| Introduced | 16.0.R1 |
| Platforms | All |

cdp *boolean*

| | |
|----------|---|
| Synopsis | Enable Cisco discovery protocol |
| Context | configure service vpls <i>string</i> sap <i>string</i> l2pt termination protocols cdp <i>boolean</i> |
| Tree | cdp |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ntp boolean

| | |
|------------|--|
| Synopsis | Enable dynamic trunking protocol |
| Context | configure service vpls string sap string l2pt termination protocols ntp boolean |
| Tree | ntp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pagp boolean

| | |
|------------|---|
| Synopsis | Enable port aggregation protocol |
| Context | configure service vpls string sap string l2pt termination protocols pagp boolean |
| Tree | pagp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

stp boolean

| | |
|------------|--|
| Synopsis | Enable all spanning tree protocols |
| Context | configure service vpls string sap string l2pt termination protocols stp boolean |
| Tree | stp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

udld boolean

| | |
|----------|---|
| Synopsis | Enable unidirectional link detection |
| Context | configure service vpls string sap string l2pt termination protocols udld boolean |

| | |
|------------|----------------------|
| Tree | udld |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

vtp boolean

| | |
|------------|--|
| Synopsis | Enable virtual trunk protocol |
| Context | configure service vpls string sap string l2tp termination protocols vtp boolean |
| Tree | vtp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

l2tpv3-session

| | |
|------------|--|
| Synopsis | Enable the l2tpv3-session context |
| Context | configure service vpls string sap string l2tpv3-session |
| Tree | l2tpv3-session |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of the session for the service |
| Context | configure service vpls string sap string l2tpv3-session admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

pseudo-wire

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enter the pseudo-wire context |
| Context | configure service vpls string sap string l2tpv3-session pseudo-wire |
| Tree | pseudo-wire |
| Introduced | 16.0.R4 |
| Platforms | All |

ethernet

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enable the Ethernet PW-type for the L2TPv3 session |
| Context | configure service vpls string sap string l2tpv3-session pseudo-wire ethernet |
| Tree | ethernet |
| Notes | The following elements are part of a choice: ethernet or ethernet-vlan-id . |
| Introduced | 16.0.R4 |
| Platforms | All |

ethernet-vlan-id *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Ethernet-VLAN PW-type ID for the L2TPv3 session |
| Context | configure service vpls string sap string l2tpv3-session pseudo-wire ethernet-vlan-id number |
| Tree | ethernet-vlan-id |
| Range | 0 to 4095 |
| Notes | The following elements are part of a choice: ethernet or ethernet-vlan-id . |
| Introduced | 16.0.R4 |

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Tunnel group name

Context **configure service vpls string sap string l2tpv3-session router group string**

Tree **group**

String Length 1 to 32

Introduced 16.0.R4

Platforms All

router-instance *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Router name used to identify the router instance

Context **configure service vpls string sap string l2tpv3-session router router-instance string**

Tree **router-instance**

String Length 1 to 64

Introduced 16.0.R4

Platforms All

vc-id *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis VC ID for the L2TPv3 session

Context **configure service vpls string sap string l2tpv3-session vc-id number**

Tree [vc-id](#)

Range 1 to 4294967295

Introduced 16.0.R4

Platforms All

lag

Synopsis Enter the **lag** context

Context **configure service vpls string sap string lag**

Tree [lag](#)

Introduced 16.0.R1

Platforms All

link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure service vpls string sap string lag link-map-profile number**

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

per-link-hash

| | |
|------------|---|
| Synopsis | Enter the per-link-hash context |
| Context | configure service vpls string sap string lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | All |

class number

| | |
|------------|--|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
| Context | configure service vpls string sap string lag per-link-hash class number |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight number

| | |
|------------|---|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service vpls string sap string lag per-link-hash weight number |
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

managed-vlan-list

| | |
|------------|---|
| Synopsis | Enter the managed-vlan-list context |
| Context | configure service vpls string sap string managed-vlan-list |
| Tree | managed-vlan-list |
| Introduced | 19.10.R1 |
| Platforms | All |

range [*vlan-range*] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for range |
| Context | configure service vpls string sap string managed-vlan-list range string |
| Tree | range |
| Introduced | 19.10.R1 |
| Platforms | All |

[vlan-range] *string*

| | |
|------------|--|
| Synopsis | Range of VLANs associated with the M-VPLS SAP |
| Context | configure service vpls string sap string managed-vlan-list range string |
| Tree | range |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

mc-ring

| | |
|------------|---|
| Synopsis | Enable the mc-ring context |
| Context | configure service vpls string sap string mc-ring |
| Tree | mc-ring |
| Introduced | 16.0.R1 |
| Platforms | All |

ring-node *string*

| | |
|---------------|--|
| Synopsis | Name for the ring node associated with this SAP |
| Context | configure service vpls string sap string mc-ring ring-node string |
| Tree | ring-node |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

mld-snooping

| | |
|------------|--|
| Synopsis | Enter the mld-snooping context |
| Context | configure service vpls string sap string mld-snooping |
| Tree | mld-snooping |
| Introduced | 16.0.R1 |
| Platforms | All |

fast-leave *boolean*

| | |
|------------|---|
| Synopsis | Allow IGMP fast leave processing |
| Context | configure service vpls string sap string mld-snooping fast-leave boolean |
| Tree | fast-leave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|------------|--|
| Synopsis | Import policy that filters IGMP packets |
| Context | configure service vpls string sap string mld-snooping import-policy reference |
| Tree | import-policy |
| Reference | configure policy-options policy-statement string |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-groups *number*

| | |
|------------|---|
| Synopsis | Maximum groups allowed |
| Context | configure service vpls string sap string mld-snooping maximum-number-groups number |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Operate port as a multicast router port |
| Context | configure service vpls <i>string sap string mld-snooping mrouter-port boolean</i> |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mvr

| | |
|------------|---|
| Synopsis | Enter the mvr context |
| Context | configure service vpls <i>string sap string mld-snooping mvr</i> |
| Tree | mvr |
| Introduced | 16.0.R1 |
| Platforms | All |

from-vpls *reference*

| | |
|------------|---|
| Synopsis | MVR VPLS from which the multicast channels are taken |
| Context | configure service vpls <i>string sap string mld-snooping mvr from-vpls reference</i> |
| Tree | from-vpls |
| Reference | configure service vpls <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

to-sap *string*

| | |
|---------------|---|
| Synopsis | SAP to which the multicast channels are copied |
| Context | configure service vpls <i>string sap string mld-snooping mvr to-sap string</i> |
| Tree | to-sap |
| String Length | 1 to 45 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|--|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vpls string sap string mld-snooping query-interval number |
| Tree | query-interval |
| Range | 2 to 1024 |
| Default | 125 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|--|
| Synopsis | Time between group-specific query messages |
| Context | configure service vpls string sap string mld-snooping query-last-member-interval number |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Default | 10 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|---|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vpls string sap string mld-snooping query-response-interval number |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|---|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-alert-check *boolean*

| | |
|------------|--|
| Synopsis | Enable IP router alert check option |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|------------|--|
| Synopsis | Generate IGMP general queries |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping send-queries <i>boolean</i> |
| Tree | send-queries |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |
|------------|---|
| Synopsis | Enter the static context |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping static |
| Tree | static |
| Introduced | 16.0.R1 |
| Platforms | All |

group [[group-address](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the group list instance |
| Context | configure service vpls string sap string mld-snooping static group string |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | All |

[group-address] *string*

| | |
|------------|--|
| Synopsis | Group address of multicast channel |
| Context | configure service vpls string sap string mld-snooping static group string |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

source [[source-address](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for source |
| Context | configure service vpls string sap string mld-snooping static group string source string |
| Tree | source |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R1 |
| Platforms | All |

[source-address] *string*

| | |
|------------|--|
| Synopsis | Source IP address |
| Context | configure service vpls string sap string mld-snooping static group string source string |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R2 |
| Platforms | All |

starg

| | |
|------------|---|
| Synopsis | any source address (*,G) |
| Context | configure service vpls string sap string mld-snooping static group string starg |
| Tree | starg |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R2 |
| Platforms | All |

version *keyword*

| | |
|------------|---|
| Synopsis | Version of MLD running on the SAP or SDP |
| Context | configure service vpls string sap string mld-snooping version <i>keyword</i> |
| Tree | version |
| Default | 2 |
| Options | 1, 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

| | |
|------------|---|
| Synopsis | Monitor operational group |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ip] string

| | |
|------------|--|
| Synopsis | IP address |
| Context | configure service vpls string sap string static-host ipv4 string mac string |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|--|
| Synopsis | MAC address |
| Context | configure service vpls string sap string static-host ipv4 string mac string |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the static host |
| Context | configure service vpls string sap string static-host ipv4 string mac string admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ancp-string *string*

| | |
|---------------|---|
| Synopsis | ANCP string |
| Context | configure service vpls string sap string static-host ipv4 string mac string ancp-string string |
| Tree | ancp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile

| | |
|------------|--|
| Synopsis | Enter the app-profile context |
| Context | configure service vpls string sap string static-host ipv4 string mac string app-profile |
| Tree | app-profile |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

profile *reference*

| | |
|------------|--|
| Synopsis | Application profile used by the static host |
| Context | configure service vpls string sap string static-host ipv4 string mac string app-profile profile reference |
| Tree | profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id *string*

Synopsis Intermediate destination ID

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **int-dest-id** *string*

Tree [int-dest-id](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv

Synopsis Enter the **shcv** context

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **shcv**

Tree [shcv](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis SLA profile name

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **sla-profile** *reference*

Tree [sla-profile](#)

Reference **configure** [subscriber-mgmt](#) [sla-profile](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis Sub-profile name

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **sub-profile** *reference*

Tree [sub-profile](#)

Reference **configure subscriber-mgmt sub-profile** *string*
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis Enter the **subscriber-id** context
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id*
Tree **subscriber-id**
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis Subscriber identification
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id string string*
Tree **string**
String Length 1 to 64
Notes The following elements are part of a choice: **string** or **use-sap-id**.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis Use the SAP id as subscriber ID
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id use-sap-id*
Tree **use-sap-id**
Notes The following elements are part of a choice: **string** or **use-sap-id**.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

static-isid

Synopsis Enter the **static-isid** context

| | |
|------------|---|
| Context | configure service vpls string sap string static-isid |
| Tree | static-isid |
| Introduced | 19.10.R1 |
| Platforms | All |

range [range-id] number

| | |
|------------|--|
| Synopsis | Enter the range list instance |
| Context | configure service vpls string sap string static-isid range number |
| Tree | range |
| Introduced | 19.10.R1 |
| Platforms | All |

[range-id] number

| | |
|------------|--|
| Synopsis | Range ID for static ISID |
| Context | configure service vpls string sap string static-isid range number |
| Tree | range |
| Range | 1 to 8191 |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

end number

| | |
|------------|---|
| Synopsis | Upper bound of the ISID range |
| Context | configure service vpls string sap string static-isid range number end number |
| Tree | end |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

start number

| | |
|----------|-------------------------------|
| Synopsis | Lower bound of the ISID range |
|----------|-------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string static-isid range number start number |
| Tree | start |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

stp

| | |
|------------|---|
| Synopsis | Enter the stp context |
| Context | configure service vpls string sap string stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of STP |
| Context | configure service vpls string sap string stp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

auto-edge *boolean*

| | |
|------------|---|
| Synopsis | Enable automatic detection of edge port characteristics |
| Context | configure service vpls string sap string stp auto-edge boolean |
| Tree | auto-edge |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

edge-port *boolean*

| | |
|----------|--------------------------------------|
| Synopsis | Designate SAP or SDP as an edge port |
|----------|--------------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string stp edge-port boolean |
| Tree | edge-port |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

link-type *keyword*

| | |
|------------|---|
| Synopsis | Configure STP link-type |
| Context | configure service vpls string sap string stp link-type keyword |
| Tree | link-type |
| Default | pt-pt |
| Options | pt-pt, shared |
| Introduced | 16.0.R4 |
| Platforms | All |

mst-instance [[mst-inst-number](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the mst-instance list instance |
| Context | configure service vpls string sap string stp mst-instance number |
| Tree | mst-instance |
| Introduced | 19.10.R1 |
| Platforms | All |

[\[mst-inst-number\]](#) *number*

| | |
|------------|---|
| Synopsis | Multiple Spanning Tree Instance number |
| Context | configure service vpls string sap string stp mst-instance number |
| Tree | mst-instance |
| Range | 1 to 4094 |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-path-cost *number*

| | |
|------------|---|
| Synopsis | MSTI path cost |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-path-cost <i>number</i> |
| Tree | mst-path-cost |
| Range | 1 to 200000000 |
| Default | 10 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-port-priority *number*

| | |
|------------|---|
| Synopsis | MSTI port priority |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-port-priority <i>number</i> |
| Tree | mst-port-priority |
| Range | 0 16 32 48 64 80 96 112 128 144 160 176 192 208 224 240 |
| Default | 128 |
| Introduced | 19.10.R1 |
| Platforms | All |

path-cost *number*

| | |
|------------|--|
| Synopsis | Configure path-cost |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp path-cost <i>number</i> |
| Tree | path-cost |
| Range | 1 to 200000000 |
| Default | 10 |
| Introduced | 16.0.R4 |
| Platforms | All |

port-num *number*

| | |
|----------|---|
| Synopsis | Configure virtual port number |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp port-num <i>number</i> |
| Tree | port-num |

| | |
|------------|-----------|
| Range | 1 to 2047 |
| Introduced | 16.0.R4 |
| Platforms | All |

priority *number*

| | |
|------------|--|
| Synopsis | Configure STP priority |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 128 |
| Introduced | 16.0.R4 |
| Platforms | All |

root-guard *boolean*

| | |
|------------|---|
| Synopsis | Enable/disable STP root-guard |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp root-guard <i>boolean</i> |
| Tree | root-guard |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

sub-sla-mgmt

| | |
|------------|--|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of SAP subscriber management |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt admin-state <i>keyword</i> |

| | |
|------------|---|
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|---|
| Synopsis | Enter the defaults context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Default application profile name for this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id

| | |
|------------|---|
| Synopsis | Enter the int-dest-id context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id |
| Tree | int-dest-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|----------|---|
| Synopsis | Use the configured string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id string string |

| | |
|---------------|--|
| Tree | string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

top-q-tag

| | |
|------------|---|
| Synopsis | Use the top Q-tag of this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id top-q-tag |
| Tree | top-q-tag |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | Default SLA profile for hosts on this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Default subscriber profile used for subscribers on this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|------------|---|
| Synopsis | Use auto-generated subscriber identification string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use SAP ID as default subscriber identification string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Default subscriber identification string for the SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id string string |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-da-hashing *boolean*

| | |
|------------|--|
| Synopsis | Use destination MAC address instead of subscriber ID to select egress LAG link |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt mac-da-hashing <i>boolean</i> |
| Tree | mac-da-hashing |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-sub-parameters

| | |
|------------|--|
| Synopsis | Enter the single-sub-parameters context |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters |
| Tree | single-sub-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

non-sub-traffic

| | |
|------------|--|
| Synopsis | Enable the non-sub-traffic context |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic |
| Tree | non-sub-traffic |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Application profile name for all non-subscriber traffic |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | SLA profile applicable for all non-subscriber traffic |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile reference |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile string |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |

| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt2m

| | |
|-------------|---|
| Synopsis | Enable the udt2m context |
| Context | configure service vpls string segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m |
| Tree | udt2m |
| Description | Commands in this context configure the SRv6 uDT2M behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value *number*

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vpls string segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m <i>value</i> <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |

| | |
|------------|---|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt2u

| | |
|-------------|---|
| Synopsis | Enable the udt2u context |
| Context | configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u |
| Tree | udt2u |
| Description | Commands in this context configure the SRv6 uDT2U behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|

service-mtu *number*

| | |
|----------|--|
| Synopsis | MTU size |
| Context | configure <i>service vpls string</i> service-mtu <i>number</i> |
| Tree | service-mtu |

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

| Tree | auto-learn-mac-protect-exclude-list |
| Description | This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object. |

| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Reference | configure bfd bfd-template string |
| Introduced | 21.2.R1 |
| Platforms | All |

failure-action *keyword*

| | |
|-------------|---|
| Synopsis | VCCV BFD action taken on the SDP binding |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> bfd failure-action <i>keyword</i> |
| Tree | failure-action |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Default | none |
| Options | none, down |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range | 1 to 60 |
| Units | seconds |
| Introduced | 21.2.R1 |
| Platforms | All |

block-on-mesh-failure *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |

| | |
|---------------|--|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (<i>number keyword</i>) cfm-vlan-tag <i>string</i> |
| Tree | cfm-vlan-tag |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |

| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i> |
| Tree | auto-learn-mac-protect-exclude-list |
| Description | This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object. |

maximum-mac-addresses number

| | |
|----------|--|
| Synopsis | Maximum number of MAC address entries in the FDB |
| Context | configure service vpls string spoke-sdp string fdb maximum-mac-addresses number |
| Tree | maximum-mac-addresses |

Description This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this spoke SDP.

When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.

When the configured limit is reached and the **configure service spoke-sdp fdb discard-unknown-source** command is set to **true** for this spoke SDP, packets with unknown source MAC addresses are discarded. If **discard-unknown-source** is set to **false**, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the spoke SDP uses the global MAC learning limitations.

policy *reference*

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> igmp-snooping mcac policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPE subscribers in per-SAP replication mode.</p> |

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| Default | 10 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | All |

periodic-timer *boolean*

| | |
|------------|--|
| Synopsis | Enable the Periodic Transmission Timer |
| Context | configure service vpls string spoke-sdp string mrp periodic-timer boolean |
| Tree | periodic-timer |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

policy *reference*

| | |
|------------|--|
| Synopsis | MRP policy to control Group B-MAC attributes |
| Context | configure service vpls string spoke-sdp string mrp policy reference |
| Tree | policy |
| Reference | configure service mrp policy string |
| Introduced | 20.10.R1 |
| Platforms | All |

oper-group *reference*

| | |
|------------|---|
| Synopsis | Operational group identifier |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | All |

pbb

| | |
|------------|---|
| Synopsis | Enter the pbb context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> pbb |
| Tree | pbb |
| Introduced | 20.10.R1 |
| Platforms | All |

fault-propagation

| | |
|------------|---|
| Synopsis | Enter the fault-propagation context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> pbb fault-propagation |
| Tree | fault-propagation |
| Introduced | 20.10.R1 |
| Platforms | All |

backbone-mac-address [[address](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for backbone-mac-address |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> pbb fault-propagation backbone-mac-address <i>string</i> |
| Tree | backbone-mac-address |
| Introduced | 20.10.R1 |
| Platforms | All |

[address] *string*

| | |
|------------|---|
| Synopsis | Backbone MAC address |
| Context | configure service vpls string spoke-sdp string pbb fault-propagation backbone-mac-address string |
| Tree | backbone-mac-address |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

backbone-mac-name [[name](#)] *reference*

| | |
|------------|---|
| Synopsis | Add a list entry for backbone-mac-name |
| Context | configure service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference |
| Tree | backbone-mac-name |
| Introduced | 20.10.R1 |
| Platforms | All |

[name] *reference*

| | |
|------------|---|
| Synopsis | Backbone MAC address name |
| Context | configure service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference |
| Tree | backbone-mac-name |
| Reference | configure service pbb mac string |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

pim-snooping

| | |
|------------|--|
| Synopsis | Enter the pim-snooping context |
| Context | configure service vpls string spoke-sdp string pim-snooping |
| Tree | pim-snooping |
| Introduced | 16.0.R1 |

Platforms All

maximum-number-groups *number*

Synopsis Maximum groups for this interface

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [pim-snooping](#) [maximum-number-groups](#) *number*

Tree [maximum-number-groups](#)

Range 1 to 16000

Introduced 16.0.R1

Platforms All

pw-status

Synopsis Enter the **pw-status** context

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [pw-status](#)

Tree [pw-status](#)

Introduced 16.0.R1

Platforms All

signaling *boolean*

Synopsis Enable the use of pseudowire status signaling

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [pw-status](#) [signaling](#) *boolean*

Tree [signaling](#)

Default true

Introduced 16.0.R1

Platforms All

spb

Synopsis Enable the **spb** context

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [spb](#)

Tree [spb](#)

Introduced 21.10.R1

Platforms All

admin-state *keyword*

Synopsis Admin state
 Context **configure** [service vpls string spoke-sdp string spb admin-state keyword](#)
 Tree [admin-state](#)
 Default disable
 Options enable, disable
 Introduced 21.10.R1
 Platforms All

level [*id*] *number*

Synopsis Enter the **level** list instance
 Context **configure** [service vpls string spoke-sdp string spb level number](#)
 Tree [level](#)
 Introduced 21.10.R1
 Platforms All

[id] *number*

Synopsis Level identifier
 Context **configure** [service vpls string spoke-sdp string spb level number](#)
 Tree [level](#)
 Range 1
 Notes This element is part of a list key.
 Introduced 21.10.R1
 Platforms All

hello-interval *number*

Synopsis Hello interval
 Context **configure** [service vpls string spoke-sdp string spb level number hello-interval number](#)
 Tree [hello-interval](#)

| | |
|------------|------------|
| Range | 1 to 20000 |
| Default | 9 |
| Units | seconds |
| Introduced | 21.10.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|---|
| Synopsis | Hello multiplier |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

metric *number*

| | |
|------------|---|
| Synopsis | Metric |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> metric <i>number</i> |
| Tree | metric |
| Range | 0 to 16777215 |
| Default | 0 |
| Introduced | 21.10.R1 |
| Platforms | All |

lsp-pacing-interval *number*

| | |
|------------|--|
| Synopsis | Lsp pacing interval |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb lsp-pacing-interval <i>number</i> |
| Tree | lsp-pacing-interval |
| Range | 0 to 65535 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |

Platforms All

retransmit-interval *number*

Synopsis Retransmit interval
 Context **configure** *service vpls string spoke-sdp string spb retransmit-interval number*
 Tree [retransmit-interval](#)
 Range 1 to 65535
 Default 5
 Units seconds
 Introduced 21.10.R1
 Platforms All

split-horizon-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Name of the split horizon group where the spoke SDP bind belongs to
 Context **configure** *service vpls string spoke-sdp string split-horizon-group reference*
 Tree [split-horizon-group](#)
 Reference **configure** *service vpls string split-horizon-group string*
 Introduced 16.0.R1
 Platforms All

static-isid

Synopsis Enter the **static-isid** context
 Context **configure** *service vpls string spoke-sdp string static-isid*
 Tree [static-isid](#)
 Introduced 19.10.R1
 Platforms All

range [*range-id*] *number*

| | |
|------------|---|
| Synopsis | Enter the range list instance |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> |
| Tree | range |
| Introduced | 19.10.R1 |
| Platforms | All |

[range-id] *number*

| | |
|------------|---|
| Synopsis | Range ID for static ISID |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> |
| Tree | range |
| Range | 1 to 8191 |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

end *number*

| | |
|------------|---|
| Synopsis | Upper bound of the ISID range |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> end <i>number</i> |
| Tree | end |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

start *number*

| | |
|------------|---|
| Synopsis | Lower bound of the ISID range |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> start <i>number</i> |
| Tree | start |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

stp

| | |
|------------|---|
| Synopsis | Enter the stp context |
| Context | configure service vpls string spoke-sdp string stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of STP |
| Context | configure service vpls string spoke-sdp string stp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

auto-edge *boolean*

| | |
|------------|---|
| Synopsis | Enable automatic detection of edge port characteristics |
| Context | configure service vpls string spoke-sdp string stp auto-edge boolean |
| Tree | auto-edge |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

edge-port *boolean*

| | |
|------------|---|
| Synopsis | Designate SAP or SDP as an edge port |
| Context | configure service vpls string spoke-sdp string stp edge-port boolean |
| Tree | edge-port |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

link-type *keyword*

| | |
|------------|--|
| Synopsis | Configure STP link-type |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp link-type <i>keyword</i> |
| Tree | link-type |
| Default | pt-pt |
| Options | pt-pt, shared |
| Introduced | 16.0.R4 |
| Platforms | All |

path-cost *number*

| | |
|------------|---|
| Synopsis | Configure path-cost |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp path-cost <i>number</i> |
| Tree | path-cost |
| Range | 1 to 200000000 |
| Default | 10 |
| Introduced | 16.0.R4 |
| Platforms | All |

port-num *number*

| | |
|------------|--|
| Synopsis | Virtual port number |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp port-num <i>number</i> |
| Tree | port-num |
| Range | 1 to 2047 |
| Introduced | 16.0.R4 |
| Platforms | All |

priority *number*

| | |
|----------|--|
| Synopsis | Configure STP priority |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |

| | |
|------------|---------|
| Default | 128 |
| Introduced | 16.0.R4 |
| Platforms | All |

root-guard *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable STP root-guard |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp root-guard <i>boolean</i> |
| Tree | root-guard |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

transit-policy

| | |
|------------|---|
| Synopsis | Enable the transit-policy context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> transit-policy |
| Tree | transit-policy |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

prefix *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IP prefix policy ID |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> transit-policy prefix <i>reference</i> |
| Tree | prefix |
| Reference | configure application-assurance <i>group</i> <i>number</i> partition <i>number</i> transit-prefix-policy <i>number</i> |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vc-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> vc-type <i>keyword</i> |
| Tree | vc-type |
| Default | ether |
| Options | ether, vlan |
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-vc-tag *number*

| | |
|------------|---|
| Synopsis | SDP bind VC tag |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> vlan-vc-tag <i>number</i> |
| Tree | vlan-vc-tag |
| Range | 0 to 4094 |
| Introduced | 16.0.R1 |
| Platforms | All |

stp

| | |
|------------|---|
| Synopsis | Enter the stp context |
| Context | configure service vpls <i>string</i> stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of STP |
| Context | configure service vpls <i>string</i> stp admin-state <i>keyword</i> |
| Tree | admin-state |

| | |
|------------|-----------------|
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

forward-delay *number*

| | |
|------------|---|
| Synopsis | Configure forward-delay |
| Context | configure service vpls <i>string</i> stp forward-delay <i>number</i> |
| Tree | forward-delay |
| Range | 4 to 30 |
| Default | 15 |
| Introduced | 16.0.R4 |
| Platforms | All |

hello-time *number*

| | |
|------------|--|
| Synopsis | Configure hello-time |
| Context | configure service vpls <i>string</i> stp hello-time <i>number</i> |
| Tree | hello-time |
| Range | 1 to 10 |
| Default | 2 |
| Introduced | 16.0.R4 |
| Platforms | All |

hold-count *number*

| | |
|------------|--|
| Synopsis | Configure BPDU transmit hold count |
| Context | configure service vpls <i>string</i> stp hold-count <i>number</i> |
| Tree | hold-count |
| Range | 1 to 20 |
| Default | 6 |
| Introduced | 16.0.R4 |
| Platforms | All |

maximum-age *number*

| | |
|------------|--|
| Synopsis | Configure maximum STP information age |
| Context | configure <i>service vpls string stp maximum-age number</i> |
| Tree | <i>maximum-age</i> |
| Range | 6 to 40 |
| Default | 20 |
| Introduced | 16.0.R4 |
| Platforms | All |

mode *keyword*

| | |
|------------|--|
| Synopsis | Configure protocol version |
| Context | configure <i>service vpls string stp mode keyword</i> |
| Tree | <i>mode</i> |
| Default | rstp |
| Options | rstp, comp-dot1w, dot1w, mstp, pmstp |
| Introduced | 16.0.R4 |
| Platforms | All |

mst-instance [*mst-inst-number*] *number*

| | |
|------------|---|
| Synopsis | Enter the mst-instance list instance |
| Context | configure <i>service vpls string stp mst-instance number</i> |
| Tree | <i>mst-instance</i> |
| Introduced | 19.10.R1 |
| Platforms | All |

[mst-inst-number] *number*

| | |
|----------|---|
| Synopsis | Multiple Spanning Tree Instance number |
| Context | configure <i>service vpls string stp mst-instance number</i> |
| Tree | <i>mst-instance</i> |
| Range | 1 to 4094 |
| Notes | This element is part of a list key. |

Introduced 19.10.R1
 Platforms All

mst-priority *number*

Synopsis Priority of multiple spanning tree instance
 Context **configure** *service vpls string stp mst-instance number mst-priority number*
 Tree [mst-priority](#)
 Range 0 | 4096 | 8192 | 12288 | 16384 | 20480 | 24576 | 28672 | 32768 | 36864 | 40960 | 45056
 | 49152 | 53248 | 57344 | 61440
 Default 32768
 Introduced 19.10.R1
 Platforms All

vlan-range [*range*] *string*

Synopsis Add a list entry for **vlan-range**
 Context **configure** *service vpls string stp mst-instance number vlan-range string*
 Tree [vlan-range](#)
 Introduced 19.10.R1
 Platforms All

[range] *string*

Synopsis Range of VLANs associated with the M-VPLS SAP
 Context **configure** *service vpls string stp mst-instance number vlan-range string*
 Tree [vlan-range](#)
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms All

mst-maximum-hops *number*

Synopsis Maximum number of hops in an MSTP region
 Context **configure** *service vpls string stp mst-maximum-hops number*

| | |
|------------|----------------------------------|
| Tree | mst-maximum-hops |
| Range | 1 to 40 |
| Default | 20 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-name *string*

| | |
|---------------|--|
| Synopsis | MST region name |
| Context | configure service vpls string stp mst-name string |
| Tree | mst-name |
| String Length | 1 to 32 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-revision *number*

| | |
|------------|--|
| Synopsis | MST configuration revision |
| Context | configure service vpls string stp mst-revision number |
| Tree | mst-revision |
| Range | 0 to 65535 |
| Introduced | 19.10.R1 |
| Platforms | All |

priority *number*

| | |
|------------|--|
| Synopsis | STP bridge priority |
| Context | configure service vpls string stp priority number |
| Tree | priority |
| Range | 0 to 65535 |
| Default | 32768 |
| Introduced | 16.0.R4 |
| Platforms | All |

temp-flooding *number*

| | |
|------------|--|
| Synopsis | Temporary flooding |
| Context | configure service vpls <i>string</i> temp-flooding <i>number</i> |
| Tree | temp-flooding |
| Range | 3 to 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

vpn-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | VPN identifier for the service |
| Context | configure service vpls <i>string</i> vpn-id <i>number</i> |
| Tree | vpn-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

vxlan

| | |
|------------|--|
| Synopsis | Enter the vxlan context |
| Context | configure service vpls <i>string</i> vxlan |
| Tree | vxlan |
| Introduced | 16.0.R1 |
| Platforms | All |

instance [[vxlan-instance](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the instance list instance |
| Context | configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> |
| Tree | instance |
| Introduced | 16.0.R1 |

Platforms All

[vxlan-instance] *number*

Synopsis VXLAN instance
 Context **configure service vpls string vxlan instance number**
 Tree [instance](#)
 Range 1 to 2
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

assisted-replication

Synopsis Enter the **assisted-replication** context
 Context **configure service vpls string vxlan instance number assisted-replication**
 Tree [assisted-replication](#)
 Introduced 16.0.R1
 Platforms All

leaf

Synopsis Enable the **leaf** context
 Context **configure service vpls string vxlan instance number assisted-replication leaf**
 Tree [leaf](#)
 Notes The following elements are part of a choice: **leaf** or **replicator**.
 Introduced 16.0.R1
 Platforms All

acttime *number*

Synopsis Time for the leaf to wait before sending traffic to a new replicator
 Context **configure service vpls string vxlan instance number assisted-replication leaf acttime number**
 Tree [acttime](#)

| | |
|------------|----------|
| Range | 1 to 255 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

replicator

| | |
|------------|---|
| Synopsis | AR role as replicator |
| Context | configure service vpls <i>string vxlan instance number</i> assisted-replication replicator |
| Tree | replicator |
| Notes | The following elements are part of a choice: leaf or replicator . |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-vtep [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Add a list entry for egress-vtep |
| Context | configure service vpls <i>string vxlan instance number</i> egress-vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | egress-vtep |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

[[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | VTEP IP address used when originating VXLAN packets |
| Context | configure service vpls <i>string vxlan instance number</i> egress-vtep (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | egress-vtep |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fdb

| | |
|----------|------------------------------|
| Synopsis | Enter the fdb context |
|----------|------------------------------|

| | |
|------------|--|
| Context | configure service vpls string vxlan instance number fdb |
| Tree | fdb |
| Introduced | 16.0.R1 |
| Platforms | All |

discard-unknown-source *boolean*

| | |
|------------|--|
| Synopsis | Discard frames with unknown source |
| Context | configure service vpls string vxlan instance number fdb discard-unknown-source <i>boolean</i> |
| Tree | discard-unknown-source |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-learning

| | |
|------------|---|
| Synopsis | Enter the mac-learning context |
| Context | configure service vpls string vxlan instance number fdb mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

aging *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable aging of MAC addresses |
| Context | configure service vpls string vxlan instance number fdb mac-learning aging <i>boolean</i> |
| Tree | aging |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

learning *boolean*

| | |
|----------|---|
| Synopsis | Enable learning of new MAC addresses |
| Context | configure service vpls string vxlan instance number fdb mac-learning learning <i>boolean</i> |

| | |
|------------|--|
| Tree | learning |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

maximum-mac-addresses *number*

| | |
|------------|---|
| Synopsis | Maximum number of MAC entries in the FDB from this vxlan instance |
| Context | configure service vpls string vxlan instance number fdb maximum-mac-addresses number |
| Tree | maximum-mac-addresses |
| Range | 1 to 511999 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

protected-src-mac-violation-action *keyword*

| | |
|------------|---|
| Synopsis | Action when a relearn request for a protected MAC is received |
| Context | configure service vpls string vxlan instance number fdb protected-src-mac-violation-action keyword |
| Tree | protected-src-mac-violation-action |
| Options | discard |
| Introduced | 16.0.R1 |
| Platforms | All |

igmp-snooping

| | |
|------------|--|
| Synopsis | Enter the igmp-snooping context |
| Context | configure service vpls string vxlan instance number igmp-snooping |
| Tree | igmp-snooping |
| Introduced | 16.0.R5 |
| Platforms | All |

mrouter-port *boolean*

| | |
|----------|--|
| Synopsis | Enable VXLAN binds as multicast router ports |
|----------|--|

| | |
|------------|---|
| Context | configure service vpls string vxlan instance number igmp-snooping mrouter-port boolean |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

mld-snooping

| | |
|------------|---|
| Synopsis | Enter the mld-snooping context |
| Context | configure service vpls string vxlan instance number mld-snooping |
| Tree | mld-snooping |
| Introduced | 16.0.R5 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Enable VXLAN binds as multicast router ports |
| Context | configure service vpls string vxlan instance number mld-snooping mrouter-port boolean |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

network

| | |
|------------|--|
| Synopsis | Enter the network context |
| Context | configure service vpls string vxlan instance number network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|----------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vpls string vxlan instance number network ingress |

| | |
|------------|-------------------------|
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vpls string vxlan instance number network ingress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

network

| | |
|------------|--|
| Synopsis | Enter the network context |
| Context | configure service vpls string vxlan instance number network ingress qos network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | All |

fp-redirect-group

| | |
|------------|--|
| Synopsis | Enter the fp-redirect-group context |
| Context | configure service vpls string vxlan instance number network ingress qos network fp-redirect-group |
| Tree | fp-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *reference*

| | |
|-----------|--|
| Synopsis | Name of the forwarding plane queue group template |
| Context | configure service vpls string vxlan instance number network ingress qos network fp-redirect-group group-name <i>reference</i> |
| Tree | group-name |
| Reference | configure qos queue-group-templates ingress queue-group string |

Introduced 16.0.R1
 Platforms All

instance *number*

Synopsis Instance of the forwarding-plane ingress Queue Group for this SDP binding
 Context **configure** [service](#) [vpls](#) [string](#) [vxlan](#) [instance](#) [number](#) [network](#) [ingress](#) [qos](#) [network](#) [fp-redirect-group](#) [instance](#) [number](#)
 Tree [instance](#)
 Range 1 to 65535
 Introduced 16.0.R1
 Platforms All

policy-name *reference*

Synopsis Ingress network policy name applied to this SDP binding
 Context **configure** [service](#) [vpls](#) [string](#) [vxlan](#) [instance](#) [number](#) [network](#) [ingress](#) [qos](#) [network](#) [policy-name](#) [reference](#)
 Tree [policy-name](#)
 Reference **configure** [qos](#) [network](#) [string](#)
 Introduced 16.0.R1
 Platforms All

rx-discard-on-ndf *keyword*

Synopsis Received multicast traffic type discarded on NDF
 Context **configure** [service](#) [vpls](#) [string](#) [vxlan](#) [instance](#) [number](#) [rx-discard-on-ndf](#) [keyword](#)
 Tree [rx-discard-on-ndf](#)
 Default bm
 Options bm, bum, none
 Introduced 16.0.R4
 Platforms All

source-vtep-security *boolean*

Synopsis Enable/disable source vtep security

| | |
|------------|---|
| Context | configure service vpls string vxlan instance number source-vtep-security boolean |
| Tree | source-vtep-security |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

vni number

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | VNI of the VXLAN |
| Context | configure service vpls string vxlan instance number vni number |
| Tree | vni |
| Range | 1 to 16777215 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

source-vtep (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Vxlan source virtual tunnel endpoint information |
| Context | configure service vpls string vxlan source-vtep (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | source-vtep |
| Introduced | 16.0.R1 |
| Platforms | All |

wlan-gw

| | |
|------------|--|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vpls string wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of WLAN-GW |
| Context | configure service vpls string wlan-gw admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vpls string wlan-gw description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | WLAN-GW endpoint within the VPLS service |
| Context | configure service vpls string wlan-gw wlan-gw-group <i>reference</i> |
| Tree | wlan-gw-group |
| Description | <p>This command specifies a WLAN-GW group to be used as an endpoint within the VPLS. This feature is used in conjunction with the configure service vprn subscriber-interface group-interface wlan-gw vlan-range dynamic-service command for a VPRN service and the configure service ies subscriber-interface group-interface wlan-gw vlan-range dynamic-service command for an IES service.</p> <p>See "Dynamic VPLS service" in the <i>7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide</i> for more information about the dynamic VPLS service feature.</p> |
| Reference | configure isa wlan-gw-group <i>number</i> |

Introduced 23.3.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vprn [[service-name](#)] *string*

Synopsis Enter the **vprn** list instance
 Context **configure** [service](#) [vprn](#) *string*
 Tree [vprn](#)
 Introduced 16.0.R1
 Platforms All

[service-name] *string*

Synopsis Administrative service name
 Context **configure** [service](#) [vprn](#) *string*
 Tree [vprn](#)
 String Length 1 to 64
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

aa-interface [[interface-name](#)] *string*

Synopsis Enter the **aa-interface** list instance
 Context **configure** [service](#) [vprn](#) *string* [aa-interface](#) *string*
 Tree [aa-interface](#)
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *string*

Synopsis Interface name
 Context **configure** [service](#) [vprn](#) *string* [aa-interface](#) *string*
 Tree [aa-interface](#)
 String Length 1 to 32

| | |
|------------|--|
| Notes | This element is part of a list key. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the interface |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|------------|--|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn string aa-interface string ipv4 |
| Tree | ipv4 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

primary

| | |
|------------|---|
| Synopsis | Enable the primary context |
| Context | configure service vprn string aa-interface string ipv4 primary |
| Tree | primary |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|------------|--|
| Synopsis | Primary IPv4 address assigned to the interface |
| Context | configure service vprn string aa-interface string ipv4 primary address string |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

prefix-length *number*

| | |
|------------|--|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn string aa-interface string ipv4 primary prefix-length number |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sap [**sap-id**] *string*

| | |
|----------------|--|
| Synopsis | Enter the sap list instance |
| Context | configure service vprn string aa-interface string sap string |
| Tree | sap |
| Max. Instances | 1 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[sap-id] *string*

| | |
|---------------|--|
| Synopsis | SAP ID |
| Context | configure service vprn string aa-interface string sap string |
| Tree | sap |
| String Length | 1 to 45 |
| Notes | This element is part of a list key. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the SAP |
| Context | configure service vprn string aa-interface string sap string admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn string aa-interface string sap string description string |
| Tree | description |
| String Length | 1 to 160 |

Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis Enter the **egress** context
 Context **configure service vprn string aa-interface string sap string egress**
 Tree **egress**
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis Enter the **filter** context
 Context **configure service vprn string aa-interface string sap string egress filter**
 Tree **filter**
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip reference

Synopsis IPv4 filter policy name
 Context **configure service vprn string aa-interface string sap string egress filter ip reference**
 Tree **ip**
 Reference **configure filter ip-filter string**
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis Enter the **qos** context
 Context **configure service vprn string aa-interface string sap string egress qos**
 Tree **qos**
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policy ID to associate with SAP for mirrored service |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> egress qos sap-egress policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fwd-wholesale

| | |
|------------|--|
| Synopsis | Enter the fwd-wholesale context |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> fwd-wholesale |
| Tree | fwd-wholesale |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pppoe-service *reference*

| | |
|------------|---|
| Synopsis | PPPoE service name |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> fwd-wholesale pppoe-service <i>reference</i> |
| Tree | pppoe-service |
| Reference | configure service epipe <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|---|
| Synopsis | Enter the ingress context |
| Context | configure service vprn string aa-interface string sap string ingress |
| Tree | ingress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn string aa-interface string sap string ingress qos |
| Tree | qos |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sap-ingress

| | |
|------------|---|
| Synopsis | Enter the sap-ingress context |
| Context | configure service vprn string aa-interface string sap string ingress qos sap-ingress |
| Tree | sap-ingress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

overrides

| | |
|------------|---|
| Synopsis | Enter the overrides context |
| Context | configure service vprn string aa-interface string sap string ingress qos sap-ingress overrides |
| Tree | overrides |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|----------|-----------|
| Synopsis | Policy ID |
|----------|-----------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress <i>policy-name</i> <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-ingress <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lag

| | |
|------------|---|
| Synopsis | Enter the lag context |
| Context | configure service vprn <i>string</i> aa-interface <i>string</i> sap <i>string</i> lag |
| Tree | lag |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

aaa

| | |
|------------|--|
| Synopsis | Enter the aaa context |
| Context | configure service vprn <i>string</i> aaa |
| Tree | aaa |
| Introduced | 16.0.R4 |
| Platforms | All |

remote-servers

| | |
|------------|---|
| Synopsis | Enter the remote-servers context |
| Context | configure service vprn <i>string</i> aaa remote-servers |
| Tree | remote-servers |
| Introduced | 16.0.R4 |
| Platforms | All |

radius

| | |
|----------|--|
| Synopsis | Enable the radius context |
| Context | configure service vprn <i>string</i> aaa remote-servers radius |

| | |
|------------|------------------------|
| Tree | radius |
| Introduced | 16.0.R4 |
| Platforms | All |

access-algorithm *keyword*

| | |
|------------|---|
| Synopsis | Algorithm used to access the set of RADIUS servers |
| Context | configure service vprn <i>string</i> aaa remote-servers radius access-algorithm <i>keyword</i> |
| Tree | access-algorithm |
| Default | direct |
| Options | direct, round-robin |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting *boolean*

| | |
|------------|---|
| Synopsis | Enable RADIUS command accounting |
| Context | configure service vprn <i>string</i> aaa remote-servers radius accounting <i>boolean</i> |
| Tree | accounting |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting-port *number*

| | |
|------------|---|
| Synopsis | Port number on RADIUS server for accounting requests |
| Context | configure service vprn <i>string</i> aaa remote-servers radius accounting-port <i>number</i> |
| Tree | accounting-port |
| Range | 1 to 65535 |
| Default | 1813 |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the authentication server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

authorization *boolean*

| | |
|------------|--|
| Synopsis | Enable RADIUS authorization |
| Context | configure service vprn <i>string</i> aaa remote-servers radius authorization <i>boolean</i> |
| Tree | authorization |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

interactive-authentication *boolean*

| | |
|------------|---|
| Synopsis | Enable RADIUS interactive authentication |
| Context | configure service vprn <i>string</i> aaa remote-servers radius interactive-authentication <i>boolean</i> |
| Tree | interactive-authentication |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

port *number*

| | |
|----------|--|
| Synopsis | UDP port number on which to contact RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius port <i>number</i> |
| Tree | port |
| Range | 1 to 65535 |
| Default | 1812 |

| | |
|------------|---------|
| Introduced | 16.0.R4 |
| Platforms | All |

server [[index](#)] *number*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn string aaa remote-servers radius server number |
| Tree | server |
| Max. Instances | 5 |
| Introduced | 16.0.R4 |
| Platforms | All |

[index] *number*

| | |
|------------|--|
| Synopsis | RADIUS server ID |
| Context | configure service vprn string aaa remote-servers radius server number |
| Tree | server |
| Range | 1 to 5 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IP address of the RADIUS server |
| Context | configure service vprn string aaa remote-servers radius server number address (ipv4-address-no-zone ipv6-address-no-zone) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

authenticator *keyword*

| | |
|----------|--|
| Synopsis | Authenticator hash algorithm for the RADIUS server |
|----------|--|

| | |
|-------------|--|
| Context | configure service vprn string aaa remote-servers radius server number authenticator keyword |
| Tree | authenticator |
| Description | This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets. |
| Default | md5 |
| Options | md5, sm3 |
| Introduced | 22.10.R1 |
| Platforms | All |

secret string

| | |
|---------------|--|
| Synopsis | Secret key to access the RADIUS server |
| Context | configure service vprn string aaa remote-servers radius server number secret string |
| Tree | secret |
| String Length | 1 to 115 |
| Introduced | 16.0.R4 |
| Platforms | All |

tls-client-profile reference

| | |
|-------------|--|
| Synopsis | TLS client profile for the RADIUS server |
| Context | configure service vprn string aaa remote-servers radius server number tls-client-profile reference |
| Tree | tls-client-profile |
| Description | This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS. |
| Reference | configure system security tls client-tls-profile string |
| Introduced | 21.10.R1 |
| Platforms | All |

server-retry number

| | |
|----------|--|
| Synopsis | Number of attempts to retry contacting RADIUS server |
| Context | configure service vprn string aaa remote-servers radius server-retry number |

| | |
|------------|------------------------------|
| Tree | server-retry |
| Range | 1 to 10 |
| Default | 3 |
| Introduced | 16.0.R4 |
| Platforms | All |

server-timeout *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response from the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server-timeout <i>number</i> |
| Tree | server-timeout |
| Range | 1 to 90 |
| Default | 3 |
| Units | seconds |
| Introduced | 16.0.R4 |
| Platforms | All |

use-default-template *boolean*

| | |
|------------|---|
| Synopsis | Apply the RADIUS default user template to RADIUS user |
| Context | configure service vprn <i>string</i> aaa remote-servers radius use-default-template <i>boolean</i> |
| Tree | use-default-template |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

tacplus

| | |
|------------|--|
| Synopsis | Enable the tacplus context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus |
| Tree | tacplus |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting

| | |
|------------|--|
| Synopsis | Enable the accounting context |
| Context | configure service vprn string aaa remote-servers tacplus accounting |
| Tree | accounting |
| Introduced | 16.0.R4 |
| Platforms | All |

record-type *keyword*

| | |
|------------|--|
| Synopsis | Type of accounting record packet sent to TACACS+ server |
| Context | configure service vprn string aaa remote-servers tacplus accounting record-type keyword |
| Tree | record-type |
| Default | stop-only |
| Options | start-stop, stop-only |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the TACACS+ protocol |
| Context | configure service vprn string aaa remote-servers tacplus admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

authorization

| | |
|------------|---|
| Synopsis | Enable the authorization context |
| Context | configure service vprn string aaa remote-servers tacplus authorization |
| Tree | authorization |
| Introduced | 16.0.R4 |
| Platforms | All |

request-format

| | |
|-------------|--|
| Synopsis | Enter the request-format context |
| Context | configure service vprn string aaa remote-servers tacplus authorization request-format |
| Tree | request-format |
| Description | Commands in this context configure access operations that are sent to the TACACS+ server during authorization. |
| Introduced | 21.10.R3 |
| Platforms | All |

access-operation-cmd *keyword*

| | |
|----------------|---|
| Synopsis | Access operations sent in authorization requests |
| Context | configure service vprn string aaa remote-servers tacplus authorization request-format access-operation-cmd keyword |
| Tree | access-operation-cmd |
| Description | This command sends an operation argument in authorization requests.

In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces. |
| Options | delete |
| Max. Instances | 1 |
| Introduced | 21.10.R3 |
| Platforms | All |

use-priv-lvl *boolean*

| | |
|-------------|---|
| Synopsis | Allow privilege level mapping |
| Context | configure service vprn string aaa remote-servers tacplus authorization use-priv-lvl boolean |
| Tree | use-priv-lvl |
| Description | When configured to true , this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except enable-admin). |

When configured to **false**, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the **tacplus use-default-template** setting is enabled).

| | |

| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Destination IP address prefix of the aggregate route |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | aggregate |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

aggregator

| | |
|------------|---|
| Synopsis | Enter the aggregator context |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator |
| Tree | aggregator |
| Introduced | 16.0.R1 |
| Platforms | All |

address string

| | |
|------------|--|
| Synopsis | Aggregator IP address |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator address string |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

as-number number

| | |
|------------|--|
| Synopsis | Aggregator AS number |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number number |
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

as-set *boolean*

| | |
|-------------|---|
| Synopsis | Use AS_SET path segment type for the aggregate route |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) as-set <i>boolean</i> |
| Tree | as-set |
| Description | When configured to true , the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.

When configured to false , the AS_PATH attribute contains no AS_SET and will be originated by the ESR. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole

| | |
|------------|---|
| Synopsis | Enable the blackhole context |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole |
| Tree | blackhole |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |
| Platforms | All |

generate-icmp *boolean*

| | |
|-------------|--|
| Synopsis | Send ICMP unreachable messages for aggregate routes |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i> |
| Tree | generate-icmp |
| Description | When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop.

When configured to false , ICMP unreachable messages are not generated. |
| Default | false |
| Introduced | 16.0.R2 |
| Platforms | All |

community string

| | |
|----------------|---|
| Synopsis | Community name that is added to the aggregate route |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) community string |
| Tree | community |
| Description | This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route. |
| String Length | 1 to 72 |
| Max. Instances | 12 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

discard-component-communities boolean

| | |
|------------|---|
| Synopsis | Advertise aggregate with aggregate route community set |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) discard-component-communities boolean |
| Tree | discard-component-communities |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

indirect (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Address of the indirect next hop |
| Context | configure service vprn <i>string aggregates aggregate (ipv4-prefix ipv6-prefix) indirect (ipv4-address-no-zone ipv6-address-no-zone)</i> |
| Tree | indirect |
| Description | This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded. |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|-------------|--|
| Synopsis | Local preference used when aggregate route is exported |
| Context | configure service vprn <i>string aggregates aggregate (ipv4-prefix ipv6-prefix) local-preference number</i> |
| Tree | local-preference |
| Description | This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes. |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|---|
| Synopsis | Policy name for the aggregated route |
| Context | configure service vprn <i>string aggregates aggregate (ipv4-prefix ipv6-prefix) policy reference</i> |
| Tree | policy |
| Description | This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub- |

tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.

If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.

| | |
|------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | All |

summary-only *boolean*

| | |
|-------------|--|
| Synopsis | Advertise the aggregate route only |
| Context | configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) summary-only <i>boolean</i> |
| Tree | summary-only |
| Description | When configured to true , the router suppresses the advertisement of more specific component routes for the aggregate.

When configured to false , the router advertises both the aggregate route and its contributing routes. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

tunnel-group *number*

| | |
|-------------|--|
| Synopsis | Tunnel group from which to associate the MC IPsec state |
| Context | configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i> |
| Tree | tunnel-group |
| Description | This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route. |
| Range | 1 to 64 |
| Introduced | 20.7.R1 |
| Platforms | All |

allow-export-bgp-vpn *boolean*

| | |
|----------|-----------------------------------|
| Synopsis | Include BGP-VPN routes for export |
|----------|-----------------------------------|

| | |
|------------|---|
| Context | configure service vpn <i>string</i> allow-export-bgp-vpn <i>boolean</i> |
| Tree | allow-export-bgp-vpn |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

autonomous-system *number*

| | |
|-------------|--|
| Synopsis | AS number advertised to peers for this router |
| Context | configure service vpn <i>string</i> autonomous-system <i>number</i> |
| Tree | autonomous-system |
| Description | This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.

If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted. |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp

| | |
|------------|---|
| Synopsis | Enable the bgp context |

| Tree | bgp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the BGP instance |
| Context | configure service vpn <i>string</i> bgp admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |

Platforms All

advertise-inactive *boolean*

Synopsis Advertise inactive BGP routes to peers

Context **configure** [service vprn string bgp advertise-inactive boolean](#)

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows any inactive BGP route to be advertised, even though it is not the used route.

When configured to **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Default false

Introduced 16.0.R1

Platforms All

advertise-ipv6-next-hops

Synopsis Enter the **advertise-ipv6-next-hops** context

Context **configure** [service vprn string bgp advertise-ipv6-next-hops](#)

Tree [advertise-ipv6-next-hops](#)

Introduced 19.5.R1

Platforms All

ipv4 *boolean*

Synopsis Enable IPv4 routes to be advertised

Context **configure** [service vprn string bgp advertise-ipv6-next-hops ipv4 boolean](#)

Tree [ipv4](#)

Default false

Introduced 19.5.R1

Platforms All

aggregator-id-zero *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to 0

Context **configure** [service vprn string bgp aggregator-id-zero boolean](#)

| | |
|-------------|--|
| Tree | aggregator-id-zero |
| Description | When configured to true , the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.

When configured to false , the AS number and router ID are added to the AGGREGATOR path attribute. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|------------|---|
| Synopsis | Advertise support for 4-byte ASNs |
| Context | configure service vprn string bgp asn-4-byte boolean |
| Tree | asn-4-byte |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | BGP authentication key for all peers |
| Context | configure service vprn string bgp authentication-key string |
| Tree | authentication-key |
| Description | This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting. |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|----------|--|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn string bgp authentication-keychain reference |
| Tree | authentication-keychain |

| | |
|-------------|--|
| Description | This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session. |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

backup-path

| | |
|-------------|--|
| Synopsis | Enter the backup-path context |
| Context | configure service vprn <i>string</i> bgp backup-path |
| Tree | backup-path |
| Description | <p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for unlabeled unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp backup-path ipv4 <i>boolean</i> |

| Platforms | All |

d-path-length-ignore *boolean*

| | |
|----------|---|
| Synopsis | Enable D-PATH length ignore |
| Context | configure service vprn <i>string</i> bgp best-path-selection d-path-length-ignore <i>boolean</i> |
| Tree | d-path-length-ignore |

Description When configured to **true**, this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

| | |
|------------|----------|
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

deterministic-med *boolean*

| | |
|-------------|--|
| Synopsis | Group paths based on AS before MED attribute comparison |
| Context | configure service vprn <i>string</i> bgp best-path-selection deterministic-med <i>boolean</i> |
| Tree | deterministic-med |
| Description | <p>When configured to true, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.</p> <p>When configured to false, paths are not grouped and the overall best-path selection can depend on the order of route arrival.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ebgp-ibgp-equal

| | |
|-------------|--|
| Synopsis | Enter the ebgp-ibgp-equal context |
| Context | configure service vprn <i>string</i> bgp best-path-selection ebgp-ibgp-equal |
| Tree | ebgp-ibgp-equal |
| Description | <p>Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGp learned route over an IBGP learned route.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Consider EBGp and IBGP IPv4 routes equal |

domain-id *string*

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp domain-id <i>string</i> |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |

fast-external-failover *boolean*

| | |
|-------------|---|
| Synopsis | Drop external BGP session immediately when link fails |
| Context | configure service vprn string bgp fast-external-failover boolean |
| Tree | fast-external-failover |
| Description | When configured to true , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down.
When configured to false , the BGP session remains up until the hold time expires. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

flowspec

| | |
|------------|---|
| Synopsis | Enter the flowspec context |
| Context | configure service vprn string bgp flowspec |
| Tree | flowspec |
| Introduced | 16.0.R1 |
| Platforms | All |

validate-dest-prefix *boolean*

| | |
|-------------|--|
| Synopsis | Validate destination prefix in FlowSpec-IPv4/IPv6 route |
| Context | configure service vprn string bgp flowspec validate-dest-prefix boolean |
| Tree | validate-dest-prefix |
| Description | When configured to true , this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent. |

A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true:

- it was originated outside the local AS of the receiving BGP router
- the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix

An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers.

When configured to **false**, destination-prefix validation is disabled.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

validate-redirect-ip *boolean*

| | |
|-------------|--|
| Synopsis | Validate the redirect-to-IPv4 action in FlowSpec route |
| Context | configure service vprn <i>string</i> bgp flowspec validate-redirect-ip <i>boolean</i> |
| Tree | validate-redirect-ip |
| Description | <p>When configured to true, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.</p> <p>A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.</p> <p>When configured to false, the validation check is disabled.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> bgp graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

gr-notification *boolean*

| | |
|-------------|---|
| Synopsis | Perform Graceful Restart procedures |
| Context | configure service vprn <i>string</i> bgp graceful-restart gr-notification <i>boolean</i> |
| Tree | gr-notification |
| Description | When configured to true , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to false , NOTIFICATION messages are not supported. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

long-lived

| | |
|------------|---|

| Context | configure service vpn <i>string</i> bgp graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|-------------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
| Context | configure service vpn <i>string</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Default | none |
| Options | none, all, non-fw |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vpn <i>string</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | <p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p> |

| | |
|------------|-----------|
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override. |
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|-------------|--|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived without-no-export <i>boolean</i> |
| Tree | without-no-export |
| Description | When configured to true , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to false , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

restart-time *number*

| | |
|------------|--|
| Synopsis | Restart time advertised by GR capability |
| Context | configure service vprn <i>string</i> bgp graceful-restart restart-time <i>number</i> |

Introduced 16.0.R1

Platforms All

advertise-inactive *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure service vprn string bgp group string advertise-inactive boolean**

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

advertise-ipv6-next-hops

Synopsis Enable the **advertise-ipv6-next-hops** context

interface [interface-name] reference

| | |
|----------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn string bgp group string dynamic-neighbor interface reference |

| | |
|-------------|--|
| Tree | interface |
| Description | <p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p> |
| Introduced | 22.10.R1 |
| Platforms | All |

| Tree | allowed-peer-as |
| Description | This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .

All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100]. |
| Max. Instances | 32 |
| Notes | This element is ordered by the user. |

| Platforms | All |

dynamic-neighbor-limit *number*

| | |
|-------------|--|
| Synopsis | Maximum dynamic BGP sessions to accept from remote peer |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> dynamic-neighbor-limit <i>number</i> |
| Tree | dynamic-neighbor-limit |
| Description | This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new |

dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.

When unconfigured, the setting is inherited from the BGP global-level configuration.

| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value. |
| Range | 0 to 16777216 |
| Default | 16777216 |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|-------------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Default | none |
| Options | none, all, non-fwd |
| Introduced | 16.0.R1 |

Platforms All

helper-override-restart-time *number*

Synopsis Locally-configured override for restart time

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [graceful-restart long-lived helper-override-restart-time](#) *number*

Tree [helper-override-restart-time](#)

Description This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.

Range 0 to 4095

Introduced 16.0.R1

Platforms All

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [graceful-restart long-lived helper-override-stale-time](#) *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range 0 to 16777215

Introduced 16.0.R1

Platforms All

without-no-export *boolean*

Synopsis Advertise LLGR stale routes to non-LLGR peers

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [graceful-restart long-lived without-no-export](#) *boolean*

Tree [without-no-export](#)

| | |
|-------------|---|
| Description | <p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time minimum-hold-time <i>number</i> |
| Tree | minimum-hold-time |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
When unconfigured, the command value is inherited from the BGP global-level setting. |
| Range | 0 3 to 65536 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|--|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time seconds <i>number</i> |
| Tree | seconds |
| Description | This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.
Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances. <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. When unconfigured, the command setting is inherited from the BGP global-level configuration. |
| Range | 0 3 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

initial-send-delay-zero *boolean*

| | |
|-------------|---|
| Synopsis | Send BGP updates as soon as the session comes up |
| Context | configure service vprn string bgp group string initial-send-delay-zero <i>boolean</i> |
| Tree | initial-send-delay-zero |
| Description | When configured to true , BGP updates are sent as soon as the session comes up.
When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false .
When this command inherits a value of false , BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established. |
| Introduced | 16.0.R1 |
| Platforms | All |

keepalive *number*

| | |
|-------------|--|
| Synopsis | Time after which the BGP KEEPALIVE message is sent |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> keepalive <i>number</i> |
| Tree | keepalive |
| Description | <p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p> |

Synopsis Support Link Bandwidth EC in IPv6 routes

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [link-bandwidth send-to-ebgp ipv6](#) *boolean*

Tree [ipv6](#)

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

label-ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Support Link Bandwidth EC in label-IPv4 routes |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> link-bandwidth send-to-ebgp label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

local-address (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

| | |
|---------------|--|
| Synopsis | Local IP address used when communicating with BGP peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-address (<i>ipv4-address-no-zone ipv6-address-no-zone interface-name</i>) |
| Tree | local-address |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

local-as

| | |
|------------|---|
| Synopsis | Enter the local-as context |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-as |
| Tree | local-as |
| Introduced | 16.0.R1 |
| Platforms | All |

as-number *number*

| | |
|----------|--|
| Synopsis | Local (or virtual) BGP AS number |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-as as-number <i>number</i> |

| | |
|------------|---------------------------|
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

prepend-global-as *boolean*

| | |
|-------------|--|
| Synopsis | Prepend global ASN when advertising routes to BGP peer |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-as prepend-global-as <i>boolean</i> |
| Tree | prepend-global-as |
| Description | When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to false , the global ASN is not included in the AS_PATH attribute. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

private *boolean*

| | |
|-------------|--|
| Synopsis | Hide the local ASN in sent paths learned from peering |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-as private <i>boolean</i> |
| Tree | private |
| Description | When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.
When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|----------|--|
| Synopsis | Default local preference if not in incoming routes |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-preference <i>number</i> |
| Tree | local-preference |
| Range | 0 to 4294967295 |

Introduced 16.0.R1
Platforms All

loop-detect *keyword*

Synopsis Strategy for loop detection in the AS path
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **loop-detect** *keyword*
Tree [loop-detect](#)
Options drop-peer, ignore-loop, off, discard-route
Introduced 16.0.R1
Platforms All

loop-detect-threshold *number*

Synopsis Threshold for the global ASN in a received AS path
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **loop-detect-threshold** *number*
Tree [loop-detect-threshold](#)
Range 0 to 15
Introduced 16.0.R6
Platforms All

med-out (*number* | *keyword*)

Synopsis Default MED attribute value to advertise to peers
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **med-out** (*number* | *keyword*)
Tree [med-out](#)
Max. Range 0 to 4294967295
Options igp-cost
Introduced 16.0.R1
Platforms All

min-route-advertisement *number*

Synopsis Minimum time before a prefix can be advertised to peer
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **min-route-advertisement** *number*

| | |
|------------|---|
| Tree | min-route-advertisement |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor

| | |
|------------|---|
| Synopsis | Enable the monitor context |
| Context | configure service vprn string bgp group string monitor |
| Tree | monitor |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BMP monitoring |
| Context | configure service vprn string bgp group string monitor admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

all-stations *boolean*

| | |
|-------------|--|
| Synopsis | Send BMP messages to all configured stations |
| Context | configure service vprn string bgp group string monitor all-stations boolean |
| Tree | all-stations |
| Description | <p>When configured to true, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to false, the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

route-monitoring

| | |
|------------|--|
| Synopsis | Enter the route-monitoring context |
| Context | configure service vprn string bgp group string monitor route-monitoring |
| Tree | route-monitoring |
| Introduced | 16.0.R1 |
| Platforms | All |

post-policy *boolean*

| | |
|------------|---|
| Synopsis | Allow post-policy route-monitoring messages to be sent |
| Context | configure service vprn string bgp group string monitor route-monitoring post-policy <i>boolean</i> |
| Tree | post-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pre-policy *boolean*

| | |
|------------|--|
| Synopsis | Allow pre-policy route-monitoring messages to be sent |
| Context | configure service vprn string bgp group string monitor route-monitoring pre-policy <i>boolean</i> |
| Tree | pre-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

station [[station-name](#)] *reference*

| | |
|----------------|--|
| Synopsis | Add a list entry for station |
| Context | configure service vprn string bgp group string monitor station <i>reference</i> |
| Tree | station |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |

Platforms All

[station-name] reference

Synopsis BMP monitoring station
 Context **configure service vprn string bgp group string monitor station reference**
 Tree [station](#)
 Reference **configure bmp station string**
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

multihop number

Synopsis TTL in IP packet headers for EBGp peers multi-hops away
 Context **configure service vprn string bgp group string multihop number**
 Tree [multihop](#)
 Range 1 to 255
 Introduced 16.0.R1
 Platforms All

multipath-eligible boolean

Synopsis Allow routes from group peers in multipath eligibility
 Context **configure service vprn string bgp group string multipath-eligible boolean**
 Tree [multipath-eligible](#)
 Default false
 Introduced 19.5.R1
 Platforms All

next-hop-self boolean

Synopsis Advertise routes with local address as next-hop address
 Context **configure service vprn string bgp group string next-hop-self boolean**
 Tree [next-hop-self](#)

| | |
|------------|---------|

| Tree | label-ipv4 |

| | |
|------------|---------|
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|---|
| Synopsis | Enable passive mode for BGP communication |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> passive <i>boolean</i> |
| Tree | passive |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

path-mtu-discovery *boolean*

| | |
|-------------|--|
| Synopsis | Enable Path MTU Discovery |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|----------|--|
| Synopsis | Peer AS number |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-as <i>number</i> |

| | |
|------------|-------------------------|
| Tree | peer-as |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|--|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Route preference for routes learned from all peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit [[family](#)] *keyword*

| | |
|------------|---|
| Synopsis | Enter the prefix-limit list instance |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> |
| Tree | prefix-limit |
| Introduced | 16.0.R1 |

Platforms All

[family] *keyword*

Synopsis Address family to which the limit applies

| Introduced | 16.0.R1 |
| Platforms | All |

extended boolean

| | |
|-------------|--|
| Synopsis | Advertise the Extended Communities attribute to peers |
| Context | configure service vprn string bgp group string send-communities extended boolean |
| Tree | extended |
| Description | <p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to false, all extended communities are removed from all routes advertised to BGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

large boolean

| | |
|-------------|---|
| Synopsis | Advertise the Large Communities attribute to peers |
| Context | configure service vprn string bgp group string send-communities large boolean |
| Tree | large |
| Description | <p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to false, all large communities are removed from all routes advertised to BGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

standard boolean

| | |
|-------------|---|
| Synopsis | Advertise the Communities attribute to peers |
| Context | configure service vprn string bgp group string send-communities standard boolean |
| Tree | standard |
| Description | <p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> |

When configured to **false**, all standard communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1
 Platforms All

send-default

| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

static-group *boolean*

| | |
|------------|--|
| Synopsis | Use group for static peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> static-group <i>boolean</i> |
| Tree | static-group |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | TCP maximum segment size override |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> tcp-mss (<i>number</i> <i>keyword</i>) |
| Tree | tcp-mss |

| | |
|-------------|---|
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p> |
| Range | 384 to 9746 |
| Options | ip-stack |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|-------------|---|
| Synopsis | Apply third-party next-hop processing to EBGP peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> third-party-nexthop <i>boolean</i> |
| Tree | third-party-nexthop |
| Description | <p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ttl-security *number*

| | |
|----------|---|
| Synopsis | Minimum TTL value for an incoming BGP packet |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> ttl-security <i>number</i> |
| Tree | ttl-security |

| | |
|-------------|--|
| Description | This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|------------|---|
| Synopsis | BGP peer type |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> <i>type keyword</i> |
| Tree | <i>type</i> |
| Default | no-type |
| Options | no-type, internal, external |
| Introduced | 16.0.R1 |
| Platforms | All |

hold-time

| | |

| Introduced | 16.0.R1 |
| Platforms | All |

minimum-hold-time *number*

| | |
|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure <i>service vprn string</i> <i>bgp hold-time minimum-hold-time number</i> |
| Tree | <i>minimum-hold-time</i> |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. |
| Range | 0 3 to 65535 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|---|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure <i>service vprn string bgp hold-time seconds number</i> |
| Tree | <i>seconds</i> |
| Description | <p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. |
| Range | 0 3 to 65535 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

ibgp-multipath *boolean*

| | |
|-------------|---|
| Synopsis | Enable IBGP multipath load balancing |
| Context | configure <i>service vprn string bgp ibgp-multipath boolean</i> |
| Tree | <i>ibgp-multipath</i> |
| Description | <p>When configured to true, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to false, this command disables IBGP multipath load balancing.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

Introduced 16.0.R1

Platforms All

advertise-inactive *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-inactive** *boolean*

Tree **advertise-inactive**

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

advertise-ipv6-next-hops

| | |
|------------|--|
| Synopsis | Enable the advertise-ipv6-next-hops context |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) advertise-ipv6-next-hops |

| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) aggregator-id-zero boolean |
| Tree | aggregator-id-zero |
| Introduced | 16.0.R1 |
| Platforms | All |

as-override *boolean*

| | |
|-------------|--|
| Synopsis | Replace the peer ASN with the local ASN in AS Path |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) as-override boolean |
| Tree | as-override |
| Description | <p>When configured to true, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> |

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When the command inherits a value of **false**, no AS override is performed.

| | |

|------------|---|
| Synopsis | Enable default reject import policy for external peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) ebgp-default-reject-policy import <i>boolean</i> |
| Tree | import |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

enforce-first-as *boolean*

| | |
|-------------|---|
| Synopsis | Enforce the configured peer AS value in received routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i> |
| Tree | enforce-first-as |
| Description | <p>When configured to true for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, received routes are not checked for compliance with the rule.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

error-handling

| | |
|----------|---|
| Synopsis | Enter the error-handling context |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling |
| Tree | error-handling |
| Introduced | 16.0.R1 |
| Platforms | All |

update-fault-tolerance *boolean*

| | |
|-------------|--|
| Synopsis | Tolerate non-critical errors in UPDATE messages |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling update-fault-tolerance <i>boolean</i> |
| Tree | update-fault-tolerance |
| Description | <p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

evpn-link-bandwidth

| | |
|------------|--|
| Synopsis | Enter the evpn-link-bandwidth context |

advertised-stale-time *number*

Synopsis LLGR stale routes time for family override

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived family** *keyword* **advertised-stale-time** *number*

Tree [advertised-stale-time](#)

Description This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.
This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

Platforms All

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived family** *keyword* **helper-override-stale-time** *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.

Range 0 to 16777216

Default 16777216

Introduced 16.0.R1

Platforms All

forwarding-bits-set *keyword*

Synopsis BGP LLGR forwarding-bit behavior for address family

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived forwarding-bits-set** *keyword*

Tree [forwarding-bits-set](#)

| | |
|-------------|---|
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Default | none |
| Options | none, all, non-fwd |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | <p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p> |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

| Introduced | 16.0.R1 |
| Platforms | All |

local-as

| | |
|------------|--|
| Synopsis | Enter the local-as context |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as |
| Tree | local-as |
| Introduced | 16.0.R1 |
| Platforms | All |

as-number *number*

| | |
|------------|--|
| Synopsis | Local (or virtual) BGP AS number |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as as-number <i>number</i> |
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

prepend-global-as *boolean*

| | |
|-------------|--|
| Synopsis | Prepend global ASN when advertising routes to BGP peer |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as prepend-global-as <i>boolean</i> |
| Tree | prepend-global-as |
| Description | When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to false , the global ASN is not included in the AS_PATH attribute. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

private *boolean*

| | |
|-------------|--|
| Synopsis | Hide the local ASN in sent paths learned from peering |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private <i>boolean</i> |
| Tree | private |
| Description | When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.
When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|------------|--|
| Synopsis | Default local preference if not in incoming routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-preference <i>number</i> |
| Tree | local-preference |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect *keyword*

| | |
|------------|--|
| Synopsis | Strategy for loop detection in the AS path |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect <i>keyword</i> |
| Tree | loop-detect |
| Options | drop-peer, ignore-loop, off, discard-route |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect-threshold *number*

| | |
|----------|--|
| Synopsis | Threshold for the global ASN in a received AS path |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect-threshold <i>number</i> |

| Range | 0 to 15 |
| Introduced | 16.0.R6 |
| Platforms | All |

med-out (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Default MED attribute value to advertise to peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) med-out (<i>number</i> <i>keyword</i>) |
| Tree | med-out |
| Max. Range | 0 to 4294967295 |
| Options | igp-cost |
| Introduced | 16.0.R1 |
| Platforms | All |

min-route-advertisement *number*

| | |
|------------|--|
| Synopsis | Minimum interval between successive prefix updates |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) min-route-advertisement <i>number</i> |
| Tree | min-route-advertisement |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor

| | |
|------------|--|
| Synopsis | Enable the monitor context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor |
| Tree | monitor |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BMP monitoring |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

all-stations *boolean*

| | |
|-------------|--|
| Synopsis | Send BMP messages to all configured stations |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor all-stations <i>boolean</i> |
| Tree | all-stations |
| Description | <p>When configured to true, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to false, the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

route-monitoring

| | |
|------------|---|
| Synopsis | Enter the route-monitoring context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring |
| Tree | route-monitoring |
| Introduced | 16.0.R1 |
| Platforms | All |

post-policy *boolean*

| | |
|------------|---|
| Synopsis | Allow post-policy route-monitoring messages to be sent |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring post-policy <i>boolean</i> |
| Tree | post-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pre-policy *boolean*

| | |
|------------|--|
| Synopsis | Allow pre-policy route-monitoring messages to be sent |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring pre-policy <i>boolean</i> |
| Tree | pre-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

station [[station-name](#)] *reference*

| | |
|----------------|--|
| Synopsis | Add a list entry for station |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i> |
| Tree | station |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

[station-name] *reference*

| | |
|----------|--|
| Synopsis | BMP monitoring station |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i> |
| Tree | station |

| | |
|------------|---|
| Reference | configure bmp station string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

multihop *number*

| | |
|------------|--|
| Synopsis | TTL in IP packet headers for EBGPeers multi-hops away |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) multihop number |
| Tree | multihop |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

multipath-eligible *boolean*

| | |
|------------|---|
| Synopsis | Allow routes from this peer in multipath eligibility |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) multipath-eligible boolean |
| Tree | multipath-eligible |
| Introduced | 19.5.R1 |
| Platforms | All |

next-hop-self *boolean*

| | |
|-------------|--|
| Synopsis | Advertise routes with local address as next-hop address |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) next-hop-self boolean |
| Tree | next-hop-self |
| Description | <p>When configured to true, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the configure router bgp rr-vpn-forwarding command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> |

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 16.0.R1
 Platforms All

origin-validation

Synopsis Enable the **origin-validation** context
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation**
 Tree [origin-validation](#)
 Introduced 19.7.R1
 Platforms All

ipv4 boolean

Synopsis Enable support for unlabeled unicast IPv4 routes
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv4 boolean**
 Tree [ipv4](#)
 Default false
 Introduced 19.7.R1
 Platforms All

ipv6 boolean

Synopsis Enable support for unlabeled unicast IPv6 routes
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv6 boolean**
 Tree [ipv6](#)
 Default false
 Introduced 19.7.R1
 Platforms All

label-ipv4 boolean

Synopsis Enable support for labeled-unicast IPv4 routes

| | |
|------------|--|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|---|
| Synopsis | Use passive mode for BGP communication |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i> |
| Tree | passive |
| Introduced | 16.0.R1 |
| Platforms | All |

path-mtu-discovery *boolean*

| | |
|-------------|---|
| Synopsis | Enable path MTU discovery |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|-------------|---|
| Synopsis | Peer AS number |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i> |
| Tree | peer-as |
| Description | <p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p> |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-creation-type *keyword*

| | |
|------------|---|
| Synopsis | Peer creation type |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i> |
| Tree | peer-creation-type |
| Default | static |
| Options | static, dynamic, dynamic-if-remote, dynamic-if-local |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> |

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, peer tracking is disabled.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

preference number

| | |
|-------------|---|
| Synopsis | Route preference for routes learned from all peers |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) preference number |
| Tree | preference |
| Description | This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

When unconfigured, the command setting is inherited from the group-level configuration. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit [family] keyword

| | |
|------------|--|
| Synopsis | Enter the prefix-limit list instance |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) prefix-limit keyword |

| Introduced | 16.0.R1 |
| Platforms | All |

[family] keyword

| | |
|----------|--|
| Synopsis | Address family to which the limit applies |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) prefix-limit keyword |
| Tree | prefix-limit |

| | |
|------------|--|
| Options | ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

idle-timeout *number*

| | |
|-------------|---|
| Synopsis | Time which BGP peering remains idle before reconnecting |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> idle-timeout <i>number</i> |
| Tree | idle-timeout |
| Description | This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.

When unconfigured, the command inherits the value from the group-level configuration. |
| Range | 1 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Send warning message at threshold instead of take-down |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum *number*

| | |
|-------------|---|
| Synopsis | Maximum number of routes to be learned from a peer |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> maximum <i>number</i> |
| Tree | maximum |
| Description | This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken. |

| | |
|------------|----------------------------|
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R2 |
| Platforms | All |

post-import *boolean*

| | |
|------------|---|
| Synopsis | Apply limit only to routes accepted by import policies |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> post-import <i>boolean</i> |
| Tree | post-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Percentage threshold that triggers a warning message |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

remove-private

| | |
|------------|--|
| Synopsis | Enable the remove-private context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private |
| Tree | remove-private |
| Introduced | 16.0.R1 |
| Platforms | All |

limited *boolean*

| | |
|------------|---|
| Synopsis | Remove private ASNs up to first public ASN encountered |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i> |
| Tree | limited |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

replace *boolean*

| | |
|------------|---|
| Synopsis | Replace private ASN with global ASN before advertising |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i> |
| Tree | replace |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

skip-peer-as *boolean*

| | |
|------------|--|
| Synopsis | Keep private ASN if it is the same as the BGP peer ASN |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i> |
| Tree | skip-peer-as |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

send-communities

| | |
|------------|--|
| Synopsis | Enter the send-communities context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities |
| Tree | send-communities |
| Introduced | 16.0.R1 |

Platforms All

extended *boolean*

Synopsis Advertise the Extended Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities extended** *boolean*

Tree **extended**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

large *boolean*

Synopsis Advertise the Large Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities large** *boolean*

Tree **large**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

standard *boolean*

Synopsis Advertise the Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities standard** *boolean*

Tree **standard**

| | |
|-------------|--|
| Description | <p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

send-default

| | |
|------------|--|
| Synopsis | Enable the send-default context |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) send-default |
| Tree | send-default |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv4 family type |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) send-default ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv6 family type |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|--|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss (*number* | *keyword*)

| | |
|-------------|--|
| Synopsis | TCP maximum segment size override |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tcp-mss (<i>number</i> <i>keyword</i>) |
| Tree | tcp-mss |
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> |

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

| | |
|------------|-------------|
| Range | 384 to 9746 |
| Options | ip-stack |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|------------|--|
| Synopsis | Apply third-party next-hop processing to EBGP peers |

use-bgp-routes *boolean*

| | |
|-------------|--|
| Synopsis | Use BGP routes to resolve BGP next hops |
| Context | configure service vprn <i>string</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i> |
| Tree | use-bgp-routes |
| Description | <p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p> |

| | |
|------------|----------|
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

path-mtu-discovery *boolean*

| | |
|-------------|---|
| Synopsis | Enable Path MTU Discovery |
| Context | configure service vprn <i>string</i> bgp path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | When configured to true , Path MTU Discovery (PMTUD) is enabled for the associated TCP connections. |

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

| | |

resolution *keyword*

| | |
|------------|---|
| Synopsis | Resolution method for tunnel selection |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution <i>keyword</i> |
| Tree | resolution |
| Default | none |
| Options | none, filter, any |
| Introduced | 20.10.R1 |
| Platforms | All |

resolution-filter

| | |
|-------------|---|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Description | Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers. |
| Introduced | 20.10.R1 |
| Platforms | All |

bgp *boolean*

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter
bgp <i>boolean</i> |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

ldp *boolean*

| | |
|-------------|--|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter
ldp <i>boolean</i> |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.

When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

mpls-fwd-policy *boolean*

| | |
|-------------|---|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter
mpls-fwd-policy <i>boolean</i> |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.

When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |

| | |
|------------|----------|
| Introduced | 20.10.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.

When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.

When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-isis *boolean*

| | |
|----------|--|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
sr-isis <i>boolean</i> |

| | |
|-------------|--|
| Tree | sr-isis |
| Description | <p>When configured to true, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf boolean

| | |
|-------------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean |
| Tree | sr-ospf |
| Description | <p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf3 boolean

| | |
|-------------|--|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 boolean |
| Tree | sr-ospf3 |
| Description | <p>When configured to true, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p> |
| Default | false |

| | |
|------------|----------|
| Introduced | 20.10.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|---|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | <p>When configured to true, this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|---|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te <i>boolean</i> |
| Tree | sr-te |
| Description | <p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

udp *boolean*

| | |
|----------|--|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp <i>boolean</i> |

| | |
|-------------|--|
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.

When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.

The following are examples of the conflict priority handling: <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero. |
| Introduced | 20.10.R1 |
| Platforms | All |

domain-id string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn string bgp-evpn mpls number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |
| Introduced | 21.10.R1 |
| Platforms | All |

dynamic-egress-label-limit boolean

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure service vprn string bgp-evpn mpls number dynamic-egress-label-limit boolean |
| Tree | dynamic-egress-label-limit |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> |

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

max-dynamic-weight *number*

| | |
|-------------|---|
| Synopsis | Maximum dynamic weight of the route |
| Context | configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise max-dynamic-weight number |
| Tree | max-dynamic-weight |
| Description | This command configures the maximum weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If weight dynamic is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight. |
| Range | 1 to 128 |
| Default | 128 |
| Introduced | 22.7.R1 |
| Platforms | All |

weight (*number* | *keyword*)

| | |
|-------------|---|
| Synopsis | Weight of the route |
| Context | configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise weight (number keyword) |
| Tree | weight |
| Description | This command configures the weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service.

If set to dynamic , the weight is dynamically set based on the number of BGP PE-CE paths for the IP-Prefix that is advertised in an EVPN IP-Prefix route. |
| Range | 1 to 128 |
| Default | dynamic |
| Options | dynamic |
| Introduced | 22.7.R1 |
| Platforms | All |

weighted-ecmp *boolean*

| | |
|-------------|--|
| Synopsis | Enable weighted ECMP |
| Context | configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> evpn-link-bandwidth weighted-ecmp <i>boolean</i> |
| Tree | weighted-ecmp |
| Description | <p>When configured to true, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.</p> <p>Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).</p> <p>The command also enables the weighted ECMP functionality for BGP CEs that are configured with an evpn-link-bandwidth add-to-received-bgp weight.</p> <p>When configured to false, the router disables the processing of the EVPN link bandwidth extended community.</p> |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | All |

route-distinguisher (*string* | *keyword*)

domain-id string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vpn string bgp-evpn segment-routing-v6 number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> |

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

| Context | configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> evi <i>number</i> |
| Tree | evi |
| Description | This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) or an R-VPLS (for the EVPN-IFF model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment. |
| Range | 1 to 16777215 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

resolution keyword

| | |
|------------|--|
| Synopsis | Resolution options for routes |
| Context | configure service vprn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> resolution <i>keyword</i> |
| Tree | resolution |
| Default | route-table |
| Options | route-table, tunnel-table, fallback-tunnel-to-route-table |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

route-distinguisher (*string* | *keyword*)

| | |
|-------------|---|
| Synopsis | Route distinguisher |
| Context | configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> route-distinguisher (<i>string</i> <i>keyword</i>) |
| Tree | route-distinguisher |
| Description | This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify the VPN to which the route belongs.

Alternatively, the system can automatically generate an RD based on the BGP automatic RD range configured at the configure service system level. |
| Options | auto-rd |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

source-address *string*

| | |
|-------------|---|
| Synopsis | Source IPv6 address |
| Context | configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> source-address <i>string</i> |
| Tree | source-address |
| Description | When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.

When not configured, the source IPv6 address is inherited from the configuration of the global default address in the router "base" segment-routing segment-routing-v6 source-address context.

A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address. |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

srv6

| | |
|------------|---|
| Synopsis | Enter the srv6 context |
| Context | configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> srv6 |
| Tree | srv6 |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

default-locator *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

vrf-target

| | |
|-------------|---|
| Synopsis | Enter the vrf-target context |
| Context | configure service vpn <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> vrf-target |
| Tree | vrf-target |
| Description | <p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p> |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

community string

| | |
|---------------|---|
| Synopsis | Extended BGP community |
| Context | configure service vprn string bgp-evpn segment-routing-v6 number vrf-target community string |
| Tree | community |
| Description | This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers. |
| String Length | 10 to 28 |
| Notes | The following elements are part of a choice: community or (export-community and import-community). |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

export-community string

| | |
|---------------|--|
| Synopsis | Communities sent to remote PE neighbors |
| Context | configure service vprn string bgp-evpn segment-routing-v6 number vrf-target export-community string |
| Tree | export-community |
| String Length | 10 to 28 |
| Notes | The following elements are part of a choice: community or (export-community and import-community). |
| Introduced | 22.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

import-community string

| | |
|---------------|--|
| Synopsis | Communities accepted from remote PE neighbors |

| Platforms | All |

mpls

| | |
|------------|---|
| Synopsis | Enter the mpls context |
| Context | configure service vprn string bgp-ipvpn mpls |
| Tree | mpls |
| Introduced | 21.2.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BGP-IPVPN MPLS |
| Context | configure service vprn string bgp-ipvpn mpls admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.2.R1 |
| Platforms | All |

auto-bind-tunnel

| | |
|-------------|---|
| Synopsis | Enter the auto-bind-tunnel context |
| Context | configure service vprn string bgp-ipvpn mpls auto-bind-tunnel |
| Tree | auto-bind-tunnel |
| Description | Commands in this context configure the automatic binding parameters of a BGP-IPVPN service using tunnels to MP-BGP peers. |
| Introduced | 21.2.R1 |
| Platforms | All |

allow-flex-algo-fallback *boolean*

| | |
|-------------|--|
| Synopsis | Enable flexible algorithm fallback |
| Context | configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i> |
| Tree | allow-flex-algo-fallback |
| Description | When configured to true , a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.

When configured to false , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

ecmp *number*

| | |
|-------------|---|
| Synopsis | Maximum ECMP routes allowed |
| Context | configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel ecmp <i>number</i> |
| Tree | ecmp |
| Description | This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level. |
| Range | 1 to 32 |
| Default | 1 |
| Introduced | 21.2.R1 |
| Platforms | All |

enforce-strict-tunnel-tagging *boolean*

| | |
|-------------|---|
| Synopsis | Allow enforcement of strict tunnel tagging |
| Context | configure service vprn <i>string</i> bgp-ipvprn mpls auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i> |
| Tree | enforce-strict-tunnel-tagging |
| Description | When configured to true , the system must only consider LSPs marked with an administrative tag for next-hop resolution. |

When configured to **false**, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

resolution keyword

| | |
|------------|---|
| Synopsis | Resolution method for tunnel selection |
| Context | configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution <i>keyword</i> |
| Tree | resolution |
| Default | none |
| Options | none, filter, any |
| Introduced | 21.2.R1 |
| Platforms | All |

resolution-filter

| | |
|-------------|---|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Description | Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers. |
| Introduced | 21.2.R1 |
| Platforms | All |

bgp boolean

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp <i>boolean</i> |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |

| | |
|------------|---------|
| Default | true |
| Introduced | 21.2.R1 |
| Platforms | All |

gre boolean

| | |
|-------------|--|
| Synopsis | Use GRE tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre <i>boolean</i> |
| Tree | gre |
| Description | When configured to true , this command enables setting the tunnel type for the auto bind tunnel.
When configured to false , this command disables setting the tunnel type for the auto bind tunnel. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

ldp boolean

| | |
|-------------|--|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp <i>boolean</i> |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.
When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

mpls-fwd-policy boolean

| | |
|----------|--|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter mpls-fwd-policy <i>boolean</i> |
| Tree | mpls-fwd-policy |

| | |
|-------------|---|
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.
When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-isis *boolean*

| | |
|-------------|---|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis <i>boolean</i> |
| Tree | sr-isis |
| Description | When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.

When configured to false , IS-IS tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf *boolean*

| | |
|-------------|--|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i> |
| Tree | sr-ospf |
| Description | When configured to true , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.

When configured to false , OSPF tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf3 *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i> |
| Tree | sr-ospf3 |
| Description | When configured to true , BGP uses an OSPFv3 tunnel type to determine the address of the BGP next hop. |

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPFv3 instance.

When configured to **false**, OSPFv3 tunneling is not used for next-hop resolution.

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|--|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | <p>When configured to true, SR policies are used to determine the address of the BGP next hop.</p> <p>The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|---|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te <i>boolean</i> |
| Tree | sr-te |
| Description | <p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

udp *boolean*

| | |
|-------------|--|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter udp <i>boolean</i> |
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

weighted-ecmp *boolean*

| | |
|-------------|--|
| Synopsis | Allow weighted load-balancing |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp <i>boolean</i> |
| Tree | weighted-ecmp |
| Description | When configured to true , this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.
When configured to false , this command disables weighted ECMP for next-hop tunnel selection. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

domain-id *string*

| | |
|-------------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls domain-id <i>string</i> |
| Tree | domain-id |
| Description | This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i> . Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The |

VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

| | |
|------------|----------|
| Introduced | 21.10.R1 |
| Platforms | All |

dynamic-egress-label-limit *boolean*

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls dynamic-egress-label-limit <i>boolean</i> |
| Tree | dynamic-egress-label-limit |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p> |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

route-distinguisher (*string* | *keyword*)

| | |
|----------|---------------------|
| Synopsis | Route distinguisher |
|----------|---------------------|

| | |
|-------------|--|
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls route-distinguisher (<i>string</i> <i>keyword</i>) |
| Tree | route-distinguisher |
| Description | This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to. |
| Options | auto-rd |
| Introduced | 21.2.R1 |
| Platforms | All |

vrf-export

| | |
|------------|---|
| Synopsis | Enable the vrf-export context |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls vrf-export |

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

domain-id string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn string bgp-ipvpn segment-routing-v6 number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

resolution keyword

| | |
|------------|---|

route-distinguisher (*string* | *keyword*)

| | |
|-------------|---|
| Synopsis | Route distinguisher |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> route-distinguisher (<i>string</i> <i>keyword</i>) |
| Tree | route-distinguisher |
| Description | This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify the VPN to which the route belongs.

Alternatively, the system can automatically generate an RD based on the BGP automatic RD range configured at the configure service system level. |
| Options | auto-rd |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

source-address *string*

| | |
|-------------|---|
| Synopsis | Source IPv6 address |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> source-address <i>string</i> |
| Tree | source-address |
| Description | When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.

When not configured, the source IPv6 address is inherited from the configuration of the global default address in the router "base" segment-routing segment-routing-v6 source-address context.

A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address. |

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover partner-down-delay <i>number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer [[address](#)] *reference*

| | |
|----------------|---|
| Synopsis | Enter the peer list instance |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover peer <i>reference</i> |
| Tree | peer |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[address] *reference*

| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sync-tag *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Tag that identifies synchronizing server or pool pairs |
| Context | configure service vpn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover peer reference sync-tag <i>string</i> |
| Tree | sync-tag |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

startup-wait-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time between initialization and assuming active role |
| Context | configure service vpn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover startup-wait-time <i>number</i> |
| Tree | startup-wait-time |
| Description | This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote. |
| Range | 60 to 3600 |
| Default | 120 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-renews *boolean*

| | |
|-------------|---|
| Synopsis | Send FORCERENEW messages to force renewals of leases |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> force-renews <i>boolean</i> |
| Tree | force-renews |
| Description | When configured to true , FORCERENEW messages are enabled for DHCP. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-hold

| | |
|------------|--|
| Synopsis | Enter the lease-hold context |

| Synopsis | Administrative state of the failover mechanism |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string failover admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-mclt-on-takeover *boolean*

| | |
|-------------|--|
| Synopsis | Ignore maximum client lead during takeover from partner |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover ignore-mclt-on-takeover <i>boolean</i> |
| Tree | ignore-mclt-on-takeover |
| Description | When configured to true , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.

When configured to false , the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-client-lead-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> failover maximum-client-lead-time <i>number</i> |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string failover partner-down-delay number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |
| Default | 86399 |
| Units | seconds |

minimum-free

Synopsis Enter the **minimum-free** context

Context **configure** [service vprn](#) *string* [dhcp-server dhcpv4](#) *string* [pool](#) *string* **minimum-free**

Tree [minimum-free](#)

Description Commands in this context specify the minimum number of free addresses in this pool.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

absolute number

| | |
|------------|---|
| Synopsis | Minimum number of free addresses in this pool or subnet |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string minimum-free absolute number |
| Tree | absolute |
| Range | 0 to 255 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

event-when-depleted boolean

| | |
|-------------|--|
| Synopsis | Generate notification when addresses are depleted |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted boolean |
| Tree | event-when-depleted |
| Description | When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.

When configured to false , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

percent number

| | |
|------------|--|
| Synopsis | Minimum free addresses as a percentage |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string minimum-free percent number |
| Tree | percent |
| Range | 0 to 100 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nak-non-matching-subnet *boolean*

| | |
|-------------|---|
| Synopsis | Send NAK if no match for request address pool range |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> nak-non-matching-subnet <i>boolean</i> |
| Tree | nak-non-matching-subnet |
| Description | When configured to true , a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.

When configured to false or unconfigured, the system drops the DHCP packet. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-time *number*

| | |
|------------|---|
| Synopsis | Time interval during which a DHCP offer remains valid |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> offer-time <i>number</i> |
| Tree | offer-time |
| Range | 10 to 600 |
| Default | 60 |
| Units | seconds |
| Introduced | 16.0.R1 |

| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> address-range <i>string</i> end <i>string</i> failover-control-type <i>keyword</i> |
| Tree | failover-control-type |
| Default | local |
| Options | local, remote, access-driven |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

drain *boolean*

| | |
|-------------|---|
| Synopsis | Prevent new lease assignment from this subnet |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> drain <i>boolean</i> |
| Tree | drain |
| Description | When configured to true , new leases cannot be assigned and existing leases are kept up until they are released.
When configured to false , the subnet is active and new leases can be assigned. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

exclude-addresses [*start*] *string* **end** *string*

| | |
|------------|--|
| Synopsis | Add a list entry for exclude-addresses |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i> |
| Tree | exclude-addresses |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[start] *string*

| | |
|-------------|--|
| Synopsis | Lower bound of the IP address range |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i> |
| Tree | exclude-addresses |
| Description | This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

end *string*

|-------------|--|
| Synopsis | Upper bound of the IP address range |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i> |
| Tree | exclude-addresses |
| Description | This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-declined *number*

| | |
|------------|--|
| Synopsis | Maximum number of declined addresses allowed |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> maximum-declined <i>number</i> |
| Tree | maximum-declined |
| Max. Range | 0 to 4294967295 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

minimum-free

| | |
|-------------|--|
| Synopsis | Enter the minimum-free context |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string subnet string</i>
minimum-free |
| Tree | minimum-free |
| Description | Commands in this context specify the minimum number of free addresses in this pool. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

absolute number

| | |
|------------|--|
| Synopsis | Minimum number of free addresses in this pool or subnet |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string subnet string</i>
minimum-free absolute number |
| Tree | absolute |
| Range | 0 to 255 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

event-when-depleted boolean

| | |
|-------------|--|
| Synopsis | Generate notification when addresses are depleted |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string subnet string</i>
minimum-free event-when-depleted boolean |
| Tree | event-when-depleted |
| Description | When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.

When configured to false , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

percent *number*

| | |
|------------|---|
| Synopsis | Minimum free addresses as a percentage |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> minimum-free percent <i>number</i> |
| Tree | percent |
| Range | 0 to 100 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |

| Options | b-node, p-node, m-node, h-node |
| Notes | The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pool-selection

| | |
|------------|---|
| Synopsis | Enter the pool-selection context |
| Context | configure service vprn string dhcp-server dhcpv4 string pool-selection |
| Tree | pool-selection |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-gi-address

| | |
|-------------|--|
| Synopsis | Enable the use-gi-address context |
| Context | configure service vprn string dhcp-server dhcpv4 string pool-selection use-gi-address |
| Tree | use-gi-address |
| Description | <p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime *number*

| | |
|-------------|--|
| Synopsis | Time this lease remains preferred |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.

Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level). |
| Range | 300 to 315446399 |
| Default | 3600 |
| Units | seconds |

| | |
|------------|---|
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-time *number*

| | |
|-------------|--|
| Synopsis | Rebind time for the lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults rebind-time <i>number</i> |
| Tree | rebind-time |
| Description | <p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |
| Range | 0 to 1209600 |
| Default | 2880 |
| Units | seconds |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-time *number*

| | |
|-------------|--|
| Synopsis | Renew time for the lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults renew-time <i>number</i> |
| Tree | renew-time |
| Description | <p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> |

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

| | |
|------------|---|
| Range | 0 to 604800 |
| Default | 1800 |
| Units | seconds |

valid-lifetime *number*

| | |
|-------------|--|
| Synopsis | Time for the lease to remain valid |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults valid-lifetime <i>number</i> |
| Tree | valid-lifetime |
| Description | <p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p> |
| Range | 300 to 315446399 |
| Default | 86400 |

interface-id-mapping *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Map hosts within interface-to-prefix combinations |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> interface-id-mapping <i>boolean</i> |
| Tree | interface-id-mapping |
| Description | When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address. |
| Default | false |
| Introduced | 16.0.R1 |

(<i>number</i> <i>keyword</i>) duration number |
| Tree | duration |
| Range | 10 to 315446399 |
| Units | seconds |
| Notes | The following elements are part of a mandatory choice: ascii-string, domain-string, duration, empty, hex-string, or ipv6-address. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

empty

| | |
|----------|-------------------|
| Synopsis | Empty DHCP option |
|----------|-------------------|

| | |
|------------|---|
| Context | configure service vprn string dhcp-server dhcpv6 string pool string options option
(<i>number</i> <i>keyword</i>) empty |
| Tree | empty |
| Notes | The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address . |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hex-string string

| | |
|---------------|---|
| Synopsis | DHCP option specified as hexadecimal string |
| Context | configure service vprn string dhcp-server dhcpv6 string pool string options option
(<i>number</i> <i>keyword</i>) hex-string string |
| Tree | hex-string |
| String Length | 1 to 256 |
| Notes | The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6-address string

| | |
|----------------|---|
| Synopsis | DHCP option specified as a list of IPv6 addresses |
| Context | configure service vprn string dhcp-server dhcpv6 string pool string options option
(<i>number</i> <i>keyword</i>) ipv6-address string |
| Tree | ipv6-address |
| Max. Instances | 4 |
| Notes | The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix [ipv6-prefix] string

preferred-lifetime *number*

| | |
|----------|-----------------------------------|
| Synopsis | Time this lease remains preferred |
|----------|-----------------------------------|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | <p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p> |
| Range | 300 to 315446399 |
| Default | 3600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-time number

| | |
|-------------|--|
| Synopsis | Rebind time for the lease |
| Context | configure service vprn string dhcp-server dhcpv6 string pool string prefix string rebind-time number |
| Tree | rebind-time |
| Description | <p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |
| Range | 0 to 1209600 |
| Default | 2880 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-time number

| | |
|-------------|---|
| Synopsis | Renew time for the lease |
| Context | configure service vprn string dhcp-server dhcpv6 string pool string prefix string renew-time number |
| Tree | renew-time |
| Description | <p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or</p> |

| | |
|------------|---|
| | equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA. |
| Range | 0 to 604800 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime *number*

| | |
|-------------|--|
| Synopsis | Time for the lease to remain valid |
| Context | configure <i>service vprn string dhcp-server dhcpv6 string pool string prefix string valid-lifetime number</i> |
| Tree | <i>valid-lifetime</i> |
| Description | <p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p> |

ecmp number

| | |
|----------|--|
| Synopsis | Maximum equal-cost routes for routing table instance |
| Context | configure service vprn string ecmp number |

| | |
|-------------|---|
| Tree | ecmp |
| Description | <p>This command configures ECMP and defines the number of routes for path sharing. For example, the value 2 means that two equal-cost routes are used for cost sharing.</p> <p>ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>When more ECMP routes are available at the best preference than the number specified with this command, the lowest next-hop IP-address algorithm is used to select the routes.</p> <p>If this command is configured to 1, ECMP path sharing is disabled.</p> |
| Range | 1 to 64 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

ecmp-unequal-cost *boolean*

| | |
|------------|--|
| Synopsis | Enable ECMP unequal cost capability |
| Context | configure service vprn <i>string</i> ecmp-unequal-cost <i>boolean</i> |
| Tree | ecmp-unequal-cost |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

entropy-label *boolean*

| | |
|-------------|--|
| Synopsis | Use entropy label |
| Context | configure service vprn <i>string</i> entropy-label <i>boolean</i> |
| Tree | entropy-label |
| Description | <p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> |

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, this command disables the use of entropy labels.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

eth-cfm

| | |
|------------|---|
| Synopsis | Enter the eth-cfm context |
| Context | configure service vprn <i>string</i> eth-cfm |
| Tree | eth-cfm |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

export-inactive-bgp *boolean*

| | |
|-------------|---|
| Synopsis | Export preferred BGP route even if inactive |
| Context | configure service vprn <i>string</i> export-inactive-bgp <i>boolean</i> |
| Tree | export-inactive-bgp |
| Description | <p>When configured to true, the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE.</p> <p>When configured to false, the preferred BGP route is not exported if it is inactive.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

fib-priority *keyword*

Synopsis Filter policy type for FlowSpec embedding

Context **configure service vprn** *string* **flowspec filter-cam-type** *keyword*

Tree **filter-cam-type**

Description This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.

Default normal

Options normal, packet-length

Introduced 20.7.R1

Platforms All

ip-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv4 filter

Context **configure service vprn** *string* **flowspec ip-filter-max-size** *number*

Tree **ip-filter-max-size**

Description This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).

The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.

The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.

Range 0 to 262143

Default 512

Introduced 16.0.R1

Platforms All

ipv6-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv6 filter

| | |
|-------------|---|

policy *reference*

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name reference mcac policy <i>reference</i> |
| Tree | policy |
| Description | This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. |

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

import-policy *reference*

Synopsis Import policy that filters IGMP packets

Context **configure** [service vprn](#) *string* [igmp interface](#) *string* **import-policy** *reference*

Tree [import-policy](#)

Description This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.

When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).

Reference **configure** [policy-options policy-statement](#) *string*

Introduced 16.0.R1

Platforms All

maximum-number-group-sources *number*

Synopsis Maximum number of group sources for this interface

Context **configure** [service vprn](#) *string* [igmp interface](#) *string* **maximum-number-group-sources** *number*

Tree [maximum-number-group-sources](#)

Description This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.

dynamic-tunnel-redundant-nexthop string

| | |
|-------------|--|
| Synopsis | Redundant next-hop address for the dynamic IPsec tunnel |
| Context | configure service vprn string interface string dynamic-tunnel-redundant-nexthop string |
| Tree | dynamic-tunnel-redundant-nexthop |
| Description | This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service. |

| | |
|------------|---|
| Notes | The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop). |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |
|------------|--|
| Synopsis | Enter the hold-time context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | All |

init-only *boolean*

| | |
|----------|---|
| Synopsis | Apply delay only at interface configuration or reboot |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |

ingress

| | |
|----------|----------------------------------|
| Synopsis | Enter the ingress context |
|----------|----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress |
| Tree | ingress |
| Introduced | 19.7.R1 |
| Platforms | All |

destination-class-lookup *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP destination class lookup |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress destination-class-lookup <i>boolean</i> |
| Tree | destination-class-lookup |
| Description | When configured to true , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the destination-class match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.

When configured to false , destination class lookup is not enabled. |
| Default | false |
| Introduced | 20.7.R1 |
| Platforms | All |

policy-accounting *reference*

| | |
|------------|--|
| Synopsis | Ingress policy accounting template name |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress policy-accounting <i>reference</i> |
| Tree | policy-accounting |
| Reference | configure routing-options policy-accounting policy-acct-template <i>string</i> |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS |

ingress-stats *boolean*

| | |
|------------|--|
| Synopsis | Collect ingress statistics |
| Context | configure service vprn <i>string</i> interface <i>string</i> ingress-stats <i>boolean</i> |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-mtu *number*

| | |
|------------|---|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vpn <i>string</i> interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

ipsec

| | |
|------------|--|
| Synopsis | Enable the ipsec context |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec |
| Tree | ipsec |
| Introduced | 22.7.R1 |
| Platforms | VSR |

bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Designate IPsec tunnel to carry BFD traffic |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string bfd bfd-designate boolean |
| Tree | bfd-designate |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string bfd bfd-liveness |
| Tree | bfd-liveness |
| Description | Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session. |

BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.

Introduced 22.7.R1
 Platforms VSR

| Platforms | VSR |

strict-match *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable strict match of the security policy entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i> |
| Tree | strict-match |
| Description | When configured to true , this command enables strict match of the security policy entry. |

When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.

If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.

If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.

If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.

| | |
|------------|---------|
| Default | false |
| Introduced | 22.7.R1 |

|-------------|---|
| Synopsis | IPv6 filter exception used to bypass encryption |
| Context | configure service vpn <i>string</i> interface <i>string</i> ipsec ipv6-exception <i>reference</i> |
| Tree | ipv6-exception |
| Description | This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface. |
| Reference | configure filter ipv6-exception <i>string</i> |
| Introduced | 22.7.R1 |
| Platforms | VSR |

| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn string interface string ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |

| | |
|------------|---------|
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive number

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn string interface string ipv4 bfd receive number |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval number

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn string interface string ipv4 bfd transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

type keyword

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

| Default | keep |
| Options | replace, drop, keep |
| Introduced | 16.0.R1 |
| Platforms | All |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

ifindex

| | |
|------------|--|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|---|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id

| | |
|----------|---|
| Synopsis | Use the SAP ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vprn string interface string ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-id

| | |
|-------------|--|
| Synopsis | Enter the remote-id context |
| Context | configure service vprn string interface string ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn string interface string ipv4 dhcp option-82 remote-id ascii-string string |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

mac

| | |
|------------|---|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

vendor-specific-option

| | |
|-------------|--|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

client-mac-address *boolean*

| | |
|----------|--|
| Synopsis | Send the MAC address in the VSO |

|-------------|---|
| Synopsis | Enter the ttl-expired context |
| Context | configure service vprn string interface string ipv4 icmp ttl-expired |
| Tree | ttl-expired |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of sending TTL expired messages |
| Context | configure service vprn string interface string ipv4 icmp ttl-expired admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number number

| | |
|------------|---|
| Synopsis | Maximum number of TTL expired messages to send |
| Context | configure service vprn string interface string ipv4 icmp ttl-expired number number |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds number

| | |
|----------|--|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service vprn string interface string ipv4 icmp ttl-expired seconds number |
| Tree | seconds |
| Range | 1 to 60 |

| | |
|------------|---------|
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unreachables

| | |
|-------------|--|
| Synopsis | Enter the unreachables context |
| Context | configure service vprn string interface string ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of sending unreachable messages |
| Context | configure service vprn string interface string ipv4 icmp unreachables admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of unreachable messages to send |
| Context | configure service vprn string interface string ipv4 icmp unreachables number number |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time to limit the number of ICMP unreachable messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 icmp unreachables seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-helper-address *string*

| | |
|------------|--|
| Synopsis | Gateway address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 ip-helper-address <i>string</i> |
| Tree | ip-helper-address |
| Introduced | 16.0.R1 |
| Platforms | All |

local-dhcp-server *reference*

| | |
|------------|---|
| Synopsis | DHCP server for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 local-dhcp-server <i>reference</i> |
| Tree | local-dhcp-server |
| Reference | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|---|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

host-route

| | |
|------------|--|
| Synopsis | Enter the host-route context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route |
| Tree | host-route |
| Introduced | 19.10.R1 |
| Platforms | All |

populate [[route-type](#)] *keyword*

| | |
|------------|--|
| Synopsis | Enter the populate list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Introduced | 19.10.R1 |
| Platforms | All |

[[route-type](#)] *keyword*

| | |
|------------|--|
| Synopsis | Type of ARP or ND entries that generate host routes |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Options | static, dynamic, evpn |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i> |

| | |
|-------------|--|
| Tree | route-tag |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |
| Introduced | 19.10.R1 |
| Platforms | All |

learn-unsolicited *boolean*

| | |
|-------------|--|
| Synopsis | Learn new entries from any received NA message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i> |
| Tree | learn-unsolicited |
| Description | <p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|------------|--|
| Synopsis | Enter the limit context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit |
| Tree | limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|--|
| Synopsis | Generate log entries only if limit is reached |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-entries *number*

| | |
|------------|--|
| Synopsis | Maximum number of entries learned on an IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit max-entries <i>number</i> |
| Tree | max-entries |
| Range | 0 to 524288 |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Threshold value that triggers a warning message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

local-proxy-arp *boolean*

| | |
|----------|---|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i> |

| | |
|-------------|--|
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.
When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | All |

populate *boolean*

| | |
|------------|---|
| Synopsis | Allow static and dynamic hosts to be populated in system ARP cache |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i> |
| Tree | populate |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *boolean*

| | |
|-------------|--|
| Synopsis | Send a single refresh message before entry timeout |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i> |
| Tree | proactive-refresh |
| Description | When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).
When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-arp-policy *reference*

| | |
|----------|-----------------------|
| Synopsis | Proxy ARP policy name |
|----------|-----------------------|

| | |
|----------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i> |
| Tree | proxy-arp-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-proxy-arp *boolean*

| | |
|------------|---|
| Synopsis | Enable remote proxy ARP on the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i> |
| Tree | remote-proxy-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

retry-timer *number*

| | |
|------------|---|
| Synopsis | ARP retry interval |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery retry-timer <i>number</i> |
| Tree | retry-timer |
| Range | 1 to 300 |
| Default | 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

static-neighbor [[ipv4-address](#)] *string*

| | |
|----------|---|
| Synopsis | Enter the static-neighbor list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |

| | |
|------------|---------------------------------|
| Tree | static-neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IPv4 address that corresponds to the physical address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-address *string*

| | |
|------------|---|
| Synopsis | MAC address for the static neighbor |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> mac-address <i>string</i> |
| Tree | mac-address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

static-neighbor-unnumbered

| | |
|------------|--|
| Synopsis | Enable the static-neighbor-unnumbered context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor-unnumbered |
| Tree | static-neighbor-unnumbered |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-address *string*

| | |
|----------|-------------------------------------|
| Synopsis | MAC address for the static neighbor |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor-unnumbered mac-address <i>string</i> |
| Tree | mac-address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|-------------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |
| Tree | timeout |
| Description | This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table. |
| Range | 0 to 65535 |
| Default | 14400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

primary

| | |
|------------|--|
| Synopsis | Enable the primary context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 primary |
| Tree | primary |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|----------|--|
| Synopsis | Primary IPv4 address assigned to the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 primary address <i>string</i> |

admin-state *keyword*

| | |
|-------------|--|
| Synopsis | Administrative state of VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|-------------|---|
| Synopsis | Password for simple text authentication |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p> |

backup string

| | |
|----------------|--|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn string interface string ipv4 vrrp number backup string |
| Tree | backup |
| Description | <p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p> |
| Max. Instances | 16 |

mac string

| | |
|-------------|--|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> mac <i>string</i> |
| Tree | mac |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit *boolean*

| Context | configure <i>service vprn string interface string ipv4 vrrp number master-int-inherit boolean</i> |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service vprn string interface string ipv4 vrrp number message-interval number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message. |
| Range | 1 to 2559 |
| Default | 10 |

| | |
|------------|-------------|
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i> |
| Tree | ntp-reply |
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|----------|---|
| Synopsis | Operational group name associated with the VRRP |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string interface string ipv4 vrrp number oper-group reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string interface string ipv4 vrrp number owner boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure service vprn <i>string interface string ipv4 vrrp number passive boolean</i> |
| Tree | passive |

| | |
|-------------|---|
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure <i>service vprn string interface string ipv4 vrrp number ping-reply boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure <i>service vprn string interface string ipv4 vrrp number policy reference</i> |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with</p> |

the **priority** command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.

For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.

| | |
|------------|-------------------------------------|
| Reference | configure vrrp policy number |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|---|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service vprn string interface string ipv4 vrrp number preempt boolean |
| Tree | preempt |
| Description | When configured to true , this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.

When configured to false , this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|-------------|--|
| Synopsis | Base priority for the VRRP |
| Context | configure service vprn string interface string ipv4 vrrp number priority number |
| Tree | priority |
| Description | This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

ssh-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow the non-owner master to reply to SSH requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ssh-reply <i>boolean</i> |
| Tree | ssh-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> standby-forwarding <i>boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). |

When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i> |
| Tree | traceroute-reply |
| Description | When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address). |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

address [[ipv6-address](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the address list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |

| | |
|------------|--|
| Synopsis | IPv6 address assigned to the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable Duplicate Address Detection |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Description | When configured to true , the router enables Duplicate Address Detection (DAD).
When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Form IPv6 address from prefix and 64-bit interface ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> eui-64 <i>boolean</i> |
| Tree | eui-64 |
| Description | When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from |

the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv6 address prefix length |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 4 to 128 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

primary-preference *number*

| | |
|-------------|---|
| Synopsis | Index assigned to the IPv6 address of the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> primary-preference <i>number</i> |
| Tree | primary-preference |
| Description | <p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p> |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP ID whose state is tracked on this IP address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |

| | |
|------------|--------------|
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure <i>service vprn string interface string ipv6 bfd type keyword</i> |
| Tree | <i>type</i> |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tag value used with the host route from an ARP/ND entry
 Context **configure** *service* *vprn* *string* *interface* *string* *ipv6* *neighbor-discovery* *host-route*
populate *keyword* *route-tag* *number*
 Tree *route-tag*
 Description This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
 Range 1 to 255
 Introduced 20.2.R1

Platforms All

learn-unsolicited *keyword*

Synopsis Type of entries learned from unsolicited NA messages

Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [neighbor-discovery](#) **learn-unsolicited** *keyword*

Tree [learn-unsolicited](#)

Description This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.

When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.

Options global, link-local, both

Introduced 16.0.R1

Platforms All

limit

Synopsis Enter the **limit** context

Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [neighbor-discovery](#) **limit**

Tree [limit](#)

Introduced 16.0.R1

Platforms All

log-only *boolean*

Synopsis Generate log entries when limit is reached

Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [neighbor-discovery](#) **limit** **log-only** *boolean*

Tree [log-only](#)

Description When configured to **true**, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.

When configured to **false**, the router does not send the warning message.

Default false

Introduced 16.0.R1

Platforms All

max-entries *number*

Synopsis Maximum number of entries learned on an IP interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 neighbor-discovery limit max-entries](#) *number*

Tree [max-entries](#)

Description This command configures the maximum number of entries that can be learned on an IP interface.
When unconfigured, no maximum limit is imposed.

Range 0 to 102400

Introduced 16.0.R1

Platforms All

threshold *number*

Synopsis Threshold percentage that triggers a warning message

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 neighbor-discovery limit threshold](#) *number*

Tree [threshold](#)

Range 1 to 100

Default 90

Units percent

Introduced 16.0.R1

Platforms All

local-proxy-nd *boolean*

Synopsis Enable local proxy neighbor discovery on the interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 neighbor-discovery local-proxy-nd](#) *boolean*

Tree [local-proxy-nd](#)

Description When configured to **true**, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.

When configured to **false**, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *keyword*

| | |
|-------------|---|
| Synopsis | Proactive refresh of neighbor entries |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i> |
| Tree | proactive-refresh |
| Description | This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-nd-policy *reference*

| Platforms | All |

admin-state *keyword*

| | |
|-------------|---|
| Synopsis | Administrative state of VRRP |
| Context | configure <i>service vprn string interface string ipv6 vrrp number admin-state keyword</i> |
| Tree | <i>admin-state</i> |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> |

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

| | |
|------------|-----------------|
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

backup string

| | |
|----------------|--|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn string interface string ipv6 vrrp number backup string |
| Tree | backup |
| Description | <p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p> |
| Max. Instances | 4 |

mac *string*

| | |
|-------------|--|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure <i>service vprn string interface string ipv6 vrrp number mac string</i> |
| Tree | <i>mac</i> |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p> |

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit *boolean*

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure <i>service vprn string interface string ipv6 vrrp number master-int-inherit boolean</i> |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|---|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service vprn string interface string ipv6 vrrp number message-interval number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. |

- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

| | |
|------------|--------------|
| Range | 10 to 4095 |
| Default | 100 |
| Units | centiseconds |

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|----------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> ntp-reply <i>boolean</i> |
| Tree | ntp-reply |

| | |
|-------------|--|
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group name associated with the VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> owner <i>boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure <i>service vprn string interface string ipv6 vrrp number</i> passive <i>boolean</i> |
| Tree | passive |
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure <i>service vprn string interface string ipv6 vrrp number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> policy reference |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|--|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> preempt boolean |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|----------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> priority number |
| Tree | priority |

| | |
|-------------|--|
| Description | This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|---|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> standby-forwarding <i>boolean</i> |
| Tree | standby-forwarding |
| Description | When configured to true , the standby router forwards all traffic.

When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).

When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> traceroute-reply <i>boolean</i> |
| Tree | traceroute-reply |
| Description | When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address). |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|------------|---|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing |
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing flow-label-load-balancing <i>boolean</i> |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to false , the router disables load balancing in ECMP and LAG. |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn string interface string load-balancing ip-load-balancing <i>keyword</i> |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the I4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs. |
| Default | both |
| Options | both, destination, source, inner-ip |
| Introduced | 16.0.R3 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|-------------|---|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn string interface string load-balancing spi-load-balancing <i>boolean</i> |
| Tree | spi-load-balancing |
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |

calling-station-id *string*

Synopsis Calling station ID
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [calling-station-id](#) *string*
 Tree [calling-station-id](#)
 String Length 1 to 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis Collect accounting statistics
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [collect-stats](#) *boolean*
 Tree [collect-stats](#)
 Default false
 Introduced 16.0.R1
 Platforms All

cpu-protection

Synopsis Enter the **cpu-protection** context
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [cpu-protection](#)
 Tree [cpu-protection](#)

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

eth-cfm-monitoring

| | |
|------------|--|
| Synopsis | Enable the eth-cfm-monitoring context |
| Context | configure service vprn string interface string sap string cpu-protection eth-cfm-monitoring |
| Tree | eth-cfm-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

aggregate

| | |
|------------|--|
| Synopsis | Apply rate limit to the sum of the per peer packet rates |
| Context | configure service vprn string interface string sap string cpu-protection eth-cfm-monitoring aggregate |
| Tree | aggregate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

car

| | |
|------------|--|
| Synopsis | Ignore Ethernet CFM packets when enforcing overall rate |
| Context | configure service vprn string interface string sap string cpu-protection eth-cfm-monitoring car |
| Tree | car |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

ip-src-monitoring

| | |
|----------|---|
| Synopsis | Enable IP source monitoring for CPU protection |
| Context | configure service vprn string interface string sap string cpu-protection ip-src-monitoring |

| | |
|------------|--|
| Tree | ip-src-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

mac-monitoring

| | |
|------------|---|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

policy-id *reference*

| | |
|------------|---|
| Synopsis | CPM protection policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i> |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 160 |
| Introduced | 16.0.R1 |
| Platforms | All |

dist-cpu-protection *reference*

| | |
|------------|--|
| Synopsis | Distributed CPU protection policy for SAP |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> dist-cpu-protection <i>reference</i> |
| Tree | dist-cpu-protection |
| Reference | configure system security dist-cpu-protection policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

egress

| | |
|------------|--|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | All |

agg-rate

| | |
|------------|---|
| Synopsis | Enter the agg-rate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate |
| Tree | agg-rate |
| Notes | The following elements are part of a choice: agg-rate or percent-agg-rate . |
| Introduced | 16.0.R1 |
| Platforms | All |

adaptation-rule *keyword*

| | |
|------------|--|
| Synopsis | Adaptation rule to compute the operational PIR value when an aggregate shaper is used |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate adaptation-rule <i>keyword</i> |
| Tree | adaptation-rule |
| Default | closest |
| Options | max, min, closest |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

burst-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Shaping burst size when an aggregate shaper is used |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Default | auto |
| Units | bytes |
| Options | auto |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

limit-unused-bandwidth *boolean*

| | |
|------------|--|
| Synopsis | Enable aggregate rate overrun protection |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i> |
| Tree | limit-unused-bandwidth |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

queue-frame-based-accounting *boolean*

| | |
|------------|--|
| Synopsis | Enable frame-based accounting on all policers and queues associated with context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate queue-frame-based-accounting <i>boolean</i> |
| Tree | queue-frame-based-accounting |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

rate *number*

| | |
|----------|--|
| Synopsis | Enforced aggregate rate for all queues |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i> |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress filter ip <i>reference</i> |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 reference

| | |
|------------|--|
| Synopsis | IPv6 filter policy name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress filter ipv6 <i>reference</i> |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn string interface string sap string egress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

policer-control-policy

| | |
|------------|--|
| Synopsis | Enter the policer-control-policy context |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy |
| Tree | policer-control-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

overrides

| | |
|------------|--|
| Synopsis | Enable the overrides context |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

root

| | |
|------------|---|
| Synopsis | Enter the root context |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides root |
| Tree | root |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

max-rate (*number* | *keyword*)

| | |
|----------|-------------------------------------|
| Synopsis | Maximum frame-based bandwidth limit |
|----------|-------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|---|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority [[priority-level](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the priority list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[priority-level] *number*

Synopsis Priority level

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos policer-control-policy overrides root priority-mbs-thresholds](#) [priority](#) *number*

Tree [priority](#)

Range 1 to 8

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs-contribution (*number* | *keyword*)

Synopsis Minimum amount of cumulative buffer space allowed

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos policer-control-policy overrides root priority-mbs-thresholds](#) [priority](#) *number* [mbs-contribution](#) (*number* | *keyword*)

Tree [mbs-contribution](#)

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policy-name *reference*

Synopsis Policer control policy name

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos policer-control-policy](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos policer-control-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

qinq-mark-top-only *boolean*

| | |
|------------|--|
| Synopsis | Mark top Q-tags |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i> |
| Tree | qinq-mark-top-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-egress

| | |
|------------|---|
| Synopsis | Enter the sap-egress context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 16.0.R1 |
| Platforms | All |

overrides

| | |
|------------|---|
| Synopsis | Enter the overrides context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-secondary-shaper *string*

| | |
|---------------|---|
| Synopsis | HS Secondary Shaper |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-secondary-shaper <i>string</i> |
| Tree | hs-secondary-shaper |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-group [[group-id](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the hs-wrr-group list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

[group-id] *reference*

| | |
|------------|---|
| Synopsis | HS WRR group identifier |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Reference | configure qos sap-egress <i>string</i> hs-wrr-group <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-class-weight *number*

| | |
|------------|---|
| Synopsis | Class weight override of the WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

percent-rate *decimal-number*

| | |
|----------|--|
| Synopsis | Percent rate override applied to the HS WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> percent-rate <i>decimal-number</i> |
| Tree | percent-rate |

| | |
|------------|---|
| Range | 0.01 to 100.00 |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

rate (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Scheduling rate override applied to the HS WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> rate (<i>number</i> <i>keyword</i>) |
| Tree | rate |
| Range | 1 to 2000000000 |
| Units | kilobps |
| Options | max |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policer [[policer-id](#)] *reference*

| | |
|------------|--|
| Synopsis | Enter the policer list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> |
| Tree | policer |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[policer-id] *reference*

| | |
|-----------|--|
| Synopsis | Policer unique ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> |
| Tree | policer |
| Reference | configure qos sap-egress <i>string</i> policer <i>number</i> |
| Notes | This element is part of a list key. |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | MBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number</i> <i>keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|------------|--|
| Synopsis | Packet size modification for policing information |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir decimal-number

| | |
|------------|--|
| Synopsis | CIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir decimal-number

| | |
|------------|--|
| Synopsis | PIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate pir decimal-number |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|----------|---|
| Synopsis | Enter the rate context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference rate |
| Tree | rate |

| | |
|------------|---|
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CIR rate |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | PIR rate |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

stat-mode *keyword*

| | |
|----------|---|
| Synopsis | Mode of statistics collected by the policer |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> stat-mode <i>keyword</i> |
| Tree | stat-mode |

| | |
|------------|--|
| Options | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

queue [\[queue-id\]](#) *reference*

| | |
|------------|--|
| Synopsis | Enter the queue list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> |
| Tree | queue |
| Introduced | 16.0.R1 |
| Platforms | All |

[queue-id] *reference*

| | |

monitor-queue-depth

Synopsis Enable the **monitor-queue-depth** context
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference](#) **monitor-queue-depth**
Tree [monitor-queue-depth](#)
Introduced 20.10.R1
Platforms All

fast-polling *boolean*

| | |
|-------------|--|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
When configured to false , fast queue polling is not enabled. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|-------------|---|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|---|
| Synopsis | Enter the parent context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference parent |
| Tree | parent |
| Introduced | 16.0.R1 |
| Platforms | All |

cir-weight *number*

| | |

Introduced 16.0.R1

Platforms All

[scheduler-name] *string*

Synopsis Scheduler name

Context **configure** **service vprn** *string* **interface** *string* **sap** *string* **egress qos scheduler-policy**
overrides scheduler *string*

Tree **scheduler**

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

| Synopsis | Number of octets of padding to insert in CCM packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> ccm-padding-size <i>number</i> |
| Tree | ccm-padding-size |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second. |
| Range | 3 to 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

csf

| | |
|------------|---|
| Synopsis | Enable the csf context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> csf |
| Tree | csf |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Local IP address of this tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | local-ip-address |
| Description | This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).

When this command specifies an IPv6 address, it must be a global unicast address. |
| Introduced | 16.0.R1 |
| Platforms | All |

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Time to age out the learned path MTU |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Default | 900 |
| Units | seconds |

| | |
|------------|--|
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Synopsis | Name of the interface used by the BFD session |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> bfd bfd-liveness interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> bfd bfd-liveness service-name <i>string</i> |
| Tree | service-name |
| Description | This command configures the name of the service where BFD traffic is forwarded to. |
| String Length | 1 to 64 |
| Notes | This element is mandatory. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Reset the DF bit to 0 in all payload IP packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> clear-df-bit <i>boolean</i> |
| Tree | clear-df-bit |
| Description | When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs. |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

copy-traffic-class-upon-decapsulation *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable traffic class copy upon decapsulation |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> copy-traffic-class-upon-decapsulation <i>boolean</i> |
| Tree | copy-traffic-class-upon-decapsulation |
| Description | When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | Private IP address of the remote IP tunnel endpoint |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> dest-ip (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | dest-ip |
| Notes | This element is part of a list key. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum size of the encapsulated tunnel packet |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> encapsulated-ip-mtu <i>number</i> |
| Tree | encapsulated-ip-mtu |
| Description | This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If |

the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.

| | |
|------------|--|
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the icmp-generation context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation |
| Tree | icmp-generation |
| Description | Commands in this context configure settings for ICMPv4 message generation. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the frag-required context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required |
| Tree | frag-required |
| Description | Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Administrative state of sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Default | enable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Interval for sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required interval <i>number</i> |
| Tree | interval |
| Description | This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4). |
| Range | 1 to 60 |
| Default | 10 |
| Units | seconds |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Maximum number of ICMP messages that can be sent |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string icmp-generation frag-required message-count number</i> |
| Tree | <i>message-count</i> |
| Description | This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the icmp6-generation context |
| Context | configure <i>service vprn string interface string sap string ipsec-tunnel string icmp6-generation</i> |
| Tree | <i>icmp6-generation</i> |
| Description | Commands in this context configure settings for ICMPv6 message generation. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Enter the packet-too-big context |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big |
| Tree | packet-too-big |
| Description | <p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| String Length | 1 to 130 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encryption-key *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Key used for the encryption algorithm |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> encryption-key <i>string</i> |
| Tree | encryption-key |
| String Length | 1 to 66 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipsec-transform *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Transform entry used by manual SAs |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> ipsec-transform <i>reference</i> |
| Tree | ipsec-transform |
| Reference | configure ipsec ipsec-transform <i>number</i> |
| Notes | This element is mandatory. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

spi *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | SPI of inbound and outbound packets |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i> |
| Tree | spi |

| | |
|-------------|--|
| Description | This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.

The remote node can use the SPI to look up the instruction to verify and decrypt the packet. |
| Range | 256 to 16383 |
| Notes | This element is mandatory. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the max-history-key-records context |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> max-history-key-records |
| Tree | max-history-key-records |
| Description | Commands in this context configure the settings for recording historical IPsec keys. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

esp number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of recent records |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> max-history-key-records esp <i>number</i> |
| Tree | esp |
| Range | 1 to 48 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of historical IKE key records |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> max-history-key-records ike <i>number</i> |
| Tree | ike |
| Range | 1 to 3 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Aging out time of the learned path MTU |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Default | 900 |
| Units | seconds |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | TCP maximum segment size (MSS) adjustment |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i> |
| Tree | private-tcp-mss-adjust |
| Description | This command specifies the TCP MSS to adjust for the tunnel on the private side.
When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable propagation of the path MTU to IPv4 hosts |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i> |
| Tree | propagate-pmtu-v4 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Enable propagation of the path MTU to IPv6 hosts |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> propagate-pmtu-v6 <i>boolean</i> |
| Tree | propagate-pmtu-v6 |

| | |
|-------------|--|
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP maximum segment size (MSS) on the public network |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Description | This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Options | auto |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

replay-window *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Anti-replay window size |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> replay-window <i>number</i> |
| Tree | replay-window |
| Description | This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled. |
| Range | 32 64 128 256 512 |

| | |
|------------|--|
| Units | packets |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

security-policy

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enter the security-policy context |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> security-policy |
| Tree | security-policy |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

id reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IPsec security policy ID |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> security-policy <i>id reference</i> |
| Tree | id |
| Reference | configure service vpn <i>string</i> ipsec security-policy <i>number</i> |
| Introduced | 19.7.R1 |

strict-match *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Enable strict match of the security policy entry |
|----------|--|

| | |
|-------------|---|
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i> |
| Tree | strict-match |
| Description | <p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p> |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Tree | failure-action |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Default | none |
| Options | none, down |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range | 1 to 60 |
| Units | seconds |
| Introduced | 21.2.R1 |
| Platforms | All |

collect-stats *boolean*

| | |

Tree [rx-eth-vsm-grace](#)

Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-vsm-grace tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp advertise <i>keyword</i> route-tag <i>number</i> |
| Tree | route-tag |
| Description | This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies. |
| Range | 0 to 255 |
| Introduced | 19.10.R1 |
| Platforms | All |

flood-garp-and-unknown-req *boolean*

| | |
|-------------|---|
| Synopsis | Allow CPM originated ARP frames to flood R-VPLS service |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp flood-garp-and-unknown-req <i>boolean</i> |
| Tree | flood-garp-and-unknown-req |
| Description | When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command.
When configured to false , CPM-originated ARP flooding is suppressed. |
| Default | true |
| Introduced | 19.10.R1 |
| Platforms | All |

learn-dynamic *boolean*

| | |
|-------------|---|
| Synopsis | Process ARP or ND messages on EVPN tunnels |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp learn-dynamic <i>boolean</i> |
| Tree | learn-dynamic |
| Description | When configured to true , the system processes ARP or ND messages that arrive on EVPN tunnels.
When configured to false , learning is disabled and table entries are not created for these messages. |
| Default | true |
| Introduced | 19.10.R1 |
| Platforms | All |

nd

| | |
|------------|---|
| Synopsis | Enter the nd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd |
| Tree | nd |
| Introduced | 20.5.R1 |
| Platforms | All |

advertise [*route-type*] *keyword*

| | |
|-------------|--|
| Synopsis | Enter the advertise list instance |
| Context | configure <i>service vprn string interface string vpls string evpn nd advertise keyword</i> |
| Tree | <i>advertise</i> |
| Description | Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.
The learn-dynamic command must be set to false when using this functionality. |
| Introduced | 20.5.R1 |
| Platforms | All |

[route-type] *keyword*

| | |
|-------------|---|
| Synopsis | Type of ARP or ND entries that generate host routes |
| Context | configure <i>service vprn string interface string vpls string evpn nd advertise keyword</i> |
| Tree | <i>advertise</i> |
| Description | This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes. |
| Options | static, dynamic |
| Notes | This element is part of a list key. |
| Introduced | 20.5.R1 |
| Platforms | All |

route-tag *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure <i>service vprn string interface string vpls string evpn nd advertise keyword route-tag number</i> |
| Tree | <i>route-tag</i> |
| Description | This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies. |
| Range | 0 to 255 |
| Introduced | 20.5.R1 |

Platforms All

learn-dynamic *boolean*

Synopsis Process ARP or ND messages on EVPN tunnels

Context **configure** *service vprn string interface string vpls string evpn nd learn-dynamic boolean*

Tree [learn-dynamic](#)

Description When configured to **true**, the system processes ARP or ND messages that arrive on EVPN tunnels.
When configured to **false**, learning is disabled and table entries are not created for these messages.

Default true

Introduced 20.5.R1

Platforms All

evpn-tunnel

| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router advertisement |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

current-hop-limit *number*

| | |
|----------|--|
| Synopsis | Hop limit advertised in RA messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |

| | |
|------------|---------|
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

dns-options

| | |
|------------|--|
| Synopsis | Enable the dns-options context |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options |
| Tree | dns-options |
| Introduced | 16.0.R1 |
| Platforms | All |

include-rdnss *boolean*

| | |
|------------|--|
| Synopsis | Include the RDNSS option in the RA |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options include-rdnss boolean |
| Tree | include-rdnss |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

rdnss-lifetime (*number | keyword*)

| | |
|------------|--|
| Synopsis | Maximum time over which the RDNSS address 25 is valid |
| Context | configure service vprn string ipv6 router-advertisement interface reference dns-options rdnss-lifetime (number keyword) |
| Tree | rdnss-lifetime |
| Range | 0 4 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

server string

| | |
|----------------|--|
| Synopsis | RAs that are forwarded to IPv6 DNS servers |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> dns-options server string |
| Tree | server |
| Max. Instances | 4 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

managed-configuration boolean

| | |
|------------|--|
| Synopsis | Set the managed address configuration flag |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> managed-configuration boolean |
| Tree | managed-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-advertisement-interval number

| | |
|------------|--|
| Synopsis | Maximum time between sending advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> max-advertisement-interval number |
| Tree | max-advertisement-interval |
| Range | 4 to 1800 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

min-advertisement-interval number

| | |
|----------|--|
| Synopsis | Minimum interval between router advertisement messages |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 3 to 1350 |
| Default | 200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu *number*

| | |
|------------|--|
| Synopsis | MTU for sending packets to the router |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 1280 to 9800 |
| Introduced | 16.0.R1 |
| Platforms | All |

other-stateful-configuration *boolean*

| | |
|------------|--|
| Synopsis | Set the other configuration flag |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix [[ipv6-prefix](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the prefix list instance |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> |
| Tree | prefix |
| Max. Instances | 254 |
| Introduced | 16.0.R1 |

Platforms All

[ipv6-prefix] *string*

Synopsis IPv6 address prefix

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*

Tree [prefix](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

autonomous *boolean*

Synopsis Set the autonomous flag value

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*
[autonomous](#) *boolean*

Tree [autonomous](#)

Default true

Introduced 16.0.R1

Platforms All

on-link *boolean*

Synopsis Use prefix for on-link determination

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*
[on-link](#) *boolean*

Tree [on-link](#)

Default true

Introduced 16.0.R1

Platforms All

preferred-lifetime (*keyword* | *number*)

Synopsis Remaining time that the prefix remains preferred

Context **configure** [service](#) [vpn](#) *string* [ipv6](#) [router-advertisement](#) [interface](#) [reference](#) [prefix](#) *string*
[preferred-lifetime](#) (*keyword* | *number*)

| | |
|------------|------------------------------------|
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Default | 604800 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

valid-lifetime (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Remaining time in which the prefix is still valid |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> valid-lifetime (<i>keyword</i> <i>number</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Default | 2592000 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | All |

reachable-time *number*

| | |
|------------|---|
| Synopsis | Time the router is reachable by other hosts or nodes |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-time *number*

| | |
|----------|---|
| Synopsis | Time to advertise neighbor advertisement messages |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference retransmit-time <i>number</i> |
| Tree | retransmit-time |
| Range | 0 to 1800000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

router-lifetime *number*

| | |
|------------|--|
| Synopsis | Lifetime value in neighbor advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference router-lifetime <i>number</i> |
| Tree | router-lifetime |
| Range | 0 4 to 9000 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

use-virtual-mac *boolean*

| | |
|------------|---|
| Synopsis | Use VRRP virtual MAC address for advertisement message |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference use-virtual-mac <i>boolean</i> |
| Tree | use-virtual-mac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

isis [**isis-instance**] *number*

| | |
|----------|---|
| Synopsis | Enter the isis list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> |
| Tree | isis |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

[isis-instance] *number*

| | |
|------------|---|
| Synopsis | Instance ID for the IS-IS instance |
| Context | configure service vprn <i>string isis number</i> |
| Tree | isis |
| Range | 0 to 127 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the IS-IS instance |
| Context | configure service vprn <i>string isis number admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-passive-only *boolean*

| | |
|------------|--|
| Synopsis | Advertise prefixes that belong to passive interfaces |
| Context | configure service vprn <i>string isis number advertise-passive-only boolean</i> |
| Tree | advertise-passive-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|----------|--|
| Synopsis | Router capabilities advertisement to neighbors |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn string isis number advertise-router-capability keyword |
| Tree | advertise-router-capability |
| Options | area, as |
| Introduced | 16.0.R1 |
| Platforms | All |

all-l1isis string

| | |
|------------|--|
| Synopsis | Destination MAC address for all L1 IS-IS routers |
| Context | configure service vprn string isis number all-l1isis string |
| Tree | all-l1isis |
| Default | 01:80:C2:00:00:14 |
| Introduced | 16.0.R1 |
| Platforms | All |

all-l2isis string

| | |
|------------|--|
| Synopsis | Destination MAC address for all L2 IS-IS routers |
| Context | configure service vprn string isis number all-l2isis string |
| Tree | all-l2isis |
| Default | 01:80:C2:00:00:15 |
| Introduced | 16.0.R1 |
| Platforms | All |

area-address string

| | |
|----------------|--|
| Synopsis | Area address portion of the NSAP address |
| Context | configure service vprn string isis number area-address string |
| Tree | area-address |
| String Length | 2 to 38 |
| Max. Instances | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|------------|--|
| Synopsis | Perform authentication check to reject mismatch PDUs |
| Context | configure service vprn <i>string isis number authentication-check boolean</i> |
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to verify PDUs sent from neighbors |
| Context | configure service vprn <i>string isis number authentication-key string</i> |
| Tree | authentication-key |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Keychain used to sign and authenticate |
| Context | configure service vprn <i>string isis number authentication-keychain reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string isis number authentication-type keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|------------|---|
| Synopsis | Authenticate individual IS-IS packets of the CSNP type |
| Context | configure service vprn <i>string isis number csnp-authentication boolean</i> |
| Tree | csnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

default-route-tag *number*

| | |
|------------|--|
| Synopsis | Route tag for the default route |
| Context | configure service vprn <i>string isis number default-route-tag number</i> |
| Tree | default-route-tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|--|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string isis number export-limit</i> |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent *number*

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string isis number export-limit log-percent number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn <i>string</i> isis <i>number</i> export-limit number <i>number</i> |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn <i>string</i> isis <i>number</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|----------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> isis <i>number</i> graceful-restart |
| Tree | graceful-restart |

Introduced 16.0.R1
 Platforms All

helper-mode *boolean*

Synopsis Enable the Graceful Restart helper for IS-IS
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [graceful-restart](#) [helper-mode](#) *boolean*
 Tree [helper-mode](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [hello-authentication](#) *boolean*
 Tree [hello-authentication](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello-padding *keyword*

Synopsis IS-IS Hello message padding
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [hello-padding](#) *keyword*
 Tree [hello-padding](#)
 Options adaptive, loose, strict, none
 Introduced 16.0.R1
 Platforms All

ignore-attached-bit *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [ignore-attached-bit](#) *boolean*
 Tree [ignore-attached-bit](#)

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-lsp-errors *boolean*

| | |
|------------|---|
| Synopsis | Ignore LSP packets with errors |
| Context | configure service vprn <i>string</i> isis <i>number</i> ignore-lsp-errors <i>boolean</i> |
| Tree | ignore-lsp-errors |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-narrow-metric *boolean*

| | |
|------------|--|
| Synopsis | Ignore links with narrow metrics |
| Context | configure service vprn <i>string</i> isis <i>number</i> ignore-narrow-metric <i>boolean</i> |
| Tree | ignore-narrow-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

iid-tlv *boolean*

| | |
|------------|---|
| Synopsis | Use IID TLVs with IS-IS multi-instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> iid-tlv <i>boolean</i> |
| Tree | iid-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------|---|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string</i> isis <i>number</i> import-policy <i>reference</i> |

| | |
|----------------|--|
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the interface list instance |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the IS-IS interface |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|-------------|---|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn string isis number interface string bfd-liveness |
| Tree | bfd-liveness |
| Description | Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|---|
| Synopsis | Enable the ipv4 context |
| Context | configure service vprn string isis number interface string bfd-liveness ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

include-bfd-tlv *boolean*

| | |
|------------|--|
| Synopsis | Enable IS-IS BFD TLVs on the interface |
| Context | configure service vprn string isis number interface string bfd-liveness ipv4 include-bfd-tlv <i>boolean</i> |
| Tree | include-bfd-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|---|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn string isis number interface string bfd-liveness ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |

Platforms All

include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [bfd-liveness](#) [ipv6](#) **include-bfd-tlv** *boolean*

Tree [include-bfd-tlv](#)

Default false

Introduced 16.0.R1

Platforms All

csnp-interval *number*

Synopsis Time interval between successive CSN PDUs sent

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **csnp-interval** *number*

Tree [csnp-interval](#)

Range 1 to 65535

Default 10

Units seconds

Introduced 16.0.R1

Platforms All

default-instance *boolean*

Synopsis Allow non-MI capable router to establish an adjacency

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **default-instance** *boolean*

Tree [default-instance](#)

Default false

Introduced 16.0.R1

Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication** *boolean*

| | |
|------------|--------------------------------------|
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key or hash string for Hello PDUs |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-key <i>string</i> |
| Tree | hello-authentication-key |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Authentication keychain to use for the session |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-keychain <i>reference</i> |
| Tree | hello-authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Hello authentication type |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

| | |
|------------|---|
| Synopsis | Interface type to broadcast, point-to-point, or to be default |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> interface-type <i>keyword</i> |
| Tree | interface-type |
| Options | point-to-point, broadcast |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|------------|---|
| Synopsis | Enable IPv4 multicast routing for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> ipv4-multicast <i>boolean</i> |
| Tree | ipv4-multicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|---|
| Synopsis | Enable IPv6 unicast routing for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> ipv6-unicast <i>boolean</i> |
| Tree | ipv6-unicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|---|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key for Hello PDUs |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-key <i>string</i> |
| Tree | hello-authentication-key |
| Description | This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.

If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-keychain *reference*

| | |
|------------|--|
| Synopsis | Authentication keychain to use for the session |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i> |
| Tree | hello-authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|-------------|--|
| Synopsis | Hello authentication enabled on the context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Description | This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included. |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Interval between Hello messages sent on this level |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 20000 |
| Default | 9 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|--|
| Synopsis | Hello messages missed from neighbor before router declares adjacency down |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric *number*

| | |
|------------|---|
| Synopsis | IS-IS interface metric applied for IPv4 multicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> ipv4-multicast-metric <i>number</i> |
| Tree | ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast-metric *number*

| | |
|----------|---|
| Synopsis | IS-IS interface metric applied for IPv6 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> ipv6-unicast-metric <i>number</i> |
| Tree | ipv6-unicast-metric |

| | |
|------------|---------------|
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

metric number

| | |
|------------|--|
| Synopsis | IS-IS interface metric applied for IPv4 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean

| | |
|------------|--|
| Synopsis | Passive interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> passive <i>boolean</i> |
| Tree | passive |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|------------|--|
| Synopsis | Router to become the designated router on a multi-access network |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> priority <i>number</i> |
| Tree | priority |
| Range | 0 to 127 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

sd-offset number

| | |
|----------|------------------------------------|
| Synopsis | Value of the signal degrade offset |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string isis number interface string level keyword sd-offset number</i> |
| Tree | sd-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

sf-offset *number*

| | |
|------------|---|
| Synopsis | Value of the signal fail offset |
| Context | configure service vprn <i>string isis number interface string level keyword sf-offset number</i> |
| Tree | sf-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|------------|---|
| Synopsis | IS-IS levels for this interface |
| Context | configure service vprn <i>string isis number interface string level-capability keyword</i> |
| Tree | level-capability |
| Default | 1/2 |
| Options | 1, 2, 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|------------|---|
| Synopsis | Load balancing weight |
| Context | configure service vprn <i>string isis number interface string load-balancing-weight number</i> |
| Tree | load-balancing-weight |
| Max. Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable Loopfree Alternative at interface level. |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate exclude <i>boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|--|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|---|
| Synopsis | Route next hop policy template that is applied to interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsp-pacing-interval *number*

| | |
|------------|--|
| Synopsis | Interval for sending LSPs from interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> lsp-pacing-interval <i>number</i> |
| Tree | lsp-pacing-interval |
| Range | 0 to 65535 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mesh-group

| | |
|------------|---|
| Synopsis | Enable the mesh-group context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group |
| Tree | mesh-group |
| Introduced | 16.0.R1 |
| Platforms | All |

blocked

| | |
|------------|--|
| Synopsis | Prevent the interface from flooding LSPs |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group blocked |
| Tree | blocked |
| Notes | The following elements are part of a choice: blocked or value . |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

| | |
|----------|--|
| Synopsis | Mesh group for the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group value <i>number</i> |
| Tree | value |
| Range | 1 to 2000000000 |
| Notes | The following elements are part of a choice: blocked or value . |

Introduced 16.0.R1
Platforms All

passive *boolean*

Synopsis Passive interface
Context **configure** *service vprn string isis number interface string* **passive** *boolean*
Tree **passive**
Default false
Introduced 16.0.R1
Platforms All

retransmit-interval *number*

Synopsis Minimum time between LSP PDU retransmissions on point-to-point interface
Context **configure** *service vprn string isis number interface string* **retransmit-interval** *number*
Tree **retransmit-interval**
Range 1 to 65535
Default 5
Units seconds
Introduced 16.0.R1
Platforms All

tag *number*

Synopsis Route tag for IP address of interface
Context **configure** *service vprn string isis number interface string* **tag** *number*
Tree **tag**
Range 1 to 4294967295
Introduced 16.0.R1
Platforms All

ipv4-multicast-routing *keyword*

Synopsis IS-IS topology for IPv4 multicast routing

| | |
|------------|--|
| Context | configure service vprn <i>string isis number ipv4-multicast-routing keyword</i> |
| Tree | ipv4-multicast-routing |
| Default | native |
| Options | false, native, mt |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-routing *boolean*

| | |
|------------|--|
| Synopsis | Support IPv4 routing for IS-IS instance |
| Context | configure service vprn <i>string isis number ipv4-routing boolean</i> |
| Tree | ipv4-routing |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-routing *keyword*

| | |
|------------|--|
| Synopsis | Routing topology for IPv6 |
| Context | configure service vprn <i>string isis number ipv6-routing keyword</i> |
| Tree | ipv6-routing |
| Default | false |
| Options | false, native, mt |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string isis number level keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|---|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string isis number level keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string isis number level keyword advertise-router-capability boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to verify PDUs sent on the interface |
| Context | configure service vprn <i>string isis number level keyword authentication-key string</i> |
| Tree | authentication-key |
| Description | This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.

Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Keychain used to sign and authenticate |
| Context | configure service vpn <i>string</i> isis <i>number</i> level <i>keyword</i> authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type to be used |
| Context | configure service vpn <i>string</i> isis <i>number</i> level <i>keyword</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|------------|---|
| Synopsis | Enable authentication of CSNP IS-IS protocol packets |
| Context | configure service vpn <i>string</i> isis <i>number</i> level <i>keyword</i> csnp-authentication <i>boolean</i> |
| Tree | csnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

default-ipv4-multicast-metric *number*

| | |
|----------|--|
| Synopsis | Default metric for IPv4 unicast |
| Context | configure service vpn <i>string</i> isis <i>number</i> level <i>keyword</i> default-ipv4-multicast-metric <i>number</i> |
| Tree | default-ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Default | 10 |

Introduced 16.0.R1
Platforms All

default-ipv6-unicast-metric *number*

Synopsis Default metric for IPv6 unicast
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [default-ipv6-unicast-metric](#) *number*
Tree [default-ipv6-unicast-metric](#)
Range 1 to 16777215
Default 10
Introduced 16.0.R1
Platforms All

default-metric *number*

Synopsis Default metric
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [default-metric](#) *number*
Tree [default-metric](#)
Range 1 to 16777215
Default 10
Introduced 16.0.R1
Platforms All

external-preference *number*

Synopsis External route preference for IS-IS level
Context **configure** [service vprn](#) *string* [isis](#) *number* [level](#) *keyword* [external-preference](#) *number*
Tree [external-preference](#)
Range 1 to 255
Introduced 16.0.R1
Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets

| | |
|------------|---|
| Context | configure service vprn string isis number level keyword hello-authentication boolean |
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn string isis number level keyword hello-padding keyword |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate-exclude *boolean*

| | |
|------------|---|
| Synopsis | Exclude interface participating in specific IS-IS level in SPF LFA computation |
| Context | configure service vprn string isis number level keyword loopfree-alternate-exclude boolean |
| Tree | loopfree-alternate-exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-mtu-size *number*

WARNING:

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|----------|--|
| Synopsis | LSP MTU size |
| Context | configure service vprn string isis number level keyword lsp-mtu-size number |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Default | 1492 |

| | |
|------------|---------|
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | External route preference at level |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

psnp-authentication *boolean*

| | |
|------------|--|
| Synopsis | Enable authentication on PSNP IS-IS protocol packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> psnp-authentication <i>boolean</i> |
| Tree | psnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

wide-metrics-only *boolean*

| | |
|------------|--|
| Synopsis | Use wide metrics advertisements in the LSPs |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> wide-metrics-only <i>boolean</i> |
| Tree | wide-metrics-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|----------|--|
| Synopsis | Routing level for instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> level-capability <i>keyword</i> |

| | |
|------------|----------------------------------|
| Tree | level-capability |
| Default | 1/2 |
| Options | 1, 2, 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

link-group [[link-group-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the link-group list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> |
| Tree | link-group |
| Introduced | 16.0.R1 |
| Platforms | All |

[link-group-name] *string*

| | |
|---------------|---|
| Synopsis | Link group name for the IS-IS protocol |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> |
| Tree | link-group |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|--|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric-offset *number*

| | |
|------------|---|
| Synopsis | Offset value for the IPv4 multicast address family |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> ipv4-multicast-metric-offset <i>number</i> |
| Tree | ipv4-multicast-metric-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-unicast-metric-offset *number*

| | |
|----------|---|
| Synopsis | Offset value for the IPv4 unicast address family |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> ipv4-unicast-metric-offset <i>number</i> |
| Tree | ipv4-unicast-metric-offset |
| Range | 1 to 16777215 |

Introduced 16.0.R1
 Platforms All

ipv6-unicast-metric-offset *number*

Synopsis Offset value for the IPv6 unicast address family
 Context **configure** **service** **vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **ipv6-unicast-metric-offset** *number*
 Tree [ipv6-unicast-metric-offset](#)
 Range 1 to 16777215
 Introduced 16.0.R1
 Platforms All

member [[interface-name](#)] *reference*

Synopsis Add a list entry for **member**
 Context **configure** **service** **vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **member** *reference*
 Tree [member](#)
 Max. Instances 8
 Introduced 16.0.R1
 Platforms All

[interface-name] *reference*

Synopsis Interface name for the associated link group
 Context **configure** **service** **vprn** *string* **isis** *number* **link-group** *string* **level** *keyword* **member** *reference*
 Tree [member](#)
 Reference **configure** **service** **vprn** *string* **isis** *number* **interface** *string*
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

oper-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> oper-members <i>number</i> |
| Tree | oper-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

revert-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links to return link group to normal state and remove offsets |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> revert-members <i>number</i> |
| Tree | revert-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string</i> isis <i>number</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vprn <i>string</i> isis <i>number</i> loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|----------------|--|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vprn string isis number loopfree-alternate exclude prefix-policy reference |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement string |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsp-lifetime *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | Amount of time during which an LSP is considered valid |
| Context | configure service vprn string isis number lsp-lifetime number |
| Tree | lsp-lifetime |
| Range | 350 to 65535 |
| Default | 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-minimum-remaining-lifetime *number*

| | |
|----------|--|
| Synopsis | Minimum value for the Remaining Lifetime of an LSP |
| Context | configure service vprn string isis number lsp-minimum-remaining-lifetime number |
| Tree | lsp-minimum-remaining-lifetime |

| | |
|------------|--------------|
| Range | 350 to 65535 |
| Units | seconds |
| Introduced | 19.7.R1 |
| Platforms | All |

lsp-mtu-size *number*

WARNING:

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | LSP MTU size |
| Context | configure service vprn <i>string isis number</i> lsp-mtu-size <i>number</i> |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Default | 1492 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-refresh

| | |
|------------|---|
| Synopsis | Enter the lsp-refresh context |
| Context | configure service vprn <i>string isis number</i> lsp-refresh |
| Tree | lsp-refresh |
| Introduced | 16.0.R1 |
| Platforms | All |

half-lifetime *boolean*

| | |
|------------|--|
| Synopsis | Set the refresh interval to always be half the LSP lifetime |
| Context | configure service vprn <i>string isis number</i> lsp-refresh half-lifetime <i>boolean</i> |
| Tree | half-lifetime |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|---|
| Synopsis | Refresh timer interval |
| Context | configure service vprn <i>string</i> isis <i>number</i> lsp-refresh interval <i>number</i> |
| Tree | interval |
| Range | 150 to 65535 |
| Default | 600 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

mru-mismatch-detection *boolean*

| | |
|-------------|--|
| Synopsis | Enable detection of MRU mismatch |
| Context | configure service vprn <i>string</i> isis <i>number</i> mru-mismatch-detection <i>boolean</i> |
| Tree | mru-mismatch-detection |
| Description | <p>When configured to true, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to false, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p> |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

multi-topology

| | |
|------------|---|
| Synopsis | Enable the multi-topology context |
| Context | configure service vprn <i>string</i> isis <i>number</i> multi-topology |
| Tree | multi-topology |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|------------|--|
| Synopsis | Support IPv4 topology (MT3) |
| Context | configure service vprn <i>string isis number multi-topology</i> ipv4-multicast <i>boolean</i> |
| Tree | ipv4-multicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|--|
| Synopsis | Support multi-topology TLVs |
| Context | configure service vprn <i>string isis number multi-topology</i> ipv6-unicast <i>boolean</i> |
| Tree | ipv6-unicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-import

| | |
|------------|--|
| Synopsis | Enter the multicast-import context |
| Context | configure service vprn <i>string isis number</i> multicast-import |
| Tree | multicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Submit IPv4 routes into the multicast RPF of the RTM |
| Context | configure service vprn <i>string isis number multicast-import</i> ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload

| | |
|------------|---|
| Synopsis | Enable the overload context |
| Context | configure service vprn string isis number overload |
| Tree | overload |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|--|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn string isis number overload max-metric boolean |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-external *boolean*

| | |
|------------|---|
| Synopsis | Advertise the external routes when router is in overloaded |
| Context | configure service vprn string isis number overload-export-external boolean |
| Tree | overload-export-external |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-interlevel *boolean*

| | |
|------------|---|
| Synopsis | Advertise the inter-level routes when router is overloaded |
| Context | configure service vprn string isis number overload-export-interlevel boolean |
| Tree | overload-export-interlevel |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|---|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn string isis number overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|--|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn string isis number overload-on-boot max-metric boolean |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload state after reboot |
| Context | configure service vprn string isis number overload-on-boot timeout number |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

poi-tlv *boolean*

| | |
|------------|--|
| Synopsis | Purge Originator Identification TLV |
| Context | configure service vprn string isis number poi-tlv boolean |
| Tree | poi-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-attributes-tlv *boolean*

| | |
|------------|---|
| Synopsis | Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-attributes-tlv <i>boolean</i> |
| Tree | prefix-attributes-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit

| | |
|------------|---|
| Synopsis | Enable the prefix-limit context |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit |
| Tree | prefix-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of prefixes for IS-IS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit limit <i>number</i> |
| Tree | limit |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Send warning message when the prefix limit is reached |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

overload-timeout (*number* | *keyword*)

Synopsis Time router remains in overload after prefix limit is exceeded before restarting

Context **configure service vprn** *string isis number prefix-limit overload-timeout* (*number* | *keyword*)

Tree [overload-timeout](#)

Range 1 to 1800

Default forever

Units seconds

Options forever

Introduced 16.0.R1

Platforms All

warning-threshold *number*

Synopsis Threshold value to trigger a warning message to be sent

Context **configure service vprn** *string isis number prefix-limit warning-threshold* *number*

Tree [warning-threshold](#)

Range 0 to 100

Default 0

Units percent

Introduced 16.0.R1

Platforms All

psnp-authentication *boolean*

Synopsis Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type

Context **configure service vprn** *string isis number psnp-authentication* *boolean*

Tree [psnp-authentication](#)

Default true

Introduced 16.0.R1

Platforms All

reference-bandwidth *number*

| | |
|------------|--|
| Synopsis | Reference bandwidth for bandwidth relative costing |
| Context | configure service vprn <i>string</i> isis <i>number</i> reference-bandwidth <i>number</i> |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|------------|---|
| Synopsis | Enter the rib-priority context |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|--|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority high |
| Tree | high |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-list *reference*

| | |
|------------|---|
| Synopsis | List used to select routes processed at higher priority through OSPF route calculation process |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority high prefix-list <i>reference</i> |
| Tree | prefix-list |
| Reference | configure policy-options prefix-list <i>string</i> |
| Notes | The following elements are part of a choice: prefix-list or tag . |
| Introduced | 16.0.R1 |

Platforms All

tag *number*

Synopsis Tag value that is used to match IS-IS routes

Context **configure** *service vprn string isis number rib-priority high tag number*

Tree [tag](#)

Range 1 to 4294967295

Notes The following elements are part of a choice: **prefix-list** or **tag**.

Introduced 16.0.R1

Platforms All

router-id *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Unique router ID for the ISIS instance

Context **configure** *service vprn string isis number router-id string*

Tree [router-id](#)

Introduced 16.0.R1

Platforms All

standard-multi-instance *boolean*

Synopsis Enable RFC standards compliant multi-instance behavior

Context **configure** *service vprn string isis number standard-multi-instance boolean*

Tree [standard-multi-instance](#)

Default false

Introduced 16.0.R1

Platforms All

strict-adjacency-check *boolean*

Synopsis Enable strict checking of address families for IS-IS adjacencies

| | |
|------------|--|
| Context | configure service vprn <i>string isis number strict-adjacency-check boolean</i> |
| Tree | strict-adjacency-check |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

summary-address [[ip-prefix](#)] (*ipv4-prefix | ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the summary-address list instance |
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix)</i> |
| Tree | summary-address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix | ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IP prefix for the summary address |
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix)</i> |
| Tree | summary-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|------------|--|
| Synopsis | IS-IS level for the summary address |
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix) level-capability keyword</i> |
| Tree | level-capability |
| Default | 1/2 |
| Options | 1, 2, 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

route-tag *number*

| | |
|------------|--|
| Synopsis | Route tag assigned to the summary address |
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix)</i>
route-tag <i>number</i> |
| Tree | route-tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-attached-bit *boolean*

| | |
|------------|--|
| Synopsis | Allow IS-IS to suppress setting attached bit on LSPs |
| Context | configure service vprn <i>string isis number suppress-attached-bit boolean</i> |
| Tree | suppress-attached-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

system-id *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|---------------|---|
| Synopsis | System ID |
| Context | configure service vprn <i>string isis number system-id string</i> |
| Tree | system-id |
| String Length | 14 |
| Default | 0000.0000.0000 |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enter the timers context |
| Context | configure service vprn string isis number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-wait

| | |
|------------|--|
| Synopsis | Enter the Isp-wait context |
| Context | configure service vprn string isis number timers Isp-wait |
| Tree | Isp-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-initial-wait *number*

| | |
|------------|---|
| Synopsis | Initial LSP generation delay |
| Context | configure service vprn string isis number timers Isp-wait Isp-initial-wait <i>number</i> |
| Tree | Isp-initial-wait |
| Range | 10 to 100000 |
| Default | 10 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isp-max-wait *number*

| | |
|------------|---|
| Synopsis | Maximum time between two consecutive LSP occurrences |
| Context | configure service vprn string isis number timers Isp-wait Isp-max-wait <i>number</i> |
| Tree | Isp-max-wait |
| Range | 10 to 120000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

lsp-second-wait *number*

Synopsis Delay between first and second LSP generation

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [lsp-wait](#) [lsp-second-wait](#) *number*

Tree [lsp-second-wait](#)

Range 10 to 100000

Default 1000

Units milliseconds

Introduced 16.0.R1

Platforms All

spf-wait

Synopsis Enter the **spf-wait** context

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [spf-wait](#)

Tree [spf-wait](#)

Introduced 16.0.R1

Platforms All

spf-initial-wait *number*

Synopsis Initial SPF calculation delay after topology change

Context **configure** [service vprn](#) *string* [isis](#) *number* [timers](#) [spf-wait](#) [spf-initial-wait](#) *number*

Tree [spf-initial-wait](#)

Range 10 to 100000

Default 1000

Units milliseconds

Introduced 16.0.R1

Platforms All

spf-max-wait *number*

Synopsis Maximum interval amid two consecutive SPF calculations

| | |
|------------|---|
| Context | configure service vprn <i>string isis number timers spf-wait spf-max-wait number</i> |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Default | 10000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|--|
| Synopsis | Hold time between first and second SPF calculations |
| Context | configure service vprn <i>string isis number timers spf-wait spf-second-wait number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import

| | |
|------------|--|
| Synopsis | Enter the unicast-import context |
| Context | configure service vprn <i>string isis number unicast-import</i> |
| Tree | unicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Submit IPv4 routes into unicast RTM |
| Context | configure service vprn <i>string isis number unicast-import ipv4 boolean</i> |
| Tree | ipv4 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Submit IPv6 routes into unicast RTM |
| Context | configure service vprn <i>string isis number unicast-import ipv6 boolean</i> |
| Tree | ipv6 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

l2tp

| | |
|------------|---|
| Synopsis | Enable the l2tp context |
| Context | configure service vprn <i>string l2tp</i> |
| Tree | l2tp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of L2TP |
| Context | configure service vprn <i>string l2tp admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|---|
| Synopsis | Attribute of the Value Pair (AVP) hiding algorithm |
| Context | configure service vprn <i>string l2tp avp-hiding keyword</i> |
| Tree | avp-hiding |
| Options | sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *boolean*

| | |
|------------|---|
| Synopsis | Use challenge-response authentication |
| Context | configure service vprn <i>string</i> l2tp challenge <i>boolean</i> |
| Tree | challenge |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|---|
| Synopsis | Destruction timeout |
| Context | configure service vprn <i>string</i> l2tp destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Default | 60 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-tunnel

| | |
|------------|--|
| Synopsis | Enter the ethernet-tunnel context |
| Context | configure service vprn <i>string</i> l2tp ethernet-tunnel |
| Tree | ethernet-tunnel |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reconnect-timeout (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Timeout for a session setup retry |
| Context | configure service vprn <i>string</i> l2tp ethernet-tunnel reconnect-timeout (<i>number</i> <i>keyword</i>) |
| Tree | reconnect-timeout |
| Range | 10 to 3600 |
| Default | infinite |

| | |
|------------|---|
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

exclude-avps

| | |
|------------|---|
| Synopsis | Enter the exclude-avps context |
| Context | configure service vprn string l2tp exclude-avps |
| Tree | exclude-avps |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

calling-number *boolean*

| | |
|------------|--|
| Synopsis | Calling Number AVP to exclude |
| Context | configure service vprn string l2tp exclude-avps calling-number <i>boolean</i> |
| Tree | calling-number |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

initial-rx-lcp-conf-req *boolean*

| | |
|------------|---|
| Synopsis | Exclude the Initial Received LCP CONFREQ AVP |
| Context | configure service vprn string l2tp exclude-avps initial-rx-lcp-conf-req <i>boolean</i> |
| Tree | initial-rx-lcp-conf-req |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|----------|--|
| Synopsis | Enter the failover context |
| Context | configure service vprn string l2tp failover |

| | |
|------------|---|
| Tree | failover |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-max-session-lifetime *number*

| | |
|------------|---|
| Synopsis | Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase |
| Context | configure service vprn <i>string</i> l2tp failover recovery-max-session-lifetime <i>number</i> |
| Tree | recovery-max-session-lifetime |
| Range | 2 to 4294967295 |
| Default | 2 |
| Units | centiseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-method *keyword*

| | |
|------------|--|
| Synopsis | Recovery method of the sequence numbers after failover |
| Context | configure service vprn <i>string</i> l2tp failover recovery-method <i>keyword</i> |
| Tree | recovery-method |
| Default | mcs |
| Options | mcs, recovery-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|---|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp [*id*] *reference*

Synopsis Enter the **track-srrp** list instance

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference*

Tree [track-srrp](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[id] *reference*

Synopsis SRRP instance ID for multi-chassis redundancy failover

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference*

Tree [track-srrp](#)

Reference **configure** [redundancy multi-chassis peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*) [sync track-srrp](#) *number*

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *reference*

Synopsis Multi-chassis peer address

Context **configure** [service vprn](#) *string* [l2tp failover track-srrp](#) *reference* [peer](#) *reference*

Tree [peer](#)

Reference **configure** [redundancy multi-chassis peer](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

Synopsis Synchronization tag on the multi-chassis peer

| | |
|---------------|---|
| Context | configure service vpn <i>string</i> l2tp failover track-srrp <i>reference</i> sync-tag <i>string</i> |
| Tree | sync-tag |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group [**tunnel-group-name**] *string*

| | |
|------------|--|
| Synopsis | Enter the group list instance |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[tunnel-group-name] *string*

| | |
|---------------|--|
| Synopsis | Tunnel group name |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| String Length | 1 to 63 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the L2TP tunnel group |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|--|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |

| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|---|
| Synopsis | Destruction timeout |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-tunnel

Synopsis Enter the **ethernet-tunnel** context

Context **configure service vprn string l2tp group string ethernet-tunnel**

Tree [ethernet-tunnel](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout (*number | keyword*)

Synopsis Timeout for a session setup retry at group level

Context **configure service vprn string l2tp group string ethernet-tunnel reconnect-timeout (*number | keyword*)**

Tree [reconnect-timeout](#)

Range 10 to 3600

Units seconds

Options infinite

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis Enter the **failover** context

Context **configure service vprn string l2tp group string failover**

Tree [failover](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis Recovery method of the sequence numbers after failover

Context **configure service vprn string l2tp group string failover recovery-method *keyword***

Tree [recovery-method](#)

Options mcs, recovery-tunnel

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|---|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Idle timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2tpv3

| | |
|------------|---|
| Synopsis | Enter the I2tpv3 context |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 |
| Tree | I2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Cookie field length |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 cookie-length (<i>number</i> <i>keyword</i>) |
| Tree | cookie-length |
| Range | 4 8 |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|--|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 digest-type <i>keyword</i> |
| Tree | digest-type |
| Options | none, md5, sha1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nonce-length *number*

| | |
|------------|--|
| Synopsis | Length for the local L2TPv3 nonce (random number) |
| Context | configure service vprn <i>string</i> I2tp group <i>string</i> I2tpv3 nonce-length <i>number</i> |
| Tree | nonce-length |
| Range | 0 16 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TPv3 password |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 private-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | TCP Maximum Segment Size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pw-cap-list

| | |
|----------|--------------------------------------|
| Synopsis | Enter the pw-cap-list context |
|----------|--------------------------------------|

| | |
|------------|--|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list |
| Tree | pw-cap-list |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Advertise Ethernet pseudowire type |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet <i>boolean</i> |
| Tree | ethernet |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-vlan *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Advertise Ethernet VLAN pseudowire type |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet-vlan <i>boolean</i> |
| Tree | ethernet-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rem-router-id *string*

| | |
|----------|--|
| Synopsis | Filter on remote router ID |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> l2tpv3 rem-router-id <i>string</i> |
| Tree | rem-router-id |
| Default | 0.0.0.0 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-password-change *boolean*

Synopsis Enable tracking of password changes
 Context **configure** [service vprn](#) [string l2tp group](#) [string l2tpv3](#) **track-password-change** *boolean*
 Tree [track-password-change](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis Enter the **lac** context
 Context **configure** [service vprn](#) [string l2tp group](#) [string lac](#)
 Tree [lac](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *keyword*

Synopsis DF (do not fragment) bit in data traffic transmitted as LAC
 Context **configure** [service vprn](#) [string l2tp group](#) [string lac](#) **df-bit** *keyword*
 Tree [df-bit](#)
 Options false, true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis Enter the **lns** context
 Context **configure** [service vprn](#) [string l2tp group](#) [string lns](#)
 Tree [lns](#)
 Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Ins-group *reference*

Synopsis ISA LNS group
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [Ins-group](#) *reference*
 Tree [Ins-group](#)
 Reference **configure** [isa](#) [Ins-group](#) *number*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance-method *keyword*

Synopsis New sessions for L2TP ISA MDA
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [load-balance-method](#) *keyword*
 Tree [load-balance-method](#)
 Default per-session
 Options per-session, per-tunnel
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis Enter the **mlppp** context
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [mlppp](#)
 Tree [mlppp](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis Administrative state of MLPPP in the L2TP tunnel group
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [Ins](#) [mlppp](#) [admin-state](#) *keyword*
 Tree [admin-state](#)
 Default disable

| | |
|------------|---|
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|------------|---|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp endpoint |
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *boolean*

| | |
|------------|---|
| Synopsis | Enable link fragmentation and interleaving |
| Context | configure service vprn string l2tp group string lns mlppp interleave <i>boolean</i> |
| Tree | interleave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn string l2tp group string lns mlppp max-fragment-delay (<i>number</i> <i>keyword</i>) |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Default | no-fragmentation |
| Units | milliseconds |
| Options | no-fragmentation |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|------------|---|
| Synopsis | Maximum MLPPP links |
| Context | configure service vprn string l2tp group string lns mlppp max-links <i>number</i> |
| Tree | max-links |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|----------|--|
| Synopsis | Reassembly timeout |
| Context | configure service vprn string l2tp group string lns mlppp reassemble-timeout <i>number</i> |

| | |
|------------|---|
| Tree | reassembly-timeout |
| Range | 100 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *boolean*

| | |
|------------|---|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn string l2tp group string lns mlppp short-sequence-numbers boolean |
| Tree | short-sequence-numbers |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|--|
| Synopsis | Enter the ppp context |
| Context | configure service vprn string l2tp group string lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|---|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vprn string l2tp group string lns ppp authentication keyword |
| Tree | authentication |
| Default | pref-chap |
| Options | pap, chap, pref-chap, pref-pap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|---------------|---|
| Synopsis | Authentication policy when a DHCP message is received |
| Context | configure service vprn string l2tp group string lns ppp authentication-policy string |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|------------|--|
| Synopsis | Enter the chap-challenge-length context |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end *number*

| | |
|------------|---|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length end number |
| Tree | end |
| Range | 8 to 64 |
| Default | 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start *number*

| | |
|----------|---|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length start number |
| Tree | start |
| Range | 8 to 64 |

| | |
|------------|--|
| Default | 32 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-group-interface

| | |
|------------|--|
| Synopsis | Enter the default-group-interface context |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface |
| Tree | default-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface *string*

| | |
|---------------|---|
| Synopsis | Group interface |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface interface string |
| Tree | interface |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name *string*

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface service-name string |
| Tree | service-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipcp-subnet-negotiation *boolean*

| | |
|----------|---|
| Synopsis | Allow IPCP subnet negotiation for PPPoE hosts |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp ipcp-subnet-negotiation <i>boolean</i> |
| Tree | ipcp-subnet-negotiation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | PPP keepalive interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive interval <i>number</i> |
| Tree | interval |
| Range | 10 to 300 |
| Default | 30 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|------------|---|
| Synopsis | PPP keepalive multiplier |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive multiplier <i>number</i> |
| Tree | multiplier |
| Range | 1 to 5 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-force-ack-accm *boolean*

| | |
|------------|--|
| Synopsis | Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp lcp-force-ack-accm <i>boolean</i> |
| Tree | lcp-force-ack-accm |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-ignore-magic-numbers *boolean*

| | |
|------------|--|
| Synopsis | Check magic number in echo request and reply messages |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp lcp-ignore-magic-numbers <i>boolean</i> |
| Tree | lcp-ignore-magic-numbers |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Maximum PPP MTU size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Default | 1500 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *boolean*

| | |
|----------|--|
| Synopsis | Use authentication AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp proxy-authentication <i>boolean</i> |
| Tree | proxy-authentication |

| | |
|------------|--|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-lcp *boolean*

| | |
|------------|---|
| Synopsis | Proxy LCP AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp proxy-lcp <i>boolean</i> |
| Tree | proxy-lcp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reject-disabled-ncp *boolean*

| | |
|------------|---|
| Synopsis | Force LCP Protocol Reject for IPv6CP Configure Request |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp reject-disabled-ncp <i>boolean</i> |
| Tree | reject-disabled-ncp |
| Default | false |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

user-db *string*

| | |
|---------------|--|
| Synopsis | Local user database for PPP PAP and CHAP authentication |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp user-db <i>string</i> |
| Tree | user-db |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-address *string*

| | |
|----------|--|
| Synopsis | Local address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> local-address <i>string</i> |

Tree [local-address](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name used to distinguish tunnels
 Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [local-name](#) *string*
 Tree [local-name](#)
 String Length 1 to 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
 Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [max-retries-estab](#) *number*
 Tree [max-retries-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
 Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [max-retries-not-estab](#) *number*
 Tree [max-retries-not-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Password between L2TP LAC and LNS
 Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [password](#) *string*

| | |
|---------------|---|
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

protocol *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |

| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive-window-size *number*

| | |
|------------|--|
| Synopsis | L2TP receive window size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> receive-window-size <i>number</i> |
| Tree | receive-window-size |
| Range | 4 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-assign-method *keyword*

| | |
|------------|---|
| Synopsis | Session assignment method |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> session-assign-method <i>keyword</i> |
| Tree | session-assign-method |
| Options | existing-first, weighted, weighted-random |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Session limit |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> session-limit (<i>number</i> <i>keyword</i>) |
| Tree | session-limit |
| Range | 1 to 250000 |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel [[tunnel-name](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the tunnel list instance |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| Max. Instances | 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[tunnel-name] *string*

| | |
|---------------|---|
| Synopsis | Tunnel name |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| String Length | 1 to 32 |

| | |
|------------|---|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the L2TP tunnel |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-establish *boolean*

| | |
|------------|---|
| Synopsis | Allow the tunnel to be automatically set up by the system |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> auto-establish <i>boolean</i> |
| Tree | auto-establish |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|---|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *keyword*

| | |
|----------|---|
| Synopsis | Enable use of challenge-response authentication |
|----------|---|

| | |
|------------|--|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> challenge <i>keyword</i> |
| Tree | challenge |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|--|
| Synopsis | Destruction timeout |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|------------|--|
| Synopsis | Enter the failover context |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover |
| Tree | failover |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-method *keyword*

| | |
|------------|---|
| Synopsis | Recovery method of the sequence numbers after failover |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover recovery-method <i>keyword</i> |
| Tree | recovery-method |
| Options | mcs, recovery-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|--|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|----------|--------------|
| Synopsis | Idle timeout |
|----------|--------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|------------|---|
| Synopsis | Enter the l2tpv3 context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 private-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |

| | |
|------------|---|
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|---|
| Synopsis | Enter the lac context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit *keyword*

| | |
|------------|--|
| Synopsis | DF (do not fragment) bit in data traffic transmitted as LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac df-bit <i>keyword</i> |
| Tree | df-bit |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lns

| | |
|------------|---|
| Synopsis | Enter the lns context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns |
| Tree | lns |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lns-group *reference*

| | |
|----------|---|
| Synopsis | ISA LNS group |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns lns-group <i>reference</i> |
| Tree | lns-group |

| | |
|------------|--|
| Reference | configure isa lns-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

load-balance-method *keyword*

| | |
|------------|--|
| Synopsis | New sessions for L2TP ISA MDA |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns load-balance-method <i>keyword</i> |
| Tree | load-balance-method |
| Options | per-session, per-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mlppp

| | |
|------------|---|
| Synopsis | Enter the mlppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp |
| Tree | mlppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of MLPPP in the L2TP tunnel |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|----------|--|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint |

| | |
|------------|---|
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *keyword*

| | |
|------------|--|
| Synopsis | Use of Link fragmentation and interleaving |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp interleave <i>keyword</i> |
| Tree | interleave |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay *number*

| | |
|------------|--|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-fragment-delay <i>number</i> |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|------------|---|
| Synopsis | Maximum MLPPP links |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-links <i>number</i> |
| Tree | max-links |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|------------|--|
| Synopsis | Reassembly timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp reassemble-timeout <i>number</i> |
| Tree | reassemble-timeout |
| Range | 100 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *keyword*

| | |
|----------|---|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp short-sequence-numbers <i>keyword</i> |

| | |
|------------|---|
| Tree | short-sequence-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|---|
| Synopsis | Enter the ppp context |
| Context | configure service vprn string l2tp group string tunnel string lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|---|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vprn string l2tp group string tunnel string lns ppp authentication <i>keyword</i> |
| Tree | authentication |
| Options | pap, chap, pref-chap, pref-pap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|---------------|---|
| Synopsis | Authentication policy when a DHCP message is received |
| Context | configure service vprn string l2tp group string tunnel string lns ppp authentication-policy <i>string</i> |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|----------|--|
| Synopsis | Enter the chap-challenge-length context |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end number

| | |
|------------|--|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length end <i>number</i> |
| Tree | end |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start number

| | |
|------------|--|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length start <i>number</i> |
| Tree | start |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-group-interface

| | |
|------------|--|
| Synopsis | Enter the default-group-interface context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp default-group-interface |
| Tree | default-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface string

| | |
|---------------|---|
| Synopsis | Group interface |
| Context | configure service vprn string l2tp group string tunnel string lns ppp default-group-interface interface string |
| Tree | interface |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name string

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn string l2tp group string tunnel string lns ppp default-group-interface service-name string |
| Tree | service-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipcp-subnet-negotiation keyword

| | |
|------------|--|
| Synopsis | Use of IPCP subnet negotiation for PPPoE hosts |
| Context | configure service vprn string l2tp group string tunnel string lns ppp ipcp-subnet-negotiation keyword |
| Tree | ipcp-subnet-negotiation |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn string l2tp group string tunnel string lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis PPP keepalive interval

Context **configure** *service vprn string l2tp group string tunnel string lns ppp keepalive interval number*

Tree [interval](#)

Range 10 to 300

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis PPP keepalive multiplier

Context **configure** *service vprn string l2tp group string tunnel string lns ppp keepalive multiplier number*

Tree [multiplier](#)

Range 1 to 5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm *keyword*

Synopsis Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option

Context **configure** *service vprn string l2tp group string tunnel string lns ppp lcp-force-ack-accm keyword*

Tree [lcp-force-ack-accm](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *keyword*

| | |
|------------|--|
| Synopsis | Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp lcp-ignore-magic-numbers <i>keyword</i> |
| Tree | lcp-ignore-magic-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Maximum PPP MTU size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *keyword*

| | |
|------------|--|
| Synopsis | Authentication AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-authentication <i>keyword</i> |
| Tree | proxy-authentication |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-lcp *keyword*

| | |
|----------|---|
| Synopsis | Use the Proxy LCP AVPs that are received from the LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-lcp <i>keyword</i> |
| Tree | proxy-lcp |
| Options | false, true |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reject-disabled-ncp *keyword*

Synopsis Force LCP Project Reject for IPv6CP Configure Request
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) **reject-disabled-ncp** *keyword*
 Tree [reject-disabled-ncp](#)
 Options false, true
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis Local user database for PPP PAP and CHAP authentication
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) **user-db** *string*
 Tree [user-db](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis Local address
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-address** *string*
 Tree [local-address](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name used to distinguish tunnels
 Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-name** *string*
 Tree [local-name](#)
 String Length 1 to 64

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [max-retries-estab](#) *number*
 Tree [max-retries-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [max-retries-not-estab](#) *number*
 Tree [max-retries-not-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Password between L2TP LAC and LNS
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [password](#) *string*
 Tree [password](#)
 String Length 1 to 115
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *string*

Synopsis Peer address
 Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [peer](#) *string*
 Tree [peer](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis Tunnel preference number with its group
 Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [preference](#) *number*
 Tree [preference](#)
 Range 0 to 16777215
 Default 50
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis RADIUS accounting policy
 Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [radius-accounting-policy](#) *reference*
 Tree [radius-accounting-policy](#)
 Reference **configure** [aaa](#) [radius](#) [l2tp-accounting-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
 Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [receive-window-size](#) *number*
 Tree [receive-window-size](#)
 Range 4 to 1024
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-name *string*

Synopsis Remote tunnel host name

| | |
|---------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> remote-name <i>string</i> |
| Tree | remote-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> session-limit (<i>number</i> <i>keyword</i>) |
| Tree | session-limit |
| Range | 1 to 65534 |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit for each group of this router |
| Context | configure service vprn <i>string</i> l2tp group-session-limit <i>number</i> |
| Tree | group-session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hello-interval (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Hello interval |
| Context | configure service vprn <i>string</i> l2tp hello-interval (<i>number</i> <i>keyword</i>) |
| Tree | hello-interval |
| Range | 10 to 3600 |
| Default | 300 |
| Units | seconds |
| Options | infinite |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Idle timeout |
| Context | configure service vprn <i>string</i> l2tp idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Default | infinite |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-avps

| | |
|------------|---|
| Synopsis | Enter the ignore-avps context |
| Context | configure service vprn <i>string</i> l2tp ignore-avps |
| Tree | ignore-avps |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sequencing-required *boolean*

| | |
|------------|--|
| Synopsis | Ignore Sequencing Required AVP |
| Context | configure service vprn <i>string</i> l2tp ignore-avps sequencing-required <i>boolean</i> |
| Tree | sequencing-required |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|----------|---------------------------------|
| Synopsis | Enter the l2tpv3 context |
|----------|---------------------------------|

| | |
|------------|---|
| Context | configure service vprn string l2tp l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length *number*

| | |
|------------|---|
| Synopsis | Cookie field length |
| Context | configure service vprn string l2tp l2tpv3 cookie-length number |
| Tree | cookie-length |
| Range | 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|--|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn string l2tp l2tpv3 digest-type keyword |
| Tree | digest-type |
| Options | md5, sha1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nonce-length *number*

| | |
|------------|--|
| Synopsis | Length of the local L2TPv3 nonce (random number) |
| Context | configure service vprn string l2tp l2tpv3 nonce-length number |
| Tree | nonce-length |
| Range | 0 16 to 64 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TPv3 password |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

| | |
|------------|--|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 private-tcp-mss-adjust <i>number</i> |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust *number*

| | |
|------------|---|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 public-tcp-mss-adjust <i>number</i> |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transport-type

| | |
|------------|--|
| Synopsis | Enter the transport-type context |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 transport-type |
| Tree | transport-type |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip *boolean*

| | |
|------------|---|
| Synopsis | Use IP as the transport type for the L2TPv3 tunnel |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 transport-type ip <i>boolean</i> |
| Tree | ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|---|
| Synopsis | Enter the lac context |
| Context | configure service vprn <i>string</i> l2tp lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

calling-number-format *string*

| | |
|---------------|---|
| Synopsis | Calling Number AVP for L2TP control messages |
| Context | configure service vprn <i>string</i> l2tp lac calling-number-format <i>string</i> |
| Tree | calling-number-format |
| String Length | 1 to 255 |
| Default | %S %s |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cisco-nas-port

| | |
|------------|--|
| Synopsis | Enter the cisco-nas-port context |
| Context | configure service vprn <i>string</i> l2tp lac cisco-nas-port |
| Tree | cisco-nas-port |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet string

| | |
|---------------|--|
| Synopsis | L2TP Cisco NAS port AVP with binary patterns for Ethernet |
| Context | configure service vprn string l2tp lac cisco-nas-port ethernet string |
| Tree | ethernet |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit boolean

| | |
|------------|--|
| Synopsis | Send all L2TP packets with DF bit set to 1 |
| Context | configure service vprn string l2tp lac df-bit boolean |
| Tree | df-bit |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address string

| | |
|------------|--|
| Synopsis | Local address |
| Context | configure service vprn string l2tp local-address string |
| Tree | local-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-name string

| | |
|---------------|---|
| Synopsis | Local host name |
| Context | configure service vprn string l2tp local-name string |
| Tree | local-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for established tunnels |
| Context | configure service vprn <i>string</i> l2tp max-retries-estab <i>number</i> |
| Tree | max-retries-estab |
| Range | 2 to 7 |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-not-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for unestablished tunnels |
| Context | configure service vprn <i>string</i> l2tp max-retries-not-estab <i>number</i> |
| Tree | max-retries-not-estab |
| Range | 2 to 7 |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-attempt *keyword*

| | |
|------------|---|
| Synopsis | Tunnel that is selected when previous session setup failed |
| Context | configure service vprn <i>string</i> l2tp next-attempt <i>keyword</i> |
| Tree | next-attempt |
| Default | next-preference-level |
| Options | same-preference-level, next-preference-level |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|----------|--|
| Synopsis | L2TP password |
| Context | configure service vprn <i>string</i> l2tp password <i>string</i> |
| Tree | password |

String Length 1 to 115
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-address-change-policy *keyword*

Synopsis Reaction for L2TP response from a different address
Context **configure service vprn string l2tp peer-address-change-policy keyword**
Tree [peer-address-change-policy](#)
Default reject
Options accept, ignore, reject
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis RADIUS accounting policy
Context **configure service vprn string l2tp radius-accounting-policy reference**
Tree [radius-accounting-policy](#)
Reference **configure aaa radius l2tp-accounting-policy string**
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
Context **configure service vprn string l2tp receive-window-size number**
Tree [receive-window-size](#)
Range 4 to 1024
Default 64
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

replace-result-code

| | |
|------------|---|
| Synopsis | Enter the replace-result-code context |
| Context | configure service vprn string l2tp replace-result-code |
| Tree | replace-result-code |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error code |
| Context | configure service vprn string l2tp replace-result-code cdn-invalid-dst <i>boolean</i> |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error |
| Context | configure service vprn string l2tp replace-result-code cdn-permanent-no-facilities <i>boolean</i> |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error |
| Context | configure service vprn string l2tp replace-result-code cdn-temporary-no-facilities <i>boolean</i> |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rtm-debounce-time (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Debounce timer that declares L2TP action for route table management events |
| Context | configure service vprn <i>string</i> l2tp rtm-debounce-time (<i>number</i> <i>keyword</i>) |
| Tree | rtm-debounce-time |
| Range | 0 to 5000 |
| Default | infinite |
| Units | milliseconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-assign-method *keyword*

| | |
|------------|---|
| Synopsis | Session assignment method |
| Context | configure service vprn <i>string</i> l2tp session-assign-method <i>keyword</i> |
| Tree | session-assign-method |
| Default | existing-first |
| Options | existing-first, weighted, weighted-random |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|--|
| Synopsis | L2TP session limit of this router |
| Context | configure service vprn <i>string</i> l2tp session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-selection-blacklist

| | |
|----------|---|
| Synopsis | Enter the tunnel-selection-blacklist context |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist |

| | |
|------------|---|
| Tree | tunnel-selection-blacklist |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

add-tunnel-on

| | |
|------------|--|
| Synopsis | Enter the add-tunnel-on context |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on |
| Tree | add-tunnel-on |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address-change-timeout *boolean*

| | |
|------------|--|
| Synopsis | Enable a timed-out tunnel to be forced to the denylist |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on address-change-timeout <i>boolean</i> |
| Tree | address-change-timeout |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-err-code *boolean*

| | |
|------------|--|
| Synopsis | Add to deny if CDN is received with code: General error |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-err-code <i>boolean</i> |
| Tree | cdn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst *boolean*

| | |
|----------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 6 |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-invalid-dst boolean |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 5 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-permanent-no-facilities boolean |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 4 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities boolean |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-err-code boolean

| | |
|------------|--|
| Synopsis | Add to denylist if received with general error code |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-err-code boolean |
| Tree | stop-ccn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-other *boolean*

| | |
|------------|---|
| Synopsis | Add to denylist if StopCCN received with general error |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-other <i>boolean</i> |
| Tree | stop-ccn-other |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tx-cdn-not-established-in-time *boolean*

| | |
|------------|---|
| Synopsis | Add to denylist if CDN transmitted with result code |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on tx-cdn-not-established-in-time <i>boolean</i> |
| Tree | tx-cdn-not-established-in-time |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-list-length (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Number of tunnels or peers in the denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist max-list-length (<i>number</i> <i>keyword</i>) |
| Tree | max-list-length |
| Range | 1 to 65535 |
| Default | infinite |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-time *number*

| | |
|----------|--|
| Synopsis | Time that a tunnel or peer can remain in the denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist max-time <i>number</i> |

| | |
|------------|---|
| Tree | max-time |
| Range | 1 to 60 |
| Default | 5 |
| Units | minutes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout-action *keyword*

| | |
|------------|---|
| Synopsis | Action when a tunnel or peer exceeds time in denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist timeout-action <i>keyword</i> |
| Tree | timeout-action |
| Default | remove-from-blacklist |
| Options | remove-from-blacklist, try-one-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp tunnel-session-limit <i>number</i> |
| Tree | tunnel-session-limit |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

label-mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Allocation mode for VPRN service labels |
| Context | configure service vprn <i>string</i> label-mode <i>keyword</i> |
| Tree | label-mode |
| Default | vrf |

| | |
|------------|---------------|
| Options | vrf, next-hop |
| Introduced | 16.0.R1 |
| Platforms | All |

local-routes-domain-id *string*

| | |
|-------------|--|
| Synopsis | Local routes domain ID |
| Context | configure service vprn <i>string</i> local-routes-domain-id <i>string</i> |
| Tree | local-routes-domain-id |
| Description | <p>This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.</p> <p>The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> |
| Introduced | 21.10.R1 |
| Platforms | All |

log

| | |
|------------|--|
| Synopsis | Enter the log context |

| Synopsis | SNMP version to format notification messages sent to this SNMP notification collector |
| Context | configure service vprn <i>string</i> log snmp-trap-group <i>string</i> trap-target <i>string</i> version <i>keyword</i> |
| Tree | version |
| Default | snmpv3 |
| Options | snmpv1, snmpv2c, snmpv3 |
| Introduced | 16.0.R1 |
| Platforms | All |

syslog [**syslog-name**] *string*

| | |
|----------------|---|
| Synopsis | Enter the syslog list instance |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> |
| Tree | syslog |
| Max. Instances | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

[**syslog-name**] *string*

| | |
|---------------|---|
| Synopsis | Syslog name |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> |
| Tree | syslog |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |

Introduced 21.2.R1
 Platforms All

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the Syslog target host
 Context **configure service vprn string log syslog string address** (*ipv4-address-no-zone | ipv6-address-no-zone*)
 Tree [address](#)
 Introduced 16.0.R1
 Platforms All

description *string*

Synopsis Text description
 Context **configure service vprn string log syslog string description string**
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms All

facility *keyword*

Synopsis Facility code for messages
 Context **configure service vprn string log syslog string facility keyword**
 Tree [facility](#)
 Default local7
 Options kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
 Introduced 16.0.R1
 Platforms All

log-prefix (*keyword | string*)

Synopsis String that is prepended to every log message sent to this target syslog host
 Context **configure service vprn string log syslog string log-prefix** (*keyword | string*)

| | |
|---------------|----------------------------|
| Tree | log-prefix |
| String Length | 1 to 32 |
| Default | TMNX |
| Options | no-prefix |
| Introduced | 16.0.R1 |
| Platforms | All |

port number

| | |
|------------|--|
| Synopsis | Destination port when sending syslog over UDP |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> port number |
| Tree | port |
| Range | 0 1 to 65535 |
| Default | 514 |
| Introduced | 16.0.R1 |
| Platforms | All |

severity keyword

| | |
|------------|--|
| Synopsis | Severity level threshold for the syslog message |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> severity <i>keyword</i> |
| Tree | severity |
| Default | info |
| Options | emergency, alert, critical, error, warning, notice, info, debug |
| Introduced | 16.0.R1 |
| Platforms | All |

tls-client-profile reference

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | TLS client profile used to encrypt syslog communication |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> tls-client-profile <i>reference</i> |
| Tree | tls-client-profile |

| | |
|-------------|--|
| Description | This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.
Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.
When this command is unconfigured, the syslog messages are sent over UDP. |
| Reference | configure system security tls client-tls-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | All |

management

| | |
|------------|--|
| Synopsis | Enable the management context |
| Context | configure service vprn <i>string</i> management |
| Tree | management |
| Introduced | 16.0.R4 |
| Platforms | All |

allow-ftp *boolean*

| | |
|-------------|---|
| Synopsis | Allow access to the FTP server |
| Context | configure service vprn <i>string</i> management allow-ftp <i>boolean</i> |
| Tree | allow-ftp |
| Description | When configured to true , this command allows FTP access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the SR OS FTP server. |
| Default | false |
| Introduced | 16.0.R6 |
| Platforms | All |

allow-grpc *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the gRPC server |
| Context | configure service vprn <i>string</i> management allow-grpc <i>boolean</i> |
| Tree | allow-grpc |
| Description | When configured to true , this command allows access to the gRPC server via the VPRN router instance. |

| | |
|------------|--|
| | When configured to false , this command disallows gRPC server access. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-netconf *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the NETCONF server |
| Context | configure service vprn string management allow-netconf boolean |
| Tree | allow-netconf |
| Description | When configured to true , this command allows NETCONF server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the NETCONF server. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-ssh *boolean*

| | |
|-------------|---|
| Synopsis | Allow access to the SSH server |
| Context | configure service vprn string management allow-ssh boolean |
| Tree | allow-ssh |
| Description | When configured to true , this command allows SSH server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows SSH server access. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the IPv4 Telnet server |
| Context | configure service vprn string management allow-telnet boolean |
| Tree | allow-telnet |
| Description | When configured to true , this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance. |

When configured to **false**, this command disallows access to the IPv4 Telnet server.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet6 *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the Telnet IPv6 server |
| Context | configure service vprn string management allow-telnet6 boolean |
| Tree | allow-telnet6 |
| Description | When configured to true , this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance.
When configured to false , this command removes access to the IPv6 Telnet server. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

maximum-ipv4-routes

| | |
|------------|--|
| Synopsis | Enter the maximum-ipv4-routes context |
| Context | configure service vprn string maximum-ipv4-routes |
| Tree | maximum-ipv4-routes |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Action when the maximum number of routes, held within a VRF context, is reached |
| Context | configure service vprn string maximum-ipv4-routes log-only boolean |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | Mid-level water marker for the number of routes which this VRF holds |
| Context | configure <i>service vprn string maximum-ipv4-routes threshold number</i> |
| Tree | <i>threshold</i> |
| Range | 1 to 100 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of routes that are configured on this virtual router |
| Context | configure <i>service vprn string maximum-ipv4-routes value number</i> |
| Tree | <i>value</i> |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-ipv6-routes

| | |
|------------|---|
| Synopsis | Enter the maximum-ipv6-routes context |
| Context | configure <i>service vprn string maximum-ipv6-routes</i> |
| Tree | <i>maximum-ipv6-routes</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|----------|--|
| Synopsis | Action when the maximum number of routes, held within a VRF context, is reached |
| Context | configure <i>service vprn string maximum-ipv6-routes log-only boolean</i> |
| Tree | <i>log-only</i> |
| Default | false |

Introduced 16.0.R1
 Platforms All

threshold *number*

Synopsis Mid-level water marker for the number of routes which this VRF holds
 Context **configure service vprn string maximum-ipv6-routes threshold number**
 Tree [threshold](#)
 Range 1 to 100
 Units percent
 Introduced 16.0.R1
 Platforms All

value *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of routes that are configured on this virtual router

| Synopsis | Maximum number of group sources for this interface |
| Context | configure service vprn <i>string</i> mld group-interface <i>reference</i> maximum-number-group-sources <i>number</i> |
| Tree | maximum-number-group-sources |
| Description | This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed. |
| Range | 1 to 32000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

| | |
|------------|--|
| Synopsis | Enter the ssm-translate context |
| Context | configure service vprn <i>string</i> mld ssm-translate |
| Tree | ssm-translate |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [start](#) *string* [end](#) *string*

| | |
|------------|---|
| Synopsis | Enter the group-range list instance |
| Context | configure service vprn <i>string</i> mld ssm-translate group-range start <i>string</i> end <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[start](#) *string*

| | |
|------------|---|
| Synopsis | Lower bound of the group range |
| Context | configure service vprn <i>string</i> mld ssm-translate group-range start <i>string</i> end <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

[end](#) *string*

| | |
|----------|---|
| Synopsis | Upper bound of the group range |
| Context | configure service vprn <i>string</i> mld ssm-translate group-range start <i>string</i> end <i>string</i> |
| Tree | group-range |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

source [[source-address](#)] *string*

| | |
|----------------|---|
| Synopsis | Add a list entry for source |
| Context | configure service vprn <i>string</i> mld ssm-translate group-range start <i>string</i> end <i>string</i>
source <i>string</i> |
| Tree | source |
| Min. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

[source-address] *string*

| | |
|------------|---|
| Synopsis | Source IP address |
| Context | configure service vprn <i>string</i> mld ssm-translate group-range start <i>string</i> end <i>string</i>
source <i>string</i> |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R2 |
| Platforms | All |

msdp

| | |
|------------|--|
| Synopsis | Enable the msdp context |
| Context | configure service vprn <i>string</i> msdp |
| Tree | msdp |
| Introduced | 19.10.R1 |
| Platforms | All |

active-source-limit *number*

| | |
|----------|--|
| Synopsis | Maximum number of active messages accepted by MSDP |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string msdp active-source-limit number</i> |
| Tree | active-source-limit |
| Range | 0 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of MSDP |
| Context | configure service vprn <i>string msdp admin-state keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 19.10.R1 |
| Platforms | All |

data-encapsulation *boolean*

| | |
|------------|---|
| Synopsis | Enable encapsulation of multicast data used by MSDP |
| Context | configure service vprn <i>string msdp data-encapsulation boolean</i> |
| Tree | data-encapsulation |
| Default | true |
| Introduced | 19.10.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Policies to export source active state into MSDP |
| Context | configure service vprn <i>string msdp export-policy reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |

Platforms All

group *[name]* *string*

Synopsis Enter the **group** list instance
 Context **configure** *service vprn string msdp group string*
 Tree *group*
 Introduced 19.10.R1
 Platforms All

[name] *string*

Synopsis MSDP group name
 Context **configure** *service vprn string msdp group string*
 Tree *group*
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms All

active-source-limit *number*

Synopsis Maximum number of active messages accepted by MSDP
 Context **configure** *service vprn string msdp group string active-source-limit number*
 Tree *active-source-limit*
 Range 0 to 1000000
 Introduced 19.10.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of MSDP
 Context **configure** *service vprn string msdp group string admin-state keyword*
 Tree *admin-state*
 Default enable

| | |
|------------|-----------------|
| Options | enable, disable |

| Tree | local-address |
| Introduced | 19.10.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|---|
| Synopsis | Topology of groups of peers |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> mode <i>keyword</i> |
| Tree | mode |
| Default | standard |
| Options | standard, mesh-group |
| Introduced | 19.10.R1 |
| Platforms | All |

peer [[ip-address](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the peer list instance |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> |
| Tree | peer |
| Introduced | 19.10.R1 |
| Platforms | All |

[ip-address] *string*

| | |
|------------|--|
| Synopsis | IP address of the remote MSDP router for peering |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> |
| Tree | peer |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

active-source-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of active messages accepted by MSDP |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> active-source-limit <i>number</i> |
| Tree | active-source-limit |
| Range | 0 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MSDP |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 19.10.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | MD5 authentication key for the MSDP peering session |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 370 |
| Introduced | 19.10.R1 |
| Platforms | All |

default-peer *boolean*

| | |
|------------|--|
| Synopsis | Enable/Disable default peer as MSDP peer |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> default-peer <i>boolean</i> |
| Tree | default-peer |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

export-policy *reference*

| | |
|-----------|---|
| Synopsis | Policies to export source active state into MSDP |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |

| | |
|----------------|--------------------------------------|
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies to import Source Active state from the Source Active list into MSDP |
| Context | configure service vprn <i>string</i> msdp group <i>string</i> peer <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 19.10.R1 |

rpf-table *keyword*

| | |
|------------|---|
| Synopsis | Route tables for RPF lookup |
| Context | configure service vprn <i>string</i> msdp rpf-table <i>keyword</i> |
| Tree | rpf-table |
| Default | rtable-u |
| Options | rtable-m, rtable-u, both |
| Introduced | 19.10.R1 |
| Platforms | All |

source [[ip-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the source list instance |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> |
| Tree | source |
| Introduced | 19.10.R1 |
| Platforms | All |

[ip-prefix] *string*

| | |
|------------|---|
| Synopsis | Source IP address for accepted active source messages |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

active-source-limit *number*

| | |
|------------|---|
| Synopsis | Number of active source messages accepted by MSDP |
| Context | configure service vprn <i>string</i> msdp source <i>string</i> active-source-limit <i>number</i> |
| Tree | active-source-limit |
| Range | 0 to 1000000 |
| Introduced | 19.10.R1 |
| Platforms | All |

source-active-cache-lifetime *number*

| | |
|------------|--|
| Synopsis | Lifetime given to SA cache entries when created or refreshed |
| Context | configure service vprn <i>string</i> msdp source-active-cache-lifetime <i>number</i> |
| Tree | source-active-cache-lifetime |
| Range | 90 to 600 |
| Default | 90 |
| Units | seconds |
| Introduced | 19.10.R1 |
| Platforms | All |

mss-adjust

| | |
|------------|--|
| Synopsis | Enable the mss-adjust context |
| Context | configure service vprn <i>string</i> mss-adjust |
| Tree | mss-adjust |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-group *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | NAT group used for TCP-MSS adjustment |
| Context | configure service vprn <i>string</i> mss-adjust nat-group <i>number</i> |
| Tree | nat-group |
| Max. Range | 0 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

segment-size *number*

| | |
|----------|--|
| Synopsis | TCP-MSS option value in transmitted TCP SYN requests |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> mss-adjust segment-size <i>number</i> |
| Tree | segment-size |
| Range | 160 to 10240 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtrace2

| | |
|------------|--|
| Synopsis | Enter the mtrace2 context |
| Context | configure service vprn <i>string</i> mtrace2 |
| Tree | mtrace2 |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of multicast path tracing |
| Context | configure service vprn <i>string</i> mtrace2 admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

udp-port *number*

| | |
|------------|---|
| Synopsis | Destination UDP port for mstat2 mtrace2 test, or unsolicited mstat2 mtrace2 packets |
| Context | configure service vprn <i>string</i> mtrace2 udp-port <i>number</i> |
| Tree | udp-port |
| Range | 1024 to 49151 |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-info-policy *reference*

| | |
|------------|--|
| Synopsis | Multicast policy name for virtual router |
| Context | configure service vprn <i>string</i> multicast-info-policy <i>reference</i> |
| Tree | multicast-info-policy |
| Reference | configure multicast-management multicast-info-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mvpn

| | |
|------------|--|
| Synopsis | Enable the mvpn context |
| Context | configure service vprn <i>string</i> mvpn |
| Tree | mvpn |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery

| | |
|------------|---|
| Synopsis | Enter the auto-discovery context |
| Context | configure service vprn <i>string</i> mvpn auto-discovery |
| Tree | auto-discovery |
| Introduced | 19.5.R1 |
| Platforms | All |

source-address *string*

| | |
|------------|--|
| Synopsis | IPv4 source address |
| Context | configure service vprn <i>string</i> mvpn auto-discovery source-address <i>string</i> |
| Tree | source-address |
| Default | 0.0.0.0 |
| Introduced | 19.5.R1 |
| Platforms | All |

type keyword

| | |
|------------|---|
| Synopsis | Status of multicast VPN membership auto-discovery |
| Context | configure service vprn string mvpn auto-discovery type keyword |
| Tree | type |
| Options | bgp, mdt-safi |
| Introduced | 19.5.R1 |
| Platforms | All |

c-mcast-signaling keyword

| | |
|------------|---|
| Synopsis | Protocol for PE-to-PE signaling of CE multicast states |
| Context | configure service vprn string mvpn c-mcast-signaling keyword |
| Tree | c-mcast-signaling |
| Default | pim |
| Options | bgp, pim |
| Introduced | 19.5.R1 |
| Platforms | All |

intersite-shared

| | |
|-------------|---|
| Synopsis | Enter the intersite-shared context |
| Context | configure service vprn string mvpn intersite-shared |
| Tree | intersite-shared |
| Description | Commands in this context configure whether to use inter-site shared C-trees. Optional parameters allow enabling additional intersite shared functionality. Not specifying an optional parameter when executing the command disables that parameter. |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|----------|--|
| Synopsis | Administrative state of inter-site shared C-trees use |
| Context | configure service vprn string mvpn intersite-shared admin-state keyword |
| Tree | admin-state |
| Default | enable |

| | |
|------------|-----------------|
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

kat-type5-advertisement-withdraw *boolean*

| | |
|-------------|---|
| Synopsis | Enable KATs on source PEs for ng-MVPN deployments |
| Context | configure service vprn <i>string</i> mvpn intersite-shared kat-type5-advertisement-withdraw <i>boolean</i> |
| Tree | kat-type5-advertisement-withdraw |
| Description | When configured to true , this command specifies that the MVPN Type-5 “Source Active AD routes” are not removed even if all receivers are removed from the tree. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

persistent-type5-advertisement *boolean*

| | |
|-------------|--|
| Synopsis | Ensure Type-5 S-A routes are generated for MCAST source |
| Context | configure service vprn <i>string</i> mvpn intersite-shared persistent-type5-advertisement <i>boolean</i> |
| Tree | persistent-type5-advertisement |
| Description | When configured to true , this command removes the MVPN Type-5 “Source Active AD routes” even if receivers are present but the keepalive timer (KAT) has timed out because of no traffic. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

mdt-type *keyword*

| | |
|----------|--|
| Synopsis | MVPN instance type per PE node |
| Context | configure service vprn <i>string</i> mvpn mdt-type <i>keyword</i> |
| Tree | mdt-type |
| Default | sender-receiver |
| Options | sender-only, receiver-only, sender-receiver |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

provider-tunnel

| | |
|------------|--|
| Synopsis | Enter the provider-tunnel context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel |
| Tree | provider-tunnel |
| Introduced | 19.5.R1 |
| Platforms | All |

inclusive

| | |
|------------|--|
| Synopsis | Enter the inclusive context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive |
| Tree | inclusive |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|------------|---|
| Synopsis | Enable the bier context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier |
| Tree | bier |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of BIER |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|--|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier sub-domain <i>number</i> |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

bsr *keyword*

| | |
|------------|---|
| Synopsis | BSR signaling type |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bsr <i>keyword</i> |
| Tree | bsr |
| Options | unicast, spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|------------|---|
| Synopsis | Enable the mldp context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive mldp |
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive mldp admin-state <i>keyword</i> |
| Tree | admin-state |

| | |
|------------|-----------------|
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enable the p2mp-sr context |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 21.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state for P2MP SR |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | All |

bfd-leaf boolean

| | |
|-------------|--|
| Synopsis | Enable unidirectional multipoint BFD on the leaf PE |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-leaf boolean |
| Tree | bfd-leaf |
| Description | When configured to true , this command enables unidirectional multipoint BFD sessions on a receiver (leaf) PE node for upstream fast failure detection over P2MP SR tree LSP. |
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

bfd-root

| | |
|------------|--|
| Synopsis | Enable the bfd-root context |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root |
| Tree | bfd-root |
| Introduced | 21.10.R1 |
| Platforms | All |

multiplier number

| | |
|-------------|--|
| Synopsis | Multiplier for the transmit interval of the BFD session |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root multiplier number |
| Tree | multiplier |
| Description | This command configures the multiplier for the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

transmit-interval number

| | |
|-------------|---|
| Synopsis | Transmit interval of the BFD session |
| Context | configure service vprn string mvpn provider-tunnel inclusive p2mp-sr bfd-root transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|------------|---|
| Synopsis | Use P2MP policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|---|
| Synopsis | Static policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr static-policy <i>reference</i> |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim |
| Tree | pim |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of PIM use for provider tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |

Introduced 19.5.R1
Platforms All

group-address *string*

Synopsis Multicast group address
Context **configure service vprn** *string mvpn provider-tunnel inclusive pim group-address string*
Tree [group-address](#)
Notes This element is mandatory.
Introduced 19.5.R1
Platforms All

hello-interval *number*

Synopsis Frequency at which PIM Hello messages are transmitted
Context **configure service vprn** *string mvpn provider-tunnel inclusive pim hello-interval number*
Tree [hello-interval](#)
Range 0 to 255
Default 30
Introduced 19.5.R1
Platforms All

hello-multiplier *number*

Synopsis Multiplier to determine the holdtime for a PIM neighbor
Context **configure service vprn** *string mvpn provider-tunnel inclusive pim hello-multiplier number*
Tree [hello-multiplier](#)
Range 20 to 100
Default 35
Introduced 19.5.R1
Platforms All

improved-assert *boolean*

Synopsis Enable the improved assert procedure

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim improved-assert
<i>boolean</i> |
| Tree | improved-assert |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|---|
| Synopsis | PIM mode for the inclusive provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim mode <i>keyword</i> |
| Tree | mode |
| Options | asm, ssm |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

three-way-hello *boolean*

| | |
|------------|---|
| Synopsis | Enable PIM three-way hello |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim three-way-hello
<i>boolean</i> |
| Tree | three-way-hello |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

tracking-support *boolean*

| | |
|------------|--|
| Synopsis | Enable the T bit in the LAN Prune Delay option |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim tracking-support
<i>boolean</i> |
| Tree | tracking-support |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp

| | |
|------------|---|
| Synopsis | Enable the rsvp context |
| Context | configure service vprn string mvpn provider-tunnel inclusive rsvp |
| Tree | rsvp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of RSVP use for provider tunnels |
| Context | configure service vprn string mvpn provider-tunnel inclusive rsvp admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-leaf *boolean*

| | |
|------------|---|
| Synopsis | Enable unidirectional multi-point BFD on a receiver |
| Context | configure service vprn string mvpn provider-tunnel inclusive rsvp bfd-leaf boolean |
| Tree | bfd-leaf |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-root

| | |
|------------|---|
| Synopsis | Enable the bfd-root context |
| Context | configure service vprn string mvpn provider-tunnel inclusive rsvp bfd-root |
| Tree | bfd-root |
| Introduced | 19.5.R1 |
| Platforms | All |

multiplier *number*

| | |
|------------|---|
| Synopsis | Enable unidirectional multi-point BFD on a sender |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root multiplier <i>number</i> |
| Tree | multiplier |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|------------|--|
| Synopsis | Transmit interval for the BFD session |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template *reference*

| | |
|------------|---|
| Synopsis | P2MP LSP created as the provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp lsp-template <i>reference</i> |
| Tree | lsp-template |
| Reference | configure router <i>string</i> mpls lsp-template <i>string</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-rate-monitoring

| | |
|----------|--|
| Synopsis | Enter the umh-rate-monitoring context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring |

| | |
|------------|-------------------------------------|
| Tree | umh-rate-monitoring |
| Introduced | 21.5.R1 |
| Platforms | All |

revertive-timer *number*

| | |
|------------|--|
| Synopsis | Time until switch to primary PMSI after recovering rate |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring revertive-timer <i>number</i> |
| Tree | revertive-timer |
| Range | 0 to 3600 |
| Introduced | 21.5.R1 |
| Platforms | All |

traffic-rate-delta *number*

| | |
|------------|---|
| Synopsis | Rate delta between PMSIs under which traffic switches |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive umh-rate-monitoring traffic-rate-delta <i>number</i> |
| Tree | traffic-rate-delta |
| Range | 0 to 4294967294 |
| Introduced | 21.5.R1 |
| Platforms | All |

wildcard-spmsi *boolean*

| | |
|------------|--|
| Synopsis | Enable RFC 6625 S-PMSI functionality for NG-MVPN |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive wildcard-spmsi <i>boolean</i> |
| Tree | wildcard-spmsi |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

selective

| | |
|----------|------------------------------------|
| Synopsis | Enter the selective context |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective |
| Tree | selective |
| Introduced | 19.5.R1 |
| Platforms | All |

asm-mdt *boolean*

| | |
|------------|--|
| Synopsis | Enable Data MDT with PIM-ASM mode on receiver PE node |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective asm-mdt <i>boolean</i> |
| Tree | asm-mdt |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery *boolean*

| | |
|------------|---|
| Synopsis | Enable C-trees to P-tunnel binding auto-discovery |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective auto-discovery <i>boolean</i> |
| Tree | auto-discovery |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|------------|---|
| Synopsis | Enable the bier context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier |
| Tree | bier |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|------------------------------|
| Synopsis | Administrative state of BIER |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|---|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective bier sub-domain <i>number</i> |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-delay-interval *number*

| | |
|------------|---|
| Synopsis | Interval a PE switches from inclusive to selective |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-delay-interval <i>number</i> |
| Tree | data-delay-interval |
| Range | 3 to 180 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-threshold

| | |
|------------|--|
| Synopsis | Enter the data-threshold context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-threshold |
| Tree | data-threshold |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the group-prefix list instance |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-add *number*

| | |
|------------|--|
| Synopsis | PE add threshold |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-add <i>number</i> |
| Tree | pe-threshold-add |
| Range | 1 to 65535 |
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-delete *number*

| | |
|----------|---|
| Synopsis | PE delete threshold |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-delete <i>number</i> |
| Tree | pe-threshold-delete |
| Range | 2 to 65535 |

| | |
|------------|---------|
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | S-PMSI threshold |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) threshold <i>number</i> |
| Tree | threshold |
| Range | 0 to 4294967294 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

join-tlv-packing *boolean*

| | |
|------------|---|
| Synopsis | Enable packing of MDT join TLVs into a single PDU |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective join-tlv-packing <i>boolean</i> |
| Tree | join-tlv-packing |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|------------|--|
| Synopsis | Enable the mldp context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp |
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

maximum-p2mp-spmsi *number*

| | |
|------------|---|
| Synopsis | Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp maximum-p2mp-spmsi <i>number</i> |
| Tree | maximum-p2mp-spmsi |
| Range | 1 to 4000 |
| Default | 10 |
| Introduced | 19.5.R1 |
| Platforms | All |

multistream-spmsi [[multistream-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the multistream-spmsi list instance |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

[[multistream-id](#)] *number*

| | |
|----------|---|
| Synopsis | Multistream spmsi id |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Range | 1 to 1024 |
| Notes | This element is part of a list key. |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of multi-stream S-PMSI |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [source-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Add a list entry for group-prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

source-prefix (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 unicast source address and prefix |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template *reference*

| | |
|------------|--|
| Synopsis | RSVP-TE LSP template for S-PMSI |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> lsp-template <i>reference</i> |
| Tree | lsp-template |
| Reference | configure router <i>string</i> mpls lsp-template <i>string</i> |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|--|
| Synopsis | Enter the p2mp-sr context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 21.5.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|----------|---|
| Synopsis | Use P2MP policy for selective MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |

| | |
|------------|---------|
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|---|
| Synopsis | P2MP static policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr static-policy <i>reference</i> |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim |
| Tree | pim |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 19.5.R1 |
| Platforms | All |

group-address *string*

| | |
|------------|--|
| Synopsis | Group address of the data MDT |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> pim group-address <i>string</i> |
| Tree | group-address |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|----------|--|
| Synopsis | PIM mode for the selective provider tunnel |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> <i>mvpn provider-tunnel selective multistream-spmsi number pim mode keyword</i> |
| Tree | mode |
| Options | asm, ssm |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enable the p2mp-sr context |
| Context | configure service vprn <i>string</i> <i>mvpn provider-tunnel selective p2mp-sr</i> |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 21.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of P2MP SR |
| Context | configure service vprn <i>string</i> <i>mvpn provider-tunnel selective p2mp-sr admin-state keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.5.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|------------|---|
| Synopsis | Use P2MP policy for selective MVPN provider tunnel |
| Context | configure service vprn <i>string</i> <i>mvpn provider-tunnel selective p2mp-sr p2mp-policy boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|--|
| Synopsis | Static policy for selective MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective p2mp-sr static-policy reference |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy string |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|---|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim |
| Tree | pim |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix *string*

| | |
|------------|--|
| Synopsis | Multicast group address and netmask length |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim group-prefix string |
| Tree | group-prefix |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

mode *keyword*

| | |
|----------|---|
| Synopsis | PIM mode. |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective pim mode keyword |
| Tree | mode |
| Options | asm, ssm |
| Notes | This element is mandatory. |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp

| | |
|------------|---|
| Synopsis | Enable the rsvp context |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp |
| Tree | rsvp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of RSVP use for provider tunnels |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template reference

| | |
|------------|---|
| Synopsis | P2MP LSP created as the selective provider tunnel |
| Context | configure service vprn string mvpn provider-tunnel selective rsvp lsp-template reference |
| Tree | lsp-template |
| Reference | configure router string mpls lsp-template string |
| Introduced | 19.5.R1 |
| Platforms | All |

maximum-p2mp-spmsi number

| | |
|----------|--|
| Synopsis | Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective rsvp maximum-p2mp-spmsi <i>number</i> |
| Tree | maximum-p2mp-spmsi |
| Range | 1 to 4000 |
| Default | 10 |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-rate-monitoring

| | |
|------------|---|
| Synopsis | Enter the umh-rate-monitoring context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring |
| Tree | umh-rate-monitoring |
| Introduced | 21.5.R1 |
| Platforms | All |

group [group-ip-address] (*ipv4-prefix* | *ipv6-prefix*) **source** (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the group list instance |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Introduced | 21.5.R1 |
| Platforms | All |

[group-ip-address] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Group IP address |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | All |

source (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|--|
| Synopsis | Source IP address |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | All |

revertive-timer *number*

| | |
|------------|---|
| Synopsis | Time until switch to primary PMSI after recovering rate |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) revertive-timer <i>number</i> |
| Tree | revertive-timer |
| Range | 0 to 3600 |
| Introduced | 21.5.R1 |
| Platforms | All |

traffic-rate-delta *number*

| | |
|------------|--|
| Synopsis | Rate delta between PMSIs under which traffic switches |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective umh-rate-monitoring group (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) traffic-rate-delta <i>number</i> |
| Tree | traffic-rate-delta |
| Range | 0 to 4294967294 |
| Introduced | 21.5.R1 |
| Platforms | All |

redundant-source-list

| | |
|------------|---|
| Synopsis | Enter the redundant-source-list context |
| Context | configure service vprn <i>string</i> mvpn redundant-source-list |
| Tree | redundant-source-list |
| Introduced | 19.5.R1 |
| Platforms | All |

source-prefix [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|----------------|---|
| Synopsis | Add a list entry for source-prefix |
| Context | configure service vpn <i>string</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | source-prefix |
| Max. Instances | 16 |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Unicast address prefix and mask |
| Context | configure service vpn <i>string</i> mvpn redundant-source-list source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | source-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

rpf-select

| | |
|------------|--|
| Synopsis | Enter the rpf-select context |
| Context | configure service vpn <i>string</i> mvpn rpf-select |
| Tree | rpf-select |
| Introduced | 19.5.R1 |
| Platforms | All |

core-mvpn [[core-mvpn-service-name](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the core-mvpn list instance |
| Context | configure service vpn <i>string</i> mvpn rpf-select core-mvpn <i>reference</i> |
| Tree | core-mvpn |
| Introduced | 19.5.R1 |
| Platforms | All |

[core-mvpn-service-name] reference

| | |
|------------|--|
| Synopsis | Core MVPN service name |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> |
| Tree | core-mvpn |
| Reference | configure service vprn <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [ip-group-prefix] string

| | |
|----------------|---|
| Synopsis | Enter the group-prefix list instance |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Min. Instances | 1 |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] string

| | |
|------------|---|
| Synopsis | IPv4 multicast address prefix and mask |
| Context | configure service vprn <i>string</i> <i>mvpn rpf-select core-mvpn reference</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

starg boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|-------------|
| Synopsis | Starg flag. |
|----------|-------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> mvpn rpf-select core-mvpn <i>reference</i> group-prefix <i>string</i>
starg <i>boolean</i> |
| Tree | starg |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-pe-backup

| | |
|------------|---|
| Synopsis | Enter the umh-pe-backup context |
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup |
| Tree | umh-pe-backup |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-pe [*ip-address*] *string*

| | |
|------------|--|
| Synopsis | Enter the umh-pe list instance |
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup umh-pe <i>string</i> |
| Tree | umh-pe |
| Introduced | 19.5.R1 |
| Platforms | All |

[*ip-address*] *string*

| | |
|------------|--|
| Synopsis | IP address for the standby PE |
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup umh-pe <i>string</i> |
| Tree | umh-pe |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

standby *string*

| | |
|----------|---------------------|
| Synopsis | <i>ip-address</i> . |
|----------|---------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn umh-pe-backup umh-pe <i>string</i> standby <i>string</i> |
| Tree | standby |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

umh-selection *keyword*

| | |
|------------|--|
| Synopsis | UMH selection mechanism |
| Context | configure service vprn <i>string</i> mvpn umh-selection <i>keyword</i> |
| Tree | umh-selection |
| Default | highest-ip |
| Options | highest-ip, hash-based, tunnel-status, unicast-rt-pref |
| Introduced | 19.5.R1 |
| Platforms | All |

vrf-export

| | |
|------------|--|
| Synopsis | Enter the vrf-export context |
| Context | configure service vprn <i>string</i> mvpn vrf-export |
| Tree | vrf-export |
| Introduced | 19.5.R1 |
| Platforms | All |

policy (*policy-expr-string* | *string*)

| | |
|----------------|---|
| Synopsis | Route policy name |
| Context | configure service vprn <i>string</i> mvpn vrf-export policy (<i>policy-expr-string</i> <i>string</i>) |
| Tree | policy |
| Description | This command specifies the route policy name. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes. |
| String Length | 1 to 255 |
| Max. Instances | 15 |
| Min. Instances | 1 |

| | |
|------------|--|
| Notes | The following elements are part of a choice: policy or unicast .
This element is ordered by the user. |
| Introduced | 19.5.R1 |
| Platforms | All |

unicast *boolean*

| | |
|------------|--|
| Synopsis | Enable the unicast VRF export policy for the MVPN |
| Context | configure <i>service vprn string mvpn vrf-export unicast boolean</i> |
| Tree | <i>unicast</i> |
| Default | false |
| Notes | The following elements are part of a choice: policy or unicast . |
| Introduced | 19.5.R1 |
| Platforms | All |

vrf-import

| | |
|------------|---|
| Synopsis | Enter the vrf-import context |
| Context | configure <i>service vprn string mvpn vrf-import</i> |
| Tree | <i>vrf-import</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

policy (*policy-expr-string | string*)

| | |
|----------------|---|
| Synopsis | Route policy name |
| Context | configure <i>service vprn string mvpn vrf-import policy (policy-expr-string string)</i> |
| Tree | <i>policy</i> |
| Description | This command specifies the route policy name. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes. |
| String Length | 1 to 255 |
| Max. Instances | 15 |
| Min. Instances | 1 |
| Notes | The following elements are part of a choice: policy or unicast . |

This element is ordered by the user.

Introduced 19.5.R1
Platforms All

unicast *boolean*

Synopsis Enable the unicast VRF import policy for the MVPN
Context **configure** *service vprn string mvpn vrf-import unicast boolean*
Tree *unicast*
Default false
Notes The following elements are part of a choice: **policy** or **unicast**.
Introduced 19.5.R1

 Introduced 19.5.R1
 Platforms All

nat

Synopsis Enable the **nat** context
 Context **configure** [service vprn](#) *string* [nat](#)
 Tree [nat](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside

Synopsis Enter the **inside** context
 Context **configure** [service vprn](#) *string* [nat inside](#)
 Tree [inside](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

I2-aware

Synopsis Enter the **I2-aware** context
 Context **configure service vprn string nat inside I2-aware**
 Tree [I2-aware](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-unique-ip-addresses boolean

Synopsis Enforce unique IPv4 addresses for L2-aware subscribers
 Context **configure service vprn string nat inside I2-aware force-unique-ip-addresses boolean**
 Tree [force-unique-ip-addresses](#)
 Description When configured to **true**, the system enforces the uniqueness of IPv4 addresses of L2-aware subscribers in an inside routing context.
 This functionality is required if multicast sourced from the inside routing context is enabled for L2-aware subscribers.
 Default false
 Introduced 23.3.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscribers [prefix] string

Synopsis Add a list entry for **subscribers**
 Context **configure service vprn string nat inside I2-aware subscribers string**
 Tree [subscribers](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[prefix] string

Synopsis Layer-2 Aware NAT subscriber prefix
 Context **configure service vprn string nat inside I2-aware subscribers string**

| | |
|------------|--|
| Tree | subscribers |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

large-scale

| Synopsis | Enter the endpoint list instance |
|----------|---|

| | |
|----------------|--|
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint string</i> |
| Tree | endpoint |
| Max. Instances | 128 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] *string*

| | |
|------------|--|
| Synopsis | Dual Stack Lite IPv6 address |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint string</i> |
| Tree | endpoint |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-fragmentation *keyword*

| | |
|------------|---|
| Synopsis | Fragmentation control of the AFTR originated downstream IPv6 traffic |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint string ip-fragmentation keyword</i> |
| Tree | ip-fragmentation |
| Options | fragment-ipv6, fragment-ipv6-unless-ipv4-df-set |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

min-first-fragment-size-rx *number*

| | |
|-------------|---|
| Synopsis | Minimum MTU size for upstream packets |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint string min-first-fragment-size-rx number</i> |
| Tree | min-first-fragment-size-rx |
| Description | This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If |

a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.

| | |
|------------|--|
| Range | 512 to 1280 |
| Default | 1280 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reassemble *boolean*

| | |
|------------|---|
| Synopsis | Reassembly of IPv6 payload datagrams |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint</i> <i>string reassemble</i> <i>boolean</i> |
| Tree | reassemble |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-mtu *number*

| | |
|-------------|--|
| Synopsis | DS-Lite tunnel MTU for this address |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint</i> <i>string tunnel-mtu</i> <i>number</i> |
| Tree | tunnel-mtu |
| Description | This command configures the Dual Stack Lite (DS-Lite) tunnel MTU for this address. |
| Range | 464 to 9212 |
| Default | 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max-subscriber-limit *number*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|---|

nat-import *reference*

| | |
|-------------|--|
| Synopsis | Import BGP-VPN routes in NAT inside routing context |
| Context | configure service vpn <i>string</i> nat inside large-scale nat44 nat-import <i>reference</i> |
| Tree | nat-import |
| Description | <p>This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT.</p> <p>A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.</p> |

All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |

| | |
|-------------|---|
| Synopsis | Outside IP address allocation mode for a NAT subscriber |
| Context | configure service vprn string nat outside pool string address-pooling keyword |
| Tree | address-pooling |
| Description | <p>This command configures address pooling which defines a relationship between the NAT subscriber and its outside IP address(es).</p> <p>The behavior in NAT, as defined in RFC 7857, strongly recommends that the NAT subscribers be mapped to a single outside IP address. If this outside IP address runs out of ports, no new ports for the subscriber are allocated. This behavior is called paired address pooling.</p> <p>The alternative behavior is arbitrary address pooling, where a NAT subscriber is mapped to multiple IP addresses when the current outside IP address runs out of ports. This way, the subscriber becomes associated with multiple outside IP addresses. While this results in better resource utilization in NAT, it may negatively affect the behavior of some applications.</p> |
| Default | paired |
| Options | paired, arbitrary |
| Introduced | 23.3.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address-range [*start*] *string end string*

default-host

| | |
|----------|--|
| Synopsis | Enable the default-host context |
|----------|--|

| | |
|-------------|--|
| Context | configure service vpn <i>string</i> nat outside pool <i>string</i> l2-aware default-host |
| Tree | default-host |
| Description | <p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p> |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inside-router-instance *string*

| | |
|-------------|--|
| Synopsis | Router instance of the DMZ |
| Context | configure service vpn <i>string</i> nat outside pool <i>string</i> l2-aware default-host inside-router-instance <i>string</i> |
| Tree | inside-router-instance |
| Description | This command configures the router instance on the inside where the default DMZ host resides. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|-------------|---|
| Synopsis | IP address of the default DMZ host |
| Context | configure service vpn <i>string</i> nat outside pool <i>string</i> l2-aware default-host ip-address <i>string</i> |
| Tree | ip-address |
| Description | This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rate-limit *number*

| | |
|-------------|--|
| Synopsis | Rate limit for unknown traffic sent to default DMZ host |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> l2-aware default-host rate-limit <i>number</i> |
| Tree | rate-limit |
| Description | This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM. |
| Range | 1 to 10000 |
| Default | 10 |
| Units | megabps |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dynamic-block-reservation *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Reserve dynamic block for subscriber |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding dynamic-block-reservation <i>boolean</i> |
| Tree | dynamic-block-reservation |
| Description | <p>When configured to true, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> <p>When configured to false, dynamic port blocks are not reserved when the first port forward for the subscriber is created.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-end *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|---|
| Synopsis | End of the wildcard range for port forwards |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding range-end <i>number</i> |
| Tree | range-end |

| | |
|-------------|---|
| Description | <p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p> |
| Range | 0 1023 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-start *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Start of the wildcard range for port forwards |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding range-start <i>number</i> |
| Tree | range-start |
| Description | <p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-end command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the range-start implicit value is set to 1. Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p> |
| Range | 0 1 1025 to 65535 |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-reservation

| | |
|------------|--|
| Synopsis | Enter the port-reservation context |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-reservation |

| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-blocks *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Port block size for NAT subscribers |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-reservation port-blocks <i>number</i> |
| Tree | port-blocks |
| Description | <p>In CGN, this specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the l2-aware port-block-extension hierarchy in the NAT pool.</p> |
| Range | 0 to 64512 |
| Notes | The following elements are part of a choice: port-blocks or ports . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ports *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Size of the port block for NAT subscribers |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-reservation ports <i>number</i> |
| Tree | ports |
| Description | For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool. |

For L2-aware NAT, this command specifies the size of the initial port-block of a subscriber in the pool. Additional port blocks (extended port blocks) for the L2-aware subscriber must be explicitly enabled under the **I2-aware port-block-extension** hierarchy in the NAT pool.

This command does not affect the size of extended port blocks.

| | |
|------------|---|
| Range | 1 to 64512 |
| Notes | The following elements are part of a choice: port-blocks or ports . |
| Introduced | 16.0.R1 |

| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

transmit-interval *number*

Synopsis BFD transmit interval over this interface

Context **configure service vprn** *string network-interface string ipv4 bfd transmit-interval number*

Tree **transmit-interval**

Description This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Default 100

Units milliseconds

Introduced 16.0.R1

Platforms All

type *keyword*

Synopsis Local termination point for the BFD session

Context **configure service vprn** *string network-interface string ipv4 bfd type keyword*

Tree **type**

Description This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are:

- **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**.
- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Default auto

Options cpm-np, auto, fp

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

| | |
|------------|---|
| Synopsis | Enter the icmp context |
| Context | configure service vprn string network-interface string ipv4 icmp |
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | All |

mask-reply *boolean*

| | |
|------------|--|
| Synopsis | Allow responses to ICMP mask requests on the interface |
| Context | configure service vprn string network-interface string ipv4 icmp mask-reply boolean |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|-------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn string network-interface string ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of sent Parameter Problem messages |

| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor-discovery

| | |
|------------|---|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

retry-timer *number*

| | |
|------------|---|
| Synopsis | ARP retry interval |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery retry-timer <i>number</i> |
| Tree | retry-timer |
| Range | 1 to 300 |
| Default | 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

static-neighbor [ipv4-address] *string*

| | |
|------------|---|
| Synopsis | Enter the static-neighbor list instance |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IPv4 address that corresponds to the physical address |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-address *string*

| | |
|------------|---|
| Synopsis | MAC address for the static neighbor |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> mac-address <i>string</i> |
| Tree | mac-address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|-------------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |
| Tree | timeout |
| Description | This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request |

or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.

| | |
|------------|------------|
| Range | 0 to 65535 |
| Default | 14400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

primary

| | |
|------------|--|
| Synopsis | Enable the primary context |
| Context | configure service vprn string network-interface string ipv4 primary |
| Tree | primary |
| Introduced | 16.0.R1 |
| Platforms | All |

address string

| | |
|------------|---|
| Synopsis | Primary IPv4 address assigned to the interface |
| Context | configure service vprn string network-interface string ipv4 primary address string |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

broadcast keyword

| | |

| Default | host-ones |
| Options | all-ones, host-ones |
| Introduced | 16.0.R1 |

Platforms All

igp-inhibit *boolean*

Synopsis Disable the running IGP from recognizing secondary IP

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 secondary](#) *string* **igp-inhibit** *boolean*

Tree [igp-inhibit](#)

Description When configured to **true**, the running IGP does not recognize the secondary IP address as a local interface.

Default false

Introduced 16.0.R1

Platforms All

prefix-length *number*

Synopsis IPv4 address prefix length

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4 secondary](#) *string* **prefix-length** *number*

Tree [prefix-length](#)

Range 0 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

tcp-mss *number*

Synopsis TCP maximum segment size for the interface

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4](#) **tcp-mss** *number*

Tree [tcp-mss](#)

Range 384 to 9746

Introduced 16.0.R1

Platforms All

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-default *boolean*

| | |
|------------|---|
| Synopsis | Ignore default route when performing a uRPF check |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 urpf-check ignore-default <i>boolean</i> |
| Tree | ignore-default |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|---|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Default | strict |
| Options | strict, loose, strict-no-ecmp |
| Introduced | 16.0.R1 |
| Platforms | All |

lag

| | |
|------------|---|
| Synopsis | Enter the lag context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag |
| Tree | lag |
| Introduced | 16.0.R1 |
| Platforms | All |

link-map-profile *number*

| | |
|-------------|--|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing. |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

per-link-hash

| | |
|------------|---|
| Synopsis | Enter the per-link-hash context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | All |

class *number*

| | |
|------------|---|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash class <i>number</i> |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight *number*

| | |
|----------|--|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash weight <i>number</i> |

| | |
|------------|------------------------|
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|------------|--|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn string network-interface string load-balancing |
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn string network-interface string load-balancing flow-label-load-balancing boolean |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to false , the router disables load balancing in ECMP and LAG. |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn string network-interface string load-balancing ip-load-balancing keyword |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing |

command is enabled, this command also includes the source or destination port in the hash inputs.

| | |
|------------|-------------------------------------|
| Default | both |
| Options | both, destination, source, inner-ip |
| Introduced | 16.0.R3 |
| Platforms | All |

lsr-load-balancing *keyword*

| | |
|-------------|---|
| Synopsis | LSR load-balancing algorithm |
| Context | configure service vprn string network-interface string load-balancing lsr-load-balancing keyword |
| Tree | lsr-load-balancing |
| Description | This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting. |
| Options | lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid |
| Introduced | 16.0.R1 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|-------------|---|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn string network-interface string load-balancing spi-load-balancing boolean |
| Tree | spi-load-balancing |
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |
|----------|--|
| Synopsis | Enable use of TEID in hashing |
| Context | configure service vprn string network-interface string load-balancing teid-load-balancing boolean |
| Tree | teid-load-balancing |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

loopback

| | |
|------------|--|
| Synopsis | Use interface as a loopback interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> loopback |
| Tree | loopback |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

mac string

| | |
|------------|---|
| Synopsis | MAC address for the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | All |

port string

| | |
|---------------|--|
| Synopsis | Port to bind the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> port <i>string</i> |
| Tree | port |
| String Length | 1 to 45 |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|----------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos |

| | |
|------------|---------------------|
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-instance *number*

| | |
|-------------|---|
| Synopsis | Port egress queue group instance for this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-instance <i>number</i> |
| Tree | egress-instance |
| Description | This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-port-redirect-group *reference*

| | |
|-------------|---|
| Synopsis | QoS queue group name |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-port-redirect-group <i>reference</i> |
| Tree | egress-port-redirect-group |
| Description | This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface. |
| Reference | configure qos queue-group-templates egress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-fp-redirect-group *reference*

| | |
|----------|--|
| Synopsis | Forwarding plane queue group policy for the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos ingress-fp-redirect-group <i>reference</i> |
| Tree | ingress-fp-redirect-group |

| | |
|-------------|---|
| Description | This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface. |
| Reference | configure qos queue-group-templates ingress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-instance *number*

| | |
|-------------|---|
| Synopsis | Forwarding plane ingress queue group for this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos ingress-instance <i>number</i> |
| Tree | ingress-instance |
| Description | This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

network-policy *reference*

| | |
|-------------|---|
| Synopsis | Network policy name associated with a network interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos network-policy <i>reference</i> |
| Tree | network-policy |
| Description | This command associates an existing network policy name with the IP interface. |
| Reference | configure qos network <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

tos-marking-state *keyword*

| | |
|----------|--|
| Synopsis | TOS marking state |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> tos-marking-state <i>keyword</i> |
| Tree | tos-marking-state |
| Default | trusted |

| | |
|------------|--------------------|
| Options | trusted, untrusted |
| Introduced | 16.0.R1 |
| Platforms | All |

ntp

| | |
|------------|--|
| Synopsis | Enable the ntp context |
| Context | configure service vprn string ntp |
| Tree | ntp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of NTP execution |
| Context | configure service vprn string ntp admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authenticate *boolean*

| | |
|------------|---|
| Synopsis | Authentication of NTP PDUs when acting as a server |
| Context | configure service vprn string ntp authenticate boolean |
| Tree | authenticate |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|----------|--|
| Synopsis | Reject NTP PDUs that do not match the authentication key-id, type, or key requirements |
| Context | configure service vprn string ntp authentication-check boolean |

| | |
|------------|--------------------------------------|
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the authentication-key list instance |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|--|
| Synopsis | Index of the NTP authentication key table that uniquely identifies an authentication key and type |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

key *string*

| | |
|---------------|--|
| Synopsis | Key to authenticate NTP packets |

| Introduced | 16.0.R1 |

Platforms All

t*ttl number*

Synopsis TTL value of messages transmitted by this broadcast address
 Context **configure** *service vprn string ntp broadcast reference ttl number*
 Tree *ttl*
 Range 1 to 255
 Default 127
 Introduced 16.0.R1
 Platforms All

v*version number*

Synopsis NTP version number generated or accepted by this node in NTP packets
 Context **configure** *service vprn string ntp broadcast reference version number*
 Tree *version*
 Range 2 to 4
 Default 4
 Introduced 16.0.R1
 Platforms All

ospf [*ospf-instance*] *number*

Synopsis Enter the **ospf** list instance
 Context **configure** *service vprn string ospf number*
 Tree *ospf*
 Max. Instances 32
 Introduced 16.0.R1
 Platforms All

[ospf-instance] *number*

Synopsis Specifies the value of the integrated OSPF instance.
 Context **configure** *service vprn string ospf number*

| | |
|------------|-------------------------------------|
| Tree | ospf |
| Range | 0 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf <i>number</i> advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Default | false |
| Options | false, link, area, as |
| Introduced | 16.0.R1 |
| Platforms | All |

area [[area-id](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the area list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> |
| Tree | area |
| Introduced | 16.0.R1 |
| Platforms | All |

[area-id] string

| | |

| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|--|
| Synopsis | Authentication type used on OSPF interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|------------|--|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

remain-down-on-failure *boolean*

| | |
|----------|---|
| Synopsis | Force adjacency down on failure until session returns |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness remain-down-on-failure <i>boolean</i> |
| Tree | remain-down-on-failure |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

strict *boolean*

| | |
|-------------|---|
| Synopsis | Enable BFD strict mode |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness strict <i>boolean</i> |
| Tree | strict |
| Description | <p>When configured to true, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to true, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.</p> <p>During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.</p> |
| Default | false |
| Introduced | 23.3.R1 |
| Platforms | All |

strict-mode-holddown *number*

| | |
|-------------|--|
| Synopsis | Adjacency up time delay after BFD session establishment |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness strict-mode-holddown <i>number</i> |
| Tree | strict-mode-holddown |
| Description | This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles. |
| Range | 1 to 600 |
| Units | seconds |
| Introduced | 23.3.R1 |

Platforms All

dead-interval *number*

Synopsis OSPF wait time for Hellos before neighbor declared down

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Interface type

Context **configure** [service vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* [interface-type](#) *keyword*

Tree [interface-type](#)

Description This command specifies the interface type.

Use this command to set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided the link is used as a point-to-point.

If the interface type is not known at the time the interface is added to OSPF and subsequently the IP interface is bound (or moved) to a different interface type, this command must be entered manually.

Configuring the interface type to **secondary**, allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

| | |
|------------|---|
| Options | broadcast, non-broadcast, point-to-point, secondary |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| Synopsis | Authentication type to be used |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> authentication-type <i>keyword</i> |

| | |
|------------|-------------------------------------|
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|------------|--|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|---|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

message-digest-key [[key-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|--|
| Synopsis | Message digest index |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 *string*

| | |
|---------------|---|
| Synopsis | MD5 key or hash key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> message-digest-key <i>number</i> md5 <i>string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

metric *number*

| | |
|------------|--|
| Synopsis | Explicit route cost metric that is applied to the sham link |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 65535 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|----------|--|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|---|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> sham-link <i>string</i> ip-address <i>string</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

stub

| | |
|------------|---|
| Synopsis | Enable the stub context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> stub |
| Tree | stub |
| Introduced | 16.0.R1 |
| Platforms | All |

default-metric *number*

| | |
|----------|---|
| Synopsis | Metric used by the ABR for the default route into the stub area |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> stub default-metric <i>number</i> |
| Tree | default-metric |
| Range | 1 to 16777214 |
| Default | 1 |

Introduced 16.0.R1
 Platforms All

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the stub area on an ABR
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [stub](#) [summaries](#) *boolean*
 Tree [summaries](#)
 Default true
 Introduced 16.0.R1
 Platforms All

virtual-link [[router-id](#)] *string* [transit-area](#) *reference*

Synopsis Enter the **virtual-link** list instance
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [virtual-link](#) *string* [transit-area](#) *reference*
 Tree [virtual-link](#)
 Introduced 16.0.R1
 Platforms All

[router-id] *string*

Synopsis Router identity of the virtual link neighbor
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [virtual-link](#) *string* [transit-area](#) *reference*
 Tree [virtual-link](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

transit-area *reference*

Synopsis Transit area that links backbone area to area without physical connection with the backbone

| | |
|------------|---|
| Context | configure service vprn string ospf number area string virtual-link string transit-area reference |
| Tree | virtual-link |
| Reference | configure service vprn string ospf number area string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn string ospf number area string virtual-link string transit-area reference admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key string

| | |
|---------------|---|
| Synopsis | Authentication key |
| Context | configure service vprn string ospf number area string virtual-link string transit-area reference authentication-key string |
| Tree | authentication-key |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain reference

| | |
|-----------|---|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn string ospf number area string virtual-link string transit-area reference authentication-keychain reference |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain string |

Introduced 16.0.R3
 Platforms All

authentication-type *keyword*

Synopsis Authentication type used on OSPF interface
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [virtual-link](#) *string* [transit-area](#) *reference* [authentication-type](#) *keyword*
 Tree [authentication-type](#)
 Options password, message-digest
 Introduced 16.0.R1
 Platforms All

dead-interval *number*

Synopsis OSPF wait time for Hellos before neighbor declared down
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [virtual-link](#) *string* [transit-area](#) *reference* [dead-interval](#) *number*
 Tree [dead-interval](#)
 Range 2 to 65535
 Units seconds
 Introduced 16.0.R1
 Platforms All

hello-interval *number*

Synopsis Time between OSPF Hellos of this interface
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [virtual-link](#) *string* [transit-area](#) *reference* [hello-interval](#) *number*
 Tree [hello-interval](#)
 Range 1 to 65535
 Default 10
 Units seconds
 Introduced 16.0.R1
 Platforms All

message-digest-key [[key-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|---|
| Synopsis | Message digest index |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> |
| Tree | message-digest-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 *string*

| | |
|---------------|---|
| Synopsis | MD5 hash key |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> message-digest-key <i>number</i> md5 <i>string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|----------|--|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> retransmit-interval <i>number</i> |

| | |
|------------|-------------------------------------|
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|--|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

compatible-rfc1583 *boolean*

| | |
|------------|--|
| Synopsis | OSPF summary and external route calculations |
| Context | configure service vprn <i>string</i> ospf <i>number</i> compatible-rfc1583 <i>boolean</i> |
| Tree | compatible-rfc1583 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|---|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent *number*

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-limit log-percent <i>number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-limit number <i>number</i> |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn <i>string</i> ospf <i>number</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |

| | |
|------------|--------------------------------------|
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

external-db-overflow

| | |
|------------|---|
| Synopsis | Enable the external-db-overflow context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|---|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow <i>interval</i> <i>number</i> |
| Tree | interval |
| Range | 0 to 2147483647 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|--|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow <i>limit</i> <i>number</i> |
| Tree | limit |
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn <i>string</i> ospf number external-preference number |
| Tree | external-preference |
| Range | 1 to 255 |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|--|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> ospf number graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|---|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn <i>string</i> ospf number graceful-restart helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-lsa-checking *boolean*

| | |
|------------|---|
| Synopsis | Perform strict LSA checking during graceful restart helper |
| Context | configure service vprn <i>string</i> ospf number graceful-restart strict-lsa-checking <i>boolean</i> |
| Tree | strict-lsa-checking |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-dn-bit *boolean*

| | |
|------------|--|
| Synopsis | Ignore the DN bit for OSPF LSA packets for the instance |
| Context | configure service vprn <i>string</i> ospf number ignore-dn-bit <i>boolean</i> |
| Tree | ignore-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string</i> ospf number import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|--|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string</i> ospf number loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|--|
| Synopsis | Enter the exclude context |
| Context | configure service vprn <i>string</i> ospf number loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |

Platforms All

prefix-policy *reference*

Synopsis Policy to exclude prefixes from LFA SPF calculation

Context **configure** [service vprn string ospf number loopfree-alternate exclude prefix-policy reference](#)

Tree [prefix-policy](#)

Description This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.

Reference **configure** [policy-options policy-statement string](#)

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R3

Platforms All

multicast-import *boolean*

Synopsis Submit routes into the multicast Route Table Manager

Context **configure** [service vprn string ospf number multicast-import boolean](#)

Tree [multicast-import](#)

Default false

Introduced 16.0.R1

Platforms All

overload *boolean*

Synopsis Change local router state to appear overloaded

Context **configure** [service vprn string ospf number overload boolean](#)

Tree [overload](#)

Default false

Introduced 16.0.R1

Platforms All

overload-include-ext-1 *boolean*

| | |
|------------|---|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-ext-1 <i>boolean</i> |
| Tree | overload-include-ext-1 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

overload-include-ext-2 *boolean*

| | |
|------------|---|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-ext-2 <i>boolean</i> |
| Tree | overload-include-ext-2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-stub *boolean*

| | |
|------------|--|
| Synopsis | Advertise all stub interfaces with max metric value |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-include-stub <i>boolean</i> |
| Tree | overload-include-stub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|--|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload state before reestablishing normal operations |
| Context | configure service vprn <i>string</i> ospf number overload-on-boot <i>timeout number</i> |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|---|
| Synopsis | Preference for OSPF internal routes |
| Context | configure service vprn <i>string</i> ospf number preference number |
| Tree | preference |
| Range | 1 to 255 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

reference-bandwidth *number*

| | |
|------------|--|
| Synopsis | Bandwidth to reference the default costing of interfaces |
| Context | configure service vprn <i>string</i> ospf number reference-bandwidth number |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |
| Default | 100000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|----------|---------------------------------------|
| Synopsis | Enter the rib-priority context |
|----------|---------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string ospf number rib-priority</i> |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|---|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string ospf number rib-priority high</i> |
| Tree | high |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-list *reference*

| | |
|------------|---|
| Synopsis | Higher priority list used during OSPF route calculation |
| Context | configure service vprn <i>string ospf number rib-priority high prefix-list reference</i> |
| Tree | prefix-list |
| Reference | configure policy-options prefix-list <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

router-id *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Unique router ID for the OSPF instance |
| Context | configure service vprn <i>string ospf number router-id string</i> |
| Tree | router-id |
| Introduced | 16.0.R1 |
| Platforms | All |

rtr-adv-lsa-limit

| | |
|------------|--|
| Synopsis | Enable the rtr-adv-lsa-limit context |
| Context | configure service vprn string ospf number rtr-adv-lsa-limit |
| Tree | rtr-adv-lsa-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only boolean

| | |
|------------|---|
| Synopsis | Log the event without triggering overload |
| Context | configure service vprn string ospf number rtr-adv-lsa-limit log-only boolean |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-count number

| | |
|------------|---|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn string ospf number rtr-adv-lsa-limit max-lsa-count number |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (number | keyword)

| | |
|----------|--|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn string ospf number rtr-adv-lsa-limit overload-timeout (number keyword) |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Default | forever |
| Units | seconds |

| | |
|------------|---------|
| Options | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|------------|--|
| Synopsis | Percentage of the max LSA count that causes a warning |
| Context | configure service vprn <i>string</i> ospf <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i> |
| Tree | warning-threshold |
| Range | 0 to 100 |
| Default | 0 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

super-backbone *boolean*

| | |
|------------|--|
| Synopsis | Enable/disable super-backbone functionality. |
| Context | configure service vprn <i>string</i> ospf <i>number</i> super-backbone <i>boolean</i> |
| Tree | super-backbone |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-dn-bit *boolean*

| | |
|------------|---|
| Synopsis | Suppress the DN bit setting for OSPF LSA packets |
| Context | configure service vprn <i>string</i> ospf <i>number</i> suppress-dn-bit <i>boolean</i> |
| Tree | suppress-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enter the timers context |
| Context | configure service vprn string ospf number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

incremental-spf-wait number

| | |
|------------|---|
| Synopsis | Delay time before an incremental SPF calculation starts |
| Context | configure service vprn string ospf number timers incremental-spf-wait number |
| Tree | incremental-spf-wait |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-accumulate number

| | |
|------------|---|
| Synopsis | Delay to gather LSAs before advertising to neighbors |
| Context | configure service vprn string ospf number timers lsa-accumulate number |
| Tree | lsa-accumulate |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-arrival number

| | |
|----------|--|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn string ospf number timers lsa-arrival number |
| Tree | lsa-arrival |
| Range | 0 to 600000 |

| | |
|------------|--------------|
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-generate

| | |
|------------|---|
| Synopsis | Enter the Isa-generate context |
| Context | configure service vprn string ospf number timers Isa-generate |
| Tree | Isa-generate |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-initial-wait *number*

| | |
|------------|--|
| Synopsis | First wait period between OSPF LSA generation |
| Context | configure service vprn string ospf number timers Isa-generate Isa-initial-wait <i>number</i> |
| Tree | Isa-initial-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second LSA generation |
| Context | configure service vprn string ospf number timers Isa-generate Isa-second-wait <i>number</i> |
| Tree | Isa-second-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-wait *number*

| | |
|------------|---|
| Synopsis | Max time between two LSAs being generated |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers lsa-generate max-lsa-wait <i>number</i> |
| Tree | max-lsa-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

redistribute-delay *number*

| | |
|------------|--|
| Synopsis | Hold down timer for external routes into OSPF |

Platforms All

remain-down-on-failure *boolean*

Synopsis Force adjacency down on failure until session returns

Context **configure service vprn** *string* **ospf3** *number* **area** *string* **interface** *string* **bfd-liveness** **remain-down-on-failure** *boolean*

Tree **remain-down-on-failure**

Default false

Introduced 16.0.R1

Platforms All

strict *boolean*

Synopsis Enable BFD strict mode

Context **configure service vprn** *string* **ospf3** *number* **area** *string* **interface** *string* **bfd-liveness** **strict** *boolean*

Tree **strict**

Description When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set.

During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.

Default false

Introduced 23.3.R1

Platforms All

strict-mode-holddown *number*

Synopsis Adjacency up time delay after BFD session establishment

Context **configure service vprn** *string* **ospf3** *number* **area** *string* **interface** *string* **bfd-liveness** **strict-mode-holddown** *number*

Tree **strict-mode-holddown**

Description This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn

when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.

| | |
|------------|----------|
| Range | 1 to 600 |
| Units | seconds |

| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-area *reference*

| | |
|------------|---|
| Synopsis | Transit area that links backbone area to area without physical connection with the backbone |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Reference | configure service vprn <i>string ospf3 number area string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference admin-state keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication

| | |
|----------|--|
| Synopsis | Enable the authentication context |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference authentication</i> |
| Tree | authentication |

Introduced 16.0.R6
 Platforms All

inbound *reference*

Synopsis sa-name
 Context **configure** [service vprn string ospf3 number area string virtual-link string transit-area reference authentication inbound reference](#)
 Tree [inbound](#)
 Reference **configure** [ipsec static-sa string](#)
 Notes This element is mandatory.
 Introduced 16.0.R6
 Platforms All

outbound *reference*

Synopsis sa-name
 Context **configure** [service vprn string ospf3 number area string virtual-link string transit-area reference authentication outbound reference](#)
 Tree [outbound](#)
 Reference **configure** [ipsec static-sa string](#)
 Notes This element is mandatory.
 Introduced 16.0.R6
 Platforms All

dead-interval *number*

Synopsis OSPF wait time for Hellos before neighbor declared down
 Context **configure** [service vprn string ospf3 number area string virtual-link string transit-area reference dead-interval number](#)
 Tree [dead-interval](#)
 Range 2 to 65535
 Units seconds
 Introduced 16.0.R1
 Platforms All

hello-interval *number*

| | |
|------------|--|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Default | 10 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|------------|---|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Default | 5 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|---|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Default | 1 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|--|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn string ospf3 number export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent number

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn string ospf3 number export-limit log-percent number |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number number

| | |
|------------|--|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn string ospf3 number export-limit number number |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy reference

| | |
|-------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn string ospf3 number export-policy reference |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> |

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

external-db-overflow

| | |
|------------|--|
| Synopsis | Enable the external-db-overflow context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-db-overflow |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|---|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-db-overflow interval <i>number</i> |
| Tree | interval |
| Range | 0 to 2147483647 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|----------|--|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-db-overflow limit <i>number</i> |
| Tree | limit |

| | |
|------------|-----------------|
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|---|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn <i>string ospf3</i> <i>number external-preference</i> <i>number</i> |
| Tree | external-preference |
| Range | 1 to 255 |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|--|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string ospf3</i> <i>number graceful-restart</i> |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn <i>string ospf3</i> <i>number graceful-restart</i> helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-lsa-checking *boolean*

| | |
|----------|--|
| Synopsis | Perform strict LSA checking during graceful restart helper |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf3 number graceful-restart strict-lsa-checking boolean</i> |
| Tree | strict-lsa-checking |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-dn-bit *boolean*

| | |
|------------|--|
| Synopsis | Ignore the DN bit for OSPF LSA packets for the instance |
| Context | configure service vprn <i>string ospf3 number ignore-dn-bit boolean</i> |
| Tree | ignore-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string ospf3 number import-policy reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string ospf3 number loopfree-alternate</i> |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|----------------|--|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i> |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

multicast-import *boolean*

| | |
|------------|---|
| Synopsis | Submit routes into the multicast Route Table Manager |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> multicast-import <i>boolean</i> |
| Tree | multicast-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload *boolean*

| | |
|------------|--|
| Synopsis | Change local router state to appear overloaded |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload <i>boolean</i> |
| Tree | overload |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-ext-1 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-ext-1 <i>boolean</i> |
| Tree | overload-include-ext-1 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

overload-include-ext-2 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-ext-2 <i>boolean</i> |
| Tree | overload-include-ext-2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-stub *boolean*

| | |
|------------|---|
| Synopsis | Advertise all stub interfaces with max metric value |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-stub <i>boolean</i> |
| Tree | overload-include-stub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|--|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn string ospf3 number overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|---|
| Synopsis | Time during which the router operates in overload state before reestablishing normal operations |
| Context | configure service vprn string ospf3 number overload-on-boot timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF internal routes |
| Context | configure service vprn string ospf3 number preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

reference-bandwidth *number*

| | |
|----------|---|
| Synopsis | Bandwidth to reference the default costing of interfaces |
| Context | configure service vprn string ospf3 number reference-bandwidth <i>number</i> |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |

| | |
|------------|-----------|
| Default | 100000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|------------|--|
| Synopsis | Enter the rib-priority context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|---|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority high |
| Tree | high |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-list *reference*

| | |
|------------|--|
| Synopsis | Higher priority list used during OSPF route calculation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority high prefix-list <i>reference</i> |
| Tree | prefix-list |
| Reference | configure policy-options prefix-list <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

router-id *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Unique router ID for the OSPF instance |
| Context | configure service vprn <i>string ospf3 number router-id string</i> |
| Tree | router-id |
| Introduced | 16.0.R1 |
| Platforms | All |

rtr-adv-lsa-limit

| | |
|------------|--|
| Synopsis | Enable the rtr-adv-lsa-limit context |
| Context | configure service vprn <i>string ospf3 number rtr-adv-lsa-limit</i> |
| Tree | rtr-adv-lsa-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Log the event without triggering overload |
| Context | configure service vprn <i>string ospf3 number rtr-adv-lsa-limit log-only boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-count *number*

| | |
|------------|---|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn <i>string ospf3 number rtr-adv-lsa-limit max-lsa-count number</i> |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn <i>string ospf3 number rtr-adv-lsa-limit</i> overload-timeout (<i>number</i> <i>keyword</i>) |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Default | forever |
| Units | seconds |
| Options | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|------------|---|
| Synopsis | Percentage of the max LSA count that causes a warning |
| Context | configure service vprn <i>string ospf3 number rtr-adv-lsa-limit</i> warning-threshold <i>number</i> |
| Tree | warning-threshold |
| Range | 0 to 100 |
| Default | 0 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-dn-bit *boolean*

| | |
|------------|--|
| Synopsis | Suppress the DN bit setting for OSPF LSA packets |
| Context | configure service vprn <i>string ospf3 number</i> suppress-dn-bit <i>boolean</i> |
| Tree | suppress-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|----------|---------------------------------|
| Synopsis | Enter the timers context |
|----------|---------------------------------|

| | |
|------------|--|
| Context | configure service vprn string ospf3 number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

incremental-spf-wait *number*

| | |
|------------|--|
| Synopsis | Delay time before an incremental SPF calculation starts |
| Context | configure service vprn string ospf3 number timers incremental-spf-wait number |
| Tree | incremental-spf-wait |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-accumulate *number*

| | |
|------------|--|
| Synopsis | Delay to gather LSAs before advertising to neighbors |
| Context | configure service vprn string ospf3 number timers lsa-accumulate number |
| Tree | lsa-accumulate |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-arrival *number*

| | |
|----------|---|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn string ospf3 number timers lsa-arrival number |
| Tree | lsa-arrival |
| Range | 0 to 600000 |
| Default | 1000 |
| Units | milliseconds |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-generate

| | |
|------------|---|
| Synopsis | Enter the Isa-generate context |
| Context | configure service vprn string ospf3 number timers Isa-generate |
| Tree | Isa-generate |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-initial-wait *number*

| | |
|------------|--|
| Synopsis | First wait period between OSPF LSA generation |
| Context | configure service vprn string ospf3 number timers Isa-generate Isa-initial-wait <i>number</i> |
| Tree | Isa-initial-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second LSA generation |
| Context | configure service vprn string ospf3 number timers Isa-generate Isa-second-wait <i>number</i> |
| Tree | Isa-second-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-wait *number*

| | |
|------------|--|
| Synopsis | Max time between two LSAs being generated |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-generate max-lsa-wait <i>number</i> |
| Tree | max-lsa-wait |
| Range | 10 to 600000 |
| Default | 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

redistribute-delay *number*

| | |
|------------|---|
| Synopsis | Hold down timer for external routes into OSPF |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers redistribute-delay <i>number</i> |
| Tree | redistribute-delay |
| Range | 0 to 1000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-wait

| | |
|------------|---|
| Synopsis | Enter the spf-wait context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers spf-wait |
| Tree | spf-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-initial-wait *number*

| | |
|----------|--|
| Synopsis | Initial SPF calculation delay after a topology change |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers spf-wait spf-initial-wait <i>number</i> |
| Tree | spf-initial-wait |
| Range | 10 to 100000 |

| | |
|------------|--------------|
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-max-wait *number*

| | |
|------------|--|
| Synopsis | Max interval between two consecutive SPF calculations |
| Context | configure service vprn string ospf3 number timers spf-wait spf-max-wait <i>number</i> |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Default | 10000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second SPF calculation |
| Context | configure service vprn string ospf3 number timers spf-wait spf-second-wait <i>number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Default | 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import *boolean*

| | |
|------------|---|
| Synopsis | Submit routes into the unicast Route Table Manager |
| Context | configure service vprn string ospf3 number unicast-import <i>boolean</i> |
| Tree | unicast-import |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

pcp

| | |
|------------|--|
| Synopsis | Enter the pcp context |
| Context | configure service vprn string pcp |
| Tree | pcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

server [name] string

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn string pcp server string |
| Tree | server |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] string

| | |
|---------------|--|
| Synopsis | PCP server name |
| Context | configure service vprn string pcp server string |
| Tree | server |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |

[interface-name] *string*

| | |
|----------|---|
| Synopsis | Interface name |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> |

| | |
|---------------|-------------------------------------|
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the PIM interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

assert-period *number*

| | |
|------------|---|
| Synopsis | Time for periodic refreshes of PIM Assert messages on an interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> assert-period <i>number</i> |
| Tree | assert-period |
| Range | 1 to 300 |
| Default | 60 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|------------|--|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 boolean

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection for IPv4 on PIM interface |
| Context | configure service vprn string pim interface string bfd-liveness ipv4 boolean |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 boolean

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection for IPv6 on PIM interface |
| Context | configure service vprn string pim interface string bfd-liveness ipv6 boolean |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bsm-check-rtr-alert boolean

| | |
|------------|---|
| Synopsis | Check router alert option in bootstrap messages received |
| Context | configure service vprn string pim interface string bsm-check-rtr-alert boolean |
| Tree | bsm-check-rtr-alert |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval number

| | |
|------------|---|
| Synopsis | Frequency at which PIM Hello messages are sent over this interface |
| Context | configure service vprn string pim interface string hello-interval number |
| Tree | hello-interval |
| Range | 0 to 255 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|---|
| Synopsis | Multiplier to determine the hold time for PIM neighbor |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 20 to 100 |
| Default | 35 |
| Introduced | 16.0.R1 |
| Platforms | All |

improved-assert *boolean*

| | |
|------------|---|
| Synopsis | Allow improved assert processing on interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> improved-assert <i>boolean</i> |
| Tree | improved-assert |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

instant-prune-echo *boolean*

| | |
|------------|--|
| Synopsis | Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> instant-prune-echo <i>boolean</i> |
| Tree | instant-prune-echo |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |

bandwidth

| | |
|------------|--|
| Synopsis | Enter the bandwidth context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac bandwidth |
| Tree | bandwidth |
| Introduced | 16.0.R1 |
| Platforms | All |

mandatory (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Pre-reserved bandwidth for all mandatory channels |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac bandwidth mandatory (<i>number</i> <i>keyword</i>) |
| Tree | mandatory |
| Range | 0 to 2147483647 |
| Default | unlimited |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

total (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum allowed bandwidth |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac bandwidth total (<i>number</i> <i>keyword</i>) |
| Tree | total |
| Range | 0 to 2147483647 |
| Default | unlimited |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-policy *reference*

| | |
|------------|--|
| Synopsis | Name of multicast CAC interface policy |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac interface-policy <i>reference</i> |
| Tree | interface-policy |
| Reference | configure mcac interface-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-constraints

| | |
|------------|---|
| Synopsis | Enter the mc-constraints context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints |
| Tree | mc-constraints |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of the multicast CAC constraints |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |

| | |
|------------|-----------------|
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

level [*level-id*] *number*

| | |
|------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints level <i>number</i> |
| Tree | level |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-id] *number*

| | |
|------------|---|
| Synopsis | Bandwidth level ID for an MCAC constraint |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints level <i>number</i> |
| Tree | level |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth *number*

| | |
|------------|---|
| Synopsis | Bandwidth available for this level |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints level <i>number</i> bandwidth <i>number</i> |
| Tree | bandwidth |
| Range | 0 to 2147483647 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

number-down [**number-lag-port-down**] *number*

| | |
|------------|--|
| Synopsis | Enter the number-down list instance |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> |
| Tree | number-down |
| Introduced | 16.0.R1 |
| Platforms | All |

[number-lag-port-down] *number*

| | |
|------------|--|
| Synopsis | Number of ports that are down in this LAG link |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> |
| Tree | number-down |
| Range | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level *number*

| | |
|-------------|---|
| Synopsis | Level ID to associate with number of down LAG ports |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> level <i>number</i> |
| Tree | level |
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight *boolean*

| | |
|----------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints use-lag-port-weight <i>boolean</i> |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac policy reference |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p> |
| Reference | configure mcac policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-senders *keyword*

| | |
|----------|--|
| Synopsis | Subnet matching for the incoming data packets |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> multicast-senders <i>keyword</i> |

| | |
|------------|-----------------------------------|
| Tree | multicast-senders |
| Default | auto |
| Options | auto, always, never |
| Introduced | 16.0.R1 |
| Platforms | All |

p2mp-ldp-tree-join

| | |
|------------|---|
| Synopsis | Enter the p2mp-ldp-tree-join context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> p2mp-ldp-tree-join |
| Tree | p2mp-ldp-tree-join |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ipv4 boolean

| | |
|------------|--|
| Synopsis | Allow dynamic mLDP in-band signaling for IPv4 PIM joins |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> p2mp-ldp-tree-join ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ipv6 boolean

| | |
|------------|--|
| Synopsis | Allow dynamic mLDP in-band signaling for IPv6 PIM joins |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> p2mp-ldp-tree-join ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

priority number

| | |
|----------|---|
| Synopsis | DR election priority for this interface |
|----------|---|

| Notes | The following elements are part of a choice: any or group-prefix . |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|--|
| Synopsis | IP address and mask length |
| Context | configure service vprn <i>string</i> pim ipv4 grt-extranet group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

starg *boolean*

| | |
|------------|--|
| Synopsis | Add a static (*,G) entry |
| Context | configure service vprn <i>string</i> pim ipv4 grt-extranet group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
starg <i>boolean</i> |
| Tree | starg |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

rpf-table *keyword*

| | |
|------------|---|
| Synopsis | Route table for RPF lookup |
| Context | configure service vprn <i>string</i> pim ipv4 rpf-table <i>keyword</i> |
| Tree | rpf-table |
| Default | rtable-u |
| Options | rtable-m, rtable-u, both |
| Introduced | 16.0.R1 |
| Platforms | All |

source-address

| | |
|-------------|---|
| Synopsis | Enter the source-address context |
| Context | configure service vprn <i>string</i> pim ipv4 source-address |
| Tree | source-address |
| Description | Commands in this context configure the source IP address for PIM messages. |
| Introduced | 23.3.R1 |
| Platforms | All |

register-message *string*

| | |
|-------------|---|
| Synopsis | Source IPv4 address for PIM register messages |
| Context | configure service vprn <i>string</i> pim ipv4 source-address register-message <i>string</i> |
| Tree | register-message |
| Description | <p>This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address.</p> <p>When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.</p> |
| Introduced | 23.3.R1 |
| Platforms | All |

ssm-assert-compatible-mode *boolean*

| | |
|----------|-----------------------------------|
| Synopsis | Enable SSM assert compatible mode |
|----------|-----------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> pim ipv4 ssm-assert-compatible-mode <i>boolean</i> |
| Tree | ssm-assert-compatible-mode |

| Synopsis | SSM default range |
| Context | configure service vprn <i>string</i> pim ipv6 ssm-default-range <i>boolean</i> |

| | |
|------------|-----------------------------------|
| Tree | ssm-default-range |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-balance *boolean*

| | |
|------------|--|
| Synopsis | Enable multicast balancing of traffic over ECMP links |
| Context | configure service vprn <i>string</i> pim mc-ecmp-balance <i>boolean</i> |
| Tree | mc-ecmp-balance |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-balance-hold *number*

| | |
|------------|--|
| Synopsis | Hold time for multicast balancing over ECMP links |
| Context | configure service vprn <i>string</i> pim mc-ecmp-balance-hold <i>number</i> |
| Tree | mc-ecmp-balance-hold |
| Range | 2 to 600 |
| Units | minutes |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-hashing

| | |
|------------|---|
| Synopsis | Enable the mc-ecmp-hashing context |
| Context | configure service vprn <i>string</i> pim mc-ecmp-hashing |
| Tree | mc-ecmp-hashing |
| Introduced | 16.0.R1 |
| Platforms | All |

rebalance *boolean*

| | |
|----------|---|
| Synopsis | Rebalance flows to newly added links immediately instead of waiting until they are pruned |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> pim mc-ecmp-hashing rebalance <i>boolean</i> |
| Tree | rebalance |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu-over-head *number*

| | |
|-------------|---|
| Synopsis | MVPN tunnel MTU size reduction to allow for BIER header |
| Context | configure service vprn <i>string</i> pim mtu-over-head <i>number</i> |
| Tree | mtu-over-head |
| Description | This command subtracts the specified value from the MVPN tunnel MTU to allow a BIER header to be added without exceeding the network MTU. |
| Range | 0 44 76 140 268 536 |
| Default | 0 |
| Introduced | 20.5.R1 |
| Platforms | All |

non-dr-attract-traffic *boolean*

| | |
|------------|--|
| Synopsis | Attract traffic when the router is not the designated one |
| Context | configure service vprn <i>string</i> pim non-dr-attract-traffic <i>boolean</i> |
| Tree | non-dr-attract-traffic |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

rp

| | |
|------------|---|
| Synopsis | Enter the rp context |
| Context | configure service vprn <i>string</i> pim rp |
| Tree | rp |
| Introduced | 16.0.R1 |
| Platforms | All |

bootstrap

| | |
|------------|--|
| Synopsis | Enter the bootstrap context |
| Context | configure service vprn <i>string</i> pim rp bootstrap |
| Tree | bootstrap |
| Introduced | 16.0.R1 |
| Platforms | All |

export *reference*

| | |
|----------------|--|
| Synopsis | Export policy to control the flow of bootstrap messages |
| Context | configure service vprn <i>string</i> pim rp bootstrap export <i>reference</i> |
| Tree | export |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

import *reference*

| | |
|----------------|--|
| Synopsis | Import policy to control the flow of bootstrap messages |
| Context | configure service vprn <i>string</i> pim rp bootstrap import <i>reference</i> |
| Tree | import |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|----------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> pim rp ipv4 |

| | |
|------------|----------------------|
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

anycast [[ipv4-address](#)] *string rp-set-peer string*

| | |
|------------|--|
| Synopsis | Add a list entry for anycast |
| Context | configure service vprn string pim rp ipv4 anycast string rp-set-peer string |
| Tree | anycast |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|--|
| Synopsis | Loopback IP address shared by routes in RP set |
| Context | configure service vprn string pim rp ipv4 anycast string rp-set-peer string |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

rp-set-peer *string*

| | |
|------------|--|
| Synopsis | Configure a peer in the anycast rp-set. |
| Context | configure service vprn string pim rp ipv4 anycast string rp-set-peer string |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-rp-discovery *boolean*

| | |
|----------|--|
| Synopsis | Enable auto RP discovery |
| Context | configure service vprn string pim rp ipv4 auto-rp-discovery boolean |
| Tree | auto-rp-discovery |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bsr-candidate

| | |
|------------|--|
| Synopsis | Enter the bsr-candidate context |
| Context | configure service vprn string pim rp ipv4 bsr-candidate |
| Tree | bsr-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address string

| | |
|------------|---|
| Synopsis | Candidate BSR IP address for Bootstrap Router election |
| Context | configure service vprn string pim rp ipv4 bsr-candidate address string |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of the Candidate BSR |
| Context | configure service vprn string pim rp ipv4 bsr-candidate admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

hash-mask-len number

| | |
|----------|---|
| Synopsis | Length for bootstrap hash mask |
| Context | configure service vprn string pim rp ipv4 bsr-candidate hash-mask-len number |
| Tree | hash-mask-len |

| | |
|------------|---------|
| Range | 0 to 32 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|---|
| Synopsis | Bootstrap priority of the router |
| Context | configure service vpn <i>string</i> pim rp ipv4 bsr-candidate <i>priority number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

candidate *boolean*

| | |
|-------------|--|
| Synopsis | Enable auto-RP to advertise candidate RP information |
| Context | configure service vpn <i>string</i> pim rp ipv4 candidate <i>boolean</i> |
| Tree | candidate |
| Description | When configured to true , the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.

When configured to false , the candidate RP information is not specified. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

mapping-agent *boolean*

| | |
|-------------|--|
| Synopsis | Enable the mapping agent on the node |
| Context | configure service vpn <i>string</i> pim rp ipv4 mapping-agent <i>boolean</i> |
| Tree | mapping-agent |
| Description | When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP |

discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.

| | |
|------------|----------|
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rp-candidate

| | |
|------------|---|
| Synopsis | Enter the rp-candidate context |
| Context | configure service vprn string pim rp ipv4 rp-candidate |
| Tree | rp-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|-------------|--|
| Synopsis | Local RP address |
| Context | configure service vprn string pim rp ipv4 rp-candidate address string |
| Tree | address |
| Description | This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the Candidate RP |
| Context | configure service vprn string pim rp ipv4 rp-candidate admin-state keyword |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [ipv4-prefix] *string*

| | |
|------------|---|
| Synopsis | Add a list entry for group-range |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-prefix] *string*

| | |
|------------|--|
| Synopsis | IPv4 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

holdtime *number*

| | |
|------------|--|
| Synopsis | Time during which the neighboring router considers this router to be up |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate holdtime <i>number</i> |
| Tree | holdtime |
| Range | 5 to 255 |
| Default | 150 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|--|
| Synopsis | Candidate RP priority |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 192 |
| Introduced | 16.0.R1 |

Synopsis Matching attribute type to RADIUS server policy

Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [attribute-matching](#) [type](#) *number*

Tree [type](#)

Range 1 to 255

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (*number* | *keyword*)

Synopsis Matching Vendor ID to RADIUS server policy

Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [attribute-matching](#) [vendor](#) (*number* | *keyword*)

| | |
|------------|---|
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cache

| | |
|------------|---|
| Synopsis | Enter the cache context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache |
| Tree | cache |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the RADIUS proxy cache |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

key

| | |
|------------|--|
| Synopsis | Enable the key context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key |
| Tree | key |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-type *number*

| | |
|----------|---|
| Synopsis | RADIUS attribute type to cache for this RADIUS proxy server |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key attribute-type <i>number</i> |
| Tree | attribute-type |
| Range | 1 to 255 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

packet-type *keyword*

| | |
|------------|---|
| Synopsis | Packet type of the RADIUS messages |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key packet-type <i>keyword</i> |
| Tree | packet-type |
| Options | access-request, access-accept |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | RADIUS Vendor ID |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|----------|--|
| Synopsis | Idle timeout value |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 3600 |
| Default | 300 |
| Units | seconds |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-accounting

Synopsis Enter the **track-accounting** context
Context **configure service vprn string radius proxy string cache track-accounting**
Tree [track-accounting](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-off *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client
Context **configure service vprn string radius proxy string cache track-accounting accounting-off boolean**
Tree [accounting-off](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-on *boolean*

Synopsis Remove all ESM hosts associated with the RADIUS client
Context **configure service vprn string radius proxy string cache track-accounting accounting-on boolean**
Tree [accounting-on](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis Update the ESM host with the RADIUS client that generated the interim update
Context **configure service vprn string radius proxy string cache track-accounting interim-update boolean**

| | |
|------------|---|
| Tree | interim-update |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

start *boolean*

| | |
|------------|---|
| Synopsis | Update host with client that generated accounting-start |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-accounting start <i>boolean</i> |
| Tree | start |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop *boolean*

| | |
|------------|--|
| Synopsis | Remove ESM host and forward accounting-stop packet |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-accounting stop <i>boolean</i> |
| Tree | stop |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-authentication

| | |
|------------|---|
| Synopsis | Enter the track-authentication context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-authentication |
| Tree | track-authentication |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accept *boolean*

| | |
|----------|--|
| Synopsis | Track Access-Accept message for mobility |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-authentication accept <i>boolean</i> |

| | |
|------------|---|
| Tree | accept |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-delete-hold-time *number*

| | |
|------------|--|
| Synopsis | Delete hold time |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-delete-hold-time <i>number</i> |
| Tree | track-delete-hold-time |
| Range | 0 to 6000 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|--|
| Synopsis | Enter the defaults context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-server-policy *string*

| | |
|---------------|--|
| Synopsis | Default accounting RADIUS server policy |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> defaults accounting-server-policy <i>string</i> |
| Tree | accounting-server-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

authentication-server-policy *string*

| | |
|---------------|--|
| Synopsis | Default authentication RADIUS server policy |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> defaults authentication-server-policy <i>string</i> |
| Tree | authentication-server-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface [[interface-name](#)] *reference*

| | |
|------------|---|
| Synopsis | Add a list entry for interface |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> interface <i>reference</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] *reference*

| | |
|------------|---|
| Synopsis | IP interface name |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> interface <i>reference</i> |
| Tree | interface |
| Reference | configure service vprn <i>string</i> interface <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

load-balance-key

| | |
|------------|---|
| Synopsis | Enter the load-balance-key context |
| Context | configure service vprn string radius proxy string load-balance-key |
| Tree | load-balance-key |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-1

| | |
|------------|---|
| Synopsis | Enter the attribute-1 context |
| Context | configure service vprn string radius proxy string load-balance-key attribute-1 |
| Tree | attribute-1 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|--|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn string radius proxy string load-balance-key attribute-1 type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn string radius proxy string load-balance-key attribute-1 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-2

| | |
|------------|--|
| Synopsis | Enter the attribute-2 context |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 |
| Tree | attribute-2 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Vendor-Id attribute |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-3

| | |
|------------|--|
| Synopsis | Enter the attribute-3 context |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-3 |
| Tree | attribute-3 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-3 type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Vendor-Id attribute |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-3 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-4

| | |
|----------|--|
| Synopsis | Enter the attribute-4 context |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-4 |
| Tree | attribute-4 |

| | |
|------------|---|
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn string radius proxy string load-balance-key attribute-4 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (number | keyword)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn string radius proxy string load-balance-key attribute-4 vendor (number keyword) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-5

| | |
|------------|---|
| Synopsis | Enter the attribute-5 context |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 |
| Tree | attribute-5 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-5 type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-5 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-udp

| | |
|------------|---|
| Synopsis | Key to consist of the source IP address and source UDP port of the RADIUS message |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key source-ip-udp |
| Tree | source-ip-udp |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

purpose *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Purpose of the RADIUS proxy |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> purpose <i>keyword</i> |
| Tree | purpose |
| Options | accounting, authentication, accounting-authentication |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

secret *string*

| | |
|---------------|---|
| Synopsis | Format of the secret key to access the RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> secret <i>string</i> |
| Tree | secret |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

send-accounting-response *boolean*

| | |
|------------|--|
| Synopsis | Allow RADIUS proxy server to respond to Accounting-Response messages |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> send-accounting-response <i>boolean</i> |
| Tree | send-accounting-response |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|--|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vprn string radius proxy string wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address string

| | |
|-------------|---|
| Synopsis | IPv4 address of the distributed RADIUS proxy server |
| Context | configure service vprn string radius proxy string wlan-gw address string |
| Tree | address |
| Description | This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv6-address string

| | |
|-------------|---|
| Synopsis | IPv6 address of the distributed RADIUS proxy server |
| Context | configure service vprn string radius proxy string wlan-gw ipv6-address string |
| Tree | ipv6-address |
| Description | This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group reference**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | ISA WLAN gateway group |
| Context | configure service vprn string radius proxy string wlan-gw-group reference |

| | |
|------------|--|
| Tree | wlan-gw-group |
| Reference | configure isa wlan-gw-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

server [[name](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> radius server <i>string</i> |
| Tree | server |
| Max. Instances | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|---|
| Synopsis | External RADIUS server name |
| Context | configure service vprn <i>string</i> radius server <i>string</i> |
| Tree | server |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accept-coa *boolean*

| | |
|------------|--|
| Synopsis | Process Change of Authorization (CoA) messages |
| Context | configure service vprn <i>string</i> radius server <i>string</i> accept-coa <i>boolean</i> |
| Tree | accept-coa |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

acct-port number

| | |
|------------|--|
| Synopsis | UDP port number of the RADIUS for accounting events |
| Context | configure service vprn string radius server string acct-port number |
| Tree | acct-port |
| Range | 1 to 65535 |
| Default | 1813 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address (ipv4-address-no-zone | ipv6-address-no-zone)

| | |
|------------|---|
| Synopsis | IP address of the RADIUS server |
| Context | configure service vprn string radius server string address (ipv4-address-no-zone ipv6-address-no-zone) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auth-port number

| | |
|------------|--|
| Synopsis | UDP port number of the RADIUS to be used as match criteria |
| Context | configure service vprn string radius server string auth-port number |
| Tree | auth-port |
| Range | 1 to 65535 |
| Default | 1812 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn string radius server string description string |
| Tree | description |
| String Length | 1 to 80 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pending-requests-limit *number*

Synopsis Limit of the number for pending RADIUS requests
 Context **configure** [service vprn](#) *string* [radius server](#) *string* **pending-requests-limit** *number*
 Tree [pending-requests-limit](#)
 Range 1 to 4096
 Default 4096
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis Python script policy to modify CoA messages
 Context **configure** [service vprn](#) *string* [radius server](#) *string* **python-policy** *reference*
 Tree [python-policy](#)
 Reference **configure** [python](#) **python-policy** *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis Secret key associated with this RADIUS server
 Context **configure** [service vprn](#) *string* [radius server](#) *string* **secret** *string*
 Tree [secret](#)
 String Length 1 to 115
 Notes This element is mandatory.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reassembly

Synopsis Enable the **reassembly** context

| | |
|------------|---|
| Context | configure service vprn string reassembly |
| Tree | reassembly |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-group *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | NAT group (including WLAN Gateway group) that executes the reassembly |
| Context | configure service vprn string reassembly nat-group number |
| Tree | nat-group |
| Max. Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

to-base-network *boolean*

| | |
|------------|---|
| Synopsis | Allow reassembled traffic sent to network interface |
| Context | configure service vprn string reassembly to-base-network boolean |
| Tree | to-base-network |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

redundant-interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the redundant-interface list instance |
| Context | configure service vprn string redundant-interface string |
| Tree | redundant-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] string

| | |
|---------------|---|
| Synopsis | Interface name |
| Context | configure service vprn string redundant-interface string |
| Tree | redundant-interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the interface |
| Context | configure service vprn string redundant-interface string admin-state keyword |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn string redundant-interface string description string |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |
|------------|---|
| Synopsis | Enter the hold-time context |
| Context | configure service vprn string redundant-interface string hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn string redundant-interface string hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure service vprn string redundant-interface string hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

init-only *boolean*

| | |
|-------------|---|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn string redundant-interface string hold-time ipv4 down init-only boolean |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|----------|--|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn string redundant-interface string hold-time ipv4 down seconds number |

| | |
|------------|---|
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn string redundant-interface string hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn string redundant-interface string hold-time ipv4 up seconds number |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|------------|---|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vprn string redundant-interface string ip-mtu number |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis Enter the **ipv4** context

Context **configure service vprn string redundant-interface string ipv4**

Tree [ipv4](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis Enable the **primary** context

Context **configure service vprn string redundant-interface string ipv4 primary**

Tree [primary](#)

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis IPv4 address to be assigned to the interface

Context **configure service vprn string redundant-interface string ipv4 primary address string**

Tree [address](#)

Notes This element is mandatory.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis IPv4 address prefix length

Context **configure service vprn string redundant-interface string ipv4 primary prefix-length number**

Tree [prefix-length](#)

Range 0 to 32

Notes This element is mandatory.

Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-ip *string*

Synopsis Remote IP address for the interface
 Context **configure** [service](#) [vpn](#) *string* [redundant-interface](#) *string* [ipv4](#) [primary](#) [remote-ip](#) *string*
 Tree [remote-ip](#)
 Introduced 16.0.R4
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [[sdp-bind-id](#)] *string*

Synopsis Enter the **spoke-sdp** list instance
 Context **configure** [service](#) [vpn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string*
 Tree [spoke-sdp](#)
 Max. Instances 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[sdp-bind-id] *string*

Synopsis SDP binding ID
 Context **configure** [service](#) [vpn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string*
 Tree [spoke-sdp](#)
 String Length 3 to 16
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the SDP binding to the service
 Context **configure** [service](#) [vpn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [admin-state](#) *keyword*

| | |
|------------|---|
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

control-word *boolean*

| | |
|------------|--|
| Synopsis | Use the control word as preferred |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> control-word <i>boolean</i> |
| Tree | control-word |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

egress

| | |
|------------|---|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vc-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Egress MPLS VC label to send packets to the far end |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 16 to 1048575 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|----------|---|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> ingress |
| Tree | ingress |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis Enter the **filter** context
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#) [filter](#)
 Tree [filter](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip reference

Synopsis IPv4 filter policy name
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#) [filter](#) [ip](#) [reference](#)
 Tree [ip](#)
 Reference **configure** [filter](#) [ip-filter](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vc-label number

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#) [vc-label](#) *number*
 Tree [vc-label](#)
 Range 1 to 1048575
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip

| | |
|------------|--|
| Synopsis | Enable the rip context |
| Context | configure service vprn <i>string</i> rip |
| Tree | rip |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the RIP instance |
| Context | configure service vprn <i>string</i> rip admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn <i>string</i> rip authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> |
| String Length | 1 to 51 |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-type *keyword*

| | |
|----------|--|
| Synopsis | Authentication type used between RIP neighbors |
|----------|--|

| | |
|-------------|--|
| Context | configure service vprn <i>string rip authentication-type keyword</i> |
| Tree | authentication-type |
| Description | This command sets the type of authentication to be used between RIP neighbors.
The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.
When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication. |
| Default | none |
| Options | none, password, md5, md20 |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|--|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn <i>string rip bfd-liveness boolean</i> |
| Tree | bfd-liveness |
| Description | When configured to true , this command enables BFD to control the state of the associated protocol adjacency.
When configured to false , this command removes BFD from the associated protocol adjacency. |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|-------------|---|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn <i>string rip check-zero boolean</i> |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.
When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Default | false |
| Introduced | 16.0.R4 |

Platforms All

description *string*

Synopsis Text description
 Context **configure** [service](#) [vprn](#) *string* [rip](#) [description](#) *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R4

| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> |
| String Length | 1 to 51 |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-type *keyword*

| | |
|----------|--|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> authentication-type <i>keyword</i> |

| | |
|-------------|--|
| Tree | authentication-type |
| Description | This command configures the type of authentication to be used.
The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.
When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication. |
| Options | none, password, md5, md20 |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|--|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Description | When configured to true , this command enables BFD to control the state of the associated protocol adjacency.
When configured to false , this command removes BFD from the associated protocol adjacency. |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|-------------|---|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> check-zero <i>boolean</i> |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.
When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Introduced | 16.0.R4 |
| Platforms | All |

description *string*

| | |
|----------|------------------|
| Synopsis | Text description |
|----------|------------------|

| | |
|---------------|---|
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies used to rule which routes are exported to RIP |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | This command specifies the export route policies used to determine which routes are exported to RIP.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies to decide routes accepted from RIP neighbors |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Description | This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |

Platforms All

message-size *number*

| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference export-policy <i>reference</i> |
| Tree | export-policy |
| Description | This command specifies the export route policies used to determine which routes are exported to RIP.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|-------------|---|
| Synopsis | Policies to decide routes accepted from RIP neighbors |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference import-policy <i>reference</i> |
| Tree | import-policy |
| Description | This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |

| | |
|----------------|--------------------------------------|
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

message-size *number*

| | |
|------------|--|
| Synopsis | Maximum number of routes in the message |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> message-size <i>number</i> |
| Tree | message-size |
| Range | 25 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-in *number*

| | |
|------------|---|
| Synopsis | Metric added to routes received from the neighbor |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> metric-in <i>number</i> |
| Tree | metric-in |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-out *number*

| | |
|------------|--|
| Synopsis | Metric added to routes exported into RIPng |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> metric-out <i>number</i> |
| Tree | metric-out |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Route preference |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|--|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> receive <i>keyword</i> |
| Tree | receive |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|---|
| Synopsis | RIPng version and method used to send RIPng updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> send <i>keyword</i> |
| Tree | send |
| Options | none, ripng, unicast |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). |

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

| | |
|------------|---------|
| Introduced | 16.0.R4 |
| Platforms | All |

timers

| | |
|------------|--|
| Synopsis | Enable the timers context |

| Tree | timers |
| Introduced | 16.0.R4 |
| Platforms | All |

flush *number*

| | |
|-------------|--|
| Synopsis | RIP flush timer |
| Context | configure service vprn string ripng group string neighbor reference timers flush <i>number</i> |
| Tree | flush |
| Description | This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

timeout *number*

| | |
|----------|--|
| Synopsis | RIP timeout timer |
| Context | configure service vprn string ripng group string neighbor reference timers timeout <i>number</i> |
| Tree | timeout |

| | |
|-------------|--|
| Description | This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|--|
| Synopsis | Timer that controls the frequency of updates |

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[**locator-name**] *reference*

Synopsis Micro-segment SRv6 locator name

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference**

Tree [micro-segment-locator](#)

Description This command associates a pre-defined micro-segment SRv6 locator (defined in the **configure router segment-routing segment-routing-v6** context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.

Reference **configure router string segment-routing segment-routing-v6 micro-segment-locator string**

Notes This element is part of a list key.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function

Synopsis Enter the **function** context

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference function**

Tree [function](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt4

Synopsis Enable the **udt4** context

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference function udt4**

Tree [udt4](#)

Description Commands in this context configure the SRv6 uDT4 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv4 prefixes occur in the VPRN service.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis SRv6 function value

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference function udt4 value number**

Tree [value](#)

Description This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically.

Range 1 to 1048575

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt46

Synopsis Enable the **udt46** context

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference function udt46**

Tree [udt46](#)

Description The commands in this context configure the SRv6 uDT46 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv4 and IPv6 prefixes occur in the VPRN service.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis SRv6 function value

Context **configure service vprn string segment-routing-v6 number micro-segment-locator reference function udt46 value number**

Tree [value](#)

Description This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically.

Range 1 to 1048575

| | |
|------------|---|
| Introduced | 22.10.R1 |

|------------|--|
| Synopsis | Enable SNMP access for the VPRN service |
| Context | configure service vprn string snmp access boolean |
| Tree | access |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

community [**community-string**] *string*

| | |
|-------------|--|
| Synopsis | Enter the community list instance |
| Context | configure service vprn string snmp community string |
| Tree | community |
| Description | <p>Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.</p> <p>VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).</p> <p>The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).</p> |
| Introduced | 16.0.R5 |
| Platforms | All |

| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | cpe-check |
| Description | <p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> |

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

| | |
|------------|--------------------------|
| Tree | next-hop |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

| | |
|------------|---|
| Synopsis | Next-hop IP address used to reach the destination |
| Context | configure service vprn <i>string static-routes route (ipv4-prefix ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone ipv6-address-with-zone)</i> |
| Tree | next-hop |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the static route operation |
| Context | configure service vprn <i>string static-routes route (ipv4-prefix ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone ipv6-address-with-zone) admin-state keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

backup-next-hop

| | |
|-------------|---|
| Synopsis | Enter the backup-next-hop context |
| Context | configure service vprn <i>string static-routes route (ipv4-prefix ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone ipv6-address-with-zone) backup-next-hop</i> |
| Tree | backup-next-hop |
| Description | Commands in this context configure static route entry fast failover. |
| Introduced | 21.2.R1 |
| Platforms | All |

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|-------------|---|
| Synopsis | Backup next-hop IP address |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) backup-next-hop address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | address |
| Description | <p>This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.</p> <p>The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.</p> <p>One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.</p> <p>The configured IP address can be either on the network or the access side.</p> |
| Introduced | 21.2.R1 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection on this static route |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

community *string*

| | |
|---------------|---|
| Synopsis | Community ID associated with the static route |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) community <i>string</i> |
| Tree | community |
| String Length | 1 to 72 |
| Introduced | 16.0.R1 |

[sampling-type] *keyword*

| | |
|-------------|---|
| Synopsis | Traffic sampling type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Description | This command configures the type of traffic to be sampled on the associated IP interface. |
| Options | unicast, multicast, both |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

direction *keyword*

| | |
|-------------|---|
| Synopsis | Direction of traffic for cflowd sampling |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i> |
| Tree | direction |
| Description | This command configures the direction in which sampling occurs on the associated IP interfaces. |
| Default | ingress-only |
| Options | ingress-only, egress-only, both |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sample-profile (*keyword | number*)

| | |
|-------------|---|
| Synopsis | Sample profile ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> sample-profile (<i>keyword number</i>) |
| Tree | sample-profile |
| Description | This command defines the sampling rate profile associated with this interface. |
| Max. Range | 0 to 4294967295 |
| Options | 1 |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|--|
| Synopsis | Type of cflowd analysis |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> type <i>keyword</i> |
| Tree | type |
| Description | This command configures the cflowd sampling type on the associated IP interface. |
| Options | acl, interface |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-trigger

| | |
|------------|---|
| Synopsis | Enter the data-trigger context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger |
| Tree | data-trigger |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of data-triggered host creation |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dynamic-routes-track-srrp

| | |
|------------|---|
| Synopsis | Enable the dynamic-routes-track-srrp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp |
| Tree | dynamic-routes-track-srrp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|---|
| Synopsis | Delay before updating the route state after the last SRRP transition |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp hold-time <i>number</i> |
| Tree | hold-time |
| Range | 1 to 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-parameters

Synopsis Enter the **gtp-parameters** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters**

Tree **gtp-parameters**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of GTP access

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters admin-state** *keyword*

Tree **admin-state**

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fpe *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis PE that provisions the GTP user interface

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters fpe** *reference*

Tree **fpe**

Reference **configure fwd-path-ext fpe** *number*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gx-policy *reference*

| | |
|------------|--|
| Synopsis | Diameter application policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gx-policy reference |
| Tree | gx-policy |
| Reference | configure subscriber-mgmt diameter-gx-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress |
| Tree | ingress |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-accounting *reference*

| | |
|------------|--|
| Synopsis | Ingress policy accounting template name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress policy-accounting reference |
| Tree | policy-accounting |
| Reference | configure routing-options policy-accounting policy-acct-template <i>string</i> |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s |

ingress-stats *boolean*

| | |
|------------|---|
| Synopsis | Collect ingress interface statistics |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress-stats <i>boolean</i> |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis Interface IP MTU

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ip-mtu** *number*

Tree [ip-mtu](#)

Range 512 to 9786

Units bytes

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-linking

Synopsis Enter the **ipoe-linking** context

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ipoe-linking**

Tree [ipoe-linking](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of IPoE host linking

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ipoe-linking** **admin-state** *keyword*

Tree [admin-state](#)

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-router-advertisement *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Send unsolicited router advertisement after DHCP setup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i> |
| Tree | gratuitous-router-advertisement |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shared-circuit-id *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enable circuit ID in DHCPv4 Option82 to validate DHCPv6 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking shared-circuit-id <i>boolean</i> |
| Tree | shared-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|---|
| Synopsis | Enter the ipoe-session context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of IPoE session management |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-auth

| | |
|------------|--|
| Synopsis | Enter the force-auth context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth |
| Tree | force-auth |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when circuit ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth cid-change <i>boolean</i> |
| Tree | cid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when remote ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth rid-change <i>boolean</i> |
| Tree | rid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | IPoE Session policy to be used for new sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session ipoe-session-policy <i>reference</i> |
| Tree | ipoe-session-policy |
| Reference | configure subscriber-mgmt ipoe-session-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval (*keyword | number*)

| | |
|------------|---|
| Synopsis | Minimum time between two authentication attempts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session min-auth-interval (<i>keyword number</i>) |
| Tree | min-auth-interval |
| Range | 1 to 32000000 |
| Default | infinite |
| Units | seconds |
| Options | infinite, always-reauthenticate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-session-timeout *keyword*

| | |
|------------|---|
| Synopsis | Session timeout attribute to be interpreted |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session radius-session-timeout <i>keyword</i> |
| Tree | radius-session-timeout |
| Options | absolute, ignore, backwards-compatible |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of sessions per SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stateless-redundancy *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session stateless-redundancy <i>boolean</i> |
| Tree | stateless-redundancy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Local user database that is used to (pre-)authenticate new sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

arp-host

| | |
|------------|---|
| Synopsis | Enter the arp-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host |
| Tree | arp-host |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

host-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host host-limit <i>number</i> |
| Tree | host-limit |
| Range | 1 to 524287 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval *number*

| | |
|------------|---|
| Synopsis | Minimum authentication interval |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host min-auth-interval <i>number</i> |
| Tree | min-auth-interval |
| Range | 1 to 6000 |
| Default | 15 |
| Units | minutes |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-host-limit *number*

| | |
|----------|-------------------------------------|
| Synopsis | Maximum number of ARP hosts per SAP |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host sap-host-limit <i>number</i> |
| Tree | sap-host-limit |
| Range | 1 to 131071 |
| Default | 1 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|----------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |

| | |
|------------|---|
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval *number*

| | |
|----------|---|
| Synopsis | BFD transmit interval over this interface |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp

| | |
|----------|---|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp |

| | |
|------------|---|
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|----------|--|
| Synopsis | Enable PPPoE clients to use DHCP relay or proxy server |
|----------|--|

| | |
|------------|--|
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter *reference*

| | |
|------------|--|
| Synopsis | DHCP filter ID for the group interface |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp filter <i>reference</i> |
| Tree | filter |
| Reference | configure filter dhcp-filter <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. |

By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis Enter the **lease-populate** context
 Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate**
 Tree **lease-populate**
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

I2-header

Synopsis Enable the **I2-header** context
 Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header**
 Tree **I2-header**
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac string

Synopsis IEEE address used in anti-spoofing entries for the SAP
 Context **configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header mac string**
 Tree **mac**
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases number

Synopsis Maximum number of DHCPv4 leases

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 1 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

match-circuit-id *boolean*

| | |
|------------|---|
| Synopsis | Enable Option 82 circuit ID on relayed DHCP packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp match-circuit-id <i>boolean</i> |
| Tree | match-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-selection

| | |
|------------|---|
| Synopsis | Enter the offer-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection |
| Tree | offer-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|--|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|-------------|---|
| Synopsis | Designated client MAC addresses for Offer selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Description | This command specifies the client MAC addresses for which the Discover delay applies. |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server [*ipv4-address*] *string*

| | |
|----------------|---|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IP address of the DHCP server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay DHCP Discover messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

action keyword

| | |
|------------|--|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 action keyword |
| Tree | action |
| Default | keep |
| Options | replace, drop, keep |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|----------|--|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |

| | |
|------------|---|
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use the SAP ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.

When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id

| | |
|-------------|--|
| Synopsis | Enter the remote-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac

| | |
|------------|---|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|--|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|----------|--|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |

| | |
|------------|---|
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pool-name *boolean*

| | |
|------------|--|
| Synopsis | Send the pool name in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id *boolean*

| | |
|------------|---|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

system-id *boolean*

| | |
|------------|---|
| Synopsis | Send the system ID in the VSO |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *string*

Synopsis IP address used as DHCP server address in SAP context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp proxy-server emulated-server](#) *string*
 Tree [emulated-server](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis Enter the **lease-time** context
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp proxy-server lease-time](#)
 Tree [lease-time](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis Use lease time information provided by RADIUS server
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp proxy-server lease-time radius-override](#) *boolean*
 Tree [radius-override](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis DHCP lease time
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 dhcp proxy-server lease-time value](#) *number*
 Tree [value](#)

| | |
|------------|---|
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-------------|---|
| Synopsis | Python policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp python-policy <i>reference</i> |
| Tree | python-policy |
| Description | This command associates a Python policy name with the interface. |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay-proxy

| | |
|------------|--|
| Synopsis | Enable the relay-proxy context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-update-src-ip *boolean*

| | |
|------------|---|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-include-gi-address *boolean*

| | |
|------------|--|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

src-ip-addr *keyword*

| | |
|----------|--|
| Synopsis | Type of source address to use for DHCP relay |
|----------|--|

| | |
|------------|---|
| Context | configure service vpn <i>string subscriber-interface string group-interface string ipv4 dhcp src-ip-addr keyword</i> |
| Tree | src-ip-addr |
| Default | auto |
| Options | auto, gi-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

trusted *boolean*

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service vpn <i>string subscriber-interface string group-interface string ipv4 dhcp trusted boolean</i> |
| Tree | trusted |
| Description | <p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

use-matching-address *boolean*

| | |
|-------------|--|
| Synopsis | Use the subscriber interface address as source address |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired use-matching-address <i>boolean</i> |
| Tree | use-matching-address |
| Description | <p>When configured to true, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to false, the system uses the first configured address.</p> |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

unreachables

| | |
|-------------|--|
| Synopsis | Enter the unreachables context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of sending unreachable messages

Context **configure** **service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachable** **admin-state** *keyword*

Tree **admin-state**

Default enable

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis Maximum number of unreachable messages to send

Context **configure** **service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachable** **number** *number*

Tree **number**

Range 10 to 2000

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis Time to limit the number of ICMP unreachable messages

Context **configure** **service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachable** **seconds** *number*

Tree **seconds**

Range 1 to 60

Default 10

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

| | |
|-------------|---|
| Synopsis | Ignore DF bit in the IPv4 header when fragmenting |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 ignore-df-bit <i>boolean</i> |
| Tree | ignore-df-bit |
| Description | When configured to true , fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.

When configured to false , the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1. |
| Default | false |
| Introduced | 20.5.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-proxy-arp *boolean*

| | |
|-------------|---|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i> |
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.

When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate *boolean*

| | |
|------------|---|
| Synopsis | Allow static and dynamic hosts to be populated in system ARP cache |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i> |
| Tree | populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-arp-policy *reference*

| | |
|----------------|---|
| Synopsis | Proxy ARP policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i> |
| Tree | proxy-arp-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-proxy-arp *boolean*

| | |
|------------|---|
| Synopsis | Enable remote proxy ARP on the interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i> |
| Tree | remote-proxy-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|----------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |

| | |
|------------|---|
| Tree | timeout |
| Range | 0 to 65535 |
| Default | 14400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|------------|--|

| Options | destination |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Default | strict |
| Options | strict, loose, strict-no-ecmp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-multiple-wan-addresses *boolean*

| | |
|------------|---|
| Synopsis | Allow multiple WAN addresses |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i> |
| Tree | allow-multiple-wan-addresses |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-reply

| | |
|------------|--|
| Synopsis | Enter the auto-reply context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply |
| Tree | auto-reply |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-solicitation *boolean*

| | |
|------------|--|
| Synopsis | Enable auto-reply for NS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply neighbor-solicitation <i>boolean</i> |
| Tree | neighbor-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicitation *boolean*

| | |
|------------|---|
| Synopsis | Enable auto-reply for RS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply router-solicitation <i>boolean</i> |
| Tree | router-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|----------|--|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd echo-receive <i>number</i> |

| | |
|------------|---|
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval *number*

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Default | 100 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Default | auto |
| Options | cpm-np, auto, fp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp6

| | |
|------------|--|
| Synopsis | Enter the dhcp6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter reference

| | |
|------------|---|
| Synopsis | DHCPv6 filter |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 filter reference |
| Tree | filter |
| Reference | configure filter dhcp6-filter <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option

| | |
|------------|---|
| Synopsis | Enter the option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option |
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id

| | |
|------------|--|
| Synopsis | Enter the interface-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id |
| Tree | interface-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use ASCII-encoded concatenated tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

if-index

| | |
|------------|--|
| Synopsis | Use interface index in interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id if-index |
| Tree | if-index |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use SAP ID in interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|----------|--|
| Synopsis | String for interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id string <i>string</i> |
| Tree | string |

| | |
|---------------|--|
| String Length | 1 to 80 |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id *boolean*

| | |
|------------|--|
| Synopsis | Allow remote ID option to be sent in the DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option remote-id <i>boolean</i> |
| Tree | remote-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

override-slaac *boolean*

| | |
|------------|--|
| Synopsis | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 override-slaac <i>boolean</i> |
| Tree | override-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pd-managed-route

| | |
|------------|---|
| Synopsis | Enable the pd-managed-route context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route |
| Tree | pd-managed-route |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-hop *keyword*

| | |
|------------|--|
| Synopsis | Next hop type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i> |
| Tree | next-hop |
| Default | ipv6 |
| Options | ipv4, ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|----------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications |
| Tree | client-applications |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp boolean

Synopsis Enable IPoE clients to use DHCP relay or proxy server
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 proxy-server client-applications dhcp](#) *boolean*
 Tree [dhcp](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp boolean

Synopsis Allow the PPP application to use DHCP relay functionality
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 proxy-server client-applications ppp](#) *boolean*
 Tree [ppp](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime (*number* | *keyword*)

Synopsis Time for prefix to remain preferred on this interface
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 dhcp6 proxy-server preferred-lifetime](#) (*number* | *keyword*)
 Tree [preferred-lifetime](#)
 Range 300 to 4294967294
 Default 3600
 Units seconds
 Options infinite
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

| | |
|------------|---|
| Synopsis | Rebind timer (T2) for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i> |
| Tree | rebind-timer |
| Range | 0 to 1209600 |
| Default | 2880 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-timer *number*

| | |
|------------|--|
| Synopsis | Renew timer (T1) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i> |
| Tree | renew-timer |
| Range | 0 to 604800 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server-id

| | |
|------------|--|
| Synopsis | Enter the server-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id |
| Tree | server-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-ascii *string*

| | |
|----------|---|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
|----------|---|

| | |
|---------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i> |
| Tree | duid-en-ascii |
| String Length | 1 to 58 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-II . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-hex *string*

| | |
|---------------|--|
| Synopsis | DUID system ID in hexadecimal format |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i> |
| Tree | duid-en-hex |
| String Length | 1 to 118 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-II . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-II

| | |
|------------|--|
| Synopsis | Use link-layer address (DUID-LL) as DUID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-II |
| Tree | duid-II |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-II . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | Time for prefix to remain valid on this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 300 to 4294967294 |

| | |
|------------|---|
| Default | 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 python-policy reference |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay

| | |
|------------|---|
| Synopsis | Enter the relay context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay |
| Tree | relay |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCPv6 Relay |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

advertise-selection

| | |
|------------|--|
| Synopsis | Enter the advertise-selection context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection |
| Tree | advertise-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|---|
| Synopsis | Enter the client-mac context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|------------|--|
| Synopsis | Designated client MAC addresses for Advertise selection |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|----------|---|
| Synopsis | Enter the preference-option context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option |
| Tree | preference-option |

| | |
|-------------|---|
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis Preference option value for DHCPv6 Advertise messages

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection preference-option value number*

Tree *value*

Range 0 to 255

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [*ipv6-address*] *string*

Synopsis Enter the **server** list instance

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] *string*

Synopsis IP address of the DHCPv6 server

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|----------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
|----------|--|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the server instance or the client-mac context. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|----------|---|
| Synopsis | Allow the PPP application to use DHCP relay functionality |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-split

| | |
|-------------|---|
| Synopsis | Enter the lease-split context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split |
| Tree | lease-split |
| Description | <p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of DHCPv6 lease split |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |

| | |
|------------|---|
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime *number*

| | |
|------------|--|
| Synopsis | DHCPv6 lease split valid lifetime (short lease time) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split valid-lifetime <i>number</i> |
| Tree | valid-lifetime |
| Range | 300 to 315446399 |
| Default | 3600 |
| Units | seconds |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|--|
| Synopsis | Link address for the DHCPv6 relay messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i> |
| Tree | link-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | DHCP6 server(s) to which the DHCP6 requests are forwarded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-address *string*

| | |
|------------|--|
| Synopsis | Source IPv6 address for the DHCPv6 relay messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay source-address <i>string</i> |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

snooping

| | |
|------------|--|
| Synopsis | Enter the snooping context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping |
| Tree | snooping |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCPv6 snooping |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user database used for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-ident *keyword*

Synopsis DHCP6 user identification for this interface

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 user-ident** *keyword*

Tree [user-ident](#)

Default mac

Options mac, mac-interface-id

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis Enable IPv6 IPoE bridged mode

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 ipoe-bridged-mode** *boolean*

Tree [ipoe-bridged-mode](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis Enter the **neighbor-discovery** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 neighbor-discovery**

Tree [neighbor-discovery](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dad-snooping *boolean*

Synopsis Populate table via duplicate address detection packets

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 neighbor-discovery dad-snooping** *boolean*

| | |
|------------|---|
| Tree | dad-snooping |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of neighbor entries learned per SLAAC host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery neighbor-limit <i>number</i> |
| Tree | neighbor-limit |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|------------|---|
| Synopsis | QoS route lookup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

router-advertisements

| | |
|------------|---|
| Synopsis | Enter the router-advertisements context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements |
| Tree | router-advertisements |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router advertisements |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-mcast *keyword*

| | |
|------------|---|
| Synopsis | Protocol with forced multicast |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements force-mcast <i>keyword</i> |
| Tree | force-mcast |
| Options | ip, ip-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-advertisement-interval *number*

| | |
|------------|---|
| Synopsis | Maximum advertisement interval |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i> |
| Tree | max-advertisement-interval |
| Range | 900 to 1800 |
| Default | 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-advertisement-interval *number*

| | |
|----------|--------------------------------|
| Synopsis | Minimum advertisement interval |
|----------|--------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 900 to 1350 |
| Default | 900 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|--|
| Synopsis | Enter the options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

current-hop-limit *number*

| | |
|------------|--|
| Synopsis | Hop limit to be advertised |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dns

| | |
|------------|--|
| Synopsis | Enter the dns context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns |
| Tree | dns |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis Include the RDNSS server option 25

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 router-advertisements options dns include-rdnss](#) *boolean*

Tree [include-rdnss](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime (*number* | *keyword*)

Synopsis Maximum time for the RDNSS address to remain valid

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 router-advertisements options dns rdnss-lifetime](#) (*number* | *keyword*)

Tree [rdnss-lifetime](#)

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis Managed address configuration flag

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 router-advertisements options managed-configuration](#) *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Advertised MTU value |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options mtu (<i>number</i> <i>keyword</i>) |
| Tree | mtu |
| Range | 1280 to 9212 |
| Default | not-included |
| Units | bytes |
| Options | not-included |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

other-stateful-configuration *boolean*

| | |
|------------|---|
| Synopsis | Other stateful configuration flag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reachable-time *number*

| | |
|------------|--|
| Synopsis | Neighbor discovery reachable time that is advertised for this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Default | 0 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retransmit-timer *number*

| | |
|------------|--|
| Synopsis | Neighbor discovery retransmit timer that is advertised for this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options retransmit-timer <i>number</i> |
| Tree | retransmit-timer |
| Range | 0 to 1800000 |
| Default | 0 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Router lifetime |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | router-lifetime |
| Range | 2700 to 9000 |
| Default | 4500 |
| Units | seconds |
| Options | no-default-router |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-options

| | |
|------------|--|
| Synopsis | Enter the prefix-options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options |
| Tree | prefix-options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

autonomous *boolean*

| | |
|----------|------------------------------|
| Synopsis | Value of the autonomous flag |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

on-link *boolean*

| | |
|------------|--|
| Synopsis | Assign the prefix to an interface on the specified link |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for a prefix to remain preferred |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Default | 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Time for a prefix to remain valid |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |

| | |
|------------|---|
| Range | 0 to 4294967294 |
| Default | 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicit

| | |
|------------|---|
| Synopsis | Enter the router-solicit context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit |
| Tree | router-solicit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router-solicit based authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

inactivity-timer (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | Time before an inactive host is removed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit inactivity-timer (<i>number</i> <i>keyword</i>) |
| Tree | inactivity-timer |
| Range | 1 to 31536000 |
| Default | 300 |
| Units | seconds |

| | |
|------------|---|
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval *number*

| | |
|------------|---|
| Synopsis | Minimum interval between two consecutive authentication attempts for the same host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit min-auth-interval <i>number</i> |
| Tree | min-auth-interval |
| Range | 1 to 360000 |
| Default | 300 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user-database that is used for router solicit based authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Default | strict |
| Options | strict, loose, strict-no-ecmp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address-assignment

| | |
|------------|---|
| Synopsis | Enter the local-address-assignment context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment |
| Tree | local-address-assignment |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Local Address Assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|----------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 |
| Tree | ipv4 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#)
 Tree [client-applications](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *boolean*

Synopsis Request local addresses for non-DHCP/managed IPoE hosts
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ipoe](#) *boolean*
 Tree [ipoe](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis Request local addresses for PPP IPCP hosts
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ppp](#) *boolean*
 Tree [ppp](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis Default pools
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [default-pool](#) *string*

| | |
|----------------|---|
| Tree | default-pool |
| String Length | 1 to 32 |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server reference

| | |
|------------|--|
| Synopsis | Local DHCP server that contains pools for local address assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 server <i>reference</i> |
| Tree | server |
| Reference | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-slaac *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for IPoE SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-slaac <i>boolean</i> |
| Tree | ipoe-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-wan *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for IPoE IA NA hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i> |
| Tree | ipoe-wan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp-slaac *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for PPP SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i> |
| Tree | ppp-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *reference*

| | |
|----------|--|
| Synopsis | Local DHCPv6 server that contains pools for local address assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 server <i>reference</i> |
| Tree | server |

| | |
|------------|--|
| Reference | configure service vprn string dhcp-server dhcpv6 string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|--|
| Synopsis | MAC address for the interface |
| Context | configure service vprn string subscriber-interface string group-interface string mac string |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nasreq-auth-policy reference

| | |
|------------|--|
| Synopsis | Diameter NASREQ application policy to use for authentication |
| Context | configure service vprn string subscriber-interface string group-interface string nasreq-auth-policy reference |
| Tree | nasreq-auth-policy |
| Reference | configure subscriber-mgmt diameter-nasreq-policy string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

oper-up-while-empty boolean

| | |
|------------|---|
| Synopsis | Enable this group interface without any active SAPs |
| Context | configure service vprn string subscriber-interface string group-interface string oper-up-while-empty boolean |
| Tree | oper-up-while-empty |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pppoe

| | |
|----------|--------------------------------|
| Synopsis | Enter the pppoe context |
|----------|--------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe |
| Tree | pppoe |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of PPPoE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | disable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|---|
| Synopsis | PPPoE anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Default | mac-sid |
| Options | mac-sid, mac-sid-ip |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp-client

| | |
|------------|--|
| Synopsis | Enter the dhcp-client context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client |
| Tree | dhcp-client |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-id *keyword*

| | |
|------------|---|
| Synopsis | Type of information that DHCP option 61 contains |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client client-id <i>keyword</i> |
| Tree | client-id |
| Options | mac-pppoe-session-id |
| Introduced | 16.0.R7 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|------------|--|
| Synopsis | PPPoE policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe policy <i>reference</i> |
| Tree | policy |
| Reference | configure subscriber-mgmt ppp-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-----------|---|
| Synopsis | Python policy used to modify PPPoE packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-limit *number*

Synopsis Maximum PPPoE sessions per SAP
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe](#) [sap-session-limit](#) *number*
 Tree [sap-session-limit](#)
 Range 1 to 131071
 Default 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis Maximum PPPoE sessions
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe](#) [session-limit](#) *number*
 Tree [session-limit](#)
 Range 1 to 333823
 Default 1
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local user database for authentication

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface *reference*

Synopsis Redundant interface

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [redundant-interface](#) *reference*

Tree [redundant-interface](#)

Reference **configure** [service vprn](#) *string* [redundant-interface](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis SAP ID

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

String Length 1 to 45

| | |
|------------|---|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-policy *reference*

| | |
|------------|---|
| Synopsis | Accounting policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> accounting-policy <i>reference</i> |
| Tree | accounting-policy |
| Reference | configure log accounting-policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Default | enable |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | Type of anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Options | source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Application profile name |
| Context | configure service vprn string subscriber-interface string group-interface string sap string app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

calling-station-id *string*

| | |
|---------------|--|
| Synopsis | Calling station ID |
| Context | configure service vprn string subscriber-interface string group-interface string sap string calling-station-id string |
| Tree | calling-station-id |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

collect-stats *boolean*

| | |
|------------|--|
| Synopsis | Collect accounting statistics |
| Context | configure service vprn string subscriber-interface string group-interface string sap string collect-stats boolean |
| Tree | collect-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpu-protection

| | |
|------------|---|
| Synopsis | Enter the cpu-protection context |
| Context | configure service vprn string subscriber-interface string group-interface string sap string cpu-protection |
| Tree | cpu-protection |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring**

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring aggregate**

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring car**

Tree [car](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis Enable IP source monitoring for CPU protection

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection ip-src-monitoring**

Tree [ip-src-monitoring](#)

| | |
|------------|--|
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

mac-monitoring

| | |
|------------|--|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

policy-id *reference*

| | |
|------------|---|
| Synopsis | CPM protection policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection policy-id reference |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

default-host

| | |
|------------|---|
| Synopsis | Enter the default-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host |
| Tree | default-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

ipv4 [**address**] *reference* **prefix-length** *number*

| | |
|------------|---|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

[address] *reference*

| | |
|------------|---|
| Synopsis | IPv4 default host address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Reference | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Range | 0 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

next-hop *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Next-hop IP address used to forward traffic on the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> next-hop <i>string</i> |
| Tree | next-hop |
| Notes | This element is mandatory. |

| Description | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options | be, l2, af, l1, h2, ef, h1, nc |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc-in-profile *keyword*

Synopsis Forwarding class name for profile-aware counter

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **collect-lmm-fc-stats** **fc-in-profile** *keyword*

Tree **fc-in-profile**

Description This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options be, l2, af, l1, h2, ef, h1, nc

Max. Instances 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

collect-lmm-stats *boolean*

Synopsis Collect statistics for loss measurement message tests

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **collect-lmm-stats** *boolean*

Tree **collect-lmm-stats**

Description When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.
The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.
The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).
When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i> |

| | |
|------------|--|
| Tree | low-priority-defect |
| Default | mac-rem-err-xcon |
| Options | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

one-way-delay-threshold *number*

| | |
|------------|--|
| Synopsis | Threshold time limit for the one-way delay test |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i> |
| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Default | 3 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

fwd-wholesale
