Clear, Monitor, Show, and Tools Command Reference Guide

3HE 19216 AAAB TQZZA 01
Edition 01
July 2023

Nokia is committed to diversity and inclusion. We are continuously reviewing our customer documentation and consulting with standards bodies to ensure that terminology is inclusive and aligned with the industry. Our future customer documentation will be updated accordingly.

This document includes Nokia proprietary and confidential information, which may not be distributed or disclosed to any third parties without the prior written consent of Nokia.

This document is intended for use by Nokia's customers ("You"/"Your") in connection with a product purchased or licensed from any company within Nokia Group of Companies. Use this document as agreed. You agree to notify Nokia of any errors you may find in this document; however, should you elect to use this document for any purpose(s) for which it is not intended, You understand and warrant that any determinations You may make or actions You may take will be based upon Your independent judgment and analysis of the content of this document.

Nokia reserves the right to make changes to this document without notice. At all times, the controlling version is the one available on Nokia's site.

1 Getting started

This guide contains command descriptions for the common operational **clear**, **monitor**, **show**, and **tools** CLI commands that are used to manage the SR OS in either the classic CLI or the MD-CLI.

The output of the common operational commands is always the same in the classic CLI and the MD-CLI. The command names and syntaxes of the common operational commands in the classic CLI and the MD-CLI are also compatible. The MD-CLI ? help and command completion only displays parameters that are valid next in order based on what has been entered, while the classic CLI displays all parameters that can be entered out of order. Commands in the MD-CLI can be entered out of order by entering the complete command and parameters without using command completion.

This guide does not include any other classic or MD-CLI commands. These commands are documented in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide* and the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide*.

Note:

This guide generically covers Release 23.x.Rx content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the SR OS R23.x.Rx Software Release Notes, part number 3HE 19269 000 x TQZZA, for information about the supported features and applicable platforms in each load of the Release 23.x.Rx software.

The full set of CLI commands supported by the SR OS is documented in three related guides that are listed in the following table.

Table 1: Documentation for SR OS CLI commands

Guide title	Classic CLI commands	MD-CLI commands
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR Clear, Monitor, Show, and Tools Command Reference Guide</i>	All clear , monitor , show , and tools commands	All clear , monitor , show , and tools commands
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide</i>	All other commands	—
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide</i>	—	All other commands

1.1 Platforms and terminology

Note:

Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 2: Platforms and terminology

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	

Platform	Collective platform designation
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12/12e
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12
7750 SR-12	
7750 SR-a4	7750 SR-a
7750 SR-a8	
7750 SR-1e	7750 SR-e
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	7750 SR-s
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	7950 XRS
7950 XRS-20e	
7950 XRS-40	

Platform	Collective platform designation
VSR	VSR
VSR-NRC	

1.2 Command tree

The SR OS CLI command tree is a hierarchical inverted tree. The highest level is the root level. Below this level are other tree levels with the major command groups; for example, **show** commands and **tools** commands are levels below root.

In the tree, you can click a command to link directly to the command description.

Note:

Commands that are listed in the tree but are not linked to an associated description are available on one or more platforms but are not currently described in the guide.

1.3 Command descriptions

Command descriptions are listed in alphabetical order by command name.

The following figure shows an example of a command description.

Field	Description
Parameters	Descriptions of command parameters
Values	Values allowed for the parameter
Default	Parameter default value
Platforms	Hardware platforms on which the command is available. See Table 2: Platforms and terminology for information about the platforms. Note: Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the SR OS R23.x.Rx Software Release Notes, part number 3HE 19269 000 x TQZZA, for information about platform support.

The **monitor** and **show** commands may also show command output and a description of the fields found in that output. Command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

Note:

All options for enumerated types and numerical ranges are listed in the command descriptions; however, not all options or ranges are valid on all platforms.

1.4 Navigational aids

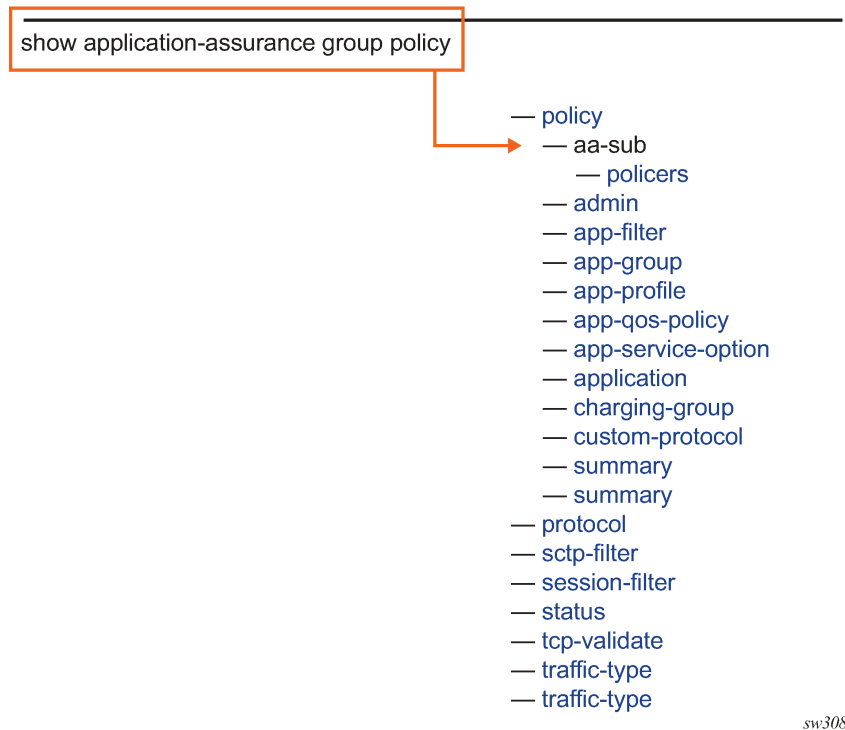

The following aids help you navigate the guide and find specific commands.

1.4.1 Context path

In the CLI tree section, the complete contextual path to the first command on the page is shown at the top of the page, as shown in the following figure.

Figure 2: Command tree navigation

Clear, show and tools command reference guide

1.4.2 Searching

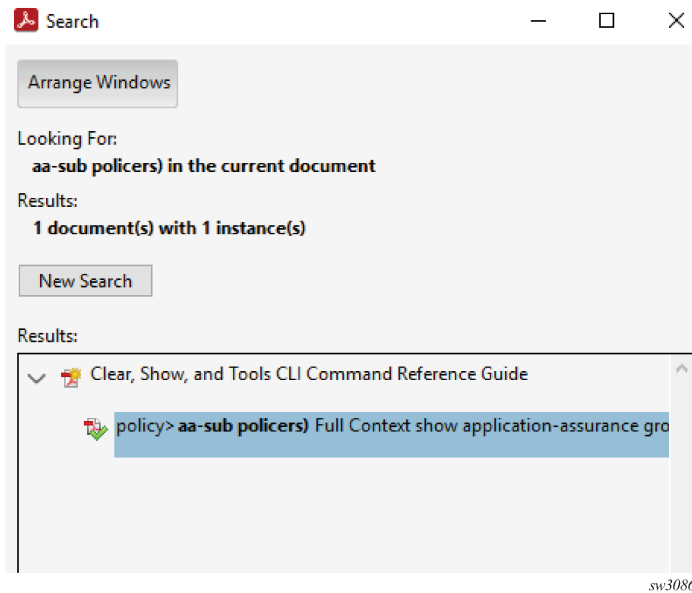

The Context field in each command description shows, in parentheses, the full path to the command as displayed in the CLI prompt. This form of the contextual path often abbreviates terms. For example:

```
(cfg>qos>qgrps>egr>qgrp>queue wred-queue)
```

To search this guide for a specific command using the Acrobat search function, enter the command name and append a closing parenthesis in the search window. For more efficient searching, add the previous level of the contextual path before the command name.

If you add the context and closing parenthesis, the resulting search returns only matching Context entries. It will not return instances of the same command found elsewhere in the guide. The following figure shows an example of a search.

Figure 3: Search window

sw3086

1.4.3 Linking to the tree

Clicking on [Tree] in a command description context links directly to the command in the CLI tree. The following figure shows the [Tree] element.

Figure 4: Link to CLI tree

policers

Syntax	policers
Context	[Tree] (show>app-assure>group>policy>aa-sub policers)
Full Context	show application-assurance group policy aa-sub policers
Description	This command displays policer configuration information.
Output	The following is an example output for the policers command.

sw3087

2 Command Trees

2.1 clear Commands

The CLI **clear** commands are primarily used to set statistics in a specific area back to a value of zero, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

```
- clear

2.2 monitor Commands

The CLI **monitor** commands are found in the **monitor** context of the operational root of the CLI tree. The **monitor** commands display specified statistical information related to the monitor subject (such as filter, port, QoS, router, service, and VRRP) at a configurable interval until a count is reached.

The **monitor** command output displays a snapshot of the current statistics. The output refreshes with subsequent statistical information at each configured interval and is displayed as a delta to the previous output.

The <Ctrl-C> keystroke interrupts a monitoring process. **monitor** command configurations cannot be saved. You must enter the command for each monitoring session. If the maximum limits are configured, you can monitor the statistical information for a maximum of 60 x 999 s (approximately 1000 minutes).

```

2.3 show Commands

The CLI **show** commands display useful information in the format of a human-readable report, with the ability to add or remove output based on additional parameters. The information in the output of the **show** commands consists of configuration and operational information, and may also perform calculations or additional processing to display some of the output.

The information in the output of the **show** commands can also be found in the **state** and **configure** branches of the MD-CLI (as well as via model-driven interfaces such as NETCONF and gRPC). The output of these branches is fully modeled in YANG with structured data that can be easily manipulated by tools and applications (including pySROS and NETCONF clients). The pySROS and MD-CLI command alias features can be used together to create custom **show** commands using the modeled data. See "Command aliases" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.

2.4 tools Commands

The CLI **tools** commands provide two primary functions:

- dump
- perform

The **tools dump** commands provide additional detailed and enhanced information about the router.

The **tools perform** commands provide the ability to trigger a variety of actions in the router, such as a card power cycle (**tools perform card power-cycle**), and APS switchovers.

Context

[\[Tree\]](#) (show>system>license-statistics 24-hours)

Full Context

show system license-statistics 24-hours

Description

This command displays application license statistics for the last 24 hours.

Parameters

license-app

Specifies the application license.

Values Ins, nat, sub-mgmt, wlan-gw, aa, ipsec

history

Displays additional 24 hour statistics.

Platforms

VSR

4 a Commands

4.1 aa-anl-list

aa-anl-list

Syntax

aa-anl-list [**congested-only**] [**sort-type** { **top-by-subs** | **top-by-rate**}] [**isa** *mda-id*]

aa-anl-list summary

Context

[Tree] (tools>dump>app-assure>group aa-anl-list)

Full Context

tools dump application-assurance group aa-anl-list

Description

This command displays the list of active ANLs detected by AA along with the associated conditions (for example, congestion, measured rate, and number of subscribers).

Parameters

congested-only

Specifies only congested ANLs.

sort-type

Filters by the specified sub-type.

Values **top-by-subs** — Displays the top ANLs sorted by measured ANL bandwidth.

top-by-rate — Displays the top ANLs sorted by those ANLs that have the highest number of subscribers.

mda-id

Specifies the slot and MDA in the format *slot/mda*.

Values *slot*—1 to 10

mda—1 or 2

summary

Displays summary information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of aa-anl-list information.

Output Example

```
A:Dut-C# tools dump application-assurance group 120:10 aa-anl-list
=====
Application-Assurance Access Network Location List: Group 120:10, ISA 3/1
=====
Type                Location                Congestion State    Rate (kbps)  Subscribers
-----
AP-MAC+VLAN        23:89:be:c2:64:50+1034  RTT Limits Exceeded  21961        113
AP-MAC+VLAN        83:2d:3d:73:c4:9a+4090  RTT Limits Exceeded  15963        86
AP-MAC+VLAN        f2:ee:cc:47:71:f7+0034  Not Congested        6147         12
=====
```

4.2 aa-interface

aa-interface

Syntax

aa-interface isa *mda-id*

Context

[\[Tree\]](#) (show>app-assure>group aa-interface)

Full Context

show application-assurance group aa-interface

Description

This command displays AA interface information.

Parameters

mda-id

Specifies the MDA ID.

Values

<mda-id>	<slot>/<mda>
slot	[1 to 10] (depending on platform)
mda	[1 to 2]

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.3 aa-sub

aa-sub

Syntax

aa-sub esm *sub-ident-string* [**snapshot**]

aa-sub esm-mac *esm-mac-name* [**snapshot**]

aa-sub sap *sap-id*

aa-sub spoke-id *sdp-id:vc-id* [**snapshot**]

aa-sub transit *transit-aasub-name* [**snapshot**]

Context

[\[Tree\]](#) (show>app-assure>group aa-sub)

Full Context

show application-assurance group aa-sub

Description

This command displays per-subscriber statistics.

Parameters

esm *sub-ident-string*

Specifies an existing subscriber identification string.

esm-mac *esm-mac-name*

Specifies an existing subscriber MAC.

sap *sap-id*

Specifies the physical port identifier portion of the SAP definition.

spoke-id *sdp-id:vc-id*

Specifies the spoke SDP ID and VC ID.

Values	1 to 17407
	1 to 4294967295

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

transit *transit-aasub-name*

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **aa-sub** command information.

Output Example

aa-sub

Syntax

aa-sub dsm mac *mac-address* [**snapshot**]

aa-sub esm *sub-ident-string*

aa-sub esm-mac *esm-mac-name*

aa-sub transit *transit-aasub-name*

Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub)

Full Context

tools dump application-assurance group aa-sub

Description

This command displays AA subscriber information for a specific ISA.

Parameters

esm-mac-name

Specifies the ESM MAC name; a maximum of 32 characters.

mac-address

Specifies the MAC address in *xx:xx:xx:xx:xx:xx* or *xx-xx-xx-xx-xx-xx* format.

snapshot

Displays snapshot statistics.

sub-ident-string

Specifies the AA subscriber identifier string, up to 32 characters.

transit-aasub-name

Specifies the AA transit subscriber name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber information.

Output Example

```
A:Dut-C# tools dump application-assurance group 120:10 aa-sub dsm mac 00:01:02:00:00:00
summary
```

Full Context

tools perform application-assurance group aa-sub

Description

This command performs application assurance group aa-sub operations.

Parameters

esm sub-ident-string

Specifies an existing subscriber identification string.

esm-mac esm-mac-name

Specifies an existing subscriber MAC.

sap sap-id

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407
1 to 4294967295

transit transit-aasub-name

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-list

Syntax

aa-sub-list [*filter-by-type sub-type*] [*isa mda-id*] **quarantined-only**
aa-sub-list [*filter-by-type sub-type*] [*isa mda-id*] **policers-exceeded**
aa-sub-list summary

Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub-list)

Full Context

tools dump application-assurance group aa-sub-list

Description

This command displays the AA subscriber list for a specific ISA.

Parameters

filter-by-type sub-type

Filters by the specified sub-type.

Values dsm, esm, esm-mac, sap, spoke-sdp, transit

mda-id

Specifies the slot and MDA in the format *slot/mda*.

Values *slot*—1 to 10
mda—1 or 2

summary

Displays summary information.

quarantined-only

Displays the AA subscribers that are under quarantine.

policers-exceeded

Displays subscribers that have exceeded policer resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber list information.

Output Example

```
*A:Dut-C# tools dump application-assurance group 1 aa-sub-list quarantined-only

4.5 aa-sub-search

aa-sub-search

Syntax

aa-sub-search *search-type granularity* [**direction** *direction*] [**max-count** *max-count*]

Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub-search)

Full Context

tools dump application-assurance group aa-sub-search

Description

This command displays AA aa-sub information.

Parameters

search-type

Specifies the type of search.

Values top

granularity

Specifies the granularity of the search.

Values bytes, packets, flows

direction *direction*

Specifies the network/subscriber direction.

Values from-sub, to-sub, both

max-count *max-count*

Specifies the maximum flows to display.

Values 1 to 100

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA aa-sub information.

Output Example

```

4.6 aa-sub-study

aa-sub-study

Syntax

aa-sub-study esm *sub-ident-string* [snapshot]

aa-sub-study esm-mac *esm-mac-name* [snapshot]

aa-sub-study sap *sap-id* [snapshot]

aa-sub-study spoke-sdp *sdp-id:vc-id* [snapshot]

aa-sub-study transit *transit-aasub-name* [snapshot]

Context

[\[Tree\]](#) (show>app-assure>group aa-sub-study)

Full Context

show application-assurance group aa-sub-study

Description

This command displays per-subscriber special study statistics.

Parameters

esm sub-ident-string

Specifies an existing subscriber identification string.

esm-mac esm-mac-name

Specifies an existing subscriber MAC.

sap sap-id

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407
1 to 4294967295

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

transit transit-aasub-name

Specifies an existing transit subscriber name string.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.9 aarp

aarp

Syntax

aarp

aarp *aarpld*

Context

[\[Tree\]](#) (show>app-assur aarp)

Full Context

show application-assurance aarp

Description

This command displays the Application Assurance Redundancy Protocol (AARP) instance status.

Parameters

aarpld

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpId* **event-history** [**clear**]

Context

[\[Tree\]](#) (tools>dump>application-assurance aarp)

Full Context

tools dump application-assurance aarp

Description

This command dumps application-assurance AARP information for a specified instance.

Parameters

aarpId

Specifies the AARP ID.

Values 1 to 65535

event-history

Dumps historical information for the instance.

clear

Clears the event history after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpId* **force-evaluate**

Context

[\[Tree\]](#) (tools>perform>app-assure aarp)

Full Context

tools perform application-assurance aarp

Description

This command performs Application Assurance Redundancy Protocol instance operations.

Parameters

aarpId

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

force-evaluate

Forces a re-evaluation of the preferred AARP instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.10 abort-startup-wait

abort-startup-wait

Syntax

abort-startup-wait

Context

[Tree] (tools>perform>router>dhcp6>server>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp6>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp>server>failover abort-startup-wait)

Full Context

tools perform router dhcp6 local-dhcp-server failover abort-startup-wait

tools perform router dhcp local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp local-dhcp-server failover abort-startup-wait

Description

This command aborts the running start-up-wait time, forcing the DHCP server to transition immediately to the COMMUNICATIONS-INTERRUPTED state.

The start-up-wait time is started after a boot to enable two redundant routers to synchronize the DHCP server lease database before transitioning to the (PRE-)NORMAL state when the last state record from the peer is synchronized. If the last state record is not received before the start-up-wait time

expires, it is assumed that the remote DHCP server is not operational and the DHCP server goes in COMMUNICATIONS-INTERRUPTED state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 6: Show Accounting Policy Output Fields

Label	Description
Policy ID	The identifying value assigned to a specific policy.

Label	Description
Type	Identifies accounting record type forwarded to the configured accounting file. access — Indicates that the policy is an access accounting policy. network — Indicates that the policy is a network accounting policy. none — Indicates no accounting record types assigned.
Def	Yes — Indicates that the policy is a default access or network policy. No — Indicates that the policy is not a default access or network policy.
Admin State	Displays the administrative state of the policy. Up — Indicates that the policy is administratively enabled. Down — Indicates that the policy is administratively disabled.
Oper State	Displays the operational state of the policy. Up — Indicates that the policy is operationally up. Down — Indicates that the policy is operationally down.
Intvl	Displays the interval, in minutes, in which statistics are collected and written to their destination. The default depends on the record name type.
File ID	The log destination.
Record Name	The accounting record name which represents the configured record type.
This policy is applied to	Specifies the entity where the accounting policy is applied.

4.13 accounting-records

accounting-records

Syntax

accounting-records

Context

[\[Tree\]](#) (show>log accounting-records)

Full Context

show log accounting-records

Description

This command displays accounting policy record names.

Platforms

All

Output

The following output is an example of accounting records output information.

[Table 7: Accounting Policy Output Fields](#) describes accounting records output fields.

Table 7: Accounting Policy Output Fields

Label	Description
Record #	The record ID that uniquely identifies the accounting policy, expressed as a decimal integer.
Record Name	The accounting record name.
Def. Interval	The default interval, in minutes, in which statistics are collected and written to their destination.

Output Example

Note:

aa, video and subscriber records are not applicable to the 7950 XRS.

```

4.14 acct-off

acct-off

Syntax

acct-off [**radius-server-policy** *policy-name*] [**force**] [**acct-terminate-cause** *number*]

Context

[\[Tree\]](#) (tools>perform>aaa acct-off)

Full Context

tools perform aaa acct-off

Description

This command triggers a RADIUS Accounting-Off message:

- for all radius-server-policies that have acct-on-off configured

- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-Off message is not sent when the last successful event for the radius server policy was an Accounting-Off message. In this case, an Accounting-On should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-Off should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-Off.

number

Overrides the default Acct-Terminate-Cause (User-Request) in the Accounting-Off message.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.15 acct-on

acct-on

Syntax

acct-on [**radius-server-policy** *policy-name*] [**force**]

Context

[\[Tree\]](#) (tools>perform>aaa acct-on)

Full Context

tools perform aaa acct-on

Description

This command triggers a RADIUS Accounting-On message:

- for all radius-server-policies that have acct-on-off configured.
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-On message is not sent when the last successful event for the RADIUS server policy was an Accounting-On message. In this case, an Accounting-Off should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-On should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-On.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.16 acct-on-off-group

acct-on-off-group

Syntax

acct-on-off-group *[group-name]*

Context

[\[Tree\]](#) (show>aaa acct-on-off-group)

Full Context

show aaa acct-on-off-group

Description

This command displays Acct-On-Off group information and the associated RADIUS server policies.

Parameters

group-name

Displays information pertaining to the specified acct-on-off group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA Acct-On-Off group information.

Output Example

```
# show aaa acct-on-off-group "group-1"
=====
Acct-On-Off-Group Information
=====
acct on off group name           : group-1
- controlling Radius-Server-policy :
  aaa-server-policy-3
- monitored by Radius-Server-policy :
  aaa-server-policy-4
-----
Nbr of Acct-on-off-groups displayed : 1
-----
```

Table 9: WiFi Acct-On-Off Field Descriptions

Label	Description
acct on off group name	The name of a RADIUS server policy Accounting-On-Off-Group
controlling Radius-Server-policy	The controlling RADIUS server policy name
monitored by Radius-Server-policy	The policy monitored a RADIUS server policy.
Nbr of Acct-on-off-groups displayed	The RADIUS policy that controls the Acct-On-Off group

4.17 accu-stats

accu-stats

Syntax

accu-stats subscriber *subscriber-id*

Context

[\[Tree\]](#) (show>subscriber-mgmt accu-stats)

Full Context

show subscriber-mgmt accu-stats

Description

This command displays the accumulated statistics for both online and offline statistics.

Parameters

subscriber-id

Specifies the subscriber ID, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber statistics.

Output Example

```

A:active# show subscriber-mgmt accu-stats subscriber home-1
=====
Subscriber accumulated statistics for "home-1"
=====

-----
Subscriber accumulated statistics ingress queue 1
-----
                                packets          octets

=====
    
```

[Table 10: Accumulated Statistics Field Descriptions](#) describes accumulated statistics output fields.

Table 10: Accumulated Statistics Field Descriptions

Field	Description
packets	The number of packets associated with this policy
octets	The number of octets associated with this policy
Offered high priority	The number of offered high priority packets or octets
Offered low priority	The number of offered low priority packets or octets
Dropped high priority	The number of dropped high priority packets or octets
Forwarded in-profile	The number of forwarded in-profile packets or octets
Forwarded out-of-profile	The number of forwarded out-of-profile packets or octets
Dropped in-profile	The number of dropped in-profile packets or octets
Dropped out-of-profile	The number of dropped out-of-profile packets or octets

accu-stats

Syntax

accu-stats active subs no-accu-stats-policy
accu-stats active subs sub-profile *profile-name*
accu-stats inactive subs
accu-stats subscriber *subscriber-id*

Context

[\[Tree\]](#) (clear>subscriber-mgmt accu-stats)

Full Context

clear subscriber-mgmt accu-stats

Description

This command removes the accumulated statistics for a subscriber.

Parameters

active subs no-accu-stats-policy

Removes the accumulated statistics that are no longer associated with an **accu-stats-policy**. These are active subscribers that are referencing a subscriber profile that removed an **accu-stats-policy**.

active subs sub-profile *profile-name*

Removes the accumulated statistics for the specified subscriber profile.

inactive subs

Removes the accumulated statistics from all inactive subscribers.

profile-name

Specifies the subscriber profile up to 32 characters.

subscriber-id

Specifies the subscriber up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.18 accu-stats-policy

accu-stats-policy

Syntax

accu-stats-policy

accu-stats-policy *policy-name* [**associations**]

Context

[Tree] (show>subscriber-mgmt accu-stats-policy)

Full Context

show subscriber-mgmt accu-stats-policy

Description

This command displays the configuration of the accumulated statistics policy for the subscriber profile that referenced the accumulated statistics policy.

Parameters

policy-name

Specifies the policy name, up to 32 characters.

associations

Lists the sub-profile that referenced the policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management accumulated statistics information.

Output Example

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01" associations
=====
Subscriber profile associations
=====
no-prof
sub-prof
-----
=====
No. of subscriber profiles: 2
=====

-----
ingress  queue    1
egress   queue    1
```

[Table 11: Accumulated Statistics Policy Field Descriptions](#) describes subscriber management accumulated statistics policy fields.

Table 11: Accumulated Statistics Policy Field Descriptions

Field	Description
Description	The user provided description of this policy
Last management change	The date and time of the last management change
Direction Type	The specific direction for the policer or the queue to be stored, ingress or egress
ID	The queue ID
No. of subscriber profiles	The number of entries matching the search criteria

4.19 accu-stats-subscribers

accu-stats-subscribers

Syntax

accu-stats-subscribers [**subscriber** *sub-ident*] [**sub-profile** *name*]

Context

[\[Tree\]](#) (show>subscriber-mgmt accu-stats-subscribers)

Full Context

show subscriber-mgmt accu-stats-subscribers

Description

This command lists all subscribers on the system that had referenced an accumulated statistics policy. The list contains subscribers that are currently referencing an **accu-stats-policy** as well as subscribers that no longer reference an **accu-stats-policy** (due to removal of the policy from the subscriber profile).

Parameters

sub-ident

Specifies a specific subscriber ID, up to 32 characters.

sub-profile name

Lists all subscribers that are referencing the specified subscriber profile, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management accumulated statistics information.

Output Example

```
*DUT# show subscriber-mgmt accu-stats-subscribers
=====
Subscribers with accumulated statistics
=====
Subscriber                : home-1
Subscriber profile        : no-prof
Accumulated-stats policy  : accu-stats-policy-01
-----
Subscriber                : home-2
Subscriber profile        : no-prof
Accumulated-stats policy  : accu-stats-policy-02
-----
Subscriber                : twamp-host
Subscriber profile        : no-prof
Accumulated-stats policy  : (Unknown)
-----
No. of Subscribers with accumulated statistics: 3
=====
```

Output Example

The **show subscriber-mgmt status system** command shows the number of subscribers using accumulated statistics and whether the statistics usage has reached the peak value.

```
*A:Dut-C# show subscriber-mgmt status system
=====
Subscriber Management System Status
=====
Chassis 1

=====
```

[Table 12: Status System Field Descriptions](#) describes subscriber management status system fields.

Table 12: Status System Field Descriptions

Field	Description
Chassis	The chassis number
Memory usage high	The memory usage of the subscriber management function on this chassis is near the limit; Yes or No
DHCP message processing overload	The subscriber management DHCP message processing function is in overload; Yes or No
Statistics usage high	The memory used for subscriber statistics on this chassis is near the limit; Yes or No
Number of subscribers using statistics	The number of subscribers using memory to store accumulated statistics
Packets received	The number of data packets received that may trigger creation of data-triggered subscriber hosts on this system
Packets dropped	The number of data packets dropped that could have triggered creation of data-triggered subscriber hosts on this system
Packets in queue (actual)	The number of data packets currently in the waiting queue that may trigger creation of data-triggered subscriber hosts on this system
Packets in queue (peak)	The maximum value of the packets in queue object since the start up of this system or the last time that the value of packets in queue was reset
BRG initialized	The number of BRGs with the init timer running; waiting for the first host
BRG operational	The number of BRGs in the normal operating state, with dynamic hosts
BRG in connectivity verification	The number of BRGs with no hosts, pinging the residential gateway
BRG on hold	The number of BRGs with no hosts attached, in hold
BRG authenticated by proxy	The number of BRGs in this system

4.20 activate-best-dest

activate-best-dest

Syntax

activate-best-dest

Context

[\[Tree\]](#) (tools>perform>filter>redirect-policy activate-best-dest)

Full Context

tools perform filter redirect-policy activate-best-dest

Description

This command allows the operator to force a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If **hold-time-up** is running, the timer is also expired.

Platforms

All

4.21 activate-primary-action

activate-primary-action

Syntax

activate-primary-action

Context

[\[Tree\]](#) (tools>perform>filter>mac-filter>entry activate-primary-action)

[\[Tree\]](#) (tools>perform>filter>ip-filter>entry activate-primary-action)

[\[Tree\]](#) (tools>perform>filter>ipv6-filter>entry activate-primary-action)

Full Context

tools perform filter mac-filter entry activate-primary-action

tools perform filter ip-filter entry activate-primary-action

tools perform filter ipv6-filter entry activate-primary-action

Description

This command allows an operator to activate the primary action for the given filter policy entry. If the primary action is already active, the command has no effect. If a secondary action is active, the primary action will be activated unless the primary target is down. If the sticky destination timer is running for the primary action entry, it will expire.

Full Context

show router ldp bindings active

Description

This command display information about LDP active bindings.

Parameters

detail

Displays detailed information.

summary

Displays information in a summarized format.

family

Displays either IPv4 or IPv6 active LDP information.

opaque-type *opaque-type*

Specifies the type of a Multi-Point Opaque Value Element.

Values generic, ssm, vpn-ssm, recursive-ssm

egress-lsp *tunnel-id*

Displays LDP active bindings by matching on the egress RSVP-TE LSP *tunnel-id* for LDP FECs which are tunneled over a RSVP-TE LSP. The *tunnel-id* for the RSVP-TE LSP can be found in the output of the **show router mpls lsp detail** command and in the **show router tunnel-table** command. It is not the *path LSP ID* shown in the output of the **show router mpls lsp path detail** command.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

inner-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address.

innermost-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address and non-recursive FECs that have a root address that matches the specified address.

p2mp source *ip-address*

Displays LDP active P2MP source bindings.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

p2mp-id *identifier*

Displays LDP active P2MP identifier bindings.

Values 0 to 4294 967 295

group *mcast-address*

Displays the P2MP group multicast address bindings.

root ip-address

Displays root IP address information.

rd rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

prefix ip-prefix/ip-prefix-length

Specifies information for the specified IP prefix and mask length.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

4.23 active-subscribers

active-subscribers

Syntax

active-subscribers detail

active-subscribers mirror

active-subscribers [summary]

Context

[Tree] (show>service active-subscribers)

Full Context

show service active-subscribers

Description

This command displays active subscriber information.

Parameters

detail

Displays detailed output.

mirror

Displays active subscriber mirror information.

summary

Displays active subscriber information in a brief format.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active service subscriber information. [Table 13: Active Subscriber Field Descriptions](#) describes the fields.

Output Example

```
*A:Dut-C# show service active-subscribers

Description

This command displays ad insertion channel information.

Parameters

service *service-id*

Displays information pertaining to the specified service ID.

Values 1 — 2147483648 *svc-name* — a string up to 64 characters in length.

interface *ip-int-name*

Displays information pertaining to the specified interface.

address *mcast-address*

Displays information pertaining to the specified multicast channel address.

source *ip-address*

Displays information pertaining to the source IP address.

detail

The output displays detailed information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

adjacency

Syntax

adjacency [*ip-address* | *ip-int-name* | *nbr-system-id*] [**detail**]

Context

[\[Tree\]](#) (show>router>isis adjacency)

Full Context

show router isis adjacency

Description

This command displays information regarding IS-IS neighbors. When no *ip-address*, *ip-int-name*, or *nbr-system-id* is specified, then all adjacencies are displayed.

Parameters

ip-address

When specified, only adjacencies with that interface is displayed.

Values

ipv4-address:

- a.b.c.d (host bits must be 0)

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

ip-int-name

When specified, only adjacencies with that interface is displayed.

nbr-system-id

When specified, only the adjacency with that ID is displayed.

detail

All output is displayed in the detailed format.

mt-id-number

Specifies the multi topology ID number for this route.

Platforms

All

Output

Standard and Detailed IS-IS Adjacency Output

[Table 14: Standard and Detailed Adjacency Output Fields](#) describes the standard and detailed command output fields for an IS-IS adjacency.

Table 14: Standard and Detailed Adjacency Output Fields

Label	Description
Interface	Interface name associated with the neighbor.
System-id	Neighbor's system ID.
Level	1-L1 only, 2-L2 only, 3-L1 and L2.
State	Up, down, new, one-way, initializing, or rejected.
Hold	Hold time remaining for the adjacency.
SNPA	Subnetwork point of attachment, MAC address of the next hop.
Circuit type	Level on the interface L1, L2, or both.
Expires In	Number of seconds until adjacency expires.
Priority	Priority to become designated router.
Up/down transitions	Number of times neighbor state has changed.
Event	Event causing last transition.
Last transition	Time since last transition change.
Speaks	Supported protocols (only IP).
IP address	IP address of neighbor.
MT enab	Yes — The neighbor is advertising at least 1 non MTID#0.
Topology	Derived from the MT TLV in the IIH <ul style="list-style-type: none"> • MT#0, MT#2 => "Topology : Unicast, IPv6-Unicast" • Native IPv4 or native IPv6 => "Topology : Unicast" Not supported MTIDs => Topology line suppressed

```

adjacency

Syntax

adjacency [*system-id*]

Context

[Tree] (clear>router>isis adjacency)

Full Context

clear router isis adjacency

Description

This command clears and resets the entries from the IS-IS adjacency database.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Platforms

All

adjacency

Syntax

```
adjacency [system-id]
```

Context

[\[Tree\]](#) (clear>service>id>spb adjacency)

Full Context

```
clear service id spb adjacency
```

Description

This command clears and resets IS-IS adjacencies.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

Platforms

All

4.26 adjust-autobandwidth

adjust-autobandwidth

Syntax

```
adjust-autobandwidth [lsp lsp-name [force [bandwidth mbps]]]
```

Context

[\[Tree\]](#) (tools>perform>router>mpls adjust-autobandwidth)

Full Context

tools perform router mpls adjust-autobandwidth

Description

This command initiates an immediate automatic bandwidth adjustment attempt for either one specific LSP or all active LSPs. The automatic bandwidth adjustment is made to the primary or secondary path of the LSP, whichever is the currently active path. If an LSP is not specified, then the system assumes the command applies to all LSPs. The optional **force** parameter, which is available only when an LSP is referenced, determines whether **adjust-up** and **adjust-down** threshold checks are applied. If **force** is not specified then the maximum average data rate must differ from the current reservation by more than the **adjust-up** or **adjust-down** thresholds, otherwise no bandwidth adjustment occurs. If the force option is specified then, bandwidth adjustment ignores the configured thresholds. If a bandwidth is specified as part of the force option then the bandwidth of the LSP is changed to this specific value, otherwise the bandwidth is changed to the maximum average data rate that has been measured by the system in the current adjust interval.

The adjust-count and maximum average data rate are not reset by the manual **auto-bandwidth** command, whether or not the bandwidth adjustment succeeds or fails. The overflow count is reset only if the manual **auto-bandwidth** attempt is successful.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters, to which this command applies. If this parameter is not supplied the command applies to all active LSPs.

mbps

Specifies the bandwidth that the LSP should be immediately resized to.

Values 0 to 6400000

Platforms

All

4.27 admin

4.29 admin-lock

admin-lock

Syntax

admin-lock

Context

[\[Tree\]](#) (tools>perform>service>id admin-lock)

Full Context

tools perform service id admin-lock

Description

Commands in this context apply an administrative lock for a spoke SDP that is bound to a VLL SAP, another spoke-\ sdp or a VPLS interface for an MPLS-TP PW. After the PW is locked, it can be put into loopback mode. The command must be executed at both ends of the PW or MS-PW represented by the spoke-\ SDP. Test traffic can then be injected using a test SAP.

Table 16: Show QoS Scheduler-Hierarchy Customer Output Fields

Label	Description
Policy Name	Displays the policy name.
Description	Displays the policy description.
OM Add PIR Prcnt	Displays the percentage of the administrative PIR by which the measured rate is increased.
OM Add Rate	Displays the amount, in kb/s, by which the measured rate is increased.
OM Add	<p>min-only — When this option is true, the system uses the specified increase as a minimum offered rate even for inactive queues or policers associated with the policy.</p> <p>active-min-only — When this option is true, the respective rate or percentage is treated as the minimum offered rate for a queue only when the queue has an actual non-zero offered rate. This is intended to limit the artificial increase in offered rate to queues that are currently active. When a queue's measured offered rate drops to zero, the system stops enforcing the minimum value.</p>
OM Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the threshold sensitivity to the offered rate change.

Label	Description
	If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity.
OM Gran Rate	Displays the explicit rate, in kb/s, that are used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Max Dec PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the decrement limit to the offered rate change. If a value of 100 or 100.00 is used, the system interprets this equivalent as no max-decrement .
Max Dec Rate	Displays the rate, in kb/s, that is used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Abv Off PIR Prcnt	<p>Displays the percentage of the child's administrative PIR that is used as the fair share increase limit. The new operational PIR result is capped by the child's PIR.</p> <p>If a value of 0 or 0.00 is specified, the system will disable the fair share increase function and only configure the actual distribution rate.</p> <p>If a value of 100 or 100.00 is used, the system will interpret this equivalent to executing the no above-offered-cap command and return the fair-share operation to the default behavior.</p>
Abv Off Rate	<p>Specifies the explicit rate, in kb/s, that is used as the limit to the child's fair share increase to the operational PIR. The new operational PIR result is capped by the child's PIR.</p> <p>If a value of 0 is used, the system will disable the fair share increase function and only configure the actual distribution rate.</p>
BWD Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the rounding step value. If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity .
BWD Gran Rate	Displays the rate, in kb/s, that is used as the rounding step value. If a value of 0 is used, the system will interpret this equivalent to no granularity .
Fast Start	Displays whether fast detection of initial bandwidth on a child policer or queue associated with the policy is enabled.
Fast Stop	Displays whether fast detection of lack of offered rate on a child policer or queue associated with the policy is enabled.
Time Average Factor	Displays the time average factor used to calculate the weight of the new offered rate using a portion of the previous offered rate.

Label	Description
	If dec-only is true, the time average factor adjustment is only applied if the new offered rate is decreasing compared to the previous offered rate.
Hi Rate Hold Time	<p>Displays the time period that the current offered rate is maintained for a child policer or queue when it is seen that the offered rate is decreasing. The offered measurement that triggers the hold time is used when the hold timer expires, unless a higher offered rate is seen in the interim. When a higher rate is observed, the hold timer is canceled and the higher offered rate is used immediately.</p> <p>If active-min-only is true, the respective rate or percentage is treated as the minimum offered rate for a queue, only when the queue has an actual non-zero offered rate.</p>
Sample Interval	Displays the number of intervening sample periods before a new offered rate is measured.
Enqueue on PIR Zero	Displays whether enqueue-on-pir-zero is enabled. If it is enabled, when the operational PIR is set to zero, the queue's MBS remains set to the normal value and is not also set to zero.
Limit PIR Zero Drain	If true, the system to use the minimum configurable PIR instead of an H-QoS derived zero operational PIR.
Init LUB with min PIR	If true, new queues associated with a LUB context are assigned a minimum rate operational PIR to be applied to the queue for use by enqueued packets prior to an H-QoS iteration.
Internal Sched Wght Mode	<p>Specifies the internal scheduler weight:</p> <p>default — Specifies that queues are equally weighted, except at ingress for mixed-speed LAGs without per-fp-inq-queuing enabled and at egress for all mixed-speed LAGs, in which cases the queues are weighted based on port speed.</p> <p>force-equal — Specifies that the queues are always equally weighted.</p> <p>offered-load — Specifies that the queues are weighted based on observed offered load.</p> <p>capped-offered-load — Specifies that the queues are weighted based on observed offered load capped by PIR.</p>
Unconsumed Agg-rate	Displays the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Agg-rate	Displays the percentage of the delta consumed aggregate rate that can be given to a queue at the end of an H-QoS pass.

Label	Description
Unconsumed Hi-tier-rate	Displays the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Hi-tier-rate	Displays the percentage of the delta consumed higher tier rate that can be given to a queue at the end of an H-QoS pass.

Table 17: Show Aggregate Field Descriptions

Label	Description
Prefix	Displays the destination address of the aggregate route in dotted decimal notation.
Summary	Specifies whether the aggregate or more specific components are advertised.
AS Set	Displays an aggregate where the path advertised for the route consists of all elements contained in all paths that are being summarized.
Aggr AS	Displays the aggregator path attribute to the aggregate route.
Aggr IP-Address	The IP address of the aggregated route.
State	The operational state of the aggregated route.
No. of Aggregates	The total number of aggregated routes.

4.34 alarm-contact-input

alarm-contact-input

Syntax

alarm-contact-input {*alarm-contact-input-id* | **all**} [**detail**]

Context

[Tree] (show>system alarm-contact-input)

Full Context

show system alarm-contact-input

Description

This command displays the alarm contact input information.

Parameters

alarm-contact-input-id

Specifies the alarm contact input pin number. Alarm contact input information is displayed only for the specified pin.

Values 1 to 4

all

Displays alarm contact input information for all pins.

detail

Displays detailed alarm contact input information for the specifies pin or all pins.

Platforms

7750 SR-a

Output

The following output is an example of alarm contact input information, and [Table 18: Alarm Contact Input Field Descriptions](#) describes the output fields.

Output Example

```
=====
Alarm Contact Input
=====
Alarm Input Pin Number      : 1
  Description                : (Not Specified)
  Alarm Input Pin Current State : Disabled

  Description                : (Not Specified)
  Alarm Input Pin Current State : Disabled
  Alarm Severity             : major
  Alarm Raised               : No
  Last State Change          : 03/18/2021 14:45:31
```

Table 18: Alarm Contact Input Field Descriptions

Label	Description
Alarm Input Pin Number	Indicates the alarm contact input pin number.
Description	Displays the configured description string for the alarm contact input
Alarm Input Pin Current State	Indicates the configured administrative state of the alarm contact input. Disabled — The alarm contact input is disabled (shutdown) and log events will not be generated for changes to the input pin status. Enabled — The alarm contact input is enabled (no shutdown) and log events are generated for changes to the input pin status as long as the log events are not suppressed in event-control configuration.
Alarm Severity	Indicates the configured severity of the associated CHASSIS log event.
Alarm Raised	Indicates if the input pin is triggered or not.
Last State Change	Indicates when the input pin last changed state.

4.35 alarms

alarms

Syntax

alarms [**cleared**] [**count** *count*] [**newer-than** *days*] [**severity** *severity-level*]

Context

[\[Tree\]](#) (show>system alarms)

Full Context

show system alarms

Description

This command displays facility alarms on the system. Alarm support covers a focused subset of router states that are likely to indicate service impacts (or imminent service impacts) related to the overall state of hardware assemblies (cards, fans, links, and so on).

Platforms

All

Output

[Table 19: Show Facility Alarms Output Fields](#) describes the alarms output fields.

Use the following command to display facility alarms on the system.

```
show system alarms
```

Output Example

```

Table 21: All Service-ID Field Descriptions describes the show all service-id command output fields:

Table 21: All Service-ID Field Descriptions

Label	Description
Service Id	The value that identifies a service
VPN Id	The number that identifies the VPN
Service Type	The type of service
SDP Id	The SDP identifier
Description	The text string describing general information about the service
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service
Evpn Mcast GW	The status of the EVPN multicast gateway
Mcast-GW Type	The multicast gateway type: MEG, PEG, or MEG-PEG
Split Horizon Group	The name of the split horizon group for this service
Description	The text string describing the split horizon group
Last Changed	The date and time of the most recent management-initiated change to this split horizon group
SDP Id	The SDP identifier
Type	The service SDP binding type, spoke or mesh

Label	Description
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Delivery	The type of delivery used by the SDP: GRE or MPLS
Admin State	The administrative state of this SDP
Oper State	The operational status of the KeepAlive protocol.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP
Ingress Filter	The ID of the ingress filter policy
Egress Filter	The ID of the egress filter policy
Far End	The IP address of the remote end of the GRE or MPLS tunnel defined by this SDP
Last Changed	The date and time of the most recent change to this customer
Signaling	The signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	The operating status of the SDP
Oper State	The operational state of the SDP
Hello Time	The frequency that SDP echo request messages are transmitted on this SDP
Hello Msg Len	The length of the SDP echo request messages transmitted on this SDP
Max Drop Count	The maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault
Hold Down Time	The amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field.

Label	Description
	If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS
Number of SDPs	The total number SDPs applied to this service ID
Service Access Points	
Service Id	The value that identifies a service
Port Id	The ID of the access port where this SAP is defined
Description	The generic information about the SAP
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP
Oper State	The operating state of the SAP
Last Changed	The date and time of the last change
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Ingress qos-policy	The SAP ingress QoS policy ID
Egress qos-policy	The SAP egress QoS policy ID
Ingress Filter-Id	The SAP ingress filter policy ID
Egress Filter-Id	The SAP egress filter policy ID
Multi Svc Site	The multi-service site in which the SAP is a member
Ingress sched-policy	The ingress QoS scheduler for the SAP
Egress sched-policy	The egress QoS scheduler for the SAP
Acct. Pol	The accounting policy applied to the SAP
Collect Stats	Accounting statistics collected on the SAP
Dropped	The number of packets or octets dropped
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy

Label	Description
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded
Dropped In Profile	The number of in-profile packets or octets discarded
Dropped Out Profile	The number of out-of-profile packets or octets discarded
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded
Ingress Queue 1	The index of the ingress QoS queue of this SAP
High priority offered	The packets or octets count of the high priority traffic for the SAP
High priority dropped	The number of high priority traffic packets or octets dropped
Low priority offered	The packets or octets count of the low priority traffic
Low priority dropped	The number of low priority traffic packets or octets dropped
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded
Egress Queue 1	The index of the egress QoS queue of the SAP
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
In profile dropped	The number of in-profile packets or octets dropped for the SAP
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded
Out profile dropped	The number of out-of-profile packets or octets discarded
State	The DHCP relay state on this SAP
Info Option	Option 82 processing state on this SAP
Action	Option 82 processing state SAP or interface: keep, replace or drop

Label	Description
Circuit ID	If index is inserted in Circuit ID sub-option of Option 82
Remote ID	The far-end MAC address inserted in remote ID sub-option of Option 82
Managed by Service	The service-id of the management VPLS managing this SAP
Managed by SAP	The SAP ID inside the management VPLS managing this SAP
Prune state	The STP state inherited from the management VPLS
Managed by Service	The service ID of the management VPLS managing this spoke SDP
Managed by Spoke	The SAP ID inside the management VPLS managing this spoke SDP
Prune state	The STP state inherited from the management VPLS

Table 22: Show Service ID Output Fields describes the Show service ID output fields when the **all** option is specified.

Table 22: Show Service ID Output Fields

Label	Description
Service Id	The service identifier
VPN Id	The number which identifies the VPN
Service Type	The type of service
VLL Type	The the VLL type
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Description	Generic information about the service

Label	Description
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change
Endpoint	The name of the service endpoint for the 7450 ESS or 7750 SR
Flags	The conditions that affect the operating status of this SAP. Display output includes: ServiceAdminDown, SapAdmin Down, InterfaceAdminDown, PortOperDown, PortMTUToo Small, L2OperDown, SapIngressQoSMismatch, SapEgress QoSMismatch, RelearnLimitExceeded, RxProtSrcMac, Parent IfAdminDown, NoSapIpipeCelpAddr, SapParamMismatch, Cem SapNoEcidOrMacAddr, StandByForMcRing, ServiceMTUToo Small, NoSapEpipeRingNode.
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service for the 7450 ESS or 7750 SR
Split Horizon Group Specifics	
Split Horizon Group	The name of the split horizon group for this VPLS for the 7450 ESS or 7750 SR
Description	The description of the split horizon group for the 7450 ESS or 7750 SR
Last Changed	The date and time of the most recent management-initiated change to this split horizon group for the 7450 ESS or 7750 SR
Service Destination Points (SDPs)	
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Type	Indicates whether this service SDP binding is a spoke or a mesh for the 7450 ESS or 7750 SR
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR
Delivery	The type of delivery used by the SDP: GRE or MPLS for the 7450 ESS or 7750 SR

Label	Description
Admin State	The administrative state of this SD for the 7450 ESS or 7750 SR
Oper State	The operational state of this SDP for the 7450 ESS or 7750 SR
Jitter Buffer (packets)	The jitter buffer length in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	The playout buffer packets threshold in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	Indicates the current packet depth of the jitter buffer for the 7450 ESS or 7750 SR
Peer Pw Bits	<p>The bits set by the LDP peer when there is a fault on its side of the pseudowire for the 7450 ESS or 7750 SR. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pw NotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding lacIngressFault Local — Attachment circuit RX fault lacEgressFault Local — Attachment circuit TX fault psnIngressFault Local — PSN-facing PW RX fault psnEgressFault Local — PSN-facing PW TX fault pwFwdingStandby — Pseudowire in standby mode</p>
Signaling Override	The overriding signaled pseudowire type, as configured under the signaled-vc-type-override option for Apipes. This field is only displayed if signaled-vc-type-override is configured for the 7750 SR.

Table 23: Show Service ID All Output Fields describes the command output fields.

Table 23: Show Service ID All Output Fields

Label	Description
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Service Type	Specifies the type of service.
SDP Id	The SDP identifier.
Description	Generic information about the service.
Customer Id	The customer identifier.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Split Horizon Group	Name of the split horizon group for this service.
Description	Description of the split horizon group.
Last Changed	The date and time of the most recent management-initiated change to this split horizon group.
SDP Id	The SDP identifier.
Type	Indicates whether this service SDP binding is a spoke or a mesh.
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.

Label	Description
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field. If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS
Number of SDPs	The total number SDPs applied to this service ID.
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The administrative state of the SAP.

Label	Description
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
Dropped	The number of packets or octets dropped.
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.

Label	Description
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Out profile dropped	The number of out-of-profile packets or octets discarded.
State	Specifies whether DHCP Relay is enabled on this SAP.
Info Option	Specifies whether Option 82 processing is enabled on this SAP.
Action	Specifies the Option 82 processing on this SAP or interface: keep, replace or drop.
Circuit ID	Specifies whether the If Index is inserted in Circuit ID sub-option of Option 82.
Remote ID	Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82.
Managed by Service	Specifies the service-id of the management VPLS managing this SAP.
Managed by MSTI	Specifies the MST instance inside the management VPLS managing this SAP.
Last BPDU from	The bridge ID of the sender of the last BPDU received on this SAP.

Label	Description
Managed by SAP	Specifies the sap-id inside the management VPLS managing this SAP.
Prune state	Specifies the STP state inherited from the management VPLS.
Managed by Service	Specifies the service-id of the management VPLS managing this spoke-SDP.
Last BPDU from	The bridge ID of the sender of the last BPDU received on this SAP.
Managed by Spoke	Specifies the sap-id inside the management VPLS managing this spoke-SDP.
Prune state	Specifies the STP state inherited from the management VPLS.
Peer Pw Bits	<p>Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding. lacIngressFault Local — Attachment circuit RX fault. lacEgressFault Local — Attachment circuit TX fault. psnIngressFault Local — PSN-facing PW RX fault. psnEgressFault Local — PSN-facing PW TX fault. pwFwdingStandby — Pseudowire in standby mode.</p>

all

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output is an example of service id information, and [Table 24: Show All Service-ID Field Descriptions](#) describes the output fields.

Output Example

```
A:PE# show service id 500 all

Table 24: Show All Service-ID Field Descriptions

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Service Type	Specifies the type of service.
SDP Id	The SDP identifier.
Description	Generic information about the service.
Customer Id	The customer identifier.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.

Label	Description
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the service.
Oper State	The current status of the service.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far-end field. If the SDP type is GRE, then the following message displays: "SDP Delivery Mechanism is not MPLS".
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap	The value of the label used to identify this SAP on the access port.

Label	Description
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.

Label	Description
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
IPCP Address Extension Details	
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional).

all

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output is an example of show all service-ID information, and [Table 25: Show All Service-ID Field Descriptions](#) describes the output fields.

Output Example

Note:

Ing ipv6 Fltr and Egr ipv6 Fltr are for the 7750 SR only.

Output Example

```
show service id all
```

```

Table 25: Show All Service-ID Field Descriptions

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Customer Id	The customer identifier.
Last Status Change	The date and time of the most recent change in the administrative or operating status of the service.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
Admin State	The current administrative state.
Oper State	The current operational state.
Route Dist.	Displays the route distribution number.
AS Number	Displays the autonomous system number.
Router Id	Displays the router ID for this service.

Label	Description
ECMP	Displays equal cost multipath information.
ECMP Max Routes	Displays the maximum number of routes that can be received from the neighbors in the group or for the specific neighbor.
Max Routes	Displays the maximum number of routes that can be used for path sharing.
Auto Bind	Specifies the automatic binding type for the SDP assigned to this service.
Vrf Target	Specifies the VRF target applied to this service.
Vrf Import	Specifies the VRF import policy applied to this service.
Vrf Export	Specifies the VRF export policy applied to this service.
SDP Id	The SDP identifier.
Description	Generic information about the service.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Split Horizon Group	Name of the split horizon group for this service.
Description	Description of the split horizon group.
Last Changed	The date and time of the most recent management-initiated change to this split horizon group.
ETH-CFM Service Specifics	
Tunnel Faults	Whether tunnel faults are ignored or accepted.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.

Label	Description
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the keepalive protocol.
Oper State	The current status of the keepalive protocol.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far end field. If the SDP type is GRE, then the following message displays: SDP delivery mechanism is not MPLS.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	

Label	Description
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.

Label	Description
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Out profile dropped	The number of out-of-profile packets or octets discarded.
State	Specifies whether DHCP relay is enabled on this SAP.
Info Option	Specifies whether Option 82 processing is enabled on this SAP.
Action	Specifies the Option 82 processing on this SAP or interface: keep, replace or drop.
Circuit ID	Specifies whether the If index is inserted in circuit ID sub-option of Option 82.

Label	Description
Remote ID	Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82.
Service Access Points	
Managed by Service	Specifies the service-id of the management VPLS managing this SAP.
Managed by SAP	Specifies the sap-id inside the management VPLS managing this SAP.
Prune state	Specifies the STP state inherited from the management VPLS.
Spoke SDPs	
Managed by Service	Specifies the service-id of the management VPLS managing this spoke SDP.
Managed by Spoke	Specifies the sap-id inside the management VPLS managing this spoke SDP.
Prune state	Specifies the STP state inherited from the management VPLS.
Peer Pw Bits	<p>Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding.</p> <p>lacIngressFault Local — Attachment circuit RX fault.</p> <p>lacEgressFault Local — Attachment circuit TX fault.</p> <p>psnIngressFault Local — PSN-facing PW RX fault.</p> <p>psnEgressFault Local — PSN-facing PW TX fault.</p> <p>pwFwdingStandby — Pseudowire in standby mode.</p>
IPCP Address Extension Details	
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.

Table 26: IGMP Snooping Show All Service-ID Field Descriptions describes the show all service ID command output fields:

Table 26: IGMP Snooping Show All Service-ID Field Descriptions

Label	Description
Admin State	The administrative state of the IGMP instance
Querier	The address of the IGMP querier on the IP subnet to which the interface is attached
Sap/Sdp Id	The SAP and SDP IDs of the service ID
Oper State	The operational state of the SAP and SDP IDs of the service ID
Mrtr Port	The multicast router port
Send Queries	Send-queries command is enabled or disabled
Max Num Groups	The maximum number of multicast groups that can be joined on this SAP or SDP
MVR From VPLS	MVR from VPLS enabled
Num Groups	The actual number of multicast groups that can be joined on this SAP or SDP

all summary

Context

[\[Tree\]](#) (show>router>seg-rt>sr-policies all)

Full Context

show router segment-routing sr-policies all

Description

This command displays the traffic statistics of all or a filtered set of the BGP and static policies, or displays summary parameters.

Parameters

color

Specifies to filter on the color.

Values 0 to 4294967295

ipv4-address | ipv6-address

Specifies to filter on the end-point IPv4 or IPv6 address.

Values ipv4-address — a.b.c.d
 ipv6-address — x:x:x:x:x:x:x (eight 16-bit pieces) or
 x:x:x:x:x:x:d:d:d
 x — [0..FFFF]H
 d — [0..255]D

preference-id

Specifies to filter on the preference ID.

Values 0 to 4294967295

distinguisher-id

Specifies to filter on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information for the BGP and static policies.

Platforms

All

Output

The following outputs are examples of traffic statistics for the BGP and static policies.

Output Example Information for all BGP and Static Policies

```
*A:Dut-C# show router segment-routing sr-policies all

[Table 29: ANCP Policy Field Descriptions](#) describes subscriber management ANCP policy fields.

Table 29: ANCP Policy Field Descriptions

Field	Description
I. Rate Reduction	The ingress rate reduction applied for this policy
I. Rate Adjustment	The ingress rate adjustment percentage
I. Rate Monitor	The ingress rate monitor rate
I. Rate Monitor Alarm	The ingress rate monitor enabled; yes or no
I. Rate Modify	The ingress rate modify scheduler policy
E. Rate Reduction	The egress rate reduction applied for this policy percentage
E. Rate Adjustment	The egress rate adjustment
E. Rate Monitor	The egress rate monitor rate
E. Rate Monitor Alarm	The egress rate monitor enabled; yes or no
E. Rate Modify	The egress rate monitor rate
Port Down	The actions taken on port-down
Last Mgmt Change	The time of the last modification of this entry
SAP	The ANCP static map entry SAP ID
Svc-id	The service ID associated with this static map
String	The ANCP string
Cust-id	The ID of the customer in which the multi-service-site specifies
MSS-name	The name of the multi-service-site used by this subscriber
Number of associations	The total number associations matching the search criteria

4.42 ancp-string

ancp-string

Syntax

ancp-string

ancp-string *ancp-string*
ancp-string customer *customer-id* **site** *customer-site-name*
ancp-string sap *sap-id*

Context

[\[Tree\]](#) (show>subscriber-management ancp-string)

Full Context

show subscriber-mgmt ancp-string

Description

This command displays subscriber ANCP string information.

Parameters

ancp-string

Specify the ASCII representation of the DSLAM circuit-id name.

customer-id

Specify the associated existing customer name.

customer-site-name

Specify the associated customer's configured MSS name.

sap-id

Specifies the physical port identifier portion of the SAP definition.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management ANCP string information.

Output Example

```
A:active# show subscriber-mgmt ancp-string

show application-assurance group aa-sub application
```

Description

This command displays per-application statistics. The system-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Subscriber statistics are available for special-study subscribers and account for all completed and active flows at the moment of this statistics request.

Parameters

application-name

Displays information about the specified application name.

count

Displays counter information.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Displays counters sorted by octets, packets, or flow. This is indicated by granularity.

Values octets, packets, flows

max-count

If the value is greater than 0, displays up to the indicated value of statistic rows. If 0, displays all.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **application** command information.

Output Example

application-assurance-group

Syntax

application-assurance-group [*aa-group-id*] [**load-balance** [**unassigned**]]]

Context

[\[Tree\]](#) (show>isa application-assurance-group)

Full Context

show isa application-assurance-group

Description

This command displays ISA group information.

Parameters

aa-group-id

Specifies the AA ISA group ID.

load-balance

Specifies load balancing information.

unassigned

Specifies load balancing unassigned aa-sub information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

[Table 32: Show Application Assurance Group Output Fields](#) describes the show command output fields:

Table 32: Show Application Assurance Group Output Fields

Label	Description
ISA-AA Group Index	Indicates the group number of this group of MDAs.
Description	
Primary ISA-AA	Displays the primary slot and card number and whether the status is up or down and is either active or standby.
Backup ISA-AA	Displays the backup slot and card number and whether the status is up or down and is either active or standby. The status should be up and standby.
Last Active change	Indicates the last time a successful change was performed.
Admin State	Displays the administrative state, up or down.
Oper State	Displays the operational state, up or down.
Diverted FCs	Displays the forwarding class to be diverted.
Fail to mode	Displays how traffic is handled when there are no available ISA-AA cards to handle the traffic, either failToWire or failToOpen.
Partitions	Indicates whether partitions are enabled or disabled within an ISA-AA group. When the value of this object is set to enabled , partitions can be created in the tmnxBsxAaGrpPartTable.
Egress from subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for subscriber to network traffic egressing towards the ISA-AA MDA.

Label	Description
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for subscriber to network traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetwork QueueTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA
Egress to subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for network to subscriber traffic egressing towards the ISA-AA MDA.
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for network to subscriber traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetwork QueueTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::t SchedulerPolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Overload Sub-quarantine	Displays the overload quarantine state, up or down.
Overload Cut Through	Displays the overload cut through state, enabled or disabled.

applications

Syntax

applications [*isa mda-id/esa-vm-id*]

Context

[Tree] (tools>dump>app-assure>group>ipassist applications)

Full Context

tools dump application-assurance group ip-identification-assist applications

Description

This command dumps statistics showing the amount of traffic detected by IP identification assist for supported applications.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values	
<i>slot/mda</i>	
<i>slot</i>	1 to 10, depending on chassis model
<i>mda</i>	1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	
<i>esa-esa-id/vm-id</i>	
<i>esa-id</i>	1 to 16
<i>vm-id</i>	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display statistics showing how much traffic is detected by the IP identification assist feature for supported applications.

```
tools dump application-assurance group 1:0 ip-identification-assist applications isa 1/1
```

Output Example

```
=====

Output Fields: show aps

Table 33: Output Fields: show aps describes output fields for the **show aps** command.

Table 33: Output Fields: show aps

Label	Description
Interface	Specifies the APS interface name (the APS group port).
Admin State	Up — APS is administratively up. Down — APS port is administratively down.
Oper State	Up — APS port is operationally up. Down — APS is operationally down.
MC-CTL State	Specifies the multi-chassis state.
Work Circuit	Specifies the working circuit ID.
Prot Circuit	Specifies the physical port that acts as the protection circuit for this APS group.
Active Circuit	Specifies the active circuit.
Tx/Rx K1 Byte	Displays the value of the SONET/SDH K1 byte received or transmitted on the protection circuit.
Group Id	Displays the APS group name.
Protection Circuit	Displays the physical port that will act as the protection circuit for this APS group.
Switching-mode	Displays the switching mode of the APS group.
Switching-arch	The architecture of the APS group.
Revertive-mode	Displays the revertive mode of the APS group. non-revertive — Traffic remains on the protection line until another switch request is received. revertive — When the condition that caused a switch to the protection line has been cleared the signal is switched back to the working line.
Revert-time	Displays the configured time, in minutes, to wait after the working circuit has become functional again, before making the working circuit active again. If the revertive mode is non-revertive, then this field will be empty.
Rx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte received on the interface.

Label	Description
Tx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte transmitted on the interface.
Current APS Status	Displays the current APS status.
Mode Mismatch Cnt	Indicates the number of times a conflict occurs between the current local mode and the received K2 mode information.
Channel mismatch Cnt	Indicates the number of mismatches between the transmitted K1 channel and the received K2 channel has been detected.
PSB failure Cnt	Displays a count of Protection Switch Byte (PSB) failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected.
FEPL failure Cnt	Displays a count of far-end protection-line (FEPL) failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte.
No. of Switchovers	Displays the number of times a switchover has occurred.
Last Switchover	Displays the time stamp of the last switchover.
Switchover seconds	Displays the cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled.
Signal Degrade Cnt	Displays the number of times the signal was degraded.
Signal Failure Cnt	Displays the number of times the signal failed.
Last Switch Cmd	Reports the last switch command that was performed on a circuit.
Last Exercise Result	The result of the last exercise request on a circuit.
Neighbor address	Displays the neighbor IP address.
Advertise Interval	Displays the advertise interval.
Hold time	Displays the hold time.

aps

Syntax

aps *aps-id* [clear]

aps mc-aps-signaling [clear]

aps mc-aps-ppp [clear]

Context

[\[Tree\]](#) (tools>dump aps)

Full Context

tools dump aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

aps-id

Specifies the APS ID.

Values	<i>aps-group-id</i>
	aps: keyword
	group-id: 1 to 64

clear

Removes all Automated Protection Switching (APS) operational commands.

mc-aps-signaling

Displays multi-chassis APS signaling information.

mc-aps-ppp

Displays multi-chassis APS PPP information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

The following output is an example of APS information.

Output Example

```
*A:AS_SR7_2# tools dump aps aps-33

show router ospf area

Description

This command displays configuration information about all areas or the specified area.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

Values ip-address — a.b.c.d
area — 0 to 4294967295

flex-algo-id

Displays the flexible algorithm identifier.

Values 128 to 255

detail

Displays detailed operational and statistical information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

flex-algo

Displays OSPFv2 information for the specified algorithm identifier.

flex-algo all

Displays OSPFv2 information for all flexible algorithms.

Platforms

All

Output

The following outputs are examples of OSPF area outputs.

[Table 34: OSPF Area Output Fields](#) describes the standard and detailed command output fields for an OSPF area.

Table 34: OSPF Area Output Fields

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub).

Label	Description
	Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area.

Label	Description
Export Policies	The export policies configured in this area.
Export Fltrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Fltrd LSAs	The total number of LSAs filtered by area import policies.

Output Example: show router ospf area detail

```
A:SetupCLI# show router ospf 0 area detail

area

Syntax

area [*area-id*] [**detail**] [**lfa**]

Context

[\[Tree\]](#) (show>router>ospf3 area)

Full Context

show router ospf3 area

Description

This command displays configuration information about all areas or the specified area. When detail is specified operational and statistical information will be displayed.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

detail

Displays detailed information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

Platforms

All

Output

OSPF Area Output

The following table describes the standard and detailed command output fields for an OSPF area.

Table 35: OSPF Area Output Fields

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.

Label	Description
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area.
Export Policies	The export policies configured in this area.
Export Filtrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Filtrd LSAs	The total number of LSAs filtered by area import policies.

Output Example

```
A:SetupCLI# show router ospf 0 area detail

4.56 arp

arp

Syntax

```
arp {[ip-address] | [mac ieee-address] | [ sap sap-id] | [interface ip-int-name] | [ sdp sdp-id:vc-id] |  
[summary] }
```

Context

[\[Tree\]](#) (show>service>id arp)

Full Context

```
show service id arp
```

Description

This command displays the ARP cache entries for this service.

Parameters

ip-address

Specifies the IP address in IP address dotted decimal notation.

ieee-mac-address

Specifies the 48-bit MAC address in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sap-id

Specifies a Service Access Point (SAP) within a service.

ip-int-name

Specifies the name of the IP interface. Interface names can be from 1 to 32 alphanumeric characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes.

sdp-id

Specifies the SDP identifier. Allowed values are integers in the range of 1 and 17407 for existing SDPs.

vc-id

Specifies the virtual circuit identifier.

Values 1 to 4294967295

Platforms

All

Output

The following output is an example of service ID information. [Table 36: Service-ID ARP Field Descriptions](#) describes the output fields.

Output Example

```
A:ALA-A# show service id 100 base

```

Table 36: Service-ID ARP Field Descriptions

Label	Description
IP Address	Specifies the IP address of the ARP cache entry.
MAC Address	Specifies the MAC address associated with the IP address.
Type	Other — Learned through normal ARP queries. Static — Configured by static-arp commands. Managed — Learned from DHCP snooping or configured by host commands.
Age	Indicates age of the ARP entry.
Interface	Indicates the name of the IP interface.
Port	Indicates the port upon which the entry was learned.

arp

Syntax

arp {all | ip-address}

arp interface {ip-int-name | ip-address}

Context

[\[Tree\]](#) (clear>router arp)

Full Context

clear router arp

Description

This command clears all or specific ARP entries.

The scope of ARP cache entries cleared depends on the command line options specified.

Parameters

all

Clears all ARP cache entries.

ip-address

Clears the ARP cache entry for the specified IP address.

Values

ipv4-address: a.b.c.d

ip-int-name

Clears all ARP cache entries for the IP interface with the specified name, up to 32 characters.

ip-address

Clears all ARP cache entries for the specified IP interface with the specified IP address.

Values

ipv4-address: a.b.c.d

Platforms

All

arp

Syntax

arp

Context

[\[Tree\]](#) (clear>service>id arp)

Full Context

clear service id arp

Description

This command clears all ARP entries. This command is only valid for lpipe and VPRN services.

Platforms

All

arp

Syntax

arp [{*ip-int-name* | *ip-address[/mask]* | **mac** *ieee-mac-address* | **summary**}] [*arp-type*]

Context

[\[Tree\]](#) (show>router arp)

Full Context

show router arp

Description

This command displays the router ARP table sorted by IP address. If no command line options are specified, all ARP entries are displayed.

Parameters

ip-int-name

Only displays ARP entries associated with the specified IP interface name.

ip-address[/mask]

Only displays ARP entries associated with the specified IP address and mask.

ieee-mac-address

Only displays ARP entries associated with the specified MAC address.

summary

Displays an abbreviate list of ARP entries.

arp-type

Only displays ARP information associated with the keyword.

Values local, dynamic, static, managed

Platforms

Interface	The IP interface name associated with the ARP entry
No. of ARP Entries	The number of ARP entries displayed in the list

4.57 arp-host

arp-host

Syntax

```
arp-host [wholesaler service-id] {[sap sap-id | interface interface-name | ip-address ip-address[/mask] |  
mac ieee-address | {[ port port-id] [no-inter-dest-id | inter-dest-id inter-dest-id]]} [detail]  
arp-host statistics [sap sap-id | interface interface-name]  
arp-host summary {[interface interface-name | saps ]
```

Context

[\[Tree\]](#) (show>service>id arp-host)

Full Context

```
show service id arp-host
```

Description

This command displays ARP host related information.

Parameters

service-id

The VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

Values 1 to 2148007980, *svc-name: 64 chars max*

sap-id

Specifies the physical port identifier portion of the SAP definition.

interface-name

Displays information for the specified IP interface. 32 characters maximum.

ip-address[/mask]

Displays information associated with the specified IP address.

Values ip-address: a.b.c.d.
mask: 1 to 32

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

port-id

Specifies the port ID.

Values slot, mda, port

no-inter-dest-id

Displays the information about no intermediate destination ID.

inter-dest-id

Indicates the intermediate destination identifier received from either the DHCP or the RADIUS server or the local user database. 32 characters maximum

detail

Displays detailed information.

statistics

Displays ARP host statistics.

summary

Displays summary information.

saps

Displays SAP ARP host related information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example ARP host information for specified service IDs.

Output Example

```

Table 38: Service ARP Host Field Descriptions describes service ARP host information.

Table 38: Service ARP Host Field Descriptions

Field	Description
IP Address	The IP address
Mac Address	The MAC address of the this ARP host
Sap Id	The service SAP ID
Remaining Time	The remaining time
MC Stdbby	The MC standby
Number of ARP hosts	The total number of ARP hosts
Service ID	The service identifier
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile

Field	Description
App-Profile-String	The application profile string
ARP host ANCP-String	The name of the ARP host
ARP host Int Dest Id	The ARP host internal destination ID
RADIUS-User-Name	The RADIUS user name
Session Timeout (s)	The session timeout value
Start Time	The start time
Last Auth	The date and time of the last authentication
Last Refresh	The date and time of the last refresh
Persistence Key	The key value that can be used to track this ARP host in the persistence file.
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit

Field	Description
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

arp-host

Syntax

arp-host {all | mac *ieee-address* | sap *sap-id* | ip-address *ip-address*[/mask]}

arp-host {port *port-id* | {inter-dest-id *intermediate-destination-id* | no-inter-dest-id} [port *port-id*]}

arp-host statistics [sap *sap-id* | interface *interface-name*]

Context

[\[Tree\]](#) (clear>service>id arp-host)

Full Context

clear service id arp-host

Description

This command clears ARP host data.

Parameters

all

Clears all ARP host statistics.

ieee-address

Clears the ARP host MAC address information. The 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

sap-id

Clears the specified SAP information.

ip-address[/mask]

Clears the specified IP address and mask.

Values a.b.c.d
 mask: 1 to 32

port-id

Clear the specified port ID information.

Values

<i>port-id</i>	<i>slot/mda/port [.channel]</i>		
	aps-id	<i>aps-group-id[.channel]</i>	
		aps	keyword
		<i>group-id</i>	1 to 64
	ccag-id	<i>ccag-id.path-id [cc-type]</i>	
		ccag	keyword
		id	1 to 8
		path-id	a, b
		cc-type	.sap-net, net-sap
	eth-tunnel-id	<i>eth-tunnel-id</i>	
		eth-tunnel	keyword
		id	1 to 1024
	lag-id	<i>lag-id</i>	
		lag	keyword
		id	1 to 800

intermediate-destination-id

Displays information about the specified intermediate destination ID. 32 characters maximum.

no-inter-dest-id

Displays the information about no intermediate destination ID.

interface-name

Clears the interface name. 32 characters maximum.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.58 arp-table

arp-table

Syntax

arp-table [*ip ipv4-address*] [**class** *class*] [**next-index** *index*]

Context

[\[Tree\]](#) (tools>dump>wlan-gw>lanext>bd arp-table)

Full Context

tools dump wlan-gw lanext bd arp-table

Description

This command dumps the specified ARP table entries for the specified HLE BD.

Parameters

ipv4-address

Specifies the IP address of the ARP entry to be displayed.

class

Specifies the source on which to filter the ARP table entries.

Values access, network, remote

index

Specifies the next set of results if there are more results than the current output. The additional results are shown at the bottom of the current output.

Values 0 to 4294967295

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ARP table information.

Output Example

```
tools>dump>wlan-gw>lanext>bd# arp-table
=====
MATCHED 1 ARP ENTRY ON SLOT #2 MDA #1
=====
IP ADDRESS          MAC ADDRESS          CLASS    TIMESTAMP

192.168.0.1         AA:BB:CC:00:00:01   ACCESS  05/30/2017 23:49:11
=====
```

4.59 aspath-regex

aspath-regex

Syntax

aspath-regex *reg-exp* {**detail** | **longer**}

aspath-regex *reg-exp*

aspath-regex *reg-exp* **hunt**

Context

[\[Tree\]](#) (show>router>bgp>routes aspath-regex)

Full Context

show router bgp routes aspath-regex

Description

This command displays BGP routes with an AS path matching the specified regular expression.

aspath-regex is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

4.60 association

association

Syntax

association [*ma-index* | *ma-admin-name*] [**detail**]

Context

[\[Tree\]](#) (show>eth-cfm association)

Full Context

show eth-cfm association

Description

This command displays ETH-CFM association information.

Parameters

ma-index

Specifies the maintenance association (MA) index.

Values 1 to 4294967295

ma-admin-name

Specifies the administrative name for the association, up to 64 characters.

detail

Keyword to display detailed information for the ETH-CFM association.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ETH-CFM association information, and the following table describes the output fields.

Output Example

```
A:node-2# show eth-cfm association
=====

```

Table 39: Output fields: ETH-CFM association

Label	Description
Md-index	Displays the maintenance domain (MD) index
Ma-index	Displays the maintenance association (MA) index
Name	Displays the part of the maintenance association identifier which is unique within the maintenance domain name
Int	Displays the CCM transmission interval for all MEPs in the association
Hold	Displays the CCM hold time, in milliseconds, that is added before the defect condition is raised. A value of "n/a" indicates that the MEP is not subsecond and does not support the CCM hold time.
Bridge-id	Displays the bridge-identifier value for the domain association
MEPS	Displays the total local and remote maintenance association end point (MEP)
TxSid	Yes — the Sender ID TLV is included in the supported ETH-CFM PDUs No — the Sender ID TLV is not included in the supported ETH-CFM PDUs
md-admin-name	Displays the administrative MD name
ma-admin-name	Displays the administrative MA name
bridge-name	Displays the administrative bridge-identifier name

association

Syntax

association

association *name* [**statistics**]

Context

[Tree] (show>subscr-mgmt>pfcp association)

Full Context

show subscriber-mgmt pfcp association

Description

This command displays PFCP association information. If no parameters are entered, it displays an overview of all PFCP associations present on the system.

Parameters

name

Specifies the name of the configured PFCP association, up to 32 characters, for which detailed overview information is displayed.

statistics

Specifies that the packet counters for each PFCP message and upstream IBCP message for the specified PFCP association *name* are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of PFCP association output information and the corresponding table describes the output fields:

- [Output Example: show subscriber-mgmt pfcp association](#); [Table 40: PFCP Association Field Descriptions](#)
- [Output Example: show subscriber-mgmt pfcp association name](#); [Table 41: PFCP Association Name Field Descriptions](#)

4.63 authentication

authentication

Syntax

authentication user-name *user-name* **password** *password* [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ppp authentication)

Full Context

tools perform subscriber-mgmt local-user-db ppp authentication

Description

This command authenticates the PPPoE user name.

Parameters

user-name

Specifies the PPP user name up to 253 characters.

password

Specifies the password of this host up to 64 characters.

circuit-id

Specifies the circuit ID up to 127 characters.

circuit-id-hex

Specifies the circuit ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction up to 255 characters.

ieee-address

Specifies information about the MAC address of the PPP session.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies the service name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication **coa-statistics**

Context

[\[Tree\]](#) (show>subscr-mgmt authentication)

Full Context

show subscriber-mgmt authentication

Description

This command displays subscriber management RADIUS authentication policy information and statistics.

Parameters

policy-name

Specifies the subscriber management RADIUS authentication policy name, up to 32 characters, for which information is requested.

association

Displays SAP, interface, local user database host, AA and L2TP associations of this policy.

coa-statistics

Displays the overall statistics for incoming RADIUS Change of Authorization (CoA) messages and Disconnect Messages. For dropped requests, a counter for different drop reasons is available.

statistics

Displays a list of policies with basic statistics (without specifying a policy name) or detailed statistics, including per-server statistics for the specified policy-name. These statistics apply only to the legacy RADIUS server configuration method where the servers are directly configured in the authentication policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management authentication information.

Output Example

Table 43: Subscriber Authentication Field Descriptions

Label	Description
Re-authentication	Whether re-authentication on IPOE renewal is enabled
Username Format	The user name format in RADIUS message

Label	Description
PPPoE Access Method	The PPPoE access method, none, padi, pap-chap
Username Mac-Format	The username is represented when contacting a RADIUS server.
PPP-Username Oper	The PPP user name operation
PPP-Domain-Name	The PPP domain name
Username Oper	The username
Acct-Stop-On-Fail	The failure condition a RADIUS accounting-stop message indicating the failure has to be sent
RADIUS Server Policy	The RADIUS server policy name
Fallback Action	The authentication action in case no RADIUS server is available
Lack Mgmt Change	The time of the most recent management-initiated change to this policy server
Remote Id	The value of the remote ID sub-option
NAS Port Id	NAS port ID generation enabled or disabled
PPPoE Service Name	The PPPoE service name
Access Loop Options	The generation of the DSL forum access loop characteristics RADIUS attributes enabled or disabled
NAS Port Prefix	The type of prefix added to the NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Type	The kind of value to be put in the RADIUS NAS-Port-Type attribute if included in RADIUS authentication request messages
Calling Station Id	The string will be put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
Tunnel Server Attr	The tunnel-server-attrs RADIUS attribute enabled or disabled
NAS Port	The NAS-Port attribute included or excluded
NAS Port Bits Spec	The number that will be put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages
Circuit Id	Circuit ID generation enabled or disabled
NAS Identifier	NAS-Identifier RADIUS attribute enabled or disabled
DHCP Vendor Class Id	dhcp-vendor-class-id RADIUS attribute enabled or disabled

Label	Description
MAC Address	The generation of the client MAC address RADIUS attribute enabled or disabled
NAS Port Suffix	The type of suffix is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
Acct Session Id	The RADIUS accounting session id for this subscriber host
DHCP Options	DHCP options enabled or disabled
Router	The RADIUS router name
Access Algorithm	The algorithm used to access the set of RADIUS servers
Timeout (s)	The timeout for a response from the RADIUS server
Source Address	The source address of the RADIUS message
Retry	The number of retries for contacting the RADIUS server
Hold down time (s)	The hold down time
Index IP Address	The IP address of the index
Port	The port ID
Pend-Req-Limit	The limit of the number of pending RADIUS authentication requests for this RADIUS server
Out/Overload time (s)	The accumulated time that the value of the object RADIUS server has been equal to 'overloaded' since created
Oper State	The operational state
Access-Request	The number of Access-Request packets received by this RADIUS proxy server
Access-Accept	The number of Access-Accept packets received by this RADIUS proxy server
Change-of-Authorization	Change of authorization enabled or disabled
Policy Name	The authentication policy name
Subscr. Pkts Authenticated	The number of subscriber packets authenticated
Subscr. Pkts Rejected	The number of subscriber packets rejected
Subscr. Pkts Rejected Send Failed	The number of subscriber messages (such as DHCP and PPPoE) failed to be sent

Label	Description
subscriber packets authenticated	The number of subscriber packets authenticated
subscriber packets rejected	The number of subscriber packets rejected
subscriber packets send failed	The number of subscriber packets failed to be sent
Requests Received	The number of notify Change-of-Authorization requests received
Requests Accepted	The number of notify Change-of-Authorization requests accepted
Requests Rejected	The number of notify Change-of-Authorization requests rejected
Requests Dropped	The number of notify Change-of-Authorization requests dropped
No Auth Policy found	The number of notify Change-of-Authorization requests found
Invalid message	The number of notify Change-of-Authorization requests rejected because of decode errors
Out of resources	The number of notify Change-of-Authorization requests rejected due to lack of resources
Authentication Failure	The number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id

4.65 authentication-server-check

authentication-server-check

Syntax

```
authentication-server-check server-address ip-address [port port] {{user-name user-name password
password} | attr-from-file file-url} secret key [source-address ip-address] [timeout seconds] [
router router-instance | service-name service-name] nas-identifier nas-id [ debug]
```

Context

[\[Tree\]](#) (tools>perform>security authentication-server-check)

Full Context

tools perform security authentication-server-check

Description

This command is used to perform an authentication check on the RADIUS server.

Parameters

server-address *ip-address*

Specifies the IP address of the RADIUS server.

port

Specifies the port of the RADIUS server.

Values 1 to 65535

user-name

Specifies the user name, up to 253 characters.

password

Specifies the user password, up to 64 characters.

file-url

Specifies to attach additional VSAs from a file.

Values		
<i>local-url:</i>	[<i>cflash-id</i>] [<i>file-path</i>]	
		200 characters maximum, including <i>cflash-id</i> directory length, up to 99 characters each
<i>remote-url:</i>	[[ftp:// tftp://]<login>:<pswd>@<remote-locn>/][<file-path>]	
		255 characters maximum, directory length, up to 99 characters each
<i>remote-locn:</i>	[<hostname> <ipv4-address> <ipv6-address>]	
<i>ipv4-address:</i>	a.b.c.d	
<i>ipv6-address:</i>	x:x:x:x:x:x[-interface]	
	x:x:x:x:x:d.d.d.d[-interface]	
	x - [0..FFFF]H	
	d - [0..255]D	
		interface - up to 32 characters for link local addresses
<i>cflash-id:</i>	cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:	

key

Specifies the secret key shared between the RADIUS client and server, up to 64characters.

source address ip-address

Specifies the source address used for the access-request message.

Values		
<i>ipv4-address</i>	a.b.c.d	
<i>ipv6-address</i>	x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:d.d.d.d	
	x - [0 to FFFF]H	
	d - [0 to 255]D	

seconds

Specifies the time to wait for the RADIUS server response.

Values	1 to 90
---------------	---------

router-instance

Specifies the router instance that should be used by the access request message.

Values		
	<i>router-name</i> <i>vprn-svc-id</i>	
	<i>router-name</i>	Base, management

Default - Base

vpm-svc-id 1 to 2147483647

service-name

Specifies the service name that should be used by the access request message, up to 64 characters.

nas-id

Specifies the NAS identifier, up to 64 characters.

debug

Specifies to display the full debug message, including all VSAs and full hex sting, of the RADIUS reply message.

Platforms

All

4.66 auto-boot

auto-boot

Syntax

auto-boot {**retry** | **terminate**}

auto-boot echo [**debugger**]

no auto-boot echo [**debugger**]

Context

[\[Tree\]](#) (tools auto-boot)

Full Context

tools auto-boot

Description

This command starts and stops the auto-boot process. It is also used to enable the display of auto-discovery information in the CLI.

This command can be used only if the **auto-boot** flag is enabled in the BOF.

The **no** form of this command disables the display of auto-discovery information.

Parameters

retry

Executes the auto-boot process.

terminate

Stops an ongoing auto-boot process.

echo

Enables the display of auto-discovery information in the CLI.

debugger

Includes debugging information in the displayed auto-discovery information.

Platforms

All

auto-boot

Syntax

auto-boot [detail]

auto-boot log

Context

[\[Tree\]](#) (tools>dump auto-boot)

Full Context

tools dump auto-boot

Description

This command displays auto-boot process information.

Parameters

detail

Displays detailed information.

log

Saves auto-boot process information to a log file.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

4.67 auto-disc

auto-disc

Syntax

auto-disc [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn auto-disc)

Full Context

show router bgp routes evpn auto-disc

Description

This command displays BGP-EVPN auto discovery routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

where:

- *as-number1* — 0 to 65535
- *comm-val1* — 0 to 65535
- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the auto discovery route tag.

Values 0 to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',';')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

4.68 auto-discovered-meps

auto-discovered-meps

Syntax

auto-discovered-meps [*mep-id*] **domain** *md-index* **association** *ma-index*

Context

[Tree] (clear>eth-cfm auto-discovered-meps)

Full Context

clear eth-cfm auto-discovered-meps

Description

This command clears remote MEPs that were auto discovered. The function clears a specific auto-discovered MEP learned within an association or all auto-discovered MEPs in the association. When the *mep-id* representing the auto-discovered MEP is omitted and only the **domain** *md-index* and **association** *ma-index* are provided, all auto-discovered MEPs in the association are cleared. At a minimum the **domain** *md-index* and the **association** *ma-index* must be provided.

Only auto-discovered MEPs may be cleared. This command has no effect on manually configured MEPs.

Parameters

mep-id

Specifies the MEP ID of the remote MEP that was auto-discovered.

Values 1 to 8191

md-index

Specifies the domain context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

ma-index

Specifies the association context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Table 46: Show Service-ID Base Output Fields

Label	Description
Service Id	Displays the service identifier

Label	Description
Vpn Id	Displays the VPN ID assigned to the service
Service Type	Displays the type of service: Epipe, Apipe, Fpipe, Ipipe, VPLS, IES, VPRN
MACSec enabled	Indicates whether MACsec is enabled
Name	Displays the service name
Description	Displays the generic information about the service
Customer Id	Displays the customer identifier
Creation Origin	Displays how the service was created
Last Status Change	Displays the date and time of the most recent status change to this customer
Last Mgmt Change	Displays the date and time of the most recent management-initiated change to this customer
Etree Mode	Indicates whether Etree mode is enabled
Admin State	Displays the state of the service
Oper State	Displays the operating state of the service
MTU	Displays the largest frame size (in octets) that the service can handle
SAP Count	Displays the number of SAPs defined on the service
SDP Bind Count	Displays the number of SDPs bound to the service
Snd Flush on Fail	Indicates whether sending MAC flush messages is enabled
Host Conn Verify	Indicates whether the host is connected
Propagate MacFlush	Indicates whether MAC flush messages are propagated to remote Target LDP (TLDP) peers
Per Svc Hashing	Indicates whether per-service hashing is enabled for this service
Allow IP Intf Bind	Indicates whether allow IP interface binding is enabled for R-VPLS services
Fwd-IPv4-Mcast-To*	Indicates whether IPv4 multicast traffic to the VPRN interface attached to the R-VPLS is enabled
Fwd-IPv6-Mcast-To*	Indicates whether IPv6 multicast traffic to the VPRN interface attached to the R-VPLS is enabled
Mcast IPv6 scope	Displays the IPv6 multicast scope

Label	Description
Def. Gateway IP	Displays the default gateway
Def. Gateway MAC	Displays the default gateway MAC address
Temp Flood Time	Displays the temporary flood time
Temp Flood	Displays the temporary flood time state
Temp Flood Chg Cnt	Displays the temporary flood change count
SPI load-balance	Indicates whether SPI load-balance is enabled
TEID load-balance	Indicates whether TEID load balancing is enabled
Lbl Eth/IP L4 TEID	Indicates whether load balancing based on MPLS labels and inner Ethernet, IP addresses, L4 ports, and TEID is enabled
Src Tep IP	Displays the Termination Endpoint address
Vxlan ECMP	Indicates whether VXLAN ECMP is enabled
MPLS ECMP	Indicates whether MPLS ECMP is enabled
Ignore MTU Mismatch	Displays the configuration state of the ignore-l2-mtu-mismatch command for the service
SAP Type	Displays the type of SAPs allowed in the service and describes the processing applied by the node packets received on these SAPs
Vxlan Src Tep Ip	Displays the VXLAN source tunnel endpoint (TEP) ID
Force QTag Fwd	Indicates whether force Q-tag forwarding is enabled
Oper Group	Displays the operational group for this service
Identifier	Displays the service access (SAP) and destination (SDP) points
Type	Displays the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on the SDP
AdmMTU	Displays the largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented
OprMTU	Displays the operational MTU of the SAP or SDP bind
Admin State (Adm)	Displays the administrative state
Oper State (Opr)	Displays the operation state

Label	Description
PBB Tunnel Point	Displays the endpoint in the B-VPLS environment where the Epipe terminates
Admin MTU	Displays the B-VPLS admin MTU
Backbone-Flooding	Indicates whether traffic is flooded in the B-VPLS for the destination instead of unicast. If the backbone destination MAC is in the B-VPLS FDB, it is unicast.
ISID	Displays the 24 bit field carrying the service instance identifier associated with the frame. It is used at the destination PE as a demultiplex or field.
Router Oper State	Displays the operational state of the router
Route Dist.	Displays the route distinguisher (RD) type
VPRN Type	Displays the VPRN type
Oper Route Dist	Displays the IP address of the operational RD
Oper RD Type	Displays the operational RD type
AS Number	Displays the AS number
Router Id	Displays the router ID
ECMP	Displays the status of ECMP
ECMP Max Routes	Displays the maximum ECMP routes
Max IPv4 Routes	Displays the maximum IPv4 routes
Local Rt Domain-id	Displays the local route domain ID

```

Context

[\[Tree\]](#) (show>qos bcg)

Full Context

```
show qos bcg
```

Description

The **show qos bcg** command outputs the current and historical visitation time associated with the specified BCG name.

A Burst Control Group (BCG) represents a list of queues that share the same non-scheduling PIR and CIR bucket target update interval. When a queue's scheduled rate bursts above its PIR bucket depth, the queue is removed from its scheduling context. The system uses a BCG in order to visit the queues PIR bucket to periodically drain an appropriate amount from the bucket. When the bucket has been drained below the PIR bucket threshold, the queue is allowed back onto its scheduling context. The amount decremented from the bucket is a function of the amount of time that has elapsed since the last bucket update and the queue's shaping rate (PIR). If the queue's shaping rate is configured as 1 Mb/s and 1 ms has elapsed since the last bucket update, the system decrements the PIR bucket by 125 bytes. One caveat is that the bucket cannot be decremented past a depth of 0. This fact drives how the system chooses which BCG is used to manage the queue bucket update interval.

If a queue's shaping rate is 1 Mb/s and the threshold (burst limit) is set to 10 kbytes, the maximum amount of time that can expire before the queue is updated without resulting in a negative bucket depth is 81.92 ms. This can be calculated by taking the number of bits represented by the bucket depth (10 kbytes = 10 * 1,024 * 8 = 81,920 bits) and dividing it by the rate (81,920 bits / 1,000,000 bits per second = 81.92 ms). The queue is not removed from the scheduler until the PIR bucket depth has equaled or exceeded the configured burst threshold, so the bucket is at least 10 kbytes deep. If the system visits the queue PIR bucket within 81.92 ms, the resulting decrement operation leaves the bucket. If the system takes longer than 81.92 ms, the decrement result will be greater than 10 kbytes and part of the decrement result is lost.

The net result is that, because of less than timely updates, the queue will not be returned to the scheduler context fast enough and some shaping bandwidth for the queue will be lost (underrun the shaping rate).

Each FP2- and FP3-based Q-chip maintains eight BCGs, each targeting a certain queue bucket visitation time. A 1 s, 40 ms, 20 ms, 10 ms, 5 ms, 1 ms, 500 μ s, and 100 μ s BCG is supported. An FP4- or FP5-based Q-chip has an additional four BCGs with target visitation times of 50 μ s, 10 μ s, 5 μ s, and 1 μ s. By default, queues are placed in a BCG based on shaping rate and the queue's burst limit (PIR threshold depth) is set based on the BCG visitation time and the queue's specified shaping rate.

When explicit burst-limit threshold values are defined for a shaping queue, the system picks an appropriate BCG based on the queue's configured shaping rate and the explicit threshold to find a BCG with the best target visitation time that results in worst-case decrement values that are less than the configured threshold. However, when a queue is placed on a 'faster' BCG, more visitation resources are consumed and it is possible that the system will not meet a queue's decrement constraints.

The **show qos bcg** command allows visibility into a BCG's historic and current visitation time. The system samples the amount of time it takes each list to visit each of its associated queues once each second and stores the last 10 samples. It also keeps the longest visitation time seen since the last time the BCG statistics were cleared, the longest visitation time for the current queue-to-BCG lists associations, calculated longest visitation time based on maximum scheduling bandwidth, and the longest visitation time for an optionally defined scheduling rate.

With each sample, the system indirectly calculates the amount of scheduling bandwidth based on how many Q-chip resources were diverted from BCG visitation processing. This calculated scheduling bandwidth is used to evaluate the worst-case visitation times for each BCG. The calculated scheduling bandwidth value is stored with the longest-seen-visitiation time and the longest-seen-visitiation time with the current queue-to-BCG mappings. This is not applicable to an FP4- or FP5-based Q-chip, so the **exp-util-bw** parameter is not applicable to an FP4- or FP5-based Q-chip.

Parameters

Burst-Control-Group-name

Specifies which globally unique Burst Control Group to display. If the specified Burst Control Group does not exist, the show command will fail.

Values <slot>/<fp>-< target-visitiation-time>[-<direction>]

slot - 1 to 20

fp - 1 to 8

target-visitiation-time - 1 μ s, 5 μ s, 10 μ s, 50 μ s, 100 μ s, 500 μ s, 1ms, 5ms, 10ms, 20ms, 40ms, 1s

direction - i, e

member-queues

Includes a list of all queues attached to the specified burst-control-group-name. The 100% scheduling bandwidth used in the 'at-risk' determination may be overridden with a specified scheduling bandwidth by using the exp-util-bw parameter. When the **member-queues** parameter is specified, the output includes a single-entry summary of the internal queues.

exp-util-bw mega-bits-per-second

Displays a calculated worst-case visitation rate for the specified BCG name based on the specified value of *megabits-persecond* which also modifies the member queue's 'at-risk' state output. This parameter is not applicable to FP4- or FP5-based hardware which has

dedicated internal resources for handling BCG visitations and is unaffected by scheduling bandwidth.

Values 0 to 4294967

port *port-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *port-id*. If the specified *port-id* does not exist, the show command will fail.

Values Up to 17 characters

sap *sap-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sap-id*. If the specified *sap-id* does not exist, the show command will fail.

Values Up to 64 characters

subscriber *sub-ident*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sub-ident*. If the specified *sub-ident* does not exist, the show command will fail.

Values Up to 32 characters

access-queue-grp *queue-group-name*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *queue-group-name*. If the specified *queue-group-name* is not found, the show command will fail.

Values Up to 32 characters

service *service-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *service-id*. If the specified *service-id* does not exist, the show command will fail.

Values 1 to 2147483647

card-slot-number

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for all queues associated with the specified *card-slot-number*. If the specified *card-slot-number* does not exist, the show command will fail.

Values 1 to 40

[*ingress* | *egress*]

The **ingress** and **egress** keywords specify the direction to display and are mutually exclusive.

Description

Commands in this context dump LSP-BFD information for LDP and RSVP LSPs.

Platforms

All

bfd

Syntax

bfd

Context

[\[Tree\]](#) (show>router bfd)

Full Context

show router bfd

Description

Commands in this context display bidirectional forwarding detection (BFD) information.

Platforms

All

Output

The following output is an example of BFD information.

Output Example

```
*A:Dut-D# show router 3 bfd session

Context

[Tree] (show>router>seg-rt>sr-policies bgp)

Full Context

show router segment-routing sr-policies bgp

Description

This command displays the traffic statistics of all or a filtered set of the BGP policies, or displays summary parameters.

Parameters

color

Filters on the color.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Filters on the end-point IPv4 or IPv6 address.

Values *ipv4-address* — a.b.c.d
ipv6-address — x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:d:d:d
x — [0 to FFFF]H
d — [0 to 255]D

preference-id

Filters on the preference ID.

Values 0 to 4294967295

distinguisher-id

Filters on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information for the BGP policies.

Platforms

All

Output

The following outputs are examples of traffic statistics for the BGP policies.

5.11 bgp-evpn

bgp-evpn

Syntax

bgp-evpn [**instance** *instance-id*]

Context

[\[Tree\]](#) (show>service>id bgp-evpn)

Full Context

show service id bgp-evpn

Description

This command displays the **bgp-evpn** configured parameters for a specified service, including the administrative status of VXLAN, the configuration for **mac-advertisement** and **unknown-mac-route**, as well as the **mac-duplication** parameters. The command displays the duplicate MAC addresses that **mac-duplication** has detected.

This command also displays whether the **ip-route-advertisement** command (and the **incl-host** parameter) is enabled. If the service is BGP-EVPN MPLS, the command also displays the parameters corresponding to EVPN-MPLS.

Parameters

instance-id

Filters on the instance ID.

Values 1 to 2

Platforms

All

Output

The following output is an example of BGP EVPN information.

Output Example

```
show service id 110 bgp-evpn

bgp-evpn

Syntax

bgp-evpn [**ethernet-segment**]

bgp-evpn ethernet-segment name *name* [**all**] [**evi** *evi*] [**isid** *isid*]

Context

[\[Tree\]](#) (show>service>system bgp-evpn)

Full Context

show service system bgp-evpn

Description

This command displays all the information related to the base EVPN instance, including the base RD used for Ethernet Segment (ES) routes, the ESs or individual ES information.

Parameters

ethernet-segment

Displays information for ES.

name

Specifies the name of an ES, up to 32 characters.

all

Displays all available information for the specified ES.

evi

Displays information for the specified EVI.

Values 1 to 65535

isid

Displays information for the specified ISID.

Values 1 to 16777215

Platforms

All

Output

The following output is an example of service system BGP EVPN information, and [Table 48: BGP EVPN Output Fields](#) describes the output fields.

Table 48: BGP EVPN Output Fields

Label	Description
Eth Seg Route Dist	Specifies the ES Route Distinguisher.
Eth Seg Oper Route Dist	Specifies the operational ES Route Distinguisher.
Eth Seg Oper Route Dist Type	Specifies the operational ES Route Distinguisher type.
Ad Per ES Route Target	Specifies the AD per-ES route target.
Leaf Label	Specifies the leaf label.
Alloc Leaf Label	Specifies the allocated leaf label.
Leaf Label Value	Specifies the leaf label value.
EVI RT set Route Dist.	Specifies the EVI RT set range.
Extended Evi Range	Specifies the EVI extended range status.
Mcast Leave Sync Prop	Specifies the multicast leave synchronization propagation time.
Attribute Uniform Prop	Specifies the attribute uniform propagation configuration.
BGP Path Selection	Specifies the configuration of the BGP Path Selection.

bgp-evpn

Syntax

bgp-evpn

Context

[\[Tree\]](#) (tools>dump>service>system bgp-evpn)

Full Context

tools dump service system bgp-evpn

Description

Commands in this context display information about the BGP-EVPN base instance.

Platforms

All

5.12 bgp-evpn-multi-homing

bgp-evpn-multi-homing

Syntax

bgp-evpn-multi-homing

Context

[\[Tree\]](#) (show>redundancy bgp-evpn-multi-homing)

Full Context

show redundancy bgp-evpn-multi-homing

Description

This command shows the information related to the EVPN global timers.

Platforms

All

Output

Output Example

```
*A:PE2# show redundancy bgp-evpn-multi-homing
=====
Redundancy BGP EVPN Multi-homing Information
=====
Boot-Timer           : 10 secs
Boot-Timer Remaining : 0 secs
ES Activation Timer  : 3 secs
=====
```

5.13 bgp-ipvpn

bgp-ipvpn

Syntax

bgp-ipvpn

Context

[\[Tree\]](#) (show>service>id bgp-ipvpn)

Full Context

```
show service id bgp-ipvpn
```

Description

This command displays the BGP IPVPN configured parameters for a specified service.

Platforms

All

Output

The following output is an example of BGP IPVPN information, and [Table 49: BGP IPVPN Output Fields](#) describes the output fields.

Table 49: BGP IPVPN Output Fields

Label	Description
Admin State	Specifies the administrative state
VRF Import	Specifies the VRF import
VRF Export	Specifies the VRF export
Route Dist.	Specifies the route distinguisher
Oper Route Dist	Specifies the operational route distinguisher
Oper RD Type	Specifies the operational RD type
Route Target	Specifies the route target
Route Target Import	Specifies the route target import
Route Target Export	Specifies the route target export
D-Path Domain-Id	Specifies the D-Path domain ID

Output Example

```
# show service id 2000 bgp-ipvpn

=====
Service 2000 BGP-IPVPN MPLS Information
=====
Admin State      : Up
VRF Import       : None
VRF Export       : None
Route Dist.     : 0:0
Oper Route Dist  : 192.0.2.3:64000
Oper RD Type     : auto
Route Target     : None
```

```
Route Target Impor: None
Route Target Expor: None
D-Path Domain-Id : 65000:1
<snip>
```

5.14 bgp-ls

bgp-ls

Syntax

```
bgp-ls [hunt] [node | link | ipv4-prefix [ipv4-prefix/mask-len]]
```

Context

[\[Tree\]](#) (show>router>bgp>routes bgp-ls)

Full Context

```
show router bgp routes bgp-ls
```

Description

This command displays BGP-Link State (BGP-LS) routes.

Parameters

hunt

Displays detailed information about the routes, including information about the advertised routes (RIB-OUT).

node

Displays BGP-LS link NLRI routes.

link

Displays BGP-LS node NLRI routes.

ipv4-prefix

Displays BGP-LS IPv4-prefix NLRI routes.

ipv4-prefix/prefix-length

Displays the entries matching the specified IPv4 prefix and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)
ipv4-prefix-length:	0 to 32

Platforms

All

Output

The following outputs are examples of information displayed by the **bgp-ls** command.

Output Example

```
# show router bgp routes bgp-ls

5.15 bgp-multi-homing

bgp-multi-homing

Syntax

bgp-multi-homing

Context

[\[Tree\]](#) (show>redundancy bgp-multi-homing)

Full Context

show redundancy bgp-multi-homing

Description

This command displays BGP multi-homing information.

Platforms

All

5.16 bgp-nh-info

bgp-nh-info

Syntax

bgp-nh-info [**location** *location-id*] [**bgp-nh** *ip-address*]

Context

[\[Tree\]](#) (show>router>bgp>orr bgp-nh-info)

Full Context

show router bgp optimal-route-reflection bgp-nh-info

Description

This command displays the calculated IGP cost from a particular location ID to all prefixes containing BGP next-hop addresses.

Parameters

location-id

Specifies the ORR location identifier.

Values 1 to 16 (7750 SR-12, VSR)
 1 to 255 (all other platforms)

ip-address

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d.
ipv6-address:	x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

Platforms

All

Output

The following table describes the command output fields for the **show router bgp optimal-route-reflection bgp-nh-info** command output.

Table 50: ORR bgp-nh-info Fields

Label	Description
Next Hop Loc	The address of the next-hop location.
Dest-Prefix	Displays the longest prefix match for the BGP next-hop address from the point of view of a specific location. Displays "unreachable" if no route exists to the BGP next-hop from the location.
DB-Source	Displays the source of the reachability information in the TE database.
Type	Displays the type of route or reachability, either intra-area or inter-area.
Proto	Displays the source protocol that is providing reachability to the BGP next-hop address.
Metric	Displays the IGP cost to reach the BGP next-hop from the location reference point.

Label	Description
Preference	Displays the routing preference of the route that is providing reachability to the BGP next-hop address. This is derived from standard protocol preference values.

Output Example

```
*A:Dut-C# show router bgp optimal-route-reflection bgp-nh-info

5.17 bgp-peering-policy

bgp-peering-policy

Syntax

bgp-peering-policy [*policy-name*]

Context

[Tree] (show>subscr-mgmt bgp-peering-policy)

Full Context

show subscriber-mgmt bgp-peering-policy

Description

This command displays BGP peering policy information.

Parameters

policy-name

Specifies the BPG peering policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BOF, and [Table 51: Show BGP peering policy fields](#) describes the output fields.

```
show subscriber-mgmt bgp-peering-policy "bgp-policy-1"
```

Output Example

```

```

Table 51: Show BGP peering policy fields

Label	Description
Description	Displays the description of the BGP peering policy
IP address family IPv4	Displays whether the IPv4 family is enabled
IP address family IPv6	Displays whether the IPv6 family is enabled
Advertise Inactive	Displays whether inactive BGP routes are advertised to other BGP peers
Aggregator id zero	Displays whether the router ID in the BGP aggregator path attribute is set to zero when BGP aggregates routes
AS Override	Displays whether the peer ASN is overridden with the local ASN in AS Path
Auth Key Chain	Displays the authentication key chain name
Authentication Key	Displays whether and authentication key is configured
BFD enable	Displays the BFD enable status
Cluster Id	Displays the cluster ID
Connect Retry	Displays the connect retry timer value in seconds
Damping	Displays whether BGP route damping for learned routes is enabled
Disable Client Ref*	Displays whether routes received from neighbors considered to be RR clients are reflected to other clients
Disable Communities	Displays whether standard or extended communities are sent
Disable FE Failover	Displays the BGP fast external failover state
Hold Time	Displays the hold time in seconds before closing the BGP connection
Keep Alive	Displays the keepalive timer value in seconds
Local Address	Displays the local IP address
Local AS	Displays the local AS value
Local Preference	Displays the local preference value
Loop Detect	Displays the loop detect type: drop-peer ignore-loop off discard-route

Label	Description
MED Out	Displays the Multi-Exit Discriminator value or "IGP Cost"
Min Route Advertis*	Displays the minimum interval in seconds for a prefix to be advertised to a peer
Multihop	Displays the TTL value entered in IP header of packets sent to peer
Next Hop Self	Displays whether the next hop path attribute is set to self when advertising
Passive	Displays whether to wait passively for BGP peer to connect
Peer AS	Displays the peer AS value
Preference	Displays the preference value
Prefix Limit	Displays the prefix limit type
Prefix Log Only	Displays the prefix log only type
Prefix Threshold	Displays the prefix threshold type
Remove Private AS	Displays whether private AS numbers up to first public ASN encountered should be removed
TTL Security	Displays the minimum TTL value for incoming BGP packets
Type	Displays the BGP peer type (Internal External No Type)
Disable 4byte ASN	Displays whether 4-byte AS numbers are used
Export Policy	Displays the export policies
Import Policy	Displays the import policies
Last Mgmt Change	Displays the date and time of the last management change
Prefix Limits Per Address Family	
Family	Displays the address family: ipv4 ipv6
Limit	Displays the maximum number of BGP routes per address family that can be received from an ESM dynamic BGP peer before an administrative action is taken
Idle Timeout	Displays the time, in minutes, before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, this value is "forever" and a manual reset must be performed to re-establish the BGP peer after reaching the prefix limit.
Threshold	Displays the percentage threshold before triggering a warning message

Label	Description
Log Only	Displays whether only a warning message is sent or also the BGP session is taken down
Post Import	Displays the state on whether limits should be applied after import policies

5.18 bgp-route-distinguisher

bgp-route-distinguisher

Syntax

bgp-route-distinguisher [vprn] [vpls] [epipe]

bgp-route-distinguisher svc

bgp-route-distinguisher ad-evi-rt-set

bgp-route-distinguisher system

Context

[\[Tree\]](#) (show>service>system bgp-route-distinguisher)

Full Context

show service system bgp-route-distinguisher

Description

This command displays the BGP operational route distinguishers (RDs) used by all the BGP-enabled services in the system. The information can be filtered by service: VPRN, VPLS, or Epipe. The output can also be filtered to show only the relevant RD information related to services (**svc**), or the EVPN Auto-Discovery routes (**ad-evi-rt-set**), or the system RDs (**system**).

Platforms

All

Output

The following output is an example of service BGP RD information.

```
Auto-rd <none>
Ethernet-segment <none>
EVI RT Set RD Range 1.2.3.6:1-1.2.3.6:512 configured
// the above is the case when the "Extended Evi Range" is disabled.
// When enabled :it is "1.2.3.6:1-1.2.3.6:65535"
```

Output Example

```

bier-info

Syntax

bier-info [*system-id* | *lsp-id*] [**level** *level*]

Context

[\[Tree\]](#) (show>router>isis bier-info)

Full Context

show router isis bier-info

Description

This command displays IS-IS BIER sub-TLV information.

Parameters

system-id

Specifies the system ID, up to 72 characters.

lsp-id

Specifies the LSP ID, up to 72 characters.

Platforms

All

5.22 bin-group

bin-group

Syntax

bin-group *bin-group-number* [**detail**]

Context

[\[Tree\]](#) (show>oam-pm bin-group)

Full Context

show oam-pm bin-group

Description

Show the configuration data for one or all OAM Performance Monitoring bin groups.

Parameters

bin-group-number

Specifies an OAM Performance Monitoring bin group.

Values 1 to 255

detail

Keyword to display additional exclusion and event monitoring information for the bin group.

Platforms

All

Output

The following output is an example of OAM-PM bin group information.

Output Example

```
show oam-pm bin-group
-----
Configured Lower Bounds for Delay Tests, in microseconds
-----
Group Description                Admin Bin   FD(us)    FDR(us)   IFDV(us)

5.24 binding-label

binding-label

Syntax

binding-label [/label] [detail]

binding-label [/label] egress-stats

binding-label [/label] ingress-stats

Context

[Tree] (show>router>mpls>forwarding-policies binding-label)

Full Context

show router mpls forwarding-policies binding-label

Description

This command displays the MPLS forwarding policy binding label information.

Parameters

label

Specifies the label value.

Values 32 to 1048575

detail

Displays detailed information of the binding label.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

ingress-stats

Displays ingress statistics information.

Platforms

All

Output

[Table 52: MPLS Binding Label Output Fields](#) describes MPLS binding label output fields.

Table 52: MPLS Binding Label Output Fields

Label	Description
Label	Specifies the label number.

Label	Description
Preference	Specifies the preference.
Oper State	Specifies the operational state (up down).
Policy Name	Specifies the MPLS forwarding policies binding label name.
No. of Binding Labels	Specifies the number of binding labels.
OperDown Reason	Specifies the reason for being operationally down.
Down Time	Specifies the downtime date and time.
NumNextHop Grps	Specifies the number of next-hop groups.
Ingress Stats	Specifies if ingress stats are enabled for collection (disabled enabled).
IngOperState	Specifies the ingress operational state (up down)
Revert Timer	Specifies the revert timer value.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct indirect).
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.
Next Revert In	Specifies the next revert interval.
Primary nexthop	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false true).
NHopDown Reason	Specifies the reason for the next-hop down.
Backup nexthop	Specifies the IP address of the backup next-hop.
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

Output Example

```

binding-label

Syntax

binding-label *label* **ingress-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>mpls>forwarding-policies binding-label)

Full Context

monitor router mpls forwarding-policies binding-label

Description

This command monitors statistics for Forwarding Policy Binding Label.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

binding-label

Syntax

binding-label *label* **ingress-stats**

Context

[\[Tree\]](#) (clear>router>mpls>forwarding-policies binding-label)

Full Context

clear router mpls forwarding-policies binding-label

Description

This command clears or resets statistics for the MPLS forwarding policy binding label.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

Platforms

All

5.25 bindings

bindings

Syntax

bindings [**mac** *ieee-address*]

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway bindings)

Full Context

show subscriber-mgmt vrgw brg gateway bindings

Description

This command lists all the DHCP bindings of the local pool associated with the specified BRG. If the MAC attribute is specified, only the binding for that MAC address is displayed.

Parameters

ieee-address

specifies the MAC address identifying a specific binding.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway binding information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05" bindings

5.26 bluetooth

bluetooth

Syntax

bluetooth [device-mac *[ieee-address]* | module *[cpm-slot]*]

Context

[Tree] (show>system bluetooth)

Full Context

show system bluetooth

Description

This command displays detailed information about the Bluetooth configuration on the CPM or chassis.

Parameters

ieee-address

Specifies the source MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

cpm-slot

Specifies the CPM slot.

Values A , B, C, D

Platforms

7750 SR-1, 7750 SR-s

Output

The following output is an example of Bluetooth configuration information. [Table 53: System Bluetooth Field Descriptions](#) describes the output fields.

Output Example

```
*A:bkvm18>show>system# bluetooth
=====

Table 53: System Bluetooth Field Descriptions

Label	Description
Passkey	The Bluetooth passkey in use by the system
Advertising Timeout	The amount of time the Bluetooth will advertise that it is ready to pair
Power State	The operating mode for Bluetooth

Label	Description
Pairing Button	Displays whether the pairing button is enabled for use
Device	The MAC address of the Bluetooth device
Description	The customer-entered description for the Bluetooth device
Module	Displays which CPM module contains the Bluetooth device
Connected Device	Displays if there is a device actively paired to the module
Device MAC	The MAC address of the Bluetooth device connected to the module
Device Description	The description associated with the connected Bluetooth device
Configured Identifier	The customer-defined Bluetooth identifier for the module
Operational Identifier	The Bluetooth identifier in use for the module

5.28 bof

bof

Syntax

bof [*cflash-id* | **booted**]

Context

[\[Tree\]](#) (show bof)

Full Context

show bof

Description

This command displays the Boot Option File (BOF) executed on last system boot or on the specified device.

If no device is specified, the BOF used in the last system boot displays. If the BOF has been modified since the system boot, a message displays.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration bof** command or the **info** command in the bof configuration region.

Parameters

cflash-id

Displays the cflash directory name. The slot name is not case-sensitive. Use upper or lowercase "A" or "B" for the slot name.

Values cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

booted

displays the boot option file used to boot the system.

Platforms

All

Output

The following output is an example of BOF, and [Table 54: Show BOF Output Fields](#) describes the output fields.

Output Example

```
A:ALA-1# show bof cf3:
=====

=====
A:ALA-1#
```

Table 54: Show BOF Output Fields

Label	Description
primary-image	The primary location of the directory that contains the runtime images of both CPM and XCM/IOM.
primary-config	The primary location of the file that contains the configuration.

Label	Description
primary-dns	The primary DNS server for resolution of host names to IP addresses.
secondary-image	The secondary location of the directory that contains the runtime images of both CPM and XCM/IOM.
secondary-config	The secondary location of the file that contains the configuration.
secondary-dns	The secondary DNS server for resolution of host names to IP addresses.
tertiary-image	The tertiary location of the directory that contains the runtime images of both CPM and XCM/IOM.
tertiary-config	The tertiary location of the file that contains the configuration.
address	The IP address and mask associated with the CPM Ethernet port or the secondary CPM port.
tertiary-dns	The tertiary DNS server for resolution of host names to IP addresses.
persist	on — Persistent indexes between system reboots is enabled. off — Persistent indexes between system reboots is disabled.
wait	The time configured for the boot to pause while waiting for console input.
autonegotiate	no autonegotiate — Autonegotiate not enabled. autonegotiate — Autonegotiate is enabled.
duplex	half — Specifies that the system uses half duplex. full — Specifies that the system uses full duplex.
speed	The speed of the CPM Ethernet interface.
console speed	The console port baud rate.
dns domain	The domain name used when performing DNS address resolution.
uplinkA-address	Displays the Uplink-A IP address.
uplinkA-port	Displays the primary port to be used for auto-boot.
uplinkA-route	Displays the static route associated with Uplink-A.
uplinkA-vlan	Displays the VLAN ID to be used on Uplink-A.
uplinkB-address	Displays the Uplink-B IP address.
uplinkB-port	Displays the secondary port to be used for auto-boot.

Label	Description
uplinkB-route	Displays the static route associated with Uplink-B.
uplinkB-vlan	Displays the VLAN ID to be used on Uplink-B.
uplink-mode	Displays the uplink mode of the device.
no-service-ports	Displays the ports on which service traffic is not processed.
use-expansion-card-type	The expansion card type.
system-profile	The system profile used by the system when it is rebooted.

bonding bonding-id *bonding-id* [**detail**]

Context

[\[Tree\]](#) (show>service bonding)

Full Context

show service bonding

Description

This command displays an overview of active bonding contexts and the associated access connections. When a bonding ID is specified, only information for that specific context is displayed.

Parameters

bonding-id

Specifies the ID of a specific bonding context.

detail

Displays additional detailed bonding settings, such as load-balancing.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of bonding information.

Output Example

```
Node# show service bonding
=====
Bonding Summary
=====
-----
Bond1 - svc:40 - itf:grp_itf_bonding
-----
 1 - PPP - svc:30 - sap:1/1/3:1 - mac:00:00:00:00:00:01 - sid:1
 2 - IPOE - svc:11 - sap:pxc-1.b:1.8 - mac:00:03:ff:f0:01:00

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg brg-hosts)

Full Context

show subscriber-mgmt vrgw brg brg-hosts

Description

This command displays operational information for connected BRGs and related hosts.

Parameters

ieee-address

Displays detailed information for each prefix.

ip-address

Displays only the prefixes associated with this subscriber interface.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management BRG host information.

Output Example

```
Node# show subscriber-mgmt brg brg-hosts

5.37 bypass-tunnel

bypass-tunnel

Syntax

```
bypass-tunnel [to ip-address] [protected-lsp [name]] [dynamic | manual | p2mp] [detail] [lsp-name  
session-name]
```

Context

[\[Tree\]](#) (show>router>mpls bypass-tunnel)

Full Context

```
show router mpls bypass-tunnel
```

Description

If fast reroute is enabled on an LSP and the facility method is selected, instead of creating a separate LSP for every LSP that is to be backed up, a single LSP is created which serves as a backup for a set of LSPs. Such an LSP tunnel is called a bypass tunnel.

Parameters

ip-address

Specifies the IP address of the egress router.

name

Specifies the name of the LSP protected by the bypass tunnel up to 160 characters. "*" is accepted as a wild card character.

dynamic

Displays dynamically-assigned labels for bypass protection.

manual

Displays manually-assigned labels for bypass protection.

detail

Displays detailed information.

p2mp

Displays P2MP bypass tunnel information.

session-name

Specifies the session name, up to 160 characters, of the LSP used in the path. "*" can be used as a wildcard character.

Platforms

All

Output

The following output is an example of MPLS bypass tunnel information.

[Table 55: MPLS Bypass Tunnel Output Fields](#) describes MPLS bypass tunnel output fields.

Table 55: MPLS Bypass Tunnel Output Fields

Label	Description
To	The IP address of the egress router.
State	The LSP's administrative state.
Out I/F	Specifies the name of the network IP interface.
Out Label	Specifies the incoming MPLS label on which to match.
Reserved BW (kb/s)	Specifies the amount of bandwidth in Mb/s reserved for the LSP.

Output Example

```
*A:Dut-B# show router mpls bypass-tunnel detail

6 c Commands

6.1 ca-profile

ca-profile

Syntax

ca-profile
ca-profile *name* [**association**]

Context

[\[Tree\]](#) (show certificate ca-profile)

Full Context

show certificate ca-profile

Description

This command shows certificate-authority profile information.

Parameters

name
Specifies the name of the Certificate Authority (CA) profile.

association
Displays associated CA profiles.

Platforms

All

6.2 cache

cache

Syntax

cache [**peer** *ip-address*] [**group** *ip-address*] [**source** *ip-address*] [**originrp** *ip-address*]

Context

[\[Tree\]](#) (clear>router>msdp cache)

Full Context

clear router msdp cache

Description

This command clears the MSDP cache.

Parameters

peer *ip-address*

Clears the cache of the IP address of the peer to which Multicast Source Discovery protocol (MSDP) source-active (SA) requests for groups matching this entry's group range were sent.

group *ip-address*

Clears the group IP address of the SA entry.

source *ip-address*

Clears the source IP address of the SA entry.

originrp *ip-address*

Clears the origin rendezvous point (RP) address type of the SA entry.

Platforms

All

cache

Syntax

cache aggregate {src-dst-proto | src-dst-proto-port} family {ipv4 | ipv6}

cache all family {ipv4 | ipv6}

Context

[\[Tree\]](#) (tools>dump>cflowd cache)

Full Context

tools dump cflowd cache

Description

This command displays the contents of the cflowd active cache. This information can be displayed either in raw form where every flow entry is displayed or in an aggregated form.

[Table 56: Tools Dump cflowd Cache Output Fields](#) describes the cflowd cache output fields.

Table 56: Tools Dump cflowd Cache Output Fields

Label	Description
Proto/Protocol	Displays the IPv4 or IPv6 protocol type
Source Address/Src-IP	Displays the source IP address of the flow (IPv4 or IPv6)
Destination Address/Dst-IP	Displays the destination IP address of the flow (IPv4 or IPv6)
Intf/Ingr	Displays the ingress interface associated with the sampled flow (only displayed with the raw (all) output)
Intf/Egr	Displays the egress interface associated with the sampled flow (only displayed with the raw (all) output)
S-Port	Displays the source protocol port number
D-Port	Displays the destination protocol port number
Pkt-Cnt	Displays the total number of packets sampled for the associated flow
Byte-Cnt	Displays the total number of bytes of traffic sampled for the associated flow
Start-Time	Displays the system time when the first packet was sampled for the associated flow
Flags	Displays the IP flag value from the sampled IP flow header (only displayed with the raw (all) output)
ToS	Displays the ToS byte values from the sampled IP flow header (only displayed with the raw (all) output)
(Src) Mask	Displays the IP route mask for the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) Mask	Displays the IP route mask for the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)
(Src) AS	Displays the ASN associated with the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) AS	Displays the ASN associated with the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)

Label	Description
vRtr-ID	Displays the Virtual Router ID associated with the reported IP flow (only displayed with the raw (all) output)

Parameters

aggregate

Displays the aggregated active cache flow data.

Values src-dst-proto — Aggregates the active flow cache based on the source and destination IP address and the IP protocol value.

src-dst-proto-port — Aggregates the active flow cache based on the source and destination IP address, IP protocol value, and the source and destination port numbers.

family

Specifies which IP address family flow data should be displayed.

Values ipv4 — Displays the IPv4 flow data.

ipv6 — Displays the IPv6 flow data.

all

Displays the raw active cache flow data with no aggregation.

Platforms

All

6.3 cache-contents

cache-contents

Syntax

cache-contents [*isa mda-id/esa-vm-id*] *url file-url*

Context

[\[Tree\]](#) (tools>dump>app-assure>group>ipassist cache-contents)

Full Context

tools dump application-assurance group ip-identification-assist cache-contents

Description

This command dumps the cache contents generated by the IP identification assist feature into a local or remote destination.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values	
	<i>slot/mda</i>
	<i>slot</i> 1 to 10, depending on chassis model
	<i>mda</i> 1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	
	<i>esa-esa-id/vm-id</i>
	<i>esa-id</i> 1 to 16
	<i>vm-id</i> 1 to 4

url *file-url*

Specifies a local or remote destination to which the cache content output is directed.

Values	
	<i>local-url</i> <i>remote-url</i>
	<i>local-url</i> [<i>cflash-id</i>]/ <i>file-path</i> 200 characters maximum, including <i>cflash-id</i> directory length 99 characters maximum each
	<i>remote-url</i> { <i>ftp</i> <i>tftp</i> }://[<i>login:pswd</i> @] <i>remote-locn</i> [/ <i>filepath</i>] 255 characters maximum, <i>filepath</i> 199 characters maximum
	<i>remote-locn</i> { <i>hostname</i> <i>ipv4-address</i> "[" <i>ipv6-address</i> "]" }[: <i>port</i>]
	<i>ipv4-address</i> <i>a.b.c.d</i>
	<i>ipv6-address</i> <i>x:x:x:x:x:x</i> [- <i>interface</i>] <i>x:x:x:x:x:d.d.d</i> [- <i>interface</i>] <i>x</i> - [0 to FFFF]H <i>d</i> - [0 to 255]D interface - 32 characters maximum, for link local addresses
	<i>port</i> [0 to 65535]

cflash-id

cf1: | cf1-A: | cf1-B: | cf2: | cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to direct the cache contents generated by the IP identification assist feature to a remote destination.

```
tools dump application-assurance group 1 ip-identification-assist cache-contents isa 1/1 url ftp://exuser:expassword@192.0.2.1/tmp/sample-cache
```

Output Example

```
=====  
Application-Assurance Group 1 ip-identification-assist cache contents  
=====  
  
Writing to file ftp://exuser:expassword@192.0.2.1/tmp/sample-cache_1_1.ip-ident-assist-cache ...  
  
File closed

```

6.4 calculate-maps

calculate-maps

Syntax

calculate-maps **router** *router-instance* **subscriber-type** *nat-sub-type* **prefix** *ip-prefix/length*

Context

[\[Tree\]](#) (tools>perform>nat>deterministic calculate-maps)

Full Context

tools perform nat deterministic calculate-maps

Description

This command allows the operator to reveal the auto-mappings before they are created in the system, while the inside prefix is still out of service (in a **shutdown** administrative state). Based on the auto-mapping results, the user can decide to use the auto-mapping and operationalize the prefix (**no shutdown** command), or to use custom mappings.

The inside IP addresses for deterministic subscribers and for 1:1 protocol agnostic subscribers can be mapped to outside IP addresses in the following ways:

- Automatically by the system. By enabling the deterministic prefix (**no shutdown** command), the system will automatically create map commands and sequentially map subscribers into outside IP address space.
- Manually by the operator by configuring the map commands. This gives the operator control over mappings beyond the sequential auto-mapping.

Parameters

router-instance

Specifies the inside router name or VPRN service instance where the deterministic prefix resides.

Values <router-name> | <vprn-svc-id>
router-name — "Base"
vprn-svc-id — 1 to 2147483647

nat-sub-type

Specifies the NAT subscriber type.

Values classic-lsn-sub, dslite-lsn-sub

ip-prefix/length

Specifies the inside prefix containing IP addresses for which mapping is sought. The IP prefix is IPv4 family type for classic LSN subscriber and IPv6 family type for a DS-Lite subscriber.

Values

<ip-prefix/ip-prefix-length>	<ipv4-prefix>/<ipv4-prefix-length> <ipv6-prefix>/<ipv6-prefix-length>
<ipv4-prefix>	a.b.c.d (host bits must be 0)
<ipv4-prefix-length>	0 to 32
<ipv6-prefix>	x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D
<ipv6-prefix-length>	[0 to 128]

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.5 call-trace

call-trace

Syntax

call-trace

Context

[Tree] (show call-trace)

Full Context

show call-trace

Description

Commands in this context display information related to the call-trace module.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-trace

Syntax

call-trace

Context

[Tree] (clear call-trace)

Full Context

clear call-trace

Description

This command clears call trace jobs.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.6 cam-utilization

cam-utilization

Syntax

cam-utilization [**card** *slot-number*]

Context

[\[Tree\]](#) (tools>dump>filter cam-utilization)

Full Context

tools dump filter cam-utilization

Description

This command, when used without parameters, specifies the utilization per CAM table for line card ACL filters per FP for FP4- and FP5-based cards in the system. Optionally, the card number can be provided as a parameter to limit the output to a single card.

Parameters

slot-number

Specifies the IOM slot number.

Values 1 to 10, **A**, **B**

Platforms

All

Output

The following output is an example of CAM utilization information for filters.

Output Example

```
*A:7750# tools dump filter cam-utilization
=====
Filter Cam Utilization
=====
Slot FP  Dir  Type      Cam Utilization %
-----
2    1   Ing  ip-mac           0
2    1   Egr  ip-mac          100
2    1   Ing  ipv6             0
2    1   Egr  ipv6             0
=====
```

6.7 candidate

candidate

Syntax

candidate

Context

[\[Tree\]](#) (show>system candidate)

Full Context

show system candidate

Description

This command shows classic CLI candidate configuration information.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **info** command in a configuration region.

Platforms

All

Output

The following output is an example of candidate information, and [Table 57: Candidate Output Fields](#) describes the output fields.

Output Example

```
*A:bksim3107# show system candidate
=====
Candidate Config Information
=====
Candidate configuration state      : modified
Num editors/viewers              : 0

Table 57: Candidate Output Fields

Label	Description
Candidate configuration state	<ul style="list-style-type: none"> • empty — indicates there are no uncommitted changes in the candidate config • modified — indicates there are uncommitted changes in the candidate config • unconfirmed — indicates there are no uncommitted changes in the candidate config but the result of the last commit will be auto-reverted unless it is confirmed before the timeout expires
Num editors/viewers	Displays the number of CLI sessions currently in edit-cfg mode
Candidate cfg exclusive locked	Indicates if a user has exclusively locked the candidate using the candidate edit exclusive command
Last commit state	<ul style="list-style-type: none"> • none — indicates there have been no commits since the last reboot of the node • in-progress — indicates the system is currently committing the candidate config • success — indicates the last commit finished successfully • revert-pending — indicates the last commit finished successfully but has not been confirmed yet, and will be auto-reverted if it is not confirmed before the timeout expires • failed — indicates the last commit failed and has been undone • revert-in-progress — indicates the last commit finished successfully but was not confirmed in time and is currently being reverted • reverted — indicates the last commit finished successfully but was not confirmed in time and has been reverted • revert-failed — indicates the last commit finished successfully but was not confirmed in time and the system attempted to revert it but failed
Last commit time	Displays the time at which the last commit attempt was started
Checkpoint created with last commit	Indicates if a rollback checkpoint was created after the previous commit completed
Scheduled revert time	Indicates the currently scheduled auto-revert time based on the confirmed option being used with a candidate commit
Last commit revert time	Displays the time the commit was last reverted
Users in edit-cfg mode	Lists all the user sessions that are currently in edit-cfg mode

Label	Description
Type (from)	Indicates the type of session (such as Console, Telnet, and so on) and also the source of the session (such as the source IP address of the remote host)

6.8 capabilities

capabilities

Syntax

capabilities [*system-id* | *lsp-id*] [**level** *level*]

Context

[Tree] (show>router>isis capabilities)

Full Context

show router isis capabilities

Description

This command displays the IS-IS capability information.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed.

lsp-id

Only the specified LSP is listed.

level

Specifies the interface level (1, 2, or 1 and 2).

Platforms

All

Output

The following output is an example of IS-IS capability information, and [Table 58: IS-IS Capability Information Output Fields](#) describes the output fields.

6.9 capture-sap

capture-sap

Syntax

capture-sap [**statistics**] *sap-id*

Context

[\[Tree\]](#) (show>service>id>dynsvc capture-sap)

Full Context

show service id dynamic-services capture-sap

Description

This command displays the status and statistics of a dynamic services capture. Statistics include counters for the number of data triggers received and data trigger drop reasons.

Note:

This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services capture SAP.

statistics

Displays data trigger receive and drop reason counters for this dynamic services capture SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of capture SAP information.

Output Example

```
# show service id 10 dynamic-services capture-sap 1/1/1:10.*
=====
Dynamic Services Capture SAP 1/1/1:10.*
=====
Dynamic services policy      : dyn-svc-1

Corresponding dynamic SAP is not created    : 0
=====
```

[Table 59: Capture SAP Field Descriptions](#) describes the Capture SAP policy fields.

Table 59: Capture SAP Field Descriptions

Counter	Description
Data packets received by SAP	The number of dynamic service data triggers received on the capture SAP that reached the CPM.
No policy configured at capture SAP level	There is no dynamic-services-policy configured at the capture SAP. This is required to determine the authentication destination.
No authentication configured in policy	The authentication section in the specified in dynamic services policy is missing or incomplete.
Data-trigger already exists	A new data trigger frame is received for an existing data trigger that is authenticated, but the corresponding dynamic SAP is not yet created. The new data trigger packet is dropped.
Lockout is active	The data trigger for this managed SAP is currently in a lockout state due to previous authentication failures.
Reached data-trigger system limit	The maximum number of dynamic service data triggers supported on the system is reached. Additional data triggers are dropped.
No memory available	There is not enough system memory available to process the data trigger.
Unsuccessful authentication	The authentication for a data trigger on this capture SAP failed or timed out.
No data-trigger SAP-id in authentication	The dynamic services data trigger SAP ID is not provided in authentication. This is a mandatory parameter.
Corresponding dynamic SAP is not created	The data trigger successfully authenticated but the corresponding dynamic SAP was not created. This is typically caused by a dynamic services script error.

capture-sap

Syntax

capture-sap [**statistics**] *sap-id*

Context

[Tree] (clear>service>id>dynsvc capture-sap)

Full Context

clear service id dynamic-services capture-sap

Description

This command clears the dynamic services capture SAP control plane statistics (data triggers received and data trigger drop reason counters).

Parameters

statistics

Clears the data trigger statistics for a capture SAP.

sap-id

Specifies the dynamic services capture SAP.

Values

Context

[\[Tree\]](#) (show card)

Full Context

show card

Description

This command shows card information.

If no command line parameters are specified, a card summary for all cards is displayed.

Parameters

slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM/XCM slots are numbered from 1 to 10. CPM slots are A, B. The 7950 XRS has additional slots C, D (upper or lowercase). SFM slots are not addressed as cards. See the **show sfm** command.

cpu

Displays CPU utilization.

seconds

Displays the number of seconds over which to sample CPU task utilization.

Values 1 to 300

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

dist-cpu-protection

Displays the distributed CPU protection information.

policy-accounting

Displays the policy accounting information.

memory-pools

Displays the memory pools for the card.

state

Displays provisioned and equipped card and MDA information.

detail

Displays detailed card information.

fwd-engine

Displays forwarding engine information.

drop-reason

Displays drop reason information.

statistics

Displays statistics information.

ingress

Specifies statistics are ingress related.

egress

Specifies statistics are egress related.

tap-number

Displays the source TAP number.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

queue-group

Displays queue group information.

mode

Specifies the mode in which the card will operate.

access

Displays information for the queue groups related to access mode.

network

Displays information for the queue groups related to network mode.

Platforms

All

Output

See the following sections for output examples:

- [Output Example: show card \(showing the 7750 SR-12\)](#)

- Output Example: show card (showing the 7950 XRS-40)
- Output Fields: show card
- Output Example: show card state (showing 7750 SR-12 Chassis)
- Output Example: show card state (showing 7750 SR-14s Chassis)
- Output Example: show card state (showing 7450 ESS-12 Chassis)
- Output Example: show card state (showing a 7950 XRS Chassis)
- Output Fields: show card state
- Output Example: show card <slot-number> detail (showing IOM5-e Card)
- Output Example: show card <slot-number> detail (showing XCM-20 Card)
- Output Fields: show card <slot-number> detail (for an IOM or XCM Card)
- Output Example: show card <slot-number> detail (showing CPM5 Cards)
- Output Example: show card <slot-number> detail (showing CPM-x20 Cards)
- Output Fields: show card <slot-number> detail (for a CPM)
- Output Example: show card <slot-number> detail (showing IOM iwth license detail)
- Output Fields: show card <slot-number> detail (showing IOM with license level)
- Output Example: show card <slot-number> fp fwd-engine drop-reason statistics
- Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics
- Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats
- Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats tap <tap-number>
- Output Example: show card <slot-number> fp <fp-number> egress per-ingress-fp-stats
- Output Fields: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats

Output Example: show card (showing the 7750 SR-12)

Card Summary
=====
Slot      Provisioned Type          Admin Operational  Comments
```

	Equipped Type (if different)	State	State
1	xcm-x20	up	up
2	xcm-x20	up	up
A	cpm-x20	up	up/active
B	cpm-x20	up	up/standby
C	cpm-x20	up	down/ext-stby
D	cpm-x20	up	up/ext-actv

Output Fields: show card

Table 60: Output Field: show card describes the output fields for the **show card** command.

Table 60: Output Field: show card

Label	Description
Slot	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40).
Equipped Type	The card type that is actually populated in the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40).
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Down — The card is operationally down. active — The CPM is the Active CPM for the system (actively managing the system components, processing various protocols, and so on). standby — The CPM is the Standby CPM. The standby is hot synchronized with the Active CPM. ext-actv — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the active extension CPM for the chassis in which it sits. ext-stby — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the standby extension CPM for the chassis in which it sits.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.

Label	Description
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Example: show card state (showing 7750 SR-12 Chassis)

```

Output Fields: show card state

Table 61: Output Fields: show card state describes the output fields for the **show card state** command.

Table 61: Output Fields: show card state

Label	Description
Slot/MDA	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot.
Equipped Type	The card type that is actually populated in the slot.
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Provisioned — There is no card in the slot but it has been pre-configured.
Num Ports	The number of ports available on the MDA.
Num MDA	The number of MDAs installed.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state.

Label	Description
	No SFM — Indicates no SFM is online that is usable by this card.
	Pwr Save — Indicates if the card is in power save mode.
	Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.
	SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Fields: show card <slot-number> detail (for an IOM or XCM Card)

Table 62: [Output Fields: show card <slot-number> detail \(for an IOM or XCM Card\)](#) describes the output fields for the **show card detail** command.

Table 62: Output Fields: show card <slot-number> detail (for an IOM or XCM Card)

Label	Description
Clock source	Source of clock for the IOM. Currently this parameter always displays "none".
Available MDA slots	The number of MDA slots available on the IOM.
Installed MDAs	The number of MDAs installed on the IOM.
FP Resource Policy	The FP resource policy for the specified FP.
Initial Extract Priority Mode	The scheme used to select the initial drop priority of extracted control plane traffic. uniform — Initializes the drop priority of all extracted control traffic as high priority. l3-classify — Initializes the drop priority of all Layer 3 extracted control traffic (for example, BGP or OSPF) based on the QoS classification of the packets. See "Classification-Based Priority for Extracted Protocol Traffic" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide</i> for more details.
Part number	The IOM part number.
CLEI code	The Common Language Location Identifier (CLLI) code string for the router.
Serial number	The serial number. Not user-modifiable.
Manufacture date	The chassis manufacture date. Not user-modifiable.
Manufacturing string	Factory-inputted manufacturing text string. Not user-modifiable.
Manufacturing deviations	Displays a record of changes by manufacturing to the hardware or software that is outside the normal revision control process.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Software version	The software version number.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Base MAC address	Displays the base MAC address of the hardware component.

Label	Description
Memory capacity	Displays the memory capacity of the card.
Generation	Displays the FP generation of the assembly. N/A is displayed if there is no XMA installed in the card slot.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.
Network ingress queue policy	Displays the name of the network ingress queue policy applied to the FP.

Output Example: show card <slot-number> detail (showing CPM5 Cards)

```

Output Fields: show card <slot-number> detail (for a CPM)

Table 63: Output Fields: show card <slot-number> detail (for a CPM) describes the output fields for the **show card detail** command for a CPM card.

Table 63: Output Fields: show card <slot-number> detail (for a CPM)

Label	Description
Slot	The slot of the card in the chassis.
Card Provisioned	The CPM type that is configured for the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Card Equipped	The CPM type that is actually populated in the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Admin State	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational State	Up — The CPM is operationally up. Down — The CPM is operationally down.
Inter chassis cpm interconnect	Up — The CPM is operationally up. Down — The CPM is operationally down.
BOF last modified	The date and time of the most recent BOF modification.
Config file version	The configuration file version.
Config file last modified	The date and time of the most recent config file modification.
Config file last modified	The date and time of the most recent config file modification.
Config file last saved	The date and time of the most recent config file save.
CPM card status	active — The card is acting as the primary (active) CPM in a redundant system. standby — The card is acting as the standby (secondary) CPM in a redundant system.
Administrative state	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational state	Up — The CPM is operationally up. Down — The CPM is operationally down.
Serial number	The compact flash part number. Not user modifiable.
Firmware revision	The firmware version. Not user modifiable.
Model number	The compact flash model number. Not user modifiable.
Size	The amount of space available on the compact flash card.
Free space	The amount of space remaining on the compact flash card.

Label	Description
Part number	The CPM part number.
CLEI code	The code used to identify the router.
Serial number	The CPM part number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	Factory-set manufacturing text string. Not user modifiable.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Status	Displays the current status.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Memory capacity	The total amount of memory.
Secure boot status	Status of the Secure Boot for this CPM. enabled — Secure Boot is enabled disabled — Secure Boot is disabled
UEFI variable status	Status of the Secure Boot UEFI variables for this CPM. ok — no update required update required — update is required
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.

Label	Description
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Fields: show card <slot-number> detail (showing IOM with license level)

[Table 64: Output Fields: show card <slot-number> detail \(showing IOM with license level\)](#) describes the output fields for the **show card detail** command with IOM licensing information.

Table 64: Output Fields: show card <slot-number> detail (showing IOM with license level)

Label	Description
Slot	The slot of the card in the chassis.
Provisioned Type	The IOM type and level that is configured for the slot.
Equipped Type (if different)	The IOM type and level that is actually populated in the slot if it is different than the Provisioned Type.
Admin State	Up — The IOM is administratively up. Down — The IOM is administratively down.
Operational State	Up — The IOM is operationally up. Down — The IOM is operationally down.
Licensed Level	License level of the card.
Description	Description of the license.
Licensed Bandwidth Used	The total connector bandwidth configured on the assembly.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Example: show card <slot-number> fp fwd-engine drop-reason statistics

```
*A:cses-V93# show card 1 fp 1 fwd-engine drop-reason statistics
=====
Card 1 FP 1 Egress Forwarding Engine Drop Reason Statistics
=====
Egress Encapsulation Exceeded          0
MTU Exceeded                           0
Frame too big for port                  4
=====
```

Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics

[Table 65: Output Fields: show card slot-number fp fwd-engine drop-reason](#) describes the output fields for the **show card fp fwd-engine drop-reason** command.

Table 65: Output Fields: show card slot-number fp fwd-engine drop-reason

Label	Description
Card	The card in the chassis.
FP	The egress forwarding plane hardware component.
Egress Encapsulation Exceeded	Addition of egress encapsulation headers would have exceeded the maximum frame size.
MTU Exceeded	Protocol supports packet fragmentation but fragmentation was blocked (for example, packet is IPv6 or packet is IPv4 and DF set to one).
Frame too big for port	Final check before transmitting has detected frame exceeded the port MTU.

Note:

A single frame can only result in one drop reason statistic being incremented.

Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats

```
# show card 4 fp 5 ingress per-egress-fp-stats

Output Fields: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats

Table 66: Output Fields: egress and ingress card statistics per ingress or egress FP describes the output fields for the egress and ingress card statistics per ingress or egress FP.

Table 66: Output Fields: egress and ingress card statistics per ingress or egress FP

Label	Description
To FP/TAP	Displays the To forwarding plane TAP information.
Priority	Displays the priority (Best-Effort, Expedite, or Auto-Expedite).
Forwarded Packets	Displays the unicast packet statistics sent from the specified FP to the destination FP.
Forwarded Octets	Displays the unicast octet statistics sent from the specified FP to the destination FP.

card

Syntax

card *slot-number*

```
card slot-number fp fp-number hs-pool high-water-mark  
card slot-number fp fp-number hs-pool high-water-mark mid-pool [value]  
card slot-number fp fp-number hs-pool high-water-mark root-pool [value]  
card slot-number fp fp-number hs-pool high-water-mark system  
card slot-number fp fp-number dist-cpu-protection  
card slot-number fp fp-number ingress per-egress-fp-stats  
card slot-number fp fp-number egress per-ingress-fp-stats  
card slot-number soft [hard-reset-unsupported-mdas]  
card slot-number fp fp-number fwd-engine drop-reason statistics  
card slot-number fp fp-number ingress mode {access | network} queue-group group-name instance  
instance statistics
```

Context

[\[Tree\]](#) (clear card)

Full Context

clear card

Description

This command re-initializes the card in the specified slot. A **clear card** command (without the soft) is referred to as a *Hard Reset*. A **clear card x soft** command (with the soft) is referred to as a *Soft Reset*.

Parameters

slot-number

Clears information for the specified card slot.

Values 1 to 20, A, B, C, D

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

high-water-mark

Clears the high water marks within the HS pool on the specified card and FP.

mid-pool

Clears the high water marks within the mid pools in the HS pool and on the specified card and FP.

Values 1 to 16

root-pool

Clears the high water marks within the root pools in the HS pool and on the specified card and FP.

Values 1 to 16

system

Clears the high water marks within the in the HS system pool and on the specified card and FP.

dist-cpu-protection

Clears the distributed CPU protection information.

soft

Issues a soft reset of the I/O module (IOM).

hard-reset-unsupported-mdas

Allows a soft reset operation when some of the MDA's cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset and a hard reset is performed on MDAs that do not support soft resets.

fwd-engine

Specifies to clear the forwarding engine information.

drop-reason

Specifies to clear the drop reason information.

statistics

Specifies to clear the statistics.

ingress

Specifies to clear the ingress information.

egress

Specifies to clear the egress information.

per-egress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

mode

Specifies the mode in which the card is to operate.

access

Specifies to clear the access mode information.

network

Specifies to clear the network mode information.

group-name

Specifies the group name, to a maximum of 32 characters.

instance

Specifies the instance of the named queue group to be cleared.

Values 1 to 65535

Platforms

All

card

Syntax

```
card slot-number fp fp-number queue-group queue-group-name instance instance-id [{access |  
network}] [{ingress | egress}] [arbiter {name | root}] [port port-id] [{detail | root-detail | thresholds |  
priority-info | depth}]
```

Context

[\[Tree\]](#) (show>qos>policer-hierarchy card)

Full Context

show qos policer-hierarchy card

Description

This command displays physical card related information.

Parameters

slot-number

Displays information about the slot number of the card in the chassis. The maximum slot number is platform dependent.

Values 1 to 10

fp-number

Displays information about the specified forwarding plane number.

Values 1

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the instance of the named queue group.

Values 1 to 65535

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

port-id

Displays information about the specified port ID.

access

Displays policer-hierarchy statistics applied on an access port.

network

Displays policer-hierarchy statistics applied on a network port.

ingress

Displays ingress queue group information.

egress

Displays egress queue group information.

detail

Displays detailed information.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays the threshold, parenting, rate, and traffic information related to a policer.

priority-info

Displays the threshold information related to the root arbiter.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card [*slot-num*]

card [*slot-num*] **all**

Context

[\[Tree\]](#) (tools>dump>resource-usage card)

Full Context

tools dump resource-usage card

Description

This command displays resource information for cards.

Parameters

slot-num

Specifies a card slot.

Values 1 to 10

all

Displays all available information for the card, including resource usage information for all child objects of the card such as FPs and MDAs.

Platforms

All

card

Syntax

```
card slot-number fp fp-number ingress {access | network} queue-group queue-group-name instance
instance-id [absolute | percent-rate] [interval seconds] [repeat repeat] policer policer-id [reference-
rate]
card slot-number fp fp-number ingress [tap tap-number] per-egress-fp-stats [interval seconds] [repeat
repeat] [absolute | rate]
card slot-number fp fp-number [tap tap-number] egress per-ingress-fp-stats [interval seconds] [ repeat
repeat] [absolute | rate]
```

Context

[\[Tree\]](#) (monitor card)

Full Context

monitor card

Description

This command monitors statistics in an ingress and egress Forwarding Plane (FP).

Parameters

slot-number

Monitors information on the specified card slot.

Values 1 to 20 (The maximum slot number is platform dependent)

fp-number

Monitors information on the specified FP.

Values 1 to 8

ingress

Monitors information on the ingress.

egress

Monitors information on the egress.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

absolute

Displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

Displays the rate-per-second for each statistic based on the reference rate of 10G.

seconds

Specifies the interval for each display in seconds.

Values 11 to 60

Default 11

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

policer-id

Must exist within the queue-group template applied to the ingress context of the forwarding plane.

Values 1 to 32

reference-rate

Displays the rate-per-second for each statistic as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

Default 10G

tap-number

Specifies the source TAP.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP.

rate

Displays the rate-per-second for each statistic instead of the delta.

Platforms

All

```

card

Syntax

```

card slot-number fp fp-number queue-group queue-group-name instance instance-id [ingress] [access
| networks] [interval seconds] [repeat repeat] [absolute | percent-rate [reference-rate]] [arbiter root
| name]
    
```

Context

[\[Tree\]](#) (monitor>qos>arbiter-stats card)

Full Context

monitor qos arbiter-stats card

Description

This command monitors arbiter statistics in an ingress FP queue group.

Parameters

slot-number

Specifies the slot number associated with the queue group, expressed as an integer.

Values 1 to 20

fp-number

Specifies the FP number associated with the queue group, expressed as an integer.

Values 1 to 8

ingress

Displays policer statistics applied on the ingress FP.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the name of the queue group up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Default 11 seconds

Values 11 to 60

repeat

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

When the absolute keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

When the percent-rate keyword is specified, the rate-per-second for each statistic is displayed based on the reference rate of 10G.

reference-rate

When a reference-rate value is specified, the rate-per-second for each statistic is displayed as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

name

Specify the name of the policer control policy arbiter.

Values An existing arbiter-name in the form of a string up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, etc.), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

```
card slot-number fp fp-number ingress [access | network] queue-group queue-group-name [instance instance-id] [arbiter {name | root}]
```

Context

[\[Tree\]](#) (clear>qos>arbiter-stats card)

Full Context

```
clear qos arbiter-stats card
```

Description

This command clears arbiter statistics per card.

Parameters

slot-number

Specifies the slot number associated with the queue group.

Values 1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1 to 4

access

Clears policer statistics on the FP access.

network

Clears policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

```
card slot-number fp fp-number ingress [access | network] [queue-group queue-group-name] [instance instance-id] [arbiter name | root]
```

Context

[\[Tree\]](#) (show>qos>arbiter-stats card)

Full Context

```
show qos arbiter-stats card
```

Description

This command displays the arbiter statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values	1 (7750 SR-1, VSR)
	1 to 2 (7750 SR-2s)
	1 to 5 (7750 SR-7)
	1 to 6 (7750 SR-14s)
	1 to 10 (7450 ESS, 7750 SR-12)
	1 to 14 (VSR)
	1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values	1
---------------	---

access

Displays arbiter statistics applied on an access port.

network

Displays arbiter statistics applied on a network port.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *group-name* **instance** *instance-id* {**access** | **network**}
[**detail**] [**ingress**]

[\[Tree\]](#) (show>qos>policer card)

Full Context

show qos policer card

Description

This command displays the policer statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 (7750 SR-1, VSR)
1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1

group-name

Specifies the queue group name, up to 32 characters.

access

Displays policer statistics applied on an access port.

network

Displays policer statistics applied on a network port.

detail

Displays detailed information.

ingress

Displays ingress queue group information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

6.12 category-map

category-map

Syntax

```
category-map [category-map]
category-map category-map subscribers
```

Context

[\[Tree\]](#) (show>subscr-mgmt category-map)

Full Context

```
show subscriber-mgmt category-map
```

Description

This command displays category map information.

With no parameters specified, a summary view of all configured category maps is displayed.

With the optional *category-map* name parameter specified, the detailed configuration of the specified category map name is displayed.

With the *category-map* **subscribers** parameters specified, all subscribers that have the specified *category-map* associated are displayed.

Parameters

category-map

Specifies the category map name for which information is displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management category map information.

Output Example

```
Node# show subscriber-mgmt category-map "cat-map-1"

Table 67: Category Map Field Descriptions describes category map output fields.

Table 67: Category Map Field Descriptions

Field	Description
Description	The user provided description of this policy
Credit Type	The volume or time based accounting is performed
Credit Exh. Thresh	The credit exhaust threshold considered to take action
Activity Thresh.	The threshold (in kb/s) that is applied to determine whether or not activity is occurring
Gx session level usage monitoring	Whether category map supports Gx session level usage monitoring
Credit Type Over.	Credit type override
Rating Group	The rating group applicable for this category
OutOfCredit Action	The action to be taken if the credit es exhausted
Default Credit	The default value for the Time credit
Ingress Queues	The ingress queues defined in this category
Egress Queues	The egress queues defined in this category
Ingress Policers	The ingress policers defined in this category

Field	Description
Egress Policers	The egress queues defined in this category
ExhCrdsvcLvl Pir	The credit exhaust threshold considered to take action

6.13 category-set-id

category-set-id

Syntax

category-set-id *category-set*

Context

[\[Tree\]](#) (show>app-assure>web-service category-set-id)

Full Context

show application-assurance web-service category-set-id

Description

This command displays information for the web-service category set.

Parameters

category-set

Specifies the category set ID.

Values 0 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output examples show information about SAPs using the application profile.

Output Example

```
# show application-assurance web-service category-set-id 1
=====

ccrt-replay diameter-application-policy *name* **summary**

ccrt-replay summary

Context

[Tree] (show>subscr-mgmt>diam-session ccrt-replay)

Full Context

show subscriber-mgmt diameter-session ccrt-replay

Description

This command displays:

- information for all diameter sessions that are in CCR-T replay mode:
 - Diameter session ID
 - Diameter Application Policy
 - Replay Time left
- statistics per diameter application policy for diameter sessions in CCR-T replay mode or that were in CCR-T replay mode and were dropped or terminated:
 - Sessions in CCR-T replay mode: the number of Diameter Gx or Gy sessions from the specified diameter application policy that are currently in CCR-T replay mode
 - Replay sessions dropped (maximum life-time expired): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before **max-lifetime** expiration
 - Replay sessions dropped (to free resources): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of active Diameter sessions for Gx or Gy was reached
 - Replay sessions dropped (cleared): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a **clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy** *name* **sessions** command
 - Replay sessions terminated (CCA-T received): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before **max-lifetime** expiration
 - Statistics last cleared time: timestamp when the statistics were last cleared or n/a if the statistics were never cleared

Parameters

name

Specifies the application policy, up to 32 characters.

session-id

Specifies a diameter session ID.

summary

Displays summarized information about CCR-T replay.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management CCR-T replay information.

Table 68: CCR-T Replay Field Descriptions describes CCRT replay output fields.

Table 68: CCR-T Replay Field Descriptions

Field	Description
Session-id	The diameter session ID that is in CCR-T replay mode
Diameter Application Policy	The diameter application policy name to which the Gx or Gy session in CCR-T replay mode belongs
Replay Time Left	The remaining max-lifetime before the Diameter Gx or Gy session in CCR-T replay mode is dropped
No. of Matching Entries	The number of entries matching the search criteria
Sessions in CCR-T replay mode	The number of Diameter Gx or Gy sessions from the specified diameter application policy that are in CCR-T replay mode
Replay sessions dropped (maximum life-time expired)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before max-lifetime expiration
Replay sessions dropped (to free resources)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of Diameter sessions was reached
Replay sessions dropped (cleared)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy <i>name</i> sessions command
Replay sessions terminated (CCA-T received)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before max-lifetime expiration

Field	Description
Statistics last cleared time	The timestamp when the statistics were last cleared or n/a if the statistics were never cleared

ccrt-replay

Syntax

ccrt-replay diameter-application-policy *name* statistics

ccrt-replay diameter-application-policy *name* sessions

Context

[\[Tree\]](#) (clear>subscr-mgmt>diam-session ccrt-replay)

Full Context

clear subscriber-mgmt diameter-session ccrt-replay

Description

This command, when the **statistics** parameter is specified, clears the CCR-T replay statistics and updates the "Statistics last cleared time" value.

This command, when the **sessions** parameter is specified, drops the diameter Gx or Gy sessions that are in CCR-T replay mode.

Parameters

name

Specifies the diameter application policy, up to 32 characters.

statistics

Clears the CCR-T replay statistics.

sessions

Clears the sessions that are in CCR-T replay mode.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.16 cert-profile

cert-profile

Syntax

cert-profile *name* **association**

cert-profile [*name*]

cert-profile *name* **entry** [*value*]

Context

[\[Tree\]](#) (show ipsec cert-profile)

Full Context

show ipsec cert-profile

Description

This command displays IPsec certificate profile information.

Parameters

name

Specifies an existing certificate profile name.

association

Displays information for which this IPsec certificate profile is associated.

value

Displays information for the specified entry.

Values 1 to 8

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show ipsec cert-profile** command.

Output Example

```
*A:Dut-A# show ipsec cert-profile cert "cert-1.der"
=====
Certificate Profile Entry
=====
Id Cert                Key                Status Flags
-----
1 cert-1.der           key-1.der
=====

cert-profile

Syntax

cert-profile *[name]*

cert-profile *name association*

cert-profile *name entry entry*

Context

[\[Tree\]](#) (show system security tls cert-profile)

Full Context

```
show system security tls cert-profile
```

Description

This command displays information about server and client profiles that are using this certificate profile.

Parameters

entry

Specifies a certificate profile entry number for which to display information.

Values 1 to 8

name

Specifies the name of a certificate profile for which to display information.

Platforms

All

6.17 certificate

certificate

Syntax

```
certificate filename association
```

Context

[\[Tree\]](#) (show certificate)

[\[Tree\]](#) (show>ipsec certificate)

Full Context

```
show certificate
```

```
show ipsec certificate
```

Description

This command displays certificate-related information.

Parameters

filename

Specifies the certificate file name.

association

Displays information for which this IPsec certificate is associated.

Platforms

All

- show certificate

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

- show ipsec certificate

Output

The following output is an example of the **show certificate** command.

Output Example

```
*A:Dut-B# show certificate ca-profile

cflowd

Syntax

cflowd

Context

[\[Tree\]](#) (clear cflowd)

Full Context

clear cflowd

Description

This command clears the raw and aggregation flow caches which are sending flow data to the configured collectors. This action will trigger all the flows to be discarded. The cache restarts flow data collection from a fresh state. This command also clears global stats collector stats listed in the cflowd **show** commands.

Platforms

All

cflowd

Syntax

Context

[\[Tree\]](#) (show>eth-cfm cfm-stack-table)

Full Context

show eth-cfm cfm-stack-table

Description

This command displays stack-table information. This stack-table is used to display the various management points MEPs and MIPs that are configured on the system. These can be service-based or facility-based. The various options allow the operator to be specific. If no parameters are included then the entire stack-table is displayed.

Parameters

port *port-id*

Displays the bridge port or aggregated port on which MEPs or MHFs are configured.

Values	<i>port-id</i>	<i>slot/mda/port[.channel]</i>
	lag-id	lag-id
		lag keyword
		id 1 to 800
	eth-sat-id	esat-<id>/<slot>/[u]<port>
		esat keyword
		id 1 to 20
		u keyword for up-link port
	tdm-sat-id	tsat-<id>/<slot>/[<u>]<port>.<channel>
		tsat keyword
		id 1 to 20
		u keyword for up-link port

vlan *vlan-id*

Displays the associated VLAN ID.

Values 1 or 4094 or all

level

Displays the MD level of the maintenance point.

Values 0 to 7

collect-lmm-stats

Displays facility MEPs on which LMM collection is enabled.

direction up | down

Displays the direction in which the MP faces on the bridge port.

facility

Displays the CFM stack table information for facility MEPs. The base command displays all the facility MEPs. Options may be included in order to further parse the table for specific facility MEP information.

sdp sdp-id[:vc-id]

Displays CFM stack table information for the specified SDP.

Values sdp-id: 1 to 32767
 vc-id: 1 to 4294967295

virtual service-id

Displays CFM stack table information for the specified SDP.

Values service-id: 1..2148278386]
 svc-name: up to 64 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of stack table information. [Table 69: ETH-CFM CFM Stack Table Field Descriptions](#) describes the output content.

Output Example

```

Mep-id	Displays the integer that is unique among all the MEPs in the same MA.
Mac-address	Displays the MAC address of the MP.
md-admin-name	Displays the administrative MD name.
ma-admin-name	Displays the administrative MA name.

6.21 change-key

change-key

Syntax

change-key authentication *authentication-protocol old-authentication-key new-authentication-key*

change-key authentication authentication-protocol privacy *privacy-protocol old-privacy-key new-privacy-key*

Context

[\[Tree\]](#) (tools>perform>system>mgmt-itf>snmp change-key)

Full Context

tools perform system management-interface snmp change-key

Description

This command generates KeyChange strings to change SNMPv3 authentication or privacy keys. The SNMP engine ID is not needed because localized keys are required as input. The KeyChange algorithm uses a random string, which generates a different output each time the command is executed.

Parameters

authentication

Generates a KeyChange string for an authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

- Values**
- hmac-md5-96** — Specifies use of the HMAC-MD5-96 authentication protocol.
 - hmac-sha1-96** — Specifies use of the HMAC-SHA-96 authentication protocol.
 - hmac-sha2-224** — Specifies use of the HMAC-SHA-224 authentication protocol.
 - hmac-sha2-256** — Specifies use of the HMAC-SHA-256 authentication protocol.
 - hmac-sha2-384** — Specifies use of the HMAC-SHA-384 authentication protocol.
 - hmac-sha-512** — Specifies use of the HMAC-SHA-512 authentication protocol.

old-authentication-key

Specifies the old localized authentication key.

new-authentication-key

Specifies the new localized authentication key.

privacy

Keyword to generate a KeyChange string for a privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

- Values**
- cbc-des** — Specifies the use of the CBC-DES privacy protocol. This parameter is not available in FIPS-140-2 mode.
 - cfb128-aes-128** — Specifies the use of the CFB128-AES-128 privacy protocol.
 - cfb128-aes-192** — Specifies the use of the CFB128-AES-192 privacy protocol.
 - cfb128-aes-256** — Specifies the use of the CFB128-AES-256 privacy protocol.

old-privacy-key

Specifies the old localized privacy key.

new-privacy-key

Specifies the new localized privacy key.

Platforms

All

Output

The following output is an example of a generated KeyChange string.

Output Example

```
A:ALA-1# tools perform system management-interface snmp change-key authentication hmac-sha1-96
5c9ccb02cb2066f226e9d41b428c63ba801a3319
6caf2644ebb8141876a455ba14e58d5c61d8cb16
KeyChange string :

```

6.22 channel

channel

Syntax

```
channel [router router-instance | vpls service-id | service-name service-name] [fp slot-number/fp-number] [group ip-address [source ip-address]] [path path-type] [detail]
```

Context

[\[Tree\]](#) (show>mcast-management channel)

Full Context

```
show mcast-management channel
```

Description

This command displays multicast path management channel related information.

Parameters

service-id

Specifies an existing VPLS service ID.

Values 1 to 214748364

service-name

A string up to 64 characters.

slot-number

Displays information for the specified card slot.

fp-number

Specifies an FP.

Values 1 to 8

ip-address

ipv4-address in the form *a.b.c.d*

path-type

Specifies the path type.

Values primary, secondary

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of multicast management channel information.

Output Example

```
*A:PE# show mcast-management channel

channel

Syntax

channel [**service** *service-id*] [**interface** *ip-int-name*] [**address** *mcast-address*] [**source** *ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>video>adi channel)

Full Context

show video adi channel

Description

This command displays video channel information.

Parameters

service *service-id*

Displays video channel information pertaining to the specified service ID.

Values service-id: 1 to 2148278381
 svc-name: A string up to 64 characters
 router-name: Base, management, vpls-management

Default Base

interface *ip-int-name*

Displays video channel information pertaining to the specified interface.

address *mcast-address*

Displays video channel information pertaining to the specified multicast channel address.

source *ip-address*

Displays video channel information pertaining to the source IP address.

detail

The output displays detailed video channel information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

channel

Syntax

```
channel [service service-id] [interface ip-int-name] [address mcast-address] [source ip-address]  
      [summary | detail] [pid | config | analyzer [interval time-interval]]
```

Context

[\[Tree\]](#) (show>video channel)

Full Context

show video channel

Description

This command displays video channel information.

Parameters

service *service-id*

Displays video channel information pertaining to the specified service ID.

Values service-id: 1 to 214748364
 svc-name: A string up to 64 characters
 router-name: Base, management, vpls-management

Default Base

interface *ip-int-name*

Displays video channel information pertaining to the specified interface.

address *mcast-address*

Displays video channel information pertaining to the specified multicast channel address.

source *ip-address*

Displays video channel information pertaining to the source IP address.

summary

The output displays summarized video channel information.

detail

The output displays detailed video channel information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

Output

The following output is an example of this command.

Output Example

```

channel

Syntax

channel all [rt-client] [rt-server] [fcc-server] [ad-insert]

channel grp-address [source *srcAddr*] [rt-client] [rt-server] [fcc-server] [ad-insert]

Context

[\[Tree\]](#) (clear>video>statistics>id channel)

Full Context

clear video statistics id channel

Description

This command clears video statistics for a particular channel.

Parameters

all

Clears statistics for all channels.

rt-client

Clears all RET client related statistics.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

6.23 charging-filter

charging-filter

Syntax

charging-filter {*charging-filter-id* | **non-zero**}

Context

[\[Tree\]](#) (show>app-assure>group>policy charging-filter)

Full Context

show application-assurance group policy charging-filter

Description

This command displays information about the charging filter.

Parameters

charging-filter-id

Specifies the ID of an existing charging filter entry.

Values 1 to 65535

non-zero

Specifies to show all non-zero count entries.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the charging filter information, and [Table 70: Show AA group policy charging filter output fields](#) describes the fields.

```
show application-assurance group 1:0 policy charging-filter 1
```

Output Example

```
=====
Charging Filter Entry 1
=====
Description      : "Charging-filter entry for WhatsApp Video"
Admin State      : in-service
Charging Group   : "cgVideo100"
Hits             : 0 flows

Match :
  Application    : eq "Whats App"
  Flow Attribute : flow-attribute video confidence gte 100
```

Table 70: Show AA group policy charging filter output fields

Label	Description
Charging Filter Entry	The charging filter
Description	The description of the charging filter
Admin State	The administrative state of the filter
Charging Group	The charging group
Hits	The number of hits
Application	The matched application
Flow Attribute	The flow attribute used by the match criteria

6.24 charging-group

charging-group

Syntax

charging-group
charging-group *charging-group-name*

Context

[\[Tree\]](#) (show>app-assure>group>policy charging-group)

Full Context

show application-assurance group policy charging-group

Description

This command displays application-assurance policy application information.

Parameters

charging-group-name
Specifies the application name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

```
charging-group [charging-group-name] count [detail]  
charging-group count top granularity [max-count max-count]
```

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub charging-group)

Full Context

```
show application-assurance group aa-sub charging-group
```

Description

This command displays application-assurance group charging group information.

Parameters

charging-group-name

Specifies an existing charging group.

count

Displays the counters for the charging group.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Specifies the granularity of the search.

Values octets, packets, flows

max-count

Specifies the maximum flows to display.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

```
charging-group [charging-group-name] count
```

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub>um charging-group)

Full Context

show application-assurance group aa-sub usage-monitor charging-group

Description

This command displays usage monitor statistics for the charging group.

Parameters

charging-group-name

Specifies the charging group name, up to 32 characters.

count

Displays counters for the charging group.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

charging-group [*charging-group-name*] **count** [**detail**]

Context

[\[Tree\]](#) (tools>dump>app-assure>group>aa-sub charging-group)

Full Context

tools dump application-assurance group aa-sub charging-group

Description

This command displays per-subscriber per-charging-group statistics.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.25 chassis

chassis

Syntax

chassis [**environment**] [**ccm**] [**power-supply**] [*chassis-id*]

chassis class *chassis-class*

chassis detail [**class** *chassis-class*]

Context

[\[Tree\]](#) (show chassis)

Full Context

show chassis

Description

This command displays general status information about the chassis.

Parameters

chassis-id

Specifies the ID of the chassis.

chassis-class

Displays information related to the chassis of the specified class.

Values router or eth-sat

environment

Displays environmental status information about the chassis.

Default Displays all chassis information.

power-supply

Displays the status of the power supply in the chassis.

Default Displays all chassis information.

detail

Displays detailed information for all chassis in the system.

ccm

Displays chassis control module information for platforms that support CCMs.

Platforms

All

Output

See the following sections for output examples:

- [Output Fields: show chassis](#)

- [Output Example: show chassis \(showing 7750 SR\)](#)
- [Output Example: show chassis environment](#)
- [Output Example: show chassis power-supply \(showing 7750 SR-1\)](#)
- [Output Example: show chassis ccm](#)
- [Output Example: show chassis \(showing 7950 XRS\)](#)
- [Output Example: show chassis detail \(showing 7950 XRS\)](#)
- [Output Example: show chassis \(showing 7750 SR with Ethernet satellites configured\)](#)

Output Example: show chassis (showing 7750 SR)

```

Output Fields: show chassis

Table 71: Output Fields: show chassis describes the output fields for the **show chassis** command.

Table 71: Output Fields: show chassis

Label	Description
Name	The system name for the router.
Type	Displays the router model number.
Chassis Topology	Indicates the inter-chassis topology mode in which the system is operating. Standalone indicates that the system is comprised of a single physical router chassis. Extended (XRS-40) on a 7950 XRS based system indicates that two router chassis are connected together in a "back-to-back" topology with no additional switch fabric chassis. An extended chassis topology is comprised of two XRS-20 chassis and is also known as an XRS-40 system.
Chassis role	Specifies the Chassis Roles. Standalone — Specifies the value for all non-7950 XRS SR OS systems and for 7950 XRS-20 standalone systems. 7950 XRS-40 Master 7950 XRS-40 Extension
Location	The system location for the device.
Coordinates	A user-configurable string that indicates the Global Positioning System (GPS) coordinates for the location of the chassis. For example: • N 45 58 23, W 34 56 12

Label	Description
	<ul style="list-style-type: none"> N37 37' 00 latitude, W122 22' 00 longitude N36*39.246' W121*40.121'
CLLI Code	The Common Language Location Identifier (CLLI) that uniquely identifies the geographic location of places and certain functional categories of equipment unique to the telecommunications industry.
Number of slots	The number of slots in the 7450 ESS and 7750 SR chassis that are available for plug-in cards. The total number includes the IOM/CCM slot(s) and the CPM slots.
Number of ports	The total number of ports currently installed in this chassis. This count does not include the Ethernet ports on the CPMs/CCMs that are used for management access.
Oper Number of Slots	The number of slots in the 7950 XRS chassis that are available for XCM cards and CPM cards operating as the active or standby CPM. Oper Number of Slots goes to 24 when Chassis Topology is Extended.
Critical LED state	The current state of the Critical LED in this chassis.
Major LED state	The current state of the Major LED in this chassis.
Minor LED state	The current state of the Minor LED in this chassis.
Base MAC address	The base chassis Ethernet MAC address.
FP Generations	Identifies the FP generations for cards in the system.
System Profile	The scaling profile in use by the system.
Over Temperature state	Indicates if there is currently an over temperature condition (OK = not currently over temp).
Admin chassis mode	The configured chassis mode (chassis mode D).
Oper chassis mode	The current chassis mode.
Part number	The part number of the particular hardware assembly. In the show chassis output, the first set of Hardware Data output is for the chassis mid-plane.
CLEI code	The Common Language Equipment Code of the particular hardware assembly.
Serial number	The serial number of the particular hardware assembly.
Manufacture date	The manufacture date of the particular hardware assembly.
Manufacturing string	The factory inputted manufacturing text string for the particular hardware assembly.
Manufacturing deviations	Additional manufacturing data.
Manufacturing assembly number	Additional manufacturing data.

Label	Description
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Number of fan trays	The total number of fan trays installed in this chassis.
Number of fans	The total number of fans installed in this chassis.
Fan tray number	The ID for each fan tray installed in the chassis
Fan tray type	Indicates the type of fan tray: Chassis - standard fan tray PCM - dedicated to cooling PCMs in the 7950 XRS-20e Universal chassis
Operational status	Current status of the fan tray.
Speed	Indicates the speed of the fans as a percentage.
Status	Current status of the particular hardware assembly (up, down, or not equipped).
Number of power supplies	The number of power supplies installed in the chassis.
Power supply number	The ID for each power supply installed in the chassis.
Power supply type	The basic type of the power supply.
Power supply model	The model of the power supply.
Input voltage	The input voltage for the specific power supply or power module. This field is only displayed for a subset of platforms.
CCM Slot	The identifier of the CCM (A or B).
Equipped	Indicates if the CCM is detected as physically present.
Temperature	The current temperature detected by the particular hardware assembly.
Temperature threshold	The temperature at which the particular hardware assembly considers an over temperature condition to exist.
Part number	The CCM part number.
CLEI code	The code used to identify the router.
Serial number	The CCM serial number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	Factory-inputted manufacturing text string. Not user modifiable.
Administrative state	Up — The card is administratively up.

Label	Description
	Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Temperature	The internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the CCM.

chassis

Syntax

chassis [*phys-chassis-id*]

Context

[\[Tree\]](#) (tools>perform chassis)

Full Context

tools perform chassis

Description

The following command performs chassis maintenance operations.

Parameters

phys-chassis-id

The identifier of the physical chassis for the tools perform context.

Values 1

Platforms

All

chassis

Syntax

chassis

Context

[\[Tree\]](#) (clear chassis)

Full Context

clear chassis

Description

Commands in this context clear data for various pieces of equipment that sit in a chassis.

Platforms

7750 SR-s

chassis

Syntax

chassis

Context

[\[Tree\]](#) (show>mcast-mgmt chassis)

Full Context

show mcast-management chassis

Description

This command displays multicast path management chassis information.

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

6.26 check-bp-eprom

check-bp-eprom

Syntax

check-bp-eprom

Context

[\[Tree\]](#) (tools>perform>chassis check-bp-eprom)

Full Context

tools perform chassis check-bp-eprom

Description

This command checks the chassis BP EPROM. The function reads the EPROM and is corrected with one of the following:

- for each SEEP that is found to be acceptable or can be corrected:
"BP eprom X: ok" with X = seep number
- for each SEEP that is found to be unacceptable and cannot be corrected:
"BP eprom X: not ok"

Platforms

All

6.27 class-forwarding-policy

class-forwarding-policy

Syntax

class-forwarding-policy [*policy-name*]

Context

[\[Tree\]](#) (show>router>mpls class-forwarding-policy)

Full Context

show router mpls class-forwarding-policy

Description

This command displays the mapping of the Forwarding Classes (FCs) to the set IDs as well as the default set ID of the CBF policy. It also shows the number of MPLS LSPs that reference this CBF policy.

Parameters

policy-name

Specifies the name of the class-forwarding-policy, up to 256 characters and composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

The following output is an example of class forwarding policy information.

Output Example

```
*A:Dut-B>show>router# show router mpls class-forwarding-policy "policy1"
=====
MPLS Class Forwarding Policy Table
=====
Policy Name                Default Forwarding Class Set-id  Ref
Set-Id                    be l2 af l1 h2 ef h1 nc  Count
-----
policy1                    3      1 1 2 2 3 3 4 4  50
-----
No. of Forwarding Policies: 1
=====
```

6.28 classic-lsn-sub

classic-lsn-sub

Syntax

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length*

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length* **subscriber-string**

Context

[\[Tree\]](#) (clear>nat classic-lsn-sub)

Full Context

clear nat classic-lsn-sub

Description

This command clears NAT mappings for classic LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ip-prefix/length

Specifies the IP prefix and length.

Values ip-prefix: a.b.c.d (host bits must be 0)length: 0 to 32

subscriber-string

Clears subscriber string information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.29 clear

clear

Syntax

clear *aps-id* {**protect** | **working**} [**number** *number*]

Context

[\[Tree\]](#) (tools>perform>aps clear)

Full Context

tools perform aps clear

Description

This command removes all Automated Protection Switching (APS) operational commands.

Parameters

aps-id

This option clears a specific APS on un-bundled SONET/SDH ports.

Values

<i>aps-id</i>	<i>aps-group-id</i>
aps	keyword
group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

Values 1, 2

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clear

Syntax

`clear ring-index`

Context

[\[Tree\]](#) (tools>perform>eth-ring clear)

Full Context

tools perform eth-ring clear

Description

The clear command, at the Ethernet Ring Node, is used for the following operations:

- Clearing an active local administrative command, such as a Forced Switch or Manual Switch
- Triggering reversion before the WTR or WTB timer expires in case of revertive operation
- Triggering reversion in case of non-reactive operation

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear

Syntax

`clear id tunnel-id`

`clear lsp-name`

Context

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel clear)

Full Context

tools perform router mpls tp-tunnel clear

Description

This command clears all the MPLS-TP linear protection operational commands for the specified LSP that are currently active.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 1 to 61440

isp-name

Specifies the name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear

Syntax

clear

Context

[\[Tree\]](#) (clear)

Full Context

clear

Description

Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

Platforms

All

6.30 clear-arp

clear-arp

Syntax

clear-arp [ip *ipv4-address*]

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-arp)

Full Context

tools perform wlan-gw lanext bd clear-arp

Description

This command clears all ARP table entries for the specified HLE BD or a specific entry if an IPv4 address is specified.

Parameters

ipv4-address

Specifies the IPv4 address of the ARP table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.31 clear-force

clear-force

Syntax

clear-force all-mc

clear-force lag-id *lag-id* [**sub-group** *sub-group-id*]

clear-force peer-mc *ip-address*

Context

[\[Tree\]](#) (tools>perform>lag clear-force)

Full Context

tools perform lag clear-force

Description

This command clears forced status.

Parameters

all-mc

Specifies all MC-LAGs.

lag-id

Specifies the LAG ID.

Values 1 to 800

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the peer MC IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

Platforms

All

6.32 clear-lockout-annexb

clear-lockout-annexb

Syntax

clear-lockout-annexb *aps-id*

Context

[\[Tree\]](#) (tools>perform>aps clear-lockout-annexb)

Full Context

tools perform aps clear-lockout-annexb

Description

This command clears lockout of the Annex B APS group.

Parameters

aps-id

Specifies an APS ID.

Values

<i>aps-id</i>	<i>aps-group-id</i>
aps	keyword
group-id	1 to 128

Platforms

6.33 clear-mac

```
clear-mac
```

Syntax

```
clear-mac [mac ieee-address]
```

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-mac)

Full Context

```
tools perform wlan-gw lanext bd clear-mac
```

Description

This command clears all MAC table entries for the specified HLE BD or a specific entry if a MAC address is specified.

Parameters

ieee-address

Specifies the MAC address of the MAC table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.34 clear-neighbor

```
clear-neighbor
```

Syntax

```
clear-neighbor [ip6 ipv6-address]
```

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-neighbor)

Full Context

```
tools perform wlan-gw lanext bd clear-neighbor
```

Description

This command clears all neighbor table entries for the specified HLE BD or a specific entry if an IPv6 address is specified.

Parameters

ipv6-address

Specifies the IPv6 address of the neighbor table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.35 cli

```
cli
```

Syntax

```
cli
```

Context

[\[Tree\]](#) (show>log cli)

Full Context

```
show log cli
```

Description

Commands in this context display log information specific to CLI users (classic CLI or MD-CLI).

Platforms

All

6.36 cli-session-group

```
cli-session-group
```

Syntax

```
cli-session-group session-group-name
```

Context

[\[Tree\]](#) (show>system>security cli-session-group)

Full Context

show system security cli-session-group

Description

This command displays the user profiles of this CLI session group and the session group details.

Parameters

session-group-name

Specifies a session group, up to 32 characters.

Platforms

All

6.37 client

client

Syntax

client all

client *client-address* *ip-address*

Context

[\[Tree\]](#) (show>test-oam>twamp client)

Full Context

show test-oam twamp client

Description

This command displays TWAMP client information.

Parameters

ip-address

Specifies the IPv4 or IPv6 address of a client.

Values

ipv4-address: a.b.c.d

ipv6-address: x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d

x: [0 to FFFF]H

d: [0 to 255]D

all

Displays all TWAMP client information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of TWAMP client information.

Output Example

```
show test-oam twamp client all

client-db

Syntax

client-db

client-db *db-name* **association**

client-db *db-name* **client** *client-index*

client-db *db-name*

Context

[\[Tree\]](#) (show>ipsec client-db)

Full Context

show ipsec client-db

Description

This commands displays information for client databases. Using this command without any parameters will list all configured client database.

Parameters

db-name

Species to list all IPsec gateways that use the specified client database.

association

Displays information for which this client database is associated.

client *client-index*

Specifies the client index or client name of client entry in the client database.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show client-db** command.

Output Example

```
show ipsec client-db
=====
IPsec Client Database
=====
Name                               Admin State  Match List

Context

[\[Tree\]](#) (tools>perform>ipsec client-db)

Full Context

tools perform ipsec client-db

Description

This command performs a lookup in the specified client-db by using specified input and displays the matching result.

Output Example

```
tools perform ipsec client-db "test" lookup idi string-type rfc822 string-  
value client-1@examplebm.com peer-ip 10.10.10.100  
Result : 0k  
Database : test  
Criterion - Ike Idi : RFC822 "client-1@examplebm.com"  
Criterion - Peer IP : 10.10.10.100  
Matched Record : 1 "client-1"  
Elapsed Time (us) : 2
```

Parameters

db-name

Specifies the name of the client-db.

peer-ip peer-ip-address

Specifies the peer's tunnel IP address as input, either v4 or v6.

string-type

Specifies the peer's IDi as input.

Values fqdn, rfc822

idi-ip-address

Specifies the peer's IDi of address type as input, either v4 or v6

string-value string-value

Specifies the value of FQDN or RFC822 IDi.

Platforms

string] [router-or-service attr-string] [debug]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt coa)

Full Context

tools perform subscriber-mgmt coa

Description

This command triggers a Change of Authorization (CoA) without a RADIUS authentication policy.

This command can be used to spoof a CoA from a configured server for purposes such as testing CoA python scripts. However, spoofing a CoA from a RADIUS server requires the configuration of a RADIUS authentication policy.

Parameters

nas-port-id *attr-string*

Specifies the physical access circuit of the NAS up to 253 characters.

ip-address

Specifies the IPv4 host address.

Values	<i>ipv4-address:</i> a.b.c.d
---------------	------------------------------

ipv6-address

Specifies the IPv6 host address.

Values	<i>ipv6-address:</i> x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D
---------------	--

ipv6-prefix/*ipv6-prefix-length*

Specifies the IPv6 PD host prefix.

Values	<i>ipv6-prefix:</i> x:x:x:x:x:x:x (eight 16-bit pieces)
	<i>ipv6-prefix-length</i> [0 to 128]

ipv6-prefix/*ipv6-prefix-length*

Specifies the IPv6 SLAAC host prefix.

Values	<i>ipv6-prefix:</i>	x::x:x:x:x:x (eight 16-bit pieces)
	<i>ipv6-prefix-length</i>	[0 to 128]

serv-id

Specifies the service ID of the LNS subscriber.

Values 0 to 4294967295

acct-session-id attr-string

Specifies the subscriber accounting session ID up to 22 characters.

alc-subscr-id attr-string

Specifies the subscriber ID up to 32 characters.

alc-brg-id attr-string

Specifies the BRG ID to a maximum of 32 characters.

user-name attr-string

Specifies the string matching RADIUS VSA [1] username associated to the host(s), up to 32 characters.

mac-address

Specifies the subscriber host MAC address in the form: xx:xx:xx:xx:xx:xx.

attribute

Specifies the attributes (RADIUS VSAs) for override. The VSA must be specified in number format. For example, VSA Alc-Subsc-Prof-Str="1M-prof" is expressed as 6527.12 ="1M-prof". Up to five attributes can be specified within this command.

For more information on VSAs, refer to the *7750 SR and VSR RADIUS Attributes Reference Guide*.

Values	<type>=<value>
	<type>:<tag>=<value>
	<vendor>,<type>=<value>
	e, <type>,<exttyp>=<value> (type=[241 242 243 244])
	le,<type>,<exttyp>=<value> (type=[245 246])
	evs,<type>,<vendor>,<vendor-type>=<value>
	levs,<type>,<vendor>,<vendor-type>=<value>

file-url

Specifies the file URL where the VSAs are located.

Values		
<i>local-url</i>	[<i>cflash-id</i>] [<i>file-path</i>] (up to 200 characters including the <i>cflash-id</i> directory length of up to 99 characters each)	
<i>remote-url</i>	[{ <i>ftp://</i> <i>tftp://</i> } <i>login:pswd@remote-locn</i>][<i>file-path</i>] (up to 255 characters with the directory length of up to 99 characters each)	
<i>remote-locn</i>	[<i>hostname</i> <i>ipv4-address</i> <i>ipv6-address</i>]	
<i>ipv4-address</i> :	a.b.c.d	
<i>ipv6-address</i> :	x:x:x:x:x:x:x [- <i>interface</i>] x:x:x:x:x:x:d.d.d.d[- <i>interface</i>] x - [0 to FFFF]H d - [0 to 255]D <i>interface</i> - Specifies the link local addresses, up to 32 characters	
<i>cflash-id</i>	cf1: cf1-A: cf1-B: cf2: cf2-A: cf2-B: cf3: cf3-A: cf3-B:	

attr-string

Specifies the RADIUS server name that is configured under the router or VPRN service context, up to 32 characters.

attr-string

Specifies the router or VPRN service instance where the RADIUS server is configured, up to 32 characters.

debug

Displays the debug message associated with the CoA command.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management CoA tools information.

Output Example

```
Node# tools perform subscriber-mgmt coa alc-subscr-id subscriber-01 attr 6527,13=new-sla-prof

6.42 collect-lmm-fc-stats

collect-lmm-fc-stats

Syntax

collect-lmm-fc-stats [{**sap** {*sap-id* | **all**} | **sdp** {*sdp-id* | **all**} | **interface** {*interface-name* | **all**}]

Context

[\[Tree\]](#) (show>eth-cfm collect-lmm-fc-stats)

Full Context

show eth-cfm collect-lmm-fc-stats

Description

This command displays the entities that are configured with per-FC LMM counters, and whether those counters are counting in-profile packets only or all countable packets.

Each entity may have up to eight individual FC-based counters. Each FC includes a positional index value (1 to 8) under the FC that is counting. A "P" indicates that the index is only counting in-profile traffic.

When no display filters are applied, this command displays all entities and the individual FC counters. Optional filters help to reduce the output that is visible to the operator.

Parameters

sap-id

Specifies a SAP entity for which to display active individual FC counters.

Values		
null	<i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i>	
dot1q	<i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i> <i>pw-id</i> : <i>[qtag1</i> <i>cp-conn-prof-id]</i>

	tunnel	keyword
	<i>id</i>	1 to 16
	<i>tag</i>	0 to 4094

sdp-id

Specifies an SDP entity for which to display active individual FC counters.

Values *sdp-id* — 1 to 32767
vc-id — 1 to 4294967295

interface-name

Specifies an interface entity for which to display active individual FC counters, up to 32 characters maximum.

all

Keyword to display all SAP, SDP, and interface entities, and the associated active individual FC counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output example shows information about entities that are configured with per-FC counters.

Output Example

```
A:node-2# show eth-cfm collect-lmm-fc-stats
=====
The FC to priority bit mapping for collect-lmm-fc-stats is as follows:
```

NC = 7, H1 = 6, EF = 5, H2 = 4, L1 = 3, AF = 2, L2 = 1, BE = 0

The number below each FC column indicates which counter index PDUs matching that FC will be counted in. Entries with a "P" beside the number indicate that only in-profile traffic is being counted. Entries without a "P" are not profile aware and count all PDUs associated with that FC.

collector

Syntax

collector *collector-id*

Context

[\[Tree\]](#) (show>app-assure>group>cflowd>dir-exp collector)

Full Context

show application-assurance group cflowd direct-export collector

Description

Commands in this context display cflowd direct-export collector output.

Parameters

collector-id

Specifies the ID of the cflowd direct export collector.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **collector** command information.

Output Example

```
A:Sim# show application-assurance group 1 cflowd direct-export collector 1
=====
Application Assurance Group 1 Cflowd Direct-Export Collector 1
=====

collector

Syntax

collector [*ip-address[:port]*] [**detail**]

Context

[\[Tree\]](#) (show>cflowd collector)

Full Context

show cflowd collector

Description

This command displays administrative and operational status of data collector configuration.

Parameters

ip-address

Displays information only about the specified collector IP address.

Default all collectors

:port

Displays information only about the collector on the specified UDP port.

Default all UDP ports

Values 1 to 65535

detail

Displays details about either all collectors or the specified collector.

Platforms

All

Output

cflowd Collector Output —The following output is an example of cflowd Collector information, and [Table 72: Show cflowd Collector Output Fields](#) describes the output fields.

```
A:R51-CfmA# show cflowd collector
=====

Table 73: Show cflowd Collector Detailed Output Fields

Label	Description
Address	The IP address of a remote cflowd collector host to receive the exported cflowd data
Port	The UDP port number on the remote cflowd collector host to receive the exported cflowd data
Description	A user-provided descriptive string for this cflowd remote collector host
Version	The version of the flow data sent to the collector
AS Type	The style of AS reporting used in the exported flow data
	origin — reflects the endpoints of the AS path which the flow is following
	peer — reflects the AS of the previous and next hops for the flow
Admin State	The desired administrative state for this cflowd remote collector host
Oper State	The current operational status of this cflowd remote collector host
Records Sent	The number of cflowd records that have been transmitted to this remote collector host
Last Changed	The time when this row entry was last changed
Last Pkt Sent	The time when the last cflowd packet was sent to this remote collector host
Aggregation Type	The bit mask which specifies the aggregation schemes used to aggregate multiple individual flows into an aggregated flow for export to this remote host collector
	none — no data will be exported for this remote collector host
	raw — flow data is exported without aggregation in version 5 format
	All other aggregation types use version 8 format to export the flow data to this remote host collector
Collectors	The total number of collectors using this IP address
Sent	The number of packets with flow data sent to the associated collector

Label	Description
Open	This counter shows the number of partially filled packets which have some flow data but are not yet filled or have been timed out (60 seconds maximum)
Error	This counter increments when there was an error during exporting of the collector packet; the most common reason will be a UDP unreachable destination for the configured collector

6.45 commit-history

commit-history

Syntax

commit-history

commit-history [*keyword*] [**commit-id** *number*]

Context

[\[Tree\]](#) (show>system>management-interface commit-history)

Full Context

show system management-interface commit-history

Description

This command displays the history of configuration changes that were committed in model-driven interfaces. A separate history of the last commits is maintained for each configuration region (bof, configure, debug, and li). Each commit is uniquely identified by a numerical sequential incrementing commit ID assigned by the system.

Note:

This command is not available in the classic CLI.

Parameters

keyword

Specifies the configuration region to display.

Values bof, configure, debug, li

Default configure

number

Specifies the commit history ID to display.

Values 1 to 4294967295

Platforms

All

Output

The following output is an example of commit history information.

The following table describes the commit history output fields.

Output Example

```
A:admin@node-2# show system management-interface commit-history
=====
Commit History
=====
Total Commits : 4

4
  Committed 2022-02-01T11:13:38.7-05:00 by admin (NETCONF) from 10.1.236.68
  Comment   "Fourth commit with NETCONF."
  Location  "cf3:\config.cfg"
3
  Committed 2022-02-01T11:01:03.8-05:00 by admin (MD-CLI) from 10.1.145.205
  Comment   "Third commit with the MD-CLI."
  Location  "cf3:\config.cfg.1"
2
  Committed 2022-02-01T11:00:47.7-05:00 by admin (MD-CLI) from 10.1.145.205
  Comment   "Second commit with the MD-CLI."
  Location  "cf3:\config.cfg.2"
1
  Committed 2022-02-01T10:56:01.3-05:00 by system (MD-CLI) from Console
  Log       "System booted version B-22.2.R1."
  Location  "Configuration is not saved to startup."
```

Table 74: Show Commit History Output Fields

Label	Description
Commit ID	Displays the commit ID.
Committed	Displays the date and time when the commit completed.
By	Displays the user and interface type that committed.
From	Displays the origin of the commit operation.
Comment	Displays the comment added by the user.
Log	Displays the log added by the system.
Increment	Displays the incremental saved configuration file location.
Location	Displays the complete saved configuration file location.

6.46 community

community

Syntax

community *community-string*

Context

[\[Tree\]](#) (show>system>security>snmp community)

Full Context

show system security snmp community

Description

This command lists SNMP communities and characteristics. Including the *community-name* parameter modifies the output to include all details for the specified community, including the source IP address list and validation failure counters.

Platforms

All

Output

The following output is an example of SNMP community information.

[Table 75: Show Community Output Fields](#) describes the community output fields.

Output Example

Note:

The system-created communities that begin with "cli-" are only used for internal CLI management purposes and are not exposed to external SNMP access.

```
A:ALA-1# show system security snmp community
=====
Communities
=====

                my-list1                5
=====
A:ALA-1#
```

Table 75: Show Community Output Fields

Label	Description
Community	Displays the community string name for SNMPv1 and SNMPv2c access only.
Access	Displays access information. r — The community string allows read-only access. rw — The community string allows read-write access. rwa — The community string allows read-write access. mgmt — The unique SNMP community string assigned to the management router. vpls-mgmt — The unique SNMP community string assigned for vpls management.
View	Displays the view name.
Version	Displays the SNMP version.
Group Name	Displays the access group name.
src-access-list	Displays the name of the list of source IP addresses that are allowed to use the community, as configured using the community configuration command.
authFailures	Displays the number of SNMP requests that have failed validation using this community .
No of Communities	Displays the total number of configured community strings.

community

Syntax

community *comm-id* {**detail** | **longer**}

community *comm-id*

community *comm-id* hunt

Context

[\[Tree\]](#) (show>router>bgp>routes community)

Full Context

show router bgp routes community

Description

This command displays BGP routes with routes with a community value matching the specified value.

community is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
 - *{target | origin}:ip-address:comm-val*
 - *{target | origin}:asnum:ext-comm-val*
 - *{target | origin}:ext-asnum:comm-val*
 - **bandwidth:asnum:val-in-mbps**
 - **ext:4300:ovstate**
 - **ext \t:value1:value2**
 - **flowspec-set:ext-asnum:group-id**

where:

- *target* — route target
- *origin* — route origin
- *ip-address* — a.b.c.d
- *ext-comm-val* — 0 to 4294967295
- *ext-asnum* — 0 to 4294967295
- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended

- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFF
- **flowspec-set** — flow-spec set
- *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

hunt

Displays entries for the specified route.

Platforms

All

6.47 completed

completed

Syntax

completed [*script-policy-name*] [**owner** *owner-name*]

Context

[\[Tree\]](#) (clear>system>script-control>script-policy completed)

Full Context

clear system script-control script-policy completed

Description

This command clears completed script run history entries.

Parameters

script-policy-name

Specifies to only clear history entries for the specified script-policy. 32 characters maximum.

owner-name

Specifies to only clear history entries for script-policies with the specified owner. 32 characters maximum.

Syntax

configuration-mode {mixed | model-driven} check [li | configure]

Context

[\[Tree\]](#) (tools>perform>system>management-interface configuration-mode)

Full Context

tools perform system management-interface configuration-mode

Description

This command checks if the configuration meets the prerequisite reference requirements to change the management interface configuration mode. Incompatible configuration commands are displayed with an error reason if the prerequisite is not met. This command does not check if the configuration has commands that are unsupported in model-driven interfaces.

Parameters

mixed

Specifies to check mixed management interface configuration mode.

model-driven

Specifies to check model-driven management interface configuration mode.

li

Specifies to only check the li configuration region.

configure

Specifies to only check the configure configuration region.

Description

This command displays UDP and TCP connection information.

If no command line options are specified, a summary of the TCP and UDP connections displays.

Entries in the output with a vRtrID of 4095 and a local address of 127.x.x.x are internal connections serving internal SR OS purposes, and are not used for external protocols.

Parameters

ip-address

Displays only the connection information for the specified IP address.

Values

ipv4-address: a.b.c.d (host bits must be 0)
 ipv6-address: x:x:x:x:x:x:x[-interface]
 x:x:x:x:x:d.d.d.d[-interface]
 where
 x: [0 to FFFF]H
 d: [0 to 255]D
 interface: up to 32 characters,
 mandatory for link local
 addresses

port-number

Displays only the connection information for the specified port number.

Values 0 to 65535

detail

Appends TCP statistics to the display output.

Platforms

All

Output

The following outputs are examples of system connections information, and [Table 77: System Connections Field Descriptions](#) describes the output fields.

Output Example

```
A:ALA-12# show system connections
=====
Connections
=====

Table 77: System Connections Field Descriptions

Label	Description
Proto	The socket protocol, either TCP or UDP.
RecvQ	The number of input packets received by the protocol.
TxmtQ	The number of output packets sent by the application.
Local Address	The local address of the socket. The socket port is separated by a period.
Remote Address	The remote address of the socket. The socket port is separated by a period.
State	Listen — The protocol state is in the listen mode. Established — The protocol state is established. vRtrID — The virtual router identifier. <ul style="list-style-type: none"> • vRtrID 0 — listens for connections in all routing instances including the Base and management VRFs. • vRtrID 1 — Base routing instance • vRtrID 4095 — management routing instance

Label	Description
	MSS — The TCP maximum segment size.

6.54 connectivity-association

connectivity-association

Syntax

connectivity-association [*ca-name*] [**detail**]

Context

[\[Tree\]](#) (show>macsec connectivity-association)

Full Context

show macsec connectivity-association

Description

This command displays MACsec specific CA information.

Parameters

ca-name

Displays MACsec information for the specified CA name, up to 256 characters in length.

detail

Displays MACsec CA detailed information.

Platforms

All

Output

See the following output examples:

- [Output Example: show macsec connectivity-association](#)
- [Output Fields: show macsec connectivity-association](#)
- [Output Example: show macsec connectivity-association <ca-name>](#)
- [Output Fields: show macsec connectivity-association <ca-name>](#)

Output Fields: show macsec connectivity-association <ca-name>

[Table 79: Output Fields: show macsec connectivity-association <ca-name>](#) describes the output fields for the **show macsec connectivity-association <ca-name>** command.

Table 79: Output Fields: show macsec connectivity-association <ca-name>

Label	Description
Admin State	Up — The CA is administratively up. Down — The CA is administratively down. If port <x/y/z> ethernet>macsec is shutdown, the admin state will be down. Otherwise, the admin state is up.
Description	Specifies a user description for this CA.
Replay Protection	Enabled — Replay Protection is enabled.

Label	Description
	Disabled — Replay Protection is disabled. If replay protection is enabled for this CA, the out of window packet will be discarded.
Replay Window Size	Specifies the size, in packets, of the replay window.
Macsec Encrypt	Enabled — MACsec is enabled. Disabled — MACsec is disabled.
Clear Tag Mode	Specifies the clear tag mode: single-tag, dual-tag.
Cipher Suite	Specifies the cipher suite used for encrypting the SAK: gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256.
Encryption Offset	Specifies the encryption offset configured on this node: 0, 30, 50.
Assigned ports	Specifies all ports that contain this CA.
MKA Key Server Priority	Specifies the MKA key server priority: 0-255 (default 16).
Active Pre-Shared Key Index	Specifies the active pre-shared key index: 1-2 (default 1).
Active Pre-Shared Key CKN	Specifies the active PSK CAK name.

Output Example: show macsec connectivity-association <ca-name> detail

```
A:Dut-C# show macsec connectivity-association "abcdefghijklmnoprstuvwxyz@" detail
=====
Connectivity Association "abcdefghijklmnoprstuvwxyz@"

6.55 convergence

convergence

Syntax

convergence [*family*]

Context

[\[Tree\]](#) (show>router>bgp convergence)

Full Context

show router bgp convergence

Description

This command displays information about how the router reconverged its routing state after the last restart of BGP.

Parameters

family

Specifies an address family for which to display BGP route convergence information.

Values ipv4, ipv6, vpn-ipv4, vpn-ipv6, label-ipv4, label-ipv6

Platforms

All

Output

[Table 80: Show Router BGP Convergence Field Descriptions](#) describes the BGP convergence output fields.

Use the following command to display BGP route convergence information for routes of all address families.

```
show router bgp convergence
```

Output Example

```

=====
```

Table 80: Show Router BGP Convergence Field Descriptions

Label	Description
Min wait advertise timer	The operational value of min-wait-to-advertise (0 if the feature is disabled) Use the min-wait-to-advertise command in the configure router bgp convergence context to configure the minimum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises any routes in a specific set of address families.
Established peers at min wait timer expiry	The number of address-family peers that were established when the min-wait-to-advertise command timer value expired (N/A if the feature is disabled)
Current established peers	The current number of address family peers that are in the established state
First session established time	The time, relative to BGP instance restart at time T=0, when the first address family session was established. This stops being tracked when the min-wait-to-advertise timer expires.
Last session established time	The time, relative to BGP instance restart at time T=0, when the last address-family session was established.

Label	Description
Max Wait advertise timer	<p>The operational value of the max-wait-to-advertise command for the address family (0 if the feature is disabled)</p> <p>Use the max-wait-to-advertise command in the configure router bgp convergence family context to configure the maximum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises the routes of a specific address family to BGP peers.</p>
Converged peers	<p>The number of address-family converged peers. This is the number of BGP neighbors that have, up to now, sent an EOR marker for the address family. N/A if the feature is disabled.</p>
Converged state	<p>The convergence state of the address family: waiting, started, partial, timeout or converged. N/A if the feature is disabled. Waiting is when no peers have reconnected yet.</p> <p>The waiting to start transition occurs when the first session comes up.</p> <p>The started to partial transition occurs when at least one address-family peer has sent the EOR marker.</p> <p>The partial to converged transition occurs when all address-family peers that have been up continuously since the min-wait-to-advertise timer expired have sent the EOR marker.</p> <p>The partial to timeout transition occurs when the max-wait-to-advertise timer expires and not all address family peers that have been up continuously since the min-wait-to-advertise timer expired have sent the EOR marker.</p>
Converged time	<p>The convergence time of the address family after the last restart, relative to BGP instance restart at time T=0. N/A is displayed if the convergence state is waiting, started, partial, or timeout.</p>

6.56 count

count

Syntax

count [detail]

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub count)

Full Context

show application-assurance group aa-sub count

Description

This command displays per-subscriber app-group application and protocol statistics.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **count** command.

Output Example

```

count

Syntax

count

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub>um count)

Full Context

show application-assurance group aa-sub usage-monitor count

Description

This command displays usage monitor counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.57 counters

counters

Syntax

counters

Context

[\[Tree\]](#) (clear>service>statistics>id counters)

Full Context

clear service statistics id counters

Description

This command clears all traffic queue counters associated with the service ID.

Platforms

All

counters

Syntax

counters

Context

[\[Tree\]](#) (show>snmp counters)

Full Context

show snmp counters

Description

This command displays SNMP counters information. SNMP counters will continue to increase even when SNMP is shut down. Some internal modules communicate using SNMP packets.

Platforms

All

Output

The following output is an example of SNMP counter information.

[Table 81: Show Counters Output Fields](#) describes the SNMP counters output fields.

Output Example

```
A:ALA-1# show snmp counters
=====
SNMP counters:
=====
  in packets : 463
-----
    in gets   : 93
    in getnexts : 0
    in sets   : 370
  out packets : 463
-----
    out get responses : 463
    out traps         : 0
  variables requested : 33
  variables set       : 497
=====
A:ALA-1#
```

Table 81: Show Counters Output Fields

Label	Description
in packets	Displays the total number of messages delivered to SNMP from the transport service.
in gets	Displays the number of SNMP get request PDUs accepted and processed by SNMP.
in getnexts	Displays the number of SNMP get next PDUs accepted and processed by SNMP.

Label	Description
in sets	Displays the number of SNMP set request PDUs accepted and processed by SNMP.
out packets	Displays the total number of SNMP messages passed from SNMP to the transport service.
out get responses	Displays the number of SNMP get response PDUs generated by SNMP.
out traps	Displays the number of SNMP Trap PDUs generated by SNMP.
variables requested	Displays the number of MIB objects requested by SNMP.
variables set	Displays the number of MIB objects set by SNMP as the result of receiving valid SNMP set request PDUs.

counters

Syntax

counters

Context

[\[Tree\]](#) (show>snmp>streaming counters)

Full Context

show snmp streaming counters

Description

This command displays counters information for the proprietary SNMP streaming protocol.

Platforms

All

Output

The following output is an example of SNMP streaming counters information.

[Table 82: Show Streaming Counters Output Fields](#) describes the SNMP streaming counters output fields.

Output Example

```
*A:Dut-B# show snmp streaming counters
=====
STREAMING counters:
=====
  in getTables   : 772
  in getManys   : 26
-----
  out responses  : 848
```

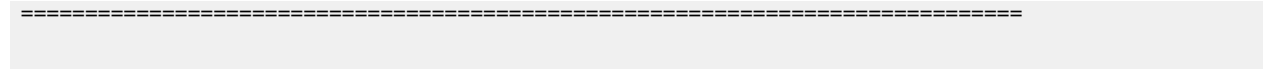

Table 82: Show Streaming Counters Output Fields

Label	Description
in getTables	Displays the number of GetTable request packets received.
in getManys	Displays the number of GetMany request packets received.
out responses	Displays the number of response packets sent.

6.58 cpm

cpm

Syntax

cpm

Context

[\[Tree\]](#) (tools>dump>filter>resources cpm)

Full Context

tools dump filter resources cpm

Description

This command displays information about filter resource utilization on the CPM, consumption by filter-using services such as OpenFlow, and the filters that use the most resources.

Platforms

All

Output

The following output is an example of filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># cpm

6.61 cpm-queue

cpm-queue

Syntax

cpm-queue *queue-id*

Context

[\[Tree\]](#) (show>system>security cpm-queue)

Full Context

show system security cpm-queue

Description

This command displays CPM queues.

Parameters

queue-id

Specifies an integer value that identifies a CPM queue.

Values 0, 33 to 2000

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of CPM IPv6 filter information.

[Table 83: Show CPM IPv6 Filter Output Fields](#) describes CPM queue output fields.

Output Example

```
A:ALA-35# show system security cpm-queue 1001
=====
CPM Queue Entry
=====
Queue Id           : 1001
-----
Queue Parameters :
-----
PIR                : 10000000          CIR                : 1000000
CBS                : 4096             MBS                : 8192
=====
```

A:ALA-35#

Table 83: Show CPM IPv6 Filter Output Fields

Label	Description
PIR	Displays the administrative Peak Information Rate (PIR) for the queue.
CIR	Displays the amount of bandwidth committed to the queue.
CBS	Displays the amount of buffer drawn from the reserved buffer portion of the queue's buffer pool.
MBS	Displays the maximum queue depth to which a queue can grow.

cpm-queue

Syntax

`cpm-queue queue-id`

Context

[\[Tree\]](#) (clear cpm-queue)

Full Context

clear cpm-queue

Description

This command clears CPM queue information.

Parameters

queue-id

Specifies the CPM queue ID.

Values 33 to 2000

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

6.62 cpu

cpu

Syntax

cpu [**sample-period** *seconds*]

Context

[\[Tree\]](#) (show>system cpu)

Full Context

show system cpu

Description

This command displays CPU utilization per task over a sample period.

Parameters

seconds

Specifies the number of seconds over which to sample CPU task utilization.

Values 1 to 300

Default 1

Platforms

All

Output

The following output is an example of CPU information, and [Table 84: System CPU Field Descriptions](#) describes the output fields.

Output Example

```
*A:cses-E11# show system cpu sample-period 2

Table 84: System CPU Field Descriptions

Label	Description
CPU Utilization	The total amount of CPU time.
Name	The process or protocol name.
CPU Time (uSec)	The CPU time each process or protocol has used in the specified time.
CPU Usage	The sum of CPU usage of all the processes and protocols.
Capacity Usage	The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be

Label	Description
	extra CPU cycles still left for other processes, but this service is running at capacity. This column does not reflect the true CPU utilization value; that data is still available in the CPU Usage column. This column is the busiest task in each group, where busiest is defined as either actually running or blocked attempting to acquire a lock.
Idle	The current CPU utilization for the system.
Usage	The overall percentage of CPU idleness over the specified sample time.
Busiest Core Utilization	The utilization percentage of the busiest processor core over the specified sample time. On single core CPUs, this is the overall system utilization percentage over the specified sample time.

cpu

Syntax

cpu [*sample-period seconds*]

Context

[\[Tree\]](#) (show>system cpu)

Full Context

show system cpu

Description

This command displays CPU utilization per task over a sample period.

Parameters

seconds

Specifies the number of seconds over which to sample CPU task utilization.

Values 1 to 300

Default 1

Platforms

All

Output

The following output is an example of system CPU information. [Table 85: System CPU Field Descriptions](#) describes the output fields.

Output Example

```

*A:cses-E11# show system cpu sample-period 2

cpu-protection

Syntax

cpu-protection

Context

[\[Tree\]](#) (clear cpu-protection)

Full Context

clear cpu-protection

Description

Commands in this context clear CPU protection data.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

6.64 cpu-scheduling

cpu-scheduling

Syntax

cpu-scheduling

Context

[\[Tree\]](#) (show>card>virtual cpu-scheduling)

Full Context

show card virtual cpu-scheduling

Description

This command displays the CPU scheduling health on the card. The scheduling health is a measure of the hypervisor load and is expressed by the percentage of clock interrupts that arrive within an accepted time period compared to the last clock interrupt.

Platforms

VSR

cpu-scheduling

Syntax

cpu-scheduling

Context

[\[Tree\]](#) (clear>card>virtual cpu-scheduling)

Full Context

clear card virtual cpu-scheduling

Description

This command clears virtual CPU scheduling statistics on the card.

Platforms

VSR

6.65 cpu-usage

cpu-usage

Syntax

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**]

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] **esa-vm** *esa-id/vm-id*

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**}

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**} **esa-vm** *esa-id/vm-id*

Context

[\[Tree\]](#) (show>isa>stats>tunnel-isa cpu-usage)

Full Context

show isa statistics tunnel-isa cpu-usage

Description

This command displays the CPU usage of the specified ISA. The information includes control plane usage and data plane usage.

The data plane usage collection depends on the configuration of the **config>isa>tunnel-grp>stats-collection>isa-dp-cpu-usage system** and collects usage every 5 minutes for the last 24 hours. The output also includes the current value.

Parameters

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 24

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system when this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

mda

Displays information about the specified ISA.

Values slot/mda

control-plane

Displays information about the control plane.

data-plane

Displays information about the data plane.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	<i>esa-id/vm-id</i>	
		<i>esa-id</i>	1 to 16
		<i>vm-id</i>	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa stats tunnel-isa cpu-usage** configuration.

Output Example

```
show>isa>stats>tunnel-isa# cpu-usage 1/2

6.66 create-sticky-lease

create-sticky-lease

Syntax

```
create-sticky-lease host-name [mac ieee-address] [circuit-id circuit-id] [client-id client-id] [requested-ip-address ip-address] [circuit-id-hex circuit-id-hex-string] [client-id-hex client-id-hex-string]
```

Context

[Tree] (tools>perform>router>dhcp>server>pool create-sticky-lease)

Full Context

```
tools perform router dhcp local-dhcp-server pool create-sticky-lease
```

Description

This command tries to create a lease-state in the specified local-dhcp-server pool with the supplied parameters. The hostname uniquely identifies this lease for subsequent operations. mac, circuit-id, and client-id should also have a unique combination of values according to the configured user-ident variables. If the requested-ip-address is provided the server tries to create a lease with this address. If this address is not available in the pool, the command fails.

Parameters

host-name

Specifies a string to identify the lease, up to 32 characters. If not specified, it can be internally generated based on MAC@ or another key.

ieee-address

Specifies the MAC address in xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx format.

circuit-id

Specifies the circuit-id string, up to 255 characters.

client-id

Specifies the client-id string, up to 255 characters.

ip-address

Specifies the IPv4 address in dotted notation a.b.c.d.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.67 credit-control

credit-control

Syntax

credit-control [**subscriber** *sub-ident-string*]

credit-control out-of-credit [**action** *action*] [**summary**]

credit-control extended-failure-handling [*state*] [**summary**]

Context

[\[Tree\]](#) (show>service>active-subscribers credit-control)

Full Context

show service active-subscribers credit-control

Description

This command displays active subscriber credit control information. Without additional filters, the output lists information for all active subscribers.

The output of this command can be filtered:

- per subscriber by specifying the optional **subscriber** *sub-ident-string* parameter
- per all subscribers that are out of credit by specifying the **out-of-credit** parameter with the optional **action** *action* parameter
- per subscribers that have a Diameter Gy session with Extended Failure Handling (EFH) enabled by specifying the **extended-failure-handling** parameter with the optional *state* parameter.

Parameters

sub-ident-string

Displays credit control information for the specified subscriber, up to 32 characters.

out-of-credit [**action** *action*]

Displays credit control information for subscribers that are out of credit and, optionally, have the specified out of credit action enabled.

Values continue, block-category, change-service-level

extended-failure-handling [*state*]

Displays credit control information for subscribers with a Diameter Gy session with EFH enabled. The optional *state* parameter lists subscribers for which the Diameter Gy session EFH is active, inactive, or both (all).

Values active, inactive, all

summary

Lists the number of matching entries for the specified filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber's credit control information.

Output Example

```
A:eng-BNG-2 # show service active-subscribers credit-control

The following table describes credit control output fields.

Table 86: Credit Control Field Descriptions

Label	Description
Credit Control Policy	The credit control policy name in use for this subscriber session
Category Map	The active category map in use for this subscriber session

Label	Description
Diameter Session Gy	The Diameter Gy session ID
CC Failure Handling	The current value for Credit Control Failure Handling (CCFH) as configured in the Diameter Gy application policy or as received in an Answer message from the Online Charging Server (OCS) in the CCFH AVP Values: terminate, continue, or retry-and-terminate
Extended Failure Handling (EFH) - State ¹	The EFH state: active — EFH is enabled and currently active inactive — EFH is enabled and currently inactive
EFH - Attempts ^{1 2}	The number of times interim credit is assigned to all rating groups followed by an attempt to establish a new Diameter Gy session with the Online Charging Server (OCS), or credit control server
EFH - Maximum Attempts ^{1 2}	The configured maximum attempts value in the Diameter application policy When an attempt to establish a new Diameter Gy session with the OCS continues to fail after the maximum attempts value is reached, then the user session is terminated (the subscriber hosts are deleted from the system).
EFH - Active Time ^{1 2}	The time since the EFH state became active for this subscriber session
EFH - Total Active Time ¹	The accumulated time of all occurrences that EFH was active during the lifetime of this subscriber session
EFH - Total Active Count ¹	The number of times that EFH was active during the lifetime of this subscriber session
Number of categories - static	The number of static categories in use for this subscriber session.
Number of categories - gx-session	The number of categories reserved for this subscriber session for Gx session level Usage Monitoring.
Number of categories - gx-pcc	The number of dynamic categories in use by this subscriber session for Gx PCC rule-based Usage Monitoring.
Category - Category Name	The name of the category as configured in the category map
Category - Ingress Queues	The ingress queues for which credit control is applied in this category as configured in the category map

Label	Description
Category - Egress Queues	The egress queues for which credit control is applied in this category as configured in the category map
Category - Ingress Policers	The ingress policers for which credit control is applied in this category as configured in the category map
Category - Egress Policers	The egress policers for which credit control is applied in this category as configured in the category map
Category - Credit Volume Used	The used total octets counter (ingress and egress combined) since the last usage reporting of this rating group
Category - Credit Volume Avail.	The remaining total granted octets available before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Category - Credit Volume Thres.	The volume quota threshold in octets as received from the OCS. When the Credit Volume Available octets fall below the Credit Volume Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Volume Threshold value is set to Expired and Credit Negotiating is set to True.
Category - Credit Time Used	The number of seconds passed since the last reporting of this rating group
Category - Credit Time Avail.	The remaining number of seconds before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Category - Credit Time Thres.	The time quota threshold in seconds as received from the OCS When the Credit Time Available falls below the Credit Time Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Time Threshold value is set to Expired and Credit Negotiating is set to true.
Category - Credit Expired	The credit expired value: False—Negotiated credit is still available True—All granted credit is exhausted; either new credit is being negotiated with the OCS or the out of credit action is activated.
Category - Credit Negotiating	The credit negotiating value: False—There is no credit being requested to the OCS

Label	Description
	True—New credit is being requested to the OCS
Category - Out Of Credit Action	The out of credit action value: None—Out-of-credit action is not active When the out-of-credit action is active, the value is set to one of: ChangeServiceLevel, BlockCategory, Continue, or DisconnectHost
Category - Quota Holding Time	The Idle timeout associated with the granted quota. When no traffic associated with the quota is observed for the time specified, a credit negotiation is triggered with the OCS.
Category - Validity Time Used	The number of seconds passed since the Validity Time was installed
Category - Validity Time Avail.	The remaining number of seconds of the Validity Time before a new usage reporting is triggered for this rating group (category)
Category - EFH Unreported Credit - Current Volume ^{1 2}	The unreported volume credit for the current occurrence of EFH in an active state. This counter includes the unreported used volume credit for the initial Diameter Gy session that caused the active EFH state and the unreported volume interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Volume Used counter.
Category - EFH Unreported Credit - Total Volume ¹	The accumulated total unreported volume credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported volume credit during the lifetime of the subscriber session.
Category - EFH Unreported Credit - Current Time ^{1 2}	The unreported time credit for the current occurrence of EFH in an active state. This counter includes the unreported used time credit for the initial Diameter Gy session that caused the active EFH state and the unreported time interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Time Used counter.
Category - EFH Unreported Credit - Total Time ¹	The accumulated total unreported time credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is

Label	Description
	enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported time credit during the lifetime of the subscriber session.
Category - HTTP Rdr URL Override	The URL returned by a Diameter OCS in a Credit Control Answer (CCA) message Final-Unit-Indication/Redirect-Server/Redirect-Server-Address AVP. This URL is used for Diameter Gy http-redirect out-of-credit actions when allow-override is configured.

Note:

1. These fields are only shown when EFH is enabled in the Diameter application policy. EFH is enabled using the **configure subscriber-mgmt diameter-application-policy gy extended-failure-handling no shutdown** command.
2. These fields are only shown when the EFH state is active.

6.68 credit-control-policy

credit-control-policy

Syntax

```
credit-control-policy [policy-name]  
credit-control-policy policy-name subscribers
```

Context

[\[Tree\]](#) (show>subscr-mgmt credit-control-policy)

Full Context

```
show subscriber-mgmt credit-control-policy
```

Description

This command displays credit control policy information.

Parameters

policy-name

Specifies the credit control policy name, up to 32 characters.

subscribers

Displays the subscribers associated with the credit control policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.69 credit-reset

credit-reset

Syntax

```
credit-reset sap sap-id subscriber sub-ident-string sla-profile sla-profile-name {category category-name | all-categories} [spi-sharing-type spi-sharing-type] [spi-sharing-id spi-sharing-id]
```

```
credit-reset sap sap-id ip ip-address {category category-name | all-categories} [mac mac-address]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt credit-reset)

Full Context

tools perform subscriber-mgmt credit-reset

Description

This command resets the credit for an SLA-profile instance.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

sub-ident-string

Resets the credit for the specified subscriber identification, up to 32 characters.

sla-profile-name

Resets the credit for the specified SLA profile, up to 32 characters.

category-name

Resets the credit for the specified category, up to 32 characters.

spi-sharing-type

Resets the credit for sessions with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Resets the credit for sessions with the specified SPI sharing type and sharing identifier.
The SPI sharing identifier is:

- an identifier when the sharing type is per-group

- an internal PPP or IPoE identifier when the sharing type is a per-PPP or per-IPoE session

Values 0 to 4294967295

ip-address

Resets the credit for the specified IP address.

mac-address

Resets the credit for the specified MAC IP address.

sub-profile-string

Resets the credit for the specified subscriber profile, up to 32 characters.

service-id

Resets the credit for the specified service ID.

Values service-id: 1 2147483647 svc-name: up to 64 characters.

crp

Syntax

crp [*family* | *ip-address*]

Context

[Tree] (show>router>pim crp)

Full Context

show router pim crp

Description

This command displays PIM candidate RP (CRP) information received at the elected Bootstrap router (BSR).

Parameters

family

Displays CRP information for the address family.

Values ipv4, ipv6

ip-address

Displays the IP address of the candidate RP.

Platforms

All

Output

The following output is an example of a PIM CRP configuration.

Output Example

```
A:WAS# show router pim crp
=====

```

Table 87: PIM CRP Fields provides PIM CRP field descriptions.

Table 87: PIM CRP Fields

Label	Description
RP Address	The Candidate RP address
Group Address	The range of multicast group addresses for which the CRP is the Candidate RP
Priority	The Candidate RP's priority for becoming a rendezvous point (RP). This value is used to elect RP for a group range. A value of 0 is considered as the highest priority.
Holdtime	The hold time of the candidate RP. It is used by the Bootstrap router to time out the RP entries if it does not listen to another CRP advertisement within the holdtime period.
Expiry	The minimum time remaining before the CRP will be declared down. If the local router is not the BSR, this value is 0.
Candidate RPs	The number of CRP entries.

6.72 cspf

cspf

Syntax

cspf to *ip-addr* [**from** *ip-addr*] [**bandwidth** *bandwidth*] [**include-bitmap** *bitmap*] [**exclude-bitmap** *bitmap*] [**hop-limit** *limit*] [**exclude-address** *excl-addr*] [**use-te-metric**] [**strict-srlg**] [**srlg-group**] [**exclude-node** *excl-node-id*] [**skip-interface** *interface-name*] [**ds-class-type** *class-type*] [**cspf-reqtype** *req-type*] [**least-fill-min-thd** *thd*] [**setup-priority** *val*] [**hold-priority** *val*]

Context

[Tree] (tools>perform>router>mpls cspf)

Full Context

tools perform router mpls cspf

Description

This command computes a CSPF path with specified user constraints.

Parameters

to *ip-addr*

Specifies the destination IP address.

Values a.b.c.d

from *ip-addr*

Specifies the originating IP address.

Values a.b.c.d

bandwidth *bandwidth*

Specifies the amount of bandwidth in Mb/s to be reserved.

Values 1 to 6400000

include-bitmap *bitmap*

Specifies to include a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

exclude-bitmap *bitmap*

Specifies to exclude a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

hop-limit *limit*

Specifies the maximum number of hops for the path.

Values 2 to 255

exclude-address *ip-addr*

Specifies IP addresses, up to eight, that should be excluded in the path computation.

Values a.b.c.d

use-te-metric

Specifies the use of the link traffic engineering metric to optimize the path. By default, the link IGP metric is used.

strict-srlg

Specifies the computation of a path which is strictly disjoint from links which are members of the entered SRLG

srlg-group *grp-id*

Specifies up to eight Shared Risk Loss Groups (SRLGs) that path computation should avoid, or must avoid if the **strict-srlg** option is enabled. An SRLG group represents a set

of interfaces which could be subject to the same failures or defects and thus share the same risk of failing.

Values 0 to 4294967295

exclude-node *excl-node-id*

Specifies a list of up to eight addresses, that should be excluded during the path computation.

Values a.b.c.d

skip-interface *interface-name*

Specifies an interface name of up to 32 characters, that should be skipped during the path computation.

ds-class-type *class-type*

Specifies the class type (CT) to associate with the computed path.

Values 0 to 7

cspf-reqtype *req-type*

Specifies the if all ECMP paths or a single path, selected randomly or using the **least-fill** parameter, should be returned.

Values all, random, least-fill

least-fill-min-thd *thd*

Specifies the use of the least-fill path selection method in the computation of the path.

Values 1 to 100

setup-priority *val*

Specifies the setup priority value to use for the path.

Values 0 to 7

hold-priority *val*

Specifies the hold priority value to use for the path.

Values 0 to 7

Table 88: Show Customer Field Descriptions

Label	Description
Customer-ID	The ID that uniquely identifies a customer.
Contact	The name of the primary contact person.
Description	Generic information about the customer.
Phone	The phone/pager number to reach the primary contact person.
Total Customers	The total number of customers configured.
Multi-service site	
Site	Multi-service site name. A multi-service customer site is a group of SAPs with common origination and termination points.
Description	Information about a specific customer's multi-service site.
Assignment	The port ID, MDA, or card number, where the SAP's that are members of this multi- service site are defined.
I. Sched Pol	The ingress QoS scheduler policy assigned to this multi-service site.
E. Sched Pol	The egress QoS scheduler policy assigned to this multi-service site.
Service Association	
Service-ID	The ID that uniquely identifies a service.
SAP	The SAP assigned to the service.

Table 89: Show QoS Scheduler-Hierarchy Customer Output Fields

Label	Description
Legend	Admin CIR/PIR: Specifies the configured value of CIR/PIR. Assigned CIR/PIR: Specifies the PIR/CIR rate given to a member by that parent level. Offered CIR/PIR: Specifies the offered load on that member. Consumed CIR/PIR: Specifies the amount of scheduler bandwidth used by this member.
Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation. Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level.
Cir Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue as

Label	Description
	compared to other child schedulers and queues while vying for bandwidth on the parent scheduler.
PIR	Specifies the PIR rate.
CIR	Specifies the CIR rate.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue aside from the queue's PIR setting.
Service-Id	The ID that uniquely identifies the policy.
Customer-Id	The ID that uniquely identifies the customer.
SAP	Specifies the Service Access Point (SAP) within the service where the policy is applied.
Multi Service Site	Specifies the multiservice site name.
Orphan Queues	Specifies the number of queues in an orphaned state.
Hierarchy	Displays the scheduler policy tree structure.
Tier0	Specifies the weight of the queue at its parent internal (Tier0) scheduler. This is a normalized value based on the port speed, or hash weight when used within a LAG.

OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the limit-unused-bandwidth command is enabled to protect against exceeding the aggregated bandwidth.
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**arbiter** {**root** | *name*}] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>arbiter-stats customer)

Full Context

monitor qos arbiter-stats customer

Description

This command monitors arbiter statistics for a customer site.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site which is an anchor point for ingress and egress arbiter hierarchy.

name

Specifies the name of the policer control policy arbiter. This parameter is mandatory if the SAP resides on a LAG in adapt-qos link or port-fair mode.

Values An existing arbiter-name in the form of a string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

ingress

Displays arbiter-name statistics applied on the site ingress.

egress

Displays arbiter-name statistics applied on the site egress.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>qos>scheduler-stats customer)

Full Context

monitor qos scheduler-stats customer

Description

This command monitors scheduler statistics per customer multi-service-site. The first screen displays the current statistics related to the specified customer ID and customer site name. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta. Monitor commands are similar to **show** commands but only statistical information displays. These commands display selected statistics per the configured number of times at the interval specified.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site, which is an anchor point for ingress and egress virtual scheduler hierarchy.

scheduler-name

Specifies an existing *scheduler-name*. Scheduler names are configured in the **config>qos>scheduler-policy>tier level** context. This parameter is mandatory if the customer resides on a LAG in adapt-qos link or port-fair mode.

Values An existing *scheduler-name* is in the form of a string, up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ingress

Displays the customer's multi-service-site ingress scheduler policy.

egress

Displays the customer's multi-service-site egress scheduler policy.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

damping

Syntax

damping [*ip-prefix* [*ip-prefix-length*]] [damp-type] [detail] [ipv4]

damping [*ip-prefix* [*ip-prefix-length*]] [damp-type] [detail] { ipv6 | label-ipv4 | label-ipv6 | mcast-ipv4 | mcast-ipv6 | mvpn-ipv4 | vpn-ipv4 | vpn-ipv6 }

Context

[\[Tree\]](#) (show>router>bgp damping)

Full Context

show router bgp damping

Description

This command displays BGP routes with have been dampened due to route flapping. This command can be entered with or without a route parameter.

When the keyword **detail** is included, more detailed information displays.

When only the command is entered (without any parameters included except **detail**), then all dampened routes are listed.

When a parameter is specified, then the matching route or routes are listed.

When a **decayed**, **history**, or **suppressed** keyword is specified, only those types of dampened routes are listed.

Parameters

ip-prefix[ip-prefix-length]

Displays damping information for the specified IP prefix length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)
 ipv4-prefix-le: 0 to 32
 ipv6-prefix:
 • x:x:x:x:x:x:x (eight 16-bit pieces)
 • x:x:x:x:x:d.d.d.d
 • x: [0 to FFFF] H
 • d: [0 to 255] D
 ipv6-prefix-le: 0 to 128

damp-type

Displays damping type for the specified IP address.

decayed

Displays damping entries that are decayed but are not suppressed.

history

Displays damping entries that are withdrawn but have history.

suppressed

Displays damping entries suppressed because of route damping.

detail

Displays detailed information.

ipv4

Displays damped routes for the IPv4 family.

ipv6

Displays damped routes for the IPv6 family.

label-ipv4

Displays damped routes for the label IPv4 family.

label-ipv6

Displays damped routes for the label IPv6 family.

mcast-ipv4

Displays damped routes for the MCAST IPv4 family.

mcast-ipv6

Table 92: Show Damping Field Descriptions

Label	Description
BGP Router ID	The local BGP router ID.
AS	The configured autonomous system number.
Local AS	The configured or inherited local AS for the specified peer group. If not configured, then it is the same value as the AS.
Network	Route IP prefix and mask length for the route.
Flag(s)	Legend: Status codes: u- used, s-suppressed, h-history, d-decayed, *-valid. If a * is not present, then the status is invalid. Origin codes: i-IGP, e-EGP, ?-incomplete, >-best
Network	The IP prefix and mask length for the route.
From	The originator ID path attribute value.
Reuse time	The time when a suppressed route can be used again.
AS Path	The BGP AS path for the route.
Peer	The router ID of the advertising router.

Label	Description
NextHop	BGP nexthop for the route.
Peer AS	The autonomous system number of the advertising router.
Peer Router-Id	The router ID of the advertising router.
Local Pref	BGP local preference path attribute for the route.
Age	The time elapsed since the service was enabled.
Last update	The time when BGP was updated last in second/minute/hour (SS:MM:HH) format.
FOM Present	The current Figure of Merit (FOM) value.
Number of Flaps	The number of flaps in the neighbor connection.
Reuse time	The time when the route can be reused.
Path	The BGP AS path for the route.
Applied Policy	The applied route policy name.

damping

Syntax

damping [{*ip-prefix/ip-prefix-length*] [**neighbor** *ip-address*]} | **group name**]

Context

[\[Tree\]](#) (clear>router>bgp damping)

Full Context

clear router bgp damping

Description

This command clears or resets the route damping information for received routes.

Parameters

ip-prefix/ip-prefix-length

Clears damping information for entries that match the IP prefix and prefix length.

- Values**
- ipv4-prefix:
 - a.b.c.d (host bits must be 0)
 - ipv4-prefix-length: [0 to 32]
 - ipv6-prefix:

- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D
- ipv6-prefix-length: [0 to 128]

neighbor *ip-address*

Clears damping information for entries received from the BGP neighbor.

- Values**
- ipv4-address:
- a.b.c.d
- ipv6-prefix:
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D
- interface: up to 32 characters, mandatory for link local addresses

group *name*

Clears damping information for entries received from any BGP neighbors in the peer group.

- Values** up to 32 characters

Platforms

All

7.3 data-trigger

data-trigger

Syntax

data-trigger sap *sap-id*

Context

[\[Tree\]](#) (clear>service>dynsvc data-trigger)

Full Context

clear service dynamic-services data-trigger

Description

This command deletes all dynamic services associated with a dynamic services data trigger.

Note:

This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services data trigger SAP to delete.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.4 data-triggers

data-triggers

Syntax

data-triggers [**sap** *sap-id*] [**summary**]

Context

[\[Tree\]](#) (show>service>dynsvc data-triggers)

Full Context

show service dynamic-services data-triggers

Description

This command displays the active dynamic services data trigger details.

Note:

This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services SAP for which the details are shown.

summary

Limits the output to one line per data trigger SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of data trigger information.

Output Example

```
# show service dynamic-services data-triggers
=====
Dynamic Services Data-triggers
=====
SAP                          : 1/1/4:1214.101
-----
Acct session-ID              : 144DFF0000009156A24138
MAC                          : 00:51:00:dd:01:01
IP                            :
State                         : sapCreated
-----
No. of Data-triggers: 1
=====
```

[Table 93: Data Trigger Field Descriptions](#) describes data trigger fields.

Table 93: Data Trigger Field Descriptions

Output field	Description
Acct session-ID	The RADIUS accounting session ID for this dynamic services data trigger. This accounting session ID is used as an accounting multi-session ID in RADIUS accounting for the associated dynamic services. It can also be used as a key in CoA or Disconnect Messages to set up or terminate associated dynamic services.
MAC	The MAC address learned to set up this dynamic service data trigger. The MAC address is included in the Access-Request message for RADIUS authentication.
IP	The IPv4 or IPv6 address learned to set up this dynamic service data trigger. If the data trigger packet was not an IP packet, then this field is empty. When available, the IP address is included in the RADIUS authentication and accounting messages.
State	The current state of the dynamic service data trigger: Pending—(initial state) data trigger received and authentication started Accepted—(transient state) authentication succeeded; dynsvc script started but not yet completed sapCreated—(final state) corresponding dynamic services sap created

7.5 database

database

Syntax

Context

[\[Tree\]](#) (clear>service>id>pim-snooping database)

Full Context

clear service id pim-snooping database

Description

This command clears PIM snooping source group database information.

Parameters

sap-id

Clears PIM snooping SAP information

sdp-id

Clears PIM snooping entries associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

Values 1 to 17407

grp-ip-address

Clears PIM snooping information matching the specified group address

src-ip-address

Clears PIM snooping information matching one particular source within the multicast group

family

Displays either IPv4 or IPv6 information

Values ipv4 or ipv6

evpn-mpls

Clears PIM snooping statistics for EVPN-MPLS destinations

Platforms

show router rip database

Description

Displays all routes in the RIP database.

Parameters

ip-address /mask

Specifies the IP address.

Values ip-address: a.b.c.d.
 mask: 1 to 32

longer

Specifies the longer prefix match entries should also be displayed.

peer ip-address

Specifies the peer IP address.

Values a.b.c.d

detail

Displays detailed information.

qos

Specifies the QoS.

Platforms

All

Output

The following output is an example of RIP route database information, and [Table 94: Show RIP Database Field Descriptions](#) describes the output fields.

Output Example

```
*A:ALA-1# show rip database
=====
RIP Route Database

Table 94: Show RIP Database Field Descriptions

Label	Description
Destination	The RIP destination for the route.
Peer	The router ID of the peer router.
NextHop	The IP address of the next hop.
Metric	The hop count to rate the value of different hops.
Tag	The value to distinguish between internal routes (learned by RIP) and external routes (learned from other protocols).
TTL	Displays the number of seconds the specific route will remain in the routing table. When an entry reaches 0, it is removed from the routing table.
Valid	No — The route is not valid. Yes — The route is valid.

database

Syntax

database

Context

[\[Tree\]](#) (clear>router>rip database)

Full Context

clear router rip database

Description

This command flushes all routes in the RIP database.

Platforms

All

database

Syntax

Table 95: Bier Database Fields

Label	Description
Template	The template name
MT	The IGP topology associated with the sub-domain
Sub-domain	The sub-domain ID
BSL	The BitStringLength used in the sub-domain
BFR-ID	The BFR ID which identifies the router in the BitString
Start	The start label allocated for this sub-domain
End	The end label allocated for this sub-domain
Total	The total number of labels allocated for this sub-domain
BFR-Prefix	The routable IP address of a BFR, used by BIER to identify a BFR

database

Syntax

database [**group** *grp-ip-address*] [**source** *src-ip-address*]

database interface {*ip-int-name* | *ip-address*} [**group** *grp-ip-address*] [**source** *src-ip-address*]

database group-interface all

Context

[\[Tree\]](#) (clear>router>igmp database)

Full Context

clear router igmp database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

group *grp-ip-address*

Clears the multicast group address (IPv4/IPv6) or zero in the specified address group.

source *src-ip-address*

Clears the IGMP database from the specified source IP address.

interface *ip-int-name*

Clears the IGMP database on the specified interface.

interface *ip-address*

Clears the IGMP database on the specified IP address.

host *ip-address*

Clears the IGMP database on the specified host.

host *all*

Clears the IGMP database on all hosts.

group-interface *interface-name*

Clears the IGMP database on the specified group interface.

group-interface *all*

Clears the IGMP database on all group interfaces.

Platforms

All

database

Syntax

```
database [group ipv6-address [source ipv6-address]]
```

```
database interface {ip-int-name | ipv6-address} [ group ipv6-address [source ipv6-address]]
```

```
database ipsec-interface ip-int-name [group ipv6-address [source ipv6-address]]
```

```
database host ipv6-address [group ipv6-address [ source ipv6-address]]
```

```
database host all [group ipv6-address [source ipv6-address]]
```

```
database group-interface interface-name [ fwd-service service-id] [group grp-ipv6-address [source  
ipv6-address]]
```

```
database group-interface all
```

Context

[\[Tree\]](#) (clear>router>mld database)

Full Context

```
clear router mld database
```

Description

This command clears MLD database parameters.

Parameters

host *ipv6-address*

Clears the MLD database on the specified host.

host all

Clears the MLD database on all hosts.

interface *ip-int-name*

Clears database information for the specified MLD interface name.

interface *ipv6-address*

Clears database information for the specified MLD interface IPv6 address.

ipsec-interface *ip-int-name*

Clears database information for the specified dynamic name for the MLD-enabled child_SA.

group *ipv6-address*

Clears database information for the specified MLD group IPv6 address.

source *ipv6-address*

Clears database information for the specified MLD source IPv6 address.

service-id

Clears database information for the specified service ID.

Values service-id: 1 to 2148278386
 svc-name: up to 64 characters.

Platforms

All

database

Syntax

```
database [interface ip-int-name | mt-int-name | int-ip-address] [group grp-ip-address [source ip-address]]  
          [family]
```

Context

[\[Tree\]](#) (clear>router>pim database)

Full Context

clear router pim database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

ip-int-name

Clears the IGMP or PIM database on the specified interface.

mt-int-name

Clears the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

Syntax: *vprn-id-mt-grp-ip-address*

int-ip-address

Clears the IGMP or PIM database on the specified IP address.

group-ip-address

Clears the multicast group address (ipv4, ipv6) or zero in the specified address group.

ip-address

Clears the IGMP or PIM database from the specified source IP address.

family

Clears database family information.

Values ipv4, ipv6

mpls-if-name

Clears the MPLS interface name.

Syntax: *mpls-if-index*

Platforms

All

database

Syntax

database

Context

[\[Tree\]](#) (show>router>p2mp-sr-tree database)

Full Context

show router p2mp-sr-tree database

Description

Commands in this context display P2MP SR tree database information.

Platforms

All

database

Syntax

database [*family*] [*ip-prefix/ip-prefix-length*] [**up to** *prefix-length*] [**origin-as** *as-number*]

database [*family*] [*ip-prefix/ip-prefix-length*] **{longer}**

database **{summary}**

database [*family*] [**{static}**]

Context

[\[Tree\]](#) (show>router>origin-validation database)

Full Context

show router origin-validation database

Description

This command displays database information.

Parameters

family

Specifies the type of routing information to be displayed.

Values ipv4 — Displays IPv4 entries.

 ipv6 — Displays IPv6 entries.

ip-prefix/ip-prefix-length

Displays routes only matching the specified IP address and length, up to 64 characters.

prefix-length

Displays routes matching up to the specified length.

Values 1 to 128

as-number

Specifies the origin AS number.

Values 0 to 4294967295

longer

Displays routes matching the *ip-prefix-ip-prefix-length* and routes with longer masks.

summary

Displays database summary information.

static

Displays static routes.

Platforms

All

Output

The following output is an example of database information.

Output Example

```

database

Syntax

database [*system-id* | *isp-id*] [**detail**] [**level** *level*]

Context

[\[Tree\]](#) (show>router>isis database)

Full Context

show router isis database

Description

This command displays the entries in the IS-IS link state database.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

lsp-id

Only the specified LSP (hostname) is listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

level

Specifies the interface level (1, 2, or 1 and 2).

detail

All output is displayed in the detailed format.

Platforms

```

Table 96: IS-IS Link State Database Output Fields

Label	Description
Flex-Algorithm	The flexible algorithm number

Label	Description
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Prefix SID Flags	Displays the prefix SID flags
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR

Full Context

clear router isis database

Description

This command removes the entries from the IS-IS link-state database which contains information about PDUs.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS link-state database.

Platforms

All

database

Syntax

```
database [type {router | network | summary | asbr-summary | external | nssa | all}] [area area-id] [adv-router router-id] [link-state-id] [detail] [filtered]
```

```
database [type {router | network | inter-area-pfx | inter-area-rtr | external | nssa | intra-area-pfx | rtr-info | all}] [area area-id] [adv-router router-id] [link-state-id] [detail] [filtered]

```

```
show router ospf database
```

Description

This command displays information about the OSPF link state database (LSDB).

When no command line options are specified, the command displays brief output for all database entries.

Parameters

type keyword

Specifies to filter the OSPF LSDB information based on the type specified by *keyword*.

router

Displays only router (Type 1) LSAs in the LSDB.

network

Displays only network (Type 2) LSAs in the LSDB.

summary

Displays only summary (Type 3) LSAs in the LSDB.

asbr-summary

Displays only ASBR summary (Type 4) LSAs in the LSDB.

external

Displays only AS external (Type 5) LSAs in the LSDB. External LSAs are maintained globally and not per area. If the display of external links is requested, the area parameter, if present, is ignored.

nssa

Displays only NSSA area-specific AS external (Type 7) LSAs in the LSDB.

inter-area-pfx

Displays inter-area prefix LSAs.

inter-area-rtr

Displays inter-area router LSAs.

intra-area-pfx

Displays intra-area prefix LSAs.

rtr-info

Displays router info LSAs.

all

Displays all LSAs in the LSDB. The all keyword is intended to be used with either the **area area-id** or the **adv-router router-id [link-state-id]** parameters.

area area-id

Displays LSDB information associated with the specified OSPF *area-id*.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

adv-router router-id [link-state-id]

Displays LSDB information associated with the specified advertising router. To further narrow the number of items displayed, the *link-state-id* can optionally be specified.

detail

Displays detailed information on the LSDB entries.

filtered

Displays LSDB entries that were filtered by an area import or export policy.

Platforms

All

Output

OSPF Database Output

[Table 97: OSPF Database Output Fields](#) describes the standard and detailed command output fields for an OSPF database.

Table 97: OSPF Database Output Fields

Label	Description
Area Id	The OSPF area identifier.
Type	Router — LSA type of router (OSPF)
LSA Type	Network — LSA type of network (OSPF)
	Summary — LSA type of summary (OSPF)
	ASBR Summary — LSA type of ASBR summary (OSPF)
	Nssa-ext — LSA area-specific, NSSA external (OSPF)
	Area opaque — LSA type of area opaque (OSPF)
	router — LSA type of router (OSPF3)
	Network — LSA type of network (OSPF3)

Label	Description
	IE Pfx — LSA type of inter-area prefix (OSPF3) Newline IE Rtr LSA type of inter-area router (OSPF3) IA Pfx — LSA type of intra-area prefix (OSPF3)
Link State Id	The link state Id is an LSA type specific field containing either a number to distinguish several LSAs from the same router, an interface ID, or a router-id; it identifies the piece of the routing domain being described by the advertisement.
Adv Rtr Id Adv Router Id	The router identifier of the router advertising the LSA.
Age	The age of the link state advertisement in seconds.
Sequence Sequence No	The signed 32-bit integer sequence number.
Cksum Checksum	The 32-bit unsigned sum of the link-state advertisements' LS checksums.
No. of LSAs	The number of LSAs displayed.
Options	EA — External Attribute LSA Support DC — Demand Circuit Support R — If clear, a node can participate in OSPF topology distribution without being used to forward transit traffic. N — Type 7 LSA Support MC — Multicast Support E — External Routes Support V6 — V6 works in conjunction with R. If V6 is clear, a node can participate in OSPF topology distribution without being used to forward IPv6 datagrams. If R is set and V6 is clear, IPv6 datagrams are not forwarded but diagrams belonging to another protocol family may be forwarded.
Prefix Options	P — Propagate NSSA LSA. MC — Multicast support. LA — Local address capability. If set, the prefix is an IPv6 interface address of the advertising router. NU — No unicast capability. If set, the prefix is excluded from IPv6 unicast calculations.
Flags	None — No flags set V — The router is an endpoint for one or more fully adjacent Virtual Links having the described area as the transit area

Label	Description
	E — The router is an AS Boundary Router B — The router is an Area Border Router
Link Count	The number of links advertised in the LSA.
Link Type (<i>n</i>)	The link type of the <i>n</i> th link in the LSA.
Network (<i>n</i>)	The network address of the <i>n</i> th link in the LSA.
Mask (<i>n</i>)	The mask of the <i>n</i> th link in the LSA.
No of TOS (<i>n</i>)	The ToS of the <i>n</i> th link in the LSA.
Metric-0 (<i>n</i>)	The cost metric of the <i>n</i> th link in the LSA.
Not Flooded (<i>n</i>)	Filtered on Import The <i>n</i> th LSA was filtered by an area import policy. Filtered on Export The <i>n</i> th LSA was filtered by an area export policy. Note: this line does not appear if there is no filtering and the LSA was flooded.

Output Example

```

database

Syntax

database [**purge**]

Context

[\[Tree\]](#) (clear>router>ospf3 database)

[\[Tree\]](#) (clear>router>ospf database)

Full Context

clear router ospf3 database

clear router ospf database

Description

This command clears all LSAs received from other nodes, sets all adjacencies other than two-way to one-way, and refreshes all self-originated LSAs.

Parameters

purge

Clears all self-originated LSAs and re-originates all self-originated LSAs.

Platforms

All

database

Syntax

database [*peer ipv6-address*] [**detail**]

database [*peer ipv6-address*] **detail** [**qos**]

database *ipv6-address* [*prefix-length*] [**longer**] [*peer ipv6-address*] [**detail**]

database *ipv6-address* [*prefix-length*] [**longer**] [*peer ipv6-address*] **detail** [**qos**]

Context

[\[Tree\]](#) (show>router>ripng database)

Full Context

show router ripng database

Description

This command displays the routes in the RIPng database.

Parameters

ipv6-address

Specifies the RIPng IPv6 address.

Values

ipv6-address: x:x:x:x:x:x:x [-interface]

x:x:x:x:x:d.d.d.d [-interface]

x: [0..FFFF]H

d: [0..255]D

interface — link local addresses up to 32 characters

prefix-length

The IP prefix in dotted decimal notation for the range used by the ABR to advertise that summarizes the area into another area.

Values ipv6-prefix:

- x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

prefix-length: 0 to 128

detail

Displays detailed information.

qos

Displays QoS information.

longer

Displays more detailed information.

Platforms

All

Output

The following outputs are examples of router RIPng database information.

Output Example

```
*A:Dut-C>config>router>if# show router ripng database

database

Syntax

database

Context

[\[Tree\]](#) (clear>router>ripng database)

Full Context

clear router ripng database

Description

This command flushes all routes in the RIPng database.

Platforms

All

database

Syntax

database [**bsl** [256..1024]] **subdomain-id** [0..255]

Context

[\[Tree\]](#) (clear>router>bier database)

Full Context

clear router bier database

Description

This command clears the BIER database.

Platforms

All

database

Syntax

database [*system-id*]

Context

[\[Tree\]](#) (clear>service>id>spb database)

Full Context

clear service id spb database

Description

This command clears and resets the Shortest Path Bridging (SPB)database.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

Platforms

All

7.6 datapath

datapath

Syntax

datapath *port-id* [**mac** *mac-chip-number*] [**fp** *fp-number*] [**detail**]

Context

[\[Tree\]](#) (show datapath)

Full Context

show datapath

Description

This command displays the datapath mapping for the specified card, MDA, FP, MAC, connector, and port combinations. Fully qualified port identifiers are displayed for ports when the **detail** or **port** parameters are specified.

This command is supported on FP4-based hardware only.

Parameters

port-id

Specifies the port ID.

slot

Specifies the slot number of the card in the chassis to display. The maximum slot number is platform dependent. See the *Installation Guides* for more information.

Values 1 to 10

mda

Specifies the MDA number in the slot to display. This is an integer value relative to the card.

Values 1 to 2

xiom

Specifies the XIOM number in the slot to display.

Values x1

connector

Specifies the connector number to display. This is an integer value relative to the MDA.

Values c1 to c54

port

Specifies the connector port number to display. The full port identifier is displayed. This is an integer value relative to the connector.

Values 1 to 10

fp-number

Specifies the FP number to display. This is an integer value relative to the card.

Values 1 to 8

mac-chip-number

Specifies the MAC number to display. This is an integer value relative to the MDA.

Values 1 to 12

detail

Displays the full port identifiers for all ports with configured connectors.

Platforms

All

Output

The following output is an example of the **show datapath** command.

Output Example:

```
*A:PE# show datapath 1/2/c1/1
```

```
=====
Card      MDA      FP      MAC Chip Num  Connector  Ports

7.7 datastore-locks

datastore-locks

Syntax

datastore-locks [detail]

Context

[\[Tree\]](#) (show>system>management-interface datastore-locks)

Full Context

show system management-interface datastore-locks

Description

This command displays datastore locks information.

Parameters

detail

Displays session-specific information.

Platforms

All

Output

The following output is an example of detail datastore locks information for all datastores. [Table 98: Datastore-locks Output Fields](#) describes the output fields.

Output Example

```
[ ]
A:admin@node-1# show system management-interface datastore-locks detail
=====
Session ID  Region                Datastore              Lock State
Username    Session Mode          Idle Time
Session Type From
-----
 6          configure            Candidate              Unlocked
admin      Global                0d 00:00:09
MD-CLI (1) Console
-----
Number of sessions: 1
'#' indicates the current active session
'(n)' indicates the number of internal sessions
=====
```

Table 98: Datastore-locks Output Fields

Label	Description
Session ID	The session ID.
Region	The region or scope that the datastore belongs to.
Datastore	Datastores that can be locked. For example: Running and Candidate.
Lock State	Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state.
Username	The name of the user.
Session Mode	Global — A shared session. Exclusive — An exclusive session.
Idle Time	The idle time of the session.
Session Type	NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running.

Label	Description
	Classic CLI — Indicates a classic CLI session is running. System — Indicates a system (EHS or CRON) session is running.
From	The originating IP address.

7.8 debounce

debounce

Syntax

debounce peer *ip-address* ring *sync-tag*

Context

[\[Tree\]](#) (clear>redundancy>multi-chassis>mcr debounce)

Full Context

clear redundancy multi-chassis mc-ring debounce

Description

This command clears multi-chassis ring operational state debounce history.

Parameters

ip-address

Clears debounce history for the specified IP address.

- Values**
- ipv4-address: a.b.c.d
 - ipv6-address:
 - x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x – [0 to FFFF] H
 - d – [0 to 255] D

sync-tag

Clears debounce history for the specified sync tag.

Platforms

All

7.9 debug

debug

Syntax

debug [*application*]

Context

[\[Tree\]](#) (show debug)

Full Context

show debug

Description

This command displays set debug points.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration debug** command or the **info** command in the debug configuration region.

Parameters

application

Display which debug points have been set.

Values aaa, application-assurance, atm, bgp, bier, call-trace, certificate, cisco-hdlc, diameter, dynamic-services, eth-cfm, ethernet, filter, frame-relay, gtp, igmp, ip, ipsec, isis, l2tp, lag, ldp, local-dhcp-server, mcast-management, mirror, mld, mpls, msdp, mtrace, mtrace2, nat, oam, open-flow, ospf, ospf3, pcep, pcp, pim, ppp, python, radius, radius-proxy, rip, ripng, rpki, rsvp, service, snmp, srrp, subscriber-mgmt, system, upnp, vrrp, wlan-gw, wpp

Platforms

All

Output

The following shows an example of debug output.

Output Example

```
*A:EsrC# show debug

debug

Syntax

debug

Context

[\[Tree\]](#) (tools>dump debug)

Full Context

tools dump debug

Description

Commands in this context dump debug information.

Platforms

All

7.10 debug-packet

debug-packet

Syntax

debug-packet [clear]

Context

[\[Tree\]](#) (tools>dump>eth-cfm debug-packet)

Full Context

tools dump eth-cfm debug-packet

Description

This command displays and optionally clears the counters representing the number of CFM PDUs that matched the debug criteria but were not passed to the debug logger. This situation is caused by a full message queue.

Parameters

clear

Clears the current counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of CFM-PDU information.

Output Example

```
tools dump eth-cfm debug-packet
=====
ETH-CFM Debug Logging Message Queue Statistics
=====
Rx Debug Exceptions      : 0
Tx Debug Exceptions      : 0
=====
```

7.11 declined-addresses

declined-addresses

Syntax

declined-addresses *ip-address*[/*mask*] [**detail**]

declined-addresses pool *pool-name*

Context

[Tree] (show>router>dhcp>server declined-addresses)

Full Context

show router dhcp local-dhcp-server declined-addresses

Description

This command display information about declined addresses.

Parameters

pool-name

Specifies a DHCP pool name on the router.

ip-address

Specifies the IP address of the DNS server. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of declined address information

Output Example

```
*A:ALA-48>show>router>dhcp>server# declined-addresses pool test
=====
Declined addresses for server test Base
=====
Pool          Subnet          IP Address
PPPoE User Name   Time           MAC Address    Type
Option 82 Circuit ID
-----
No Matching Entries
=====
*A:ALA-48>show>router>dhcp>server#
```

[Table 99: Declined Address Pool Field Descriptions](#) describes declined address pool output fields.

Table 99: Declined Address Pool Field Descriptions

Field	Description
Pool	The name of the IP address pool
Subnet	The subnet address
IP Address	The declined IP address
Time	The creation time of this entry
MAC Address	The declined MAC address
Type	The type of declined address
PPPoE User Name	The name of the PPPoE user name
Option 82 Circuit ID	The declined circuit ID from the Option 82

declined-addresses

Syntax

declined-addresses *ip-address[/mask]*

declined-addresses pool *pool-name*

Context

[\[Tree\]](#) (clear>router>dhcp>server declined-addresses)

Full Context

clear router dhcp local-dhcp-server declined-addresses

Description

This command clears declined DHCP addresses.

Parameters

pool-name

Clears information about the declined pool name.

ip-address[/mask]

Clears information about the declined IP address and mask.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.12 default-domain

default-domain

Syntax

default-domain [**bridge-identifier** {*bridge-id* | *bridge-name*}] [**vlan** *vlan-id*] [**system-settings**]

Context

[\[Tree\]](#) (show>eth-cfm default-domain)

Full Context

show eth-cfm default-domain

Description

This command displays per-MIP index (**bridge-identifier** and **vlan**) configuration as entered under the **default-domain** entries.

Parameters

bridge-id

Specifies the bridge identifier related to the MIP. This is equivalent to the *service-id*.

Values 1 to 2147483647

bridge-name

Specifies the name of the bridge related to the MIP, up to 64 characters.

vlan-id

Specifies the VLAN ID matching the primary VLAN, or "none" if **primary-vlan-enable** is not configured.

Values 1 to 4094, none

system-settings

Keyword to display the system settings.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of default domain information, and [Table 100: Output fields: ETH-CFM default domain](#) describes the output fields.

Output Example

```
show eth-cfm default-domain
=====
Default Domain Information
=====
```

```

```

Table 100: Output fields: ETH-CFM default domain

Label	Description
BridgeName:BridgeID	The name and ID of the association service BridgeName:BridgeID combinations that exceed the allowed column length causes the associated output to be produced on a separate line.
VLAN	The numerical value of the primary VLAN associated with the MIP, or the value none
Level	The configured level value, or defer to the value specified under the system settings for the MIP
Creation	The configured MHF creation mode, or defer to the value specified under the system settings for the MIP
IdPerm	The configured identifier that is carried in supporting ETH-CFM PDUs, or defer to the value specified under the system settings
LtrPr	The configured MIP LTR priority, or defer to the value specified under the system settings for the MIP

7.13 delay-template

delay-template

Syntax

delay-template *template-name*

Context

[\[Tree\]](#) (show>oam-pm>streaming delay-template)

Full Context

show oam-pm streaming delay-template

Description

This command displays the configuration data for one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template** summary information. [Table 101: Show delay-template Output Fields](#) describes the delay template fields.

Output Example

```
show oam-pm streaming delay-template
-----
Streaming Delay Templates
-----
Name                                     Admin   Tests
-----
stream-1                                 Up      7
-----

Sample Window    : 10 seconds
Window Integrity : 80%
Active Test Refs : 6
Total Test Refs  : 7
-----
```

Table 101: Show delay-template Output Fields

Label	Description
Name	Name of the delay template

Label	Description
Admin	State of the delay template
Tests	Number of tests referencing the delay template
Tmpl Name	Name of the delay template
Description	Description of the delay template (truncated beyond width)
Admin State	Up — The delay template is administratively enabled Down — The delay template is administratively disabled
FD Average	forward — The average frame delay metric for forward direction backward — The average frame delay metric for backward direction round-trip — The average frame delay metric for round-trip direction
IFDV Average	forward — The average inter-frame delay variation metric for forward direction backward — The average inter-frame delay variation metric for backward direction round-trip — The average inter-frame delay variation metric for round-trip direction
Sample Window	Length of the sample window
Window Integrity	Percentage required to ensure integrity of the reporting
Active Test Refs	Number of tests actively referencing the delay template
Total Test Refs	Number of total tests referencing the delay template

7.14 delay-template-using

delay-template-using

Syntax

delay-template-using [**delay-template** *template-name*]

Context

[\[Tree\]](#) (show>oam-pm>streaming delay-template-using)

Full Context

show oam-pm streaming delay-template-using

Description

This command displays the list of sessions configured against one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template-using** summary information.

Output Example

```
show oam-pm streaming delay-template-using

7.15 dest-tracking

dest-tracking

Syntax

dest-tracking ip [detail]

dest-tracking ipv6 [detail]

dest-tracking sap [detail]

dest-tracking sdp [detail]

Context

[\[Tree\]](#) (tools>dump>filter>resources dest-tracking)

Full Context

tools dump filter resources dest-tracking

Description

This command displays information about resources pertaining to tracked targets.

Parameters

ip

Displays information about IPv4 targets.

ipv6

Displays information about IPv6 targets.

sap

Displays information about SAP targets.

sdp

Displays information about SDP targets.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of filter resource SAP destination tracking information.

Output Example

```
dest-tracking sap
=====
Unique SAPs with tracked forwarding states =====
Used : 1
```

```
Free : 4095
Total : 4096
=====
```

The following output is an example of filter resource SAP destination tracking detailed information.

```

Table 102: PCEP Detail Output Fields

Label	Description
Admin Status	Down — PCEP is administratively disabled. Up — PCEP is administratively enabled.
Oper Status	Down — PCEP is operationally down. Up — PCEP is operationally up.
Unknown Msg Limit	Specifies the unknown messages, per minute, limit.
Keepalive Interval	Specifies the keepalive interval.
DeadTimer Interval	Specifies the number of matching entries.
Capabilities List	Specifies the capabilities listing.
Address	Specifies the IP address.
Report Path Constraints	True — Path constraints will be reported. False — Path constraints will not be reported.
Redelegation Interval	Specifies the redelegation timer interval.
State Interval	Specifies the state timer interval.
State Timer Action	Remove — Specifies the state timer action is remove. None — Specifies the state timer action is none.
Max SR-TE PCE Init Lsps	Specifies the maximum number of PCE initiated SR-TE LSPs that can be created by the router.
Open Wait Timer	Specifies the open wait timer value.
Keep Wait Timer	Specifies the keep wait timer value.
Sync Timer	Specifies the sync timer value.
Request Timer	Specifies the request timer value.
Connection Timer	Specifies the connection timer value.
Allow Negotiations	True — Allow negotiations will occur. False — Allow negotiations will not occur.
Max Sessions	Specifies the maximum sessions value.

Label	Description
Max Unknown Req	Specifies the maximum unknown requests value.

detail

Syntax

detail [*partition*]

Context

[Tree] (show>app-assure>group>http-enrich detail)

Full Context

show application-assurance group http-enrich detail

Description

This command displays detailed HTTP Enrichment information.

Parameters

partition

Specifies the partition within the group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail

Syntax

detail

Context

[Tree] (show>router>bgp>routes detail)

Full Context

show router bgp routes detail

Description

This command displays detailed information about the BGP routes, including information about the original path attribute values.

detail is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

7.17 detected-protocols

detected-protocols

Syntax

```
detected-protocols {all | sap sap-id | spoke-sdp sdp-id[:vc-id]}
```

Context

[\[Tree\]](#) (clear>service>id>stp detected-protocols)

Full Context

```
clear service id stp detected-protocols
```

Description

RSTP automatically falls back to STP mode when it receives an STP BPDU. The **clear detected-protocols** command forces the system to revert to the default RSTP mode on the SAP or spoke SDP.

Parameters

all

Clears all detected protocol information.

sap-id

Clears the specified lease state SAP information.

sdp-id

The SDP ID to be cleared.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be cleared.

Values 1 to 4294967295

Platforms

All

7.18 deterministic

deterministic

Syntax

deterministic

Context

Description

Commands in this context perform actions of deterministic NAT.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.19 device

device

Syntax

device [*ieee-address*]

Context

[\[Tree\]](#) (show>system>bluetooth device)

Full Context

show system bluetooth device

Description

This command displays information for Bluetooth devices registered with the system.

Parameters

ieee-address

Specifies the MAC address, up to 30 characters.

Platforms

7750 SR-1, 7750 SR-s

Output

Use the following command to display Bluetooth device information.

```
show system bluetooth device
```

The following output is an example of Bluetooth device information, and [Table 103: Output fields: Bluetooth device](#) describes the output fields.

Output Example

```
=====
System-wide Bluetooth Configuration
=====
Passkey           : 123456           Advertising Timeout: 30
Power State       : off             Pairing Button    : Disabled
=====

Description

This command provides information about the active Diameter Gx and Diameter Gy session IDs.

Note: The diameter NASREQ application is stateless in SR OS and therefore a NASREQ session ID is not included in the output.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the active Diameter Gx and Gy session IDs and [Table 104: Active subscriber hierarchy diameter field descriptions](#) describes the output fields.

```
show service active-subscribers hierarchy diameter
```

Output Example

```
=====
Active Subscribers Hierarchy (diameter information)

-----
Number of active subscribers : 1
Flags: (N) = the host or the managed route is in non-forwarding state
=====
```

Table 104: Active subscriber hierarchy diameter field descriptions

Field	Description
Gy-diam-session-id	The active Diameter Gy session ID for this SLA Profile Instance. N/A when no session is active.
Gx-diam-session-id	The active Diameter Gx session ID for this subscriber host or session. N/A when no session is active.

7.26 diameter-application-policy

diameter-application-policy

Syntax

diameter-application-policy [*name*]

Context

[\[Tree\]](#) (show>subscr-mgmt diameter-application-policy)

Full Context

show subscriber-mgmt diameter-application-policy

Description

This command displays Diameter application policy information.

Parameters

name

Specifies the application policy, up to 32 characters, for which orphaned Gx sessions are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management Diameter application policy information

Output Example

```
# show subscriber-mgmt diameter-application-policy

[Table 105: Diameter Application Policy Field Descriptions](#) describes diameter application policy output fields.

Table 105: Diameter Application Policy Field Descriptions

Field	Description
Description	The user provided description of this policy
Session failover	Failover is enabled or disabled
Failover Handling	Handling is retry-and-terminate or terminate
Peer policy	The diameter application peer policy name
Application	The policy's application, gx, gy, or nasreq
Tx timer (s)	The maximum wait time (seconds) while a client is pending
Last management change	The time of the most recent management-initiated change to this policy
Include AVP	The attribute-value-pairs for Gx messages
Calling-Station-Id type	The string that is put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
NAS-Port bits spec	The number that is put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Id prefix type	The type of prefix that is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
NAS-Port-Id prefix	The user configurable string that is added as the prefix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Id suffix type	The user configurable string that is added as the suffix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Type value	The value that is put in the RADIUS NAS-Port-Type attribute if included in RADIUS accounting-request messages
User-Equipment-Info	The user equipment info, eui64, imeisv, mac, or modified-eui64

diameter-application-policy

Syntax

diameter-application-policy *name* **statistics**

Context

[Tree] (clear>subscr-mgmt diameter-application-policy)

Full Context

clear subscriber-mgmt diameter-application-policy

Description

This command clears Diameter application policy data.

Parameters

name

Specifies the Diameter application policy name, up to 32 characters.

statistics

Clears Diameter application policy statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.27 diameter-node

diameter-node

[Table 107: Diameter Node Peer Field Descriptions](#) describes Diameter node peer fields.

Table 107: Diameter Node Peer Field Descriptions

Field	Description
Diameter Node	The Diameter node under which this peer is active
Index	The Peer index is a peer configuration parameter
Remote Host Identity	The peer identity
Remote Realm	The realm to which the peer belongs
Remote IP address	The IP address of the peer
Remote Port	The port on the peer used for Diameter communication
Remote Origin-State-Id	The Origin-State-Id of the peer
Local Host Identity	The local identity
Local Realm	The local realm name
Local IP address	The local IP address
Local Port	The local port used for Diameter communication
Peer Admin State	The administrative state of the configured peer
Peer Active	Indicates whether the connection towards the peer is active
Peer Status	The operational status of the configured peer
Active Applications	The applications used over this peer

Field	Description
Last Disconnect Cause	The last disconnect cause
Preference	The configured preference of the peer
Connection Timer (Tc)	The timer used to initiate connections towards the peer. In case that the connection is not successfully established, a new attempt is periodically tried (every Tc interval)
Watchdog Timer (Tw)	The watchdog timer value that detects the failed connection towards the peer
Last Mgmt Change	The date and time of the last management change

```

7.30 discovery

discovery

Syntax

```
discovery [{peer [ip-address]} | {interface [ ip-int-name}}] [state state] [detail] [ adjacency-type type]
discovery [state state] [detail | summary] [adjacency-type type] [session ip-addr[label-space]]
discovery [state state] [detail | summary] [adjacency-type type] [family]
discovery interface [ip-int-name] [state state] [detail | summary] [session ip-addr[label-space]]
discovery peer [ip-address] [state state] [ detail | summary] [session ip-addr[ label-space]]
```

Context

[\[Tree\]](#) (show>router>ldp discovery)

Full Context

```
show router ldp discovery
```

Description

This command displays the status of the interfaces participating in LDP discovery.

Parameters

peer ip-address

Specifies to display the IP address of the peer.

interface ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

state state

Specifies to display the current operational state of the adjacency.

Values established, trying, down

detail

Specifies to display detailed information.

family

Displays either IPv4 or IPv6 LDP session information.

adjacency-type type

Specifies to display the adjacency type.

Values link, targeted

Platforms

All

Output

LDP Discovery Output

Table 110: LDP Discovery Output Fields describes the LDP discovery output fields.

Table 110: LDP Discovery Output Fields

Label	Description
Interface Name	The name of the interface.
Local Addr	The IP address of the originating (local) router.
Peer Addr	The IP address of the peer.
AdjType	The adjacency type between the LDP peer and LDP session is targeted.
State	Established — The adjacency is established. Trying — The adjacency is not yet established.
No. of Hello Adjacencies	The total number of hello adjacencies discovered.
Up Time	The amount of time the adjacency has been enabled.
Hold Time Remaining	The time left before a neighbor is declared to be down.

Output Example

```
*A:Dut-A# show router ldp discovery

7.31 dist-cpu-protection

dist-cpu-protection

Syntax

cpu-protection

Context

[\[Tree\]](#) (show>system>security dist-cpu-protection)

Full Context

show system security dist-cpu-protection

Description

Commands in this context display Distributed CPU Protection information.

Platforms

All

dist-cpu-protection

Syntax

dist-cpu-protection

Context

[\[Tree\]](#) (tools>dump>security dist-cpu-protection)

[\[Tree\]](#) (tools>perform>security dist-cpu-protection)

Full Context

tools dump security dist-cpu-protection

tools perform security dist-cpu-protection

Description

This command displays to release Distributed CPU Protection parameters and status at the per card and forwarding plane level.

Platforms

All

dist-cpu-protection

Syntax

dist-cpu-protection [detail]

Context

[\[Tree\]](#) (show>port dist-cpu-protection)

Full Context

show port dist-cpu-protection

Description

This command displays distributed CPU protection information.

Parameters

detail

Displays detailed information.

Platforms

All

7.32 diversity

diversity

Syntax

diversity *diversity-assoc-name*

Context

[\[Tree\]](#) (show>router>pcep>pcc>pce-assoc diversity)

Full Context

show router pcep pcc pce-associations diversity

Description

This command displays the diversity association information.

If a diversity association name is not specified, the information for all configured diversity associations is displayed.

Parameters

diversity-assoc-name

Specifies the diversity association name.

Platforms

All

Output

The following output is an example of diversity association information, and [Table 111: Show Diversity Association Descriptions](#) describes the output fields.

Output Example

```
*A:Dut-C>config>router>mpls>lsp# show router pcep pcc pce-associations diversity "test_div"
=====
PCEP PCC Diversity Associations Info
=====
Association Name      : test_div
Association ID        : 20
Diversity Type       : link
Disjoint Reference   : False
Association Source    : 192.168.213.59
Disjointness Type    : loose
=====
```

Table 111: Show Diversity Association Descriptions

Label	Description
Association Name	The diversity association name

Label	Description
Association ID	The diversity association ID
Association Source	The diversity source address of the diversity association. Both IPv4 and IPv6 addresses are supported.
Diversity Type	The diversity type of the diversity association
Disjointness Type	The disjointness type of the diversity association
Disjoint Reference	The P-flag value conveyed to the disjointness configuration TLV

7.33 dm

dm

Syntax

dm [*interval seconds*] [*repeat repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>oam-pm>session dm)

Full Context

monitor oam-pm session dm

Description

This command monitors the MPLS Delay Measurement (DM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dm

Syntax

dm

Context

[\[Tree\]](#) (show>oam-pm>stats>session dm)

Full Context

show oam-pm statistics session dm

Description

This command selects the session's MPLS DM test for the statistical display.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.34 dmm

dmm

Syntax

dmm [interval *seconds*] [repeat *repeat*] [absolute | rate]

Context

[\[Tree\]](#) (monitor>oam-pm>session dmm)

Full Context

monitor oam-pm session dmm

Description

This command monitors the Ethernet Delay Measurement Message (DMM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

All

dmm

Syntax

dmm

Context

[\[Tree\]](#) (show>oam-pm>stats>session dmm)

Full Context

show oam-pm statistics session dmm

Description

This command selects the session's Ethernet DMM test for the statistical display.

Platforms

Secondary DNS           : 2009::16
Tertiary DNS            : (Not Specified)
IPv4 source address     : 5.1.45.3
IPv6 source address     : 2005::1:2d:3
Last management change  : 01/13/2020 11:00:13
```

7.36 dns-ip-cache

dns-ip-cache

Syntax

dns-ip-cache *cache-name* **isa** *mda-id*

dns-ip-cache *cache-name*

Context

[\[Tree\]](#) (show>app-assure>group dns-ip-cache)

Full Context

show application-assurance group dns-ip-cache

Description

This command displays the application assurance DNS IP cache statistics and status information.

Parameters

cache-name

Specifies the DNS IP cache for a particular ISA-AA card, up to 32 characters.

mda-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

[Table 112: Show DNS IP Cache Output Fields](#) describes the **show** command output fields.

Table 112: Show DNS IP Cache Output Fields

Label	Description
Admin Status	Indicates the administrative status of the DNS IP cache. [Up Down]
Domain expressions	Indicates the number of DNS domain expressions configured.
Server addresses	Indicates the number of server-addresses configured
High-Watermark	Indicates the value, in percentage, of the configured high watermark.
Low-Watermark	Indicates the value, in percentage, of the configured low watermark.
Cache-size	Indicates the value of the configured maximum cache size.

Label	Description
Usage	Indicates the value, in percentage, of the total for the number of entries in the cache.
Alarm State	Indicates the status of the alarm related to the DNS IP cache high/low watermark utilization. The alarm is raised when the high watermark is crossed; it is cleared when it goes below the low watermark. [Clear Raised]
Hit-Count	Indicates the number of times an IP address lookup in this cache was successful.
Total responses	Indicates the total number of DNS responses analyzed.
Domain name matched	Indicates the number of times a domain name defined in the DNS match criteria matched a DNS response.
Domain & server matched	Indicates the number of times both the domain name and server address defined in the DNS match criteria matched a DNS response.
Total entries added	Indicates the total number of IP entries added in the cache.
Total entries removed	Indicates the total number of IP entries removed from the cache after the entry expired.
Full count	Indicates the total number of IP entries in the cache.
Hit Count	Indicates the number of times an IP address lookup in this cache was successful. The IP address lookup is performed in app-filters and is successful if the server address DNS IP cache criteria is met.
Miss Count	Indicates the number of times an IP address lookup in this cache was unsuccessful. The IP address lookup is performed in app-filters and is unsuccessful if the server address DNS IP cache criteria is not met.

Output Example

```

dns-ip-cache

Syntax

dns-ip-cache *dns-ip-cache-name* *url file-url*

dns-ip-cache *dns-ip-cache-name* **isa** *mda-id/esa-vm-id* [*url file-url*] [**new-ip-count**]

Context

[Tree] (tools>dump>app-assure>group dns-ip-cache)

Full Context

tools dump application-assurance group dns-ip-cache

Description

This command displays the list of IP addresses stored in a DNS IP cache.

Parameters

dns-ip-cache-name

Specifies a DNS IP cache name, up to 32 characters.

url *file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url remote-url	local-url	[<cf-flash-id>/][<file-path>] 200 chars max, including cflash-id directory length 99 chars max each
	remote-url	{ftp tftp}://[<login>:<pswd>@] <remote-locn>/[<file-path>] 255 chars max <file-path> 199 chars max
	remote-locn	{ <hostname> <ipv4-address> "["<ipv6-address>"]" }[:<port>]
	ipv4-address	a.b.c.d
	ipv6-address	x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface - 32 chars max, for link local addresses
	port	[0..65535]
	cflash-id	cf1: cf1-A: cf1-B: cf2: cf2-A: cf2-B: cf3: cf3-A: cf3-B:

isa *mda-id/esa-vm-id*

Specifies the DNS IP cache for a particular ISA-AA card.

Values

slot/mda	slot: 1 to 10 mda: 1, 2
esa-esa-id/vm-id	esa-id: 1 to 16 vm-id: 1 to 4

new-ip-count

Displays the number of new IP addresses added to the cache.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following are output examples for this command.

Table 113: Tools DNS IP Cache Output Fields

Label	Description
ip-address	Indicates the IP address stored in the DNS IP cache. The address is added into the cache if the DNS response meets the DNS IP cache match criteria (domain name and DNS server address).
creationTime	Indicates the time at which the entry was created. The entry is created by a DNS response meeting the DNS IP cache match criteria (domain name and DNS server address).
lastUpdated(UTC)	Indicates the time at which the entry was last updated, either from a new IP flow (fully classified) using the same IP address or a new DNS response meeting the DNS IP cache match criteria.
numDNSResponses	Indicates the number of DNS responses including this IP address meeting the DNS IP cache match criteria.
lastMatchTime(UTC)	Indicates the last time the IP address matched an app-filter with a server address DNS IP cache criteria.
numTimesMatched	Indicates the number of times the IP address matched an app-filter with a server address DNS IP cache.
domain	Indicates the domain as configured in dns-ip-cache.
hostname	Indicates the hostname as configured in dns-ip-cache.
new-ip-count	Indicates the number of new IP addresses added in the cache for the domain.

7.37 domain

domain

Syntax

domain [*md-index* | *md-admin-name*] [**association** {*ma-index* | *ma-admin-name* | **all-associations**}]
 [detail]

Context

[\[Tree\]](#) (show>eth-cfm domain)

Full Context

show eth-cfm domain

Description

This command displays domain information.

Parameters

md-index

Specifies the index of the MD to which the MP is associated, or 0, if none.

Values 1 to 4294967295

md-admin-name

Specifies the administrative name for the domain, up to 64 characters.

ma-index

Specifies the index to which the MP is associated, or 0, if none.

Values 1 to 4294967295

ma-admin-name

Specifies the administrative name for the association, up to 64 characters.

all-associations

Keyword to display all associations to the MD.

detail

Keyword to display detailed domain information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of ETH-CFM domain information.

Output Example

```
*A:node-1# show eth-cfm domain

domain ipsec-domain-id [now] to router-id
```

Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec>force-switchover domain)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover domain

Description

This command triggers an IPsec N:M switchover for the specified IPsec domain.

Parameters

ipsec-domain-id

Specifies the multi-chassis IPsec domain value.

Values 1 to 255

now

Specifies to switchover without confirmation.

auto

Automatically elects a new active node, excluding the current active node.

to *router-id*

Specifies the router ID of the new active node.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tools perform router l2tp group tunnel drain

tools perform router l2tp tunnel drain

Description

This command triggers an attempt to drain a specified L2TP tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drain

Syntax

[no] drain

Context

[\[Tree\]](#) (tools>perform>router>l2tp>peer drain)

Full Context

tools perform router l2tp peer drain

Description

This command triggers an attempt to drain a specified L2TP peer.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.41 ds-lite-b4

ds-lite-b4

Syntax

dscp-table [*value dscp-value*]

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway ds-lite-b4)

Full Context

show subscriber-mgmt vrgw brg gateway ds-lite-b4

Description

This command displays the DS-Lite B4 services of a gateway.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.42 dscp-map

dscp-map

Syntax

dscp-map [*dscp-name*]

Context

[\[Tree\]](#) (show>router>sgt-qos dscp-map)

Full Context

show router sgt-qos dscp-map

Description

This command displays DSCP to FC mappings.

Parameters

dscp-name

Specifies the DSCP name.

Values be, ef, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cp9, cs1, cs2, cs3, cs4, cs5, nc1, nc2, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cp11, cp13, cp15, cp17, cp19, cp21, cp23, cp25, cp27, cp29, cp31, cp33, cp35, cp37, cp39, cp41, cp42, cp43, cp44, cp45, cp47,

cp49, cp50, cp51, cp52, cp53, cp54, cp55, cp57, cp58, cp59, cp60,

7.43 dscp-table

dscp-table

Syntax

dscp-table [*value dscp-value*]

Context

[\[Tree\]](#) (show>qos dscp-table)

Full Context

show qos dscp-table

Description

This command displays the DSCP name-to-DSCP value mappings.

Parameters

value dscp-value

The specific DSCP value for which to display information.

Values 0 to 63

Default Show all values

Platforms

All

Output

The following output is an example of dscp-table information, and [Table 116: Show QoS DSCP Table Output Fields](#) describes the output fields.

Output Example

```
A:ALA-48# show qos dscp-table
=====
DSCP Mapping

TOS (bin)	Displays the type of service in binary format.
TOS (hex)	Displays the type of service in hex format.

7.44 dslite-lsn-sub

dslite-lsn-sub

Syntax

dslite-lsn-sub *router* *router-instance* **b4-address-prefix** *ipv6-prefix*

Context

[\[Tree\]](#) (clear>nat dslite-lsn-sub)

Full Context

```
clear nat dslite-lsn-sub
```

Description

This command clears NAT mappings for Dual-Stack Lite (DS-Lite) LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ipv6-prefix

Specifies the IPv6 prefix and length.

- Values**
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.45 dump

```
dump
```

Syntax

Context

[\[Tree\]](#) (tools>dump>nat>l2-aware dynamic-blocks)

Full Context

tools dump nat l2-aware dynamic-blocks

Description

This command displays information about dynamic blocks.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 64 characters

policy-name

Specifies the NAT policy name, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic block information, and [Table 117: Dynamic Blocks Field Descriptions](#) describes the output fields.

Output Example

```
/tools dump nat l2-aware dynamic-blocks subscriber "dynblocks sub"
=====
Dynamic blocks
=====
NAT policy          Router Outside IP      Dynamic block
-----
dynblocks pol      101    40.101.200.5          1049 - 1058
                                     1059 - 1068
```

Table 117: Dynamic Blocks Field Descriptions

Field	Description
NAT policy	The NAT policy name
Router	The router number
Outside IP	The outside IP address
Dynamic block	The dynamic block range

7.49 dynamic-resolve

dynamic-resolve

Syntax

dynamic-resolve all [force]
dynamic-resolve ip-address [force]

Context

[\[Tree\]](#) (tools>perform>service>id>proxy-arp dynamic-resolve)

Full Context

tools perform service id proxy-arp dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IP entries. When executed, a resolve message (ARP-request) is issued for the requested IP or, if the **all** option used, for all the configured dynamic IPs.

The **force** option triggers the resolve process even for IPs with an existing entry in the proxy-ARP table.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

all

Runs the command for all configured dynamic IPs.

force

Issues a resolve message even when configured dynamic IP entries are present.

Platforms

All

dynamic-resolve

Syntax

dynamic-resolve all [force]

dynamic-resolve *ipv6-address* [force]

Context

[\[Tree\]](#) (tools>perform>service>id>proxy-nd dynamic-resolve)

Full Context

tools perform service id proxy-nd dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IPv6 entries. When executed, a resolve message (Neighbor Solicitation) is issued for the requested IPv6 or, if the **all** option used, for all the configured dynamic IPv6s. The **force** option triggers the resolve process even for IPv6 addresses with an existing entry in the proxy-ARP table.

Parameters

ipv6-address

Specifies the IPv4 or IPv6 address.

Values ip-address: a.b.c.d
ipv6-address: x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d

where:
x: [0 to FFFF]H
d: [0 to 255]D

all

Runs the command for all configured dynamic IPv6 addresses.

force

Issues a resolve message even when configured dynamic IP entries are present.

dynamic-services

Syntax

dynamic-services command-list

Context

[\[Tree\]](#) (tools>dump>service dynamic-services)

Full Context

tools dump service dynamic-services

Description

This command displays the list of supported commands that can be used in dynamic service CLI scripts.

There are two types of CLI nodes in this list:

- Pass through nodes: navigation is allowed but attributes creation or attribute changes are prohibited in this node.
- Allowed nodes: navigation, attribute creation and attribute changes are allowed in this node.

Note:

These commands are not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.51 dynamic-services-policy

dynamic-services-policy

Syntax

dynamic-services-policy [*policy-name*]

Context

[\[Tree\]](#) (show>service>dynsvc dynamic-services-policy)

Full Context

show service dynamic-services dynamic-services-policy

Description

This command displays the dynamic services policy information.

Note:

This command is not available in the MD-CLI.

Parameters

policy-name

specifies for which dynamic services policy the information is requested.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic service policy information.

Output Example

```
# show service dynamic-services dynamic-services-policy "dynsvc-policy-1"
=====
Dynamic Service Policies
=====
Dynamic Service Policy      : dynsvc-policy-1
-----
cli-user                   : (Not Specified)
description                 : Dynamic Services Policy 1
script-policy              : script-policy-5
sap-limit                   : 2000

Accounting instance 1
Stats type                  : volume-time
server policy              : aaa-server-policy-1
Update interval (minutes)  : 30
Update interval jitter     : 180s

Accounting instance 2
Stats type                  : time
server policy              : aaa-server-policy-2
Update interval (minutes)  : 0
Update interval jitter     : 10%
-----
No. of Services-policies: 1
=====
```

Table 118: Dynamic Services Policy Field Descriptions describes the Dynamic Services policy fields.

Table 118: Dynamic Services Policy Field Descriptions

Output Field	Description
dynsrv-policy-name	The unique name of a dynamic services policy, up to 32 characters.
cli-user	The identifier name of the CLI user associated with this Dynamic Services policy.
script-policy	The identifier name of the script policy associated with this Dynamic Services policy.
sap-limit	The limit of the number of SAPs (Service Access Point) that can be created using this Dynamic Services policy.
Stats type	The value used to identify the type of accounting statistics gathered, either volume-time or time .

Output Field	Description
server policy	The identifier name of a RADIUS server policy to be used for accounting.
update interval (minutes)	The time interval between consecutive accounting updates when using this Dynamic Services policy.
update interval jitter	The amount of jitter to be applied on the update interval.
No. of Services-policies	The total number Dynamic Services policies.

8 e Commands

8.1 ecmp

```
ecmp
```

Syntax

```
ecmp
```

Context

[\[Tree\]](#) (show>router ecmp)

Full Context

```
show router ecmp
```

Description

This command displays the ECMP settings for the router.

Platforms

All

Output

The following output is an example of ECMP settings information, and [Table 119: ECMP Fields](#) describes the output fields for the router ECMP settings.

Output Example

```
A:ALA-A# show router ecmp
=====
Router ECMP
=====
Instance      Router Name      ECMP      Configured-ECMP-Routes
-----
1             Base             True      8
=====
A:ALA-A#
*A:Dut-C# show router ecmp
=====
Router ECMP
=====
Instance      Router Name      ECMP      Max-ECMP-      Weight ECMP
            Router Name      ECMP      Rtes
-----
1             Base             True      32             True
```

Table 119: ECMP Fields

Label	Description
Instance	The router instance number
Router Name	The name of the router instance
ECMP	False — ECMP is disabled for the instance True — ECMP is enabled for the instance
Configured-ECMP-Routes	The number of ECMP routes configured for path sharing

8.2 edit-ipoe-session

edit-ipoe-session

Syntax

edit-ipoe-session sap *sap-id* **mac** *mac-address* [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*]

Context

[Tree] (tools>perform>subscr-mgmt edit-ipoe-session)

Full Context

tools perform subscriber-mgmt edit-ipoe-session

Description

This command updates the data of the IPoE session identified with the given MAC address and SAP identifier. Optionally the remote ID and circuit ID can be specified to identify the IPoE session to update.

Note:

The changes take effect immediately.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.3 edit-lease-state

edit-lease-state

Syntax

edit-lease-state sap *sap-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*]
[**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

edit-lease-state svc-id *service-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*]
[**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-lease-state)

Full Context

tools perform subscriber-mgmt edit-lease-state

Description

This command provides the parameters to edit lease state information.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Modifies lease state information for the specified IP address.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sub-ident-string

Modifies the lease state information for the specified subscriber identification.

sub-profile-string

Modifies lease state information for the specified subscriber profile.

sla-profile-string

Modifies lease state information for the specified SLA profile.

service-id

Modifies lease state information for the specified service ID.

Values

<i>service-id</i> :	1 to 2147483647
<i>svc-name</i> :	64 characters maximum

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.4 edit-ppp-session

edit-ppp-session

Syntax

edit-ppp-session sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-ppp-session svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-ppp-session)

Full Context

tools perform subscriber-mgmt edit-ppp-session

Description

This command updates the data of the PPP session identified with the given MAC address and SAP identifier. Optionally the remote-id and circuit-id can be specified to identify the IPoE session to update.

Note:

The changes take immediate effect.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name, up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up, to 16 characters.

ip-address

Specifies the peer's IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string, up to 16 characters.

sub-profile-name

Specifies the subscriber profile name, up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings, up to 32 characters.

ancp-string

Specifies the ASCII representation of the string, up to 63 characters.

app-profile-string

Specifies the application profile string, up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.5 edit-slaac-host

edit-slaac-host

Syntax

edit-slaac-host sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-slaac-host svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-slaac-host)

Full Context

tools perform subscriber-mgmt edit-slaac-host

Description

This command updates the data of the SLAAC host information.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up to 16 characters.

ip-address

Specifies the peer's IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string up to 16 characters.

sub-profile-name

Specifies the subscriber profile name up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

ancp-string

Specifies the ASCII representation of the up to 63 characters.

app-profile-string

Specifies the application profile string up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.6 efm-oam

efm-oam

Syntax

efm-oam

Context

[\[Tree\]](#) (show>system>ethernet efm-oam)

Full Context

show system ethernet efm-oam

Description

This command displays a system-level summary for EFM-OAM enabled ports. It includes the configuration, action, various states, and soft reset precedence for the protocol.

Platforms

All

Output

The following output is an example of EFM-OAM summary information.

Output Example

```
show system ethernet efm-oam
=====
System Configuration
=====

efm-oam

Syntax

efm-oam

Context

[\[Tree\]](#) (clear>port>ethernet efm-oam)

Full Context

clear port ethernet efm-oam

Description

This command clears EFM-OAM statistics on the port.

Platforms

All

efm-oam

Syntax

efm-oam

Context

[\[Tree\]](#) (show>port>ethernet efm-oam)

Full Context

show port ethernet efm-oam

Description

This command displays EFM-OAM information.

Platforms

All

8.7 egress-if

egress-if

Syntax

egress-if *port-id* [**summary** | **detail**] [*family*]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-if)

Full Context

show router ldp bindings active egress-if

Description

This command displays LDP active bindings by matching the egress interface.

Parameters

port-id

Specifies the port ID.

Values

	<i>slot[/mda[/port]]</i> or <i>slot/mda/port [.channel]</i>	
aps-id	aps-group-id [.channel]	
	aps	keyword
	<i>group-id</i>	1 to 128
eth-sat-id	esat-id [/slot/[u]port]	
	esat	keyword
	<i>id</i>	1 to 20
	<i>u</i>	keyword for up-link port
tdm-sat-id	tsat-id [/slot/[u]port. channel]	
	tsat	keyword
	<i>id</i>	1 to 20
	u	keyword for up-link port
pxc-id	pxc-id.sub-port	

pxc	keyword
<i>id</i>	1 to 64
<i>sub-port</i>	a to b

family

Specifies the address family.

Values ipv4, ipv6

Platforms

All

8.8 egress-label

egress-label

Syntax

egress-label *start-label* [*end-label*]

Context

[\[Tree\]](#) (show>service egress-label)

Full Context

show service egress-label

Description

This command displays service information using the range of egress labels.

If only the mandatory *egress-label1* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting egress label value for the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0,18432 to 524287

end-label

The ending egress label value for the label range.

Default The *start-label* value.

Values 18432 to 524287

Platforms

All

Output

The following output is an example of service egress label information.

Output Example

```
*A:ALA-12# show service egress-label 0 10000

Table 120: Show Service Egress Command Output Fields describes show service egress label output fields.

Table 120: Show Service Egress Command Output Fields

Label	Description
Svc Id	The ID that identifies a service.
Sdp Id	The ID that identifies an SDP.
Type	Indicates whether the SDP binding is a spoke or a mesh.

Label	Description
I. Lbl	The VC label used by the far-end device to send packets to this device in this service by the SDP.
E. Lbl	The VC label used by this device to send packets to the far-end device in this service by the SDP.
Number of bindings found	The total number of SDP bindings that exist within the specified egress label range.

8.9 egress-lsp

egress-lsp

Syntax

egress-lsp *tunnel-id* [**summary** | **detail**] [*family*]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-lsp)

Full Context

show router ldp bindings active egress-lsp

Description

This command displays LDP active bindings by matching the egress LSP.

Parameters

tunnel-id

Specifies the tunnel ID.

Values 0 to 4294967295

family

Specifies the address family.

Values ipv4, ipv6

Platforms

All

8.10 egress-nh

egress-nh

Syntax

egress-nh [*family*] [**summary** | **detail**] *ip-address*

Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-nh)

Full Context

show router ldp bindings active egress-nh

Description

This command displays LDP active bindings by matching the egress Next-Hop (NH).

Parameters

family

Specifies the address family.

Values ipv4, ipv6

ip-address

Specifies the IPv4 or IPv6 address.

Values	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

Platforms

8.12 egress-rate-distribution

egress-rate-distribution

Syntax

egress-rate-distribution

Context

[\[Tree\]](#) (show>lag egress-rate-distribution)

Full Context

show lag egress-rate-distribution

Description

This command displays adaptive load-balancing egress rate distribution information.

Platforms

All

8.13 egress-statistics

egress-statistics

Syntax

egress-statistics color *color* [end-point {*ipv4-address* | *ipv6-address*}]

Context

[\[Tree\]](#) (show>router>segment-routing>sr-policies egress-statistics)

Full Context

show router segment-routing sr-policies egress-statistics

Description

This command displays the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of egress traffic statistics of the SR policy, and [Table 121: Show Egress Statistics Field Descriptions](#) describes the output fields.

Output Example Show Router Segment Route Policy Egress Statistics

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the endpoint address of the SR policy.
Segment-List	Indicates the index of the segment list.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

egress-statistics

Syntax

egress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (clear>router>segment-routing>sr-policies egress-statistics)

Full Context

clear router segment-routing sr-policies egress-statistics

Description

This command clears the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

egress-statistics

Syntax

egress-statistics color [0..4294967295] **endpoint** *ip-address* | *ipv6-address* [**interval seconds**] [**repeat repeat**]

Context

[\[Tree\]](#) (monitor>router>seg-rt>sr-policies egress-statistics)

Full Context

monitor router segment-routing sr-policies egress-statistics

Description

This command monitors SR Policy Egress Statistics.

Parameters

ip-address

Specifies the IPv4 address of the endpoint.

Values 64 characters maximum

ipv6-address

Specifies the IPv6 address of the endpoint.

Values 64 characters maximum

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

Platforms

All

8.14 elmi

elmi

Syntax

elmi

Context

[\[Tree\]](#) (show elmi)

Full Context

show elmi

Description

This command displays Ethernet Link Management Interface (E-LMI) information.

[Table 122: Output Fields: show elmi](#) describes the output fields for the **show elmi** command.

Table 122: Output Fields: show elmi

Field	Description
Link Status	Status of the E-LMI protocol when the elmi mode is set to uni-n. Link Status will indicate up if E-LMI mode is set to "none".
T391	Pooling timer used by UNI-C. UNI-N will send the consecutive single EVC asynchronous status messages every (T391/10) rounded to the second interval.
T392	Pooling verification timer for UNI-N
N393	Status counter for UNI-N.
Rx Enq. Time	Last time a status inquiry message was received from UNI-C.
Rx Enq. Msg	Number of status inquiry messages received.

Field	Description
Rx Check Time	Last time a status inquiry E-LMI check message was received.
Rx Inv. SeqNum	Counts the number of E-LMI messages received with invalid sequence number.
Enq Timeouts	Counts the number of T392 timer expired.
Tx Status Time	Last time a status message was sent by UNI-N.
Tx Status Msg	Number of status messages sent by UNI-N.
Tx Check Time	Last time a status E-LMI check message was sent by UNI-N.
Tx Async Status Msg	Counter for single EVC asynchronous status messages sent by UNI-N.
Discard Msg	Counter for the status inquiry messages discarded due to errors.

8.15 encryption-keygroup

encryption-keygroup

Syntax

```
encryption-keygroup keygroup-id [spi spi]
```

Context

[\[Tree\]](#) (show>grp-encryp encryption-keygroup)

Full Context

```
show group-encryption encryption-keygroup
```

Description

This command displays NGE information for a key group.

Parameters

keygroup-id

Specifies the key group identifier to use for the output display.

Values 1 to 15 or *keygroup-name* (up to 64 characters)

spi

Specifies the SPI to use for the output display.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of encryption key group information, and [Table 123: Show Encryption Key Group Output Fields](#) describes the fields.

Output Example

```

Table 123: Show Encryption Key Group Output Fields

Label	Description
Encryption Keygroup Configuration Detail	
Keygroup Id	The key group identifier
Keygroup Name	The key group name
Description	The key group description
Authentication Algo	The authentication algorithm used for the key group
Encryption Algo	The encryption algorithm used for the key group
Active Outbound SA	The active outbound SA for the key group
Activation Time	The date and time that the key group was activated
Security Associations	
Spi	The security parameter index for the SA in the key group

Label	Description
Install Time	The date and time that the SA was installed in the key group
Key CRC	The CRC for the key belonging to the SA
Encryption Keygroup Forwarded Statistics	
Encrypted Pkts	The number of encrypted packets forwarded by the key group
Encrypted Bytes	The number of encrypted bytes forwarded by the key group
Decrypted Pkts	The number of decrypted packets forwarded by the key group
Decrypted Bytes	The number of decrypted bytes forwarded by the key group
Encryption Keygroup Outbound Discarded Statistics (Pkts)	
Total Discard	The total number of outbound packets discarded by the key group
Unsupported Uplink	The total number of outbound packets discarded by the key group due to an unsupported uplink
Enqueue Error	The total number of outbound packets discarded by the key group due to an enqueueing error
Other	The total number of outbound packets discarded by the key group due to some other reason, such as an internal configuration error (for example, a key group that points to an SA, but the SA is not valid)
Encryption Keygroup Inbound Discarded Statistics (Pkts)	
Total Discard	The total number of inbound packets discarded by the key group
Invalid Spi	The total number of inbound packets discarded by the key group due to an invalid SPI
Authentication Failure *	The total number of inbound packets discarded by the key group due to an authorization failure
Control Word Mismatch	The total number of inbound packets discarded by the key group due to a control word (CW) mismatch between the encrypted (protected) CW in the ESP payload and the CW that is not encrypted
Padding Error	The total number of inbound packets discarded by the key group due to a padding error

Label	Description
Enqueue Error	The total number of inbound packets discarded by the key group due to an enqueueing error
Other	The total number of inbound packets discarded by the key group due to some other reason (for example, an incoming packet length is incorrect)
SDP Keygroup Association Table	
SDP ID	The SDP ID
Direction	The direction in which key group authentication and encryption occurs for traffic on the SDP
Inbound Keygroup SDP Association Count	The number of SDPs configured to use inbound SA
Outbound Keygroup SDP Association Count	The number of SDPs configured to use outbound SA
VPRN Keygroup Association Table	
VPRN SVC ID	The VPRN service identifier
Direction	The direction in which key group authentication and encryption occurs for traffic on the VPRN
Inbound Keygroup VPRN Association Count	The number of VPRNs configured to use inbound SA
Outbound Keygroup VPRN Association Count	The number of VPRNs configured to use outbound SA

encryption-keygroup

Syntax

encryption-keygroup *keygroup-id*
encryption-keygroup *keygroup-id spi spi*

Context

[\[Tree\]](#) (clear>grp-encryp encryption-keygroup)

Full Context

clear group-encryption encryption-keygroup

Description

This command clears NGE information for a key group.

Parameters

keygroup-id

Specifies the key group identifier.

Values 1 to 127, *keygroup-name* (up to 64 characters)

spi

Specifies the SPI ID.

Values 1 to 127

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.16 end-sid

end-sid

Syntax

end-sid [mt {0 | 2}] [**prefix** *ipv6-prefix[/prefix-length]*] [**adv-router** *system-id | hostname*] [**algo** *algo-id*]

Context

[\[Tree\]](#) (show>router>isis>srv6 end-sid)

Full Context

show router isis segment-routing-v6 end-sid

Description

This command displays IS-IS SRv6 End SIDs.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values *ipv6-prefix[/prefix]*: x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d

x: [0 to FFFF]H

d: [0 to 255]D

prefix-length: 1 to 128

system-id | hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

8.17 endpoint

endpoint

Syntax

endpoint [*endpoint-name*]

Context

[\[Tree\]](#) (show>service>id endpoint)

Full Context

show service id endpoint

Description

This command displays service endpoint information.

Parameters

endpoint-name

Specifies the name of an existing endpoint for the service.

Platforms

All

Output

The following output is an example of service endpoint information.

Output Example

```
*A:ALA-48>config>service>epipe# show service id 6 endpoint
=====
Service 6 endpoints
=====
Endpoint name      : x
Revert time       : 0

Tx Active	: none

```
-----  
Members  
-----  
No members found.  
=====
```

*A:ALA-48>config>service>epipe#

endpoint

Syntax

```
endpoint [{ip-address | ipv6-address}] [ detail]  
endpoint [{ip-address | ipv6-address}] egress-stats
```

Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies endpoint)

Full Context

```
show router mpls forwarding-policies endpoint
```

Description

This command displays the MPLS forwarding policy endpoint information.

Parameters

ip-address

Specifies the IPv4 address of the endpoint up to 64 characters.

ipv6-address

Specifies the IPv6 address of the endpoint up to 64 characters.

detail

Specifies detailed information for the endpoint.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

Platforms

All

Output

[Table 124: MPLS Endpoint Output Fields](#) describes MPLS endpoint output fields.

Table 124: MPLS Endpoint Output Fields

Label	Description
Endpoint	Specifies the endpoint IP address.
Preference	Specifies the preference.
Policy Name	Specifies the MPLS forwarding policies binding label name.
Active	Specifies the active state (Y N).
InactiveReason	Specifies the inactive reason.
Last Updated	Specifies the date and time of the last update.
Num Grps	Specifies the number of groups.
OperState	Specifies the operational state (up down).
Metric	Specifies the metric value.
TTM Preference	Specifies the TTM preference value.
Revert Timer	Specifies the revert timer value.
Path Pref	Specifies the path preference.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct indirect).
Oper State	Specifies the operational state (down up).
Oper Down Reas*	Specifies the reason for being operationally down.
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.
Next Revert In	Specifies the next revert interval.
Weight	Specifies the weight value.
Primary	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false true).
Down Reason	Specifies the down reason.

Label	Description
Backup	Specifies the IP address of the backup next-hop.
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

Output Example

8.20 epipe-map-access-to-egress-port

epipe-map-access-to-egress-port

Syntax

epipe-map-access-to-egress-port service *service-id* [end-service *service-id*] | lag *lag-id* summary

Context

[\[Tree\]](#) (tools>dump epipe-map-access-to-egress-port)

Full Context

tools dump epipe-map-access-to-egress-port

Description

This command will display the egress port that will be used to transmit traffic associated with the displayed Epipe service(s). The information displayed shows the egress port for traffic traveling from SAP to egress SDP or SAP.

This command will support Epipe services with the following combinations:

- SAP to SDP (with no endpoint configuration)
- SAP to SAP (with or without an ICB)
- SAP to SDP using endpoints with 1 or 2 SDPs

The command can be executed by specifying either a service ID, service-ID range or an ingress LAG ID.

This command will not display the egress port for traffic traveling from the SDP to egress SAP. This command also does not work with services that use policers or shared queues and also does not support PBB services.

This command replaces the command tools dump epipe-map-to-network, which has been deprecated.

Parameters

service service-id

Identifies the service ID for which the command will return the egress port. If used in conjunction with the end-service parameter, this value represent the beginning of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

end-service service-id

This parameter is used to identify the end of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

lag-id

This parameter caused the command to return the egress port for all service with SAPs associated with the specified LAG ID.

Values 1 to 800

Platforms

All

Table 125: Show Application Assurance HTTP Redirect Error Codes Output Fields

Label	Description
Description	Describes the error
Default	Indicates what the default is for the error
custom-msg-size (Custom Message Size)	The size of the message

error-codes

Syntax

error-codes

Context

[\[Tree\]](#) (show>app-assure>http-err-redirect error-codes)

Full Context

show application-assurance http-error-redirect error-codes

Description

This command displays HTTP error redirect error codes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.23 error-counters

error-counters

Syntax

error-counters

Context

[\[Tree\]](#) (tools>dump>test-oam>twamp>server error-counters)

Full Context

tools dump test-oam twamp server error-counters

Description

This command dumps various error counters related to TWAMP server and TWAMP test.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of various error counters related to TWAMP server and TWAMP test.

Output Example

```
tools>dump>test-oam>twamp>server# error-counters
Dropped Connection Stats
-----
TCP connection closed           : 0
TCP connection error           : 0
Unexpected event                : 0
Error sending message          : 0
Error waiting for message      : 0
Connection not in a prefix     : 0
Max global limit               : 0
Max prefix limit               : 0
No mode specified              : 0
Unsupported mode                : 0
Invalid command                 : 0
Stop-sessions with bad session count : 0
Connection timeout             : 0
Internal resource               : 0
Invalid zero SID                : 0
Invalid HMAC                    : 0
Dropped Connection States
-----
Idle                            : 0
Set-up-wait                     : 0
Started                         : 0
Active                          : 0
Process Start                   : 0
Process Stop                    : 0
Process TW-session              : 0
Rejected Session Stats
-----
Invalid address version: 0
Non-local destination          : 0
Bad type-p                     : 0
Padding too big                : 0
MBZ value is non-zero         : 0
SID is non-zero                : 0
Timeout too large              : 0
Max global sessions            : 0
Max prefix sessions            : 0
Socket error                   : 0
Source unreachable             : 0
Port in use                    : 0
Duplicate session              : 0
Internal resource               : 0
REFWAIT timeout                : 0
Dropped Test Packet Stats
-----
Packet wrong size              : 0
Wrong source address           : 0
```

```
Arrived before start time : 0  
No Start-sessions         : 0  
Invalid error estimate    : 0  
Error sending reply       : 0  
Invalid Server Octets     : 0  
Invalid Symmetric MBZ     : 0
```

8.24 errors

errors

Syntax

errors

Context

[\[Tree\]](#) (clear>subscr-mgmt errors)

Full Context

clear subscriber-mgmt errors

Description

This command clears all errors in the circular buffer.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

errors

Syntax

errors

Context

Full Context

show subscriber-mgmt errors

Description

This command clears all errors in the circular buffer.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.25 es-pbr

es-pbr

Syntax

es-pbr

Context

[\[Tree\]](#) (show>service>id es-pbr)

Full Context

show service id es-pbr

Description

When a filter with an **action forward esi** is successfully added to a VPLS service and the PE receives an EVPN Auto-Discovery route for the configured ESI, this command displays the PBR VXLAN bindings auto-created, including the ESI, the VXLAN VTEP:VNI and the status of the binding.

Platforms

All

Output

Output Example

```
A:PE1# show service id 301 es-pbr
=====
L2 ES PBR
=====
ESI                Users      Status
                  VTEP:VNI
-----
ff:00:00:00:00:00:00:00:01 1      Active
                                      192.0.2.72:7272

```

8.26 esa

esa

Syntax

esa *esa-id* [**detail**]

esa

esa detail

Context

[\[Tree\]](#) (show esa)

Full Context

show esa

Description

This command displays ESA details.

Parameters

detail

Displays detailed ESA information.

esa-id

Specifies the ESA.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

[Table 126: Show ESA Output Fields](#) describes the ESA output fields.

Use the following command to display ESA information.

```
show esa
```

Output Example

```

Table 126: Show ESA Output Fields

Label	Description
ESA	The ESA identification number
Admin State	up — Administratively up
	down — Administratively down
Operational State	up — Operationally up
	down — Operationally down
	booting
	failed
	provisioned
	unprovisioned

Label	Description
	fwUpgrade — Firmware upgrade
Oper flags	Operational flag of the ESA
IOM Host Port	The IOM host port in <i>slot/mda/port</i> format
Hardware Health	Health statuses for hardware components
Hardware Data	Detailed hardware data about the ESA
NUMA Cell Topology (ESA 400G only)	Number of cores, amount of memory, and Ethernet ports available to the NUMA cell
VM	The VM identification number
VM Type	The VM type (aa, bb, or tunnel)
Cores	The number of cores of the ESA-VM
Memory (GB)	The memory on the ESA-VM

esa

Syntax

esa *esa-id*

Context

[\[Tree\]](#) (clear esa)

Full Context

clear esa

Description

This command clears the statistics or status pertaining to the specified ESA.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

8.27 esa-vm

esa-vm

Syntax

```
esa [esa-id/vm-id] [ detail]
```

Context

[\[Tree\]](#) (show esa-vm)

Full Context

```
show esa-vm
```

Description

This command displays ESA-VM details.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

detail

Specifies the detailed ESA-VM information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

The following are output examples for this command.

Output Example

```

Table 127: Show ESA-VM Output Fields

Label	Description
ESA	The ESA identification number
VM	The VM identification number
VM Type	The VM type (aa, bb, or tunnel)
Cores	The number of cores of the ESA-VM
Memory (GB)	The memory on the ESA-VM
Admin State	up — Administratively up
	down — Administratively down
Operational State	up — Operationally up
	down — Operationally down
	booting
	failed
	provisioned
	unprovisioned
IOM Host Port	The IOM host port in <i>slot/mda/port</i> format
Oper flags	The operational flags for the ESA-VM
Virtual Core Role	The virtual core role (Mgmt-#, Worker-#, Idle-#, Scheduler-#, Nic-#)
Virtual Core Id	The Virtual Core identification number
Current %	The current processing load of the virtual core
15min Average %	The 15 minute average processing load of the virtual core
All-time Peak %	The all-time peak processing load of the virtual core

esa-vm

Syntax

esa-vm [*esa-id/vm-id*]

Context

[Tree] (clear esa-vm)

Full Context

clear esa-vm

Description

This command clears the statistics or status pertaining to the specified ESA-VM.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

8.28 est-profile

est-profile

Syntax

est-profile [*name*]

Context

[Tree] (show certificate est-profile)

Full Context

show certificate est-profile

Description

This command displays EST profile information. If a profile name is not specified, the command displays information about all the EST profiles.

Parameters

name

Specifies an existing EST profile name, up to 32 characters.

Platforms

All

Output

The following output is an example of the **show certificate est-profile** command

Output Example

```
*A:cses-V27# show certificate est-profile
=====
EST Profile          Server
                    Address:Port
-----
No. of EST Profiles: 0
=====
```

8.29 eth

eth

Syntax

eth

Context

[\[Tree\]](#) (tools>perform>service>id>loopback eth)

Full Context

tools perform service id loopback eth

Description

Commands in this context configure a loopback on Ethernet SAPs or MPLS SDP bindings.

Platforms

All

8.30 eth-cfm

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (show eth-cfm)

Full Context

show eth-cfm

Description

Commands in this context display eth-cfm information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (clear eth-cfm)

Full Context

clear eth-cfm

Description

Commands in this context display CFM information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (tools>dump eth-cfm)

Full Context

tools dump eth-cfm

Description

Commands in this context configure debugging for Ethernet Connectivity Fault Management.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (monitor eth-cfm)

Full Context

monitor eth-cfm

Description

Commands in this context monitor statistics for Ethernet connectivity fault management.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (show>service>sdp-using eth-cfm)

Full Context

show service sdp-using eth-cfm

Description

Commands in this context display SDP binding information for a specific ETH-CFM.

Platforms

All

eth-cfm

Syntax

eth-cfm [tunnel *tunnel-id*] [detail]

Context

[\[Tree\]](#) (show>lag eth-cfm)

Full Context

show lag eth-cfm

Description

This command displays ETH-CFM information.

Parameters

tunnel-id

Filters ETH-CFM MEP information to one tunnel.

Values 1 to 4094

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm [detail]

Context

[\[Tree\]](#) (show>port>ethernet eth-cfm)

Full Context

show port ethernet eth-cfm

Description

This command displays ETH-CFM information.

Parameters

detail

Displays detailed information.

Platforms

All

8.31 eth-cfm-monitoring

eth-cfm-monitoring

Syntax

eth-cfm-monitoring [{**service-id** *service-id* **sap-id** *sap-id*} | {**service-id** *service-id* **sdp-id** *sdp-id:vc-id*}]

Context

[\[Tree\]](#) (show>system>security>cpu-protection eth-cfm-monitoring)

Full Context

show system security cpu-protection eth-cfm-monitoring

Description

This command displays sources exceeding their eth-cfm-monitoring rate limit.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278317, svc-name up to 64 characters in length

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm-monitoring

Syntax

eth-cfm-monitoring

Context

[\[Tree\]](#) (clear>cpu-protection eth-cfm-monitoring)

Full Context

clear cpu-protection eth-cfm-monitoring

Description

This command clears records of flows exceeding the ETH-CFM monitoring rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

8.32 eth-ring

eth-ring

Syntax

eth-ring

Context

[\[Tree\]](#) (tools>perform eth-ring)

Full Context

tools perform eth-ring

Description

This command performs Ethernet ring operations.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

Syntax

eth-ring [status]

eth-ring [*ring-index*] **hierarchy**
eth-ring *ring-index* [**path** {**a** | **b**}]

Context

[\[Tree\]](#) (show eth-ring)

Full Context

show eth-ring

Description

This command displays Ethernet Ring information.

Parameters

status

Specifies to display an Ethernet Ring status summary

ring-index

Specifies an Ethernet Ring index

Values 1 to 128

hierarchy

Specifies to display Ethernet Ring hierarchical relationships

path

Specifies to show information for a specific path

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

Syntax

eth-ring *ring-index* [**clear**]

Context

[\[Tree\]](#) (tools>dump eth-ring)

Full Context

tools dump eth-ring

Description

This command displays Ethernet Ring information.

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

clear

Keyword to clear stored information for the specified Ethernet Ring.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

8.33 eth-sat

eth-sat

Syntax

eth-sat [*sat-id*]

Context

[\[Tree\]](#) (show>system>satellite eth-sat)

Full Context

show system satellite eth-sat

Description

This command displays information about configured Ethernet satellites. If a *sat-id* is specified, this command displays information only about the specified Ethernet satellite.

Parameters

sat-id

Specifies the Ethernet satellite chassis.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet satellite information.

Output Example

```

eth-seg

Syntax

eth-seg [hunt | detail] [rd *rd*] [community *comm-id*] [originator-ip *ip-address* | *ipv6-address*] [next-hop *next-hop*] [esi *esi*] [aspath-regex *reg-exp*]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn eth-seg)

Full Context

show router bgp routes evpn eth-seg

Description

This command displays BGP-EVPN Ethernet Segment (ES) routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

comm-id

Specifies community ID, up to 72 characters.

Values [*as-num:comm-val | ext-comm | well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ ip-address:comm-val1 | as-number1:comm-val2 | as-number2:comm-val1}
where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295
 - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null | no-export | no-export-subconfed | no-advertise |**

ip-address | ipv6-address

Specifies the IPv4 or IPv6 originator address, up to 64 characters.

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',';')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

8.35 eth-tunnel

eth-tunnel

Syntax

```
eth-tunnel [group tunnel-group-name] [ vc-id vc-id]
```

Context

[\[Tree\]](#) (show>router>l2tp eth-tunnel)

Full Context

```
show router l2tp eth-tunnel
```

Description

This command displays information about configured L2TPv3 Ethernet tunnels. These Ethernet tunnels are the L2TPv3 sessions setup between the local private L2 SAP and the far end device.

If this command is executed without any parameters, then a list of all configured Ethernet tunnels are displayed.

If this command is executed with a tunnel group name or a VC-ID, then a detailed view of the associated Ethernet tunnel is displayed.

Parameters

tunnel-group-name

Specifies the configured tunnel group name used for the associated Ethernet tunnel.

vc-id

Specifies the VC ID for the L2TPv3 Ethernet tunnel.

Values 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TPv3 Ethernet tunnel information

Output Example

```
A:Dut-A# show router 200 l2tp eth-tunnel
```

```
=====

eth-tunnel

Syntax

eth-tunnel

eth-tunnel {*aps* | *status*}

eth-tunnel *tunnel-index* [*path path-index*] [*detail*]

Context

[\[Tree\]](#) (show eth-tunnel)

Full Context

show eth-tunnel

Description

This command displays Ethernet tunnel information. Any data SAP missing a tag for a defined path has the EthTunTagMismatch flag generated. In the example provided below, SAP eth-tunnel-1:1 does not have the tag for path 2 configured. Therefore, it is operationally down with the reason indicated by the EthTunTagMismatch flag.

Parameters

aps

Shows APS Ethernet tunnel information.

status

Shows Ethernet tunnel status information.

tunnel-index

Specifies the tunnel index.

Values 1 to 1024

path-index

Specifies the path index.

Values 1 to 16

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information, and [Table 128: Output Fields: show eth-tunnel](#) describes the output fields.

Output Example: show eth-tunnel

```
*A:PE-E# show eth-tunnel

Table 128: Output Fields: show eth-tunnel

Field	Description
Tunnel Id	Numeric value from 1 to 64.
Admin State	Up — The eth tunnel is administratively up. Down — The eth tunnel is administratively down.
Oper State	Up — The eth tunnel is operationally up. Down — The eth tunnel is operationally down.
Protection Type	Two options: g8031-1to1 — Two members are allowed, but only one of them is active at one point in time. loadsharing — Multiple members can be active at one point in time.
Active Paths	Only two paths are supported.

eth-tunnel

Syntax

eth-tunnel *tunnel-index* [**clear**]

Context

[\[Tree\]](#) (tools>dump eth-tunnel)

Full Context

tools dump eth-tunnel

Description

This command displays Ethernet tunnel information.

Parameters

tunnel-id

Specifies the tunnel ID.

Values 1 to 128

clear

Clears statistics after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information.

Output Example

```
*A:PE-E# tools dump eth-tunnel 1

Description

Commands in this context display the Ethernet Segment (ES) parameters.

Parameters

name

Specifies the name of an ES, up to 32 characters.

all

Displays all available information for the specified ES.

evi

Displays information for the specified EVPN Instance (EVI) .

Values 1 to 65535

isid

Displays information for the specified ISID.

Values 1 to 16777215

virtual-ranges

Displays the VD-ID, Q-tag, S-tag, or C-tag per S-tag virtual ranges configured on the virtual ES.

Table 129: BGP EVPN ES Field Descriptions describes BGP EVPN ES output fields.

Table 129: BGP EVPN ES Field Descriptions

Field	Description
Name	The Ethernet Segment name
Eth Seg Type	The Ethernet Segment type
Admin State	The administrative state for this service Ethernet Segment
Oper State	The operational state for this service Ethernet Segment
ESI	The Ethernet Segment Identifier
Oper ESI	The current operational Ethernet Segment Identifier
Auto-ESI Type	The auto-derived Ethernet Segment Identifier type
AC DF Capability	The AC-DF Capability status (Exclude or Include)
Multi-homing	The multi-homing information
Oper Multi-homing	The operational multi-homing state
ES SHG Label	The ES Split Horizon Group label
Source BMac LSB	The source BMac least significant bit
Vprn Next Hop	The IP address associated with an Ethernet Segment
PW Port Id	The PW port ID
PW Port Headend	The PW port headend status
ES BMac Tbl Size	The ES BMac table size

Field	Description
ES BMac Entries	The ES BMac entries
Lag Id	The LAG ID
ES Activation Timer	The ES activation timer
Svc Carving	The service carving type
Oper Svc Carving	The operational service carving type
Cfg Range Type	The configured range type
DF Pref Election Information	
Preference Mode	The preference mode
Preference Value	The preference value
Last Admin Change	The date and time of the last administrative change
Oper Pref Value	The operational preference value
Do No Preempt	The Do Not Preempt status
EVI Ranges	The EVI ranges
ISID Ranges	The ISID ranges
Vprn NextHop Evi Ranges	
From	The beginning point of the EVI range
To	The ending point of the EVI range
Last Update	The date and time of the last range update
EVI Information	
EVI	The EVPN instance
SvcId	The service ID
Actv Timer Rem	The active timer rem value
DF	The designated forwarder status
Number of entries:	The number of entries
EVI DF and Candidate List	
DF Last Change	The date and time of the last DF candidate change

Field	Description
DF Candidates	The DF candidate IP address
Time Added	The date and time of the DF candidate addition
Q-Tag Ranges	
Q-Tag Start	The Q-Tag start range value
Q-Tag End	The Q-Tag end range value
Last Changed	The date and time of the last change
VC-Id Ranges	
VC-Id Start	The VC-Id start range value
VC-Id End	The VC-Id end range value
S-Tag Ranges	
S-Tag Start	The S-Tag start value
S-Tag End	The S-Tag end value
S-Tag C-Tag Ranges	
C-Tag Start	The C-Tag start value
C-Tag End	The C-Tag end value
Vxlan Instance Service Ranges	
Svc Range Start	The service range start in this Vxlan instance
Svc Range End	The service range end in this Vxlan instance

ethernet-segment

Syntax

ethernet-segment *name evi evi df*
ethernet-segment *name isid isid df*
ethernet-segment *name local-bias*

Context

[\[Tree\]](#) (tools>dump>service>system>bgp-evpn ethernet-segment)

Full Context

tools dump service system bgp-evpn ethernet-segment

Description

This command shows the computed DF PE for a specified EVI or ISID when the **evi** or **isid** parameters are selected, respectively. When the **local-bias** parameter is used, the output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

The PE can only enable local bias procedures on up to three PEs that are attached to the same ES and use multihomed VXLAN services. If more than three PEs exists, the PEs are ordered by either lowest IP (if **service-carving auto** is used in the ES) or lowest preference (if preference-based service-carving is used) and only the top three PEs are considered for local bias.

Parameters

name

Specifies the name of the Ethernet Segment, up to 32 characters.

evi

Specifies the EVI.

Values 1 to 65535

isid

Specifies the ISID.

Values 1 to 16777215

local-bias

Specifies that output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

Platforms

All

Output

The following output is an example of Ethernet Segment information.

Output Example

```
# tools dump service system bgp-evpn ethernet-segment "ESI-71" evi 1 df
[07/15/2015 21:52:08] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

# tools dump service system bgp-evpn ethernet-segment "ESI-71" isid 20001 df
[07/15/2015 21:52:21] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

# /tools dump service system bgp-evpn ethernet-segment "ESI-71" local-bias

ethernet-segment

Syntax

ethernet-segment [*name*]

Context

[\[Tree\]](#) (show>service>sdp-using ethernet-segment)

Full Context

show service sdp-using ethernet-segment

Description

This command displays Ethernet Segment information associated with SDPs.

Parameters

name

Specifies the Ethernet segment name, up to 32 characters.

Platforms

All

8.38 etree

etree

Syntax

etree

Context

[Tree] (show>service>id etree)

Full Context

show service id etree

Description

This command displays the same information shown in the show service ID base context, with the addition of the role of each object in the VPLS E-Tree service.

The following labels identify the configuration of the SAPs and SDP bindings:

- (L) indicates leaf-ac
- (RL) indicates root-leaf-tag

Platforms

All

Output

The following output is an example of VPLS E-Tree information.

Output Example

```
*A:PE-6# show service id 2005 etree

8.39 eval-group-interface-template

eval-group-interface-template

Syntax

eval-group-interface-template *name*

Context

[Tree] (tools>perform>subscr-mgmt eval-group-interface-template)

Full Context

tools perform subscriber-mgmt eval-group-interface-template

Description

This command reapplies the specified group-interface template to all the group interfaces that were created using this template. This command can be used after changing the group-interface template, because not all the changed parameters are automatically applied to the existing group interfaces.

This command reports the total number of group interfaces linked to the template, the number of group interfaces that were changed or did not require a change, and the number of group interfaces for which a change was attempted but failed.

Parameters

name

Specifies a group-interface template name, up to 32 characters, as configured under **configure subscriber-mgmt group-interface-template**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the command information.

Output Example

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-group-interface-template "default"
Group interface instances:
- total submitted : 1
- changed        : 1
- change failed  : 0
```

8.40 eval-ipoe-session

eval-ipoe-session

Syntax

```
eval-ipoe-session [svc-id service-id] [sap sap-id] [mac mac-address] [circuit-id circuit-id] [remote-id remote-id] [subscriber sub-ident-string]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ipoe-session)

Full Context

```
tools perform subscriber-mgmt eval-ipoe-session
```

Description

This command re-evaluates the mapping between authentication strings such as the SLA profile string and the actual profiles for the identified IPoE sessions.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

circuit-id

Specifies the circuit ID up to 127 characters.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.41 eval-lease-state

eval-lease-state

Syntax

eval-lease-state [**svc-id** *service-id*] [**sap** *sap-id*] [**subscriber** *sub-ident-string*] [**ip** *ip-address*] [**mac** *mac-address*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-lease-state)

Full Context

tools perform subscriber-mgmt eval-lease-state

Description

This command evaluates lease state.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Specifies the server's IP address. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

sub-ident-string

Specifies the subscriber ID string, up to 32 characters.

service-id

Specifies an existing service ID.

Values 1 to 2147483647

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.42 eval-msap

eval-msap

Syntax

```
eval-msap {policy msap-policy-name | msap sap-id}
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-msap)

Full Context

```
tools perform subscriber-mgmt eval-msap
```

Description

This command re-applies the managed SAP policy to the managed SAP identified by the specified *sap-id* or to all managed SAPs associated with the specified *msap-policy name*.

Parameters

msap-policy-name

Specifies an existing MSAP policy. The MSAP policy is re-applied to all associated managed SAPs.

sap-id

Specifies an MSAP SAP ID. The MSAP policy is re-applied to the specified MSAP.

Values *[port-id | lag-id]:qtag1*
[port-id | lag-id]:qtag1.qtag2

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.43 eval-ppp-session

eval-ppp-session

Syntax

```
eval-ppp-session [svc-id service-id] [user-name user-name] [sap sap-id] [ip ip-address] [subscriber  
sub-ident-string]
```

```
eval-ppp-session [svc-id service-id] [user-name user-name] [sap sap-id] mac mac-address [session-id  
session-id] [ip ip-address] [subscriber sub-ident-string]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ppp-session)

Full Context

tools perform subscriber-mgmt eval-ppp-session

Description

This command evaluates PPP sessions.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

user-name

Specifies the PPP user name up to 253 characters.

sap-id

Specifies a SAP ID up to 255 characters.

ip-address

Specifies the peer's IP address.

sub-ident-string

Specifies an existing subscriber identification profile.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.44 eval-rates

eval-rates

Syntax

eval-rates

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>bonding eval-rates)

Full Context

tools perform subscriber-mgmt bonding eval-rates

Description

This command evaluates all bonding contexts and recalculates all reference rates. This command can be useful in handling changes that are not automatically tracked, such as adapting a scheduler rate in a QoS policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.45 eval-sap-template

eval-sap-template

Syntax

eval-sap-template *name*

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-sap-template)

Full Context

tools perform subscriber-mgmt eval-sap-template

Description

This command reapplies the SAP template to all the SAPs that were created using this template. This command can be used after changing the SAP template because not all the changed parameters are automatically applied to the existing SAPs.

This command reports the total number of SAPs linked to the template, the number of SAPs that changed or did not require a change, and the number of SAPs for which a change was attempted but failed.

Parameters

name

Specifies a SAP template name, up to 32 characters, as configured under **configure subscriber-mgmt sap-template**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the command information.

Output Example

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-sap-template "default"  
Sap instances:  
- total submitted : 1  
- changed         : 1  
- change failed   : 0
```

8.46 eval-slaac-host

eval-slaac-host

Syntax

```
eval-slaac-host [svc-id service-id] [sap sap-id] [subscriber sub-ident-string] [ipv6-address ipv6-prefix]  
[mac ieee-address]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-slaac-host)

Full Context

```
tools perform subscriber-mgmt eval-slaac-host
```

Description

This command evaluates the SLAAC host.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

ipv6-prefix

Specifies an IPv6 prefix and prefix length.

Values	ipv6-prefix	x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d
---------------	-------------	--

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.47 evaluate-script

evaluate-script

Syntax

```
evaluate-script sap sap-id control-session acct-session-id action script-action [ dynsvc-policy name ]  
[param-string string]
```

Context

[\[Tree\]](#) (tools>perform>service>dynamic-services evaluate-script)

Full Context

tools perform service dynamic-services evaluate-script

Description

This tools command performs the execution of a dynamic service script action as if the corresponding RADIUS attributes were received from RADIUS. It is possible to setup, modify or teardown a dynamic service associated with the specified control channel.

Note:

This command is not available in the MD-CLI.

Parameters

sap *sap-id*

specifies the dynamic service SAP id.

control-session *acct-session-id*

Specifies the accounting session id of the control channel associated with this dynamic service.

action *script-action*

Specifies the requested action: setup, modify or teardown.

dynsvc-policy *name*

Specifies the dynamic services policy to use for this action. Mandatory parameter for setup and modify actions. In case of a modify action, the dynamic services policy must be the same as the policy used at setup.

param-string *string*

Specifies the dynamic service parameter list. Mandatory parameter for setup and modify actions.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.48 evc

evc

Syntax

evc [*port-id* [**vlan** *vlan-id*]]

Context

[\[Tree\]](#) (show>elmi evc)

Full Context

show elmi evc

Description

This command displays Ethernet Virtual Connections (EVC). No argument displays all the EVC on the service router. The port and VLAN arguments display information related to EVC associated with the port and VLAN.

Parameters

port-id

Displays information related to the EVCs configured on the port.

Values *slot/mdal/port*

vlan-id

Specifies the VLAN Identifier of the EVC.

Values 0 to 4094, *

Platforms

All

Output

The following output is an example of E-LMI EVC information, and [Table 130: Output Fields: show elmi evc](#) describes the output fields.

Output Example

```

8.49 event-control

event-control

Syntax

event-control [*application-id* [*event-name* | *event-number*]]

event-control *application-id* *event-name* **detail**

Context

[\[Tree\]](#) (show>log event-control)

Full Context

show log event-control

Description

This command displays event control settings for events including whether the event is suppressed or generated and the severity level for the event.

If no options are specified all events, alarms and traps are listed.

Parameters

application-id

Only displays event control for the specified application.

Default All applications.

The following are some sample applications:

Values application_assurance, aps, atm, auto_prov, bfd, bgp, bier, bmp, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtp, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp, oam, open_flow, ospf, pcap, pcep, pfc, pim, im_snooping, port, ppp, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, sr_policy, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

event-name

Only displays event control for the named application event, up to 32 characters.

Default All events for the application.

event-number

Only displays event control for the specified application event number.

Default All events for the application.

Platforms

All

Output

The following output is an example of event control information.

[Table 131: Event-Control Output Field Descriptions](#) describes the output fields for the event control.

Output Example

```

Table 131: Event-Control Output Field Descriptions

Label	Description
Application	The application name.
ID#	The event ID number within the application. L ID# An "L" in front of an ID represents event types that do not generate an associated SNMP notification. Most events do generate a notification, only the exceptions are marked with a preceding "L".
Event Name	The event name.
P	CL — The event has a cleared severity or priority. CR — The event has critical severity or priority. IN — The event has indeterminate severity or priority. MA — The event has major severity or priority. MI — The event has minor severity or priority. WA — The event has warning severity or priority.
g/s	gen — The event will be generated or logged by event control. sup — The event will be suppressed or dropped by event control. thr — Specifies that throttling is enabled.
Logged	The number of events logged or generated.
Dropped	The number of events dropped/suppressed.
Severity	The severity level of the event (cleared, indeterminate, critical, major, minor, or warning).
Generated	Indicates whether the log event is enabled (true) or suppressed (false).
Count	The number of events logged or generated.
Drop count	The number of events dropped/suppressed.
Throttle	Indicates whether the event is subject to global throttling (true or false).

Label	Description
Specific throttle	Indicates whether the event is subject to specific per event throttling (true or false).
Specific throttle limit	The configured number of events per interval for specific throttling.
Specific throttle interval (s)	The configured interval over which the specific throttling limit is applied.
Specific throttle by default	Indicates whether the specific throttling is enabled or not when it has not been explicitly configured.
Specific throttle limit default	The default number of events per-interval for specific throttling of this event.
Specific throttle interval default (s)	The default interval over which the specific default throttling limit is applied.
Repeat	Specifies that the log event should be repeated every minute until the underlying condition is cleared.

8.50 event-handling

event-handling

Syntax

event-handling

Context

[\[Tree\]](#) (show>log event-handling)

event-log

Syntax

event-log *event-log-name* **syslog**

Context

[\[Tree\]](#) (show>app-assure>group event-log)

Full Context

show application-assurance group event-log

Description

This command displays event log information.

Parameters

event-log-name

Specifies the event log name, up to 32 characters.

syslog

Specifies to display syslog information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an output example displaying event log information:

Output Example

```
*A:Dut-B# show application-assurance group 1:1 event-log "sampleLog" syslog
=====
Application Assurance Group 1:1 Event Log "sampleLog" Syslog

```

Context

[\[Tree\]](#) (clear>app-assure>group event-log)

Full Context

clear application-assurance group event-log

Description

This command clears the application assurance event log.

Parameters

event-log-name

Specifies the event log name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.52 event-logs

event-logs

Syntax

event-logs [**failure** | **degrade**] [**active** | **cleared**]

Context

[\[Tree\]](#) (show>port>ethernet>efm-oam event-logs)

Full Context

show port ethernet efm-oam event-logs

Description

This command displays all event logs.

Parameters

failure | **degrade**

Only show logs with the specified severity.

active | **cleared**

Only show logs with the specified state.

Platforms

All

8.53 event-parameters

event-parameters

Syntax

event-parameters [*application-id* [*event-name* | *event-number*]]

Context

[\[Tree\]](#) (show>log event-parameters)

Full Context

show log event-parameters

Description

This command displays an event's (or all events) common parameters and specific parameters. This allows a user to know what parameters can be passed from a triggering event to the triggered EHS script.

There is a common event parameter for all log events called 'timestamp' that contains the same information as 'gentime', but in a different format and unit. The 'timestamp' parameter is only available to python3 applications.

Parameters

application-id

Displays event parameters for the specified application.

Default All applications.

The following are some sample applications:

Values application_assurance, aps, atm, bfd, bgp, calltrace, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, mcac, mcpath, mc_redundancy, mirror, mld, mld_snooping, mpls, mpls_tp, mrrp, msdp, nat, ntp, oam, open_flow, ospf, pcep, pim, pim_snooping, port, ppp, pppoe, ptp, pxc, python, qos, radius, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

event-name

Displays event parameters for the named application event up to 32 characters in length.

Default All events for the application.

event-number

Displays event parameters for the specified application event number.

Default All events for the application.

Values 0 — 4294967295

Platforms

All

Output

The following output is an example of log event parameter information.

Output Example

```
# show log event-parameters "oam" 2001

8.54 events

events

Syntax

events [**local** | **remote**]

Context

[\[Tree\]](#) (clear>port>eth>efm-oam events)

Full Context

```
clear port ethernet efm-oam events
```

Description

This command clears all link monitoring events on the port.

Parameters

local

Clears the local events only.

remote

Clears the remote events only.

Platforms

All

8.55 evpn

```
evpn
```

Syntax

```
evpn mac-dup-detect ieee-address
```

```
evpn mac-dup-detect all
```

Context

[\[Tree\]](#) (clear>service>id evpn)

Full Context

```
clear service id evpn
```

Description

This command clears a duplicate MAC and restarts the MAC duplication process. It also clears black-hole MACs.

Parameters

ieee-address

Specifies the MAC address, up to 30 characters.

all

Specifies that the **clear** command applies to all duplicate MACs.

Platforms

All

evpn

Syntax

evpn usage

Context

[\[Tree\]](#) (tools>dump>service evpn)

evpn-mcast-gateway {all | pim | mvpn}
```

Context

[\[Tree\]](#) (show>service>id evpn-mcast-gateway)

Full Context

```
show service id evpn-mcast-gateway
```

Description

This command displays the EVPN multicast gateway information.

Parameters

all

Displays EVPN mulitcast gateway information for the MVPN-to-EVPN Gateway (MEG) and PIM-to-EVPN Gateway (PEG) cases.

pim

Displays EVPN mulitcast gateway information for the PEG case.

mvpn

Displays EVPN mulitcast gateway information for the MEG case.

Platforms

evpn-mpls instance instance-id [detail]
```

Context

[\[Tree\]](#) (show>service>id evpn-mpls)

Full Context

```
show service id evpn-mpls
```

Description

This command displays the existing EVPN-MPLS destinations for a specified service and all related information. The command allows filtering based on **esi** (for EVPN multi-homing) and **es-bmac** (for PBB-EVPN multi-homing) to display the EVPN-MPLS destinations associated to an Ethernet Segment Identifier (ESI).

Parameters

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':',' ')

ieee-address

Specifies a 48-bit MAC address for which to display information. The parameter is entered in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx, where xx represents a hexadecimal number.

instance-id

Specifies the instance ID.

Values 1,2

detail

Displays detailed information.

The following table describes the EVPN-MPLS output fields.

Table 134: Show EVPN-MPLS Information Fields

Label	Description
vBmacAddr	Displays the vBmac address
Num. Macs	Displays the number of MACs
Last Change	Indicates the time of the most recent state changes

Label	Description
TEP Address	Displays the TEP address
Egr Label	Displays the egress label
Transport	Displays the transport type
Number of entries	Indicates the number of entries
Eth SegId	Displays the Ethernet Segment ID
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the EVPN-MPLS entry
Transport:Tnl	Displays the transport tunnel
Num. MAC	Displays the number of MACs
Oper State	Displays the operational state
Oper Flags	Displays the operational flags
Mcast	Displays the multicast information
Sup BCast Domain	Displays the Sup BCast Domain

8.59 evpn-proxy-db

evpn-proxy-db

Syntax

```
evpn-proxy-db [detail]
evpn-proxy-db [group grp-ip-address]
```

Context

[\[Tree\]](#) (show>service>id>igmp-snooping evpn-proxy-db)
[\[Tree\]](#) (show>service>id>mld-snooping evpn-proxy-db)

Full Context

```
show service id igmp-snooping evpn-proxy-db
show service id mld-snooping evpn-proxy-db
```

Description

This command displays the EVPN proxy database that is created when **config>service>vpls> igmp/mld-snooping>evpn-proxy** is enabled in the service. The EVPN proxy database is populated with local reports

received on SAP or SDP binds but not with the received SMET routes. The output shows the IGMP and MLD versions of the database entries that are conveyed in the SMET routes advertised for the entries.

Parameters

grp-ip-address

Specifies the group IP address, in dotted decimal notation.

detail

Specifies detailed information for the EVPN proxy database.

Platforms

All

Output

The following output is an example of EVPN proxy database information.

Output Example

```
A:PE-2# show service id 4000 igmp-snooping evpn-proxy-db
=====
IGMP Snooping Evpn-Proxy-reporting DB for service 4000
=====
Group Address      Mode      Up Time      Num Sources  V1  V2  V3

Table 135: EVPN Proxy Field Descriptions

Field	Description
Group Address	Group IP address
Mode	IGMPv3 or MLDv2 mode
Up Time	Time that the group is added
Num Sources	Number of sources
V1	IGMP/MLD version of the database
V2	IGMP/MLD version of the database
V3	IGMP version of the database

8.60 excessive-sources

excessive-sources

Syntax

excessive-sources [**service-id** *service-id* **sap-id** *sap-id*]

Context

[\[Tree\]](#) (show>system>security>cpu-protection excessive-sources)

Full Context

show system security cpu-protection excessive-sources

Description

This command displays sources exceeding their per-source rate limit.

Parameters

service-id

Displays information for services exceeding their per-source rate limit.

sap-id

Displays information for SAPs exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

excessive-sources

Syntax

excessive-sources

Context

[\[Tree\]](#) (clear>cpu-protection excessive-sources)

Full Context

clear cpu-protection excessive-sources

Description

This command clears the records of sources exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

8.61 exercise

exercise

Syntax

exercise *aps-id* {**protect** | **working**}

Context

[\[Tree\]](#) (tools>perform>aps exercise)

Full Context

tools perform aps exercise

Description

This command performs an exercise request on the protection or working circuit.

Parameters

aps-id

Specifies the APS ID.

Values

<i>aps-id</i>	<i>aps-group-id</i>
aps	keyword
group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

8.62 expand-wildcard-path

expand-wildcard-path

Syntax

expand-wildcard-path *path*

Context

[Tree] (tools>dump>system>telemetry expand-wildcard-path)

Full Context

tools dump system telemetry expand-wildcard-path

Description

This command expands XML Paths (XPath) to include multiple wildcards.

Parameters

path

Specifies the XPath that contains the wildcards.

Platforms

All

Output

Output Example

```
# tools dump system telemetry expand-wildcard-path "/state/card/.../oper-state"  
=====
```

Expanded paths

```
=====
```

/state/card[slot-number=*/hardware-data/oper-state
/state/card[slot-number=*/mda[mda-slot=*/hardware-data/oper-state
/state/card[slot-number=*/mda[mda-slot=*/flex[group-index=*/oper-state

Table 137: Failover Pool Statistics Field Descriptions describes failover pool statistics output fields.

Table 137: Failover Pool Statistics Field Descriptions

Field	Description
Failover Admin State	Identifies the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.

Field	Description
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for pool	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a

Field	Description
	subnet range of which the failover control is set to local on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.
Number of pools found	The total number of pools found

failover-pool-stats

Table 138: Failover Server Statistics Field Descriptions describes failover server stats fields.

Table 138: Failover Server Statistics Field Descriptions

Field	Description
Failover Admin State	Identifiers the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner

Field	Description
	IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for server	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease.
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host

Field	Description
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to local on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.

9.4 failure-recovery

failure-recovery

Syntax

failure-recovery {**start** | **abort** | **clear-hold-down**}

Context

[\[Tree\]](#) (tools>perform>system>switch-fabric failure-recovery)

Full Context

tools perform system switch-fabric failure-recovery

Description

This command controls the automatic switch-fabric failure recovery.

Parameters

start

Forces the initiation of the recovery process.

abort

Terminates a running recovery process.

clear-hold-down

Clears the hold-down condition and allows the recovery to run immediately when the trigger condition occurs.

Platforms

7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

9.5 fate-sharing

fate-sharing

Syntax

fate-sharing

Context

[\[Tree\]](#) (show>service>id>spb fate-sharing)

Full Context

show service id spb fate-sharing

Description

This command displays SPB fate-sharing information on User B-VPLS service, in correspond to associated Control B-VPLS service.

Platforms

All

Output

The following output is an example of service SPB fate sharing information.

Output Example

```
*A:Dut-A# Node show service id spb fate-sharing
=====
User service fate-shared sap/sdp-bind information
=====
Control   Control Sap/      FID      User      User Sap/
SvcId     SdpBind

500       1/1/20:500        502      502       1/1/20:502
=====
```

9.6 fdb

`fdb`

Syntax

```
fdb [sap sap-id [expiry]] | [sdp sdp-id [expiry]] | [mac ieee-address [expiry]] | endpoint endpoint | [detail] [expiry] [pbb]
```

Context

[\[Tree\]](#) (show>service>id fdb)

Full Context

```
show service id fdb
```

Description

This command displays FDB entries for a specified MAC address.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP

detail

Displays detailed information

expiry

Displays time until MAC is aged out

pbb

Displays PBB related information. This keyword is only applicable to B-VPLS or I-VPLS services. This parameter applies to the 7450 ESS or 7750 SR only.

endpoint-name

Specifies an endpoint name up to 32 characters in length. This parameter applies to the 7450 ESS or 7750 SR only.

Platforms

All

Output

The following output is an example of service FDB information.

```
show service id 1 fdb
```

Output Example

```

Table 139: Show FDB Information Fields describes service FDB output fields.

Table 139: Show FDB Information Fields

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the FDB entry.
Source Identifier	Displays the id of the source MAC.
Type/Age	<p>Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs.</p> <p>Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.</p> <p>L — Learned - Dynamic entries created by the learning process.</p> <p>OAM — Entries created by the OAM process.</p> <p>P — Indicates the MAC is protected by the MAC protection feature.</p> <p>H — Host, the entry added by the system for a static configured subscriber host.</p> <p>D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.</p> <p>Static — Statically configured.</p> <p>T — Trusted.</p>
Last Change	Indicates the time of the most recent state changes.

fdb

Syntax

```
fdb {all | mac ieee-address | sap sap-id | mesh-sdp sdp-id [: vc-id] | spoke-sdp sdp-id [:vc - id] | vxlan-instance instance [vtep ip- address]}
```

Context

[Tree] (clear>service>id fdb)

Full Context

```
clear service id fdb
```

Description

This command clears the FDB entries for the service.

Parameters

all

Clears all FDB entries.

ieee-address

Clears only FDB entries in the FDB table with the specified 48-bit address. The MAC address can be expressed in the form aa:bb:cc:dd:ee:ff or aa-bbcc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers.

sap-id

Clears the physical port identifier portion of the SAP definition.

mesh-sdp

Clears only the service FDB entries associated with the specified mesh SDP ID. For a mesh SDP, the VC ID is optional.

spoke-sdp

Clears only the service FDB entries associated with the specified spoke-SDP ID. For a spoke-SDP, the VC ID must be specified.

sap-id

Specifies the SDP ID for which the associated FDB entries will be cleared.

vc-id

Specifies the virtual circuit ID on the SDP ID for which the associated FDB entries are cleared.

Values sdp-id[:vc-id] sdp-id: 1 to 32767
vc-id: 1 to 4294967295
sdp-id:vc-id sdp-id: 1 to 32767
vc-id: 1 to 4294967295

instance

Clears only the service FDB entries associated with the specified static VXLAN instance.

Values 1, 2

vtep ip-address

Specifies, optionally and along with the VXLAN instance, a specific configured static egress VTEP to clear the FDB entries associated only with the VTEP.

Table 140: Show FDB Information Fields describes show FDB-Info command output.

Table 140: Show FDB Information Fields

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Mac Move	Displays the administrative state of the MAC movement feature associated with this service.
Primary Factor	Displays a factor for the primary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Secondary Factor	Displays a factor for the secondary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Mac Move Rate	Displays the maximum rate at which MACs can be re-learned in this service, before the SAP where the moving MAC was last seen is automatically disabled in order to protect the system against undetected loops or duplicate MAs. The rate is computed as the maximum number of re-learns

Label	Description
	allowed in a 5 second interval: for example, the default rate of 2 re-learns per second corresponds to 10 re-learns in a 5 second period.
Mac Move Timeout	Displays the time in seconds to wait before a SAP that has been disabled after exceeding the maximum re-learn rate is re-enabled. A value of zero indicates that the SAP will not be automatically re-enabled after being disabled. If after the SAP is re-enabled it is disabled again, the effective retry timeout is doubled in order to avoid thrashing.
Mac Move Retries	Displays the number of times retries are performed for re-enabling the SAP/SDP.
Table Size	Specifies the maximum number of learned and static entries allowed in the FDB of this service.
Allocated Count	Displays the total number of allocated entries in the FDB of this service.
Total In Use	Displays the total number of entries in use in the FDB of this service.
Learned Count	Displays the current number of learned entries in the FDB of this service.
Static Count	Displays the current number of static entries in the FDB of this service.
OAM MAC Count	Displays the current number of OAM entries in the FDB of this service.
DHCP MAC Count	Displays the current number of DHCP-learned entries in the FDB of this service.
Host MAC Count	Displays the current number of host-learned entries in the FDB of this service.
Intf MAC Count	Displays the total number of interface MAC entries in the FDB of this service.
SPB Count	Displays the total number of SPB entries in the FDB of this service.
Cond MAC Count	Displays the total number of conditional static MAC entries in the FDB of this service.
BGP EVPN Count	Displays the total number of BGP EVPN entries in the FDB of this service.

Label	Description
EVPN Static Cnt	Displays the total number of BGP EVPN MAC entries with the sticky bit set in the FDB of this service.
EVPN Dup Det Cnt	Displays the total number of times a BGP EVPN duplicate MAC address has been detected in this service.
Remote Age	Displays the number of seconds used to age out FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.
Local Age	Displays the number of seconds used to age out FDB entries learned on local SAPs.
High Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be raised by the agent.
Low Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be cleared by the agent.
Mac Learning	Specifies whether the MAC learning process is enabled.
Discard Unknown	Specifies whether frames received with an unknown destination MAC are discarded.
Mac Aging	Indicates whether the MAC aging process is enabled.
Relearn Only	When one of the FDB table size limits (service, line card, system) has been reached, the learning of new MAC addresses is temporary disabled and only MAC relearns are allowed. When in this state, the Relearn Only flag is True, otherwise it is False.
Mac Subnet Len	Displays the number of bits to be considered when performing MAC-learning or MAC-switching.
Source-Identifier	The location where the MAC is defined.
Type/Age	<p>Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs.</p> <p>Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.</p> <p>L — Learned - Dynamic entries created by the learning process.</p> <p>OAM — Entries created by the OAM process.</p> <p>H — Host, the entry added by the system for a static configured subscriber host.</p> <p>D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.</p>

Label	Description
	P — Indicates the MAC is protected by the MAC protection feature. Static — Statically configured.
Last Change	Indicates the time of the most recent state changes.
Sel Learned FDB	Displays the administrative state of the selective learned FDB feature associated with this service.

9.8 fdb-mac

fdb-mac

Syntax

fdb-mac *ieee-address* [**expiry**]

Context

[\[Tree\]](#) (show>service fdb-mac)

Full Context

show service fdb-mac

Description

This command displays the FDB entry for a specified MAC address.

Parameters

ieee-address

The 48-bit MAC address for which the FDB entry will be displayed in the form *aa:bb:cc:dd:ee:ff* or *aa-bb-cc-dd-ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

expiry

Shows the time until the MAC is aged out.

Platforms

All

Output

The following output is an example of FDB MAC information.

Output Example

```
*A:ian2# show service fdb-mac

```

Context

[\[Tree\]](#) (tools>dump>router>ldp fec)

Full Context

tools dump router ldp fec

Description

This command dumps information for an LDP FEC.

Parameters

p2mp-id *identifier*

Dumps LDP active P2MP identifier bindings information.

Values 0 to 4294967295

inner-root *ip-address*

Dumps inner root IP address information.

root *ip-address*

Dumps root IP address information.

prefix *ip-address[/mask]*

Dumps LDP active prefix and mask information.

Values ip-address[/mask]:

ipv4-prefix	a.b.c.d
ipv4-prefix- le	0 to 32
ipv6-prefix	x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF] H
	d: [0 to 255] D
ipv6-prefix- le	0 to 128

source *ip-address*

Dumps source IP address information.

group mcast-address

Dumps the group multicast address bindings.

rd rd

Dumps information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

vc-type vc-type

Dumps information for the specified VC type.

Values ethernet, vlan, framerelay, atm-all5, atm-cell, hdlc, ppp, cem, atm-vcc, atm-vpc, ipipe, atm-vcc-1-1, atm-vpc-1-1, atm-aal5-pdu, fr, cep, e1-satop, t1-satop, e3-satop, t3-satop, cesopsn, tdmopip, cesopsn-cas, tdmopip-cas, fr-dlci, mirror

vc-id vc-id

Dumps information for the specified VC-ID.

Values 1 to 4294967295

agi agi

Specifies the Attachment Group identifier TLV associated with this service FEC.

Values <ip-addr:comm-val> | <2byte-asnumber:ext-comm-val> | <4byte-asnumber:comm-val>
ip-addr - a.b.c.d
comm-val - [0 to 65535]
2byte-asnumber - [1 to 65535]
ext-comm-val - [0 to 4294967295]
4byte-asnumber - [1 to 4294967295]
null - means all value is 0

saii-type2 global-id:prefix:ac-id

Dumps Source Attachment Individual Identifier (SAII) information.

Values <number>:<number> | <a.b.c.d>:<number>

taii-type2 global-id:prefix:ac-id

Dumps Target Attachment Individual Identifier (TAII)

svc-fec-type

Specifies the FEC type.

Values fec128, fec129

Platforms

All

Metric	Specifies the metric type of the LSP.
inLabel	Specifies the incoming MPLS label on which to match.
egress Label	Specifies the egress label associated with this next-hop entry.

9.11 fec-egress-stats

fec-egress-stats

Syntax

fec-egress-stats [*ip-prefix/mask*]

fec-egress-stats [**active**] [**family**]

Context

[Tree] (show>router>ldp fec-egress-stats)

Full Context

show router ldp fec-egress-stats

Description

This command displays LDP prefix FECs egress statistics.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

mask

Specifies the address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values IPv4: 0 to 32
 IPv6: 0 to 128

family

Displays either IPv4 or IPv6 LDP session information.

Platforms

All

Output

The following output is an example of LDP FEC egress statistics information.

Output Example

```
*A:Dut-C>config>router>ldp# show router ldp fec-egress-stats 3ffe::a14:101/128

fec-egress-stats

Syntax

fec-egress-stats *ip-prefix/mask* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>ldp fec-egress-stats)

Full Context

monitor router ldp fec-egress-stats

Description

This command monitors egress statistics for LDP FEC prefixes.

Parameters

ip-prefix/mask

Specifies information for the specified IP prefix and mask length.

Values

ipv4-prefix	a.b.c.d
ipv4-prefix- le	0 to 32
ipv6-prefix	x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:d.d.d.d

x: [0 to FFFF] H

d: [0 to 255] D

ipv6-prefix-
le 0 to 128

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

9.12 fec-originate

fec-originate

Syntax

fec-originate [*ip-prefix/mask*] [*operation-type*]

Context

[\[Tree\]](#) (show>router>ldp fec-originate)

Full Context

show router ldp fec-originate

Description

This command displays LDP static prefix FECs.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

mask

Specifies the 32-bit address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values 0 to 32

operation-type

Specify the operation type to display.

Values pop, swap

Platforms

All

Output

FEC Originate Output

[Table 143: FEC Originate Output Fields](#) describes the FEC originate parameters output fields.

Table 143: FEC Originate Output Fields

Label	Description
Prefix	Specifies the static prefix FEC.
NHType	Specifies the type of next-hop represented by this row entry: unknown — The next-hop type has not been set. IP Addr — The next-hop is an IP address. pop — There is no next-hop (pop the label and route).
NextHop	The IP address of the next-hop.
NHIfName	The name of the next-hop.
IngLabel	Specifies the label that is advertised to the upstream peer. If this variable is set to the default value of 4294967295, the ingress label will be dynamically assigned by the label manager.
EgrLabel	Specifies the egress label associated with this next-hop entry. The LSR will swap the incoming label with the configured egress label. If this egress label has a value of 4294967295, the LSR will pop the incoming label.

Label	Description
OprInLbl OperIngLabel	Specifies the actual or operational value of the label that was advertised to the upstream peer.

Output Example

```
*A:SRU4>config>router>ldp# show router ldp fec-originate

9.13 fetch-ahs-log

fetch-ahs-log

Syntax

fetch-ahs-log *period days file-url file-url*

Context

[\[Tree\]](#) (tools>perform>esa fetch-ahs-log)

Full Context

tools perform esa fetch-ahs-log

Description

This command retrieves the ESA instance AHS log for a specified number of past days and copies it to a local or remote destination.

Note: To retrieve an AHS log that includes all AHS log events saved on the ESA, configure the **period** keyword to use a value of *all*. This is helpful when trying to retrieve a record of AHS log events occurring over 31 days ago.

Parameters

period *days*

Specifies the number of past days for which AHS log events are retrieved.

Values 1 to 31, all

file-url *file-url*

Specifies a local or remote destination for the AHS log.

Values

local-url | *remote-url*

local-url

[cflash-id]/file-path 200 characters maximum, including cflash-id

directory length 99 characters maximum each

remote-url

{ftp | tftp}://[login:pswd@]remote-locn/[filepath]

255 characters maximum, *filepath* 199 characters maximum

remote-locn

{hostname | ipv4-address | ["ipv6-address"][:port]}

ipv4-address

a.b.c.d

ipv6-address

x:x:x:x:x:x[-interface]

x:x:x:x:x:d.d.d.d[-interface]

x - [0 to FFFF]H

d - [0 to 255]D

interface - 32 characters maximum, for link local addresses

<i>port</i>	[0 to 65535]
<i>cflash-id</i>	cf1: cf1-A: cf1-B: cf2: cf2-A: cf2-B: cf3: cf3-A: cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

Use the following command to copy the AHS log to a local destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url cf3:/test.ahs
```

Output Example

```
Updating (1 day) AHS Log @09/19/2022 21:28:25 on esa-1 ... DONE @ 09/19/2022
21:30:50 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54104161 bytes

Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to cf3:/test.ahs ...

9.14 fib

fib

Syntax

```
fib slot-number [family] [ip-prefix/prefix-length [longer]] [secondary] [qos] [accounting-class] [all]
fib slot-number extensive [ip-prefix/prefix-length] [family] [all]
fib slot-number [family] summary
```

fib slot-number nh-table-usage

fib all summary

Context

[\[Tree\]](#) (show>router fib)

Full Context

show router fib

Description

This command displays the active FIB entries for a specific IOM or line card.

Parameters

slot-number

Displays routes only matching the specified chassis slot number.

Values 1 to 20

Note:

The actual range can be less depending on the platform.

family

Displays the router IP interface table.

Values **ipv4** — Displays IPv4 routes installed in the FIB.

ipv6 — Displays IPv6 routes installed in the FIB.

ip-prefix/prefix-length

Displays FIB entries only matching the specified *ip-prefix* and length.

Values	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length:	0 to 32
	ipv6-prefix:	x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x: [0 to FFFF]H d: [0 to 255]D
	ipv6-prefix-length:	0 to 128

Note:

It is possible that a specific platform only supports a subset of the above values.

longer

Displays FIB entries matching the *ip-prefix/mask* and routes with longer masks.

secondary

Displays secondary VRF ID information.

qos

Displays the QoS priority and fc values.

accounting-class

Displays the accounting class information.

Note:

Not all platforms support this parameter.

all

Displays all information.

summary

Displays summary FIB information for the specified slot number.

nh-table-usage

Displays next-hop table usage.

Platforms

All

Output

The following output is an example of FIB information and [Table 144: FIB Fields](#) describes the output fields for the router FIB settings.

Output Example

```

Table 144: FIB Fields

Label	Description
Prefix [Flags]	The prefix
Protocol	The routing protocol
NextHop	The next-hop IP address
Total Entries	The total number of entries
Dest Prefix	The destination prefix
Installed	The installed indicator (Y or N)
Label	The label number
QoS	The QoS value
Source-Class	The source class
Dest-Class	The destination class value
ECMP-Weight	The ECMP weight value

fib

Syntax

fib *slot-number* [{**ipv4** | **ipv6**}] **summary**

Context

[Tree] (tools>dump>router fib)

Full Context

tools dump router fib

Description

This command configures the dump tools for FIB information for a specific IOM.

Parameters

slot-number

Specifies the slot number.

Values 1 to 10

ipv4 | ipv6

Specifies the IPv4 or IPv6 addresses.

Default ipv4

summary

Displays summary FIB information for the specified slot number.

Platforms

All

Output

The following output is an example of FIB summary information.

Output Example

```
*A:Dut-F# tools dump router fib 1 summary

9.15 fib-telemetry

fib-telemetry

Syntax

fib-telemetry label [*label*]

fib-telemetry route [*family*]

fib-telemetry route [*ip-prefix/prefix-length*]

fib-telemetry tunnel [*family*]

fib-telemetry tunnel [*ip-prefix/prefix-length*]

Context

[Tree] (show>router fib-telemetry)

Full Context

show router fib-telemetry

Description

This command displays FIB telemetry information.

Parameters

label

Specifies the label value.

Values 0 to 1048575

family

Specifies the IPv4 or IPv6 address FIB telemetry route or tunnel family.

Values ipv4, ipv6

ip-prefix/prefix-length

Displays FIB telemetry route or tunnel entries only matching the specified IP prefix and length.

Values	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length	0 to 32
	ipv6-prefix:	x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
	x:	[0 to FFFF]H

d: [0 to 255]D
 ipv6-prefix-length: 0 to 128

Platforms

All

Output

The following output is an example of FIB telemetry information.

Output Example

```

Table 145: FIB Telemetry Fields

Label	Description
Label	The label number of the FIB entry
Owner	The owner (protocol name) of the label entry
LastUpdt	The time stamp of when the entry was last updated

Label	Description
Primary NextHop[If/TnId]	The primary path next-hop IP or tunnel ID or interface
Weight	The normalized ECMP weight associated with the next-hop
GrpId	The next-hop group ID
PriActv	The boolean value (YES or NO) that indicates whether the primary path is active or not
Pushed Labels	The pushed labels number
Backup NextHop[If/TnId]	The backup path next-hop IP or tunnel ID or interface
Number of Entries	The total number of displayed labels
Flags	The flags: <ul style="list-style-type: none"> • b — backup • i — indirect • l — LFA
Dest Prefix	The destination IP prefix of the route FIB entry
Owner	The protocol owner (routing protocol) of the FIB entry
FIB Update Time	The time stamp of when the route was last updated in FIB
NextHop [If/TnId]	The IP address of the next-hop and interface name or tunnel ID
Number of Entries	The total number of displayed routes
Flags	The flags: <ul style="list-style-type: none"> • a — active • b — backup • l — LFA
Dest Prefix	The destination IP prefix of the FIB tunnel entry
Owner	The protocol owner of the FIB tunnel entry
Pref	The preference number that indicates the priority of the tunnel
FIB Update Time	The time stamp of when the tunnel was last updated in FIB
TnId	The global tunnel ID

Label	Description
TnInst	The tunnel instance of the type indicated by protocol
Number of Entries	The total number of displayed tunnels

Context

[\[Tree\]](#) (show>service>id>spb fid)

Full Context

show service id spb fid

Description

This command displays SPB control service FID information.

Parameters

fid

A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

Values 1 to 4095

fate-sharing

Displays fate-sharing information

user-service

Specifies user VPLS information for each control VPLS per forwarding data-base identifier. A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

fdb

Displays forwarding database (FDB) information

mfib

Displays multicast forwarding information base (MFIB) information

ieee-address

Specifies the 48-bit IEEE 802.3 group MAC address

isid

Specifies the value of ISID of the group MAC address of this entry

Values 0 to 16777215

Platforms

All

Output

The following output is an example of service SPB FID fare sharing information.

Output Example

```
*A:Dut-A# show service id 100001 spb fid fate-sharing

show application-assurance http-enrich fields

Description

This command displays HTTP enrichment fields.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.19 file

file

Syntax

file *provisioning-file-url* [**save-provision-file-destination** *file-url*] [**reboot-on-success**]

Context

[\[Tree\]](#) (tools>perform>system>auto-node-provisioning file)

Full Context

tools perform system auto-node-provisioning file

Description

This command executes the auto-provisioning process. When the auto-provisioning process is executed using the **file** command, DHCP discovery and solicitation is not performed.

Parameters

provisioning-file-url

Specifies the location of the provisioning file.

Values *local-url, remote-url*

local-url — [*cflash-id*]/*file-path*; 200 characters max

remote-url — {ftp | http | https}://[*login:password*@]*remote-locn*/*file-path*

remote-locn — {*hostname* | *ipv4-address* | *ipv6-address*][:*port*]

ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x[-*interface*]

x:x:x:x:x:d.d.d.d[-*interface*]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

port — 0 to 65535

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

file-url

Specifies the location to save the provisioning file.

Values *[cflash-id]/file-path*

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

reboot-on-success

Reboots the router when the auto-provisioning process completes successfully.

Table 146: Output fields: log file

Label	Description
name	Displays the string name of the log file policy
file-id	Displays the log file ID
rollover	Displays the rollover time for the log file, which is how long in between partitioning of the file into a new file
retention	Displays the retention time for the file in the system, which is how long the file will be retained in the file system
admin location	Displays the primary flash device specified for the file location

Label	Description
	none — indicates no specific flash device is specified
oper location	Displays the actual flash device on which the log file exists
file name	Displays the complete pathname of the file associated with the log ID
expired	Indicates whether the retention period for this file has passed
state	in progress — Indicates the current open log file complete — Indicates the old log file

files

Syntax

files [running | finished] [detail]

Context

[Tree] (show>call-trace files)

Full Context

show call-trace files

Description

This command gives an overview of all the files in use by the call-trace module, either for running or finished jobs.

Parameters

running

Displays the active jobs that are tracing events triggered by the host being monitored.

finished

Displays the jobs that have already finished and not tracing events generated by the host anymore.

detail

Displays detailed information about the files.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace local log files information.

Output Example

```
Node# show call-trace files
=====
Call trace files of running jobs
=====
File path                                     File size

Description

This command displays event file log information.

If no command line parameters are specified, a summary output of all event log files is displayed.

Specifying a file ID displays detailed information on the event file log.

Parameters

filter-id

Specifies the filter policy.

Values 1 to 65535

Platforms

All

Output

[Table 148: Filter-ID Field Descriptions](#) describes the output fields for a log file summary.

Table 148: Filter-ID Field Descriptions

Label	Description
file-id	The log file ID.
rollover	The rollover time for the log file which is how long in between partitioning of the file into a new file.
retention	The retention time for the file in the system which is how long the file should be retained in the file system.
admin location	The primary flash device specified for the file location. n/a — Indicates no specific flash device was specified.
backup location	The secondary flash device specified for the file location if the admin location is not available. n/a — Indicates that no backup flash device was specified.
oper location	The actual flash device on which the log file exists.
file-id	The log file ID.
rollover	The rollover time for the log file which is how long in between partitioning of the file into a new file.
retention	The retention time for the file in the system which is how long the file should be retained in the file system.
file name	The complete pathname of the file associated with the log ID.

Label	Description
expired	Indicates whether or not the retention period for this file has passed.
state	In progress — Indicates the current open log file. Complete —Indicates the old log file.

Event Log Filter Detailed Output

[Table 149: Event Log Filter Detail Output Fields](#) describes the output fields for detailed event log filter information.

Table 149: Event Log Filter Detail Output Fields

Label	Description
Filter Name/Id	The event log filter name or ID.
Applied	no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID.
Default Action	drop — The default action for the event log filter is to drop events not matching filter entries. forward — The default action for the event log filter is to forward events not matching filter entries.

Label	Description
Description (Filter-id)	The description string for the filter ID.

[Table 150: Log Filter Match Criteria Output Fields](#) describes the output fields for log filter match criteria information.

Table 150: Log Filter Match Criteria Output Fields

Label	Description
Entry-id	The event log filter entry ID.
Action	<p>default — There is no explicit action for the event log filter entry and the filter’s default action is used on matching events.</p> <p>drop — The action for the event log filter entry is to drop matching events.</p> <p>forward — The action for the event log filter entry is to forward matching events.</p>
Description (Entry-id)	The description string for the event log filter entry.
Application	The event log filter entry application match criterion.
Event Number	The event log filter entry application event ID match criterion.
Severity	<p>cleared — The log event filter entry application event severity cleared match criterion.</p> <p>indeterminate — The log event filter entry application event severity indeterminate match criterion.</p> <p>critical — The log event filter entry application event severity critical match criterion.</p> <p>major — The log event filter entry application event severity cleared match criterion.</p> <p>minor — The log event filter entry application event severity minor match criterion.</p> <p>warning — The log event filter entry application event severity warning match criterion.</p>
Subject	Displays the event log filter entry application event ID subject string match criterion.
Router	Displays the event log filter entry application event ID router <i>router-instance</i> string match criterion.
Operator	There is an operator field for each match criteria: application, event number, severity, and subject.

Label	Description
	equal — Matches when equal to the match criterion. greaterThan — Matches when greater than the match criterion. greaterThanOrEqualTo — Matches when greater than or equal to the match criterion. lessThan — Matches when less than the match criterion. lessThanOrEqualTo — Matches when less than or equal to the match criterion. notEqual — Matches when not equal to the match criterion. off — No operator specified for the match criterion.

9.25 firewall

firewall

Syntax

firewall

Context

[\[Tree\]](#) (show>router firewall)

Full Context

show router firewall

Description

This command displays firewall information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.26 firewall-hosts

firewall-hosts

Syntax

firewall-hosts [subscriber *sub-ident*] [ip *ipv6-address/prefix-length*] [mac *ieee-address*] [firewall-policy *policy-name*] [router *router-instance*]

Context

[\[Tree\]](#) (show>service>nat firewall-hosts)

Full Context

show service nat firewall-hosts

Description

This command lists ESM hosts that have an active firewall. Configuring the optional parameters will narrow the scope of the list.

Parameters

ieee-address

Specifies the MAC address of a host, in the format xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

ipv6-address/prefix-length

Specifies the IPv6 prefix of a host.

Values *ipv6-address* — x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
x — 0 to FFFF (in hexadecimal)
d — 0 to 255 (in decimal)
prefix-length — 1 to 128

policy-name

Specifies the name of a firewall policy, up to 32 characters.

router-instance

Specifies the ID of the router that contains the firewall domain.

Values *router-name* | *vprn-svc-id*
router-name — "Base", "management"
vprn-svc-id — 1 to 2147483647

sub-ident

Specifies the subscriber identity string, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.27 firewall-policy

firewall-policy

Syntax

firewall-policy [*policy-name* [**associations**]]

Context

[[Tree](#)] (show>service>nat firewall-policy)

Full Context

show service nat firewall-policy

Description

This command lists the firewall policies that are present in the system.

Configuring the *policy-name* parameter will display all information for the specified policy.

Parameters

associations

Keyword to display all configuration objects that use the specified firewall policy.

policy-name

Specifies the name of a firewall policy, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of firewall policy information.

Output Example

```
Node# show service nat firewall-policy

9.28 flap-statistics

flap-statistics

Syntax

flap-statistics [{*ip-prefix/mask* [**neighbor** *ip-addr*] | **group** *group-name* | **regex** *reg-exp* | [**policy** *policy-name*]}]

Context

[Tree] (clear>router>bgp flap-statistics)

Full Context

clear router bgp flap-statistics

Description

This command clears route flap statistics.

Parameters

ip-prefix/mask

Clears route flap statistics for entries that match the specified IP prefix and mask length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)
ipv4-prefix-le: 0 to 32
ipv6-prefix:
• x:x:x:x:x:x:x (eight 16-bit pieces)
• x:x:x:x:x:d.d.d.d
• x: [0 to FFFF] H
• d: [0 to 255] D
ipv6-prefix-le: 0 to 128

ip-addr

Clears route flap statistics for entries received from the specified BGP neighbor.

Values ipv4-prefix: a.b.c.d (host bits must be 0)
ipv6-prefix:
• x:x:x:x:x:x:x (eight 16-bit pieces)
• x:x:x:x:x:d.d.d.d
• x: [0 to FFFF] H
• d: [0 to 255] D
interface: 32 chars max, mandatory for link local addresses

group-name

Clears route flap statistics for entries received from any BGP neighbors in the specified peer group. 32 characters maximum.

reg-exp

Clears route flap statistics for all entries which have the regular expression and the AS path that matches the regular expression. 80 characters maximum.

policy-name

Clears route flap statistics for entries that match the specified route policy. 32 characters maximum.

Platforms

All

9.29 flex-algo

flex-algo

Syntax

flex-algo [*flex-algo-id*] [*level /eve/*] [*detail*]

Context

[\[Tree\]](#) (show>router>isis flex-algo)

Full Context

show router isis flex-algo

Description

This command displays the IS-IS flexible algorithm information.

This command displays the flexible algorithms, the winning FAD for which the router is enabled and whether the local router is advertising a FAD.

When the keyword **detail** is used, all other FADs (beyond the winning FAD) advertised by any other router in the area are also displayed.

The displayed output can be filtered by using the *flex-algo-id* or *level* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

level

Displays the IS-IS area level information constrained to IS-IS level-1 or level-2 only.

level

Specifies the IS-IS area level, it filters the displayed information constrained to IS-IS level-1 or level-2 only.

detail

Displays not only the winning FAD information, but also all other FADs that the router has advertised in IS-IS.

Platforms

All

Output

The following output is an example of flexible algorithm information, and [Table 151: Flexible Algorithm Output Fields](#) describes the output fields.

=====
*A:Dut-B>show>router>isis#
    
```

Table 151: Flexible Algorithm Output Fields

Label	Description
Flex-Algo	The flexible algorithm number
Advertising FAD	The FAD name when the local router is advertising a FAD
Participating	The flexible algorithm participation is enabled
Loop-Free-Alternate	Displays Loop-Free-Alternates; if enabled, then the configuration is inherited from base SPF
L1 Oper State	Displays the L1 operational flexible algorithm state
L2 Oper State	Displays the L2 operational flexible algorithm state
FADs-Count	Displays the number of FADs in the area available to the router
FAD-Owner	Displays the winning FAD owner

Label	Description
Supported	Displays local router support for the flexible algorithm definition that is advertised in the FAD
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Exclude	The list of administrative groups for links to be excluded from the flexible algorithm topology graph
Include Any	The list of administrative groups for links to be included in the flexible algorithm topology graph
Include All	The list of administrative groups for links where all administrative groups have to match to be included in the flexible algorithm topology graph
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR
Level	The IS-IS area level where the FAD is received

flex-algo

Syntax

flex-algo [*flex-algo-id*] [**area** *area-id*] [**detail**]

Context

[Tree] (show>router>ospf flex-algo)

Full Context

show router ospf flex-algo

Description

This command displays OSPFv2 flexible algorithm information, which includes the flexible algorithms, the winning FAD for which the router is enabled, and whether the local router is advertising a FAD.

The displayed output can be filtered using either the *area-id* or *flex-algo-id* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

area-id

Specifies the OSPFv2 area to display output.

area

Displays the information constrained to a particular OSPFv2 area.

detail

Displays the winning FAD information and all other FADs that the router has advertised in OSPFv2.

Platforms

All

Output

The following output is an example of flexible algorithm information, and [Table 152: Flexible Algorithm Output Fields](#) describes the output fields.

Output Example

```
*A:Dut-C# show router ospf flex-algo detail

Include All	The list of administrative groups for links where all administrative groups must match to be included in the flexible algorithm topology graph
Fad Flags	Displays the FAD flags. The M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR.

9.30 flexible-algorithm-definitions

flexible-algorithm-definitions

Syntax

flexible-algorithm-definitions [**flex-algo** *fad-name*]

Context

[\[Tree\]](#) (show>router flexible-algorithm-definitions)

Full Context

show router flexible-algorithm-definitions

Description

This command displays information about the locally configured FADs.

If **flex-algo** *fad-name* is specified as the output filter, only filtered FAD definitions are shown. If no output filter is specified, all configured FADs are shown.

Parameters

flex-algo *fad-name*

Displays the configuration information for the specified FAD name.

Platforms

All

Output

The following output is an example of FAD information, and [Table 153: FAD Fields](#) describes the output fields.

Output Example

```
*A:Dut-B# show router flexible-algorithm-definitions

tools dump application-assurance group flow-record-search
```

Description

This command dumps application-assurance flow-records matching the specified criteria for a specific AA subscriber.

Parameters

application *app-name*

Displays flows for the specified application name.

app-group *app-group-name*

Displays flows for the specified application group.

bytes-tx *kbytes*

Display flows with the specified minimum kilobytes.

Values 0 to 4294967295

classified *classified*

Specifies the starting flow ID.

Values yes, no

client-ip *ip-address*

Display flows with the specified client IP address.

Values ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

dsm mac *mac-address*

Displays flows for the specified subscriber.

esm *sub-ident-string*

Displays flows for the specified subscriber.

esm-mac *esm-mac-name*

Displays flows for the specified ESM MAC.

flow-duration *minutes*

Display flows with the specified minimum duration in minutes.

Values 0 to 4294967295

flow-status *flow-status*

Displays only flows that are active or closed.

Values active, closed

max-count *max-count*

Specifies the maximum count of flows to display.

Values 1 to 4294967295

protocol *protocol-name*

Displays flows for the specified protocol.

sap *sap-id*

Displays flows for the specified SAP.

search-type *search-type*

Specifies the level of detail displayed for flows that match the search criteria.

Values default — Displays some per flow information.
count — Displays the number of matching flows.
detail — Displays all per flow information available.

server-ip *ip-address*

Display flows with the specified server IP address.

Values ipv4-address - a.b.c.d
 ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

server-port *port-num*

Display flows with the specified server port number.

Values 0 to 65535

spoke-sdp *sdp-id:vc-id*

Displays flows for the specified spoke SDP.

start-flowid *start-flowid*

Specifies the starting flow ID.

Values 0 to 4294967295

transit *transit-aasub-name*

Displays flows for the specified transit subscriber.

url *file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url | remote-url

local-url	[<cfld-id>/][<file-path>] 200 chars max, including cflash-id directory length 99 chars max each
remote-url	[{ftp:// tftp://}<login>:<pswd>@<remote-locn>/][<file-path>] 255 chars max directory length 99 chars max each
remote-locn	[<hostname> <ipv4-address> <ipv6- address>] ipv4-address a.b.c.d ipv6-address x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D

interface - 32 chars max, for
 link

local addresses

cflash-id flash slot ID

9.37 force

force

Syntax

force *aps-id* {**protect** | **working**} [**number** *number*]

Context

[\[Tree\]](#) (tools>perform>aps force)

Full Context

tools perform aps force

Description

This command forces a switch to either the protect or working circuit

Parameters

aps-id

Specifies the APS ID.

Values

<i>aps-id</i>	<i>aps-group-id</i>
aps	keyword
group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

Values 1, 2

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

force

Syntax

force *ring-index* **path** {**a** | **b**}

Context

[\[Tree\]](#) (tools>perform>eth-ring force)

Full Context

tools perform eth-ring force

Description

This command forces a block on the ring port where the command is issued.

Parameters

ring-index

Specifies the ring index.

Values 1 to 128

path

Displays information for a specific path.

Values a, b

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

force

Syntax

force all-mc {**active** | **standby**}

force lag-id *lag-id* [**sub-group** *sub-group-id*] { **active** | **standby**}

force peer-mc *ip-address* {**active** | **standby**}

Context

[\[Tree\]](#) (tools>perform>lag force)

Full Context

tools perform lag force

Description

This command allows forcing the specified LAG, subgroup, all MC-LAGs, or remote peer for MC-LAGs to become active or standby when LAG runs in Active/Standby mode. To remove the forced condition, execute the **tools perform lag clear-force** command.

Parameters

all-mc

Specifies all MC-LAGs.

active

Specifies to become active.

standby

Specifies to become standby.

lag-id

Specifies the LAG ID.

Values 1 to 800

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d
ipv6-address:
• x:x:x:x:x:x (eight 16-bit pieces)
• x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

Platforms

All

force

Syntax

force id *tunnel-id*

force *lsp-name*

Context

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel force)

Full Context

tools perform router mpls tp-tunnel force

Description

This command performs a force switchover of the MPLS-TP LSP from the active path to the protect path.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 1 to 61440

isp-name

Specifies name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

force-partner-down

Syntax

force-partner-down

Context

[Tree] (tools>perform>router>dhcp>server>pool>failover force-partner-down)

[Tree] (tools>perform>router>dhcp6>server>pool>failover force-partner-down)

[Tree] (tools>perform>router>dhcp6>server>failover force-partner-down)

[Tree] (tools>perform>router>dhcp>server>failover force-partner-down)

Full Context

tools perform router dhcp local-dhcp-server pool failover force-partner-down

tools perform router dhcp6 local-dhcp-server pool failover force-partner-down

tools perform router dhcp6 local-dhcp-server failover force-partner-down

tools perform router dhcp local-dhcp-server failover force-partner-down

Description

This command forces a DHCP server to transition from the COMMUNICATIONS-INTERRUPTED state to the PARTNER-DOWN state.

It is important to note that this command should only be used if the remote DHCP server is out of service, else duplicate address allocations could occur.

In case of a communication failure between two redundant DHCP servers, the DHCP server transitions to the COMMUNICATIONS-INTERRUPTED state. In this state, the DHCP server allocates IP addresses for new leases from the local and address-driven address-ranges only. This prevents duplicate address allocations.

If during the partner-down-delay time, the communication with the remote DHCP server is not restored, then the DHCP server transitions to the PARTNER-DOWN state. In this state, the DHCP server also allocates IP addresses for new leases from the remote ranges. A DHCP server should only reach this state when the remote DHCP server is out of service, else IP address conflicts can occur.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.39 force-switch-path

force-switch-path

Syntax

force-switch-path [**lsp** *lsp-name*] [**path** *path-name*]

no force-switch-path **lsp** *lsp-name*

Context

[\[Tree\]](#) (tools>perform>router>mpls force-switch-path)

Full Context

tools perform router mpls force-switch-path

Description

Use this command to move from a standby path to any other standby path regardless of priority. The **no** form of the command reverts to priority path.

Parameters

lsp-name

Specifies an existing LSP name, up to 64 characters in length.

path-name

Specifies the path name to which to move the specified LSP.

Platforms

All

9.40 force-switchover

force-switchover

Syntax

force-switchover **tunnel-group** *local-group-id* [**now**] [**to** {**master** | **standby**}]

Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec force-switchover)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover

Description

This command manually switches over the 7750 SR mc-ipsec mastership of specified tunnel-group.

Parameters

local-group-id

Specifies the local tunnel-group id configured in the **config>redundancy>multi-chassis>peer>mc-ipsec** context.

now

This optional parameter removes the prompt of confirmation.

to {master | standby}

specifies the desired mastership state to be achieved following a forced switch between this tunnel group and its redundant peer. If the target state matches the current state when the switch is attempted, then no switch will occur.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.41 force-uplink-switch

force-uplink-switch

Syntax

force-uplink-switch *client-port-id*

Context

[\[Tree\]](#) (tools>perform>satellite force-uplink-switch)

Full Context

tools perform satellite force-uplink-switch

Description

This command forces traffic associated with the specified satellite client port to be switched away from the current uplink depending on which uplink is currently active.

Parameters

client-port-id

Specifies the satellite client port associated with the port mapping, in the format **esat- id/ slot/port force**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

forcerenew

Syntax

forcerenew **svc-id** *service-id* { **ip** *ip-address[/mask]* | **mac** *ieee-address*}

forcerenew {**interface** *interface-name* | **sap** *sap-id* | **sdp** *sdp-id:vc-id*} [**ip** *ip-address[/mask]* | **mac** *ieee-address*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt forcerenew)

Full Context

tools perform subscriber-mgmt forcerenew

Description

This command forces the renewal of lease state and only applies to the 7450 ESS and 7750 SR.

In cases where the IPoE hosts resides in a private retail subnet VPRN, the MAC address must be used for the **tools>perform>subscriber-mgmt>forcerenew** command instead of the IP address.

Parameters

service-id

Forces renewal of the lease state for the specified service ID.

Values 1 to 2147483647

sap-id

Forces renewal of the lease state for the specified SAP.

ip-address

Forces renewal of the lease state for the specified IP address.

ieee-address

Forces renewal of the lease state for the specified MAC address.

interface-name

Forces renewal of the lease state for the specified interface name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

```

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

plcy

Specifies the forwarding policy up to 64 characters.

egress-stats

Monitors the egress statistics of the specified forwarding policy.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays the absolute statistics of the specified forwarding policy.

rate

Displays the rate statistics of the specified forwarding policy.

Description

This command displays the IOM/IMM label, next-hop and outgoing interface information for BGP, LDP and RSVP tunnels used in any of the following applications:

- BGP shortcut (**config>router>bgp>next-hop-resolution>shortcut-tunnel**)
- IGP shortcut (**config>router>isis[ospf]>igp-shortcut**)
- IGP prefix resolved to an LDP LSP (**config>router>ldp-shortcut**)
- Static route resolved to a LDP or RSVP LSP
- VPRN auto-bind
- 6PE/6VPE.

Parameters

slot-number

Displays information for the specified slot.

Values 1 to 10

ip-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)
ipv4-prefix-length:	0 to 32
ipv6	ipv6-prefix[/pref*]:
	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D
	prefix-length: 1 to 128

ipv4

Displays the output to IPv4-based FP tunnel tables.

ipv6

Displays the output to IPv6-based FP tunnel tables.

Platforms

All

Output

The following output is an example of router FP tunnel information.

Output Example

```
*A:Dut-B# show router fp-tunnel-table 1 10.20.1.3/32
=====

=====
```

Table 157: Map Frag-Stats Output Fields

Label	Description
Rx Resolved Packets	Specifies fragments that were resolved and never buffered. This includes: <ul style="list-style-type: none"> • first fragments (MF=1, FO=0), which are always resolved by definition • non-first fragments that have matching flow records
Rx Unresolved Packets	Specifies the number of packets that were queued in the system since the last clear command was invoked. For example, out-of-order fragments without a matching flow record (missing the first fragment). These packets can be eventually resolved and forwarded, or discarded (for example, as a result of timeout).
Tx Frags	Specifies the fragments that were transmitted (Rx Resolved and Rx Unresolved that were eventually resolved) out of the fragmentation logic within the VSR. There is no guarantee that these fragments will be transmitted out of the system as they may be dropped on egress due to congestion or restrictions imposed by the configured filter.
Dropped Frags	Specifies the dropped fragments due to some fragmentation issue (timeout, buffer full).
Created Flows	A cumulative counter that represents the total number of flow records since the last clear command was invoked. It only counts the first fragment and roughly represents the amount of fragmented packets that were processed by the system since the last clear command.

Label	Description
	The counter does not provide any indication about the number of flows (packets whose fragments were transmitted fully) that were actually transmitted.
Flow Collisions	Represents the number of overlapping first fragments. For example, when a flow record already exists and another first fragment for this flow is received.
Exceeded Max Flows	Specifies the number of occurrences when the number of flows in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last clear command): <ul style="list-style-type: none"> • Rx unresolved (buffered) fragments that have timed out, due to a missing first fragment • deleted flow-records because they have not received all fragments within the timeout period
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last clear command): <ul style="list-style-type: none"> • Rx unresolved (buffered) fragments that have timed out, due to a missing 1st fragment • deleted flow-records because they have not received all fragments within the timeout period
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Buffers Per Flow	Specifies the number of occurrences when a fragment count per flow has exceeded its limit.
In-Use Flows	An approximation of the number of flow records that are currently in use. The counter provides an estimate, expressed in percent, of the number of fragmented packets that were being processed at the time the counter was invoked.
Max Flows	Specifies the amount of time in seconds that the system will remain in a hold down state before being used again.
In-Use Buffers	Represents the amount of buffered fragments, expressed in percent of the maximum buffer space, that can be used for fragmentation.
Max Buffers	A non-cumulative counter that represents the maximum number of buffers allocated since the last clear command. The counter captures the highest value of the buffers-in-use counter since

Label	Description
	the last clear command. The counter shows the percentage of the total buffer space that can be used by fragmentation.

9.52 free-addresses

free-addresses

Syntax

free-addresses *ip-address[/mask]*

free-addresses summary [**subnet** *ip-address[/ mask]*]

free-addresses pool *pool-name*

Context

[Tree] (show>router>dhcp>local-dhcp-server free-addresses)

Full Context

show router dhcp local-dhcp-server free-addresses

Description

This command displays the free addresses in a subnet.

Parameters

pool-name

Specifies a DHCP pool name on the router.

subnet

Specifies a subnet of IP addresses that are served from the pool.

summary

Displays summary output of the free addresses.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of free address information

Output Example

```
*A:ALA-48>show>router>dhcp>local-dhcp-server# free addresses pool test subnet 10.0.0.0/24
=====
Free addresses in subnet 10.0.0.0/24
=====
```

```

```

Table 158: Free Addresses Field Descriptions describes free addresses pool command output fields.

Table 158: Free Addresses Field Descriptions

Field	Description
IP Address	The free IP addresses in the subnet
No of free addresses	The total number of free addresses in the subnet

9.53 ftn

ftn

Syntax

ftn [**endpoint** *endpoint* | **sender** *sender* | **nexthop** *nexthop* | **lsp-id** *lsp-id* | **tunnel-id** *tunnel-id* | **label** *start-label end-label*]

Context

[Tree] (tools>dump>router>mpls ftn)

Full Context

tools dump router mpls ftn

Description

This command dumps FEC-to-NHLFE (FTN) information for MPLS.

Parameters

endpoint

Specifies the endpoint or destination IP address.

Values a.b.c.d

sender

Specifies the sender IP address.

Values a.b.c.d

lsp-id

Specifies the LSP ID.

Values 0 to 65535

tunnel-id

Specifies the tunnel ID.

Values 0 to 65535

nexthop

Specifies the next hop IP address.

Values a.b.c.d

start-label

Specifies the start label value for the label range of the display.

Values 32 to 524287

end-label

Specifies the end label value for the label range of the display.

Values 32 to 524287

Platforms

All

9.54 fwd-path-ext

fwd-path-ext

Syntax

fwd-path-ext [*fpe fpe-id*]

fwd-path-ext *fpe fpe-id* **associations**

Context

[\[Tree\]](#) (show fwd-path-ext)

Full Context

show fwd-path-ext

Description

This command displays FPE information.

Parameters

fpe-id

Specifies the FPE ID.

Values 1 to 64

associations

Displays a list of current fwd path extensions to which the FPE is associated.

Platforms

All

Output

The following output is an example of show fwd-path-ext command information, and [Table 159: Output Fields: show fwd-path-ext](#) describes the output fields.

Output Example

Table 159: Output Fields: show fwd-path-ext

Field	Description
FPE Id	Displays the configured ID of the FPE.
Path pxc/ xc-a, xc-b	Displays the path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE. In case of a PXC based LAG, the path is referred to as xc-a and xc-b.
Application	Displays the application associated with this FPE. Based on the application type, the system will internally configure logic on underlying PXC (or PXC based LAG) necessary to accommodate the application.
Description	Displays the user-configurable string used to describe the use of the FPE.
SDP-id Range	Displays the configurable SDP-id range used for internal SDPs that are utilized by FPEs.
Path	Path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE.
PW-Port	Displays the FPE that is used by PW-port application.

Field	Description
VXLAN-Termination	Displays the FPE that is used by Vxlan-Termination application.
Oper	Displays the status of the application.
EPIPE svc Id	Displays the Epipe service ID with which the PW-port is associated.
PW-Port Id	Displays the PW-port ID that is associated with the EPIPE.
Tunnel termination	Displays the IP addresses on which the VXLAN tunnel is terminated.

10.1 gateway

gateway

Syntax

gateway *brg-id* *brg-ident*

Context

[Tree] (show>subscr-mgmt>vrgw>brg gateway)

Full Context

show subscriber-mgmt vrgw brg gateway

Description

This command displays all operational data related to the BRG.

Parameters

brg-ident

Specifies the BRG identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management BRG gateway information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05"

gateway

Syntax

```
gateway brg-id brg-ident
gateway brg-id brg-ident idle-bindings [binding ieee-address]
gateway all-gateways
gateway brg-id brg-ident all-hosts
gateway brg-id brg-ident host ieee-address
```

Context

[\[Tree\]](#) (clear>subscr-mgmt>vrgw>brg gateway)

Full Context

```
clear subscriber-mgmt vrgw brg gateway
```

Description

This command clears BRG gateway data.

Parameters

brg-ident

Clears the specified BRG and all related hosts from the system.

idle-bindings

Clears a specific idle binding or all idle binding from the BRG. An idle binding is a DHCP lease that has not been expired but for which the host has been removed due to idle timeout.

ieee-address

Specifies the MAC address of the binding to remove.

all-gateways

Clears all BRGs and related hosts from the system.

all-hosts

Clears all hosts belonging to a specified BRG.

ieee-address

Clears a specific host belonging to a specified BRG.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gateway

Syntax

gateway name *name*

gateway [**name** *name*] **tunnel** [**private-address-type** *private-address-type*]

gateway [**service** *service-id*]

gateway tunnel [*ip-address:port*]

gateway name *name* **tunnel***ip-address:port*

gateway [**name** *name*] **tunnel state** *state*

gateway [**name** *name*] **tunnel idi-value** *idi-prefix*

gateway tunnel count

gateway tunnel [**private-address-type** *private-address-type*]

Context

[\[Tree\]](#) (show>ipsec gateway)

Full Context

show ipsec gateway

Description

This command displays IPsec gateway information.

Parameters

name

Specifies an IPsec gateway name.

service-id

Specifies the service ID of the default security service used by the IPsec gateway.

Values 1 to 214748364 svc-name: Up to 64 characters maximum

ip-address:port

Displays the IP address and UDP port of the SAP IPsec gateway to the tunnel.

Values 0 to 65535

state

Specifies the state of the tunnel.

Values up, down

idi-prefix

Displays a string as an IDi prefix. With this parameter, the system lists all the peers with IDi that has specified prefixes.

count

Displays the number of IPsec gateway tunnels with the **ike-policy>authmethod** command set to **psk**.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show ipsec gateway** command.

Output Example

```
show ipsec gateway tunnel 10.2.2.100:500

gateway

Syntax

gateway name name tunnel ip-address:port [statistics] [saved-key]

gateway name name tunnel ip-address:port [temp-mtu]

gateway name name [saved-key]

gateway name name tunnel ip-address:port [saved-key]

Context

[Tree] (clear>ipsec gateway)

Full Context

clear ipsec gateway

Description

This command clears dynamic IPsec tunnel states.

The system clears the statistics counter for the specified tunnel when the **statistics** parameter option is specified.

The system clears the saved IKE and ESP keys for the specified tunnel, or for all tunnels on the specified gateway if no tunnel is specified when the **saved-key** parameter option is specified.

The system removes the specified tunnel when the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

Parameters

name

Specifies the name of the IPsec GW, up to 32 characters.

ip-address

Specifies the IP address and port of the remote peer.

Values	<ip-address>	ip-address	a.b.c.d
		ipv6-address	x:x:x:x:x:x:x
			x:x:x:x:x:d.d.d.d
			x - [0 to FFFF]H
			d - [0 to 255]D

port

Specifies the port of the remote peer. The specifies channel is cleared if the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

Values 0 to 65535

statistics

Clears the stats counter.

saved-key

Clears the saved IKE and ESP keys.

temp-mtu

Clears temporary MTU learned from MTU propagation for the specified tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateways

Syntax

gateways

gateways brg-profile *profile-name*

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg gateways)

Full Context

show subscriber-mgmt vrgw brg gateways

Description

This command lists operational gateway information for all BRGs active on the system. This list can optionally be reduced by specifying a BRG profile.

Parameters

profile-name

Specifies the name of the BRG profile to filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway information.

Output Example

```
Node# show subscriber-mgmt brg gateways

10.3 generate-key

generate-key

Syntax

generate-key authentication *authentication-protocol authentication-password* [**privacy** *privacy-protocol privacy-password*] [**engine-id** *identifier*]

Context

[\[Tree\]](#) (tools>perform>system>mgmt-itf>snmp generate-key)

Full Context

tools perform system management-interface snmp generate-key

Description

This command generates localized SNMPv3 authentication and privacy keys, which are a hash of the SNMP engine ID and a password. The SNMP engine ID can be displayed with the **show system information | match "SNMP Engine ID"** command and does not need to be entered. If keys are being generated for a different system, its SNMP engine ID must be specified.

Parameters

authentication

Generates a localized authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

Values	
hmac-md5-96	— Specifies use of the HMAC-MD5-96 authentication protocol.
hmac-sha1-96	— Specifies use of the HMAC-SHA-96 authentication protocol.
hmac-sha2-224	— Specifies use of the HMAC-SHA-224 authentication protocol.
hmac-sha2-256	— Specifies use of the HMAC-SHA-256 authentication protocol.
hmac-sha2-384	— Specifies use of the HMAC-SHA-384 authentication protocol.
hmac-sha-512	— Specifies use of the HMAC-SHA-512 authentication protocol.

authentication-password

Specifies the password used to generate the authentication key.

privacy

Keyword to generate a localized privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

- Values**
- cbc-des** — Specifies the use of the CBC-DES privacy protocol. This parameter is not available in FIPS-140-2 mode.
 - cfb128-aes-128** — Specifies the use of the CFB128-AES-128 privacy protocol.
 - cfb128-aes-192** — Specifies the use of the CFB128-AES-192 privacy protocol.
 - cfb128-aes-256** — Specifies the use of the CFB128-AES-256 privacy protocol.

privacy-password

Specifies the privacy password used to generate the privacy key.

engine-id identifier

Keyword that specifies the SNMP engine ID. The identifier must be a hexadecimal string between 10 and 64 digits in length.

Platforms

All

Output

The following output is an example of a generated authentication and privacy key.

Output Example

```
A:ALA-1# tools perform system management-interface snmp generate-key authentication hmac-sha2-512 thisistheauthenticationpassword privacy cfb128-aes-256 thisistheprivacypassword

group

Syntax

group [*name*] [*detail*]

Context

[\[Tree\]](#) (show>router>bgp group)

Full Context

show router bgp group

Description

This command displays group information for a BGP peer group. This command can be entered with or without parameters.

When this command is issued without a group name, information about all peer groups displays.

When the command is issued with a specific group name, information only pertaining to that specific peer group displays.

The "State" field displays the BGP group's operational state. Other valid states are:

- Up - BGP global process is configured and running.
- Down - BGP global process is administratively shutdown and not running.
- Disabled - BGP global process is operationally disabled. The process must be restarted by the operator.

Parameters

name

Displays information for the specified BGP group, up to 64 characters.

detail

Displays detailed information.

Platforms

All

Output

The following outputs are example of BGP group information, and [Table 161: Standard and Detailed Group Field Descriptions](#) describes the output fields.

Output Example

```
*A:Dut-B#
*A:Dut-B# show router bgp group

Table 161: Standard and Detailed Group Field Descriptions

Label	Description
Group	BGP group name
Group Type	No Type — Peer type not configured External — Peer type configured as external BGP peers Internal — Peer type configured as internal BGP peers
State	Disabled — The BGP peer group has been operationally disabled Down — The BGP peer group is operationally inactive Up — The BGP peer group is operationally active
Peer AS	The configured or inherited peer AS for the specified peer group
Local AS	The configured or inherited local AS for the specified peer group
Local Address	The configured or inherited local address for originating peering for the specified peer group
Loop Detect	The configured or inherited loop detect setting for the specified peer group
Connect Retry	The configured or inherited connect retry timer value
Authentication	n/a — No authentication is configured MD5 — MD5 authentication is configured
Local Pref	The configured or inherited local preference value
MED Out	The configured or inherited MED value assigned to advertised routes without a MED attribute

Label	Description
Min Route Advt.	The minimum amount of time that must pass between route updates for the same IP prefix
Min AS Originate	The minimum amount of time that must pass between updates for a route originated by the local router
Multihop	The maximum number of router hops a BGP connection can traverse
Multipath	The configured or inherited multipath value, determining the maximum number of ECMP routes BGP can advertise to the RTM
Prefix Limit	No Limit — No route limit assigned to the BGP peer group 1 to 4294967295 — The maximum number of routes BGP can learn from a peer
Passive	Disabled — BGP attempts to establish BGP connections with neighbors in the specified peer group Enabled — BGP does actively attempt to establish BGP connections with neighbors in the specified peer group
Next Hop Self	Disabled — BGP is not configured to send only its own IP address as the BGP nexthop in route updates to neighbors in the peer group Enabled — BGP sends only its own IP address as the BGP nexthop in route updates to neighbors in the specified peer group
Aggregator ID 0	Disabled — BGP is not configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group Enabled — BGP is configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group
Remove Private	Disabled — BGP will not remove all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group Enabled — BGP removes all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group
Damping	Disabled — The peer group is configured not to dampen route flaps Enabled — The peer group is configured to dampen route flaps
Export Policy	The configured export policies for the peer group
Import Policy	The configured import policies for the peer group
Hold Time	The configured hold time setting
Keep Alive	The configured keepalive setting
Cluster Id	n/a — No cluster ID has been configured
Client Reflect	Disabled — The BGP route reflector will not reflect routes to this neighbor Enabled — The BGP route reflector is configured to reflect routes to this neighbor

Label	Description
NLRI	The type of NLRI information that the specified peer group can accept Unicast — IPv4 unicast routing information can be carried
Preference	The configured route preference value for the peer group
Egress Engineering	Enabled — EPE is enabled for the peer group Disabled — EPE is disabled for the peer group
List of Peers	A list of BGP peers configured under the peer group
Total Peers	The total number of peers configured under the peer group
Established	The total number of peers that are in an established state

group

Syntax

group *aa-group-id* [:*partition-id*]

Context

[\[Tree\]](#) (show>app-assure group)

Full Context

show application-assurance group

Description

Commands in this context display application-assurance group information.

Parameters

aa-group-id

Specifies an AA ISA group ID.

Values 1

partition-id

Specifies a partition within a group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of application assurance group information.

Output Example

```
*A:Dut-C# /show application-assurance group 1:1 aa-sub esm Subscriber1 summary
=====
Application-Assurance Subscriber Summary (realtime)
=====
AA-Subscriber          : Subscriber1 (esm)

Tethering Status       : not-detected (disabled)
Devices Detected       : N/A
Sub Congestion State   : Not Congested|RTT Limits Exceeded (Stage X)
```

group

Syntax

group *aa-group-id* **resources**

Context

[\[Tree\]](#) (tools>dump>application-assurance group)

Full Context

tools dump application-assurance group

Description

This command dumps application-assurance information within a group.

Parameters

aa-group-id

Specifies the AA group identifier.

Values *aa-group-id*: partition:aa-group-id[:partition-id]
aa-group-id: 1 to 255

resources

Specifies the AA group resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of group resources information.

Output Example

```
*A:Dut-C# tools dump application-assurance group 1 resources

group

Syntax

group *aa-group-id* [: *partition-id*]

Context

[\[Tree\]](#) (tools>dump>application-assurance group)

Full Context

tools dump application-assurance group

Description

This command dumps application-assurance information within a group/partition.

Parameters

aa-group-id

Specifies the AA group identifier.

Values

aa-group-id: partition:aa-group-id[:partition-id]

aa-group-id 1 to 255

partition-id

1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group *aa-group-id* **load-balance** [**service** *service-id*]

Context

[\[Tree\]](#) (tools>perform>app-assure group)

Full Context

tools perform application-assurance group

Description

This command performs application assurance group operations.

Parameters

aa-group-id

Specifies the application assurance group ID.

Values 1 to 255

load-balance

Load balances subscribers within the group.

service ***service-id***

Load balances the specified service.

Values 1 to 2148278381, svc-name (up to 64 char max.)

Platforms

All

group

Syntax

group [*grp-ipv6-address*] [**hosts** | **interfaces** | **saps**]

group summary [**hosts** | **interfaces** | **saps**]

Context

[\[Tree\]](#) (show>router>mld group)

Full Context

show router mld group

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ipv6-address* parameters are specified, then all MLD group, (*,G) and (S,G) addresses are displayed.

Parameters

grp-ipv6-address

Displays specific multicast group addresses.

hosts

Displays hosts for the multicast group address.

interfaces

Displays interfaces for the multicast group address.

saps

Displays SAPs for the multicast group address.

Platforms

All

Output

The following output is an example of MLD group information. [Table 162: MLD Group Information Output Fields](#) describes the output fields for MLD group information.

Output Example

```

Table 163: MSDP Group Fields

Label	Description
Group Name	The MSDP group name.
Mode	The groups of peers in a full mesh topology to limit excessive flooding of source-active messages to neighboring peers.
Act Srcs	The configured maximum number of active source messages that will be accepted by MSDP.
Local Address	The local end of a MSDP session.
Admin State	The administrative state.
Receive Msg Rate	Displays rate that the messages are read from the TCP session.
Receive Msg Time	The time of MSDP messages that are read from the TCP session within the configured number of seconds.
Receive Msg Thd	The configured threshold number of MSDP messages can be processed before the MSDP message rate limiting function.

Label	Description
SA Limit	The source-active limit.

group

Syntax

group *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

group *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*] **rpfv**

Context

[\[Tree\]](#) (show>router>pim group)

Full Context

show router pim group

Description

This command displays PIM source group database information.

Parameters

grp-ip-address

Specifies the IP multicast group address for which this entry contains information.

source ip-address

Specifies the source address for which this entry contains information.

type starstarrp

Specifies that only (*, *, rp) entries are displayed.

type starg

Specifies that only (*,G) entries are displayed.

type sg

Specifies that only (S,G) entries are displayed.

detail

Displays detailed group information.

family

Displays family information.

Values ipv4, ipv6

rpfv

Displays proxy RPF vectors that are used for inter-AS Rosen MVPN.

Platforms

All

Output

The following output is an example of PIM group information. [Table 164: PIM Group Fields](#) provides PIM group field descriptions.

PIM Source Group ipv4
```

Table 164: PIM Group Fields

Label	Description
Group Address	The IP multicast group address for which this entry contains information
Source Address	The source address of the multicast sender. The value is 0 if the type is configured as starg . The address of the Rendezvous Point (RP) display when the type is configured as starRP .
RP Address	The RP address
Type	The type of entry, (*,*, rp)/(*,G) or (S,G).
Spt Bit	Specifies whether to forward on (*,*, rp)/(*,G) or on (S,G) state. It is updated when the (S,G) data comes on the RPF interface towards the source.
Incoming Intf	The interface on which the traffic comes in. It can be the RPF interface to the RP (if starg) or the source (if sg).
Num Oifs	The number of interfaces in the inherited outgoing interface list. An inherited list inherits the state from other types.
Flags	The different lists to which this interface belongs
Keepalive Timer Exp	The keepalive timer expiration which is applicable only for (S,G) entries. The (S,G) keepalive timer is updated by data being forwarded using this (S,G) Forwarding state. It is used to keep (S,G) state alive in the absence of explicit (S,G) joins.
MRIB Next Hop	The next hop address towards the RP
MRIB Src Flags	MRIB information about the source. If the entry is of type starg or starstarp , it will contain information about the RP for the group.
Up Time	The time since this source group entry was created.
Resolved By	The route table used for RPF check.
Up JP State	The upstream join prune state for this entry on the interface. PIM join prune messages are sent by the downstream routers towards the RPF neighbor.
Up JP Expiry	The minimum amount of time remaining before this entry will be aged out.
Up JP Rpt	The join prune Rpt state for this entry on the interface. PIM join/prune messages are sent by the downstream routers towards the

Label	Description
	RPF neighbor. (S,G, rpt) state is a result of receiving (S,G, rpt) JP message from the downstream router on the RP tree.
Up JP Rpt Override	The value used to delay triggered Join (S,G, rpt) messages to prevent implosions of triggered messages. If this has a non-zero value, it means that the router was in 'not Pruned' state and it saw a prune (S,G, rpt) message being sent to RPF (S,G, rpt). If the router sees a join (S,G, rpt) override message being sent by some other router on the LAN while the timer is still non-zero, it simply cancels the override timer. If it does not see a join (S,G, rpt) message, then on expiry of the override timer, it sends its own join (S,G, rpt) message to RPF (S,G, rpt). A similar scenario exists when RPF (S,G, rpt) changes to become equal to RPF (*,G).
Register State	The register state. The register state is kept at the source DR. When the host starts sending multicast packets and if there are no entries programmed for that group, the source DR sends a register packet to the RP (g). Register state transition happen based on the register stop timer and the response received from the RP.
Register Stop Exp	The time remaining before the register state might transition to a different state
Register from Anycast RP	The status of the register packet for that group received from one of the RP from the anycast-RP set
RPF Neighbor	The address of the RPF neighbor
Outgoing Intf List	A list of interfaces on which data is forwarded.
Curr Fwding Rate	The current forwarding rate of the multicast data for this group and source. This forwarding rate is calculated before ingress QoS policing or shaping is applied.
Forwarded Packets	The number of multicast packets that were forwarded to the interfaces in the outgoing interface list. This packet count is before ingress QoS policing or shaping is applied.
Discarded Packets	The number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
Forwarded Octets	The number of octets forwarded
RPF Mismatches	The number of multicast packets that matched this source group entry but they did not arrive on the interface.

Label	Description
Spt threshold	The value of the SPT threshold configured for that group. 0 kb/s means that the switch to the SP tree occurs immediately.

group

Syntax

group *aa-group-id* [: *partition-id*]

Context

[Tree] (clear>application-assurance group)

Full Context

clear application-assurance group

Description

This command clears application assurance group data.

Parameters

aa-group-id

Specifies a group of ISA MDAs.

Values 1 to 255

partition-id

Specifies a partition within a group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group [*group-name*] [**detail**]

Context

[Tree] (show>router>rip group)

Full Context

show router rip group

Description

This command displays RIP group information.

Parameters

group-name

Displays RIP group information for the specified group.

detail

Displays detailed RIP group information.

Platforms

All

Output

[Table 165: RIP Group Fields](#) describes the standard command output fields for a RIP group.

Table 165: RIP Group Fields

Label	Description
Group	The RIP group name.
Adm	Down — The RIP group is administratively down. Up — The RIP group is administratively up.
Opr	Down — The RIP group is operationally down. Up — The RIP group is operationally up.
Send Mode	Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address. Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address. None — Specifies that no RIP messages are sent (silent listener). RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.asp
Recv Mode	Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted. None — Specifies that RIP updates will not be accepted. RIPv1 — Specifies that RIP updates in version 1 format only will be accepted. RIPv2 — Specifies that RIP updates in version 2 format only will be accepted.
Metric In	The metric value added to routes received from a RIP neighbor.

The following output is an example of RIP group information.

Output Example: Standard RIP Group

group

Syntax

group *grp-ip-address* [**source** *ip-address*] [**interval** *interval*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>pim group)

Full Context

monitor router pim group

Description

This command monitors statistics for a PIM source group.

Parameters

grp-ip-address

Specifies the IP address of an multicast group that identifies a set of recipients that are interested in a particular data stream.

ip-address

Specifies the source IP address to use in the ping requests in dotted decimal notation.

Values 0.0.0.0 to 255.255.255.255

Default the IP address of the egress IP interface

interval

Configures the interval for each display, in seconds.

Values 10, 20, 30, 40, 50, 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

10.10 group-interface

group-interface

Syntax

group-interface [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-address*]

Context

[\[Tree\]](#) (show>router>igmp group-interface)

Full Context

show router igmp group-interface

Description

This command displays IGMP group-interface information.

Parameters

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

ip-int-name

Specifies an IP interface name, up to 32 characters.

detail

Displays detailed information.

group

Displays information for the group IP address.

grp-address

Displays information for the group IP address in the multicast group address format or zero.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

group-interface [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-ipv6-address*]

Context

[\[Tree\]](#) (show>router>mld group-interface)

Full Context

show router mld group-interface

Description

This command displays MLD group-interface information.

Parameters

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

ip-int-name

IP interface name, up to 32 characters.

detail

Displays detailed information.

group

Displays information from the group IPv6 address.

grp-ipv6-address

Group IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

group-interface [**fwd-service** *service-id*] [*ip-int-name*]

Context

[\[Tree\]](#) (show>router>mld>statistics group-interface)

Full Context

show router mld statistics group-interface

Description

This command displays MLD group interface statistics information.

Parameters

service-name

Displays information associated with the specified service name.

ip-int-name

Displays information associated with the specified IP interface name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

Table 166: Show System gRPC Output Fields

Label	Description
gRPC Server	Specifies the gRPC server name.
Administrative State	Specifies the administrative state (Enabled, Disabled).
Operational State	Specifies the operational state (Up, Down).
Supported services	Specifies the supported services.
gNMI Version	Specifies the gNMI version.
Address	Specifies the IP address.
Port	Specifies the port number.
Establishment Time	Specifies the establishment time.
Active RPC Count	Specifies the active RPC count.
Total RPC Count	Specifies the total RPC count.
Rx Bytes	Specifies the number of received bytes.
Tx Bytes	Specifies the number of transmitted bytes.
No. of connections	Specifies the number of gRPC connections.
No. of RPCs	Specifies the number of RPCs.

```
gtp
```

Syntax

```
gtp
```

Context

[\[Tree\]](#) (clear>router gtp)

Full Context

clear router gtp

Description

Commands in this context clear GTP information in this routing context.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Syntax

gtp session all

gtp session apn *apn*

gtp session apn *apn* imsi *imsi*

gtp session imsi *imsi*

gtp statistics

Context

[\[Tree\]](#) (clear>subscr-mgmt gtp)

Full Context

clear subscriber-mgmt gtp

Description

This command clears all GTP sessions matching the specified criteria. Associated objects, such as the ESM subscriber in a GTP uplink scenario are also removed.

Parameters

session

Specifies to remove GTP sessions.

all

Specifies to remove all GTP sessions in the system.

statistics

Specifies to clear GTP statistics.

apn

Specifies the APN identifying the session, up to 100 characters.

imsi

Specifies the IMSI identifying the session, in the format of a string of digits between 9 and 15.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Syntax

gtp

gtp gtp-filter *gtp-filter-name*

Context

[\[Tree\]](#) (show>app-assure>group gtp)

Full Context

show application-assurance group gtp

Description

This command displays GTP (General packet radio service (GPRS) Tunneling Protocol) information.

Parameters

gtp-filter-name

Specifies a GTP filter name, up to 32 characters. When a filter is specified, all traffic is examined as described in the tmnxBsxGtpFiltrTable.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **gtp gtp-filter** command.

Output Example

```
show application-assurance group 1:0 gtp gtp-filter "bob"
=====

11.1 handler

handler

Syntax

handler [*handler-name*]

handler detail

Context

[\[Tree\]](#) (show>log>event-handling handler)

Full Context

show log event-handling handler

Description

Commands in this context display EHS handler information.

Parameters

handler-name

Specifies the name of a specific handler up to 32 characters in length.

detail

Keyword to list details of all handlers.

Platforms

All

Output

The following output is an example of handler information.

[Table 168: Handler Output Field Descriptions](#) describes handler output fields.

Output Example

```
A:node1>show>log>event-handling# handler

=====
    
```

Table 168: Handler Output Field Descriptions

Label	Description
Handler	The name of the handler.
Description	The handler description string.
Admin State	The administrative state of the handler.
Oper State	The operational state of the handler.
Handler Action-List Entry	
Entry-id	The action-list entry identifier.
Description	The action-list entry description string.
Admin State	The administrative state of the action-list entry.
Policy Name	The name of the related script policy.
Policy Owner	The owner of the related script policy.
Last Exec	The timestamp of the last successful execution of the action-list entry.

Label	Description
Handler Action-List Entry Execution Statistics	
Enqueued	The number of times the action-list entry was successfully passed on to the SR OS sub-system or module that will attempt to process and execute the action. For a script-policy entry, this indicates that the script request has been enqueued but does not necessarily indicate that the script has successfully launched or completed. For status and information about the script, use the show>system>script-control command.
Err Launch	The number of times the action-list entry was not successfully handed over to the next SR OS sub-system or module in the processing chain. This can be caused by a variety of conditions including a full script request input queue.
Err Adm Status	The number of times the action-list entry was not executed because the entry was administratively disabled.
Total	The total number of times that the action-list entry attempted execution.

handler

Syntax

handler *event-handler-name*

Context

[\[Tree\]](#) (clear>log>event-handling handler)

Full Context

clear log event-handling handler

Description

This command clears the counters in the **show log event-handling handler** *handler-name* output. It does not affect the global or aggregate counters shown using the **information** command.

Parameters

handler-name

Specifies the name of the event handler, up to 32 characters in length.

Platforms

All

11.2 hash-control

hash-control

Syntax

hash-control

Context

[\[Tree\]](#) (show>system>security hash-control)

Full Context

show system security hash-control

Description

Commands in this context display hash-control configuration information.

Platforms

All

11.3 hierarchy

hierarchy

Syntax

hierarchy [**subscriber** *sub-ident-string*]

Context

[\[Tree\]](#) (show>service>active-subscribers hierarchy)

Full Context

show service active-subscribers hierarchy

Description

This command displays active subscriber hierarchy information. To display an IPoE/PPP session, the group of hosts within the session is visually indented. Additional information related to the session is also shown. For PPPoE, the circuit ID and remote ID if used is shown. For IPoE, the key used to group the session is shown (for example, the circuit ID). The command also display PD host which are modeled as a managed route. The PD managed route is directly underneath and points to the host that it is using as the next hop. The PD managed route forwarding status is also shown, where (N) indicates that the route is not forwarding.

Parameters

sub-ident-string

Specifies the subscriber ID of the active subscriber, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber hierarchy information.

11.4 histogram

histogram

Syntax

histogram router *router-instance* **pool** *pool-name* **bucket-size** [1..65536] **num-buckets** [2..50]

Context

[\[Tree\]](#) (tools>dump>nat histogram)

Full Context

tools dump nat histogram

Description

This command displays a NAT pool port usage histogram

Parameters

router *router-instance*

Specifies the router instance.

pool *pool-name*

Specifies the identification of the NAT pool.

bucket-size [1..65536]

Specifies the unit of the X-axis of the histogram; a value of ten, for example, would return in a histogram with results for [0-9], [10-19], [20-29], ... ports.

num-buckets [2..50]

Specifies the size of the histogram; a value of five, for example, would result in five results: [0-9], [10-19], [20-29], [30-39], [40-infinite].

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

11.5 host

host

Syntax

host [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

host interface *interface-name* [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

Context

[\[Tree\]](#) (show>service>id>slaac host)

Full Context

show service id slaac host

Description

This command displays SLAAC host related information.

Parameters

detail

Specifies to display detailed SLAAC host related information.

service-id

Specifies the service ID of the wholesaler.

Values 1 to 2147483647

session

Specifies to display information about SLAAC hosts that are associated with an IPoE session or a PPP session.

Values none, ipoe, ppp

interface-name

Specifies the interface name, up to 32 characters.

ieee-address

Specifies the MAC address for which to display SLAAC host information.

ipv6-address

Specifies the IPv6 address for which to display SLAAC host information.

sap-id

Specifies the physical port identifier portion of the SAP definition.

policy-name

Specifies the name of the router advertisement policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of detailed SLAAC host information.

Output Example

[Table 169: Service SLAAC Host Field Descriptions](#) describes service SLAAC host information.

Table 169: Service SLAAC Host Field Descriptions

Field	Description
Service ID	The service identifier.
Prefix	The prefix for the service
Interface Id	The interface identifier of this SLAAC host. If the SLAAC host has multiple addresses, this field will only show the interface identifier of one of them.
Mac Address	The MAC address of the this SLAAC host
Subscriber-interface	The subscriber interface name
Group-interface	The subscriber interface group interface name
SAP	The service SAP ID
Termination Type	The termination type of this SLAAC host
Creation Time	The date and time the service was created
Persistence Key	The key value that can be used to track this SLAAC host in the persistence file.
Router adv. policy	The name of the router advertisement policy associated with the SLAAC host during authentication
IPoE PPP session	The indication if this SLAAC host belongs to an IPoE or PPP session
Radius sub-if prefix	The subscriber interface prefix that is received from a Radius server
IPoE Trigger	The trigger name
Last Auth Time	The sysUpTime at the time of the last authentication for this session
Inactivity Timer	The remaining time in seconds before the host is removed. A value of 0 indicates no inactivity timer is active.

Field	Description
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
ANCP-String	The ANCP string applicable for this session
Int Dest ID	The intermediate destination identifier applicable for this session
Category-Map-Name	The category map name applicable for this session
Info origin	The server that provided the Sub-profile, SLA profile, Ancp string and Intermediate Destination Id
Pool	the DHCP server pool from which the SLAAC prefix is allocated
Primary-Dns	the primary DNS server
Secondary-Dns	the secondary DNS server
Circuit ID	circuit ID of this host
Remote ID	remote ID of this host
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit

Field	Description
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 PPPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdbby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

host

Syntax

host [**sap** *sap-id*] [**wholesaler** *service-id*] [**port** *port-id*] [**inter-dest-id** *intermediate-destination-id*] [**detail**]

host [**sap** *sap-id*] [**wholesaler** *service-id*] [**port** *port-id*] **no-inter-dest-id** [**detail**]

host summary

host [**detail**] **wholesaler** *service-id* (VPRN only)

Context

[\[Tree\]](#) (show>service>id host)

Full Context

show service id host

Description

This command displays static host information configured on this service.

Parameters

sap-id

Displays SAP information for the specified SAP ID.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

summary

Displays summary host information.

wholesaler service-id

Specifies the VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

Values

<i>service-id:</i>	1 to 2147483647
<i>svc-name:</i>	64 characters maximum

Platforms

All

host

Syntax

host mac *ieee-address* ip *ip-address*

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway host)

Full Context

show subscriber-mgmt vrgw brg gateway host

Description

This command lists pool information about a specific host in the BRG.

Parameters

ieee-address

Specifies the MAC address identifying a specific host.

ip-address

Displays only the prefixes associated with this host.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host [*ipv6-address*]

Context

[\[Tree\]](#) (show>router>mld>statistics host)

Full Context

show router mld statistics host

Description

This command displays MLD host statistics information.

Parameters

ipv6-address

Displays information associated with the specified IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host all

host ipv6-address *ipv6-prefix*

host mac *ieee-address*

host sap *sap-id*

Context

[\[Tree\]](#) (clear>service>id>slaac host)

Full Context

clear service id slaac host

Description

This command clears SLAAC host data.

Parameters

ieee-address

Specifies the MAC address.

ipv6-prefix

Specifies the IPv6 prefix and length.

sap-id

Specifies the SAP ID.

all

Clears all SLAAC host data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

```
host [ip-address]
```

Context

[\[Tree\]](#) (show>router>igmp>statistics host)

Full Context

```
show router igmp statistics host
```

Description

This command displays IGMP statistics for hosts.

Parameters

ip-address

Specifies the host IP address.

Values a.b.c.d

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.6 host-connectivity-verify

host-connectivity-verify

Syntax

host-connectivity-verify statistics [**sap sap-id**]

Context

[\[Tree\]](#) (show>service>id host-connectivity-verify)

Full Context

show service id host-connectivity-verify

Description

This command displays host connectivity check statistics.

Parameters

statistics

Displays host connectivity verification data

sap-id

Specifies the physical port identifier portion of the SAP definition

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service host connectivity information.

Output Example

```
A:ALA-48>show>service>id# host-connectivity-verify statistics sap 1/1/9:0
=====
Host connectivity check statistics
=====
Svc  SapId/      DestIp      Last        Time        Oper

[Table 170: Show Service Id Host Connectivity Verify Fields](#) describes show service-id host connectivity verification output fields.

Table 170: Show Service Id Host Connectivity Verify Fields

Label	Description
Svc Id	The service identifier.
SapId/Sdpld	The SAP and SDP identifiers.
DestIp Address	The destination IP address.
Last Response	The time when the last response was received.
Time Expired	Displays whether the interval value has expired.
Oper State	Displays the current operational state of the service.

11.7 host-lockout-policy

host-lockout-policy

Syntax

host-lockout-policy [**policy** *host-lockout-policy-name*] *lockout-state*

host-lockout-policy sap *sap-id* [**circuit-id** *circuit-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [*lockout-state*]

Context

[Tree] (clear>subscr-mgmt host-lockout-policy)

Full Context

clear subscriber-mgmt host-lockout-policy

Description

This command removes host lockout contexts from the system.

Parameters

sap-id

Specifies to clear information for hosts in a specific lockout state.

Values

null	<i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i> <i>eth-sat-id</i>
dot1q	<i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i> <i>pw-id</i> <i>eth-sat-id</i> : <i>[qtag1</i> <i>cp-conn-prof-id</i>]

qinq	<i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>pw-id</i> <i>eth-sat-id</i> :[qtag1 cp-conn-prof-id].[qtag2 cp-conn-prof-id]	
	cp	keyword
	<i>conn-prof-id</i>	1 to 8000
cem	<i>slot/mda/port.channel</i>	
ima-grp	<i>bundle-id</i> [:vpi/vci vpi vpi1.vpi2 cp.conn-prof-id]	
	cp	keyword
	<i>conn-prof-id</i>	1 to 8000
port-id	<i>slot/mda/port</i> [.channel]	
aps-id	aps-group-id [.channel]	
	aps	keyword
	<i>group-id</i>	1 to 128
eth-tunnel	<i>eth-tunnel-id</i> [: <i>eth-tun-sap-id</i>]	
	<i>id</i>	1 to 1024
	<i>eth-tun-sap-id</i>	0 to 4094
lag-id	lag-id lag-string	
	lag	keyword
	<i>id</i>	1 to 800
	<i>string</i>	23 characters max
pw-id	pw-id	
	pw	keyword
	<i>id</i>	1 to 32767
qtag1	null 0 to 4094	
qtag2	* null 0 to 4094	
tunnel-id	tunnel-id.private <i>public:tag</i>	
	tunnel	keyword
	<i>id</i>	1 to 16
	<i>tag</i>	0 to 4094
eth-sat-id	esat-id/slot/port	
	esat	keyword
	<i>id</i>	1 to 20

pxc-id	pxc-id.sub-port	
	pxc	keyword
	<i>id</i>	1 to 64
	<i>sub-port</i>	a, b

circuit-id

Specifies the circuit ID, up to 253 characters.

ieee-address

Specifies the MAC address, up to 30 characters.

remote-id

Specifies the remote ID, up to 253 characters.

lockout-state

Specifies to clear information for hosts in a specific lockout state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lockout-policy

Syntax

host-lockout-policy

host-lockout-policy *policy-name* **association**

host-lockout-policy *policy-name*

host-lockout-policy *policy-name* *lockout-state* **sap** *sap-id* [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**circuit-id** *circuit-id*] [**sap** *sap-id*] [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**mac** *ieee-address*] [**sap** *sap-id*] [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**remote-id** *remote-id*] [**sap** *sap-id*] [**summary**]

Context

[\[Tree\]](#) (show>subscr-mgmt host-lockout-policy)

Full Context

show subscriber-mgmt host-lockout-policy

Description

This command displays host lockout policy information.

Parameters

policy-name

Specifies a specific subscriber host lockout policy name up to 32 characters.

association

Specifies to display the association of the host lockout policy.

lockout-state

Specifies to display information for hosts in a specific lockout state.

Values all, active, graceful

sap sap-id

Specifies to display SAP ID information.

circuit-id circuit-id

Specifies to display circuit ID information. The *circuit-id* is up to 256 characters .

mac ieee-address

Specifies to display MAC address information up to 30 characters.

remote-id remote-id

Specifies to display remote ID information, up to 256 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management host lockout policy information.

Output Example

```
*A:cses-E11# show subscriber-mgmt host-lockout-policy

[Table 171: Host Lockout Policy Field Descriptions](#) describes subscriber management host lockout policy output fields.

Table 171: Host Lockout Policy Field Descriptions

Field	Description
Lockout Policy	The subscriber Host Lockout Policy name
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout Time Min	The minimum lockout-time for this host lockout policy
Lockout Time Max	The maximum lockout-time for this host lockout policy
Description	The user-provided description of this subscriber Host Lockout Policy
Max Lockout Hosts	The maximum number of lockouts for this host
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout time min	The minimum lockout-time for this Host Lockout Policy
Lockout time max	The maximum lockout-time for this Host Lockout Policy
Lockout reset time	The lockout reset time for this Host Lockout Policy
Max lockout hosts	The maximum number of locked out hosts for this Host Lockout Policy
Host key	The method for host matching

11.8 host-lookup

host-lookup

Syntax

host-lookup [**mac** *ieee-address*] [**remote-id** *remote-id-ascii*] [**sap-id** *sap-id*] [**service-id** *service-id*] [**string** *vso-string*] [**system-id** *system-id*] [**option60** *option-60-ascii*] [**circuit-id** *circuit-id-ascii*] [**circuit-id-hex** *circuit-id-hex*] [**option60-hex** *option60-hex*] [**remote-id-hex** *remote-id-hex*] [**derived-id** *derived-id*] [**ip-prefix** *ip-prefix/ip-prefix-length*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ipoe host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ipoe host-lookup

Description

This command performs a lookup in the local user database. This command looks up the host with the match-list configured in the local user database.

Parameters

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information which goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sap-id

Specifies a SAP identifier to be used.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

vso-string

Specifies a Vendor Specific Option (VSO) string.

system-id

Specifies the system ID.

Values up to 255 characters maximum

hex-string

Specifies the content of option 60 for this lookup.

Values 0x0 to 0xFFFFFFFF (maximum 64 hex nibbles)

circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters maximum.

option-60-ascii

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in ASCII.

option-60-hex

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in HEX.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lookup

Syntax

host-lookup [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*] [**user-name** *user-name*]

Context

[Tree] (tools>perform>subscr-mgmt>loc-user-db>ppp host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ppp host-lookup

Description

This command performs a lookup in the local user database.

Parameters

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

user-name

Specifies a user name, up to 128 characters.

service-name

Specifies a PPP service name, up to 255 characters.

circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id derived-id

Specifies an ASCII string that uniquely identifies a host and is derived by a Python script from packet content available during a DHCP transaction.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command for an example of PPP host lookup information.

```
tools perform subscriber-mgmt local-user-db "ludb-1" ppp host-lookup user-name user-1@best.net
```

```

```

Description

This command performs a lookup in the local user database.

Parameters

circuit-id circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies a PPP service name up to 253 characters.

user-name

Specifies a user name up to 128 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.9 host-tracking

host-tracking

Syntax

host-tracking [**subscriber** *sub-ident-string*]

host-tracking [**subscriber** *sub-ident-string*] **detail**

host-tracking [**subscriber** *sub-ident-string*] **summary**

host-tracking [**subscriber** *sub-ident-string*] **statistics**

Context

[\[Tree\]](#) (show>service>active-subscribers host-tracking)

Full Context

show service active-subscribers host-tracking

Description

This command displays active subscriber host tracking information.

Parameters

sub-ident-string

Displays subscriber ID of the active subscriber, up to 32 characters.

detail

Displays detailed host tracking information for the specified subscriber ID.

summary

Displays summarized host tracking information for the specified subscriber ID.

statistics

Displays statistical host tracking information for the specified subscriber ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-tracking

Syntax

host-tracking [*statistics*]

host-tracking sap *sap-id* [*host ip-address*] [*statistics*]

Context

[\[Tree\]](#) (clear>service>id host-tracking)

Full Context

clear service id host-tracking

Description

This command clears host tracking data.

Parameters

sap-id

Specifies a SAP for which to clear host tracking data.

ip-address

Specifies the IP address of a host for which to clear tracking data.

Values a.b.c.d

statistics

Clears statistics.

Platforms

All

host-tracking

Syntax

host-tracking

Context

[\[Tree\]](#) (clear>subscr-mgmt host-tracking)

Description

Commands in this context clear host tracking data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.10 host-tracking-policy

host-tracking-policy

Syntax

host-tracking-policy

host-tracking-policy *policy-name* **association**

host-tracking-policy *policy-name*

Context

[\[Tree\]](#) (show>subscr-mgmt host-tracking-policy)

Full Context

show subscriber-mgmt host-tracking-policy

Description

This command displays host tracking policy information.

Parameters

policy-name

Specifies the host tracking policy name, up to 32 characters.

association

Displays information associated with the host tracking policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.11 hostname

hostname

Syntax

hostname

Context

[\[Tree\]](#) (show>service>id>spb hostname)

Full Context

show service id spb hostname

Description

This command displays SPB system-id to hostname mapping.

Platforms

All

Output

The following output is an example of service SPB hostname information.

Output Example

```
*A:Dut-A# show service id 100001 spb hostname
=====
Hosts
=====
System Id           Hostname
-----
0000.00AA.AAAA     cses-B02
0000.00BB.BBBB     cses-B07
```

hostname

Syntax

hostname

Context

[\[Tree\]](#) (show>router>isis hostname)

Full Context

show router isis hostname

Description

This command displays the hostname database. There are no options or parameters.

Platforms

All

Output

IS-IS Hostname Output

[Table 172: IS-IS Hostname Output Fields](#) describes output fields for IS-IS hostname output.

Table 172: IS-IS Hostname Output Fields

Label	Description
System-id	System identifier mapped to hostname.
Hostname	Hostname for the specific <i>system-id</i> .
Type	The type of entry (static or dynamic).

Output Example

```
A:ALA-A# show router isis hostname
=====
Rtr Base ISIS Instance 0 Hostnames
=====
System Id           Hostname
-----

hostname

Syntax

hostname

Context

[\[Tree\]](#) (show>router>ospf3 hostname)

[\[Tree\]](#) (show>router>ospf hostname)

Full Context

show router ospf3 hostname

show router ospf hostname

Description

This command displays information about the hostname database.

Platforms

All

Output

The following output is an example of OSPF hostname database information. [Table 173: Host Output Fields](#) displays field descriptions.

Table 173: Host Output Fields

Label	Description
Nbr Rtr Id	The OSPF ID.
hostname	The OSPF hostname.
No. of OSPF RTR id/ hostnames	The total number of OSPF router IDs and hostnames.

Output Example

```
*A:router-B# show router ospf hostname
```

```
=====
Rtr Base OSPFv2 Instance 0 hostnames
=====
Nbr Rtr Id      hostname
-----
10.20.0.3      router-A

hosts

Syntax

hosts [**group** *grp-address*] [**detail**] [**fwd-service** *service-id*] [**grp-interface** *ip-int-name*]

hosts [**host** *ip-address*] [**group** *grp-address*] [**detail**]

hosts summary

Context

[\[Tree\]](#) (show>router>igmp hosts)

Full Context

show router igmp hosts

Description

This command displays IGMP hosts information.

Parameters

grp-address

Specifies the group IP address.

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

ip-int-name

Specifies an IP interface name, up to 32 characters.

ip-address

Specifies an IP address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IGMP host information.

Output Example

```
*B:Dut-C# show router igmp hosts

11.13 hosts-logging-out

hosts-logging-out

Syntax

hosts-logging-out [**portal** *name*] [**host** *ip-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**sap** *sap-id*] [**mac** *ieee-address*] [**session**] [**all-portals**] [**all-hosts**] [**all-sessions**]

Context

[\[Tree\]](#) (clear>router>wpp hosts-logging-out)

Full Context

clear router wpp hosts-logging-out

Description

This command clears WPP hosts that are logging out.

Parameters

name

Specifies the portal name, up to 32 characters.

ip-address

Specifies the IP address.

Values a.b.c.d

circuit-id

Specifies the circuit ID, up to 256 characters.

remote-id

Specifies the remote ID, up to 256 characters.

sap-id

Specifies the SAP ID.

ieee-address

Specifies the MAC address, up to 30 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.14 hs-attachment-policy

show qos hs-attachment-policy

Description

This command displays information about HS attachment policies in the system.

Parameters

policy-name

Displays information about the specified policy name, up to 32 characters.

association

Displays the entities associated with all HS attachment policies or the specified HS attachment policy.

detail

Displays detailed policy information, including policy associations, of all HS attachment policies, or the specified HS attachment policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS attachment policy information.

Output Example

```

hs-pool-policy

Syntax

hs-pool-policy [*policy-name*] [**association** | **detail**]

Context

[\[Tree\]](#) (show>qos hs-pool-policy)

Full Context

show qos hs-pool-policy

Description

This command displays information about HS pool policies in the system.

Parameters

policy-name

Displays information about the specified HS pool policy name, up to 32 characters.

association

Displays the entities associated with all HS pool policies or the specified HS pool policy.

detail

Displays detailed policy information, including policy associations, of all HS pool policies or the specified HS pool policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS pool policy information.

Output Example

```
*A:PE# show qos hs-pool-policy

=====
HS Pool Policy Summary

hs-pools **port** *port-id* **egress** **sap** *sap-id*

hs-pools **port** *port-id* **egress** **subscriber** *sub-ident-string*

Context

[\[Tree\]](#) (show hs-pools)

Full Context

show hs-pools

Description

This command shows the egress pool information relating to an HSQ IOM.

The **card** and **fp** output shows the total buffer allocation, the number of allocated buffers, the available buffer allocation, and the buffer high-water marks for the system pools and the hierarchy of user-provisioned root and mid pools on the specified card and FP. The output includes the applied slope policy and the related instantaneous slope drop probabilities (as a percentage) for the user-provisioned pools.

The port output adds the port class pool information to the above hierarchy of user-provisioned pools for the specified port. The queue information for network queues, queue group instances, SAPs, or subscribers on the specified port is included when the associated parameter is added.

Parameters

card-slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM slots are numbered from 1 to 10.

forwarding-plane

Displays information for the specified forwarding plane.

Values 1

port-id

Displays information about the specified physical port ID in the slot/mda/port format.

network-queues

Displays information about the egress network queues on the specified port.

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the specified SAP, up to 64 characters, on the specified port.

sub-ident-string

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS pool information.

Output Example

```
*A:PE4# show hs-pools port 1/1/2 egress sap 1/1/2:1

hs-scheduler-hierarchy sap *sap-id* **egress** [**interval** *time-in-seconds*]

hs-scheduler-hierarchy subscriber *sub-ident* **egress** [**interval** *time-in-seconds*]

Context

[\[Tree\]](#) (show>qos hs-scheduler-hierarchy)

Full Context

show qos hs-scheduler-hierarchy

Description

This command displays the egress HS scheduler hierarchy for the HS scheduler policy applied to the related port. The output includes the current maximum rate and each scheduling class rate on the port. The parameters allow for the current rates for the scheduling classes for all HS secondary shapers or a specific HS secondary shaper, or for the queue rates in a specified access or network queue group instance, SAP or subscriber to be included in the output.

Parameters

port-id

Specifies the physical port ID in the slot/mda/port format.

shaper-name

Displays information about the specified HS secondary name, up to 32 characters, and includes the scheduling class rates for the HS secondary shaper on the port.

time-in-seconds

Displays the time interval used to calculate the rates, in seconds.

Values 1 to 5

hs-secondary-shapers

Displays information about scheduling class rates for all HS secondary shapers on the port.

queue-group-name

Displays information about the specified queue group name on the port, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the queue rates for the specified SAP, up to 64 characters, on the specified port.

sub-ident

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS scheduler hierarchy information.

Output Example

```
*A:PE# show qos hs-scheduler-hierarchy port 1/1/1 hs-secondary-shaper "default"

11.20 hs-secondary-shaper

hs-secondary-shaper

Syntax

hs-secondary-shaper *secondary-shaper-name* [**statistics** | **associations**]

Context

[Tree] (show>port hs-secondary-shaper)

Full Context

```
show port hs-secondary-shaper
```

Description

This command displays port HS secondary shaper information.

Parameters

secondary-shaper-name

Specifies the secondary shaper name, up to 32 characters.

statistics

Displays the statistics related to the port HS secondary shaper.

association

Displays the associations related to the port HS secondary shaper.

Platforms

7750 SR-7/12/12e

11.21 http-client

http-client

Syntax

```
http-client any
```

```
http-client [ip-address/prefix-length]
```

```
http-client [ipv6-address/prefix-length]
```

Context

[\[Tree\]](#) (tools>dump>router>web-rd http-client)

Full Context

```
tools dump router web-rd http-client
```

Description

Commands in this context dump the HTTP client hash table.

Parameters

any

Specifies all HTTP clients.

ip-address/prefix-length

Dumps HTTP clients only matching the specified IP address and prefix length.

Values		
	ip-address:	a.b.c.d
	prefix-length:	0 to 32

ipv6-address/prefix-length

Dumps HTTP clients only matching the specified IPv6 address and prefix length.

Values		
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x: [0 to FFFF]H d: [0 to 255]D
	prefix-length:	0 to 128

Platforms

All

Output

The following output is an example of HTTP client information.

Output Example

```
*A:Dut-F# tools dump router web-rd http-client any
=====
Webredirect HTTP Clients
=====
SvcId      IP Address      MAC Address      Connection Rate (conn/min)

11.22 http-enrich

http-enrich

Syntax

http-enrich

Context

[\[Tree\]](#) (show>app-assure http-enrich)

Full Context

show application-assurance http-enrich

Description

This command displays HTTP enrichment static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich

Syntax

http-enrich *enrichment-name*

Context

[\[Tree\]](#) (show>app-assure>group http-enrich)

Full Context

show application-assurance group http-enrich

Description

This command displays HTTP enrichment information.

Parameters

enrichment-name

Specifies the name of the HTTP enrichment policy, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the output for the **http-enrich** command and [Table 174: Show HTTP Enrichment Output Fields](#) describes the output fields.

Output Example HTTP Enrichment

```
show application-assurance group 1 http-enrich "MyTemplate"

11.24 http-host-recorder

http-host-recorder

Syntax

http-host-recorder detail [*isa mda-id/esa-vm-id*] **url** *file-url*

http-host-recorder status [*isa mda-id*]

http-host-recorder top *granularity* [**max-count** *max-count*] [*isa mda-id*]

Context

[\[Tree\]](#) (tools>dump>app-assure>group http-host-recorder)

Full Context

tools dump application-assurance group http-host-recorder

Description

This command configures the dump of application-assurance http-host-recorder information. The http-host-recorder is configured using debug commands.

Parameters

detail

Saves the http host values recorded by the tool into a file.

status

.Displays the current status of the http-host-recorder with current-time, start-time, stop-time, sample-rates, filters, buffer as well as number of bytes and flows recorded for the specified AA ISA.

top

.Displays by bytes or flows the top values recorded by the tool.

isa mda-id /esa-vm-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

url file-url

Specifies the URL for the file to direct the http-host-recorder output to.

Values

local-url:	<cflash-id>/[<file-path>] 200 chars max, including cflash-id directory length 99 chars max each
remote-url:	[[ftp:// tftp://]<login>:<pswd>@<remote-locn>/][<file-path>] 255 chars max directory length 99 chars max each
remote-locn:	<hostname> <ipv4-address> <ipv6-address>] ipv4-address a.b.c.d ipv6-address x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface 32 chars max, for link local addresses cflash-id flash slot ID

granularity

Specifies if the output is sorted by bytes or flows.

Values bytes, flows

max-count max-count

Specifies the maximum count of flows to display.

Values 1 to 25

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

11.25 http-notification

http-notification

Syntax

http-notification

Context

[\[Tree\]](#) (show>app-assure http-notification)

Full Context

show application-assurance http-notification

Description

This command displays HTTP notification static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification

Syntax

http-notification *http-notification-name* [**summary**]

Context

[\[Tree\]](#) (show>app-assure>group http-notification)

Full Context

show application-assurance group http-notification

Description

This command displays information about the configured http-notification policy with associated raw statistics:

- Template: Template Id in use
- Script URL: URL address of the script used in the notification message
- Admin Status: Up / Down
- AQP Referenced: Yes/No
- Notified: Total number of notifications sent
- Notification criteria selection not matched: Number of HTTP request not matching the selection criteria for in browser notification

Parameters

http-notification-name

Displays the name of the http-notification policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **http-notification** command information.

Output Example

```
A:7750# show application-assurance group 1 http-notification "in-browser-notification"
=====
Application Assurance Group 1 HTTP Notification "in-browser-notification"
=====
Description  : IBN Demo ALU Message
Template     : 1 - Javascript-url with subId and optional Http-Url-Param
Script URL   : http://10.1.1.1/In-Browser-Notification/script.js
Admin Status : Up
AQP Ref      : Yes
-----

```

	Notified	Notification Selection Criteria Not Matched
1:1	3	0
1:2	2	0
1:3	0	0
1:4	0	0
1:5	0	0
Total	5	0

```
-----
=====
```

11.26 http-redirect

http-redirect

Syntax

http-redirect

Context

[\[Tree\]](#) (show>app-assure http-redirect)

Full Context

show application-assurance http-redirect

Description

This command displays HTTP redirect static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Syntax

http-redirect *redirect-name* [**detail**]

Context

[\[Tree\]](#) (show>app-assure>group http-redirect)

Full Context

show application-assurance group http-redirect

Description

This command displays application assurance http-redirect statistics and status information.

Parameters

redirect-name

Specifies the name of the http-redirect policy.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following table describes the show command output fields:

Table 175: Show HTTP Redirect Output Fields

Label	Description
Template	Specifies HTTP redirect template id information. Each HTTP redirect template returns a specific HTTP redirect message such as HTTP 302 or Javascript and can optionally use macro substitution.
Redirect URL	Specifies the address the subscriber will be redirected to.
Captive Redirect	Specifies Yes if captive redirect is used and No if captive redirect is not used.

Label	Description
Redirect HTTPS	Specifies Yes if redirect https is used and No if redirect https is not used.
VLAN ID	Specifies the AA interface VLAN id used for captive redirect.
Admin Status	Specifies the administrative status (Up/Down) of the HTTP redirect policy.
AQP Ref	Specifies Yes if the HTTP redirect policy is referenced in AQP, and No if it is not.

Output Example

```
*A:7750# show application-assurance group 1 http-redirect "redirect-portal"

=====
Application Assurance Group 1 HTTP Redirect redirect-portal
=====
Description      : (Not Specified)
Template         : 5
Redirect URL     : Redirect supporting macro substitution using HTTP 302
                  : http://172.16.70.100/Redirect/redirect-
                  : portal.html?RequestedURL=$URL
Captive Redirect : Yes
  Redirect HTTPS : Yes
  VLAN ID       : 20

11.27 http-redirect-policy

http-redirect-policy

Syntax

http-redirect-policy *name*

Context

[\[Tree\]](#) (show>subscr-mgmt http-redirect-policy)

Full Context

show subscriber-mgmt http-redirect-policy

Description

This command displays HTTP redirect policy information.

Parameters

name

Specifies the HTTP redirect policy name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

11.28 hunt

hunt

Syntax

hunt [**brief**]

Context

[\[Tree\]](#) (show>router>bgp>routes hunt)

Full Context

show router bgp routes hunt

Description

This command displays detailed information about the BGP routes, including information about the advertised routes (RIB-OUT).

hunt is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

brief

Displays summary information about the BGP routes.

Platforms

All

11.29 hw-agg-shaper-scheduler-policy

hw-agg-shaper-scheduler-policy

Syntax

hw-agg-shaper-scheduler-policy [*hw-agg-shaper-scheduler-policy-name*] [**association**]

Context

[\[Tree\]](#) (show>qos hw-agg-shaper-scheduler-policy)

Full Context

show qos hw-agg-shaper-scheduler-policy

Description

This command displays hardware aggregate shaper scheduler policy information.

Parameters

hw-agg-shaper-scheduler-policy-name

Specifies the hardware aggregate shaper scheduler policy name, up to 64 characters.

association

Displays hardware aggregate shaper scheduler policy associations.

Platforms

7750 SR-1, 7750 SR-s

12 i Commands

12.1 i-vpls

i-vpls

Syntax

i-vpls

Context

[\[Tree\]](#) (show>service>id i-vpls)

```

Table 176: ICMP Fields

Label	Description
Total	The total number of all messages
Error	The number of error messages
Destination Unreachable	The number of message that did not reach the destination
Redirect	The number of packet redirects
Echo Request	The number of echo requests
Echo Reply	The number of echo replies
TTL Expired	The number of messages that exceeded the time to live threshold
Source Quench	The number of source quench requests (deprecated)
Timestamp Request	The number of timestamp requests (deprecated); ICMP timestamp requests are counted and dropped on ingress
Timestamp Reply	The number of timestamp replies (deprecated); sending ICMP timestamp replies is not supported, so this counter will always be 0

Label	Description
Address Mask Request	The number of address mask requests (deprecated)
Address Mask Reply	The number of address mask replies (deprecated)
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of messages that exceed the configured interface ICMP rate or have an expired TTL

icmp

Syntax

icmp

Context

[\[Tree\]](#) (show>test-oam icmp)

Full Context

show test-oam icmp

Description

Commands in this context show ping-templates or ping-template detail.

```

Description

This command deletes routes created as a result of ICMP redirects received on the management interface.

Parameters

all

Clears all routes.

ip-address

Clears the routes associated with the specified IP address.

Values a.b.c.d

Platforms

All

12.4 icmp-stats

icmp-stats

Syntax

```
icmp-stats
```

```
icmp-stats interface {ip-int-name | ip-address | ipv6-address}
```

Context

[\[Tree\]](#) (tools>dump>router icmp-stats)

Full Context

```
tools dump router icmp-stats
```

Description

Commands in this context dump ICMP statistics information.

Parameters

ip-int-name

Specifies the interface information associated with the specified IP interface name, up to 32 characters.

ip-address

Specifies the IPv4 address.

Values a.b.c.d

ipv6-address

Specifies the IPv6 address.

Values x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D

Platforms

All

Output

The following output is an example of ICMP statistics information.

Output Example

```
*A:Dut-C>config>router>isis# /tools dump router icmp-stats

12.5 icmp6

icmp6

Syntax

icmp6

Context

[\[Tree\]](#) (show>router icmp6)

Full Context

show router icmp6

Description

This command displays Internet Control Message Protocol Version 6 (ICMPv6) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions. ICMPv6 packets can be used in the neighbor discovery protocol and path MTU discovery.

Platforms

All

Output

The following output is an example of router ICMPv6 statistics, and [Table 177: ICMPv6 Fields](#) describes the fields.

Output Example

```
A:SR-3# show router icmp6
=====
Global ICMPv6 Stats
```

```

Table 177: ICMPv6 Fields

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited

Label	Description
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of ICMPv6 messages that exceed the configured interface ICMPv6 rate or have an expired TTL

icmp6

Syntax

icmp6 all

icmp6 global

icmp6 interface *interface-name*

Context

[\[Tree\]](#) (clear>router icmp6)

Full Context

clear router icmp6

Description

This command clears ICMPv6 statistics.

Parameters

all

Clears all statistics.

global

Clears global router statistics.

interface-name

Clears ICMPv6 statistics for the specified interface, up to 32 characters.

Platforms

All

12.6 icmp6-redirect-route

icmp6-redirect-route

Syntax

icmp6-redirect-route {*all* | *ipv6-address*}

Context

[\[Tree\]](#) (clear>router icmp6-redirect-route)

Full Context

clear router icmp6-redirect-route

Description

This command deletes routes created as a result of ICMPv6 redirects received on the management interface.

Parameters

all

Clears all routes.

ipv6-address

Clears the routes associated with the specified IPv6 address.

Values x:x:x:x:x:x:x (eight 16-bit pieces)

Platforms

All

12.7 icport

icport

Syntax

icport [*down*] [*degraded*]

Context

[\[Tree\]](#) (show>sfm icport)

Full Context

show sfm icport

Description

This command displays SFM interconnect port information.

Parameters

down

Displays interconnect ports that are not operational.

degraded

Displays interconnect ports that are associated with fabric degradation.

Platforms

7950 XRS

12.8 id

id

Syntax

id *service-id*

id *service-id* **mac-notification**

id *service-id* **macsec**

id *service-id* **mvrp vlan [detail]**

id *service-id* **vpls-group** [*vpls-group-id*]

id *service-id* **vpls-group** *vpls-group-id* **non-template-saps**

Context

[\[Tree\]](#) (show>service id)

Full Context

show service id

Description

This command displays information for a particular service ID.

Platforms

All

id

Syntax

id service-id

Context

[\[Tree\]](#) (clear>service id)

[\[Tree\]](#) (clear>service>statistics id)

Full Context

clear service id

clear service statistics id

Description

This command clears the identification for a specific service.

Parameters

service-id

The ID that uniquely identifies a service.

Values service-id: 1 to 214748364
svc-name: A string up to 64 characters.

Platforms

All

id

Syntax

id service-id

Context

[\[Tree\]](#) (tools>dump>service id)

[\[Tree\]](#) (tools>perform>service id)

Full Context

tools dump service id

tools perform service id

Description

This command specifies a service for which service debugging tools are enabled.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278386, *svc-name*: 64 chars max

Platforms

All

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (clear>video id)

Full Context

clear video id

Description

This command clears video information pertaining to the specified service ID.

Parameters

service service-id

Specifies the service ID to clear.

Values 1 to 2148278317
svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (clear>video>statistics id)

Full Context

clear video statistics id

Description

This command clears video statistics for a particular service.

Parameters

service *service-id*

Specifies the service ID to clear statistics.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (monitor>service id)

Full Context

monitor service id

Description

This command displays statistics for a specific service, specified by the *service-id*, at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the *service-id*. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

service-id

Specifies the unique service identification number which identifies the service in the service domain.

Platforms

All

12.9 idle-only-msap

idle-only-msap

Syntax

idle-only-msap *msap-policy-name*

Context

[\[Tree\]](#) (clear>subscr-mgmt idle-only-msap)

Full Context

clear subscriber-mgmt idle-only-msap

Description

This command removes all idle MSAPs associated with the MSAP policy. This command only removes idle MSAPs without active subscribers. This command is considered safer than the **clear>subscr-mgmt>msap-policy** *msap-policy-name* **idle-only** command because in that command, the parameter **idle-only** is optional. Not specifying **idle-only** deletes MSAPs with active subscribers.

Parameters

msap-policy-name

Specifies the MSAP policy for which all associated idle MSAPs are cleared.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.10 if-attribute

if-attribute

Syntax

if-attribute

Context

[\[Tree\]](#) (show>router if-attribute)

Full Context

show router if-attribute

Description

Commands in this context display interface attribute related information.

Platforms

All

12.11 if-policy

if-policy

Syntax

if-policy [*if-policy-name*]

if-policy *if-policy-name* **users**

Context

[\[Tree\]](#) (show>router>mcac if-policy)

Full Context

show router mcac if-policy

Description

This command displays information about MCAC interface policies. Display options are:

- no parameters: displays summary of configured MCAC interface policies in the system
- *if-policy-name*: if an existing interface policy name is specified, the configuration and operational details for the specified policy are displayed
- *if-policy-name* **users**: if **user** options is specified with the existing MCAC interface policy, then all instances where a given MCAC interface policy is used are listed

Platforms

All

Output

The following output is an example of MCAC interface information.

12.15 ignore-sap-port-state

ignore-sap-port-state

Syntax

ignore-sap-port-state

Context

[\[Tree\]](#) (tools>dump>service>id>interface ignore-sap-port-state)

Full Context

tools dump service id interface ignore-sap-port-state

Description

This command displays all service interfaces that have accepted an **ignore-sap-port-state start** command.

Run this command without a *service-id* to display a complete list of interfaces that have accepted an **ignore-sap-port-state start** command. The command can be run within a specific *service-id* context for a list of all interfaces for the specified service that have accepted the **ignore-sap-port-state start** command. The *ip-int-name* parameter may be optionally configured to display results only for the specified interface. If the command is run against a specific interface that has not accepted an **ignore-sap-port-state start** command, the display command will display a message indicating that no action has been started for the interface.

ignore-sap-port-state

Syntax

ignore-sap-port-state {start | stop}

Context

[\[Tree\]](#) (tools>perform>service>id>interface ignore-sap-port-state)

Full Context

tools perform service id interface ignore-sap-port-state

Description

This command enables bypassing of the Ethernet operational state check, which would otherwise be part of the Ethernet SAP operational state checking function. All other checks are performed as normal.

This command may be run against IES and VPRN service IP interfaces directly configured over an Ethernet SAP. When the command is run against an operational Ethernet SAP, the command enters a pending state, waiting for a non-operational change. Network interfaces have no SAP association and do not support this feature. When using **subscriber-interface** and **group-interface**, the command is only applicable to the **group-interface** associated with the SAP. R-VPLS does not have Ethernet SAPs directly configured under the interface, and is not supported.

This command is meant to allow service validation and reachability testing when a physical Ethernet port has not been connected. The command may be run for a non-operational SAP that is cabled. However, if the SAP transitions to an operational state, ingress and egress packet processing may still occur.

This command configuration does not survive a system restart.

Parameters

start

Enables port state bypass mode for the interface. If the Ethernet port SAP is already operational, there is no immediate effect of the command, and the Ignore Port state under the **show service id all** command will show "pending". However, if the interface Ethernet port transitions to a non-operational state, the command then bypasses this port state and executes the remainder of the operational checks, and the flag for the Ignore Port state transitions to "active". When this command is in effect, the SAP represents the state of the SAP ignoring the port state.

stop

Disables port state bypass mode for the interface attached to the SAP.

```

Context

[\[Tree\]](#) (show>isa>stats>ipsec-stats ike-exchange-failure-rate)

Full Context

```
show isa statistics ipsec-stats ike-exchange-failure-rate
```

Description

This command displays IKE exchange failure rate statistics of the specified scope.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The rate includes the following reasons:

- authentication failure
- non-proposal chosen
- internal address assignment failure
- invalid traffic selector (TS)
- invalid key exchange (KE)
- DPD timeout
- Others

The start time value indicates the starting timestamp of measurement. The sampling duration indicates the duration of the measurement.

If a record has non-zero value, the system also shows the timestamp and local or remote tunnel endpoint for the first and last occurrence in the sampling duration.

Parameters

name

Displays information about the specified IPsec GW name up to 32 characters in length.

tunnel-type

Displays information about the specified the tunnel type.

Values all, sl2l, dl2l, ra

reason

Displays information for the cause of the failure.

Values auth-failure, non-proposal-chosen, internal-addr-assignment-failure, invalid-ts, invalid-ke, dpd-timeout, other

system

Displays information about the system.

mda

Displays information about the specified ISA ID.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

name

Displays information about the specified IPsec GW name up to 32 characters in length.

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 96

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system once this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	<i>esa-id/vm-id</i>	
	<i>esa-id</i>	1 to 16
	<i>vm-id</i>	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa stats ipsec-stats ike-exchange-failure-rate** command.

Output Example

12.17 ike-initiate

ike-initiate

Syntax

ike-initiate tunnel-group-id *ipsec-group-id*

ike-initiate tunnel-name *ipsec-tunnel-name*

Context

[\[Tree\]](#) (tools>perform>ipsec ike-initiate)

Full Context

tools perform ipsec ike-initiate

Description

This command initiates tunnel setup for the specified LAN-to-LAN tunnel or for all static LAN-to-LAN tunnels in the specified tunnel group. This command initiates tunnel setup regardless of the configuration of the **ipsec-responder-only** command under the specified tunnel group.

The command only initiates tunnel setup when the tunnel group is in the MC-IPsec master state, or if MC-IPsec is not enabled for the tunnel group. If MC-IPsec is enabled and the tunnel group is not in the master state, the system will abort tunnel setup if MIMP goes down or if mastership changes during the tunnel setup.

Operationally up tunnels are not affected by this command. The system will not try to initiate a tunnel setup if the tunnel's operation flags are not clear.

The system does not automatically retry tunnel setup if a tunnel setup fails.

Parameters

ipsec-group-id

Specifies the ID of the tunnel group where all static LAN-to-LAN tunnels are initiated.

ipsec-tunnel-name

Specifies the name of the IPsec tunnel to be initiated.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.18 ike-policy

Full Context

tools dump ipsec stats ike-stats

Description

This command dumps various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Dumps information about the name of the IPsec GW, up to 32 characters.

ip-address:port

Dumps information about the IP address and port of the peer for dynamic tunneling.

mda

Dumps information about the specified ISA.

Values slot/mda

ipsec-tunnel-name

Dumps the name of the static LAN-to-LAN tunnel, up to 32 characters.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values		
esa-vm:	<i>esa-id/vm-id</i>	
	<i>esa-id</i>	1 to 16
	<i>vm-id</i>	1 to 4

Description

This command clears various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Clears information about the name of the IPsec GW up to 32 characters.

ip-address:port

Clears information about the IP address and port of the peer for dynamic tunneling.

mda

Clears information about the specified ISA.

Values slot/mda

ipsec-tunnel-name

Clears the name of the static LAN-to-LAN tunnel up to 32 characters.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	esa-id/vm-id	
		esa-id	1 to 16
		vm-id	1 to 4

Platforms

Full Context

show isa statistics ipsec-stats ikev2-msg-drop

Description

This command displays the early drop counter for received IKEv2 messages on the specified ISA. These counters reflect the number of packets dropped early in the process when ISA is congested.

Parameters

message-type

Specifies the exchange type of the packet to display.

Values ike-sa-init, ike-auth, create-child-and-info

mda

Specifies the slot and MDA in the format *slot/mda*.

Values *slot* — 1 to 10

mda — 1 or 2

show-oid

Displays the SNMP object ID of the counter.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm: *esa-id/vm-id*

esa-id 1 to 16

vm-id 1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **ikev2-msg-drop message-type** command.

Output Example

No. Of Leaves	The number of leaves in the tunnel
BFR Prefix	The BFR prefix of the tunnel
Bfr-ID	The BFR ID of the tunnel
MPLS Label	The MPLS Label of the tunnel
Sub-domain	The sub-domain associated with the tunnel

12.25 incl-mcast

incl-mcast

Syntax

```
incl-mcast [hunt | detail] [rd rd] [originator-ip originator-ip] [next-hop next-hop] [community comm-id] [tag tag] [aspath-regex reg-exp]
```

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn incl-mcast)

Full Context

```
show router bgp routes evpn incl-mcast
```

Description

This command displays BGP-EVPN inclusive multicast routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

originator-ip

Specifies the IPv4 or IPv6 originator address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
---------------	---------

ipv6-address: x:x:x:x:x:x:x (eight 16-bit pieces)
 x:x:x:x:x:d.d.d.d
 x: [0 to FFFF]H
 d: [0 to 255]D

comm-id

Specifies community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1* }
where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295
 - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the inclusive multicast route tag.

Values 0to 4294967295 | MAX-ET

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Table 180: System Information Field Descriptions

Label	Description
System Name	The configured system name
System Type	The system is administratively configured to function as a Nokia SR OS Ethernet Service Switch (ESS) or not.
Chassis Topology	Indicates the inter-chassis topology mode in which the system is operating. It indicates how multiple chassis are arranged and operate together as a single system. A value of 'standalone' indicates that the system is comprised of a single physical router chassis. A value of 'extended' (for a 7950 XRS based system) indicates that two router chassis are connected together in a 'back-to-back' topology with no additional switch fabric chassis. An extended chassis topology is comprised of two XRS-20 chassis and is also known as an XRS-40 system.
System Version	The software product release version number for the software image currently running
Crypto Module Version	Version of the SR OS cryptographic module
System Contact	A text string that describes the system contact information
System Location	A text string that describes the system location
System Coordinates	A text string that describes the system coordinates
System Active Slot	Slot of the active CPM
System Up Time	The time since the last boot
Configuration Mode Cfg	Configured setting of the management interface configuration mode. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Configuration Mode Oper	Current management interface configuration mode that is operational in the router. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Last Mode Changed	The date and time at which the operational management interface configuration mode last changed
SNMP Port	The port number used by this node to receive SNMP request messages and to send replies
SNMP Engine ID	The SNMP engineID to uniquely identify the SNMPv3 node

Label	Description
SNMP Engine Boots	The number of times the SNMP engine has rebooted with the current SNMP Engine ID
SNMP Max Message Size	The maximum SNMP packet size generated by this node
SNMP Max Bulk Duration	The maximum duration to process before bulk responses are returned
SNMP Admin State	Enabled — SNMP is administratively enabled and running. Disabled — SNMP is administratively shutdown and not running.
SNMP Oper State	Enabled — SNMP is operationally enabled. Disabled — SNMP is operationally disabled.
SNMP Failure Reason	Additional information about general failure of the SNMP engine to be ready for normal operation
SNMP Index Boot Status	Persistent — System indexes are saved between reboots. Not Persistent — System indexes are not saved between reboots.
Tel/Tel6/SSH/FTP Admin	Displays the administrative state of the Telnet, SSH, and FTP sessions
Tel/Tel6/SSH/FTP Oper	Displays the operational state of the Telnet, SSH, and FTP sessions
BOF Source	The location of the BOF
Image Source	Primary — Indicates that the directory location for runtime image file was loaded from the primary source. Secondary — Indicates that the directory location for runtime image file was loaded from the secondary source. Tertiary — Indicates that the directory location for runtime image file was loaded from the tertiary source.
Config Source	Primary — Indicates that the directory location for configuration file was loaded from the primary source. Secondary — Indicates that the directory location for configuration file was loaded from the secondary source. Tertiary — Indicates that the directory location for configuration file was loaded from the tertiary source.
Last Booted Config File	The URL and filename of the last loaded configuration file
Last Boot Cfg Version	The date and time of the last boot

Label	Description
Last Boot Config Header	The header information, such as image version, date built, date generated
Last Boot Index Version	The version of the persistence index file read when this card was last rebooted
Last Boot Index Header	The header of the persistence index file read when this card was last rebooted.
Last Saved Config	The location and filename of the last saved configuration file
Time Last Saved	The date and time of the last time configuration file was saved
Changes Since Last Save	Yes — There are unsaved configuration file changes. No — There are no unsaved configuration file changes.
Max Cfg/BOF Backup Rev	The maximum number of backup revisions maintained for a configuration file. This value also applies to the number of revisions maintained for the BOF file.
Cfg-OK Script	URL — The location and name of the CLI script file executed following successful completion of the bootup configuration file execution.
Cfg-OK Script Status	Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-OK Script location. Not used — No CLI script file was executed.
Cfg-Fail Script	URL — The location and name of the CLI script file executed following a failed bootup configuration file execution. Not used — No CLI script file was executed.
Cfg-Fail Script Status	Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-Fail Script location. Not used — No CLI script file was executed.
IPv4 autoconfiguration	Indicates whether the IPv4 DHCP-based router autoconfigure functionality is enabled or disabled
IPv6 autoconfiguration	Indicates whether the IPv6 DHCP-based router autoconfigure functionality is enabled or disabled
Management IP Addr	The management IPv4 address and mask
Management IP Addr	The management IPv6 address and mask
Primary DNS Server	The IP address of the primary DNS server

Label	Description
Secondary DNS Server	The IP address of the secondary DNS server
Tertiary DNS Server	The IP address of the tertiary DNS server
DNS Domain	The DNS domain name of the node
DNS Resolve Preference	ipv4-only — Dns-names are queried for A-records only. ipv6-first — Dns-server will be queried for AAAA-records first and a successful reply is not received, the dns-server is queried for A-records.
DNSSEC AD Validation	Indicates whether the presence of the AD-bit is validated in responses from DNS servers
DNSSEC Response Control	fall-through — Permit DNS responses that do not pass DNSSEC validation fail — Reject DNS Responses that do not pass DNSSEC validation
BOF Static Routes	To — The static route destination. Next Hop — The next hop IP address used to reach the destination. Metric — Displays the priority of this static route versus other static routes. None — No static routes are configured.
ATM Location ID	N/A — Ignore. ATM functionality is not supported.
ATM OAM Retry Up	N/A — Ignore. ATM functionality is not supported.
ATM OAM Retry Down	N/A — Ignore. ATM functionality is not supported.
ATM OAM Loopback Period	N/A — Ignore. ATM functionality is not supported.
ICMP Vendor Enhancement	Indicates whether vendor specific extensions to ICMP are enabled or disabled
Eth QinQ Untagged SAP	False — The new-qinq-untagged-sap flag is disabled. True — The new-qinq-untagged-sap flag is enabled.
EFM OAM Grace Tx Enable	True — Sending of EFM OAM grace period messages is enabled. False — Sending of EFM OAM grace period messages is disabled.
EFM OAM Dying Gasp Rst	Indicates whether EFM OAM dying gasp messages on reset are enabled or disabled.

12.27 ingress-label

ingress-label

Syntax

ingress-label *ingress-label1* [*ingress-label2*]

Context

[\[Tree\]](#) (show>service ingress-label)

Full Context

```
show service ingress-label
```

Description

This command displays service information using the range of ingress labels.

If only the mandatory *ingress-label1* parameter is specified, only services using the specified label are displayed.

If both *ingress-label1* and *ingress-label2* parameters are specified, the services using the range of labels X where *ingress-label1* <= X <= *ingress-label2* are displayed.

Use the **show router vprn-service-id ldp bindings** command to display dynamic labels.

Parameters

ingress-label1

Displays the starting ingress label value for which to display services using the label range. If only *ingress-label1* is specified, services only using *ingress-label1* are displayed.

Values 0, 2048 to 131071

ingress-label2

Displays the ending ingress label value for which to display services using the label range.

Values 2048 to 131071

Default The *ingress-label1* value.

Platforms

All

Output

The following output is an example of service ingress label information.

Output Example

```
A:ALA-12# show service ingress label 0

*A:ALA-12#
```

Table 184: Show Service Ingress-Label Field Descriptions

Label	Description
Svc ID	The service identifier.
SDP Id	The SDP identifier.
Type	Indicates whether the SDP is a spoke or a mesh.
I.Lbl	The ingress label used by the far-end device to send packets to this device in this service by the SDP.

Label	Description
E.Lbl	The egress label used by this device to send packets to the far-end device in this service by the SDP.
Number of bindings found	The number of SDP bindings within the label range specified.

12.28 ingress-statistics

ingress-statistics

Syntax

```
ingress-statistics color color [end-point {ipv4-address | ipv6-address}]
```

Context

[\[Tree\]](#) (show>router>segment-routing>sr-policies ingress-statistics)

Full Context

```
show router segment-routing sr-policies ingress-statistics
```

Description

This command displays the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of ingress traffic statistics of the SR policy, and [Table 185: Show Ingress Statistics Field Descriptions](#) describes the output fields.

Output Example Show Router Segment Route Policy Ingress Statistics

```
show router segment-routing sr-policies ingress-statistics color 10 end-point 3ffe::a14:102
=====
SR-Policies Ingress Statistics
=====

Ingress Statistics:

Color           : 10                Endpoint Addr   : 3ffe::a14:102
TunnelId        : 917520           BSID            : 100008
Pkt Count       : 3015             Octet Count     : 301500
=====
```

Table 185: Show Ingress Statistics Field Descriptions

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the end-point address of the SR policy.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

ingress-statistics

Syntax

ingress-statistics color color [end-point {ipv4-address | ipv6-address}]

Context

[Tree] (clear>router>segment-routing>sr-policies ingress-statistics)

Full Context

clear router segment-routing sr-policies ingress-statistics

Description

This command clears the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

ingress-statistics

Syntax

ingress-statistics *color* [0..4294967295] **end-point** *ip-address* | *ipv6-address* [**interval** *seconds*] [**repeat** *repeat*]

Context

[\[Tree\]](#) (monitor>router>seg-rt>sr-policies ingress-statistics)

Full Context

monitor router segment-routing sr-policies ingress-statistics

Description

This command monitors SR policy ingress statistics.

Parameters

ip-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d
- ipv6-address:
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

Platforms

All

12.29 ingress-stats-template

ingress-stats-template

Syntax

ingress-stats-template [type {p2p | p2mp}] [SessionNameString] [sender *ip-address*] [detail]

Context

[\[Tree\]](#) (show>router>mpls ingress-stats-template)

Full Context

show router mpls ingress-stats-template

Description

This command displays ingress statistics template details.

Parameters

SessionNameString

Displays the session name, up to 64 characters.

ip-address

Displays the sender IP address.

detail

Displays the number of static LSPs that terminate at the router.

Platforms

All

Output

The following output is an example of MPLS ingress statistics template information

[Table 186: Ingress Stats Template Output Fields](#) describes MPLS Ingress Statistics Template output fields.

Output Example

```
*A:cses-V23# show router mpls ingress-stats-template
=====
MPLS LSP Template Ingress Stats
=====
Session Name                               Type      Sender    Session Count
-----
No Matching Entries Found
=====
```

Table 186: Ingress Stats Template Output Fields

Label	Description
Session Name	Specifies the session name.
Type	p2p – Specifies that p2p is the ingress stats template type p2mp – Specifies that p2mp is the ingress stats template type
Sender	Specifies the sender IP address.
Session Count	Specifies the session count.
No Matching Entries Found	Specifies the number of matching entries.

12.30 inside

inside

Syntax

inside routes

Context

[\[Tree\]](#) (show>router>nat inside)

Full Context

show router nat inside

Description

This command displays information about inside NAT routes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of a NAT inside routes. [Table 187: NAT Inside Routes](#) describes NAT the output fields.

Output Example

```
*A:Dut-C# /show router 101 nat inside routes
=====
NAT Inside Routes

vprn101         210.7.1.0          24
n44Pool8-1     dynamic
-----
No. of routes: 6
=====
```

Table 187: NAT Inside Routes

Label	Description
Router	The router name
Route Address	The route address
NAT Policy	The NAT policy name
Prefix	The router prefix
Type	The router type; dynamic or static

12.31 instance

instance

Syntax

instance

instance interface *interface-name* [**vrid** *virtual-router-id*]

instance interface *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[\[Tree\]](#) (show>router>vrrp instance)

Full Context

show router vrrp instance

Description

This command displays information for VRRP instances.

If no command line options are specified, summary information for all VRRP instances displays.

Parameters

interface-name

Displays detailed information for the VRRP instances on the specified IP interface including status and statistics.

Default Summary information for all VRRP instances.

virtual-router-id

Displays detailed information for the specified VRRP instance on the IP interface.

Default All VRIDs for the IP interface.

Values 1 to 255

ipv6

Specifies the IPv6 instance.

Platforms

All

Output

The following output is an example of VRRP instance information for the 7450 ESS, and [Table 188: Show VRRP Instance Output Fields](#) describes the fields.

Output Example

```
*A:Dut-B# show router vrrp instance interface "base-1-1" vrid 1

Table 188: Show VRRP Instance Output Fields

Label	Description
Interface name	The name of the IP interface
VR ID	The virtual router ID for the IP interface
Own Owner	Yes — specifies that the virtual router instance as owning the virtual router IP addresses
	No — indicates that the virtual router instance is operating as a non-owner
Adm	Up — indicates that the administrative state of the VRRP instance is up
	Down — indicates that the administrative state of the VRRP instance is down
Opr	Up — indicates that the operational state of the VRRP instance is up
	Down — indicates that the operational state of the VRRP instance is down
State	<ul style="list-style-type: none"> When owner, backup defines the IP addresses that are advertised within VRRP advertisement messages

Label	Description
	<ul style="list-style-type: none"> When non-owner, backup actually creates an IP interface IP address used for routing IP packets and communicating with the system when the access commands are defined (ntp-reply, ping-reply, telnet-reply, and ssh-reply)
Pol Id	The value that uniquely identifies a priority control policy
Base Priority	The <i>base-priority</i> value used to derive the in-use priority of the virtual router instance as modified by any optional VRRP priority control policy
InUse Priority	The current in-use priority associated with the VRRP virtual router instance
Msg Int	The administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages and to derive the master down timer as backup
Inh Int	Yes — when the VRRP instance is a non-owner and is operating as a backup and the master-int-inherit command is enabled, the master down timer is indirectly derived from the value in the advertisement interval field of the VRRP message received from the current master
	No — when the VRRP instance is operating as a backup and the master-int-inherit command is <i>not</i> enabled, the configured advertisement interval is matched against the value in the advertisement interval field of the VRRP message received from the current master; if the two values do not match then the VRRP advertisement is discarded; if the VRRP instance is operating as a master, this value has no effect
Backup Addr	The backup virtual router IP address
BFD	Indicates BFD is enabled
VRRP State	Specifies whether the VRRP instance is operating in a master or backup state
Policy ID	<p>The VRRP priority control policy associated with the VRRP virtual router instance</p> <p>A value of 0 indicates that no control policy is associated with the virtual router instance</p>
Preempt Mode	Yes — the preempt mode is enabled on the virtual router instance where it will preempt a VRRP master with a lower priority
	No — the preempt mode is disabled and prevents the non-owner virtual router instance from preempting another, less desirable virtual router

Label	Description
Ping Reply	Yes — a non-owner master is enabled to reply to ICMP Echo requests directed to the virtual router instance IP addresses Ping Reply is valid only if the VRRP virtual router instance associated with this entry is a non-owner A non-owner backup virtual router never responds to such ICMP echo requests irrespective if Ping Reply is enabled
	No — ICMP echo requests to the virtual router instance IP addresses are discarded
Telnet Reply	Yes — non-owner masters can to reply to TCP port 23 Telnet requests directed at the virtual router instances IP addresses
	No — telnet requests to the virtual router instance IP addresses are discarded
SSH Reply	Yes — non-owner masters can to reply to SSH requests directed at the virtual router instances IP addresses
	No — all SSH request messages destined to the non-owner virtual router instance IP addresses are discarded
Primary IP of Master	The IP address of the VRRP master
Primary IP	The IP address of the VRRP owner
Up Time	The date and time when the operational state of the event last changed
Virt MAC Addr	The virtual MAC address used in ARP responses when the VRRP virtual router instance is operating as a master
Auth Type	Specifies the VRRP authentication Type 0 (no authentication), Type 1 (simple password), or Type 2 (MD5) for the virtual router
Addr List Mismatch	Specifies whether a trap was generated when the IP address list received in the advertisement messages received from the current master did not match the configured IP address list This is an edge triggered notification; a second trap will not be generated for a packet from the same master until this event has been cleared
Master Priority	The priority of the virtual router instance which is the current master
Master Since	The date and time when operational state of the virtual router changed to master For a backup virtual router, this value specifies the date and time when it received the first VRRP advertisement message from the virtual router which is the current master

Label	Description
OperGroup	The operational group name associated with the VRRP interface, if configured
Monitor OperGroup	The monitor operational group associated with the VRRP

instance

Syntax

instance [ipv4 | ipv6]

Context

[\[Tree\]](#) (clear>router>ldp instance)

Full Context

clear router ldp instance

Description

This command resets the LDP instance.

Platforms

All

instance

Syntax

instance

Context

[\[Tree\]](#) (tools>dump>router>ldp instance)

Full Context

tools dump router ldp instance

Description

This command dumps information for the LDP instance.

Platforms

All

instance

Syntax

```
instance interface interface-name vr-id virtual-router-id [ipv6] [interval seconds] [repeat repeat] [{  
  absolute | rate}]
```

Context

[\[Tree\]](#) (monitor>router>vrrp instance)

Full Context

monitor router vrrp instance

Description

Monitor statistics for a VRRP instance.

Parameters

interface-name

Specifies the name of the existing IP interface on which VRRP is configured.

virtual-router-id

Specifies the virtual router ID for the existing IP interface, expressed as a decimal integer.

ipv6

Monitors IPv6 instances.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 5 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

Platforms

All

Output

The following output is an example of VRRP instance information.

Output Example

```
*A:ALA-A# monitor router vrrp instance interface n2 vr-id 1
=====
Monitor statistics for VRRP Instance 1 on interface "n2"
=====
-----
At time t = 0 sec (Base Statistics)
-----

12.32 inter-as-label

inter-as-label

Syntax

inter-as-label [**next-hop** *ip-address* | **backup-next-hop** *ip-address*] [**received-label** *received-label*]

Context

[\[Tree\]](#) (show>router>bgp inter-as-label)

Full Context

```
show router bgp inter-as-label
```

Description

This command displays BGP inter-AS label information.

Parameters

ip-address

Displays information for the specified IP address.

- Values** ipv4-address:
- a.b.c.d (host bits must be 0)

received-label

Displays information for the received label.

- Values** 0 to 429496729

Platforms

All

12.33 inter-chassis

inter-chassis

Syntax

```
inter-chassis
```

Context

[\[Tree\]](#) (tools>perform>system inter-chassis)

Full Context

```
tools perform system inter-chassis
```

Description

Commands in this context provide inter-chassis tools.

Platforms

7950 XRS

12.34 interface

interface

Syntax

```
interface subscriber-interface [id srrp-id]
```

Context

[\[Tree\]](#) (clear>router>srrp interface)

Full Context

```
clear router srrp interface
```

Description

This command clears and resets SRRP interface instances.

Parameters

subscriber-interface

Specifies an existing subscriber interface name up to 32 characters.

srrp-id

Specifies an existing SRRP ID.

Values 1 to 4294967295

Platforms

All

interface

Syntax

```
interface [[[ip-address | ip-int-name] [interface-type] [detail] [family]]] summary
```

Context

[\[Tree\]](#) (show>service>id interface)

Full Context

```
show service id interface
```

Description

This command displays information for the IP interfaces associated with the service.

If no optional parameters are specified, a summary of all IP interfaces associated to the service are displayed.

Parameters

ip-address

Specifies the IP address of the interface for which to display information.

Values 1.0.0.0 — 223.255.255.255

ip-int-name

Specifies the IP interface name for which to display information, 32 characters.

family

Specifies the family to display.

Values ipv4, ipv6

interface-type

Specifies the interface type.

Values subscriber, group, redundant

detail

Displays detailed IP interface information.

Default IP interface summary output

summary

Displays a summary.

Platforms

All

Output

The following output is an example of IP interface information, and [Table 189: Show Service-ID Interface Field Descriptions](#) describes the output fields.

Output Example

```
A:cses-V96# /show service id 1 interface
- interface [{"<ip-address|ip-int-name>"} [interface-type] [detail]
  [family]] | summary]
<ip-int-name|ip-ad*> : ip-int-name      - 32 chars max
                    ipv4-address     - a.b.c.d
                    ipv6-address     - x:x:x:x:x:x:x:x  (eight 16-bit
                    pieces)
                    x:x:x:x:x:d.d.d.d
                    x - [0..FFFF]H
                    d - [0..255]D
<detail>           : keyword - adds details to the display
<family>           : ipv4|ipv6
<interface-type>  : subscriber|group|redundant
<summary>         : keyword - displays summary
```

Output Example

```

Table 189: Show Service-ID Interface Field Descriptions

Label	Description
Interface-Name	The name used to refer to the interface.
Type	Specifies the interface type.
IP-Address	Specifies the IP address/IP subnet/broadcast address of the interface.
Adm	The desired state of the interface.
Opr	The operating state of the interface.
Interface	
If Name	The name used to refer to the interface.
Admin State	The desired state of the interface.
Oper State	The operating state of the interface.
IP Addr/mask	Specifies the IP address/IP subnet/broadcast address of the interface.
Ignore Port State	<p>Indicates whether or not the tools perform service id service-id interface ip-int-name ignore-sap port-state command has been executed for a service interface directly connected to a SAP:</p> <p>none — The command has not been executed for or accepted by the interface.</p> <p>active — The command has been executed and accepted, and the port state check is currently being bypassed for the interface.</p> <p>pending — The command has been executed and accepted, but the port state for the interface is already operational.</p>

Label	Description
Details	
If Index	The index corresponding to this interface. The primary index is 1. For example, all interfaces are defined in the Base virtual router context.
If Type	Specifies the interface type.
Port Id	Specifies the SAP's port ID.
SNTP B.Cast	Specifies whether SNTP broadcast client mode is enabled or disabled.
Arp Timeout	Specifies the timeout for an ARP entry learned on the interface.
MAC Address	Specifies the 48-bit IEEE 802.3 MAC address.
ICMP Mask Reply	Specifies whether ICMP mask reply is enabled or disabled.
Cflowd	Specifies whether cflowd collection and analysis on the interface is enabled or disabled.
ICMP Details	
Redirects	Specifies the rate for ICMP redirect messages.
Unreachables	Specifies the rate for ICMP unreachable messages.
TTL Expired	Specifies the rate for ICMP TTL messages.
Admin State (DHCP6 Lease Split)	DHCPv6 lease split admin state (subscriber and group interfaces only)
Valid LT	DHCPv6 lease split valid lifetime (subscriber and group interfaces only)

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**group**] [*grp-ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>router>igmp interface)

Full Context

show router igmp interface

Description

This command displays IGMP interface information.

Parameters

ip-int-name

Displays information associated with the specified IP interface name.

ip-address

Displays information associated with the specified IP address.

group grp-ip-address

Displays IP multicast group address information for the specified group IP address.

detail

Displays detailed IP interface information along with the source group information learned on that interface.

Platforms

All

Output

The following output is an example of IGMP interface information. [Table 190: IGMP Fields](#) provides IGMP field descriptions.

Output Example

```
*A:ALA-BA# show router 100 interface

Table 190: IGMP Fields

Label	Description
Interface	The interfaces that participate in the IGMP protocol.
Adm Admin Status	The administrative state for the IGMP protocol on this interface.
Oper Oper Status	The current operational state of IGMP protocol on the interface.
Querier	The address of the IGMP querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	Cfg — The configured version of IGMP running on this interface. For IGMP to function correctly, all routers on a LAN must be configured to run the same version of IGMP on that LAN. Opr — The operational version of IGMP running on this interface. If the cfg value is 3 but all of the routers in the local subnet of this interface use IGMP version v1 or v2, the operational version will be v1 or v2.
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.
Group Address	The IP multicast group address for which this entry contains information.

Label	Description
Up Time	The time since this source group entry got created.
Last Reporter	The IP address of the source of the last membership report received for this IP Multicast group address on this interface. If no membership report has been received, this object has the value 0.0.0.0.
Mode	The mode is based on the type of membership report(s) received on the interface for the group. In the 'include' mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In 'exclude' mode, reception of packets sent to the given multicast address is requested from all IP source addresses except those listed in the source-list parameter.
V1 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 1 members on the IP subnet attached to this interface. Upon hearing any IGMPv1 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv2 Leave messages for this group that it receives on this interface.
V2 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 2 members on the IP subnet attached to this interface. Upon hearing any IGMPv2 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv3 Leave messages for this group that it receives on this interface.
Type	Indicates how this group entry was learned. If this group entry was learned by IGMP, it will be set to "dynamic". For statically configured groups, the value will be set to 'static'.
Compat Mode	Used in order for routers to be compatible with older version routers. IGMPv3 hosts must operate in version 1 and version 2 compatibility modes. IGMPv3 hosts must keep state per local interface regarding the compatibility mode of each attached network. A host's compatibility mode is determined from the Host Compatibility Mode variable which can be in one of three states: IGMPv1, IGMPv2 or IGMPv3. This variable is kept per interface and is dependent on the version of General Queries heard on that interface as well as the Older Version Querier Present timers for the interface.

interface

Syntax

interface

Context

[\[Tree\]](#) (show>service>id>spb interface)

interface {*ip-int-name* | *ip-address*} **mac** [*ieee-address*]

Context

[\[Tree\]](#) (clear>router interface)

Full Context

clear router interface

Description

This command clears IP interface statistics.

If no IP interface is specified either by IP interface name or IP address, the command will perform the clear operation on all IP interfaces.

Parameters

ip-int-name | *ip-address*

Specifies IP interface name or IP interface address.

Values ip-int-name: 32 chars max
ip-address: a.b.c.d

Default all IP interfaces

urpf-stats

Resets the statistics associated with uRPF failures.

statistics

Resets the IP interface traffic statistics.

hold-time

Clears the IP interface activation hold time.

policy-accounting

Clears the accounting statistics.

class

Specifies whether to clear source class counters or destination class counters.

Values source-class, dest-class

index

Specifies the source or destination class index.

Values 1 to 255

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

Platforms

All

interface

Syntax

interface *interface-name* [**vrid** *virtual-router-id*]

interface *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[\[Tree\]](#) (clear>router>vrrp interface)

Full Context

clear router vrrp interface

Description

This command resets VRRP protocol instances on an IP interface.

Parameters

interface-name

Specifies the IP interface to reset the VRRP protocol instances.

virtual-router-id

Resets the VRRP protocol instance for the specified VRID on the IP interface.

Default All VRIDs on the IP interface.

Values 1 to 255

ipv6

Clears IPv6 information for the specified interface.

Platforms

All

interface

Syntax

interface *ip-int-name*

Context

[\[Tree\]](#) (tools>perform>service>id interface)

[\[Tree\]](#) (tools>dump>service>id interface)

Full Context

tools perform service id interface

tools dump service id interface

Description

This command specifies an IP interface for which service debugging tools are enabled.

Parameters

ip-int-name

Specifies the name of the IP interface, up to 32 characters.

Platforms

All

interface

Syntax

interface [{{{*ip-address* | *ip-int-name*}}] [**detail**] [**family**] | **summary** | **exclude-services**]

interface {*ip-address* | *ip-int-name*} **eth-cfm** [**detail**]

interface {*ip-address* | *ip-int-name*} **policy-accounting** [**class** [*index*]]

interface description

interface global-if-index *global-if-index* [**family**] [**detail**]

interface global-if-index *global-if-index* **statistics**

Context

[\[Tree\]](#) (show>router interface)

Full Context

show router interface

Description

This command displays the router IP interface table sorted by interface index.

Parameters

ip-address

Displays the interface information associated with the specified IP address.

Values

ipv4-address	a.b.c.d (host bits must be 0)
ipv6-address	x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	where:
	x: [0 to FFFF]H

d: [0 to 255]D

ip-int-name

Displays the interface information associated with the specified IP interface name, up to 32 characters.

detail

Displays detailed IP interface information. For **dist-cpu-protection**, **detail** includes the adapted operational rate parameters in the CLI output. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed. and includes the adapted operational rate parameters in the CLI output. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.

family

Specifies the router IP interface family to display.

Values **ipv4** — Displays only those peers that have the IPv4 family enabled.
 ipv6 — Displays the peers that are IPv6-capable.

summary

Displays summary IP interface information for the router.

exclude-services

Displays IP interface information, excluding IP interfaces configured for customer services. Only core network IP interfaces are displayed.

eth-cfm

Displays Ethernet CFM information.

mac

Displays information associated with the MAC address.

ieee-address

Displays the information associated with the specified IEEE address. The address is in the xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx format.

statistics

Displays packet statistics for an interface on the router.

Note:

The **show router interface statistics** command also shows the MPLS statistics that are shown in using the **show router mpls interface statistics** command. This allows the operator to see MPLS statistics from interfaces that are not added to MPLS, such as a carrier's network interfaces. [Output Example](#) for an example of the MPLS fields that are displayed. These fields are displayed regardless of the state of MPLS.

dist-cpu-protection

Displays the distributed CPU protection parameters and status at the interface level.

class

Indicates whether to display accounting policy statistics for the source or destination class.

Values source-class, dest-class

index

Specifies an integer value for the accounting source or destination class index.

Values 1 to 255

description

Displays all interfaces in all routing contexts.

global-if-index

Specifies the global interface index value.

Values 1 to 262144

Platforms

All

Output

Standard IP Interface Output—The following output is an example of standard IP interface information, and [Table 191: Standard IP Interface Field Descriptions](#) describes the fields.

Output Example

```

Table 191: Standard IP Interface Field Descriptions

Label	Description
Interface-Name IF Name	The IP interface name
Type	n/a — no IP address has been assigned to the IP interface, so the IP address type is not applicable Pri — the IP address for the IP interface is the Primary address on the IP interface Sec — the IP address for the IP interface is a secondary address on the IP interface

Label	Description
IP-Address	The IP address and subnet mask length of the IP interface n/a — indicates no IP address has been assigned to the IP interface
Adm Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Opr Oper State	Down — the IP interface is operationally disabled Up — the IP interface is operationally disabled
Mode	Network — the IP interface is a network/core IP interface Service — the IP interface is a service IP interface
Port/SAP Id	The physical network port or the SAP identifier associated with the IP interface
MACSec	Lists the MACsec settings for the IP interface
Class	Specifies the source or destination class index
Policer	The policer ID
Rx Fwd Packets	The number of received forwarded packets
Rx Fwd Bytes	The number of received forwarded bytes
Drop Packets	The number of dropped packets
Drop Bytes	The number of dropped bytes
Fwd Packets	The number of forwarded packets
Fwd Bytes	The number of forwarded bytes

Table 192: Detailed IP Interface Field Descriptions

Label	Description
If Name	The IP interface name
Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Oper (v4/v6)	Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled
IP Addr/mask	The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface
IPv6 Addr	The IPv6 address of the interface
If Index	The interface index of the IP router interface
Virt If Index	The virtual interface index of the IP router interface
Last Oper Change	The last change in operational status
Global If Index	The global interface index of the IP router interface
Sap ID	The SAP identifier
TOS Marking	The ToS byte value in the logged packet
If Type	Network — the IP interface is a network/core IP interface Service — the IP interface is a service IP interface

Label	Description
SNTP B.cast	Displays if the broadcast-client global parameter is configured
IES ID	The IES identifier
QoS Policy	The QoS policy ID associated with the IP interface
MAC Address	The MAC address of the interface
Arp Timeout	The ARP timeout for the interface, in seconds, which is the time an ARP entry is maintained in the ARP cache without being refreshed
ICMP Mask Reply	False — the IP interface will not reply to a received ICMP mask request True — the IP interface will reply to a received ICMP mask request
Arp Populate	Displays whether ARP is enabled or disabled
Host Conn Verify	The host connectivity verification
LdpSyncTimer	Specifies the IGP/LDP sync timer value
uRPF Chk	Specifies whether unicast RPF (uRPF) Check is enabled on this interface
uRPF Iv6 Chk	Specifies whether unicast RPF (uRPF) Check IPv6 is enabled on this interface
PTP HW Assist	Specifies whether the PTP Hardware Assist function is enabled on this interface
cflowd	Specifies the type of cflowd analysis that is applied to the interface acl — ACL cflowd analysis is applied to the interface interface — interface cflowd analysis is applied to the interface none — no cflowd analysis is applied to the interface
Inter-AS selective ILM untrusted	Specifies whether the inter-AS selective ILM untrusted function is enabled on this interface
Untrusted default forwarding	Specifies whether the untrusted default forwarding function is enabled on this interface

Statistics IP Interface Output — The following output is an example of router IP interface statistics when **enable-interface-statistics** is enabled, and [Table 193: Statistics IP Interface Fields](#) describes the fields.

Output Example

```

Table 196: Show Distributed CPU Protection Policer Output Fields

Label	Description
Distributed CPU Protection Policy	Displays the DCP policy assigned to the object.
Policer-Name	Displays the configured name of the static policer
Card/FP	Displays the card and FP identifier. FP identifies the instance of the FP (FastPath) chipset. Some cards have a single FP (for example, IOM3-XP-3) and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMA's).
Policer-State	Displays the state of the policer with the following potential values: <i>Exceed</i> - The policer has been detected as nonconforming to the associated DCP policy parameters (packets exceeded)

Label	Description
	<p>the configured rate and the DCP polling process identified this occurrence)</p> <p><i>Conform</i> - The policer has been detected as conforming to the associated DCP policy parameters (rate)</p> <p><i>not-applicable</i> - newly-created policers or policers that are not currently instantiated. This includes policers configured on line cards that are not in service.</p>
Protocols Mapped	Displays a list of protocols that are configured to map to the particular policer.
Oper. xyz fields	<p>The actual hardware may not be able to perfectly rate limit to the exact configured rate parameters in a DCP policy. In this case the configured rate parameters will be adapted to the closest supported rate. These adapted operational values are displayed in CLI when the detail keyword is included in the show command. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.</p> <p><i>Oper. Kbps</i> - Displays the adapted "kilobits-per-second" value for DCP "kbps" rates</p> <p><i>Oper. MBS</i> - Displays the adapted "mbs size" value for DCP "kbps" rates</p> <p><i>Oper. Depth</i> - Displays the calculated policer bucket depth in packets (for DCP "packets" rates) or in bytes (for DCP "kbps" rates)</p> <p><i>Oper. Packets</i> - Displays the adapted "ppi" value for DCP "packets" rates</p> <p><i>Oper. Within</i> - Displays the adapted "within seconds" value for DCP "packets" rates</p> <p><i>Oper. Init. Delay</i> - Displays the adapted "initial-delay packets" value for DCP "packets" rates</p>
Exceed-Count	Displays the count of packets exceeding the policing parameters since the given policer was previously declared as conforming or newly-instantiated. This counter has the same behavior as the exceed counter in the DCP the log events – they are baselined (reset) when the policer transitions to conforming.
Detec. Time Remain	Displays the remaining time in the detection-time countdown during which a policer in the exceed state is being monitored to see if it conforms again.

Label	Description
Hold-Down Remain	Displays the remaining time in the hold-down countdown during which a policer is treating all packets as exceeding.
All Dyn-Plcr Alloc.	Indicates that all the dynamic enforcement policers have been allocated and instantiated for a given local-monitor.
Dyn-Policer Alloc.	Indicates that a dynamic policer has been instantiated.

interface

Syntax

interface [*ip-int-name*] [**detail**] [*family*]

interface resource-failures [*family*]

Context

[\[Tree\]](#) (show>router>ldp interface)

Full Context

show router ldp interface

Description

This command displays configuration information about LDP interfaces.

Parameters

ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

detail

Displays detailed information.

family

Displays either IPv4 or IPv6 active LDP information.

resource-failures

Displays which interfaces are in overload.

Platforms

All

Output

LDP Interface Output

[Table 197: LDP Interface Output Fields](#) describes the LDP interface output fields.

Table 197: LDP Interface Output Fields

Label	Description
Interface	Specifies the interface associated with the LDP instance.
Adm	Up — The LDP is administratively enabled. Down — The LDP is administratively disabled.
Opr	Up — The LDP is operationally enabled. Down — The LDP is operationally disabled.
Hello Factor	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.
Hold Time	The hello time, also known as hold time. It is the time interval (in s), that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor.
KA Factor	The value by which the keepalive timeout should be divided to give the keepalive time, for example, the time interval (in s), between LDP keepalive messages. LDP keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors.
KA Timeout	The time interval (in s), that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages).

Output Example

```
*A:Dut-A# show router ldp interface

interface

Syntax

interface [*ip-int-name*] [**statistics**] [**ipv4** | **ipv6**]

Context

[\[Tree\]](#) (clear>router>ldp interface)

Full Context

clear router ldp interface

Description

This command restarts or clears statistics for LDP interfaces.

Parameters

ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

family

Specifies to clear IPv4 or IPv6 information.

Platforms

All

Output

Output Example

```
*A:Dut-A# clear router ldp interface "ip-10.10.1.1" ipv4
*A:Dut-A#

*A:Dut-A# clear router ldp interface "ip-10.10.1.1" ipv6
*A:Dut-A#
```

interface

Syntax

interface *ip-int-name*

Context

[\[Tree\]](#) (tools>dump>router>ldp interface)

Full Context

tools dump router ldp interface

Description

This command dumps information for an LDP interface.

Parameters

ip-int-name

Specifies the name of an existing router.

Platforms

All

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**label-map** *label*]

interface [*ip-int-name* | *ip-address*] **statistics** [**aux-stats**]

Context

[\[Tree\]](#) (show>router>mpls interface)

Full Context

show router mpls interface

Description

This command displays MPLS interface information.

Parameters

ip-int-name

Specifies the name of the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

label-map label

Specifies the MPLS label on which to match.

Values 32 to 1048575

statistics

Displays the MPLS interface name and the number of packets and octets sent and received on an MPLS interface.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

[Table 198: MPLS Interface Output Fields](#) describes MPLS interface output fields.

Table 198: MPLS Interface Output Fields

Label	Description
Interface	The interface name.
Port-id	The port ID.
Adm	Specifies the administrative state of the interface.
Opr	Specifies the operational state of the interface.
Te-metric	Specifies the traffic engineering metric used on the interface.
Srlg Groups	Specifies the shared risk loss group (SRLG) name(s).
Interfaces	The total number of interfaces.
Transmitted	Displays the number of packets and octets transmitted from the interface.
Received	Displays the number of packets and octets received.
In Label	Specifies the ingress label.
In I/F	Specifies the ingress interface.
Out Label	Specifies the egress label.
Out I/F	Specifies the egress interface.
Next Hop	Specifies the next hop IP address for the static LSP.
Type	Specifies whether the label value is statically or dynamically assigned.

Output Example

```

interface

Syntax

interface [*ip-int-name* | *ip-address*] **statistics** [**detail**]

Context

[\[Tree\]](#) (show>router>rsvp interface)

Full Context

show router rsvp interface

Description

This command shows RSVP interfaces.

Parameters

ip-int-name

Specifies the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

statistics

Displays the RSVP interface name and counts of various RSVP packets sent and received on the interface.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of RSVP interface information.

[Table 199: RSVP Interface Output Fields](#) describes RSVP interface output fields.

Table 199: RSVP Interface Output Fields

Label	Description
Interface	The name of the IP interface.
Total Sessions	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signaled but a response has not yet been received.
Active Sessions	The total number of active RSVP sessions on this interface.
Total BW (Mbps)	The amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on the interface.
Resv BW (Mbps)	The amount of bandwidth in Mb/s reserved on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Adm	Down — The RSVP interface is administratively disabled. Up — The RSVP interface is administratively enabled.
Bfd	Yes — BFD is enabled on the RSVP interface. No — BFD is disabled on the RSVP interface.
Opr	Down — The RSVP interface is operationally down. Up — The RSVP interface is operationally up.
Port ID	Specifies the physical port bound to the interface.
Active Resvs	The total number of active RSVP sessions that have reserved bandwidth.
Subscription	Specifies the percentage of the link bandwidth that RSVP can use for reservation. When the value is zero (0), no new sessions are permitted on this interface.
Port Speed	Specifies the speed for the interface.

Label	Description
Unreserved BW	Specifies the amount of unreserved bandwidth.
Reserved BW	Specifies the amount of bandwidth in Mb/s reserved by the RSVP session on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Total BW	Specifies the amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on this interface.
Aggregate	Aggregate messages are used to pack multiple RSVP messages into a single packet to reduce the network overhead. When the value is true, RSVP negotiates with each neighbor and gets consensus before sending aggregate messages.
Hello Interval	Specifies the length of time (in s) between the hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. When the value is zero (0), the sending of hello messages is disabled.
Refresh Time	Specifies the interval between the successive Path and Resv refresh messages. RSVP declares the session down after it misses $((\text{keep-multiplier} + 0.5) * 1.5 * \text{refresh-time})$ consecutive refresh messages.
Hello Timeouts	The total number of hello messages that timed out on this RSVP interface.
Neighbors	The IP address of the RSVP neighbor.
Sent	The total number of error free RSVP packets that have been transmitted on the RSVP interface.
Recd	The total number of error free RSVP packets received on the RSVP interface.
Total Packets	The total number of RSVP packets, including errors, received on the RSVP interface.
Bad Packets	The total number of RSVP packets with errors transmitted on the RSVP interface.
Paths	The total number of RSVP PATH messages received on the RSVP interface.
Path Errors	The total number of RSVP PATH ERROR messages transmitted on the RSVP interface.
Path Tears	The total number of RSVP PATH TEAR messages received on the RSVP interface.
Resvs	The total number of RSVP RESV messages received on the RSVP interface.
Resv Confirms	The total number of RSVP RESV CONFIRM messages received on the RSVP interface.
Resv Errors	Total RSVP RESV ERROR messages received on RSVP interface.
Resv Tears	Total RSVP RESV TEAR messages received on RSVP interface.
Refresh Summaries	Total RSVP RESV summary refresh messages received on interface.

Label	Description
Refresh Acks	Total RSVP RESV acknowledgment messages received when refresh reduction is enabled on the RSVP interface.
Bundle Packets	Total RSVP RESV bundled packets received on the RSVP interface.
Hellos	Total RSVP RESV HELLO REQ messages received on the interface.
DBw Multiplier	Displays the configured dark bandwidth multiplier.
DBw Up Threshold	Displays the configured dark bandwidth up threshold (per interface or inherited).
DBw Down Threshold	Displays the configured dark bandwidth down threshold (per interface or inherited).
DBw Sample Index	Displays the index of the dark bandwidth current sample.
DBw Last Sample	Displays the latest sampled value of the dark bandwidth.
Latest Cal DBw	Displays the latest value of the calculated dark bandwidth (calculated over average interval = sample-interval X sample-multiplier). The value indicated here has already been multiplied by the dbw-multiplier.
Advertised MRLB	Displays the value of the latest advertised Maximum Reservable Link Bandwidth.

Output Example

```

```

interface

Syntax

```
interface ip-int-name [statistics | aux-stats]
```

Context

[\[Tree\]](#) (clear>router>mpls interface)

Full Context

```
clear router mpls interface
```

Description

This command resets or clears statistics for MPLS interfaces.

Parameters

ip-int-name

Specifies an existing IP interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only packet and octet counters, and only these of the default MPLS statistics.

aux-stats

Clears only packet and octet counters, and only these of the default auxiliary MPLS statistics.

Platforms

All

interface

Syntax

```
interface [ip-int-name] [statistics]
```

Context

[\[Tree\]](#) (clear>router>rsvp interface)

Full Context

```
clear router rsvp interface
```

Description

This command resets or clears statistics for an RSVP interface.

Parameters

ip-int-name

Specifies the IP interface to clear. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only statistics.

Platforms

All

interface

Syntax

interface [**service** *service-id*] [**interface** *ip-int-name*] [**stats** { **rt-server** | **fcc-server**}]

interface [**service** *service-id*] [**interface** *ip-int-name*] **summary**

Context

[\[Tree\]](#) (show>video interface)

Full Context

show video interface

Description

This command displays video interface information.

Parameters

service *service-id*

Displays video interface information pertaining to the specified service ID.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

interface *ip-int-name*

Displays video interface information pertaining to the specified interface.

stats

Displays video interface statistics.

Values **rt-server** — Displays video interface statistics for the RET server.

fcc-server — Displays video interface statistics for the FCC server.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

Output

The following output is an example of this command.

Output Example

```

interface

Syntax

interface *ip-int-name* [**address** *ip-address*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

Context

[Tree] (clear>video>statistics>id interface)

Full Context

clear video statistics id interface

Description

This command clears video statistics for a particular channel.

Parameters

ip-int-name

Clears statistics for the specified interface.

address *ip-address*

Clears statistics for the specified IP address.

rt-client

Clears all RET client related statistics.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

interface

Syntax

interface [*ip-int-name* | *ipv6-address*] [**group**] [*grp-ipv6-address*] [**detail**]

Context

[\[Tree\]](#) (show>router>mld interface)

Full Context

show router mld interface

Description

This command displays MLD interface information.

Parameters

ip-int-name

Displays the information associated with the specified IPv6 interface name.

ipv6-address

Displays the information associated with the specified IPv6 address.

group *grp-ipv6-address*

Displays IPv6 multicast group address for which this entry contains information.

detail

Displays detailed IPv6 interface information along with the source group information learned on that interface.

Platforms

All

Output

The following output is an example of MLD interface information. [Table 200: MLD Fields](#) displays MLD field descriptions.

Output Example

```
*A:Dut-A# show router mld interface
=====
MLD Interfaces

*A:Dut-A#
```

Table 200: MLD Fields

Label	Description
Interface	The interfaces that participate in the MLD protocol.
Adm Admin Status	The administrative state for the MLD protocol on this interface.
Oper Oper Status	The current operational state of MLD protocol on the interface.
Querier	The address of the MLD querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	Cfg — The configured version of MLD running on this interface. For MLD to function correctly, all routers on a LAN must be configured to run the same version of MLD on that LAN. Opr — The operational version of MLD running on this interface.
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.

Label	Description
Group Address	The IP multicast group address for which this entry contains information.

interface

Syntax

interface [*ip-int-name* | *mt-int-name* | *ip-address*] [**group** *grp-ip-address* | **source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

Context

[\[Tree\]](#) (show>router>pim interface)

Full Context

show router pim interface

Description

This command displays PIM interface information and the (S,G)/(*,G)/(*, *, rp) state of the interface.

Parameters

ip-int-name

Displays interface information associated with the specified IP interface name.

mt-int-name

Displays Multicast Tunnel (MT) interface information for a VPRN.

Values <*vprn-id*>-mt-<*grp-ip-address*>

ip-address

Displays interface information associated with the specified IP address.

group *grp-ip-address*

Displays the IP multicast group address information for which this entry contains information.

source *ip-address*

Displays information about the source address for which this entry contains information.

If the type is **starg**, the value of this object is zero.

If the type is **starstarrp**, the value of this object is the address of the RP.

type

Displays information for the specified entry type.

Values **starstarrp**, **starg**, **sg**

detail

Displays detailed interface information.

family

Displays family information for the interface.

Values ipv4, ipv6

Platforms

All

Output

The following output is an example of a PIM interface configuration. [Table 201: PIM Interface Fields](#) provides PIM interface field descriptions.

Output Example

```

Table 201: PIM Interface Fields

Label	Description
Admin State	The administrative state for PIM protocol on this interface
Oper State	The current operational state of PIM protocol on this interface
DR	The designated router on this PIM interface
DR Priority	The priority value sent in PIM Hello messages and that is used by routers to elect the designated router (DR).
Hello Intvl	The frequency at which PIM Hello messages are transmitted on this interface
OperGroup	The OperGroup name associated with the PIM interface
OprGrp Active oper	The OperGroup operation (add, set, subtract) to the DR priority
Cfg OprGrp Priority	The configured OperGroup DR priority

interface

Syntax

interface [*ip-int-name*]

Context

[Tree] (show>cflowd interface)

Full Context

show cflowd interface

Description

Displays the administrative and operational status of the interfaces with cflowd enabled.

Parameters

ip-int-name

Displays information only for the IP interface with the specified name.

Default all interfaces with cflowd enabled

Platforms

All

Output

The following output is an example of cflowd interface information, and [Table 202: Show cflowd Interface Output Fields](#) describes the output fields.

Table 202: Show cflowd Interface Output Fields

Label	Description
Interface	Displays the physical port identifier
IPv4 Address	Displays the primary IPv4 address for the associated IP interface
IPv6 Address	Displays the primary IPv6 address for the associated IP interface
Router	Displays the virtual router index (Base = 0)
IF Index	Displays the Global IP interface index
Mode	Displays the cflowd sampling type and direction intf — Interface based sampling acl — ACL based sampling ingr — Ingress sampling egr — Egress sampling both — Both ingress and egress sampling
Admin	Displays the administrative state of the interface
Opr-IPv4	Displays the operational state for IPv4 sampling
Opr-IPv6	Displays the operational state for IPv6 sampling

Output Example

```

B:sr-002# show cflowd interface [ip-addr | ip-int-name]

=====
```

B: CORE2#

Table 204: ICMP6 Interface Fields

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>router>isis interface)

Full Context

show router isis interface

Description

This command displays IS-IS interface information. When no *ip-addr* or the *ip-int-name* is specified, all interfaces are listed.

Parameters

ip-address

Only displays the interface information associated with the specified IP address.

- Values**
- ipv4-address
 - a.b.c.d (host bits must be 0)
 - ipv6-address
 - x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

ip-int-name

Only displays the interface information associated with the specified IP interface name.

detail

All output is displayed in the detailed format.

Platforms

All

Output

The following outputs are examples of IS-IS interface information, and [Table 205: IS-IS Interface Output Fields](#) describes the output fields.

Output Example

```

Table 205: IS-IS Interface Output Fields

Label	Description
Interface	The interface name
Level Capability	Specifies the interface level (1, 2, or 1 and 2)
Circuit Id	Specifies the circuit identifier
Oper State	Up — The interface is operationally up Down — The interface is operationally down
Metric	Interface metric for Level 1 and Level 2, if none are set to 0
Type	p2p — The operational interface type is point-to-point bcst — The operational interface type is broadcast

interface

Syntax

```

interface [ip-int-name | ip-address] [detail]
interface [area area-id] [detail]
interface [ip-int-name | ip-address] database [detail]
    
```

Context

[\[Tree\]](#) (show>router>ospf interface)

Full Context

```
show router ospf interface
```

Description

This command displays the details of the OSPF interface identifiable by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 address.

- Values** ipv4-address:
- a.b.c.d

area area-id

Displays all interfaces configured in this area.

- Values** ip-address — a.b.c.d
area — 0 to 4294967295

detail

Displays detailed information for the interface.

database

Displays database information for the interface.

Platforms

All

Output

The following output is an example of the OSPF interface information, and [Table 206: OSPF Interface Output Fields](#) describes the output fields.

Table 206: OSPF Interface Output Fields

Label	Description
If Name	The interface name.
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
D Rtr Id	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated Router.
BD Rtr Id	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated router.
Adm	Dn — OSPF on this interface is administratively shut down.
	Up — OSPF on this interface is administratively enabled.
Opr	Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable.
	Wait — The router is trying to determine the identity of the (Backup) Designated router for the network.
	PToP — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.
	DR — This router is the Designated Router for this network.
	BDR — This router is the Backup Designated Router for this network.
	ODR — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router.
No. of OSPF Interfaces	The number of interfaces listed.

Table 207: Detailed OSPF Interface Output Fields

Label	Description
Interface	The IP address of this OSPF interface.
IP Address	The IP address and mask of this OSPF interface.

Label	Description
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The length of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the Hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor.
Cfg Metric	The metric to be advertised for this interface.
Advert Subnet	False — When a point-to-point interface is configured as false, then the subnet is not advertised and the endpoints are advertised as host routes. True — When a point-to-point interface is configured to true, then the subnet is advertised.
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface.
Cfg IF Type	The configured interface type.
Passive	False — This interface operates as a normal OSPF interface with regard to adjacency forming and network/link behavior. True — No OSPF HELLOs will be sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs.
Cfg MTU	The desired size of the largest packet which can be sent/received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.
LSA-filter-out	This field indicates if LSA filter out is configured.
Adv Rtr Capab	The capability of the advertising router.

Label	Description
LFA	This field indicates if Loop-Free Alternate (LFA) is configured.
LFA NH Template	The LFA Next-Hop (NH) template configuration.
Load Bal Weight	The load balancing weight, if this weight is configured.
Bfd Enabled	This field indicates if Bidirectional Forwarding Detection (BFD) is enabled. The field will include one of the following values: <ul style="list-style-type: none"> • Yes – BFD is enabled. • No – BFD is disabled.
Bfd Strict Mode	This field indicates if BFD strict-mode is enabled. The field will include one of the following values: <ul style="list-style-type: none"> • Yes – BFD strict-mode is enabled. • No – BFD strict-mode is disabled.
Bfd Str Holddown	The BFD strict-mode holddown timer.
RIB-priority	The RIB prioritization for the OSPF protocol specified as either high (enabled) or none (disabled). When enabled at the OSPF interface level, all routes learned through the associated OSPF interface are processed through the OSPF route calculation process at a higher priority. This field is configured using the configure router ospf area interface rib-priority [high] command.
Auth Type	Identifies the authentication procedure to be used for the packet. <p>None — Routing exchanges over the network/subnet are not authenticated.</p> <p>Simple — A 64-bit field is configured on a per-network basis. All packets sent on a particular network must have this configured value in their OSPF header 64-bit authentication field. This essentially serves as a "clear" 64-bit password.</p> <p>MD5 — A shared secret key is configured in all routers attached to a common network/subnet. For each OSPF protocol packet, the key is used to generate/verify a "message digest" that is appended to the end of the OSPF packet.</p>
Admin Status	Disabled — OSPF on this interface is administratively shut down. Enabled — OSPF on this interface is administratively enabled.
Oper State	Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. Waiting — The router is trying to determine the identity of the (Backup) Designated Router for the network.

Label	Description
	<p>Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.</p> <p>Designated Rtr — This router is the Designated Router for this network.</p> <p>Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router.</p> <p>Backup Desig Rtr — This router is the Backup Designated Router for this network.</p>
Designated Rtr	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router.
Backup Designated Router	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated Router.
IF Type	<p>Broadcast — LANs, such as Ethernet.</p> <p>Non-Broadcast — X.25, Frame Relay and similar technologies.</p> <p>Point-To-Point — Point-to-point links.</p>
Network Type	<p>Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network.</p> <p>Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network.</p>
Oper MTU	The operational size of the largest packet which can be sent or received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface.
Oper Metric	The operational metric for the interface used by OSPF.
Te Metric	Indicates the TE metric configured for this interface. This metric is flooded out in the TE metric sub-tlv in the OSPF TE LSAs. Depending on the configuration, either the TE metric value or the native OSPF metric value is used in CSPF computations.
Te State	Indicates if TE is enabled on the interface.
Admin Groups	Indicates the bitmap inherited from MPLS interface that identifies the admin groups to which this interface belongs.

Label	Description
Ldp Sync	Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol.
Ldp Sync Wait	Indicates the time to wait for the LDP adjacency to come up.
Ldp Timer State	Indicates the state of the LDP sync time left on the OSPF interface.
Ldp Tm Left	Indicates the time left before OSPF reverts back to advertising normal metric for this interface.
Nbr Count	The number of OSPF neighbors on the network for this interface.
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled.
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled.
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled.
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled.
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled.
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled.
Tx LSRs	The total number of Link State Requests (LSRs) transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled.
Tx LSUs	The total number of Link State Updates (LSUs) transmitted on this interface since this interface was last enabled.
Rx LS Acks	The total number of Link State Acknowledgments received on this interface since this interface was last enabled.

Label	Description
Tx LS Acks	The total number of Link State Acknowledgments transmitted on this interface since this interface was last enabled.
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled.
Tx Failures	Transmitted OSPF packets that are dropped due to resource shortage.
Retransmits	The total number of OSPF Retransmits sent on this interface since this interface was last enabled.
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled.
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled.
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled.
Bad Dest Addr	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled.
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled.
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled.
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled.
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled.
Bad Hello Int.	The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled.
Bad Dead Int.	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled.

Label	Description
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled.
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled.
Bad Checksums	The number of bad checksums for the interface.
LSA Count	The LSA count for the interface.
LSA Checksum	The sum of all link-scoped LSA checksums on the interface.

interface

Syntax

interface [*ip-int-name* | *ip-address* | *ipv6-address*] [**detail**]

interface [**area** *area-id*] [**detail**]

interface [*ip-int-name* | *ip-address*]| *ipv6-address* **database** [**detail**]

Context

[\[Tree\]](#) (show>router>ospf3 interface)

Full Context

show router ospf3 interface

Description

This command displays the details of the OSPFv3 interface identified by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 or IPv6 address.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)

- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

detail

Displays detailed information for the interface.

database

Displays database information for the interface.

Platforms

All

Output

The following output is an example of an OSPFv3 interface information, and [Table 208: Detailed OSPFv3 Interface Output Fields](#) describes the output fields.

Output Example (OSPFv3 Detailed)

```

Table 208: Detailed OSPFv3 Interface Output Fields

Label	Description
IP Address	The IP address and mask of this OSPF interface.
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The interval of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor.
Advert Subnet	False — When a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes.

Label	Description
	True — When a point-to-point interface is configured to true, then the subnet is advertised.
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface.
Passive	False — This interfaces operates as a normal OSPF interface with regard to adjacency forming and network/link behavior. True — No OSPF Hello messages sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs.
MTU	The desired size of the largest packet, specified in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Admin Status	Disabled — OSPF on this interface is administratively shut down.
	Enabled — OSPF on this interface is administratively enabled.
Oper State	Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable.
	Waiting — The router is trying to determine the identity of the (Backup) Designated router for the network.
	Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.
	Designated Rtr — This router is the Designated router for this network.
	Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated router.
	Backup Desig Rtr — This router is the Backup Designated router for this network.
IF Type	Broadcast — LANs, such as Ethernet.
	Non-Broadcast — X.25, Frame Relay and similar technologies.
	Point-To-Point — Point-to-point links.
Network Type	Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network.
	Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network.

Label	Description
Oper MTU	The operational size of the largest packet, in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface.
Nbr Count	The number of OSPF neighbors on the network for this interface.
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled.
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled.
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled.
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled.
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled.
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled.
Tx LSRs	The total number of LSRs transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled.
Tx LSUs	The total number of LSUs transmitted on this interface since this interface was last enabled.
Rx LS Acks	The total number of Link State Acknowledgments (LSAs) received on this interface since this interface was last enabled.
Tx LS Acks	The total number of LSAs transmitted on this interface since this interface was last enabled.
Retransmits	The total number of OSPF retransmits sent on this interface since this interface was last enabled.

Label	Description
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled.
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled.
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled.
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled.
Bad Dest Addr	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled.
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled.
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled.
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled.
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled.
Bad Hello Int.	The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled.
Bad Dead Int.	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled.
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled.
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled.
Te State	Indicates the MPLS interface TE status from OSPF standpoint.
Admin Groups	Indicates the bit-map inherited from MPLS interface that identifies the admin groups to which this interface belongs.

Label	Description
Ldp Sync	Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol.
Ldp Sync Wait	Indicates the time to wait for the LDP adjacency to come up.
Ldp Timer State	Indicates the state of the LDP sync time left on the OSPF interface.
Ldp Tm Left	Indicates the time left before OSPF reverts back to advertising normal metric for this interface.
Tx Failures	Transmitted OSPFv3 packets that are dropped due to resource shortage.

Output Example

```

```

interface

Syntax

```
interface interface-name [detail | aggregate | sample]
```

Context

[\[Tree\]](#) (show>test-oam>link-measurement interface)

Full Context

```
show test-oam link-measurement interface
```

Description

This command displays the link measurement operational information, reporting, and recorded results for a specific interface.

Parameters

interface-name

Specifies the interface name, up to 32 characters, for which link measurement information is displayed.

detail

Optional keyword to display complete link measurement operational information, reporting, and results.

aggregate

Optional keyword to display operational information, reporting and aggregate sample window results.

sample

Optional keyword to display operational information, reporting, and sample window results.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of link measurement information for a specific interface, and the following table describes the output fields.

Output Example

```

show test-oam link-measurement interface "int-PE-1-PE-2"

Table 209: Output Fields: Link Measurement Interface

Label	Description
Interface Link Measurement Information	
Template Name	The name of the link measurement template
Oper State	The operational state of the test configured under the interface Up — assigned link-measurement template, and a test protocol is enabled; UDP port available, and internal resources are available Down — one or more requirements for the Up state is not met
Protocol	The active protocol encapsulating the test packet IPv4 or IPv6
Oper Source Address	The source address of the test packet
Source Auto-Assigned	The source address is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Oper Destination Address	The destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	The destination address is automatically determined. No — the destination is configured or cannot be automatically determined Yes — the destination is automatically determined
Failure Condition(s)	The requirements not met causing an Oper Down state
Detectable Tx Errors	The error condition detected that may prevent the test packet from being sent
Reporting	

Label	Description
Reporting Enabled	The current value should be compared to a threshold and possibly reported Yes — at least one threshold in either window is configured No — none of the thresholds in either window is configured
Delay Measurement Last Reported	The value of the last measurement reported to the routing engine
Timestamp	The end timestamp (UTC) of the last reported delay measurement
Trigger By	The window and threshold type that was exceeded triggering the reporting. Only one will be reported if multiple are triggered in the same window.
Aggregate Sample Window Delay Measurement Detail	
Count	The number of sample windows included in the aggregate sample window
Sample Window Delay Measurement Detail	
Rcv/Snt	The number of response test packets received (Rcv) and sent (Snt)
Err	The number of errors included in the sample window. This is the total of duplicates, zero, and negative valued measurements. The negative error count is incremented if either direction is negative, regardless of the unidirectional-measurement configuration method. A negative measurement in either direction calls into question the validity of both directions. Errors are included in the receive count, but do not count toward integrity. * — value exceeds column width; value more than 999
Common Table Labels	
Currently Reporting	The configured value of the delay measurement to consider (Min, Max, Avg)
End Timestamp (UTC)	The time at which the window closed
State	The state of the window InProgress — currently executing Completed — closed via normal execution Terminated — preempted by some action; closed and not considered for report

Label	Description
	SwReported — new delay reported from this sample window AswReported — new delay reported from this aggregate sample window (only applicable to Aggregate Sample Windows)
Min (us)	The minimum delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
Max (us)	The maximum delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
Avg (us)	The average delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
I	The window has integrity and should be considered Y — yes, achieved integrity N — no, did not meet configured integrity percentage
Results	The metric considered for reporting in this window N/A — not applicable or in calculable, when no responses are received, or all are in * — value exceeds column width; value more than 9999999

interface

Syntax

interface *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**aux-stats**]

Context

[Tree] (monitor>router>mpls interface)

Full Context

monitor router mpls interface

Description

This command displays statistics for MPLS interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the MPLS interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

Output Example

```
A:ALA-12>monitor>router>mpls# interface system interval 3 repeat 3 absolute

[\[Tree\]](#) (monitor>router>ospf3 interface)

Full Context

monitor router ospf interface

monitor router ospf3 interface

Description

This command displays statistics for OSPF interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the OSPF interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-address, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

=====
A:ALA-12>monitor>router>ospf#
    
```

interface

Syntax

interface *interface* [*interface*] [*interval seconds*] [*repeat repeat*] [*absolute* | *rate*]

Context

[Tree] (monitor>router>rsvp interface)

Full Context

monitor router rsvp interface

Description

This command displays statistics for RSVP interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the RSVP interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

12.35 interface-group-handler

interface-group-handler

Syntax

interface-group-handler [*index*]

Context

[\[Tree\]](#) (show interface-group-handler)

Full Context

show interface-group-handler

Description

This command displays Interface Group Handler (IGH) information.

If no command line options are specified, a summary listing of all IGHs is displayed.

Parameters

index

Specifies the index.

Values 1 to 100

Platforms

All

Output

The following output is an example of Interface Group Handler information, and [Table 210: Output Fields: show interface-group-handler](#) describes the output fields.

Output Example: show interface-group-handler

```

```

Table 210: Output Fields: show interface-group-handler

Field	Description
IGH Index	A value between 1 and 100 that identifies the specific interface group handler.
Admin State	Up — The interface group handler is administratively up. Down — The interface group handler administratively down.
Number of Members	Identifies the number of ports or channels in the group, up to a maximum of 8.
Threshold	Indicates the minimum number of active links that must be present for the interface group handler to be active.

12.36 interface-id-mapping

interface-id-mapping

Syntax

interface-id-mapping

Context

[\[Tree\]](#) (show>router>dhcp6>local-dhcp-server interface-id-mapping)

Full Context

show router dhcp6 local-dhcp-server interface-id-mapping

Description

This command displays information about the DHCPv6 server that uses a unique /64 prefix per interface-ID options combination.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of interface ID mapping information.

Output Example

```
show router 600 dhcp6 local-dhcp-server "d6" interface-id-mapping
=====
Interface-ID Mappings for DHCPv6 server d6
=====
Mapped Prefix      : 2001:AAAA::/64
Relay Interface ID : 1/1/10
LDRA Interface ID  : (Not Specified)
Active Leases      : 2001:AAAA::1 (stable)
=====
1 prefix found
=====
```

[Table 211: Interface ID Mapping Field Descriptions](#) describes interface ID mapping field descriptions.

Table 211: Interface ID Mapping Field Descriptions

Field	Description
Mapped Prefix	The mapped prefix
Relay Interface ID	The value of the Interface-ID Option assigned by the DHCPv6 Relay Agent
LDRA Interface ID	The value of the Interface-ID Option assigned by the Lightweight DHCPv6 Relay Agent
Active Leases	The number of active leases
No. of prefixes found	The total number of prefixes found.

12.37 interface-statistics

interface-statistics

Syntax

interface-statistics service *service-id* **all**

interface-statistics service *service-id* **group-interface** *grp-if*

interface-statistics service *service-id* **subscriber-interface** *sub-if*

Context

[\[Tree\]](#) (clear>subscr-mgmt interface-statistics)

Full Context

clear subscriber-mgmt interface-statistics

Description

This command clears subscriber interface statistics.

Parameters

service-id

Specifies the service ID of the service

Values 1 to 214748364

svc-name: up to 64 characters

grp-id

Specifies the group interface name, up to 32 characters

sub-id

Specifies the subscriber interface, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-statistics

Syntax

interface-statistics service *service-id* **all**

interface-statistics service *service-id* **group-interface** *grp-if*

interface-statistics service *service-id* **subscriber-interface** *sub-if*

Context

[\[Tree\]](#) (show>subscr-mgmt interface-statistics)

Full Context

show subscriber-mgmt interface-statistics

Description

This command displays subscriber interface statistics.

Parameters

service-id

Specifies the service ID of the service.

Values 1 to 2148278386
svc-name: up to 64 characters

grp-id

Specifies the group interface name, up to 32 characters

sub-id

Specifies the subscriber interface, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service interface statistics information.

Output Example

```

12.38 iom

iom

Syntax

iom [*slot-number*]

Context

[\[Tree\]](#) (tools>dump>filter>resources iom)

Full Context

tools dump filter resources iom

Description

This command shows information about filter resource utilization on all IOMs or a specified IOM. Resource utilization per filter type is available, as well as filters using most resources on a given line card.

Parameters

slot-number

Specifies that only the filter resource utilization associated with the IOM card in this slot will be displayed.

Values 1 to 10

Platforms

All

Output

The following output is an example of filter resource utilization information for all IOMs.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># iom

Context

[Tree] (show>filter ip)

Full Context

show filter ip

Description

This command displays IPv4 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv4 filter policy.

Parameters

filter-type

Specifies the type of filter to display.

Values config, flowspec, host-common, openflow

inactive

Displays all, or optionally inactive embeddings. If *ip-filter-id* is specified, displays embeddings for the IP filter ID.

ip-filter-id

Specifies the IPv4 filter policy for which to display information. Values can be expressed in different formats; the following shows decimal integer format.

Values 1 to 65535

detail

Displays detailed information.

associations

Appends, to the detailed filter policy output, information about where the specified filter policy is applied.

entry-type

Specifies the type of filter entry to display.

Values fixed, radius-insert, credit-control-insert, flow-spec, embedded, radius-shared, pcc-rule

counters

Displays counter information for the specified filter ID. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

entry-id

Specifies the filter policy entry (of the specified filter policy) for which to display information.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base" instance).

service-id

Filters the output and only displays the information for the specified service. The specified value must correspond to an existing service in which the filter has been applied.

Platforms

All

Output

Show Filter (no policy specified) — The following is an output example of IPv4 filter information when no policy is specified. [Table 212: Show IP Filter Output Fields - no policy specified](#) describes the command output fields.

Output Example

```
A:ALA-49# show filter ip
=====
Configured IP Filters                                     Total:    2
=====
Filter-Id  Scope    Applied Description
-----
5          Template Yes
6          Template Yes
=====
Host Common IP Filters                                 Total:    2
=====
Filter-Id          Description
-----
5:P4                Auto-created PCC-Rule Ingress Filter
6:P5                Auto-created PCC-Rule Egress Filter
=====
Num IP filters: 4
=====
```

Table 212: Show IP Filter Output Fields - no policy specified

Label	Description
Filter Id	The IP filter ID
Scope	Template — the filter policy is of type template
	Exclusive—the filter policy is of type exclusive

Label	Description
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Description	The IP filter policy description

Show Filter (no filter-id specified, embedded keyword specified) — The following output is an example of IPv4 filter information when no filter ID is specified but the embedded keyword is specified. [Table 213: Filter IP Output Fields \(No Filter ID Specified, Embedded Keyword Specified\)](#) describes the command output fields.

Output Example

```
*A:Dut-C>config>filter# show filter ip embedded
=====
IP Filter embedding
=====
In      From      Priority   Inserted   Status
-----
10      2          50         1/1        OK
        1          100        1/2        OK- 1 entry overwritten
20      2          100        0/5        Failed - out of resources
=====
```

Table 213: Filter IP Output Fields (No Filter ID Specified, Embedded Keyword Specified)

Label	Description
In	Shows embedding filter index
From	Shows embedded filters included
Priority	Shows priority of embedded filter
Inserted	Shows embedded/total number of entries from embedded filter. Status: OK — embedding operation successful, if any entries are overwritten this will also be indicated Failed — embedding failed, the reason is displayed (out of resources)

Show Filter (with filter-id specified) — The following output is an example of IPv4 filter information with the filter ID specified. [Table 214: Show IP Filter Policy Output Fields](#) describes the command output fields.

Output Example

```
*A:Dut-B>config>filter>ip-filter# show filter ip 10
=====
IP Filter
=====
Filter Id       : 10
Scope          : Embedded
```

```
Type           : Normal
Entries        : 4
Description    : (Not Specified)
Filter Name    : 10
```

Table 214: Show IP Filter Policy Output Fields

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRI. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy entry description string
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Description	The IPv4 filter policy entry description string
Log Id	The filter log ID

Label	Description
Src. IP	The source IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. IP	The destination IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Protocol	The protocol for the match criteria; undefined indicates no protocol specified
Dscp	The DiffServ Code Point (DSCP) name
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
ICMP Code	The ICMP code field in the ICMP header of an IPv4 packet
Fragment	False — Indicates if the filter is configured to match on all non-fragmented packets
	True — Indicates if the filter is configured to match on all fragmented packets
	First-Only — Indicates if the filter is configured to match the first fragment of a fragmented packet
	Non-First-Only — Indicates if the filter is configured to match a fragment of a fragmented packet, but not the first fragment
	Off — fragments are not a matching criteria. All fragments and non-fragments implicitly match
Src Route Opt	Indicates if the source route option has been set
Sampling	Off — specifies that traffic sampling is disabled
	On—specifies that traffic matching the associated IPv4 filter entry is sampled
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
IP-Option	Specifies matching packets with a specific IPv4 option or a range of IPv4 options in the IPv4 header for IPv4 filter match criteria
Multiple Option	Off — the option fields are not checked

Label	Description
	On — packets containing one or more option fields in the IPv4 header will be used as IPv4 filter match criteria
Tcp-flag	<p>Specifies the list of TCP flags selected:</p> <ul style="list-style-type: none"> • match true is represented with the TCP flag value • match false is represented with an exclamation mark before the flag value <p>TCP flags not selected as match criteria are not displayed</p> <p>Example: Matching "tcp-ack true" and "tcp-rst false" is represented in the show command as Tcp-flag : Ack !Rst</p>
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv4 filter match criteria
Egress PBR	Indicates if the egress-pbr flag is set for this entry
Primary Action	Indicates the configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	Indicates the configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
PBR Target Status	The status of the target of the primary or secondary action based on simple checks
Extended Action	Indicates the configured extended action, if any
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Downloaded Action	The action downloaded by CPM to IOM
Dest. Stickiness	Indicates whether stickiness is configured
Hold Remain	The stickiness timer
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter Associations — The following output is an example of IPv4 filter information when the **associations** keyword is specified. [Table 215: Filter IP Associations Output Fields](#) describes the command output fields.

Output Example

```
A:ALA-49# show filter ip 1 associations
=====

=====
```

Table 215: Filter IP Associations Output Fields

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop—the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any

Label	Description
PccRI. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Association	Indicates the filter is an IPv4 filter policy
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The type of service of the service ID
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface

Show Filter Counters — The following output is an example of IPv4 filter information when the **counters** keyword is specified. [Table 216: Filter IP Counters Output Field Descriptions](#) describes the command output fields.

Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Output Example

```
*A:ALA-48# show filter ip 100 counters

Table 216: Filter IP Counters Output Field Descriptions

Label	Description
Filter Id	The IPv4 filter policy ID

Label	Description
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRI. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter IP Output (with effective-action specified) — The following output is an example of IPv4 filter information when the **effective-action** keyword is specified. [Table 217: Show Filter IP effective-action Output Field Descriptions](#) describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- action not supported in L2 service
- action not supported in L3 service
- action not supported on egress
- destination not reachable
- egress-pbr is off
- egress-pbr is on

- entry-default
- filter-default-action
- not POS unnumbered interface
- pbr-down-action-override
- target does not exist

Output Example

```

show filter ip 1 effective-action

Table 217: Show Filter IP effective-action Output Field Descriptions

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive

Label	Description
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Stickiness	No — stickiness is not configured
	Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if any configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if any configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to

Label	Description
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	The effective action that the packet will be subject to
Extended Action	Indicates the configured extended action, if any

ip

Syntax

ip *ip-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}

Context

[\[Tree\]](#) (clear>filter ip)

Full Context

clear filter ip

Description

Clears the counters associated with the entries of the specified IPv4 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified IPv4 filter policy.

Parameters

ip-filter-id

The IPv4 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following shows decimal integer format.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

All

ip

Syntax

ip *ip-filter-id*

Context

[\[Tree\]](#) (tools>dump>filter>resources ip)

Full Context

tools dump filter resources ip

Description

This command displays information about the specified IP filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

Parameters

ip-filter-id

Specifies that only the filter resource utilization associated with this IP filter will be displayed.

Values 1 to 65535

Platforms

All

Output

The following output is an example of IP filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># ip 100
=====
Resource utilization details for Ip filter 100
=====
CPM entries used                : 5
CPM subentries used             : 5
TCAM entries used (per FlexPath) : 5
Associated with IOMs            : 1,2,3,4,5,6,7,8,9,10
-----
Largest 5 entries
```

Entry ID	Active	TCAM entries (per FlexPath)
3	Yes	1
4	Yes	1
5	Yes	1
6	Yes	1
100	Yes	1

ip

Syntax

ip entry *entry-id* [*interval seconds*] [*repeat repeat*] [*absolute* | *rate*]

Context

[\[Tree\]](#) (monitor>cpm-filter ip)

Full Context

monitor cpm-filter ip

Description

This command displays monitor command statistics for IP filter entries.

Parameters

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2048

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip

Syntax

ip *ip-filter-id* **entry** *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>filter ip)

Full Context

monitor filter ip

Description

This command enables IP filter monitoring. The statistical information for the specified IP filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified IP filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ip-filter-id

Displays detailed information for the specified filter ID and its filter entries.

Values [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | _tmnx_tms_egr-*mda-id-F* | _tmnx_tms-ing-*mda-id-F* | _tmx_ofs_*ofs-name* | *name*: 64 chars max

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values [1 to 65535], fSpec-[0 to 2147483647]-[1 to 65353]

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Full Context

monitor management-access-filter ip

Description

This command monitors statistics for the MAF IP filter entry.

Parameters

entry-id

Specifies an existing IP MAF entry ID.

Values 1 to 9999

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Table 218: IPv4 Exception Output Fields

Label	Description
Filter-Id	The filter ID.
Scope	Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive.
Applied	No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied.
Entries	The number of entries.
Description	The description of the specified filter, if specified.
Filter Name	The filter name.
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy.
Entry	The number of active or inactive entries.
Description	The IPv4 filter policy entry description string.
Src. IP	The source IP address of the logged packet.
Src. Port	The source port of the logged packet.
Dst. IP	The destination IP address of the logged packet.
Dst. Port	The destination port of the logged packet.
Protocol	The protocol for the match criteria; undefined indicates no protocol specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Ing. Matches	The number of packets matched on ingress.
Egr. Matches	The number of packets matched on egress.

ip-exception

Syntax

ip-exception *filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[\[Tree\]](#) (clear>filter ip-exception)

Full Context

```
clear filter ip-exception
```

Description

This command clears the counters associated with the entries of the specified IP exception filter policy.

Parameters

filter-id

Specifies the filter policy ID for which to clear the entry counters.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

VSR

12.41 ip-filter

ip-filter

Syntax

```
ip-filter [entry entry-id]
```

Context

[\[Tree\]](#) (show>system>security>cpm-filter ip-filter)

Full Context

```
show system security cpm-filter ip-filter
```

Description

This command displays CPM IP filters.

Parameters

entry-id

Identifies a CPM filter entry as configured on this system.

Values 1 to 131072

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of IP filter entry information.

[Table 219: Show CPM IP Filter Output Fields](#) describes CPM IP filter output fields.

Output Example

```
A:ALA-35# show system security cpm-filter ip-filter

Table 219: Show CPM IP Filter Output Fields

Label	Description
Entry-Id	Displays information about the specified management access filter entry
Dropped	Displays the number of dropped events.
Forwarded	Displays the number of forwarded events.
Description	Displays the CPM filter description.
Log ID	Displays the log ID where matched packets will be logged.
Src IP	Displays the source IP address(/netmask or prefix-list)
Dest. IP	Displays the destination IP address(/netmask).
Src Port	Displays the source port number (range).
Dest. Port	Displays the destination port number (range).
Protocol	Displays the Protocol field in the IP header.
Dscp	Displays the DSCP field in the IP header.
Fragment	Displays the 3-bit fragment flags or 13-bit fragment offset field.
ICMP Type	Displays the ICMP type field in the ICMP header.
ICMP Code	Displays the ICMP code field in the ICMP header.
TCP-syn	Displays the SYN flag in the TCP header.
TCP-ack	Displays the ACK flag in the TCP header
Match action	When the criteria matches, displays drop or forward packet.
Next Hop	In case match action is forward, indicates destination of the matched packet.
Dropped pkts	Indicates number of matched dropped packets
Forwarded pkts	Indicates number of matched forwarded packets.

ip-filter

Syntax

ip-filter [entry *entry-id*]

Context

[\[Tree\]](#) (show>system>security>mgmt-access-filter ip-filter)

Full Context

show system security management-access-filter ip-filter

Description

This command displays management-access IP filters.

Parameters

entry-id

Displays information for the specified entry.

Values 1 to 9999

Platforms

All

Output

The following output is an example of MAF IP filter information and [Table 220: Show Management Access Filter Output Fields](#) describes the management access filter output fields.

Output Example

```
*A:Dut-F# show system security management-access-filter ip-filter

```

Table 220: Show Management Access Filter Output Fields

Label	Description
Def. action	Permit — Specifies that packets not matching the configured selection criteria in any of the filter entries are permitted.

Label	Description
	Deny — Specifies that packets not matching the configured selection criteria in any of the filter entries are denied and that a ICMP host unreachable message will be issued. Deny-host-unreachable — Specifies that packets not matching the configured selection criteria in the filter entries are denied.
Entry	The entry ID in a policy or filter table.
Description	A text string describing the filter.
Src IP	The source IP address or prefix list used for management access filter match criteria.
Src interface	The interface name for the next hop to which the packet should be forwarded if it hits this filter entry.
Dest port	The destination port.
Matches	The number of times a management packet has matched this filter entry.
Protocol	The IP protocol to match.
Action	The action to take for packets that match this filter entry.

ip-filter

Syntax

ip-filter [**entry** *entry-id*]

Context

[\[Tree\]](#) (clear>cpm-filter ip-filter)

Full Context

clear cpm-filter ip-filter

Description

This command clears IP filter statistics.

Parameters

entry-id

Specifies a particular CPM IP filter entry.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-filter

Syntax

ip-filter *ip-filter-id*

Context

[\[Tree\]](#) (tools>perform>filter ip-filter)

Full Context

tools perform filter ip-filter

Description

Commands in this context perform IP filter operations.

Parameters

ip-filter-id

Specifies a particular IP filter ID or filter name.

Values *filter-id* | *filter-name*

filter-id

Specifies the IP filter ID.

Values 1 to 65535

filter-name

Specifies name of the IP filter, upto 64 characters.

Platforms

All

12.42 ip-identification-assist

ip-identification-assist

Syntax

ip-identification-assist [*isa mda-id/esa-vm-id*]

Context

[\[Tree\]](#) (show>app-assure>group ip-identification-assist)

Full Context

show application-assurance group ip-identification-assist

Description

This command displays the status and statistics for the IP identification assist feature.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values	
<i>slot/mda</i>	
<i>slot</i>	1 to 10, depending on chassis model
<i>mda</i>	1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	
<i>esa-esa-id/vm-id</i>	
<i>esa-id</i>	1 to 16
<i>vm-id</i>	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display IP identification assist information for a group.

```
show application-assurance group 1 ip-identification-assist isa 1/1
```

Output Example

```
=====
Application Assurance Group 1 IP Identification Assist
=====

ip-identification-assist

Syntax

ip-identification-assist

Context

[Tree] (tools>dump>app-assure>group ip-identification-assist)

Full Context

tools dump application-assurance group ip-identification-assist

Description

Commands in this context dump statistics for the IP identification assist feature.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.43 ip-prefix

ip-prefix

Syntax

ip-prefix [**hunt** | **detail**] [**rd** *rd*] [**prefix** *ip-prefix/ip-prefix-length*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**aspath-regex** *reg-exp*]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn ip-prefix)

Full Context

show router bgp routes evpn ip-prefix

Description

This command displays BGP-EVPN IPv4 prefix routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

ip-prefix/ip-prefix-length

Specifies the IPv4 address and mask length.

Values ip-address: a.b.c.d

mask: 0 to 32

comm-id

Specifies the community ID, up to 72 characters.

Values [as-num:comm-val | ext-comm | well-known-comm]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1* }
where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295
 - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the IPv4 prefix route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

12.44 ip-prefix-list

ip-prefix-list

Syntax

ip-prefix-list

ip-prefix-list *prefix-list-name* [**association**]

Context

[Tree] (show>qos>match-list ip-prefix-list)

Full Context

show qos match-list ip-prefix-list

Description

Displays the list of configured IPv4 QoS prefix lists or the details of a specific IPv4 QoS prefix list together with the SAP and network QoS policies in which it is used and the entry number within that policy.

Parameters

prefix-list-name

Specifies an IPv4 prefix list which contains IPv4 address prefixes to be matched.

Values A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

association

Displays the QoS policy and entry number in which the specified prefix list is used.

Platforms

All

Output

The following output is an example of ip-prefix-list information

Output Example

```
*A:PE# show qos match-list ip-prefix-list

Table 222: IPsec Domain Field Descriptions

Label	Description
Designated Role	The designated role, active or standby.
Priority	The priority.
Tunnel Group	The tunnel group ID.
Revertive	The revertive value. true means that revertive is configured. false means that revertive is not configured.
Admin State	The administrative state.
Protection Status	Displays nominal or notReady. notReady means the system is not ready for a switchover. There could be a major traffic impact if switchover happens in the case of notReady. nominal means the tunnel-group is in a better situation to switchover than notReady. However, there still might be a traffic impact.
Router Id	The router ID.
Current Active	The router ID of the active router.
Activity State	The activity state.
Adjacencies	
Peer	The IP address of the peer.
Router-Id	The router ID.
Oper State	The operational state of the peer.
Remote Activity State	The activity state of the peer.

Label	Description
Remote Designated Role	The designated role of the peer.
Domain Adjacency Entries found	The total number of domain peer entries found.
Multi-Chassis Tunnel Statistics	
Static	The number of static multi-chassis tunnels.
Dynamic	The number of dynamic multi-chassis tunnels.
Installed	The number of tunnels that have been successfully installed.
Installing	The number of tunnels that are being installed.
Awaiting Config	The number of synchronized tunnels that do not have a corresponding configuration ready.
Failed	The number of tunnels that failed to be installed.

12.51 ipsec-interface

ipsec-interface

Syntax

ipsec-interface

ipsec-interface *ip-int-name* [**group** *grp-ipv6-address*]

ipsec-interface **gateway-name** *gw-name* [**remote-address** *ip-address* | *ipv6-address*] [**port** *port-id*] [**sa-id** *sa-id*]

ipsec-interface **static-tunnel-name** *tunnel-name* [**sa-id** *sa-id*]

Context

[\[Tree\]](#) (show>router>mld ipsec-interface)

Full Context

show router mld ipsec-interface

Description

This command displays information about the MLD states over IPsec tunnels.

Parameters

ip-int-name

Specifies the dynamic name for the MLD-enabled child_SA.

grp-ipv6-address

Displays IPv6 multicast group address for which this entry contains information.

Values ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
x - [0..FFFF]H
d - [0..255]D
- multicast group IPv6 address

gw-name

Specifies the IPsec gateway name, up to 32 characters.

ip-address

Displays the information associated with the specified IP address.

ipv6-address

Displays the information associated with the specified IPv6 address.

port-id

Specifies the peer's UDP port.

Values 0 to 4294967295

sa-id

Specifies the child_SA ID.

Values 0 to 4294967295

tunnel-name

Specifies the IPsec static tunnel name up to 32 characters.

Platforms

All

Output

The following output is an example of MLD IPsec interface information. The interface name in the output is the dynamic name for an MLD-enabled child_sa. There is a corresponding MLD interface name in the **show>ipsec>gateway name tunnel tunnel** output

Output Example

```
*A:DUT-A# show router 40 mld ipsec-interface "ipsec-if-1583392"
=====
mld ipsec dynamic tunnel interfaces detail

```

12.52 ipsec-stats

ipsec-stats

Syntax

ipsec-stats

Context

[\[Tree\]](#) (show>isa>stats ipsec-stats)

Full Context

show isa statistics ipsec-stats

Description

Commands in this context display IPsec tunnel statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.53 ipsec-transport-mode-profile

ipsec-transport-mode-profile

Syntax

ipsec-transport-mode-profile [*name*]

ipsec-transport-mode-profile *name* **association**

Context

[\[Tree\]](#) (show ipsec ipsec-transport-mode-profile)

Full Context

show ipsec ipsec-transport-mode-profile

Description

This command displays IPsec transport mode profile information. If a name is specified, the command displays details about the named **ipsec-transport-mode-profile**, otherwise, a list of configured IPsec transport mode profiles is displayed.

Parameters

name

Displays information about the specified IPsec transport mode profile, up to 32 characters.

association

Displays a list of IP tunnels that reference the specified **ipsec-transport-mode-profile** *name*.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPsec transport mode profile information. [Table 223: ipsec-transport-mode-profile Field Descriptions](#) describes the fields.

Output Example

```
A:v70# show ipsec ipsec-transport-mode-profile "test"

```

Table 223: *ipsec-transport-mode-profile* Field Descriptions

Label	Description
Description	The text string to describe the transport mode profile
Keying Type	The keying type
Replay Window	The replay window size
IKE Policy ID	The ID of the IKE policy used for IKE negotiation
Auto Establish	The status of auto-establish
Transform Id1, Id2, Id3, Id4	The transform ID
Pre Shared Key	The pre-shared key used for authentication (hashed)
Local Id Type	The local ID used for IDi or IDr for IKEv2 tunnels
Cert Profile	The name of certificate profile to be used for certificate authentication
TrustAnchor Prof	The name of trust anchor profile to be used for certificate authentication.
Default Result	The default result when both the primary and secondary method failed to provide an answer
Primary	The primary method that is used to verify the revocation status of the peer's certificate; either CRL or OCSP.
Secondary	The secondary method that is used to verify the revocation status of the peer's certificate; either CRL, OCSP, or none.
Max Num of Keys	Phase 1 — The maximum number of IKE_SA keys, which can be saved by the system. Phase 2 — The maximum number of CHILD_SA keys, which can be saved by the system.
Transport Mode Profile	The transport mode profile name
SvcID	The service ID
Type	The service type
SAP	The SAP ID
Tunnel	The tunnel ID

12.54 ipv4

ipv4

Syntax

ipv4 all

ipv4 entry *entry-id*

Context

[\[Tree\]](#) (clear>subscr-mgmt>isa-filter ipv4)

Full Context

clear subscriber-mgmt isa-filter ipv4

Description

This command resets the entry hit counts associated with the specified **isa-filter** to zero. If an *entry-id* is specified, only counters for that entry are reset, otherwise all entry counters are reset.

Parameters

all

Clears all IPv4 ISA filter entries.

entry-id

Specifies the ID of the entry within the ISA filter for which to reset the counters.

Values 1 to 1024

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Syntax

ipv4 [summary | detail] [egress-if port-id]

ipv4 [summary | detail] [egress-lsp tunnel-id]

ipv4 [summary | detail] [egress-nh ip-address]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active ipv4)

Full Context

show router ldp bindings active ipv4

Description

This command display LDP active IPv4 bindings.

Parameters

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

egress-lsp *tunnel-id*

Specifies the tunnel identifier for this egress LSP.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D

detail

Displays detailed information.

summary

Displays information in a summarized format.

Platforms

All

ipv4

Syntax

```
ipv4 [timeout seconds] [ dhcp-client-identifier {string ascii-string | hex hex-string}] [reboot-on-success] [save-provision-file-destination file-url] [ include-user-class]
```

Context

[\[Tree\]](#) (tools>perform>system>auto-node-provisioning ipv4)

Full Context

tools perform system auto-node-provisioning ipv4

Description

This command initiates the IPv4 auto-provisioning of the node on all the ports that have an operationally up port but no IP address.

Parameters

seconds

DHCP request timeout period, before the system tries the next interface. Within this timeout, the DHCP client tries to retransmit the DHCP request with randomized exponential backoff (RFC 2131). This randomized exponential backoff begins at 2 s and goes to 64 s (2,4,8,32,64,64,64,64). After 64 seconds, the system will retry every 64 s.

Values 1 to 65535 seconds

Default 10

ascii-string

DHCP client identifier in ASCII format, up to 127 characters long.

hex-string

DHCP client identifier in hexadecimal format, up to 254 hexadecimal nibbles long.

Values 0x0 to 0xFFFFFFFF

file-url

The file URL as a *local-url*. The local file or folder name should not exceed 99 characters).

local-url [flash-id][file-path]

flash-id cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:,
cf3-A:, cf3-B:

include-user-class

Keyword to include user class data in network discovery requests.

Platforms

All

ipv4

Syntax

ipv4 [aspath-regex *reg-exp*] [community *comm-id*] [origin-val *originState*] [leaked] [leakable] [brief] [all]

ipv4 [aspath-regex *reg-exp*] hunt [community *comm-id*] [origin-val *originState*] [leaked] [leakable] [brief] [all]

ipv4 [detail | longer] [aspath-regex *reg-exp*] [community *comm-id*] [origin-val *originState*] [leaked] [leakable] [all]

Context

[Tree] (show>router>bgp>routes ipv4)

Full Context

show router bgp routes ipv4

Description

This command displays BGP IPv4 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values *[as-num:comm-val | ext-comm | well-known-comm | large-comm]*

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
 - *{target | origin}:ip-address:comm-val*
 - *{target | origin}:asnum:ext-comm-val*
 - *{target | origin}:ext-asnum:comm-val*
 - **bandwidth:asnum:val-in-mbps**
 - **ext:4300:ovstate**
 - **ext:lt:value1:value2**
 - **flowspec-set:ext-asnum:group-id**

where:

- *target* — route target
- *origin* — route origin
- *ip-address* — a.b.c.d
- *ext-comm-val* — 0 to 4294967295
- *ext-asnum* — 0 to 4294967295
- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended

- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFF
- **flowspec-set** — flow-spec set
- *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

originState

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

- Values**
- valid* — Displays valid validation state information.
 - invalid* — Displays invalid validation state information.
 - notfound* — Displays state information for unfound origin values.

leaked

Filters BGP routes displayed by the command to those routes leaked into this router's BGP instance from another BGP instance.

leakable

Filters BGP routes displayed by the command to those routes eligible for leaking from this router's BGP instance to another BGP instance.

brief

Displays the IPv4 BGP route information in a brief format.

all

Displays all output for imported routes.

Platforms

All

12.55 ipv4-prefix

ipv4-prefix

Syntax

ipv4-prefix [*ip-prefix/ip-prefix-length*]

Context

[\[Tree\]](#) (show>router>bgp>routes>bgp-ls ipv4-prefix)

Full Context

```
show router bgp routes bgp-ls ipv4-prefix
```

Description

This command displays BGP-LS NLRIs with an IPv4 prefix.

Parameters

ip-prefix/ip-prefix-length

Specifies information for the specified IPv4 prefix and mask length, up to 64 characters.

Platforms

All

12.56 ipv6

ipv6

Syntax

```
ipv6 all
```

```
ipv6 entry entry-id
```

Context

[\[Tree\]](#) (clear>subscr-mgmt>isa-filter ipv6)

Full Context

```
clear subscriber-mgmt isa-filter ipv6
```

Description

This command resets the entry hit counts associated with the specified **isa-filter** to zero. If an *entry-id* is specified, only counters for that entry are reset, otherwise all entry counters are reset.

Parameters

all

Clears all IPv6 ISA filter entries.

entry-id

Specifies the ID of the entry within the ISA filter for which to reset the counters.

Values 1 to 1024

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6

Context

[\[Tree\]](#) (show>filter ipv6)

Full Context

show filter ipv6

Description

This command shows IPv6 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv6 filter policy.

Parameters

filter-type

Specifies the type of filter to display.

Values config, flowspec, host-common, openflow

inactive

Shows all embeddings, optionally shows inactive embedding only, if *ipv6-filter-id* is not specified shows all embedded filters.

ipv6-filter-id

Specifies the IPv6 filter policy for which to display information. Values can be expressed in different formats. The following only shows decimal integer format.

Values 1 to 65535

detail

Displays detailed information.

associations

Appends, to the detailed filter policy output, information as to where the specified filter policy ID is applied.

entry-type

Specifies type of filter entry to display.

Values fixed, radius-insert, credit-control-insert, embedded, radius-shared

counters

Displays counter information. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

entry-id

Specifies the filter policy entry (of the specified filter policy) to display information.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base" instance).

service-id

Filters the output and only displays the information for the specified service. The specified value should correspond to an existing service in which the filter has been applied.

Platforms

All

Table 225: IPv6 Filter Policy Output Fields

Label	Description
Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Entries	The number of entries configured in this filter ID
Description	The IPv6 filter policy description
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward

Label	Description
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	IP — Indicates the filter is an IPv6 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Log Id	The filter log ID
Src. IP	The source IPv6 address and mask match criterion <ul style="list-style-type: none"> • "::/0" indicates no criterion specified for the filter entry
Dest. IP	The destination IPv6 address and mask match criterion <ul style="list-style-type: none"> • "::/0" indicates no criterion specified for the filter entry
Protocol	The protocol ID for the match criteria; undefined indicates no protocol specified
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
Fragment	False — configures a match on all non-fragmented IPv6 packets
	True — configures a match on all fragmented IPv6 packets
	Off — fragments are not a matching criteria; all fragments and nonfragments implicitly match
Sampling	Off — specifies that traffic sampling is disabled
	On — specifies that traffic matching the associated IPv6 filter entry is sampled
IP-Option	Specifies matching packets with a specific IPv6 option or a range of IPv6 options in the IPv6 header for IPv6 filter match criteria
Match action	Default — the filter does not have an explicit forward or drop match action specified; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
	Drop — drop packets matching the filter entry
	Forward—the explicit action to perform is forwarding of the packet; if the action is Forward, then if configured, the next hop information should be displayed, including nexthop: <i>IPv6 address</i> , Indirect: <i>IPv6 address</i> or Interface: <i>IPv6 interface name</i>
Ing. Matches	The number of ingress filter matches/hits for the filter entry

Label	Description
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Dscp	The DiffServ Code Point (DSCP) name
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet
Tcp-flag	<p>Specifies the list of TCP flags selected:</p> <ul style="list-style-type: none"> • match true is represented with the TCP Flag value • match false is represented with an exclamation mark before the flag value <p>TCP flags not selected as match criteria are not displayed</p> <p>Example: Matching "tcp-ack true" and "tcp-rst false" is represented in the show command as Tcp-flag : Ack !Rst</p>
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv6 filter match criteria
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv6 header will be used as IPv6 filter match criteria
Egr. Matches	The number of egress filter matches/hits for the filter entry
Ing. Rate-limiter	The number of offered, forwarded, and dropped packet matches for the filter entry

Show Filter Associations — The following output is an example of IPv6 filter information when the **associations** keyword is specified, and [Table 226: Filter IPv6 Associations Output Fields](#) describes the fields.

Output Example

```
A:ALA-48# show filter ipv6 1 associations

Table 226: Filter IPv6 Associations Output Fields

Label	Description
Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Entries	The number of entries configured in this filter ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
SAP	The Service Access Point on which the filter policy ID is applied
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface
Type	The type of service of the service ID

Label	Description
Entry	The filter entry ID; if the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified
Log Id	The filter log ID
Src. IP	The source IPv6 address and mask match criterion <ul style="list-style-type: none"> • "0.0.0.0/0" indicates no criterion specified for the filter entry
Dest. IP	The destination IPv6 address and mask match criterion <ul style="list-style-type: none"> • "0.0.0.0/0" indicates no criterion specified for the filter entry
Protocol	The protocol ID for the match criteria; undefined indicates no protocol specified
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
Fragment	False — configures a match on all non-fragmented IPv6 packets
	True — configures a match on all fragmented IPv6 packets
	Off — fragments are not a matching criteria; all fragments and nonfragments implicitly match
Sampling	Off — specifies that traffic sampling is disabled
	On — specifies that traffic matching the associated IPv6 filter entry is sampled
IP-Option	Specifies matching packets with a specific IPv6 option or a range of IPv6 options in the IPv6 header for IPv6 filter match criteria
TCP-syn	False — configures a match on packets with the SYN flag set to false
	True — configures a match on packets with the SYN flag set to true
	Off — the state of the TCP SYN flag is not considered as part of the match criteria
Match action	Default — the filter does not have an explicit forward or drop match action specified; if the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified
	Drop — drop packets matching the filter entry
	Forward — the explicit action to perform is forwarding of the packet; if the action is Forward, then if configured the nexthop information should be displayed, including Nexthop: <IPv6

Label	Description
	address>, Indirect: <IPv6 address> or Interface: <IPv6 interface name>
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Dscp	The DiffServ Code Point (DSCP) name
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv6 filter match criteria
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv6 header will be used as IPv6 filter match criteria
TCP-ack	False — configures a match on packets with the ACK flag set to false
	True — configured a match on packets with the ACK flag set to true
	Off — the state of the TCP ACK flag is not considered as part of the match criteria
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter Counters — The following output is an example of IPv6 filter information when the **counters** keyword is specified, and [Table 227: Filter IPv6 Counters Output Fields](#) describes the output fields.

Egress count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Output Example

```
A:ALA-48# show filter ipv6 8 counters
=====
IPv6 Filter
=====
Filter Id      : 8                      Applied       : Yes

Table 227: Filter IPv6 Counters Output Fields

Label	Description
IP Filter Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	IP — Indicates the filter is an IPv6 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Egress count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Show Filter IPv6 Output (with effective-action specified) — The following output is an example of IPv6 filter information when the **effective-action** keyword is specified. [Table 228: Filter IPv6 effective-action Output Fields](#) describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- action not supported in L2 service
- action not supported in L3 service
- action not supported on egress
- destination not reachable
- egress-pbr is off
- egress-pbr is on
- entry-default
- filter-default-action
- pbr-down-action-override
- target does not exist

Output Example

```

show filter ipv6 10 entry 10 effective-action

Table 228: Filter IPv6 effective-action Output Fields

Label	Description
Filter Id	The IPv6 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Description	The IPv6 filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Origin	The type of filter entry
Egress PBR	Indicates if the egress-pbr flag is set for this entry
Stickiness	No — stickiness is not configured
	Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action

Label	Description
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	Indicates the effective action the packet will be subject to
Extended Action	Indicates the configured extended action, if any

ipv6

Syntax

ipv6 *ipv6-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[Tree] (clear>filter ipv6)

Full Context

clear filter ipv6

Description

Clears the counters associated with the entries of the specified IPv6 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified IPv6 filter policy.

Parameters

ipv6-filter-id

The IPv6 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following only shows decimal integer format.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

All

ipv6

Syntax

ipv6 *ipv6-filter-id*

Context

[\[Tree\]](#) (tools>dump>filter>resources ipv6)

Full Context

tools dump filter resources ipv6

Description

This command displays information about the specified IPv6 filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

Parameters

ipv6-filter-id

Specifies that only the filter resource utilization associated with this IPv6 filter will be displayed.

Values 1 to 65535

Platforms

All

Output

The following output is an example of IPv6 filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># ipv6 "fSpec-0"
=====
Resource utilization details for Ipv6 filter fSpec-0
=====
CPM entries used                : 0
CPM subentries used             : 0
TCAM entries used (per FlexPath) : 0
Associated with IOMs            : 2
-----
Largest 5 entries
-----
Entry ID                        Active          TCAM entries
                               (per FlexPath)
-----
No Matching Entries

ipv6

Syntax

```
ipv6 [timeout seconds] [ dhcp-client-identifier {duid-link-local | duid-enterprise} { string ascii-string |
hex hex-string}] [reboot-on-success] [ save-provision-file-destination file-url] [include-user-class]
```

Context

[\[Tree\]](#) (tools>perform>system>auto-node-provisioning ipv6)

Full Context

tools perform system auto-node-provisioning ipv6

Description

This command initiates the IPv6 auto-provisioning of the node on all the ports that have an operationally up port but no IP address.

Parameters

seconds

DHCP request timeout period, before the system tries the next interface. Within this timeout, the DHCP client tries to retransmit the DHCP request with randomized

exponential backoff (RFC 2131). This randomized exponential backoff begins at 2 s and goes to 64 s (2,4,8,32,64,64,64,64). After 64 seconds, the system will retry every 64 s.

Values 1 to 65535 seconds

Default 10

duid-link-local

Keyword to configure the type code of the server DUID.

duid-enterprise

Keyword to configure the type code of the server DUID.

ascii-string

DHCP client identifier in ASCII format, up to 127 characters long.

hex-string

DHCP client identifier in hexadecimal format, up to 254 hexadecimal nibbles long.

Values 0x0 to 0xFFFFFFFF

file-url

The file URL as a *local-url*. The local file or folder name should not exceed 99 characters).

local-url [flash-id]/[file-path]

flash-id cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:,
cf3-A:, cf3-B:

reboot-on-success

Keyword to reboot the router when the auto-provisioning process completes successfully.

include-user-class

Keyword to include user class data in network discovery requests.

Platforms

All

ipv6

Syntax

ipv6 entry *entry-id* [interval *seconds*] [repeat *repeat*] [absolute | rate]

Context

[Tree] (monitor>cpm-filter ipv6)

Full Context

monitor cpm-filter ipv6

Description

This command displays monitor command statistics for IPv6 filter entries.

Parameters

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2048

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6

Syntax

```
ipv6 entry-id [interval seconds] [repeat repeat] [absolute | rate]
```

Context

[\[Tree\]](#) (monitor>management-access-filter ipv6)

Full Context

```
monitor management-access-filter ipv6
```

Description

This command monitors statistics for the MAF IPv6 filter entry.

Parameters

entry-id

Specifies an existing IP MAF entry ID.

Values 1 to 9999

interval seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

ipv6

Syntax

```
ipv6 ipv6-filter-id entry entry-id [ interval seconds] [repeat repeat] [ absolute | rate]
```

Context

[\[Tree\]](#) (monitor>filter ipv6)

Full Context

monitor filter ipv6

Description

This command enables IPv6 filter monitoring. The statistical information for the specified IPv6 filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified IPv6 filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ipv6-filter-id

Displays detailed information for the specified IPv6 filter ID and its filter entries.

Values [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | *_tmnx_tms_egr- mda-id-F* | *_tmnx_tms-ing- mda-id-F* | *_tmnx_ofs_ofs-name* | *name*: 64 chars max

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

Output

The following output is an example of filter IPv6 information.

Context

[\[Tree\]](#) (show>router>bgp>routes ipv6)

Full Context

show router bgp routes ipv6

Description

This command displays BGP IPv6 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values `[as-num:comm-val | ext-comm | well-known-comm | large-comm]`

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:

- `{target | origin}:ip-address:comm-val`
- `{target | origin}:asnum:ext-comm-val`
- `{target | origin}:ext-asnum:comm-val`
- **bandwidth:asnum:val-in-mbps**
- **ext:4300:ovstate**
- **ext:value1:value2**
- **flowspec-set:ext-asnum:group-id**

where:

- *target* — route target
- *origin* — route origin
- *ip-address* — a.b.c.d
- *ext-comm-val* — 0 to 4294967295
- *ext-asnum* — 0 to 4294967295
- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended
- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFF
- **flowspec-set** — flow-spec set

- *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

originState

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

- Values**
- valid** — Displays valid validation state information.
 - invalid** — Displays invalid validation state information.
 - notfound** — Displays state information for unfound origin values.

leaked

Filters BGP routes displayed by the command to those routes leaked into this router's BGP instance from another BGP instance.

leakable

Filters BGP routes displayed by the command to those routes eligible for leaking from this router's BGP instance to another BGP instance.

brief

Displays the IPv4 BGP route information in a brief format.

all

Displays all output for imported routes.

12.57 ipv6-exception

ipv6-exception

Syntax

- ipv6-exception** *exception*
- ipv6-exception** *exception* [**associations**]
- ipv6-exception** *exception* [**counters**]
- ipv6-exception** *exception* **entry** *entry-id* [**counters**]

Context

[Tree] (show>filter ipv6-exception)

Full Context

```
show filter ipv6-exception
```

Description

This command shows IPv6 exception information.

Parameters

exception

Specifies the IPv6 exception filter.

Values *exception-id*: 1 to 65535
exception-name: An existing IPv6 exception filter name up to 64 characters.

associations

Displays associations applicable to the specified IPv6 exception.

counters

Displays counters for the specified IPv6 exception.

entry entry-id

Specifies an integer that identifies the entry.

Values 1 to 2097151

Platforms

VSR

Output

The following output is an example of IPv6 exception filter information, and [Table 229: IPv6 Exception Output Fields](#) describes the fields.

Output Example

```

Table 229: IPv6 Exception Output Fields

Label	Description
Configured IPv6-Exception Filters	The number of configured IPv6 exception filters.
Filter-Id	The filter ID.
Scope	Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive.
Applied	No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied.
Entries	The number of entries.

Label	Description
Description	The description of the specified filter, if specified.
Filter Name	The filter name.
Num IPv6-Exception filters	The number of IPv6 exception filters.
Entry	The number of active or inactive entries.
Src. IP	The source IP address of the logged packet.
Src. Port	The source port of the logged packet.
Dst. IP	The destination IP address of the logged packet.
Dst. Port	The destination port of the logged packet.
Next Header	8-bit selector. Identifies the type of header immediately following the IPv6 header.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet.
Ing. Matches	The number of packets matched on ingress.
Egr. Matches	The number of packets matched on egress.
Filter Association	Indicates the filter is an IPv6 filter policy.
Service Id	The service ID on which the IPv6 exception ID is applied.
Filter association with IOM	The number of filters associated with an IOM.

ipv6-exception

Syntax

ipv6-exception *exception* [**entry** *entry-id*] [**ingress**]

Context

[Tree] (clear>filter ipv6-exception)

Full Context

clear filter ipv6-exception

Description

This command clears the information about the IPv6 exception filter.

Parameters

exception

Specifies the IPv6 exception filter by ID or name.

Values *exception-id* | *exception-name*

exception-id

Specifies the IPv6 exception filter ID for which to clear the entry counters.

Values 1 to 65535

exception-name

Specifies name of the IPv6 exception filter, up to 64 characters.

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

Platforms

VSR

12.58 ipv6-filter

ipv6-filter

Syntax

ipv6-filter [**entry** *entry-id*]

Context

[\[Tree\]](#) (show>system>security>cpm-filter ipv6-filter)

Full Context

show system security cpm-filter ipv6-filter

Description

This command displays CPM IPv6 filters and only applies to the 7750 SR and 7950 XRS.

Parameters

entry-id

Identifies a CPM IPv6 filter entry as configured on this system.

Values 1 to 131072

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of IPv6 filter entry information.

[Table 230: Show CPM IPv6 Filter Output Fields](#) describes CPM IPv6 filter output fields.

The following is an output example on the 7750 SR:

```
A:ALA-35# show system security cpm-filter ipv6-filter
=====
CPM IPv6 Filters
=====
Entry-Id Dropped Forwarded Description
-----

Table 230: Show CPM IPv6 Filter Output Fields

Label	Description
Entry-Id	Displays information about the specified management access filter entry
Dropped	Displays the number of dropped events.
Forwarded	Displays the number of forwarded events.
Description	Displays the CPM filter description.
Log ID	Log Id where matched packets will be logged.
Src IP	Displays Source IP address(/netmask)
Dest. IP	Displays Destination IP address(/netmask).
Src Port	Displays Source Port Number (range).
Dest. Port	Displays Destination Port Number (range).
next-header	Displays next-header field in the IPv6 header.
Dscp	Displays Traffic Class field in the IPv6 header.
ICMP Type	Displays ICMP type field in the icmp header.
ICMP Code	Displays ICMP code field in the icmp header.
TCP-syn	Displays the SYN flag in the TCP header.
TCP-ack	Displays the ACK flag in the TCP header
Match action	When criteria matches, displays drop or forward packet.
Next Hop	In case match action is forward, indicates destination of the matched packet.
Dropped pkts	Indicating number of matched dropped packets
Forwarded pkts	Indicating number of matched forwarded packets.

ipv6-filter

Syntax

ipv6-filter [entry *entry-id*]

Context

[Tree] (show>system>security>mgmt-access-filter ipv6-filter)

Full Context

```
show system security management-access-filter ipv6-filter
```

Description

This command displays management-access IPv6 filters and only applies to the 7750 SR and 7950 XRS.

Parameters

entry-id

Specifies the IPv6 filter entry ID to display.

Values 1 to 9999

Platforms

All

Output

The following output is an example of MAF IPv6 filter information, and the table outlined in **show>system>security>mgmt-access-filter ip-filter** describes the output fields.

Output Example

```
*A:Dut-C# show system security management-access-filter ipv6-filter entry 1

ipv6-filter

Syntax

```
ipv6-filter [entry entry-id]
```

Context

[\[Tree\]](#) (clear>cpm-filter ipv6-filter)

Full Context

```
clear cpm-filter ipv6-filter
```

Description

This command clears IPv6 filter statistics.

Parameters

entry-id

Specifies a particular CPM IP filter entry.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-filter

Syntax

```
ipv6-filter ipv6-filter-id
```

Context

[\[Tree\]](#) (tools>perform>filter ipv6-filter)

Full Context

```
tools perform filter ipv6-filter
```

Description

Commands in this context perform IPv6 filter operations.

Parameters

ip-v6filter-id

Specifies a particular IPv6 filter ID or filter name.

Values *filter-id* | *filter-name*

filter-id

Specifies the IPv6 filter ID.

Values 1 to 65535

filter-name

Specifies name of the IPv6 filter, up to 64 characters.

Platforms

All

12.59 ipv6-prefix

ipv6-prefix

Syntax

```
ipv6-prefix [hunt | detail] [rd rd] [prefix ipv6-prefix/ipv6-prefix-length] [community comm-id] [tag tag] [next-hop next-hop] [aspath-regex reg-exp]
```

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn ipv6-prefix)

Full Context

```
show router bgp routes evpn ipv6-prefix
```

Description

This command displays BGP-EVPN IPv6 prefix routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

ipv6-prefix/ipv6-prefix-length

Specifies the IPv6 prefix and length.

Values

ipv6-prefix:	x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length:	0 to 128

comm-id

Specifies the community ID, up to 256 characters.

tag

Specifies the IPv6 prefix route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values		
ipv4-address:		a.b.c.d
ipv6-address:		x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

12.60 ipv6-prefix-list

ipv6-prefix-list

Syntax

ipv6-prefix-list

ipv6-prefix-list *prefix-list-name* [**association**]

Context

[\[Tree\]](#) (show>qos>match-list ipv6-prefix-list)

Full Context

show qos match-list ipv6-prefix-list

Description

Displays the list of configured IPv6 QoS prefix lists or the details of a specific IPv6 QoS prefix list together with the network QoS policies in which it is used and the entry number within that policy.

Parameters

prefix-list-name

Specifies an IPv6 prefix list which contains IPv6 address prefixes to be matched.

Values A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

association

Displays the QoS policy and entry number in which the specified prefix list is used.

Platforms

All

Output

The following output is an example of ipv6-prefix-list information

Output Example

```
*A:PE# show qos match-list ipv6-prefix-list

Syntax

```
ipv6-prefix-list [prefix-list-name]
```

```
ipv6-prefix-list prefix-list-name references
```

Context

```
[Tree] (show>filter>match-list ipv6-prefix-list)
```

Full Context

```
show filter match-list ipv6-prefix-list
```

Description

This command displays IPv6 prefixes information for match criteria in IPv6 ACL and CPM filter policies.

Parameters

prefix-list-name

A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

references

Displays the filter policies, policy entries and source/destination IPv6 match type per entry referring to this match list.

isa

Syntax

isa *video-group-id* [**esa-vm** *vapp-id*] [**lifetime-peaks**] [**hour-peaks**]

isa *video-group-id* [**md** *mda-id*] [**lifetime-peaks**] [**hour-peaks**]

Context

[\[Tree\]](#) (clear>video>statistics isa)

Full Context

clear video statistics isa

Description

This command clears statistics for a particular ISA video group.

Parameters

video-group-id

statistics for a particular ISA video group a video group ID.

Values 1 to 4

vapp-id

Specifies the video ISA Group Virtual Application ID

Values <esa-id>/<vm-id>

esa-id 1 to 16

vm-id 1 to 4

mda-id

Specifies the card/slot identifying a provisioned ISA

Values

mda-id: slot/mda

slot: 1 to 10 (depending on the chassis model)

mda: 1 to 2

lifetime-peaks

Clears the lifetime peaks

hour-peaks

Clears the last and current hour peaks

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

12.62 isa-collector

isa-collector

Syntax

isa-collector

Context

[\[Tree\]](#) (show>app-assure>group>cflowd>dir-exp isa-collector)

Full Context

show application-assurance group cflowd direct-export isa-collector

Description

This command displays cflowd collector assignments to ISAs.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.63 isa-filter

isa-filter

Syntax

isa-filter *name* [all]

Context

[\[Tree\]](#) (clear>subscr-mgmt isa-filter)

Full Context

clear subscriber-mgmt isa-filter

Description

This command resets the entry hit counts associated with the specified **isa-filter** to zero.

Parameters

name

Specifies the name of the ISA filter, up to 32 characters.

all

Clears all ISA filter entries.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-filter

Syntax

isa-filter

isa-filter *name*

isa-filter *name* **associations**

isa-filter *name* **ipv4**

isa-filter *name* **ipv6**

Context

[\[Tree\]](#) (show>subscr-mgmt isa-filter)

Full Context

show subscriber-mgmt isa-filter

Description

This command displays ISA filter information.

Parameters

name

Specifies the ISA filter name, up to 32 characters.

associations

Displays associated information about the specified ISA filter name.

ipv4

Display IPv4 ISA filter information for the specified ISA filter name.

ipv6

Display IPv6 ISA filter information for the specified ISA filter name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.64 isa-policer

isa-policer

Syntax

isa-policer *policer-name*

isa-policer *policer-name* **associations**

isa-policer

Context

[\[Tree\]](#) (show>subscr-mgmt isa-policer)

Full Context

show subscriber-mgmt isa-policer

Description

This command displays ISA policer information.

Parameters

policer-name

Specifies the ISA policer name, up to 32 characters.

associations

Displays associated information about the specified ISA policer name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.65 isa-radius-policy

isa-radius-policy

Syntax

isa-radius-policy *policy-name*

isa-radius-policy *policy-name* **associations**

Context

[\[Tree\]](#) (show>aaa isa-radius-policy)

Full Context

show aaa isa-radius-policy

Description

This command displays ISA RADIUS policy information.

Parameters

policy-name

Displays information about the specified ISA RADIUS policy.

associations

Displays the information associated with the ISA RADIUS server policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA ISA RADIUS policy information.

Output Example

```
*B:asd-tr0610-dr421# show aaa isa-radius-policy "ZiggoAAA_DRP_ISAPlcy"

[Table 231: Subscriber ISA RADIUS Policy Field Descriptions](#) describes subscriber ISA RADIUS policy output fields.

Table 231: Subscriber ISA RADIUS Policy Field Descriptions

Label	Description
Purposes Up	The RADIUS services that are up and running, and fully operational for this server
Source IP address	The IP address of the RADIUS server
Acct Tx Requests	The number of RADIUS transaction requests transmitted
Acct TX Retries	The number of RADIUS transaction request retries
Acct TX Timeouts	The number of RADIUS transaction requests that have timed out
Acct RX Replies	The number of RADIUS transaction responses received
Auth Tx Requests	The number of authentication requests transmitted
Auth Tx Retries	The number of authentication request retries
Auth Tx Timeouts	The number of RADIUS authentication requests that have timed out for the policy
CoA RX Requests	The number of Change-of-Authorization message responses received

isa-radius-policy

Syntax

isa-radius-policy *policy-name* **statistics**

Context

[\[Tree\]](#) (clear>aaa isa-radius-policy)

Full Context

clear aaa isa-radius-policy

Description

This command clears ISA RADIUS policy data.

Parameters

policy-name

Specifies the ISA RADIUS policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.66 isa-service-chaining

isa-service-chaining

Syntax

isa-service-chaining vas-filter *name*

Context

[\[Tree\]](#) (clear>subscr-mgmt isa-service-chaining)

Full Context

clear subscriber-mgmt isa-service-chaining

Description

This command clears all L2-aware NAT flows of all hosts associated with the VAS filter and can be used if all flows need re-evaluation against a modified set of matching criteria.

Parameters

name

Specifies the filter name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-service-chaining

Syntax

isa-service-chaining

Context

[\[Tree\]](#) (show>subscr-mgmt isa-service-chaining)

Full Context

show subscriber-mgmt isa-service-chaining

Description

Commands in this context display ISA service chaining information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-service-chaining

Syntax

isa-service-chaining

Context

[Tree] (show>router isa-service-chaining)

Full Context

show router isa-service-chaining

Description

This command displays information related to service chaining (for ESM hosts with L2-aware NAT) at the router level.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ISA service chaining information.

Output Example

```
show router isa-service-chaining
=====
ISA Service Chaining - Router "Base"
=====
VXLAN Tep range      : 1.2.3.4 - 1.2.3.8
NAT Groups           : 2
=====
```

Table 232: ISA Service Chaining

Label	Description
VXLAN Tep range	The VXLAN Tep Information (VTEP) range
NAT Groups	The NAT ISA group used in a virtual router for Service Chaining.

12.67 isa-subnets

isa-subnets

Syntax

isa-subnets [**detail**]

isa-subnets [**detail**] **interface** *interface-name*

isa-subnets **prefix** *ipv6-address/prefix-length*

Context

[Tree] (show>router>wlan-gw isa-subnets)

Full Context

show router wlan-gw isa-subnets

Description

This command outputs all the prefixes in use by the WLAN GW pool manager.

Parameters

detail

Displays detailed information for each prefix.

interface-name

Displays only the prefixes associated with this subscriber interface.

ipv6-address/prefix-length

Displays details of a specific IPv6 address and prefix.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of WLAN-GW ISA subnet information.

Output Example

```
system# show router wlan-gw isa-subnets
=====
ISA Subnets
=====
Prefix                               MDA      Family  Usage

2001:db8:a::/48                        5/1      slaac   0%
```

isa-subnets prefix *ipv6-address/prefix-length*

Context

[\[Tree\]](#) (clear>router>wlan-gw isa-subnets)

Full Context

clear router wlan-gw isa-subnets

Description

This command clears specific subnets from the pool-manager. Associated UE's is removed from the system.

When clearing the last subnet on an ISA the pool-manager will automatically allocate a new subnet with allocation-level 0%.

Parameters

all

Clears all the isa-subnets.

ip-int-name

Clears all the isa-subnets of a specific subscriber-interface.

ipv6-address/prefix-length

Clears a specific IPv6 address and prefix length.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.68 isid-route-target

isid-route-target

Syntax

isid-route-target

Context

[\[Tree\]](#) (show>service>id>bgp-evpn isid-route-target)

Full Context

show service id bgp-evpn isid-route-target

Description

This command displays a list of the auto-derived or configured ISID-based route-targets per B-VPLS service. The entries show the ISID ranges and association to either an auto-rt or an actual configured route-target.

The auto-rt display format is: <2-byte-as-number>:<4-byte-value>, where: 4-byte-value = 0x30+ISID.

Platforms

All

Output

Output Example

```
*A:PE-2# show service id 10 bgp-evpn isid-route-target

isid-using

Syntax

```
isid-using [ISID]
```

Context

[\[Tree\]](#) (show>service isid-using)

Full Context

```
show service isid-using
```

Description

This command displays services using an ISID.

Parameters

ISID

Specifies a 24 bit (0 to 16777215) service instance identifier for this service. As part of the Provider Backbone Bridging frames, it is used at the destination PE as a demultiplexor field.

Values 0 to 16777215

Platforms

All

Output

The following output is an example of services using ISID information.

Output Example

```
*A:SetupCLI# show service isid-using

14.2 I2-aware-blocks

I2-aware-blocks

Syntax

I2-aware-blocks [**outside-ip-prefix** *ip-prefix/length*] [**outside-port** [1..65535]] [**pool** *pool-name*]

Context

[\[Tree\]](#) (show>router>nat I2-aware-blocks)

Full Context

```
show router nat l2-aware-blocks
```

Description

This command displays Layer 2 aware NAT blocks.

Parameters

ip-prefix

Specifies the IP prefix.

Values a.b.c.d (host bits must be 0)

length

Specifies the IP prefix length.

Values 1 to 32

pool-name

Specifies the pool name up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
show router nat l2-aware-blocks
=====
Layer-2-Aware NAT blocks for Base
=====
10.81.0.0 [32..33]
Pool : MyPool
Policy : outPolicy
Started : 2010/02/04 16:24:55
Subscriber ID : Sub001
10.81.0.0 [34..35]
Pool : MyPool
Policy : outPolicy
Started : 2010/02/04 16:25:24
Subscriber ID : Sub003
10.81.0.203 [32..41]
Pool : MyPool2
Policy : outPolicy2
Started: 2010/02/04 16:25:21
Subscriber ID : Sub002
-----
Number of blocks: 3
=====
```

14.3 I2-aware-hosts

I2-aware-hosts

Syntax

I2-aware-hosts [**outside-router** *router-instance*] [**outside-ip** *outside-ip-address*] [**inside-ip-prefix** *ip-prefix/mask*] [**vas-filter** *vas-filter-name*]

Context

[\[Tree\]](#) (show>service>nat I2-aware-hosts)

Full Context

show service nat I2-aware-hosts

Description

This command displays layer-2 aware NAT hosts.

Parameters

nat-policy-name

Specifies the NAT policy name, up to 32 characters.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

router-instance

Specifies the router instance.

Values	router-name:	Base , management
	service-id:	1 to 2147483647
	svc-name:	A string up to 64 characters in length.

outside-ip-address

Specifies the outside IP address.

Values a.b.c.d

sub-ident

Specifies the identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
show service nat l2-aware-hosts
=====
Layer-2-Aware NAT hosts
=====
Inside IP Out-Router Outside IP Subscriber
-----
10.0.0.100 Base 10.81.0.0 Sub001
10.0.0.102 Base 10.81.0.0 Sub001
10.0.0.101 Base 10.81.0.203 Sub002
10.0.0.103 Base 10.81.0.0 Sub003
-----
No. of hosts: 4
=====
```

14.4 l2-aware-sub

l2-aware-sub

Syntax

l2-aware-sub *sub-ident-string*

l2-aware-sub *sub-ident-string* **firewall-statistics**

Context

[\[Tree\]](#) (clear>nat l2-aware-sub)

Full Context

clear nat l2-aware-sub

Description

This command clears NAT mappings for L2-Aware subscribers.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 64 characters.

firewall-statistics

Clears only the firewall counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

14.5 I2-aware-subscribers

I2-aware-subscribers

Syntax

I2-aware-subscribers subscriber sub-ident

I2-aware-subscribers [nat-policy nat-policy-name] [nat-group nat-group-id] [member [1..255]] [outside-router router-instance] [outside-ip outside-ip-address] [firewall-policy policy-name]

Context

[\[Tree\]](#) (show>service>nat I2-aware-subscribers)

Full Context

show service nat I2-aware-subscribers

Description

This command displays layer-2 aware NAT subscribers.

Parameters

nat-policy-name

Specifies the NAT policy name, up to 32 characters.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

router-instance

Specifies the router instance.

Values	router-name:	Base, management
	service-id:	1 to 2147483647
	svc-name:	A string up to 64 characters.

outside-ip-address

Specifies the outside IP address.

Values a.b.c.d

sub-ident

Specifies the identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
show service nat l2-aware-subscribers
=====

14.6 I2-route-table

I2-route-table

Syntax

I2-route-table [detail] [bgp-ad] [multi-homing] [bgp-vpls] [bgp-vpws] [all-routes]

Context

[\[Tree\]](#) (show>service l2-route-table)

Full Context

show service l2-route-table

Description

This command displays Layer 2 route table information.

Parameters

detail

Displays detailed information.

bgp-ad

Displays BGP AD related information.

multi-homing

Displays multihoming related information.

bgp-vpls

Displays BGP VPLS related information.

bgp-vpws

Displays BGP VPWS related information.

all-routes

Displays active or inactive routes.

Platforms

All

Output

Use the following command to display Layer 2 route table information.

Output Example

```
show service l2-route-table
```

```
=====

Table 233: Output Fields: show service id I2-route-table

Label	Description
Admin State	Displays the administrative state of the service Up — Indicates the service is administratively enabled Down — Indicates the service is administratively disabled
Vpls Id	Displays the Virtual Private LAN Service (VPLS) ID
Prefix	Displays information for the specified IP prefix and mask length
Veld	Displays the VEID for BGP-VPLS routes
PW Temp Id	Displays the Pseudowire (PW) temporary ID
RD	Displays information for the route distinguisher
Next Hop	Displays the next hop for the route
State (D-Bit)	Displays the state of the Disable-bit (D-bit). The D-bit ensures packet integrity between the terminal and host packet assembler/disassemblers
Path MTU	Displays the maximum transmission unit (MTU) of the path
Hash Label Tx	Displays the transmit hash label value
Hash Label Rx	Displays the receive hash label value

Label	Description
Control Word	Displays information about the control word. The control word is an optional 4-byte field used in the pseudowire packet
Seq Delivery	Displays information about sequence delivery
DF Bit	Displays information about the DF bit
Status	Displays the status of the service
Sdp Bind Id	Displays information about the SDP binding ID

14.7 I2-services

I2-services

Syntax

I2-services [**service** *service-id*]

Context

[\[Tree\]](#) (show>cflowd I2-services)

Full Context

show cflowd I2-services

Description

This command displays Layer 2 and SAP/SDP services on which Layer 2 sampling is enabled.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278386, svc-name: up to 64 characters

Platforms

All

Output

The following output is an example of cflowd Layer 2 services information.

Output Example

```
*A:Dut-B>config>cflowd# show cflowd l2-services
```

```

=====
Cflowd L2-Services

14.8 I2-vpn

I2-vpn

Syntax

I2-vpn [**aspath-regex** *reg-exp*] [**community** *comm-id*] [**rd** *rd*] [**brief**] [**I2vpn-type**] [**veid** *veid*] [**offset** *vpls-base-offset*] [**siteid** *site-id*]

I2-vpn [**aspath-regex** *reg-exp*] **hunt** [**community** *comm-id*] [**rd** *rd*] [**brief**] [**I2vpn-type**] [**veid** *veid*] [**offset** *vpls-base-offset*] [**siteid** *site-id*]

I2-vpn [**detail** | **longer**] [**aspath-regex** *reg-exp*] [**community** *comm-id*] [**rd** *rd*] [**I2vpn-type**] [**veid** *veid*] [**offset** *vpls-base-offset*] [**siteid** *site-id*]

Context

[\[Tree\]](#) (show>router>bgp>routes I2-vpn)

Full Context

show router bgp routes I2-vpn

Description

This command displays BGP flow L2-VPN routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535

- *ext-comm* — the extended community, defined as one of the following:
 - *{target | origin}:ip-address:comm-val*
 - *{target | origin}:asnum:ext-comm-val*
 - *{target | origin}:ext-asnum:comm-val*
 - **bandwidth:asnum:val-in-mbps**
 - **ext:4300:ovstate**
 - **ext:value1:value2**
 - **flowspec-set:ext-asnum:group-id**where:
 - *target* — route target
