<b>configure</b> <a href="#">service epipe string</a> <a href="#">bgp-vpws</a>
Tree	<a href="#">bgp-vpws</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the VPWS edge instance
----------	--

Context	<b>configure service epipe string</b> <i>bgp-vpws admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## local-ve

Synopsis	Enter the <b>local-ve</b> context
Context	<b>configure service epipe string</b> <i>bgp-vpws local-ve</i>
Tree	<a href="#">local-ve</a>
Introduced	16.0.R1
Platforms	All

## id number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local VPWS edge ID
Context	<b>configure service epipe string</b> <i>bgp-vpws local-ve id number</i>
Tree	<a href="#">id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## name string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local VPWS instance name
Context	<b>configure service epipe string</b> <i>bgp-vpws local-ve name string</i>

### **standby-signaling** *keyword*

Synopsis Endpoint behavior to handle the PW standby bit

Context **configure service epipe** *string endpoint string standby-signaling keyword*

Tree [standby-signaling](#)

Options master, slave

Introduced 16.0.R1

Platforms All

### **eth-cfm**

Synopsis Enter the **eth-cfm** context

Context **configure service epipe** *string eth-cfm*

Tree [eth-cfm](#)

Introduced 19.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ignore-l2vpn-mtu-mismatch** *boolean*

Synopsis Ignore the L2 VPN MTU mismatch with local service MTU

Context **configure service epipe** *string ignore-l2vpn-mtu-mismatch boolean*

Tree [ignore-l2vpn-mtu-mismatch](#)

Description When configured to **true**, the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPWS service regardless of any MTU mismatch.

When configured to **false**, an MTU mismatch prevents the system from bringing up a BGP-VPWS service.

Default false

Introduced 22.2.R1

Platforms All

## load-balancing

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure service epipe string load-balancing</b>
Tree	<a href="#">load-balancing</a>
Introduced	16.0.R1
Platforms	All

## lbl-eth-or-ip-l4-teid *boolean*

Synopsis	Enable hashing of MPLS ethernet and IP packets on SAPs
Context	<b>configure service epipe string load-balancing lbl-eth-or-ip-l4-teid boolean</b>
Tree	<a href="#">lbl-eth-or-ip-l4-teid</a>
Description	When configured to <b>true</b> , this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based and later.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## per-service-hashing *boolean*

Synopsis	Enable per-service hashing for Ethernet services
Context	<b>configure service epipe string load-balancing per-service-hashing boolean</b>
Tree	<a href="#">per-service-hashing</a>
Default	false
Introduced	16.0.R1
Platforms	All

## nat-outside [[nat-group](#)] *number*

Synopsis	Enter the <b>nat-outside</b> list instance
Context	<b>configure service epipe string nat-outside number</b>
Tree	<a href="#">nat-outside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[nat-group] number**

Synopsis	NAT group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">nat-outside</a> <i>number</i>
Tree	<a href="#">nat-outside</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of Epipe as a NAT outside service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">nat-outside</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**oper-group reference**

Synopsis	Oper-group name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>

Synopsis	Enable the <b>aarp</b> context
----------	--------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a>
Tree	<a href="#">aarp</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**id** *reference*

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <i>id</i> <i>reference</i>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">aarp</a> <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**type** *keyword*

Synopsis	Role referenced by the AARP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <i>type</i> <i>keyword</i>
Tree	<a href="#">type</a>
Options	dual-homed, dual-homed-secondary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
----------	---------------------------------

Context	<b>configure service epipe</b> <i>string sap string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure service epipe</b> <i>string sap string app-profile reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure application-assurance</b> <i>group number partition number policy app-profile string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure service epipe</b> <i>string sap string bandwidth number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **cflowd** *boolean*

Synopsis	Enable Cflowd collection and analysis on this SAP
Context	<b>configure service epipe</b> <i>string sap string cflowd boolean</i>
Tree	<a href="#">cflowd</a>
Default	false
Introduced	16.0.R1
Platforms	All

## collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

## cpu-protection

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>cpu-protection</b>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <b>eth-cfm-monitoring</b>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <b>aggregate</b>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <i>reference</i>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

**dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <a href="#">policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

**agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Notes	The following elements are part of a choice: <b>agg-rate</b> or <b>percent-agg-rate</b> .
Introduced	16.0.R1
Platforms	All

**adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <i>keyword</i>
Tree	<a href="#">adaptation-rule</a>
Options	max, min, closest
Default	closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <b>limit-unused-bandwidth</b> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

**queue-frame-based-accounting** *boolean*

Synopsis	Enable frame based accounting on policers and queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <b>queue-frame-based-accounting</b> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

**rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <b>rate</b> <i>number</i>

Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter</a> <a href="#">ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter</a> <a href="#">ipv6 reference</a>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mac reference

Synopsis	MAC filter policy name
----------	------------------------

Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter mac</a> <i>reference</i>
Tree	<a href="#">mac</a>
Reference	<b>configure</b> <a href="#">filter mac-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides root</a>
Tree	<a href="#">root</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <b>max-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority-mbs-thresholds**

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <b>priority-mbs-thresholds</b>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority** [*priority-level*] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <b>policy-name</b> <i>reference</i>

Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **hs-secondary-shaper** *string*

Synopsis	HS Secondary Shaper
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-secondary-shaper</a> <i>string</i>

Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *reference*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **[group-id]** *reference*

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <a href="#">reference</a> <b>percent-rate</b> <i>decimal-number</i>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <a href="#">reference</a> <b>rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id]** *reference*

Synopsis	Policer unique ID
----------	-------------------

Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress string policer number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
----------	---

Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer</b> <i>reference packet-byte-offset number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer</b> <i>reference percent-rate</i>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### cir decimal-number

Synopsis	CIR percent rate
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer</b> <i>reference percent-rate cir decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### pir decimal-number

Synopsis	PIR percent rate
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer</b> <i>reference percent-rate pir decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>

Introduced 16.0.R1  
Platforms All

### **cir** *keyword*

Synopsis Constraint used when deriving the operational CIR value  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [adaptation-rule](#) **cir** *keyword*  
Tree [cir](#)  
Options max, min, closest  
Introduced 16.0.R1  
Platforms All

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [adaptation-rule](#) **pir** *keyword*  
Tree [pir](#)  
Options max, min, closest  
Introduced 16.0.R1  
Platforms All

### **avg-frame-overhead** *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **avg-frame-overhead** *decimal-number*  
Tree [avg-frame-overhead](#)  
Range 0.00 to 100.00  
Introduced 16.0.R1  
Platforms All

### **burst-limit** (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue

Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference burst-limit (number   keyword)</b>
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference drop-tail low</b>
Tree	<a href="#">low</a>

Introduced 16.0.R1  
 Platforms All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [drop-tail](#) [low](#) **percent-reduction-from-mbs** (*number* | *keyword*)  
 Tree [percent-reduction-from-mbs](#)  
 Range 0 to 100  
 Options auto  
 Introduced 16.0.R1  
 Platforms All

### **hs-class-weight** *number*

Synopsis Class weight override for the queue  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-class-weight](#) *number*  
 Tree [hs-class-weight](#)  
 Range 1 | 2 | 4 | 8  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wred-queue](#)  
 Tree [hs-wred-queue](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy applied to the HSQ queue group queue

Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure qos slope-policy string</b>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis	WRR weight to parent with the queue into the scheduler
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number</b>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference mbs (number   keyword)</b>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>

Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

**cir-weight** *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight** *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>

Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

**pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

**group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>

Reference	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress port-redirect-group</a> <i>instance number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>

Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<code>#</code>, <code>\$</code>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

### **cir-weight** *number*

Synopsis	Weight used at the within-CIR port priority level
----------	---

Context	<b>configure service epipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight number</i>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service epipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent weight number</i>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service epipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string rate</i>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

### **cir (number | keyword)**

Synopsis	CIR at which the queue it to operate
Context	<b>configure service epipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string rate cir (number   keyword)</i>
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1

Platforms All

### **pir** (*number* | *keyword*)

Synopsis PIR at which the queue is to operate

Context **configure** [service epipe](#) *string* [sap](#) *string* [egress qos scheduler-policy overrides scheduler](#) *string* **rate** **pir** (*number* | *keyword*)

Tree [pir](#)

Range 1 to 6400000000

Units kilobps

Options max

Introduced 16.0.R1

Platforms All

### **policy-name** *reference*

Synopsis Scheduler policy name

Context **configure** [service epipe](#) *string* [sap](#) *string* [egress qos scheduler-policy](#) **policy-name** *reference*

Tree [policy-name](#)

Reference **configure** [qos scheduler-policy](#) *string*

Introduced 16.0.R1

Platforms All

### **virtual-port**

Synopsis Enter the **virtual-port** context

Context **configure** [service epipe](#) *string* [sap](#) *string* [egress](#) **virtual-port**

Tree [virtual-port](#)

Introduced 23.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vport-name** *reference*

Synopsis Virtual port assigned to the SAP

Context **configure** [service epipe](#) *string* [sap](#) *string* [egress virtual-port](#) **vport-name** *reference*

Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port string ethernet access egress virtual-port string</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## endpoint *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the endpoint
Context	<b>configure</b> <a href="#">service epipe string sap string endpoint reference</a>
Tree	<a href="#">endpoint</a>
Reference	<b>configure</b> <a href="#">service epipe string endpoint string</a>
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service epipe string sap string eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ais *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service epipe string sap string eth-cfm ais boolean</a>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fc-in-profile keyword

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>

Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ais**

Synopsis	Enable the <b>ais</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a>
Tree	<a href="#">ais</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**client-meg-level** *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">client-meg-level</a> <i>number</i>
Tree	<a href="#">client-meg-level</a>
Range	1 to 7
Max.	7
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">interface-support</a> <i>boolean</i>

Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	1   60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-reset-time</b> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis Generate CCM messages

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean**

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number**

Tree [ccm-ltm-priority](#)

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis Number of octets of padding to insert in CCM packets

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number**

Tree [ccm-padding-size](#)

Description This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range 3 to 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis VLAN tags to apply to CFM PDUs for egress processing

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **cfm-vlan-tag** *string*

Tree [cfm-vlan-tag](#)

Description This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the **vc-type vlan** or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.

String Length 1 to 9

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis Enable the **csf** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **csf**

Tree [csf](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **csf** **multiplier** *decimal-number*

Tree [multiplier](#)

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### description *string*

Synopsis Text description

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [description](#) *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### direction *keyword*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Direction the MEP faces

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [direction](#) *keyword*

Options down, up

Default down

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### eth-test

Synopsis Enable the **eth-test** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#)

Tree [eth-test](#)

Description Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **bit-error-threshold** *number*

Tree [bit-error-threshold](#)

Range 0 to 11840

Units bit errors

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis Enter the **test-pattern** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **test-pattern**

Tree [test-pattern](#)

Description Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis Generate a CRC checksum

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **test-pattern** **crc-tlv** *boolean*

Tree [crc-tlv](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pattern keyword**

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fault-propagation keyword**

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">fault-propagation</a> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
----------	---------------------------------

Context	<b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window number**

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</b>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</b>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</b>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace](#) [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis Process service activation streams in ETH-CFM LBM

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [lbm-svc-act-responder](#) *boolean*

Tree [lbm-svc-act-responder](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [low-priority-defect](#) *keyword*

Tree [low-priority-defect](#)

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">one-way-delay-threshold</a> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">primary-vlan</a> <i>boolean</i>

Tree	<a href="#">primary-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mip primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mip</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
----------	--

Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<b>squelch-ingress-ctag-levels</b>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7

Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">squelch-ingress-levels</a> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ethernet**

Synopsis	Enter the <b>ethernet</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ethernet</a>
Tree	<a href="#">ethernet</a>
Introduced	20.5.R1
Platforms	All

### **l1f**

Synopsis	Enter the <b>l1f</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l1f</a>
Tree	<a href="#">l1f</a>

Description	<p>Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.</p> <p>The Ethernet port must be configured for null encapsulation.</p> <p>This feature is also supported in Epipes with BGP-EVPN enabled. In this case, upon removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains operationally up). The port transitions to the operationally up state when the EVPN destination is created.</p>
Introduced	20.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Link Loss Forwarding
Context	<b>configure service epipe</b> <i>string sap string ethernet llf admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	All

### **ignore-oper-down** *boolean*

Synopsis	Ignore operational down state of the SAP on SAP failure
Context	<b>configure service epipe</b> <i>string sap string ignore-oper-down boolean</i>
Tree	<a href="#">ignore-oper-down</a>
Description	<p>When configured to <b>true</b>, the Epipe service does not transition to the operational down state when the SAP fails. This command can only be set to <b>true</b> for a single SAP in an Epipe. The command can be used in Epipes with or without EVPN enabled.</p> <p>When configured to <b>false</b>, the Epipe service transitions to the operational down state when SAP fails.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ip-criteria</a>
Tree	<a href="#">ip-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**activate-entry-tag** *number*

Synopsis	Tag ID activated for IPv4 criteria
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ip-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ipv6-criteria</a>
Tree	<a href="#">ipv6-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**activate-entry-tag** *number*

Synopsis	Tag ID activated for IPv6 criteria
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">ipv6-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id] reference**

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number   keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs (number | keyword)**

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">mbs</a> ( <i>number   keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <b>adaptation-rule</b>

Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">cbs</a> <a href="#">(number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

## drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-ingress</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress queuing-type</b> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

**overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

**scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

**[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

## parent

Synopsis Enter the **parent** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* **parent**

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-ip-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy prefix reference</a>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## segment-routing-v6 [[instance](#)] *number*

Synopsis	Enter the <b>segment-routing-v6</b> list instance
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i>
Tree	<a href="#">segment-routing-v6</a>
Description	Commands in this context configure the SRv6 instance that is used in the service.
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[instance]** *number*

Synopsis Segment routing v6 instance  
 Context **configure service epipe** *string segment-routing-v6 number*  
 Tree [segment-routing-v6](#)  
 Range 1  
 Notes This element is part of a list key.  
 Introduced 21.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator** [[locator-name](#)] *reference*

Synopsis Enter the **locator** list instance  
 Context **configure service epipe** *string segment-routing-v6 number locator reference*  
 Tree [locator](#)  
 Max. 1  
 Instances  
 Introduced 21.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis SRv6 locator name  
 Context **configure service epipe** *string segment-routing-v6 number locator reference*  
 Tree [locator](#)  
 Reference **configure router** *string segment-routing segment-routing-v6 locator string*  
 Notes This element is part of a list key.  
 Introduced 21.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis Enter the **function** context

Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">locator</a> <i>reference</i> <a href="#">function</a>
Tree	<a href="#">function</a>
Description	Commands in this context configure SRv6 SID function values and parameters for the locator.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-dx2

Synopsis	Enable the <b>end-dx2</b> context
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-dx2</a>
Tree	<a href="#">end-dx2</a>
Description	Commands in this context configure the SRv6 End.DX2 behavior and function value that is associated with the SRv6 instance in the service. This means that decapsulation and cross-connect to the egress SAP occurs in the Epipe service.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-dx2</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## micro-segment-locator [[locator-name](#)] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i>

Tree	<a href="#">micro-segment-locator</a>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [**locator-name**] *reference*

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Description	This command associates a pre-defined micro-segment SRv6 locator (defined in the <b>configure router segment-routing segment-routing-v6</b> context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.
Reference	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis	Enter the <b>function</b> context
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **udx2**

Synopsis	Enable the <b>udx2</b> context
Context	<b>configure service epipe</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b> <b>udx2</b>
Tree	<a href="#">udx2</a>

Description	Commands in this context configure the SRv6 micro-segment uDX2 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and cross-connect to the egress SAP occurs in the Epipe service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure service epipe</b> <i>string segment-routing-v6 number micro-segment-locator reference function udx2 value number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**service-id number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure service epipe</b> <i>string service-id number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

**service-mtu number**

Synopsis	MTU size
Context	<b>configure service epipe</b> <i>string service-mtu number</i>

Tree [service-mtu](#)

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range 1 to 9782

Introduced	21.5.R1
Platforms	All

**app-profile** *reference*

Synopsis	Application profile name for this SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**bandwidth** (*number* | *keyword*)

Synopsis	Bandwidth that is reserved for this SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bandwidth</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">bandwidth</a>
Range	0 to 100000000
Units	kilobps
Options	max
Default	0
Introduced	16.0.R1
Platforms	All

**bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	All

**bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

**encap** *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <b>encap</b> <i>keyword</i>
Tree	<a href="#">encap</a>
Options	ipv4
Default	ipv4
Introduced	21.2.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	21.2.R1
Platforms	All

**failure-action** *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">failure-action</a> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

**wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>spoke-sdp</i> <i>string</i> <i>bfd</i> <i>wait-for-up-timer</i> <i>number</i>
Tree	<i>wait-for-up-timer</i>
Description	<p>This command configures the time interval that is used to wait for a BFD session to come up.</p> <p>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.</p>
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>spoke-sdp</i> <i>string</i> <i>collect-stats</i> <i>boolean</i>
Tree	<i>collect-stats</i>
Default	false
Introduced	16.0.R1
Platforms	All

**control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>spoke-sdp</i> <i>string</i> <i>control-word</i> <i>boolean</i>
Tree	<i>control-word</i>
Default	false
Introduced	16.0.R1
Platforms	All

## cpu-protection

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure service epipe string spoke-sdp string cpu-protection</b>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring</b>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring aggregate</b>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring car</b>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <i>reference</i>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mac reference

Synopsis	MAC filter policy name
Context	<b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress filter mac reference</b>
Tree	<b>mac</b>
Reference	<b>configure filter mac-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## **l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure service epipe string spoke-sdp string egress l2tpv3</b>
Tree	<b>l2tpv3</b>
Introduced	16.0.R1
Platforms	All

## **cookie string**

Synopsis	Cookie parameters
Context	<b>configure service epipe string spoke-sdp string egress l2tpv3 cookie string</b>
Tree	<b>cookie</b>
String Length	18 to 23
Introduced	16.0.R1
Platforms	All

## **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service epipe string spoke-sdp string egress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	All

## **network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure service epipe string spoke-sdp string egress qos network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	All

## **policy-name reference**

Synopsis	Network policy ID
----------	-------------------

Context	<b>configure service epipe string spoke-sdp string egress qos network policy-name reference</b>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos network string</b>
Introduced	16.0.R1
Platforms	All

### port-redirect-group

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure service epipe string spoke-sdp string egress qos network port-redirect-group</b>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

### group-name *reference*

Synopsis	Name of the egress port queue group
Context	<b>configure service epipe string spoke-sdp string egress qos network port-redirect-group group-name reference</b>
Tree	<a href="#">group-name</a>
Reference	<b>configure qos queue-group-templates egress queue-group string</b>
Introduced	16.0.R1
Platforms	All

### instance *number*

Synopsis	Queue-group instance ID
Context	<b>configure service epipe string spoke-sdp string egress qos network port-redirect-group instance number</b>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <i>service epipe string spoke-sdp string egress vc-label number</i>
Tree	<i>vc-label</i>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

**endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <i>service epipe string spoke-sdp string endpoint</i>
Tree	<i>endpoint</i>
Introduced	16.0.R1
Platforms	All

**icb** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind SDP as type Inter-Chassis Backup (ICB)
Context	<b>configure</b> <i>service epipe string spoke-sdp string endpoint icb boolean</i>
Tree	<i>icb</i>
Default	false
Introduced	16.0.R1
Platforms	All

## name *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service endpoint name
Context	<b>configure service epipe string spoke-sdp string endpoint name reference</b>
Tree	<b>name</b>
Reference	<b>configure service epipe string endpoint string</b>
Introduced	16.0.R1
Platforms	All

## precedence (*number* | *keyword*)

Synopsis	Precedence when multiple SDP binds are on one endpoint
Context	<b>configure service epipe string spoke-sdp string endpoint precedence (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>precedence</b>
Range	1 to 4
Options	primary
Default	4
Introduced	16.0.R1
Platforms	All

## entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure service epipe string spoke-sdp string entropy-label</b>
Tree	<b>entropy-label</b>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
----------	----------------------------------

Context	<b>configure service epipe string spoke-sdp string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service epipe string spoke-sdp string eth-cfm collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service epipe string spoke-sdp string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
----------	------------------------------------

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure eth-cfm domain</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure eth-cfm domain</b> <i>string association string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of the MEP  
 Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **admin-state** *keyword*  
 Tree **admin-state**  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais**

Synopsis Enable the **ais** context  
 Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **ais**  
 Tree **ais**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis Client MEG level for AIS message generation  
 Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **ais** **client-meg-level** *number*  
 Tree **client-meg-level**  
 Range 1 to 7  
 Max. 7  
 Instances  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>interface-support</b> <i>boolean</i>
Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>interval</b> <i>number</i>
Tree	<a href="#">interval</a>
Range	1   60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority** *number*

Synopsis	Priority of the AIS messages generated by the node
----------	--

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification</i>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
----------	--

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number cfm-vlan-tag string</a>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</a>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
----------	---

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **direction** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword</i>
Tree	<a href="#">direction</a>
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
----------	------------------------------------

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</i>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean</i>

Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">fault-propagation</a> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i>

Tree	<a href="#">rx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>When configured to <b>false</b>, the router disables the Nokia Grace function.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">lbm-svc-act-responder</a> <i>boolean</i>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>primary-vlan</b> <i>boolean</i>
Tree	<a href="#">primary-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mip** **primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mip</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<b>squelch-ingress-ctag-levels</b>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.

Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sqelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>spoke-sdp</i> <i>string</i> <i>eth-cfm</i> <b>sqelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">sqelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>spoke-sdp</i> <i>string</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

## hash-label

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure service epipe string spoke-sdp string hash-label</b>
Tree	<a href="#">hash-label</a>
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> .
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	<b>configure service epipe string spoke-sdp string hash-label signal-capability</b>
Tree	<a href="#">signal-capability</a>
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.  The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service epipe string spoke-sdp string ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service epipe string spoke-sdp string ingress filter</b>
Tree	<a href="#">filter</a>

Introduced 16.0.R1  
Platforms All

### **vc-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [ingress](#) [vc-label](#) *number*

Tree [vc-label](#)

Range 1 to 1048575

Introduced 16.0.R1

Platforms All

### **monitor-oper-group** *reference*

Synopsis Operational group that affects state of the SDP bind

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [monitor-oper-group](#) *reference*

Tree [monitor-oper-group](#)

Reference **configure** [service](#) [oper-group](#) *string*

Notes The following elements are part of a choice: **monitor-oper-group** or **oper-group**.

Introduced 16.0.R1

Platforms All

**oper-group** *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

**pw-status**

Synopsis	Enter the <b>pw-status</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a>
Tree	<a href="#">pw-status</a>
Introduced	16.0.R1
Platforms	All

**block-on-peer-fault** *boolean*

Synopsis	Block transmit direction of PW based on status code
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">block-on-peer-fault</a> <i>boolean</i>
Tree	<a href="#">block-on-peer-fault</a>
Default	false
Notes	The following elements are part of a choice: <b>block-on-peer-fault</b> or <b>standby-signaling-slave</b> .
Introduced	16.0.R1
Platforms	All

**signaling** *boolean*

Synopsis	Allow SDP binding to support pseudowire status signaling
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">signaling</a> <i>boolean</i>
Tree	<a href="#">signaling</a>
Default	true
Introduced	16.0.R1

Platforms All

### **standby-signaling-slave** *boolean*

Synopsis Block spoke transmission based on PW standby status

Context **configure** [service epipe](#) *string* [spoke-sdp](#) *string* [pw-status](#) **standby-signaling-slave** *boolean*

Tree [standby-signaling-slave](#)

Default false

Notes The following elements are part of a choice: **block-on-peer-fault** or **standby-signaling-slave**.

Introduced 16.0.R1

Platforms All

### **source-bmac**

Synopsis Enter the **source-bmac** context

Context **configure** [service epipe](#) *string* [spoke-sdp](#) *string* [source-bmac](#)

Tree [source-bmac](#)

Introduced 16.0.R1

Platforms All

### **use-sdp-bmac-lsb** *boolean*

Synopsis Allow the spoke SDP to be part of a redundant pseudo-wire within PBB Epipe service

Context **configure** [service epipe](#) *string* [spoke-sdp](#) *string* [source-bmac](#) **use-sdp-bmac-lsb** *boolean*

Tree [use-sdp-bmac-lsb](#)

Default false

Introduced 16.0.R1

Platforms All

### **transit-policy**

Synopsis Enable the **transit-policy** context

Context **configure** [service epipe](#) *string* [spoke-sdp](#) *string* [transit-policy](#)

Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> <i>ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-ip-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> <i>prefix reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vc-type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Virtual circuit type associated with the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vc-type</a> <i>keyword</i>
Tree	<a href="#">vc-type</a>
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

**vlan-vc-tag** *number*

Synopsis	SDP bind VC tag
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vlan-vc-tag</a> <i>number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

**test** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">test</a> <i>boolean</i>
Tree	<a href="#">test</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vc-switching** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	<b>configure</b> <i>service epipe</i> <i>string</i> <b>vc-switching</b> <i>boolean</i>
Tree	<b>vc-switching</b>
Default	false
Introduced	16.0.R1
Platforms	All

**vpn-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure</b> <i>service epipe</i> <i>string</i> <b>vpn-id</b> <i>number</i>
Tree	<b>vpn-id</b>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

**vxlan**

Synopsis	Enter the <b>vxlan</b> context
Context	<b>configure</b> <i>service epipe</i> <i>string</i> <b>vxlan</b>
Tree	<b>vxlan</b>
Introduced	16.0.R1
Platforms	All

**instance** [**vxlan-instance**] *number*

Synopsis	Enter the <b>instance</b> list instance
Context	<b>configure</b> <i>service epipe</i> <i>string</i> <b>vxlan instance</b> <i>number</i>

Tree	<a href="#">instance</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### **[vxlan-instance]** *number*

Synopsis	VXLAN instance
Context	<b>configure</b> <a href="#">service epipe</a> <i>string vxlan instance number</i>
Tree	<a href="#">instance</a>
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **egress-vtep**

Synopsis	Enter the <b>egress-vtep</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string vxlan instance number egress-vtep</i>
Tree	<a href="#">egress-vtep</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	VTEP IP address used when originating VXLAN packets
Context	<b>configure</b> <a href="#">service epipe</a> <i>string vxlan instance number egress-vtep ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group associated with egress VTEP address
----------	---

Context	<b>configure service epipe</b> <i>string vxlan instance number egress-vtep oper-group reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure service</b> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**vni number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VNI of the VXLAN
Context	<b>configure service epipe</b> <i>string vxlan instance number vni number</i>
Tree	<a href="#">vni</a>
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**source-vtep** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Vxlan source virtual tunnel endpoint information
Context	<b>configure service epipe</b> <i>string vxlan source-vtep (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">source-vtep</a>
Introduced	16.0.R1
Platforms	All

**ies** [[service-name](#)] *string*

Synopsis	Enter the <b>ies</b> list instance
Context	<b>configure service ies</b> <i>string</i>
Tree	<a href="#">ies</a>
Introduced	16.0.R1
Platforms	All

**[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure service ies</b> <i>string</i>
Tree	<b>ies</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**aa-interface** [*interface-name*] *string*

Synopsis	Enter the <b>aa-interface</b> list instance
Context	<b>configure service ies</b> <i>string aa-interface</i> <i>string</i>
Tree	<b>aa-interface</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service ies</b> <i>string aa-interface</i> <i>string</i>
Tree	<b>aa-interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service ies</b> <i>string aa-interface</i> <i>string admin-state</i> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **primary**

Synopsis	Enable the <b>primary</b> context
----------	-----------------------------------

Context	<b>configure service ies string aa-interface string ipv4 primary</b>
Tree	<b>primary</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure service ies string aa-interface string ipv4 primary address string</b>
Tree	<b>address</b>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length number**

Synopsis	IPv4 address prefix length
Context	<b>configure service ies string aa-interface string ipv4 primary prefix-length number</b>
Tree	<b>prefix-length</b>
Range	0 to 32
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sap [sap-id] string**

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure service ies string aa-interface string sap string</b>
Tree	<b>sap</b>
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[sap-id] string**

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">aa-interface string</a> <a href="#">sap string</a>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">aa-interface string</a> <a href="#">sap string</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">aa-interface string</a> <a href="#">sap string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">aa-interface string</a> <a href="#">sap string</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <a href="#">reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sap-egress

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**virtual-port**

Synopsis	Enter the <b>virtual-port</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress virtual-port</a>
Tree	<a href="#">virtual-port</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vport-name** *reference*

Synopsis	Virtual port assigned to the SAP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress virtual-port vport-name</a> <i>reference</i>
Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet access egress virtual-port</a> <i>string</i>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fwd-wholesale**

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fwd-wholesale</a>
Tree	<a href="#">fwd-wholesale</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pppoe-service *reference*

Synopsis	PPPoE service name
Context	<b>configure service ies</b> <i>string aa-interface string sap string fwd-wholesale pppoe-service reference</i>
Tree	<a href="#">pppoe-service</a>
Reference	<b>configure service epipe</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string ingress</i>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sap-ingress

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string ingress qos sap-ingress</i>
Tree	<a href="#">sap-ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string ingress qos sap-ingress overrides</i>
Tree	<i>overrides</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis	Policy ID
Context	<b>configure service ies</b> <i>string aa-interface string sap string ingress qos sap-ingress policy-name reference</i>
Tree	<i>policy-name</i>
Reference	<b>configure qos sap-ingress</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string lag</i>
Tree	<i>lag</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## aarp-interface [*interface-name*] *string*

Synopsis	Enter the <b>aarp-interface</b> list instance
Context	<b>configure service ies</b> <i>string aarp-interface string</i>
Tree	<i>aarp-interface</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[interface-name] string**

Synopsis	Interface name
Context	<b>configure service ies string aarp-interface string</b>
Tree	<b>aarp-interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the interface
Context	<b>configure service ies string aarp-interface string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure service ies string aarp-interface string description string</b>
Tree	<b>description</b>
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ip-mtu number**

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure service ies string aarp-interface string ip-mtu number</b>
Tree	<b>ip-mtu</b>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.

Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>aarp-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<b>spoke-sdp</b>
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>aarp-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<b>spoke-sdp</b>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>aarp-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp</b>
Tree	<b>aarp</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**id reference****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string aarp id reference</i>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance aarp</a> <i>number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**type keyword****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Role of the spoke SDP referenced by the AARP
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string aarp type keyword</i>
Tree	<a href="#">type</a>
Options	subscriber-side-shunt, network-side-shunt
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of this service SDP binding
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip** *reference*

Synopsis	IP filter ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC egress value that indicates a specific connection
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <b>vc-label</b> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <b>filter</b>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ip** *reference*

Synopsis	IP filter name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <b>filter</b> <b>ip</b> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <b>ip-filter</b> <i>string</i>

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC ingress value that indicates a specific connection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**customer** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">customer</a> <i>reference</i>
Tree	<a href="#">customer</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i>

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>igmp-host-tracking</b> <b>expiry-time</b> <i>number</i>
Tree	<b>expiry-time</b>
Range	1 to 65535
Units	seconds
Default	260
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface** [**interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Description	Commands in this context create a logical IP routing interface. When created, attributes such as an IP address and SAP ID can be associated with the IP interface.
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>cflowd-parameters</b>
Tree	<a href="#">cflowd-parameters</a>
Introduced	16.0.R1
Platforms	All

**sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Introduced	16.0.R1
Platforms	All

**[[sampling-type](#)]** *keyword*

Synopsis	Traffic sampling type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

### **direction** *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>direction</b> <i>keyword</i>
Tree	<a href="#">direction</a>
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R1
Platforms	All

### **sample-profile** (*keyword* | *number*)

Synopsis	Sample profile ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>sample-profile</b> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">sample-profile</a>
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	All

### **type** *keyword*

Synopsis	Type of cflowd analysis
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **cpu-protection** *reference*

Synopsis	CPU protection policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cpu-protection</a> <i>reference</i>
Tree	<a href="#">cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">cpu-protection</a> <i>policy</i> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **dynamic-tunnel-redundant-nexthop** *string*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">dynamic-tunnel-redundant-nexthop</a> <i>string</i>
Tree	<a href="#">dynamic-tunnel-redundant-nexthop</a>
Description	This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service.
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ).
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure service ies string interface string hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service ies string interface string hold-time ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies string interface string hold-time ipv4 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies string interface string hold-time ipv4 down init-only <i>boolean</i></b>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false

Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">down</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

**up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a>
Tree	<a href="#">up</a>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6 down init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	When configured to <b>true</b> , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv6 down seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200

Units	seconds
Introduced	16.0.R1
Platforms	All

## up

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time ipv6 up</a>
Tree	<a href="#">up</a>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time ipv6 up seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## if-attribute

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a>
Tree	<a href="#">if-attribute</a>
Introduced	16.0.R1
Platforms	All

## admin-group *reference*

Synopsis	Administrative group name for the interface
----------	---

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Description	This command specifies the administrative group membership to an interface. The configured administrative group membership is applied in all levels or areas the interface is participating in. The same interface cannot have different memberships in different levels or areas.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **srlog-group** [*name*] *reference*

Synopsis	Add a list entry for <b>srlog-group</b>
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">srlog-group</a> <i>reference</i>
Tree	<a href="#">srlog-group</a>
Introduced	16.0.R1
Platforms	All

### **[name]** *reference*

Synopsis	SRLG name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">if-attribute</a> <a href="#">srlog-group</a> <i>reference</i>
Tree	<a href="#">srlog-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">srlog-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	19.7.R1

Platforms All

### **destination-class-lookup** *boolean*

Synopsis Enable BGP destination class lookup

Context **configure** [service ies](#) *string* [interface](#) *string* [ingress destination-class-lookup](#) *boolean*

Tree [destination-class-lookup](#)

Description When configured to **true**, the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the **destination-class** match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.

When configured to **false**, destination class lookup is not enabled.

Default false

Introduced 20.7.R1

Platforms All

### **policy-accounting** *reference*

Synopsis Ingress policy accounting template name

Context **configure** [service ies](#) *string* [interface](#) *string* [ingress policy-accounting](#) *reference*

Tree [policy-accounting](#)

Reference **configure** [routing-options policy-accounting policy-acct-template](#) *string*

Introduced 19.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **ingress-stats** *boolean*

Synopsis Collect ingress statistics

Context **configure** [service ies](#) *string* [interface](#) *string* [ingress-stats](#) *boolean*

Tree [ingress-stats](#)

Default false

Introduced 16.0.R1

Platforms All

**ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

**ipsec**

Synopsis	Enable the <b>ipsec</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a>
Tree	<a href="#">ipsec</a>
Description	Commands in this context configure an IPsec secured interface.
Introduced	22.7.R1
Platforms	VSR

**admin-state** *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

**ip-exception** *reference*

Synopsis	IP exception filter
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ip-exception</a> <i>reference</i>
Tree	<a href="#">ip-exception</a>

Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	<b>configure filter ip-exception string</b>
Introduced	22.7.R1
Platforms	VSR

### **ipsec-tunnel [name] string**

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string</b>
Tree	<a href="#">ipsec-tunnel</a>
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

### **[name] string**

Synopsis	IPsec tunnel name
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string</b>
Tree	<a href="#">ipsec-tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **admin-state keyword**

Synopsis	Administrative state of the IPsec tunnel
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	22.7.R1

Platforms VSR

## bfd

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **bfd** context

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [bfd](#)

Tree [bfd](#)

Introduced 22.7.R1

Platforms VSR

## bfd-designate *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Designate IPsec tunnel to carry BFD traffic

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [bfd bfd-designate](#) *boolean*

Tree [bfd-designate](#)

Default false

Introduced 22.7.R1

Platforms VSR

## bfd-liveness

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the **bfd-liveness** context

Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [bfd bfd-liveness](#)

Tree [bfd-liveness](#)

Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session. BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.
Introduced	22.7.R1
Platforms	VSR

### **dest-ip** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">bfd bfd-liveness</a> <b>dest-ip</b> <i>string</i>
Tree	<a href="#">dest-ip</a>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **interface** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">bfd bfd-liveness</a> <b>interface</b> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**service-name** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string bfd bfd-liveness service-name string</i>
Tree	<i>service-name</i>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

**clear-df-bit** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i>
Tree	<i>clear-df-bit</i>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

**copy-traffic-class-upon-decapsulation** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>copy-traffic-class-upon-decapsulation</b> <i>boolean</i>
Tree	<b>copy-traffic-class-upon-decapsulation</b>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **encapsulated-ip-mtu** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## icmp-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	22.7.R1
Platforms	VSR

## frag-required

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

### **message-count** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">message-count</a> <i>number</i>
Tree	<a href="#">message-count</a>

Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a>
Tree	<a href="#">icmp6-generation</a>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a>
Tree	<a href="#">packet-too-big</a>
Description	Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.  The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.  The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.
Introduced	22.7.R1

Platforms VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

**message-count** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

**ip-mtu** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

**key-exchange****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">key-exchange</a>
Tree	<a href="#">key-exchange</a>
Introduced	22.7.R1
Platforms	VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">key-exchange</a> <a href="#">dynamic</a>
Tree	<a href="#">dynamic</a>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">key-exchange</a> <a href="#">dynamic auto-establish</a> <i>boolean</i>
Tree	<a href="#">auto-establish</a>
Default	false
Introduced	22.7.R1
Platforms	VSR

## cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert</b>
Tree	<b>cert</b>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	22.7.R1
Platforms	VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert cert-profile reference</b>
Tree	<b>cert-profile</b>
Reference	<b>configure ipsec cert-profile string</b>
Introduced	22.7.R1
Platforms	VSR

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert status-verify</b>
Tree	<b>status-verify</b>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	22.7.R1
Platforms	VSR

**default-result** *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	22.7.R1
Platforms	VSR

**primary** *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>primary</b> <i>keyword</i>
Tree	<b>primary</b>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ojsp
Default	crl
Introduced	22.7.R1
Platforms	VSR

**secondary** *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>secondary</b> <i>keyword</i>
Tree	<b>secondary</b>
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ojsp
Default	none

Introduced 22.7.R1  
 Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
 Context **configure** [service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert trust-anchor-profile reference](#)  
 Tree [trust-anchor-profile](#)  
 Reference **configure** [ipsec trust-anchor-profile string](#)  
 Introduced 22.7.R1  
 Platforms VSR

### **id**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
 Context **configure** [service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic id](#)  
 Tree [id](#)  
 Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:
 

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

 Introduced 22.7.R1  
 Platforms VSR

### **fqdn** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id fqdn</b> <i>string</i>
Tree	<b>fqdn</b>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv4** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv4</b> <i>string</i>
Tree	<b>ipv4</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv6</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>ipv6</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

## ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec ike-policy</a> <i>number</i>
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	22.7.R1
Platforms	VSR

## pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>pre-shared-key</b> <i>string</i>
Tree	<b>pre-shared-key</b>
String Length	1 to 115
Introduced	22.7.R1
Platforms	VSR

## manual

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b>
Tree	<b>manual</b>
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## keys [**security-association**] *number* *direction* *keyword*

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <i>direction</i> <i>keyword</i>
Tree	<b>keys</b>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

## [**security-association**] *number*

Synopsis	SA entry ID
----------	-------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange manual keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<a href="#">keys</a>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **direction** *keyword*

Synopsis	Direction of the IPsec tunnel
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange manual keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<a href="#">keys</a>
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **authentication-key** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange manual keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 130
Introduced	22.7.R1
Platforms	VSR

## encryption-key *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">encryption-key</a> <i>string</i>
Tree	<a href="#">encryption-key</a>
String Length	1 to 66
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Reference	<b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## spi *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">spi</a> <i>number</i>
Tree	<a href="#">spi</a>

Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **local-gateway-address-override** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>local-gateway-address-override</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-gateway-address-override</b>
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

### **max-history-key-records**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>max-history-key-records</b>
Tree	<b>max-history-key-records</b>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1

Platforms VSR

### esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of recent records

Context **configure** service ies string interface string ipsec ipsec-tunnel string max-history-key-records esp number

Tree esp

Range 1 to 48

Introduced 22.7.R1

Platforms VSR

### ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of historical IKE key records

Context **configure** service ies string interface string ipsec ipsec-tunnel string max-history-key-records ike number

Tree ike

Range 1 to 3

Introduced 22.7.R1

Platforms VSR

### pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Aging out time of the learned path MTU

Context **configure** service ies string interface string ipsec ipsec-tunnel string pmtu-discovery-aging number

Tree	<a href="#">pmtu-discovery-aging</a>
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	22.7.R1
Platforms	VSR

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>private-sap</b> <i>number</i>
Tree	<a href="#">private-sap</a>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

### **private-service** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
----------	----------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>private-service</b> <i>string</i>
Tree	<a href="#">private-service</a>
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String Length	1 to 64
Introduced	22.7.R1
Platforms	VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>private-tcp-mss-adjust</b> <i>number</i>
Tree	<a href="#">private-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>propagate-pmtu-v4</b> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v4</a>

Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>propagate-pmtu-v6</b> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

### **public-tcp-mss-adjust** (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number   keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto

Introduced 22.7.R1  
 Platforms VSR

### **remote-gateway-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Remote IPsec tunnel endpoint address  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [remote-gateway-address](#) (*ipv4-address-no-zone | ipv6-address-no-zone*)  
 Tree [remote-gateway-address](#)  
 Introduced 22.7.R1  
 Platforms VSR

### **replay-window** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Anti-replay window size  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [replay-window](#) *number*  
 Tree [replay-window](#)  
 Description This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.  
 Range 32 | 64 | 128 | 256 | 512  
 Units packets  
 Introduced 22.7.R1  
 Platforms VSR

## security-policy

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>security-policy</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">security-policy</a>
Tree	<a href="#">security-policy</a>
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

## id number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">security-policy id number</a>
Tree	<a href="#">id</a>
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

## strict-match *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipsec ipsec-tunnel string</a> <a href="#">security-policy strict-match boolean</a>
Tree	<a href="#">strict-match</a>
Description	When configured to <b>true</b> , this command enables strict match of the security policy entry.

When a CREATE\_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.

If there is no match, the setup fails, and TS\_UNACCEPTABLE is sent.

If there is a match, but there is an existing CHILD\_SA for the matched security policy, the setup fails, and NO\_PROPOSAL\_CHOSEN is sent.

If there is a match, and there is not a CHILD\_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD\_SA is created.

Default	false
Introduced	22.7.R1
Platforms	VSR

### ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipv6-exception</b> <i>reference</i>
Tree	<a href="#">ipv6-exception</a>
Description	This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.
Reference	<b>configure filter ipv6-exception</b> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

### public-sap *number*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec public-sap</b> <i>number</i>
Tree	<a href="#">public-sap</a>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1

Platforms VSR

## tunnel-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tunnel group ID

Context **configure service ies** *string* **interface** *string* **ipsec tunnel-group** *reference*

Tree **tunnel-group**

Reference **configure isa tunnel-group** *number*

Notes This element is mandatory.

Introduced 22.7.R1

Platforms VSR

## ipv4

Synopsis Enter the **ipv4** context

**allow-directed-broadcasts** *boolean*

Synopsis	Forward directed broadcasts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 allow-directed-broadcasts</a> <i>boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Default	false
Introduced	16.0.R1
Platforms	All

**bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service ies string interface string ipv4 bfd</b>
Tree	<b>bfd</b>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of BFD sessions
Context	<b>configure service ies string interface string ipv4 bfd admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**echo-receive number**

Synopsis	Minimum echo interval over this interface
Context	<b>configure service ies string interface string ipv4 bfd echo-receive number</b>
Tree	<b>echo-receive</b>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

**multiplier number**

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure service ies string interface string ipv4 bfd multiplier number</b>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

---

Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive number**

Synopsis	BFD receive interval over this interface
Context	<b>configure service ies string interface string ipv4 bfd receive number</b>
Tree	<a href="#">receive</a>
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **transmit-interval number**

Synopsis	BFD transmit interval over this interface
Context	<b>configure service ies string interface string ipv4 bfd transmit-interval number</b>
Tree	<a href="#">transmit-interval</a>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

**type keyword**

Synopsis	Local termination point for the BFD session
Context	<b>configure service ies string interface string ipv4 bfd type keyword</b>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure service ies string interface string ipv4 dhcp</b>
Tree	<b>dhcp</b>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of DHCP
Context	<b>configure service ies string interface string ipv4 dhcp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">gi-address</a> <i>string</i>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

**lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">lease-populate</a>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	All

**max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">lease-populate</a> <a href="#">max-leases</a> <i>number</i>

---

Tree	<a href="#">max-leases</a>
Range	0 to 511999
Introduced	16.0.R1
Platforms	All

## option-82

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

## action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <i>action keyword</i>
Tree	<a href="#">action</a>
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	All

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">circuit-id</a>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">ascii-tuple</a>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">ifindex</a>
Tree	<a href="#">ifindex</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the circuit ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">none</a>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## sap-id

Synopsis	Use the SAP ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">circuit-id</a> <a href="#">sap-id</a>
Tree	<a href="#">sap-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .

Introduced	16.0.R1
Platforms	All

## vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 circuit-id</a> <a href="#">vlan-ascii-tuple</a>
Tree	<a href="#">vlan-ascii-tuple</a>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">remote-id</a>
Tree	<a href="#">remote-id</a>
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

## ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82</a> <a href="#">remote-id</a> <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1

Platforms All

## mac

Synopsis Use the MAC address for the remote ID

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 remote-id mac](#)

Tree [mac](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

## none

Synopsis Do not include the remote ID

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 remote-id none](#)

Tree [none](#)

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

## vendor-specific-option

Synopsis Enter the **vendor-specific-option** context

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 vendor-specific-option](#)

Tree [vendor-specific-option](#)

Description Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.

Introduced 16.0.R1

Platforms All

## client-mac-address *boolean*

Synopsis Send the MAC address in the VSO

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 vendor-specific-option client-mac-address](#) *boolean*

Tree [client-mac-address](#)

---

Default	false
Introduced	16.0.R1
Platforms	All

**pool-name** *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>pool-name</b> <i>boolean</i>
Tree	<b>pool-name</b>
Default	false
Introduced	16.0.R1
Platforms	All

**sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>sap-id</b> <i>boolean</i>
Tree	<b>sap-id</b>
Default	false
Introduced	16.0.R1
Platforms	All

**service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b> <b>service-id</b> <i>boolean</i>
Tree	<b>service-id</b>
Default	false
Introduced	16.0.R1
Platforms	All

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">system-id</a> <a href="#">boolean</a>
Tree	<a href="#">system-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms All

### **emulated-server** *string*

Synopsis IP address used as the DHCP server address for the SAP

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server emulated-server](#) *string*

Tree [emulated-server](#)

Description This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.

Introduced 16.0.R1

Platforms All

### **lease-time**

Synopsis Enter the **lease-time** context

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server lease-time](#)

Tree [lease-time](#)

Introduced 16.0.R1

Platforms All

### **radius-override** *boolean*

Synopsis Use lease time information provided by RADIUS server

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server lease-time radius-override](#) *boolean*

Tree [radius-override](#)

Default false

Introduced 16.0.R1

Platforms All

### **value** *number*

Synopsis DHCP lease time

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp proxy-server lease-time value](#) *number*

Tree	<a href="#">value</a>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">python-policy</a> <a href="#">reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

### **relay-plain-bootp** *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-plain-bootp</a> <a href="#">boolean</a>
Tree	<a href="#">relay-plain-bootp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **relay-proxy**

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	All

### **release-update-src-ip** *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp relay-proxy release-update-src-ip</b> <i>boolean</i>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **siaddr-override** *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp relay-proxy siaddr-override</b> <i>string</i>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	All

### **release-include-gi-address** *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp release-include-gi-address</b> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis	IP addresses for DHCP server requests
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 dhcp server</b> <i>string</i>
Tree	<a href="#">server</a>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>src-ip-addr</b> <i>keyword</i>
Tree	<a href="#">src-ip-addr</a>
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	All

### **trusted** *boolean*

Synopsis	Relay untrusted packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>trusted</b> <i>boolean</i>
Tree	<a href="#">trusted</a>
Description	<p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **use-arp** *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>use-arp</b> <i>boolean</i>
Tree	<a href="#">use-arp</a>

Default	false
Introduced	16.0.R1
Platforms	All

## icmp

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp</a>
Tree	<a href="#">icmp</a>
Introduced	16.0.R1
Platforms	All

## mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp mask-reply</a> <i>boolean</i>
Tree	<a href="#">mask-reply</a>
Default	true
Introduced	16.0.R1
Platforms	All

## param-problem

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem</a>
Tree	<a href="#">param-problem</a>
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem</a> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp param-problem</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp</a> <b>redirects</b>
Tree	<a href="#">redirects</a>
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>

---

Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">redirects</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">redirects</a> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">redirects</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**ttl-expired**

Synopsis	Enter the <b>ttl-expired</b> context
Context	<b>configure service ies string interface string ipv4 icmp ttl-expired</b>
Tree	<b>ttl-expired</b>
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure service ies string interface string ipv4 icmp ttl-expired admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number number**

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure service ies string interface string ipv4 icmp ttl-expired number number</b>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds number**

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure service ies string interface string ipv4 icmp ttl-expired seconds number</b>
Tree	<b>seconds</b>
Range	1 to 60

Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

## unreachables

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service ies string interface string ipv4 icmp unreachables</b>
Tree	<a href="#">unreachables</a>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure service ies string interface string ipv4 icmp unreachables admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Maximum number of unreachable messages to send
Context	<b>configure service ies string interface string ipv4 icmp unreachables number number</b>
Tree	<a href="#">number</a>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">unreachables</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**ip-helper-address** *string*

Synopsis	Gateway address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">ip-helper-address</a> <i>string</i>
Tree	<a href="#">ip-helper-address</a>
Introduced	16.0.R1
Platforms	All

**local-dhcp-server** *reference*

Synopsis	DHCP server for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">local-dhcp-server</a> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**neighbor-discovery**

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

**host-route**

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a>
Tree	<a href="#">host-route</a>
Introduced	19.10.R1
Platforms	All

**populate** [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i>
Tree	<a href="#">populate</a>
Introduced	19.10.R1
Platforms	All

**[route-type]** *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
