# 1 Getting started

This guide contains command descriptions for the common operational **clear**, **monitor**, **show**, and **tools** CLI commands that are used to manage the SR OS in either the classic CLI or the MD-CLI.

See the *7250 IXR, 7450 ESS, 7705 SAR Gen 2, 7750 SR, 7950 XRS, and VSR Acronyms Reference Guide* for expansions of acronyms used in this guide.

The output of the common operational commands is always the same in the classic CLI and the MD-CLI. The command names and syntaxes of the common operational commands in the classic CLI and the MD-CLI are also compatible. The MD-CLI ? help and command completion only displays parameters that are valid next in order based on what has been entered, while the classic CLI displays all parameters that can be entered out of order. Commands in the MD-CLI can be entered out of order by entering the complete command and parameters without using command completion.

This guide does not include any other classic or MD-CLI commands. These commands are documented in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide* and the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide*.

**Note:**

This guide generically covers Release 25.x.Rx content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the SR OS R25.x.Rx Software Release Notes, part number 3HE 21562 000x TQZZA, for information about the supported features and applicable platforms in each load of the Release 25.x.Rx software.

The full set of CLI commands supported by the SR OS is documented in three related guides that are listed in the following table.

*Table 1: Documentation for SR OS CLI commands*

Guide title	Classic CLI commands	MD-CLI commands
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR Clear, Monitor, Show, and Tools CLI Command Reference Guide</i>	All <b>clear</b> , <b>monitor</b> , <b>show</b> , and <b>tools</b> commands	All <b>clear</b> , <b>monitor</b> , <b>show</b> , and <b>tools</b> commands
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide</i>	All other commands	—
<i>7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide</i>	—	All other commands

## 1.1 Platforms and terminology

**Note:**

Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

*Table 2: Platforms and terminology*

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	

Platform	Collective platform designation
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	7450 ESS
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-1-24D	7750 SR-1 (FP5)
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	7750 SR-7/12/12e
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12
7750 SR-12	
7750 SR-a4	7750 SR-a
7750 SR-a8	
7750 SR-1e	7750 SR-e
7750 SR-2e	

Platform	Collective platform designation
7750 SR-3e	7750 SR-s
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	7950 XRS
7950 XRS-20e	
7950 XRS-40	
VSR	VSR
VSR-NRC	

## 1.2 Command tree

The SR OS CLI command tree is a hierarchical inverted tree. The highest level is the root level. Below this level are other tree levels with the major command groups; for example, **show** commands and **tools** commands are levels below root.

In the tree, you can click a command to link directly to the command description.

**Note:** Commands that are listed in the tree but are not linked to an associated description are available on one or more platforms but are not currently described in the guide.

## 1.3 Command descriptions

Command descriptions are listed in alphabetical order by command name.

The following figure shows an example of a command description.

Figure 1: Command description example

**policers**

Syntax

policers

Context

[Tree] (show>app-assure>group>policy>aa-sub policers)

Full Context

show application-assurance group policy aa-sub policers

Description

This command displays policer configuration information.

Output

The following is an example output for the **policers** command.

Sample Output

A:cpm-a>show>app-assure>group>aa-sub# policers  
=====

Application-Assurance Subscriber Policer Summary

=====

AA-Subscriber

: Alex (esm)

=====

Type: single-bucket-bandwidth Direction: subscriber-to-network

=====

AQP Policer Resource Exceeded?

=====

61 SuspectUp\_policer N

=====

Type: single-bucket-bandwidth Direction: network-to-subscriber

=====

AQP Policer Resource Exceeded?

=====

62 SuspectDown\_policer N

=====

Policer usage counts:

single-bucket-bandwidth

subscriber-to-network 1 out of 32

network-to-subscriber 1 out of 32

dual-bucket-bandwidth

subscriber-to-network 0 out of 1

network-to-subscriber 0 out of 1

flow-count-limit 0 out of 8

flow-rate-limit 0 out of 8

=====

A:cpm-a>show>app-assure>group>aa-sub#

sw3088

The following table describes the fields that may be shown for a command. Not all fields are applicable for all commands.

Table 3: Command description fields

Field	Description
Command Name	Name of the command
Syntax	Command syntax required to execute the command. For further information about command syntax, see the 7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide or the 7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide.
Context	Path to the command as it is displayed in the CLI prompt. Clicking on [Tree] links to the command in the CLI tree.
Full Context	Complete contextual path to perform the command
Description	Description of the command functionality and any restrictions
Default	Command default value

3HE 21201 AAAC TQZZA 01

© 2025 Nokia.

Use subject to Terms available at: [www.nokia.com/terms](http://www.nokia.com/terms).

9

Field	Description
Parameters	Descriptions of command parameters
Values	Values allowed for the parameter
Default	Parameter default value
Platforms	Hardware platforms on which the command is available. See <a href="#">Platforms and terminology</a> for more information about the platforms. <b>Note:</b> Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the SR OS R25.x.Rx Software Release Notes, part number 3HE 21562 000x TQZZA, for information about platform support.

The **monitor** and **show** commands may also show command output and a description of the fields found in that output. Command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

**Note:** All options for enumerated types and numerical ranges are listed in the command descriptions; however, not all options or ranges are valid on all platforms.

## 1.4 Navigational aids

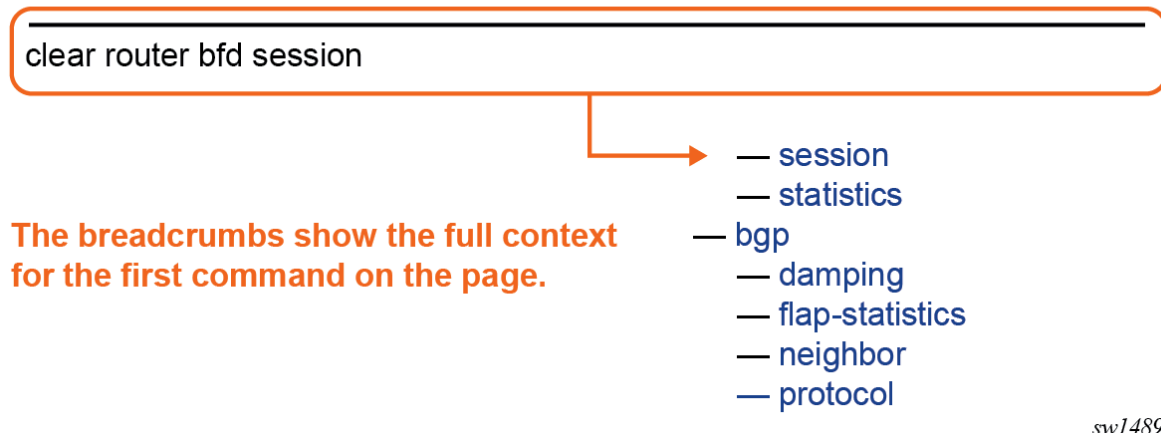

The following aids help you navigate the guide and find specific commands.

### 1.4.1 Context path

In the CLI tree section, the complete contextual path to the first command on the page is shown at the top of the page, as shown in the following figure.

Figure 2: Command tree navigation

## Command Trees

### 1.4.2 Search tips

Use the following search tips to easily find information about a specific command using a search function:

- Enter the command name in the search input field.
- To optimize your search, specify one or more levels of the contextual path before the command name.

**Note:** The Full Context section in each command description shows the full path to the command, as described in [Command descriptions](#).

- Do not include variables in the search phrase.

For example, to search for the **show router mpls lsp status** command, entering "**lsp status**" is more efficient than "**status**" and limits the number of search results. Using "**lsp <lsp-name> status**" does not return any results.

**Caution:** Using a combination of hyphenated terms with other terms within the same quoted search phrase (for example, searching for "**cert-profile entry send-chain**") may produce inaccurate search results in WebHelp

### 1.4.3 Linking to the tree

Clicking on [Tree] in a command description context links directly to the command in the CLI tree. The following figure shows the [Tree] element.

Figure 3: Link to CLI tree

Syntax	<b>policers</b>
Context	<a href="#">[Tree]</a> (show>app-assure>group>policy>aa-sub policers)
Full Context	show application-assurance group policy aa-sub policers
Description	This command displays policer configuration information.
Output	The following is an example output for the <b>policers</b> command. <div>sw3087</div>

## 2 Command Trees

## 2.1 clear Commands

The CLI **clear** commands are primarily used to set statistics in a specific area back to a value of zero, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

```
- clear
  - aaa
    - diameter-node
    - isa-radius-policy
    - l2tp-accounting-policy
    - radius-server-policy

## 2.2 monitor Commands

The CLI **monitor** commands are found in the **monitor** context of the operational root of the CLI tree. The **monitor** commands display specified statistical information related to the monitor subject (such as filter, port, QoS, router, service, and VRRP) at a configurable interval until a count is reached.

The **monitor** command output displays a snapshot of the current statistics. The output refreshes with subsequent statistical information at each configured interval and is displayed as a delta to the previous output.

The <Ctrl-C> keystroke interrupts a monitoring process. **monitor** command configurations cannot be saved. You must enter the command for each monitoring session. If the maximum limits are configured, you can monitor the statistical information for a maximum of 60 x 999 s (approximately 1000 minutes).

## 2.3 show Commands

The CLI **show** commands display useful information in the format of a human-readable report, with the ability to add or remove output based on additional parameters. The information in the output of the **show** commands consists of configuration and operational information, and may also perform calculations or additional processing to display some of the output.

The information in the output of the **show** commands can also be found in the **state** and **configure** branches of the MD-CLI (as well as via model-driven interfaces such as NETCONF and gRPC). The output of these branches is fully modeled in YANG with structured data that can be easily manipulated by tools and applications (including pySROS and NETCONF clients). The pySROS and MD-CLI command alias features can be used together to create custom **show** commands using the modeled data. See "Command aliases" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.

## 2.4 tools Commands

The CLI **tools** commands provide two primary functions:

- dump
- perform

The **tools dump** commands provide additional detailed and enhanced information about the router.

The **tools perform** commands provide the ability to trigger a variety of actions in the router, such as a card power cycle ( **tools perform card power-cycle**), and APS switchovers.

```

## 3 2 Commands

### 3.1 24-hours

#### 24-hours

##### Syntax

**24-hours**

**24-hours application** *license-app*

**24-hours application** *license-app history*

**24-hours history**

##### Context

[\[Tree\]](#) (show>system>license-statistics 24-hours)

##### Full Context

show system license-statistics 24-hours

##### Description

This command displays application license statistics for the last 24 hours.

##### Parameters

***license-app***

Specifies the application license.

**Values**    Ins, nat, sub-mgmt, wlan-gw, aa, ipsec

**history**

Displays additional 24 hour statistics.

##### Platforms

VSR

## 4 a Commands

### 4.1 aa-anl-list

aa-anl-list

**Syntax**

**aa-anl-list** [**congested-only**] [**sort-type** { **top-by-subs** | **top-by-rate**}] [**isa** *mda-id*]  
**aa-anl-list** **summary**

**Context**

[\[Tree\]](#) (tools>dump>app-assure>group aa-anl-list)

**Full Context**

tools dump application-assurance group aa-anl-list

**Description**

This command displays the list of active ANLs detected by AA along with the associated conditions (for example, congestion, measured rate, and number of subscribers).

**Parameters**

**congested-only**

Specifies only congested ANLs.

**sort-type**

Filters by the specified sub-type.

- Values**
- top-by-subs** — Displays the top ANLs sorted by measured ANL bandwidth.
- top-by-rate** — Displays the top ANLs sorted by those ANLs that have the highest number of subscribers.

**mda-id**

Specifies the slot and MDA in the format *slot/mda*.

- Values**
- slot*—1 to 10
- mda*—1 or 2

**summary**

Displays summary information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of aa-anl-list information.

Output Example

```
A:Dut-C# tools dump application-assurance group 120:10 aa-anl-list
=====
Application-Assurance Access Network Location List: Group 120:10, ISA 3/1
=====
Type                Location                Congestion State    Rate (kbps)  Subscribers
-----
AP-MAC+VLAN        23:89:be:c2:64:50+1034  RTT Limits Exceeded  21961        113
AP-MAC+VLAN        83:2d:3d:73:c4:9a+4090  RTT Limits Exceeded  15963         86
AP-MAC+VLAN        f2:ee:cc:47:71:f7+0034  Not Congested        6147         12
=====
```

4.2 aa-interface

aa-interface

Syntax

**aa-interface isa** *mda-id*

Context

[\[Tree\]](#) (show>app-assure>group aa-interface)

Full Context

show application-assurance group aa-interface

Description

This command displays AA interface information.

Parameters

***mda-id***  
Specifies the MDA ID.

Values	<mda-id>	<slot>/<mda>
	slot	[1 to 10] (depending on platform)
	mda	[1 to 2]

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.3 aa-sub

### aa-sub

#### Syntax

**aa-sub** *esm sub-ident-string* [**snapshot**]

**aa-sub** *esm-mac esm-mac-name* [**snapshot**]

**aa-sub** *sap sap-id*

**aa-sub** *spoke-id sdp-id:vc-id* [ **snapshot**]

**aa-sub** *transit transit-aasub-name* [**snapshot**]

#### Context

[\[Tree\]](#) (show>app-assure>group aa-sub)

#### Full Context

show application-assurance group aa-sub

#### Description

This command displays per-subscriber statistics.

#### Parameters

##### **esm sub-ident-string**

Specifies an existing subscriber identification string.

##### **esm-mac esm-mac-name**

Specifies an existing subscriber MAC.

##### **sap sap-id**

Specifies the physical port identifier portion of the SAP definition.

##### **spoke-id sdp-id:vc-id**

Specifies the spoke SDP ID and VC ID.

<b>Values</b>	1 to 17407
	1 to 4294967295

##### **snapshot**

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

### **transit *transit-aasub-name***

Specifies an existing transit subscriber name string up to 32 characters in length.

## **Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **Output**

The following output is an example of the **aa-sub** command information.

### **Output Example**

```

## aa-sub

### Syntax

**aa-sub dsm mac** *mac-address* [**snapshot**]

**aa-sub esm** *sub-ident-string*

**aa-sub esm-mac** *esm-mac-name*

**aa-sub transit** *transit-aasub-name*

### Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub)

### Full Context

tools dump application-assurance group aa-sub

### Description

This command displays AA subscriber information for a specific ISA.

### Parameters

#### ***esm-mac-name***

Specifies the ESM MAC name; a maximum of 32 characters.

#### ***mac-address***

Specifies the MAC address in xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx format.

#### ***snapshot***

Displays snapshot statistics.

#### ***sub-ident-string***

Specifies the AA subscriber identifier string, up to 32 characters.

#### ***transit-aasub-name***

Specifies the AA transit subscriber name, up to 32 characters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### Output

The following output is an example of AA subscriber information.

Output Example

```

aa-sub

Syntax

- aa-sub esm** *sub-ident-string*
- aa-sub esm-mac** *esm-mac-name*
- aa-sub sap** *sap-id*
- aa-sub spoke-id** *sdp-id:vc-id*
- aa-sub transit** *transit-aasub-name*

Context

[\[Tree\]](#) (tools>perform>app-assure>group aa-sub)

## Full Context

tools perform application-assurance group aa-sub

## Description

This command performs application assurance group aa-sub operations.

## Parameters

### ***esm sub-ident-string***

Specifies an existing subscriber identification string.

### ***esm-mac esm-mac-name***

Specifies an existing subscriber MAC.

### ***sap sap-id***

Specifies the physical port identifier portion of the SAP definition.

### ***spoke-id sdp-id:vc-id***

Specifies the spoke SDP ID and VC ID.

<b>Values</b>	1 to 17407
	1 to 4294967295

### ***transit transit-aasub-name***

Specifies an existing transit subscriber name string up to 32 characters in length.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.4 aa-sub-list

aa-sub-list

## Syntax

**aa-sub-list** [*isa mda-id*]

**aa-sub-list policers-exceeded**

**aa-sub-list summary**

## Context

**[Tree]** (show>app-assure>group aa-sub-list)

## Full Context

show application-assurance group aa-sub-list

Description

This command displays AA subscriber lists.

Parameters

**isa mda-id**

Displays the slot and MDA ID.

**Values**    1 to 10 (depending on chassis model)  
              1, 2

**summary**

Displays summary information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **aa-sub-list** command information.

Output Example

```
*A:Dut-C# show application-assurance group 74:40346 aa-sub-list summary

```

Full Context

```
tools dump application-assurance group aa-sub-list
```

Description

This command displays the AA subscriber list for a specific ISA.

Parameters

**filter-by-type** *sub-type*

Filters by the specified sub-type.

**Values**     dsm, esm, esm-mac, sap, spoke-sdp, transit

**mda-id**

Specifies the slot and MDA in the format *slot/mda*.

**Values**     *slot*—1 to 10  
              *mda*—1 or 2

**summary**

Displays summary information.

**quarantined-only**

Displays the AA subscribers that are under quarantine.

**policers-exceeded**

Displays subscribers that have exceeded policer resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber list information.

Output Example

## 4.5 aa-sub-search

### aa-sub-search

**Syntax**  
`aa-sub-search search-type granularity [direction direction] [max-count max-count]`

**Context**  
[\[Tree\]](#) (tools>dump>app-assure>group aa-sub-search)

**Full Context**  
tools dump application-assurance group aa-sub-search

**Description**  
This command displays AA aa-sub information.

**Parameters**

**search-type**  
Specifies the type of search.  
**Values** top

**granularity**  
Specifies the granularity of the search.  
**Values** bytes, packets, flows

**direction direction**  
Specifies the network/subscriber direction.

**Values** from-sub, to-sub, both

**max-count** *max-count*

Specifies the maximum flows to display.

**Values** 1 to 100

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of AA aa-sub information.

**Output Example**

```

```

## Context

[\[Tree\]](#) (show>app-assure>group aa-sub-study)

## Full Context

show application-assurance group aa-sub-study

## Description

This command displays per-subscriber special study statistics.

## Parameters

### **esm sub-ident-string**

Specifies an existing subscriber identification string.

### **esm-mac esm-mac-name**

Specifies an existing subscriber MAC.

### **sap sap-id**

Specifies the physical port identifier portion of the SAP definition.

### **spoke-id sdp-id:vc-id**

Specifies the spoke SDP ID and VC ID.

**Values**    1 to 17407  
             1 to 4294967295

### **snapshot**

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

### **transit transit-aasub-name**

Specifies an existing transit subscriber name string.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.7 aa-sub-using

tools perform aaa

### Description

Commands in this context perform AAA operations.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.9 aarp

aarp

### Syntax

**aarp**

**aarp** *aarpld*

### Context

[\[Tree\]](#) (show>app-assur aarp)

### Full Context

show application-assurance aarp

### Description

This command displays the Application Assurance Redundancy Protocol (AARP) instance status.

### Parameters

***aarpld***

Specifies an integer that identifies an AARP instance.

**Values** 1 to 65535

**detail**

Displays detailed information.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

### Syntax

**aarp** *aarpld* **event-history** **[clear]**

### Context

[\[Tree\]](#) (tools>dump>application-assurance aarp)

### Full Context

tools dump application-assurance aarp

## Description

This command dumps application-assurance AARP information for a specified instance.

## Parameters

***aarpld***

Specifies the AARP ID.

**Values** 1 to 65535

**event-history**

Dumps historical information for the instance.

**clear**

Clears the event history after reading.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

## Syntax

**aarp *aarpld* force-evaluate**

## Context

[\[Tree\]](#) (tools>perform>app-assure aarp)

## Full Context

tools perform application-assurance aarp

## Description

This command performs Application Assurance Redundancy Protocol instance operations.

## Parameters

***aarpld***

Specifies an integer that identifies an AARP instance.

**Values** 1 to 65535

**force-evaluate**

Forces a re-evaluation of the preferred AARP instance.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.10 abort-startup-wait

### abort-startup-wait

#### Syntax

**abort-startup-wait**

#### Context

**[Tree]** (tools>perform>router>dhcp6>server>failover abort-startup-wait)

**[Tree]** (tools>perform>router>dhcp>server>failover abort-startup-wait)

**[Tree]** (tools>perform>router>dhcp>server>pool>failover abort-startup-wait)

**[Tree]** (tools>perform>router>dhcp6>server>pool>failover abort-startup-wait)

#### Full Context

tools perform router dhcp6 local-dhcp-server failover abort-startup-wait

tools perform router dhcp local-dhcp-server failover abort-startup-wait

tools perform router dhcp local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server pool failover abort-startup-wait

#### Description

This command aborts the running start-up-wait time, forcing the DHCP server to transition immediately to the COMMUNICATIONS-INTERRUPTED state.

The start-up-wait time is started after a boot to enable two redundant routers to synchronize the DHCP server lease database before transitioning to the (PRE-)NORMAL state when the last state record from the peer is synchronized. If the last state record is not received before the start-up-wait time expires, it is assumed that the remote DHCP server is not operational and the DHCP server goes in COMMUNICATIONS-INTERRUPTED state.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.11 access-group

### access-group

#### Syntax

**access-group** *[group-name]*

## Context

[\[Tree\]](#) (show>system>security access-group)

## Full Context

show system security access-group

## Description

This command displays access-group information.

## Platforms

All

## Output

The following output is an example of access group information.

[Table 4: Output fields: system security access group](#) describes the access-group output fields.

### Output Example

```
A:ALA-1# show system security access-group
=====
Access Groups
=====
group name      security  security  read      write      notify

-----
No. of Access Groups: 8
=====
```

Table 4: Output fields: system security access group

Label	Description
Group name	The access group name
Security model	The security model required to access the views configured in this node
Security level	Specifies the required authentication and privacy levels to access the views configured in this node
Read view	Specifies the view to read the MIB objects
Write view	Specifies the view to configure the contents of the agent

Label	Description
Notify view	Specifies the view to send a trap about MIB objects
No. of access groups	The total number of configured access groups

## 4.12 accounting-policy

accounting-policy

**Syntax**

accounting-policy [*acct-policy-id*] [**access** | **network**] [**associations**]

**Context**

[\[Tree\]](#) (show>log accounting-policy)

**Full Context**

show log accounting-policy

**Description**

This command displays accounting policy information.

**Parameters**

*policy-id*

Specifies the policy ID that uniquely identifies the accounting policy, expressed as a decimal integer.

**Values**    1 to 99

**access**

Specifies to only display access accounting policies.

**network**

Specifies to only display network accounting policies.

**association**

Displays accounting-policy associations.

**Platforms**

All

**Output**

The following output is an example of accounting policy information.

[Table 5: Output fields: accounting policy](#) describes accounting policy output fields.

## Output Example

```
A:ALA-1# show log accounting-policy

A:ALA-1#

*Table 5: Output fields: accounting policy*

Label	Description
Policy ID	The identifying value assigned to a specific policy.
Type	Identifies accounting record type forwarded to the configured accounting file.  access — Indicates that the policy is an access accounting policy.  network — Indicates that the policy is a network accounting policy.  none — Indicates no accounting record types assigned.
Def	Yes — Indicates that the policy is a default access or network policy.  No — Indicates that the policy is not a default access or network policy.
Admin State	Displays the administrative state of the policy.  Up — Indicates that the policy is administratively enabled.  Down — Indicates that the policy is administratively disabled.
Oper State	Displays the operational state of the policy.  Up — Indicates that the policy is operationally up.  Down — Indicates that the policy is operationally down.
Intvl	Displays the interval, in minutes, in which statistics are collected and written to their destination. The default depends on the record name type.
File ID	The log destination.
Record Name	The accounting record name which represents the configured record type.
This policy is applied to	Specifies the entity where the accounting policy is applied.

### 4.13 accounting-records

accounting-records

**Syntax**  
accounting-records

**Context**  
[\[Tree\]](#) (show>log accounting-records)

**Full Context**  
show log accounting-records

**Description**  
This command displays accounting policy record names.

**Platforms**  
All

**Output**  
The following output is an example of accounting records output information.  
[Table 6: Output fields: accounting records](#) describes accounting records output fields.

Table 6: Output fields: accounting records

Label	Description
Record #	The record ID that uniquely identifies the accounting policy, expressed as a decimal integer.
Record Name	The accounting record name.
Def. Interval	The default interval, in minutes, in which statistics are collected and written to their destination.

**Output Example**

 **Note:**  
aa, video and subscriber records are not applicable to the 7950 XRS.

```

## 4.14 acct-off

### acct-off

#### Syntax

**acct-off** [**radius-server-policy** *policy-name*] [**force**] [**acct-terminate-cause** *number*]

#### Context

[\[Tree\]](#) (tools>perform>aaa acct-off)

#### Full Context

tools perform aaa acct-off

#### Description

This command triggers a RADIUS Accounting-Off message:

- for all radius-server-policies that have acct-on-off configured
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-Off message is not sent when the last successful event for the radius server policy was an Accounting-Off message. In this case, an Accounting-On should be sent first. By specifying the keyword **force**, this is overruled.

#### Parameters

##### *policy-name*

Specifies the **radius-server-policy** for which the Accounting-Off should be sent.

##### **force**

Sends an Accounting-On also if the last successful event was an Accounting-Off.

##### *number*

Overrides the default Acct-Terminate-Cause (User-Request) in the Accounting-Off message.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.15 acct-on

acct-on

### Syntax

**acct-on** [**radius-server-policy** *policy-name*] [**force**]

### Context

[\[Tree\]](#) (tools>perform>aaa acct-on)

### Full Context

tools perform aaa acct-on

### Description

This command triggers a RADIUS Accounting-On message:

- for all radius-server-policies that have acct-on-off configured.
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-On message is not sent when the last successful event for the RADIUS server policy was an Accounting-On message. In this case, an Accounting-Off should be sent first. By specifying the keyword **force**, this is overruled.

### Parameters

#### *policy-name*

Specifies the **radius-server-policy** for which the Accounting-On should be sent.

#### **force**

Sends an Accounting-On also if the last successful event was an Accounting-On.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.16 acct-on-off-group

acct-on-off-group

### Syntax

**acct-on-off-group** [*group-name*]

Context

[Tree] (show>aaa acct-on-off-group)

Full Context

show aaa acct-on-off-group

Description

This command displays Acct-On-Off group information and the associated RADIUS server policies.

Parameters

*group-name*

Displays information pertaining to the specified acct-on-off group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA Acct-On-Off group information.

Output Example

```
# show aaa acct-on-off-group "group-1"
=====
Acct-On-Off-Group Information
=====
acct on off group name           : group-1
- controlling Radius-Server-policy :
  aaa-server-policy-3
- monitored by Radius-Server-policy :
  aaa-server-policy-4
-----
Nbr of Acct-on-off-groups displayed : 1
-----
=====
```

Table 8: Output fields: Acct-On-Off group

Label	Description
acct on off group name	The name of a RADIUS server policy Accounting-On-Off-Group
controlling Radius-Server-policy	The controlling RADIUS server policy name
monitored by Radius-Server-policy	The policy monitored a RADIUS server policy.
Nbr of Acct-on-off-groups displayed	The RADIUS policy that controls the Acct-On-Off group

## 4.17 accu-stats

### accu-stats

**Syntax**

**accu-stats** **subscriber** *subscriber-id*

**Context**

[\[Tree\]](#) (show>subscriber-mgmt accu-stats)

**Full Context**

show subscriber-mgmt accu-stats

**Description**

This command displays the accumulated statistics for both online and offline statistics.

**Parameters**

***subscriber-id***

Specifies the subscriber ID, up to 32 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of subscriber statistics.

**Output Example**

```
A:active# show subscriber-mgmt accu-stats subscriber home-1
=====
Subscriber accumulated statistics for "home-1"
=====

-----
Subscriber accumulated statistics ingress queue 1
-----
                                packets          octets

Offered high priority           0                0
Offered low priority            0                0
Dropped high priority           0                0
Dropped low priority            0                0
Forwarded in-profile            0                0
Forwarded out-of-profile        0                0
-----

-----
Subscriber accumulated statistics egress queue 1
-----
```

	packets	octets
Forwarded in-profile	0	0
Forwarded out-of-profile	0	0
Dropped in-profile	0	0
Dropped out-of-profile	0	0
-----		
=====		

Table 9: Output fields: accumulated statistics describes accumulated statistics output fields.

Table 9: Output fields: accumulated statistics

Field	Description
packets	The number of packets associated with this policy
octets	The number of octets associated with this policy
Offered high priority	The number of offered high priority packets or octets
Offered low priority	The number of offered low priority packets or octets
Dropped high priority	The number of dropped high priority packets or octets
Forwarded in-profile	The number of forwarded in-profile packets or octets
Forwarded out-of-profile	The number of forwarded out-of-profile packets or octets
Dropped in-profile	The number of dropped in-profile packets or octets
Dropped out-of-profile	The number of dropped out-of-profile packets or octets

accu-stats

Syntax

```
accu-stats active subs no-accu-stats-policy
accu-stats active subs sub-profile profile-name
accu-stats inactive subs
accu-stats subscriber subscriber-id
```

Context

```
[Tree] (clear>subscriber-mgmt accu-stats)
```

Full Context

```
clear subscriber-mgmt accu-stats
```

Description

This command removes the accumulated statistics for a subscriber.

## Parameters

### **active subs no accu-stats-policy**

Removes the accumulated statistics that are no longer associated with an **accu-stats-policy**. These are active subscribers that are referencing a subscriber profile that removed an **accu-stats-policy**.

### **active subs sub-profile *profile-name***

Removes the accumulated statistics for the specified subscriber profile.

### **inactive subs**

Removes the accumulated statistics from all inactive subscribers.

### ***profile-name***

Specifies the subscriber profile up to 32 characters.

### ***subscriber-id***

Specifies the subscriber up to 32 characters.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.18 accu-stats-policy

### accu-stats-policy

## Syntax

**accu-stats-policy**

**accu-stats-policy** *policy-name* [**associations**]

## Context

[\[Tree\]](#) (show>subscriber-mgmt accu-stats-policy)

## Full Context

show subscriber-mgmt accu-stats-policy

## Description

This command displays the configuration of the accumulated statistics policy for the subscriber profile that referenced the accumulated statistics policy.

## Parameters

### ***policy-name***

Specifies the policy name, up to 32 characters.

### **associations**

Lists the sub-profile that referenced the policy.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of subscriber management accumulated statistics information.

### Output Example

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01" associations
=====
Subscriber profile associations
=====
no-prof
sub-prof
-----
=====
No. of subscriber profiles: 2
=====
```

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01"
=====
Subscriber accumulated statistics policy accu-stats-policy-01

[Table 10: Output fields: accumulated statistics policy](#) describes subscriber management accumulated statistics policy fields.

*Table 10: Output fields: accumulated statistics policy*

Field	Description
Description	The user provided description of this policy
Last management change	The date and time of the last management change
Direction Type	The specific direction for the policer or the queue to be stored, ingress or egress
ID	The queue ID
No. of subscriber profiles	The number of entries matching the search criteria

## 4.19 accu-stats-subscribers

### accu-stats-subscribers

**Syntax**

**accu-stats-subscribers** [**subscriber** *sub-ident*] [**sub-profile** *name*]

**Context**

**[Tree]** (show>subscriber-mgmt accu-stats-subscribers)

**Full Context**

show subscriber-mgmt accu-stats-subscribers

**Description**

This command lists all subscribers on the system that had referenced an accumulated statistics policy. The list contains subscribers that are currently referencing an **accu-stats-policy** as well as subscribers that no longer reference an **accu-stats-policy** (due to removal of the policy from the subscriber profile).

**Parameters**

***sub-ident***

Specifies a specific subscriber ID, up to 32 characters.

***sub-profile name***

Lists all subscribers that are referencing the specified subscriber profile, up to 32 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of subscriber management accumulated statistics information.

**Output Example**

```
*DUT# show subscriber-mgmt accu-stats-subscribers
=====
Subscribers with accumulated statistics
=====
Subscriber                : home-1
Subscriber profile         : no-prof
Accumulated-stats policy   : accu-stats-policy-01
-----
Subscriber                : home-2
Subscriber profile         : no-prof
Accumulated-stats policy   : accu-stats-policy-02
-----
Subscriber                : twamp-host
Subscriber profile         : no-prof
```

```
Accumulated-stats policy          : (Unknown)
-----
No. of Subscribers with accumulated statistics: 3
=====
```

### Output Example

The **show subscriber-mgmt status system** command shows the number of subscribers using accumulated statistics and whether the statistics usage has reached the peak value.

```
*A:Dut-C# show subscriber-mgmt status system
=====
Subscriber Management System Status
=====
Chassis 1
-----
Memory usage high                : No
DHCP message processing overload  : No
Statistics usage high            : Yes
Number of subscribers using statistics : 131072
Data-trigger statistics
-----
Packets received                 : 0
Packets dropped                  : 0
Packets in queue (actual)       : 0
Packets in queue (peak)        : 0
Bridged Residential Gateway statistics
-----
BRG initialized                 : 0
BRG operational                 : 0
BRG in connectivity verification : 0
BRG on hold                    : 0
BRG authenticated by proxy      : 0
=====
```

**Table 11: Output fields: status system** describes subscriber management status system fields.

*Table 11: Output fields: status system*

Field	Description
Chassis	The chassis number
Memory usage high	The memory usage of the subscriber management function on this chassis is near the limit; Yes or No
DHCP message processing overload	The subscriber management DHCP message processing function is in overload; Yes or No
Statistics usage high	The memory used for subscriber statistics on this chassis is near the limit; Yes or No
Number of subscribers using statistics	The number of subscribers using memory to store accumulated statistics
Packets received	The number of data packets received that may trigger creation of data-triggered subscriber hosts on this system

Field	Description
Packets dropped	The number of data packets dropped that could have triggered creation of data-triggered subscriber hosts on this system
Packets in queue (actual)	The number of data packets currently in the waiting queue that may trigger creation of data-triggered subscriber hosts on this system
Packets in queue (peak)	The maximum value of the packets in queue object since the start up of this system or the last time that the value of packets in queue was reset
BRG initialized	The number of BRGs with the init timer running; waiting for the first host
BRG operational	The number of BRGs in the normal operating state, with dynamic hosts
BRG in connectivity verification	The number of BRGs with no hosts, pinging the residential gateway
BRG on hold	The number of BRGs with no hosts attached, in hold
BRG authenticated by proxy	The number of BRGs in this system

## 4.20 activate-best-dest

### activate-best-dest

#### Syntax

**activate-best-dest**

#### Context

[\[Tree\]](#) (tools>perform>filter>redirect-policy activate-best-dest)

#### Full Context

tools perform filter redirect-policy activate-best-dest

#### Description

This command allows the operator to force a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If **hold-time-up** is running, the timer is also expired.

## Platforms

All

## 4.21 activate-primary-action

### activate-primary-action

#### Syntax

**activate-primary-action**

#### Context

**[Tree]** (tools>perform>filter>ip-filter>entry activate-primary-action)

**[Tree]** (tools>perform>filter>mac-filter>entry activate-primary-action)

**[Tree]** (tools>perform>filter>ipv6-filter>entry activate-primary-action)

#### Full Context

tools perform filter ip-filter entry activate-primary-action

tools perform filter mac-filter entry activate-primary-action

tools perform filter ipv6-filter entry activate-primary-action

#### Description

This command allows an operator to activate the primary action for the given filter policy entry. If the primary action is already active, the command has no effect. If a secondary action is active, the primary action will be activated unless the primary target is down. If the sticky destination timer is running for the primary action entry, it will expire.

**Context**  
[Tree] (show>router>ldp>bindings active)

**Full Context**  
show router ldp bindings active

**Description**  
This command display information about LDP active bindings.

- Parameters**
- detail**  
Displays detailed information.
  - summary**  
Displays information in a summarized format.
  - family**  
Displays either IPv4 or IPv6 active LDP information.
  - opaque-type opaque-type**  
Specifies the type of a Multi-Point Opaque Value Element.  
**Values** generic, ssm, vpn-ssm, recursive-ssm

**egress-lsp tunnel-id**  
Displays LDP active bindings by matching on the egress RSVP-TE LSP *tunnel-id* for LDP FECs which are tunneled over a RSVP-TE LSP. The *tunnel-id* for the RSVP-TE LSP can be found in the output of the **show router mpls lsp detail** command and in the **show router tunnel-table** command. It is not the *path LSP ID* shown in the output of the **show router mpls lsp path detail** command.  
**Values** 0 to 4294967295

**egress-nh ip-address**  
Displays LDP active bindings by matching egress-nh.  
**Values**

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:x.d.d.d.d

x - [0 to FFFF]H  
d - [0 to 255]D

**egress-if *port-id***

Displays LDP active bindings by matching egress-if.

**inner-root *ip-address***

Displays recursive FECs whose inner root address matches the specified address.

**innermost-root *ip-address***

Displays recursive FECs whose inner root address matches the specified address and non-recursive FECs that have a root address that matches the specified address.

**p2mp source *ip-address***

Displays LDP active P2MP source bindings.

Values	ipv4-address	- a.b.c.d
	ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x - [0 to FFFF]H
		d - [0 to 255]D

**p2mp-id *identifier***

Displays LDP active P2MP identifier bindings.

Values	0 to 4294 967 295
--------	-------------------

**group *mcast-address***

Displays the P2MP group multicast address bindings.

**root *ip-address***

Displays root IP address information.

**rd *rd***

Displays information for the route distinguisher.

Values	<i>ip-addr:comm-val</i>   <i>2byte-asnumber:ext-comm-val</i>   <i>4byte-asnumber:comm-val</i>
--------	---

**prefix *ip-prefix/ip-prefix-length***

Specifies information for the specified IP prefix and mask length.

Values	ipv4-address	- a.b.c.d
	ipv6-address	- x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H  
d - [0 to 255]D

**community**

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

**Platforms**

All

**Output**

**Output Example**

```

## 4.23 active-subscribers

### active-subscribers

#### Syntax

- `active-subscribers detail`
- `active-subscribers mirror`
- `active-subscribers [summary]`

#### Context

[\[Tree\]](#) (show>service active-subscribers)

#### Full Context

show service active-subscribers

#### Description

This command displays active subscriber information.

#### Parameters

- detail**  
Displays detailed output.
- mirror**  
Displays active subscriber mirror information.
- summary**  
Displays active subscriber information in a brief format.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of active service subscriber information. [Table 12: Output fields: active subscriber](#) describes the fields.

## Output Example

```
*A:Dut-C# show service active-subscribers

## adjacency

### Syntax

**adjacency** [*ip-address* | *ip-int-name* | *nbr-system-id*] [**detail**]

### Context

[\[Tree\]](#) (show>router>isis adjacency)

### Full Context

show router isis adjacency

### Description

This command displays information regarding IS-IS neighbors. When no *ip-address*, *ip-int-name*, or *nbr-system-id* is specified, then all adjacencies are displayed.

### Parameters

#### *ip-address*

When specified, only adjacencies with that interface is displayed.

**Values**    ipv4-address:

- a.b.c.d (host bits must be 0)

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

#### *ip-int-name*

When specified, only adjacencies with that interface is displayed.

#### *nbr-system-id*

When specified, only the adjacency with that ID is displayed.

#### **detail**

All output is displayed in the detailed format.

#### *mt-id-number*

Specifies the multi topology ID number for this route.

### Platforms

All

### Output

Standard and Detailed IS-IS Adjacency Output

**Table 13: Output fields: adjacency** describes the standard and detailed command output fields for an IS-IS adjacency.

*Table 13: Output fields: adjacency*

Label	Description
Interface	Interface name associated with the neighbor.
System-id	Neighbor's system ID.
Level	1-L1 only, 2-L2 only, 3-L1 and L2.
State	Up, down, new, one-way, initializing, or rejected.
Hold	Hold time remaining for the adjacency.
SNPA	Subnetwork point of attachment, MAC address of the next hop.
Circuit type	Level on the interface L1, L2, or both.
Expires In	Number of seconds until adjacency expires.
Priority	Priority to become designated router.
Up/down transitions	Number of times neighbor state has changed.
Event	Event causing last transition.
Last transition	Time since last transition change.
Speaks	Supported protocols (only IP).
IP address	IP address of neighbor.
MT enab	Yes — The neighbor is advertising at least 1 non MTID#0.
Topology	Derived from the MT TLV in the IIH <ul style="list-style-type: none"> <li>MT#0, MT#2 =&gt; "Topology : Unicast, IPv6-Unicast"</li> <li>Native IPv4 or native IPv6 =&gt; "Topology : Unicast"</li> </ul> Not supported MTIDs => Topology line suppressed

## adjacency

### Syntax

**adjacency** [*system-id*]

### Context

**[Tree]** (clear>router>isis adjacency)

### Full Context

clear router isis adjacency

## Description

This command clears and resets the entries from the IS-IS adjacency database.

## Parameters

### *system-id*

When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

## Platforms

All

adjacency

## Syntax

adjacency [*system-id*]

## Context

[\[Tree\]](#) (clear>service>id>spb adjacency)

## Full Context

clear service id spb adjacency

## Description

This command clears and resets IS-IS adjacencies.

## Parameters

### *system-id*

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

**Values** 6-octet system identifier (xxxx.xxxx.xxxx)

## Platforms

All

## 4.25 adjust-autobandwidth

adjust-autobandwidth

## Syntax

adjust-autobandwidth [*lsp lsp-name* [*force* [*bandwidth mbps*]]]

## Context

[\[Tree\]](#) (tools>perform>router>mpls adjust-autobandwidth)

## Full Context

tools perform router mpls adjust-autobandwidth

## Description

This command initiates an immediate auto-bandwidth adjustment attempt for either one specific LSP or all active LSPs. The auto-bandwidth adjustment is made to the primary or secondary path of the LSP, whichever is the currently active path. If an LSP is not specified, the system assumes the command applies to all LSPs.

The optional **force** parameter, which is available only when an LSP is referenced, determines whether to apply **adjust-up** and **adjust-down** threshold checks.

The adjust count and maximum average data rate are not reset when using this command to manually initiate an auto-bandwidth adjustment, regardless of whether the bandwidth adjustment succeeds or fails. The overflow count is reset only if the manual auto-bandwidth adjustment attempt succeeds.

## Parameters

*lsp-name*

Specifies the LSP name, up to 64 characters. If this parameter is not specified, the command applies to all active LSPs.

**force**

Keyword to force the bandwidth adjustment to ignore configured thresholds. If this parameter is not specified, the maximum average data rate must differ from the current bandwidth reservation by more than the **adjust-up** or **adjust-down** thresholds, otherwise no bandwidth adjustment occurs.

**bandwidth** *mbps*

Specifies the bandwidth that the LSP should be immediately resized to, in Mb/s.

If a **bandwidth** is specified as part of the **force** parameter, the bandwidth of the LSP is changed to the specified value, otherwise the bandwidth is changed to the maximum average data rate that has been measured by the system in the current adjust interval.

**Values** 0 to 6400000

## Platforms

## 4.26 admin

### admin

#### Syntax

admin

#### Context

[\[Tree\]](#) (show>app-assure>group>policy admin)

#### Full Context

show application-assurance group policy admin

#### Description

This command displays the application-assurance policy uncommitted changes.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of the **admin** command.

#### Output Example

```
*A:ALA-48>show>app-assure>group>policy# admin
      begin
      app-filter
        entry 10 create
        shutdown

    entry 10 create
    shutdown
  exit
exit
commit
*A:ALA-48>show>app-assure>group>policy#
```

## 4.27 admin-group

admin-group

**Syntax**

**admin-group** [*name*]

**Context**

[\[Tree\]](#) (show>router>if-attribute admin-group)

**Full Context**

show router if-attribute admin-group

**Description**

This command displays administrative group statistics.

**Parameters**

*name*

Displays entries that are associated with the specified administrative group name, up to 32 characters.

**Platforms**

All

**Output**

The following output is an example of administrative group statistics, and [Table 14: Output fields: administrative group](#) describes the fields.

**Output Example**

```
*A:node-3# show router if-attribute admin-group
=====

Table 14: Output fields: administrative group

Label	Description
Group Name	The name of the administrative group
Group Value	The integer value of the administrative group
No. of Groups	The total number of displayed administrative groups

4.28 admin-lock

admin-lock

Syntax  
admin-lock

Context  
[\[Tree\]](#) (tools>perform>service>id admin-lock)

Full Context  
tools perform service id admin-lock

Description  
Commands in this context apply an administrative lock for a spoke SDP that is bound to a VLL SAP, another spoke-\ sdp or a VPLS interface for an MPLS-TP PW. After the PW is locked, it can be put into loopback mode. The command must be executed at both ends of the PW or MS-PW represented by the spoke-\ SDP. Test traffic can then be injected using a test SAP.

4.30 adv-config-policy

adv-config-policy

Syntax

adv-config-policy [policy-name] [association]

Context

[Tree] (show>qos adv-config-policy)

Full Context

show qos adv-config-policy

Description

This command displays advanced QoS policy information.

Parameters

**policy-name**

The name of the advanced QoS policy.

**association**

Displays associations related to the specified adv-config-policy.

Platforms

All

Output

The following output is an example of advanced QoS policy information, and [Table 15: Output fields: QoS scheduler hierarchy customer](#) describes the advanced QoS policy fields.

Output Example

```
*A:PE# show qos adv-config-policy "adv1"
=====
QoS Advanced Configure Policy
=====
Policy Name           : adv1
Description            : (Not Specified)

=====
*A:PE#
```

Table 15: Output fields: QoS scheduler hierarchy customer

Label	Description
Policy Name	Displays the policy name.

Label	Description
Description	Displays the policy description.
OM Add PIR Prcnt	Displays the percentage of the administrative PIR by which the measured rate is increased.
OM Add Rate	Displays the amount, in kb/s, by which the measured rate is increased.
OM Add	<p>min-only — When this option is true, the system uses the specified increase as a minimum offered rate even for inactive queues or policers associated with the policy.</p> <p>active-min-only — When this option is true, the respective rate or percentage is treated as the minimum offered rate for a queue only when the queue has an actual non-zero offered rate. This is intended to limit the artificial increase in offered rate to queues that are currently active. When a queue's measured offered rate drops to zero, the system stops enforcing the minimum value.</p>
OM Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the threshold sensitivity to the offered rate change. If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity.
OM Gran Rate	Displays the explicit rate, in kb/s, that are used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Max Dec PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the decrement limit to the offered rate change. If a value of 100 or 100.00 is used, the system interprets this equivalent as <b>no max-decrement</b> .
Max Dec Rate	Displays the rate, in kb/s, that is used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Abv Off PIR Prcnt	<p>Displays the percentage of the child's administrative PIR that is used as the fair share increase limit. The new operational PIR result is capped by the child's PIR.</p> <p>If a value of 0 or 0.00 is specified, the system will disable the fair share increase function and only configure the actual distribution rate.</p> <p>If a value of 100 or 100.00 is used, the system will interpret this equivalent to executing the <b>no above-offered-cap</b> command and return the fair-share operation to the default behavior.</p>
Abv Off Rate	Specifies the explicit rate, in kb/s, that is used as the limit to the child's fair share increase to the operational PIR. The new operational PIR result is capped by the child's PIR.

Label	Description
	If a value of 0 is used, the system will disable the fair share increase function and only configure the actual distribution rate.
BWD Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the rounding step value. If a value of 0 or 0.00 is used, the system will interpret this equivalent to <b>no granularity</b> .
BWD Gran Rate	Displays the rate, in kb/s, that is used as the rounding step value. If a value of 0 is used, the system will interpret this equivalent to <b>no granularity</b> .
Fast Start	Displays whether fast detection of initial bandwidth on a child policer or queue associated with the policy is enabled.
Fast Stop	Displays whether fast detection of lack of offered rate on a child policer or queue associated with the policy is enabled.
Time Average Factor	Displays the time average factor used to calculate the weight of the new offered rate using a portion of the previous offered rate.  If <b>dec-only</b> is true, the time average factor adjustment is only applied if the new offered rate is decreasing compared to the previous offered rate.
Hi Rate Hold Time	Displays the time period that the current offered rate is maintained for a child policer or queue when it is seen that the offered rate is decreasing. The offered measurement that triggers the hold time is used when the hold timer expires, unless a higher offered rate is seen in the interim. When a higher rate is observed, the hold timer is canceled and the higher offered rate is used immediately.  If <b>active-min-only</b> is true, the respective rate or percentage is treated as the minimum offered rate for a queue, only when the queue has an actual non-zero offered rate.
Sample Interval	Displays the number of intervening sample periods before a new offered rate is measured.
Enqueue on PIR Zero	Displays whether <b>enqueue-on-pir-zero</b> is enabled. If it is enabled, when the operational PIR is set to zero, the queue's MBS remains set to the normal value and is not also set to zero.
Limit PIR Zero Drain	If true, the system to use the minimum configurable PIR instead of an H-QoS derived zero operational PIR.
Init LUB with min PIR	If true, new queues associated with a LUB context are assigned a minimum rate operational PIR to be applied to the queue for use by enqueued packets prior to an H-QoS iteration.
Internal Sched Wght Mode	Specifies the internal scheduler weight:

Label	Description
	<p><b>default</b> — Specifies that queues are equally weighted, except at ingress for mixed-speed LAGs without per-fp-inq-queuing enabled and at egress for all mixed-speed LAGs, in which cases the queues are weighted based on port speed.</p> <p><b>force-equal</b> — Specifies that the queues are always equally weighted.</p> <p><b>offered-load</b> — Specifies that the queues are weighted based on observed offered load.</p> <p><b>capped-offered-load</b> — Specifies that the queues are weighted based on observed offered load capped by PIR.</p>
Unconsumed Agg-rate	Displays the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Agg-rate	Displays the percentage of the delta consumed aggregate rate that can be given to a queue at the end of an H-QoS pass.
Unconsumed Hi-tier-rate	Displays the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Hi-tier-rate	Displays the percentage of the delta consumed higher tier rate that can be given to a queue at the end of an H-QoS pass.

4.31 agg-rate

agg-rate

**Syntax**  
agg-rate

**Context**  
[Tree] (show>qos agg-rate)

**Full Context**  
show qos agg-rate

**Description**  
This command displays aggregate rate information.

**Platforms**  
All

## 4.32 aggregate

aggregate

### Syntax

aggregate [*family*] [*active*] [*detail*]

### Context

[\[Tree\]](#) (show>router aggregate)

### Full Context

show router aggregate

### Description

This command displays aggregated routes.

### Parameters

- active**  
This keyword filters out inactive aggregates.
- detail**  
This keyword displays detailed information.
- family**  
Specifies the family to display.  
**Values**    ipv4, ipv6

### Platforms

All

### Output

The following output is an example of router aggregate information, and [Table 16: Output fields: aggregate](#) describes the output fields.

### Output Example

```
*A:ALA-12# show router 3 aggregate
=====
Aggregates (Service: 3)
=====
Prefix                Summary  AS Set   Aggr AS   Aggr IP-Address  State
-----
No. of Aggregates: 0
-----
*A:ALA-12#
```

```
*A:Dut-A>config>router# show router aggregate

=====
Aggregates (Router: Base)
=====
Prefix                               Aggr IP-Address  Aggr AS
  Summary                             AS Set          State
  NextHop                             AS Set          NextHopType
-----

                                           100:33         Blackhole
-----
No. of Aggregates: 1
=====
```

Table 16: Output fields: aggregate

Label	Description
Prefix	Displays the destination address of the aggregate route in dotted decimal notation.
Summary	Specifies whether the aggregate or more specific components are advertised.
AS Set	Displays an aggregate where the path advertised for the route consists of all elements contained in all paths that are being summarized.
Aggr AS	Displays the aggregator path attribute to the aggregate route.
Aggr IP-Address	The IP address of the aggregated route.
State	The operational state of the aggregated route.

Label	Description
No. of Aggregates	The total number of aggregated routes.

### 4.33 alarm-contact-input

alarm-contact-input

**Syntax**  
`alarm-contact-input {alarm-contact-input-id | all} [detail]`

**Context**  
[\[Tree\]](#) (show>system alarm-contact-input)

**Full Context**  
show system alarm-contact-input

**Description**  
This command displays the alarm contact input information.

**Parameters**  
***alarm-contact-input-id***  
Specifies the alarm contact input pin number. Alarm contact input information is displayed only for the specified pin.  
**Values** 1 to 4

**all**  
Displays alarm contact input information for all pins.

**detail**  
Displays detailed alarm contact input information for the specifies pin or all pins.

**Platforms**  
7750 SR-a

**Output**  
The following output is an example of alarm contact input information, and [Table 17: Output fields: alarm contact input](#) describes the output fields.

**Output Example**

=====

Alarm Contact Input

```
=====
Alarm Input Pin Number      : 1
  Description               : (Not Specified)
  Alarm Input Pin Current State : Disabled
  Alarm Severity            : major
  Alarm Raised              : No
  Last State Change         : 03/18/2021 14:45:31
Alarm Input Pin Number      : 2
  Description               : (Not Specified)
  Alarm Input Pin Current State : Disabled
  Alarm Severity            : major
  Alarm Raised              : No
  Last State Change         : 02/21/2021 11:46:45
Alarm Input Pin Number      : 3
  Description               : (Not Specified)
  Alarm Input Pin Current State : Disabled
  Alarm Severity            : major
  Alarm Raised              : No
  Last State Change         : 02/22/2021 16:20:00
Alarm Input Pin Number      : 4
  Description               : (Not Specified)
  Alarm Input Pin Current State : Disabled
  Alarm Severity            : major
  Alarm Raised              : No
  Last State Change         : 03/18/2021 14:45:31
=====
```

Table 17: Output fields: alarm contact input

Label	Description
Alarm Input Pin Number	Indicates the alarm contact input pin number.
Description	Displays the configured description string for the alarm contact input
Alarm Input Pin Current State	Indicates the configured administrative state of the alarm contact input.  Disabled — The alarm contact input is disabled ( <b>shutdown</b> ) and log events will not be generated for changes to the input pin status.  Enabled — The alarm contact input is enabled ( <b>no shutdown</b> ) and log events are generated for changes to the input pin status as long as the log events are not suppressed in <b>event-control</b> configuration.
Alarm Severity	Indicates the configured severity of the associated CHASSIS log event.
Alarm Raised	Indicates if the input pin is triggered or not.
Last State Change	Indicates when the input pin last changed state.

### 4.34 alarms

#### alarms

**Syntax**

**alarms** [**cleared**] [**count** *count*] [**newer-than** *days*] [**severity** *severity-level*]

**Context**

[\[Tree\]](#) (show>system alarms)

**Full Context**

show system alarms

**Description**

This command displays facility alarms on the system. Alarm support covers a focused subset of router states that are likely to indicate service impacts (or imminent service impacts) related to the overall state of hardware assemblies (cards, fans, links, and so on).

**Platforms**

All

**Output**

[Table 18: Output fields: system alarms](#) describes the alarms output fields.

Use the following command to display facility alarms on the system.

```
show system alarms
```

**Output Example**

=====				
Alarms [Critical:1 Major:2 Minor:0 Warning:0 Total:3]				
=====				
Index	Date/Time	Severity	Alarm	Resource
Details				
-----				
8	2011/04/01 18:36:43.80	MAJOR	7-2011-1	Power Supply 1
	Power supply 1, power lost			
7	2011/04/01 18:35:57.00	MAJOR	7-2005-1	Chassis 1
	Chassis 1: temperature too high			
6	2011/04/01 18:35:24.80	CRITICAL	7-2006-1	Fan 1
	Fan 1 failed			
=====				

**Output Example (ESA)**

```
=====
```

```
Alarms [Critical:3 Major:1 Minor:0 Warning:0 Total:4]
=====
Index      Date/Time              Severity Alarm      Resource
  Details
-----
8      2022/08/23 17:06:54.70 MAJOR    7-2426-1   Chassis esa-1
  ESA Chassis temperature status degraded
7      2022/08/23 17:06:54.70 CRITICAL 7-2416-1   Chassis esa-1
  ESA Chassis fan status degraded
6      2022/08/23 17:06:14.70 CRITICAL 7-2410-1   Chassis esa-1
  ESA Chassis power supply 2 status failed
5      2022/08/23 17:06:14.70 CRITICAL 7-2404-1   Chassis esa-1
  ESA Chassis power supply 1 status degraded
=====
```

Use the following command to display cleared facility alarms on the system.

```
show system alarms cleared
```

### Output Example

```
=====
Cleared Alarms [Size:500 Total:5 (not wrapped)]
=====
Index      Date/Time              Severity Alarm      Resource
  Details
-----
5      2011/04/01 18:11:55.00 MAJOR    7-2005-1   Chassis 1
  Clear Chassis temperature too high alarm
3      2011/04/01 18:11:54.50 CRITICAL 7-2051-1   Power Supply 1
  Clear Power Supply failure
2      2011/04/01 18:11:54.40 CRITICAL 7-2050-1   Power Supply 1
  Clear Power Supply failure
4      2011/04/01 18:11:54.10 MINOR    7-2004-1   Fan 1
  Clear Fan wrong type failure
1      2011/04/01 18:11:54.00 CRITICAL 7-2007-1   Power Supply 1
  Clear Power Supply failure
=====
```

### Output Example (ESA)

```
=====
Cleared Alarms [Size:500 Total:14 (not wrapped)]

Index      Date/Time              Severity Alarm      Resource
  Details
-----
15      2022/09/22 14:49:36.00 MAJOR    7-2422-1   Chassis esa-1
  ESA Chassis power supply redundancy degraded - cleared, now redundant
14      2022/09/22 14:49:36.00 MAJOR    7-2400-1   Chassis esa-1
  ESA Chassis aggregate hardware degraded status cleared, now ok
13      2022/09/22 14:49:31.00 CRITICAL 7-2410-1   Chassis esa-1
  ESA Chassis power supply 2 failed status cleared, now ok
```

```
12      2022/09/22 11:27:04.80 MAJOR      7-2400-1  Chassis esa-1
      ESA Chassis aggregate hardware degraded status cleared, now ok
```

Table 18: Output fields: system alarms

Label	Description
Index	Alarm index number
Date/Time	Date and time string for the alarm
Severity	Severity level of the alarm
Alarm	Alarm identifier
Resource	Facility associated with the alarm
Details	Description of the alarm

4.35 ale-adjust

ale-adjust

Syntax

```
ale-adjust
ale-adjust subscriber sub-ident-string
```

Context

```
[Tree] (show>service>active-subscribers ale-adjust)
```

Full Context

```
show service active-subscribers ale-adjust
```

Description

This command displays subscriber Access Loop Encapsulation adjust information.

Parameters

```
sub-ident-string
    Displays subscriber Access Loop Encapsulation adjust for the specified subscriber, up to
    32 characters.
```

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.36 alias

alias

**Syntax**  
alias

**Context**  
[\[Tree\]](#) (show alias)

**Full Context**  
show alias

**Description**  
This command shows command aliases.

**Note:**  
This command is not available in the MD-CLI. Use the MD-CLI **info detail environment command-alias** command.

**Platforms**  
All

**Output**  
The following output is an example of alias information, and [Table 19: Output fields: alias](#) describes the output fields.

**Output Example**

```
A:ALA-103>config>system# show alias
=====
Alias-Name           Alias-command-name
=====
sri                  show router interface
sse                  show service service-using epipe
ssvpls               show service service-using vpls
ssvprn               show service service-using vprn
ssi                  show service service-using ies
-----
Number of aliases : 5
=====
A:ALA-103>config>system#
```

Table 19: Output fields: alias

Label	Description
Alias-Name	Displays the name of the alias.
Alias-command-name	The command and parameter syntax that define the alias.
Number of aliases	The total number of aliases configured on the router.

4.37 all

all

Syntax  
all

Context  
[\[Tree\]](#) (show>service>id all)

Full Context  
show service id all

Description  
This command displays detailed information for all aspects of the service.

Platforms

Table 20: Output fields: service ID all (VPLS)

Label	Description
Service Id	The value that identifies a service

Label	Description
VPN Id	The number that identifies the VPN
Service Type	The type of service
SDP Id	The SDP identifier
Description	The text string describing general information about the service
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service
Evpn Mcast GW	The status of the EVPN multicast gateway
Mcast-GW Type	The multicast gateway type: MEG, PEG, or MEG-PEG
Split Horizon Group	The name of the split horizon group for this service
Description	The text string describing the split horizon group
Last Changed	The date and time of the most recent management-initiated change to this split horizon group
SDP Id	The SDP identifier
Type	The service SDP binding type, spoke or mesh
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Delivery	The type of delivery used by the SDP: GRE or MPLS
Admin State	The administrative state of this SDP
Oper State	The operational status of the KeepAlive protocol.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP
Ingress Filter	The ID of the ingress filter policy

Label	Description
Egress Filter	The ID of the egress filter policy
Far End	The IP address of the remote end of the GRE or MPLS tunnel defined by this SDP
Last Changed	The date and time of the most recent change to this customer
Signaling	The signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	The operating status of the SDP
Oper State	The operational state of the SDP
Hello Time	The frequency that SDP echo request messages are transmitted on this SDP
Hello Msg Len	The length of the SDP echo request messages transmitted on this SDP
Max Drop Count	The maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault
Hold Down Time	The amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field.  If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS
Number of SDPs	The total number SDPs applied to this service ID
Service Access Points	
Service Id	The value that identifies a service
Port Id	The ID of the access port where this SAP is defined
Description	The generic information about the SAP
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP
Oper State	The operating state of the SAP
Last Changed	The date and time of the last change

Label	Description
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Ingress qos-policy	The SAP ingress QoS policy ID
Egress qos-policy	The SAP egress QoS policy ID
Ingress Filter-Id	The SAP ingress filter policy ID
Egress Filter-Id	The SAP egress filter policy ID
Multi Svc Site	The multi-service site in which the SAP is a member
Ingress sched-policy	The ingress QoS scheduler for the SAP
Egress sched-policy	The egress QoS scheduler for the SAP
Acct. Pol	The accounting policy applied to the SAP
Collect Stats	Accounting statistics collected on the SAP
Dropped	The number of packets or octets dropped
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded
Dropped In Profile	The number of in-profile packets or octets discarded
Dropped Out Profile	The number of out-of-profile packets or octets discarded
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded
Ingress Queue 1	The index of the ingress QoS queue of this SAP
High priority offered	The packets or octets count of the high priority traffic for the SAP

Label	Description
High priority dropped	The number of high priority traffic packets or octets dropped
Low priority offered	The packets or octets count of the low priority traffic
Low priority dropped	The number of low priority traffic packets or octets dropped
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded
Egress Queue 1	The index of the egress QoS queue of the SAP
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
In profile dropped	The number of in-profile packets or octets dropped for the SAP
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded
Out profile dropped	The number of out-of-profile packets or octets discarded
State	The DHCP relay state on this SAP
Info Option	Option 82 processing state on this SAP
Action	Option 82 processing state SAP or interface: keep, replace or drop
Circuit ID	If index is inserted in Circuit ID sub-option of Option 82
Remote ID	The far-end MAC address inserted in remote ID sub-option of Option 82
Managed by Service	The service-id of the management VPLS managing this SAP
Managed by SAP	The SAP ID inside the management VPLS managing this SAP
Prune state	The STP state inherited from the management VPLS
Managed by Service	The service ID of the management VPLS managing this spoke SDP
Managed by Spoke	The SAP ID inside the management VPLS managing this spoke SDP
Prune state	The STP state inherited from the management VPLS

Table 21: Output fields: service ID all (Epipe)

Label	Description
Service Id	The service identifier
VPN Id	The number that identifies the VPN
Service Type	The type of service
VLL Type	The VLL type
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Description	Generic information about the service

Label	Description
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change
Endpoint	The name of the service endpoint for the 7450 ESS or 7750 SR
Flags	The conditions that affect the operating status of this SAP. Display output includes: ServiceAdminDown, SapAdmin Down, InterfaceAdminDown, PortOperDown, PortMTUToo Small, L2OperDown, SapIngressQoSMismatch, SapEgress QoSMismatch, RelearnLimitExceeded, RxProtSrcMac, Parent IfAdminDown, NoSapIpipeCelpAddr, SapParamMismatch, Cem SapNoEcidOrMacAddr, StandByForMcRing, ServiceMTUToo Small, NoSapEpipeRingNode.
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service for the 7450 ESS or 7750 SR
<b>Split Horizon Group Specifics</b>	
Split Horizon Group	The name of the split horizon group for this VPLS for the 7450 ESS or 7750 SR
Description	The description of the split horizon group for the 7450 ESS or 7750 SR
Last Changed	The date and time of the most recent management-initiated change to this split horizon group for the 7450 ESS or 7750 SR
<b>Service Destination Points (SDPs)</b>	
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Type	Indicates whether this service SDP binding is a spoke or a mesh for the 7450 ESS or 7750 SR
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR
Delivery	The type of delivery used by the SDP: GRE or MPLS for the 7450 ESS or 7750 SR

Label	Description
Admin State	The administrative state of this SD for the 7450 ESS or 7750 SR
Oper State	The operational state of this SDP for the 7450 ESS or 7750 SR
Jitter Buffer (packets)	The jitter buffer length in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	The playout buffer packets threshold in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	Indicates the current packet depth of the jitter buffer for the 7450 ESS or 7750 SR
Peer Pw Bits	<p>The bits set by the LDP peer when there is a fault on its side of the pseudowire for the 7450 ESS or 7750 SR. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pw NotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding  lacIngressFault Local — Attachment circuit RX fault  lacEgressFault Local — Attachment circuit TX fault  psnIngressFault Local — PSN-facing PW RX fault  psnEgressFault Local — PSN-facing PW TX fault  pwFwdingStandby — Pseudowire in standby mode</p>
Signaling Override	The overriding signaled pseudowire type, as configured under the <b>signaled-vc-type-override</b> option for Apipes. This field is only displayed if <b>signaled-vc-type-override</b> is configured for the 7750 SR.

Table 22: Output fields: service ID all (IES)

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Service Type	Specifies the type of service.
SDP Id	The SDP identifier.
Description	Generic information about the service.

Label	Description
Customer Id	The customer identifier.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the service.
Oper State	The current status of the service.

Label	Description
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far-end field.  If the SDP type is GRE, then the following message displays: "SDP Delivery Mechanism is not MPLS".
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.

Label	Description
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.

Label	Description
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
IPCP Address Extension Details	
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional).

### Output Example (VPRN)

Table 23: Output fields: service ID all (VPRN; PW SAPs )

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Customer Id	The customer identifier.
Last Status Change	The date and time of the most recent change in the administrative or operating status of the service.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
Admin State	The current administrative state.

Label	Description
Oper State	The current operational state.
Route Dist.	Displays the route distribution number.
AS Number	Displays the autonomous system number.
Router Id	Displays the router ID for this service.
ECMP	Displays equal cost multipath information.
ECMP Max Routes	Displays the maximum number of routes that can be received from the neighbors in the group or for the specific neighbor.
Max Routes	Displays the maximum number of routes that can be used for path sharing.
Auto Bind	Specifies the automatic binding type for the SDP assigned to this service.
Vrf Target	Specifies the VRF target applied to this service.
Vrf Import	Specifies the VRF import policy applied to this service.
Vrf Export	Specifies the VRF export policy applied to this service.
SDP Id	The SDP identifier.
Description	Generic information about the service.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Split Horizon Group	Name of the split horizon group for this service.
Description	Description of the split horizon group.
Last Changed	The date and time of the most recent management-initiated change to this split horizon group.
ETH-CFM Service Specifics	
Tunnel Faults	Whether tunnel faults are ignored or accepted.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.

Label	Description
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the keepalive protocol.
Oper State	The current status of the keepalive protocol.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far end field.  If the SDP type is GRE, then the following message displays: SDP delivery mechanism is not MPLS.

Label	Description
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.

Label	Description
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Out profile dropped	The number of out-of-profile packets or octets discarded.

Label	Description
State	Specifies whether DHCP relay is enabled on this SAP.
Info Option	Specifies whether Option 82 processing is enabled on this SAP.
Action	Specifies the Option 82 processing on this SAP or interface: keep, replace or drop.
Circuit ID	Specifies whether the If index is inserted in circuit ID sub-option of Option 82.
Remote ID	Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82.
Service Access Points	
Managed by Service	Specifies the service-id of the management VPLS managing this SAP.
Managed by SAP	Specifies the sap-id inside the management VPLS managing this SAP.
Prune state	Specifies the STP state inherited from the management VPLS.
Spoke SDPs	
Managed by Service	Specifies the service-id of the management VPLS managing this spoke SDP.
Managed by Spoke	Specifies the sap-id inside the management VPLS managing this spoke SDP.
Prune state	Specifies the STP state inherited from the management VPLS.
Peer Pw Bits	<p>Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding.</p> <p>lacIngressFault Local — Attachment circuit RX fault.</p> <p>lacEgressFault Local — Attachment circuit TX fault.</p> <p>psnIngressFault Local — PSN-facing PW RX fault.</p> <p>psnEgressFault Local — PSN-facing PW TX fault.</p> <p>pwFwdingStandby — Pseudowire in standby mode.</p>
IPCP Address Extension Details	

Label	Description
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.

Context

[\[Tree\]](#) (show>router>seg-rt>sr-policies all)

Full Context

show router segment-routing sr-policies all

Description

This command displays the traffic statistics of all or a filtered set of the BGP and static policies, or displays summary parameters.

Parameters

*color*

Specifies the color to filter on.

**Values** 0 to 4294967295

*ipv4-address* | *ipv6-address*

Specifies the end-point IPv4 or IPv6 address to filter on.

**Values** *ipv4-address* — a.b.c.d  
*ipv6-address* — x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:x:d:d:d  
x — [0..FFFF]H  
d — [0..255]D

*preference-id*

Specifies the preference ID to filter on.

**Values** 0 to 4294967295

*distinguisher-id*

Specifies the distinguisher ID to filter on.

**Values** 0 to 4294967295

**summary**

Displays the summary information for the BGP and static policies.

**tunnel-id**

Specifies the tunnel ID to filter on.

**Values** 0 to 4294967295

**Platforms**

All

**Output**

The following output is an example of traffic statistics for all BGP and static policies.

**Output Example**

```
A:node-2# show router segment-routing sr-policies all

### 4.41 ancp

```
ancp
```

#### Syntax

```
ancp ancp-sub-string string
```

#### Context

[\[Tree\]](#) (clear>subscr-mgmt ancp)

#### Full Context

```
clear subscriber-mgmt ancp
```

#### Description

This command clears subscriber ANCP data.

#### Parameters

*string*

Specifies the ANCP string to clear, up to 63 characters, corresponding to this subscriber ID.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### 4.42 ancp-policy

```
ancp-policy
```

#### Syntax

```
ancp-policy [policy-name]
```

```
ancp-policy policy-name association
```

#### Context

[\[Tree\]](#) (show>subscr-mgmt ancp-policy)

## Full Context

show subscriber-mgmt ancp-policy

## Description

This command displays subscriber Access Node Control Protocol (ANCP) policy information.

## Parameters

### *policy-name*

Displays information for the specified ANCP policy.

### *association*

Displays the information configured with the ANCP policy.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of subscriber management ANCP policy information, and [Table 26: Output fields: ANCP policy](#) describes the output fields.

ancp-string

Syntax

```
ancp-string
ancp-string ancp-string
ancp-string customer customer-id site customer-site-name
ancp-string sap sap-id
```

Context

```
[Tree] (show>subscriber-management ancp-string)
```

Full Context

```
show subscriber-mgmt ancp-string
```

Description

This command displays subscriber ANCP string information.

Parameters

- ancp-string***  
Specify the ASCII representation of the DSLAM circuit-id name.
- customer-id***  
Specify the associated existing customer name.
- customer-site-name***  
Specify the associated customer's configured MSS name.
- sap-id***  
Specifies the physical port identifier portion of the SAP definition.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management ANCP string information.

## Output Example

**Table 27: Output fields: ANCP string** describes ANCP string output fields.

*Table 27: Output fields: ANCP string*

Field	Description
ANCP-String	The ANCP string name
Assoc	The entity associated with the ANCP string
State	The state of the entity associated with the ANCP string
Number of ANCP-Strings	The number of ANCP strings matching the search criteria
Type	The location the ANCP string is configured
Ancp Policy	The ANCP policy name
I. Rate	The ingress rate
E. Rate	The egress rate
Adj I. Rate	The adjusted ingress rate
Adj E. Rate	The adjusted egress rate
Act I. Rate	The actual ingress rate
Act E. Rate	The actual egress rate
Service Id	The service ID
Group	The group name
Neighbor	The neighbor address

## 4.44 anycast

anycast

### Syntax

**anycast** [**family**] [**detail**]

### Context

[\[Tree\]](#) (show>router>pim anycast)

### Full Context

show router pim anycast

### Description

This command displays PIM anycast rp-set information.

### Parameters

**family**

Specifies the address family.

**Values**    ipv4, ipv6

**detail**

Displays detailed information.

### Platforms

All

### Output

The following output is an example of a PIM anycast configuration.

### Output Example

```
A:dut-d# show router pim anycast
=====
PIM Anycast RP Entries
=====
Anycast RP           Anycast RP Peer

Anycast Address	Displays the candidate anycast address.
Anycast RP Peer	Displays the candidate anycast RP peer address.

4.45 anysec

anysec

Syntax

anysec port *port-id*

Context

[\[Tree\]](#) (tools>dump anysec)

Full Context

tools dump anysec

Description

This command dumps ANYsec information.

Parameters

*port-id*

Specifies the port ID.

**Values** slot, mda, connector, port

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

anysec

Syntax

anysec encryption-group *group-name* peer *ip-address* statistics

Context

[\[Tree\]](#) (clear anysec)

Full Context

clear anysec

Description

This command clears ANYsec statistics.

Parameters

*group-name*

Specifies the encryption group name, up to 32 characters.

*ip-address*

Specifies a peer IP address.

- Values
- ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF] H
  - d: [0 to 255] D

*statistics*

Keyword used to clear ANYsec statistics

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

anysec

Syntax

anysec

Context

[\[Tree\]](#) (show anysec)

Full Context

show anysec

Description

This command displays ANYsec information.

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

## 4.46 app-filter

### app-filter

#### Syntax

**app-filter** [*entry-id*]

#### Context

[\[Tree\]](#) (show>app-assure>group>policy app-filter)

#### Full Context

show application-assurance group policy app-filter

#### Description

This command displays application-assurance policy filter information.

#### Parameters

***entry-id***

Specifies an existing application filter entry.

**Values** 1 to 65535

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.47 app-group

### app-group

#### Syntax

**app-group** [*app-group-name*] **count** [**detail**]

**app-group count top** *granularity* [**max-count** *max-count*]

#### Context

[\[Tree\]](#) (show>app-assure>group app-group)

[\[Tree\]](#) (show>app-assure>group>aa-sub app-group)

Full Context

show application-assurance group app-group  
show application-assurance group aa-sub app-group

Description

This command displays per-application-group statistics. System-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Parameters

- app-group-name**  
Displays information about the specified application group name.
- count**  
Displays the counters for the application group.
- detail**  
Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **app-group** command information.

Output Example

```
A:ALU>show>app-assure>group# app-group count

show application-assurance group policy app-service-option

### Description

This command displays application-assurance policy application service option information.

### Parameters

#### *characteristic-name*

Specifies the characteristic name, up to 32 characters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 4.51 application

### application

#### Syntax

**application** [*application-name*] **count** [**detail**]  
**application count top** *granularity* [**max-count** *max-count*]

#### Context

[Tree] (show>app-assure>group>aa-sub-study application)  
[Tree] (show>app-assure>group application)  
[Tree] (show>app-assure>group>aa-sub application)

#### Full Context

show application-assurance group aa-sub-study application  
show application-assurance group application  
show application-assurance group aa-sub application

#### Description

This command displays per-application statistics. The system-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Subscriber statistics are available for special-study subscribers and account for all completed and active flows at the moment of this statistics request.

#### Parameters

##### ***application-name***

Displays information about the specified application name.

##### **count**

Displays counter information.

##### **detail**

Displays detailed information.

##### **top**

Displays counters sorted by granularity.

##### ***granularity***

Displays counters sorted by octets, packets, or floe. This is indicated by granularity.

**Values**    octets, packets, flows

**max-count**

If the value is greater than 0, displays up to the indicated value of statistic rows. If 0, displays all.

**Values**     1 to 4294967295

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of the **application** command information.

**Output Example**

```
A:ALU-ABC>show>app-assure>group# application count

A:ALU>show>app-assure>group#
```

application

Syntax

**application** [*app-name*]

Context

[\[Tree\]](#) (show>app-assure>group>policy application)

Full Context

show application-assurance group policy application

Description

This command displays application-assurance policy application information.

Parameters

***app-name***  
Specifies the application name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Syntax

**application** [*application-name*] **count**

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub>um application)

Full Context

show application-assurance group aa-sub usage-monitor application

## Description

This command displays usage monitor statistics for the application.

## Parameters

### *application-name*

Specifies the application name, up to 32 characters.

### count

Displays counters for the application.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

## Syntax

**application** [*application-name*] **count** [*detail*]

## Context

[\[Tree\]](#) (tools>dump>app-assure>group>aa-sub application)

## Full Context

tools dump application-assurance group aa-sub application

## Description

This command displays per-subscriber per-application statistics.

## Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

## Syntax

**application** [*app-name*] [{**dscp** | **dot1p**}]

## Context

[\[Tree\]](#) (show>router>sgt-qos application)

## Full Context

show router sgt-qos application

Description

This command displays application QoS settings.

Parameters

**app-name**

Specifies the application.

**Values** Some of the following values may only apply to specific products. Refer to the *SR OS R25.x.Rx Software Release Notes* for details about application support for different SR OS products:

arp, bgp, bmp, call-trace, cflowd, dhcp, diameter, dns, ftp, grpc, gtp, http, icmp, igmp, igmp-reporter, isis, l2tp, ldp, mld, mpls-udp-return, msdp, mtrace2, ndis, ntp, ospf, pcep, pim, pppoe, ptp, radius, rip, rsvp, sflow, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp

**dscp**

Specifies to show DSCP values only.

**dot1p**

Specifies to show dot1p values only.

Platforms

All

Output

The following output is an example of SGT QoS application information.

Output Example

```
A:ALA-A# show router sgt-qos application

### 4.53 application-assurance-group

```
application-assurance-group
```

**Syntax**

```
application-assurance-group [aa-group-id [ load-balance [unassigned]]]
```

**Context**

```
[Tree] (show>isa application-assurance-group)
```

**Full Context**

```
show isa application-assurance-group
```

**Description**

This command displays ISA group information.

**Parameters**

- aa-group-id**  
Specifies the AA ISA group ID.
- load-balance**  
Specifies load balancing information.
- unassigned**  
Specifies load balancing unassigned aa-sub information.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of application assurance group information, and [Table 29: Output fields: application assurance group](#) describes the output fields.

**Output Example**

```
*A:Dut-A# show isa application-assurance-group 1

Table 29: Output fields: application assurance group

Label	Description
ISA-AA Group Index	Indicates the group number of this group of MDAs.
Description	
Primary ISA-AA	Displays the primary slot and card number and whether the status is up or down and is either active or standby.
Backup ISA-AA	Displays the backup slot and card number and whether the status is up or down and is either active or standby. The status should be up and standby.
Last Active change	Indicates the last time a successful change was performed.
Admin State	Displays the administrative state, up or down.
Oper State	Displays the operational state, up or down.
Diverted FCs	Displays the forwarding class to be diverted.

Label	Description
Fail to mode	Displays how traffic is handled when there are no available ISA-AA cards to handle the traffic, either failToWire or failToOpen.
Egress <b>from</b> subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for subscriber to network traffic egressing towards the ISA-AA MDA.
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for subscriber to network traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlopePolicyTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetworkQueueTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlopePolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA
Egress <b>to</b> subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for network to subscriber traffic egressing towards the ISA-AA MDA.
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for network to subscriber traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlopePolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetworkQueueTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSchedulerPolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Overload Sub-quarantine	Displays the overload quarantine state, up or down.
Overload Cut Through	Displays the overload cut through state, enabled or disabled.

## applications

### Syntax

**applications** [**isa** *mda-id/esa-vm-id*]

### Context

[\[Tree\]](#) (tools>dump>app-assure>group>ipassist applications)

### Full Context

tools dump application-assurance group ip-identification-assist applications

### Description

This command dumps statistics showing the amount of traffic detected by IP identification assist for supported applications.

### Parameters

**isa** *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values	
<i>slot/mda</i>	
<i>slot</i>	1 to 10, depending on chassis model
<i>mda</i>	1 to 2, depending on chassis model

**isa** *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	
<i>esa-esa-id/vm-id</i>	
<i>esa-id</i>	1 to 16
<i>vm-id</i>	1 to 4

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

Use the following command to display statistics showing how much traffic is detected by the IP identification assist feature for supported applications.

```
tools dump application-assurance group 1:0 ip-identification-assist applications isa 1/1
```

## Output Example

```
=====

## 4.55 aps

aps

Syntax

aps [aps-id] [detail]

Context

[\[Tree\]](#) (show aps)

Full Context

show aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

**aps-id**

Displays information for the specified APS group ID.

**Values**    aps-group-idaps: keywordgroup-id: 1 to 128

**detail**

Displays detailed APS information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

See the following output examples:

- [Output Example: show aps \(Working Multi-chassis APS Node\)](#)
- [Output Example: show aps \(Protect MC-APS Node\)](#)
- [Output Fields: show aps](#)

Output Example: show aps (Working Multi-chassis APS Node)

### Output Fields: show aps

Table 30: Output fields: APS describes output fields for the **show aps** command.

Table 30: Output fields: APS

Label	Description
Interface	Specifies the APS interface name (the APS group port).
Admin State	Up — APS is administratively up. Down — APS port is administratively down.
Oper State	Up — APS port is operationally up. Down — APS is operationally down.
MC-CTL State	Specifies the multi-chassis state.
Work Circuit	Specifies the working circuit ID.
Prot Circuit	Specifies the physical port that acts as the protection circuit for this APS group.

Label	Description
Active Circuit	Specifies the active circuit.
Tx/Rx K1 Byte	Displays the value of the SONET/SDH K1 byte received or transmitted on the protection circuit.
Group Id	Displays the APS group name.
Protection Circuit	Displays the physical port that will act as the protection circuit for this APS group.
Switching-mode	Displays the switching mode of the APS group.
Switching-arch	The architecture of the APS group.
Revertive-mode	Displays the revertive mode of the APS group.  non-revertive — Traffic remains on the protection line until another switch request is received.  revertive — When the condition that caused a switch to the protection line has been cleared the signal is switched back to the working line.
Revert-time	Displays the configured time, in minutes, to wait after the working circuit has become functional again, before making the working circuit active again. If the revertive mode is non-revertive, then this field will be empty.
Rx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte received on the interface.
Tx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte transmitted on the interface.
Current APS Status	Displays the current APS status.
Mode Mismatch Cnt	Indicates the number of times a conflict occurs between the current local mode and the received K2 mode information.
Channel mismatch Cnt	Indicates the number of mismatches between the transmitted K1 channel and the received K2 channel has been detected.
PSB failure Cnt	Displays a count of Protection Switch Byte (PSB) failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected.
FEPL failure Cnt	Displays a count of far-end protection-line (FEPL) failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte.
No. of Switchovers	Displays the number of times a switchover has occurred.
Last Switchover	Displays the time stamp of the last switchover.

Label	Description
Switchover seconds	Displays the cumulative Protection Switching Duration (PSD) time in seconds.  For a working channel, this is the cumulative number of seconds that service was carried on the protection line.  For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled.
Signal Degrade Cnt	Displays the number of times the signal was degraded.
Signal Failure Cnt	Displays the number of times the signal failed.
Last Switch Cmd	Reports the last switch command that was performed on a circuit.
Last Exercise Result	The result of the last exercise request on a circuit.
Neighbor address	Displays the neighbor IP address.
Advertise Interval	Displays the advertise interval.
Hold time	Displays the hold time.

## aps

### Syntax

**aps** *aps-id* [clear]

**aps mc-aps-signaling** [clear]

**aps mc-aps-ppp** [clear]

### Context

[\[Tree\]](#) (tools>dump aps)

### Full Context

tools dump aps

### Description

This command displays Automated Protection Switching (APS) information.

### Parameters

***aps-id***

Specifies the APS ID.

**Values**    *aps-group-id*

aps: keyword  
group-id: 1 to 64

- clear**  
Removes all Automated Protection Switching (APS) operational commands.
- mc-aps-signaling**  
Displays multi-chassis APS signaling information.
- mc-aps-ppp**  
Displays multi-chassis APS PPP information.

**Platforms**  
7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**Output**  
The following output is an example of APS information.

**Output Example**

```

show router ospf area
```

Description

This command displays configuration information about all areas or the specified area.

Parameters

**area-id**  
Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

**Values**    ip-address — a.b.c.d  
              area — 0 to 4294967295

**flex-algo-id**  
Displays the flexible algorithm identifier.  
**Values**    128 to 255

**detail**  
Displays detailed operational and statistical information about the specified area.

**lfa**  
Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

**flex-algo**  
Displays OSPFv2 information for the specified algorithm identifier.

## flex-algo all

Displays OSPFv2 information for all flexible algorithms.

## Platforms

All

## Output

The following outputs are examples of OSPF area outputs.

[Table 31: Output fields: OSPF area](#) describes the standard and detailed command output fields for an OSPF area.

*Table 31: Output fields: OSPF area*

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.

Label	Description
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area.
Export Policies	The export policies configured in this area.
Export Fltrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Fltrd LSAs	The total number of LSAs filtered by area import policies.

#### Output Example: show router ospf area detail

area

Syntax

area [area-id] [detail] [ lfa]

Context

[\[Tree\]](#) (show>router>ospf3 area)

Full Context

show router ospf3 area

Description

This command displays configuration information about all areas or the specified area. When detail is specified operational and statistical information will be displayed.

Parameters

**area-id**  
Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

**Values**    ip-address — a.b.c.d  
              area — 0 to 4294967295

**detail**  
Displays detailed information about the specified area.

**lfa**  
Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

Platforms

All

Output

OSPF Area Output  
The following table describes the standard and detailed command output fields for an OSPF area.

Table 32: Output fields: OSPv3 area

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area.

Label	Description
	Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area.

Label	Description
	True — The extended TE Database (TE-DB) is exported in this area.
Export Policies	The export policies configured in this area.
Export Fltrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Fltrd LSAs	The total number of LSAs filtered by area import policies.

### Output Example

```

4.58 arp

arp

Syntax

```
arp {[ip-address] | [mac ieee-address] | [ sap sap-id] | [interface ip-int-name] | [ sdp sdp-id:vc-id] |
[summary] }
```

Context

```
[Tree] (show>service>id arp)
```

Full Context

```
show service id arp
```

Description

This command displays the ARP cache entries for this service.

Parameters

```
ip-address
    Specifies the IP address in IP address dotted decimal notation.
```

**ieee-mac-address**

Specifies the 48-bit MAC address in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

**sap-id**

Specifies a Service Access Point (SAP) within a service.

**ip-int-name**

Specifies the name of the IP interface. Interface names can be from 1 to 32 alphanumeric characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes.

**sdp-id**

Specifies the SDP identifier. Allowed values are integers in the range of 1 and 17407 for existing SDPs.

**vc-id**

Specifies the virtual circuit identifier.

**Values** 1 to 4294967295

**Platforms**

All

**Output**

The following output is an example of service ID information. [Table 33: Output fields: service ID ARP](#) describes the output fields.

**Output Example**

```
A:ALA-A# show service id 100 base

=====
A:ALA-A#
```

Table 33: Output fields: service ID ARP

Label	Description
IP Address	Specifies the IP address of the ARP cache entry.
MAC Address	Specifies the MAC address associated with the IP address.
Type	Other — Learned through normal ARP queries. Static — Configured by <b>static-arp</b> commands.

Label	Description
	Managed — Learned from DHCP snooping or configured by <b>host</b> commands.
Age	Indicates age of the ARP entry.
Interface	Indicates the name of the IP interface.
Port	Indicates the port upon which the entry was learned.

arp

Syntax

**arp** {**all** | *ip-address*}

**arp interface** {*ip-int-name* | *ip-address*}

Context

[\[Tree\]](#) (clear>router arp)

Full Context

clear router arp

Description

This command clears all or specific ARP entries.

The scope of ARP cache entries cleared depends on the command line options specified.

Parameters

**all**

Clears all ARP cache entries.

***ip-address***

Clears the ARP cache entry for the specified IP address.

**Values**

ipv4-address: a.b.c.d

***ip-int-name***

Clears all ARP cache entries for the IP interface with the specified name, up to 32 characters.

***ip-address***

Clears all ARP cache entries for the specified IP interface with the specified IP address.

**Values**

ipv4-address: a.b.c.d

## Platforms

All

```
arp
```

## Syntax

**arp**

## Context

[\[Tree\]](#) (clear>service>id arp)

## Full Context

clear service id arp

## Description

This command clears all ARP entries. This command is only valid for Ipipe and VPRN services.

## Platforms

All

```
arp
```

## Syntax

**arp** [{*ip-int-name* | *ip-address[/mask]* | **mac** *ieee-mac-address* | **summary**}] [*arp-type*]

## Context

[\[Tree\]](#) (show>router arp)

## Full Context

show router arp

## Description

This command displays the router ARP table sorted by IP address. If no command line options are specified, all ARP entries are displayed.

## Parameters

### *ip-int-name*

Only displays ARP entries associated with the specified IP interface name.

### *ip-address[/mask]*

Only displays ARP entries associated with the specified IP address and mask.

**ieee-mac-address**

Only displays ARP entries associated with the specified MAC address.

**summary**

Displays an abbreviate list of ARP entries.

**arp-type**

Only displays ARP information associated with the keyword.

**Values**    local, dynamic, static, managed

**Platforms**

All

**Output**

**ARP Table Output** — The following output is an example of router ARP table information, and [Table 34: Output fields: ARP](#) describes the ARP table output fields.

**Output Example**

```
*B:7710-Red-RR# show router arp

Table 34: Output fields: ARP

Label	Description
IP Address	The IP address of the ARP entry
MAC Address	The MAC address of the ARP entry
Expiry	The age of the ARP entry
Type	Dyn — the ARP entry is a dynamic ARP entry Inv — the ARP entry is an inactive static ARP entry (invalid) Oth — the ARP entry is a local or system ARP entry Sta — the ARP entry is an active static ARP entry
*Man	The ARP entry is a managed ARP entry
Int	The ARP entry is an internal ARP entry
[I]	The ARP entry is in use
Interface	The IP interface name associated with the ARP entry
No. of ARP Entries	The number of ARP entries displayed in the list

## 4.59 arp-host

### arp-host

#### Syntax

**arp-host** [wholesaler service-id] {[sap sap-id | interface interface-name | ip-address ip-address[/mask] | mac ieee-address | {[ port port-id] [no-inter-dest-id | inter-dest-id inter-dest-id]}]} [detail]  
**arp-host statistics** [sap sap-id | interface interface-name]  
**arp-host summary** {[interface interface-name | saps ]

#### Context

[\[Tree\]](#) (show>service>id arp-host)

#### Full Context

show service id arp-host

#### Description

This command displays ARP host related information.

## Parameters

### ***service-id***

The VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

**Values** 1 to 2148007980, *svc-name: 64 chars max*

### ***sap-id***

Specifies the physical port identifier portion of the SAP definition.

### ***interface-name***

Displays information for the specified IP interface. 32 characters maximum.

### ***ip-address[/mask]***

Displays information associated with the specified IP address.

**Values** ip-address: a.b.c.d.  
mask: 1 to 32

### ***ieee-address***

Specifies the MAC address.

**Values** xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

### ***port-id***

Specifies the port ID.

**Values** slot, mda, port

### ***no-inter-dest-id***

Displays the information about no intermediate destination ID.

### ***inter-dest-id***

Indicates the intermediate destination identifier received from either the DHCP or the RADIUS server or the local user database. 32 characters maximum

### ***detail***

Displays detailed information.

### ***statistics***

Displays ARP host statistics.

### ***summary***

Displays summary information.

### ***saps***

Displays SAP ARP host related information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example ARP host information for specified service IDs.

## Output Example

```
*A:Dut-C# show service id 2 arp-host

**Table 35: Output fields: service ID ARP host** describes service ARP host information.

*Table 35: Output fields: service ID ARP host*

Field	Description
IP Address	The IP address
Mac Address	The MAC address of the this ARP host
Sap Id	The service SAP ID
Remaining Time	The remaining time
MC Stdbby	The MC standby
Number of ARP hosts	The total number of ARP hosts
Service ID	The service identifier
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
ARP host ANCP-String	The name of the ARP host
ARP host Int Dest Id	The ARP host internal destination ID
RADIUS-User-Name	The RADIUS user name
Session Timeout (s)	The session timeout value
Start Time	The start time
Last Auth	The date and time of the last authentication
Last Refresh	The date and time of the last refresh
Persistence Key	The key value that can be used to track this ARP host in the persistence file.
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	

Field	Description
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit

Field	Description
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdbby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

## arp-host

### Syntax

**arp-host** {**all** | **mac** *ieee-address* | **sap** *sap-id* | **ip-address** *ip-address*[*/mask*]}  
**arp-host** {**port** *port-id* | {**inter-dest-id** *intermediate-destination-id* | **no-inter-dest-id**} [**port** *port-id*]}  
**arp-host statistics** [**sap** *sap-id* | **interface** *interface-name*]

### Context

[\[Tree\]](#) (clear>service>id arp-host)

### Full Context

clear service id arp-host

### Description

This command clears ARP host data.

### Parameters

- all**

Clears all ARP host statistics.
- ieee-address**

Clears the ARP host MAC address information. The 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

**Values**

xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx
- sap-id**

Clears the specified SAP information.
- ip-address[/mask]**

Clears the specified IP address and mask.

**Values**

a.b.c.d

mask: 1 to 32

**port-id**

Clear the specified port ID information.

Values	port-id	slot/mda/port [.channel]	
	aps-id	aps-group-id[.channel]	
		aps	keyword
		group-id	1 to 64
	ccag-id	ccag-id.path-id [cc-type]	
		ccag	keyword
		id	1 to 8
		path-id	a, b
		cc-type	.sap-net, net-sap
	eth-tunnel-id	eth-tunnel-id	
		eth-tunnel	keyword
		id	1 to 1024
	lag-id	lag-id	
		lag	keyword
		id	1 to 800

**intermediate-destination-id**

Displays information about the specified intermediate destination ID. 32 characters maximum.

**no-inter-dest-id**

Displays the information about no intermediate destination ID.

**interface-name**

Clears the interface name. 32 characters maximum.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 4.60 arp-table

### arp-table

#### Syntax

**arp-table** [**ip** *ipv4-address*] [**class** *class*] [**next-index** *index*]

#### Context

[\[Tree\]](#) (tools>dump>wlan-gw>lanext>bd arp-table)

#### Full Context

tools dump wlan-gw lanext bd arp-table

#### Description

This command dumps the specified ARP table entries for the specified HLE BD.

#### Parameters

***ipv4-address***

Specifies the IP address of the ARP entry to be displayed.

***class***

Specifies the source on which to filter the ARP table entries.

**Values**    access, network, remote

***index***

Specifies the next set of results if there are more results than the current output. The additional results are shown at the bottom of the current output.

**Values**    0 to 4294967295

#### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of ARP table information.

#### Output Example

```
tools>dump>wlan-gw>lanext>bd# arp-table
=====
MATCHED 1 ARP ENTRY ON SLOT #2 MDA #1
=====
IP ADDRESS      MAC ADDRESS      CLASS      TIMESTAMP
-----

```

=====

## 4.61 aspath-regex

### aspath-regex

#### Syntax

**aspath-regex** *reg-exp* {**detail** | **longer**}

**aspath-regex** *reg-exp*

**aspath-regex** *reg-exp* **hunt**

#### Context

[\[Tree\]](#) (show>router>bgp>routes aspath-regex)

#### Full Context

show router bgp routes aspath-regex

#### Description

This command displays BGP routes with an AS path matching the specified regular expression.

**aspath-regex** is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

#### Platforms

All

## 4.62 association

### association

#### Syntax

**association** [*ma-index* | *ma-admin-name*] [**detail**]

#### Context

[\[Tree\]](#) (show>eth-cfm association)

Full Context

show eth-cfm association

Description

This command displays ETH-CFM association information.

Parameters

- ma-index*

Specifies the maintenance association (MA) index.

**Values**1 to 4294967295
- ma-admin-name*

Specifies the administrative name for the association, up to 64 characters.
- detail**

Keyword to display detailed information for the ETH-CFM association.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ETH-CFM association information, and the following table describes the output fields.

Output Example

```
A:node-2# show eth-cfm association

Table 36: Output fields: ETH-CFM association

Label	Description
Md-index	Displays the maintenance domain (MD) index
Ma-index	Displays the maintenance association (MA) index
Name	Displays the part of the maintenance association identifier which is unique within the maintenance domain name
Int	Displays the CCM transmission interval for all MEPs in the association
Hold	Displays the CCM hold time, in milliseconds, that is added before the defect condition is raised. A value of "n/a" indicates that the MEP is not subsecond and does not support the CCM hold time.
Bridge-id	Displays the bridge-identifier value for the domain association
MEPS	Displays the total local and remote maintenance association end point (MEP)
TxSid	Yes — the Sender ID TLV is included in the supported ETH-CFM PDUs No — the Sender ID TLV is not included in the supported ETH-CFM PDUs
md-admin-name	Displays the administrative MD name
ma-admin-name	Displays the administrative MA name
bridge-name	Displays the administrative bridge-identifier name

## association

### Syntax

**association**

**association** *name* [**statistics**]

### Context

**[Tree]** (show>subscr-mgmt>pfcf association)

Full Context

show subscriber-mgmt pfcf association

Description

This command displays PFCF association information. If no parameters are entered, it displays an overview of all PFCF associations present on the system.

Parameters

- name**  
Specifies the name of the configured PFCF association, up to 32 characters, for which detailed overview information is displayed.
- statistics**  
Specifies that the packet counters for each PFCF message and upstream IBCP message for the specified PFCF association *name* are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of PFCF association output information and the corresponding table describes the output fields:

- [Output Example: show subscriber-mgmt pfcf association](#); [Table 37: Output fields: PFCF association](#)
- [Output Example: show subscriber-mgmt pfcf association name](#); [Table 38: Output fields: PFCF association name](#)
- [Output Example: show subscriber-mgmt pfcf association name statistics](#)

Output Example: show subscriber-mgmt pfcf association

4.63 associations

associations

Syntax  
associations

Context  
[Tree] (show>router>dhcp>local-dhcp-server associations)  
[Tree] (show>router>dhcp6>local-dhcp-server associations)

Full Context  
show router dhcp local-dhcp-server associations  
show router dhcp6 local-dhcp-server associations

Description  
This command displays the interfaces associated with this DHCP or DHCP6 server.

Platforms  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output  
The following output is an example of information associated with this DHCP or DHCP6 server.

Output Example

```
*A:SUB-Dut-A# show router dhcp local-dhcp-server dhcpS1 associations
=====
DHCP server s1  router 3
=====
Associations                Admin
-----
tosim5                      Up
=====
*A:SUB-Dut-A#

*A:SUB-Dut-A# show router dhcp6 local-dhcp-server abc associations
=====
DHCP server abc  router 3
=====
Associations                Admin
-----
tosimxyz                   Up
=====
*A:SUB-Dut-A#
```

Table 39: Output fields: DHCP summary describes DHCP associations fields.

Table 39: Output fields: DHCP summary

Label	Description
Associations	The entity associated with the local DHCP server
Admin	The administrative state

## associations

### Syntax

- associations**
- associations per-link-hash interface**
- associations per-link-hash class {1 | 2 | 3} interface**
- associations link-map-profile [link-map-profile] interface**
- associations per-link-hash [class {1 | 2| 3}] sap**
- associations link-map-profile [link-map-profile] sap**

### Context

[Tree] (show>lag associations)

### Full Context

show lag associations

### Description

This command displays LAG association information.

### Parameters

- link-map-profile**  
Displays information about a specified LAG link map profile.  
**Values** 1 to 32 (VSR)  
1 to 64 (all other platforms)

### Platforms

All

## 4.64 auth-keychain

### auth-keychain

**Syntax**

**auth-keychain** [*keychain*]

**Context**

[\[Tree\]](#) (show>router>bgp auth-keychain)

**Full Context**

show router bgp auth-keychain

**Description**

This command displays BGP sessions using a particular authentication keychain.

**Parameters**

***keychain***

Specifies an existing keychain name.

**Platforms**

All

**Output**

The following output is an example of authentication keychain information.

**Output Example**

```
*A:ALA-48# show router 2 bgp auth-keychain
=====
Sessions using key chains
=====
Peer address          Group      Keychain name
-----

## 4.65 authentication

authentication

Syntax

**authentication user-name** *user-name* **password** *password* [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ppp authentication)

Full Context

tools perform subscriber-mgmt local-user-db ppp authentication

Description

This command authenticates the PPPoE user name.

Parameters

***user-name***

Specifies the PPP user name up to 253 characters.

***password***

Specifies the password of this host up to 64 characters.

***circuit-id***

Specifies the circuit ID up to 127 characters.

***circuit-id-hex***

Specifies the circuit ID in hexadecimal format.

**Values**    0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

***derived-id***

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction up to 255 characters.

***ieee-address***

Specifies information about the MAC address of the PPP session.

***remote-id***

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

***remote-id-hex***

Specifies the remote ID in hexadecimal format.

**Values** 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

***sap-id***

Specifies a SAP ID, up to 255 characters.

***service-name***

Specifies the service name.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## authentication

**Syntax**

**authentication** *policy-name* **association**

**authentication** [*policy-name*]

**authentication** [*policy-name*] **statistics**

**authentication** **coa-statistics**

**Context**

[\[Tree\]](#) (show>subscr-mgmt authentication)

**Full Context**

show subscriber-mgmt authentication

**Description**

This command displays subscriber management RADIUS authentication policy information and statistics.

**Parameters**

***policy-name***

Specifies the subscriber management RADIUS authentication policy name, up to 32 characters, for which information is requested.

**association**

Displays SAP, interface, local user database host, AA and L2TP associations of this policy.

### coa-statistics

Displays the overall statistics for incoming RADIUS Change of Authorization (CoA) messages and Disconnect Messages. For dropped requests, a counter for different drop reasons is available.

### statistics

Displays a list of policies with basic statistics (without specifying a policy name) or detailed statistics, including per-server statistics for the specified policy-name. These statistics apply only to the legacy RADIUS server configuration method where the servers are directly configured in the authentication policy.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of subscriber management authentication information.

### Output Example

```
# show subscriber-mgmt authentication

Table 40: Output fields: subscriber authentication

Label	Description
Re-authentication	Whether re-authentication on IPOE renewal is enabled
Username Format	The user name format in RADIUS message
PPPoE Access Method	The PPPoE access method, none, padi, pap-chap
Username Mac-Format	The username is represented when contacting a RADIUS server.
PPP-Username Oper	The PPP user name operation
PPP-Domain-Name	The PPP domain name
Username Oper	The username

Label	Description
Acct-Stop-On-Fail	The failure condition a RADIUS accounting-stop message indicating the failure has to be sent
RADIUS Server Policy	The RADIUS server policy name
Fallback Action	The authentication action in case no RADIUS server is available
Lack Mgmt Change	The time of the most recent management-initiated change to this policy server
Remote Id	The value of the remote ID sub-option
NAS Port Id	NAS port ID generation enabled or disabled
PPPoE Service Name	The PPPoE service name
Access Loop Options	The generation of the DSL forum access loop characteristics RADIUS attributes enabled or disabled
NAS Port Prefix	The type of prefix added to the NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Type	The kind of value to be put in the RADIUS NAS-Port-Type attribute if included in RADIUS authentication request messages
Calling Station Id	The string will be put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
Tunnel Server Attr	The tunnel-server-attrs RADIUS attribute enabled or disabled
NAS Port	The NAS-Port attribute included or excluded
NAS Port Bits Spec	The number that will be put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages
Circuit Id	Circuit ID generation enabled or disabled
NAS Identifier	NAS-Identifier RADIUS attribute enabled or disabled
DHCP Vendor Class Id	dhcp-vendor-class-id RADIUS attribute enabled or disabled
MAC Address	The generation of the client MAC address RADIUS attribute enabled or disabled
NAS Port Suffix	The type of suffix is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
Acct Session Id	The RADIUS accounting session id for this subscriber host
DHCP Options	DHCP options enabled or disabled
Router	The RADIUS router name

Label	Description
Access Algorithm	The algorithm used to access the set of RADIUS servers
Timeout (s)	The timeout for a response from the RADIUS server
Source Address	The source address of the RADIUS message
Retry	The number of retries for contacting the RADIUS server
Hold down time (s)	The hold down time
Index IP Address	The IP address of the index
Port	The port ID
Pend-Req-Limit	The limit of the number of pending RADIUS authentication requests for this RADIUS server
Out/Overload time (s)	The accumulated time that the value of the object RADIUS server has been equal to 'overloaded' since created
Oper State	The operational state
Access-Request	The number of Access-Request packets received by this RADIUS proxy server
Access-Accept	The number of Access-Accept packets received by this RADIUS proxy server
Change-of-Authorization	Change of authorization enabled or disabled
Policy Name	The authentication policy name
Subscr. Pkts Authenticated	The number of subscriber packets authenticated
Subscr. Pkts Rejected	The number of subscriber packets rejected
Subscr. Pkts Rejected Send Failed	The number of subscriber messages (such as DHCP and PPPoE) failed to be sent
subscriber packets authenticated	The number of subscriber packets authenticated
subscriber packets rejected	The number of subscriber packets rejected
subscriber packets send failed	The number of subscriber packets failed to be sent
Requests Received	The number of notify Change-of-Authorization requests received
Requests Accepted	The number of notify Change-of-Authorization requests accepted

Label	Description
Requests Rejected	The number of notify Change-of-Authorization requests rejected
Requests Dropped	The number of notify Change-of-Authorization requests dropped
No Auth Policy found	The number of notify Change-of-Authorization requests found
Invalid message	The number of notify Change-of-Authorization requests rejected because of decode errors
Out of resources	The number of notify Change-of-Authorization requests rejected due to lack of resources
Authentication Failure	The number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id

Table 41: Output fields: system security authentication

Label	Description
sequence	Sequence in which authentication and authorization is attempted
type	Type of server
status	Status of the server
timeout (secs)	Number of seconds the system waits for a response from a server
retry count	Number of retry attempts to contact the LDAP or RADIUS server
retry timeout (secs)	Number of seconds the system waits before retrying the TACACS+ server
server address	IP address of the server

Label	Description
server name	Optional description of the LDAP server
admin/oper status	Administrative and operational status for each type, and RADIUS server ports in use
health check	Whether the servers are periodically monitored
No. of Servers	Total number of configured servers
conn errors	Number of connection errors
accepted logins	Number of logins accepted by the server
rejected logins	Number of logins rejected by the server
sent pkts	Number of packets sent
rejected pkts	Number of packets rejected
valid	Number of valid VSAs received
invalid	Number of invalid VSAs received
unknown	Number of unknown VSAs received
malformed	Number of malformed VSAs received

## 4.66 authentication-origin

### authentication-origin

#### Syntax

**authentication-origin** [**priority** [*priority*]]

#### Context

**[Tree]** (show>subscr-mgmt authentication-origin)

#### Full Context

show subscriber-mgmt authentication-origin

#### Description

This command displays subscriber authentication origin information.

Parameters

**priority**  
Displays information about the specified authentication origin priority override.

**Values**    1 to 7

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of authentication origin information. [Table 42: Output fields: authentication origin](#) describes authentication origin output fields.

Output Example

```
*A:cses-V26>config>subscr-mgmt>auth-orig# show subscriber-mgmt authentication-origin

Field	Description
Priority	The relative order of authentication priorities
Source	The source of authentication priority
Number of Authentication Origins	The number of authentication origins

## 4.67 authentication-server-check

### authentication-server-check

#### Syntax

**authentication-server-check** **server-address** *ip-address* [**port** *port*] {{**user-name** *user-name* **password** *password*} | **attr-from-file** *file-url*} **secret** *key* [**source-address** *ip-address*] [**timeout** *seconds*] [**router** *router-instance* | **service-name** *service-name*] **nas-identifier** *nas-id* [ **debug**]

#### Context

[\[Tree\]](#) (tools>perform>security authentication-server-check)

#### Full Context

tools perform security authentication-server-check

#### Description

This command is used to perform an authentication check on the RADIUS server.

#### Parameters

**server-address** *ip-address*  
Specifies the IP address of the RADIUS server.

**port**  
Specifies the port of the RADIUS server.

**Values** 1 to 65535

**user-name**  
Specifies the user name, up to 253 characters.

**password**  
Specifies the user password, up to 64 characters.

**file-url**  
Specifies to attach additional VSAs from a file.

Values	<i>local-url:</i> [ <i>cflash-id</i> ] [ <i>file-path</i> ] 200 characters maximum, including cflash-id directory length, up to 99 characters each <i>remote-url:</i> [{ftp://  tftp://}<login>:<pswd>@<remote-locn>/][<file-path>] 255 characters maximum, directory length, up to 99 characters each <i>remote-locn:</i> [<hostname>   <ipv4-address>   <ipv6-address>]
--------	---

*ipv4-address:* a.b.c.d

*ipv6-address:* x::x::x::x::x::x[-interface]  
x::x::x::x::x::d.d.d.d[-interface]

x - [0..FFFF]H

d - [0..255]D

interface - up to 32 characters for link local addresses

*cflash-id:* cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

**key**

Specifies the secret key shared between the RADIUS client and server, up to 64characters.

**source address** *ip-address*

Specifies the source address used for the access-request message.

Values	
<i>ipv4-address</i>	a.b.c.d
<i>ipv6-address</i>	x::x::x::x::x::x (eight 16-bit pieces)
	x::x::x::x::d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

***seconds***

Specifies the time to wait for the RADIUS server response.

**Values** 1 to 90

***router-instance***

Specifies the router instance that should be used by the access request message.

<b>Values</b>	<i>router-name</i>   <i>vprn-svc-id</i>
<i>router-name</i>	Base, management Default - Base
<i>vprn-svc-id</i>	1 to 2147483647

**service-name**

Specifies the service name that should be used by the access request message, up to 64 characters.

***nas-id***

Specifies the NAS identifier, up to 64 characters.

### **debug**

Specifies to display the full debug message, including all VSAs and full hex sting, of the RADIUS reply message.

### **Platforms**

All

## **4.68 auto-boot**

### **auto-boot**

#### **Syntax**

**auto-boot** {**retry** | **terminate**}  
**auto-boot echo** [**debugger**]  
**no auto-boot echo** [**debugger**]

#### **Context**

[\[Tree\]](#) (tools>perform auto-boot)

#### **Full Context**

tools perform auto-boot

#### **Description**

This command starts and stops the auto-boot process. It is also used to enable the display of auto-discovery information in the CLI.

This command can be used only if the **auto-boot** flag is enabled in the BOF.

The **no** form of this command disables the display of auto-discovery information.

#### **Parameters**

##### **retry**

Executes the auto-boot process.

##### **terminate**

Stops an ongoing auto-boot process.

##### **echo**

Enables the display of auto-discovery information in the CLI.

##### **debugger**

Includes debugging information in the displayed auto-discovery information.

#### **Platforms**

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

## auto-boot

### Syntax

**auto-boot** [**detail**]

**auto-boot** **log**

### Context

[\[Tree\]](#) (tools>dump auto-boot)

### Full Context

tools dump auto-boot

### Description

This command displays auto-boot process information.

### Parameters

**detail**

Displays detailed information.

**log**

Saves auto-boot process information to a log file.

### Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

## 4.69 auto-disc

## auto-disc

### Syntax

**auto-disc** [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

### Context

[\[Tree\]](#) (show>router>bgp>routes>evpn auto-disc)

### Full Context

show router bgp routes evpn auto-disc

**Description**

This command displays BGP-EVPN auto discovery routes.

**Parameters**

**hunt**

Displays entries for the specified route.

**detail**

Displays detailed information.

**rd**

Displays information for the route distinguisher.

**Values** *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

**comm-id**

Specifies the community ID, up to 72 characters.

**Values** *[as-num:comm-val | ext-comm | well-known-comm]*  
where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:  
*type:{ ip-address:comm-val1 | as-number1:comm-val2 | as-number2:comm-val1 }*  
where:
  - *as-number1* — 0 to 65535
  - *comm-val1* — 0 to 65535
  - **type** — target, origin
  - *ip-address* — a.b.c.d
  - *comm-val2* — 0 to 4294967295
  - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

**tag**

Specifies the auto discovery route tag.

**Values** 0 to 4294967295 | MAX-ET

**next-hop**

Specifies the IPv4 or IPv6 BGP next-hop address.

**Values**            *ipv4-address:            a.b.c.d*

ipv6-address:           x:x:x:x:x:x:x (eight 16-bit pieces)  
                          x:x:x:x:x:d.d.d.d  
                          x: [0 to FFFF]H  
                          d: [0 to 255]D

**esi**  
Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':','')

**reg-exp**  
Displays routes matching the specified regular expression, up to 80 characters.

**Platforms**  
All

**Output**  
The following output is an example of BGP-EVPN auto discovery route information, and [Table 43: Output fields: BGP route auto discovery](#) describes the output fields.

**Output Example**

```

### 4.70 auto-discovered-meps

auto-discovered-meps

Syntax

**auto-discovered-meps** [*mep-id*] **domain** *md-index* **association** *ma-index*

Context

[\[Tree\]](#) (clear>eth-cfm auto-discovered-meps)

Full Context

clear eth-cfm auto-discovered-meps

Description

This command clears remote MEPs that were auto discovered. The function clears a specific auto-discovered MEP learned within an association or all auto-discovered MEPs in the association. When the *mep-id* representing the auto-discovered MEP is omitted and only the **domain** *md-index* and **association** *ma-index* are provided, all auto-discovered MEPs in the association are cleared. At a minimum the **domain** *md-index* and the **association** *ma-index* must be provided.

Only auto-discovered MEPs may be cleared. This command has no effect on manually configured MEPs.

Parameters

*mep-id*

Specifies the MEP ID of the remote MEP that was auto-discovered.

**Values** 1 to 8191

*md-index*

Specifies the domain context in which the remote MEP was auto-discovered.

**Values** 1 to 4294967295

***ma-index***

Specifies the association context in which the remote MEP was auto-discovered.

**Values** 1 to 4294967295

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 4.71 auto-lsp

### auto-lsp

**Syntax**

**auto-lsp**

**Context**

[\[Tree\]](#) (clear>router>mpls>lsp auto-lsp)

**Full Context**

clear router mpls lsp auto-lsp

**Description**

Commands in this context reset and restart all auto LSPs.

**Platforms**

All

## 4.72 auto-node-provisioning

### auto-node-provisioning

**Syntax**

**auto-node-provisioning**

**Context**

[\[Tree\]](#) (tools>perform>system auto-node-provisioning)

**Full Context**

tools perform system auto-node-provisioning

### Description

This command initiates auto-provisioning of the node on all ports that are operationally up but do not have an IP address.

### Platforms

All

## 4.73 autoconfigure

### autoconfigure

#### Syntax

**autoconfigure**

#### Context

[\[Tree\]](#) (clear>router autoconfigure)

#### Full Context

clear router autoconfigure

#### Description

Commands in this context clear IP autoconfiguration information.

#### Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

### autoconfigure

#### Syntax

**autoconfigure**

#### Context

[\[Tree\]](#) (show router autoconfigure)

#### Full Context

show router autoconfigure

#### Description

Commands in this context display IP autoconfiguration information.

## Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

## 5 b Commands

### 5.1 bandwidth-policy

bandwidth-policy

**Syntax**

**bandwidth-policy** *policy-name* [**detail**]

**Context**

[\[Tree\]](#) (show>mcast-management bandwidth-policy)

**Full Context**

show mcast-management bandwidth-policy

**Description**

This command displays multicast path management bandwidth policy information.

**Parameters**

***policy-name***

Specifies the bandwidth policy name, up to 32 characters.

**detail**

Displays detailed information.

**Platforms**

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

**Output**

The following output is an example of multicast management bandwidth policy information.

**Output Example**

```

Table 44: Output fields: service ID base

Label	Description
Service Id	Displays the service identifier

Label	Description
Vpn Id	Displays the VPN ID assigned to the service
Service Type	Displays the type of service: Epipe, Apipe, Fpipe, Ipipe, VPLS, IES, VPRN
MACSec enabled	Indicates whether MACsec is enabled
Name	Displays the service name
Description	Displays the generic information about the service
Customer Id	Displays the customer identifier
Creation Origin	Displays how the service was created
Last Status Change	Displays the date and time of the most recent status change to this customer
Last Mgmt Change	Displays the date and time of the most recent management-initiated change to this customer
Etree Mode	Indicates whether Etree mode is enabled
Admin State	Displays the state of the service
Oper State	Displays the operating state of the service
MTU	Displays the largest frame size (in octets) that the service can handle
SAP Count	Displays the number of SAPs defined on the service
SDP Bind Count	Displays the number of SDPs bound to the service
Snd Flush on Fail	Indicates whether sending MAC flush messages is enabled
Host Conn Verify	Indicates whether the host is connected
Propagate MacFlush	Indicates whether MAC flush messages are propagated to remote Target LDP (TLDP) peers
Per Svc Hashing	Indicates whether per-service hashing is enabled for this service
Allow IP Intf Bind	Indicates whether allow IP interface binding is enabled for R-VPLS services
Fwd-IPv4-Mcast-To*	Indicates whether IPv4 multicast traffic to the VPRN interface attached to the R-VPLS is enabled
Fwd-IPv6-Mcast-To*	Indicates whether IPv6 multicast traffic to the VPRN interface attached to the R-VPLS is enabled
Mcast IPv6 scope	Displays the IPv6 multicast scope

Label	Description
Def. Gateway IP	Displays the default gateway
Def. Gateway MAC	Displays the default gateway MAC address
Temp Flood Time	Displays the temporary flood time
Temp Flood	Displays the temporary flood time state
Temp Flood Chg Cnt	Displays the temporary flood change count
SPI load-balance	Indicates whether SPI load-balance is enabled
TEID load-balance	Indicates whether TEID load balancing is enabled
Lbl Eth/IP L4 TEID	Indicates whether load balancing based on MPLS labels and inner Ethernet, IP addresses, L4 ports, and TEID is enabled
Src Tep IP	Displays the Termination Endpoint address
Vxlan ECMP	Indicates whether VXLAN ECMP is enabled
MPLS ECMP	Indicates whether MPLS ECMP is enabled
Ignore MTU Mismatch	Displays the configuration state of the <b>ignore-l2-mtu-mismatch</b> command for the service
SAP Type	Displays the type of SAPs allowed in the service and describes the processing applied by the node packets received on these SAPs
Vxlan Src Tep Ip	Displays the VXLAN source tunnel endpoint (TEP) ID
Force QTag Fwd	Indicates whether force Q-tag forwarding is enabled
Oper Group	Displays the operational group for this service
Identifier	Displays the service access (SAP) and destination (SDP) points
Type	Displays the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on the SDP
AdmMTU	Displays the largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented
OprMTU	Displays the operational MTU of the SAP or SDP bind
Admin State (Adm)	Displays the administrative state
Oper State (Opr)	Displays the operation state

Label	Description
PBB Tunnel Point	Displays the endpoint in the B-VPLS environment where the Epipe terminates
Admin MTU	Displays the B-VPLS admin MTU
Backbone-Flooding	Indicates whether traffic is flooded in the B-VPLS for the destination instead of unicast. If the backbone destination MAC is in the B-VPLS FDB, it is unicast.
ISID	Displays the 24 bit field carrying the service instance identifier associated with the frame. It is used at the destination PE as a demultiplex or field.
Router Oper State	Displays the operational state of the router
Route Dist.	Displays the route distinguisher (RD) type
VPRN Type	Displays the VPRN type
Oper Route Dist	Displays the IP address of the operational RD
Oper RD Type	Displays the operational RD type
AS Number	Displays the AS number
Router Id	Displays the router ID
ECMP	Displays the status of ECMP
ECMP Max Routes	Displays the maximum ECMP routes
Max IPv4 Routes	Displays the maximum IPv4 routes
Local Rt Domain-id	Displays the local route domain ID

## 5.3 base-routing-instance

### base-routing-instance

#### Syntax

**base-routing-instance** [**locator** *locator-name*] [**end-x**] [**end-dt4**] [**end-dt6**] [**end-dt46**] [**end**]

**base-routing-instance all**

**base-routing-instance micro** [**micro-segment-locator** *locator-name*] [**ua**] [**udt4**] [**udt6**] [**udt46**]

#### Context

[\[Tree\]](#) (show>router>srv6 base-routing-instance)

#### Full Context

show router segment-routing-v6 base-routing-instance

#### Description

This command displays SRv6 Base routing instances.

#### Parameters

##### **locator-name**

Specifies the locator or micro-segment locator name, up to 64 characters.

##### **end-x**

Displays the End.X SID function associated with a P2P interface.

##### **end-dt4**

Displays the End.DT4 function associated with the Base routing instance.

##### **end-dt6**

Displays the End.DT6 function associated with the Base routing instance.

##### **end-dt46**

Displays the End.DT46 function associated with the Base routing instance.

##### **end**

Displays the End SID function of a locator.

##### **ua**

Displays the uA SID function associated with a P2P interface.

##### **udt4**

Displays the uDT4 function associated with the Base routing instance.

##### **udt6**

Displays the uDT6 function associated with the Base routing instance.

## udt46

Displays the uDT46 function associated with the Base routing instance.

## Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## 5.4 bcg

### bcg

#### Syntax

**bcg** *Burst-Control-Group-name* **member-queues** [ **at-risk-only**] [ **exp-util-bw** *megabits-persecond*] [ **port** *port-id*] [ **sap** *sap-id*] [ **subscriber** *sub-ident*] [ **access-queue-grp** *queue-group-name*] [ **service-id** *service-id*]

**bcg** *burst-control-group-name* [ **member-queues**] [ **exp-util-bw** *mega-bits-per-second*]

**bcg** *card-slot-number* [ **ingress** | **egress**]

#### Context

[\[Tree\]](#) (show>qos bcg)

#### Full Context

show qos bcg

#### Description

The **show qos bcg** command outputs the current and historical visitation time associated with the specified BCG name.

A Burst Control Group (BCG) represents a list of queues that share the same non-scheduling PIR and CIR bucket target update interval. When a queue's scheduled rate bursts above its PIR bucket depth, the queue is removed from its scheduling context. The system uses a BCG in order to visit the queues PIR bucket to periodically drain an appropriate amount from the bucket. When the bucket has been drained below the PIR bucket threshold, the queue is allowed back onto its scheduling context. The amount decremented from the bucket is a function of the amount of time that has elapsed since the last bucket update and the queue's shaping rate (PIR). If the queue's shaping rate is configured as 1 Mb/s and 1 ms has elapsed since the last bucket update, the system decrements the PIR bucket by 125 bytes. One caveat is that the bucket cannot be decremented past a depth of 0. This fact drives how the system chooses which BCG is used to manage the queue bucket update interval.

If a queue's shaping rate is 1 Mb/s and the threshold (burst limit) is set to 10 kbytes, the maximum amount of time that can expire before the queue is updated without resulting in a negative bucket depth is 81.92 ms. This can be calculated by taking the number of bits represented by the bucket depth (10 kbytes = 10 \* 1,024 \* 8 = 81,920 bits) and dividing it by the rate (81,920 bits / 1,000,000 bits per second = 81.92 ms). The queue is not removed from the scheduler until the PIR bucket depth has equaled or exceeded the configured burst threshold, so the bucket is at least 10 kbytes deep. If the system visits the queue PIR bucket within 81.92 ms, the resulting decrement operation leaves the bucket. If the system takes longer

than 81.92 ms, the decrement result will be greater than 10 kbytes and part of the decrement result is lost. The net result is that, because of less than timely updates, the queue will not be returned to the scheduler context fast enough and some shaping bandwidth for the queue will be lost (underrun the shaping rate).

Each FP2- and FP3-based Q-chip maintains eight BCGs, each targeting a certain queue bucket visitation time. A 1 s, 40 ms, 20 ms, 10 ms, 5 ms, 1 ms, 500  $\mu$ s, and 100  $\mu$ s BCG is supported. An FP4- or FP5-based Q-chip has an additional four BCGs with target visitation times of 50  $\mu$ s, 10  $\mu$ s, 5  $\mu$ s, and 1  $\mu$ s. By default, queues are placed in a BCG based on shaping rate and the queue's burst limit (PIR threshold depth) is set based on the BCG visitation time and the queue's specified shaping rate.

When explicit burst-limit threshold values are defined for a shaping queue, the system picks an appropriate BCG based on the queue's configured shaping rate and the explicit threshold to find a BCG with the best target visitation time that results in worst-case decrement values that are less than the configured threshold. However, when a queue is placed on a 'faster' BCG, more visitation resources are consumed and it is possible that the system will not meet a queue's decrement constraints.

The **show qos bcg** command allows visibility into a BCG's historic and current visitation time. The system samples the amount of time it takes each list to visit each of its associated queues once each second and stores the last 10 samples. It also keeps the longest visitation time seen since the last time the BCG statistics were cleared, the longest visitation time for the current queue-to-BCG lists associations, calculated longest visitation time based on maximum scheduling bandwidth, and the longest visitation time for an optionally defined scheduling rate.

With each sample, the system indirectly calculates the amount of scheduling bandwidth based on how many Q-chip resources were diverted from BCG visitation processing. This calculated scheduling bandwidth is used to evaluate the worst-case visitation times for each BCG. The calculated scheduling bandwidth value is stored with the longest-seen-visitation time and the longest-seen-visitation time with the current queue-to-BCG mappings. This is not applicable to an FP4- or FP5-based Q-chip, so the **exp-util-bw** parameter is not applicable to an FP4- or FP5-based Q-chip.

## Parameters

### **Burst-Control-Group-name**

Specifies which globally unique Burst Control Group to display. If the specified Burst Control Group does not exist, the show command will fail.

**Values**    <slot>/<fp>-< target-visitation-time>[-<direction>]  
               slot - 1 to 20  
               fp - 1 to 8  
               target-visitation-time -1  $\mu$ s, 5  $\mu$ s, 10  $\mu$ s, 50  $\mu$ s, 100  $\mu$ s, 500  $\mu$ s, 1ms, 5ms, 10ms, 20ms, 40ms, 1s  
               direction - i, e

### **member-queues**

Includes a list of all queues attached to the specified burst-control-group-name. The 100% scheduling bandwidth used in the 'at-risk' determination may be overridden with a specified scheduling bandwidth by using the exp-util-bw parameter. When the **member-queues** parameter is specified, the output includes a single-entry summary of the internal queues.

### **exp-util-bw mega-bits-per-second**

Displays a calculated worst-case visitation rate for the specified BCG name based on the specified value of *megabits-persecond* which also modifies the member queue's 'at-risk' state output. This parameter is not applicable to FP4- or FP5-based hardware which has

dedicated internal resources for handling BCG visitations and is unaffected by scheduling bandwidth.

**Values** 0 to 4294967

**port *port-id***

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *port-id*. If the specified *port-id* does not exist, the show command will fail.

**Values** Up to 17 characters

**sap *sap-id***

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sap-id*. If the specified *sap-id* does not exist, the show command will fail.

**Values** Up to 64 characters

**subscriber *sub-ident***

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sub-ident*. If the specified *sub-ident* does not exist, the show command will fail.

**Values** Up to 32 characters

**access-queue-grp *queue-group-name***

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *queue-group-name*. If the specified *queue-group-name* is not found, the show command will fail.

**Values** Up to 32 characters

**service *service-id***

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *service-id*. If the specified *service-id* does not exist, the show command will fail.

**Values** 1 to 2147483647

**card-slot-number**

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for all queues associated with the specified *card-slot-number*. If the specified *card-slot-number* does not exist, the show command will fail.

**Values** 1 to 40

**[ingress | egress]**

The **ingress** and **egress** keywords specify the direction to display and are mutually exclusive.

bfd-templates-in-use

**Syntax**  
bfd-templates-in-use

**Context**  
[Tree] (tools>dump>router>ldp>lsp-bfd bfd-templates-in-use)

**Full Context**  
tools dump router ldp lsp-bfd bfd-templates-in-use

**Description**  
This command indicates the named BFD templates that are configured for use by LSP BFD for LDP.

**Platforms**  
All

## 5.9 bgp

bgp

### Syntax

**bgp** [*bgp-instance*]

### Context

[\[Tree\]](#) (show>service>id bgp)

### Full Context

show service id bgp

### Description

This command displays BGP-related information for the service.

### Parameters

***bgp-instance***

Specifies the ID value for the BGP instance.

**Values**    1, 2

### Platforms

All

### Output

The following output is an example of BGP-related information, and [Table 45: Output fields: service ID BGP](#) describes the output fields.

### Output Example

```
*A:PE-2>config>service>vpls$ /show service id 1985 bgp

bgp

Syntax

**bgp** [**color** *color*] [**end-point** {*ipv4-address* | *ipv6-address*}] [**preference** *preference-id*] [**distinguisher** *distinguisher-id*]  
**bgp summary**

Context

[Tree] (show>router>seg-rt>sr-policies bgp)

Full Context

show router segment-routing sr-policies bgp

Description

This command displays the traffic statistics of all or a filtered set of the BGP policies, or displays summary parameters.

Parameters

**color**

Filters on the color.

**Values** 0 to 4294967295

**ipv4-address | ipv6-address**

Filters on the end-point IPv4 or IPv6 address.

**Values**    ipv4-address — a.b.c.d  
              ipv6-address — x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:d:d:d:d  
              x — [0 to FFFF]H  
              d — [0 to 255]D

**preference-id**

Filters on the preference ID.

**Values**    0 to 4294967295

**distinguisher-id**

Filters on the distinguisher ID.

**Values**    0 to 4294967295

**summary**

Displays the summary information for the BGP policies.

**Platforms**

All

**Output**

The following outputs are examples of traffic statistics for the BGP policies.

**Output Example Information for all BGP Policies**

## 5.11 bgp-evpn

```
bgp-evpn
```

**Syntax**  
`bgp-evpn [instance instance-id]`

**Context**  
[\[Tree\]](#) (show>service>id bgp-evpn)

Full Context

show service id bgp-evpn

Description

This command displays the **bgp-evpn** configured parameters for a specified service, including the administrative status of VXLAN, the configuration for **mac-advertisement** and **unknown-mac-route**, as well as the **mac-duplication** parameters. The command displays the duplicate MAC addresses that **mac-duplication** has detected.

This command also displays whether the **ip-route-advertisement** command (and the **incl-host** parameter) is enabled. If the service is BGP-EVPN MPLS, the command also displays the parameters corresponding to EVPN-MPLS.

Parameters

*instance-id*  
Filters on the instance ID.

**Values** 1 to 2

Platforms

All

Output

The following output is an example of BGP EVPN information and [Table 46: Output fields: service ID BGP-EVPN](#) describes the output fields.

Output Example

```
show service id 100 bgp-evpn

# bgp-evpn

## Syntax

```
bgp-evpn [ethernet-segment]  
bgp-evpn ethernet-segment name name [all] [ evi evi] [isid isid]
```

## Context

```
[Tree] (show>service>system bgp-evpn)
```

## Full Context

```
show service system bgp-evpn
```

## Description

This command displays all the information related to the base EVPN instance, including the base RD used for Ethernet Segment (ES) routes, the ESs or individual ES information.

## Parameters

### ethernet-segment

Displays information for ES.

### name

Specifies the name of an ES, up to 32 characters.

### all

Displays all available information for the specified ES.

### evi

Displays information for the specified EVI.

**Values** 1 to 65535

### isid

Displays information for the specified ISID.

**Values** 1 to 16777215

## Platforms

All

## Output

The following output is an example of service system BGP EVPN information, and [Table 47: Output fields: BGP-EVPN](#) describes the output fields.

Table 47: Output fields: BGP-EVPN

Label	Description
Eth Seg Route Dist	Specifies the ES Route Distinguisher.
Eth Seg Oper Route Dist	Specifies the operational ES Route Distinguisher.
Eth Seg Oper Route Dist Type	Specifies the operational ES Route Distinguisher type.
Ad Per ES Route Target	Specifies the AD per-ES route target.
Leaf Label	Specifies the leaf label.
Alloc Leaf Label	Specifies the allocated leaf label.
Leaf Label Value	Specifies the leaf label value.
EVI RT set Route Dist.	Specifies the EVI RT set range.
Extended Evi Range	Specifies the EVI extended range status.
Mcast Leave Sync Prop	Specifies the multicast leave synchronization propagation time.
Attribute Uniform Prop	Specifies the attribute uniform propagation configuration.
BGP Path Selection	Specifies the configuration of the BGP Path Selection.

### Output Example

bgp-evpn

Syntax

bgp-evpn

Context

[\[Tree\]](#) (tools>dump>service>system bgp-evpn)

Full Context

tools dump service system bgp-evpn

Description

Commands in this context display information about the BGP-EVPN base instance.

Platforms

All

5.12 bgp-evpn-multi-homing

bgp-evpn-multi-homing

Syntax

bgp-evpn-multi-homing

Context

[\[Tree\]](#) (show>redundancy bgp-evpn-multi-homing)

Full Context

show redundancy bgp-evpn-multi-homing

Description

This command shows the information related to the EVPN global timers.

Platforms

All

Output

Output Example

```
*A:PE2# show redundancy bgp-evpn-multi-homing
=====
Redundancy BGP EVPN Multi-homing Information
=====
Boot-Timer           : 10 secs
Boot-Timer Remaining : 0 secs
ES Activation Timer   : 3 secs
=====
```

5.13 bgp-ipvpn

bgp-ipvpn

Syntax

bgp-ipvpn

Context

[\[Tree\]](#) (show>service>id bgp-ipvpn)

Full Context

show service id bgp-ipvpn

Description

This command displays the BGP IPVPN configured parameters for a specified service.

Platforms

All

Output

The following output is an example of BGP IPVPN information, and [Table 48: Output fields: BGP-IPVPN](#) describes the output fields.

Table 48: Output fields: BGP-IPVPN

Label	Description
Admin State	Specifies the administrative state
VRF Import	Specifies the VRF import
VRF Export	Specifies the VRF export
Route Dist.	Specifies the route distinguisher
Oper Route Dist	Specifies the operational route distinguisher
Oper RD Type	Specifies the operational RD type
Route Target	Specifies the route target
Route Target Import	Specifies the route target import
Route Target Export	Specifies the route target export
D-Path Domain-Id	Specifies the D-Path domain ID

### Output Example

```
# show service id 2000 bgp-ipvpn

=====
Service 2000 BGP-IPVPN MPLS Information
=====
Admin State      : Up
VRF Import       : None
VRF Export       : None
Route Dist.      : 0:0
Oper Route Dist  : 192.0.2.3:64000
Oper RD Type     : auto
Route Target     : None
Route Target Import: None
Route Target Export: None
D-Path Domain-Id : 65000:1
<snip>
```

## 5.14 bgp-ls

bgp-ls

### Syntax

**bgp-ls** [**hunt**] [**node** | **link** | **ipv4-prefix** [*ipv4-prefix/mask-len*]]

### Context

[\[Tree\]](#) (show>router>bgp>routes bgp-ls)

### Full Context

show router bgp routes bgp-ls

### Description

This command displays BGP-Link State (BGP-LS) routes.

### Parameters

- hunt**  
Displays detailed information about the routes, including information about the advertised routes (RIB-OUT).
- node**  
Displays BGP-LS link NLRI routes.
- link**  
Displays BGP-LS node NLRI routes.
- ipv4-prefix**  
Displays BGP-LS IPv4-prefix NLRI routes.
- ipv4-prefix/prefix-length**  
Displays the entries matching the specified IPv4 prefix and length.

Values		
ipv4-prefix:		a.b.c.d (host bits must be 0)
ipv4-prefix-length:		0 to 32

### Platforms

All

### Output

The following outputs are examples of information displayed by the **bgp-ls** command.

## Output Example

```
# show router bgp routes bgp-ls

## 5.15 bgp-multi-homing

### bgp-multi-homing

#### Syntax

**bgp-multi-homing**

#### Context

[\[Tree\]](#) (show>redundancy bgp-multi-homing)

#### Full Context

show redundancy bgp-multi-homing

#### Description

This command displays BGP multi-homing information.

#### Platforms

All

## 5.16 bgp-nh-info

### bgp-nh-info

#### Syntax

**bgp-nh-info** [**location** *location-id*] [**bgp-nh** *ip-address*]

#### Context

[\[Tree\]](#) (show>router>bgp>orr bgp-nh-info)

#### Full Context

show router bgp optimal-route-reflection bgp-nh-info

#### Description

This command displays the calculated IGP cost from a particular location ID to all prefixes containing BGP next-hop addresses.

#### Parameters

***location-id***

Specifies the ORR location identifier.

**Values** 1 to 16 (7750 SR-12, VSR)  
1 to 255 (all other platforms)

**ip-address**

Specifies the IPv4 or IPv6 BGP next-hop address.

<b>Values</b>	ipv4-address:	a.b.c.d.
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

**Platforms**

All

**Output**

The following table describes the command output fields for the **show router bgp optimal-route-reflection bgp-nh-info** command output.

Table 49: Output fields: ORR BGP next-hop information

Label	Description
Next Hop Loc	The address of the next-hop location.
Dest-Prefix	Displays the longest prefix match for the BGP next-hop address from the point of view of a specific location. Displays "unreachable" if no route exists to the BGP next-hop from the location.
DB-Source	Displays the source of the reachability information in the TE database.
Type	Displays the type of route or reachability, either intra-area or inter-area.
Proto	Displays the source protocol that is providing reachability to the BGP next-hop address.
Metric	Displays the IGP cost to reach the BGP next-hop from the location reference point.
Preference	Displays the routing preference of the route that is providing reachability to the BGP next-hop address. This is derived from standard protocol preference values.

Output Example

```
*A:Dut-C# show router bgp optimal-route-reflection bgp-nh-info

5.17 bgp-peering-policy

bgp-peering-policy

Syntax

**bgp-peering-policy** [*policy-name*]

Context

[\[Tree\]](#) (show>subscr-mgmt bgp-peering-policy)

Full Context

show subscriber-mgmt bgp-peering-policy

Description

This command displays BGP peering policy information.

Parameters

***policy-name***  
Specifies the BPG peering policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BOF, and [Table 50: Output fields: BGP peering policy](#) describes the output fields.

```
show subscriber-mgmt bgp-peering-policy "bgp-policy-1"
```

Output Example

```

=====
```

Table 50: Output fields: BGP peering policy

Label	Description
Description	Displays the description of the BGP peering policy
IP address family IPv4	Displays whether the IPv4 family is enabled

Label	Description
IP address family IPv6	Displays whether the IPv6 family is enabled
Advertise Inactive	Displays whether inactive BGP routes are advertised to other BGP peers
Aggregator id zero	Displays whether the router ID in the BGP aggregator path attribute is set to zero when BGP aggregates routes
AS Override	Displays whether the peer ASN is overridden with the local ASN in AS Path
Auth Key Chain	Displays the authentication key chain name
Authentication Key	Displays whether and authentication key is configured
BFD enable	Displays the BFD enable status
Cluster Id	Displays the cluster ID
Connect Retry	Displays the connect retry timer value in seconds
Damping	Displays whether BGP route damping for learned routes is enabled
Disable Client Ref*	Displays whether routes received from neighbors considered to be RR clients are reflected to other clients
Disable Communities	Displays whether standard or extended communities are sent
Disable FE Failover	Displays the BGP fast external failover state
Hold Time	Displays the hold time in seconds before closing the BGP connection
Keep Alive	Displays the keepalive timer value in seconds
Local Address	Displays the local IP address
Local AS	Displays the local AS value
Local Preference	Displays the local preference value
Loop Detect	Displays the loop detect type: drop-peer ignore-loop off discard-route
MED Out	Displays the Multi-Exit Discriminator value or "IGP Cost"
Min Route Advertis*	Displays the minimum interval in seconds for a prefix to be advertised to a peer
Multihop	Displays the TTL value entered in IP header of packets sent to peer

Label	Description
Next Hop Self	Displays whether the next hop path attribute is set to self when advertising
Passive	Displays whether to wait passively for BGP peer to connect
Peer AS	Displays the peer AS value
Preference	Displays the preference value
Prefix Limit	Displays the prefix limit type
Prefix Log Only	Displays the prefix log only type
Prefix Threshold	Displays the prefix threshold type
Remove Private AS	Displays whether private AS numbers up to first public ASN encountered should be removed
TTL Security	Displays the minimum TTL value for incoming BGP packets
Type	Displays the BGP peer type (Internal   External   No Type)
Disable 4byte ASN	Displays whether 4-byte AS numbers are used
Export Policy	Displays the export policies
Import Policy	Displays the import policies
Last Mgmt Change	Displays the date and time of the last management change
Prefix Limits Per Address Family	
Family	Displays the address family: ipv4   ipv6
Limit	Displays the maximum number of BGP routes per address family that can be received from an ESM dynamic BGP peer before an administrative action is taken
Idle Timeout	Displays the time, in minutes, before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, this value is "forever" and a manual reset must be performed to re-establish the BGP peer after reaching the prefix limit.
Threshold	Displays the percentage threshold before triggering a warning message
Log Only	Displays whether only a warning message is sent or also the BGP session is taken down
Post Import	Displays the state on whether limits should be applied after import policies

## 5.18 bgp-route-distinguisher

### bgp-route-distinguisher

#### Syntax

```
bgp-route-distinguisher [vprn] [vpls] [epipe]
bgp-route-distinguisher svc
bgp-route-distinguisher ad-evi-rt-set
bgp-route-distinguisher system
```

#### Context

```
[Tree] (show>service>system bgp-route-distinguisher)
```

#### Full Context

```
show service system bgp-route-distinguisher
```

#### Description

This command displays the BGP operational route distinguishers (RDs) used by all the BGP-enabled services in the system. The information can be filtered by service: VPRN, VPLS, or Epipe. The output can also be filtered to show only the relevant RD information related to services ( **svc**), or the EVPN Auto-Discovery routes (**ad-evi-rt-set**), or the system RDs (**system**).

#### Platforms

All

#### Output

The following output is an example of service BGP RD information.

```
Auto-rd                <none>
Ethernet-segment        <none>
EVI RT Set RD Range     1.2.3.6:1-1.2.3.6:512          configured
// the above is the case when the "Extended Evi Range" is disabled.
// When enabled :it is "1.2.3.6:1-1.2.3.6:65535"
```

#### Output Example

## 5.22 bin-group

### bin-group

#### Syntax

**bin-group** *bin-group-number* [**detail**]

#### Context

[\[Tree\]](#) (show>oam-pm bin-group)

#### Full Context

show oam-pm bin-group

Description

Show the configuration data for one or all OAM Performance Monitoring bin groups.

Parameters

*bin-group-number*

Specifies an OAM Performance Monitoring bin group.

**Values**    1 to 255

**detail**

Keyword to display additional exclusion and event monitoring information for the bin group.

Platforms

All

Output

The following output is an example of OAM-PM bin group information.

Output Example

```
show oam-pm bin-group
-----
Configured Lower Bounds for Delay Tests, in microseconds
-----
Group Description                Admin Bin   FD(us)   FDR(us)   IFDV(us)
-----

## 5.24 binding-label

### binding-label

#### Syntax

- `binding-label [/label/] [detail]`
- `binding-label [/label/] egress-stats`
- `binding-label [/label/] ingress-stats`

#### Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies binding-label)

#### Full Context

show router mpls forwarding-policies binding-label

#### Description

This command displays the MPLS forwarding policy binding label information.

#### Parameters

- label**

Specifies the label value.

**Values** 32 to 1048575
- detail**

Displays detailed information of the binding label.
- egress-stats**

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.
- ingress-stats**

Displays ingress statistics information.

#### Platforms

All

## Output

[Table 51: Output fields: MPLS binding label](#) describes MPLS binding label output fields.

*Table 51: Output fields: MPLS binding label*

Label	Description
Label	Specifies the label number.
Preference	Specifies the preference.
Oper State	Specifies the operational state (up   down).
Policy Name	Specifies the MPLS forwarding policies binding label name.
No. of Binding Labels	Specifies the number of binding labels.
OperDown Reason	Specifies the reason for being operationally down.
Down Time	Specifies the downtime date and time.
NumNextHop Grps	Specifies the number of next-hop groups.
Ingress Stats	Specifies if ingress stats are enabled for collection (disabled   enabled).
IngOperState	Specifies the ingress operational state (up   down)
Revert Timer	Specifies the revert timer value.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct   indirect).
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.
Next Revert In	Specifies the next revert interval.
Primary nexthop	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false   true).
NHopDown Reason	Specifies the reason for the next-hop down.
Backup nexthop	Specifies the IP address of the backup next-hop.

Label	Description
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

### Output Example

```

## binding-label

### Syntax

**binding-label** *label* **ingress-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

### Context

[\[Tree\]](#) (monitor>router>mpls>forwarding-policies binding-label)

### Full Context

monitor router mpls forwarding-policies binding-label

### Description

This command monitors statistics for Forwarding Policy Binding Label.

### Parameters

***label***

Specifies the label value.

**Values** 32 to 1048575

***ingress-stats***

Displays ingress statistics information.

***seconds***

Configures the interval for each display in seconds.

**Values** 3 to 60

**Default** 10

***repeat***

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

***absolute***

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

**rate**

Displays rate-per-second for each statistic instead of the delta.

**Platforms**

All

## binding-label

**Syntax**

**binding-label** *label* **ingress-stats**

**Context**

[\[Tree\]](#) (clear>router>mpls>forwarding-policies binding-label)

**Full Context**

clear router mpls forwarding-policies binding-label

**Description**

This command clears or resets statistics for the MPLS forwarding policy binding label.

**Parameters**

***label***

Specifies the label value.

**Values** 32 to 1048575

***ingress-stats***

Displays ingress statistics information.

**Platforms**

All

## 5.25 bindings

## bindings

**Syntax**

**bindings** [**mac** *ieee-address*]

**Context**

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway bindings)

Full Context

show subscriber-mgmt vrgw brg gateway bindings

Description

This command lists all the DHCP bindings of the local pool associated with the specified BRG. If the MAC attribute is specified, only the binding for that MAC address is displayed.

Parameters

*ieee-address*  
specifies the MAC address identifying a specific binding.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway binding information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05" bindings
=====
Bridged Residential Gateway home-aware pool address bindings

5.26 bluetooth

bluetooth

**Syntax**  
**bluetooth** [device-mac *[ieee-address]* | **module** [*cpm-slot*]]

Context

[Tree] (show>system bluetooth)

Full Context

show system bluetooth

Description

This command displays detailed information about the Bluetooth configuration on the CPM or chassis.

Parameters

*ieee-address*

Specifies the source MAC address.

**Values**    xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

*cpm-slot*

Specifies the CPM slot.

**Values**    A , B, C, D

Platforms

7750 SR-1, 7750 SR-s, 7950 XRS-20e

Output

The following output is an example of Bluetooth configuration information, and [Table 52: Output fields: system Bluetooth](#) describes the output fields.

Output Example

```
*A:bkvm18>show>system# bluetooth

=====*
```

Table 52: Output fields: system Bluetooth

Label	Description
Passkey	The Bluetooth passkey in use by the system

Label	Description
Advertising Timeout	The amount of time the Bluetooth will advertise that it is ready to pair
Power State	The operating mode for Bluetooth
Pairing Button	Displays whether the pairing button is enabled for use
Device	The MAC address of the Bluetooth device
Description	The customer-entered description for the Bluetooth device
Module	Displays which CPM module contains the Bluetooth device
Connected Device	Displays if there is a device actively paired to the module
Device MAC	The MAC address of the Bluetooth device connected to the module
Device Description	The description associated with the connected Bluetooth device
Configured Identifier	The customer-defined Bluetooth identifier for the module
Operational Identifier	The Bluetooth identifier in use for the module

## 5.28 bof

## bof

### Syntax

**bof** [*cflash-id* | **booted**]

### Context

[\[Tree\]](#) (show bof)

### Full Context

show bof

### Description

This command displays the Boot Option File (BOF) executed on last system boot or on the specified device.

If no device is specified, the BOF used in the last system boot displays. If the BOF has been modified since the system boot, a message displays.

#### Note:

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration bof** command or the **info** command in the bof configuration region.

## Parameters

### *cflash-id*

Displays the cflash directory name. The slot name is not case-sensitive. Use upper or lowercase "A" or "B" for the slot name.

**Values** cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

### **booted**

displays the boot option file used to boot the system.

## Platforms

All

## Output

The following output is an example of BOF, and [Table 53: Output fields: BOF](#) describes the output fields.

### Output Example

```
A:ALA-1# show bof cf3:

A:ALA-1#

Table 53: Output fields: BOF

Label	Description
primary-image	The primary location of the directory that contains the runtime images of both CPM and XCM/IOM.
primary-config	The primary location of the file that contains the configuration.
primary-dns	The primary DNS server for resolution of host names to IP addresses.
secondary-image	The secondary location of the directory that contains the runtime images of both CPM and XCM/IOM.
secondary-config	The secondary location of the file that contains the configuration.
secondary-dns	The secondary DNS server for resolution of host names to IP addresses.
tertiary-image	The tertiary location of the directory that contains the runtime images of both CPM and XCM/IOM.
tertiary-config	The tertiary location of the file that contains the configuration.
address	The IP address and mask associated with the CPM Ethernet port or the secondary CPM port.
tertiary-dns	The tertiary DNS server for resolution of host names to IP addresses.
persist	on — Persistent indexes between system reboots is enabled. off — Persistent indexes between system reboots is disabled.
wait	The time configured for the boot to pause while waiting for console input.
autonegotiate	no autonegotiate — Autonegotiate not enabled. autonegotiate — Autonegotiate is enabled.
duplex	half — Specifies that the system uses half duplex. full — Specifies that the system uses full duplex.
speed	The speed of the CPM Ethernet interface.
console speed	The console port baud rate.
dns domain	The domain name used when performing DNS address resolution.
uplinkA-address	Displays the Uplink-A IP address.

Label	Description
uplinkA-port	Displays the primary port to be used for auto-boot.
uplinkA-route	Displays the static route associated with Uplink-A.
uplinkA-vlan	Displays the VLAN ID to be used on Uplink-A.
uplinkB-address	Displays the Uplink-B IP address.
uplinkB-port	Displays the secondary port to be used for auto-boot.
uplinkB-route	Displays the static route associated with Uplink-B.
uplinkB-vlan	Displays the VLAN ID to be used on Uplink-B.
uplink-mode	Displays the uplink mode of the device.
no-service-ports	Displays the ports on which service traffic is not processed.
use-expansion-card-type	The expansion card type.
system-profile	The system profile used by the system when it is rebooted.

## 5.29 bonding

### bonding

#### Syntax

**bonding** [detail]

**bonding** **bonding-id** *bonding-id* [ **detail**]

#### Context

[\[Tree\]](#) (show>service bonding)

#### Full Context

show service bonding

#### Description

This command displays an overview of active bonding contexts and the associated access connections. When a bonding ID is specified, only information for that specific context is displayed.

#### Parameters

***bonding-id***

Specifies the ID of a specific bonding context.

### detail

Displays additional detailed bonding settings, such as load-balancing.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of bonding information.

### Output Example

```
Node# show service bonding
=====
Bonding Summary
=====
-----

## 5.31 brg

brg

### Syntax

brg

### Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw brg)

### Full Context

show subscriber-mgmt vrgw brg

### Description

Commands in this context display operational information for connected BRGs and related hosts.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg

### Syntax

brg

### Context

[\[Tree\]](#) (clear>subscr-mgmt>vrgw brg)

### Full Context

```
clear subscriber-mgmt vrgw brg
```

### Description

This command clears BRG data.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**brg**

### Syntax

```
brg
```

### Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>vrgw brg)

### Full Context

```
tools perform subscriber-mgmt vrgw brg
```

### Description

This command enables tools for controlling BRGs.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 5.32 brg-hosts

**brg-hosts**

### Syntax

```
brg-hosts [mac ieee-address] [ip ip-address]
```

### Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg brg-hosts)

### Full Context

```
show subscriber-mgmt vrgw brg brg-hosts
```

## Description

This command displays operational information for connected BRGs and related hosts.

## Parameters

### *ieee-address*

Displays detailed information for each prefix.

### *ip-address*

Displays only the prefixes associated with this subscriber interface.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of subscriber management BRG host information.

### Output Example

```
Node# show subscriber-mgmt brg brg-hosts
=====
Bridged Residential Gateway hosts

### 5.33 brg-profile

```
brg-profile
```

**Syntax**

```
brg-profile
brg-profile name
brg-profile name associations
```

**Context**

```
[Tree] (show>subscr-mgmt>vrgw>brg brg-profile)
```

**Full Context**

```
show subscriber-mgmt vrgw brg brg-profile
```

**Description**

This command displays BRG profile information.

**Parameters**

- name***  
Specifies an existing BRG profile name.
- associations***  
Displays information associated with the specified BRG profile name.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### 5.34 brief

```
brief
```

**Syntax**

```
brief
```

## Context

[\[Tree\]](#) (show>router>bgp>routes brief)

## Full Context

show router bgp routes brief

## Description

This command displays summary information about the BGP routes.

**brief** is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

## Platforms

All

## 5.35 build-packet

build-packet

## Syntax

**build-packet**

## Context

[\[Tree\]](#) (show>test-oam build-packet)

## Full Context

show test-oam build-packet

## Description

Commands in this context display OAM egress port finder information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 5.36 bundles

### bundles

#### Syntax

**bundles**

#### Context

[\[Tree\]](#) (show>router>l2tp>mlppp bundles)

#### Full Context

show router l2tp mlppp bundles

#### Description

This command displays L2TP MLPPP bundle statistics.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

#### Output

The following output is an example of L2TP MLPPP bundle statistics information.

#### Output Example

The following is an example with one MLPPP bundle (using two links).

## 5.37 bypass-tunnel

### bypass-tunnel

#### Syntax

```
bypass-tunnel [to ip-address] [protected-lsp [ name]] [dynamic | manual | p2mp] [detail] [lsp-name
session-name]
bypass-tunnel [detail] [dns]
```

#### Context

[\[Tree\]](#) (show>router>mpls bypass-tunnel)

#### Full Context

```
show router mpls bypass-tunnel
```

#### Description

This command displays MPLS bypass tunnel information.

If fast reroute is enabled on an LSP and the facility method is selected, instead of creating a separate LSP for every LSP that is to be backed up, a single LSP is created and serves as a backup for a set of LSPs. Such an LSP tunnel is called a bypass tunnel.

Parameters

- ip-address**  
Specifies the IP address of the egress router.
- name**  
Specifies the name of the LSP protected by the bypass tunnel up to 160 characters. "\*" is accepted as a wild card character.
- dynamic**  
Keyword used to display dynamically-assigned labels for bypass protection.
- manual**  
Keyword used to display manually-assigned labels for bypass protection.
- detail**  
Keyword used to display detailed information.
- p2mp**  
Keyword used to display P2MP bypass tunnel information.
- session-name**  
Specifies the session name, up to 160 characters, of the LSP used in the path. "\*" can be used as a wildcard character.
- dns**  
Keyword used to display reverse DNS resolution of actual and explicit hop information.

## 6 c Commands

### 6.1 ca-profile

#### ca-profile

##### Syntax

**ca-profile**

**ca-profile** *name* [association]

##### Context

[\[Tree\]](#) (show>certificate ca-profile)

##### Full Context

show certificate ca-profile

##### Description

This command shows certificate-authority profile information.

##### Parameters

***name***

Specifies the name of the Certificate Authority (CA) profile.

**association**

Displays associated CA profiles.

##### Platforms

All

### 6.2 cache

#### cache

##### Syntax

**cache** [peer *ip-address*] [group *ip-address*] [source *ip-address*] [originrp *ip-address*]

## Context

[\[Tree\]](#) (clear>router>msdp cache)

## Full Context

clear router msdp cache

## Description

This command clears the MSDP cache.

## Parameters

**peer** *ip-address*

Clears the cache of the IP address of the peer to which MSDP source-active (SA) requests for groups matching this entry's group range were sent.

**group** *ip-address*

Clears the group IP address of the SA entry.

**source** *ip-address*

Clears the source IP address of the SA entry.

**originrp** *ip-address*

Clears the origin rendezvous point (RP) address type of the SA entry.

## Platforms

All

cache

## Syntax

cache aggregate {src-dst-proto | src-dst-proto-port} family {ipv4 | ipv6}

cache all family {ipv4 | ipv6}

## Context

[\[Tree\]](#) (tools>dump>cflowd cache)

## Full Context

tools dump cflowd cache

## Description

This command displays the contents of the cflowd active cache. This information can be displayed either in raw form where every flow entry is displayed or in an aggregated form.

[Table 56: Output fields: tools dump cflowd cache](#) describes the cflowd cache output fields.

Table 56: Output fields: tools dump cflowd cache

Label	Description
Proto/Protocol	Displays the IPv4 or IPv6 protocol type
Source Address/Src-IP	Displays the source IP address of the flow (IPv4 or IPv6)
Destination Address/Dst-IP	Displays the destination IP address of the flow (IPv4 or IPv6)
Intf/Ingr	Displays the ingress interface associated with the sampled flow (only displayed with the raw (all) output)
Intf/Egr	Displays the egress interface associated with the sampled flow (only displayed with the raw (all) output)
S-Port	Displays the source protocol port number
D-Port	Displays the destination protocol port number
Pkt-Cnt	Displays the total number of packets sampled for the associated flow
Byte-Cnt	Displays the total number of bytes of traffic sampled for the associated flow
Start-Time	Displays the system time when the first packet was sampled for the associated flow
Flags	Displays the IP flag value from the sampled IP flow header (only displayed with the raw (all) output)
ToS	Displays the ToS byte values from the sampled IP flow header (only displayed with the raw (all) output)
(Src) Mask	Displays the IP route mask for the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) Mask	Displays the IP route mask for the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)
(Src) AS	Displays the ASN associated with the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) AS	Displays the ASN associated with the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)

Label	Description
vRtr-ID	Displays the Virtual Router ID associated with the reported IP flow (only displayed with the raw (all) output)

Parameters

aggregate

Displays the aggregated active cache flow data.

- Values**
- src-dst-proto — Aggregates the active flow cache based on the source and destination IP address and the IP protocol value.
  - src-dst-proto-port — Aggregates the active flow cache based on the source and destination IP address, IP protocol value, and the source and destination port numbers.

family

Specifies which IP address family flow data should be displayed.

- Values**
- ipv4 — Displays the IPv4 flow data.
  - ipv6 — Displays the IPv6 flow data.

all

Displays the raw active cache flow data with no aggregation.

Platforms

All

6.3 cache-contents

cache-contents

Syntax

cache-contents [isa mda-id/esa-vm-id] url file-url

Context

[Tree] (tools>dump>app-assure>group>ipassist cache-contents)

Full Context

tools dump application-assurance group ip-identification-assist cache-contents

Description

This command dumps the cache contents generated by the IP identification assist feature into a local or remote destination.

Parameters

**isa** *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values	<i>slot/mda</i>
<i>slot</i>	1 to 10, depending on chassis model
<i>mda</i>	1 to 2, depending on chassis model

**isa** *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	<i>esa-esa-id/vm-id</i>
<i>esa-id</i>	1 to 16
<i>vm-id</i>	1 to 4

**url** *file-url*

Specifies a local or remote destination to which the cache content output is directed.

Values	<i>local-url</i>   <i>remote-url</i>
<i>local-url</i>	<i>[cflash-id]/file-path</i> 200 characters maximum, including cflash-id  directory length 99 characters maximum each
<i>remote-url</i>	{ftp   tftp}://[login:pswd@]remote-locn/[filepath]  255 characters maximum, <i>filepath</i> 199 characters maximum
<i>remote-locn</i>	{hostname   ipv4-address   "["ipv6-address"]" }[:port]
<i>ipv4-address</i>	a.b.c.d
<i>ipv6-address</i>	x:x:x:x:x:x:x[-interface]  x:x:x:x:x:d.d.d.d[-interface]  x - [0 to FFFF]H d - [0 to 255]D  interface - 32 characters maximum, for link local addresses
<i>port</i>	[0 to 65535]

*cflash-id*

cf1: | cf1-A: | cf1-B: | cf2: | cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to direct the cache contents generated by the IP identification assist feature to a remote destination.

```
tools dump application-assurance group 1 ip-identification-assist cache-contents isa 1/1 url ftp://exuser:expassword@192.0.2.1/tmp/sample-cache
```

Output Example

```
=====
Application-Assurance Group 1 ip-identification-assist cache contents
=====

Writing to file ftp://exuser:expassword@192.0.2.1/tmp/sample-cache_1_1.ip-ident-assist-cache ...

File closed

-rw-r--r-- 1 exuser exuser 16553 Aug 24 09:22 sample-cache_1_1.ip-ident-assist-cach
```

Use the following command to dump information stored in the cache related to the IP identification assist feature for top applications.

```
tools dump application-assurance group "1" ip-identification-assist cache-contents isa "1/1"
```

Output Example

```
=====
Application-Assurance Group 1 ip-identification-assist cache contents

## 6.4 calculate-maps

calculate-maps

### Syntax

**calculate-maps** *router router-instance subscriber-type nat-sub-type prefix ip-prefix/length*

### Context

[\[Tree\]](#) (tools>perform>nat>deterministic calculate-maps)

### Full Context

tools perform nat deterministic calculate-maps

### Description

This command allows the operator to reveal the auto-mappings before they are created in the system, while the inside prefix is still out of service (in a **shutdown** administrative state). Based on the auto-mapping results, the user can decide to use the auto-mapping and operationalize the prefix (**no shutdown** command), or to use custom mappings.

The inside IP addresses for deterministic subscribers and for 1:1 protocol agnostic subscribers can be mapped to outside IP addresses in the following ways:

- Automatically by the system. By enabling the deterministic prefix (**no shutdown** command), the system will automatically create map commands and sequentially map subscribers into outside IP address space.
- Manually by the operator by configuring the map commands. This gives the operator control over mappings beyond the sequential auto-mapping.

### Parameters

***router-instance***

Specifies the inside router name or VPRN service instance where the deterministic prefix resides.

**Values**    <router-name> | <vprn-svc-id>

router-name — "Base"  
vprn-svc-id — 1 to 2147483647

**nat-sub-type**

Specifies the NAT subscriber type.

**Values** classic-lsn-sub, dslite-lsn-sub

**ip-prefix/length**

Specifies the inside prefix containing IP addresses for which mapping is sought. The IP prefix is IPv4 family type for classic LSN subscriber and IPv6 family type for a DS-Lite subscriber.

<b>Values</b>	<ip-prefix/ip-prefix-length>	<ipv4-prefix>/<ipv4-prefix-length> <ipv6-prefix>/<ipv6-prefix-length>
	<ipv4-prefix>	a.b.c.d (host bits must be 0)
	<ipv4-prefix-length>	0 to 32
	<ipv6-prefix>	x::x::x::x::x::x (eight 16-bit pieces) x::x::x::x::d.d.d.d x - [0 to FFFF]H d - [0 to 255]D
	<ipv6-prefix-length>	[0 to 128]

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.5 call-home

call-home

**Syntax**

call-home

**Context**

[Tree] (clear>system>management-interface>netconf call-home)

**Full Context**

clear system management-interface netconf call-home

### Description

Commands in this context reset statistics for NETCONF call-home clients.

### Platforms

All

## 6.6 call-trace

### call-trace

#### Syntax

**call-trace**

#### Context

[\[Tree\]](#) (show call-trace)

#### Full Context

show call-trace

#### Description

Commands in this context display information related to the call-trace module.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### call-trace

#### Syntax

**call-trace**

#### Context

[\[Tree\]](#) (clear call-trace)

#### Full Context

clear call-trace

#### Description

This command clears call trace jobs.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.7 cam-utilization

cam-utilization

Syntax

cam-utilization [card slot-number]

Context

[Tree] (tools>dump>filter cam-utilization)

Full Context

tools dump filter cam-utilization

Description

This command, when used without parameters, specifies the utilization per CAM table for line card ACL filters per FP for FP4- and FP5-based cards in the system. Optionally, the card number can be provided as a parameter to limit the output to a single card.

Parameters

slot-number

Specifies the IOM slot number.

Values 1 to 10, A, B

Platforms

All

Output

The following output is an example of CAM utilization information for filters.

Output Example

```
*A:7750# tools dump filter cam-utilization
=====
Filter Cam Utilization
=====
Slot FP  Dir   Type      Cam Utilization %
-----
2    1   Ing   ip-mac      0
2    1   Egr   ip-mac     100
2    1   Ing   ipv6        0
2    1   Egr   ipv6        0
=====
```

## 6.8 candidate

### candidate

**Syntax**  
candidate

**Context**  
[\[Tree\]](#) (show>system candidate)

**Full Context**  
show system candidate

**Description**  
This command shows classic CLI candidate configuration information.

**Note:**  
This command is not available in the MD-CLI. Use the MD-CLI **info** command in a configuration region.

**Platforms**  
All

**Output**  
The following output is an example of candidate information, and [Table 57: Output fields: candidate](#) describes the output fields.

**Output Example**

```
*A:bksim3107# show system candidate
=====

Table 57: Output fields: candidate

Label	Description
Candidate configuration state	<ul style="list-style-type: none"> <li>• empty — indicates there are no uncommitted changes in the candidate config</li> <li>• modified — indicates there are uncommitted changes in the candidate config</li> <li>• unconfirmed — indicates there are no uncommitted changes in the candidate config but the result of the last commit will be auto-reverted unless it is confirmed before the timeout expires</li> </ul>
Num editors/viewers	Displays the number of CLI sessions currently in edit-cfg mode
Candidate cfg exclusive locked	Indicates if a user has exclusively locked the candidate using the <b>candidate edit exclusive</b> command
Last commit state	<ul style="list-style-type: none"> <li>• none — indicates there have been no commits since the last reboot of the node</li> <li>• in-progress — indicates the system is currently committing the candidate config</li> <li>• success — indicates the last commit finished successfully</li> <li>• revert-pending — indicates the last commit finished successfully but has not been confirmed yet, and will be auto-reverted if it is not confirmed before the timeout expires</li> <li>• failed — indicates the last commit failed and has been undone</li> <li>• revert-in-progress — indicates the last commit finished successfully but was not confirmed in time and is currently being reverted</li> <li>• reverted — indicates the last commit finished successfully but was not confirmed in time and has been reverted</li> <li>• revert-failed — indicates the last commit finished successfully but was not confirmed in time and the system attempted to revert it but failed</li> </ul>
Last commit time	Displays the time at which the last commit attempt was started
Checkpoint created with last commit	Indicates if a rollback checkpoint was created after the previous commit completed
Scheduled revert time	Indicates the currently scheduled auto-revert time based on the confirmed option being used with a candidate commit
Last commit revert time	Displays the time the commit was last reverted

Label	Description
Users in edit-cfg mode	Lists all the user sessions that are currently in edit-cfg mode
Type (from)	Indicates the type of session (such as Console, Telnet, and so on) and also the source of the session (such as the source IP address of the remote host)

6.9 capabilities

capabilities

Syntax

**capabilities** [*system-id* | *lsp-id*] [**level** *level*]

Context

[\[Tree\]](#) (show>router>isis capabilities)

Full Context

show router isis capabilities

Description

This command displays the IS-IS capability information.

Parameters

***system-id***

Only the LSPs related to the specified *system-id* are listed.

***lsp-id***

Only the specified LSP is listed.

***level***

Specifies the interface level (1, 2, or 1 and 2).

Platforms

All

Output

The following output is an example of IS-IS capability information, and [Table 58: Output fields: IS-IS capabilities](#) describes the output fields.

Output Example

show router ospf capabilities

### Description

This command displays the entries in the Router Information (RI) LSAs.

### Parameters

**router-id**

Lists only the LSAs related to that router ID. If no *router-id* is specified, all database entries are listed.

### Platforms

All

Output

OSPF Capabilities Output

The following table describes the standard and detailed command output fields for OSPF capabilities.

Output Example

```
*A:Dut-C# show router ospf capabilities
=====
Rtr Base OSPFv2 Instance 0 Capabilities
=====
scope      Router Id      Capabilities
-----
Area       10.20.1.2      0x14: Stub P2P-VLAN
              SR Algorithm: IGP-metric-based-SPF
              SR Label Range: start label 22000 range 1001
Area       10.20.1.3      0x14: Stub P2P-VLAN
              SR Algorithm: IGP-metric-based-SPF
              SR Label Range: start label 23030 range 71
Area       10.20.1.4      0x14: Stub P2P-VLAN
              SR Algorithm: IGP-metric-based-SPF

6.10 capture-sap

```
capture-sap
```

Syntax

capture-sap [statistics] sap-id

Context

[Tree] (show>service>id>dynsvc capture-sap)

Full Context

show service id dynamic-services capture-sap

## Description

This command displays the status and statistics of a dynamic services capture. Statistics include counters for the number of data triggers received and data trigger drop reasons.

### Note:

This command is not available in the MD-CLI.

## Parameters

### *sap-id*

Specifies the dynamic services capture SAP.

### *statistics*

Displays data trigger receive and drop reason counters for this dynamic services capture SAP.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of capture SAP information.

### Output Example

```
# show service id 10 dynamic-services capture-sap 1/1/1:10.*
=====
Dynamic Services Capture SAP 1/1/1:10.*
=====
Dynamic services policy      : dyn-svc-1
Administrative state        : in-service
-----
Last Mgmt Change            : 01/20/2016 12:54:06
=====
# show service id 10 dynamic-services capture-sap 1/1/1:10.* statistics
=====
Dynamic Services Capture SAP 1/1/1:10.* Statistics
=====
Data packets received by SAP : 0
-----
Drop Reason Counters
-----
No policy configured at capture SAP level : 0
No authentication configured in policy    : 0
Data-trigger already exists               : 0
Lockout is active                        : 0
Reached data-trigger system limit        : 0
No memory available                      : 0
Unsuccessful authentication               : 0
No data-trigger SAP-id in authentication : 0
Corresponding dynamic SAP is not created  : 0
=====
```

Table 59: Output fields: [capture SAP](#) describes the Capture SAP policy fields.

Table 59: Output fields: capture SAP

Counter	Description
Data packets received by SAP	The number of dynamic service data triggers received on the capture SAP that reached the CPM.
No policy configured at capture SAP level	There is no dynamic-services-policy configured at the capture SAP. This is required to determine the authentication destination.
No authentication configured in policy	The authentication section in the specified in dynamic services policy is missing or incomplete.
Data-trigger already exists	A new data trigger frame is received for an existing data trigger that is authenticated, but the corresponding dynamic SAP is not yet created. The new data trigger packet is dropped.
Lockout is active	The data trigger for this managed SAP is currently in a lockout state due to previous authentication failures.
Reached data-trigger system limit	The maximum number of dynamic service data triggers supported on the system is reached. Additional data triggers are dropped.
No memory available	There is not enough system memory available to process the data trigger.
Unsuccessful authentication	The authentication for a data trigger on this capture SAP failed or timed out.
No data-trigger SAP-id in authentication	The dynamic services data trigger SAP ID is not provided in authentication. This is a mandatory parameter.
Corresponding dynamic SAP is not created	The data trigger successfully authenticated but the corresponding dynamic SAP was not created. This is typically caused by a dynamic services script error.

## capture-sap

### Syntax

**capture-sap** [**statistics**] *sap-id*

Context

[Tree] (clear>service>id>dynsvc capture-sap)

Full Context

clear service id dynamic-services capture-sap

Description

This command clears the dynamic services capture SAP control plane statistics (data triggers received and data trigger drop reason counters).

Parameters

statistics

Clears the data trigger statistics for a capture SAP.

sap-id

Specifies the dynamic services capture SAP.

Values		
null	port-id   bundle-id   bpgrp-id   lag-id   aps-id   eth-sat-id

## Context

[\[Tree\]](#) (show card)

## Full Context

show card

## Description

This command displays card information.

If no command line parameters are specified, a card summary for all cards is displayed.

## Parameters

*slot-number*

Displays information for the specified card slot.

**Values** Depending on the chassis model, IOM/XCM slots are numbered from 1 to 10. CPM slots are A, B. The 7950 XRS has additional slots C, D (upper or lowercase). SFM slots are not addressed as cards. See the **show sfm** command.

**cpu**

Displays CPU utilization.

*seconds*

Displays the number of seconds over which to sample CPU task utilization.

**Values** 1 to 300

*fp-number*

Displays information for the specified forwarding plane.

**Values** 1 to 8

**dist-cpu-protection**

Displays the distributed CPU protection information.

**policy-accounting**

Displays the policy accounting information.

**memory-pools**

Displays the memory pools for the card.

**state**

Displays provisioned and equipped card and MDA information.

**detail**

Displays detailed card information.

**fwd-engine**

Displays forwarding engine information.

**drop-reason**

Displays drop reason information.

**statistics**

Displays statistics information.

**ingress**

Specifies statistics are ingress related.

**egress**

Specifies statistics are egress related.

*tap-number*

Displays the source TAP number.

**Values** 1 to 2

**per-egress-fp-stats**

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

**per-ingress-fp-stats**

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

**queue-group**

Displays queue group information.

**mode**

Specifies the mode in which the card will operate.

**access**

Displays information for the queue groups related to access mode.

**network**

Displays information for the queue groups related to network mode.

**Platforms**

All

**Output**

The following outputs are examples of card information, and the associated tables describe the output fields:

- Output Example: show card (showing the 7750 SR-12)
- Output Example: show card (showing the 7950 XRS-40)
- Output Fields: show card
- Output Example: show card state (showing 7750 SR-12 Chassis)
- Output Example: show card state (showing 7750 SR-14s Chassis)
- Output Example: show card state (showing 7450 ESS-12 Chassis)
- Output Example: show card state (showing a 7950 XRS Chassis)
- Output Fields: show card state
- Output Example: show card <slot-number> detail (showing IOM5-e Card)
- Output Example: show card <slot-number> detail (showing XCM-20 Card)
- Output Fields: show card <slot-number> detail (for an IOM or XCM Card)
- Output Example: show card <slot-number> detail (showing CPM5 Cards)
- Output Example: show card <slot-number> detail (showing CPM-x20 Cards)
- Output Fields: show card <slot-number> detail (for a CPM)
- Output Example: show card <slot-number> detail (showing IOM with license detail)
- Output Fields: show card <slot-number> detail (showing IOM with license level)
- Output Example: show card <slot-number> fp fwd-engine drop-reason statistics
- Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics
- Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats

Card Summary
=====
```

Slot	Provisioned Type Equipped Type (if different)	Admin State	Operational State	Comments
1	xcm-x20	up	up	
2	xcm-x20	up	up	
A	cpm-x20	up	up/active	
B	cpm-x20	up	up/standby	
C	cpm-x20	up	down/ext-stby	
D	cpm-x20	up	up/ext-actv	

**Output Fields: show card**

Table 60: Output fields: card describes the output fields for the **show card** command.

Table 60: Output fields: card

Label	Description
Slot	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40).
Equipped Type	The card type that is actually populated in the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40).
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Down — The card is operationally down. active — The CPM is the Active CPM for the system (actively managing the system components, processing various protocols, and so on). standby — The CPM is the Standby CPM. The standby is hot synchronized with the Active CPM. ext-actv — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the active extension CPM for the chassis in which it sits. ext-stby — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the standby extension CPM for the chassis in which it sits.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.

Label	Description
	SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

#### Output Fields: show card state

Table 61: Output fields: card state describes the output fields for the **show card state** command.

Table 61: Output fields: card state

Label	Description
Slot/MDA	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot.
Equipped Type	The card type that is actually populated in the slot.
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Provisioned — There is no card in the slot but it has been pre-configured.
Num Ports	The number of ports available on the MDA.
Num MDA	The number of MDAs installed.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.

Label	Description
	SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

**Output Fields: show card <slot-number> detail (for an IOM or XCM Card)**

[Table 62: Output fields: card detail \(for an IOM or XCM Card\)](#) describes the output fields for the **show card detail** command.

Table 62: Output fields: card detail (for an IOM or XCM Card)

Label	Description
Clock source	Source of clock for the IOM. Currently this parameter always displays "none".
Available MDA slots	The number of MDA slots available on the IOM.
Installed MDAs	The number of MDAs installed on the IOM.
FP Resource Policy	The FP resource policy for the specified FP.
Initial Extract Priority Mode	The scheme used to select the initial drop priority of extracted control plane traffic. uniform — Initializes the drop priority of all extracted control traffic as high priority. l3-classify — Initializes the drop priority of all Layer 3 extracted control traffic (for example, BGP or OSPF) based on the QoS classification of the packets. See "Classification-Based Priority for Extracted Protocol Traffic" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide</i> for more details.
Part number	The IOM part number.
CLEI code	The Common Language Location Identifier (CLLI) code string for the router.
Serial number	The serial number. Not user-modifiable.
Manufacture date	The chassis manufacture date. Not user-modifiable.
Manufacturing string	Factory-inputted manufacturing text string. Not user-modifiable.
Manufacturing deviations	Displays a record of changes by manufacturing to the hardware or software that is outside the normal revision control process.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Software version	The software version number.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Base MAC address	Displays the base MAC address of the hardware component.

Label	Description
Memory capacity	Displays the memory capacity of the card.
Generation	Displays the FP generation of the assembly. N/A is displayed if there is no XMA installed in the card slot.
Comments	<p>Active — Indicates if the CPM is the active state.</p> <p>Standby — Indicates if the CPM is the standby state.</p> <p>No SFM — Indicates no SFM is online that is usable by this card.</p> <p>Pwr Save — Indicates if the card is in power save mode.</p> <p>Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.</p> <p>SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.</p> <p>No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.</p>
Network ingress queue policy	Displays the name of the network ingress queue policy applied to the FP.

**Output Example: show card <slot-number> detail (showing CPM5 Cards)**

```

**Output Fields: show card <slot-number> detail (for a CPM)**

**Table 63: Output fields: card detail (for a CPM)** describes the output fields for the **show card detail** command for a CPM card.

*Table 63: Output fields: card detail (for a CPM)*

Label	Description
Slot	The slot of the card in the chassis.
Card Provisioned	The CPM type that is configured for the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Card Equipped	The CPM type that is actually populated in the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Admin State	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational State	Up — The CPM is operationally up. Down — The CPM is operationally down.
Inter chassis cpm interconnect	Up — The CPM is operationally up. Down — The CPM is operationally down.
BOF last modified	The date and time of the most recent BOF modification.
Config file version	The configuration file version.
Config file last modified	The date and time of the most recent config file modification.
Config file last modified	The date and time of the most recent config file modification.
Config file last saved	The date and time of the most recent config file save.
CPM card status	active — The card is acting as the primary (active) CPM in a redundant system. standby — The card is acting as the standby (secondary) CPM in a redundant system.
Administrative state	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational state	Up — The CPM is operationally up. Down — The CPM is operationally down.
Serial number	The compact flash part number. Not user modifiable.
Firmware revision	The firmware version. Not user modifiable.
Model number	The compact flash model number. Not user modifiable.
Size	The amount of space available on the compact flash card.
Free space	The amount of space remaining on the compact flash card.

Label	Description
Part number	The CPM part number.
CLEI code	The code used to identify the router.
Serial number	The CPM part number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	Factory-set manufacturing text string. Not user modifiable.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Status	Displays the current status.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Memory capacity	The total amount of memory.
Secure boot status	Status of the Secure Boot for this CPM. enabled — Secure Boot is enabled disabled — Secure Boot is disabled
UEFI variable status	Status of the Secure Boot UEFI variables for this CPM. ok — no update required update required — update is required
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.

Label	Description
	No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

**Output Fields: show card <slot-number> detail (showing IOM with license level)**

**Table 64: Output fields: card detail (showing IOM with license level)** describes the output fields for the **show card detail** command with IOM licensing information.

*Table 64: Output fields: card detail (showing IOM with license level)*

Label	Description
Slot	The slot of the card in the chassis.
Provisioned Type	The IOM type and level that is configured for the slot.
Equipped Type (if different)	The IOM type and level that is actually populated in the slot if it is different than the Provisioned Type.
Admin State	Up — The IOM is administratively up. Down — The IOM is administratively down.
Operational State	Up — The IOM is operationally up. Down — The IOM is operationally down.
Licensed Level	License level of the card.
Description	Description of the license.
Licensed Bandwidth Used	The total connector bandwidth configured on the assembly.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

**Output Example: show card <slot-number> fp fwd-engine drop-reason statistics**

```
*A:cses-V93# show card 1 fp 1 fwd-engine drop-reason statistics
=====
Card 1 FP 1 Egress Forwarding Engine Drop Reason Statistics
=====
Egress Encapsulation Exceeded          0
MTU Exceeded                          0
Frame too big for port                  4
=====
```

**Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics**

**Table 65: Output fields: card forwarding plane forwarding engine drop reason** describes the output fields for the **show card fp fwd-engine drop-reason** command.

Table 65: Output fields: card forwarding plane forwarding engine drop reason

Label	Description
Card	The card in the chassis.
FP	The egress forwarding plane hardware component.
Egress Encapsulation Exceeded	Addition of egress encapsulation headers would have exceeded the maximum frame size.
MTU Exceeded	Protocol supports packet fragmentation but fragmentation was blocked (for example, packet is IPv6 or packet is IPv4 and DF set to one).
Frame too big for port	Final check before transmitting has detected frame exceeded the port MTU.

**Note:**

A single frame can only result in one drop reason statistic being incremented.

**Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats**

```
# show card 4 fp 5 ingress per-egress-fp-stats
=====
Card 4 FP 5 TAP 1 (Ingress Per-Egress FP Statistics)

=====			

Table 67: Output fields: card CPU sample-period

Label	Description
Name	The name of the CPU task
CPU Time (uSec)	The CPU usage time, in microseconds
CPU Usage	The CPU usage as a percentage of the total sampled time
Capacity Usage	<p>The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity.</p> <p>This column does not reflect the true CPU utilization value; that data is still available in the <b>CPU Usage</b> column. This column is the <b>busiest</b> task in each group, where <b>busiest</b> is defined as either actually running or blocked attempting to acquire a lock.</p>
Total	The total CPU time measured in the sample period
Idle	The total CPU idle time
Usage	The total CPU usage time
Busiest Core Utilization	The CPU utilization of the busiest core

**card** *slot-number* **fp** *fp-number* **egress** **per-ingress-fp-stats**

**card** *slot-number* **soft** [**hard-reset-unsupported-mdas**]

**card** *slot-number* **fp** *fp-number* **fwd-engine** **drop-reason** **statistics**

**card** *slot-number* **fp** *fp-number* **ingress** **mode** {**access** | **network**} **queue-group** *group-name* **instance** *instance* **statistics**

### Context

**[Tree]** (clear card)

## Full Context

clear card

## Description

This command re-initializes the card in the specified slot. A **clear card** command (without the soft) is referred to as a *Hard Reset*. A **clear card x soft** command (with the soft) is referred to as a *Soft Reset*.

## Parameters

### **slot-number**

Clears information for the specified card slot.

**Values** 1 to 20, A, B, C, D

### **fp-number**

Displays information for the specified forwarding plane.

**Values** 1 to 8

### **high-water-mark**

Clears the high water marks within the HS pool on the specified card and FP.

### **mid-pool**

Clears the high water marks within the mid pools in the HS pool and on the specified card and FP.

**Values** 1 to 16

### **root-pool**

Clears the high water marks within the root pools in the HS pool and on the specified card and FP.

**Values** 1 to 16

### **system**

Clears the high water marks within the in the HS system pool and on the specified card and FP.

### **dist-cpu-protection**

Clears the distributed CPU protection information.

### **soft**

Issues a soft reset of the I/O module (IOM).

### **hard-reset-unsupported-mdas**

Allows a soft reset operation when some of the MDA's cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset and a hard reset is performed on MDAs that do not support soft resets.

### **fwd-engine**

Specifies to clear the forwarding engine information.

### **drop-reason**

Specifies to clear the drop reason information.

**statistics**

Specifies to clear the statistics.

**ingress**

Specifies to clear the ingress information.

**egress**

Specifies to clear the egress information.

**per-egress-fp-stats**

Specifies to clear packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

**per-ingress-fp-stats**

Specifies to clear packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

**mode**

Specifies the mode in which the card is to operate.

**access**

Specifies to clear the access mode information.

**network**

Specifies to clear the network mode information.

**group-name**

Specifies the group name, to a maximum of 32 characters.

**instance**

Specifies the instance of the named queue group to be cleared.

**Values** 1 to 65535

**Platforms**

All

**card**

**Syntax**

**card** *slot-number* **fp** *fp-number* **queue-group** *queue-group-name* **instance** *instance-id* [{**access** | **network**}] [{**ingress** | **egress**}] [**arbiter** {*name* | *root*}] [**port** *port-id*] [{**detail** | **root-detail** | **thresholds** | **priority-info** | **depth**}]

**Context**

[\[Tree\]](#) (show>qos>policer-hierarchy card)

**Full Context**

show qos policer-hierarchy card

## Description

This command displays physical card related information.

## Parameters

### ***slot-number***

Displays information about the slot number of the card in the chassis. The maximum slot number is platform dependent.

**Values** 1 to 10

### ***fp-number***

Displays information about the specified forwarding plane number.

**Values** 1

### ***queue-group-name***

Displays information about the specified queue group name, up to 32 characters.

### ***instance-id***

Displays information about the instance of the named queue group.

**Values** 1 to 65535

### ***name***

Displays information about the name of the QoS arbiter.

### ***root***

Displays information about the arbiter root.

### ***port-id***

Displays information about the specified port ID.

### ***access***

Displays policer-hierarchy statistics applied on an access port.

### ***network***

Displays policer-hierarchy statistics applied on a network port.

### ***ingress***

Displays ingress queue group information.

### ***egress***

Displays egress queue group information.

### ***detail***

Displays detailed information.

### ***root-detail***

Displays detailed information about the arbiter root.

### ***thresholds***

Displays the threshold, parenting, rate, and traffic information related to a policer.

### ***priority-info***

Displays the threshold information related to the root arbiter.

### depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## card

### Syntax

**card** [*slot-num*]

**card** [*slot-num*] **all**

### Context

[\[Tree\]](#) (tools>dump>resource-usage card)

### Full Context

tools dump resource-usage card

### Description

This command displays resource information for cards.

### Parameters

#### **slot-num**

Specifies a card slot.

**Values** 1 to 10

#### **all**

Displays all available information for the card, including resource usage information for all child objects of the card such as FPs and MDAs.

### Platforms

All

## card

### Syntax

**card** *slot-number* **fp** *fp-number* **ingress** {**access** | **network**} **queue-group** *queue-group-name* **instance** *instance-id* [**absolute** | **percent-rate**] [**interval** *seconds*] [**repeat** *repeat*] **policer** *policer-id* [*reference-rate*]

## Context

[\[Tree\]](#) (monitor card)

## Full Context

monitor card

## Description

This command monitors statistics in an ingress and egress Forwarding Plane (FP).

## Parameters

### **slot-number**

Monitors information on the specified card slot.

**Values** 1 to 20 (The maximum slot number is platform dependent)

### **fp-number**

Monitors information on the specified FP.

**Values** 1 to 8

### **ingress**

Monitors information on the ingress.

### **egress**

Monitors information on the egress.

### **access**

Displays policer statistics on the FP access.

### **network**

Displays policer statistics on the FP network.

### **queue-group-name**

Specifies the queue group name, up to 32 characters.

### **instance-id**

Specifies the identification of a specific instance of the queue group.

**Values** 1 to 65535

### **absolute**

Displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

### **percent-rate**

Displays the rate-per-second for each statistic based on the reference rate of 10G.

### **seconds**

Specifies the interval for each display in seconds.

**Values** 11 to 60

**Default** 11

***repeat***

Specifies how many times the command is repeated.

**Values** 1 to 999

**Default** 10

***policer-id***

Must exist within the queue-group template applied to the ingress context of the forwarding plane.

**Values** 1 to 32

***reference-rate***

Displays the rate-per-second for each statistic as a percentage based on the reference rate specified.

**Values** 100M, 1G, 10G, 40G, 100G, 400G

**Default** 10G

***tap-number***

Specifies the source TAP.

**Values** 1 to 2

***per-egress-fp-stats***

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP.

***per-ingress-fp-stats***

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP.

***rate***

Displays the rate-per-second for each statistic instead of the delta.

**Platforms**

All

## card

### Syntax

```
card slot-number fp fp-number queue-group queue-group-name instance instance-id [ingress] [access  
| networks] [interval seconds] [repeat repeat] [absolute | percent-rate [reference-rate]] [arbiter root  
| name]
```

### Context

[\[Tree\]](#) (monitor>qos>arbiter-stats card)

### Full Context

monitor qos arbiter-stats card

### Description

This command monitors arbiter statistics in an ingress FP queue group.

### Parameters

#### ***slot-number***

Specifies the slot number associated with the queue group, expressed as an integer.

**Values** 1 to 20

#### ***fp-number***

Specifies the FP number associated with the queue group, expressed as an integer.

**Values** 1 to 8

#### **ingress**

Displays policer statistics applied on the ingress FP.

#### **access**

Displays policer statistics on the FP access.

#### **network**

Displays policer statistics on the FP network.

#### ***queue-group-name***

Specifies the name of the queue group up to 32 characters.

#### ***instance-id***

Specifies the identification of a specific instance of the queue-group.

**Values** 1 to 65535

#### ***seconds***

Configures the interval for each display in seconds.

**Default** 11 seconds

**Values** 11 to 60

**repeat**

Configures how many times the command is repeated.

**Default** 10

**Values** 1 to 999

**absolute**

When the absolute keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

**percent-rate**

When the percent-rate keyword is specified, the rate-per-second for each statistic is displayed based on the reference rate of 10G.

**reference-rate**

When a reference-rate value is specified, the rate-per-second for each statistic is displayed as a percentage based on the reference rate specified.

**Values** 100M, 1G, 10G, 40G, 100G, 400G

**name**

Specify the name of the policer control policy arbiter.

**Values** An existing arbiter-name in the form of a string up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, etc.), the entire string must be enclosed within double quotes.

**root**

Specifies the root arbiter.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

**Syntax**

**card** *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] **queue-group** *queue-group-name* [**instance** *instance-id*] [**arbiter** {*name* | *root*}]

**Context**

**[Tree]** (clear>qos>arbiter-stats card)

**Full Context**

clear qos arbiter-stats card

**Description**

This command clears arbiter statistics per card.

**Parameters**

***slot-number***

Specifies the slot number associated with the queue group.

- Values
- 1 to 2 (7750 SR-2s)

1 to 5 (7750 SR-7)

1 to 6 (7750 SR-14s)

1 to 10 (7450 ESS, 7750 SR-12)

1 to 14 (VSR)

1 to 20 (7950 XRS, VSR)

***fp-number***

Specifies the FP number associated with the queue group.

- Values
- 1 to 4

***access***

Clears policer statistics on the FP access.

***network***

Clears policer statistics on the FP network.

***queue-group-name***

Specifies the queue group name, up to 32 characters.

***name***

Specifies the arbiter name, up to 32 characters.

***root***

Specifies the arbiter root, up to 32 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

**Syntax**

**card** *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] [**queue-group** *queue-group-name*] [**instance** *instance-id*] [**arbiter** *name* | *root*]

**Context**

[\[Tree\]](#) (show>qos>arbiter-stats card)

Full Context

show qos arbiter-stats card

Description

This command displays the arbiter statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

- Values
- 1 (7750 SR-1, VSR)

1 to 2 (7750 SR-2s)

1 to 5 (7750 SR-7)

1 to 6 (7750 SR-14s)

1 to 10 (7450 ESS, 7750 SR-12)

1 to 14 (VSR)

1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

- Values
- 1

access

Displays arbiter statistics applied on an access port.

network

Displays arbiter statistics applied on a network port.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card slot-number fp fp-number queue-group group-name instance instance-id {access | network}  
[detail] [ingress]

**Context**

[Tree] (show>qos>policer card)

**Full Context**

show qos policer card

**Description**

This command displays the policer statistics per card.

**Parameters**

**slot-number**

Displays information for the specified card slot.

- Values
- 1 (7750 SR-1, VSR)

1 to 2 (7750 SR-2s)

1 to 5 (7750 SR-7)

1 to 6 (7750 SR-14s)

1 to 10 (7450 ESS, 7750 SR-12)

1 to 14 (VSR)

1 to 20 (7950 XRS, VSR)

**fp-number**

Specifies the FP number associated with the queue group.

- Values
- 1

**group-name**

Specifies the queue group name, up to 32 characters.

**access**

Displays policer statistics applied on an access port.

**network**

Displays policer statistics applied on a network port.

**detail**

Displays detailed information.

**ingress**

Displays ingress queue group information.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## 6.12 card-status

```
card-status
```

**Syntax**  
`card-status`

**Context**  
[\[Tree\]](#) (tools>dump>service>id>fdb card-status)

**Full Context**  
tools dump service id fdb card-status

**Description**  
This command displays the following MAC address information for each line card in the system:

- the number of allocated MAC addresses
- the number of pending MAC address allocations
- the number of pending free MAC addresses

**Platforms**  
All

**Output**  
**Output Example**

```
*A:PE1# tools dump service id 1 fdb card-status
=====
VPLS FDB Card Status at 01/31/2017 08:44:38

## 6.13 category-map

### category-map

#### Syntax

**category-map** [*category-map*]  
**category-map** *category-map* **subscribers**

#### Context

**[Tree]** (show>subscr-mgmt category-map)

#### Full Context

show subscriber-mgmt category-map

#### Description

This command displays category map information.

With no parameters specified, a summary view of all configured category maps is displayed.

With the optional *category-map* name parameter specified, the detailed configuration of the specified category map name is displayed.

With the *category-map* **subscribers** parameters specified, all subscribers that have the specified *category-map* associated are displayed.

#### Parameters

##### *category-map*

Specifies the category map name for which information is displayed.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of subscriber management category map information.

#### Output Example

```
Node# show subscriber-mgmt category-map "cat-map-1"
=====
Category Map: cat-map-1
=====
Description      : gy - time and volume
Credit Type      : volume                Credit Exh. Thresh.: 80%
Activity Thresh. : 0 kb/s
Gx session level
usage monitoring  : false
-----
Category: cat-1-time
```

```

-----
Description      : Rating group for Time quota
Credit Type Over. : none           Rating Group      : 11
OutOfCredit Action : none
Default Credit   : none
Ingress Queues   : 1
Egress Queues    : 1
Ingress Policers : none
Egress Policers  : none
ExhCrdsvcLvl Pir : none
-----
Category: cat-1-volume
-----
Description      : Rating group for Volume quota
Credit Type Over. : none           Rating Group      : 12
OutOfCredit Action : none
Default Credit   : none
Ingress Queues   : 1
Egress Queues    : 1
Ingress Policers : none
Egress Policers  : none
ExhCrdsvcLvl Pir : 100
=====

```

**Table 68: Output fields: category map** describes category map output fields.

*Table 68: Output fields: category map*

Field	Description
Description	The user provided description of this policy
Credit Type	The volume or time based accounting is performed
Credit Exh. Thresh	The credit exhaust threshold considered to take action
Activity Thresh.	The threshold (in kb/s) that is applied to determine whether or not activity is occurring
Gx session level usage monitoring	Whether category map supports Gx session level usage monitoring
Credit Type Over.	Credit type override
Rating Group	The rating group applicable for this category
OutOfCredit Action	The action to be taken if the credit es exhausted
Default Credit	The default value for the Time credit
Ingress Queues	The ingress queues defined in this category
Egress Queues	The egress queues defined in this category
Ingress Policers	The ingress policers defined in this category
Egress Policers	The egress queues defined in this category

Field	Description
ExhCrdSvcLvl Pir	The credit exhaust threshold considered to take action

### 6.14 category-set-id

category-set-id

**Syntax**  
`category-set-id category-set`

**Context**  
`[Tree]` (show>app-assure>web-service category-set-id)

**Full Context**  
show application-assurance web-service category-set-id

**Description**  
This command displays information for the web-service category set.

**Parameters**  
`category-set`  
Specifies the category set ID.  
**Values** 0 to 65535

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output examples show information about SAPs using the application profile.

**Output Example**

```
# show application-assurance web-service category-set-id 1
=====
Compatible Classifier-ids
=====
Name                Description

## 6.15 ccrt-replay

### ccrt-replay

#### Syntax

**ccrt-replay** [**session-id** *session-id*] [**diameter-application-policy** *name*]

**ccrt-replay** **diameter-application-policy** *name* **summary**

**ccrt-replay** **summary**

#### Context

**[Tree]** (show>subscr-mgmt>diam-session ccrt-replay)

#### Full Context

show subscriber-mgmt diameter-session ccrt-replay

#### Description

This command displays:

- information for all diameter sessions that are in CCR-T replay mode:
  - Diameter session ID
  - Diameter Application Policy
  - Replay Time left
- statistics per diameter application policy for diameter sessions in CCR-T replay mode or that were in CCR-T replay mode and were dropped or terminated:
  - Sessions in CCR-T replay mode: the number of Diameter Gx or Gy sessions from the specified diameter application policy that are currently in CCR-T replay mode
  - Replay sessions dropped (maximum life-time expired): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before **max-lifetime** expiration
  - Replay sessions dropped (to free resources): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of active Diameter sessions for Gx or Gy was reached
  - Replay sessions dropped (cleared): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a **clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy *name* sessions** command
  - Replay sessions terminated (CCA-T received): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before **max-lifetime** expiration
  - Statistics last cleared time: timestamp when the statistics were last cleared or n/a if the statistics were never cleared

Parameters

- name**

Specifies the application policy, up to 32 characters.
- session-id**

Specifies a diameter session ID.
- summary**

Displays summarized information about CCR-T replay.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management CCR-T replay information.

Output Example

```
*A:Dut-C# show subscriber-mgmt diameter-session ccrt-replay

```

**Table 69: Output fields: CCR-T replay** describes CCRT replay output fields.

*Table 69: Output fields: CCR-T replay*

Field	Description
Session-id	The diameter session ID that is in CCR-T replay mode
Diameter Application Policy	The diameter application policy name to which the Gx or Gy session in CCR-T replay mode belongs
Replay Time Left	The remaining <b>max-lifetime</b> before the Diameter Gx or Gy session in CCR-T replay mode is dropped
No. of Matching Entries	The number of entries matching the search criteria
Sessions in CCR-T replay mode	The number of Diameter Gx or Gy sessions from the specified diameter application policy that are in CCR-T replay mode
Replay sessions dropped (maximum life-time expired)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before max-lifetime expiration
Replay sessions dropped (to free resources)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of Diameter sessions was reached
Replay sessions dropped (cleared)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a <b>clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy <i>name</i> sessions</b> command
Replay sessions terminated (CCA-T received)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before max-lifetime expiration

Field	Description
Statistics last cleared time	The timestamp when the statistics were last cleared or n/a if the statistics were never cleared

## ccrt-replay

### Syntax

**ccrt-replay diameter-application-policy *name* statistics**  
**ccrt-replay diameter-application-policy *name* sessions**

### Context

[\[Tree\]](#) (clear>subscr-mgmt>diam-session ccrt-replay)

### Full Context

clear subscriber-mgmt diameter-session ccrt-replay

### Description

This command, when the **statistics** parameter is specified, clears the CCR-T replay statistics and updates the "Statistics last cleared time" value.

This command, when the **sessions** parameter is specified, drops the diameter Gx or Gy sessions that are in CCR-T replay mode.

### Parameters

- name***  
Specifies the diameter application policy, up to 32 characters.
- statistics**  
Clears the CCR-T replay statistics.
- sessions**  
Clears the sessions that are in CCR-T replay mode.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 6.16 cem

**cem**

### Syntax

**cem**

### Context

[\[Tree\]](#) (clear>service>statistics>id cem)

### Full Context

clear service statistics id cem

### Description

This command clears CEM statistics for this service.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 6.17 cert-profile

**cert-profile**

### Syntax

**cert-profile** *name* **association**

**cert-profile** [*name*]

**cert-profile** *name* **entry** [*value*]

### Context

[\[Tree\]](#) (show>ipsec cert-profile)

### Full Context

show ipsec cert-profile

### Description

This command displays IPsec certificate profile information.

Parameters

- name**

Specifies an existing certificate profile name.
- association**

Displays information for which this IPsec certificate profile is associated.
- value**

Displays information for the specified entry.
- Values**

1 to 8

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show ipsec cert-profile** command.

Output Example

```
*A:Dut-A# show ipsec cert-profile cert "cert-1.der"
=====
Certificate Profile Entry
=====
Id Cert                Key                Status Flags

=====
*A:Dut-A#
```

cert-profile

Syntax

**cert-profile** [*name*]

**cert-profile** *name* **association**

**cert-profile** *name* **entry** *entry*

### Context

[\[Tree\]](#) (show>system>security>tls cert-profile)

### Full Context

show system security tls cert-profile

### Description

This command displays information about server and client profiles that are using this certificate profile.

### Parameters

**entry**

Specifies a certificate profile entry number for which to display information.

**Values** 1 to 8

**name**

Specifies the name of a certificate profile for which to display information.

### Platforms

All

## 6.18 certificate

certificate

### Syntax

**certificate** *filename* **association**

### Context

[\[Tree\]](#) (show>ipsec certificate)

[\[Tree\]](#) (show certificate)

### Full Context

show ipsec certificate

show certificate

### Description

This command displays certificate-related information.

Parameters

- filename

Specifies the certificate file name.
- association

Displays information for which this IPsec certificate is associated.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

- show ipsec certificate

All

- show certificate

Output

The following output is an example of the **show certificate** command.

Output Example

```
*A:Dut-B# show certificate ca-profile
-----

## 6.19 certificate-profile

### certificate-profile

#### Syntax

**certificate-profile**

#### Context

[\[Tree\]](#) (show>app-assure>group certificate-profile)

#### Full Context

show application-assurance group certificate-profile

#### Description

This command displays certificate profile information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.20 cflowd

### cflowd

#### Syntax

cflowd

#### Context

[\[Tree\]](#) (show cflowd)

#### Full Context

show cflowd

#### Description

This command displays cflowd information.

#### Platforms

All

### cflowd

#### Syntax

cflowd

#### Context

[\[Tree\]](#) (show>app-assure cflowd)

#### Full Context

show application-assurance cflowd

#### Description

This command configures the context to display cflowd template field information.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## cflowd

### Syntax

**cflowd**

### Context

[\[Tree\]](#) (show>app-assure>group cflowd)

### Full Context

show application-assurance group cflowd

### Description

Commands in this context display cflowd output.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## cflowd

### Syntax

**cflowd**

### Context

[\[Tree\]](#) (clear cflowd)

### Full Context

clear cflowd

### Description

This command clears the raw and aggregation flow caches which are sending flow data to the configured collectors. This action will trigger all the flows to be discarded. The cache restarts flow data collection from a fresh state. This command also clears global stats collector stats listed in the cflowd **show** commands.

### Platforms

All

## cflowd

### Syntax

**cflowd**

## Context

[\[Tree\]](#) (tools>dump cflowd)

## Full Context

tools dump cflowd

## Description

Commands in this context dump Cflowd information.

## Platforms

All

cflowd

## Syntax

cflowd

## Context

[\[Tree\]](#) (tools>perform cflowd)

## Full Context

tools perform cflowd

## Description

Commands in this context perform Cflowd operations.

## Platforms

All

cflowd

## Syntax

cflowd

## Context

[\[Tree\]](#) (clear>app-assure>group cflowd)

## Full Context

clear application-assurance group cflowd

## Description

This command clears cflowd application assurance statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[\[Tree\]](#) (show>eth-cfm cfm-stack-table)

Full Context

show eth-cfm cfm-stack-table

Description

This command displays stack-table information. This stack-table is used to display the various management points MEPs and MIPs that are configured on the system. These can be service-based or facility-based. The various options allow the operator to be specific. If no parameters are included then the entire stack-table is displayed.

Parameters

**port *port-id***  
Displays the bridge port or aggregated port on which MEPs or MHFs are configured.

Values	<i>port-id</i>	<i>slot/mda/port</i> [ <i>channel</i> ]
	lag-id	lag-id

	lag	keyword
	id	1 to 800
eth-sat-id	esat-<id>/<slot>/[u]<port>	
	esat	keyword
	id	1 to 20
	u	keyword for up-link port

**vlan *vlan-id***

Displays the associated VLAN ID.

**Values** 1 or 4094 or all

***level***

Displays the MD level of the maintenance point.

**Values** 0 to 7

**collect-lmm-stats**

Displays facility MEPs on which LMM collection is enabled.

**direction up | down**

Displays the direction in which the MP faces on the bridge port.

**facility**

Displays the CFM stack table information for facility MEPs. The base command displays all the facility MEPs. Options may be included in order to further parse the table for specific facility MEP information.

**sdp *sdp-id[:vc-id]***

Displays CFM stack table information for the specified SDP.

**Values** sdp-id: 1 to 32767  
vc-id: 1 to 4294967295

**virtual *service-id***

Displays CFM stack table information for the specified SDP.

**Values** service-id: 1..2148278386]  
svc-name: up to 64 characters

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following output is an example of stack table information. [Table 70: Output fields: ETH-CFM CFM stack table](#) describes the output content.

## Output Example

```

Label	Description
Sap	Displays associated SAP IDs.
Sdp	Displays the SDP binding for the bridge.
Level Dir	Displays the MD level of the maintenance point.
Md-index	Displays the maintenance domain (MD) index.
Ma-index	Displays the maintenance association (MA) index.
Mep-id	Displays the integer that is unique among all the MEPs in the same MA.
Mac-address	Displays the MAC address of the MP.
md-admin-name	Displays the administrative MD name.
ma-admin-name	Displays the administrative MA name.

## 6.22 change-key

```
change-key
```

### Syntax

```
change-key authentication authentication-protocol old-authentication-key new-authentication-key
change-key authentication authentication-protocol privacy privacy-protocol old-privacy-key new-privacy-key
```

### Context

```
[Tree] (tools>perform>system>mgmt-itf>snmp change-key)
```

## Full Context

tools perform system management-interface snmp change-key

## Description

This command generates KeyChange strings to change SNMPv3 authentication or privacy keys. The SNMP engine ID is not needed because localized keys are required as input. The KeyChange algorithm uses a random string, which generates a different output each time the command is executed.

## Parameters

### **authentication**

Generates a KeyChange string for an authentication key.

### ***authentication-protocol***

Specifies the SNMPv3 authentication protocol.

<b>Values</b>	<b>hmac-md5-96</b> — Specifies use of the HMAC-MD5-96 authentication protocol.
	<b>hmac-sha1-96</b> — Specifies use of the HMAC-SHA-96 authentication protocol.
	<b>hmac-sha2-224</b> — Specifies use of the HMAC-SHA-224 authentication protocol.
	<b>hmac-sha2-256</b> — Specifies use of the HMAC-SHA-256 authentication protocol.
	<b>hmac-sha2-384</b> — Specifies use of the HMAC-SHA-384 authentication protocol.
	<b>hmac-sha-512</b> — Specifies use of the HMAC-SHA-512 authentication protocol.

### ***old-authentication-key***

Specifies the old localized authentication key.

### ***new-authentication-key***

Specifies the new localized authentication key.

### **privacy**

Keyword to generate a KeyChange string for a privacy key.

### ***privacy-protocol***

Specifies the SNMPv3 privacy protocol.

<b>Values</b>	<b>cbc-des</b> — Specifies the use of the CBC-DES privacy protocol.
	<b>cfb128-aes-128</b> — Specifies the use of the CFB128-AES-128 privacy protocol.
	<b>cfb128-aes-192</b> — Specifies the use of the CFB128-AES-192 privacy protocol.
	<b>cfb128-aes-256</b> — Specifies the use of the CFB128-AES-256 privacy protocol.

***old-privacy-key***

Specifies the old localized privacy key.

***new-privacy-key***

Specifies the new localized privacy key.

**Platforms**

All

**Output**

The following output is an example of a generated KeyChange string.

**Output Example**

```

**Context**

[\[Tree\]](#) (show>mcast-management channel)

**Full Context**

show mcast-management channel

**Description**

This command displays multicast path management channel related information.

**Parameters**

***service-id***

Specifies an existing VPLS service ID.

**Values** 1 to 214748364

***service-name***

A string up to 64 characters.

**slot-number**

Displays information for the specified card slot.

**fp-number**

Specifies an FP.

**Values** 1 to 8

**ip-address**

ipv4-address in the form *a.b.c.d*

**path-type**

Specifies the path type.

**Values** primary, secondary

**Platforms**

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

**Output**

The following output is an example of multicast management channel information.

Source Address	The source address of the video channel
Analyzer State	Indicates if the analyzer state is enabled
Cc Error	The number of CC errors that were seen for this PID in the stream
PAT Rep Err	Indicates if the PAT reportable error is enabled
TNC PAT Rep	The TNC PAT reportable error amount
QOS PAT Rep	The QoS PAT reportable error amount
POA PAT Rep	The POA PAT reportable error amount
PAT Syntax	Indicates if the PAT syntax is enabled
PCR Rep Err	Indicates if the PAT syntax is enabled
TNC PCR Rep	The TNC PCR reportable error amount
QOS PCR Rep	The QoS PCR reportable error amount
POA PCR Rep	The POA PCR reportable error amount
Vid PID Absent	The video PID absent amount
PID PMT Unref	Indicates if the PID PMT unreferenced is enabled
PMT Rep Err Secs	Indicates if the PMT reportable error secs is enabled
TNC PMT Rep	The TNC PMT reportable error amount
QOS PMT Rep	The QoS PMT reportable error amount
POA PMT Rep	The POA PMT reportable error amount
PMT Syntax	Indicates if the PMT syntax is enabled
SCTE35 Err Secs	Indicates if SCTE35 Err Secs is enabled
TEI Err Secs	Indicates if TEI Err Secs is enabled
TS Sync Loss	Indicates if TS sync loss is enabled
Non-Vid Pid Abse	Indicates non-video PID absent amount
Alarm Sev	The alarm severity

### Output example: video channel PID information

```
A:node-2# show video channel pid

Number of pids for this channel: 5

Number of channels : 1

Table 73: Output fields: video channel PID information

Label	Description
Video Channel PID	
Service ID	The service ID for the video channel
Interface Name	The interface name for the video channel
Group Address	The group address for the video channel
Source Address	The source address for the video channel
PID	The value of the PID
PID Type	The PID type: <ul style="list-style-type: none"> <li>• video</li> <li>• audio</li> <li>• PAT</li> <li>• PMT</li> <li>• PCR</li> </ul>
MPEG Stream Type	If the PID is video or audio, this field indicates how the video or audio is encoded: <ul style="list-style-type: none"> <li>• For video, H.265, H.264, or MPEG2 (only the decimal equivalent defined by the MPEG standard is displayed and not the string)</li> <li>• For audio, E-AC3, DTS-HD, AC-3, or MPEG-2 (only the decimal equivalent defined by the MPEG standard is displayed and not the string)</li> </ul>
Is PCR PID	If set to yes, indicates that the PID is the PCR PID
TEI Err Secs	The number of seconds the TEI was set for the specific PID
Cc Err Secs	The CC error seconds
Absent Err Secs	The number of seconds during which the PID was not seen for a particular interval of time, which is decided by the alarms set for the non-VID PID absent and video PID absent configurations
PID Bitrate	This value is calculated by counting the number of times the PID occurred in the last second x 188 x 8: <ul style="list-style-type: none"> <li>• 188 = TS packet size</li> <li>• 8 = number of bits in a byte</li> </ul>

Label	Description
Number of pids for this channel	The overall number of PIDs for this channel
Number of channels	The number of channels

*Table 74: Output fields: video channel configuration information*

Label	Description
Video Channel number	
Service ID	The service ID of the video channel
Interface Name	The interface name of the video channel
Group Address	The group address of the video channel
Source Address	The source address of the video channel
Analyzer State	Indicates if the analyzer state is enabled
Alarm Sev	Indicates the alarm severity
PAT Rep Err	Indicates if the PAT syntax is enabled
PAT TNC Rep	The PAT TNC reportable error amount
PAT QOS Rep	The PAT QOS reportable error amount
PAT POA Rep	The PAT POA reportable error amount

Label	Description
PAT Syntax	Indicates if PAT syntax is enabled
PMT Rep Err	The PMT reportable error amount
PMT TNC Rep	The PMT TNC reportable error amount
PMT QOS Rep	The PMT QOS reportable error amount
PMT POA Rep	The PMT POA reportable error amount
PMT Syntax	Indicates if PMT syntax is enabled
PCR Rep Err	Indicates if PCR reportable error is enabled
PCR TNC Rep	The PCR TNC reportable error amount
PCR QOS Rep	The PCR QOS reportable error amount
PCR POA Rep	The PCR POA reportable error amount
TS Sync Loss	Indicates if TS sync loss is enabled
PID PMT Unref	Indicates if PID PMT unreferenced is enabled
TEI Err	Indicates if TEI error is enabled
Cc Error	Indicates if CC error is enabled
Vid PID Absent	The VID PID absent value
Non-Vid Pid Abse*	The non-VID PID absent value
Number of channels	The number of channels

## channel

### Syntax

**channel all** [rt-client] [rt-server] [fcc-server] [ad-insert]

**channel grp-address** [source srcAddr] [rt-client] [ rt-server] [fcc-server] [ ad-insert]

### Context

[\[Tree\]](#) (clear>video>statistics>id channel)

### Full Context

clear video statistics id channel

### Description

This command clears video statistics for a particular channel.

## Parameters

### **all**

Clears statistics for all channels.

### **rt-client**

Clears all RET client related statistics.

### **rt-server**

Clears all RET server related statistics.

### **fcc-server**

Clears all FCC server related statistics.

### **ad-insert**

Clears all ad insert related statistics.

### **grp-address**

Clears statistics for the specified channel group address.

### **source *srcAddr***

Clears statistics for the specified source address.

## Platforms

7450 ESS, 7750 SR, 7750 SR-s

## 6.24 charging-filter

### charging-filter

## Syntax

**charging-filter** {*charging-filter-id* | **non-zero**}

## Context

[\[Tree\]](#) (show>app-assure>group>policy charging-filter)

## Full Context

show application-assurance group policy charging-filter

## Description

This command displays information about the charging filter.

## Parameters

### *charging-filter-id*

Specifies the ID of an existing charging filter entry.

**Values** 1 to 65535

**non-zero**  
Specifies to show all non-zero count entries.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of the charging filter information, and [Table 75: Output fields: AA group policy charging filter](#) describes the fields.

```
show application-assurance group 1:0 policy charging-filter 1
```

**Output Example**

```
=====
Charging Filter Entry 1
=====
Description      : "Charging-filter entry for WhatsApp Video"
Admin State      : in-service
Charging Group    : "cgVideo100"
Hits             : 0 flows

Match :
  Application      : eq "Whats App"
  Flow Attribute    : flow-attribute video confidence gte 100
=====
```

Table 75: Output fields: AA group policy charging filter

Label	Description
Charging Filter Entry	The charging filter
Description	The description of the charging filter
Admin State	The administrative state of the filter
Charging Group	The charging group
Hits	The number of hits
Application	The matched application
Flow Attribute	The flow attribute used by the match criteria

## 6.25 charging-group

### charging-group

#### Syntax

**charging-group**

**charging-group** *charging-group-name*

#### Context

[\[Tree\]](#) (show>app-assure>group>policy charging-group)

#### Full Context

show application-assurance group policy charging-group

#### Description

This command displays application-assurance policy application information.

#### Parameters

***charging-group-name***

Specifies the application name, up to 32 characters.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### charging-group

#### Syntax

**charging-group** [*charging-group-name*] **count** [**detail**]

**charging-group count top** *granularity* [**max-count** *max-count*]

#### Context

[\[Tree\]](#) (show>app-assure>group>aa-sub charging-group)

#### Full Context

show application-assurance group aa-sub charging-group

#### Description

This command displays application-assurance group charging group information.

## Parameters

### ***charging-group-name***

Specifies an existing charging group.

### **count**

Displays the counters for the charging group.

### **detail**

Displays detailed information.

### **top**

Displays counters sorted by granularity.

### ***granularity***

Specifies the granularity of the search.

**Values**    octets, packets, flows

### ***max-count***

Specifies the maximum flows to display.

**Values**    1 to 4294967295

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## charging-group

## Syntax

**charging-group** [*charging-group-name*] **count**

## Context

[\[Tree\]](#) (show>app-assure>group>aa-sub>um charging-group)

## Full Context

show application-assurance group aa-sub usage-monitor charging-group

## Description

This command displays usage monitor statistics for the charging group.

## Parameters

### ***charging-group-name***

Specifies the charging group name, up to 32 characters.

### **count**

Displays counters for the charging group.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

# charging-group

## Syntax

**charging-group** [*charging-group-name*] **count** [**detail**]

## Context

[\[Tree\]](#) (tools>dump>app-assure>group>aa-sub charging-group)

## Full Context

tools dump application-assurance group aa-sub charging-group

## Description

This command displays per-subscriber per-charging-group statistics.

## Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.26 chassis

# chassis

## Syntax

**chassis** [*environment*] [*ccm*] [*power-supply*] [*chassis-id*]

**chassis class** *chassis-class*

**chassis detail** [*class chassis-class*]

## Context

[\[Tree\]](#) (show chassis)

## Full Context

show chassis

## Description

This command displays general status information about the chassis.

Parameters

- chassis-id**

Specifies the ID of the chassis.
- chassis-class**

Displays information related to the chassis of the specified class.

Values

router or eth-sat
- environment**

Displays environmental status information about the chassis.

Default

Displays all chassis information.
- power-supply**

Displays the status of the power supply in the chassis.

Default

Displays all chassis information.
- detail**

Displays detailed information for all chassis in the system.
- ccm**

Displays chassis control module information for platforms that support CCMs.

Platforms

All

Output

The following outputs are examples of chassis information, and [Table 76: Output fields: chassis](#) describes the output fields.

- [Output example: show chassis \(showing 7750 SR\)](#)
- [Output example: show chassis environment](#)
- [Output example: show chassis power-supply \(showing 7750 SR-1\)](#)
- [Output example: show chassis ccm](#)
- [Output example: show chassis \(showing 7950 XRS\)](#)
- [Output example: show chassis detail \(showing 7950 XRS\)](#)
- [Output example: show chassis \(showing 7750 SR with Ethernet satellites configured\)](#)
- [Output example: show chassis \(showing the state of the Ethernet satellite compact flash\)](#)

Output example: show chassis (showing 7750 SR)

```

Table 76: Output fields: chassis

Label	Description
Name	The system name for the router
Type	The router model number
Chassis Topology	The inter-chassis topology mode in which the system is operating: <ul style="list-style-type: none"> <li>Standalone – indicates that the system is comprised of a single physical router chassis</li> <li>Extended (7950 XRS-40) on a 7950 XRS based system – indicates that two router chassis are connected together in a "back-to-back" topology with no additional switch fabric chassis. An extended chassis topology is comprised of two 7950 XRS-20 chassis and is also known as an 7950 XRS-40 system.</li> </ul>
Chassis Status	The status of the chassis
Chassis role	The chassis roles: Standalone – specifies the value for all non-7950 XRS SR OS systems and for 7950 XRS-20 standalone systems 7950 XRS-40 Master 7950 XRS-40 Extension
Location	The system location for the device
Coordinates	A user-configurable string that indicates the Global Positioning System (GPS) co-ordinates for the location of the chassis For example: <ul style="list-style-type: none"> <li>N 45 58 23, W 34 56 12</li> <li>N37 37' 00 latitude, W122 22' 00 longitude</li> <li>N36*39.246' W121*40.121'</li> </ul>
CLLI Code	The Common Language Location Identifier (CLLI) that uniquely identifies the geographic location of places and certain functional categories of equipment unique to the telecommunications industry
Number of slots	The number of slots in the 7450 ESS and 7750 SR chassis that are available for plug-in cards. The total number includes the IOM or CCM slot or slots and the CPM slots.
Number of ports	The total number of ports currently installed in this chassis. This count does not include the Ethernet ports on the CPMs or CCMs that are used for management access.
Oper Number of Slots	The number of slots in the 7950 XRS chassis that are available for XCM cards and CPM cards operating as the active or standby CPM. The operational number of slots can reach to 24 when the chassis topology is extended.

Label	Description
Critical LED state	The current state of the Critical LED in this chassis
Major LED state	The current state of the Major LED in this chassis
Minor LED state	The current state of the Minor LED in this chassis
Base MAC address	The base chassis Ethernet MAC address
FP Generations	Identifies the FP generations for cards in the system
System Profile	The scaling profile in use by the system
Over Temperature state	Indicates if there is currently an over temperature condition (OK = not currently over temp)
Admin chassis mode	The configured chassis mode (chassis mode D)
Oper chassis mode	The current chassis mode
Part number	The part number of the particular hardware assembly. In the <b>show chassis</b> output, the first section of Hardware Data output is for the chassis midplane.
CLEI code	The Common Language Equipment Code Identifier (CLEI) code of the particular hardware assembly
Serial number	The serial number of the particular hardware assembly
Manufacture date	The manufacture date of the particular hardware assembly
Manufacturing string	The factory inputted manufacturing text string for the particular hardware assembly
Manufacturing deviations	Additional manufacturing data
Manufacturing assembly number	Additional manufacturing data
Time of last boot	The date and time the most recent boot occurred
Current alarm state	The alarm conditions for the specific board
Number of fan trays	The total number of fan trays installed in this chassis
Number of fans	The total number of fans installed in this chassis
Fan tray number	The ID for each fan tray installed in the chassis
Fan tray type	The type of fan tray: <ul style="list-style-type: none"> <li>Chassis – standard fan tray</li> <li>PCM – dedicated to cooling PCMs in the 7950 XRS-20e Universal chassis</li> </ul>
Operational status	The current status of the fan tray
Speed	The speed of the fans as a percentage

Label	Description
Status	The current status of the particular hardware assembly (up, down, or not equipped)
Power Supply Information	
Number of power supplies	The number of power supplies in the chassis
Power supply number	The ID for each power supply installed in the chassis
Power supply type	The basic type of the power supply
Status	The power supply status
DC power	Indicates if the DC power is over the safe range
Over temp	Indicates if the power supply is over the safe temperature range
Power supply model	The model of the power supply
Input voltage	The input voltage for the specific power supply or power module. This field is only displayed for a subset of platforms.
CCM Slot	The identifier of the CCM (A or B)
Equipped	Indicates if the CCM is detected as physically present
Temperature	The current temperature detected by the particular hardware assembly
Temperature threshold	The temperature at which the particular hardware assembly considers an over temperature condition to exist
Part number	The CCM part number
CLEI code	The code used to identify the router
Serial number	The CCM serial number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	The factory-inputted manufacturing text string. Not user modifiable.
Administrative state	The administrative state of the card: <ul style="list-style-type: none"> <li>Up — The card is administratively up</li> <li>Down — The card is administratively down</li> </ul>
Operational state	The operational state of the card: <ul style="list-style-type: none"> <li>Up — The card is operationally up</li> <li>Down — The card is operationally down</li> </ul>
Temperature	The internal chassis temperature

Label	Description
Temperature threshold	The value above which the internal temperature must rise to indicate that the temperature is critical
Time of last boot	The date and time the most recent boot occurred
Current alarm state	The alarm conditions for the CCM
Flash Information	
Flash	The compact flash (CF) name
Administrative State	The administrative state of the CF: <ul style="list-style-type: none"><li>• Up — The CF is administratively up</li><li>• Down — The CF is administratively down</li></ul>
Operational state	The operational state of the CF: <ul style="list-style-type: none"><li>• Up — The CF is operationally up</li><li>• Down — The CF is operationally down</li></ul>
Serial number	The serial number of the CF
Firmware revision	The firmware revision
Model number	The model number of the CF
Size	The size of the CF
Free space	The free space available on the CF
Percent used	The percentage of the CF that has been used

## chassis

### Syntax

**chassis** [*phys-chassis-id*]

### Context

[\[Tree\]](#) (tools>perform chassis)

### Full Context

tools perform chassis

### Description

The following command performs chassis maintenance operations.

Parameters

*phys-chassis-id*

The identifier of the physical chassis for the tools perform context.

Values 1

Platforms

All

chassis

Syntax

chassis

Context

[Tree] (clear chassis)

Full Context

clear chassis

Description

Commands in this context clear data for various pieces of equipment that sit in a chassis.

Platforms

7750 SR-s

chassis

Syntax

chassis

Context

[Tree] (show>mcast-mgmt chassis)

Full Context

show mcast-management chassis

Description

This command displays multicast path management chassis information.

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

## 6.27 check-bp-eprom

### check-bp-eprom

#### Syntax

**check-bp-eprom**

#### Context

[\[Tree\]](#) (tools>perform>chassis check-bp-eprom)

#### Full Context

tools perform chassis check-bp-eprom

#### Description

This command checks the chassis BP EPROM. The function reads the EPROM and is corrected with one of the following:

- for each SEEP that is found to be acceptable or can be corrected:  
"BP eprom X: ok" with X = seep number
- for each SEEP that is found to be unacceptable and cannot be corrected:  
"BP eprom X: not ok"

#### Platforms

All

## 6.28 class-forwarding-policy

### class-forwarding-policy

#### Syntax

**class-forwarding-policy** [*policy-name*]

#### Context

[\[Tree\]](#) (show>router>mpls class-forwarding-policy)

#### Full Context

show router mpls class-forwarding-policy

Description

This command displays the mapping of the Forwarding Classes (FCs) to the set IDs as well as the default set ID of the CBF policy. It also shows the number of MPLS LSPs that reference this CBF policy.

Parameters

**policy-name**  
Specifies the name of the class-forwarding-policy, up to 256 characters and composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

The following output is an example of class forwarding policy information.

Output Example

```
*A:Dut-B>show>router# show router mpls class-forwarding-policy "policy1"
=====
MPLS Class Forwarding Policy Table
=====
Policy Name                Default Forwarding Class Set-id  Ref
Set-Id                    be l2 af l1 h2 ef h1 nc  Count
-----
policy1                    3      1 1 2 2 3 3 4 4  50
-----
No. of Forwarding Policies: 1
=====
```

6.29 classic-lsn-sub

classic-lsn-sub

Syntax

**classic-lsn-sub** *router-instance* **ip-prefix** *ip-prefix/length*  
**classic-lsn-sub** *router-instance* **ip-prefix** *ip-prefix/length* **subscriber-string**

Context

[\[Tree\]](#) (clear>nat classic-lsn-sub)

Full Context

clear nat classic-lsn-sub

Description

This command clears NAT mappings for classic LSN subscribers.

Parameters

*router-instance*

Specifies the router instance, up to 32 characters.

*ip-prefix/length*

Specifies the IP prefix and length.

**Values** ip-prefix: a.b.c.d (host bits must be 0)length: 0 to 32

*subscriber-string*

Clears subscriber string information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.30 clear

clear

Syntax

clear *aps-id* {protect | working} [*number number*]

Context

[\[Tree\]](#) (tools>perform>aps clear)

Full Context

tools perform aps clear

Description

This command removes all Automated Protection Switching (APS) operational commands.

Parameters

*aps-id*

This option clears a specific APS on un-bundled SONET/SDH ports.

Values	<i>aps-id</i>	<i>aps-group-id</i>
	aps	keyword
	group-id	1 to 128

**protect**

This command clears a physical port that is acting as the protection circuit for the APS group.

**working**

This command clears a physical port that is acting as the working circuit for this APS group.

**number**

Specifies the APS channel number.

**Values** 1, 2

**Platforms**

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

**clear**

**Syntax**

**clear** *ring-index*

**Context**

[\[Tree\]](#) (tools>perform>eth-ring clear)

**Full Context**

tools perform eth-ring clear

**Description**

The clear command, at the Ethernet Ring Node, is used for the following operations:

- Clearing an active local administrative command, such as a Forced Switch or Manual Switch
- Triggering reversion before the WTR or WTB timer expires in case of revertive operation
- Triggering reversion in case of non-reactive operation

**Parameters**

***ring-index***

Specifies an Ethernet Ring index.

**Values** 1 to 128

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## clear

### Syntax

**clear id** *tunnel-id*

**clear** *lsp-name*

### Context

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel clear)

### Full Context

tools perform router mpls tp-tunnel clear

### Description

This command clears all the MPLS-TP linear protection operational commands for the specified LSP that are currently active.

### Parameters

#### *tunnel-id*

Specifies the tunnel number of the MPLS-TP LSP.

**Values** 1 to 61440

#### *lsp-name*

Specifies the name of the MPLS-TP LSP, up to 32 characters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## clear

### Syntax

**clear**

### Context

[\[Tree\]](#) (clear)

### Full Context

clear

### Description

Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

## Platforms

All

### 6.31 clear-arp

```
clear-arp
```

#### Syntax

```
clear-arp [ip ipv4-address]
```

#### Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-arp)

#### Full Context

```
tools perform wlan-gw lanext bd clear-arp
```

#### Description

This command clears all ARP table entries for the specified HLE BD or a specific entry if an IPv4 address is specified.

#### Parameters

***ipv4-address***

Specifies the IPv4 address of the ARP table entry to be cleared.

#### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

### 6.32 clear-force

```
clear-force
```

#### Syntax

```
clear-force all-mc
```

```
clear-force lag-id lag-id [sub-group sub-group-id]
```

```
clear-force peer-mc ip-address
```

#### Context

[\[Tree\]](#) (tools>perform>lag clear-force)

**Full Context**

tools perform lag clear-force

**Description**

This command clears forced status.

**Parameters**

**all-mc**

Specifies all MC-LAGs.

**lag-id**

Specifies the LAG ID.

**Values** 1 to 800

**sub-group-id**

Specifies the subscriber group ID.

**Values** 1 to 16

**ip-address**

Specifies the peer MC IP address.

**Values** ipv4-address: a.b.c.d  
ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

**Platforms**

All

6.33 clear-history

clear-history

**Syntax**

clear-history

**Context**

[Tree] (tools>perform>system>nsp-proxy clear-history)

**Full Context**

tools perform system nsp-proxy clear-history

Description

This command clears the NSP proxy history.

Platforms

VSR-NRC

6.34 clear-lockout-annexb

clear-lockout-annexb

Syntax

clear-lockout-annexb *aps-id*

Context

[\[Tree\]](#) (tools>perform>aps clear-lockout-annexb)

Full Context

tools perform aps clear-lockout-annexb

Description

This command clears lockout of the Annex B APS group.

Parameters

*aps-id*  
Specifies an APS ID.

Values	<i>aps-id</i>	<i>aps-group-id</i>
	aps	keyword
	group-id	1 to 128

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## 6.35 clear-mac

```
clear-mac
```

### Syntax

```
clear-mac [mac ieee-address]
```

### Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-mac)

### Full Context

```
tools perform wlan-gw lanext bd clear-mac
```

### Description

This command clears all MAC table entries for the specified HLE BD or a specific entry if a MAC address is specified.

### Parameters

*ieee-address*

Specifies the MAC address of the MAC table entry to be cleared.

### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.36 clear-neighbor

```
clear-neighbor
```

### Syntax

```
clear-neighbor [ip6 ipv6-address]
```

### Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-neighbor)

### Full Context

```
tools perform wlan-gw lanext bd clear-neighbor
```

### Description

This command clears all neighbor table entries for the specified HLE BD or a specific entry if an IPv6 address is specified.

### Parameters

#### *ipv6-address*

Specifies the IPv6 address of the neighbor table entry to be cleared.

### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.37 cli

```
cli
```

### Syntax

```
cli
```

### Context

[\[Tree\]](#) (show>log cli)

### Full Context

```
show log cli
```

### Description

Commands in this context display log information specific to CLI users (classic CLI or MD-CLI).

### Platforms

All

## 6.38 cli-session-group

```
cli-session-group
```

### Syntax

```
cli-session-group session-group-name
```

### Context

[\[Tree\]](#) (show>system>security cli-session-group)

Full Context

show system security cli-session-group

Description

This command displays the user profiles of this CLI session group and the session group details.

Parameters

*session-group-name*  
Specifies a session group, up to 32 characters.

Platforms

All

6.39 client

client

Syntax

client all  
client client-address *ip-address*

Context

[\[Tree\]](#) (show>test-oam>twamp client)

Full Context

show test-oam twamp client

Description

This command displays TWAMP client information.

Parameters

*ip-address*  
Specifies the IPv4 or IPv6 address of a client.

Values	
ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x: [0 to FFFF]H

d: [0 to 255]D

**all**  
Displays all TWAMP client information.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**  
The following output is an example of TWAMP client information.

**Output Example**

```
show test-oam twamp client all

client-db

Syntax

```
client-db
client-db db-name association
client-db db-name client client-index
client-db db-name
```

Context

```
[Tree] (show>ipsec client-db)
```

Full Context

```
show ipsec client-db
```

Description

This commands displays information for client databases. Using this command without any parameters will list all configured client database.

Parameters

- db-name**  
Species to list all IPsec gateways that use the specified client database.
- association**  
Displays information for which this client database is associated.

**client** *client-index*

Specifies the client index or client name of client entry in the client database.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of the **show client-db** command.

**Output Example**

```
show ipsec client-db

**client-db**

**Syntax**

**client-db** *db-name* **lookup** *peer-ip* *peer-ip-address*

**client-db** *db-name* **lookup** *idi* **string-type** {asn1dn | fqdn | rfc822} *string-value* *string-value* [*peer-ip* *peer-ip-address*]

**client-db** *db-name* **lookup** *idi* **address** *idi-ip-address* [*peer-ip* *peer-ip-address*]

**Context**

[\[Tree\]](#) (tools>perform>ipsec client-db)

## Full Context

tools perform ipsec client-db

## Description

This command performs a lookup in the specified client-db by using specified input and displays the matching result.

## Output Example

```
tools perform ipsec client-db "test" lookup idi string-type rfc822 string-  
value client-1@examplebm.com peer-ip 10.10.10.100  
Result : 0k  
Database : test  
Criterion - Ike Idi : RFC822 "client-1@examplebm.com"  
Criterion - Peer IP : 10.10.10.100  
Matched Record : 1 "client-1"  
Elapsed Time (us) : 2
```

## Parameters

### ***db-name***

Specifies the name of the client-db.

### ***peer-ip peer-ip-address***

Specifies the peer's tunnel IP address as input, either v4 or v6.

### ***string-type***

Specifies the peer's IDi as input.

**Values**    asn1dn, fqdn, rfc822

### ***idi-ip-address***

Specifies the peer's IDi of address type as input, either v4 or v6

### ***string-value string-value***

Specifies the value of FQDN or RFC822 IDi.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.41 client-tls-profile

### client-tls-profile

## Syntax

**client-tls-profile** [*client-tls-profile*]

**client-tls-profile** *client-tls-profile* **association**

Context

[Tree] (show>system>security>tls client-tls-profile)

Full Context

show system security tls client-tls-profile

Description

This command displays TLS client profile information

Parameters

*client-tls-profile*  
Specifies the client TLS profile, up to 32 characters.

Platforms

All

Output

The following output is an example of TLS client profile information.

Output Example

```
*A:Dut-C> show system security tls client-tls-profile
=====
Client Profile Information
=====

6.42 clock-recovery

clock-recovery

Syntax

clock-recovery

## Context

**[Tree]** (clear>system>ptp clock-recovery)

## Full Context

clear system ptp clock-recovery

## Description

This command resets the PTP recovery algorithm.

The algorithms involved in PTP frequency and time recovery are reset to the initial conditions. This command clears any previous history and can be used to ensure a consistent starting state for a test or can be used to clear any unexpected behaviour in the algorithm.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 6.43 coa

coa

## Syntax

## Context

**[Tree]** (tools>perform>subscr-mgmt coa)

## Full Context

tools perform subscriber-mgmt coa

## Description

This command triggers a Change of Authorization (CoA) without a RADIUS authentication policy.

This command can be used to spoof a CoA from a configured server for purposes such as testing CoA python scripts. However, spoofing a CoA from a RADIUS server requires the configuration of a RADIUS authentication policy.

## Parameters

**nas-port-id** *attr-string*

Specifies the physical access circuit of the NAS up to 253 characters.

***ip-address***

Specifies the IPv4 host address.

Values	<i>ipv4-address:</i> a.b.c.d
--------	------------------------------

**ipv6-address**

Specifies the IPv6 host address.

<b>Values</b>	<i>ipv6-address</i> : x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D
---------------	---

***ipv6-prefix[/ipv6-prefix-length]***

Specifies the IPv6 PD host prefix.

<b>Values</b>	<i>ipv6-prefix</i> : x:x:x:x:x:x:x (eight 16-bit pieces)
	<i>ipv6-prefix-length</i> [0 to 128]

***ipv6-prefix[/ipv6-prefix-length]***

Specifies the IPv6 SLAAC host prefix.

<b>Values</b>	<i>ipv6-prefix</i> : x:x:x:x:x:x:x (eight 16-bit pieces)
	<i>ipv6-prefix-length</i> [0 to 128]

***serv-id***

Specifies the service ID of the LNS subscriber.

**Values** 0 to 4294967295

**acct-session-id attr-string**

Specifies the subscriber accounting session ID up to 22 characters.

**alc-subscr-id** *attr-string*

Specifies the subscriber ID up to 32 characters.

**alc-brg-id** *attr-string*

Specifies the BRG ID to a maximum of 32 characters.

**user-name attr-string**

Specifies the string matching RADIUS VSA [1] username associated to the host(s), up to 32 characters.

**mac-address**

Specifies the subscriber host MAC address in the form: xx:xx:xx:xx:xx:xx.

**attribute**

Specifies the attributes (RADIUS VSAs) for override. The VSA must be specified in number format. For example, VSA Alc-Subsc-Prof-Str="1M-prof" is expressed as 6527.12 ="1M-prof". Up to five attributes can be specified within this command.

For more information on VSAs, refer to the *7750 SR and VSR RADIUS Attributes Reference Guide*.

Values	<type>=<value>
	<type>.<tag>=<value>
	<vendor>,<type>=<value>
	e,<type>,<exttyp>=<value> (type=[241  242  243  244])
	le,<type>,<exttyp>=<value> (type=[245  246])
	evs,<type>,<vendor>,<vendor-type>=<value>
	levs,<type>,<vendor>,<vendor-type>=<value>

**file-url**

Specifies the file URL where the VSAs are located.

Values	<i>local-url</i> [cflash-id/] [file-path] (up to 200 characters including the cflash-id directory length of up to 99 characters each)
	<i>remote-url</i> [{ftp://  tftp://}login:pswd@remote-locn/][file-path] (up to 255 characters with the directory length of up to 99 characters each)
	<i>remote-locn</i> [hostname   ipv4-address   ipv6-address]
	<i>ipv4-address</i> : a.b.c.d
	<i>ipv6-address</i> : x:x:x:x:x:x:x [-interface] x:x:x:x:x:x:d.d.d.d[-interface] x - [0 to FFFF]H d - [0 to 255]D <i>interface</i> - Specifies the link local addresses, up to 32 characters
	<i>cflash-id</i> cf1:   cf1-A:   cf1-B:   cf2:   cf2-A:   cf2-B:   cf3:   cf3-A:   cf3-B:

***attr-string***

Specifies the RADIUS server name that is configured under the router or VPRN service context, up to 32 characters.

***attr-string***

Specifies the router or VPRN service instance where the RADIUS server is configured, up to 32 characters.

***debug***

Displays the debug message associated with the CoA command.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of subscriber management CoA tools information.

**Output Example**

```
Node# tools perform subscriber-mgmt coa alc-subscr-id subscriber-01 attr 6527,13=new-sla-prof
debug

## 6.44 coa-statistics

### coa-statistics

**Syntax**

**coa-statistics**

**Context**

**[Tree]** (clear>subscr-mgmt>authentication coa-statistics)

**Full Context**

clear subscriber-mgmt authentication coa-statistics

Description

This command clears RADIUS CoA statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.45 collect-lmm-fc-stats

collect-lmm-fc-stats

Syntax

collect-lmm-fc-stats [{sap {sap-id | all} | sdp {sdp-id | all} | interface {interface-name | all}}]

Context

[Tree] (show>eth-cfm collect-lmm-fc-stats)

Full Context

show eth-cfm collect-lmm-fc-stats

Description

This command displays the entities that are configured with per-FC LMM counters, and whether those counters are counting in-profile packets only or all countable packets.

Each entity may have up to eight individual FC-based counters. Each FC includes a positional index value (1 to 8) under the FC that is counting. A "P" indicates that the index is only counting in-profile traffic.

When no display filters are applied, this command displays all entities and the individual FC counters. Optional filters help to reduce the output that is visible to the operator.

Parameters

sap-id

Specifies a SAP entity for which to display active individual FC counters.

Values	null	port-id   bundle-id   bpgrp-id   lag-id   aps-id
	dot1q	port-id   bundle-id   bpgrp-id   lag-id   aps-id   pw-id:[qtag1 cp-conn-prof-id]

	<b>tunnel</b>	keyword
	<i>id</i>	1 to 16
	<i>tag</i>	0 to 4094

**sdp-id**

Specifies an SDP entity for which to display active individual FC counters.

**Values**     *sdp-id* — 1 to 32767  
                 *vc-id* — 1 to 4294967295

**interface-name**

Specifies an interface entity for which to display active individual FC counters, up to 32 characters maximum.

**all**

Keyword to display all SAP, SDP, and interface entities, and the associated active individual FC counters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following output example shows information about entities that are configured with per-FC counters.

**Output Example**

```
A:node-2# show eth-cfm collect-lmm-fc-stats
=====
The FC to priority bit mapping for collect-lmm-fc-stats is as follows:
NC = 7, H1 = 6, EF = 5, H2 = 4, L1 = 3, AF = 2, L2 = 1, BE = 0

The number below each FC column indicates which counter index PDUs matching
that FC will be counted in. Entries with a "P" beside the number indicate
that only in-profile traffic is being counted. Entries without a "P" are not
profile aware and count all PDUs associated with that FC.

## collect-imm-stats

### Syntax

```
collect-imm-stats [sdp-id[:vc-id]]
```

### Context

```
[Tree] (show>service>sdp-using>eth-cfm collect-imm-stats)
```

### Full Context

show service sdp-using eth-cfm collect-lmm-stats

### Description

This command displays SDP bindings which are configured to collect statistics for LMM tests.

### Parameters

***sdp-id[:vc-id]***

Specifies the SDP ID and virtual circuit ID on the SDP ID.

**Values**    sdp-id: 1 to 32767  
              vc-id: 1 to 4294967295

### Platforms

Table 78: Output fields: cflowd collector detail

Label	Description
Address	The IP address of a remote cflowd collector host to receive the exported cflowd data
Port	The UDP port number on the remote cflowd collector host to receive the exported cflowd data

Label	Description
Router	The router
Description	A user-provided descriptive string for this cflowd remote collector host
Version	The version of the flow data sent to the collector
AS Type	The style of AS reporting used in the exported flow data
	origin — reflects the endpoints of the AS path which the flow is following
	peer — reflects the AS of the previous and next hops for the flow
Admin State	The desired administrative state for this cflowd remote collector host
Oper State	The current operational status of this cflowd remote collector host
Records Sent	The number of cflowd records that have been transmitted to this remote collector host
Last Changed	The time when this row entry was last changed
Last Pkt Sent	The time when the last cflowd packet was sent to this remote collector host
Aggregation Type	The bit mask which specifies the aggregation schemes used to aggregate multiple individual flows into an aggregated flow for export to this remote host collector
	none — no data will be exported for this remote collector host
	raw — flow data is exported without aggregation in version 5 format
	All other aggregation types use version 8 format to export the flow data to this remote host collector
Collectors	The total number of collectors using this IP address
Status	The status of the aggregation type
Sent	The number of packets with flow data sent to the associated collector
Open	This counter shows the number of partially filled packets which have some flow data but are not yet filled or have been timed out (60 seconds maximum)

Label	Description
Errors	This counter increments when there was an error during exporting of the collector packet; the most common reason will be a UDP unreachable destination for the configured collector
Packets sent	The number of packets sent
Template set	The template set sent to the collector when using cflowd version 9 or version 10.  basic – basic flow data is sent  mpls-ip – extended flow data is sent, which includes IP and MPLS flow information  l2-ip – extended flow data is sent, which includes Layer 2 (Ethernet) and IP flow information. This template is only applicable for version 10 IPFIX collectors.  mpls-transport – flow statistics for MPLS traffic using only the outer transport label, EXP bit value, and ingress interface as the flow identifier. This template enables the collection of flow statistics on a core router to develop LSP usage statistics.
Traffic Type	The traffic type
Template sent	The time and date at which the template is sent

## 6.48 commit-history

### commit-history

#### Syntax

**commit-history**

**commit-history** [*keyword*] [**commit-id** *number*]

#### Context

[\[Tree\]](#) (show>system>management-interface commit-history)

#### Full Context

show system management-interface commit-history

#### Description

This command displays the history of configuration changes that were committed in model-driven interfaces. A separate history of the last commits is maintained for each configuration region (bof, configure, debug, and LI). Each commit is uniquely identified by a numerical sequential incrementing commit ID assigned by the system.

When a gNMI, NETCONF, or MD-CLI Set request starts a commit transaction, an entry, including the persist ID and rollback duration, displays in the router commit history. When the system confirms the commit, the commit history displays the confirmation or, if the commit is not confirmed and the rollback duration expires, the commit history displays a rollback entry.

**Note:**  
This command is not available in the classic CLI.

Parameters

**keyword**  
Specifies the configuration region to display.

<b>Values</b>	bof, configure, debug, li
<b>Default</b>	configure

**number**  
Specifies the commit history ID to display.

<b>Values</b>	1 to 4294967295
---------------	-----------------

Platforms

All

Output

The following output is an example of commit history information, and [Table 79: Output fields: commit history](#) describes the commit history output fields.

Output Example

```

Location "Configuration is not saved to startup."
```

Table 79: Output fields: commit history

Label	Description
Commit ID	Displays the commit ID.
Committed	Displays the date and time when the commit completed.
By	Displays the user and interface type that committed.
From	Displays the origin of the commit operation.
Comment	Displays the comment added by the user.
Log	Displays the log added by the system.
Increment	Displays the incremental saved configuration file location.
Location	Displays the complete saved configuration file location.

## 6.49 community

### community

#### Syntax

**community** *community-string*

#### Context

[\[Tree\]](#) (show>system>security>snmp community)

#### Full Context

show system security snmp community

#### Description

This command lists SNMP communities and characteristics. Including the *community-name* parameter modifies the output to include all details for the specified community, including the source IP address list and validation failure counters.

#### Platforms

All

## Output

The following output is an example of SNMP community information.

[Table 80: Output fields: community](#) describes the community output fields.

### Output Example

#### Note:

The system-created communities that begin with "cli-" are only used for internal CLI management purposes and are not exposed to external SNMP access.

```
A:ALA-1# show system security snmp community
=====
Communities
=====
community      access  view      version    group name
-----

                                     5
-----
A:ALA-1#
```

Table 80: Output fields: community

Label	Description
Community	Displays the community string name for SNMPv1 and SNMPv2c access only.
Access	Displays access information. r — The community string allows read-only access. rw — The community string allows read-write access. rwa — The community string allows read-write access. mgmt — The unique SNMP community string assigned to the management router.

Label	Description
	vpls-mgmt — The unique SNMP community string assigned for vpls management.
View	Displays the view name.
Version	Displays the SNMP version.
Group Name	Displays the access group name.
src-access-list	Displays the name of the list of source IP addresses that are allowed to use the community, as configured using the <b>community</b> configuration command.
authFailures	Displays the number of SNMP requests that have failed validation using this <b>community</b> .
No of Communities	Displays the total number of configured community strings.

## community

### Syntax

**community** *comm-id* {**detail** | **longer**}

**community** *comm-id*

**community** *comm-id* **hunt**

### Context

[\[Tree\]](#) (show>router>bgp>routes community)

### Full Context

show router bgp routes community

### Description

This command displays BGP routes with routes with a community value matching the specified value.

**community** is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

### Parameters

***comm-id***

Specifies the community ID, up to 72 characters.

**Values** [as-num:comm-val | ext-comm | well-known-comm | large-comm]

where:

- *as-num* — 0 to 65535
  - *comm-val* — 0 to 65535
  - *ext-comm* — the extended community, defined as one of the following:
    - *{target | origin}:ip-address:comm-val*
    - *{target | origin}:asnum:ext-comm-val*
    - *{target | origin}:ext-asnum:comm-val*
    - **bandwidth**:*asnum:val-in-mbps*
    - **ext:4300**:*ovstate*
    - **ex** \t:*value1:value2*
    - **flowspec-set**:*ext-asnum:group-id*
- where:
- *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFF
  - **flowspec-set** — flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
  - *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

## hunt

Displays entries for the specified route.

## Platforms

All

## 6.50 completed

completed

### Syntax

**completed** [*script-policy-name*] [**owner** *owner-name*]

### Context

[\[Tree\]](#) (clear>system>script-control>script-policy completed)

### Full Context

clear system script-control script-policy completed

### Description

This command clears completed script run history entries.

### Parameters

#### ***script-policy-name***

Specifies to only clear history entries for the specified script-policy. 32 characters maximum.

#### ***owner-name***

Specifies to only clear history entries for script-policies with the specified owner. 32 characters maximum.

**Default**    TiMOS CLI

### Platforms

All

## 6.51 comprehensive

comprehensive

### Syntax

**comprehensive** fields

### Context

[\[Tree\]](#) (show>app-assure>cflowd comprehensive)

## Full Context

show application-assurance cflowd comprehensive

## Description

This command displays the fields in the AA cflowd comprehensive template.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of AA cflowd comprehensive template fields, and [Table 81: Output fields: AA cflowd comprehensive](#) describes the output fields.

### Output Example

```
show application-assurance cflowd comprehensive fields
```

```

## 6.53 configuration-mode

### configuration-mode

#### Syntax

**configuration-mode** {**mixed** | **model-driven**} **check** [**li** | **configure**]

#### Context

[\[Tree\]](#) (tools>perform>system>management-interface configuration-mode)

#### Full Context

tools perform system management-interface configuration-mode

#### Description

This command checks if the configuration meets the prerequisite reference requirements to change the management interface configuration mode. Incompatible configuration commands are displayed with an error reason if the prerequisite is not met. This command does not check if the configuration has commands that are unsupported in model-driven interfaces.

#### Parameters

##### **mixed**

Specifies to check mixed management interface configuration mode.

##### **model-driven**

Specifies to check model-driven management interface configuration mode.

##### **li**

Specifies to only check the li configuration region.

##### **configure**

Specifies to only check the configure configuration region.

#### Platforms

Number of sessions: 5  
'#' indicates the current active session  
'(n)' indicates the number of internal sessions  
=====
```

Table 82: Output fields: configuration sessions

Label	Description
Session ID	The session ID.
Region	The region or scope that the datastore belongs to.

Label	Description
Datastore	Datastores that can be locked. For example: Running and Candidate.
Lock State	Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state.
Username	The name of the user.
Session Mode	Exclusive — An exclusive session. Global — A shared session. Private — A private session. Private Exclusive — A private exclusive session. Read-Only — A read-only session.
Idle Time	The idle time of the session.
Session Type	NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system session is running.
From	The originating IP address, CRON, or EHS.

## 6.55 connection-profile-vlan

### connection-profile-vlan

#### Syntax

**connection-profile-vlan** [*conn-prof-id*]

#### Context

**[Tree]** (show connection-profile-vlan)

#### Full Context

show connection-profile-vlan

Description

This command displays information about the connection-profiles (VLAN) in the system. When a specific connection profile is shown, the vlan-ranges that it contains are displayed.

Parameters

**conn-prof-id**  
Specifies the VLAN connection profile ID.

**Values** 1 to 8000

Platforms

All

Output

The following output is an example of connection profile VLAN information.

Output Example

```
*A:Dut# show connection-profile-vlan
=====
Connection Profile Vlan Summary Information
=====
CP Index                               Number of Members
-----
1                                       2
=====
*A:Dut# show connection-profile-vlan 1
=====
Connection Profile 1 Information
=====
Description : (Not Specified)
Last Change : 12/01/2015 16:50:34
=====
Connection Profile Vlan Eth Information
=====

```

6.56 connections

```
connections
```

Syntax

**connections**

Context

[Tree] (show>li>x-interfaces connections)

Full Context

show li x-interfaces connections

Description

This command displays the connections between the X1, X2, and X3 interfaces.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

connections

Syntax

connections [detail] [address ip-address] [port port-number]

Context

[Tree] (show>system connections)

Full Context

show system connections

Description

This command displays UDP and TCP connection information.

If no command line options are specified, a summary of the TCP and UDP connections displays.

Entries in the output with a vRtrID of 4095 and a local address of 127.x.x.x are internal connections serving internal SR OS purposes, and are not used for external protocols.

Parameters

*ip-address*

Displays only the connection information for the specified IP address.

Values

ipv4-address:	a.b.c.d (host bits must be 0)
ipv6-address:	x:x:x:x:x:x:x[-interface]
	x:x:x:x:x:d.d.d.d[-interface]
	where
x:	[0 to FFFF]H
d:	[0 to 255]D

interface:

up to 32 characters,  
mandatory for link local  
addresses

**port-number**  
Displays only the connection information for the specified port number.

**Values**    0 to 65535

**detail**  
Appends TCP statistics to the display output.

**Platforms**  
All

**Output**  
The following outputs are examples of system connections information, and [Table 83: Output fields: system connections](#) describes the output fields.

**Output Example**

A:ALA-12# show system connections

Table 83: Output fields: system connections

Label	Description
Proto	The socket protocol, either TCP or UDP.
RecvQ	The number of input packets received by the protocol.
TxmtQ	The number of output packets sent by the application.
Local Address	The local address of the socket. The socket port is separated by a period.
Remote Address	The remote address of the socket. The socket port is separated by a period.
State	<p>Listen — The protocol state is in the listen mode.</p> <p>Established — The protocol state is established.</p> <p>vRtrID — The virtual router identifier.</p> <ul style="list-style-type: none"> <li>vRtrID 0 — listens for connections in all routing instances including the Base and management VRFs.</li> <li>vRtrID 1 — Base routing instance</li> <li>vRtrID 4095 — management routing instance</li> </ul> <p>MSS — The TCP maximum segment size.</p>

## 6.57 connectivity-association

### connectivity-association

#### Syntax

```
connectivity-association [ca-name] [detail]  
connectivity-association [detail] type {anysec | macsec}
```

#### Context

[\[Tree\]](#) (show>macsec connectivity-association)

#### Full Context

```
show macsec connectivity-association
```

#### Description

This command displays MACsec specific CA information.

#### Parameters

##### ***ca-name***

Displays MACsec information for the specified CA name, up to 256 characters in length.

##### **detail**

Displays MACsec CA detailed information.

##### **anysec**

Displays ANYsec CA information.

##### **macsec**

Displays MACsec CA information.

#### Platforms

All

#### Output

See the following output examples:

- [Output Example: show macsec connectivity-association](#)
- [Output Fields: show macsec connectivity-association](#)

### Output Fields: show macsec connectivity-association <ca-name>

[Table 85: Output fields: MACsec connectivity association name](#) describes the output fields for the **show macsec connectivity-association <ca-name>** command.

*Table 85: Output fields: MACsec connectivity association name*

Label	Description
Admin State	Up — The CA is administratively up. Down — The CA is administratively down.

Label	Description
	If port <x/y/z> ethernet>macsec is shutdown, the admin state will be down. Otherwise, the admin state is up.
Description	Specifies a user description for this CA.
Replay Protection	Enabled — Replay Protection is enabled. Disabled — Replay Protection is disabled. If replay protection is enabled for this CA, the out of window packet will be discarded.
Replay Window Size	Specifies the size, in packets, of the replay window.
Macsec Encrypt	Enabled — MACsec is enabled. Disabled — MACsec is disabled.
Clear Tag Mode	Specifies the clear tag mode: single-tag, dual-tag.
Cipher Suite	Specifies the cipher suite used for encrypting the SAK: gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256.
Encryption Offset	Specifies the encryption offset configured on this node: 0, 30, 50.
Assigned ports	Specifies all ports that contain this CA.
MKA Key Server Priority	Specifies the MKA key server priority: 0-255 (default 16).
Active Pre-Shared Key Index	Specifies the active pre-shared key index: 1-2 (default 1).
Active Pre-Shared Key CKN	Specifies the active PSK CAK name.

#### Output Example: show macsec connectivity-association <ca-name> detail

## 6.58 convergence

### convergence

#### Syntax

**convergence** [*family*]

#### Context

[\[Tree\]](#) (show>router>bgp convergence)

#### Full Context

show router bgp convergence

#### Description

This command displays information about how the router reconverged its routing state after the last restart of BGP.

#### Parameters

**family**

Specifies an address family for which to display BGP route convergence information.

**Values**    ipv4, ipv6, vpn-ipv4, vpn-ipv6, label-ipv4, label-ipv6

#### Platforms

All

#### Output

[Table 87: Output fields: BGP convergence](#) describes the BGP convergence output fields.

Use the following command to display BGP route convergence information for routes of all address families.

```
show router bgp convergence
```

#### Output Example

```

=====
```

Table 87: Output fields: BGP convergence

Label	Description
Min wait advertise timer	The operational value of <b>min-wait-to-advertise</b> (0 if the feature is disabled)  Use the <b>min-wait-to-advertise</b> command in the <b>configure router bgp convergence</b> context to configure the minimum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises any routes in a specific set of address families.
Established peers at min wait timer expiry	The number of address-family peers that were established when the <b>min-wait-to-advertise</b> command timer value expired (N/A if the feature is disabled)
Current established peers	The current number of address family peers that are in the established state
First session established time	The time, relative to BGP instance restart at time T=0, when the first address family session was established.

Label	Description
	This stops being tracked when the <b>min-wait-to-advertise</b> timer expires.
Last session established time	The time, relative to BGP instance restart at time T=0, when the last address-family session was established.
Max Wait advertise timer	<p>The operational value of the <b>max-wait-to-advertise</b> command for the address family (0 if the feature is disabled)</p> <p>Use the <b>max-wait-to-advertise</b> command in the <b>configure router bgp convergence family</b> context to configure the maximum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises the routes of a specific address family to BGP peers.</p>
Converged peers	The number of address-family converged peers. This is the number of BGP neighbors that have, up to now, sent an EOR marker for the address family. N/A if the feature is disabled.
Converged state	<p>The convergence state of the address family: waiting, started, partial, timeout or converged. N/A if the feature is disabled. Waiting is when no peers have reconnected yet.</p> <p>The waiting to start transition occurs when the first session comes up.</p> <p>The started to partial transition occurs when at least one address-family peer has sent the EOR marker.</p> <p>The partial to converged transition occurs when all address-family peers that have been up continuously since the <b>min-wait-to-advertise</b> timer expired have sent the EOR marker.</p> <p>The partial to timeout transition occurs when the <b>max-wait-to-advertise</b> timer expires and not all address family peers that have been up continuously since the <b>min-wait-to-advertise</b> timer expired have sent the EOR marker.</p>
Converged time	The convergence time of the address family after the last restart, relative to BGP instance restart at time T=0. N/A is displayed if the convergence state is waiting, started, partial, or timeout.

## 6.59 count

## Parameters

### detail

Displays detailed information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of the **count** command.

### Output Example

```
A:ALU>show>app-assure>group>aa-sub# count

All

# counters

## Syntax

counters

## Context

[\[Tree\]](#) (show>snmp counters)

## Full Context

show snmp counters

## Description

This command displays SNMP counters information. SNMP counters will continue to increase even when SNMP is shut down. Some internal modules communicate using SNMP packets.

## Platforms

All

## Output

The following output is an example of SNMP counter information.

[Table 88: Output fields: counters](#) describes the SNMP counters output fields.

## Output Example

```
A:ALA-1# show snmp counters
=====
SNMP counters:
=====
  in packets : 463
-----
    in gets   : 93
    in getnexts : 0
    in sets   : 370
-----
  out packets : 463
-----
    out get responses : 463
    out traps         : 0
-----
  variables requested : 33
  variables set       : 497
=====
A:ALA-1#
```

Table 88: Output fields: counters

Label	Description
in packets	Displays the total number of messages delivered to SNMP from the transport service.
in gets	Displays the number of SNMP get request PDUs accepted and processed by SNMP.
in getnexts	Displays the number of SNMP get next PDUs accepted and processed by SNMP.
in sets	Displays the number of SNMP set request PDUs accepted and processed by SNMP.
out packets	Displays the total number of SNMP messages passed from SNMP to the transport service.
out get responses	Displays the number of SNMP get response PDUs generated by SNMP.
out traps	Displays the number of SNMP Trap PDUs generated by SNMP.
variables requested	Displays the number of MIB objects requested by SNMP.
variables set	Displays the number of MIB objects set by SNMP as the result of receiving valid SNMP set request PDUs.

## counters

### Syntax

counters

### Context

[\[Tree\]](#) (show>snmp>streaming counters)

### Full Context

show snmp streaming counters

### Description

This command displays counters information for the proprietary SNMP streaming protocol.

### Platforms

All

Output

The following output is an example of SNMP streaming counters information.

Table 89: Output fields: streaming counters describes the SNMP streaming counters output fields.

Output Example

```
*A:Dut-B# show snmp streaming counters
=====
STREAMING counters:
=====
      in getTables   : 772
      in getManys    : 26
-----
      out responses  : 848
=====
```

Table 89: Output fields: streaming counters

Label	Description
in getTables	Displays the number of GetTable request packets received.
in getManys	Displays the number of GetMany request packets received.
out responses	Displays the number of response packets sent.

6.61 cpm

```
cpm
```

Syntax

cpm

Context

[Tree] (tools>dump>filter>resources cpm)

Full Context

tools dump filter resources cpm

Description

This command displays information about filter resource utilization on the CPM, consumption by filter-using services such as OpenFlow, and the filters that use the most resources.

Platforms

All

## Output

The following output is an example of filter resource utilization information.

### Output Example

```
*A:Dut-C>tools>dump>filter>resources># cpm

## 6.62 cpm-filter

### cpm-filter

**Syntax**  
`cpm-filter`

**Context**  
[\[Tree\]](#) (clear cpm-filter)

**Full Context**  
`clear cpm-filter`

**Description**  
Commands in this context clear the CPM filter.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cpm-filter

### Syntax

**cpm-filter**

### Context

[\[Tree\]](#) (show>system>security cpm-filter)

### Full Context

show system security cpm-filter

### Description

This command displays CPM filters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cpm-filter

### Syntax

**cpm-filter**

### Context

[\[Tree\]](#) (monitor cpm-filter)

### Full Context

monitor cpm-filter

### Description

This command displays monitor command output for CPM filters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 6.63 cpm-http-redirect

cpm-http-redirect

### Syntax

**cpm-http-redirect**

### Context

[\[Tree\]](#) (tools>dump>system cpm-http-redirect)

### Full Context

tools dump system cpm-http-redirect

### Description

Commands in this context display system-level CPM HTTP redirect information.

### Platforms

All

## 6.64 cpm-queue

cpm-queue

### Syntax

**cpm-queue** *queue-id*

### Context

[\[Tree\]](#) (show>system>security cpm-queue)

### Full Context

show system security cpm-queue

### Description

This command displays CPM queues.

### Parameters

***queue-id***

Specifies an integer value that identifies a CPM queue.

**Values**    0, 33 to 2000

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following output is an example of CPM IPv6 filter information.

[Table 90: Output fields: CPM IPv6 filter](#) describes CPM queue output fields.

**Output Example**

```
A:ALA-35# show system security cpm-queue 1001
=====
CPM Queue Entry
=====
Queue Id           : 1001
-----
Queue Parameters :
-----
PIR                : 10000000          CIR                : 10000000
CBS                : 4096              MBS                : 8192
=====
A:ALA-35#
```

*Table 90: Output fields: CPM IPv6 filter*

Label	Description
PIR	Displays the administrative Peak Information Rate (PIR) for the queue.
CIR	Displays the amount of bandwidth committed to the queue.
CBS	Displays the amount of buffer drawn from the reserved buffer portion of the queue's buffer pool.
MBS	Displays the maximum queue depth to which a queue can grow.

cpm-queue

**Syntax**

**cpm-queue** *queue-id*

**Context**

[\[Tree\]](#) (clear cpm-queue)

**Full Context**

clear cpm-queue

**Description**

This command clears CPM queue information.

**Parameters**

*queue-id*  
Specifies the CPM queue ID.

<b>Values</b>	33 to 2000
---------------	------------

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

6.65 **cpu**

cpu

**Syntax**

cpu [sample-period *seconds*]

**Context**

[\[Tree\]](#) (show>system cpu)

**Full Context**

show system cpu

**Description**

This command displays CPU utilization per task over a sample period.

**Parameters**

*seconds*  
Specifies the number of seconds over which to sample CPU task utilization.

<b>Values</b>	1 to 300
<b>Default</b>	1

**Platforms**

All

**Output**

The following output is an example of CPU information, and [Table 91: Output fields: system CPU](#) describes the output fields.

## Output Example

```
*A:cses-E11# show system cpu sample-period 2
```

```
=====
```

```
CPU Utilization (Sample period: 2 seconds)
```

```
=====
```

=====
```

Table 91: Output fields: system CPU

Label	Description
CPU Utilization	The total amount of CPU time.
Name	The process or protocol name.
CPU Time (uSec)	The CPU time each process or protocol has used in the specified time.
CPU Usage	The sum of CPU usage of all the processes and protocols.
Capacity Usage	<p>The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity.</p> <p>This column does not reflect the true CPU utilization value; that data is still available in the <b>CPU Usage</b> column. This column is the <b>busiest</b> task in each group, where <b>busiest</b> is defined as either actually running or blocked attempting to acquire a lock.</p>
Idle	The current CPU utilization for the system.
Usage	The overall percentage of CPU idleness over the specified sample time.
Busiest Core Utilization	The utilization percentage of the busiest processor core over the specified sample time. On single core CPUs, this is the overall system utilization percentage over the specified sample time.

## 6.66 cpu-protection

### cpu-protection

#### Syntax

cpu-protection

#### Context

[\[Tree\]](#) (show>system>security cpu-protection)

#### Full Context

show system security cpu-protection

## Description

Commands in this context display CPU protection information.

## Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## Output

The following output is an example of ETH CFM monitoring.

### Output Example

```
show system security cpu-protection eth-cfm-monitoring

cpu-protection

Syntax

cpu-protection

Context

[\[Tree\]](#) (clear cpu-protection)

Full Context

clear cpu-protection

Description

Commands in this context clear CPU protection data.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## 6.67 cpu-scheduling

### cpu-scheduling

#### Syntax

cpu-scheduling

#### Context

[\[Tree\]](#) (show>card>virtual cpu-scheduling)

#### Full Context

show card virtual cpu-scheduling

#### Description

This command displays the CPU scheduling health on the card. The scheduling health is a measure of the hypervisor load and is expressed by the percentage of clock interrupts that arrive within an accepted time period compared to the last clock interrupt.

#### Platforms

VSR

### cpu-scheduling

#### Syntax

cpu-scheduling

#### Context

[\[Tree\]](#) (clear>card>virtual cpu-scheduling)

#### Full Context

clear card virtual cpu-scheduling

#### Description

This command clears virtual CPU scheduling statistics on the card.

#### Platforms

VSR

## 6.68 cpu-usage

cpu-usage

### Syntax

```
cpu-usage mda [history-stats-in-count count] [history-stats-in-min minutes] [current]
cpu-usage mda [history-stats-in-count count] [history-stats-in-min minutes] [current] esa-vm esa-id/
vm-id
cpu-usage mda [history-stats-in-count count] [history-stats-in-min minutes] [current] [ show-oid] type
{control-plane | data-plane}
cpu-usage mda [history-stats-in-count count] [history-stats-in-min minutes] [current] [ show-oid] type
{control-plane | data-plane} esa-vm esa-id/vm-id
```

### Context

```
[Tree] (show>isa>stats>tunnel-isa cpu-usage)
```

### Full Context

```
show isa statistics tunnel-isa cpu-usage
```

### Description

This command displays the CPU usage of the specified ISA. The information includes control plane usage and data plane usage.

The data plane usage collection depends on the configuration of the **config>isa>tunnel-grp>stats-collection>isa-dp-cpu-usage system** and collects usage every 5 minutes for the last 24 hours. The output also includes the current value.

### Parameters

- count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values1 to 24
- minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values1 to 1440
- current

Displays information about the current statistic value. The values of count and minutes are ignored by the system when this parameter is specified.

- show-oid**  
Displays information about the Object Identifier (OID) of the current statistical value.
- mda**  
Displays information about the specified ISA.  

**Values** slot/mda
- control-plane**  
Displays information about the control plane.
- data-plane**  
Displays information about the data plane.
- esa-vm**  
Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	esa-id/vm-id
	esa-id	1 to 16
	vm-id	1 to 4

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of the **show isa stats tunnel-isa cpu-usage** configuration.

**Output Example**

```
show>isa>stats>tunnel-isa# cpu-usage 1/2

## 6.69 create-sticky-lease

create-sticky-lease

Syntax

**create-sticky-lease** *host-name* [**mac** *ieee-address*] [**circuit-id** *circuit-id*] [**client-id** *client-id*] [**requested-ip-address** *ip-address*] [**circuit-id-hex** *circuit-id-hex-string*] [**client-id-hex** *client-id-hex-string*]

Context

**[Tree]** (tools>perform>router>dhcp>server>pool create-sticky-lease)

Full Context

tools perform router dhcp local-dhcp-server pool create-sticky-lease

Description

This command tries to create a lease-state in the specified local-dhcp-server pool with the supplied parameters. The hostname uniquely identifies this lease for subsequent operations. mac, circuit-id, and client-id should also have a unique combination of values according to the configured user-ident variables. If the requested-ip-address is provided the server tries to create a lease with this address. If this address is not available in the pool, the command fails.

Parameters

- host-name**  
Specifies a string to identify the lease, up to 32 characters. If not specified, it can be internally generated based on MAC@ or another key.
- ieee-address**  
Specifies the MAC address in xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx format.

***circuit-id***

Specifies the circuit-id string, up to 255 characters.

***client-id***

Specifies the client-id string, up to 255 characters.

***ip-address***

Specifies the IPv4 address in dotted notation a.b.c.d.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 6.70 credit-control

### credit-control

**Syntax**

**credit-control** [**subscriber** *sub-ident-string*]

**credit-control out-of-credit** [**action** *action*] [**summary**]

**credit-control extended-failure-handling** [*state*] [**summary**]

**Context**

[\[Tree\]](#) (show>service>active-subscribers credit-control)

**Full Context**

show service active-subscribers credit-control

**Description**

This command displays active subscriber credit control information. Without additional filters, the output lists information for all active subscribers.

The output of this command can be filtered:

- per subscriber by specifying the optional **subscriber** *sub-ident-string* parameter
- per all subscribers that are out of credit by specifying the **out-of-credit** parameter with the optional **action** *action* parameter
- per subscribers that have a Diameter Gy session with Extended Failure Handling (EFH) enabled by specifying the **extended-failure-handling** parameter with the optional *state* parameter.

**Parameters**

***sub-ident-string***

Displays credit control information for the specified subscriber, up to 32 characters.

### **out-of-credit [action action]**

Displays credit control information for subscribers that are out of credit and, optionally, have the specified out of credit action enabled.

**Values** continue, block-category, change-service-level

### **extended-failure-handling [state]**

Displays credit control information for subscribers with a Diameter Gy session with EFH enabled. The optional *state* parameter lists subscribers for which the Diameter Gy session EFH is active, inactive, or both (all).

**Values** active, inactive, all

### **summary**

Lists the number of matching entries for the specified filter.

## **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **Output**

The following output is an example of active subscriber's credit control information.

### **Output Example**

```
# show service active-subscribers credit-control

The following table describes credit control output fields.

Table 92: Output fields: credit control

Label	Description
Credit Control Policy	Displays the credit control policy name in use for this subscriber session
Idle Timeout Policy	Displays the idle timeout policy name
Category Map	Displays the active category map in use for this subscriber session
Diameter Session Gy	Displays the Diameter Gy session ID
CC Failure Handling	Displays the current value for Credit Control Failure Handling (CCFH) as configured in the Diameter Gy application policy or as received in an Answer message from the Online Charging Server (OCS) in the CCFH AVP Values: terminate, continue, or retry-and-terminate
Extended Failure Handling (EFH) - State <sup>1</sup>	Displays the EFH state: active — EFH is enabled and currently active inactive — EFH is enabled and currently inactive
EFH - Attempts <sup>1 2</sup>	Displays the number of times interim credit is assigned to all rating groups followed by an attempt to establish a new Diameter Gy session with the Online Charging Server (OCS), or credit control server
EFH - Maximum Attempts <sup>1 2</sup>	Displays the configured maximum attempts value in the Diameter application policy When an attempt to establish a new Diameter Gy session with the OCS continues to fail after the maximum attempts value is reached, then the user session is terminated (the subscriber hosts are deleted from the system).
EFH - Active Time <sup>1 2</sup>	Displays the time since the EFH state became active for this subscriber session
EFH - Total Active Time <sup>1</sup>	Displays the accumulated time of all occurrences that EFH was active during the lifetime of this subscriber session
EFH - Total Active Count <sup>1</sup>	Displays the number of times that EFH was active during the lifetime of this subscriber session
Number of categories	

Label	Description
static	Displays the number of static categories in use for this subscriber session.
gx-session	Displays the number of categories reserved for this subscriber session for Gx session level Usage Monitoring.
gx-pcc	Displays the number of dynamic categories in use by this subscriber session for Gx PCC rule-based Usage Monitoring.
cups-acct	Displays the number of CUPS account categories in use for this subscriber session
idle-timeout	Displays the number of idle timeout categories in use for this subscriber session. A credit control category <i>tmnx_IdleTimeoutCategory</i> is instantiated when an <b>idle-timeout-policy</b> is associated with the SLA profile
Category - Category Name	Displays the name of the category as configured in the category map
Ingress Queues	Displays the ingress queues for which credit control is applied in this category as configured in the category map, or the ingress queues for which idle timeout is applied (configured in the <b>idle-timeout-policy</b> )
Egress Queues	Displays the egress queues for which credit control is applied in this category as configured in the category map, or the egress queues for which idle timeout is applied (configured in the <b>idle-timeout-policy</b> )
Ingress Policers	Displays the ingress policers for which credit control is applied in this category as configured in the category map, or the ingress policers for which idle timeout is applied (configured in the <b>idle-timeout-policy</b> )
Egress Policers	Displays the egress policers for which credit control is applied in this category as configured in the category map, or the egress policers for which idle timeout is applied (configured in the <b>idle-timeout-policy</b> )
Credit Volume Used	Displays the used total octets counter (ingress and egress combined) since the last usage reporting of this rating group
Credit Volume Avail.	Displays the remaining total granted octets available before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Credit Volume Thres.	Displays the volume quota threshold in octets as received from the OCS.

Label	Description
	When the Credit Volume Available octets fall below the Credit Volume Threshold, a new credit negotiation is triggered for this rating group (category). Displays the Credit Volume Threshold value is set to Expired and Credit Negotiating is set to True.
Credit Time Used	Displays the number of seconds passed since the last reporting of this rating group
Credit Time Avail.	Displays the remaining number of seconds before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Credit Time Thres.	Displays the time quota threshold in seconds as received from the OCS  When the Credit Time Available falls below the Credit Time Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Time Threshold value is set to Expired and Credit Negotiating is set to true.
Credit Expired	Displays the credit expired value:  False—Negotiated credit is still available  True—All granted credit is exhausted; either new credit is being negotiated with the OCS or the out of credit action is activated.
Credit Negotiating	Displays the credit negotiating value:  False—There is no credit being requested to the OCS True—New credit is being requested to the OCS
Out Of Credit Action	Displays the out of credit action value:  None—Out-of-credit action is not active  When the out-of-credit action is active, the value is set to one of: ChangeServiceLevel, BlockCategory, Continue, or DisconnectHost
Quota Holding Time	Displays the Idle timeout associated with the granted quota. When no traffic associated with the quota is observed for the time specified, a credit negotiation is triggered with the OCS.
Validity Time Used	Displays the number of seconds passed since the Validity Time was installed
Validity Time Avail.	Displays the remaining number of seconds of the Validity Time before a new usage reporting is triggered for this rating group (category)

Label	Description
Idle_Timeout	Displays the idle timeout value in seconds. The active value is taken from configuration in the <b>idle-timeout-policy</b> or overwritten from RADIUS authentication or CoA.
Category - EFH Unreported Credit - Current Volume <sup>1 2</sup>	Displays the unreported volume credit for the current occurrence of EFH in an active state. This counter includes the unreported used volume credit for the initial Diameter Gy session that caused the active EFH state and the unreported volume interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Volume Used counter.
Category - EFH Unreported Credit - Total Volume <sup>1</sup>	Displays the accumulated total unreported volume credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported volume credit during the lifetime of the subscriber session.
Category - EFH Unreported Credit - Current Time <sup>1 2</sup>	Displays the unreported time credit for the current occurrence of EFH in an active state. This counter includes the unreported used time credit for the initial Diameter Gy session that caused the active EFH state and the unreported time interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Time Used counter.
Category - EFH Unreported Credit - Total Time <sup>1</sup>	Displays the accumulated total unreported time credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported time credit during the lifetime of the subscriber session.
Category - HTTP Rdr URL Override	Displays the URL returned by a Diameter OCS in a Credit Control Answer (CCA) message Final-Unit-Indication/Redirect-Server/Redirect-Server-Address AVP. This URL is used for Diameter Gy http-redirect out-of-credit actions when <b>allow-override</b> is configured.
IP Address	Displays the IP address
MAC Address	Displays the MAC address

Label	Description
Session	Displays the session type
Origin	Displays the origin type
Svc	Displays the service ID
Fwd	Displays the forwarding status
Number of active subscribers	Displays the number of active subscribers

- Note:**
1. These fields are only shown when EFH is enabled in the Diameter application policy. EFH is enabled using the **configure subscriber-mgmt diameter-application-policy gy extended-failure-handling no shutdown** command.
  2. These fields are only shown when the EFH state is active.

## 6.71 credit-control-policy

credit-control-policy

**Syntax**

**credit-control-policy** [*policy-name*]  
**credit-control-policy** *policy-name* **subscribers**

**Context**

[\[Tree\]](#) (show>subscr-mgmt credit-control-policy)

**Full Context**

show subscriber-mgmt credit-control-policy

**Description**

This command displays credit control policy information.

**Parameters**

- policy-name**  
Specifies the credit control policy name, up to 32 characters.
- subscribers**  
Displays the subscribers associated with the credit control policy.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 6.72 credit-reset

### credit-reset

#### Syntax

```
credit-reset sap sap-id subscriber sub-ident-string sla-profile sla-profile-name {category category-name | all-categories} [spi-sharing-type spi-sharing-type] [spi-sharing-id spi-sharing-id]  
credit-reset sap sap-id ip ip-address {category category-name | all-categories} [mac mac-address]  
credit-reset svc service-id ip ip-address {category category-name | all-categories} [mac mac-address]
```

#### Context

[\[Tree\]](#) (tools>perform>subscr-mgmt credit-reset)

#### Full Context

tools perform subscriber-mgmt credit-reset

#### Description

This command resets the credit for an SLA-profile instance.

#### Parameters

##### **sap-id**

Specifies the physical port identifier portion of the SAP definition.

##### **sub-ident-string**

Resets the credit for the specified subscriber identification, up to 32 characters.

##### **sla-profile-name**

Resets the credit for the specified SLA profile, up to 32 characters.

##### **category-name**

Resets the credit for the specified category, up to 32 characters.

##### **spi-sharing-type**

Resets the credit for sessions with the specified SPI sharing type.

**Values** per-group, per-session-ipoe, per-session-ppp

##### **spi-sharing-id**

Resets the credit for sessions with the specified SPI sharing type and sharing identifier.  
The SPI sharing identifier is:

- an identifier when the sharing type is per-group
- an internal PPP or IPoE identifier when the sharing type is a per-PPP or per-IPoE session

**Values** 0 to 4294967295

***ip-address***

Resets the credit for the specified IP address.

***mac-address***

Resets the credit for the specified MAC IP address.

***sub-profile-string***

Resets the credit for the specified subscriber profile, up to 32 characters.

***service-id***

Resets the credit for the specified service ID.

**Values**    service-id: 1 2147483647 svc-name: up to 64 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 6.73 cron

cron

**Syntax**

cron

**Context**

[\[Tree\]](#) (show>system cron)

**Full Context**

show system cron

**Description**

Commands in this context display CRON information.

**Platforms**

All

## 6.74 crp

crp

### Syntax

**crp** [*family* | *ip-address*]

### Context

[\[Tree\]](#) (show>router>pim crp)

### Full Context

show router pim crp

### Description

This command displays PIM candidate RP (CRP) information received at the elected Bootstrap router (BSR).

### Parameters

***family***

Displays CRP information for the address family.

**Values**    ipv4, ipv6

***ip-address***

Displays the IP address of the candidate RP.

### Platforms

All

### Output

The following output is an example of a PIM CRP configuration.

### Output Example

```
A:WAS# show router pim crp
=====
PIM Candidate RPs
=====
RP Address      Group Address    Priority    Holdtime  Expiry Time
-----
239.22.187.236   224.0.0.0/4      192         150       0d 00:02:19
239.22.187.239   224.0.0.0/4      192         150       0d 00:02:19
239.22.187.240   224.0.0.0/4      192         150       0d 00:02:09
-----
Candidate RPs : 3
=====
A:WAS#
```

```
A:WAS# show router pim crp 239.22.187.236
=====
PIM Candidate RPs
=====
RP Address      Group Address      Priority    Holdtime    Expiry Time
-----
239.22.187.236  224.0.0.0/4        192        150         0d 00:01:43
-----
Candidate RPs : 1
=====
A:WAS#
```

**Table 93: Output fields: PIM CRP** provides PIM CRP field descriptions.

*Table 93: Output fields: PIM CRP*

Label	Description
RP Address	The Candidate RP address
Group Address	The range of multicast group addresses for which the CRP is the Candidate RP
Priority	The Candidate RP's priority for becoming a rendezvous point (RP). This value is used to elect RP for a group range. A value of 0 is considered as the highest priority.
Holdtime	The hold time of the candidate RP. It is used by the Bootstrap router to time out the RP entries if it does not listen to another CRP advertisement within the holdtime period.
Expiry	The minimum time remaining before the CRP will be declared down. If the local router is not the BSR, this value is 0.
Candidate RPs	The number of CRP entries.

## 6.75 cspf

### cspf

#### Syntax

**cspf** to *ip-addr* [**from** *ip-addr*] [**bandwidth** *bandwidth*] [**include-bitmap** *bitmap*] [**exclude-bitmap** *bitmap*] [**hop-limit** *limit*] [**exclude-address** *excl-addr*] [**use-te-metric**] [**strict-srlg**] [**srlg-group**] [**exclude-node** *excl-node-id* [*excl-node-id*]] [**skip-interface** *interface-name*] [**ds-class-type** *class-type*] [**cspf-reqtype** *req-type*] [**least-fill-min-thd** *thd*] [**setup-priority** *val*] [**hold-priority** *val*]

#### Context

**[Tree]** (tools>perform>router>mpls cspf)

## Full Context

tools perform router mpls cspf

## Description

This command computes a CSPF path with specified user constraints.

## Parameters

### to *ip-addr*

Specifies the destination IP address.

**Values** a.b.c.d

### from *ip-addr*

Specifies the originating IP address.

**Values** a.b.c.d

### bandwidth *bandwidth*

Specifies the amount of bandwidth in Mb/s to be reserved.

**Values** 1 to 6400000

### include-bitmap *bitmap*

Specifies to include a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

**Values** 1 to 4294967295

### exclude-bitmap *bitmap*

Specifies to exclude a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

**Values** 1 to 4294967295

### hop-limit *limit*

Specifies the maximum number of hops for the path.

**Values** 2 to 255

### exclude-address *ip-addr*

Specifies IP addresses, up to eight, that should be excluded in the path computation.

**Values** a.b.c.d

### use-te-metric

Specifies the use of the link traffic engineering metric to optimize the path. By default, the link IGP metric is used.

### strict-srlg

Specifies the computation of a path which is strictly disjoint from links which are members of the entered SRLG

**srlg-group *grp-id***

Specifies up to eight Shared Risk Loss Groups (SRLGs) that path computation should avoid, or must avoid if the **strict-srlg** option is enabled. An SRLG group represents a set of interfaces which could be subject to the same failures or defects and thus share the same risk of failing.

**Values** 0 to 4294967295

**exclude-node *excl-node-id***

Specifies a list of up to eight addresses, that should be excluded during the path computation.

**Values** a.b.c.d

**skip-interface *interface-name***

Specifies an interface name of up to 32 characters, that should be skipped during the path computation.

**ds-class-type *class-type***

Specifies the class type (CT) to associate with the computed path.

**Values** 0 to 7

**cspf-reqtype *req-type***

Specifies the if all ECMP paths or a single path, selected randomly or using the **least-fill** parameter, should be returned.

**Values** all, random, least-fill

**least-fill-min-thd *thd***

Specifies the use of the least-fill path selection method in the computation of the path.

**Values** 1 to 100

**setup-priority *val***

Specifies the setup priority value to use for the path.

**Values** 0 to 7

**hold-priority *val***

Specifies the hold priority value to use for the path.

**Values** 0 to 7

**Platforms**

All

## 6.76 custom-hash

### custom-hash

#### Syntax

custom-hash

#### Context

[\[Tree\]](#) (show>system>security>hash-control custom-hash)

#### Full Context

show system security hash-control custom-hash

#### Description

This command displays custom hash information.

#### Platforms

All

## 6.77 custom-protocol

### custom-protocol

#### Syntax

custom-protocol

#### Context

[\[Tree\]](#) (show>app-assure>group>policy custom-protocol)

#### Full Context

show application-assurance group policy custom-protocol

#### Description

This command displays application-assurance policy custom protocol information.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 6.78 customer

```
customer
```

### Syntax

```
customer [customer-id [site customer-site-name [associated-subs]]]
```

### Context

```
[Tree] (show>service customer)
```

### Full Context

```
show service customer
```

### Description

This command displays service customer information.

### Parameters

***customer-id***

Displays only information for the specified customer ID.

**Values**     1 to 2147483647

**Default**    Displays all customer IDs.

***site customer-site-name***

Specifies the customer site which is an anchor point for an ingress and egress virtual scheduler hierarchy.

***associated-subs***

Displays information for the associated subscribers.

### Platforms

All

### Output

The following output is an example of customer information, and [Table 94: Output fields: customer](#) describes the output fields.

### Output Example

Table 94: Output fields: customer

Label	Description
Customer-ID	The ID that uniquely identifies a customer.
Contact	The name of the primary contact person.
Description	Generic information about the customer.
Phone	The phone/pager number to reach the primary contact person.
Total Customers	The total number of customers configured.
Multi-service site	
Site	Multi-service site name. A multi-service customer site is a group of SAPs with common origination and termination points.
Description	Information about a specific customer's multi-service site.
Assignment	The port ID, MDA, or card number, where the SAP's that are members of this multi- service site are defined.
I. Sched Pol	The ingress QoS scheduler policy assigned to this multi-service site.
E. Sched Pol	The egress QoS scheduler policy assigned to this multi-service site.
Service Association	
Service-ID	The ID that uniquely identifies a service.
SAP	The SAP assigned to the service.

## customer

### Syntax

**customer** *customer-id* **site** *customer-site-name* [{**ingress** | **egress**}] [**arbiter** {*name* | **root**}] [{**detail** | **depth**}]

### Context

[\[Tree\]](#) (show>qos>policer-hierarchy customer)

### Full Context

show qos policer-hierarchy customer

### Description

This command displays information about the policer hierarchy per customer.

### Parameters

#### **customer-id**

Specifies the customer ID that identifies the customer to the service.

#### **customer-site-name**

Specifies the unique customer site name, up to 32 characters.

#### **ingress**

Displays ingress queue group information.

#### **egress**

Displays egress queue group information.

#### **name**

Displays information about the name of the QoS arbiter.

#### **root**

Displays information about the arbiter root.

#### **detail**

Displays detailed information.

#### **depth**

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### Syntax

**customer** *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}] [**detail**]

Context

[Tree] (show>qos>scheduler-hierarchy customer)

Full Context

show qos scheduler-hierarchy customer

Description

This command displays the scheduler hierarchy per customer multiservice site.

Parameters

*customer-id*

Specifies the ID number associated with a particular customer.

**Values** 1 to 2147483647

*customer-site-name*

Specifies the unique name customer site name.

*scheduler-name*

Specifies the unique scheduler name created in the context of the scheduler policy.

*ingress*

Displays ingress SAP customer scheduler stats.

*egress*

Displays egress SAP customer scheduler stats.

*detail*

Displays detailed information.

Platforms

All

Output

The following output is an example of customer scheduler hierarchy information, and [Table 95: Output fields: QoS scheduler hierarchy customer](#) describes the customer scheduler hierarchy fields.

Table 95: Output fields: QoS scheduler hierarchy customer

Label	Description
Legend	<p>Admin CIR/PIR: Specifies the configured value of CIR/PIR.</p> <p>Assigned CIR/PIR: Specifies the PIR/CIR rate given to a member by that parent level.</p> <p>Offered CIR/PIR: Specifies the offered load on that member.</p> <p>Consumed CIR/PIR: Specifies the amount of scheduler bandwidth used by this member.</p>
Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation.

Label	Description
	Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level.
Cir Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue as compared to other child schedulers and queues while vying for bandwidth on the parent scheduler.
PIR	Specifies the PIR rate.
CIR	Specifies the CIR rate.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue aside from the queue's PIR setting.
Service-Id	The ID that uniquely identifies the policy.
Customer-Id	The ID that uniquely identifies the customer.
SAP	Specifies the Service Access Point (SAP) within the service where the policy is applied.
Multi Service Site	Specifies the multiservice site name.
Orphan Queues	Specifies the number of queues in an orphaned state.
Hierarchy	Displays the scheduler policy tree structure.
Tier0	Specifies the weight of the queue at its parent internal (Tier0) scheduler. This is a normalized value based on the port speed, or hash weight when used within a LAG.

## customer

### Syntax

**customer** *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}]

### Context

**[Tree]** (show>qos>scheduler-stats customer)

### Full Context

show qos scheduler-stats customer

### Description

This command displays scheduler statistics customer information.

Parameters

**customer-id**  
Specifies the ID number associated with a particular customer.  
**Values** 1 to 2147483647

**customer-site-name**  
The unique customer site name.

**scheduler-name**  
The unique scheduler name created in the context of the scheduler policy.

**ingress**  
The keyword to display ingress SAP customer scheduler stats.

**egress**  
The keyword to display egress SAP customer scheduler stats.

Platforms

All

Output

The following output is an example of SAP scheduler-stats customer information, and [Table 96: Output fields: QoS scheduler statistics customer](#) describes the SAP scheduler-stats customer fields.

Output Example

```
A:ALA-12# show qos scheduler-stats customer 274 site west scheduler NetworkControl ingress
=====
Scheduler Stats
=====
Scheduler                Forwarded Packets      Forwarded Octets
-----
NetworkControl           0                      0
=====
A:ALA-12#
```

Table 96: Output fields: QoS scheduler statistics customer

Label	Description
Scheduler	Displays the scheduler policy name.
Forwarded Packets	Displays the number of packets forwarded.
Forwarded Octets	Displays the number of octets forwarded.

customer

Syntax

**customer** *customer-id* **site** *customer-site-name* [**egress**] [**detail**]

Context

[\[Tree\]](#) (show>qos>agg-rate customer)

Full Context

show qos agg-rate customer

Description

This command displays the H-QoS aggregate rate limit per customer multiservice site.

Parameters

- customer** *customer-id*  
Specifies the ID number associated with a particular customer.  
**Values** 1 to 2147483647
- site** *customer-site-name*  
Specifies the unique customer site name.
- egress**  
Displays egress SAP customer scheduler stats.
- detail**  
Displays detailed information.

Platforms

All

Output

The following output is an example of QoS customer aggregation rate output, and [Table 97: Output fields: QoS aggregation rate customer](#) describes the QoS customer aggregation rate fields.

Output Example

```

Table 97: Output fields: QoS aggregation rate customer

Label	Description
AdminRate	Displays the configured aggregate rate in the subscriber profile.
OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the <b>limit-unused-bandwidth</b> command is enabled to protect against exceeding the aggregated bandwidth.
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

## customer

### Syntax

**customer** *customer-id* **site** *customer-site-name* [**arbiter** {**root** | *name*}] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

**Context**

[Tree] (monitor>qos>arbiter-stats customer)

**Full Context**

monitor qos arbiter-stats customer

**Description**

This command monitors arbiter statistics for a customer site.

**Parameters**

***customer-id***

Specifies the ID number to be associated with the customer, expressed as an integer.

**Values** 1 to 2147483647

***customer-site-name***

Specifies the customer site which is an anchor point for ingress and egress arbiter hierarchy.

***name***

Specifies the name of the policer control policy arbiter. This parameter is mandatory if the SAP resides on a LAG in adapt-qos link or port-fair mode.

**Values** An existing arbiter-name in the form of a string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

***root***

Specifies the root arbiter.

***ingress***

Displays arbiter-name statistics applied on the site ingress.

***egress***

Displays arbiter-name statistics applied on the site egress.

***seconds***

Configures the interval for each display in seconds.

**Values** 11 to 60

**Default** 11 seconds

***repeat***

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

### **absolute**

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

### **rate**

Displays rate-per-second for each statistic.

## **Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **customer**

## **Syntax**

**customer** *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

## **Context**

[\[Tree\]](#) (monitor>qos>scheduler-stats customer)

## **Full Context**

monitor qos scheduler-stats customer

## **Description**

This command monitors scheduler statistics per customer multi-service-site. The first screen displays the current statistics related to the specified customer ID and customer site name. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta. Monitor commands are similar to **show** commands but only statistical information displays. These commands display selected statistics per the configured number of times at the interval specified.

## **Parameters**

### ***customer-id***

Specifies the ID number to be associated with the customer, expressed as an integer.

**Values** 1 to 2147483647

### ***customer-site-name***

Specifies the customer site, which is an anchor point for ingress and egress virtual scheduler hierarchy.

### ***scheduler-name***

Specifies an existing *scheduler-name*. Scheduler names are configured in the **config>qos>scheduler-policy>tier level** context. This parameter is mandatory if the customer resides on a LAG in adapt-qos link or port-fair mode.

**Values** An existing *scheduler-name* is in the form of a string, up to 32 characters, composed of printable, 7-bit ASCII characters. If the string

contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**ingress**  
Displays the customer's multi-service-site ingress scheduler policy.

**egress**  
Displays the customer's multi-service-site egress scheduler policy.

**seconds**  
Configures the interval for each display in seconds.

**Values**    11 to 60

**Default**    11 seconds

**repeat**  
Configures how many times the command is repeated.

**Values**    1 to 999

**Default**    10

**absolute**  
Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

**rate**  
Displays rate-per-second for each statistic instead of the delta.

**Platforms**  
All

customer

**Syntax**  
**customer** *customer-id* **site** *customer-site-name* [**arbiter** {*name* | *root*}] [**ingress** | **egress**]

**Context**  
[\[Tree\]](#) (clear>qos>arbiter-stats customer)

**Full Context**  
clear qos arbiter-stats customer

**Description**  
This command clears the arbiter statistics per customer.

## Parameters

### ***customer-id***

Specifies the ID number of the associated customer.

**Values** 1 to 2147483647

### ***customer-site-name***

Specifies the customer site name, up to 32 characters.

### ***name***

Specifies the arbiter name, up to 32 characters.

### ***root***

Specifies the arbiter root, up to 32 characters.

### ***ingress***

Clears the arbiter name statistics applied on the site ingress.

### ***egress***

Clears the arbiter name statistics applied on the site egress.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## customer

## Syntax

**customer** *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [**ingress** | **egress**]

## Context

[\[Tree\]](#) (clear>qos>scheduler-stats customer)

## Full Context

clear qos scheduler-stats customer

## Description

This command clears the scheduler statistics per customer multi-service site.

## Parameters

### ***customer-id***

Specifies the ID number of the associated customer.

**Values** 1 to 2147483647

### ***customer-site-name***

Specifies the customer site name, up to 32 characters.

***scheduler-name***

Specifies the scheduler name, up to 32 characters.

**ingress**

Clears the customer's multi-service site ingress scheduler policy.

**egress**

Clears customer's multi-service site egress scheduler policy.

**Platforms**

All

customer

**Syntax**

**customer** *customer-id* **site** *customer-site-name* [**arbiter** *name* | *root*] [**ingress** | **egress**]

**Context**

##### Syntax

**damping** [*ip-prefix* [*/ip-prefix-length*]] [ **damp-type**] [detail] [ **ipv4**]

**damping** [*ip-prefix* [*/ip-prefix-length*]] [ **damp-type**] [detail] { **ipv6** | **label-ipv4** | **label-ipv6** | **mcast-ipv4** | **mcast-ipv6** | **mvpn-ipv4** | **vpn-ipv4** | **vpn-ipv6**}

##### Context

[\[Tree\]](#) (show>router>bgp damping)

##### Full Context

show router bgp damping

## Description

This command displays BGP routes with have been dampened due to route flapping. This command can be entered with or without a route parameter.

When the keyword **detail** is included, more detailed information displays.

When only the command is entered (without any parameters included except **detail**), then all dampened routes are listed.

When a parameter is specified, then the matching route or routes are listed.

When a **decayed**, **history**, or **suppressed** keyword is specified, only those types of dampened routes are listed.

## Parameters

### *ip-prefix[ip-prefix-length]*

Displays damping information for the specified IP prefix length.

**Values**    ipv4-prefix: a.b.c.d (host bits must be 0)  
              ipv4-prefix-le: 0 to 32  
              ipv6-prefix:  
              • x:x:x:x:x:x:x (eight 16-bit pieces)  
              • x:x:x:x:x:d.d.d.d  
              • x: [0 to FFFF] H  
              • d: [0 to 255] D  
              ipv6-prefix-le: 0 to 128

### **damp-type**

Displays damping type for the specified IP address.

### **decayed**

Displays damping entries that are decayed but are not suppressed.

### **history**

Displays damping entries that are withdrawn but have history.

### **suppressed**

Displays damping entries suppressed because of route damping.

### **detail**

Displays detailed information.

### **ipv4**

Displays damped routes for the IPv4 family.

### **ipv6**

Displays damped routes for the IPv6 family.

### **label-ipv4**

Displays damped routes for the label IPv4 family.

### **label-ipv6**

Displays damped routes for the label IPv6 family.

### mcast-ipv4

Displays damped routes for the MCAST IPv4 family.

### mcast-ipv6

Displays damped routes for the MCAST IPv6 family.

### mvpn-ipv4

Displays damped routes for the MVPN IPv4 family.

### vpn-ipv4

Displays damped routes for the VPN IPv4 family.

### vpn-ipv6

Displays damped routes for the VPN IPv6 family.

Table 98: Output fields: BGP damping

Label	Description
BGP Router ID	The local BGP router ID.
AS	The configured autonomous system number.
Local AS	The configured or inherited local AS for the specified peer group. If not configured, then it is the same value as the AS.
Network	Route IP prefix and mask length for the route.
Flag(s)	Legend:  Status codes: u- used, s-suppressed, h-history, d-decayed, *-valid. If a * is not present, then the status is invalid.  Origin codes: i-IGP, e-EGP, ?-incomplete, >-best
Network	The IP prefix and mask length for the route.
From	The originator ID path attribute value.
Reuse time	The time when a suppressed route can be used again.
AS Path	The BGP AS path for the route.
Peer	The router ID of the advertising router.

Label	Description
NextHop	BGP nexthop for the route.
Peer AS	The autonomous system number of the advertising router.
Peer Router-Id	The router ID of the advertising router.
Local Pref	BGP local preference path attribute for the route.
Age	The time elapsed since the service was enabled.
Last update	The time when BGP was updated last in second/minute/hour (SS:MM:HH) format.
FOM Present	The current Figure of Merit (FOM) value.
Number of Flaps	The number of flaps in the neighbor connection.
Reuse time	The time when the route can be reused.
Path	The BGP AS path for the route.
Applied Policy	The applied route policy name.

## damping

### Syntax

**damping** [{*ip-prefix*/*ip-prefix-length*] [**neighbor** *ip-address*]} | **group** *name*]

### Context

[\[Tree\]](#) (clear>router>bgp damping)

### Full Context

clear router bgp damping

### Description

This command clears or resets the route damping information for received routes.

### Parameters

#### *ip-prefix/ip-prefix-length*

Clears damping information for entries that match the IP prefix and prefix length.

- Values**
- ipv4-prefix:
    - a.b.c.d (host bits must be 0)
  - ipv4-prefix-length: [0 to 32]
  - ipv6-prefix:

- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D
- ipv6-prefix-length: [0 to 128]

**neighbor ip-address**

Clears damping information for entries received from the BGP neighbor.

- Values**
- ipv4-address:
- a.b.c.d
- ipv6-prefix:
- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D
- interface: up to 32 characters, mandatory for link local addresses

**group name**

Clears damping information for entries received from any BGP neighbors in the peer group.

- Values** up to 32 characters

**Platforms**

All

7.3 data-trigger

data-trigger

**Syntax**

**data-trigger sap sap-id**

**Context**

[\[Tree\]](#) (clear>service>dynsvc data-trigger)

**Full Context**

clear service dynamic-services data-trigger

## Description

This command deletes all dynamic services associated with a dynamic services data trigger.

### Note:

This command is not available in the MD-CLI.

## Parameters

***sap-id***

Specifies the dynamic services data trigger SAP to delete.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.4 data-triggers

### data-triggers

## Syntax

**data-triggers** [**sap** *sap-id*] [**summary**]

## Context

[\[Tree\]](#) (show>service>dynsvc data-triggers)

## Full Context

show service dynamic-services data-triggers

## Description

This command displays the active dynamic services data trigger details.

### Note:

This command is not available in the MD-CLI.

## Parameters

***sap-id***

Specifies the dynamic services SAP for which the details are shown.

**summary**

Limits the output to one line per data trigger SAP.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of data trigger information.

Output Example

```
# show service dynamic-services data-triggers
=====
Dynamic Services Data-triggers
=====
SAP                               : 1/1/4:1214.101
-----
Acct session-ID                   : 144DFF0000009156A24138
MAC                               : 00:51:00:dd:01:01
IP                                :

-----
No. of Data-triggers: 1
=====
```

Table 99: Output fields: data trigger describes data trigger fields.

Table 99: Output fields: data trigger

Output field	Description
Acct session-ID	The RADIUS accounting session ID for this dynamic services data trigger. This accounting session ID is used as an accounting multi-session ID in RADIUS accounting for the associated dynamic services. It can also be used as a key in CoA or Disconnect Messages to set up or terminate associated dynamic services.
MAC	The MAC address learned to set up this dynamic service data trigger. The MAC address is included in the Access-Request message for RADIUS authentication.
IP	The IPv4 or IPv6 address learned to set up this dynamic service data trigger. If the data trigger packet was not an IP packet, then this field is empty. When available, the IP address is included in the RADIUS authentication and accounting messages.
State	The current state of the dynamic service data trigger:  Pending—(initial state) data trigger received and authentication started  Accepted—(transient state) authentication succeeded; dynsvc script started but not yet completed  sapCreated—(final state) corresponding dynamic services sap created

```

## Context

[\[Tree\]](#) (clear>service>id>pim-snooping database)

## Full Context

clear service id pim-snooping database

## Description

This command clears PIM snooping source group database information.

## Parameters

### **sap-id**

Clears PIM snooping SAP information

### **sdp-id**

Clears PIM snooping entries associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

**Values** 1 to 17407

### **grp-ip-address**

Clears PIM snooping information matching the specified group address

### **src-ip-address**

Clears PIM snooping information matching one particular source within the multicast group

### **family**

Displays either IPv4 or IPv6 information

**Values** ipv4 or ipv6

### **evpn-mpls**

Clears PIM snooping statistics for EVPN-MPLS destinations

## Platforms

Full Context

show router rip database

Description

Displays all routes in the RIP database.

Parameters

*ip-address /mask*

Specifies the IP address.

Values ip-address: a.b.c.d.  
mask: 1 to 32

*longer*

Specifies the longer prefix match entries should also be displayed.

*peer ip-address*

Specifies the peer IP address.

Values a.b.c.d

*detail*

Displays detailed information.

*qos*

Specifies the QoS.

Platforms

All

Output

The following output is an example of RIP route database information, and [Table 100: Output fields: RIP database](#) describes the output fields.

Output Example

\*A:ALA-1# show rip database

RIP Route Database						
Destination	Peer	NextHop	Metric	Tag	TTL	Valid
10.0.0.10/32	10.1.7.15	0.0.0.0	2	0x0000	163	No
10.0.0.10/32	10.1.8.14	0.0.0.0	2	0x0000	179	No
10.0.0.14/32	10.1.8.14	0.0.0.0	1	0x0000	179	Yes

10.100.17.16/31	10.1.8.14	0.0.0.0	2	0x0000	167	No

```
No. of Routes: 11
=====
*A:ALA-12#
```

Table 100: Output fields: RIP database

Label	Description
Destination	The RIP destination for the route.
Peer	The router ID of the peer router.
NextHop	The IP address of the next hop.
Metric	The hop count to rate the value of different hops.
Tag	The value to distinguish between internal routes (learned by RIP) and external routes (learned from other protocols).
TTL	Displays the number of seconds the specific route will remain in the routing table. When an entry reaches 0, it is removed from the routing table.
Valid	No — The route is not valid. Yes — The route is valid.

## Context

[\[Tree\]](#) (clear>router>igmp database)

## Full Context

clear router igmp database

## Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

## Parameters

### **group** *grp-ip-address*

Clears the multicast group address (IPv4/IPv6) or zero in the specified address group.

### **source** *src-ip-address*

Clears the IGMP database from the specified source IP address.

### **interface** *ip-int-name*

Clears the IGMP database on the specified interface.

### **interface** *ip-address*

Clears the IGMP database on the specified IP address.

### **host** *ip-address*

Clears the IGMP database on the specified host.

### **host** all

Clears the IGMP database on all hosts.

### **group-interface** *interface-name*

Clears the IGMP database on the specified group interface.

### **group-interface** all

Clears the IGMP database on all group interfaces.

## Platforms

## database group-interface all

### Context

[\[Tree\]](#) (clear>router>mld database)

### Full Context

clear router mld database

### Description

This command clears MLD database parameters.

### Parameters

#### host *ipv6-address*

Clears the MLD database on the specified host.

#### host all

Clears the MLD database on all hosts.

#### interface *ip-int-name*

Clears database information for the specified MLD interface name.

#### interface *ipv6-address*

Clears database information for the specified MLD interface IPv6 address.

#### ipsec-interface *ip-int-name*

Clears database information for the specified dynamic name for the MLD-enabled child\_SA.

#### group *ipv6-address*

Clears database information for the specified MLD group IPv6 address.

#### source *ipv6-address*

Clears database information for the specified MLD source IPv6 address.

#### service-id

Clears database information for the specified service ID.

**Values**    service-id: 1 to 2148278386  
              svc-name: up to 64 characters.

### Platforms

All

## database

### Syntax

**database** [**interface** *ip-int-name* | *mt-int-name* | *int-ip-address*] [**group** *grp-ip-address* [**source** *ip-address*]]  
          [*family*]

## Context

[\[Tree\]](#) (clear>router>pim database)

## Full Context

clear router pim database

## Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

## Parameters

### *ip-int-name*

Clears the IGMP or PIM database on the specified interface.

### *mt-int-name*

Clears the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

**Syntax:** *vprn-id-mt-grp-ip-address*

### *int-ip-address*

Clears the IGMP or PIM database on the specified IP address.

### *group-ip-address*

Clears the multicast group address (ipv4, ipv6) or zero in the specified address group.

### *ip-address*

Clears the IGMP or PIM database from the specified source IP address.

### *family*

Clears database family information.

**Values**    ipv4, ipv6

### *mpls-if-name*

Clears the MPLS interface name.

**Syntax:** *mpls-if-index*

Context

[\[Tree\]](#) (show>router>origin-validation database)

Full Context

show router origin-validation database

Description

This command displays database information.

Parameters

**family**

Specifies the type of routing information to be displayed.

**Values**    **ipv4** — Displays IPv4 entries.  
              **ipv6** — Displays IPv6 entries.

**ip-prefix/ip-prefix-length**

Displays routes only matching the specified IP address and length, up to 64 characters.

**prefix-length**

Displays routes matching up to the specified length.

**Values**    1 to 128

**as-number**

Specifies the origin AS number.

**Values**    0 to 4294967295

- longer**  
Displays routes matching the *ip-prefix-ip-prefix-length* and routes with longer masks.
- summary**  
Displays database summary information.
- static**  
Displays static routes.

**Platforms**  
All

**Output**  
The following output is an example of database information.

**Output Example**

Context

[Tree] (show>router>isis database)

Full Context

show router isis database

Description

This command displays the entries in the IS-IS link state database.

Parameters

*system-id*

Only the LSPs related to the specified *system-id* are listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

*lsp-id*

Only the specified LSP (hostname) is listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

*level*

Specifies the interface level (1, 2, or 1 and 2).

*detail*

All output is displayed in the detailed format.

Platforms

All

Output

The following output is an example of the IS-IS link state database information, and [Table 102: Output fields: IS-IS database](#) describes the output fields.

Output Example

```
*A:Dut-B# show router isis 0 database

\*A:Dut - B#

Table 102: Output fields: IS-IS database

Label	Description
Flex-Algorithm	The flexible algorithm number
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Prefix SID Flags	Displays the prefix SID flags
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR

database

Syntax

database [system-id]

Context

[Tree] (clear>router>isis database)

Full Context

clear router isis database

Description

This command removes the entries from the IS-IS link-state database which contains information about PDUs.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS link-state database.

## Platforms

All

## database

### Syntax

**database** [**type** {**router** | **network** | **summary** | **asbr-summary** | **external** | **nssa** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

**database** [**type** {**router** | **network** | **inter-area-pfx** | **inter-area-rtr** | **external** | **nssa** | **intra-area-pfx** | **rtr-info** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

### Context

**[Tree]** (show>router>ospf3 database)

**[Tree]** (show>router>ospf database)

### Full Context

show router ospf3 database

show router ospf database

### Description

This command displays information about the OSPF link state database (LSDB).

When no command line options are specified, the command displays brief output for all database entries.

### Parameters

#### **type keyword**

Specifies to filter the OSPF LSDB information based on the type specified by *keyword*.

#### **router**

Displays only router (Type 1) LSAs in the LSDB.

#### **network**

Displays only network (Type 2) LSAs in the LSDB.

#### **summary**

Displays only summary (Type 3) LSAs in the LSDB.

#### **asbr-summary**

Displays only ASBR summary (Type 4) LSAs in the LSDB.

#### **external**

Displays only AS external (Type 5) LSAs in the LSDB. External LSAs are maintained globally and not per area. If the display of external links is requested, the area parameter, if present, is ignored.

#### **nssa**

Displays only NSSA area-specific AS external (Type 7) LSAs in the LSDB.

- inter-area-pfx**  
Displays inter-area prefix LSAs.
- inter-area-rtr**  
Displays inter-area router LSAs.
- intra-area-pfx**  
Displays intra-area prefix LSAs.
- rtr-info**  
Displays router info LSAs.
- all**  
Displays all LSAs in the LSDB. The all keyword is intended to be used with either the **area area-id** or the **adv-router router-id [link-state-id]** parameters.
- area area-id**  
Displays LSDB information associated with the specified OSPF *area-id*.  

**Values**    ip-address — a.b.c.d  
              area — 0 to 4294967295
- adv-router router-id [link-state-id]**  
Displays LSDB information associated with the specified advertising router. To further narrow the number of items displayed, the *link-state-id* can optionally be specified.
- detail**  
Displays detailed information on the LSDB entries.
- filtered**  
Displays LSDB entries that were filtered by an area import or export policy.

All

Output

OSPF Database Output

Table 103: Output fields: OSPF database describes the standard and detailed command output fields for an OSPF database.

Table 103: Output fields: OSPF database

Label	Description
Area Id	The OSPF area identifier.
Type LSA Type	Router — LSA type of router (OSPF) Network — LSA type of network (OSPF) Summary — LSA type of summary (OSPF) ASBR Summary — LSA type of ASBR summary (OSPF) Nssa-ext — LSA area-specific, NSSA external (OSPF)

Label	Description
	<p>Area opaque — LSA type of area opaque (OSPF)</p> <p>router — LSA type of router (OSPF3)</p> <p>Network — LSA type of network (OSPF3)</p> <p>IE Pfx — LSA type of inter-area prefix (OSPF3) Newline IE Rtr</p> <p>LSA type of inter-area router (OSPF3)</p> <p>IA Pfx — LSA type of intra-area prefix (OSPF3)</p>
Link State Id	The link state Id is an LSA type specific field containing either a number to distinguish several LSAs from the same router, an interface ID, or a router-id; it identifies the piece of the routing domain being described by the advertisement.
Adv Rtr Id Adv Router Id	The router identifier of the router advertising the LSA.
Age	The age of the link state advertisement in seconds.
Sequence Sequence No	The signed 32-bit integer sequence number.
Cksum Checksum	The 32-bit unsigned sum of the link-state advertisements' LS checksums.
No. of LSAs	The number of LSAs displayed.
Options	<p>EA — External Attribute LSA Support</p> <p>DC — Demand Circuit Support</p> <p>R — If clear, a node can participate in OSPF topology distribution without being used to forward transit traffic.</p> <p>N — Type 7 LSA Support</p> <p>MC — Multicast Support</p> <p>E — External Routes Support</p> <p>V6 — V6 works in conjunction with R. If V6 is clear, a node can participate in OSPF topology distribution without being used to forward IPv6 datagrams. If R is set and V6 is clear, IPv6 datagrams are not forwarded but diagrams belonging to another protocol family may be forwarded.</p>
Prefix Options	<p>P — Propagate NSSA LSA.</p> <p>MC — Multicast support.</p> <p>LA — Local address capability. If set, the prefix is an IPv6 interface address of the advertising router.</p> <p>NU — No unicast capability. If set, the prefix is excluded from IPv6 unicast calculations.</p>

Label	Description
Flags	<p>None — No flags set</p> <p>V — The router is an endpoint for one or more fully adjacent Virtual Links having the described area as the transit area</p> <p>E — The router is an AS Boundary Router</p> <p>B — The router is an Area Border Router</p>
Link Count	The number of links advertised in the LSA.
Link Type ( <i>n</i> )	The link type of the <i>n</i> th link in the LSA.
Network ( <i>n</i> )	The network address of the <i>n</i> th link in the LSA.
Mask ( <i>n</i> )	The mask of the <i>n</i> th link in the LSA.
No of TOS ( <i>n</i> )	The ToS of the <i>n</i> th link in the LSA.
Metric-0 ( <i>n</i> )	The cost metric of the <i>n</i> th link in the LSA.
Not Flooded ( <i>n</i> )	<p>Filtered on Import</p> <p>The <i>n</i>th LSA was filtered by an area import policy.</p> <p>Filtered on Export</p> <p>The <i>n</i>th LSA was filtered by an area export policy.</p> <p><b>Note:</b> this line does not appear if there is no filtering and the LSA was flooded.</p>

### Output Example

```

database

Syntax

database [purge]

Context

- [Tree] (clear>router>ospf database)
- [Tree] (clear>router>ospf3 database)

Full Context

clear router ospf database  
clear router ospf3 database

Description

This command clears all LSAs received from other nodes, sets all adjacencies other than two-way to one-way, and refreshes all self-originated LSAs.

Parameters

- purge  
Clears all self-originated LSAs and re-originates all self-originated LSAs.

Platforms

All

database

Syntax

```
database [peer ipv6-address] [ detail]
database [peer ipv6-address] detail [qos]
database ipv6-address[/prefix-length] [longer] [peer ipv6-address] [detail]
database ipv6-address[/prefix-length] [ longer] [peer ipv6-address] detail [qos]
```

Context

[Tree] (show>router>ripng database)

Full Context

show router ripng database

Description

This command displays the routes in the RIPng database.

Parameters

*ipv6-address*

Specifies the RIPng IPv6 address.

Values	ipv6-address: x:x:x:x:x:x:x [-interface] x:x:x:x:x:x.d.d.d.d [-interface] x: [0..FFFF]H d: [0..255]D interface — link local addresses up to 32 characters
--------	---

*prefix-length*

The IP prefix in dotted decimal notation for the range used by the ABR to advertise that summarizes the area into another area.

Values	ipv6-prefix: <ul style="list-style-type: none"><li>x:x:x:x:x:x:x (eight 16-bit pieces)</li><li>x:x:x:x:x:x.d.d.d.d</li><li>x: [0 to FFFF]H</li><li>d: [0 to 255]D</li></ul>
--------	---

prefix-length: 0 to 128

- detail**  
Displays detailed information.
- qos**  
Displays QoS information.
- longer**  
Displays more detailed information.

Platforms

All

Output

The following outputs are examples of router RIPng database information.

Output Example

```
*A:Dut-C>config>router>if# show router ripng database

## database

### Syntax

**database**

### Context

[\[Tree\]](#) (clear>router>ripng database)

### Full Context

clear router ripng database

### Description

This command flushes all routes in the RIPng database.

### Platforms

All

## database

### Syntax

**database** [bsl [256..1024]] subdomain-id [ 0..255]

### Context

[\[Tree\]](#) (clear>router>bier database)

### Full Context

clear router bier database

### Description

This command clears the BIER database.

### Platforms

All

## database

### Syntax

**database** [system-id]

### Context

**[Tree]** (clear>service>id>spb database)

### Full Context

clear service id spb database

### Description

This command clears and resets the Shortest Path Bridging (SPB) database.

### Parameters

#### ***system-id***

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

**Values** 6-octet system identifier (xxxx.xxxx.xxxx)

### Platforms

All

## 7.6 datapath

### datapath

### Syntax

**datapath** *port-id* [**mac** *mac-chip-number*] [**fp** *fp-number*] [**detail**]

### Context

**[Tree]** (show datapath)

### Full Context

show datapath

### Description

This command displays the datapath mapping for the specified card, MDA, FP, MAC, connector, and port combinations. Fully qualified port identifiers are displayed for ports when the **detail** or **port** parameters are specified.

This command is supported on FP4-based hardware only.

### Parameters

#### ***port-id***

Specifies the port ID.

**slot**

Specifies the slot number of the card in the chassis to display. The maximum slot number is platform dependent. See the *Installation Guides* for more information.

**Values** 1 to 10

**mda**

Specifies the MDA number in the slot to display. This is an integer value relative to the card.

**Values** 1 to 2

**xiom**

Specifies the XIOM number in the slot to display.

**Values** x1

**connector**

Specifies the connector number to display. This is an integer value relative to the MDA.

**Values** c1 to c54

**port**

Specifies the connector port number to display. The full port identifier is displayed. This is an integer value relative to the connector.

**Values** 1 to 10

**fp-number**

Specifies the FP number to display. This is an integer value relative to the card.

**Values** 1 to 8

**mac-chip-number**

Specifies the MAC number to display. This is an integer value relative to the MDA.

**Values** 1 to 12

**detail**

Displays the full port identifiers for all ports with configured connectors.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following output is an example of the **show datapath** command.

**Output Example:**

```
*A:PE# show datapath 1/2/c1/1

=====
Card      MDA      FP      MAC Chip Num  Connector  Ports
```

```
-----

7.7 datastore-locks

datastore-locks

Syntax  
datastore-locks [detail]

Context

[Tree] (show>system>management-interface datastore-locks)

Full Context

show system management-interface datastore-locks

Description

This command displays datastore locks information.

Parameters

**detail**  
Displays session-specific information.

Platforms

All

Output

The following output is an example of detail datastore locks information for all datastores. [Table 104: Output fields: datastore locks](#) describes the output fields.

Output Example

```
[ ]
A:admin@node-1# show system management-interface datastore-locks detail
=====
Session ID  Region          Datastore          Lock State
Username
Session Type      Session Mode      Idle Time
From
-----
6            configure      Candidate          Unlocked
admin        Global          0d 00:00:09
MD-CLI (1)   Console
-----
Number of sessions: 1
'#' indicates the current active session
'(n)' indicates the number of internal sessions
=====
```

Table 104: Output fields: datastore locks

Label	Description
Session ID	The session ID.
Region	The region or scope that the datastore belongs to.
Datastore	Datastores that can be locked. For example: Running and Candidate.
Lock State	Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state.

Label	Description
Username	The name of the user.
Session Mode	Global — A shared session. Exclusive — An exclusive session.
Idle Time	The idle time of the session.
Session Type	NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system (EHS or CRON) session is running.
From	The originating IP address.

## 7.8 debounce

debounce

### Syntax

**debounce** peer *ip-address* ring *sync-tag*

### Context

[\[Tree\]](#) (clear>redundancy>multi-chassis>mcr debounce)

### Full Context

clear redundancy multi-chassis mc-ring debounce

### Description

This command clears multi-chassis ring operational state debounce history.

### Parameters

***ip-address***

Clears debounce history for the specified IP address.

- Values**
- ipv4-address: a.b.c.d
  - ipv6-address:
    - x:x:x:x:x:x:x (eight 16-bit pieces)

- x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

**sync-tag**

Clears debounce history for the specified sync tag.

**Platforms**

All

7.9 debug

debug

**Syntax**

**debug** [*application*]

**Context**

[\[Tree\]](#) (show debug)

**Full Context**

show debug

**Description**

This command displays set debug points.

**Note:**

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration debug** command or the **info** command in the debug configuration region.

**Parameters**

**application**

Display which debug points have been set.

**Values**    aaa, anysec, application-assurance, atm, bgp, bier, call-trace, certificate, cisco-hdlc, diameter, dynamic-services, eth-cfm, ethernet, filter, frame-relay, gtp, igmp, ip, ipsec, isis, l2tp, lag, ldp, local-dhcp-server, mcast-management, mirror, mld, mpls, msdp, mtrace, mtrace2, nat, oam, open-flow, ospf, ospf3, pcep, pcp, pim, ppp, python, radius, radius-proxy, rip, ripng, rpki, rsvp, service, snmp, srrp, subscriber-mgmt, system, upnp, vrrp, wlan-gw, wpp

## 7.10 debug-packet

debug-packet

### Syntax

debug-packet [clear]

### Context

[\[Tree\]](#) (tools>dump>eth-cfm debug-packet)

### Full Context

tools dump eth-cfm debug-packet

### Description

This command displays and optionally clears the counters representing the number of CFM PDUs that matched the debug criteria but were not passed to the debug logger. This situation is caused by a full message queue.

### Parameters

**clear**  
Clears the current counters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### Output

The following output is an example of CFM-PDU information.

### Output Example

```
tools dump eth-cfm debug-packet
=====
ETH-CFM Debug Logging Message Queue Statistics
=====
Rx Debug Exceptions      : 0
Tx Debug Exceptions      : 0
=====
```

## 7.11 declined-addresses

### declined-addresses

#### Syntax

```
declined-addresses ip-address[/mask] [detail]
declined-addresses pool pool-name
```

#### Context

```
[Tree] (show>router>dhcp>server declined-addresses)
```

#### Full Context

```
show router dhcp local-dhcp-server declined-addresses
```

#### Description

This command display information about declined addresses.

#### Parameters

- pool-name**  
Specifies a DHCP pool name on the router.
- ip-address**  
Specifies the IP address of the DNS server. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).
- detail**  
Displays detailed information.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of declined address information

#### Output Example

```
*A:ALA-48>show>router>dhcp>server# declined-addresses pool test
=====
Declined addresses for server test Base
=====
Pool      Subnet      IP Address
PPPoE User Name      Time      MAC Address      Type
Option 82 Circuit ID
-----
No Matching Entries
=====
```

```
*A:ALA-48>show>router>dhcp>server#
```

Table 105: Output fields: declined addresses pool describes declined address pool output fields.

Table 105: Output fields: declined addresses pool

Field	Description
Pool	The name of the IP address pool
Subnet	The subnet address
IP Address	The declined IP address
Time	The creation time of this entry
MAC Address	The declined MAC address
Type	The type of declined address
PPPoE User Name	The name of the PPPoE user name
Option 82 Circuit ID	The declined circuit ID from the Option 82

declined-addresses

Syntax

**declined-addresses** *ip-address[/mask]*  
**declined-addresses pool** *pool-name*

Context

[\[Tree\]](#) (clear>router>dhcp>server declined-addresses)

Full Context

clear router dhcp local-dhcp-server declined-addresses

Description

This command clears declined DHCP addresses.

Parameters

- pool-name***  
Clears information about the declined pool name.
- ip-address[/mask]***  
Clears information about the declined IP address and mask.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.12 default-domain

default-domain

### Syntax

**default-domain** [**bridge-identifier** {*bridge-id* | *bridge-name*}] [**vlan** *vlan-id*] [**system-settings**]

### Context

[\[Tree\]](#) (show>eth-cfm default-domain)

### Full Context

show eth-cfm default-domain

### Description

This command displays per-MIP index (**bridge-identifier** and **vlan**) configuration as entered under the **default-domain** entries.

### Parameters

- bridge-id*

Specifies the bridge identifier related to the MIP. This is equivalent to the *service-id*.

**Values** 1 to 2147483647
- bridge-name*

Specifies the name of the bridge related to the MIP, up to 64 characters.
- vlan-id*

Specifies the VLAN ID matching the primary VLAN, or "none" if **primary-vlan-enable** is not configured.

**Values** 1 to 4094, none
- system-settings**

Keyword to display the system settings.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### Output

The following output is an example of default domain information, and [Table 106: Output fields: ETH-CFM default domain](#) describes the output fields.

### Output Example

show eth-cfm default-domain  
=====

```

Default Domain Information
=====
System Settings
MHF Creation : none           Level           : 0

=====

```

Table 106: Output fields: ETH-CFM default domain

Label	Description
BridgeName:BridgeID	The name and ID of the association service BridgeName:BridgeID combinations that exceed the allowed column length causes the associated output to be produced on a separate line.
VLAN	The numerical value of the primary VLAN associated with the MIP, or the value <b>none</b>
Level	The configured level value, or <b>defer</b> to the value specified under the system settings for the MIP
Creation	The configured MHF creation mode, or <b>defer</b> to the value specified under the system settings for the MIP
IdPerm	The configured identifier that is carried in supporting ETH-CFM PDUs, or <b>defer</b> to the value specified under the system settings
LtrPr	The configured MIP LTR priority, or <b>defer</b> to the value specified under the system settings for the MIP

## 7.13 delay-template

### delay-template

#### Syntax

**delay-template** *template-name*

Context

[Tree] (show>oam-pm>streaming delay-template)

Full Context

show oam-pm streaming delay-template

Description

This command displays the configuration data for one or all OAM performance monitoring delay templates.

Parameters

*template-name*

Displays the results for a specific delay template, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template** summary information. [Table 107: Output fields: delay template](#) describes the delay template fields.

Output Example

```
show oam-pm streaming delay-template
-----
Streaming Delay Templates
-----
Name                                     Admin  Tests
-----
stream-1                                Up      7
-----
No. of Streaming Delay Templates: 1
-----

show oam-pm streaming delay-template "stream-1"
-----
Tpl Name      : stream-1
Description   : stream delay stats base 1
-----
Admin State    : Up
FD Average     : round-trip
IFDV Average   : round-trip
Sample Window  : 10 seconds
Window Integrity : 80%
Active Test Refs : 6
Total Test Refs  : 7
-----
```

Table 107: Output fields: delay template

Label	Description
Name	Name of the delay template

Label	Description
Admin	State of the delay template
Tests	Number of tests referencing the delay template
Tmpl Name	Name of the delay template
Description	Description of the delay template (truncated beyond width)
Admin State	Up — The delay template is administratively enabled Down — The delay template is administratively disabled
FD Average	forward — The average frame delay metric for forward direction backward — The average frame delay metric for backward direction round-trip — The average frame delay metric for round-trip direction
IFDV Average	forward — The average inter-frame delay variation metric for forward direction backward — The average inter-frame delay variation metric for backward direction round-trip — The average inter-frame delay variation metric for round-trip direction
Sample Window	Length of the sample window
Window Integrity	Percentage required to ensure integrity of the reporting
Active Test Refs	Number of tests actively referencing the delay template
Total Test Refs	Number of total tests referencing the delay template

## 7.14 delay-template-using

### delay-template-using

#### Syntax

**delay-template-using** [**delay-template** *template-name*]

#### Context

[\[Tree\]](#) (show>oam-pm>streaming delay-template-using)

#### Full Context

show oam-pm streaming delay-template-using

Description

This command displays the list of sessions configured against one or all OAM performance monitoring delay templates.

Parameters

**template-name**  
Displays the results for a specific delay template up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template-using** summary information.

Output Example

```
show oam-pm streaming delay-template-using
=====
OAM Performance Monitoring Tests Per Delay Template
=====
Template Name                               Admin
  Session Name                        Test Type  State

## 7.15 dest-tracking

### dest-tracking

#### Syntax

**dest-tracking ip [detail]**  
**dest-tracking ipv6 [detail]**  
**dest-tracking sap [detail]**  
**dest-tracking sdp [detail]**

#### Context

[\[Tree\]](#) (tools>dump>filter>resources dest-tracking)

#### Full Context

tools dump filter resources dest-tracking

#### Description

This command displays information about resources pertaining to tracked targets.

#### Parameters

- ip**  
Displays information about IPv4 targets.
- ipv6**  
Displays information about IPv6 targets.
- sap**  
Displays information about SAP targets.
- sdp**  
Displays information about SDP targets.
- detail**  
Displays detailed information.

#### Platforms

All

#### Output

The following output is an example of filter resource SAP destination tracking information.

#### Output Example

```
A:node-2>tools>dump>filter>resources# dest-tracking sap
```

```
Unique SAPs with tracked forwarding states

=====
```

Table 108: Output fields: PCEP detail

Label	Description
Admin Status	Down — PCEP is administratively disabled. Up — PCEP is administratively enabled.
Oper Status	Down — PCEP is operationally down. Up — PCEP is operationally up.
Unknown Msg Limit	Specifies the unknown messages, per minute, limit.
Keepalive Interval	Specifies the keepalive interval.
DeadTimer Interval	Specifies the number of matching entries.
Capabilities List	Specifies the capabilities listing.
Address	Specifies the IP address.
Report Path Constraints	True — Path constraints will be reported. False — Path constraints will not be reported.
Redelegation Interval	Specifies the redelegation timer interval.
State Interval	Specifies the state timer interval.
State Timer Action	Remove — Specifies the state timer action is remove. None — Specifies the state timer action is none.
Max SR-TE PCE Init Lsps	Specifies the maximum number of PCE initiated SR-TE LSPs that can be created by the router.
Open Wait Timer	Specifies the open wait timer value.
Keep Wait Timer	Specifies the keep wait timer value.
Sync Timer	Specifies the sync timer value.
Request Timer	Specifies the request timer value.
Connection Timer	Specifies the connection timer value.
Allow Negotiations	True — Allow negotiations will occur. False — Allow negotiations will not occur.
Max Sessions	Specifies the maximum sessions value.

Label	Description
Max Unknown Req	Specifies the maximum unknown requests value.

detail

Syntax

**detail** [*partition*]

Context

[\[Tree\]](#) (show>app-assure>group>http-enrich detail)

Full Context

show application-assurance group http-enrich detail

Description

This command displays detailed HTTP Enrichment information.

Parameters

*partition*

Specifies the partition within the group.

**Values**    1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail

Syntax

**detail**

Context

[\[Tree\]](#) (show>router>bgp>routes detail)

Full Context

show router bgp routes detail

Description

This command displays detailed information about the BGP routes, including information about the original path attribute values.

**detail** is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

**Platforms**  
All

7.17 detected-protocols

detected-protocols

**Syntax**  
**detected-protocols** {**all** | **sap** *sap-id* | **spoke-sdp** *sdp-id[:vc-id]*}

**Context**  
[\[Tree\]](#) (clear>service>id>stp detected-protocols)

**Full Context**  
clear service id stp detected-protocols

**Description**  
RSTP automatically falls back to STP mode when it receives an STP BPDU. The **clear detected-protocols** command forces the system to revert to the default RSTP mode on the SAP or spoke SDP.

- Parameters**
- all**  
Clears all detected protocol information.
  - sap-id**  
Clears the specified lease state SAP information.
  - sdp-id**  
The SDP ID to be cleared.  
**Values** 1 to 17407
  - vc-id**  
The virtual circuit ID on the SDP ID to be cleared.  
**Values** 1 to 4294967295

## 7.19 device

### device

#### Syntax

**device** [*ieee-address*]

#### Context

[\[Tree\]](#) (show>system>bluetooth device)

#### Full Context

show system bluetooth device

#### Description

This command displays information for Bluetooth devices registered with the system.

#### Parameters

***ieee-address***

Specifies the MAC address, up to 30 characters.

Platforms

7750 SR-1, 7750 SR-s, 7950 XRS-20e

Output

Use the following command to display Bluetooth device information.

```
show system bluetooth device
```

The following output is an example of Bluetooth device information, and [Table 109: Output fields: Bluetooth device](#) describes the output fields.

Output Example

```
=====
System-wide Bluetooth Configuration
=====
Passkey           : 123456           Advertising Timeout: 30
Power State       : off              Pairing Button      : Disabled
=====

Bluetooth Devices
=====
Device MAC        : 12:34:12:34:12:34
Description       : (Not Specified)

-----
Number of Devices : 1
=====
```

Table 109: Output fields: Bluetooth device

Label	Description
Passkey	The Bluetooth passkey in use by the system
Advertising Timeout	The amount of time, in seconds, that the Bluetooth module advertises it is ready to pair.
Power State	The operating mode for Bluetooth
Pairing Button	Displays whether the pairing button is enabled for use
Device MAC	The MAC address of the Bluetooth device registered for connection to the module
Description	The description of the registered Bluetooth device

tools perform router dhcp

### Description

Commands in this context configure tools DHCP parameters.

### Platforms

All

## dhcp

### Syntax

**dhcp** [*filter-id*]

### Context

[\[Tree\]](#) (show>filter dhcp)

### Full Context

show filter dhcp

### Description

This command displays DHCP filter information.

### Parameters

***filter-id***

Displays detailed information for the specified filter ID and its filter entries.

**Values** 1 to 65535

### Platforms

All

### Output

The following output is an example of the command information when no filter ID is specified.

Output Example

```
*B:TechPubs>config# show filter dhcp
=====
DHCP Filters
=====
Filter-Id   Applied Description
-----
10          No      test-dhcp-filter
-----
Num filter entries: 1
=====
*B:TechPubs>config#

*B:TechPubs>config# show filter dhcp 10
=====
DHCP Filter
=====
Filter-Id   : 10                      Applied      : No
Entries     : 0
Description : test-dhcp-filter

7.21 dhcp-client

dhcp-client

Syntax

dhcp-client interface *ip-int-name* statistics

Context

[\[Tree\]](#) (clear>router>autoconfigure dhcp-client)

Full Context

clear router autoconfigure dhcp-client

Description

This command clears DHCP client information.

Parameters

*ip-int-name*

Clears DHCP client information on the specified interface, up to 32 characters.

## Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

## dhcp-client

### Syntax

**dhcp-client interface** *ip-int-name* **routes**

**dhcp-client interface** *ip-int-name* **statistics**

**dhcp-client interface** *ip-int-name*

### Context

[\[Tree\]](#) (show>router>autoconfigure dhcp-client)

### Full Context

show router autoconfigure dhcp-client

### Description

This command displays DHCP client information.

### Parameters

#### *ip-int-name*

Specifies the IP interface name, up to 32 characters.

#### **statistics**

Displays DHCP client statistics.

#### **routes**

Displays routes received by the DHCP protocol.

## Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

## 7.22 dhcp-rx-stats

## dhcp-rx-stats

### Syntax

**dhcp-rx-stats** [clear]

### Context

[\[Tree\]](#) (tools>dump dhcp-rx-stats)

Full Context

tools dump dhcp-rx-stats

Description

This command displays the DHCP received packet statistics.

Parameters

**clear**  
Clears DHCP RX statistics.

Platforms

All

Output

The following output is an example of DHCP RX statistics information.

Output Example

\*A:# tools dump dhcp-rx-stats

DHCP Received Packet Statistics					
Type		Received	Forwarded	Dropped	Dropped (ESM)
IPv4	DISCOVER	72	72	0	0

## 7.24 dhcp6-client

### dhcp6-client

#### Syntax

**dhcp6-client interface *ip-int-name* statistics**

#### Context

[\[Tree\]](#) (clear>router>autoconfigure dhcp6-client)

#### Full Context

clear router autoconfigure dhcp6-client

#### Description

This command clears DHCPv6 client information.

#### Parameters

***ip-int-name***

Clears DHCPv6 client information on the specified interface, up to 32 characters.

#### Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

### dhcp6-client

#### Syntax

**dhcp6-client interface *ip-int-name***

**dhcp6-client interface *ip-int-name* statistics**

#### Context

[\[Tree\]](#) (show>router>autoconfigure dhcp6-client)

#### Full Context

show router autoconfigure dhcp6-client

#### Description

This command displays DHCPv6 client information.

Parameters

- ip-int-name*  
Specifies the IP interface name, up to 32 characters.
- statistics**  
Displays DHCPv6 client statistics.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

7.25 diameter

diameter

Syntax

diameter

Context

[\[Tree\]](#) (show>service>active-subscribers>hierarchy diameter)

Full Context

show service active-subscribers hierarchy diameter

Description

This command provides information about the active Diameter Gx and Diameter Gy session IDs.

 **Note:** The diameter NASREQ application is stateless in SR OS and therefore a NASREQ session ID is not included in the output.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the active Diameter Gx and Gy session IDs and [Table 110: Output fields: active subscriber hierarchy diameter](#) describes the output fields.

```
show service active-subscribers hierarchy diameter
```

Output Example

```
=====
Active Subscribers Hierarchy (diameter information)
=====
-- ipoe-1
   (sub-profile-1)
```

```
|
+-- sap:[1/x1/1/c1/4:2211.2005] - sla:sla-profile-1

-----
Number of active subscribers : 1
Flags: (N) = the host or the managed route is in non-forwarding state
=====
```

Table 110: Output fields: active subscriber hierarchy diameter

Field	Description
Gy-diam-session-id	The active Diameter Gy session ID for this SLA Profile Instance. N/A when no session is active.
Gx-diam-session-id	The active Diameter Gx session ID for this subscriber host or session. N/A when no session is active.

7.26 diameter-application-policy

diameter-application-policy

**Syntax**  
diameter-application-policy [name]

**Context**  
[Tree] (show>subscr-mgmt diameter-application-policy)

**Full Context**  
show subscriber-mgmt diameter-application-policy

**Description**  
This command displays Diameter application policy information.

**Parameters**  
name  
Specifies the application policy, up to 32 characters, for which orphaned Gx sessions are displayed.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of subscriber management Diameter application policy information

### Output Example

```
# show subscriber-mgmt diameter-application-policy
=====
DIAMETER application policies
=====
Name                               Description

**Table 111: Output fields: diameter application policy** describes diameter application policy output fields.

*Table 111: Output fields: diameter application policy*

Field	Description
Description	The user provided description of this policy
Session failover	Failover is enabled or disabled
Failover Handling	Handling is retry-and-terminate or terminate
Peer policy	The diameter application peer policy name
Application	The policy's application, gx, gy, or nasreq
Tx timer (s)	The maximum wait time (seconds) while a client is pending
Last management change	The time of the most recent management-initiated change to this policy
Include AVP	The attribute-value-pairs for Gx messages

Field	Description
Calling-Station-Id type	The string that is put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
NAS-Port bits spec	The number that is put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Id prefix type	The type of prefix that is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
NAS-Port-Id prefix	The user configurable string that is added as the prefix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Id suffix type	The user configurable string that is added as the suffix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Type value	The value that is put in the RADIUS NAS-Port-Type attribute if included in RADIUS accounting-request messages
User-Equipment-Info	The user equipment info, eui64, imeisv, mac, or modified-eui64

## diameter-application-policy

### Syntax

**diameter-application-policy** *name* **statistics**

### Context

[\[Tree\]](#) (clear>subscr-mgmt diameter-application-policy)

### Full Context

clear subscriber-mgmt diameter-application-policy

### Description

This command clears Diameter application policy data.

### Parameters

***name***

Specifies the Diameter application policy name, up to 32 characters.

***statistics***

Clears Diameter application policy statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.27 diameter-node

diameter-node

Syntax

diameter-node *origin-host-string* **peer** *dest-host-string*  
diameter-node *origin-host-string* **peer** *dest-host-string* **statistics**  
diameter-node *origin-host-string* **peers**  
diameter-node *origin-host-string* **routing-table**

Context

[Tree] (show>aaa diameter-node)

Full Context

show aaa diameter-node

Description

This command displays information about a Diameter node.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of Diameter node information.

Output Example

```
show aaa diameter node "node1.myrealm.com" routing-table
=====
Diameter Routing Table (Node: node1.myrealm.com)
=====
Realm Name           Appl      Pref:Index  Server-Identifier
-----
subrealm.telenet.be  Gx        30:1       node1.subrealm.telenet.be
telenet.be           Gx         60        node2.subrealm.telenet.be
telenet.be           relay      50        node3.subrealm.telenet.be
-----
No. of Routes: 5
=====
```

Table 112: Output fields: diameter node routing table describes routing entries in the Diameter realm-based routing table fields.

Table 112: Output fields: diameter node routing table

Field	Description
Realm Name	The destination realm name
Appl	The application for which this route will be used. Supported applications: <ul style="list-style-type: none"> <li>• NASREQ</li> <li>• Gx</li> <li>• Gy</li> <li>• Relay (encompass all applications)</li> </ul>
Pref:Index	The preference and index of the peer. Peers for the same realm are selected in order of preference. Peers with the lowest preference are preferred. If multiple peers have the same preference for the same realm, the peer with a lowest index is selected. Preference and index are user-configured parameters.
Server-Identifier	The next hop peer name

```
show aaa diameter node "node1.myrealm.com" peer "relay.telenet.be"

```

Table 113: Output fields: diameter node peer describes Diameter node peer fields.

Table 113: Output fields: diameter node peer

Field	Description
Diameter Node	The Diameter node under which this peer is active
Index	The Peer index is a peer configuration parameter
Remote Host Identity	The peer identity
Remote Realm	The realm to which the peer belongs
Remote IP address	The IP address of the peer
Remote Port	The port on the peer used for Diameter communication
Remote Origin-State-Id	The Origin-State-Id of the peer
Local Host Identity	The local identity
Local Realm	The local realm name
Local IP address	The local IP address
Local Port	The local port used for Diameter communication
Peer Admin State	The administrative state of the configured peer
Peer Active	Indicates whether the connection towards the peer is active
Peer Status	The operational status of the configured peer
Active Applications	The applications used over this peer
Last Disconnect Cause	The last disconnect cause
Preference	The configured preference of the peer
Connection Timer (Tc)	The timer used to initiate connections towards the peer. In case that the connection is not successfully established, a new attempt is periodically tried (every Tc interval)
Watchdog Timer (Tw)	The watchdog timer value that detects the failed connection towards the peer
Last Mgmt Change	The date and time of the last management change

Pref	The preference and index of the peer. Peers for the same realm are selected in order of preference. Peers with higher preference are preferred. If multiple peers have the same preference for the same realm, the peer with a lowest index is selected. Preference and index are user-configured parameters.
Entry	Dynamic or static diameter route
Server-Identifier	The next hop peer name

diameter-node

Syntax

diameter-node *origin-host-string* peer *dest-host-string* statistics

Context

[Tree] (clear>aaa diameter-node)

Full Context

clear aaa diameter-node

Description

This command clears Diameter node data.

Parameters

*origin-host-string*

Specifies the origin host name, up to 80 characters.

***dest-host-string***

Specifies the destination host name, up to 80 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.28 diameter-session

### diameter-session

**Syntax**

**diameter-session**

**Context**

[\[Tree\]](#) (show>subscr-mgmt diameter-session)

**Full Context**

show subscriber-mgmt diameter-session

**Description**

Commands in this context display diameter session information.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### diameter-session

**Syntax**

**diameter-session**

**Context**

## 7.30 discovery

### discovery

#### Syntax

**discovery** [{peer *[ip-address]*} | {interface *[ ip-int-name]*}] [state *state*] [detail] [ adjacency-type *type*]

**discovery** [state *state*] [detail | summary] [adjacency-type *type*] [session *ip-addr*[*label-space*]]

**discovery** [state *state*] [detail | summary] [adjacency-type *type*] [*family*]

**discovery interface** [*ip-int-name*] [state *state*] [detail | summary] [session *ip-addr*[*label-space*]]

**discovery peer** [*ip-address*] [state *state*] [ detail | summary] [session *ip-addr* [*label-space*]]

#### Context

[\[Tree\]](#) (show>router>ldp discovery)

#### Full Context

show router ldp discovery

Description

This command displays the status of the interfaces participating in LDP discovery.

Parameters

**peer ip-address**

Specifies to display the IP address of the peer.

**interface ip-int-name**

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**state state**

Specifies to display the current operational state of the adjacency.

**Values**    established, trying, down

**detail**

Specifies to display detailed information.

**family**

Displays either IPv4 or IPv6 LDP session information.

**adjacency-type type**

Specifies to display the adjacency type.

**Values**    link, targeted

Platforms

All

Output

LDP Discovery Output

Table 116: Output fields: LDP discovery describes the LDP discovery output fields.

Table 116: Output fields: LDP discovery

Label	Description
Interface Name	The name of the interface.
Local Addr	The IP address of the originating (local) router.
Peer Addr	The IP address of the peer.
AdjType	The adjacency type between the LDP peer and LDP session is targeted.
State	Established — The adjacency is established. Trying — The adjacency is not yet established.

Label	Description
No. of Hello Adjacencies	The total number of hello adjacencies discovered.
Up Time	The amount of time the adjacency has been enabled.
Hold Time Remaining	The time left before a neighbor is declared to be down.

### Output Example

```
*A:Dut-A# show router ldp discovery
=====
LDP IPv4 Hello Adjacencies

## 7.31 dist-cpu-protection

### dist-cpu-protection

#### Syntax

**cpu-protection**

#### Context

[\[Tree\]](#) (show>system>security dist-cpu-protection)

#### Full Context

show system security dist-cpu-protection

#### Description

Commands in this context display Distributed CPU Protection information.

#### Platforms

All

### dist-cpu-protection

#### Syntax

**dist-cpu-protection**

#### Context

[\[Tree\]](#) (tools>dump>security dist-cpu-protection)

[\[Tree\]](#) (tools>perform>security dist-cpu-protection)

#### Full Context

tools dump security dist-cpu-protection

tools perform security dist-cpu-protection

#### Description

This command displays to release Distributed CPU Protection parameters and status at the per card and forwarding plane level.

## Platforms

All

## dist-cpu-protection

### Syntax

**dist-cpu-protection** [**detail**]

### Context

[\[Tree\]](#) (show>port dist-cpu-protection)

### Full Context

show port dist-cpu-protection

### Description

This command displays distributed CPU protection information.

### Parameters

**detail**

Displays detailed information.

## Platforms

All

## 7.32 diversity

## diversity

### Syntax

**diversity** *diversity-assoc-name*

### Context

[\[Tree\]](#) (show>router>pcep>pcc>pce-assoc diversity)

### Full Context

show router pcep pcc pce-associations diversity

### Description

This command displays the diversity association information.

If a diversity association name is not specified, the information for all configured diversity associations is displayed.

Parameters

**diversity-assoc-name**

Specifies the diversity association name.

Platforms

All

Output

The following output is an example of diversity association information, and [Table 117: Output fields: PCE associations diversity](#) describes the output fields.

Output Example

```
*A:Dut-C>config>router>mpls>lsp# show router pcep pcc pce-associations diversity "test_div"
=====
PCEP PCC Diversity Associations Info
=====
Association Name      : test_div
Association ID         : 20
Association Source     : 192.168.213.59
Diversity Type        : link
Disjointness Type     : loose
Disjoint Reference    : False
=====
```

Table 117: Output fields: PCE associations diversity

Label	Description
Association Name	The diversity association name
Association ID	The diversity association ID
Association Source	The diversity source address of the diversity association. Both IPv4 and IPv6 addresses are supported.
Diversity Type	The diversity type of the diversity association
Disjointness Type	The disjointness type of the diversity association
Disjoint Reference	The P-flag value conveyed to the disjointness configuration TLV

## 7.33 dm

```
dm
```

### Syntax

```
dm [interval seconds] [ repeat repeatf] [absolute | rate]
```

### Context

```
[Tree] (monitor>oam-pm>session dm)
```

### Full Context

```
monitor oam-pm session dm
```

### Description

This command monitors the MPLS Delay Measurement (DM) statistics for the specified test's raw measurement interval.

### Parameters

**seconds**

Specifies the time interval, in seconds.

**Values** 3 to 60

**Default** 10

**repeat**

Specifies the number of times the command is repeated.

**Values** 1 to 999

**Default** 10

**absolute**

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

**rate**

Specifies that the rate-per-second is displayed.

**Default** delta

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dm

### Syntax

dm

### Context

[\[Tree\]](#) (show>oam-pm>stats>session dm)

### Full Context

show oam-pm statistics session dm

### Description

This command selects the session's MPLS DM test for the statistical display.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 7.34 dmm

## dmm

### Syntax

dmm [*interval seconds*] [ *repeat repeat*] [*absolute* | *rate*]

### Context

[\[Tree\]](#) (monitor>oam-pm>session dmm)

### Full Context

monitor oam-pm session dmm

### Description

This command monitors the Ethernet Delay Measurement Message (DMM) statistics for the specified test's raw measurement interval.

### Parameters

***seconds***

Specifies the time interval, in seconds.

**Values** 3 to 60

**Default** 10

***repeat***

Specifies the number of times the command is repeated.

**Values** 1 to 999

**Default** 10

***absolute***

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

***rate***

Specifies that the rate-per-second is displayed.

**Default** delta

**Platforms**

All

dmm

**Syntax**

dmm

**Context**

[\[Tree\]](#) (show>oam-pm>stats>session dmm)

**Full Context**

show oam-pm statistics session dmm

**Description**

This command selects the session's Ethernet DMM test for the statistical display.

**Platforms**

All

## 7.35 dns

dns

### Syntax

dns

### Context

[\[Tree\]](#) (show>router dns)

### Full Context

show router dns

### Description

This command displays DNS information.

### Platforms

All

### Output

The following output is an example of DNS settings information.

### Output Example

```
*A:Dut-C# show router dns
=====
Redirect VPRN           : Service: 300
Administrative state    : enabled
Default domain name     : (Not Specified)
Primary DNS             : 9.0.0.22
Secondary DNS           : 2009::16
Tertiary DNS            : (Not Specified)
IPv4 source address     : 5.1.45.3
IPv6 source address     : 2005::1:2d:3
Last management change  : 01/13/2020 11:00:13
```

## 7.36 dns-enrich

dns-enrich

### Syntax

dns-enrich *dns-enrich-name* [detail]

Context

[Tree] (show>app-assure>group dns-enrich)

Full Context

show application-assurance group dns-enrich

Description

This command displays DNS enrichment information.

Parameters

- dns-enrich-name**  
Specifies the DNS enrichment object name up to 32 characters.
- detail**  
Keyword to display detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of DNS enrichment information, and [Table 118: Output fields: DNS enrichment](#) describes the output fields.

Output example

```
*A:node-2# /show application-assurance group 1:0 dns-enrich "dns_enrich_01" detail
=====
Application Assurance Group 1:0 DNS Enrichment "dns_enrich_01"

                                Traffic Characteristics  : 0
                                Exceeded Max Packet Size : 0
```

```
-----
Total           : 0
=====
```

Table 118: Output fields: DNS enrichment

Label	Description
Application Assurance Group	Displays the name of the application assurance group
Description	Displays the description of the group (if specified)
Admin Status	Displays the administrative status of the group
AQP Referenced	Displays whether an AQP is referenced
Enriched Requests (UDP)	Displays the number of enriched DNS UDP requests processed by the group
Missing Subscriber ID (UDP)	Displays the number of DNS UDP requests in which the subscriber ID is missing
Template Not Enabled (UDP)	Displays the number of DNS UDP requests in which the DNS enrichment policy is not enabled
Traffic Characteristics (UDP)	Displays the number of DNS UDP requests dropped due to traffic characteristics errors such as fragmented, malformed or tunneled (IP in IP) requests
Exceeded Max Packet Size (UDP)	Displays the number of DNS UDP requests dropped due to packet size exceeding the limit
Enriched Requests (TCP)	Displays the number of enriched DNS TCP requests processed by the group
Missing Subscriber ID (TCP)	Displays the number of DNS TCP requests in which the subscriber ID is missing
Template Not Enabled (TCP)	Displays the number of DNS TCP requests in which the DNS enrichment policy is not enabled
Out Of Resources	Displays the number of DNS TCP requests dropped due to insufficient resources
Traffic Characteristics (TCP)	Displays the number of DNS TCP requests dropped due to traffic characteristics errors such as fragmented, malformed or tunneled (IP in IP) requests in addition to other errors such as exceeded TCP window size or exceeded MTU size
Exceeded Max Packet Size (TCP)	Displays the number of DNS TCP requests dropped due to packet size exceeding the limit

Label	Description
Total	Displays the total number of enriched DNS requests (both UDP and TCP) processed by the group

### 7.37 dns-ip-cache

dns-ip-cache

**Syntax**

```
dns-ip-cache cache-name isa mda-id
dns-ip-cache cache-name
```

**Context**

```
[Tree] (show>app-assure>group dns-ip-cache)
```

**Full Context**

```
show application-assurance group dns-ip-cache
```

**Description**

This command displays the application assurance DNS IP cache statistics and status information.

**Parameters**

- cache-name**  
Specifies the DNS IP cache for a particular ISA-AA card, up to 32 characters.
- mda-id**  
Specifies the AA ISA.  
**Values** slot 1 to 10, mda 1 to 2

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

Table 119: Output fields: DNS IP cache describes the **show** command output fields.

Table 119: Output fields: DNS IP cache

Label	Description
Admin Status	Indicates the administrative status of the DNS IP cache. [Up   Down]

Label	Description
Domain expressions	Indicates the number of DNS domain expressions configured.
Server addresses	Indicates the number of server-addresses configured
High-Watermark	Indicates the value, in percentage, of the configured high watermark.
Low-Watermark	Indicates the value, in percentage, of the configured low watermark.
Cache-size	Indicates the value of the configured maximum cache size.
Usage	Indicates the value, in percentage, of the total for the number of entries in the cache.
Alarm State	Indicates the status of the alarm related to the DNS IP cache high/low watermark utilization. The alarm is raised when the high watermark is crossed; it is cleared when it goes below the low watermark. [Clear   Raised]
Hit-Count	Indicates the number of times an IP address lookup in this cache was successful.
Total responses	Indicates the total number of DNS responses analyzed.
Domain name matched	Indicates the number of times a domain name defined in the DNS match criteria matched a DNS response.
Domain & server matched	Indicates the number of times both the domain name and server address defined in the DNS match criteria matched a DNS response.
Total entries added	Indicates the total number of IP entries added in the cache.
Total entries removed	Indicates the total number of IP entries removed from the cache after the entry expired.
Full count	Indicates the total number of IP entries in the cache.
Hit Count	Indicates the number of times an IP address lookup in this cache was successful. The IP address lookup is performed in app-filters and is successful if the server address DNS IP cache criteria is met.
Miss Count	Indicates the number of times an IP address lookup in this cache was unsuccessful. The IP address lookup is performed in app-filters and is unsuccessful if the server address DNS IP cache criteria is not met.

dns-ip-cache

Syntax

```
dns-ip-cache dns-ip-cache-name url file-url
dns-ip-cache dns-ip-cache-name isa mda-id/esa-vm-id [url file-url] [new-ip-count]
```

Context

```
[Tree] (tools>dump>app-assure>group dns-ip-cache)
```

Full Context

tools dump application-assurance group dns-ip-cache

Description

This command displays the list of IP addresses stored in a DNS IP cache.

Parameters

*dns-ip-cache-name*

Specifies a DNS IP cache name, up to 32 characters.

*url file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url   remote-url	local-url	[<cflash-id>/][<file-path> 200 chars max, including cflash-id directory length 99 chars max each
	remote-url	{ftp  tftp}://[<login>:<pswd>@] <remote-locn>/[<file-path> 255 chars max <file-path> 199 chars max
	remote-locn	{ <hostname>   <ipv4-address>   "[<ipv6-address>"] }[:<port>] ipv4-address     a.b.c.d ipv6-address     x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface - 32 chars max, for link local addresses
	port	[0..65535]
	cflash-id	cf1:  cf1-A:  cf1-B:  cf2:  cf2-A:  cf2-B:  cf3:  cf3-A:  cf3-B:

*isa mda-id/esa-vm-id*

Specifies the DNS IP cache for a particular ISA-AA card.

Values	slot/mda	slot: 1 to 10
		mda: 1, 2
	esa-esa-id/vm-id	esa-id: 1 to 16
		vm-id: 1 to 4

**new-ip-count**  
Displays the number of new IP addresses added to the cache.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following are output examples for this command.

**Output Example**

```

Table 120: Output fields: tools DNS IP cache

Label	Description
ip-address	Indicates the IP address stored in the DNS IP cache. The address is added into the cache if the DNS response meets the DNS IP cache match criteria (domain name and DNS server address).
creationTime	Indicates the time at which the entry was created. The entry is created by a DNS response meeting the DNS IP cache match criteria (domain name and DNS server address).
lastUpdated(UTC)	Indicates the time at which the entry was last updated, either from a new IP flow (fully classified) using the same IP address or a new DNS response meeting the DNS IP cache match criteria.
numDNSResponses	Indicates the number of DNS responses including this IP address meeting the DNS IP cache match criteria.
lastMatchTime(UTC)	Indicates the last time the IP address matched an app-filter with a server address DNS IP cache criteria.
numTimesMatched	Indicates the number of times the IP address matched an app-filter with a server address DNS IP cache.
domain	Indicates the domain as configured in dns-ip-cache.
hostname	Indicates the hostname as configured in dns-ip-cache.
new-ip-count	Indicates the number of new IP addresses added in the cache for the domain.

## 7.38 domain

### domain

#### Syntax

**domain** [*md-index* | *md-admin-name*] [ **association** {*ma-index* | *ma-admin-name* | **all-associations**}]  
[**detail**]

#### Context

[\[Tree\]](#) (show>eth-cfm domain)

#### Full Context

show eth-cfm domain

#### Description

This command displays domain information.

#### Parameters

*md-index*

Specifies the index of the MD to which the MP is associated, or 0, if none.

**Values** 1 to 4294967295

*md-admin-name*

Specifies the administrative name for the domain, up to 64 characters.

*ma-index*

Specifies the index to which the MP is associated, or 0, if none.

**Values** 1 to 4294967295

*ma-admin-name*

Specifies the administrative name for the association, up to 64 characters.

**all-associations**

Keyword to display all associations to the MD.

**detail**

Keyword to isplay detailed domain information.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### Output

The following outputs are examples of ETH-CFM domain information.

## Output Example

```
*A:node-1# show eth-cfm domain
=====
CFM Domain Table
=====
Md-index   Level Name                               Format
  md-admin-name
-----
15         5                               none
      level5-common
=====

*A:node-1# show eth-cfm domain level5-common detail
=====

Name Format    : none                      Next Ma Index   : 1
Name          : (Not Specified)
Admin Name    : level5-common
Creation Origin : manual
=====
```

Table 121: Output fields: ETH-CFM domain

Label	Description
Md-index	Displays the MD index value
Level	Displays an integer identifying the maintenance domain Level (MD Level)  Higher numbers correspond to higher maintenance domains (those with the greatest physical reach), with the highest values for customer CFM PDUs. Lower numbers correspond to lower maintenance domains (those with more limited physical reach), with the lowest values for CFM PDUs protecting single bridges or physical links.
Name	Displays a generic MD name
Format	Displays the type of the MD name Values include <b>dns</b> , <b>none</b> , <b>mac</b> , and <b>string</b>
md-admin-name	Displays the administrative MD name

## Output example — all associations

```
show eth-cfm domain all-associations
=====
CFM Association Table
=====
Md-index  Ma-index  Name                               Int  Hold  Bridge-id  MEPS TxSid

    10
    100
    vpls-100

12      1000     vpls-100-1      1      n/a      4      yes
    12
    vpls-100-1
    vpls-100
=====
* indicates that the corresponding row element may have been truncated.

```

Table 122: Output fields: ETH-CFM domain all-associations

Label	Description
Md-index	Displays the MD index value
Ma-index	Displays the MA index value
Name	Displays the generic MD name
Int	Displays the CCM transmission interval for all MEPs in the association
Hold	Displays the CCM hold time, in milliseconds, that is added before the defect condition is raised. A value of "n/a" indicates that the MEP is not subsecond and does not support the CCM hold time.
Bridge-id	Displays the bridge-identifier value for the domain association
MEPS	Displays the total local and remote maintenance association end point (MEP)
TxSid	Yes — the Sender ID TLV is included in the supported ETH-CFM PDUs No — the Sender ID TLV is not included in the supported ETH-CFM PDUs
md-admin-name	Displays the administrative MD name
ma-admin-name	Displays the administrative MA name
bridge-name	Displays the administrative bridge-identifier name

## domain

### Syntax

**domain** [*domain-name*]

### Context

**[Tree]** (show>router>firewall domain)

### Full Context

show router firewall domain

## Description

This command lists an overview of all firewall domains that are provisioned in the routing instance.  
Configuring the *domain-name* parameter will display operational details for the specified firewall domain.

## Parameters

### *domain-name*

Specifies the name of a firewall domain, up to 32 characters maximum.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of firewall domain information.

### Output Example

```
Node# show router 4 firewall domain

## domain

## Syntax

**domain** *ipsec-domain-id* [now] **auto**

**domain** *ipsec-domain-id* [now] **to** *router-id*

## Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec>force-switchover domain)

## Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover domain

## Description

This command triggers an IPsec N:M switchover for the specified IPsec domain.

## Parameters

### *ipsec-domain-id*

Specifies the multi-chassis IPsec domain value.

**Values** 1 to 255

### *now*

Specifies to switchover without confirmation.

### *auto*

Automatically elects a new active node, excluding the current active node.

### *to router-id*

Specifies the router ID of the new active node.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 7.39 dot1x

```
dot1x
```

## Syntax

dot1x

## Context

[\[Tree\]](#) (show>system>security dot1x)

## Full Context

show system security dot1x

## Description

This command displays IEEE 802.1X authentication information.

## Platforms

All

## 7.40 downgrade

### downgrade

#### Syntax

**downgrade target-version** *target* [**reboot**]

#### Context

[\[Tree\]](#) (tools>perform>persistence downgrade)

#### Full Context

tools perform persistence downgrade

#### Description

This command downgrades persistence files to a previous version.

#### Parameters

**target**

Specifies the downgrade version.

**reboot**

Specifies to reboot the system after a successful conversion.

## Platforms

All

## 7.41 downstream-nodes

### downstream-nodes

#### Syntax

**downstream-nodes**

#### Context

[\[Tree\]](#) (show>router>p2mp-sr-tree downstream-nodes)

Full Context

show router p2mp-sr-tree downstream-nodes

Description

This command displays information for the downstream nodes of the P2MP SR tree.

Platforms

All

Output

The following output is an example of downstream nodes information, and [Table 123: Output fields: P2MP SR tree downstream nodes](#) describes the output fields.

Output Example

```

Admin/Oper	Administrative state/Operational state of the entity

## downstream-nodes

### Syntax

**downstream-nodes** [*id*] [**nh-addr** *ip-address*] [**nh-ifName** *interface-name*] [**replication-sid** *label*] [**oper** {**up** | **down**}]

### Context

**[Tree]** (show>router>p2mp-sr-tree>replication-segment downstream-nodes)

### Full Context

show router p2mp-sr-tree replication-segment downstream-nodes

### Description

This command displays information for the specified replication segment next hops of the P2MP SR tree.

### Parameters

***id***

Specifies the next-hop ID.

**Values** 1 to 4096

***ip-address***

Specifies the root IPv4 address.

***interface-name***

Specifies the interface name, up to 32 characters.

***label***

Displays the specified label number.

**Values** 0, 16 to 1048576

**oper up**

Displays the next-hop with operational status up.

**oper down**

Displays the next-hop with operational status down.

### Platforms

All

## 7.42 drain

drain

### Syntax

[no] drain

### Context

[\[Tree\]](#) (tools>perform>router>l2tp>group drain)

### Full Context

tools perform router l2tp group drain

### Description

This command triggers an attempt to drain a specified L2TP tunnel group.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drain

tools perform router l2tp tunnel drain

tools perform router l2tp group tunnel drain

### Description

This command triggers an attempt to drain a specified L2TP tunnel.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## drain

### Syntax

[no] drain

### Context

[\[Tree\]](#) (tools>perform>router>l2tp>peer drain)

### Full Context

tools perform router l2tp peer drain

### Description

This command triggers an attempt to drain a specified L2TP peer.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.43 ds-lite-b4

## ds-lite-b4

### Syntax

dscp-table [value *dscp-value*]

### Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway ds-lite-b4)

### Full Context

show subscriber-mgmt vrgw brg gateway ds-lite-b4

### Description

This command displays the DS-Lite B4 services of a gateway.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.44 dscp-map

```
dscp-map
```

**Syntax**

```
dscp-map [dscp-name]
```

**Context**

```
[Tree] (show>router>sgt-qos dscp-map)
```

**Full Context**

```
show router sgt-qos dscp-map
```

**Description**

This command displays DSCP to FC mappings.

**Parameters**

**dscp-name**

Specifies the DSCP name.

**Values**    be, ef, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cp9, cs1, cs2, cs3, cs4, cs5, nc1, nc2, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cp11, cp13, cp15, cp17, cp19, cp21, cp23, cp25, cp27, cp29, cp31, cp33, cp35, cp37, cp39, cp41, cp42, cp43, cp44, cp45, cp47, cp49, cp50, cp51, cp52, cp53, cp54, cp55, cp57, cp58, cp59, cp60, cp61, cp62, cp63

**Platforms**

All

**Output**

The following output is an example of DSCP mapping information.

**Output Example**

```

## 7.45 dscp-table

### dscp-table

**Syntax**

**dscp-table** [**value** *dscp-value*]

**Context**

[\[Tree\]](#) (show>qos dscp-table)

**Full Context**

show qos dscp-table

**Description**

This command displays the DSCP name-to-DSCP value mappings.

**Parameters**

**value** *dscp-value*

The specific DSCP value for which to display information.

**Values**     0 to 63

**Default**    Show all values

**Platforms**

All

**Output**

The following output is an example of dscp-table information, and [Table 124: Output fields: QoS DHCP table](#) describes the output fields.

**Output Example**

```
A:ALA-48# show qos dscp-table

DSCP Value	Displays the DSCP values, between 0 and 63.
TOS (bin)	Displays the type of service in binary format.
TOS (hex)	Displays the type of service in hex format.

## 7.46 dslite-lsn-sub

### dslite-lsn-sub

#### Syntax

**dslite-lsn-sub router router-instance b4-address-prefix ipv6-prefix**

#### Context

[\[Tree\]](#) (clear>nat dslite-lsn-sub)

#### Full Context

clear nat dslite-lsn-sub

#### Description

This command clears NAT mappings for Dual-Stack Lite (DS-Lite) LSN subscribers.

#### Parameters

**router-instance**

Specifies the router instance, up to 32 characters.

**ipv6-prefix**

Specifies the IPv6 prefix and length.

- Values**
- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H

- d: [0 to 255]D

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 7.47 dump

dump

### Syntax

## 7.48 duplicate

duplicate

### Syntax

duplicate [*ip-address*]

### Context

[\[Tree\]](#) (clear>service>id>proxy-arp duplicate)

### Full Context

clear service id proxy-arp duplicate

### Description

This command clears proxy-ARP duplicate entries.

Parameters

*ip-address*  
Specifies the IP address.  
**Values**    a.b.c.d

Platforms

All

duplicate

Syntax

**duplicate** [*ipv6-address*]

Context

[\[Tree\]](#) (clear>service>id>proxy-nd duplicate)

Full Context

clear service id proxy-nd duplicate

Description

This command clears proxy-ND duplicate entries.

Parameters

*ipv6-address*  
Specifies the IPv6 address.

- Values**
- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF] H
  - d: [0 to 255] D

7.50 dynamic-blocks

dynamic-blocks

Syntax

**dynamic-blocks subscriber** *sub-ident-string* [**nat-policy** *policy-name*]

Context

[\[Tree\]](#) (tools>dump>nat>l2-aware dynamic-blocks)

Full Context

tools dump nat l2-aware dynamic-blocks

Description

This command displays information about dynamic blocks.

Parameters

*sub-ident-string*

Specifies the subscriber identification string, up to 64 characters

*policy-name*

Specifies the NAT policy name, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic block information, and [Table 125: Output fields: dynamic blocks](#) describes the output fields.

Output Example

```
/tools dump nat l2-aware dynamic-blocks subscriber "dynblocks sub"
=====
Dynamic blocks
=====
NAT policy                Router Outside IP                Dynamic block
-----
dynblocks pol             101    40.101.200.5                1049 - 1058
                                1059 - 1068
```

Table 125: Output fields: dynamic blocks

Field	Description
NAT policy	The NAT policy name
Router	The router number
Outside IP	The outside IP address
Dynamic block	The dynamic block range

7.51 dynamic-resolve

dynamic-resolve

Syntax

```
dynamic-resolve all [force]
dynamic-resolve ip-address [force]
```

Context

[\[Tree\]](#) (tools>perform>service>id>proxy-arp dynamic-resolve)

Full Context

tools perform service id proxy-arp dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IP entries. When executed, a resolve message (ARP-request) is issued for the requested IP or, if the **all** option used, for all the configured dynamic IPs. The **force** option triggers the resolve process even for IPs with an existing entry in the proxy-ARP table.

Parameters

**ip-address**  
Specifies the IP address.

**Values**    a.b.c.d

**all**  
Runs the command for all configured dynamic IPs.

**force**  
Issues a resolve message even when configured dynamic IP entries are present.

**Platforms**  
All

dynamic-resolve

**Syntax**  
**dynamic-resolve** all [**force**]  
**dynamic-resolve** *ipv6-address* [**force**]

**Context**  
[\[Tree\]](#) (tools>perform>service>id>proxy-nd dynamic-resolve)

**Full Context**  
tools perform service id proxy-nd dynamic-resolve

**Description**  
This command triggers the resolve procedure for dynamic IPv6 entries. When executed, a resolve message (Neighbor Solicitation) is issued for the requested IPv6 or, if the **all** option used, for all the configured dynamic IPv6s. The **force** option triggers the resolve process even for IPv6 addresses with an existing entry in the proxy-ARP table.

**Parameters**  
**ipv6-address**  
Specifies the IPv4 or IPv6 address.

**Values**    ip-address: a.b.c.d  
              ipv6-address: x:x:x:x:x:x:x (eight 16-bit pieces)  
              x:x:x:x:x:d.d.d.d  
              where:  
              x: [0 to FFFF]H  
              d: [0 to 255]D

**all**  
Runs the command for all configured dynamic IPv6 addresses.

**force**  
Issues a resolve message even when configured dynamic IP entries are present.

## 7.52 dynamic-services

### dynamic-services

#### Syntax

**dynamic-services**

#### Context

[\[Tree\]](#) (show>service>id dynamic-services)

[\[Tree\]](#) (show>service dynamic-services)

#### Full Context

show service id dynamic-services

show service dynamic-services

#### Description

Commands in this context show dynamic services information.

**Note:**

These commands are not available in the MD-CLI.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### dynamic-services

#### Syntax

**dynamic-services**

#### Context

[\[Tree\]](#) (clear>service>id dynamic-services)

[\[Tree\]](#) (clear>service dynamic-services)

#### Full Context

clear service id dynamic-services

clear service dynamic-services

## Description

Commands in this context clear dynamic services related data.

### Note:

These commands are not available in the MD-CLI.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dynamic-services

## Syntax

**dynamic-services**

## Context

[\[Tree\]](#) (clear>service>stats dynamic-services)

## Full Context

clear service statistics dynamic-services

## Description

This command resets the dynamic services script statistics. See also **show service dynamic services script statistics**.

### Note:

This command is not available in the MD-CLI.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dynamic-services

## Syntax

**dynamic-services command-list**

## Context

[\[Tree\]](#) (tools>dump>service dynamic-services)

## Full Context

tools dump service dynamic-services

## Description

This command displays the list of supported commands that can be used in dynamic service CLI scripts.

There are two types of CLI nodes in this list:

- Pass through nodes: navigation is allowed but attributes creation or attribute changes are prohibited in this node.
- Allowed nodes: navigation, attribute creation and attribute changes are allowed in this node.

**Note:**

These commands are not available in the MD-CLI.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 7.53 dynamic-services-policy

### dynamic-services-policy

#### Syntax

**dynamic-services-policy** [*policy-name*]

#### Context

[\[Tree\]](#) (show>service>dynsvc dynamic-services-policy)

#### Full Context

show service dynamic-services dynamic-services-policy

#### Description

This command displays the dynamic services policy information.

**Note:**

This command is not available in the MD-CLI.

#### Parameters

***policy-name***

specifies for which dynamic services policy the information is requested.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of dynamic service policy information.

#### Output Example

```
# show service dynamic-services dynamic-services-policy "dynsvc-policy-1"
=====
```

```
Dynamic Service Policies
=====
Dynamic Service Policy      : dynsvc-policy-1
-----
cli-user                   : (Not Specified)
description                 : Dynamic Services Policy 1
script-policy              : script-policy-5
sap-limit                  : 2000

Accounting instance 1
Stats type                  : volume-time
server policy               : aaa-server-policy-1
Update interval (minutes)  : 30
Update interval jitter     : 180s

Accounting instance 2
Stats type                  : time
server policy               : aaa-server-policy-2
Update interval (minutes)  : 0
Update interval jitter     : 10%
-----
No. of Services-policies: 1
=====
```

**Table 126: Output fields: dynamic services policy** describes the Dynamic Services policy fields.

*Table 126: Output fields: dynamic services policy*

Output Field	Description
dynsrv-policy-name	The unique name of a dynamic services policy, up to 32 characters.
cli-user	The identifier name of the CLI user associated with this Dynamic Services policy.
script-policy	The identifier name of the script policy associated with this Dynamic Services policy.
sap-limit	The limit of the number of SAPs (Service Access Point) that can be created using this Dynamic Services policy.
Stats type	The value used to identify the type of accounting statistics gathered, either <b>volume-time</b> or <b>time</b> .
server policy	The identifier name of a RADIUS server policy to be used for accounting.
update interval (minutes)	The time interval between consecutive accounting updates when using this Dynamic Services policy.
update interval jitter	The amount of jitter to be applied on the update interval.
No. of Services-policies	The total number Dynamic Services policies.

## 8 e Commands

### 8.1 ecmp

ecmp

**Syntax**  
ecmp

**Context**  
[\[Tree\]](#) (show>router ecmp)

**Full Context**  
show router ecmp

**Description**  
This command displays the ECMP settings for the router.

**Platforms**  
All

**Output**  
The following output is an example of ECMP settings information, and [Table 127: Output fields: ECMP](#) describes the output fields for the router ECMP settings.

**Output Example**

```
A:ALA-A# show router ecmp
=====
Router ECMP
=====
Instance      Router Name      ECMP      Configured-ECMP-Routes
-----

=====
A:ALA-A#
*A:Dut-C# show router ecmp
=====
Router ECMP
=====
Instance      Router Name      ECMP      Max-ECMP-      Weight ECMP
            Rtes
-----
1             Base             True      32             True
=====
```

=====
-------

Table 127: Output fields: ECMP

Label	Description
Instance	The router instance number
Router Name	The name of the router instance
ECMP	False — ECMP is disabled for the instance True — ECMP is enabled for the instance
Configured-ECMP-Routes	The number of ECMP routes configured for path sharing

## 8.2 edit-ipoe-session

### edit-ipoe-session

#### Syntax

**edit-ipoe-session sap** *sap-id* **mac** *mac-address* [ **subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [ **inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*] [ **circuit-id** *circuit-id*] [**remote-id** *remote-id*]

#### Context

[Tree] (tools>perform>subscr-mgmt edit-ipoe-session)

#### Full Context

tools perform subscriber-mgmt edit-ipoe-session

#### Description

This command updates the data of the IPoE session identified with the given MAC address and SAP identifier. Optionally the remote ID and circuit ID can be specified to identify the IPoE session to update.

**Note:**  
The changes take effect immediately.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### 8.3 edit-lease-state

#### edit-lease-state

**Syntax**

```
edit-lease-state sap sap-id ip ip-address [ mac ieee-address] [subscriber sub-ident-string] [sub-profile-string sub-profile-string] [ sla-profile-string sla-profile-string] [app-profile-string [ app-profile-string] [inter-dest-id intermediate-destination-id] [ ancp-string ancp-string]

edit-lease-state svc-id service-id ip ip-address [ mac ieee-address] [ subscriber sub-ident-string] [sub-profile-string sub-profile-string] [sla-profile-string sla-profile-string] [app-profile-string [ app-profile-string] [inter-dest-id intermediate-destination-id] [ ancp-string ancp-string]
```

**Context**

```
[Tree] (tools>perform>subscr-mgmt edit-lease-state)
```

**Full Context**

```
tools perform subscriber-mgmt edit-lease-state
```

**Description**

This command provides the parameters to edit lease state information.

**Parameters**

- sap-id**  
Specifies the physical port identifier portion of the SAP definition.
- ip-address**  
Modifies lease state information for the specified IP address.
- ieee-address**  
Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.
- sub-ident-string**  
Modifies the lease state information for the specified subscriber identification.
- sub-profile-string**  
Modifies lease state information for the specified subscriber profile.
- sla-profile-string**  
Modifies lease state information for the specified SLA profile.
- service-id**  
Modifies lease state information for the specified service ID.

Values	service-id: 1 to 2147483647
--------	-----------------------------

*svc-name:* 64 characters maximum

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.4 edit-ppp-session

### edit-ppp-session

#### Syntax

**edit-ppp-session sap** *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

**edit-ppp-session svc** *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

#### Context

**[Tree]** (tools>perform>subscr-mgmt edit-ppp-session)

#### Full Context

tools perform subscriber-mgmt edit-ppp-session

#### Description

This command updates the data of the PPP session identified with the given MAC address and SAP identifier. Optionally the remote-id and circuit-id can be specified to identify the IPoE session to update.

#### Note:

The changes take immediate effect.

#### Parameters

##### **sap-id**

Specifies a SAP ID, up to 255 characters.

##### **user-name**

Specifies the PPP user name, up to 253 characters.

##### **mac-address**

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

***session-id***

Specifies information about the ID of the PPP session.

**Values** 1 to 65535

***sub-ident-string***

Specifies an existing subscriber identification profile.

***sla-profile-string***

Identifies the SLA profile string up, to 16 characters.

***ip-address***

Specifies the peer's IP address.

***service-id***

Specifies an existing subscriber service ID.

**Values** 1 to 2147483647

***sub-profile-string***

Specifies the subscriber profile string, up to 16 characters.

***sub-profile-name***

Specifies the subscriber profile name, up to 32 characters.

***intermediate-destination-id***

Specifies the intermediate destination identifier which is encoded in the identification strings, up to 32 characters.

***ancp-string***

Specifies the ASCII representation of the string, up to 63 characters.

***app-profile-string***

Specifies the application profile string, up to 16 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.5 edit-slaac-host

### edit-slaac-host

**Syntax**

**edit-slaac-host sap** *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

**edit-slaac-host svc** *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*]

**string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

## Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-slaac-host)

## Full Context

tools perform subscriber-mgmt edit-slaac-host

## Description

This command updates the data of the SLAAC host information.

## Parameters

### ***sap-id***

Specifies a SAP ID, up to 255 characters.

### ***user-name***

Specifies the PPP user name up to 253 characters.

### ***mac-address***

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

### ***session-id***

Specifies information about the ID of the PPP session.

**Values** 1 to 65535

### ***sub-ident-string***

Specifies an existing subscriber identification profile.

### ***sla-profile-string***

Identifies the SLA profile string up to 16 characters.

### ***ip-address***

Specifies the peer's IP address.

### ***service-id***

Specifies an existing subscriber service ID.

**Values** 1 to 2147483647

### ***sub-profile-string***

Specifies the subscriber profile string up to 16 characters.

### ***sub-profile-name***

Specifies the subscriber profile name up to 32 characters.

### ***intermediate-destination-id***

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

- ancp-string***  
Specifies the ASCII representation of the up to 63 characters.
- app-profile-string***  
Specifies the application profile string up to 16 characters.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.6 efm-oam

efm-oam

**Syntax**  
**efm-oam**

clear port ethernet efm-oam

Description

This command clears EFM-OAM statistics on the port.

Platforms

All

efm-oam

Syntax

efm-oam

Context

[\[Tree\]](#) (show>port>ethernet efm-oam)

Full Context

show port ethernet efm-oam

Description

This command displays EFM-OAM information.

Platforms

All

8.7 egress-if

egress-if

Syntax

**egress-if** *port-id* [**summary** | **detail**] [*family*]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-if)

Full Context

show router ldp bindings active egress-if

Description

This command displays LDP active bindings by matching the egress interface.

Parameters

***port-id***  
Specifies the port ID.

Values		
	<i>slot[/mda[/port]]</i> or <i>slot/mda/port</i> [ <i>.channel</i> ]	
aps-id	<b>aps-group-id</b> [ <i>.channel</i> ]	
	<b>aps</b>	keyword
	<i>group-id</i>	1 to 128
eth-sat-id	<b>esat-id</b> [ <i>/slot[/u]port</i> ]	
	<b>esat</b>	keyword
	<i>id</i>	1 to 20
	<i>u</i>	keyword for up-link port
pxc-id	<b>pxc-id.sub-port</b>	
	<b>pxc</b>	keyword
	<i>id</i>	1 to 64

sub-port

a to b

family

Specifies the address family.

Values    ipv4, ipv6

## 8.8 egress-label

egress-label

Syntax

egress-label start-label [end-label]

Context

[\[Tree\]](#) (show>service egress-label)

Full Context

show service egress-label

Description

This command displays service information using the range of egress labels.

If only the mandatory *egress-label/1* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting egress label value for the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values    0,18432 to 524287

end-label

The ending egress label value for the label range.

Default    The *start-label* value.

Values 18432 to 524287

Platforms

All

Output

The following output is an example of service egress label information.

Output Example

```
*A:ALA-12# show service egress-label 0 10000

Table 128: Output fields: service egress describes show service egress label output fields.

Table 128: Output fields: service egress

Label	Description
Svc Id	The ID that identifies a service.
Sdp Id	The ID that identifies an SDP.
Type	Indicates whether the SDP binding is a spoke or a mesh.
I. Lbl	The VC label used by the far-end device to send packets to this device in this service by the SDP.
E. Lbl	The VC label used by this device to send packets to the far-end device in this service by the SDP.

Label	Description
Number of bindings found	The total number of SDP bindings that exist within the specified egress label range.

## 8.9 egress-lsp

egress-lsp

**Syntax**

**egress-lsp** *tunnel-id* [**summary** | **detail**] [*family*]

**Context**

[\[Tree\]](#) (show>router>ldp>bindings>active egress-lsp)

**Full Context**

show router ldp bindings active egress-lsp

**Description**

This command displays LDP active bindings by matching the egress LSP.

**Parameters**

- tunnel-id**

Specifies the tunnel ID.

**Values** 0 to 4294967295
- family**

Specifies the address family.

**Values** ipv4, ipv6

**Platforms**

All

## 8.10 egress-nh

egress-nh

### Syntax

**egress-nh** [*family*] [**summary** | **detail**] *ip-address*

### Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-nh)

### Full Context

show router ldp bindings active egress-nh

### Description

This command displays LDP active bindings by matching the egress Next-Hop (NH).

### Parameters

***family***

Specifies the address family.

**Values**    ipv4, ipv6

***ip-address***

Specifies the IPv4 or IPv6 address.

<b>Values</b>	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d

## 8.12 egress-rate-distribution

### egress-rate-distribution

**Syntax**

**egress-rate-distribution**

**Context**

[\[Tree\]](#) (show>lag egress-rate-distribution)

**Full Context**

show lag egress-rate-distribution

**Description**

This command displays adaptive load-balancing egress rate distribution information.

**Platforms**

All

## 8.13 egress-statistics

### egress-statistics

**Syntax**

**egress-statistics** color *color* [end-point {*ipv4-address* | *ipv6-address*}]

**Context**

[\[Tree\]](#) (show>router>segment-routing>sr-policies egress-statistics)

Full Context

show router segment-routing sr-policies egress-statistics

Description

This command displays the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

*color*

Displays the color that is configured for this SR policy.

**Values** 0 to 4294967295

*ipv4-address* | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

**Values** ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of egress traffic statistics of the SR policy, and [Table 129: Output fields: egress statistics](#) describes the output fields.

Output Example Show Router Segment Route Policy Egress Statistics

Table 129: Output fields: egress statistics

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the endpoint address of the SR policy.
Segment-List	Indicates the index of the segment list.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

## egress-statistics

### Syntax

**egress-statistics color** *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

### Context

**[Tree]** (clear>router>segment-routing>sr-policies egress-statistics)

### Full Context

clear router segment-routing sr-policies egress-statistics

### Description

This command clears the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

- color

Displays the color that is configured for this SR policy.

Values0 to 4294967295
- ipv4-address | ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values

ipv4-address:
  - a.b.c.dipv6-address:
  - x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D

Platforms

egress-statistics

Syntax

**egress-statistics** color [0..4294967295] **endpoint** ip-address | ipv6-address [interval seconds] [repeat repeat]

Context

[Tree] (monitor>router>seg-rt>sr-policies egress-statistics)

Full Context

monitor router segment-routing sr-policies egress-statistics

Description

This command monitors SR Policy Egress Statistics.

Parameters

- ip-address

Specifies the IPv4 address of the endpoint.

Values64 characters maximum
- ipv6-address

Specifies the IPv6 address of the endpoint.

**Values** 64 characters maximum

**seconds**  
Configures the interval for each display in seconds.

**Values** 3 to 60

**repeat**  
Configures how many times the command is repeated.

**Values** 1 to 999

**Platforms**  
All

8.14 elmi

elmi

**Syntax**  
elmi

**Context**  
[\[Tree\]](#) (show elmi)

**Full Context**  
show elmi

**Description**  
This command displays Ethernet Link Management Interface (E-LMI) information.  
[Table 130: Output fields: E-LMI](#) describes the output fields for the **show elmi** command.

Table 130: Output fields: E-LMI

Field	Description
Link Status	Status of the E-LMI protocol when the elmi mode is set to uni-n. Link Status will indicate up if E-LMI mode is set to "none".
T391	Pooling timer used by UNI-C. UNI-N will send the consecutive single EVC asynchronous status messages every (T391/10) rounded to the second interval.
T392	Pooling verification timer for UNI-N
N393	Status counter for UNI-N.

Field	Description
Rx Enq. Time	Last time a status inquiry message was received from UNI-C.
Rx Enq. Msg	Number of status inquiry messages received.
Rx Check Time	Last time a status inquiry E-LMI check message was received.
Rx Inv. SeqNum	Counts the number of E-LMI messages received with invalid sequence number.
Enq Timeouts	Counts the number of T392 timer expired.
Tx Status Time	Last time a status message was sent by UNI-N.
Tx Status Msg	Number of status messages sent by UNI-N.
Tx Check Time	Last time a status E-LMI check message was sent by UNI-N.
Tx Async Status Msg	Counter for single EVC asynchronous status messages sent by UNI-N.
Discard Msg	Counter for the status inquiry messages discarded due to errors.

8.15 encryption-keygroup

encryption-keygroup

**Syntax**  
`encryption-keygroup keygroup-id [spi spi]`

**Context**  
[\[Tree\]](#) (show>grp-encryp encryption-keygroup)

**Full Context**  
show group-encryption encryption-keygroup

**Description**  
This command displays NGE information for a key group.

**Parameters**  
*keygroup-id*  
Specifies the key group identifier to use for the output display.

**Values** 1 to 15 or *keygroup-name* (up to 64 characters)

***spi***  
Specifies the SPI to use for the output display.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of encryption key group information, and [Table 131: Output fields: encryption key group](#) describes the fields.

Table 131: Output fields: encryption key group

Label	Description
<b>Encryption Keygroup Configuration Detail</b>	
Keygroup Id	The key group identifier
Keygroup Name	The key group name
Description	The key group description
Authentication Algo	The authentication algorithm used for the key group
Encryption Algo	The encryption algorithm used for the key group
Active Outbound SA	The active outbound SA for the key group
Activation Time	The date and time that the key group was activated

Label	Description
<b>Security Associations</b>	
Spi	The security parameter index for the SA in the key group
Install Time	The date and time that the SA was installed in the key group
Key CRC	The CRC for the key belonging to the SA
<b>Encryption Keygroup Forwarded Statistics</b>	
Encrypted Pkts	The number of encrypted packets forwarded by the key group
Encrypted Bytes	The number of encrypted bytes forwarded by the key group
Decrypted Pkts	The number of decrypted packets forwarded by the key group
Decrypted Bytes	The number of decrypted bytes forwarded by the key group
<b>Encryption Keygroup Outbound Discarded Statistics (Pkts)</b>	
Total Discard	The total number of outbound packets discarded by the key group
Unsupported Uplink	The total number of outbound packets discarded by the key group due to an unsupported uplink
Enqueue Error	The total number of outbound packets discarded by the key group due to an enqueueing error
Other	The total number of outbound packets discarded by the key group due to some other reason, such as an internal configuration error (for example, a key group that points to an SA, but the SA is not valid)
<b>Encryption Keygroup Inbound Discarded Statistics (Pkts)</b>	
Total Discard	The total number of inbound packets discarded by the key group
Invalid Spi	The total number of inbound packets discarded by the key group due to an invalid SPI
Authentication Failure *	The total number of inbound packets discarded by the key group due to an authorization failure
Control Word Mismatch	The total number of inbound packets discarded by the key group due to a control word (CW) mismatch between the encrypted (protected) CW in the ESP payload and the CW that is not encrypted

Label	Description
Padding Error	The total number of inbound packets discarded by the key group due to a padding error
Enqueue Error	The total number of inbound packets discarded by the key group due to an enqueueing error
Other	The total number of inbound packets discarded by the key group due to some other reason (for example, an incoming packet length is incorrect)
<b>SDP Keygroup Association Table</b>	
SDP ID	The SDP ID
Direction	The direction in which key group authentication and encryption occurs for traffic on the SDP
Inbound Keygroup SDP Association Count	The number of SDPs configured to use inbound SA
Outbound Keygroup SDP Association Count	The number of SDPs configured to use outbound SA
<b>VPRN Keygroup Association Table</b>	
VPRN SVC ID	The VPRN service identifier
Direction	The direction in which key group authentication and encryption occurs for traffic on the VPRN
Inbound Keygroup VPRN Association Count	The number of VPRNs configured to use inbound SA
Outbound Keygroup VPRN Association Count	The number of VPRNs configured to use outbound SA

## encryption-keygroup

### Syntax

**encryption-keygroup** *keygroup-id*  
**encryption-keygroup** *keygroup-id spi spi*

### Context

**[Tree]** (clear>grp-encryp encryption-keygroup)

### Full Context

clear group-encryption encryption-keygroup

**Description**

This command clears NGE information for a key group.

**Parameters**

- keygroup-id**

Specifies the key group identifier.

**Values** 1 to 127, *keygroup-name* (up to 64 characters)
- spi**

Specifies the SPI ID.

**Values** 1 to 127

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.16 end-sid

end-sid

**Syntax**

**end-sid** [mt {0 | 2}] [ **prefix** *ipv6-prefix[/prefix-length]*] [**adv-router** *system-id | hostname*] [ **algo** *algo-id*]

**Context**

[\[Tree\]](#) (show>router>isis>srv6 end-sid)

**Full Context**

show router isis segment-routing-v6 end-sid

**Description**

This command displays IS-IS SRv6 End SIDs.

**Parameters**

- ipv6-prefix[/prefix-length]**

Displays routes only matching the specified *ip-address* and length.

**Values** *ipv6-prefix[/prefix]*: x:x:x:x:x:x:x (eight 16-bit pieces)  
x:x:x:x:x:x:d.d.d.d  
x: [0 to FFFF]H  
d: [0 to 255]D  
*prefix-length*: 1 to 128

**system-id | hostname**  
Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

**algo-id**  
Displays information for the specified algorithm.

**Values**    0 to 255

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

8.17 endpoint

endpoint

**Syntax**  
endpoint [endpoint-name]

**Context**  
[\[Tree\]](#) (show>service>id endpoint)

**Full Context**  
show service id endpoint

**Description**  
This command displays service endpoint information.

**Parameters**  
**endpoint-name**  
Specifies the name of an existing endpoint for the service.

**Platforms**  
All

**Output**  
The following output is an example of service endpoint information and [Table 132: Output fields: service endpoint](#) describes the output fields.

Table 132: Output fields: service endpoint

Label	Description
Service <ID> endpoints	
Endpoint name	Displays the endpoint name
Description	Displays the endpoint description
Creation Origin	Displays the creation origin method
Revert time	Displays the revert time value

Label	Description
Act Hold Delay	Displays the active hold delay value
Standby Signaling Master	Displays the standby signaling master status
Standby Signaling Slave	Displays the standby signaling slave status
Tx Active	Displays the active SAP ID
Tx Active Up Time	Displays the active up time
Revert Time Count Down	Displays the revert time countdown status
Tx Active Change Count	Displays the number of active changes
Last Tx Active Change	Displays the date and time of last active change
Members	
SAP	Displays the SAP ID
Oper Status	Displays the operational status

## endpoint

### Syntax

**endpoint** [{*ip-address* | *ipv6-address*}] [**detail**]  
**endpoint** [{*ip-address* | *ipv6-address*}] **egress-stats**

### Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies endpoint)

### Full Context

show router mpls forwarding-policies endpoint

### Description

This command displays the MPLS forwarding policy endpoint information.

### Parameters

#### *ip-address*

Specifies the IPv4 address of the endpoint up to 64 characters.

#### *ipv6-address*

Specifies the IPv6 address of the endpoint up to 64 characters.

#### *detail*

Specifies detailed information for the endpoint.

## egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

## Platforms

All

## Output

Table 133: Output fields: MPLS endpoint describes MPLS endpoint output fields.

Table 133: Output fields: MPLS endpoint

Label	Description
Endpoint	Specifies the endpoint IP address.
Preference	Specifies the preference.
Policy Name	Specifies the MPLS forwarding policies binding label name.
Active	Specifies the active state (Y   N).
InactiveReason	Specifies the inactive reason.
Last Updated	Specifies the date and time of the last update.
Num Grps	Specifies the number of groups.
OperState	Specifies the operational state (up   down).
Metric	Specifies the metric value.
TTM Preference	Specifies the TTM preference value.
Revert Timer	Specifies the revert timer value.
Path Pref	Specifies the path preference.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct   indirect).
Oper State	Specifies the operational state (down   up).
Oper Down Reas*	Specifies the reason for being operationally down.
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.

Label	Description
Next Revert In	Specifies the next revert interval.
Weight	Specifies the weight value.
Primary	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false   true).
Down Reason	Specifies the down reason.
Backup	Specifies the IP address of the backup next-hop.
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

### Output Example

```
A:Dut-C# show router mpls forwarding-policies endpoint detail

## 8.18 entry

entry

**Syntax**  
`entry entry-id`

**Context**  
[\[Tree\]](#) (tools>perform>filter>ip-filter entry)

**Full Context**  
tools perform filter ip-filter entry

**Description**  
Commands in this context perform IP filter entry operations.

**Parameters**  
*entry-id*  
Specifies a particular entry ID.  
**Values** 1 to 2097151

**Platforms**  
All

entry

Syntax

entry *entry-id*

Context

[\[Tree\]](#) (tools>perform>filter>ipv6-filter entry)

Full Context

tools perform filter ipv6-filter entry

Description

Commands in this context perform IPv6 filter entry operations.

Parameters

*entry-id*  
Specifies a particular entry ID.  
**Values** 1 to 2097151

Platforms

All

entry

Syntax

entry *entry-id*

Context

[\[Tree\]](#) (tools>perform>filter>mac-filter entry)

Full Context

tools perform filter mac-filter entry

Description

Commands in this context perform MAC filter entry operations.

Parameters

*entry-id*  
Specifies a particular entry ID.  
**Values** 1 to 2097151

Platforms  
All

8.19 epipe

epipe

Syntax  
epipe

Context  
[Tree] (show>service>id epipe)

Full Context  
show service id epipe

Description  
This command displays Epipe services associated with the B-VPLS service. The command only applies when the service is a B-VPLS.

Platforms  
All

Output  
The following output is an example of Epipe service information.

Output Example

```
*A:term17>show>service>id# epipe
=====
Related Epipe services for bVpls service 2000
=====
Epipe SvcId      Oper ISID      Admin      Oper

-----
*A:term17>show>service>id#
```

## 8.20 epipe-map-access-to-egress-port

### epipe-map-access-to-egress-port

#### Syntax

**epipe-map-access-to-egress-port** **service** *service-id* [**end-service** *service-id*] | **lag** *lag-id* **summary**

#### Context

**[Tree]** (tools>dump epipe-map-access-to-egress-port)

#### Full Context

tools dump epipe-map-access-to-egress-port

#### Description

This command will display the egress port that will be used to transmit traffic associated with the displayed Epipe service(s). The information displayed shows the egress port for traffic traveling from SAP to egress SDP or SAP.

This command will support Epipe services with the following combinations:

- SAP to SDP (with no endpoint configuration)
- SAP to SAP (with or without an ICB)
- SAP to SDP using endpoints with 1 or 2 SDPs

The command can be executed by specifying either a service ID, service-ID range or an ingress LAG ID.

This command will not display the egress port for traffic traveling from the SDP to egress SAP. This command also does not work with services that use policers or shared queues and also does not support PBB services.

This command replaces the command tools dump epipe-map-to-network, which has been deprecated.

#### Parameters

##### **service** *service-id*

Identifies the service ID for which the command will return the egress port. If used in conjunction with the end-service parameter, this value represent the beginning of the service ID range for which the command will be executed against.

**Values** 1 to 2148278316, *svc-name: 64 characters max*

##### **end-service** *service-id*

This parameter is used to identify the end of the service ID range for which the command will be executed against.

**Values** 1 to 2148278316, *svc-name: 64 characters max*

***lag-id***

This parameter caused the command to return the egress port for all service with SAPs associated with the specified LAG ID.

**Values** 1 to 800

**Platforms**

All

## 8.21 epipe-sap-template

### epipe-sap-template

**Syntax**

**epipe-sap-template**

**epipe-sap-template** *name*

**Context**

[\[Tree\]](#) (show>service>template epipe-sap-template)

**Full Context**

show service template epipe-sap-template

**Description**

This command displays Epipe SAP template information.

**Parameters**

***name***

Specifies the Epipe SAP template name, up to 32 characters.

**Platforms**

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 8.22 error-codes

### error-codes

**Syntax**

**error-codes**

Context

[Tree] (show>app-assure>http-redirect error-codes)

Full Context

show application-assurance http-redirect error-codes

Description

This command displays http-error-redirect error-codes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of HTTP error redirect error code information, and [Table 134: Output fields: application assurance HTTP redirect error codes](#) describes the fields.

Output Example

```
*A:Dut-C>show application-assurance http-error-redirect error-codes
```

Table 135: Output fields: ESA detail

Label	Description
ESA	ESA identification number
Description	Description for the ESA
Admin State	up — Administratively up
	down — Administratively down
Operational State	up — Operationally up
	down — Operationally down
	booting
	failed
	provisioned
	unprovisioned
	fwUpgrade — Firmware upgrade
Oper flags	Operational flag of the ESA
IOM Host Port(s)	IOM host port or ports in <i>slot/mda/port</i> format
<b>Hardware Health</b>	
Overall Status	Overall ESA server hardware status
	Unknown — ESA status not reported, ESA not connected or not booted yet

Label	Description
	OK — Normal
	Degraded — Aligns with flashing amber of the health LED
	Critical — Aligns with flashing red of the health LED
	Unsupported — ESA hardware status reporting is unsupported by the ESA
Power Supply Status	Current status of the power supply
Power Supply Temperature	Current temperature detected by the specific hardware assembly
Power Supply Voltage	Line input voltage, in volts
Power Supply Output	Current average power, in watts
Power Supply Max Power	Maximum power draw seen since power on, in watts
Power Supply Redundancy	Redundant power supply in use. In case of failure of one power supply, the server continues to operate without issue. All variants of the ESA servers come with 2 power supplies
	Unknown — The iLO firmware has not received device status information. After the iLO is reset when the server is powered off, some subsystems display the status Unknown. The iLO cannot update the status for these subsystems when the server is powered off.
	Redundant — There is a backup component for the device
	Non-redundant — There is no backup component for the device
Power Supply Mismatch Stat*	Whether different types power supplies are connected to the server
	true — Different types of power supplies are connected to the server
	false — The same types of power supplies are connected to the server
Fan State	Fan status as reported by the ESA server
	Unknown — Fan status not reported, ESA not connected or not booted yet
	OK — Normal
	Degraded — One or more fan is degraded while the system is powered on

Label	Description
	Critical — One or more fan has failed while the system is powered on
Fan Redundancy	Redundant fans in use. In case of failure of one or more fans, the server continues to operate without any issue.
	Unknown — The iLO firmware has not received device status information. After the iLO is reset when the server is powered off, some subsystems display the status Unknown. The iLO cannot update the status for these subsystems when the server is powered off.
	Redundant — All 7 backup fans are running
	Non-redundant — One or more fans have failed but at least one fan is running
	Failed — All fans have failed
CPU Temperature	CPU temperature as reported by the ESA
CPU Temperature Threshold	CPU temperature caution threshold as reported by the ESA A temperature threshold of 0 indicates that this functionality is not supported or cannot be retrieved from the ESA. This information is not output for ESA 400G rev AA or AB.
NIC Temperature	NIC temperature as reported by the ESA A temperature of 0 indicates that this functionality is not supported or not possible to retrieve from the ESA.
NIC Temperature Threshold	NIC temperature caution threshold as reported by the ESA A temperature threshold of 0 indicates that this functionality is not supported or cannot be retrieved from the ESA.
Temperature Status	Temperature status as reported by the ESA server
	Ok — Temperature within normal operating range
	Degraded — Temperature is outside the normal operating range
	Failed — Temperature exceeded configured range on the ESA
Hardware Data	Detailed hardware data about the ESA
NUMA Cell Topology	Number of cores, amount of memory, and Ethernet ports available to the NUMA cell
VM	VM identification number
VM Type	VM type (aa, bb, or tunnel)

Label	Description
Cores	Number of cores of the ESA-VM
Memory (GB)	Total memory on the ESA-VM

esa

Syntax

**esa** *esa-id*

Context

[\[Tree\]](#) (clear esa)

clear esa

Description

This command clears the statistics or status pertaining to the specified ESA.

Parameters

***esa-id***

Specifies the ESA.

**Values**    1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

8.27 esa-vm

esa-vm

Syntax

**esa** [*esa-id/vm-id*] [ **detail**]

Context

[\[Tree\]](#) (show esa-vm)

Full Context

show esa-vm

## Description

This command displays ESA-VM details.

## Parameters

### **esa-id**

Specifies the ESA.

**Values** 1 to 16

### **vm-id**

Specifies the VM.

**Values** 1 to 4

### **detail**

Specifies the detailed ESA-VM information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## Output

The following are output examples for this command.

### Output Example

```
*A:Dut-A# show esa-vm 1/1 detail

Table 136: Output fields: ESA-VM

Label	Description
ESA	The ESA identification number
VM	The VM identification number
VM Type	The VM type (aa, bb, or tunnel)

Label	Description
Cores	The number of cores of the ESA-VM
Memory (GB)	The memory on the ESA-VM
Admin State	up — Administratively up
	down — Administratively down
Operational State	up — Operationally up
	down — Operationally down
	booting
	failed
	provisioned
	unprovisioned
IOM Host Port	The IOM host port in <i>slot/mda/port</i> format
Oper flags	The operational flags for the ESA-VM
Virtual Core Role	The virtual core role (Mgmt-#, Worker-#, Idle-#, Scheduler-#, Nic-#)
Virtual Core Id	The Virtual Core identification number
Current %	The current processing load of the virtual core
15min Average %	The 15 minute average processing load of the virtual core
All-time Peak %	The all-time peak processing load of the virtual core

## esa-vm

### Syntax

**esa-vm** [esa-id/vm-id]

### Context

[\[Tree\]](#) (clear esa-vm)

### Full Context

clear esa-vm

### Description

This command clears the statistics or status pertaining to the specified ESA-VM.

### Parameters

#### *esa-id*

Specifies the ESA.

**Values** 1 to 16

#### *vm-id*

Specifies the VM.

**Values** 1 to 4

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## 8.28 est-profile

### est-profile

### Syntax

**est-profile** [*name*]

### Context

[\[Tree\]](#) (show>certificate est-profile)

### Full Context

show certificate est-profile

### Description

This command displays EST profile information. If a profile name is not specified, the command displays information about all the EST profiles.

### Parameters

#### *name*

Specifies an existing EST profile name, up to 32 characters.

### Platforms

All

### Output

The following output is an example of the **show certificate est-profile** command

### Output Example

```
*A:cses-V27# show certificate est-profile
```

=====	
EST Profile	Server
	Address:Port
-----	
No. of EST Profiles: 0	
=====	

8.29 eth

eth

**Syntax**  
eth

**Context**  
[\[Tree\]](#) (tools>perform>service>id>loopback eth)

**Full Context**  
tools perform service id loopback eth

**Description**  
Commands in this context configure a loopback on Ethernet SAPs or MPLS SDP bindings.

**Platforms**  
All

8.30 eth-cfm

eth-cfm

**Syntax**  
eth-cfm

**Context**  
[\[Tree\]](#) (show eth-cfm)

**Full Context**  
show eth-cfm

## Description

Commands in this context display eth-cfm information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-cfm

## Syntax

eth-cfm

## Context

[\[Tree\]](#) (clear eth-cfm)

## Full Context

clear eth-cfm

## Description

Commands in this context display CFM information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-cfm

## Syntax

eth-cfm

## Context

[\[Tree\]](#) (tools>dump eth-cfm)

## Full Context

tools dump eth-cfm

## Description

Commands in this context configure debugging for Ethernet Connectivity Fault Management.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-cfm

### Syntax

**eth-cfm**

### Context

[\[Tree\]](#) (monitor eth-cfm)

### Full Context

monitor eth-cfm

### Description

Commands in this context monitor statistics for Ethernet connectivity fault management.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-cfm

### Syntax

**eth-cfm**

### Context

[\[Tree\]](#) (show>service>sdp-using eth-cfm)

### Full Context

show service sdp-using eth-cfm

### Description

Commands in this context display SDP binding information for a specific ETH-CFM.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-cfm

### Syntax

**eth-cfm** [**tunnel** *tunnel-id*] [**detail**]

**Context**

[Tree] (show>lag eth-cfm)

**Full Context**

show lag eth-cfm

**Description**

This command displays ETH-CFM information.

**Parameters**

**tunnel-id**  
Filters ETH-CFM MEP information to one tunnel.  
**Values** 1 to 4094

**detail**  
Displays detailed information.

**Platforms**

eth-cfm

**Syntax**

eth-cfm [detail]

**Context**

[Tree] (show>port>ethernet eth-cfm)

**Full Context**

show port ethernet eth-cfm

**Description**

This command displays ETH-CFM information.

**Parameters**

**detail**  
Displays detailed information.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 8.31 eth-cfm-monitoring

### eth-cfm-monitoring

#### Syntax

**eth-cfm-monitoring** [{**service-id** *service-id* **sap-id** *sap-id*} | {**service-id** *service-id* **sdp-id** *sdp-id:vc-id*}]

#### Context

[\[Tree\]](#) (show>system>security>cpu-protection eth-cfm-monitoring)

#### Full Context

show system security cpu-protection eth-cfm-monitoring

#### Description

This command displays sources exceeding their eth-cfm-monitoring rate limit.

#### Parameters

**service-id**

Specifies the service ID.

**Values** 1 to 2148278317, svc-name up to 64 characters in length

#### Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### eth-cfm-monitoring

#### Syntax

**eth-cfm-monitoring**

#### Context

[\[Tree\]](#) (clear>cpu-protection eth-cfm-monitoring)

#### Full Context

clear cpu-protection eth-cfm-monitoring

#### Description

This command clears records of flows exceeding the ETH-CFM monitoring rate limit.

## Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## 8.32 eth-ring

eth-ring

### Syntax

eth-ring

### Context

[\[Tree\]](#) (tools>perform eth-ring)

### Full Context

tools perform eth-ring

### Description

This command performs Ethernet ring operations.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

### Syntax

eth-ring [status]

eth-ring [ring-index] hierarchy

eth-ring ring-index [path {a | b}]

### Context

[\[Tree\]](#) (show eth-ring)

### Full Context

show eth-ring

### Description

This command displays Ethernet Ring information.

## Parameters

### **status**

Specifies to display an Ethernet Ring status summary

### ***ring-index***

Specifies an Ethernet Ring index

**Values** 1 to 128

### **hierarchy**

Specifies to display Ethernet Ring hierarchical relationships

### **path**

Specifies to show information for a specific path

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ring

## Syntax

**eth-ring** *ring-index* [ **clear** ]

## Context

**[Tree]** (tools>dump eth-ring)

## Full Context

tools dump eth-ring

## Description

This command displays Ethernet Ring information.

## Parameters

### ***ring-index***

Specifies an Ethernet Ring index.

**Values** 1 to 128

### **clear**

Keyword to clear stored information for the specified Ethernet Ring.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### 8.33 eth-sat

#### eth-sat

**Syntax**

**eth-sat** [*sat-id*]

**Context**

[\[Tree\]](#) (show>system>satellite eth-sat)

**Full Context**

show system satellite eth-sat

**Description**

This command displays information about configured Ethernet satellites. If a sat-id is specified, this command displays information only about the specified Ethernet satellite.

**Parameters**

**sat-id**

Specifies the Ethernet satellite chassis.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following output is an example of Ethernet satellite information and [Table 137: Output fields: Ethernet satellite](#) describes the output fields.

**Output example**

```
A:Dut-A# show system satellite eth-sat 1

Table 137: Output fields: Ethernet satellite

Label	Description
SatID	The satellite identification
Provisioned Type	The satellite type that is configured
Equipped Type	The satellite type that is actually populated in the system
Admin State	The administrative state of the satellite: <ul style="list-style-type: none"> <li>up – the satellite is administratively up</li> </ul>

Label	Description
	<ul style="list-style-type: none"> <li>down – the satellite is administratively down</li> </ul>
Oper State	<p>The operational state of the satellite:</p> <ul style="list-style-type: none"> <li>up – the satellite is operationally up</li> <li>down – the satellite is operationally down</li> </ul>
Description	Additional information configured by the user
MAC address	The MAC address of the satellite
Software Repository	The software repository
SyncE	<p>The SyncE feature:</p> <ul style="list-style-type: none"> <li>enabled – the SyncE features is enabled</li> <li>disabled – the SyncE feature is disabled</li> </ul>
PTP-TC	<p>The Ethernet satellite IEEE1588 transparent clock feature:</p> <ul style="list-style-type: none"> <li>enabled – the Ethernet satellite IEEE1588 transparent clock function is enabled</li> <li>disabled – the Ethernet satellite IEEE1588 transparent clock function is disabled</li> </ul>
PTP-IP	<p>The use of PTP over IPv4 or IPv6 with the satellite transparent clock feature:</p> <ul style="list-style-type: none"> <li>enabled – the Ethernet satellite PTP IP settings are enabled</li> <li>disabled – the Ethernet satellite PTP IP settings are disabled</li> </ul>
PTP IPv4 address	The IPv4 address used to track the PTP messages crossing the satellite. This must be the address for PTP within the SR OS host system
PTP IPv6 address	IPv6 address used to track the PTP messages crossing the satellite. This must be the address for PTP within the SR OS host system
Client-Down-Delay	<p>The client-down delay feature:</p> <ul style="list-style-type: none"> <li>enabled – the client-down delay is enabled</li> <li>disabled – the client-down delay is disabled</li> </ul>
Console Access	<p>The console access:</p> <ul style="list-style-type: none"> <li>enabled – console access is enabled</li> <li>disabled – console access is disabled</li> </ul>
Port Template	The port template configured for the satellite. A port template is specific to the specified satellite type.

## eth-sat

### Syntax

**eth-sat** *sat-id*

### Context

[\[Tree\]](#) (clear>system>satellite eth-sat)

### Full Context

clear system satellite eth-sat

### Description

Commands in this context clear Ethernet satellite information.

### Parameters

***sat-id***

Specifies the Ethernet satellite ID.

**Values** 1 to 20

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 8.34 eth-seg

## eth-seg

### Syntax

**eth-seg** [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**originator-ip** *ip-address* | *ipv6-address*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

### Context

[\[Tree\]](#) (show>router>bgp>routes>evpn eth-seg)

### Full Context

show router bgp routes evpn eth-seg

### Description

This command displays BGP-EVPN Ethernet Segment (ES) routes.

d: [0 to 255]D

***esi***

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':','.')

***reg-exp***

Displays routes matching the specified regular expression, up to 80 characters.

**Platforms**

All

## 8.35 eth-tunnel

### eth-tunnel

**Syntax**

**eth-tunnel** [**group** *tunnel-group-name*] [ **vc-id** *vc-id*]

**Context**

[\[Tree\]](#) (show>router>l2tp eth-tunnel)

**Full Context**

show router l2tp eth-tunnel

**Description**

This command displays information about configured L2TPv3 Ethernet tunnels. These Ethernet tunnels are the L2TPv3 sessions setup between the local private L2 SAP and the far end device.

If this command is executed without any parameters, then a list of all configured Ethernet tunnels are displayed.

If this command is executed with a tunnel group name or a VC-ID, then a detailed view of the associated Ethernet tunnel is displayed.

**Parameters**

***tunnel-group-name***

Specifies the configured tunnel group name used for the associated Ethernet tunnel.

***vc-id***

Specifies the VC ID for the L2TPv3 Ethernet tunnel.

**Values** 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TPv3 Ethernet tunnel information

Output Example

```
A:Dut-A# show router 200 l2tp eth-tunnel
=====
L2TPv3 Ethernet Tunnel Summary
=====
Tunnel Group name                               VC ID

Ctrl Conn ID    : 221118464
Matches Cfg     : true
Down Reason     : N/A
Reconnect Time (s) : N/A
Remaining Time (s) : N/A
SAP ID          : tunnel-1.private:100
SAP Service ID  : 100
-----
No. of ethernet tunnels: 1
=====
```

eth-tunnel

Syntax

- eth-tunnel
- eth-tunnel {aps | status}
- eth-tunnel tunnel-index [path path-index] [detail]

Context

[\[Tree\]](#) (show eth-tunnel)

Full Context

show eth-tunnel

Description

This command displays Ethernet tunnel information. Any data SAP missing a tag for a defined path has the EthTunTagMismatch flag generated. In the example provided below, SAP eth-tunnel-1:1 does not have the tag for path 2 configured. Therefore, it is operationally down with the reason indicated by the EthTunTagMismatch flag.

Parameters

- aps

Shows APS Ethernet tunnel information.
- status

Shows Ethernet tunnel status information.
- tunnel-index

Specifies the tunnel index.

Values1 to 1024
- path-index

Specifies the path index.

Values1 to 16
- detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information, and [Table 138: Output fields: Ethernet tunnel](#) describes the output fields.

Output Example: show eth-tunnel

Table 138: Output fields: Ethernet tunnel

Field	Description
Tunnel Id	Numeric value from 1 to 64.
Admin State	Up — The eth tunnel is administratively up. Down — The eth tunnel is administratively down.
Oper State	Up — The eth tunnel is operationally up. Down — The eth tunnel is operationally down.
Protection Type	Two options: g8031-1to1 — Two members are allowed, but only one of them is active at one point in time. loadsharing — Multiple members can be active at one point in time.
Active Paths	Only two paths are supported.

## eth-tunnel

### Syntax

**eth-tunnel** *tunnel-index* [**clear**]

### Context

**[Tree]** (tools>dump eth-tunnel)

Full Context

tools dump eth-tunnel

Description

This command displays Ethernet tunnel information.

Parameters

*tunnel-id*

Specifies the tunnel ID.

**Values**     1 to 128

**clear**

Clears statistics after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information.

Output Example

```
*A:PE-E# tools dump eth-tunnel 1

Table 139: Output fields: BGP EVPN ES describes BGP EVPN ES output fields.

Table 139: Output fields: BGP EVPN ES

Field	Description
Name	The Ethernet Segment name
Eth Seg Type	The Ethernet Segment type
Admin State	The administrative state for this service Ethernet Segment
Oper State	The operational state for this service Ethernet Segment
ESI	The Ethernet Segment Identifier
Oper ESI	The current operational Ethernet Segment Identifier

Field	Description
Auto-ESI Type	The auto-derived Ethernet Segment Identifier type
AC DF Capability	The AC-DF Capability status (Exclude or Include)
Multi-homing	The multi-homing information
Oper Multi-homing	The operational multi-homing state
ES SHG Label	The ES Split Horizon Group label
Source BMac LSB	The source BMac least significant bit
Vprn Next Hop	The IP address associated with an Ethernet Segment
PW Port Id	The PW port ID
PW Port Headend	The PW port headend status
ES BMac Tbl Size	The ES BMac table size
ES BMac Entries	The ES BMac entries
Lag Id	The LAG ID
ES Activation Timer	The ES activation timer
Svc Carving	The service carving type
Oper Svc Carving	The operational service carving type
Cfg Range Type	The configured range type
DF Pref Election Information	
Preference Mode	The preference mode
Preference Value	The preference value
Last Admin Change	The date and time of the last administrative change
Oper Pref Value	The operational preference value
Do No Preempt	The Do Not Preempt status
EVI Ranges	The EVI ranges
ISID Ranges	The ISID ranges
Vprn NextHop Evi Ranges	
From	The beginning point of the EVI range
To	The ending point of the EVI range

Field	Description
Last Update	The date and time of the last range update
EVI Information	
EVI	The EVPN instance
SvcId	The service ID
Actv Timer Rem	The active timer rem value
DF	The designated forwarder status
Number of entries:	The number of entries
EVI DF and Candidate List	
DF Last Change	The date and time of the last DF candidate change
DF Candidates	The DF candidate IP address
Time Added	The date and time of the DF candidate addition
Q-Tag Ranges	
Q-Tag Start	The Q-Tag start range value
Q-Tag End	The Q-Tag end range value
Last Changed	The date and time of the last change
VC-Id Ranges	
VC-Id Start	The VC-Id start range value
VC-Id End	The VC-Id end range value
S-Tag Ranges	
S-Tag Start	The S-Tag start value
S-Tag End	The S-Tag end value
S-Tag C-Tag Ranges	
C-Tag Start	The C-Tag start value
C-Tag End	The C-Tag end value
Vxlan Instance Service Ranges	
Svc Range Start	The service range start in this Vxlan instance

Field	Description
Svc Range End	The service range end in this Vxlan instance

## ethernet-segment

### Syntax

```
ethernet-segment name evi evi df
ethernet-segment name isid isid df
ethernet-segment name local-bias
```

### Context

```
[Tree] (tools>dump>service>system>bgp-evpn ethernet-segment)
```

### Full Context

```
tools dump service system bgp-evpn ethernet-segment
```

### Description

This command shows the computed DF PE for a specified EVI or ISID when the **evi** or **isid** parameters are selected, respectively. When the **local-bias** parameter is used, the output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

The PE can only enable local bias procedures on up to three PEs that are attached to the same ES and use multihomed VXLAN services. If more than three PEs exists, the PEs are ordered by either lowest IP (if **service-carving auto** is used in the ES) or lowest preference (if preference-based service-carving is used) and only the top three PEs are considered for local bias.

### Parameters

**name**

Specifies the name of the Ethernet Segment, up to 32 characters.

**evi**

Specifies the EVI.

**Values** 1 to 65535

**isid**

Specifies the ISID.

**Values** 1 to 16777215

**local-bias**

Specifies that output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

Platforms

All

Output

The following output is an example of Ethernet Segment information.

Output Example

```
# tools dump service system bgp-evpn ethernet-segment "ESI-71" evi 1 df
[07/15/2015 21:52:08] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

# tools dump service system bgp-evpn ethernet-segment "ESI-71" isid 20001 df
[07/15/2015 21:52:21] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

ethernet-segment

Syntax

**ethernet-segment** *[name]*

Context

[\[Tree\]](#) (show>service>sdp-using ethernet-segment)

### Full Context

show service sdp-using ethernet-segment

### Description

This command displays Ethernet Segment information associated with SDPs.

### Parameters

*name*

Specifies the Ethernet segment name, up to 32 characters.

### Platforms

All

## 8.38 etree

etree

### Syntax

etree

### Context

**[Tree]** (show>service>id etree)

### Full Context

show service id etree

### Description

This command displays the same information shown in the show service ID base context, with the addition of the role of each object in the VPLS E-Tree service.

The following labels identify the configuration of the SAPs and SDP bindings:

- (L) indicates leaf-ac
- (RL) indicates root-leaf-tag

### Platforms

8.39 eval-group-interface-template

eval-group-interface-template

**Syntax**  
`eval-group-interface-template name`

**Context**  
`[Tree] (tools>perform>subscr-mgmt eval-group-interface-template)`

## Full Context

tools perform subscriber-mgmt eval-group-interface-template

## Description

This command reapplies the specified group-interface template to all the group interfaces that were created using this template. This command can be used after changing the group-interface template, because not all the changed parameters are automatically applied to the existing group interfaces.

This command reports the total number of group interfaces linked to the template, the number of group interfaces that were changed or did not require a change, and the number of group interfaces for which a change was attempted but failed.

## Parameters

### *name*

Specifies a group-interface template name, up to 32 characters, as configured under **configure subscriber-mgmt group-interface-template**.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of the command information.

### Output Example

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-group-interface-template "default"
Group interface instances:
- total submitted : 1
- changed         : 1
- change failed   : 0
```

## 8.40 eval-ipoe-session

### eval-ipoe-session

## Syntax

**eval-ipoe-session** [**svc-id** *service-id*] [**sap** *sap-id*] [**mac** *mac-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**subscriber** *sub-ident-string*]

## Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ipoe-session)

## Full Context

tools perform subscriber-mgmt eval-ipoe-session

## Description

This command re-evaluates the mapping between authentication strings such as the SLA profile string and the actual profiles for the identified IPoE sessions.

## Parameters

### ***service-id***

Specifies an existing subscriber service ID.

**Values** 1 to 2147483647

### ***sap-id***

Specifies a SAP ID, up to 255 characters.

### ***mac-address***

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

### ***circuit-id***

Specifies the circuit ID up to 127 characters.

### ***remote-id***

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

### ***sub-ident-string***

Specifies an existing subscriber identification profile.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.41 eval-lease-state

### eval-lease-state

## Syntax

**eval-lease-state** [**svc-id** *service-id*] [**sap** *sap-id*] [**subscriber** *sub-ident-string*] [**ip** *ip-address*] [**mac** *mac-address*]

## Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-lease-state)

## Full Context

tools perform subscriber-mgmt eval-lease-state

## Description

This command evaluates lease state.

## Parameters

### ***sap-id***

Specifies the physical port identifier portion of the SAP definition.

### ***ip-address***

Specifies the server's IP address. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

### ***sub-ident-string***

Specifies the subscriber ID string, up to 32 characters.

### ***service-id***

Specifies an existing service ID.

**Values** 1 to 2147483647

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.42 eval-msap

### eval-msap

## Syntax

**eval-msap** {**policy** *msap-policy-name* | **msap** *sap-id*}

## Context

**[Tree]** (tools>perform>subscr-mgmt eval-msap)

## Full Context

tools perform subscriber-mgmt eval-msap

## Description

This command re-applies the managed SAP policy to the managed SAP identified by the specified *sap-id* or to all managed SAPs associated with the specified *msap-policy name*.

## Parameters

### ***msap-policy-name***

Specifies an existing MSAP policy. The MSAP policy is re-applied to all associated managed SAPs.

### ***sap-id***

Specifies an MSAP SAP ID. The MSAP policy is re-applied to the specified MSAP.

**Values**    *[port-id | lag-id]:qtag1*  
              *[port-id | lag-id]:qtag1.qtag2*

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.43 eval-ppp-session

eval-ppp-session

**Syntax**  
**eval-ppp-session** [**svc-id** *service-id*] [**user-name** *user-name*] [**sap** *sap-id*] [**ip** *ip-address*] [**subscriber** *sub-ident-string*]  
**eval-ppp-session** [**svc-id** *service-id*] [**user-name** *user-name*] [**sap** *sap-id*] **mac** *mac-address* [**session-id** *session-id*] [**ip** *ip-address*] [**subscriber** *sub-ident-string*]

**Context**  
[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ppp-session)

**Full Context**  
tools perform subscriber-mgmt eval-ppp-session

**Description**  
This command evaluates PPP sessions.

**Parameters**

***service-id***  
Specifies an existing subscriber service ID.  
**Values**    1 to 2147483647

***user-name***  
Specifies the PPP user name up to 253 characters.

***sap-id***  
Specifies a SAP ID up to 255 characters.

***ip-address***  
Specifies the peer's IP address.

***sub-ident-string***  
Specifies an existing subscriber identification profile.

#### **mac-address**

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

#### **session-id**

Specifies information about the ID of the PPP session.

**Values** 1 to 65535

#### **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.44 eval-rates

### **eval-rates**

#### **Syntax**

**eval-rates**

#### **Context**

[\[Tree\]](#) (tools>perform>subscr-mgmt>bonding eval-rates)

#### **Full Context**

tools perform subscriber-mgmt bonding eval-rates

#### **Description**

This command evaluates all bonding contexts and recalculates all reference rates. This command can be useful in handling changes that are not automatically tracked, such as adapting a scheduler rate in a QoS policy.

#### **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.45 eval-sap-template

### **eval-sap-template**

#### **Syntax**

**eval-sap-template** *name*

## Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-sap-template)

## Full Context

tools perform subscriber-mgmt eval-sap-template

## Description

This command reapplies the SAP template to all the SAPs that were created using this template. This command can be used after changing the SAP template because not all the changed parameters are automatically applied to the existing SAPs.

This command reports the total number of SAPs linked to the template, the number of SAPs that changed or did not require a change, and the number of SAPs for which a change was attempted but failed.

## Parameters

### *name*

Specifies a SAP template name, up to 32 characters, as configured under **configure subscriber-mgmt sap-template**.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of the command information.

### Output Example

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-sap-template "default"
Sap instances:
- total submitted : 1
- changed        : 1
- change failed   : 0
```

## 8.46 eval-slaac-host

### eval-slaac-host

## Syntax

**eval-slaac-host** [**svc-id** *service-id*] [**sap** *sap-id*] [**subscriber** *sub-ident-string*] [**ipv6-address** *ipv6-prefix*]  
[**mac** *ieee-address*]

## Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-slaac-host)

## Full Context

tools perform subscriber-mgmt eval-slaac-host

### Description

This command evaluates the SLAAC host.

## Parameters

**service-id**

Specifies an existing subscriber service ID.

**Values** 1 to 2147483647

***sap-id***

Specifies a SAP ID, up to 255 characters.

***sub-ident-string***

Specifies an existing subscriber identification profile.

***ieee-address***

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

***ipv6-prefix***

Specifies an IPv6 prefix and prefix length.

<b>Values</b>	ipv6-prefix	x::x::x::x::x::x (eight 16-bit pieces)
		x::x::x::x::d.d.d.d

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.47 evaluate-script

## evaluate-script

## Syntax

```
evaluate-script sap sap-id control-session acct-session-id action script-action [ dynsvc-policy name ]  
[param-string string]
```

## Context

```
[Tree] (tools>perform>service>dynamic-services evaluate-script)
```

## Full Context

tools perform service dynamic-services evaluate-script

## Description

This tools command performs the execution of a dynamic service script action as if the corresponding RADIUS attributes were received from RADIUS. It is possible to setup, modify or teardown a dynamic service associated with the specified control channel.

### Note:

This command is not available in the MD-CLI.

## Parameters

### **sap sap-id**

specifies the dynamic service SAP id.

### **control-session acct-session-id**

Specifies the accounting session id of the control channel associated with this dynamic service.

### **action script-action**

Specifies the requested action: setup, modify or teardown.

### **dynsvc-policy name**

Specifies the dynamic services policy to use for this action. Mandatory parameter for setup and modify actions. In case of a modify action, the dynamic services policy must be the same as the policy used at setup.

### **param-string string**

Specifies the dynamic service parameter list. Mandatory parameter for setup and modify actions.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 8.48 evc

evc

## Syntax

**evc** [*port-id* [*vlan* *vlan-id*]]

## Context

**[Tree]** (show>elmi evc)

## Full Context

show elmi evc

Description

This command displays Ethernet Virtual Connections (EVC). No argument displays all the EVC on the service router. The port and VLAN arguments display information related to EVC associated with the port and VLAN.

Parameters

**port-id**  
Displays information related to the EVCs configured on the port.

**Values** slot/mda/port

**vlan-id**  
Specifies the VLAN Identifier of the EVC.

**Values** 0 to 4094, \*

Platforms

All

Output

The following output is an example of E-LMI EVC information, and [Table 140: Output fields: E-LMI EVC](#) describes the output fields.

Output Example

```
*A:Dut-C# show elmi evc

Type	Connection type.
EVC Id	EVC identifier.

8.49 event-control

event-control

**Syntax**  
`event-control [application-id [event-name | event-number]]`  
`event-control application-id event-name detail`

**Context**  
[\[Tree\]](#) (show>log event-control)

**Full Context**  
show log event-control

**Description**  
This command displays event control settings for events including whether the event is suppressed or generated and the severity level for the event.  
If no options are specified all events, alarms and traps are listed.

Parameters

application-id

Only displays event control for the specified application.

Default All applications.

The following are some sample applications:

Values anysec, application\_assurance, aps, atm, auto\_prov, bfd, bgp, bier, bmp, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm\_oam, elmi, ering, eth\_cfm, etun, filter, fpe, gsmp, gtp, gtungrp, icl, igh, igmp, igmp\_snooping, ip, ipfix, ipsec, ipsec\_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, macsec, mcac, mcpath, mc\_redundancy, mgmt\_core, mirror, mld, mld\_snooping, mpls, mpls\_tp, mpls\_lmgr, mrp, msdp, nat, nge, ntp, oam, open\_flow, ospf, pcap, pcep, pfcf, pim, im\_snooping, port, ppp, pppoe, pppoe\_clnt, profile, ptp, pxc, python, qos, radius, rib\_api, rip, rip\_ng, route\_next\_hop, route\_policy, rpki, rsvp, security, sflow, snmp, sr\_policy, stp, subscr\_mgmt, sub\_host\_trk, svcmgr, system, tip, tls, user, user\_db, video, vrrp, vrtr, wlan\_gw, wpp

event-name

Only displays event control for the named application event, up to 32 characters.

Default All events for the application.

event-number

Only displays event control for the specified application event number.

Default All events for the application.

Platforms

All

Output

The following output is an example of event control information.

Table 141: Output fields: event control describes the output fields for the event control.

Output Example

```
A:gal171# show log event-control

Table 141: Output fields: event control

Label	Description
Application	The application name.
ID#	The event ID number within the application L ID# - An "L" in front of an ID represents local events that do not generate an associated SNMP trap. Most events do generate a trap, only the exceptions are marked with a preceding "L".
Event Name	The event name.
P	CL — The event has a cleared severity or priority. CR — The event has critical severity or priority. IN — The event has indeterminate severity or priority. MA — The event has major severity or priority.

Label	Description
	MI — The event has minor severity or priority. WA — The event has warning severity or priority.
g/s	gen — The event will be generated or logged by event control. sup — The event will be suppressed or dropped by event control. thr — Specifies that throttling is enabled.
Logged	The number of events logged or generated.
Dropped	The number of events dropped/suppressed.
Severity	The severity level of the event (cleared, indeterminate, critical, major, minor, or warning).
Generated	Indicates whether the log event is enabled (true) or suppressed (false).
Count	The number of events logged or generated.
Drop count	The number of events dropped/suppressed.
Throttle	Indicates whether the event is subject to global throttling (true or false).
Specific throttle	Indicates whether the event is subject to specific per event throttling (true or false).
Specific throttle limit	The configured number of events per interval for specific throttling.
Specific throttle interval (s)	The configured interval over which the specific throttling limit is applied.
Specific throttle by default	Indicates whether the specific throttling is enabled or not when it has not been explicitly configured.
Specific throttle limit default	The default number of events per-interval for specific throttling of this event.
Specific throttle interval default (s)	The default interval over which the specific default throttling limit is applied.
Repeat	Specifies that the log event should be repeated every minute until the underlying condition is cleared.
Source stream	Specifies the event source (main, security, change, debug or li).

### event-parameters

#### Syntax

**event-parameters** [*application-id*] [*event-name* | *event-number*]

#### Context

[\[Tree\]](#) (show>log event-parameters)

#### Full Context

show log event-parameters

## Description

This command displays an event's (or all events) common parameters and specific parameters. This allows a user to know what parameters can be passed from a triggering event to the triggered EHS script.

There is a common event parameter for all log events called 'timestamp' that contains the same information as 'gentime', but in a different format and unit. The 'timestamp' parameter is only available to Python applications.

## Parameters

### *application-id*

Displays event parameters for the specified application.

The following are some sample applications:

**Values**    adp, anysec, application\_assurance, auto\_prov, bfd, bgp, bier, bmp, calltrace, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm\_oam, elmi, ering, eth\_cfm, etun, filter, fpe, gsmpp, gtp, igmp, igmp\_snooping, ip, ipfix, ipsec, ipsec\_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, maffilter, macsec, mcac, mcpath, mc\_redundancy, mgmt\_core, mirror, mld, mld\_snooping, mpls, mpls\_tp, mpls\_lmgr, mrp, msdp, nat, nge, ntp, oam, ospf, pcap, pcep, pfcf, pim, pim\_snooping, pools, port, pppoe, pppoe\_clnt, profile, ptp, pxc, python, qos, radius, rib\_api, rip, rip\_ng, route\_next\_hop, route\_policy, rpki, rsvp, satellite, security, sflow, snmp, sr\_mpls, sr\_policy, srv6, stp, subscr\_mgmt, sub\_host\_trk, svcmgr, system, telemetry, tip, tls, tree\_sid, user, user\_db, video, vrrp, vrtr, wlan\_gw, wpp

### *event-name*

Displays event parameters for the named application event up to 32 characters in length.

### *event-number*

Displays event parameters for the specified application event number.

**Values**    0 — 4294967295

## Platforms

All

## Output

The following output is an example of log event parameter information.

## 8.54 events

### events

#### Syntax

**events** [**local** | **remote**]

#### Context

[\[Tree\]](#) (clear>port>eth>efm-oam events)

#### Full Context

clear port ethernet efm-oam events

#### Description

This command clears all link monitoring events on the port.

#### Parameters

**local**

Clears the local events only.

**remote**

Clears the remote events only.

#### Platforms

All

## 8.55 evpn

### evpn

#### Syntax

**evpn mac-dup-detect** *ieee-address*

**evpn mac-dup-detect all**

#### Context

[\[Tree\]](#) (clear>service>id evpn)

#### Full Context

clear service id evpn

#### Description

This command clears a duplicate MAC and restarts the MAC duplication process. It also clears black-hole MACs.

#### Parameters

***ieee-address***

Specifies the MAC address, up to 30 characters.

***all***

Specifies that the **clear** command applies to all duplicate MACs.

#### Platforms

All

### evpn

#### Syntax

**evpn usage**

#### Context

[\[Tree\]](#) (tools>dump>service evpn)

tools dump service evpn

## Description

This command displays the consumed EVPN resources in the system. The VXLAN destinations include static VXLAN destinations as well as Ethernet Segment (ES) VXLAN destinations.

## Platforms

All

## Output

The following output is an example of consumed EVPN resources information and, [Table 142: Output fields: EVPN usage](#) describes the output fields.

### Output Example

```
A:PE-2# tools dump service evpn usage

vxlan-srv6-evpn-mpls usage statistics at 05/24/2024 11:23:38:

MPLS-TEP                :          0
VXLAN-TEP                :          0
SRV6-TEP                 :          5
Total-TEP                :       5/ 16383

Evpn Rvpls Mcast Dests   :      0/102400
Evpn Etree MLDP Leaf Intf :      0/ 4096
EVPN ES Labels on MLDP Leaf Intf                 :      0/ 16380
```

Table 142: Output fields: EVPN usage

Label	Description
MPLS-TEP	Specifies the number of MPLS tunnel endpoints (TEPs)
VXLAN-TEP	Specifies the number of VXLAN TEPs
SRV6-TEP	Specifies the number of SRv6 TEPs
Total-TEP	Specifies the total number of TEPs
Mpls Dests (TEP, Egress Label + ES + ES-BMAC)	Specifies the number of MPLS destinations
Mpls Etree Leaf Dests	Specifies the number of MPLS E-Tree leaf destinations
Vxlan Dests (TEP, Egress VNI + ES)	Specifies the number of VXLAN destinations

Label	Description
Srv6 Dests (TEP, SID + ES)	Specifies the number of SRv6 destinations
Total-Dest	Specifies the total number of destinations
Sdp Bind + Evpn Dests	Specifies the number of SDP bind and EVPN destinations
ES L2/L3 PBR	Specifies the number of elementary stream (ES) Layer 2 or Layer 3 policy-based routing (PBR)
Evpn Etree Remote BUM Leaf Labels	Specifies the number of EVPN E-Tree remote BUM leaf labels
Evpn Rvpls Mcast Dests	Specifies the number of R-VPLS multicast destinations
EVPN Etree MLDP Leaf Intf	<p>Specifies the number of mLDP interfaces on an mLDP Leaf (receiving P2MP traffic) where the interfaces are part of EVPN E-Tree services. Leaf, in this context, refers to mLDP leaf.</p> <p>This number also refers to the number of roots in E-Tree services that are joinable from an mLDP leaf (for example, the number of mLDP leaf interfaces). Since each root joined potentially causes an E-Tree leaf label from that root to be programmed against the mLDP leaf, it implicitly also indicates the number of programmable labels.</p> <p>An entry here is counted as soon as an mLDP leaf is created in an E-Tree service.</p>
EVPN ES Labels on MLDP Leaf Intf	Specifies the number of upstream ES labels programmed against mLDP leafs. This does not include unique upstream ES labels since these labels must be programmed on all mLDP leafs joining a specific root PE.

## 8.57 evpn-mcast-gateway

evpn-mcast-gateway

Syntax

evpn-mcast-gateway {all | pim | mvpn}

Context

[\[Tree\]](#) (show>service>id evpn-mcast-gateway)

Full Context

show service id evpn-mcast-gateway

Description

This command displays the EVPN multicast gateway information.

Parameters

- all*
- Displays EVPN mulitcast gateway information for the MVPN-to-EVPN Gateway (MEG) and PIM-to-EVPN Gateway (PEG) cases.
- pim*
- Displays EVPN mulitcast gateway information for the PEG case.
- mvpn*
- Displays EVPN mulitcast gateway information for the MEG case.

Platforms

All

Output

The following output is an example of EVPN multicast gateway information, and [Table 144: Output fields: EVPN multicast gateway](#) describes the output fields.

Output Example

```
# show service id 2 evpn-mcast-gateway {all|pim|mvpn}

evpn-mpls

Syntax

- evpn-mpls esi esi [detail]
- evpn-mpls esi esi instance instance-id [detail]
- evpn-mpls es-bmac ieee-address

**evpn-mpls** [**detail**]  
**evpn-mpls instance** *instance-id* [**detail**]  
**evpn-mpls fxc** [**sap** *sap-id*]

**Context**  
[\[Tree\]](#) (show>service>id evpn-mpls)

**Full Context**  
show service id evpn-mpls

**Description**  
This command displays the existing EVPN-MPLS destinations for a specified service and all related information. The command allows filtering based on **esi** (for EVPN multihoming) and **es-bmac** (for PBB-EVPN multihoming) to display the EVPN-MPLS destinations associated to an Ethernet Segment Identifier (ESI).

**Parameters**

**esi**

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':','')

**ieee-address**

Specifies a 48-bit MAC address for which to display information. The parameter is entered in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx, where xx represents a hexadecimal number.

**instance-id**

Specifies the instance ID.

Values	1,2
--------	-----

**detail**

Keyword that displays detailed information.

**fxc**

Keyword that displays Flexible Cross Connect (FXC) information.

**sap-id**

Specifies the port ID portion of the SAP definition.

Values	null	port-id   bundle-id   bpgrp-id   lag-id   aps-id   eth-sat-id

The following table describes the EVPN-MPLS output fields.

*Table 145: Output fields: service EVPN-MPLS*

Label	Description
vBmacAddr	Displays the vBmac address
Num. Macs	Displays the number of MACs
Last Change	Indicates the time of the most recent state changes
TEP Address	Displays the TEP address
Egr Label	Displays the egress label
Transport	Displays the transport type
Number of entries	Indicates the number of entries
Eth SegId	Displays the Ethernet Segment ID
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the EVPN-MPLS entry
Transport:Tnl	Displays the transport tunnel
Num. MAC	Displays the number of MACs
Oper State	Displays the operational state
Oper Flags	Displays the operational flags
Mcast	Displays the multicast information
Sup BCast Domain	Displays the Sup BCast Domain
FXC SAP Connections	
Dest Identifier	Displays the destination ID
Sap (Normalized Tags)	Displays the SAP ID
Last Change	Displays the date and time of the last change
Transport:Tnl-id	Displays the transport tunnel ID

Label	Description
Number of Entries	Displays the total number of entries

### 8.59 evpn-proxy-db

evpn-proxy-db

Syntax

```
evpn-proxy-db [detail]
evpn-proxy-db [group grp-ip-address]
```

Context

```
[Tree] (show>service>id>mld-snooping evpn-proxy-db)
[Tree] (show>service>id>igmp-snooping evpn-proxy-db)
```

Full Context

```
show service id mld-snooping evpn-proxy-db
show service id igmp-snooping evpn-proxy-db
```

Description

This command displays the EVPN proxy database that is created when **config>service>vpls> igmp/mld-snooping>evpn-proxy** is enabled in the service. The EVPN proxy database is populated with local reports received on SAP or SDP binds but not with the received SMET routes. The output shows the IGMP and MLD versions of the database entries that are conveyed in the SMET routes advertised for the entries.

Parameters

- grp-ip-address**  
Specifies the group IP address, in dotted decimal notation.
- detail**  
Specifies detailed information for the EVPN proxy database.

Platforms

All

Output

The following output is an example of EVPN proxy database information.

Output Example

```
A:PE-2# show service id 4000 igmp-snooping evpn-proxy-db
=====
```

```
IGMP Snooping Evpn-Proxy-reporting DB for service 4000
=====
Group Address      Mode      Up Time      Num Sources      V1  V2  V3
-----
239.0.0.1          exclude  0d 00:53:55    0                  V3
239.0.0.2          include  0d 00:53:55    1                  V3
-----
Number of groups: 2
=====
```

Table 146: Output fields: IGMP snooping EVPN proxy describes EVPN proxy output fields.

Table 146: Output fields: IGMP snooping EVPN proxy

Field	Description
Group Address	Group IP address
Mode	IGMPv3 or MLDv2 mode
Up Time	Time that the group is added
Num Sources	Number of sources
V1	IGMP/MLD version of the database
V2	IGMP/MLD version of the database
V3	IGMP version of the database

8.60 excessive-sources

excessive-sources

Syntax

**excessive-sources** [**service-id** *service-id* **sap-id** *sap-id*]

Context

[\[Tree\]](#) (show>system>security>cpu-protection excessive-sources)

Full Context

show system security cpu-protection excessive-sources

Description

This command displays sources exceeding their per-source rate limit.

## Parameters

### ***service-id***

Displays information for services exceeding their per-source rate limit.

### ***sap-id***

Displays information for SAPs exceeding their per-source rate limit.

## Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## excessive-sources

## Syntax

**excessive-sources**

## Context

[\[Tree\]](#) (clear>cpu-protection excessive-sources)

## Full Context

clear cpu-protection excessive-sources

## Description

This command clears the records of sources exceeding their per-source rate limit.

## Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## 8.61 exercise

## exercise

## Syntax

**exercise** *aps-id* {**protect** | **working**}

## Context

[\[Tree\]](#) (tools>perform>aps exercise)

## Full Context

tools perform aps exercise

Description

This command performs an exercise request on the protection or working circuit.

Parameters

*aps-id*

Specifies the APS ID.

Values	<i>aps-id</i>	<i>aps-group-id</i>
	aps	keyword
	group-id	1 to 128

**protect**

This command clears a physical port that is acting as the protection circuit for the APS group.

**working**

This command clears a physical port that is acting as the working circuit for this APS group.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

8.62 expand-wildcard-path

expand-wildcard-path

Syntax

**expand-wildcard-path** *path*

Context

[\[Tree\]](#) (tools>dump>system>telemetry expand-wildcard-path)

Full Context

tools dump system telemetry expand-wildcard-path

Description

This command expands XML Paths (XPaths) to include multiple wildcards.

Parameters

*path*

Specifies the XPath that contains the wildcards.

Platforms

All

Output

Output Example

```
# tools dump system telemetry expand-wildcard-path "/state/card/.../oper-state"
=====
Expanded paths
=====
/state/card[slot-number=]/hardware-data/oper-state
/state/card[slot-number=]/mda[mda-slot=]/hardware-data/oper-state
/state/card[slot-number=]/mda[mda-slot=]/flex[group-index=]/oper-state
=====
```

8.63 explicit-subscriber-map

explicit-subscriber-map

Syntax

explicit-subscriber-map

Context

[\[Tree\]](#) (show>subscr-mgmt explicit-subscriber-map)

Full Context

show subscriber-mgmt explicit-subscriber-map

Description

This command displays explicit subscriber mappings.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management explicit subscriber map information.

Output Example

```
B:Dut-A>show>subscr-mgmt# explicit-subscriber-map
=====
Explicit Subscriber Map
=====
Key                               Sub profile
                                SLA profile
-----
sub_ident_A_1                     sub_prof80
```

```
sla_prof80
-----
Number of Explicit Subscriber Mappings : 1
=====
B:Dut-A>show>subscr-mgmt#
```

Table 147: Output fields: explicit subscriber map describes subscriber management explicit subscriber map output fields.

Table 147: Output fields: explicit subscriber map

Field	Description
Key	The explicit subscriber mapping
Number of Explicit Subscriber Mappings	The number of configured explicit subscriber mappings

8.64 export

export

Syntax  
export

Context  
[Tree] (clear>router>isis export)

Full Context  
clear router isis export

Description  
This command re-evaluates route policies participating in the export mechanism, either as importers or exporters of routes.

Platforms  
All

export

Syntax  
export

## Context

[\[Tree\]](#) (clear>router>ospf3 export)

[\[Tree\]](#) (clear>router>ospf export)

## Full Context

clear router ospf3 export

clear router ospf export

## Description

This command re-evaluates all effective export policies.

## Platforms

All

export

## Syntax

export

## Context

[\[Tree\]](#) (clear>router>rip export)

## Full Context

clear router rip export

## Description

This command re-evaluates RIP export policies.

## Platforms

All

export

## Syntax

export

## Context

[\[Tree\]](#) (clear>router>ripng export)

## Full Context

clear router ripng export

### Description

This command re-evaluates RIPng export policies.

### Platforms

All

## 8.65 extranet-interface

### extranet-interface

### Syntax

**extranet-interface**

### Context

[\[Tree\]](#) (show>router>pim extranet-interface)

### Full Context

show router pim extranet-interface

### Description

This command displays extranet interface information.

**Table 148: Output fields: failover pool statistics** describes failover pool statistics output fields.

*Table 148: Output fields: failover pool statistics*

Field	Description
Failover Admin State	Identifies the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.

Field	Description
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out.  A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for pool	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a

Field	Description
	subnet range of which the failover control is set to <b>local</b> on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.
Number of pools found	The total number of pools found

## failover-pool-stats

### Syntax

**failover-pool-stats** [*pool-name*]

### Context

[\[Tree\]](#) (clear>router>dhcp>server failover-pool-stats)

[\[Tree\]](#) (clear>router>dhcp6>server failover-pool-stats)

### Full Context

clear router dhcp local-dhcp-server failover-pool-stats

clear router dhcp6 local-dhcp-server failover-pool-stats

### Description

This command clears failover pool statistics.

### Parameters

***pool-name***

Clears information about the pool name which is defined in the system.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 149: Output fields: failover server statistics describes failover server stats fields.

Table 149: Output fields: failover server statistics

Field	Description
Failover Admin State	Identifiers the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT

Field	Description
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state.  After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out.  A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for server	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease.
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host

Field	Description
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to <b>local</b> on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.

## 9.4 failure-recovery

### failure-recovery

#### Syntax

**failure-recovery** {**start** | **abort** | **clear-hold-down**}

#### Context

[\[Tree\]](#) (tools>perform>system>switch-fabric failure-recovery)

#### Full Context

tools perform system switch-fabric failure-recovery

#### Description

This command controls the automatic switch-fabric failure recovery.

#### Parameters

##### **start**

Forces the initiation of the recovery process.

##### **abort**

Terminates a running recovery process.

**clear-hold-down**

Clears the hold-down condition and allows the recovery to run immediately when the trigger condition occurs.

**Platforms**

7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

9.5 fate-sharing

fate-sharing

**Syntax**

fate-sharing

**Context**

[Tree] (show>service>id>spb fate-sharing)

**Full Context**

show service id spb fate-sharing

**Description**

This command displays SPB fate-sharing information on User B-VPLS service, in correspond to associated Control B-VPLS service.

**Platforms**

All

**Output**

The following output is an example of service SPB fate sharing information.

**Output Example**

```
*A:Dut-A# Node show service id spb fate-sharing
=====
User service fate-shared sap/sdp-bind information
=====
Control   Control Sap/      FID      User      User Sap/
SvcId     SdpBind                                     SvcId     SdpBind
-----
500       1/1/20:500        502      502       1/1/20:502
=====
```

## 9.6 fdb

fdb

### Syntax

**fdb** [**sap** *sap-id* [**expiry**]] | [**sdp** *sdp-id* [**expiry**]] | [**mac** *ieee-address* [**expiry**]] | **endpoint** *endpoint* | [**detail**] [**expiry**] [**pbb**]

### Context

[\[Tree\]](#) (show>service>id fdb)

### Full Context

show service id fdb

### Description

This command displays FDB entries for a specified MAC address.

### Parameters

- sap-id**  
Specifies the physical port identifier portion of the SAP
- detail**  
Displays detailed information
- expiry**  
Displays time until MAC is aged out
- pbb**  
Displays PBB related information. This keyword is only applicable to B-VPLS or I-VPLS services. This parameter applies to the 7450 ESS or 7750 SR only.
- endpoint-name**  
Specifies an endpoint name up to 32 characters in length. This parameter applies to the 7450 ESS or 7750 SR only.

### Platforms

**Table 150: Output fields: service ID FDB** describes service FDB output fields.

*Table 150: Output fields: service ID FDB*

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the FDB entry.
Source Identifier	Displays the id of the source MAC.
Type/Age	<p>Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs.</p> <p>Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.</p> <p>L — Learned - Dynamic entries created by the learning process.</p> <p>OAM — Entries created by the OAM process.</p> <p>P — Indicates the MAC is protected by the MAC protection feature.</p> <p>H — Host, the entry added by the system for a static configured subscriber host.</p> <p>D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.</p> <p>Static — Statically configured.</p> <p>T — Trusted.</p>
Last Change	Indicates the time of the most recent state changes.

## fdb

### Syntax

**fdb** {all | **mac** *ieee-address* | **sap** *sap-id* | **mesh-sdp** *sdp-id* [: *vc-id*] | **spoke-sdp** *sdp-id* [:*vc - id*] | **vxlan-instance** *instance* [**vtep** *ip- address*]}

### Context

[\[Tree\]](#) (clear>service>id fdb)

## Full Context

clear service id fdb

## Description

This command clears the FDB entries for the service.

## Parameters

### **all**

Clears all FDB entries.

### **ieee-address**

Clears only FDB entries in the FDB table with the specified 48-bit address. The MAC address can be expressed in the form aa:bb:cc:dd:ee:ff or aa-bbcc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers.

### **sap-id**

Clears the physical port identifier portion of the SAP definition.

### **mesh-sdp**

Clears only the service FDB entries associated with the specified mesh SDP ID. For a mesh SDP, the VC ID is optional.

### **spoke-sdp**

Clears only the service FDB entries associated with the specified spoke-SDP ID. For a spoke-SDP, the VC ID must be specified.

### **sap-id**

Specifies the SDP ID for which the associated FDB entries will be cleared.

### **vc-id**

Specifies the virtual circuit ID on the SDP ID for which the associated FDB entries are cleared.

<b>Values</b>	sdp-id[:vc-id] sdp-id: 1 to 32767
	vc-id: 1 to 4294967295
	sdp-id:vc-id sdp-id: 1 to 32767
	vc-id: 1 to 4294967295

### **instance**

Clears only the service FDB entries associated with the specified static VXLAN instance.

<b>Values</b>	1, 2
---------------	------

### **vtep ip-address**

Specifies, optionally and along with the VXLAN instance, a specific configured static egress VTEP to clear the FDB entries associated only with the VTEP.

**Table 151: Output fields: FDB information** describes show FDB-Info command output.

*Table 151: Output fields: FDB information*

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Mac Move	Displays the administrative state of the MAC movement feature associated with this service.
Primary Factor	Displays a factor for the primary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Secondary Factor	Displays a factor for the secondary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Mac Move Rate	Displays the maximum rate at which MACs can be re-learned in this service, before the SAP where the moving MAC was last seen is automatically disabled in order to protect the system against undetected loops or duplicate MAs. The rate is computed as the maximum number of re-learns

Label	Description
	allowed in a 5 second interval: for example, the default rate of 2 re-learns per second corresponds to 10 re-learns in a 5 second period.
Mac Move Timeout	Displays the time in seconds to wait before a SAP that has been disabled after exceeding the maximum re-learn rate is re-enabled.  A value of zero indicates that the SAP will not be automatically re-enabled after being disabled. If after the SAP is re-enabled it is disabled again, the effective retry timeout is doubled in order to avoid thrashing.
Mac Move Retries	Displays the number of times retries are performed for re-enabling the SAP/SDP.
Table Size	Specifies the maximum number of learned and static entries allowed in the FDB of this service.
Allocated Count	Displays the total number of allocated entries in the FDB of this service.
Total In Use	Displays the total number of entries in use in the FDB of this service.
Learned Count	Displays the current number of learned entries in the FDB of this service.
Static Count	Displays the current number of static entries in the FDB of this service.
OAM MAC Count	Displays the current number of OAM entries in the FDB of this service.
DHCP MAC Count	Displays the current number of DHCP-learned entries in the FDB of this service.
Host MAC Count	Displays the current number of host-learned entries in the FDB of this service.
Intf MAC Count	Displays the total number of interface MAC entries in the FDB of this service.
SPB Count	Displays the total number of SPB entries in the FDB of this service.
Cond MAC Count	Displays the total number of conditional static MAC entries in the FDB of this service.
BGP EVPN Count	Displays the total number of BGP EVPN entries in the FDB of this service.

Label	Description
EVPN Static Cnt	Displays the total number of BGP EVPN MAC entries with the sticky bit set in the FDB of this service.
EVPN Dup Det Cnt	Displays the total number of times a BGP EVPN duplicate MAC address has been detected in this service.
Remote Age	Displays the number of seconds used to age out FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.
Local Age	Displays the number of seconds used to age out FDB entries learned on local SAPs.
High Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be raised by the agent.
Low Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be cleared by the agent.
Mac Learning	Specifies whether the MAC learning process is enabled.
Discard Unknown	Specifies whether frames received with an unknown destination MAC are discarded.
Mac Aging	Indicates whether the MAC aging process is enabled.
Relearn Only	When one of the FDB table size limits (service, line card, system) has been reached, the learning of new MAC addresses is temporary disabled and only MAC relearns are allowed. When in this state, the Relearn Only flag is True, otherwise it is False.
Mac Subnet Len	Displays the number of bits to be considered when performing MAC-learning or MAC-switching.
Source-Identifier	The location where the MAC is defined.
Type/Age	<p>Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs.</p> <p>Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.</p> <p>L — Learned - Dynamic entries created by the learning process.</p> <p>OAM — Entries created by the OAM process.</p> <p>H — Host, the entry added by the system for a static configured subscriber host.</p> <p>D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.</p>

Label	Description
	P — Indicates the MAC is protected by the MAC protection feature. Static — Statically configured.
Last Change	Indicates the time of the most recent state changes.
Sel Learned FDB	Displays the administrative state of the selective learned FDB feature associated with this service.

## 9.8 fdb-mac

fdb-mac

### Syntax

**fdb-mac** *ieee-address* [**expiry**]

### Context

[\[Tree\]](#) (show>service fdb-mac)

### Full Context

show service fdb-mac

### Description

This command displays the FDB entry for a specified MAC address.

### Parameters

***ieee-address***  
The 48-bit MAC address for which the FDB entry will be displayed in the form *aa:bb:cc:dd:ee:ff* or *aa-bb-cc-dd-ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

**expiry**  
Shows the time until the MAC is aged out.

### Platforms

All

### Output

The following output is an example of FDB MAC information.

### Output Example

```
*A:ian2# show service fdb-mac

**Table 152: Output fields: FDB MAC** describes the show FDB-MAC command output fields.

Table 152: Output fields: FDB MAC

Label	Description
Service ID	The service ID number.
MAC	The specified MAC address.
Source-Identifier	The location where the MAC is defined.
Type/Age	Static — FDB entries created by management.
	Learned — Dynamic entries created by the learning process.
	OAM — Entries created by the OAM process.
	H — Host, the entry added by the system for a static configured subscriber host.
	D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.
	P — Indicates the MAC is protected by the MAC protection feature.

9.9 fdb-usage

fdb-usage

Syntax

```
fdb-usage [card slot-id]
```

Context

```
[Tree] (show>service>system fdb-usage)
```

Full Context

```
show service system fdb-usage
```

Description

This command displays the FDB usage, excluding the pending updates (which can be seen using the tools `dump service id id fdb {card-status | mac-status}` command) for the system and all line cards.

Parameters

**slot-id**

Displays the information for the line card in the specified slot IDs, expressed as an integer.

**Values**    1 to 20

Platforms

All

Output

The following output is an example of FDB usage information.

```

**Context**  
[\[Tree\]](#) (tools>dump>router>ldp fec)

**Full Context**  
tools dump router ldp fec

**Description**  
This command dumps information for an LDP FEC.

- Parameters**
- p2mp-id identifier**  
Dumps LDP active P2MP identifier bindings information.  
**Values** 0 to 4294967295
  - inner-root ip-address**  
Dumps inner root IP address information.
  - root ip-address**  
Dumps root IP address information.
  - prefix ip-address[/mask]**  
Dumps LDP active prefix and mask information.  
**Values** ip-address[/mask]:

ipv4-prefix	a.b.c.d
ipv4-prefix-le	0 to 32
ipv6-prefix	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF] H
	d: [0 to 255] D
ipv6-prefix-le	0 to 128

**source *ip-address***

Dumps source IP address information.

**group *mcast-address***

Dumps the group multicast address bindings.

**rd *rd***

Dumps information for the route distinguisher.

**Values** *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

**vc-type *vc-type***

Dumps information for the specified VC type.

**Values** ethernet, vlan, framerelay, atm-all5, atm-cell, hdlc, ppp, cem, atm-vcc, atm-vpc, ipipe, atm-vcc-1-1, atm-vpc-1-1, atm-aal5-pdu, fr, cep, e1-satop, t1-satop, e3-satop, t3-satop, cesopsn, tdmop, cesopsn-cas, tdmop-cas, fr-dlci, mirror

**vc-id *vc-id***

Dumps information for the specified VC-ID.

**Values** 1 to 4294967295

**agi *agi***

Specifies the Attachment Group identifier TLV associated with this service FEC.

**Values** <ip-addr:comm-val> | <2byte-asnumber:ext-comm-val> | <4byte-asnumber:comm-val>  
ip-addr - a.b.c.d  
comm-val - [0 to 65535]  
2byte-asnumber - [1 to 65535]  
ext-comm-val - [0 to 4294967295]  
4byte-asnumber - [1 to 4294967295]  
null - means all value is 0

**saii-type2 *global-id:prefix:ac-id***

Dumps Source Attachment Individual Identifier (SAII) information.

**Values** <number>:<number> | <a.b.c.d>:<number>

**taii-type2 *global-id:prefix:ac-id***

Dumps Target Attachment Individual Identifier (TAII)

**svc-fec-type**

Specifies the FEC type.

**Values** fec128, fec129

Table 153: Output fields: LDP FEC describes the LDP FEC parameters output fields.

Table 153: Output fields: LDP FEC

Label	Description
LSP ID	Specifies the LSP identifier.
Metric	Specifies the metric type of the LSP.
inLabel	Specifies the incoming MPLS label on which to match.
egress Label	Specifies the egress label associated with this next-hop entry.

## 9.11 fec-egress-stats

fec-egress-stats

Syntax

**fec-egress-stats** [*ip-prefix/mask*]

**fec-egress-stats** [**active**] [**family**]

Context

[\[Tree\]](#) (show>router>ldp fec-egress-stats)

Full Context

show router ldp fec-egress-stats

Description

This command displays LDP prefix FECs egress statistics.

Parameters

*ip-prefix*

Specify information for the specified IP prefix. Host bits must be 0.

**mask**

Specifies the address mask used to indicate the bits of an IP address that are being used for the subnet address.

**Values**    IPv4: 0 to 32  
              IPv6: 0 to 128

**family**

Displays either IPv4 or IPv6 LDP session information.

**Platforms**

All

**Output**

The following output is an example of LDP FEC egress statistics information.

**Output Example**

```
*A:Dut-C>config>router>ldp# show router ldp fec-egress-stats 3ffe::a14:101/128

## fec-egress-stats

### Syntax

**fec-egress-stats** *ip-prefix/mask* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

### Context

[\[Tree\]](#) (monitor>router>ldp fec-egress-stats)

### Full Context

monitor router ldp fec-egress-stats

### Description

This command monitors egress statistics for LDP FEC prefixes.

### Parameters

***ip-prefix/mask***

Specifies information for the specified IP prefix and mask length.

#### Values

ipv4-prefix	a.b.c.d
ipv4-prefix-length	0 to 32

ipv6-prefix

x:x:x:x:x:x (eight 16-bit pieces)  
  
x:x:x:x:x:d.d.d.d  
  
x: [0 to FFFF] H  
  
d: [0 to 255] D

ipv6-prefix-le

0 to 128

seconds

Configures the interval for each display in seconds.

Values3 to 60

Default10

repeat

Configures how many times the command is repeated.

Values1 to 999

Default10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

9.12 fec-originate

fec-originate

Syntax

fec-originate [ip-prefix/mask] [operation-type]

Context

[Tree] (show>router>ldp fec-originate)

Full Context

show router ldp fec-originate

Description

This command displays LDP static prefix FECs.

Parameters

*ip-prefix*

Specify information for the specified IP prefix. Host bits must be 0.

*mask*

Specifies the 32-bit address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values 0 to 32

*operation-type*

Specify the operation type to display.

Values pop, swap

Platforms

All

Output

FEC Originate Output

Table 154: Output fields: FEC originate describes the FEC originate parameters output fields.

Table 154: Output fields: FEC originate

Label	Description
Prefix	Specifies the static prefix FEC.
NHType	Specifies the type of next-hop represented by this row entry: unknown — The next-hop type has not been set. IP Addr — The next-hop is an IP address. pop — There is no next-hop (pop the label and route).
NextHop	The IP address of the next-hop.
NHIfName	The name of the next-hop.
IngLabel	Specifies the label that is advertised to the upstream peer. If this variable is set to the default value of 4294967295, the ingress label will be dynamically assigned by the label manager.
EgrLabel	Specifies the egress label associated with this next-hop entry. The LSR will swap the incoming label with the configured egress label. If this

Label	Description
	egress label has a value of 4294967295, the LSR will pop the incoming label.
OprInLbl OperIngLabel	Specifies the actual or operational value of the label that was advertised to the upstream peer.

### Output Example

## 9.13 fetch-ahs-log

fetch-ahs-log

Syntax

fetch-ahs-log period days file-url file-url

Context

[\[Tree\]](#) (tools>perform>esa fetch-ahs-log)

Full Context

tools perform esa fetch-ahs-log

Description

This command retrieves the ESA instance AHS log for a specified number of past days and copies it to a local or remote destination.

**Note:** To retrieve an AHS log that includes all AHS log events saved on the ESA, configure the **period** keyword to use a value of *all*. This is helpful when trying to retrieve a record of AHS log events occurring over 31 days ago.

Parameters

period days

Specifies the number of past days for which AHS log events are retrieved.

**Values** 1 to 31, all

file-url file-url

Specifies a local or remote destination for the AHS log.

**Values**

local-url   remote-url	
local-url	[cflash-id/]file-path 200 characters maximum, including cflash-id  directory length 99 characters maximum each
remote-url	{ftp   tftp}://[login:pswd@]remote-locn/[filepath]  255 characters maximum, filepath 199 characters maximum
remote-locn	{hostname   ipv4-address   "["ipv6-address"]" }[:port]

<i>ipv4-address</i>	<i>a.b.c.d</i>
<i>ipv6-address</i>	<i>x:x:x:x:x:x:x[-interface]</i> <i>x:x:x:x:x:x:d.d.d.d[-interface]</i> <i>x</i> - [0 to FFFF]H <i>d</i> - [0 to 255]D interface - 32 characters maximum, for link local addresses
<i>port</i>	[0 to 65535]
<i>cflash-id</i>	cf1:   cf1-A:   cf1-B:   cf2:   cf2-A:   cf2-B:   cf3:   cf3-A:   cf3-B:

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## Output

Use the following command to copy the AHS log to a local destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url cf3:/test.ahs
```

## Output Example

```
Updating (1 day) AHS Log @09/19/2022 21:28:25 on esa-1 ... DONE @ 09/19/2022
21:30:50 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54104161 bytes

Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to cf3:/test.ahs ...

100%... DONE @09/19/2022 21:32:21 File Size: 54104161 bytes md5 cksum:
3f761a3a3d9c15b8ce3079ecb2015c3d
```

Use the following command to copy the AHS log to a remote destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url ftp://exuser:expassword@192.0.2.1/exuser/
Public/esa.ahs
```

## Output Example

```
Updating (1 day) AHS Log @09/19/2022 21:34:45 on esa-1 ... DONE @ 09/19/2022
21:37:10 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54110350 bytes

Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to
ftp://exuser:expassword@192.0.2.1/exuser/Public/esa.ahs ...

## 9.14 fetch-hardware-data

fetch-hardware-data

Syntax

fetch-hardware-data file-url file-url

Context

[\[Tree\]](#) (tools>perform>esa fetch-hardware-data)

Full Context

tools perform esa fetch-hardware-data

Description

This command generates a retrievable file containing the ESA server iLO event log, integrated management log, and key server information.

Parameters

file-url

Specifies a local or remote destination for the generated log file.

Values

local-url   remote-url	
local-url	[cflash-id/]file-path 200 characters maximum, including cflash-id  directory length 99 characters maximum each
remote-url	{ftp   tftp}://[login:pswd@]remote-locn/[filepath]  255 characters maximum, filepath 199 characters maximum
remote-locn	{hostname   ipv4-address   "["ipv6-address"]" }[:port]
ipv4-address	a.b.c.d
ipv6-address	x:x:x:x:x:x[:interface]  x:x:x:x:x:d.d.d.d[:interface]  x - [0 to FFFF]H  d - [0 to 255]D

	interface - 32 characters maximum, for link local addresses
<i>port</i>	[0 to 65535]
<i>cflash-id</i>	cf1:   cf1-A:   cf1-B:   cf2:   cf2-A:   cf2-B:   cf3:   cf3-A:   cf3-B:

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

9.15 fib

fib

**Syntax**  
**fib** *slot-number* [*family*] [*ip-prefix/prefix-length* [ **longer**]] [**secondary**] [**qos**] [**accounting-class**] [ **all**]  
**fib** *slot-number* **extensive** [*ip-prefix/prefix-length*] [*family*] [ **all**]  
**fib** *slot-number* [*family*] **summary**  
**fib** *slot-number* **nh-table-usage**  
**fib** **all** **summary**

**Context**  
[\[Tree\]](#) (show>router fib)

**Full Context**  
show router fib

**Description**  
This command displays the active FIB entries for a specific IOM or line card.

**Parameters**  
***slot-number***  
Displays routes only matching the specified chassis slot number.  
**Values** 1 to 20

**Note:**  
The actual range can be less depending on the platform.

***family***  
Displays the router IP interface table.

- Values
- ipv4

— Displays IPv4 routes installed in the FIB.
- ipv6

— Displays IPv6 routes installed in the FIB.

**ip-prefix/prefix-length**

Displays FIB entries only matching the specified *ip-prefix* and length.

Values	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length:	0 to 32
	ipv6-prefix:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D
	ipv6-prefix-length:	0 to 128

**Note:**  
It is possible that a specific platform only supports a subset of the above values.

**longer**  
Displays FIB entries matching the *ip-prefix/mask* and routes with longer masks.

**secondary**  
Displays secondary VRF ID information.

**qos**  
Displays the QoS priority and fc values.

**accounting-class**  
Displays the accounting class information.

**Note:**  
Not all platforms support this parameter.

**all**  
Displays all information.

**summary**  
Displays summary FIB information for the specified slot number.

**nh-table-usage**  
Displays next-hop table usage.

**Platforms**  
All

Output

The following output is an example of FIB information and [Table 155: Output fields: FIB](#) describes the output fields for the router FIB settings.

Output Example

Table 155: Output fields: FIB

Label	Description
Prefix [Flags]	The prefix
Protocol	The routing protocol
NextHop	The next-hop IP address
Total Entries	The total number of entries
Dest Prefix	The destination prefix

Label	Description
Installed	The installed indicator (Y or N)
Label	The label number
QoS	The QoS value
Source-Class	The source class
Dest-Class	The destination class value
ECMP-Weight	The ECMP weight value

fib

Syntax

**fib** *slot-number* [{**ipv4** | **ipv6**}] **summary**

Context

[\[Tree\]](#) (tools>dump>router fib)

Full Context

tools dump router fib

Description

This command configures the dump tools for FIB information for a specific IOM.

Parameters

***slot-number***

Specifies the slot number.

**Values**    1 to 10

**ipv4 | ipv6**

Specifies the IPv4 or IPv6 addresses.

**Default**    ipv4

**summary**

Displays summary FIB information for the specified slot number.

Platforms

All

Output

The following output is an example of FIB summary information.

Output Example

```
*A:Dut-F#  tools dump router fib 1 summary

9.16 fib-telemetry

fib-telemetry

Syntax

- fib-telemetry label [/abe/]
- fib-telemetry route [family]
- fib-telemetry route [ip-prefix/prefix-length]
- fib-telemetry tunnel [family]
- fib-telemetry tunnel [ip-prefix/prefix-length]

Context

[Tree] (show>router fib-telemetry)

Full Context

show router fib-telemetry

Description

This command displays FIB telemetry information.

Parameters

*label*

Specifies the label value.

**Values**    0 to 1048575

*family*

Specifies the IPv4 or IPv6 address FIB telemetry route or tunnel family.

**Values**    ipv4, ipv6

*ip-prefix/prefix-length*

Displays FIB telemetry route or tunnel entries only matching the specified IP prefix and length.

<b>Values</b>	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length	0 to 32
	ipv6-prefix:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x.d.d.d.d
	x:	[0 to FFFF]H
	d:	[0 to 255]D
	ipv6-prefix-length:	0 to 128

Platforms

Table 156: Output fields: FIB telemetry

Label	Description
Label	The label number of the FIB entry
Owner	The owner (protocol name) of the label entry
LastUpdt	The time stamp of when the entry was last updated
Primary NextHop[If]/TnlId	The primary path next-hop IP or tunnel ID or interface
Weight	The normalized ECMP weight associated with the next-hop
GrpId	The next-hop group ID
PriActv	The boolean value (YES or NO) that indicates whether the primary path is active or not
Pushed Labels	The pushed labels number
Backup NextHop[If]/TnlId	The backup path next-hop IP or tunnel ID or interface
Number of Entries	The total number of displayed labels
Flags	The flags: <ul style="list-style-type: none"> <li>b — backup</li> <li>i — indirect</li> <li>l — LFA</li> </ul>
Dest Prefix	The destination IP prefix of the route FIB entry
Owner	The protocol owner (routing protocol) of the FIB entry

Label	Description
FIB Update Time	The time stamp of when the route was last updated in FIB
NextHop [If/TnId]	The IP address of the next-hop and interface name or tunnel ID
Number of Entries	The total number of displayed routes
Flags	The flags: <ul style="list-style-type: none"> <li>• a — active</li> <li>• b — backup</li> <li>• l — LFA</li> </ul>
Dest Prefix	The destination IP prefix of the FIB tunnel entry
Owner	The protocol owner of the FIB tunnel entry
Pref	The preference number that indicates the priority of the tunnel
FIB Update Time	The time stamp of when the tunnel was last updated in FIB
TnId	The global tunnel ID
TnInst	The tunnel instance of the type indicated by protocol
Number of Entries	The total number of displayed tunnels

## 9.17 fid

### fid

#### Syntax

**fid** [*fid*] **fate-sharing**

**fid** [*fid*] **user-service**

**fid** [*fid*] **fdb**

**fid** [*fid*] **mfib** [**group-mac** *ieee-address*]

**fid** [*fid*] **mfib** [**isid** *isid*]

#### Context

**[Tree]** (show>service>id>spb fid)

Full Context

show service id spb fid

Description

This command displays SPB control service FID information.

Parameters

- fid**

A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

**Values**1 to 4095
- fate-sharing**

Displays fate-sharing information
- user-service**

Specifies user VPLS information for each control VPLS per forwarding data-base identifier. A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.
- fdb**

Displays forwarding database (FDB) information
- mfib**

Displays multicast forwarding information base (MFIB) information
- ieee-address**

Specifies the 48-bit IEEE 802.3 group MAC address
- isid**

Specifies the value of ISID of the group MAC address of this entry

**Values**0 to 16777215

Platforms

All

Output

The following output is an example of service SPB FID fare sharing information.

Output Example

9.18 field

field

Syntax

**field** *field-name*

Context

- [Tree] (show>app-assure>http-enrich field)
- [Tree] (show>app-assure>group>http-enrich field)

Full Context

show application-assurance http-enrich field

show application-assurance group http-enrich field

Description

This command displays HTTP enrichment field information.

### Parameters

#### *field-name*

Specifies the field name, up to 32 characters.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 9.19 fields

### fields

### Syntax

**fields**

### Context

[\[Tree\]](#) (show>app-assure>http-enrich fields)

### Full Context

show application-assurance http-enrich fields

### Description

This command displays HTTP enrichment fields.

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 9.20 file

### file

### Syntax

**file** *provisioning-file-url* [**save-provision-file-destination** *file-url*] [**reboot-on-success**]

### Context

[\[Tree\]](#) (tools>perform>system>auto-node-provisioning file)

### Full Context

tools perform system auto-node-provisioning file

## Description

This command executes the auto-provisioning process. When the auto-provisioning process is executed using the **file** command, DHCP discovery and solicitation is not performed.

## Parameters

### **provisioning-file-url**

Specifies the location of the provisioning file.

**Values** *local-url, remote-url*

*local-url* — *[cflash-id]/file-path*; 200 characters max

*remote-url* — {ftp | http | https}://[login:password@]remote-locn/[file-path]

*remote-locn* — {hostname | ipv4-address | ipv6-address}[:port]

*ipv4-address* — a.b.c.d

*ipv6-address* — x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x.d.d.d.d[-interface]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

*port* — 0 to 65535

*cflash-id* — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

### **file-url**

Specifies the location to save the provisioning file.

**Values** *[cflash-id]/file-path*

*cflash-id* — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

### **reboot-on-success**

Reboots the router when the auto-provisioning process completes successfully.

All

## 9.21 file-id

file-id

## Syntax

**file-id** [*log-file-id*]

Context

[Tree] (show>log file-id)

Full Context

show log file-id

Description

This command displays event file log information.

If no command line parameters are specified, a summary output of all event log files is displayed.

Specifying a file ID displays detailed information on the event file log.

Parameters

*log-file-id*

Displays detailed information on the specified event file log.

Platforms

All

Output

The following output is an example of log file summary information.

The following table describes the output fields for a log file summary.

Output Example

```

Table 157: Output fields: log file

Label	Description
name	Displays the string name of the log file policy
file-id	Displays the log file ID
rollover	Displays the rollover time for the log file, which is how long in between partitioning of the file into a new file
retention	Displays the retention time for the file in the system, which is how long the file will be retained in the file system
admin location	Displays the primary flash device specified for the file location none — indicates no specific flash device is specified
oper location	Displays the actual flash device on which the log file exists
file name	Displays the complete pathname of the file associated with the log ID
expired	Indicates whether the retention period for this file has passed
state	in progress — Indicates the current open log file complete — Indicates the old log file

### file-transmission-profile

#### Syntax

**file-transmission-profile**

**file-transmission-profile** *name*

**file-transmission-profile** *name associations*

## Context

**[Tree]** (show>system file-transmission-profile)

## Full Context

show system file-transmission-profile

## Description

This command displays file transmission profile information.

## Parameters

***name***

Specifies the file transmission profile name, up to 32 characters.

## Platforms

All

## 9.23 files

### files

## Syntax

**files** [running | finished] [detail]

## Context

**[Tree]** (show>call-trace files)

## Full Context

show call-trace files

## Description

This command gives an overview of all the files in use by the call-trace module, either for running or finished jobs.

## Parameters

**running**

Displays the active jobs that are tracing events triggered by the host being monitored.

**finished**

Displays the jobs that have already finished and not tracing events generated by the host anymore.

**detail**

Displays detailed information about the files.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace local log files information.

Output Example

```
Node# show call-trace files
=====
Call trace files of running jobs
=====
File path                                                    File size
                                                                (bytes)
-----

#### Event Log Filter Detailed Output

[Table 160: Output fields: event log filter detail](#) describes the output fields for detailed event log filter information.

*Table 160: Output fields: event log filter detail*

Label	Description
Filter Name/Id	The event log filter name or ID.
Applied	no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID.
Default Action	drop — The default action for the event log filter is to drop events not matching filter entries. forward — The default action for the event log filter is to forward events not matching filter entries.
Description (Filter-id)	The description string for the filter ID.

[Table 161: Output fields: log filter match criteria](#) describes the output fields for log filter match criteria information.

*Table 161: Output fields: log filter match criteria*

Label	Description
Entry-id	The event log filter entry ID.
Action	default — There is no explicit action for the event log filter entry and the filter's default action is used on matching events. drop — The action for the event log filter entry is to drop matching events. forward — The action for the event log filter entry is to forward matching events.
Description (Entry-id)	The description string for the event log filter entry.

Label	Description
Application	The event log filter entry application match criterion.
Event Number	The event log filter entry application event ID match criterion.
Severity	<p>cleared — The log event filter entry application event severity cleared match criterion.</p> <p>indeterminate — The log event filter entry application event severity indeterminate match criterion.</p> <p>critical — The log event filter entry application event severity critical match criterion.</p> <p>major — The log event filter entry application event severity cleared match criterion.</p> <p>minor — The log event filter entry application event severity minor match criterion.</p> <p>warning — The log event filter entry application event severity warning match criterion.</p>
Subject	Displays the event log filter entry application event ID subject string match criterion.
Router	Displays the event log filter entry application event ID <b>router</b> <i>router-instance</i> string match criterion.
Operator	<p>There is an operator field for each match criteria: application, event number, severity, and subject.</p> <p>equal — Matches when equal to the match criterion.</p> <p>greaterThan — Matches when greater than the match criterion.</p> <p>greaterThanOrEqualTo — Matches when greater than or equal to the match criterion.</p> <p>lessThan — Matches when less than the match criterion.</p> <p>lessThanOrEqualTo — Matches when less than or equal to the match criterion.</p> <p>notEqual — Matches when not equal to the match criterion.</p> <p>off — No operator specified for the match criterion.</p>

## 9.26 firewall

### firewall

#### Syntax

**firewall**

#### Context

[\[Tree\]](#) (show>router firewall)

#### Full Context

show router firewall

#### Description

This command displays firewall information.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 9.27 firewall-hosts

### firewall-hosts

#### Syntax

**firewall-hosts** [**subscriber** *sub-ident*] [ **ip** *ipv6-address/prefix-length*] [**mac** *ieee-address*] [**firewall-policy** *policy-name*] [**router** *router-instance*]

#### Context

[\[Tree\]](#) (show>service>nat firewall-hosts)

#### Full Context

show service nat firewall-hosts

#### Description

This command lists ESM hosts that have an active firewall. Configuring the optional parameters will narrow the scope of the list.

Parameters

**ieee-address**  
Specifies the MAC address of a host, in the format xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

**ipv6-address/prefix-length**  
Specifies the IPv6 prefix of a host.

**Values**    *ipv6-address* — x:x:x:x:x:x (eight 16-bit pieces)  
                  x:x:x:x:x:d.d.d.d  
                  x — 0 to FFFF (in hexadecimal)  
                  d — 0 to 255 (in decimal)  
                  *prefix-length* — 1 to 128

**policy-name**  
Specifies the name of a firewall policy, up to 32 characters.

**router-instance**  
Specifies the ID of the router that contains the firewall domain.

**Values**    *router-name* | *vprn-svc-id*  
                  *router-name* — "Base", "management"  
                  *vprn-svc-id* — 1 to 2147483647

**sub-ident**  
Specifies the subscriber identity string, up to 32 characters.

Platforms  
7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.28 firewall-policy

firewall-policy

Syntax  
**firewall-policy** [*policy-name* [ **associations**]]

Context  
[\[Tree\]](#) (show>service>nat firewall-policy)

Full Context  
show service nat firewall-policy

## Description

This command lists the firewall policies that are present in the system.

Configuring the *policy-name* parameter will display all information for the specified policy.

## Parameters

### associations

Keyword to display all configuration objects that use the specified firewall policy.

### policy-name

Specifies the name of a firewall policy, up to 32 characters.

## Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of firewall policy information.

### Output Example

```
Node# show service nat firewall-policy
=====

## 9.29 flap-statistics

### flap-statistics

#### Syntax

**flap-statistics** [{*ip-prefix/mask* [**neighbor** *ip-addr*] | **group** *group-name* | **regex** *reg-exp* | [**policy** *policy-name*]}]

#### Context

**[Tree]** (clear>router>bgp flap-statistics)

#### Full Context

clear router bgp flap-statistics

#### Description

This command clears route flap statistics.

#### Parameters

##### *ip-prefix/mask*

Clears route flap statistics for entries that match the specified IP prefix and mask length.

- Values**
- ipv4-prefix: a.b.c.d (host bits must be 0)
  - ipv4-prefix-le: 0 to 32
  - ipv6-prefix:
    - x:x:x:x:x:x:x (eight 16-bit pieces)

- x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF] H
  - d: [0 to 255] D
- ipv6-prefix-le: 0 to 128

**ip-addr**

Clears route flap statistics for entries received from the specified BGP neighbor.

- Values**
- ipv4-prefix: a.b.c.d (host bits must be 0)
  - ipv6-prefix:
    - x:x:x:x:x:x:x (eight 16-bit pieces)
    - x:x:x:x:x:d.d.d.d
    - x: [0 to FFFF] H
    - d: [0 to 255] D
  - interface: 32 chars max, mandatory for link local addresses

**group-name**

Clears route flap statistics for entries received from any BGP neighbors in the specified peer group. 32 characters maximum.

**reg-exp**

Clears route flap statistics for all entries which have the regular expression and the AS path that matches the regular expression. 80 characters maximum.

**policy-name**

Clears route flap statistics for entries that match the specified route policy. 32 characters maximum.

**Platforms**

All

9.30 flex-algo

flex-algo

**Syntax**

**flex-algo** [flex-algo-id] [**level** /eve/] [**detail**]

**Context**

[\[Tree\]](#) (show>router>isis flex-algo)

**Full Context**

show router isis flex-algo

Description

This command displays the IS-IS flexible algorithm information.

This command displays the flexible algorithms, the winning FAD for which the router is enabled and whether the local router is advertising a FAD.

When the keyword **detail** is used, all other FADs (beyond the winning FAD) advertised by any other router in the area are also displayed.

The displayed output can be filtered by using the *flex-algo-id* or *level* keywords.

Parameters

- flex-algo-id**  
Specifies the keyword filter to display output for the requested algorithm only.
- level**  
Displays the IS-IS area level information constrained to IS-IS level-1 or level-2 only.
- level**  
Specifies the IS-IS area level, it filters the displayed information constrained to IS-IS level-1 or level-2 only.
- detail**  
Displays not only the winning FAD information, but also all other FADs that the router has advertised in IS-IS.

Platforms

All

Table 162: Output fields: IS-IS flexible algorithm

Label	Description
Flex-Algo	The flexible algorithm number
Advertising FAD	The FAD name when the local router is advertising a FAD
Participating	The flexible algorithm participation is enabled
Loop-Free-Alternate	Displays Loop-Free-Alternates; if enabled, then the configuration is inherited from base SPF
L1 Oper State	Displays the L1 operational flexible algorithm state
L2 Oper State	Displays the L2 operational flexible algorithm state
FADs-Count	Displays the number of FADs in the area available to the router
FAD-Owner	Displays the winning FAD owner
Supported	Displays local router support for the flexible algorithm definition that is advertised in the FAD
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Exclude	The list of administrative groups for links to be excluded from the flexible algorithm topology graph

Label	Description
Include Any	The list of administrative groups for links to be included in the flexible algorithm topology graph
Include All	The list of administrative groups for links where all administrative groups have to match to be included in the flexible algorithm topology graph
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR
Level	The IS-IS area level where the FAD is received

## flex-algo

### Syntax

**flex-algo** [*flex-algo-id*] [**area** *area-id*] [**detail**]

### Context

[\[Tree\]](#) (show>router>ospf flex-algo)

### Full Context

show router ospf flex-algo

### Description

This command displays OSPFv2 flexible algorithm information, which includes the flexible algorithms, the winning FAD for which the router is enabled, and whether the local router is advertising a FAD.

The displayed output can be filtered using either the *area-id* or *flex-algo-id* keywords.

### Parameters

#### ***flex-algo-id***

Specifies the keyword filter to display output for the requested algorithm only.

#### ***area-id***

Specifies the OSPFv2 area to display output.

#### **area**

Displays the information constrained to a particular OSPFv2 area.

#### **detail**

Displays the winning FAD information and all other FADs that the router has advertised in OSPFv2.

### Platforms

All

## Output

The following output is an example of flexible algorithm information, and [Table 163: Output fields: OSPF flexible algorithm](#) describes the output fields.

### Output Example

```

Fad Flags	Displays the FAD flags. The M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR.

## 9.31 flexible-algorithm-definitions

### flexible-algorithm-definitions

#### Syntax

**flexible-algorithm-definitions** [**flex-algo** *fad-name*]

#### Context

**[Tree]** (show>router flexible-algorithm-definitions)

#### Full Context

show router flexible-algorithm-definitions

#### Description

This command displays information about the locally configured FADs.

If **flex-algo** *fad-name* is specified as the output filter, only filtered FAD definitions are shown. If no output filter is specified, all configured FADs are shown.

## Parameters

### **flex-algo** *fad-name*

Displays the configuration information for the specified FAD name.

## Platforms

All

## Output

The following output is an example of FAD information, and [Table 164: Output fields: FAD](#) describes the output fields.

### Output Example

```
*A:Dut-B# show router flexible-algorithm-definitions
=====

Table 164: Output fields: FAD

Label	Description
Flex-Algo	FAD name
Admin State	Displays the administrative state of the FAD
Description	Displays a short description of the FAD
Metric Type	The metric type of the FAD igp — the IGP metric is used for the flexible algorithm graph te-metric — the TE metric is used for the flexible algorithm graph delay — the delay metric is used for the flexible algorithm graph
Priority	Displays the priority of the FAD; if the FAD is advertised, the priority is the tie-breaker used to determine the winning FAD; the higher the value the higher the priority
Exclude	Displays the list of link administrative groups to exclude from the construction of the flexible algorithm topological graph
Include Any	Displays the list of link administrative groups to include when constructing the flexible algorithm topological graph
Include All	Displays the list of link administrative groups that must be assigned to a single link to include in the construction of the flexible algorithm topological graph

## 9.32 flood-table

### flood-table

#### Syntax

**flood-table** [class *class*] [detail]

#### Context

[\[Tree\]](#) (tools>dump>wlan-gw>lanext>bd flood-table)

#### Full Context

tools dump wlan-gw lanext bd flood-table

#### Description

This command dumps the specified flood table entries for the specified HLE BD.

Parameters

- class

Specifies the source on which to filter the flood table entries.

Values    access, network, remote
- detail

Dumps detailed information for the flood table.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of flood table information.

Output Example

```
tools>dump>wlan-gw>lanext>bd# flood-table detail

## 9.35 flow-ipv4

### flow-ipv4

#### Syntax

**flow-ipv4** [**hunt**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

#### Context

[\[Tree\]](#) (show>router>bgp>routes flow-ipv4)

#### Full Context

show router bgp routes flow-ipv4

#### Description

This command displays BGP flow IPv4 routes.

#### Parameters

##### *reg-exp*

Displays routes matching the specified regular expression, up to 80 characters.

##### *comm-id*

Specifies the community ID, up to 72 characters.

**Values** [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address:comm-val*
  - {*target* | *origin*}:*asnum:ext-comm-val*
  - {*target* | *origin*}:*ext-asnum:comm-val*
  - **bandwidth**:*asnum:val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ex** \t:*value1:value2*
  - **flowspec-set**:*ext-asnum:group-id*

where:

- *target* — route target
- *origin* — route origin

- *ip-address* — a.b.c.d
- *ext-comm-val* — 0 to 4294967295
- *ext-asnum* — 0 to 4294967295
- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended
- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFF
- **flowspec-set** — flow-spec set
- *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**

```

#### Context

[\[Tree\]](#) (tools>dump>app-assure>group flow-record-search)

#### Full Context

tools dump application-assurance group flow-record-search

#### Description

This command dumps application-assurance flow-records matching the specified criteria for a specific AA subscriber.

#### Parameters

**application** *app-name*

Displays flows for the specified application name.

**app-group** *app-group-name*

Displays flows for the specified application group.

**bytes-tx** *kbytes*

Display flows with the specified minimum kilobytes.

**Values** 0 to 4294967295

**classified** *classified*

Specifies the starting flow ID.

**Values** yes, no

**client-ip** *ip-address*

Display flows with the specified client IP address.

**Values**    ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

**dsm mac *mac-address***

Displays flows for the specified subscriber.

**esm *sub-ident-string***

Displays flows for the specified subscriber.

**esm-mac *esm-mac-name***

Displays flows for the specified ESM MAC.

**flow-duration *minutes***

Display flows with the specified minimum duration in minutes.

**Values**    0 to 4294967295

**flow-status *flow-status***

Displays only flows that are active or closed.

**Values**    active, closed

**max-count *max-count***

Specifies the maximum count of flows to display.

**Values**    1 to 4294967295

**protocol *protocol-name***

Displays flows for the specified protocol.

**sap *sap-id***

Displays flows for the specified SAP.

**search-type *search-type***

Specifies the level of detail displayed for flows that match the search criteria.

**Values**    default — Displays some per flow information.  
              count — Displays the number of matching flows.  
              detail — Displays all per flow information available.

**server-ip *ip-address***

Display flows with the specified server IP address.

**Values**    ipv4-address - a.b.c.d  
              ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

**server-port *port-num***

Display flows with the specified server port number.

**Values**    0 to 65535

**spoke-sdp *sdp-id:vc-id***

Displays flows for the specified spoke SDP.

**start-flowid** *start-flowid*

Specifies the starting flow ID.

**Values**    0 to 4294967295

**transit** *transit-aasub-name*

Displays flows for the specified transit subscriber.

**url** *file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

**Values**

local-url | remote-url

local-url	[<cflash-id>/][<file-path> 200 chars max, including cflash-id directory length 99 chars max each
remote-url	[{ftp://  tftp://}<login>:<pswd>@<remote-locn>/ ][<file-path> 255 chars max directory length 99 chars max each
remote-locn	[ <hostname>   <ipv4-address>   <ipv6- address> ] ipv4-address    a.b.c.d ipv6-address    x:x:x:x:x:x:x[-interface] x:x:x:x:x:x.d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface - 32 chars max, for link local addresses cflash-id        flash slot ID

**Platforms**

9.38 force

force

Syntax

```
force aps-id {protect | working} [number number]
```

Context

```
[Tree] (tools>perform>aps force)
```

Full Context

```
tools perform aps force
```

Description

This command forces a switch to either the protect or working circuit

Parameters

<b><i>aps-id</i></b>	Specifies the APS ID.		
<b>Values</b>	<i>aps-id</i>	<i>aps-group-id</i>	
	aps	keyword	
	group-id	1 to 128	
<b>protect</b>	This command clears a physical port that is acting as the protection circuit for the APS group.		
<b>working</b>	This command clears a physical port that is acting as the working circuit for this APS group.		
<b><i>number</i></b>	Specifies the APS channel number.		
<b>Values</b>	1, 2		

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

force

Syntax

**force** *ring-index* **path** {a | b}

Context

[\[Tree\]](#) (tools>perform>eth-ring force)

Full Context

tools perform eth-ring force

Description

This command forces a block on the ring port where the command is issued.

Parameters

<b><i>ring-index</i></b>	Specifies the ring index.		
<b>Values</b>	1 to 128		

**path**  
Displays information for a specific path.

**Values**     a, b

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

force

**Syntax**  
**force all-mc** {**active** | **standby**}  
**force lag-id** *lag-id* [**sub-group** *sub-group-id*] { **active** | **standby**}  
**force peer-mc** *ip-address* {**active** | **standby**}

**Context**  
[\[Tree\]](#) (tools>perform>lag force)

**Full Context**  
tools perform lag force

**Description**  
This command allows forcing the specified LAG, subgroup, all MC-LAGs, or remote peer for MC-LAGs to become active or standby when LAG runs in Active/Standby mode. To remove the forced condition, execute the **tools perform lag clear-force** command.

**Parameters**

**all-mc**  
Specifies all MC-LAGs.

**active**  
Specifies to become active.

**standby**  
Specifies to become standby.

**lag-id**  
Specifies the LAG ID.

**Values**     1 to 800

**sub-group-id**  
Specifies the subscriber group ID.

**Values**     1 to 16

**ip-address**

Specifies the IP address.

- Values
- ipv4-address: a.b.c.d
- ipv6-address:
- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

**Platforms**

force

**Syntax**

**force id** *tunnel-id*

**force** *lsp-name*

**Context**

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel force)

**Full Context**

tools perform router mpls tp-tunnel force

**Description**

This command performs a force switchover of the MPLS-TP LSP from the active path to the protect path.

**Parameters**

**tunnel-id**

Specifies the tunnel number of the MPLS-TP LSP.

- Values
- 1 to 61440

**lsp-name**

Specifies name of the MPLS-TP LSP, up to 32 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 9.39 force-partner-down

### force-partner-down

#### Syntax

**force-partner-down**

#### Context

**[Tree]** (tools>perform>router>dhcp>server>failover force-partner-down)

**[Tree]** (tools>perform>router>dhcp6>server>pool>failover force-partner-down)

**[Tree]** (tools>perform>router>dhcp>server>pool>failover force-partner-down)

**[Tree]** (tools>perform>router>dhcp6>server>failover force-partner-down)

#### Full Context

tools perform router dhcp local-dhcp-server failover force-partner-down

tools perform router dhcp6 local-dhcp-server pool failover force-partner-down

tools perform router dhcp local-dhcp-server pool failover force-partner-down

tools perform router dhcp6 local-dhcp-server failover force-partner-down

#### Description

This command forces a DHCP server to transition from the COMMUNICATIONS-INTERRUPTED state to the PARTNER-DOWN state.

It is important to note that this command should only be used if the remote DHCP server is out of service, else duplicate address allocations could occur.

In case of a communication failure between two redundant DHCP servers, the DHCP server transitions to the COMMUNICATIONS-INTERRUPTED state. In this state, the DHCP server allocates IP addresses for new leases from the local and address-driven address-ranges only. This prevents duplicate address allocations.

If during the partner-down-delay time, the communication with the remote DHCP server is not restored, then the DHCP server transitions to the PARTNER-DOWN state. In this state, the DHCP server also allocates IP addresses for new leases from the remote ranges. A DHCP server should only reach this state when the remote DHCP server is out of service, else IP address conflicts can occur.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 9.40 force-switch-path

### force-switch-path

#### Syntax

**force-switch-path** [**lsp** *lsp-name*] [**path** *path-name*]

**no force-switch-path** **lsp** *lsp-name*

#### Context

[\[Tree\]](#) (tools>perform>router>mpls force-switch-path)

#### Full Context

tools perform router mpls force-switch-path

#### Description

Use this command to move from a standby path to any other standby path regardless of priority.

The **no** form of the command reverts to priority path.

#### Parameters

***lsp-name***

Specifies an existing LSP name, up to 64 characters in length.

***path-name***

Specifies the path name to which to move the specified LSP.

#### Platforms

All

## 9.41 force-switchover

### force-switchover

#### Syntax

**force-switchover** **tunnel-group** *local-group-id* [ **now**] [**to** {**master** | **standby**}]

#### Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec force-switchover)

## Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover

## Description

This command manually switches over the 7750 SR mc-ipsec mastership of specified tunnel-group.

## Parameters

### *local-group-id*

Specifies the local tunnel-group id configured in the **config>redundancy>multi-chassis>peer>mc-ipsec** context.

### **now**

This optional parameter removes the prompt of confirmation.

### **to {master | standby}**

specifies the desired mastership state to be achieved following a forced switch between this tunnel group and its redundant peer. If the target state matches the current state when the switch is attempted, then no switch will occur.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## force-switchover

## Syntax

**force-switchover** *sdp-id:vc-id*

**force-switchover** *vc-id*

**no force-switchover**

## Context

[\[Tree\]](#) (tools>perform>service>id>endpoint force-switchover)

## Full Context

tools perform service id endpoint force-switchover

## Description

This command forces the VLL path to switch to the specified spoke SDP, which effectively disables the algorithm used to automatically select the VLL endpoint active transmit object.

If the specified spoke SDP is operationally down, the router rejects this command. If the specified spoke SDP is operationally up, the router switches the VLL path to the specified endpoint spoke SDP and stays on it regardless of subsequent changes to its operational status.

The **no** form of this command re-enables the algorithm used to automatically select the VLL endpoint active transmit object, which switches the VLL path to the best available object in the endpoint.

**Note:** The router cannot perform force switchover to or from a spoke SDP that is configured with the **standby-signaling-slave** command.

### Parameters

#### ***sdp-id***

Specifies the spoke SDP ID.

**Values** 1 to 32767

#### ***vc-id***

Specifies the virtual circuit ID on the spoke SDP ID.

**Values** 1 to 4294967295

### Platforms

All

## 9.42 force-uplink-switch

### force-uplink-switch

### Syntax

**force-uplink-switch** *client-port-id*

### Context

[\[Tree\]](#) (tools>perform>satellite force-uplink-switch)

### Full Context

tools perform satellite force-uplink-switch

### Description

This command forces traffic associated with the specified satellite client port to be switched away from the current uplink depending on which uplink is currently active.

### Parameters

#### ***client-port-id***

Specifies the satellite client port associated with the port mapping, in the format **esat- id/ slot/port force**.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 9.43 forced-single-sfm-overload

forced-single-sfm-overload

### Syntax

[no] forced-single-sfm-overload

### Context

[\[Tree\]](#) (tools>perform>redundancy forced-single-sfm-overload)

### Full Context

tools perform redundancy forced-single-sfm-overload

### Description

This command forces the single-sfm-overload state on or off.

### Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

## 9.44 forcerenew

forcerenew

### Syntax

**forcerenew** svc-id service-id { **ip** ip-address[/mask] | **mac** ieee-address }

**forcerenew** { **interface** interface-name | **sap** sap-id | **sdp** sdp-id:vc-id } [ **ip** ip-address[/mask] | **mac** ieee-address ]

### Context

[\[Tree\]](#) (tools>perform>subscr-mgmt forcerenew)

### Full Context

tools perform subscriber-mgmt forcerenew

### Description

This command forces the renewal of lease state and only applies to the 7450 ESS and 7750 SR.

In cases where the IPoE hosts resides in a private retail subnet VPRN, the MAC address must be used for the **tools>perform>subscriber-mgmt>forcerenew** command instead of the IP address.

## Parameters

### ***service-id***

Forces renewal of the lease state for the specified service ID.

**Values** 1 to 2147483647

### ***sap-id***

Forces renewal of the lease state for the specified SAP.

### ***ip-address***

Forces renewal of the lease state for the specified IP address.

### ***ieee-address***

Forces renewal of the lease state for the specified MAC address.

### ***interface-name***

Forces renewal of the lease state for the specified interface name.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 9.45 forwarding

### forwarding

## Syntax

**forwarding** [**sub-domain** *sub-domain*] [**bsl** *bsl*] [**neighbor-prefix** *ip-address*] [**si** *si*]

## Context

[\[Tree\]](#) (show>router>bier forwarding)

## Full Context

show router bier forwarding

## Description

This command shows the BIER forwarding table.

## Parameters

### ***sub-domain***

Specifies a sub-domain.

**Values** 0 to 255

### ***bsl***

Specifies a bit string length.

<b>Values</b>	256 to 1024
---------------	-------------

***ip-address***

Specifies a neighbor-prefix in IP address format.

*si*

Specifies an SI.

**Values** 0 to 16

## Platforms

All

## Output

The following output is an example of a BIER forwarding configuration. [Table 166: Output fields: BIER forwarding](#) provides BIER forwarding field descriptions.

### Output Example

[illegible]

Table 166: Output fields: BIER forwarding

Label	Description
Neighbor	The neighbor IP address
Nexthop	The next-hop IP address
Interface	The egress interface name for the programmed tunnel

Label	Description
[SI]:Label	The SI and label. The BitString and the SI together determine the set of BFERs to which a given packet will be delivered. The label is the egress transport label used for the given SI/SD.
Forwarding Bit Mask	The BitString forwarding mask
BFR-ID: Prefix	The BFR ID and the prefix reachable through this SD/SI/BFR-ID

forwarding-policy

Syntax

**forwarding-policy** *name* **egress-stats**

Context

**[Tree]** (clear>router>mpls>forwarding-policies forwarding-policy)

Full Context

clear router mpls forwarding-policies forwarding-policy

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

***name***

Specifies the forwarding policy name up to 64 characters.

***egress-stats***

Clears the egress statistics of the specified forwarding policy.

## Platforms

All

## forwarding-policy

### Syntax

**forwarding-policy** *plcy* **egress-stats** [*interval seconds*] [ **repeat** *repeat*] [{ **absolute** | **rate**}]

### Context

[\[Tree\]](#) (monitor>router>mpls>forwarding-policies forwarding-policy)

### Full Context

monitor router mpls forwarding-policies forwarding-policy

### Description

This command clears the egress statistics of the specified forwarding policy instance.

### Parameters

#### *plcy*

Specifies the forwarding policy up to 64 characters.

#### *egress-stats*

Monitors the egress statistics of the specified forwarding policy.

#### *seconds*

Configures the interval for each display in seconds.

**Values** 3 to 60

#### *repeat*

Configures how many times the command is repeated.

**Values** 1 to 999

#### *absolute*

Displays the absolute statistics of the specified forwarding policy.

#### *rate*

Displays the rate statistics of the specified forwarding policy.

## Platforms

9.51 fp-tunnel-table

fp-tunnel-table

**Syntax**  
**fp-tunnel-table** *slot-number* [*ip-prefix/prefix-length*]  
**fp-tunnel-table** *slot-number* [{ **ipv4** | **ipv6**}]

**Context**  
[\[Tree\]](#) (show>router fp-tunnel-table)

**Full Context**  
show router fp-tunnel-table

**Description**  
This command displays the IOM/IMM label, next-hop and outgoing interface information for BGP, LDP and RSVP tunnels used in any of the following applications:

- BGP shortcut (**config>router>bgp>next-hop-resolution>shortcut-tunnel**)
- IGP shortcut (**config>router>isis[ospf]>igp-shortcut**)
- IGP prefix resolved to an LDP LSP (**config>router>ldp-shortcut**)
- Static route resolved to a LDP or RSVP LSP
- VPRN auto-bind
- 6PE/6VPE.

Parameters

*slot-number*

Displays information for the specified slot.

**Values**     1 to 10

*ip-prefix[/prefix-length]*

Displays routes only matching the specified *ip-address* and length.

<b>Values</b>	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length:	0 to 32
	ipv6	ipv6-prefix[/pref*: x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d x: [0 to FFFF]H d: [0 to 255]D
	prefix-length:	1 to 128

**ipv4**

Displays the output to IPv4-based FP tunnel tables.

**ipv6**

Displays the output to IPv6-based FP tunnel tables.

Platforms

All

Output

The following output is an example of router FP tunnel information.

Output Example

```
*A:Dut-B# show router fp-tunnel-table 1 10.20.1.3/32
=====
Tunnel Table Display
```

```

9.52 frag-stats

frag-stats

Syntax

frag-stats

Context

[Tree] (show>service>nat>map frag-stats)

Full Context

show service nat map frag-stats

Description

This command displays NAT MAP fragmentation information.

Platforms

VSR

Output

The following output is an example of this command, and [Table 168: Output fields: map fragmentation statistics](#) describes the fields.

Output Example

```
*A:Dut-D>show>service>nat>map# show service nat map frag-stats
=====
```

```
NAT MAP fragmentation statistics

=====
```

Table 168: Output fields: map fragmentation statistics

Label	Description
Rx Resolved Packets	Specifies fragments that were resolved and never buffered. This includes: <ul style="list-style-type: none"> <li>first fragments (MF=1, FO=0), which are always resolved by definition</li> <li>non-first fragments that have matching flow records</li> </ul>
Rx Unresolved Packets	Specifies the number of packets that were queued in the system since the last clear command was invoked. For example, out-of-order fragments without a matching flow record (missing the first fragment). These packets can be eventually resolved and forwarded, or discarded (for example, as a result of timeout).
Tx Frags	Specifies the fragments that were transmitted (Rx Resolved and Rx Unresolved that were eventually resolved) out of the fragmentation logic within the VSR. There is no guarantee that these fragments will be transmitted out of the system as they may be dropped on egress due to congestion or restrictions imposed by the configured filter.
Dropped Frags	Specifies the dropped fragments due to some fragmentation issue (timeout, buffer full).
Created Flows	<p>A cumulative counter that represents the total number of flow records since the last <b>clear</b> command was invoked. It only counts the first fragment and roughly represents the amount of fragmented packets that were processed by the system since the last clear command.</p> <p>The counter does not provide any indication about the number of flows (packets whose fragments were transmitted fully) that were actually transmitted.</p>

Label	Description
Flow Collisions	Represents the number of overlapping first fragments. For example, when a flow record already exists and another first fragment for this flow is received.
Exceeded Max Flows	Specifies the number of occurrences when the number of flows in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last <b>clear</b> command): <ul style="list-style-type: none"> <li>Rx unresolved (buffered) fragments that have timed out, due to a missing first fragment</li> <li>deleted flow-records because they have not received all fragments within the timeout period</li> </ul>
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last clear command): <ul style="list-style-type: none"> <li>Rx unresolved (buffered) fragments that have timed out, due to a missing 1st fragment</li> <li>deleted flow-records because they have not received all fragments within the timeout period</li> </ul>
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Buffers Per Flow	Specifies the number of occurrences when a fragment count per flow has exceeded its limit.
In-Use Flows	An approximation of the number of flow records that are currently in use. The counter provides an estimate, expressed in percent, of the number of fragmented packets that were being processed at the time the counter was invoked.
Max Flows	Specifies the amount of time in seconds that the system will remain in a hold down state before being used again.
In-Use Buffers	Represents the amount of buffered fragments, expressed in percent of the maximum buffer space, that can be used for fragmentation.
Max Buffers	A non-cumulative counter that represents the maximum number of buffers allocated since the last <b>clear</b> command. The counter captures the highest value of the <b>buffers-in-use</b> counter since the last <b>clear</b> command. The counter shows the percentage of the total buffer space that can be used by fragmentation.

## 9.53 free-addresses

### free-addresses

#### Syntax

**free-addresses** *ip-address[/mask]*  
**free-addresses summary** [**subnet** *ip-address[/ mask]*]  
**free-addresses pool** *pool-name*

#### Context

**[Tree]** (show>router>dhcp>local-dhcp-server free-addresses)

#### Full Context

show router dhcp local-dhcp-server free-addresses

#### Description

This command displays the free addresses in a subnet.

#### Parameters

##### **pool-name**

Specifies a DHCP pool name on the router.

##### **subnet**

Specifies a subnet of IP addresses that are served from the pool.

##### **summary**

Displays summary output of the free addresses.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of free address information

#### Output Example

```
*A:ALA-48>show>router>dhcp>local-dhcp-server# free addresses pool test subnet 10.0.0.0/24
=====
Free addresses in subnet 10.0.0.0/24
=====
IP Address
-----
No. of free addresses: 0
=====
*A:ALA-48>show>router>dhcp>local-dhcp-server#
```

Table 169: Output fields: DHCP server free addresses describes free addresses pool command output fields.

Table 169: Output fields: DHCP server free addresses

Field	Description
IP Address	The free IP addresses in the subnet
No of free addresses	The total number of free addresses in the subnet

9.54 ftn

ftn

Syntax

ftn [endpoint endpoint | sender sender | nexthop nexthop | lsp-id lsp-id | tunnel-id tunnel-id | label start-label end-label]

Context

[Tree] (tools>dump>router>mpls ftn)

Full Context

tools dump router mpls ftn

Description

This command dumps FEC-to-NHLFE (FTN) information for MPLS.

Parameters

**endpoint**  
Specifies the endpoint or destination IP address.

**Values** a.b.c.d

**sender**  
Specifies the sender IP address.

**Values** a.b.c.d

**lsp-id**  
Specifies the LSP ID.

**Values** 0 to 65535

**tunnel-id**  
Specifies the tunnel ID.

	<b>Values</b>	0 to 65535
<b><i>nexthop</i></b>		
		Specifies the next hop IP address.
	<b>Values</b>	a.b.c.d
<b><i>start-label</i></b>		
		Specifies the start label value for the label range of the display.
	<b>Values</b>	32 to 524287
<b><i>end-label</i></b>		
		Specifies the end label value for the label range of the display.
	<b>Values</b>	32 to 524287

Platforms

All

9.55 fwd-path-ext

fwd-path-ext

Syntax

```
fwd-path-ext [fpe fpe-id]  
fwd-path-ext fpe fpe-id associations
```

Context

```
[Tree] (show fwd-path-ext)
```

Full Context

```
show fwd-path-ext
```

Description

This command displays FPE information.

Parameters

<b><i>fpe-id</i></b>	
	Specifies the FPE ID.
<b>Values</b>	1 to 64

**associations**

Displays a list of current fwd path extensions to which the FPE is associated.

**Platforms**

All

**Output**

The following outputs are examples of **show fwd-path-ext fpe** command information, and [Table 170: Output fields: forwarding path extension](#) describes the output fields.

**Output Example: show fwd-path-ext fpe**

```

=====
```

*Table 170: Output fields: forwarding path extension*

Field	Description
FPE Id	Displays the configured ID of the FPE

Field	Description
Path pxc/ xc-a, xc-b	Displays the path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE. In case of a PXC based LAG, the path is referred to as xc-a and xc-b.
Application	Displays the application associated with this FPE. Based on the application type, the system internally configures logic on underlying PXC (or PXC based LAG) necessary to accommodate the application.
Description	Displays the user-configurable string used to describe the use of the FPE
Cups Steering	Displays the configured CUPS steering status
Multi-path	Displays the configured multipath status
MVPN UMH rate monitoring	Displays the configured MVPN UMH rate monitoring status
SDP-id Range	Displays the configurable SDP ID range used for internal SDPs that are used by FPEs
Sub Mgt Extension	Displays the configured subscriber management extension status
Segment-Routing V6	Displays the configured Segment Routing v6 status
SRv6 Type	Displays the FPE application type
Path	Path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE.
PW-Port	Displays the FPE that is used by PW-port application
VXLAN-Termination	Displays the FPE that is used by Vxlan-Termination application
Oper	Displays the status of the application
EPIPE svc Id	Displays the Epipe service ID with which the PW-port is associated
PW-Port Id	Displays the PW-port ID that is associated with the Epipe
Tunnel termination	Displays the IP addresses on which the VXLAN tunnel is terminated

# 10 g Commands

## 10.1 gateway

gateway

Syntax

gateway brg-id *brg-ident*

Context

[Tree] (show>subscr-mgmt>vrgw>brg gateway)

Full Context

show subscriber-mgmt vrgw brg gateway

Description

This command displays all operational data related to the BRG.

Parameters

*brg-ident*

Specifies the BRG identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management BRG gateway information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05"
=====
Bridged Residential Gateways
=====
Identifier                : 00:00:00:00:00:05

## gateway

### Syntax

**gateway brg-id *brg-ident***

**gateway brg-id *brg-ident* idle-bindings [binding *ieee-address*]**

**gateway all-gateways**

**gateway brg-id *brg-ident* all-hosts**

**gateway brg-id *brg-ident* host *ieee-address***

### Context

[\[Tree\]](#) (clear>subscr-mgmt>vrgw>brg gateway)

### Full Context

clear subscriber-mgmt vrgw brg gateway

### Description

This command clears BRG gateway data.

### Parameters

#### ***brg-ident***

Clears the specified BRG and all related hosts from the system.

#### **idle-bindings**

Clears a specific idle binding or all idle binding from the BRG. An idle binding is a DHCP lease that has not been expired but for which the host has been removed due to idle timeout.

#### ***ieee-address***

Specifies the MAC address of the binding to remove.

### **all-gateways**

Clears all BRGs and related hosts from the system.

### **all-hosts**

Clears all hosts belonging to a specified BRG.

### **ieee-address**

Clears a specific host belonging to a specified BRG.

## **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **gateway**

### **Syntax**

**gateway name** *name*

**gateway** [**name** *name*] **tunnel** [**private-address-type** *private-address-type*] [**tunnel-type** *tunnel-type*]

**gateway** [**service** *service-id*]

**gateway tunnel** [*ip-address:port*]

**gateway name** *name* **tunnel** *ip-address:port*

**gateway name** *name* **tunnel** [**tunnel-type** *tunnel-type*]

**gateway** [**name** *name*] **tunnel state** *state* [**tunnel-type** *tunnel-type*]

**gateway** [**name** *name*] **tunnel idi-value** *idi-prefix*

**gateway tunnel count**

**gateway tunnel** [**private-address-type** *private-address-type*] [**tunnel-type** *tunnel-type*]

### **Context**

[\[Tree\]](#) (show>ipsec gateway)

### **Full Context**

show ipsec gateway

### **Description**

This command displays IPsec gateway information.

### **Parameters**

#### ***name***

Specifies an IPsec gateway name.

#### ***service-id***

Specifies the service ID of the default security service used by the IPsec gateway.

**Values** 1 to 214748364 svc-name: Up to 64 characters maximum

**ip-address:port**

Displays the IP address and UDP port of the SAP IPsec gateway to the tunnel. For the remote tunnel endpoint, the *port* part is optional. In the case of an IPv6 address with a port, use the format "*IPv6Address:port*", for example "[2001:db8::100]:500"; a double quote is required around this format.

**Values**     0 to 65535

**state**

Specifies the state of the tunnel.

**Values**     up, down

**idi-prefix**

Displays a string as an IDi prefix. With this parameter, the system lists all the peers with IDi that has specified prefixes.

**count**

Displays the number of IPsec gateway tunnels with the **ike-policy>authmethod** command set to **psk**.

**tunnel-type**

Specifies the tunnel type supported on the IPsec gateway.

**Values**     dl2l, ra

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following outputs are examples of IPsec gateway information:

- [Output Example: show IPsec gateway tunnel](#); [Table 171: Output fields: show IPsec gateway tunnel](#)
- [Output Example: show IPsec gateway name](#); [Table 172: Output fields: show IPsec gateway name](#)

**Output Example: show IPsec gateway tunnel**

```

Match TrustAnchor	Displays the matched trust anchor name
Last Oper Changed	Displays the time of the last operation status changed
IKE IDI Type	Displays the IKE IDi type
IKE IDI Value	Displays the IKE IDi value
TS List	Displays the TS list number
IKE Policy	Displays the IKE policy number
Public	Displays the TCP MSS setting on the public side
Private	Displays the TCP MSS setting on the private side
Dynamic Keying Parameters	
Transform Id1, Id2, Id3, Id4	Displays the transform ID
PPK List	Displays the name of the referenced PPK list
IPsec GW Name	Displays the IPsec gateway name
Local GW Address	Displays the local gateway address
Ike Policy Id	Displays the IKE policy ID
Ike Pol Auth	Displays the authentication method used during tunnelling
Cert Profile	Displays the name of certificate profile used for certificate authentication
Trust Anchor Prof	Displays name of trust anchor profile used for certificate authentication
Local Id Type	Displays the local ID type

Label	Description
Client Index	Displays the client index number
Radius Acct Plcy	Displays the RADIUS account policy
Radius Auth Plcy	Displays the RADIUS authentication policy
Local Address Assignment Information	
Admin State	Displays the administrative state of the local address assignment
Router	Displays the router ID
Pool Name	Displays the pool name
Secondary Pool Name	Displays the secondary pool name
ISAKMP-SA	
State	Displays the administrative state
Established	Displays the time when the IKE_SA is established
Lifetime	Displays the lifetime of the IKE_SA
Expires	Displays the time when the IKE_SA expires
Temporary MTU	Displays the temporary MTU
Auth Algorithm	Displays the authentication algorithm of the IKE_SA
Encr Algorithm	Displays the encryption algorithm of the IKE_SA
DH Group	Displays the key exchange group ID of the IKE_SA
PRF Algorithm	Displays the PRF algorithm of the IKE_SA
PPK Used	Displays if the PPK is used
PPK ID	Displays the PPK ID
Tx Packets	Displays the number of transmitted packets
Rx Packets	Displays the number of received packets
Tx Errors	Displays the number of transmitted errors
Rx Errors	Displays the number of received errors
Tx DPD	Displays the number of transmitted DPD requests
Rx DPD	Displays the number of received DPD requests
Tx DPD ACK	Displays the number of transmitted DPD ACK

Label	Description
Rx DPD ACK	Displays the number of received DPD ACK messages
Tx DPD Unacked	Displays the number of transmitted DPD requests
Rx DPD Errors	Displays the number of received DPD errors
IPsec-SA	
SPI	Displays the SPI for the IPsec SA
Auth Algorithm	Displays the authentication algorithm of the CHILD_SA
Encr Algorithm	Displays the encryption algorithm of the CHILD_SA
Installed	Displays the installation time of the CHILD_SA
Lifetime	Displays the lifetime of the CHILD_SA
PFS DH Group	Displays the PFS key exchange group
Extended Seq Num	Displays the extended sequence number
Local Traffic Selectors	Displays the local traffic selectors
Remote Traffic Selectors	Displays the remote traffic selectors
Bytes Processed	Displays the number of bytes processed
Packets Processed	Displays the number of packets processed
Crypto Errors	Displays the number of cryptographic errors
Replay Errors	Displays the number of replay errors
SA Errors	Displays the number of SA errors
Policy Errors	Displays the number of policy errors
Fragmentation Statistics	
Encapsulation Overhead	Displays the maximum encapsulation overhead
Temporary Private MTU	Displays the temporary private MTU
Fragmentation Count	Displays the number of fragmented packets
Last Fragmented Packet Size	Displays the size of the last fragmented packet

### Output Example: show IPsec gateway name

```
show ipsec gateway name "d-psk-xauth-g1-1-v2"

Table 172: Output fields: show IPsec gateway name

Label	Description
Sap	Displays the SAP ID
Service	Displays the service ID
Local GW	Displays the local gateway IP address
Admin State	Displays the administrative state of the IPsec gateway
Oper State	Displays the operational state of the IPsec gateway
Def Secure Svc	Displays the default private service name
Def Secure Svc If	Displays the default private interface name
Ike Policy Id	Displays the IKE policy ID
Ike Version	Displays the IKE version number
Pre Shared Key	Displays the pre-shared key used for authentication (hashed)
Local Id Type	Displays the local ID used for IDi or IDr for IKEv2 tunnels
Cert Profile	Displays the name of the certificate profile used for certificate authentication
Trust Anchor Prof	Displays the name of trust anchor profile used for certificate authentication
Client Database	Displays the name of referenced IPsec client database
Mixed Tunnel Mode	Displays whether mixed tunnel mode is enabled or disabled on the IPsec gateway
Max Num of Keys	Phase 1 — The maximum number of IKE_SA keys that can be saved by the system Phase 2 — The maximum number of CHILD_SA keys that can be saved by the system

Label	Description
Number of Dynamic LAN-to-LAN Tunnels	Displays the number of dynamic LAN-to-LAN tunnels
Number of Remote Access Tunnels	Displays the number of remote access tunnels
Radius Acct Plcy	Displays the RADIUS account policy
Radius Auth Plcy	Displays the RADIUS authentication policy
TS-List	Displays the name of the referenced TS list
Primary	Displays the primary method used to verify the revocation status of the peer's certificate (either CRL or OCSP)
Secondary	Displays the secondary method used to verify the revocation status of the peer's certificate (either CRL, OCSP, or none)
Default Result	Displays the default result when both the primary and secondary method failed to provide an answer
Admin State	Displays the administrative state of the local address assignment
Router	Displays the router ID
Pool Name	Displays the pool name
Secondary Pool Name	Displays the secondary pool name
Transform Id1, Id2, Id3, Id4	Displays the transform ID
Reverse Route	Displays the reverse route setting
Replay Window	Displays the replay window size
Reverse Route Metr	Displays the metric used for the reverse route
Reverse Route Pref	Displays the preference used for the reverse route
IP MTU	Displays the IP-MTU
Clear DF BIT	Displays whether to clear DF bit or not
Encap IP MTU	Displays the encapsulated IP-MTU
Pkt Too Big	Displays whether to generate the packet too big message or not
Pkt Too Big Count	Displays the configured packet-too-big message count
Pkt Too Big Intvl	Displays the configured packet-too-big message interval

Label	Description
Frag Required	Displays whether to generate the fragment required message or not
Frag Req Count	Displays the configured fragment required message count
Frag Req Interval	Displays the configured fragment required message interval
Propagate IPv4 PMTU	Displays whether to propagate the IPv4 PMTU or not
Propagate IPv6 PMTU	Displays whether to propagate the IPv6 PMTU or not
PMTU Disc Aging	Displays the PMTU discovery lifetime
Public	Displays the TCP MSS adjust setting on the public side
Private	Displays the TCP MSS adjust setting on the private side
Ignore Default Route	Displays whether to ignore the default reverse route or not
Copy Traffic Class	Displays whether to copy the traffic class or not
PPK List	Displays the name of the referenced PPK list

## gateway

### Syntax

**gateway name name tunnel ip-address:port [statistics] [saved-key]**

**gateway name name tunnel ip-address:port [temp-mtu]**

**gateway name name [saved-key]**

**gateway name name tunnel ip-address:port [saved-key]**

### Context

[\[Tree\]](#) (clear>ipsec gateway)

### Full Context

clear ipsec gateway

### Description

This command clears dynamic IPsec tunnel states.

The system clears the statistics counter for the specified tunnel when the **statistics** parameter option is specified.

The system clears the saved IKE and ESP keys for the specified tunnel, or for all tunnels on the specified gateway if no tunnel is specified when the **saved-key** parameter option is specified.

The system removes the specified tunnel when the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

Parameters

**name**  
Specifies the name of the IPsec GW, up to 32 characters.

**ip-address**  
Specifies the IP address and port of the remote peer.

Values			
	<ip-address>	ip-address	a.b.c.d
		ipv6-address	x:x:x:x:x:x:x
			x:x:x:x:x:d.d.d.d
			x - [0 to FFFF]H
			d - [0 to 255]D

**port**  
Specifies the port of the remote peer. The specifies channel is cleared if the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

**Values** 0 to 65535

**statistics**  
Clears the stats counter.

**saved-key**  
Clears the saved IKE and ESP keys.

**temp-mtu**  
Clears temporary MTU learned from MTU propagation for the specified tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

10.2 gateways

gateways

Syntax

**gateways**  
**gateways brg-profile** *profile-name*

## Context

**[Tree]** (show>subscr-mgmt>vrgw>brg gateways)

## Full Context

show subscriber-mgmt vrgw brg gateways

## Description

This command lists operational gateway information for all BRGs active on the system. This list can optionally be reduced by specifying a BRG profile.

## Parameters

### *profile-name*

Specifies the name of the BRG profile to filter.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of BRG gateway information.

### Output Example

```
Node# show subscriber-mgmt brg gateways
=====
Bridged Residential Gateways

### 10.3 generate-event

#### generate-event

**Syntax**  
**generate-event** [*application* [**all** | *event-name* | *event-number* ] ]

**Context**  
[\[Tree\]](#) (tools>perform>log generate-event)

**Full Context**  
tools perform log generate-event

**Description**  
This command generates test events for an application's event name or event number.

**Parameters**  
***application***  
Specifies the application name.  
The following are some sample applications:

**Values**    adp, anysec, application\_assurance, auto\_prov, bfd, bgp, bier, bmp, calltrace, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm\_oam, elmi, ering, eth\_cfm, etun, filter, fpe, gsmpp, gtp, igmp, igmp\_snooping, ip, ipfix, ipsec, ipsec\_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, maffilter, macsec, mcac, mcpath, mc\_redundancy, mgmt\_core, mirror, mld, mld\_snooping, mpls, mpls\_tp, mpls\_lmgr, mrp, msdp, nat, nge, ntp, oam, ospf, pcap, pcep, pfcf, pim, pim\_snooping, pools, port, pppoe, pppoe\_clnt, profile, ptp, pxc, python, qos, radius, rib\_api, rip, rip\_ng, route\_next\_hop, route\_policy, rpki, rsvp, satellite, security, sflow, snmp, sr\_mpls, sr\_policy, srv6, stp, subscr\_mgmt, sub\_host\_trk, svcmgr, system, telemetry, tip, tls, tree\_sid, user, user\_db, video, vrrp, vrtr, wlan\_gw, wpp

**all**  
Keyword to specify all of the application events.

***event-name***  
Specifies the application event name.

**event-number**  
Specifies the application event number.

**Values**    0 to 4294967295

**Platforms**  
All

10.4 generate-key

generate-key

**Syntax**  
**generate-key authentication** *authentication-protocol authentication-password* [**privacy** *privacy-protocol privacy-password*] [**engine-id** *identifier*]

**Context**  
[\[Tree\]](#) (tools>perform>system>mgmt-itf>snmp generate-key)

**Full Context**  
tools perform system management-interface snmp generate-key

**Description**  
This command generates localized SNMPv3 authentication and privacy keys, which are a hash of the SNMP engine ID and a password. The SNMP engine ID can be displayed with the **show system information | match "SNMP Engine ID"** command and does not need to be entered. If keys are being generated for a different system, its SNMP engine ID must be specified.

**Parameters**

**authentication**  
Generates a localized authentication key.

**authentication-protocol**  
Specifies the SNMPv3 authentication protocol.

- Values**
- hmac-md5-96** — Specifies use of the HMAC-MD5-96 authentication protocol.
  - hmac-sha1-96** — Specifies use of the HMAC-SHA-96 authentication protocol.
  - hmac-sha2-224** — Specifies use of the HMAC-SHA-224 authentication protocol.
  - hmac-sha2-256** — Specifies use of the HMAC-SHA-256 authentication protocol.

**hmac-sha2-384** — Specifies use of the HMAC-SHA-384 authentication protocol.

**hmac-sha-512** — Specifies use of the HMAC-SHA-512 authentication protocol.

***authentication-password***

Specifies the password used to generate the authentication key.

***privacy***

Keyword to generate a localized privacy key.

***privacy-protocol***

Specifies the SNMPv3 privacy protocol.

**Values**    **cbc-des** — Specifies the use of the CBC-DES privacy protocol.  
**cfb128-aes-128** — Specifies the use of the CFB128-AES-128 privacy protocol.  
**cfb128-aes-192** — Specifies the use of the CFB128-AES-192 privacy protocol.  
**cfb128-aes-256** — Specifies the use of the CFB128-AES-256 privacy protocol.

***privacy-password***

Specifies the privacy password used to generate the privacy key.

***engine-id identifier***

Keyword that specifies the SNMP engine ID. The identifier must be a hexadecimal string between 10 and 64 digits in length.

**Platforms**

All

**Output**

The following output is an example of a generated authentication and privacy key.

**Output Example**

```

group

Syntax

**group** *tunnel-group-name*

Context

[\[Tree\]](#) (clear>router>l2tp group)

Full Context

clear router l2tp group

Description

This command clears L2TP data.

## Parameters

### *tunnel-group-name*

Specifies a L2TP tunnel group name.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group

## Syntax

**group** *tunnel-group-name*

## Context

[\[Tree\]](#) (tools>perform>router>l2tp group)

## Full Context

tools perform router l2tp group

## Description

Commands in this context configure performance tools for L2TP tunnel group.

## Parameters

### *tunnel-group-name*

Specifies the tunnel group name, up to 63 characters.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group

## Syntax

**group** [*grp-ip-address*] [**hosts** | **interfaces** | **saps**]

**group summary** [**hosts** | **interfaces** | **saps**]

## Context

[\[Tree\]](#) (show>router>igmp group)

## Full Context

show router igmp group

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ip-address* parameters are specified, then all IGMP group, (\*,G) and (S,G) addresses are displayed.

Parameters

- grp-ip-address**  
Displays specific multicast group addresses.
- hosts**  
Displays hosts for the multicast group address.
- interfaces**  
Displays interfaces for the multicast group address.
- saps**  
Displays SAPs for the multicast group address.

Platforms

All

Output

The following output is an example of IGMP group information. [Table 173: Output fields: IGMP group](#) describes the output fields for IGMP group information.

Output Example

```
*B:Dut-C# show router igmp group

show service id pim-snooping group

Description

This command displays the multicast group information.

Parameters

***grp-ip-address***

Specifies the IP multicast group address for which this entry contains information

***ip-address***

Specifies the source address for which this entry contains information.

- starg**  
Specifies that only (\*,G) entries be displayed
- sg**  
Specifies that only (S,G) entries be displayed
- detail**  
Displays detailed group information.
- family**  
Displays either IPv4 or IPv6 information.
  - Values**    ipv4 or ipv6

**Platforms**

group

**Syntax**  
**group** [*name*] [*detail*]

**Context**  
[\[Tree\]](#) (show>router>bgp group)

**Full Context**  
show router bgp group

**Description**  
This command displays group information for a BGP peer group. This command can be entered with or without parameters.

When this command is issued without a group name, information about all peer groups displays.

When the command is issued with a specific group name, information only pertaining to that specific peer group displays.

The "State" field displays the BGP group's operational state. Other valid states are:

- Up - BGP global process is configured and running.
- Down - BGP global process is administratively shutdown and not running.
- Disabled - BGP global process is operationally disabled. The process must be restarted by the operator.

## Parameters

### *name*

Displays information for the specified BGP group, up to 64 characters.

### *detail*

Displays detailed information.

## Platforms

All

## Output

The following outputs are example of BGP group information, and [Table 174: Output fields: standard and detailed group](#) describes the output fields.

### Output Example

Table 174: Output fields: standard and detailed group

Label	Description
Group	BGP group name
Group Type	No Type — Peer type not configured External — Peer type configured as external BGP peers Internal — Peer type configured as internal BGP peers
State	Disabled — The BGP peer group has been operationally disabled Down — The BGP peer group is operationally inactive Up — The BGP peer group is operationally active
Peer AS	The configured or inherited peer AS for the specified peer group
Local AS	The configured or inherited local AS for the specified peer group

Label	Description
Local Address	The configured or inherited local address for originating peering for the specified peer group
Loop Detect	The configured or inherited loop detect setting for the specified peer group
Connect Retry	The configured or inherited connect retry timer value
Authentication	n/a — No authentication is configured MD5 — MD5 authentication is configured
Local Pref	The configured or inherited local preference value
MED Out	The configured or inherited MED value assigned to advertised routes without a MED attribute
Min Route Advt.	The minimum amount of time that must pass between route updates for the same IP prefix
Min AS Originate	The minimum amount of time that must pass between updates for a route originated by the local router
Multihop	The maximum number of router hops a BGP connection can traverse
Multipath	The configured or inherited multipath value, determining the maximum number of ECMP routes BGP can advertise to the RTM
Prefix Limit	No Limit — No route limit assigned to the BGP peer group 1 to 4294967295 — The maximum number of routes BGP can learn from a peer
Passive	Disabled — BGP attempts to establish BGP connections with neighbors in the specified peer group Enabled — BGP does actively attempt to establish BGP connections with neighbors in the specified peer group
Next Hop Self	Disabled — BGP is not configured to send only its own IP address as the BGP nexthop in route updates to neighbors in the peer group Enabled — BGP sends only its own IP address as the BGP nexthop in route updates to neighbors in the specified peer group
Aggregator ID 0	Disabled — BGP is not configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group Enabled — BGP is configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group
Remove Private	Disabled — BGP will not remove all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group Enabled — BGP removes all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group
Damping	Disabled — The peer group is configured not to dampen route flaps

Label	Description
	Enabled — The peer group is configured to dampen route flaps
Export Policy	The configured export policies for the peer group
Import Policy	The configured import policies for the peer group
Hold Time	The configured hold time setting
Keep Alive	The configured keepalive setting
Cluster Id	n/a — No cluster ID has been configured
Client Reflect	Disabled — The BGP route reflector will not reflect routes to this neighbor Enabled — The BGP route reflector is configured to reflect routes to this neighbor
NLRI	The type of NLRI information that the specified peer group can accept Unicast — IPv4 unicast routing information can be carried
Preference	The configured route preference value for the peer group
Egress Engineering	Enabled — EPE is enabled for the peer group Disabled — EPE is disabled for the peer group
List of Peers	A list of BGP peers configured under the peer group
Total Peers	The total number of peers configured under the peer group
Established	The total number of peers that are in an established state

## group

### Syntax

**group** *aa-group-id* [:*partition-id*]

### Context

[\[Tree\]](#) (show>app-assure group)

### Full Context

show application-assurance group

### Description

Commands in this context display application-assurance group information.

### Parameters

***aa-group-id***

Specifies an AA ISA group ID.

**Values** 1

***partition-id***

Specifies a partition within a group.

**Values** 1 to 65535

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of application assurance group information.

**Output Example**

```
*A:Dut-C# /show application-assurance group 1:1 aa-sub esm Subscriber1 summary
=====
Application-Assurance Subscriber Summary (realtime)
=====

```

**group**

**Syntax**

**group** *aa-group-id* [: *partition-id*]

**Context**

[\[Tree\]](#) (tools>dump>app-assure group)

**Full Context**

tools dump application-assurance group

**Description**

This command dumps application-assurance information within a group and partition.

Parameters

*aa-group-id*

Specifies the AA group identifier.

Values	aa-group-id:	partition:aa-group-id[:partition-id]	
		aa-group-id	1 to 255
		partition-id	1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

**group** *aa-group-id* **load-balance** [**service** *service-id*]

Context

[\[Tree\]](#) (tools>perform>app-assure group)

**group summary** [**hosts** | **interfaces** | **saps**]

Context

[\[Tree\]](#) (show>router>mld group)

Full Context

show router mld group

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ipv6-address* parameters are specified, then all MLD group, (\*,G) and (S,G) addresses are displayed.

Parameters

- grp-ipv6-address**  
Displays specific multicast group addresses.
- hosts**  
Displays hosts for the multicast group address.
- interfaces**  
Displays interfaces for the multicast group address.
- saps**  
Displays SAPs for the multicast group address.

Platforms

All

Output

The following output is an example of MLD group information. [Table 175: Output fields: MLD group](#) describes the output fields for MLD group information.

Output Example

Table 176: Output fields: MSDP group

Label	Description
Group Name	The MSDP group name
Mode	The groups of peers in a full mesh topology to limit excessive flooding of SA messages to neighboring peers
Act Srcs	The configured maximum number of active source messages that will be accepted by MSDP
Local Address	The local end of a MSDP session
Admin State	The administrative state of the MSDP group

Label	Description
Receive Msg Rate	The rate that the messages are read from the TCP session
Receive Msg Time	The time of MSDP messages that are read from the TCP session within the configured number of seconds
Receive Msg Thd	The time interval, in seconds, that MSDP messages are read from the TCP session for rate limiting
Mode	The MSDP group mode
SA Limit	The source-active limit
Export Policy	The export policy specified for the group
Import Policy	The import policy specified for the group

## group

### Syntax

**group** *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]  
**group** *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*] **rpfv**

### Context

[\[Tree\]](#) (show>router>pim group)

### Full Context

show router pim group

### Description

This command displays PIM source group database information.

### Parameters

#### **grp-ip-address**

Specifies the IP multicast group address for which this entry contains information.

#### **source ip-address**

Specifies the source address for which this entry contains information.

#### **type starstarrp**

Specifies that only (\*, \*, rp) entries are displayed.

#### **type starg**

Specifies that only (\*,G) entries are displayed.

#### **type sg**

Specifies that only (S,G) entries are displayed.

detail

Displays detailed group information.

family

Displays family information.

Values    ipv4, ipv6

rpfv

Displays proxy RPF vectors that are used for inter-AS Rosen MVPN.

Platforms

All

Output

The following output is an example of PIM group information. [Table 177: Output fields: PIM group](#) provides PIM group field descriptions.

Output Example

```

=====
PIM Source Group ipv4

```

Table 177: Output fields: PIM group

Label	Description
Group Address	The IP multicast group address for which this entry contains information
Source Address	The source address of the multicast sender.  The value is 0 if the type is configured as <b>starg</b> . The address of the Rendezvous Point (RP) display when the type is configured as <b>starRP</b> .
RP Address	The RP address
Type	The type of entry, (*,*, rp)/(*,G) or (S,G).
Spt Bit	Specifies whether to forward on (*,*, rp)/(*,G) or on (S,G) state. It is updated when the (S,G) data comes on the RPF interface towards the source.
Incoming Intf	The interface on which the traffic comes in. It can be the RPF interface to the RP (if <b>starg</b> ) or the source (if <b>sg</b> ).
Num Oifs	The number of interfaces in the inherited outgoing interface list. An inherited list inherits the state from other types.
Flags	The different lists to which this interface belongs
Keepalive Timer Exp	The keepalive timer expiration which is applicable only for (S,G) entries.  The (S,G) keepalive timer is updated by data being forwarded using this (S,G) Forwarding state. It is used to keep (S,G) state alive in the absence of explicit (S,G) joins.
MRIB Next Hop	The next hop address towards the RP
MRIB Src Flags	MRIB information about the source. If the entry is of type starg or starstarrp, it will contain information about the RP for the group.
Up Time	The time since this source group entry was created.
Resolved By	The route table used for RPF check.

Label	Description
Up JP State	The upstream join prune state for this entry on the interface. PIM join prune messages are sent by the downstream routers towards the RPF neighbor.
Up JP Expiry	The minimum amount of time remaining before this entry will be aged out.
Up JP Rpt	The join prune Rpt state for this entry on the interface. PIM join/prune messages are sent by the downstream routers towards the RPF neighbor. (S,G, rpt) state is a result of receiving (S,G, rpt) JP message from the downstream router on the RP tree.
Up JP Rpt Override	The value used to delay triggered Join (S,G, rpt) messages to prevent implosions of triggered messages.  If this has a non-zero value, it means that the router was in 'not Pruned' state and it saw a prune (S,G, rpt) message being sent to RPF (S,G, rpt). If the router sees a join (S,G, rpt) override message being sent by some other router on the LAN while the timer is still non-zero, it simply cancels the override timer. If it does not see a join (S,G, rpt) message, then on expiry of the override timer, it sends its own join (S,G, rpt) message to RPF (S,G, rpt). A similar scenario exists when RPF (S,G, rpt) changes to become equal to RPF (*,G).
Register State	The register state. The register state is kept at the source DR. When the host starts sending multicast packets and if there are no entries programmed for that group, the source DR sends a register packet to the RP (g). Register state transition happen based on the register stop timer and the response received from the RP.
Register Stop Exp	The time remaining before the register state might transition to a different state
Register from Anycast RP	The status of the register packet for that group received from one of the RP from the anycast-RP set
RPF Neighbor	The address of the RPF neighbor
Outgoing Intf List	A list of interfaces on which data is forwarded.
Curr Fwding Rate	The current forwarding rate of the multicast data for this group and source. This forwarding rate is calculated before ingress QoS policing or shaping is applied.
Forwarded Packets	The number of multicast packets that were forwarded to the interfaces in the outgoing interface list. This packet count is before ingress QoS policing or shaping is applied.
Discarded Packets	The number of multicast packets that matched this source group entry but were discarded.

Label	Description
	For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
Forwarded Octets	The number of octets forwarded
RPF Mismatches	The number of multicast packets that matched this source group entry but they did not arrive on the interface.
Spt threshold	The value of the SPT threshold configured for that group. 0 kb/s means that the switch to the SP tree occurs immediately.

group

Syntax

**group** *aa-group-id* [: *partition-id*]

Context

[\[Tree\]](#) (clear>application-assurance group)

Full Context

clear application-assurance group

Description

This command clears application assurance group data.

Parameters

***aa-group-id***

Specifies a group of ISA MDAs.

**Values**     1 to 255

***partition-id***

Specifies a partition within a group.

**Values**     1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

**group** [*group-name*] [**detail**]

Context

[\[Tree\]](#) (show>router>rip group)

Full Context

show router rip group

Description

This command displays RIP group information.

Parameters

- group-name**  
Displays RIP group information for the specified group.
- detail**  
Displays detailed RIP group information.

Platforms

All

Output

[Table 178: Output fields: RIP group](#) describes the standard command output fields for a RIP group.

Table 178: Output fields: RIP group

Label	Description
Group	The RIP group name.
Adm	Down — The RIP group is administratively down. Up — The RIP group is administratively up.
Opr	Down — The RIP group is operationally down. Up — The RIP group is operationally up.
Send Mode	Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address.  Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address.  None — Specifies that no RIP messages are sent (silent listener).  RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.asp
Recv Mode	Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted.  None — Specifies that RIP updates will not be accepted.

Label	Description
	RIPv1 — Specifies that RIP updates in version 1 format only will be accepted.  RIPv2 — Specifies that RIP updates in version 2 format only will be accepted.
Metric In	The metric value added to routes received from a RIP neighbor.

The following output is an example of RIP group information.

group

Syntax

**group** *grp-ip-address* [**source** *ip-address*] [**interval** *interval*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>pim group)

Full Context

monitor router pim group

Description

This command monitors statistics for a PIM source group.

Parameters

***grp-ip-address***

Specifies the IP address of an multicast group that identifies a set of recipients that are interested in a particular data stream.

***ip-address***

Specifies the source IP address to use in the ping requests in dotted decimal notation.

- Values** 0.0.0.0 to 255.255.255.255
- Default** the IP address of the egress IP interface

***interval***

Configures the interval for each display, in seconds.

- Values** 10, 20, 30, 40, 50, 60
- Default** 10

***repeat***

Configures how many times the command is repeated.

- Values** 1 to 999
- Default** 10

***absolute***

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

***rate***

Displays rate-per-second for each statistic instead of the delta.

## 10.12 group-interface

group-interface

### Syntax

**group-interface** [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-address*]

### Context

[\[Tree\]](#) (show>router>igmp group-interface)

### Full Context

show router igmp group-interface

### Description

This command displays IGMP group-interface information.

### Parameters

***service-id***

Specifies the service ID.

**Values**    service-id: 1 to 2148278386  
              svc-name: up to 64 characters.

***ip-int-name***

Specifies an IP interface name, up to 32 characters.

**detail**

Displays detailed information.

**group**

Displays information for the group IP address.

***grp-address***

Displays information for the group IP address in the multicast group address format or zero.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

### Syntax

**group-interface** [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-ipv6-address*]

## Context

[\[Tree\]](#) (show>router>mld group-interface)

## Full Context

show router mld group-interface

## Description

This command displays MLD group-interface information.

## Parameters

### ***service-id***

Specifies the service ID.

**Values**    service-id: 1 to 2148278386  
              svc-name: up to 64 characters.

### ***ip-int-name***

IP interface name, up to 32 characters.

### ***detail***

Displays detailed information.

### ***group***

Displays information from the group IPv6 address.

### ***grp-ipv6-address***

Group IPv6 address.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## group-interface

## Syntax

**group-interface** [**fwd-service** *service-id*] [*ip-int-name*]

## Context

[\[Tree\]](#) (show>router>mld>statistics group-interface)

## Full Context

show router mld statistics group-interface

## Description

This command displays MLD group interface statistics information.

**Parameters**

- service-name**  
Displays information associated with the specified service name.
- ip-int-name**  
Displays information associated with the specified IP interface name.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

**Syntax**

**group-interface** [**fwd-service** *service-id*] [*ip-int-name*]

**Context**

[\[Tree\]](#) (show>router>igmp>statistics group-interface)

**Full Context**

show router igmp statistics group-interface

**Description**

This command displays IGMP statistics for group interfaces.

**Parameters**

- service-id**  
Specifies the service ID.  

**Values**  
*service-id*: 1 to 2148278386  
*svc-name*: Up to 64 characters
- ip-int-name**  
Specifies the IP interface name, up to 32 characters.

**Platforms**

All

## 10.13 groups

### groups

#### Syntax

**groups** [**group** *group-ip-address*]

**groups** [**group** *group-ip-address*] **detail**

**groups** [**group** *group-ip-address*] **summary**

#### Context

[\[Tree\]](#) (show>service>active-subscribers>host-tracking groups)

#### Full Context

show service active-subscribers host-tracking groups

#### Description

This command displays active subscriber host tracking groups information.

#### Parameters

##### **group-ip-address**

Displays information about the group address of the active subscriber group.

**Values**    ipv4address: a.b.c.d  
              ipv6address: FFx4::/16 up to FFxE::/16  
              x [0..F]H

##### **detail**

Displays detailed information about the group address of the active subscriber group.

##### **summary**

Displays summarized group information for active subscribers.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 10.14 grpc

```
grpc
```

**Syntax**

```
grpc
grpc connection
grpc rpc [rpc-id]
```

**Context**

```
[Tree] (show>system grpc)
```

**Full Context**

```
show system grpc
```

**Description**

This command displays gRPC server information.

**Parameters**

- connection**  
This command displays information for gRPC connections.
- rpc-id**  
Specifies an rpc ID.  
**Values** 0 to 4294967295

**Platforms**

All

**Output**

The following output is an example of system gRPC information.  
[Table 179: Output fields: system gRPC](#) describes system gRPC output fields.

**Output Example**

```
A:admin@Dut-A# show system grpc
=====
gRPC Server
=====
Administrative State      : Enabled
Operational State        : Up
Supported services
-----
gNMI Version              : 0.4.0
=====
```

```
A:admin@Dut-A# show system grpc connection
=====
gRPC Server connections
=====
Address           : 192.99.5.0
Port              : 49648
Establishment Time : 2018/02/20 09:51:48
Active RPC Count   : 0
Total RPC Count    : 1
Rx Bytes          : 2954
Tx Bytes          : 3908
-----
No. of connections : 1
=====

A:node-6>show>system# grpc rpc
=====
gRPC Server RPCs
=====
No. of RPCs       : 0
=====
```

Table 179: Output fields: system gRPC

Label	Description
gRPC Server	Specifies the gRPC server name.
Administrative State	Specifies the administrative state (Enabled, Disabled).
Operational State	Specifies the operational state (Up, Down, Transition).
Supported services	Specifies the supported services.
gNMI Version	Specifies the gNMI version.
Address	Specifies the IP address.
Port	Specifies the port number.
Establishment Time	Specifies the establishment time.
Active RPC Count	Specifies the active RPC count.
Total RPC Count	Specifies the total RPC count.
Rx Bytes	Specifies the number of received bytes.
Tx Bytes	Specifies the number of transmitted bytes.
No. of connections	Specifies the number of gRPC connections.

Label	Description
No. of RPCs	Specifies the number of RPCs.

grpc

**Syntax**  
grpc

**Context**  
[\[Tree\]](#) (show>system>telemetry grpc)

**Full Context**  
show system telemetry grpc

**Description**  
Commands in this context display gRPC telemetry subscriptions.

**Platforms**  
All

10.15 grpc-tunnel

grpc-tunnel

**Syntax**  
grpc-tunnel

**Context**  
[\[Tree\]](#) (show>system grpc-tunnel)

**Full Context**  
show system grpc-tunnel

**Description**  
Commands in this context display gRPC tunnel information.

**Platforms**  
All

## 10.16 grt-lookup

grt-lookup

### Syntax

grt-lookup

### Context

[\[Tree\]](#) (clear>router grt-lookup)

### Full Context

clear router grt-lookup

### Description

This command re-evaluates route policies for GRT.

### Platforms

All

## 10.17 gsmp

gsmp

### Syntax

gsmp

### Context

[\[Tree\]](#) (show>service>id gsmp)

### Full Context

show service id gsmp

### Description

Commands in this context display GSMP information.

### Platforms

All

## gsmp

### Syntax

gsmp

### Context

[\[Tree\]](#) (clear>service>id gsmp)

### Full Context

clear service id gsmp

### Description

Commands in this context clear GSMP statistics.

### Platforms

10.19 gtp

gtp

Syntax  
gtp

Context  
[\[Tree\]](#) (show>router gtp)

Full Context  
show router gtp

Description  
This command displays operational information related to GTP usage in the specified routing context.

Platforms  
7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
gtp
```

### Syntax

```
gtp
```

### Context

[\[Tree\]](#) (show>subscr-mgmt gtp)

### Full Context

```
show subscriber-mgmt gtp
```

### Description

This command displays router operational GTP information.

### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
gtp
```

### Syntax

```
gtp
```

### Context

[\[Tree\]](#) (clear>router gtp)

### Full Context

```
clear router gtp
```

### Description

Commands in this context clear GTP information in this routing context.

### Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
gtp
```

### Syntax

```
gtp session all
```

```
gtp session apn apn
```

```
gtp session apn apn imsi imsi
```

**gtp session imsi** *imsi*  
**gtp statistics**

## Context

[\[Tree\]](#) (clear>subscr-mgmt gtp)

## Full Context

clear subscriber-mgmt gtp

## Description

This command clears all GTP sessions matching the specified criteria. Associated objects, such as the ESM subscriber in a GTP uplink scenario are also removed.

## Parameters

### session

Specifies to remove GTP sessions.

### all

Specifies to remove all GTP sessions in the system.

### statistics

Specifies to clear GTP statistics.

### apn

Specifies the APN identifying the session, up to 100 characters.

### imsi

Specifies the IMSI identifying the session, in the format of a string of digits between 9 and 15.

## Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

**gtp**

## Syntax

**gtp**

**gtp gtp-filter** *gtp-filter-name*

## Context

[\[Tree\]](#) (show>app-assure>group gtp)

## Full Context

show application-assurance group gtp

Description

This command displays GTP (General packet radio service (GPRS) Tunneling Protocol) information.

Parameters

***gtp-filter-name***  
Specifies a GTP filter name, up to 32 characters. When a filter is specified, all traffic is examined as described in the tmnxBsxGtpFltrTable.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **gtp gtp-filter** command.

Output Example

```
show application-assurance group 1:0 gtp gtp-filter "bob"
=====
Application Assurance Group 1:0 GTP Filter "bob"
=====

# 11 h Commands

## 11.1 handler

```
handler
```

**Syntax**

```
handler [handler-name]  
handler detail
```

**Context**

```
[Tree] (show>log>event-handling handler)
```

**Full Context**

```
show log event-handling handler
```

**Description**

Commands in this context display EHS handler information.

**Parameters**

- handler-name***  
Specifies the name of a specific handler up to 32 characters in length.
- detail**  
Keyword to list details of all handlers.

**Platforms**

All

**Output**

The following output is an example of handler information.

[Table 180: Output fields: handler](#) describes handler output fields.

**Output Example**

```
A:node1>show>log>event-handling# handler  
=====
```

Handler Name	Admin State	Oper State	Description
-----------------	----------------	---------------	-------------

```
=====
```

```

-----
Handler Action-List Entry Execution Statistics
  Enqueued          : 4
  Err Launch         : 0
  Err Adm Status    : 0
Total               : 4
=====

```

Table 180: Output fields: handler

Label	Description
Handler	The name of the handler.
Description	The handler description string.
Admin State	The administrative state of the handler.
Oper State	The operational state of the handler.
<b>Handler Action-List Entry</b>	
Entry-id	The action-list entry identifier.
Description	The action-list entry description string.
Admin State	The administrative state of the action-list entry.
Policy Name	The name of the related script policy.
Policy Owner	The owner of the related script policy.
Last Exec	The timestamp of the last successful execution of the action-list entry.

Label	Description
<b>Handler Action-List Entry Execution Statistics</b>	
Enqueued	The number of times the action-list entry was successfully passed on to the SR OS sub-system or module that will attempt to process and execute the action. For a script-policy entry, this indicates that the script request has been enqueued but does not necessarily indicate that the script has successfully launched or completed. For status and information about the script, use the <b>show&gt;system&gt;script-control</b> command.
Err Launch	The number of times the action-list entry was not successfully handed over to the next SR OS sub-system or module in the processing chain. This can be caused by a variety of conditions including a full script request input queue.
Err Adm Status	The number of times the action-list entry was not executed because the entry was administratively disabled.
Total	The total number of times that the action-list entry attempted execution.

## handler

### Syntax

**handler** *event-handler-name*

### Context

[\[Tree\]](#) (clear>log>event-handling handler)

### Full Context

clear log event-handling handler

### Description

This command clears the counters in the **show log event-handling handler** *handler-name* output. It does not affect the global or aggregate counters shown using the **information** command.

### Parameters

***handler-name***

Specifies the name of the event handler, up to 32 characters in length.

### Platforms

All

## 11.2 hash-control

### hash-control

#### Syntax

hash-control

#### Context

[\[Tree\]](#) (show>system>security hash-control)

#### Full Context

show system security hash-control

#### Description

Commands in this context display hash-control configuration information.

#### Platforms

All

## 11.3 hierarchy

### hierarchy

#### Syntax

hierarchy [**subscriber** *sub-ident-string*]

#### Context

[\[Tree\]](#) (show>service>active-subscribers hierarchy)

#### Full Context

show service active-subscribers hierarchy

#### Description

This command displays active subscriber hierarchy information. To display an IPoE/PPP session, the group of hosts within the session is visually indented. Additional information related to the session is also shown. For PPPoE, the circuit ID and remote ID if used is shown. For IPoE, the key used to group the session is shown (for example, the circuit ID). The command also display PD host which are modeled as a managed route. The PD managed route is directly underneath and points to the host that it is using as the next hop. The PD managed route forwarding status is also shown, where (N) indicates that the route is not forwarding.

## Parameters

### *sub-ident-string*

Specifies the subscriber ID of the active subscriber, up to 32 characters.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of active subscriber hierarchy information.

### Output Example

```

## 11.4 histogram

### histogram

#### Syntax

**histogram router** *router-instance* **pool** *pool-name* **bucket-size** [1..65536] **num-buckets** [2..50]

#### Context

[\[Tree\]](#) (tools>dump>nat histogram)

#### Full Context

tools dump nat histogram

#### Description

This command displays a NAT pool port usage histogram

#### Parameters

**router** *router-instance*

Specifies the router instance.

**pool** *pool-name*

Specifies the identification of the NAT pool.

**bucket-size** [1..65536]

Specifies the unit of the X-axis of the histogram; a value of ten, for example, would return in a histogram with results for [0-9], [10-19], [20-29], ... ports.

### **num-buckets [2..50]**

Specifies the size of the histogram; a value of five, for example, would result in five results: [0-9], [10-19], [20-29], [30-39], [40-infinite].

### **Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **11.5 history**

### **history**

#### **Syntax**

**history**

#### **Context**

[\[Tree\]](#) (tools>dump>system>nsp-proxy history)

#### **Full Context**

tools dump system nsp-proxy history

#### **Description**

This command displays system NSP proxy history information.

#### **Platforms**

VSR-NRC

## **11.6 host**

### **host**

#### **Syntax**

**host [detail] [wholesaler service-id] [ session {none | ipoe | ppp}] [ router-advertisement-policy policy-name]**

**host interface interface-name [detail] [ wholesaler service-id] [session {none | ipoe | ppp}] [router-advertisement-policy policy-name]**

**host mac ieee-address [detail] [ wholesaler service-id] [session {none | ipoe | ppp}] [router-advertisement-policy policy-name]**

**host ipv6-address ipv6-prefix [detail] [ wholesaler service-id] [session {none | ipoe | ppp}] [router-advertisement-policy policy-name]**

**host sap** *sap-id* [**detail**] [ **wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

## Context

[\[Tree\]](#) (show>service>id>slaac host)

## Full Context

show service id slaac host

## Description

This command displays SLAAC host related information.

## Parameters

### **detail**

Specifies to display detailed SLAAC host related information.

### **service-id**

Specifies the service ID of the wholesaler.

**Values** 1 to 2147483647

### **session**

Specifies to display information about SLAAC hosts that are associated with an IPoE session or a PPP session.

**Values** none, ipoe, ppp

### **interface-name**

Specifies the interface name, up to 32 characters.

### **ieee-address**

Specifies the MAC address for which to display SLAAC host information.

### **ipv6-address**

Specifies the IPv6 address for which to display SLAAC host information.

### **sap-id**

Specifies the physical port identifier portion of the SAP definition.

### **policy-name**

Specifies the name of the router advertisement policy.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of detailed SLAAC host information.

## Output Example

```
*A:eng-BNG-2# show service id 1000 slaac host detail
```

```

**Table 181: Output fields: SLAAC host** describes service SLAAC host information.

*Table 181: Output fields: SLAAC host*

Field	Description
Service ID	The service identifier.
Prefix	The prefix for the service
Interface Id	The interface identifier of this SLAAC host. If the SLAAC host has multiple addresses, this field will only show the interface identifier of one of them.
Mac Address	The MAC address of the this SLAAC host
Subscriber-interface	The subscriber interface name

Field	Description
Group-interface	The subscriber interface group interface name
SAP	The service SAP ID
Termination Type	The termination type of this SLAAC host
Creation Time	The date and time the service was created
Persistence Key	The key value that can be used to track this SLAAC host in the persistence file.
Router adv. policy	The name of the router advertisement policy associated with the SLAAC host during authentication
IPoE PPP session	The indication if this SLAAC host belongs to an IPoE or PPP session
Radius sub-if prefix	The subscriber interface prefix that is received from a Radius server
IPoE Trigger	The trigger name
Last Auth Time	The sysUpTime at the time of the last authentication for this session
Inactivity Timer	The remaining time in seconds before the host is removed. A value of 0 indicates no inactivity timer is active.
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
ANCP-String	The ANCP string applicable for this session
Int Dest ID	The intermediate destination identifier applicable for this session
Category-Map-Name	The category map name applicable for this session
Info origin	The server that provided the Sub-profile, SLA profile, Ancp string and Intermediate Destination Id
Pool	the DHCP server pool from which the SLAAC prefix is allocated
Primary-Dns	the primary DNS server
Secondary-Dns	the secondary DNS server

Field	Description
Circuit ID	circuit ID of this host
Remote ID	remote ID of this host
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 PPPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit

Field	Description
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

host

Syntax

host mac *ieee-address* ip *ip-address*

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway host)

Full Context

show subscriber-mgmt vrgw brg gateway host

Description

This command lists pool information about a specific host in the BRG.

Parameters

***ieee-address***

Specifies the MAC address identifying a specific host.

***ip-address***

Displays only the prefixes associated with this host.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host [*ipv6-address*]

## Context

[\[Tree\]](#) (show>router>mld>statistics host)

## Full Context

show router mld statistics host

## Description

This command displays MLD host statistics information.

## Parameters

### *ipv6-address*

Displays information associated with the specified IPv6 address.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

## Syntax

host all

host *ipv6-address* *ipv6-prefix*

host mac *ieee-address*

host sap *sap-id*

## Context

[\[Tree\]](#) (clear>service>id>slaac host)

## Full Context

clear service id slaac host

## Description

This command clears SLAAC host data.

## Parameters

### *ieee-address*

Specifies the MAC address.

### *ipv6-prefix*

Specifies the IPv6 prefix and length.

### *sap-id*

Specifies the SAP ID.

### all

Clears all SLAAC host data.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host

### Syntax

**host** [*ip-address*]

### Context

[\[Tree\]](#) (show>router>igmp>statistics host)

### Full Context

show router igmp statistics host

### Description

This command displays IGMP statistics for hosts.

### Parameters

***ip-address***

Specifies the host IP address.

**Values**    a.b.c.d

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 11.7 host-connectivity-verify

## host-connectivity-verify

### Syntax

**host-connectivity-verify statistics** [**sap** *sap-id*]

### Context

[\[Tree\]](#) (show>service>id host-connectivity-verify)

### Full Context

show service id host-connectivity-verify

Description

This command displays host connectivity check statistics.

Parameters

statistics

Displays host connectivity verification data

sap-id

Specifies the physical port identifier portion of the SAP definition

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service host connectivity information.

Output Example

```
A:ALA-48>show>service>id# host-connectivity-verify statistics sap 1/1/9:0
=====
Host connectivity check statistics
=====
Svc   SapId/      DestIp      Last        Time        Oper
Id    SdpId      Address    Response    Expired     State
-----
10001/2/3:01.144.145.1                Up
=====
A:ALA-48>show>service>id#
```

Table 182: Output fields: host connectivity check verify describes show service-id host connectivity verification output fields.

Table 182: Output fields: host connectivity check verify

Label	Description
Svc Id	The service identifier.
SapId/SdpId	The SAP and SDP identifiers.
DestIp Address	The destination IP address.
Last Response	The time when the last response was received.
Time Expired	Displays whether the interval value has expired.
Oper State	Displays the current operational state of the service.

## 11.8 host-lockout-policy

host-lockout-policy

Syntax

```
host-lockout-policy [policy host-lockout-policy-name] lockout-state
host-lockout-policy sap sap-id [circuit-id circuit-id] [mac ieee-address] [remote-id remote-id] [lockout-state]
```

Context

```
[Tree] (clear>subscr-mgmt host-lockout-policy)
```

Full Context

```
clear subscriber-mgmt host-lockout-policy
```

Description

This command removes host lockout contexts from the system.

Parameters

*sap-id*

Specifies to clear information for hosts in a specific lockout state.

Values		
null	port-id   bundle-id   bpgrp-id   lag-id   aps-id   eth-sat-id	
dot1q	port-id   bundle-id   bpgrp-id   lag-id   aps-id   pw-id   eth-sat-id:[qtag1   cp-conn-prof-id]	
qinq	port-id   bundle-id   bpgrp-id   lag-id   pw-id   eth-sat-id:[qtag1 cp-conn-prof-id].[qtag2   cp-conn-prof-id]	
	cp	keyword
	conn-prof-id	1 to 8000
cem	slot/mda/port.channel	
ima-grp	bundle-id [:vpi/vci   vpi   vpi1.vpi2   cp.conn-prof-id]	
	cp	keyword
	conn-prof-id	1 to 8000
port-id	slot/mda/port[.channel]	
aps-id	aps-group-id[.channel]	
	aps	keyword

	<i>group-id</i>	1 to 128
eth-tunnel	<i>eth-tunnel-id[:eth-tun-sap-id]</i>	
	<i>id</i>	1 to 1024
	<i>eth-tun-sap-id</i>	0 to 4094
lag-id	<b>lag-id</b>   <b>lag-string</b>	
	<b>lag</b>	keyword
	<i>id</i>	1 to 800
	<i>string</i>	23 characters max
pw-id	<b>pw-id</b>	
	<b>pw</b>	keyword
	<i>id</i>	1 to 32767
qtag1	null   0 to 4094	
qtag2	*   null   0 to 4094	
tunnel-id	<b>tunnel-id.private</b>   <b>public:tag</b>	
	<b>tunnel</b>	keyword
	<i>id</i>	1 to 16
	<i>tag</i>	0 to 4094
eth-sat-id	<b>esat-id/slot/port</b>	
	<b>esat</b>	keyword
	<i>id</i>	1 to 20
pxc-id	<b>pxc-id.sub-port</b>	
	<b>pxc</b>	keyword
	<i>id</i>	1 to 64
	<i>sub-port</i>	a, b

***circuit-id***

Specifies the circuit ID, up to 253 characters.

***ieee-address***

Specifies the MAC address, up to 30 characters.

***remote-id***

Specifies the remote ID, up to 253 characters.

***lockout-state***

Specifies to clear information for hosts in a specific lockout state.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-lockout-policy

### Syntax

**host-lockout-policy**

**host-lockout-policy** *policy-name* **association**

**host-lockout-policy** *policy-name*

**host-lockout-policy** *policy-name* *lockout-state* **sap** *sap-id* [**summary**]

**host-lockout-policy** *policy-name* *lockout-state* [**circuit-id** *circuit-id*] [**sap** *sap-id*] [**summary**]

**host-lockout-policy** *policy-name* *lockout-state* [**mac** *ieee-address*] [**sap** *sap-id*] [**summary**]

**host-lockout-policy** *policy-name* *lockout-state* [**remote-id** *remote-id*] [**sap** *sap-id*] [**summary**]

### Context

[\[Tree\]](#) (show>subscr-mgmt host-lockout-policy)

### Full Context

show subscriber-mgmt host-lockout-policy

### Description

This command displays host lockout policy information.

### Parameters

#### ***policy-name***

Specifies a specific subscriber host lockout policy name up to 32 characters.

#### **association**

Specifies to display the association of the host lockout policy.

#### ***lockout-state***

Specifies to display information for hosts in a specific lockout state.

**Values** all, active, graceful

#### **sap** *sap-id*

Specifies to display SAP ID information.

#### ***circuit-id*** *circuit-id*

Specifies to display circuit ID information. The *circuit-id* is up to 256 characters .

#### **mac** *ieee-address*

Specifies to display MAC address information up to 30 characters.

#### ***remote-id*** *remote-id*

Specifies to display remote ID information, up to 256 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management host lockout policy information.

Output Example

```

Table 183: Output fields: host lockout policy describes subscriber management host lockout policy output fields.

Table 183: Output fields: host lockout policy

Field	Description
Lockout Policy	The subscriber Host Lockout Policy name
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout Time Min	The minimum lockout-time for this host lockout policy
Lockout Time Max	The maximum lockout-time for this host lockout policy
Description	The user-provided description of this subscriber Host Lockout Policy

Field	Description
Max Lockout Hosts	The maximum number of lockouts for this host
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout time min	The minimum lockout-time for this Host Lockout Policy
Lockout time max	The maximum lockout-time for this Host Lockout Policy
Lockout reset time	The lockout reset time for this Host Lockout Policy
Max lockout hosts	The maximum number of locked out hosts for this Host Lockout Policy
Host key	The method for host matching

## 11.9 host-lookup

### host-lookup

#### Syntax

**host-lookup** [**mac** *ieee-address*] [**remote-id** *remote-id-ascii*] [**sap-id** *sap-id*] [**service-id** *service-id*] [**string** *vso-string*] [**system-id** *system-id*] [**option60** *option-60-ascii*] [**circuit-id** *circuit-id-ascii*] [**circuit-id-hex** *circuit-id-hex*] [**option60-hex** *option60-hex*] [**remote-id-hex** *remote-id-hex*] [**derived-id** *derived-id*] [**ip-prefix** *ip-prefix/ip-prefix-length*]

#### Context

**[Tree]** (tools>perform>subscr-mgmt>loc-user-db>ipoe host-lookup)

#### Full Context

tools perform subscriber-mgmt local-user-db ipoe host-lookup

#### Description

This command performs a lookup in the local user database. This command looks up the host with the match-list configured in the local user database.

#### Parameters

##### *ieee-address*

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

***remote-id***

Specifies the information which goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

***sap-id***

Specifies a SAP identifier to be used.

***service-id***

Specifies an existing subscriber service ID.

**Values** 1 to 2147483647

***vso-string***

Specifies a Vendor Specific Option (VSO) string.

***system-id***

Specifies the system ID.

**Values** up to 255 characters maximum

***hex-string***

Specifies the content of option 60 for this lookup.

**Values** 0x0 to 0xFFFFFFFF (maximum 64 hex nibbles)

***circuit-id***

Specifies the circuit ID from the Option 82.

***circuit-id-hex***

Specifies the circuit ID in hexadecimal format from the Option 82.

**Values** 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

***sap-id***

Specifies a SAP ID, up to 255 characters maximum.

***option-60-ascii***

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in ASCII.

***option-60-hex***

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in HEX.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-lookup

### Syntax

**host-lookup** [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*] [**user-name** *user-name*]

### Context

**[Tree]** (tools>perform>subscr-mgmt>loc-user-db>ppp host-lookup)

### Full Context

tools perform subscriber-mgmt local-user-db ppp host-lookup

### Description

This command performs a lookup in the local user database.

### Parameters

#### ***circuit-id***

Specifies the circuit ID from the Option 82.

#### ***circuit-id-hex***

Specifies the circuit ID in hexadecimal format from the Option 82.

**Values** 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

#### ***derived-id derived-id***

Specifies an ASCII string, up to 255 characters, that uniquely identifies a host and is derived by a Python script from packet content available during a DHCP transaction.

#### ***ieee-address***

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

#### ***remote-id***

Specifies the information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

#### ***remote-id-hex***

Specifies the remote ID in hexadecimal format.

**Values** 0x0 to 0xFFFFFFFF (maximum 510 hex nibbles)

#### ***sap-id***

Specifies a SAP ID, up to 255 characters.

#### ***service-name***

Specifies a PPP service name, up to 255 characters.

### ***user-name***

Specifies a user name, up to 253 characters.

## **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **Output**

Use the following command for an example of PPP host lookup information.

```
tools perform subscriber-mgmt local-user-db "ludb-1" ppp host-lookup user-name user-1@best.net
```

```

## 11.10 host-tracking

### host-tracking

#### Syntax

```
host-tracking [subscriber sub-ident-string]
host-tracking [subscriber sub-ident-string] detail
host-tracking [subscriber sub-ident-string] summary
host-tracking [subscriber sub-ident-string] statistics
```

## Context

[\[Tree\]](#) (show>service>active-subscribers host-tracking)

## Full Context

show service active-subscribers host-tracking

## Description

This command displays active subscriber host tracking information.

## Parameters

### ***sub-ident-string***

Displays subscriber ID of the active subscriber, up to 32 characters.

### ***detail***

Displays detailed host tracking information for the specified subscriber ID.

### ***summary***

Displays summarized host tracking information for the specified subscriber ID.

### ***statistics***

Displays statistical host tracking information for the specified subscriber ID.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-tracking

## Syntax

**host-tracking** [**statistics**]

**host-tracking sap** *sap-id* [**host** *ip-address*] [**statistics**]

## Context

[\[Tree\]](#) (clear>service>id host-tracking)

## Full Context

clear service id host-tracking

## Description

This command clears host tracking data.

## Parameters

### ***sap-id***

Specifies a SAP for which to clear host tracking data.

### ***ip-address***

Specifies the IP address of a host for which to clear tracking data.

**Values**    a.b.c.d

### **statistics**

Clears statistics.

## **Platforms**

All

## host-tracking

### **Syntax**

**host-tracking**

### **Context**

[\[Tree\]](#) (clear>subscr-mgmt host-tracking)

### **Full Context**

clear subscriber-mgmt host-tracking

### **Description**

Commands in this context clear host tracking data.

### **Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 11.11 host-tracking-policy

## host-tracking-policy

### **Syntax**

**host-tracking-policy**

**host-tracking-policy** *policy-name* **association**

**host-tracking-policy** *policy-name*

### **Context**

[\[Tree\]](#) (show>subscr-mgmt host-tracking-policy)

**Full Context**

show subscriber-mgmt host-tracking-policy

**Description**

This command displays host tracking policy information.

**Parameters**

- policy-name***  
Specifies the host tracking policy name, up to 32 characters.
- association**  
Displays information associated with the host tracking policy.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.12 hostname

hostname

**Syntax**

hostname

**Context**

[\[Tree\]](#) (show>service>id>spb hostname)

**Full Context**

show service id spb hostname

**Description**

This command displays SPB system-id to hostname mapping.

**Platforms**

All

**Output**

The following output is an example of service SPB hostname information.

**Output Example**

```
*A:Dut-A# show service id 100001 spb hostname
=====

```

hostname

Syntax

hostname

Context

[Tree] (show>router>ospf hostname)

[Tree] (show>router>ospf3 hostname)

Full Context

show router ospf hostname

show router ospf3 hostname

Description

This command displays information about the hostname database.

Platforms

All

Output

The following output is an example of OSPF hostname database information. [Table 185: Output fields: hostname](#) displays field descriptions.

Table 185: Output fields: hostname

Label	Description
Nbr Rtr Id	The OSPF ID.
hostname	The OSPF hostname.
No. of OSPF RTR id/ hostnames	The total number of OSPF router IDs and hostnames.

Output Example

```
*A:router-B# show router ospf hostname
=====
Rtr Base OSPFv2 Instance 0 hostnames
=====
Nbr Rtr Id      hostname
-----
10.20.0.3      router-A
10.20.1.3      router-B
10.20.2.3      -
10.20.3.3      router-D
-----
No. of OSPF Rtr id/hostnames: 4
```

11.13 hosts

hosts

Syntax

**hosts** [**group** *grp-address*] [**detail**] [ **fwd-service** *service-id*] [**grp-interface** *ip-int-name*]  
**hosts** [**host** *ip-address*] [**group** *grp-address*] [**detail**]  
**hosts summary**

Context

[\[Tree\]](#) (show>router>igmp hosts)

Full Context

show router igmp hosts

Description

This command displays IGMP hosts information.

Parameters

**grp-address**

Specifies the group IP address.

**service-id**

Specifies the service ID.

**Values**    service-id: 1 to 2148278386  
             svc-name: up to 64 characters.

**ip-int-name**

Specifies an IP interface name, up to 32 characters.

**ip-address**  
Specifies an IP address.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of IGMP host information.

**Output Example**

```
*B:Dut-C# show router igmp hosts

## hs-attachment-policy

### Syntax

**hs-attachment-policy** [*policy-name*] [**association** | **detail**]

### Context

[\[Tree\]](#) (show>qos hs-attachment-policy)

### Full Context

show qos hs-attachment-policy

### Description

This command displays information about HS attachment policies in the system.

### Parameters

- policy-name**  
Displays information about the specified policy name, up to 32 characters.
- association**  
Displays the entities associated with all HS attachment policies or the specified HS attachment policy.
- detail**  
Displays detailed policy information, including policy associations, of all HS attachment policies, or the specified HS attachment policy.

### Platforms

7750 SR-7/12/12e

### Output

The following output is an example of HS attachment policy information.

### Output Example

```
*A:PE# show qos hs-attachment-policy "default"

=====
HS Attachment Policy Information
=====
Policy Name           : default

11.17 hs-pools

hs-pools

**Syntax**  
**hs-pools** *card-slot-number* **fp** *forwarding-plane* **egress**  
**hs-pools** **port** *port-id* **egress**

**hs-pools port *port-id* egress network-queues**

**hs-pools port *port-id* egress queue-group *queue-group-name* [instance *instance-id*]**

**hs-pools port *port-id* egress sap *sap-id***

**hs-pools port *port-id* egress subscriber *sub-ident-string***

## Context

[\[Tree\]](#) (show hs-pools)

## Full Context

show hs-pools

## Description

This command shows the egress pool information relating to an HSQ IOM.

The **card** and **fp** output shows the total buffer allocation, the number of allocated buffers, the available buffer allocation, and the buffer high-water marks for the system pools and the hierarchy of user-provisioned root and mid pools on the specified card and FP. The output includes the applied slope policy and the related instantaneous slope drop probabilities (as a percentage) for the user-provisioned pools.

The port output adds the port class pool information to the above hierarchy of user-provisioned pools for the specified port. The queue information for network queues, queue group instances, SAPs, or subscribers on the specified port is included when the associated parameter is added.

## Parameters

### ***card-slot-number***

Displays information for the specified card slot.

**Values** Depending on the chassis model, IOM slots are numbered from 1 to 10.

### ***forwarding-plane***

Displays information for the specified forwarding plane.

**Values** 1

### ***port-id***

Displays information about the specified physical port ID in the slot/mda/port format.

### ***network-queues***

Displays information about the egress network queues on the specified port.

### ***queue-group-name***

Displays information about the specified queue group name, up to 32 characters.

### ***instance-id***

Displays information about the specified queue group instance.

**Values** 1 to 65535

### ***sap-id***

Displays information about the specified SAP, up to 64 characters, on the specified port.

**sub-ident-string**

Displays information about the specified subscriber, up to 64 characters, on the specified port.

**Platforms**

7750 SR-7/12/12e

**Output**

The following output is an example of HS pool information.

**Output Example**

```
*A:PE4# show hs-pools port 1/1/2 egress sap 1/1/2:1

## 11.18 hs-port-pool-policy

### hs-port-pool-policy

#### Syntax

**hs-port-pool-policy** [*policy-name*] [**association** | **detail**]

#### Context

**[Tree]** (show>qos hs-port-pool-policy)

#### Full Context

show qos hs-port-pool-policy

#### Description

This command displays information about HS port pool policies in the system.

#### Parameters

##### *policy-name*

Displays information about the specified HS port pool policy name, up to 32 characters.

association

Displays the entities associated with all HS port pool policies or the specified HS port pool policy.

detail

Displays detailed policy information, including policy associations, of all HS port pool policies, or the specified HS port pool policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS port pool policy information.

Output Example

```
*A:PE# show qos hs-port-pool-policy

=====
HS Port Pool Policy Summary
=====
Policy Name          Description

## 11.19 hs-scheduler-hierarchy

### hs-scheduler-hierarchy

#### Syntax

**hs-scheduler-hierarchy port** *port-id* [**hs-secondary-shaper** *shaper-name*] [**interval** *time-in-seconds*]

**hs-scheduler-hierarchy port** *port-id* [**interval** *time-in-seconds*] **hs-secondary-shapers**

**hs-scheduler-hierarchy port** *port-id* [**interval** *time-in-seconds*] **queue-group** *queue-group-name*  
**instance** *instance-id* {**access** | **network**}

**hs-scheduler-hierarchy sap** *sap-id* **egress** [**interval** *time-in-seconds*]

**hs-scheduler-hierarchy subscriber** *sub-ident* **egress** [**interval** *time-in-seconds*]

#### Context

[\[Tree\]](#) (show>qos hs-scheduler-hierarchy)

#### Full Context

show qos hs-scheduler-hierarchy

## Description

This command displays the egress HS scheduler hierarchy for the HS scheduler policy applied to the related port. The output includes the current maximum rate and each scheduling class rate on the port. The parameters allow for the current rates for the scheduling classes for all HS secondary shapers or a specific HS secondary shaper, or for the queue rates in a specified access or network queue group instance, SAP or subscriber to be included in the output.

## Parameters

### ***port-id***

Specifies the physical port ID in the slot/mda/port format.

### ***shaper-name***

Displays information about the specified HS secondary name, up to 32 characters, and includes the scheduling class rates for the HS secondary shaper on the port.

### ***time-in-seconds***

Displays the time interval used to calculate the rates, in seconds.

**Values** 1 to 5

### ***hs-secondary-shapers***

Displays information about scheduling class rates for all HS secondary shapers on the port.

### ***queue-group-name***

Displays information about the specified queue group name on the port, up to 32 characters.

### ***instance-id***

Displays information about the specified queue group instance.

**Values** 1 to 65535

### ***sap-id***

Displays information about the queue rates for the specified SAP, up to 64 characters, on the specified port.

### ***sub-ident***

Displays information about the specified subscriber, up to 64 characters, on the specified port.

## Platforms

7750 SR-7/12/12e

## Output

The following output is an example of HS scheduler hierarchy information.

### Output Example

```
*A:PE# show qos hs-scheduler-hierarchy port 1/1/1 hs-secondary-shaper "default"

## 11.21 hs-secondary-shaper

### hs-secondary-shaper

#### Syntax

**hs-secondary-shaper** *secondary-shaper-name* [**statistics** | **associations**]

#### Context

[\[Tree\]](#) (show>port hs-secondary-shaper)

#### Full Context

show port hs-secondary-shaper

#### Description

This command displays port HS secondary shaper information.

#### Parameters

##### ***secondary-shaper-name***

Specifies the secondary shaper name, up to 32 characters.

##### **statistics**

Displays the statistics related to the port HS secondary shaper.

##### **association**

Displays the associations related to the port HS secondary shaper.

#### Platforms

7750 SR-7/12/12e

## 11.22 http-client

### http-client

#### Syntax

**http-client** any

**http-client** [*ip-address/prefix-length*]

**http-client** [*ipv6-address/prefix-length*]

#### Context

[\[Tree\]](#) (tools>dump>router>web-rd http-client)

Full Context

tools dump router web-rd http-client

Description

Commands in this context dump the HTTP client hash table.

Parameters

any

Specifies all HTTP clients.

ip-address/prefix-length

Dumps HTTP clients only matching the specified IP address and prefix length.

Values

ip-address:	a.b.c.d
prefix-length:	0 to 32

ipv6-address/prefix-length

Dumps HTTP clients only matching the specified IPv6 address and prefix length.

Values

ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D
prefix-length:	0 to 128

Platforms

All

Output

The following output is an example of HTTP client information.

Output Example

```
*A:Dut-F#  tools dump router web-rd http-client any

=====

## 11.23 http-enrich

```
http-enrich
```

**Syntax**

`http-enrich`

**Context**

[\[Tree\]](#) (show>app-assure http-enrich)

**Full Context**

show application-assurance http-enrich

**Description**

This command displays HTTP enrichment static definitions.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
http-enrich
```

**Syntax**

`http-enrich enrichment-name`

**Context**

[\[Tree\]](#) (show>app-assure>group http-enrich)

**Full Context**

show application-assurance group http-enrich

**Description**

This command displays HTTP enrichment information.

**Parameters**

***enrichment-name***

Specifies the name of the HTTP enrichment policy, up to 32 characters.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following output is an example of the output for the **http-enrich** command and [Table 186: Output fields: HTTP enrichment](#) describes the output fields.

### Output Example HTTP Enrichment

11.25 http-host-recorder

http-host-recorder

Syntax

- http-host-recorder detail [isa mda-id/esa-vm-id] url file-url
- http-host-recorder status [isa mda-id]
- http-host-recorder top granularity [max-count max-count] [isa mda-id]

Context

[Tree] (tools>dump>app-assure>group http-host-recorder)

Full Context

tools dump application-assurance group http-host-recorder

Description

This command configures the dump of application-assurance http-host-recorder information. The http-host-recorder is configured using debug commands.

Parameters

detail

Saves the http host values recorded by the tool into a file.

status

.Displays the current status of the http-host-recorder with current-time, start-time, stop-time, sample-rates, filters, buffer as well as number of bytes and flows recorded for the specified AA ISA.

top

.Displays by bytes or flows the top values recorded by the tool.

isa mda-id /esa-vm-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

url file-url

Specifies the URL for the file to direct the http-host-recorder output to.

Values

local-url:	<cflash-id>/[<file-path>] 200 chars max, including cflash-id directory length 99 chars max each
remote-url:	[{ftp://  tftp://}<login>:<pswd>@<remote-locn>[/][<file-path>] 255 chars max directory length 99 chars max each
remote-locn:	<hostname>   <ipv4-address>   <ipv6-address> ] ipv4-address a.b.c.d ipv6-address x:x:x:x:x:x:x[-interface] x:x:x:x:x:x.d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface 32 chars max, for link local addresses cflash-id flash slot ID

granularity

Specifies if the output is sorted by bytes or flows.

**Values** bytes, flows

**max-count** *max-count*

Specifies the maximum count of flows to display.

**Values** 1 to 25

### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 11.26 http-notification

### http-notification

#### Syntax

**http-notification**

#### Context

[\[Tree\]](#) (show>app-assure http-notification)

#### Full Context

show application-assurance http-notification

#### Description

This command displays HTTP notification static definitions.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### http-notification

#### Syntax

**http-notification** *http-notification-name* **[summary]**

#### Context

[\[Tree\]](#) (show>app-assure>group http-notification)

#### Full Context

show application-assurance group http-notification

Description

This command displays information about the configured http-notification policy with associated raw statistics:

- Template: Template Id in use
- Script URL: URL address of the script used in the notification message
- Admin Status: Up / Down
- AQP Referenced: Yes/No
- Notified: Total number of notifications sent
- Notification criteria selection not matched: Number of HTTP request not matching the selection criteria for in browser notification

Parameters

**http-notification-name**  
Displays the name of the http-notification policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **http-notification** command information.

Output Example

```
A:7750# show application-assurance group 1 http-notification "in-browser-notification"
=====
Application Assurance Group 1 HTTP Notification "in-browser-notification"
=====
Description : IBN Demo ALU Message
Template    : 1 - Javascript-url with subId and optional Http-Url-Param
Script URL  : http://10.1.1.1/In-Browser-Notification/script.js
Admin Status : Up
AQP Ref     : Yes
-----

```

	Notified	Notification Selection Criteria Not Matched
1:1	3	0
1:2	2	0
1:3	0	0
1:4	0	0
1:5	0	0
Total	5	0

```
-----

## 11.27 http-redirect

### http-redirect

#### Syntax

**http-redirect**

#### Context

[\[Tree\]](#) (show>app-assure http-redirect)

#### Full Context

show application-assurance http-redirect

#### Description

This command displays HTTP redirect static definitions.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### http-redirect

#### Syntax

**http-redirect** *redirect-name* [**detail**]

#### Context

[\[Tree\]](#) (show>app-assure>group http-redirect)

#### Full Context

show application-assurance group http-redirect

#### Description

This command displays application assurance http-redirect statistics and status information.

#### Parameters

***redirect-name***

Specifies the name of the http-redirect policy.

**detail**

Displays detailed information.

## Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Output

The following table describes the show command output fields:

Table 187: Output fields: HTTP redirect

Label	Description
Template	Specifies HTTP redirect template id information. Each HTTP redirect template returns a specific HTTP redirect message such as HTTP 302 or Javascript and can optionally use macro substitution.
Redirect URL	Specifies the address the subscriber will be redirected to.
Captive Redirect	Specifies Yes if captive redirect is used and No if captive redirect is not used.
Redirect HTTPS	Specifies Yes if redirect https is used and No if redirect https is not used.
VLAN ID	Specifies the AA interface VLAN id used for captive redirect.
Admin Status	Specifies the administrative status (Up/Down) of the HTTP redirect policy.
AQP Ref	Specifies Yes if the HTTP redirect policy is referenced in AQP, and No if it is not.

## Output Example

```
*A:7750# show application-assurance group 1 http-redirect "redirect-portal"

=====
Application Assurance Group 1 HTTP Redirect redirect-portal

## 11.28 http-redirect-policy

### http-redirect-policy

**Syntax**

http-redirect-policy *name*

**Context**

[\[Tree\]](#) (show>subscr-mgmt http-redirect-policy)

**Full Context**

show subscriber-mgmt http-redirect-policy

**Description**

This command displays HTTP redirect policy information.

**Parameters**

*name*

Specifies the HTTP redirect policy name, up to 32 characters.

**Platforms**

7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 11.29 hunt

### hunt

**Syntax**

hunt [*brief*]

## Context

[\[Tree\]](#) (show>router>bgp>routes hunt)

## Full Context

show router bgp routes hunt

## Description

This command displays detailed information about the BGP routes, including information about the advertised routes (RIB-OUT).

**hunt** is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

## Parameters

### brief

Displays summary information about the BGP routes.

## Platforms

All

## 11.30 hw-agg-shaper-scheduler-policy

### hw-agg-shaper-scheduler-policy

## Syntax

**hw-agg-shaper-scheduler-policy** [*hw-agg-shaper-scheduler-policy-name*] [ **association**]

## Context

[\[Tree\]](#) (show>qos hw-agg-shaper-scheduler-policy)

## Full Context

show qos hw-agg-shaper-scheduler-policy

## Description

This command displays hardware aggregate shaper scheduler policy information.

## Parameters

### *hw-agg-shaper-scheduler-policy-name*

Specifies the hardware aggregate shaper scheduler policy name, up to 64 characters.

### **association**

Displays hardware aggregate shaper scheduler policy associations.

### **Platforms**

7750 SR-1, 7750 SR-s

# 12 i Commands

## 12.1 i-vpls

i-vpls

**Syntax**  
i-vpls

**Context**  
[\[Tree\]](#) (show>service>id i-vpls)

**Full Context**  
show service id i-vpls

**Description**  
Displays I-VPLS services associated with the B-VPLS service. This command only applies when the service is a B-VPLS.

**Platforms**  
All

**Output**  
The following output is an example of service I-VPLS information.

**Output Example**

```
*A:SetupCLI# show service id 2002 i-vpls
=====

## 12.2 icmp

### icmp

#### Syntax

icmp

#### Context

[\[Tree\]](#) (show>router icmp)

#### Full Context

show router icmp

#### Description

This command displays Internet Control Message Protocol version 4 (ICMP) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions.

#### Platforms

All

#### Output

The following output is an example of router ICMP statistics, and [Table 188: Output fields: ICMP](#) describes the fields.

#### Output Example

```
*A:cses-V93# show router icmp
=====

=====

```

Table 188: Output fields: ICMP

Label	Description
Total	The total number of all messages
Error	The number of error messages
Destination Unreachable	The number of message that did not reach the destination
Redirect	The number of packet redirects
Echo Request	The number of echo requests
Echo Reply	The number of echo replies
TTL Expired	The number of messages that exceeded the time to live threshold
Source Quench	The number of source quench requests (deprecated)
Timestamp Request	The number of timestamp requests (deprecated); ICMP timestamp requests are counted and dropped on ingress
Timestamp Reply	The number of timestamp replies (deprecated); sending ICMP timestamp replies is not supported, so this counter will always be 0

Label	Description
Address Mask Request	The number of address mask requests (deprecated)
Address Mask Reply	The number of address mask replies (deprecated)
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of messages that exceed the configured interface ICMP rate or have an expired TTL

## icmp

### Syntax

**icmp**

### Context

[\[Tree\]](#) (show>test-oam icmp)

### Full Context

show test-oam icmp

### Description

Commands in this context show ping-templates or ping-template detail.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## icmp

### Syntax

**icmp all**

**icmp global**

**icmp interface** *interface-name*

### Context

[\[Tree\]](#) (clear>router icmp)

### Full Context

clear router icmp

## Description

This command clears ICMP statistics.

## Parameters

**all**

Clears all statistics.

**global**

Clears global router statistics.

***interface-name***

Clears ICMP statistics for the specified interface, up to 32 characters.

## Platforms

All

icmp

## Syntax

icmp

## Context

[\[Tree\]](#) (tools>perform>test-oam icmp)

## Full Context

tools perform test-oam icmp

## Description

Commands in this context perform test OAM ICMP functions.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## 12.3 icmp-redirect-route

icmp-redirect-route

## Syntax

icmp-redirect-route {all | ip-address}

## Context

[\[Tree\]](#) (clear>router icmp-redirect-route)

### Full Context

clear router icmp-redirect-route

### Description

This command deletes routes created as a result of ICMP redirects received on the management interface.

### Parameters

**all**

Clears all routes.

**ip-address**

Clears the routes associated with the specified IP address.

**Values**    a.b.c.d

### Platforms

All

## 12.4 icmp-stats

icmp-stats

### Syntax

**icmp-stats**

**icmp-stats interface** {*ip-int-name* | *ip-address* | *ipv6-address*}

### Context

[\[Tree\]](#) (tools>dump>router icmp-stats)

### Full Context

tools dump router icmp-stats

### Description

Commands in this context dump ICMP statistics information.

### Parameters

**ip-int-name**

Specifies the interface information associated with the specified IP interface name, up to 32 characters.

**ip-address**

Specifies the IPv4 address.

**Values** a.b.c.d

### ***ipv6-address***

Specifies the IPv6 address.

**Values** x:x:x:x:x:x:x (eight 16-bit pieces)  
x:x:x:x:x:d.d.d.d  
x: [0 to FFFF]H  
d: [0 to 255]D

### **Platforms**

All

### **Output**

The following output is an example of ICMP statistics information.

#### **Output Example**

```

## 12.5 icmp6

icmp6

**Syntax**  
icmp6

**Context**  
[\[Tree\]](#) (show>router icmp6)

**Full Context**  
show router icmp6

**Description**  
This command displays Internet Control Message Protocol Version 6 (ICMPv6) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions. ICMPv6 packets can be used in the neighbor discovery protocol and path MTU discovery.

**Platforms**  
All

**Output**  
The following output is an example of router ICMPv6 statistics, and [Table 189: Output fields: ICMPv6](#) describes the fields.

**Output Example**

```
A:SR-3# show router icmp6

```

Table 189: Output fields: ICMPv6

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited

Label	Description
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of ICMPv6 messages that exceed the configured interface ICMPv6 rate or have an expired TTL

## icmp6

### Syntax

**icmp6 all**

**icmp6 global**

**icmp6 interface** *interface-name*

### Context

[\[Tree\]](#) (clear>router icmp6)

### Full Context

clear router icmp6

### Description

This command clears ICMPv6 statistics.

### Parameters

**all**

Clears all statistics.

**global**

Clears global router statistics.

***interface-name***

Clears ICMPv6 statistics for the specified interface, up to 32 characters.

**Platforms**

All

## 12.6 icmp6-redirect-route

### icmp6-redirect-route

**Syntax**

**icmp6-redirect-route** {**all** | *ipv6-address*}

**Context**

[\[Tree\]](#) (clear>router icmp6-redirect-route)

**Full Context**

clear router icmp6-redirect-route

**Description**

This command deletes routes created as a result of ICMPv6 redirects received on the management interface.

**Parameters**

**all**

Clears all routes.

***ipv6-address***

Clears the routes associated with the specified IPv6 address.

**Values**    x:x:x:x:x:x:x:x (eight 16-bit pieces)

**Platforms**

All

## 12.7 icport

icport

### Syntax

**icport** [**down**] [**degraded**]

### Context

[\[Tree\]](#) (show>sfm icport)

### Full Context

show sfm icport

### Description

This command displays SFM interconnect port information.

### Parameters

**down**

Displays interconnect ports that are not operational.

**degraded**

Displays interconnect ports that are associated with fabric degradation.

### Platforms

7950 XRS

## 12.8 id

id

### Syntax

**id** *service-id*

**id** *service-id* **mac-notification**

**id** *service-id* **macsec**

**id** *service-id* **mvrp** **vlan** [**detail**]

**id** *service-id* **vpls-group** [*vpls-group-id*]

**id** *service-id* **vpls-group** *vpls-group-id* **non-template-saps**

**Context**

[Tree] (show>service id)

**Full Context**

show service id

**Description**

This command displays information for a particular service ID.

**Platforms**

All

id

**Syntax**

id *service-id*

**Context**

[Tree] (clear>service id)

[Tree] (clear>service>statistics id)

**Full Context**

clear service id

clear service statistics id

**Description**

This command clears the identification for a specific service.

**Parameters**

*service-id*

The ID that uniquely identifies a service.

**Values**    service-id: 1 to 214748364  
              svc-name: A string up to 64 characters.

**Platforms**

All

id

Syntax

id *service-id*

Context

[Tree] (tools>perform>service id)

[Tree] (tools>dump>service id)

Full Context

tools perform service id

tools dump service id

Description

This command specifies a service for which service debugging tools are enabled.

Parameters

*service-id*

Specifies the service ID.

**Values** 1 to 2148278386, *svc-name*: 64 chars max

Platforms

All

id

Syntax

id *service-id*

Context

[Tree] (clear>video id)

Full Context

clear video id

Description

This command clears video information pertaining to the specified service ID.

**Parameters**

**service *service-id***  
Specifies the service ID to clear.

**Values**    1 to 2148278317  
              svc-name — a string up to 64 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-s

id

**Syntax**

id *service-id*

**Context**

[\[Tree\]](#) (clear>video>statistics id)

**Full Context**

clear video statistics id

**Description**

This command clears video statistics for a particular service.

**Parameters**

**service *service-id***  
Specifies the service ID to clear statistics.

**Values**    1 to 2148278317  
              svc-name — a string up to 64 characters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-s

id

**Syntax**

id *service-id*

**Context**

[\[Tree\]](#) (monitor>service id)

## Full Context

monitor service id

## Description

This command displays statistics for a specific service, specified by the *service-id*, at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the *service-id*. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

## Parameters

### *service-id*

Specifies the unique service identification number which identifies the service in the service domain.

## Platforms

All

## 12.9 idle-only-msap

### idle-only-msap

## Syntax

**idle-only-msap** *msap-policy-name*

## Context

[\[Tree\]](#) (clear>subscr-mgmt idle-only-msap)

## Full Context

clear subscriber-mgmt idle-only-msap

## Description

This command removes all idle MSAPs associated with the MSAP policy. This command only removes idle MSAPs without active subscribers. This command is considered safer than the **clear>subscr-mgmt>msap-policy** *msap-policy-name* **idle-only** command because in that command, the parameter **idle-only** is optional. Not specifying **idle-only** deletes MSAPs with active subscribers.

### Parameters

#### ***msap-policy-name***

Specifies the MSAP policy for which all associated idle MSAPs are cleared.

### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 12.10 if-attribute

### if-attribute

### Syntax

**if-attribute**

### Context

[\[Tree\]](#) (show>router if-attribute)

### Full Context

show router if-attribute

### Description

Commands in this context display interface attribute related information.

### Platforms

All

## 12.11 if-policy

### if-policy

### Syntax

**if-policy** [*if-policy-name*]

**if-policy** *if-policy-name* **users**

### Context

[\[Tree\]](#) (show>router>mcac if-policy)

Full Context

show router mcac if-policy

Description

This command displays information about MCAC interface policies. Display options are:

- no parameters: displays summary of configured MCAC interface policies in the system
- *if-policy-name*: if an existing interface policy name is specified, the configuration and operational details for the specified policy are displayed
- *if-policy-name users*: if **user** options is specified with the existing MCAC interface policy, then all instances where a given MCAC interface policy is used are listed

Platforms

All

Output

## 12.12 igmp

igmp

Syntax

igmp [subscriber *sub-ident-string*][detail]

Context

[\[Tree\]](#) (show>service>active-subscribers igmp)

Full Context

show service active-subscribers igmp

Description

This command displays active subscriber IGMP information.

Parameters

*sub-ident-string*

Displays the subscriber ID of the active subscriber, up to 32 characters.

detail

Displays detailed IGMP information for the specified subscriber ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IGMP information for active subscribers.

Output Example

```
*A:eng-BNG-2# show service active-subscribers igmp
=====

Table 190: Output fields: IGMP policy describes subscriber management IGMP policy output fields.

Table 190: Output fields: IGMP policy

Field	Description
IGMP Policy	The IGMP policy name
Import Policy	The import policy name to filter packets
Admin Version	The version of IGMP which is running for this host
Description	The user-provided description of this IGMP policy
Num Subscribers	The number of subscribers
Host Max Groups	The maximum number of groups for which IGMP can have local receiver information based on received IGMP reports for this host

Field	Description
Fast Leave	Whether fast leave is allowed for this host
Pol1	Information about the first reported IGMP policy
Pol2	Information about the second reported IGMP policy
Associations	The subscribers associated with the policy

## 12.14 igmp-snooping

12.15 ignore-sap-port-state

ignore-sap-port-state

Syntax

ignore-sap-port-state

Context

[Tree] (tools>dump>service>id>interface ignore-sap-port-state)

Full Context

tools dump service id interface ignore-sap-port-state

Description

This command displays all service interfaces that have accepted an **ignore-sap-port-state start** command.

Run this command without a *service-id* to display a complete list of interfaces that have accepted an **ignore-sap-port-state start** command. The command can be run within a specific *service-id* context for a list of all interfaces for the specified service that have accepted the **ignore-sap-port-state start** command. The *ip-int-name* parameter may be optionally configured to display results only for the specified interface. If the command is run against a specific interface that has not accepted an **ignore-sap-port-state start** command, the display command will display a message indicating that no action has been started for the interface.

Platforms

All

Output

The following output is an example of **ignore-sap-port-state** information.

Output Example

```
tools dump service ignore-sap-port-state
```

## ignore-sap-port-state

### Syntax

**ignore-sap-port-state** {start | stop}

### Context

[\[Tree\]](#) (tools>perform>service>id>interface ignore-sap-port-state)

### Full Context

tools perform service id interface ignore-sap-port-state

### Description

This command enables bypassing of the Ethernet operational state check, which would otherwise be part of the Ethernet SAP operational state checking function. All other checks are performed as normal.

This command may be run against IES and VPRN service IP interfaces directly configured over an Ethernet SAP. When the command is run against an operational Ethernet SAP, the command enters a pending state, waiting for a non-operational change. Network interfaces have no SAP association and do not support this feature. When using **subscriber-interface** and **group-interface**, the command is only applicable to the **group-interface** associated with the SAP. R-VPLS does not have Ethernet SAPs directly configured under the interface, and is not supported.

This command is meant to allow service validation and reachability testing when a physical Ethernet port has not been connected. The command may be run for a non-operational SAP that is cabled. However, if the SAP transitions to an operational state, ingress and egress packet processing may still occur.

This command configuration does not survive a system restart.

### Parameters

#### start

Enables port state bypass mode for the interface. If the Ethernet port SAP is already operational, there is no immediate effect of the command, and the Ignore Port state under the **show service id all** command will show "pending". However, if the interface Ethernet port transitions to a non-operational state, the command then bypasses this port state and executes the remainder of the operational checks, and the flag for the Ignore Port state transitions to "active". When this command is in effect, the SAP represents the state of the SAP ignoring the port state.

#### stop

Disables port state bypass mode for the interface attached to the SAP.

**ike-exchange-failure-rate** *reason* *reason* *isa* *mda* [**show-oid**]

**ike-exchange-failure-rate** *reason* *reason* [ **show-oid**] *esa-vm* *esa-id/vm-id*

**ike-exchange-failure-rate** **system**

**ike-exchange-failure-rate** *reason* *reason* **system** [ **show-oid**]

**ike-exchange-failure-rate** *tunnel-group* *tunnel-group-id* [ **history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**]

**ike-exchange-failure-rate** *reason* *reason* *tunnel-group* *tunnel-group-id* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [ **current**] [**show-oid**]

#### Context

**[Tree]** (show>isa>stats>ipsec-stats ike-exchange-failure-rate)

#### Full Context

show isa statistics ipsec-stats ike-exchange-failure-rate

#### Description

This command displays IKE exchange failure rate statistics of the specified scope.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The rate includes the following reasons:

- authentication failure
- non-proposal chosen
- internal address assignment failure
- invalid traffic selector (TS)
- invalid key exchange (KE)

- DPD timeout
- Others

The start time value indicates the starting timestamp of measurement. The sampling duration indicates the duration of the measurement.

If a record has non-zero value, the system also shows the timestamp and local or remote tunnel endpoint for the first and last occurrence in the sampling duration.

**Parameters**

***name***

Displays information about the specified IPsec GW name up to 32 characters in length.

***tunnel-type***

Displays information about the specified the tunnel type.

**Values**    all, sl2l, dl2l, ra

***reason***

Displays information for the cause of the failure.

**Values**    auth-failure, non-proposal-chosen, internal-addr-assignment-failure, invalid-ts, invalid-ke, dpd-timeout, other

***system***

Displays information about the system.

***mda***

Displays information about the specified ISA ID.

**Values**    slot/mda

***tunnel-group-id***

Displays information about the specified tunnel group ID.

**Values**    1 to 16

***name***

Displays information about the specified IPsec GW name up to 32 characters in length.

***count***

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

**Values**    1 to 96

***minutes***

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

**Values**    1 to 1440

- current**  
Displays information about the current statistic value. The values of count and minutes are ignored by the system once this parameter is specified.
- show-oid**  
Displays information about the Object Identifier (OID) of the current statistical value.
- esa-vm**  
Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	esa-id/vm-id
	esa-id	1 to 16
	vm-id	1 to 4

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of the **show isa stats ipsec-stats ike-exchange-failure-rate** command.

**Output Example**

```

## 12.17 ike-initiate

### ike-initiate

**Syntax**

**ike-initiate tunnel-group-id** *ipsec-group-id*  
**ike-initiate tunnel-name** *ipsec-tunnel-name*

**Context**

[\[Tree\]](#) (tools>perform>ipsec ike-initiate)

**Full Context**

tools perform ipsec ike-initiate

**Description**

This command initiates tunnel setup for the specified LAN-to-LAN tunnel or for all static LAN-to-LAN tunnels in the specified tunnel group. This command initiates tunnel setup regardless of the configuration of the **ipsec-responder-only** command under the specified tunnel group.

The command only initiates tunnel setup when the tunnel group is in the MC-IPsec master state, or if MC-IPsec is not enabled for the tunnel group. If MC-IPsec is enabled and the tunnel group is not in the master state, the system will abort tunnel setup if MIMP goes down or if mastership changes during the tunnel setup.

Operationally up tunnels are not affected by this command. The system will not try to initiate a tunnel setup if the tunnel's operation flags are not clear.

The system does not automatically retry tunnel setup if a tunnel setup fails.

**Parameters**

- ipsec-group-id***  
Specifies the ID of the tunnel group where all static LAN-to-LAN tunnels are initiated.
- ipsec-tunnel-name***  
Specifies the name of the IPsec tunnel to be initiated.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## 12.18 ike-policy

### ike-policy

#### Syntax

**ike-policy**  
**ike-policy** *ike-policy-id*  
**ike-policy** *ike-policy-id* **association** [all]

#### Context

[\[Tree\]](#) (show>ipsec ike-policy)

#### Full Context

show ipsec ike-policy

#### Description

This command displays content for the specified **ike-policy**.

#### Parameters

- ike-policy-id***  
Specifies the ID of an IKE policy entry.  
**Values** 1 to 2048
- association***  
Lists the **ipsec-tunnel**, **ipsec-gw** and dynamic tunnel using the specified **ike-policy**.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

#### Output

The following output is an example of the **show ipsec ike-policy** command.

#### Output Example

```
*A:ALA-48# show ipsec ike-policy 10
=====

## 12.19 ike-stats

### ike-stats

#### Syntax

**ike-stats** **esa-vm** *esa-id/vm-id*

**ike-stats** **gateway** *name* [**dynamic-tunnel** *ip-address:port*]

**ike-stats** **isa** *mda*

**ike-stats** *ipsec-tunnel-name*

#### Context

[\[Tree\]](#) (tools>dump>ipsec>stats ike-stats)

#### Full Context

tools dump ipsec stats ike-stats

#### Description

This command dumps various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

#### Parameters

***name***

Dumps information about the name of the IPsec GW, up to 32 characters.

***ip-address:port***

Dumps information about the IP address and port of the peer for dynamic tunneling.

***mda***

Dumps information about the specified ISA.

**Values**    slot/mda

***ipsec-tunnel-name***

Dumps the name of the static LAN-to-LAN tunnel, up to 32 characters.

**esa-vm**  
Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	esa-id/vm-id	
		esa-id	1 to 16
		vm-id	1 to 4

**Platforms**  
All

ike-stats

**Syntax**  
**ike-stats** **esa-vm** *esa-id/vm-id*  
**ike-stats** **gateway** *name* [**dynamic-tunnel** *ip-address:port*]  
**ike-stats** **isa** *mda*  
**ike-stats** *ipsec-tunnel-name*

**Context**  
[\[Tree\]](#) (clear>ipsec>stats ike-stats)

**Full Context**  
clear ipsec stats ike-stats

**Description**  
This command clears various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

**Parameters**

**name**  
Clears information about the name of the IPsec GW up to 32 characters.

**ip-address:port**  
Clears information about the IP address and port of the peer for dynamic tunneling.

**mda**  
Clears information about the specified ISA.

**Values** slot/mda

***ipsec-tunnel-name***

Clears the name of the static LAN-to-LAN tunnel up to 32 characters.

***esa-vm***

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	<i>esa-id/vm-id</i>	
		<i>esa-id</i>	1 to 16
		<i>vm-id</i>	1 to 4

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.20 ike-transform

ike-transform

**Syntax**

**ike-transform** [*ike-transform-id*]

**Context**

[\[Tree\]](#) (show>ipsec ike-transform)

**Full Context**

show ipsec ike-transform

**Description**

This command displays information for the specified IKE transform instance. Information for all IKE transform instances is displayed when an *ike-transform-id* is not specified.

**Parameters**

***ike-transform-id***

Specifies an existing IKE transform instance

**Values** 1 to 4096

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IKE transform information.

Output Example

```

12.21 ikev2-msg-drop

ikev2-msg-drop

Syntax

```
ikev2-msg-drop message-type message-type [ show-oid] esa-vm esa-id/vm-id
ikev2-msg-drop message-type message-type isa mda [show-oid]
```

Context

```
[Tree] (show>isa>stats>ipsec-stats ikev2-msg-drop)
```

Full Context

```
show isa statistics ipsec-stats ikev2-msg-drop
```

Description

This command displays the early drop counter for received IKEv2 messages on the specified ISA. These counters reflect the number of packets dropped early in the process when ISA is congested.

Parameters

- message-type**

Specifies the exchange type of the packet to display.

**Values**   ike-sa-init, ike-auth, create-child-and-info
- mda**

Specifies the slot and MDA in the format *slot/mda*.

**Values**   *slot* — 1 to 10  
          *mda* — 1 or 2

**show-oid**

Displays the SNMP object ID of the counter.

**esa-vm**

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	esa-id/vm-id
		esa-id
		1 to 16
		vm-id
		1 to 4

**Platforms**

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of the **ikev2-msg-drop message-type** command.

## 12.24 inband-tunnel

### inband-tunnel

### Syntax

**inband-tunnel** [type {rx | tx}] [ prefix *prefix*] [tunnel-id *tunnel-id*]

**inband-tunnel** [prefix *prefix*] [tunnel-id *tunnel-id*] leaf

### Context

[\[Tree\]](#) (show>router>bier inband-tunnel)

### Full Context

show router bier inband-tunnel

Description

This command shows the BIER tunnels.

Parameters

**type**

Specifies the type of tunnel.

**Values** tx, rx

**prefix**

Specifies the BFR prefix of the tunnel in IP address form.

**tunnel-id**

Specifies the tunnel ID.

**Values** 0 to 4294967295

**leaf**

Specifies that the tunnel leafs are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of a BIER in-band tunnel configuration. [Table 191: Output fields: BIER tunnel](#) provides BIER in-band tunnel descriptions.

Output Example

Table 191: Output fields: BIER tunnel

Label	Description
Tunnel-id	The tunnel ID
Type	The tunnel type - Tx or Rx
Oper	The operational state of the tunnel
No. Of Leaves	The number of leafs in the tunnel

Label	Description
BFR Prefix	The BFR prefix of the tunnel
Bfr-IFD	The BFR ID of the tunnel
MPLS Label	The MPLS Label of the tunnel
Sub-domain	The sub-domain associated with the tunnel

## 12.25 incl-mcast

incl-mcast

### Syntax

**incl-mcast** [**hunt** | **detail**] [**rd** *rd*] [**originator-ip** *originator-ip*] [**next-hop** *next-hop*] [**community** *comm-id*] [**tag** *tag*] [**aspath-regex** *reg-exp*]

### Context

[\[Tree\]](#) (show>router>bgp>routes>evpn incl-mcast)

### Full Context

show router bgp routes evpn incl-mcast

### Description

This command displays BGP-EVPN inclusive multicast routes.

### Parameters

**hunt**

Displays entries for the specified route.

**detail**

Displays detailed information.

**rd**

Displays information for the route distinguisher.

**Values**    *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

**originator-ip**

Specifies the IPv4 or IPv6 originator address.

**Values**

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d  
x: [0 to FFFF]H  
d: [0 to 255]D

**next-hop**  
Specifies the IPv4 or IPv6 BGP next-hop address.

Values	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

**comm-id**  
Specifies community ID, up to 72 characters.

Values	[as-num:comm-val   ext-comm   well-known-comm]
	where:
	<ul style="list-style-type: none"><li>as-num — 0 to 65535</li><li>comm-val — 0 to 65535</li><li>ext-comm — the extended community, defined as the following: type:{ ip-address:comm-val1   as-number1:comm-val2   as-number2:comm-val1}</li></ul>
	where:
	<ul style="list-style-type: none"><li>as-number1 — 0 to 65535</li><li>comm-val1 — 0 to 65535</li><li>type — target, origin</li><li>ip-address — a.b.c.d</li><li>comm-val2 — 0 to 4294967295</li><li>as-number2 — 0 to 4294967295</li></ul>
	<ul style="list-style-type: none"><li>well-known-comm — null   no-export   no-export-subconfed   no-advertise  </li></ul>

**tag**  
Specifies the inclusive multicast route tag.

Values	0to 4294967295   MAX-ET
--------	-------------------------

**reg-exp**  
Displays routes matching the specified regular expression, up to 80 characters.

Table 192: Output fields: system information

Label	Description
System Name	The configured system name
System Type	The system is administratively configured to function as a Nokia SR OS Ethernet Service Switch (ESS) or not.
Chassis Topology	Indicates the inter-chassis topology mode in which the system is operating. It indicates how multiple chassis are arranged and operate together as a single system. A value of 'standalone' indicates that the system is composed of a single physical router chassis. A value of 'extended' (for a 7950 XRS based system) indicates that two router chassis are connected together in a 'back-to-back' topology with no additional switch fabric chassis. An extended chassis topology is composed of two XRS-20 chassis and is also known as an XRS-40 system.
System Version	The software product release version number for the software image currently running
Crypto Module Version	Version of the SR OS cryptographic module
System Contact	A text string that describes the system contact information
System Location	A text string that describes the system location
System Coordinates	A text string that describes the system coordinates
System Active Slot	Slot of the active CPM
System Up Time	The system uptime as a 32-bit value from the RFC 2578 sys UpTime MIB object. This value rolls over every 497 days.
System Up Time (64-bit)	The system uptime as a 64-bit value that does not roll over
Configuration Mode Cfg	Configured setting of the management interface configuration mode. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Configuration Mode Oper	Current management interface configuration mode that is operational in the router. The configuration mode affects the

Label	Description
	management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Last Mode Changed	The date and time at which the operational management interface configuration mode last changed
SNMP Port	The port number used by this node to receive SNMP request messages and to send replies
SNMP Engine ID	The SNMP engineID to uniquely identify the SNMPv3 node
SNMP Engine Boots	The number of times the SNMP engine has rebooted with the current SNMP Engine ID
SNMP Max Message Size	The maximum SNMP packet size generated by this node
SNMP Max Bulk Duration	The maximum duration to process before bulk responses are returned
SNMP Admin State	Enabled — SNMP is administratively enabled and running. Disabled — SNMP is administratively shutdown and not running.
SNMP Oper State	Enabled — SNMP is operationally enabled. Disabled — SNMP is operationally disabled.
SNMP Failure Reason	Additional information about general failure of the SNMP engine to be ready for normal operation
SNMP Index Boot Status	Persistent — System indices are saved between reboots. Not Persistent — System indices are not saved between reboots.
SNMP Sync State	The SNMP persistent indices synchronization state. <ul style="list-style-type: none"> <li>Mismatch — There is a mismatch between the primary and standby CPM.</li> <li>N/A — The standby CPM is not inserted or is offline, or indices are not persistent.</li> <li>OK — The standby CPM is present and synchronized.</li> </ul>
Tel/Tel6/SSH/FTP Admin	Displays the administrative state of the Telnet, SSH, and FTP sessions
Tel/Tel6/SSH/FTP Oper	Displays the operational state of the Telnet, SSH, and FTP sessions
BOF Source	The location of the BOF
Image Source	Primary — Indicates that the directory location for runtime image file was loaded from the primary source.

Label	Description
	<p>Secondary — Indicates that the directory location for runtime image file was loaded from the secondary source.</p> <p>Tertiary — Indicates that the directory location for runtime image file was loaded from the tertiary source.</p>
Config Source	<p>Primary — Indicates that the directory location for configuration file was loaded from the primary source.</p> <p>Secondary — Indicates that the directory location for configuration file was loaded from the secondary source.</p> <p>Tertiary — Indicates that the directory location for configuration file was loaded from the tertiary source.</p>
Last Booted Config File	The URL and filename of the last loaded configuration file
Last Boot Cfg Version	The date and time of the last boot
Last Boot Config Header	The header information, such as image version, date built, date generated
Last Boot Index Version	The version of the persistence index file read when this card was last rebooted
Last Boot Index Header	The header of the persistence index file read when this card was last rebooted.
Last Saved Config	The location and filename of the last saved configuration file
Time Last Saved	The date and time of the last time configuration file was saved
Changes Since Last Save	<p>Yes — There are unsaved configuration file changes.</p> <p>No — There are no unsaved configuration file changes.</p>
Max Cfg/BOF Backup Rev	The maximum number of backup revisions maintained for a configuration file. This value also applies to the number of revisions maintained for the BOF file.
Cfg-OK Script	URL — The location and name of the CLI script file executed following successful completion of the bootup configuration file execution.
Cfg-OK Script Status	<p>Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-OK Script location.</p> <p>Not used — No CLI script file was executed.</p>
Cfg-Fail Script	<p>URL — The location and name of the CLI script file executed following a failed bootup configuration file execution.</p> <p>Not used — No CLI script file was executed.</p>

Label	Description
Cfg-Fail Script Status	Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-Fail Script location. Not used — No CLI script file was executed.
IPv4 autoconfiguration	Indicates whether the IPv4 DHCP-based router autoconfigure functionality is enabled or disabled
IPv6 autoconfiguration	Indicates whether the IPv6 DHCP-based router autoconfigure functionality is enabled or disabled
Management IP Addr	The management IPv4 address and mask
Management IP Addr	The management IPv6 address and mask
Primary DNS Server	The IP address of the primary DNS server
Secondary DNS Server	The IP address of the secondary DNS server
Tertiary DNS Server	The IP address of the tertiary DNS server
DNS Domain	The DNS domain name of the node
DNS Resolve Preference	ipv4-only — Dns-names are queried for A-records only. ipv6-first — Dns-server is queried for AAAA-records first and a successful reply is not received, the dns-server is queried for A-records.
DNSSEC AD Validation	Indicates whether the presence of the AD-bit is validated in responses from DNS servers
DNSSEC Response Control	fall-through — Permit DNS responses that do not pass DNSSEC validation fail — Reject DNS Responses that do not pass DNSSEC validation
BOF Static Routes	To — The static route destination. Next Hop — The next hop IP address used to reach the destination. Metric — Displays the priority of this static route versus other static routes. None — No static routes are configured.
ICMP Vendor Enhancement	Indicates whether vendor specific extensions to ICMP are enabled or disabled

Label	Description
Eth QinQ Untagged SAP	False — The <b>new-qinq-untagged-sap</b> flag is disabled. True — The <b>new-qinq-untagged-sap</b> flag is enabled.
EFM OAM Grace Tx Enable	True — Sending of EFM OAM grace period messages is enabled. False — Sending of EFM OAM grace period messages is disabled.
EFM OAM Dying Gasp Rst	Indicates whether EFM OAM dying gasp messages on reset are enabled or disabled
System Reboot Required	Indicates if a configuration change has been made that requires an operator-driven reboot to fully active
Reason(s)	Indicates the configuration change reason(s) that set the System Reboot Required to true
Last Reboot Reason	Indicates the reason that the system was last rebooted. <ul style="list-style-type: none"> <li>admin – Administrative reboot (for example, <b>admin reboot</b> command) from any management interface (for example, CLI, SNMP, and so on)</li> <li>other – The system was rebooted for other unspecified reasons (for example, power cycle, system crash).</li> </ul>
Admin Reboot User	Indicates the name of the user who initiated the reboot. Value of "CRON/EHS", indicate that the system was rebooted by a script. This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Router	Indicates the source router for the management session used to reboot the router. If the session was via the console or bluetooth ports, the router shall be "Base" and the address shall be "0.0.0.0". This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Address	Indicates the IP address for the management session used to reboot the router. If the session was via the console or bluetooth ports, the router is "Base" and the address is "0.0.0.0". This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Time	Indicates the date and time that the reboot was initiated. Format is based on settings at time of the reboot. This is only displayed if the "Last System Reboot Reason" is "admin".

12.27 ingress-label

ingress-label

**Syntax**  
ingress-label *start-label* [*end-label*]

**Context**  
[\[Tree\]](#) (show>service ingress-label)

**Full Context**  
show service ingress-label

**Description**  
This command displays services using the range of ingress labels.

If only the mandatory *start-label* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X, where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

## Parameters

### *start-label*

Specifies the starting ingress label value for which to display services using the label range. If only *start-label* is specified, services only using *start-label* are displayed.

**Values** 0, 18432 to 524287

### *end-label*

Specifies the ending ingress label value for which to display services using the label range.

**Values** 18432 to 524287

**Default** *start-label* value

E.Lbl	The egress label used by this device to send packets to the far-end device in this service by the SDP
Number of Bindings Found	The number of SDP bindings within the label range specified

12.28 ingress-statistics

ingress-statistics

Syntax

ingress-statistics color *color* [end-point {*ipv4-address* | *ipv6-address*}]

Context

[\[Tree\]](#) (show>router>segment-routing>sr-policies ingress-statistics)

Full Context

show router segment-routing sr-policies ingress-statistics

Description

This command displays the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

*color*

Displays the color that is configured for this SR policy.

**Values**    0 to 4294967295

**ipv4-address | ipv6-address**

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

- Values
- ipv4-address:

  - a.b.c.d

ipv6-address:

  - x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D

Platforms

=====
```

Table 194: Output fields: ingress statistics

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the end-point address of the SR policy.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

## ingress-statistics

### Syntax

**ingress-statistics color** *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

### Context

[\[Tree\]](#) (clear>router>segment-routing>sr-policies ingress-statistics)

### Full Context

clear router segment-routing sr-policies ingress-statistics

### Description

This command clears the ingress traffic statistics of the SR policy specified by its color and end-point.

### Parameters

#### **color**

Displays the color that is configured for this SR policy.

**Values** 0 to 4294967295

#### **ipv4-address | ipv6-address**

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

**Values** ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d

## ingress-statistics

### Syntax

**ingress-statistics color** [0..4294967295] **end-point** *ip-address* | *ipv6-address* [ **interval seconds**] [**repeat repeat**]

Context

[Tree] (monitor>router>seg-rt>sr-policies ingress-statistics)

Full Context

monitor router segment-routing sr-policies ingress-statistics

Description

This command monitors SR policy ingress statistics.

Parameters

*ip-address* | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

- Values
- ipv4-address:
- a.b.c.d
- ipv6-address:
- x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D

*seconds*

Configures the interval for each display in seconds.

- Values
- 3 to 60

*repeat*

Configures how many times the command is repeated.

- Values
- 1 to 999

Platforms

Output

The following output is an example of MPLS ingress statistics template information

Table 195: Output fields: ingress statistics template describes MPLS Ingress Statistics Template output fields.

Output Example

```
*A:cses-V23# show router mpls ingress-stats-template
=====
MPLS LSP Template Ingress Stats
=====
Session Name                               Type      Sender      Session Count
-----
No Matching Entries Found
=====
```

Table 195: Output fields: ingress statistics template

Label	Description
Session Name	Specifies the session name.
Type	p2p – Specifies that p2p is the ingress stats template type p2mp – Specifies that p2mp is the ingress stats template type
Sender	Specifies the sender IP address.
Session Count	Specifies the session count.

Label	Description
No Matching Entries Found	Specifies the number of matching entries.

inside

Syntax

inside routes

Context

[Tree] (show>router>nat inside)

Full Context

show router nat inside

Description

This command displays information about inside NAT routes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of a NAT inside routes. [Table 196: Output fields: NAT inside routes](#) describes NAT the output fields.

Output Example

```
*A:Dut-C# /show router 101 nat inside routes
=====
NAT Inside Routes
=====
```

Router	Route Address NAT Policy	Prefix Type
vprn101	200.0.0.0	16 static
vprn101	200.1.0.0	16 static
vprn101	210.0.1.0	24 dynamic
vprn101	210.1.1.0	24 dynamic
vprn101	210.6.1.0	24 dynamic
vprn101	210.7.1.0	24 dynamic

n44Pool8-1	dynamic
-----	
No. of routes: 6	
=====	

Table 196: Output fields: NAT inside routes

Label	Description
Router	The router name
Route Address	The route address
NAT Policy	The NAT policy name
Prefix	The router prefix
Type	The router type; dynamic or static

12.31 instance

instance

Syntax

**instance**  
**instance interface** *interface-name* [**vrid** *virtual-router-id*]  
**instance interface** *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[\[Tree\]](#) (show>router>vrrp instance)

Full Context

show router vrrp instance

Description

This command displays information for VRRP instances.  
If no command line options are specified, summary information for all VRRP instances displays.

Parameters

***interface-name***  
Displays detailed information for the VRRP instances on the specified IP interface including status and statistics.

**Default**    Summary information for all VRRP instances.

### **virtual-router-id**

Displays detailed information for the specified VRRP instance on the IP interface.

**Default** All VRIDs for the IP interface.

**Values** 1 to 255

### **ipv6**

Specifies the IPv6 instance.

## **Platforms**

All

## **Output**

The following output is an example of VRRP instance information for the 7450 ESS, and [Table 197: Output fields: VRRP instance interface](#) describes the fields.

### **Output Example**

```
*A:Dut-B# show router vrrp instance interface "base-1-1" vrid 1

=====
VRRP Instance 1 for interface "base-1-1"

Table 197: Output fields: VRRP instance interface

Label	Description
Interface name	The name of the IP interface
VR ID	The virtual router ID for the IP interface
Own Owner	Yes — specifies that the virtual router instance as owning the virtual router IP addresses

Label	Description
	No — indicates that the virtual router instance is operating as a non-owner
Adm	Up — indicates that the administrative state of the VRRP instance is up
	Down — indicates that the administrative state of the VRRP instance is down
Opr	Up — indicates that the operational state of the VRRP instance is up
	Down — indicates that the operational state of the VRRP instance is down
State	<ul style="list-style-type: none"> <li>When owner, <b>backup</b> defines the IP addresses that are advertised within VRRP advertisement messages</li> <li>When non-owner, <b>backup</b> actually creates an IP interface IP address used for routing IP packets and communicating with the system when the access commands are defined ( <b>ntp-reply</b>, <b>ping-reply</b>, <b>telnet-reply</b>, and <b>ssh-reply</b>)</li> </ul>
Pol Id	The value that uniquely identifies a priority control policy
Base Priority	The <i>base-priority</i> value used to derive the in-use priority of the virtual router instance as modified by any optional VRRP priority control policy
InUse Priority	The current in-use priority associated with the VRRP virtual router instance
Msg Int	The administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages and to derive the master down timer as backup
Inh Int	Yes — when the VRRP instance is a non-owner and is operating as a backup and the <b>master-int-inherit</b> command is enabled, the master down timer is indirectly derived from the value in the advertisement interval field of the VRRP message received from the current master
	No — when the VRRP instance is operating as a backup and the <b>master-int-inherit</b> command is <i>not</i> enabled, the configured advertisement interval is matched against the value in the advertisement interval field of the VRRP message received from the current master; if the two values do not match then the VRRP advertisement is discarded; if the VRRP instance is operating as a master, this value has no effect
Backup Addr	The backup virtual router IP address

Label	Description
BFD	Indicates BFD is enabled
VRRP State	Specifies whether the VRRP instance is operating in a master or backup state
Policy ID	The VRRP priority control policy associated with the VRRP virtual router instance A value of 0 indicates that no control policy is associated with the virtual router instance
Preempt Mode	Yes — the preempt mode is enabled on the virtual router instance where it will preempt a VRRP master with a lower priority
	No — the preempt mode is disabled and prevents the non-owner virtual router instance from preempting another, less desirable virtual router
Ping Reply	Yes — a non-owner master is enabled to reply to ICMP Echo requests directed to the virtual router instance IP addresses Ping Reply is valid only if the VRRP virtual router instance associated with this entry is a non-owner A non-owner backup virtual router never responds to such ICMP echo requests irrespective if Ping Reply is enabled
	No — ICMP echo requests to the virtual router instance IP addresses are discarded
Telnet Reply	Yes — non-owner masters can to reply to TCP port 23 Telnet requests directed at the virtual router instances IP addresses
	No — telnet requests to the virtual router instance IP addresses are discarded
SSH Reply	Yes — non-owner masters can to reply to SSH requests directed at the virtual router instances IP addresses
	No — all SSH request messages destined to the non-owner virtual router instance IP addresses are discarded
Primary IP of Master	The IP address of the VRRP master
Primary IP	The IP address of the VRRP owner
Up Time	The date and time when the operational state of the event last changed
Virt MAC Addr	The virtual MAC address used in ARP responses when the VRRP virtual router instance is operating as a master

Label	Description
Auth Type	Specifies the VRRP authentication Type 0 (no authentication), Type 1 (simple password), or Type 2 (MD5) for the virtual router
Addr List Mismatch	Specifies whether a trap was generated when the IP address list received in the advertisement messages received from the current master did not match the configured IP address list  This is an edge triggered notification; a second trap will not be generated for a packet from the same master until this event has been cleared
Master Priority	The priority of the virtual router instance which is the current master
Master Since	The date and time when operational state of the virtual router changed to master  For a backup virtual router, this value specifies the date and time when it received the first VRRP advertisement message from the virtual router which is the current master
OperGroup	The operational group name associated with the VRRP interface, if configured
Monitor OperGroup	The monitor operational group associated with the VRRP

## instance

### Syntax

**instance** [ipv4 | ipv6]

### Context

[\[Tree\]](#) (clear>router>ldp instance)

### Full Context

clear router ldp instance

### Description

This command resets the LDP instance.

### Platforms

All

## instance

### Syntax

**instance**

### Context

[\[Tree\]](#) (tools>dump>router>ldp instance)

### Full Context

tools dump router ldp instance

### Description

This command dumps information for the LDP instance.

### Platforms

All

## instance

### Syntax

**instance interface** *interface-name* **vr-id** *virtual-router-id* [**ipv6**] [**interval** *seconds*] [**repeat** *repeat*] [{  
    **absolute** | **rate**}]

### Context

[\[Tree\]](#) (monitor>router>vrrp instance)

### Full Context

monitor router vrrp instance

### Description

Monitor statistics for a VRRP instance.

### Parameters

#### ***interface-name***

Specifies the name of the existing IP interface on which VRRP is configured.

#### ***virtual-router-id***

Specifies the virtual router ID for the existing IP interface, expressed as a decimal integer.

#### **ipv6**

Monitors IPv6 instances.

#### ***seconds***

Configures the interval for each display in seconds.

**Values**    3 to 60

**Default**   5 seconds

**repeat**

Configures how many times the command is repeated.

**Values**    1 to 999

**Default**   10

**absolute**

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

**rate**

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

**Platforms**

All

**Output**

The following output is an example of VRRP instance information.

**Output Example**

```
*A:ALA-A# monitor router vrrp instance interface n2 vr-id 1
=====
Monitor statistics for VRRP Instance 1 on interface "n2"

## 12.32 inter-as-label

### inter-as-label

**Syntax**

**inter-as-label** [**next-hop** *ip-address* | **backup-next-hop** *ip-address*] [**received-label** *received-label*]

**Context**

[\[Tree\]](#) (show>router>bgp inter-as-label)

**Full Context**

show router bgp inter-as-label

**Description**

This command displays BGP inter-AS label information.

**Parameters**

***ip-address***

Displays information for the specified IP address.

- Values**    ipv4-address:
- a.b.c.d (host bits must be 0)

***received-label***

Displays information for the received label.

**Values**    0 to 429496729

**Platforms**

All

## 12.33 inter-chassis

### inter-chassis

#### Syntax

**inter-chassis**

#### Context

[\[Tree\]](#) (tools>perform>system inter-chassis)

#### Full Context

tools perform system inter-chassis

#### Description

Commands in this context provide inter-chassis tools.

#### Platforms

7950 XRS

## 12.34 interface

### interface

#### Syntax

**interface** *subscriber-interface* [**id** *srrp-id*]

#### Context

[\[Tree\]](#) (clear>router>srrp interface)

#### Full Context

clear router srrp interface

#### Description

This command clears and resets SRRP interface instances.

#### Parameters

***subscriber-interface***

Specifies an existing subscriber interface name up to 32 characters.

**srrp-id**  
Specifies an existing SRRP ID.

**Values** 1 to 4294967295

**Platforms**  
All

interface

**Syntax**  
**interface** *[[ip-address | ip-int-name] [interface-type] [ detail] [family]] summary*

**Context**  
[\[Tree\]](#) (show>service>id interface)

**Full Context**  
show service id interface

**Description**  
This command displays information for the IP interfaces associated with the service.  
If no optional parameters are specified, a summary of all IP interfaces associated to the service are displayed.

- Parameters**
- ip-address**  
Specifies the IP address of the interface for which to display information.  
**Values** 1.0.0.0 — 223.255.255.255
  - ip-int-name**  
Specifies the IP interface name for which to display information, 32 characters.
  - family**  
Specifies the family to display.  
**Values** ipv4, ipv6
  - interface-type**  
Specifies the interface type.  
**Values** subscriber, group, redundant
  - detail**  
Displays detailed IP interface information.  
**Default** IP interface summary output

**summary**  
Displays a summary.

**Platforms**  
All

**Output**  
The following output is an example of IP interface information, and [Table 198: Output fields: service ID interface](#) describes the output fields.

**Output Example**

```
A:cses-V96# /show service id 1 interface
- interface [{<ip-address|ip-int-name>] [interface-type] [detail]
  [family]} | summary]
<ip-int-name|ip-ad*> : ip-int-name      - 32 chars max
                        ipv4-address    - a.b.c.d
                        ipv6-address    - x:x:x:x:x:x:x:x  (eight 16-bit
                                                pieces)
                                                x:x:x:x:x:x:d.d.d.d
                                                x - [0..FFFF]H
                                                d - [0..255]D
<detail>              : keyword - adds details to the display
<family>              : ipv4|ipv6
<interface-type>      : subscriber|group|redundant
<summary>             : keyword - displays summary
```

**Output Example**

```

Table 198: Output fields: service ID interface

Label	Description
Interface-Name	The name used to refer to the interface.
Type	Specifies the interface type.

Label	Description
IP-Address	Specifies the IP address/IP subnet/broadcast address of the interface.
Adm	The desired state of the interface.
Opr	The operating state of the interface.
Interface	
If Name	The name used to refer to the interface.
Admin State	The desired state of the interface.
Oper State	The operating state of the interface.
IP Addr/mask	Specifies the IP address/IP subnet/broadcast address of the interface.
Ignore Port State	<p>Indicates whether or not the <b>tools perform service id service-id interface ip-int-name ignore-sap port-state</b> command has been executed for a service interface directly connected to a SAP:</p> <p>none — The command has not been executed for or accepted by the interface.</p> <p>active — The command has been executed and accepted, and the port state check is currently being bypassed for the interface.</p> <p>pending — The command has been executed and accepted, but the port state for the interface is already operational.</p>
Details	
If Index	The index corresponding to this interface. The primary index is 1. For example, all interfaces are defined in the Base virtual router context.
If Type	Specifies the interface type.
Port Id	Specifies the SAP's port ID.
SNTP B.Cast	Specifies whether SNTP broadcast client mode is enabled or disabled.
Arp Timeout	Specifies the timeout for an ARP entry learned on the interface.
MAC Address	Specifies the 48-bit IEEE 802.3 MAC address.
ICMP Mask Reply	Specifies whether ICMP mask reply is enabled or disabled.
Cflowd	Specifies whether cflowd collection and analysis on the interface is enabled or disabled.
ICMP Details	
Redirects	Specifies the rate for ICMP redirect messages.
Unreachables	Specifies the rate for ICMP unreachable messages.

Label	Description
TTL Expired	Specifies the rate for ICMP TTL messages.
Admin State (DHCP6 Lease Split)	DHCPv6 lease split admin state (subscriber and group interfaces only)
Valid LT	DHCPv6 lease split valid lifetime (subscriber and group interfaces only)

## interface

### Syntax

**interface** [*ip-int-name* | *ip-address*] [**group**] [ *grp-ip-address*] [**detail**]

### Context

[\[Tree\]](#) (show>router>igmp interface)

### Full Context

show router igmp interface

### Description

This command displays IGMP interface information.

### Parameters

***ip-int-name***

Displays information associated with the specified IP interface name.

***ip-address***

Displays information associated with the specified IP address.

**group *grp-ip-address***

Displays IP multicast group address information for the specified group IP address.

**detail**

Displays detailed IP interface information along with the source group information learned on that interface.

### Platforms

All

### Output

The following output is an example of IGMP interface information. [Table 199: Output fields: IGMP interface](#) provides IGMP field descriptions.

## Output Example

```
*A:ALA-BA# show router 100 interface

```

Table 199: Output fields: IGMP interface

Label	Description
Interface	The interfaces that participate in the IGMP protocol.

Label	Description
Adm Admin Status	The administrative state for the IGMP protocol on this interface.
Oper Oper Status	The current operational state of IGMP protocol on the interface.
Querier	The address of the IGMP querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	<p>Cfg — The configured version of IGMP running on this interface. For IGMP to function correctly, all routers on a LAN must be configured to run the same version of IGMP on that LAN.</p> <p>Opr — The operational version of IGMP running on this interface. If the cfg value is 3 but all of the routers in the local subnet of this interface use IGMP version v1 or v2, the operational version will be v1 or v2.</p>
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.
Group Address	The IP multicast group address for which this entry contains information.
Up Time	The time since this source group entry got created.
Last Reporter	The IP address of the source of the last membership report received for this IP Multicast group address on this interface. If no membership report has been received, this object has the value 0.0.0.0.
Mode	The mode is based on the type of membership report(s) received on the interface for the group. In the 'include' mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In 'exclude' mode, reception of packets sent to the given multicast address is requested from all IP source addresses except those listed in the source-list parameter.
V1 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 1 members on the IP subnet attached to this interface. Upon hearing any IGMPv1 Membership Report, this value is reset to the group membership

Label	Description
	timer. While this time remaining is non-zero, the local router ignores any IGMPv2 Leave messages for this group that it receives on this interface.
V2 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 2 members on the IP subnet attached to this interface. Upon hearing any IGMPv2 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv3 Leave messages for this group that it receives on this interface.
Type	Indicates how this group entry was learned. If this group entry was learned by IGMP, it will be set to "dynamic". For statically configured groups, the value will be set to 'static'.
Compat Mode	Used in order for routers to be compatible with older version routers. IGMPv3 hosts must operate in version 1 and version 2 compatibility modes. IGMPv3 hosts must keep state per local interface regarding the compatibility mode of each attached network. A host's compatibility mode is determined from the Host Compatibility Mode variable which can be in one of three states: IGMPv1, IGMPv2 or IGMPv3. This variable is kept per interface and is dependent on the version of General Queries heard on that interface as well as the Older Version Querier Present timers for the interface.

## interface

### Syntax

**interface**

### Context

[\[Tree\]](#) (show>service>id>spb interface)

### Full Context

show service id spb interface

### Description

This command displays SPB interfaces.

### Platforms

All

Output

The following output is an example of service SPB interface information.

Output Example

```
*A:Dut-A# show service id 100001 spb interface

interface

Syntax

```
interface [{ip-int-name | ip-address}] [urpf-stats] [statistics] [hold-time]
interface [{ip-int-name | ip-address}] policy-accounting [class] [index]
interface {ip-int-name | ip-address} mac [ieee-address]
```

Context

```
[Tree] (clear>router interface)
```

Full Context

```
clear router interface
```

Description

This command clears IP interface statistics.

If no IP interface is specified either by IP interface name or IP address, the command will perform the clear operation on all IP interfaces.

Parameters

- ip-int-name | ip-address**  
Specifies IP interface name or IP interface address.  
  
**Values**    ip-int-name: 32 chars max  
             ip-address: a.b.c.d  
  
**Default**    all IP interfaces

**urpf-stats**  
Resets the statistics associated with uRPF failures.

**statistics**  
Resets the IP interface traffic statistics.

### **hold-time**

Clears the IP interface activation hold time.

### **policy-accounting**

Clears the accounting statistics.

### **class**

Specifies whether to clear source class counters or destination class counters.

**Values** source-class, dest-class

### **index**

Specifies the source or destination class index.

**Values** 1 to 255

### **ieee-address**

Specifies the MAC address.

**Values** xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

## **Platforms**

All

## **interface**

## **Syntax**

**interface** *interface-name* [**vrid** *virtual-router-id*]

**interface** *interface-name* **vrid** *virtual-router-id* **ipv6**

## **Context**

[\[Tree\]](#) (clear>router>vrrp interface)

## **Full Context**

clear router vrrp interface

## **Description**

This command resets VRRP protocol instances on an IP interface.

## **Parameters**

### ***interface-name***

Specifies the IP interface to reset the VRRP protocol instances.

### ***virtual-router-id***

Resets the VRRP protocol instance for the specified VRID on the IP interface.

**Default** All VRIDs on the IP interface.

**Values** 1 to 255

**ipv6**  
Clears IPv6 information for the specified interface.

**Platforms**  
All

interface

**Syntax**  
**interface** *ip-int-name*

**Context**  
[\[Tree\]](#) (tools>perform>service>id interface)  
[\[Tree\]](#) (tools>dump>service>id interface)

**Full Context**  
tools perform service id interface  
tools dump service id interface

**Description**  
This command specifies an IP interface for which service debugging tools are enabled.

**Parameters**  
***ip-int-name***  
Specifies the name of the IP interface, up to 32 characters.

**Platforms**  
All

interface

**Syntax**  
**interface** [{*ip-address* | *ip-int-name*}] [**detail**] [**family**}] | **summary** | **exclude-services**}]  
**interface** {*ip-address* | *ip-int-name*} **eth-cfm** [**detail**]  
**interface** {*ip-address* | *ip-int-name*} **mac** [*ieee-address*]  
**interface** {*ip-address* | *ip-int-name*} **statistics**  
**interface** {*ip-address* | *ip-int-name*} **dist-cpu-protection** [**detail**]  
**interface** {*ip-address* | *ip-int-name*} **policy-accounting** [**class** [*index*]]

**interface description**  
**interface** **global-if-index** *global-if-index* [**family**] [**detail**]  
**interface** **global-if-index** *global-if-index* **statistics**

**Context**  
[\[Tree\]](#) (show>router interface)

**Full Context**  
show router interface

**Description**  
This command displays the router IP interface table sorted by interface index.

**Parameters**  
***ip-address***  
Displays the interface information associated with the specified IP address.

Values	
ipv4-address	a.b.c.d (host bits must be 0)
ipv6-address	x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:d.d.d.d
	where:
	x: [0 to FFFF]H
	d: [0 to 255]D

***ip-int-name***  
Displays the interface information associated with the specified IP interface name, up to 32 characters.

**detail**  
Keyword to display detailed IP interface information. For **dist-cpu-protection**, **detail** includes the adapted operational rate parameters in the CLI output. The adapted operational rate parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed and include the adapted operational rate parameters in the CLI output. The adapted operational rate parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed.

**family**  
Keyword to specify the router IP interface family to display.

**Values**    **ipv4** — Displays only those peers that have the IPv4 family enabled.

**ipv6** — Displays the peers that are IPv6-capable.

**summary**

Keyword to display summary IP interface information for the router.

**exclude-services**

Keyword to display IP interface information, excluding IP interfaces configured for customer services. Only core network IP interfaces are displayed.

**eth-cfm**

Keyword to display Ethernet CFM information.

**mac**

Keyword to display information associated with the MAC address.

**ieee-address**

Displays the information associated with the specified IEEE address. The address is in the xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx format.

**statistics**

Keyword to display packet statistics for an interface on the router.

**Note:**

The **show router interface statistics** command also shows the MPLS statistics that are displayed when using the **show router mpls interface statistics** command. This allows the user to see MPLS statistics from interfaces that are not added to MPLS, such as the network interfaces of a carrier. [Output example](#) for an example of the MPLS fields that are displayed. These fields are displayed regardless of the state of MPLS.

**dist-cpu-protection**

Keyword to display the distributed CPU protection parameters and status at the interface level.

**class**

Displays whether to display accounting policy statistics for the source or destination class.

**Values**    source-class, dest-class

**index**

Displays interface information for a specific an integer value for the accounting source or destination class index.

**Values**    1 to 255

**description**

Keyword to display all interfaces in all routing contexts.

**global-if-index**

Displays information for a specific global interface index value.

**Values**    1 to 262144

Platforms

All

Output

**Standard IP interface output** — The following output is an example of standard IP interface information, and [Table 200: Output fields: IP interface](#) describes the fields.

Table 201: Output fields: IP interface detail

Label	Description
If Name	The IP interface name
Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Oper (v4/v6)	Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled
IP Addr/mask	The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface
IPv6 Addr	The IPv6 address of the interface
If Index	The interface index of the IP router interface
Virt If Index	The virtual interface index of the IP router interface
Last Oper Change	The last change in operational status
Global If Index	The global interface index of the IP router interface
Sap ID	The SAP identifier
TOS Marking	The ToS byte value in the logged packet
If Type	Network — the IP interface is a network or core IP interface Service — the IP interface is a service IP interface
SNTP B.cast	Displays if the <b>broadcast-client</b> global parameter is configured
IES ID	The IES identifier
QoS Policy	The QoS policy ID associated with the IP interface
MAC Address	The MAC address of the interface
Arp Timeout	The ARP timeout for the interface, in seconds, which is the time an ARP entry is maintained in the ARP cache without being refreshed
ICMP Mask Reply	False — the IP interface does not reply to a received ICMP mask request True — the IP interface does reply to a received ICMP mask request

Label	Description
Arp Populate	Displays whether ARP is enabled or disabled
Host Conn Verify	The host connectivity verification
LdpSyncTimer	The IGP/LDP sync timer value
uRPF Chk	Displays whether unicast RPF (uRPF) Check is enabled on this interface
uRPF Iv6 Chk	Displays whether unicast RPF (uRPF) Check IPv6 is enabled on this interface
PTP HW Assist	Displays whether the PTP Hardware Assist function is enabled on this interface
cflowd	Displays the type of cflowd analysis that is applied to the interface  acl — ACL cflowd analysis is applied to the interface interface — interface cflowd analysis is applied to the interface none — no cflowd analysis is applied to the interface
Inter-AS selective ILM untrusted	Displays whether the inter-AS selective ILM untrusted function is enabled on this interface
Untrusted default forwarding	Displays whether the untrusted default forwarding function is enabled on this interface

**Detailed IP interface output** — The following output is an example of detailed IP interface information showing detailed link delay information, and [Table 202: Output fields: IP interface detail](#) output describes the output fields.

#### Output example

Table 202: Output fields: IP interface detail

Label	Description
If Name	The IP interface name
Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Oper (v4/v6)	Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled
Down Reason Code	The down reason code
Down Reason V4	The down reason for IPv4
Down Reason V6	The down reason for IPv6

Label	Description
Protocols	The protocols for the interface
IP Address	The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface
Description	The description for the IP interface
If Index	The interface index of the IP router interface
Virt. If Index	The virtual interface index of the IP router interface
Last Oper Change	The last change in operational status
Global If Index	The global interface index of the IP router interface
Lag Link Map Prof	The LAG link map profile for the IP router interface
MACSec	The MACsec information for the IP router interface
Port Id	The port ID for the IP router interface
TOS Marking	Displays the ToS marking: <ul style="list-style-type: none"> <li>Trusted – the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted</li> <li>Untrusted – all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface</li> </ul>
If Type	Displays the interface type: <ul style="list-style-type: none"> <li>Network – the IP interface is a network or core IP interface</li> <li>Service – the IP interface is a service IP interface</li> </ul>
Egress Filter	The egress filter policy
Ingress Filter	The ingress filter policy
Egr Ipv6 Flt	The egress IPv6 filter policy
Ingr IPv6 Flt	The ingress IPv6 filter policy
SNTP B.Cast	Displays if the <b>broadcast-client</b> global parameter is configured: <ul style="list-style-type: none"> <li>True – the <b>broadcast-client</b> is enabled</li> <li>False – the <b>broadcast-client</b> is disabled</li> </ul>
Network QoS Policy	The network QoS policy ID

Label	Description
MAC Address	The MAC address of the IP interface
Mac Accounting	The state of MAC accounting: <ul style="list-style-type: none"> <li>Enabled – MAC accounting is enabled</li> <li>Disabled – MAC accounting is disabled</li> </ul>
Ingress stats	The state of ingress statistics collection: <ul style="list-style-type: none"> <li>Enabled – ingress statistics are being collected</li> <li>Disabled – ingress statistics are not being collected</li> </ul>
IPv6 DAD	The state of IPv6 duplicate address detection (DAD) on the IP interface: <ul style="list-style-type: none"> <li>Enabled – IPv6 DAD is enabled</li> <li>Disabled – IPv6 DAD is disabled</li> </ul>
ARP Timeout	The ARP timeout for the interface, which is the time an ARP entry is maintained in the ARP cache without being refreshed
IPv6 Nbr ReachTime	The IPv6 neighbor reachable time
ARP Retry Timer	The ARP retry timer value
IPv6 stale time	The maximum interval in which to confirm if an IPv6 neighbor is reachable
ARP Limit	The state of the ARP limit on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the ARP limit is enabled</li> <li>Disabled – the ARP limit is disabled</li> </ul>
IPv6 Nbr Limit	The state of the IPv6 neighbor limit on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the IPv6 neighbor limit is enabled</li> <li>Disabled – the IPv6 neighbor limit is disabled</li> </ul>
ARP Threshold	The state of the ARP threshold on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the ARP threshold is enabled</li> <li>Disabled – the ARP threshold is disabled</li> </ul>
IPv6 Nbr Threshold	The state of the IPv6 neighbor threshold on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the IPv6 neighbor threshold is enabled</li> <li>Disabled – the IPv6 neighbor threshold is disabled</li> </ul>
ARP Limit Log On*	The state of ARP limit log only configuration on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the ARP limit log only configuration is enabled</li> <li>Disabled – the ARP limit log only configuration is disabled</li> </ul>

Label	Description
IPv6 Nbr Log Only	The state of the IPv6 neighbor log only configuration on the IP interface: <ul style="list-style-type: none"> <li>Enabled – the IPv6 neighbor log only configuration is enabled</li> <li>Disabled – the IPv6 neighbor log only configuration is disabled</li> </ul>
ARP Learn Unsoli*	The state of ARP learn unsolicited on the IP interface: <ul style="list-style-type: none"> <li>Enabled – ARP learn unsolicited is enabled</li> <li>Disabled – ARP learn unsolicited is disabled</li> </ul>
ND Learn Unsolici*	Displays if neighbor discovery learn unsolicited is configured
ARP Proactive Re*	The state of ARP proactive refresh on the IP interface: <ul style="list-style-type: none"> <li>Enabled – ARP proactive refresh is enabled</li> <li>Disabled – ARP proactive refresh is disabled</li> </ul>
ND Proactive Refr*	Displays if neighbor proactive refresh is configured. When configured, neighbor proactive refresh helps keep the entries active by sending an ARP refresh 30 seconds before the timeout or by starting neighbor unreachable detection (NUD) when the stale time expires.
TCP MSS V4	The TCP maximum segment size (MSS) for TCP connections originated from the associated IPv4 interface
TCP MSS V6	The TCP MSS for TCP connections originated from the associated IPv6 interface
IP MTU	The IP maximum transmission unit (MTU) for the IP interface
IP Oper MTU	The IP oper MTU
ARP Populate	The state of ARP populate on the IP interface: <ul style="list-style-type: none"> <li>Enabled – ARP populate is enabled</li> <li>Disabled – ARP populate is disabled</li> </ul>
Cflowd (unicast)	The type of cflowd unicast analysis that is applied to the interface: <ul style="list-style-type: none"> <li>acl — ACL cflowd analysis is applied to the interface</li> <li>interface — interface cflowd analysis is applied to the interface</li> <li>none — no cflowd analysis is applied to the interface</li> </ul>
Cflowd (multicast)	The cflowd multicast configuration
LdpSyncTimer	The IGP LDP synchronized timer value

Label	Description
Strip-Label	The state of strip label on the IP interface: <ul style="list-style-type: none"> <li>Enabled – strip label is enabled</li> <li>Disabled – strip label is disabled</li> </ul>
LSR Load Balance	Displays if LSR load balancing occurs at the router interface level or system level of the interface. Configuration at the router interface level overrides the system level configuration.
EGR Load Balance	Displays the address used in the LAG or ECMP hash on IP interfaces: <ul style="list-style-type: none"> <li>both – the source and destination addresses are both used</li> <li>destination – the destination address is used</li> <li>source – the source address is used</li> </ul>
Vas If Type	The value added service (VAS) interface type: <ul style="list-style-type: none"> <li>both – the type of VAS is both to and from the access and to and from the network</li> <li>access – the type of VAS is to and from the access</li> <li>network – the type of VAS is to and from the network</li> </ul>
TEID Load Balance	The state of TEID load balancing on the IP interface: <ul style="list-style-type: none"> <li>Enabled – TEID load balancing is enabled</li> <li>Disabled – TEID load balancing is disabled</li> </ul>
SPI Load Balance	The state of SPI load balancing on the IP interface: <ul style="list-style-type: none"> <li>Enabled – SPI load balancing is enabled</li> <li>Disabled – SPI load balancing is disabled</li> </ul>
uRPF Chk	Displays whether unicast RPF (uRPF) check is enabled on this interface
uRPF Ipv6 Chk	Displays whether unicast RPF check IPv6 is enabled on this interface
uRPF Select VPRN	The state of uRPF checks on incoming traffic on the interface: <ul style="list-style-type: none"> <li>True – the router performs uRPF checks of incoming traffic on the network interface for the following: <ul style="list-style-type: none"> <li>packets associated with the global routing table (base router) context</li> <li>packets associated with the VPRNs that have enabled the uRPF check</li> </ul> </li> <li>False – the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router)</li> </ul>

Label	Description
	and all VPRNs) based on the IPv4 and IPv6 <b>urpf-check</b> command configuration options on the network interface
PTP HW Assist	Displays if the PTP hardware assist function is enabled on this interface
RX Pkts	The received packets
Rx Bytes	The received bytes
Rx V4 Pkts	The received IPv4 packets
Rx V4 Bytes	The received IPv4 bytes
Rx V4 Help. Pkts	The received IPv4 Helper packets
Rx V4 Help. Bytes	The received IPv4 Helper bytes
Tx Pkts	The transmitted packets
Tx Bytes	The transmitted bytes
Tx V4 Pkts	The transmitted IPv4 packets
Tx V4 Bytes	The transmitted IPv4 bytes
Tx V4 Discard Pk*	The transmitted IPv4 discarded packets
Tx V4 Discard Byt*	The transmitted IPv4 discarded packets
Tx V6 Pkts	The transmitted IPv6 packets
Tx V6 Bytes	The transmitted IPv6 bytes
Tx V6 Discard Pk*	The transmitted IPv6 discarded packets
Tx V6 Discard Byt*	The transmitted IPv6 discarded bytes
Tx DBcast Dis. P*	The transmitted DBcast discarded packets
Tx DBcast Dis. By*	The transmitted DBcast discarded bytes
Mpls Rx Pkts	The MPLS received packets
Mpls Rx Bytes	The MPLS received bytes
Mpls Tx Pkts	The MPLS transmitted packets
Mpls Tx Bytes	The MPLS transmitted bytes
GRE Termination	The state of GRE termination: <ul style="list-style-type: none"> <li>Enabled – the termination of MPLS-over-GRE and IP-over-GRE packets on destination IP addresses from a user-defined subnet is enabled</li> </ul>

Label	Description
	<ul style="list-style-type: none"> <li>Disabled – the termination of MPLS-over-GRE and IP-over-GRE packets on the subnet of the interface is disabled</li> </ul>
Inter-AS selective ILM untrusted	Displays if the inter-AS selective ILM untrusted function is enabled on this interface
Untrusted default forwarding	<p>The untrusted default forwarding behavior on the interface:</p> <ul style="list-style-type: none"> <li>forward – the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a Layer 2 service context</li> <li>drop – all labeled packets received on the interface are automatically dropped</li> </ul>
OperDCpuProtPcly	The distributed CPU protection policy
IP-Helper Address	The IPv4 address of the target UDP broadcast gateway
Ingress destination class lookup	<p>The state of the ingress destination class lookup:</p> <ul style="list-style-type: none"> <li>Enabled – the router performs a destination class lookup</li> <li>Disabled – the router does not perform a destination class lookup</li> </ul>
Link Delay Details	
Operational Delay	The operational delay on the IP interface
Delay selection	The delay selection for the IP interface
Static Delay	The static delay for the IP interface
Dynamic Delay	The dynamic delay for the IP interface
Link Measure Tmpl	The link measurement template
Proxy ARP Details	
Rem Proxy ARP	<p>The state of remote proxy ARP on the IP interface:</p> <ul style="list-style-type: none"> <li>Enabled – the remote proxy ARP is enabled. Remote proxy ARP is similar to proxy ARP. It allows the router to answer an ARP request on an interface for a subnet that is not provisioned on that interface. This allows the router to forward to the other subnet on behalf of the requester.</li> <li>Disabled – the remote proxy ARP is disabled</li> </ul>
Local Proxy ARP	<p>The state of local proxy ARP on the IP interface:</p> <ul style="list-style-type: none"> <li>Enabled – the local proxy ARP is enabled. When local proxy ARP is enabled on an IP interface, the system responds to all ARP requests for IP addresses belonging to the subnet with</li> </ul>

Label	Description
	<p>its own MAC address, and thus becomes the forwarding point for all traffic between hosts in that subnet.</p> <ul style="list-style-type: none"> <li>Disabled – the local proxy ARP is disabled</li> </ul>
Policies	Displays ARP policies for the IP interface
Proxy Neighbor Discovery Details	
Local Pxy ND	<p>The state of the local proxy neighbor discovery on the IP interface:</p> <ul style="list-style-type: none"> <li>Enabled – the local proxy neighbor discovery is enabled. When enabled, the interface replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</li> <li>Disabled – the local proxy neighbor discovery is disabled. When disabled, the interface does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</li> </ul>
Policies	The local proxy neighbor discovery policies for the IP interface
ICMP Details	
Redirects	The number of packet redirects
Unreachables	The number of packets that did not reach the destination
TTL Expired	The number of messages that exceeded the time to live (TTL) threshold
Parameter Problem	The number of packets with a parameter problem in the IP header
ICMP Mask Reply	The number of address mask replies
ICMPv6 Details	
Packet Too Big	The number of packets that were too big
Parameter Problem	The number of packets with a parameter problem in the IP header
Redirects	The number of packet redirects
Time Exceeded	The number of packets where the time was exceeded
Unreachables	The number of packets that did not reach the destination
IPCP Address Extension Details	
Peer IP Addr	The remote IP address to be assigned to the far end of the associated PPP/MLPPP link via IPCP extensions

Label	Description
Peer Pri DNS Addr	The unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions
Peer Sec DNS Addr	The unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional)
Network Domains Associated	The network domain for the interface
Admin Groups	The administrative groups for the interface
Srlg Groups	The SRLG groups for the interface
QoS Queue-Group Redirection Details	
Ingress FP QGrp	The ingress FP queue group
Egress Port QGrp	The egress port queue group
Ing FP QGrp Inst	The ingress FP queue group instance
Egr Port QGrp Inst	The egress port queue group instance

**Statistics IP interface output** — The following output is an example of router IP interface statistics when **enable-interface-statistics** is enabled, and [Table 203: Output fields: statistics IP interface](#) describes the fields.

#### Output example

```

Table 205: Output fields: interface global interface index

Label	Description
Interface-Name	The IP interface name
Type	n/a — no IP address has been assigned to the IP interface, so the IP address type is not applicable  Pri — the IP address for the IP interface is the primary address on the IP interface  Sec — the IP address for the IP interface is a secondary address on the IP interface
IP-Address	The IP address and subnet mask length of the IP interface

Label	Description
	n/a — indicates no IP address has been assigned to the IP interface
Adm	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Opr	Down — the IP interface is operationally disabled Up — the IP interface is operationally disabled
Mode	Network — the IP interface is a network or core IP interface Service — the IP interface is a service IP interface
Port/SAP Id	The physical network port or the SAP identifier associated with the IP interface

The following output is an example of Distributed CPU Protection Policer Output information, and [Table 206: Output fields: distributed CPU protection policy](#) describes Distributed CPU Protection Policer output fields.

```

Table 206: Output fields: distributed CPU protection policy

Label	Description
Distributed CPU Protection Policy	The DCP policy assigned to the object
Policer-Name	The configured name of the static policer
Card/FP	The card and FP identifier. FP identifies the instance of the FP (FastPath) chipset. Some cards have a single FP and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMAs).
Policer-State	The state of the policer with the following potential values:  Exceed – the policer has been detected as nonconforming to the associated DCP policy parameters (packets exceeded the configured rate and the DCP polling process identified this occurrence)  Conform – the policer has been detected as conforming to the associated DCP policy parameters (rate)  not-applicable – newly-created policers or policers that are not currently instantiated. This includes policers configured on line cards that are not in service.
Protocols Mapped	A list of protocols that are configured to map to the particular policer
Oper. xyz fields	The actual hardware may not be able to perfectly rate limit to the exact configured rate parameters in a DCP policy. In this case, the configured rate parameters will be adapted to the closest supported rate. These adapted operational values are displayed in CLI when the <b>detail</b> keyword is included in the show command. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the

Label	Description
	<p>associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed.</p> <p><i>Oper. Kbps</i> - Displays the adapted "kilobits-per-second" value for DCP "kbps" rates</p> <p><i>Oper. MBS</i> - Displays the adapted "mbs size" value for DCP "kbps" rates</p> <p><i>Oper. Depth</i> - Displays the calculated policer bucket depth in packets (for DCP "packets" rates) or in bytes (for DCP "kbps" rates)</p> <p><i>Oper. Packets</i> - Displays the adapted "ppi" value for DCP "packets" rates</p> <p><i>Oper. Within</i> - Displays the adapted "within seconds" value for DCP "packets" rates</p> <p><i>Oper. Init. Delay</i> - Displays the adapted "initial-delay packets" value for DCP "packets" rates</p>
Exceed-Count	The count of packets exceeding the policing parameters since the specific policer was previously declared as conforming or newly-instantiated. This counter has the same behavior as the exceed counter in the DCP the log events; the counter is baselined (reset) when the policer transitions to conforming.
Detec. Time Remain	The remaining time in the detection-time countdown during which a policer in the exceed state is being monitored to see if it conforms again
Hold-Down Remain	The remaining time in the hold-down countdown during which a policer is treating all packets as exceeding
All Dyn-Plcr Alloc.	Indicates that all the dynamic enforcement policers have been allocated and instantiated for a specific local-monitor
Dyn-Policer Alloc.	Indicates that a dynamic policer has been instantiated

## interface

### Syntax

**interface** [*ip-int-name*] [**detail**] [*family*]  
**interface resource-failures** [*family*]

### Context

**[Tree]** (show>router>ldp interface)

Full Context

show router ldp interface

Description

This command displays configuration information about LDP interfaces.

Parameters

- ip-int-name**  
The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
- detail**  
Displays detailed information.
- family**  
Displays either IPv4 or IPv6 active LDP information.
- resource-failures**  
Displays which interfaces are in overload.

Platforms

All

Output

LDP Interface Output

Table 207: Output fields: LDP interface describes the LDP interface output fields.

Table 207: Output fields: LDP interface

Label	Description
Interface	Specifies the interface associated with the LDP instance.
Adm	Up — The LDP is administratively enabled. Down — The LDP is administratively disabled.
Opr	Up — The LDP is operationally enabled. Down — The LDP is operationally disabled.
Hello Factor	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.
Hold Time	The hello time, also known as hold time. It is the time interval (in s), that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor.
KA Factor	The value by which the keepalive timeout should be divided to give the keepalive time, for example, the time interval (in s), between LDP keepalive messages. LDP

Label	Description
	keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors.
KA Timeout	The time interval (in s), that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages).

## interface

### Syntax

```
interface [ip-int-name] [family]
interface [ip-int-name] [statistics] [family]
```

### Context

```
[Tree] (clear>router>ldp interface)
```

### Full Context

```
clear router ldp interface
```

### Description

This command restarts or clears statistics for LDP interfaces.

### Parameters

- ip-int-name**  
Specifies the name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
- family**  
Specifies the IP family information to restart or clear.

**Values**    **ipv4** – Keyword used to clear IPv4 information  
             **ipv6** – Keyword used to clear IPv6 information
- statistics**  
Keyword used to clear traffic statistics.

### Platforms

All

## Output

The following example displays the **clear router ldp interface** command.

### Output example

```
A:nodd-2# clear router ldp interface "ip-10.10.1.1" ipv4
A:node-2# clear router ldp interface "ip-10.10.1.1" ipv6
```

show router mpls interface

Description

This command displays MPLS interface information.

Parameters

- ip-int-name**  
Specifies the name of the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
- ip-address**  
Specifies the system or network interface IP address.
- label-map label**  
Specifies the MPLS label on which to match.  
**Values** 32 to 1048575
- statistics**  
Displays the MPLS interface name and the number of packets and octets sent and received on an MPLS interface.
- aux-stats**  
Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

[Table 208: Output fields: MPLS interface](#) describes MPLS interface output fields.

*Table 208: Output fields: MPLS interface*

Label	Description
Interface	The interface name.
Port-id	The port ID.
Adm	Specifies the administrative state of the interface.
Opr	Specifies the operational state of the interface.
Te-metric	Specifies the traffic engineering metric used on the interface.
Srlg Groups	Specifies the shared risk loss group (SRLG) name(s).
Interfaces	The total number of interfaces.
Transmitted	Displays the number of packets and octets transmitted from the interface.

Label	Description
Received	Displays the number of packets and octets received.
In Label	Specifies the ingress label.
In I/F	Specifies the ingress interface.
Out Label	Specifies the egress label.
Out I/F	Specifies the egress interface.
Next Hop	Specifies the next hop IP address for the static LSP.
Type	Specifies whether the label value is statically or dynamically assigned.

### Output Example

```
*A:SRU4>config>router>mpls# show router mpls interface

## interface

### Syntax

**interface** [*ip-int-name* | *ip-address*] **statistics** [ **detail**]

### Context

[\[Tree\]](#) (show>router>rsvp interface)

### Full Context

show router rsvp interface

### Description

This command shows RSVP interfaces.

### Parameters

***ip-int-name***

Specifies the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

***ip-address***

Specifies the system or network interface IP address.

***statistics***

Displays the RSVP interface name and counts of various RSVP packets sent and received on the interface.

***detail***

Displays detailed information.

### Platforms

All

### Output

The following output is an example of RSVP interface information.

[Table 209: Output fields: RSVP interface](#) describes RSVP interface output fields.

Table 209: Output fields: RSVP interface

Label	Description
Interface	The name of the IP interface.
Total Sessions	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signaled but a response has not yet been received.
Active Sessions	The total number of active RSVP sessions on this interface.
Total BW (Mbps)	The amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on the interface.
Resv BW (Mbps)	The amount of bandwidth in Mb/s reserved on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Adm	Down — The RSVP interface is administratively disabled. Up — The RSVP interface is administratively enabled.
Bfd	Yes — BFD is enabled on the RSVP interface. No — BFD is disabled on the RSVP interface.
Opr	Down — The RSVP interface is operationally down. Up — The RSVP interface is operationally up.
Port ID	Specifies the physical port bound to the interface.
Active Resvs	The total number of active RSVP sessions that have reserved bandwidth.
Subscription	Specifies the percentage of the link bandwidth that RSVP can use for reservation. When the value is zero (0), no new sessions are permitted on this interface.
Port Speed	Specifies the speed for the interface.
Unreserved BW	Specifies the amount of unreserved bandwidth.
Reserved BW	Specifies the amount of bandwidth in Mb/s reserved by the RSVP session on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Total BW	Specifies the amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on this interface.
Aggregate	Aggregate messages are used to pack multiple RSVP messages into a single packet to reduce the network overhead. When the value is true, RSVP negotiates with each neighbor and gets consensus before sending aggregate messages.
Hello Interval	Specifies the length of time (in s) between the hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. When the value is zero (0), the sending of hello messages is disabled.

Label	Description
Refresh Time	Specifies the interval between the successive Path and Resv refresh messages. RSVP declares the session down after it misses $((\text{keep-multiplier} + 0.5) * 1.5 * \text{refresh-time}))$ consecutive refresh messages.
Hello Timeouts	The total number of hello messages that timed out on this RSVP interface.
Neighbors	The IP address of the RSVP neighbor.
Sent	The total number of error free RSVP packets that have been transmitted on the RSVP interface.
Recd	The total number of error free RSVP packets received on the RSVP interface.
Total Packets	The total number of RSVP packets, including errors, received on the RSVP interface.
Bad Packets	The total number of RSVP packets with errors transmitted on the RSVP interface.
Paths	The total number of RSVP PATH messages received on the RSVP interface.
Path Errors	The total number of RSVP PATH ERROR messages transmitted on the RSVP interface.
Path Tears	The total number of RSVP PATH TEAR messages received on the RSVP interface.
Resvs	The total number of RSVP RESV messages received on the RSVP interface.
Resv Confirms	The total number of RSVP RESV CONFIRM messages received on the RSVP interface.
Resv Errors	Total RSVP RESV ERROR messages received on RSVP interface.
Resv Tears	Total RSVP RESV TEAR messages received on RSVP interface.
Refresh Summaries	Total RSVP RESV summary refresh messages received on interface.
Refresh Acks	Total RSVP RESV acknowledgment messages received when refresh reduction is enabled on the RSVP interface.
Bundle Packets	Total RSVP RESV bundled packets received on the RSVP interface.
Hellos	Total RSVP RESV HELLO REQ messages received on the interface.
DBw Multiplier	Displays the configured dark bandwidth multiplier.
DBw Up Threshold	Displays the configured dark bandwidth up threshold (per interface or inherited).
DBw Down Threshold	Displays the configured dark bandwidth down threshold (per interface or inherited).
DBw Sample Index	Displays the index of the dark bandwidth current sample.

Label	Description
DBw Last Sample	Displays the latest sampled value of the dark bandwidth.
Latest Cal DBw	Displays the latest value of the calculated dark bandwidth (calculated over average interval = sample-interval X sample-multiplier). The value indicated here has already been multiplied by the dbw-multiplier.
Advertised MRLB	Displays the value of the latest advertised Maximum Reservable Link Bandwidth.

### Output Example

```

```

# interface

## Syntax

```
interface ip-int-name [statistics | aux-stats]
```

## Context

```
[Tree] (clear>router>mpls interface)
```

## Full Context

```
clear router mpls interface
```

## Description

This command resets or clears statistics for MPLS interfaces.

## Parameters

- ip-int-name**  
Specifies an existing IP interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
- statistics**  
Clears only packet and octet counters, and only these of the default MPLS statistics.
- aux-stats**  
Clears only packet and octet counters, and only these of the default auxiliary MPLS statistics.

## Platforms

All

## interface

### Syntax

**interface** [*ip-int-name*] [**statistics**]

### Context

[\[Tree\]](#) (clear>router>rsvp interface)

### Full Context

clear router rsvp interface

### Description

This command resets or clears statistics for an RSVP interface.

### Parameters

#### *ip-int-name*

Specifies the IP interface to clear. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

#### *statistics*

Clears only statistics.

## Platforms

All

## interface

### Syntax

**interface** [**service** *service-id*] [**interface** *ip-int-name*] [**stats** { **rt-server** | **fcc-server**}]

**interface** [**service** *service-id*] [**interface** *ip-int-name*] **summary**

### Context

[\[Tree\]](#) (show>video interface)

### Full Context

show video interface

### Description

This command displays video interface information.

Parameters

- service *service-id*

Displays video interface information pertaining to the specified service ID.

Values

1 to 2148278317

*svc-name* — a string up to 64 characters.
- interface *ip-int-name*

Displays video interface information pertaining to the specified interface.
- stats

Displays video interface statistics.

Values

**rt-server** — Displays video interface statistics for the RET server.

**fcc-server** — Displays video interface statistics for the FCC server.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

Output

The following output is an example of this command.

Output Example

```
*A:Dut-C# show video interface

## interface

### Syntax

**interface** *ip-int-name* [**address** *ip-address*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

### Context

[\[Tree\]](#) (clear>video>statistics>id interface)

### Full Context

clear video statistics id interface

### Description

This command clears video statistics for a particular channel.

### Parameters

#### ***ip-int-name***

Clears statistics for the specified interface.

#### **address** *ip-address*

Clears statistics for the specified IP address.

#### **rt-client**

Clears all RET client related statistics.

#### **rt-server**

Clears all RET server related statistics.

#### **fcc-server**

Clears all FCC server related statistics.

#### **ad-insert**

Clears all ad insert related statistics.

#### ***grp-address***

Clears statistics for the specified channel group address.

#### **source** *srcAddr*

Clears statistics for the specified source address.

### Platforms

7450 ESS, 7750 SR, 7750 SR-s

# interface

## Syntax

**interface** [*ip-int-name* | *ipv6-address*] [ **group**] [*grp-ipv6-address*] [**detail**]

## Context

[\[Tree\]](#) (show>router>mld interface)

## Full Context

show router mld interface

## Description

This command displays MLD interface information.

## Parameters

- ip-int-name**  
Displays the information associated with the specified IPv6 interface name.
- ipv6-address**  
Displays the information associated with the specified IPv6 address.
- group grp-ipv6-address**  
Displays IPv6 multicast group address for which this entry contains information.
- detail**  
Displays detailed IPv6 interface information along with the source group information learned on that interface.

## Platforms

All

## Output

The following output is an example of MLD interface information. [Table 210: Output fields: MLD interface](#) displays MLD field descriptions.

## Output Example

```
*A:Dut-A# show router mld interface

=====
```

\*A:Dut - A#

Table 210: Output fields: MLD interface

Label	Description
Interface	The interfaces that participate in the MLD protocol.
Adm Admin Status	The administrative state for the MLD protocol on this interface.
Oper Oper Status	The current operational state of MLD protocol on the interface.
Querier	The address of the MLD querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	Cfg — The configured version of MLD running on this interface. For MLD to function correctly, all routers on a LAN must be configured to run the same version of MLD on that LAN. Opr — The operational version of MLD running on this interface.
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.
Group Address	The IP multicast group address for which this entry contains information.

## interface

### Syntax

**interface** [*ip-int-name* | *mt-int-name* | *ip-address*] [**group** *grp-ip-address* | **source** *ip-address*] [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

### Context

[\[Tree\]](#) (show>router>pim interface)

### Full Context

show router pim interface

Description

This command displays PIM interface information and the (S,G)/(\*,G)/(\*, \*, rp) state of the interface.

Parameters

*ip-int-name*

Displays interface information associated with the specified IP interface name.

*mt-int-name*

Displays Multicast Tunnel (MT) interface information for a VPRN.

**Values**    <vprn-id>-mt-<grp-ip-address>

*ip-address*

Displays interface information associated with the specified IP address.

**group** *grp-ip-address*

Displays the IP multicast group address information for which this entry contains information.

**source** *ip-address*

Displays information about the source address for which this entry contains information.

If the type is **starg**, the value of this object is zero.

If the type is **starstarrp**, the value of this object is the address of the RP.

**type**

Displays information for the specified entry type.

**Values**    **starstarrp**, **starg**, **sg**

**detail**

Displays detailed interface information.

**family**

Displays family information for the interface.

**Values**    ipv4, ipv6

Platforms

All

Output

The following output is an example of a PIM interface configuration. [Table 211: Output fields: PIM interface](#) provides PIM interface field descriptions.

Output Example

```

Table 211: Output fields: PIM interface

Label	Description
Admin State	The administrative state for PIM protocol on this interface
Oper State	The current operational state of PIM protocol on this interface
DR	The designated router on this PIM interface
DR Priority	The priority value sent in PIM Hello messages and that is used by routers to elect the designated router (DR).
Hello Intvl	The frequency at which PIM Hello messages are transmitted on this interface
OperGroup	The OperGroup name associated with the PIM interface

Label	Description
OprGrp Active oper	The OperGroup operation (add, set, subtract) to the DR priority
Cfg OprGrp Priority	The configured OperGroup DR priority

## interface

### Syntax

**interface** [*ip-int-name*]

### Context

[\[Tree\]](#) (show>cflowd interface)

### Full Context

show cflowd interface

### Description

This command displays the administrative and operational status of interfaces that have cflowd enabled.

### Parameters

*ip-int-name*

Displays information only for the IP interface with the specified name.

**Default** All interfaces with cflowd enabled.

### Platforms

All

### Output

The following output is an example of cflowd interface information, and [Table 212: Output fields: cflowd interface](#) describes the output fields.

### Output Example

A:Dut-B# show cflowd interface

Cflowd Interfaces					
Interface	Router	IF Index	Type/Dir	Admin	
IPv4Address			Samp	Oper	IPv4
IPv6Address				Oper	IPv6
-----	-----	-----	-----	-----	-----
ixia	Base	20	intf/ingr	Up	
150.1.1.1/24			uni	Up	
::9601:101/104			uni	Up	
to-Dut-C	1	259	intf/ingr	Up	
1.20.1.2/24			uni	Up	

```

::114:102/104          uni      Up
to-Dut-C              2        260    intf/ingr Up
1.30.1.2/24           uni      Up
::11e:102/104         uni      Up
to-Dut-A              3        261    intf/ingr Up
1.10.1.2/24           uni      Up
::10a:102/104         uni      Up
-----
Interfaces : 4
=====

```

Table 212: Output fields: cflowd interface

Label	Description
Interface	Displays the interface name
IPv4 Address	Displays the primary IPv4 address for the associated IP interface
IPv6 Address	Displays the primary IPv6 address for the associated IP interface
Router	Displays the virtual router index (Base = 0) associated with the interface
IF Index	Displays the Global IP interface index
Type/Dir Samp	Displays the cflowd sampling type and direction intf — Interface based sampling acl — ACL based sampling ingr — Ingress sampling egr — Egress sampling both — Both ingress and egress sampling
Admin	Displays the administrative state of the interface
Oper IPv4	Displays the operational state for IPv4 sampling
Oper IPv6	Displays the operational state for IPv6 sampling

## interface

### Syntax

**interface** [*interface-name*] [**family**]

**interface** [*interface-name*] **detail**

**interface summary**

### Context

[\[Tree\]](#) (show>router>bfd interface)

Full Context

show router bfd interface

Description

This command displays interface information.

Parameters

- interface-name**  
Specifies the interface name.
- family**  
Specifies whether IPv4 or IPv6 routes are displayed.
- detail**  
Displays detailed interface information.
- summary**  
Displays summary interface information for the router.

Platforms

All

Output

The following output is an example of BFD interface information, and [Table 213: Output fields: BFD interface](#) describes the fields.

Output Example

```
*A:Dut-B# show router bfd interface
=====
BFD Interface
=====
Interface name          Tx Interval    Rx Interval    Multiplier
-----
port-1-1                500            500            3
port-1-1                10             10             3
port-1-2                500            500            3
port-1-2                10             10             3
port-1-3                500            500            3
port-1-3                10             10             3
port-1-4                500            500            3
port-1-4                10             10             3
port-1-5                500            500            3
...
=====
```

Table 213: Output fields: BFD interface

Label	Description
TX Interval	Displays the interval, in milliseconds, between the transmitted BFD messages to maintain the session

Label	Description
RX Interval	Displays the expected interval, in milliseconds, between the received BFD messages to maintain the session
Multiplier	Displays the integer used by BFD to declare when the neighbor is down

## interface

### Syntax

**interface** [*interface-name*]

### Context

[\[Tree\]](#) (show>router>icmp interface)

[\[Tree\]](#) (show>router>icmp6 interface)

### Full Context

show router icmp interface  
show router icmp6 interface

### Description

This command displays interface ICMP and ICMP6 statistics.

### Parameters

***interface-name***

Only displays entries associated with the specified IP interface name.

### Platforms

All

### Output

The following output is an example of ICMPv6 interface statistics, and [Table 214: Output fields: ICMP6 interface](#) describes the fields.

### Output Example

```
B:CORE2# show router icmp6 interface net1_1_2
=====
Interface ICMPv6 Stats

Neighbor Solicits : 27        Neighbor Advertisements : 20
=====
B: CORE2#

```

Table 214: Output fields: ICMP6 interface

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location

## interface

### Syntax

**interface** [*ip-int-name* | *ip-address*] [**detail**]

### Context

[\[Tree\]](#) (show>router>isis interface)

Full Context

show router isis interface

Description

This command displays IS-IS interface information. When no *ip-addr* or the *ip-int-name* is specified, all interfaces are listed.

Parameters

*ip-address*

Displays only the interface information associated with the specified IP address.

- Values
- ipv4-address

  - a.b.c.d (host bits must be 0)

ipv6-address

  - x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D

*ip-int-name*

Displays only the interface information associated with the specified IP interface name.

detail

Keyword to display detailed information.

Platforms

All

Output

The following outputs are examples of IS-IS interface information, and [Table 216: Output fields: detailed IS-IS interface](#) describes the output fields.

Output example

```
A:node-2# show router isis interface
=====
Rtr Base ISIS Instance 0 Interfaces
=====
Interface                Level CircID  Oper   L1/L2 Metric  Type
                        State
-----
To_PE1                    L1L2   2      Down    0/0          bcst
-----
Interfaces : 1
=====
```

Table 215: Output fields: IS-IS interface

Label	Description
Interface	The interface name
Level	The interface level (1, 2, or 1 and 2)
Circuit Id	The circuit identifier
Oper State	Up — the interface is operationally up Down — the interface is operationally down
Metric	The interface metric for Level 1 and Level 2, if none are set to 0
Type	p2p — the operational interface type is point-to-point bcst — the operational interface type is broadcast

The following outputs are examples of IS-IS interface information, and [Table 216: Output fields: detailed IS-IS interface](#) describes the output fields.

#### Output example

```

```

Table 216: Output fields: detailed IS-IS interface

Label	Description
Interface	The interface name
Level Capability	The interface level (1, 2, or 1 and 2)
Oper State	Up — the interface is operationally up Down — the interface is operationally down
Admin State	Up — the interface is administratively up Down — the interface is administratively down
Auth Keychain	The authentication keychain name
Auth Type	The authentication type
Auth State	The authentication state
Circuit Id	The circuit identifier

Label	Description
Retransmit Int.	The retransmit interval, which is the minimum time between LSP PDU retransmissions
Type	Pt-to-Pt — the interface type is point-to-point Broadcast — the interface type is broadcast Non-Broadcast — X.25, Frame Relay, and similar technologies
LSP Pacing Int.	The LSP pacing interval defining the flooding pace to neighboring devices
Oper Type	The operational interface type: <ul style="list-style-type: none"> <li>Broadcast – the operational interface type is broadcast</li> <li>Pt-to-Pt – the operational interface type is point-to-point</li> </ul>
CSNP Int.	The interval between successive CSN PDUs being sent
Mesh Group	Displays if the mesh group is active or inactive
BER	The bit error rate
LFA NH Template	The LFA next-hop (NH) template configuration
Bfd Enabled	Displays if Bidirectional Forwarding (BFD) is enabled: <ul style="list-style-type: none"> <li>Yes – BFD is enabled</li> <li>No – BFD is disabled</li> </ul>
Topology	The IS-IS topology information
Te Metric	The TE metric configured for the interface
Te State	Displays if TE is enabled on the interface
Admin Groups	Displays the bitmap inherited from the MPLS interface that identifies the administrative groups to which this interface belongs
Delay Normaliz.	The state of delay normalization: <ul style="list-style-type: none"> <li>Enabled – Delay normalization is enabled. When delay normalization is enabled, the normalized delay is used by the respective TLVs within the IGP link-state packets.</li> <li>Disabled – Delay normalization is disabled. When delay normalization is disabled, the measured delay is used by the respective TLVs within the IGP link-state packets</li> </ul>
Minimum Delay	The minimum delay configured on the interface
Delay Tolerance	The interval granularity within the range
Measured Delay	The measured delay on the interface

Label	Description
Normalized Delay	The normalized delay on the interface
Ldp Sync	Displays if the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the IS-IS routing protocol
Ldp Sync Wait	The time to wait for the LDP adjacency to come up
Ldp Timer State	The state of the LDP synchronized time left on the IS-IS interface
Ldp Tm Left	The time left before IS-IS reverts back to advertising the normal metric for this interface
Route Tag	The route tag of the entry
LFA	Displays if the Loop-Free Alternate (LFA) next-hop is included
Default Instance	The default instance for the entry
Load Bal Weight	The load balancing weight, if this weight is configured
Hello Padding	Displays if Hello padding is enabled
Level	The routing level for the IS-IS routing instance
Adjacencies	Displays the number of adjacencies with IS-IS neighbors
Desg. IS	The designated intermediate system
Auth Keychain	Displays if the authentication keychain is enabled
Auth Type	Displays the authentication type. If no type exists, the field displays as None.
Metric	The interface metric for Level 1 and Level 2, if none are set to 0
Hello Timer	The Hello timer for the entry
Ipv6-Ucast-Met	The IPv6 unicast metric for the entry
Priority	The priority for the entry
Ipv6-Mcast-Met	The IPv6 multicast metric for the entry
Passive	Displays if the interface operates as a normal IS-IS interface with regard to adjacency forming and network and link behavior
Ipv4-Mcast-Met	The IPv4 multicast metric for the entry
SD-Offset	The SD offset for the entry
SF-Offset	The SF offset for the entry
Hello Mult.	The Hello multiplier for the entry

Label	Description
LSP Tx Q Count	The LSP transmission Q count for the entry
Hello Padding	The Hello padding for the entry

## interface

### Syntax

```
interface [ip-int-name | ip-address] [detail]  
interface [area area-id] [detail]  
interface [ip-int-name | ip-address] database [detail]
```

### Context

```
[Tree] (show>router>ospf interface)
```

### Full Context

```
show router ospf interface
```

### Description

This command displays the details of the OSPF interface identifiable by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

**Note:**  
The **detail** keyword generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

### Parameters

#### *ip-int-name*

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

#### *ip-address*

Displays only the interface identified by this IPv4 address.

- Values**    ipv4-address:
- a.b.c.d

#### **area** *area-id*

Displays all interfaces configured in this area.

- Values**    ip-address — a.b.c.d  
              area — 0 to 4294967295

#### **detail**

Keyword to display detailed information for the interface.

database

Keyword to display database information for the interface.

Platforms

All

Output

The following output is an example of the OSPF interface information, and [Table 217: Output fields: OSPF Interface](#) describes the output fields.

Output example – OSPFv2 system interface

```
A:node-2# show router ospf interface "system"
=====
Rtr Base OSPFv2 Instance 0 Interface "system"
=====
If Name          Area Id          Designated Rtr  Bkup Desig Rtr  Adm  Oper
-----
system           0.0.0.0          10.20.1.3       0.0.0.0         Up   DR
-----
No. of OSPF Interfaces: 1
=====
```

Output example – OSPFv2 interface output

```
A:node-2# show router ospf 1 interface "DUTC_TO_DUTB.1.0"
=====
Rtr Base OSPFv2 Instance 1 Interface "DUTC_TO_DUTB.1.0"
=====
If Name          Area Id          Designated Rtr  Bkup Desig Rtr  Adm  Oper
-----
DUTC_TO_DUTB.1.0 0.0.0.0          0.0.0.0         0.0.0.0         Up   PToP
-----
No. of OSPF Interfaces: 1
=====
```

Table 217: Output fields: OSPF Interface

Label	Description
If Name	The interface name
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
D Rtr Id	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated Router.
BD Rtr Id	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated router.

Label	Description
Adm	Dn — OSPF on this interface is administratively disabled Up — OSPF on this interface is administratively enabled
Opr	Down — this is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. Wait — the router is trying to determine the identity of the (Backup) Designated router for the network PToP — the interface is operational, and connects either to a physical point-to-point network or to a virtual link DR — this router is the Designated Router for this network BDR — this router is the Backup Designated Router for this network ODR — the interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router
No. of OSPF Interfaces	The number of interfaces listed

The following output is an example of detailed OSPF interface information, and [Table 218: Output fields: detailed OSPF Interface](#) describes the output fields.

Table 218: Output fields: detailed OSPF Interface

Label	Description
IP Address	The IP address and mask of this OSPF interface
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The length of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that the Hello packets of a router have not been seen before its neighbors declare the router down. This should be some multiple of the Hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor
Cfg Metric	The metric to be advertised for this interface
Advert Subnet	False — when a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes  True — when a point-to-point interface is configured to true, the subnet is advertised
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface
Cfg IF Type	The configured interface type
Passive	False — this interface operates as a normal OSPF interface with regard to adjacency forming and network or link behavior  True — no OSPF Hellos will be sent out on this interface and the router advertises this interface as a stub network or link in its router LSAs
Cfg MTU	The required size of the largest packet that can be sent or received on this OSPF interface, specified in octets. This size

Label	Description
	does include the underlying IP header length, but not the underlying layer headers/trailers.
LSA-filter-out	This field indicates if LSA filter out is configured
Adv Rtr Capab	The capability of the advertising router
LFA	This field indicates if Loop-Free Alternate (LFA) is configured
LFA NH Template	The LFA Next-Hop (NH) template configuration
Load Bal Weight	The load balancing weight, if this weight is configured
Bfd Enabled	This field indicates if Bidirectional Forwarding Detection (BFD) is enabled. The field will include the following values: <ul style="list-style-type: none"> <li>• Yes – BFD is enabled</li> <li>• No – BFD is disabled</li> </ul>
Bfd Strict Mode	This field indicates if BFD strict-mode is enabled. The field includes the following values: <ul style="list-style-type: none"> <li>• Yes – BFD strict-mode is enabled</li> <li>• No – BFD strict-mode is disabled</li> </ul>
Bfd Str Holddown	The BFD strict-mode holddown timer
RIB-priority	The RIB prioritization for the OSPF protocol specified as either high (enabled) or none (disabled). When enabled at the OSPF interface level, all routes learned through the associated OSPF interface are processed through the OSPF route calculation process at a higher priority. This field is configured using the <b>configure router ospf area interface rib-priority [high]</b> command.
Delay Normaliz.	Displays the state of delay normalization: <ul style="list-style-type: none"> <li>• Enabled – delay normalization is enabled and normalized delay is used by the respective TLVs within the IGP link-state packets.</li> <li>• Disabled – delay normalization is disabled and measured delay is used by the respective TLVs within the IGP link-state packets</li> </ul>
Minimum Delay	The lowest delay allowed on the interface
Delay Tolerance	The delay interval granularity
Auth Type	Displays the authentication procedure to be used for the packet:. None — routing exchanges over the network/subnet are not authenticated

Label	Description
	<p>Simple — a 64-bit field is configured on a per-network basis. All packets sent on a particular network must have this configured value in their OSPF header 64-bit authentication field. This essentially serves as a "clear" 64-bit password.</p> <p>MD5 — a shared secret key is configured in all routers attached to a common network or subnet. For each OSPF protocol packet, the key is used to generate or verify a "message digest" that is appended to the end of the OSPF packet.</p>
State	
Admin Status	<p>Disabled — OSPF on this interface is administratively shut down</p> <p>Enabled — OSPF on this interface is administratively enabled</p>
Oper State	<p>Down — this is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable</p> <p>Waiting — the router is trying to determine the identity of the (Backup) Designated Router for the network</p> <p>Point To Point — the interface is operational, and connects either to a physical point-to-point network or to a virtual link.</p> <p>Designated Rtr — this router is the Designated Router for this network</p> <p>Other Desig Rtr — the interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router</p> <p>Backup Desig Rtr — this router is the Backup Designated Router for this network</p>
Designated Rtr	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router.
Backup Designated Router	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated Router.
IF Type	<p>Broadcast — LANs, such as Ethernet</p> <p>Non-Broadcast — X.25, Frame Relay and similar technologies</p> <p>Point-To-Point — Point-to-point links</p>
Network Type	Stub – OSPF has not established a neighbor relationship with any other OSPF router on this network, as such only traffic sourced or destined to this network is routed to this network

Label	Description
	Transit – OSPF has established at least one neighbor relationship with any other OSPF router on this network, as such traffic enroute to other networks may be routed via this network
Oper MTU	The operational size of the largest packet which can be sent or received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface
Oper Metric	The operational metric for the interface used by OSPF
Te Metric	The TE metric configured for this interface. This metric is flooded out in the TE metric sub-TLV in the OSPF TE LSAs. Depending on the configuration, either the TE metric value or the native OSPF metric value is used in CSPF computations.
Te State	Displays if TE is enabled on the interface
Admin Groups	Displays the bitmap inherited from MPLS interface that identifies the admin groups to which this interface belongs
Measured Delay	The measured delay on the interface. When delay normalization is disabled, the measured delay is used by the respective TLVs within IGP link-state packets.
Normalized Delay	The delay normalized based on the configuration. When normalized delay is configured, the respective TLVs within the IGP link-state packets use the normalized delay value
Ldp Sync	Displays whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol
Ldp Sync Wait	The time to wait for the LDP adjacency to come up
Ldp Timer State	The state of the LDP sync time left on the OSPF interface
Ldp Tm Left	Displays the time left before OSPF reverts back to advertising normal metric for this interface
Statistics	
Nbr Count	The number of OSPF neighbors on the network for this interface
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled

Label	Description
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled
Tx LSRs	The total number of Link State Requests (LSRs) transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled
Tx LSUs	The total number of Link State Updates (LSUs) transmitted on this interface since this interface was last enabled
Rx LS Acks	The total number of Link State Acknowledgments received on this interface since this interface was last enabled
Tx LS Acks	The total number of Link State Acknowledgments transmitted on this interface since this interface was last enabled
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled
Tx Failures	The transmitted OSPF packets that are dropped due to resource shortage
Retransmits	The total number of OSPF Retransmits sent on this interface since this interface was last enabled
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled

Label	Description
Bad Dest Addr	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length provided in the packet itself since this interface was last enabled
Bad Hello Int.	The total number of OSPF packets received where the hello interval provided in packet was not equal to that configured on this interface since this interface was last enabled
Bad Dead Int.	The total number of OSPF packets received where the dead interval provided in the packet was not equal to that configured on this interface since this interface was last enabled
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled
Bad Checksums	The number of bad checksums for the interface
LSA Count	The LSA count for the interface
LSA Checksum	The sum of all link-scoped LSA checksums on the interface

## interface

### Syntax

**interface** [*ip-int-name* | *ip-address* | *ipv6-address*] [**detail**]

**interface** [*area area-id*] [**detail**]

**interface** [*ip-int-name* | *ip-address* ]| *ipv6-address* **database** [**detail**]

**Context**

[\[Tree\]](#) (show>router>ospf3 interface)

**Full Context**

show router ospf3 interface

**Description**

This command displays the details of the OSPFv3 interface identified by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

**Parameters**

*ip-int-name*

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

*ip-address*

Displays only the interface identified by this IPv4 or IPv6 address.

- Values
- ipv4-address:

  - a.b.c.d

ipv6-address:

  - x:x:x:x:x:x:x (eight 16-bit pieces)
  - x:x:x:x:x:d.d.d.d
  - x: [0 to FFFF]H
  - d: [0 to 255]D

*area area-id*

Displays all interfaces configured in this area.

- Values
- ip-address — a.b.c.d

area — 0 to 4294967295

**detail**

Displays detailed information for the interface.

**database**

Displays database information for the interface.

**Platforms**

All

**Output**

The following output is an example of an OSPFv3 interface information, and [Table 219: Output fields: OSPFv3 interface detail](#) describes the output fields.

### Output Example (OSPFv3 Detailed)

Table 219: Output fields: OSPFv3 interface detail

Label	Description
IP Address	The IP address and mask of this OSPF interface.

Label	Description
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The interval of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor.
Advert Subnet	False — When a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes.  True — When a point-to-point interface is configured to true, then the subnet is advertised.
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface.
Passive	False — This interfaces operates as a normal OSPF interface with regard to adjacency forming and network/link behavior.  True — No OSPF Hello messages sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs.
MTU	The desired size of the largest packet, specified in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Admin Status	Disabled — OSPF on this interface is administratively shut down.
	Enabled — OSPF on this interface is administratively enabled.
Oper State	Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable.

Label	Description
	<p>Waiting — The router is trying to determine the identity of the (Backup) Designated router for the network.</p> <p>Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.</p> <p>Designated Rtr — This router is the Designated router for this network.</p> <p>Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated router.</p> <p>Backup Desig Rtr — This router is the Backup Designated router for this network.</p>
IF Type	<p>Broadcast — LANs, such as Ethernet.</p> <p>Non-Broadcast — X.25, Frame Relay and similar technologies.</p> <p>Point-To-Point — Point-to-point links.</p>
Network Type	Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network.
	Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network.
Oper MTU	The operational size of the largest packet, in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface.
Nbr Count	The number of OSPF neighbors on the network for this interface.
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled.
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled.
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled.
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled.

Label	Description
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled.
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled.
Tx LSRs	The total number of LSRs transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled.
Tx LSUs	The total number of LSUs transmitted on this interface since this interface was last enabled.
Rx LS Acks	The total number of Link State Acknowledgments (LSAs) received on this interface since this interface was last enabled.
Tx LS Acks	The total number of LSAs transmitted on this interface since this interface was last enabled.
Retransmits	The total number of OSPF retransmits sent on this interface since this interface was last enabled.
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled.
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled.
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled.
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled.
Bad Dest Addrs	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled.
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled.

Label	Description
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled.
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled.
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled.
Bad Hello Int.	The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled.
Bad Dead Int.	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled.
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled.
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled.
Te State	Indicates the MPLS interface TE status from OSPF standpoint.
Admin Groups	Indicates the bit-map inherited from MPLS interface that identifies the admin groups to which this interface belongs.
Ldp Sync	Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol.
Ldp Sync Wait	Indicates the time to wait for the LDP adjacency to come up.
Ldp Timer State	Indicates the state of the LDP sync time left on the OSPF interface.
Ldp Tm Left	Indicates the time left before OSPF reverts back to advertising normal metric for this interface.
Tx Failures	Transmitted OSPFv3 packets that are dropped due to resource shortage.

```

## interface

### Syntax

**interface** *interface-name* [**detail** | **aggregate** | **sample**]

### Context

**[Tree]** (show>test-oam>link-measurement interface)

## Full Context

show test-oam link-measurement interface

## Description

This command displays the link measurement operational information, reporting, and recorded results for a specific interface.

## Parameters

### *interface-name*

Specifies the interface name, up to 32 characters, for which link measurement information is displayed.

### *detail*

Optional keyword to display complete link measurement operational information, reporting, and results.

### *aggregate*

Optional keyword to display operational information, reporting and aggregate sample window results.

### *sample*

Optional keyword to display operational information, reporting, and sample window results.

## Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## Output

The following output is an example of link measurement information for a specific interface, and the following table describes the output fields.

### Output Example

```
show test-oam link-measurement interface "int-PE-1-PE-2"

=====								

Table 220: Output fields: link measurement interface

Label	Description
Interface Link Measurement Information	
Template Name	The name of the link measurement template
Oper State	The operational state of the test configured under the interface

Label	Description
	Up — assigned link-measurement template, and a test protocol is enabled; UDP port available, and internal resources are available  Down — one or more requirements for the Up state is not met
Protocol	The active protocol encapsulating the test packet IPv4 or IPv6
Oper Source Address	The source address of the test packet
Source Auto-Assigned	The source address is automatically determined  No — the source is configured or cannot be automatically determined  Yes — the source is automatically determined
Oper Destination Address	The destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	The destination address is automatically determined.  No — the destination is configured or cannot be automatically determined  Yes — the destination is automatically determined
Failure Condition(s)	The requirements not met causing an Oper Down state
Detectable Tx Errors	The error condition detected that may prevent the test packet from being sent
<b>Reporting</b>	
Reporting Enabled	The current value should be compared to a threshold and possibly reported  Yes — at least one threshold in either window is configured  No — none of the thresholds in either window is configured
Delay Measurement Last Reported	The value of the last measurement reported to the routing engine
Timestamp	The end timestamp (UTC) of the last reported delay measurement
Trigger By	The window and threshold type that was exceeded triggering the reporting. Only one will be reported if multiple are triggered in the same window.
<b>Aggregate Sample Window Delay Measurement Detail</b>	

Label	Description
Count	The number of sample widows included in the aggregate sample window
<b>Sample Window Delay Measurement Detail</b>	
Rcv/Snt	The number of response test packets received (Rcv) and sent (Snt)
Err	<p>The number of errors included in the sample window. This is the total of duplicates, zero, and negative valued measurements. The negative error count is incremented if either direction is negative, regardless of the unidirectional-measurement configuration method. A negative measurement in either direction calls into question the validity of both directions. Errors are included in the receive count, but do not count toward integrity.</p> <p>* — value exceeds column width; value more than 999</p>
<b>Common Table Labels</b>	
Currently Reporting	The configured value of the delay measurement to consider (Min, Max, Avg)
End Timestamp (UTC)	The time at which the window closed
State	<p>The state of the window</p> <p>InProgress — currently executing</p> <p>Completed — closed via normal execution</p> <p>Terminated — preempted by some action; closed and not considered for report</p> <p>SwReported — new delay reported from this sample window</p> <p>AswReported — new delay reported from this aggregate sample window (only applicable to Aggregate Sample Windows)</p>
Min (us)	<p>The minimum delay value recorded in this window, in units microseconds</p> <p>N/A — not applicable or incalculable, when no responses are received, or all are in error</p> <p>* — value exceeds column width; value in excess of 9999999</p>
Max (us)	<p>The maximum delay value recorded in this window, in units microseconds</p> <p>N/A — not applicable or incalculable, when no responses are received, or all are in error</p>

Label	Description
	* — value exceeds column width; value in excess of 9999999
Avg (us)	The average delay value recorded in this window, in units microseconds N/A — not applicable or incalculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
I	The window has integrity and should be considered Y — yes, achieved integrity N — no, did not meet configured integrity percentage
Results	The metric considered for reporting in this window N/A — not applicable or incalculable, when no responses are received, or all are in * — value exceeds column width; value more than 9999999

interface

Syntax

```
interface interface-name
interface interface-name port port-id [debug-counters]
```

Context

```
[Tree] (show>test-oam>lag-meas interface)
```

Full Context

```
show test-oam lag-ip-measurement interface
```

Description

This command displays LAG measurement data for the specified LAG interface.

Parameters

- interface-name

Specifies the interface name, up to 32 characters.
- port-id

Specifies the port ID.

Values slot[/mda[/port]]

eth-sat-id	<b>esat-id</b> <i>/[slot]/[u]port</i>	
	<b>esat</b>	keyword
	<i>id</i>	1 to 40
pxc-id	<b>pxc-id</b> <i>.sub-port</i>	
	<b>pxc</b>	keyword
	<i>id</i>	1 to 256
	<i>sub-port</i>	a to b

**debug-counters**

Keyword to display the debug counters.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**

The following outputs are examples of LAG measurement data:

- [Output example: LAG IP measurement interface summary, Table 221: Output fields: LAG IP measurement interface summary](#)
- [Output example: LAG IP measurement interface port 1/1/1, Table 222: Output fields: LAG IP measurement port 1/1/1 summary](#)
- [Output example: LAG IP measurement port 1/1/1 debug-counters, Table 223: Output fields: LAG IP measurement port 1/1/1 debug-counters](#)

**Output example: LAG IP measurement interface summary**

```
show test-oam lag-ip-measurement interface <interface-name>

Table 221: Output fields: LAG IP measurement interface summary

Label	Description
LAG IP Measurement Results for Interface	
LAG Template	Displays the name of the link measurement interface on the LAG template
LAG Measurement Oper State	Displays the operational state of the test configured under the interface  Up — assigned link measurement template. A test protocol is enabled, a UDP port is available, and internal resources are available.  Down — one or more requirements for the Up state are not met
LAG Name	Displays the name of the LAG
LAG Member Count	Displays the number of ports in the LAG (micro sessions)
Protocol	Displays the active protocol encapsulating the test IPv4 or IPv6 packet
Oper Source Address	Displays the source address of the test packet (IPv4 or IPv6)
Source Auto-Assigned	Displays the source address that is automatically determined  No — the source is configured or cannot be automatically determined  Yes — the source is automatically determined
Destination Address	Displays the destination address of the test packet (IPv4 or IPv6)

Label	Description
Destination Auto-Assigned	Displays the destination address that is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Destination UDP Port	Displays the destination UDP port that is the listening port on the Session-Reflector
Session Sender Type	Displays the format of the test packet that will be transmitted
STAMP Session ID	Displays the STAMP session ID
Failure Condition	Displays if the requirements are not met, which causes an operationally down state
Detectable Tx Errors	Displays the detected error condition that may prevent the test packet from being sent
LAG IP Measurement Results Summary for Port Information	
Detectable Tx Error	Displays the detected error condition that may prevent the test packet from being sent for the micro session on the port
End Timestamp	Displays the time of last completed sample window
Sample Window State	Displays the state of the sample window complt – completed sample window discrd – operational state of the LAG IP measurement transitioned to per down during the sample window inProg – the micro session is currently running
Frame Loss Ratio	Displays the round trip Frame Loss Ratio (FLR) using the count of transmitted and received packets in the sample window
Average Round Trip Delay	Displays the average round trip delay, in microseconds, for the sample window
Average Round Trip IFDV	Displays the average Inter Frame Delay Variation (IFDV) for the sample window in microseconds

**Output example: LAG IP measurement interface port 1/1/1**

Table 222: Output fields: LAG IP measurement port 1/1/1 summary

Label	Description
LAG IP Measurement Results for Interface	
LAG Template	Displays the name of the link measurement on the LAG template
LAG Measurement Oper State	Displays the operational state of the test configured under the interface  Up — assigned link measurement template. A test protocol is enabled, a UDP port is available, and internal resources are available.  Down — one or more requirements for the Up state are not met
LAG Name	Displays the name of the LAG
LAG Member Count	Displays the number of ports in the LAG (micro sessions)
Protocol	Displays the active protocol encapsulating the test IPv4 or IPv6 packet
Oper Source Address	Displays the source address of the test packet (IPv4 or IPv6)
Source Auto-Assigned	Displays the source address that is automatically determined  No — the source is configured or cannot be automatically determined  Yes — the source is automatically determined
Destination Address	Displays the destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	Displays the destination address that is automatically determined  No — the source is configured or cannot be automatically determined  Yes — the source is automatically determined
Destination UDP Port	Displays the destination UDP port that is the listening port on the Session-Reflector
Session Sender Type	Displays the format of the test packet that will be transmitted
STAMP Session ID	Displays the STAMP session ID
Failure Condition	Displays if the requirements are not met, which causes an operationally down state

Label	Description
Detectable Tx Errors	Displays the detected error condition that may prevent the test packet from being sent
LAG IP Measurement Results for Port Information	
Sender Micro Session ID	Displays the micro-session ID in the packet added by the Session-Sender
Reflector Micro Session ID	Displays the micro-session ID in the packet added by the Session-Reflector
Detectable Tx Error	Displays the error condition detected that may prevent the test packet from being sent for the micro session on the port
Sender Micro Session ID Zero	Displays the number of packets arriving on the Session-Sender with all zeros in the sender micro-session ID field
Reflector Micro Session ID Zero	Displays the number of packets arriving on the Session-Sender with all zeros in the reflector micro-session ID field
Sender Micro Session ID Mismatch	Displays the number of packets arriving on the Session-Sender with a different sender micro-session ID than expected
LAG IP Measurement Sample Window for Port Information	
End Timestamp	Displays the time of the last completed sample window. "N/A" indicates the window is not completed and results are not computed.
State	Displays the state of the sample window complt – completed sample window discrd – the operational state of the LAG IP measurement transitioned to per down during the sample window inProg – the micro session is currently running
Rcv/Sent	Displays the number of test packets sent and received
FLR%	Displays the round trip FLR using the number transmitted and received packets in the sample window
Dir	Displays the direction relative to the result RT – round trip
Type	Displays the type of measurement FD – Frame Delay IFDV – InterFrame Delay Variation
E	Displays if zero or negative round trip delay is calculated Y – yes

Label	Description
	Blank – no
Min(us)	Displays the minimum measured value in microseconds
Max(us)	Displays the maximum measured value in microseconds
Avg(us)	Displays the maximum computed valued in microseconds

Rcv/Sent	Displays the number of test packets sent and received
MFlag	Displays the number of malformed STAMP packets reported by the far end
UFlag	Displays the number of unrecognized STAMP packets reported by the far end
0Neg	Displays whether at least one negative (or zero) Round Trip delay was calculated

## interface

### Syntax

**interface** *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**aux-stats**]

### Context

[\[Tree\]](#) (monitor>router>mpls interface)

### Full Context

monitor router mpls interface

### Description

This command displays statistics for MPLS interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the MPLS interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

### Parameters

#### **interface**

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**Values** *ip-int-name, ip-address*

#### **seconds**

Configures the interval for each display, in seconds.

**Values** 11 to 60

**Default** 11 seconds

#### **repeat**

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

#### **absolute**

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

- rate**  
Displays rate-per-second for each statistic instead of the delta.
- aux-stats**  
Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

Output Example

## interface

### Syntax

**interface** *interface* [*interface*] [*interval seconds*] [*repeat repeat*] [*absolute | rate*]

### Context

[\[Tree\]](#) (monitor>router>ospf3 interface)

[\[Tree\]](#) (monitor>router>ospf interface)

### Full Context

monitor router ospf3 interface

monitor router ospf interface

### Description

This command displays statistics for OSPF interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the OSPF interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

### Parameters

#### *interface*

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**Values** *ip-int-address, ip-address*

**seconds**

Configures the interval for each display, in seconds.

**Values** 3 to 60

**Default** 10

**repeat**

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

**absolute**

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

**rate**

Displays rate-per-second for each statistic instead of the delta.

**Platforms**

All

**Output**

The following output is an example of OSPF interface information.

**Output Example**

```
A:ALA-12>monitor>router>ospf# interface to-104 interval 3 repeat 3 absolute
=====

A:ALA-12>monitor>router>ospf#

## interface

### Syntax

**interface** *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

### Context

[\[Tree\]](#) (monitor>router>rsvp interface)

### Full Context

monitor router rsvp interface

### Description

This command displays statistics for RSVP interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the RSVP interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

### Parameters

#### **interface**

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

**Values** *ip-int-name, ip-address*

#### **seconds**

Configures the interval for each display, in seconds.

**Values** 3 to 60

**Default** 10

#### **repeat**

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

#### **absolute**

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

**rate**  
Displays rate-per-second for each statistic instead of the delta.

**Platforms**  
All

12.35 interface-id-mapping

interface-id-mapping

**Syntax**  
interface-id-mapping

**Context**  
[\[Tree\]](#) (show>router>dhcp6>local-dhcp-server interface-id-mapping)

**Full Context**  
show router dhcp6 local-dhcp-server interface-id-mapping

**Description**  
This command displays information about the DHCPv6 server that uses a unique /64 prefix per interface-ID options combination.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of interface ID mapping information.

Output Example

```
show router 600 dhcp6 local-dhcp-server "d6" interface-id-mapping
=====
Interface-ID Mappings for DHCPv6 server d6
=====
Mapped Prefix      : 2001:AAAA::/64
Relay Interface ID : 1/1/10
LDRA Interface ID  : (Not Specified)
Active Leases      : 2001:AAAA::1 (stable)
=====
1 prefix found
=====
```

Table 224: Output fields: interface ID mapping describes interface ID mapping field descriptions.

Table 224: Output fields: interface ID mapping

Field	Description
Mapped Prefix	The mapped prefix
Relay Interface ID	The value of the Interface-ID Option assigned by the DHCPv6 Relay Agent
LDRA Interface ID	The value of the Interface-ID Option assigned by the Lightweight DHCPv6 Relay Agent
Active Leases	The number of active leases
No. of prefixes found	The total number of prefixes found.

12.36 interface-statistics

interface-statistics

Syntax

```
interface-statistics service service-id all
interface-statistics service service-id group-interface grp-if
interface-statistics service service-id subscriber-interface sub-if
```

Context

```
[Tree] (clear>subscr-mgmt interface-statistics)
```

Full Context

```
clear subscriber-mgmt interface-statistics
```

Description

This command clears subscriber interface statistics.

Parameters

- service-id

Specifies the service ID of the service

Values1 to 214748364  
svc-name: up to 64 characters
- grp-id

Specifies the group interface name, up to 32 characters

***sub-id***

Specifies the subscriber interface, up to 32 characters

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interface-statistics

**Syntax**

**interface-statistics service *service-id* all**

**interface-statistics service *service-id* group-interface *grp-if***

**interface-statistics service *service-id* subscriber-interface *sub-if***

**Context**

[\[Tree\]](#) (show>subscr-mgmt interface-statistics)

**Full Context**

show subscriber-mgmt interface-statistics

**Description**

This command displays subscriber interface statistics.

**Parameters**

***service-id***

Specifies the service ID of the service.

**Values**    1 to 2148278386  
              svc-name: up to 64 characters

***grp-id***

Specifies the group interface name, up to 32 characters

***sub-id***

Specifies the subscriber interface, up to 32 characters

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**Output**

The following output is an example of service interface statistics information.

**Output Example**

```
*B:Dut-C# show subscriber-mgmt interface-statistics service 10 all
=====
Subscriber statistics for svc 10, itf si-1

12.37 interfaces

interfaces

**Syntax**  
interfaces

**Context**  
[\[Tree\]](#) (show>test-oam>lag-meas interfaces)

**Full Context**  
show test-oam lag-ip-measurement interfaces

**Description**  
This command displays LAG measurement data on all LAG interfaces.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**Output**  
The following output is an example of the LAG measurement data on all LAG interfaces, and [Table 225: Output fields: LAG IP measurement summary for all interfaces](#) describes the output fields.

Output Example: LAG IP measurement summary for all interfaces

```
show test-oam lag-ip-measurement interfaces
-----
LAG IP Measurement Interface Operational Summary
-----
Interface
  Oper  Protocol  Detectable Tx Error  Ports
-----
to-sr7
  Up    IPv4          none              2
```

-----

Table 225: Output fields: LAG IP measurement summary for all interfaces

Label	Description
Interface	Displays the interface name
Oper	Displays the operational state of the LAG measurement
Protocol	Displays the IP protocol enabled for the LAG measurement
Detectable Tx Error	Displays the error preventing the LAG measurement from transmitting packets on any of the ports
Ports	Displays the number of ports (micro sessions)

12.38 iom

iom

Syntax

iom [slot-number]

Context

[\[Tree\]](#) (tools>dump>filter>resources iom)

Full Context

tools dump filter resources iom

Description

This command shows information about filter resource utilization on all IOMs or a specified IOM. Resource utilization per filter type is available, as well as filters using most resources on a given line card.

Parameters

**slot-number**

Specifies that only the filter resource utilization associated with the IOM card in this slot will be displayed.

**Values** 1 to 10

Platforms

All

## Output

The following output is an example of filter resource utilization information for all IOMs.

### Output Example

```
*A:Dut-C>tools>dump>filter>resources># iom
```

```
=====
Number of ACL filter entries used / available on IOMs
=====
```

Slot	Used	Available
1	11	65524
2	5	65530
3	5	65530

```
=====
Number of ACL filters and filter entries used / available on FlexPaths
=====
```

Slot	FlexPath	Dir	Filters used	Filters avail	MAC/IP entries used	MAC/IP entries avail	IPv6 entries used	IPv6 entries avail
1	1	Ingr	2	2045	10	65526	2	28670
		Egr	2	2045	5	32763	2	16382
2	1	Ingr	4	2043	7	65529	2	28670
		Egr	0	2047	2	32766	2	16382
3	1	Ingr	0	2047	7	65529	2	28670
		Egr	0	2047	2	32766	2	16382

```
=====
Filters utilizing most resources (ordered by TCAM entries per FlexPath)
Only filters present on any IOM are displayed
=====
```

No more Ipv6 filters				

## 12.39 ip

ip

### Syntax

**ip** [**filter-type** *filter-type*]  
**ip embedded** [**inactive**]  
**ip** *ip-filter-id* **embedded** [**inactive**]  
**ip** *ip-filter-id* [**detail**]  
**ip** *ip-filter-id* **associations**  
**ip** *ip-filter-id* **type** *entry-type*  
**ip** *ip-filter-id* **counters** [**type** *entry-type*] [**detail**]  
**ip** *ip-filter-id* **entry** *entry-id* [**counters**] [**detail**]  
**ip** *ip-filter-id* [**entry** *entry-id*] **effective-action** [{**ingress** | **egress**}]  
**ip** *ip-filter-id* [**entry** *entry-id*] **effective-action** **router** [{**ingress** | **egress**}]  
**ip** *ip-filter-id* [**entry** *entry-id*] **effective-action** **service** *service-id* [{ **ingress** | **egress**}]

### Context

[\[Tree\]](#) (show>filter ip)

### Full Context

show filter ip

### Description

This command displays IPv4 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv4 filter policy.

### Parameters

#### **filter-type**

Specifies the type of filter to display.

**Values** config, flowspec, host-common, openflow

#### **inactive**

Displays all, or optionally inactive embeddings. If *ip-filter-id* is specified, displays embeddings for the IP filter ID.

#### **ip-filter-id**

Specifies the IPv4 filter policy for which to display information. Values can be expressed in different formats; the following shows decimal integer format.

**Values** 1 to 65535

**detail**

Displays detailed information.

**associations**

Appends, to the detailed filter policy output, information about where the specified filter policy is applied.

**entry-type**

Specifies the type of filter entry to display.

**Values** fixed, radius-insert, credit-control-insert, flow-spec, embedded, radius-shared, pcc-rule

**counters**

Displays counter information for the specified filter ID. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

**entry-id**

Specifies the filter policy entry (of the specified filter policy) for which to display information.

**Values** 1 to 2097151

**effective-action**

Displays the action that the system will effectively apply to the packet.

**ingress**

Filters the output and only displays the information for filter policies applied on ingress.

**egress**

Filters the output and only displays the information for filter policies applied on egress.

**router**

Filters the output and only displays the information for that specific service ("Base" instance).

**service-id**

Filters the output and only displays the information for the specified service. The specified value must correspond to an existing service in which the filter has been applied.

**Platforms**

All

**Output**

**Show Filter (no policy specified)** — The following is an output example of IPv4 filter information when no policy is specified. [Table 226: Output fields: IP filter ID](#) describes the command output fields.

**Output Example**

```
A:ALA-49# show filter ip
=====
Configured IP Filters                                     Total:      2
```

```

=====
Filter-Id  Scope  Applied Description
-----
5          Template Yes
6          Template Yes
=====

Host Common IP Filters                                     Total:    2
=====
Filter-Id          Description
-----
5:P4                Auto-created PCC-Rule Ingress Filter
6:P5                Auto-created PCC-Rule Egress Filter
=====
Num IP filters: 4
=====

```

Table 226: Output fields: IP filter ID

Label	Description
Filter Id	The IP filter ID
Scope	Template — the filter policy is of type template
	Exclusive—the filter policy is of type exclusive
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Description	The IP filter policy description

**Show Filter (no filter-id specified, embedded keyword specified)** — The following output is an example of IPv4 filter information when no filter ID is specified but the embedded keyword is specified. [Table 227: Output fields: IP \(no filter ID specified\)](#) describes the command output fields.

#### Output Example

```

*A:Dut-C>config>filter# show filter ip embedded
=====
IP Filter embedding
=====
In    From    Priority    Inserted    Status
-----
10    2          50          1/1         OK
      1          100         1/2         OK- 1 entry overwritten
20    2          100         0/5         Failed – out of resources
=====

```

Table 227: Output fields: IP (no filter ID specified)

Label	Description
In	Shows embedding filter index

Label	Description
From	Shows embedded filters included
Priority	Shows priority of embedded filter
Inserted	Shows embedded/total number of entries from embedded filter. Status: <b>OK</b> — embedding operation successful, if any entries are overwritten this will also be indicated <b>Failed</b> — embedding failed, the reason is displayed (out of resources)

**Show Filter (with filter-id specified)** — The following output is an example of IPv4 filter information with the filter ID specified. [Table 228: Output fields: IP filter policy](#) describes the command output fields.

#### Output Example

```
*A:Dut-B>config>filter>ip-filter# show filter ip 10
=====
IP Filter
=====
Filter Id       : 10
Scope          : Embedded
Type           : Normal
Entries        : 4
Description    : (Not Specified)
Filter Name     : 10
```

Table 228: Output fields: IP filter policy

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop

Label	Description
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRI. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy entry description string
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Description	The IPv4 filter policy entry description string
Log Id	The filter log ID
Src. IP	The source IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. IP	The destination IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Protocol	The protocol for the match criteria; undefined indicates no protocol specified
Dscp	The DiffServ Code Point (DSCP) name
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
ICMP Code	The ICMP code field in the ICMP header of an IPv4 packet
Fragment	False — Indicates if the filter is configured to match on all non-fragmented packets
	True — Indicates if the filter is configured to match on all fragmented packets

Label	Description
	First-Only — Indicates if the filter is configured to match the first fragment of a fragmented packet
	Non-First-Only — Indicates if the filter is configured to match a fragment of a fragmented packet, but not the first fragment
	Off — fragments are not a matching criteria. All fragments and non-fragments implicitly match
Src Route Opt	Indicates if the source route option has been set
Sampling	Off — specifies that traffic sampling is disabled
	On—specifies that traffic matching the associated IPv4 filter entry is sampled
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
IP-Option	Specifies matching packets with a specific IPv4 option or a range of IPv4 options in the IPv4 header for IPv4 filter match criteria
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv4 header will be used as IPv4 filter match criteria
Tcp-flag	<p>Specifies the list of TCP flags selected:</p> <ul style="list-style-type: none"> <li>• match true is represented with the TCP flag value</li> <li>• match false is represented with an exclamation mark before the flag value</li> </ul> <p>TCP flags not selected as match criteria are not displayed</p> <p>Example:</p> <p>Matching "tcp-ack true" and "tcp-rst false" is represented in the show command as Tcp-flag : Ack !Rst</p>
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv4 filter match criteria
Egress PBR	Indicates if the <b>egress-pbr</b> flag is set for this entry
Primary Action	Indicates the configured action, if any; indented sub-labels in the show output provide configured parameters for this action

Label	Description
Secondary Action	Indicates the configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
PBR Target Status	The status of the target of the primary or secondary action based on simple checks
Extended Action	Indicates the configured extended action, if any
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Downloaded Action	The action downloaded by CPM to IOM
Dest. Stickiness	Indicates whether stickiness is configured
Hold Remain	The stickiness timer
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

**Show Filter Associations** — The following output is an example of IPv4 filter information when the **associations** keyword is specified. [Table 229: Output fields: IP associations](#) describes the command output fields.

#### Output Example

```
A:ALA-49# show filter ip 1 associations
=====
IP Filter
=====
Filter Id       : 4                      Applied       : Yes

=====
```

Table 229: Output fields: IP associations

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop—the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRI. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Association	Indicates the filter is an IPv4 filter policy
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The type of service of the service ID
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface

**Show Filter Counters** — The following output is an example of IPv4 filter information when the **counters** keyword is specified. [Table 230: Output fields: IP counters](#) describes the command output fields.

Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

### Output Example

```
*A:ALA-48# show filter ip 100 counters
=====

RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRl. Ins Pt	Indicates the PCC rule insertion point, if any

Label	Description
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

**Show Filter IP Output (with effective-action specified)** — The following output is an example of IPv4 filter information when the **effective-action** keyword is specified. [Table 231: Output fields: filter IP effective action](#) describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- action not supported in L2 service
- action not supported in L3 service
- action not supported on egress
- destination not reachable
- egress-pbr is off
- egress-pbr is on
- entry-default
- filter-default-action
- not POS unnumbered interface
- pbr-down-action-override
- target does not exist

### Output Example

```
show filter ip 1 effective-action

=====

```

Table 231: Output fields: filter IP effective action

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Stickiness	No — stickiness is not configured
	Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down

Label	Description
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if any configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if any configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	The effective action that the packet will be subject to
Extended Action	Indicates the configured extended action, if any

## ip

### Syntax

**ip** *ip-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

### Context

**[Tree]** (clear>filter ip)

### Full Context

clear filter ip

## Description

Clears the counters associated with the entries of the specified IPv4 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

## Default

Clears all counters associated with each entry of the specified IPv4 filter policy.

## Parameters

### *ip-filter-id*

The IPv4 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following shows decimal integer format.

**Values** 1 to 65535

### *entry-id*

Specifies that only the counters associated with the specified filter policy entry are cleared.

**Values** 1 to 2097151

### *ingress*

Specifies to only clear the ingress counters.

### *egress*

Specifies to only clear the egress counters.

## Platforms

All

ip

## Syntax

**ip** *ip-filter-id*

## Context

[\[Tree\]](#) (tools>dump>filter>resources ip)

## Full Context

tools dump filter resources ip

## Description

This command displays information about the specified IP filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

Parameters

*ip-filter-id*

Specifies that only the filter resource utilization associated with this IP filter will be displayed.

**Values**    1 to 65535

Platforms

All

Output

The following output is an example of IP filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># ip 100

=====
Resource utilization details for Ip filter 100
=====
CPM entries used           : 5

ip

Syntax

**ip entry** *entry-id* [**interval seconds**] [**repeat repeat**] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>cpm-filter ip)

Full Context

monitor cpm-filter ip

**Description**

This command displays monitor command statistics for IP filter entries.

**Parameters**

*entry-id*

Displays information on the specified filter entry ID for the specified filter ID only.

**Values** 1 to 2048

*seconds*

Configures the interval for each display in seconds.

**Values** 3 to 60

**Default** 10 seconds

*repeat*

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

*absolute*

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

*rate*

Displays rate-per-second for each statistic instead of the delta.

**Platforms**

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip

**Syntax**

**ip** *ip-filter-id* **entry** *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

**Context**

[\[Tree\]](#) (monitor>filter ip)

**Full Context**

monitor filter ip

**Description**

This command enables IP filter monitoring. The statistical information for the specified IP filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified IP filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

## Parameters

### *ip-filter-id*

Displays detailed information for the specified filter ID and its filter entries.

**Values** [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | \_tmnx\_tms\_egr- *mda-id*-F | \_tmnx\_tms-ing-*mda-id*-F | \_tmnx\_ofs\_*ofs-name* | *name*: 64 chars max

### *entry-id*

Displays information on the specified filter entry ID for the specified filter ID only.

**Values** [1 to 65535], fSpec-[0 to 2147483647]-[1 to 65353]

### *seconds*

Configures the interval for each display in seconds.

**Values** 3 to 60

**Default** 10 seconds

### *repeat*

Configures how many times the command is repeated.

**Values** 1 to 999

**Default** 10

### *absolute*

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

### *rate*

Displays rate-per-second for each statistic instead of the delta.

Table 232: Output fields: IPv4 exception

Label	Description
Filter-Id	The filter ID.
Scope	Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive.
Applied	No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied.
Entries	The number of entries.
Description	The description of the specified filter, if specified.
Filter Name	The filter name.
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy.

Label	Description
Entry	The number of active or inactive entries.
Description	The IPv4 filter policy entry description string.
Src. IP	The source IP address of the logged packet.
Src. Port	The source port of the logged packet.
Dst. IP	The destination IP address of the logged packet.
Dst. Port	The destination port of the logged packet.
Protocol	The protocol for the match criteria; undefined indicates no protocol specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Ing. Matches	The number of packets matched on ingress.
Egr. Matches	The number of packets matched on egress.

```

Table 233: Output fields: CPM IP filter

Label	Description
Entry-Id	Displays information about the specified management access filter entry
Dropped	Displays the number of dropped events.
Forwarded	Displays the number of forwarded events.
Description	Displays the CPM filter description.
Log ID	Displays the log ID where matched packets will be logged.
Src IP	Displays the source IP address(/netmask or prefix-list)
Dest. IP	Displays the destination IP address(/netmask).

Label	Description
Src Port	Displays the source port number (range).
Dest. Port	Displays the destination port number (range).
Protocol	Displays the Protocol field in the IP header.
Dscp	Displays the DSCP field in the IP header.
Fragment	Displays the 3-bit fragment flags or 13-bit fragment offset field.
ICMP Type	Displays the ICMP type field in the ICMP header.
ICMP Code	Displays the ICMP code field in the ICMP header.
TCP-syn	Displays the SYN flag in the TCP header.
TCP-ack	Displays the ACK flag in the TCP header.
Match action	When the criteria matches, displays drop or forward packet.
Next Hop	In case match action is forward, indicates destination of the matched packet.
Dropped pkts	Indicates number of matched dropped packets.
Forwarded pkts	Indicates number of matched forwarded packets.

## ip-filter

### Syntax

**ip-filter** [*entry entry-id*]

### Context

[\[Tree\]](#) (show>system>security>mgmt-access-filter ip-filter)

### Full Context

show system security management-access-filter ip-filter

### Description

This command displays management-access IP filters.

### Parameters

***entry-id***

Displays information for the specified entry.

**Values** 1 to 9999

Platforms

All

Output

The following output is an example of MAF IP filter information and [Table 234: Output fields: management access filter](#) describes the management access filter output fields.

Output Example

```
*A:Dut-F# show system security management-access-filter ip-filter
=====
IPv4 Management Access Filter
=====
filter type:      : ip
Def. Action      : permit
Admin Status     : enabled (no shutdown)
-----
Entry            : 1
Description      : (Not Specified)

Protocol         : undefined
Router           : undefined
Action           : none
Log              : disabled
Matches          : 0
=====
*A:Dut-F#
```

Table 234: Output fields: management access filter

Label	Description
Def. action	Permit — Specifies that packets not matching the configured selection criteria in any of the filter entries are permitted.  Deny — Specifies that packets not matching the configured selection criteria in any of the filter entries are denied and that a ICMP host unreachable message will be issued.  Deny-host-unreachable — Specifies that packets not matching the configured selection criteria in the filter entries are denied.
Entry	The entry ID in a policy or filter table.
Description	A text string describing the filter.
Src IP	The source IP address or prefix list used for management access filter match criteria.
Src interface	The interface name for the next hop to which the packet should be forwarded if it hits this filter entry.
Dest port	The destination port.

Label	Description
Matches	The number of times a management packet has matched this filter entry.
Protocol	The IP protocol to match.
Action	The action to take for packets that match this filter entry.

ip-filter

Syntax

ip-filter [entry *entry-id*]

Context

[\[Tree\]](#) (clear>cpm-filter ip-filter)

Full Context

clear cpm-filter ip-filter

Description

This command clears IP filter statistics.

Parameters

*entry-id*  
Specifies a particular CPM IP filter entry.

**Values**    1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-filter

Syntax

ip-filter *ip-filter-id*

Context

[\[Tree\]](#) (tools>perform>filter ip-filter)

Full Context

tools perform filter ip-filter

**Description**

Commands in this context perform IP filter operations.

**Parameters**

- ip-filter-id***

Specifies a particular IP filter ID or filter name.

**Values**     *filter-id* | *filter-name*
- filter-id***

Specifies the IP filter ID.

**Values**     1 to 65535
- filter-name***

Specifies name of the IP filter, up to 64 characters.

**Platforms**

All

12.42 ip-identification-assist

ip-identification-assist

**Syntax**

ip-identification-assist [**isa** *mda-id/esa-vm-id*]

**Context**

[\[Tree\]](#) (show>app-assure>group ip-identification-assist)

**Full Context**

show application-assurance group ip-identification-assist

**Description**

This command displays the status and statistics for the IP identification assist feature.

**Parameters**

- isa** *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

<b>Values</b>	<i>slot/mda</i>
<i>slot</i>	1 to 10, depending on chassis model

*mda* 1 to 2, depending on chassis model

**isa** *esa-vm-id*  
Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

Values	
<i>esa-esa-id/vm-id</i>	
<i>esa-id</i>	1 to 16
<i>vm-id</i>	1 to 4

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
Use the following command to display IP identification assist information for a group.

```
show application-assurance group 1 ip-identification-assist isa 1/1
```

**Output Example**

```

Commands in this context dump statistics for the IP identification assist feature.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.43 ip-prefix

ip-prefix

Syntax

**ip-prefix** [**hunt** | **detail**] [**rd** *rd*] [**prefix** *ip-prefix*/*ip-prefix-length*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**aspath-regex** *reg-exp*]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn ip-prefix)

Full Context

show router bgp routes evpn ip-prefix

Description

This command displays BGP-EVPN IPv4 prefix routes.

Parameters

**hunt**

Displays entries for the specified route.

**detail**

Displays detailed information.

**rd**

Displays information for the route distinguisher.

**Values**     *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

***ip-prefix/ip-prefix-length***

Specifies the IPv4 address and mask length.

<b>Values</b>	ip-address:	a.b.c.d
	mask:	0 to 32

***comm-id***

Specifies the community ID, up to 72 characters.

**Values**     [*as-num:comm-val* | *ext-comm* | *well-known-comm*]  
where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:  
*type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1* }  
where:
  - *as-number1* — 0 to 65535
  - *comm-val1* — 0 to 65535
  - **type** — target, origin
  - *ip-address* — a.b.c.d
  - *comm-val2* — 0 to 4294967295
  - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

**tag**

Specifies the IPv4 prefix route tag.

**Values**     0to 4294967295 | MAX-ET

**next-hop**

Specifies the IPv4 or IPv6 BGP next-hop address.

<b>Values</b>	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

**reg-exp**

Displays routes matching the specified regular expression, up to 80 characters.

**Platforms**

All

## 12.44 ip-prefix-list

### ip-prefix-list

**Syntax**

ip-prefix-list  
ip-prefix-list *prefix-list-name* [association]

**Context**

[Tree] (show>qos>match-list ip-prefix-list)

**Full Context**

show qos match-list ip-prefix-list

**Description**

Displays the list of configured IPv4 QoS prefix lists or the details of a specific IPv4 QoS prefix list together with the SAP and network QoS policies in which it is used and the entry number within that policy.

**Parameters**

- prefix-list-name***

Specifies an IPv4 prefix list which contains IPv4 address prefixes to be matched.

**Values**    A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.
- association**

Displays the QoS policy and entry number in which the specified prefix list is used.

**Platforms**

All

**Output**

The following output is an example of ip-prefix-list information

**Output Example**

```
*A:PE# show qos match-list ip-prefix-list

=====
QoS Match IP Prefix List
=====

## ip-prefix-list

### Syntax

```
ip-prefix-list [prefix-list-name]
ip-prefix-list prefix-list-name references
```

### Context

```
[Tree] (show>filter>match-list ip-prefix-list)
```

### Full Context

```
show filter match-list ip-prefix-list
```

### Description

This command displays IPv4 prefix information for match criteria in IPv4 ACL and CPM filter policies.

### Parameters

- prefix-list-name***  
String of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.
- references**  
The filter policies, policy entries and source/destination IPv4 match type per entry referring to this match list.

Platforms

All

Output

The following output is an example of IPv4 prefix information for match criteria in IPv4 ACL and CPM filter policies, and [Table 235: Output fields: filter match IP prefix lists](#) describes the output fields.

Output example

```
show filter match-list ip-prefix-list "p11"

=====

#### Context

[\[Tree\]](#) (tools>dump>router ipoe-session)

#### Full Context

tools dump router ipoe-session

#### Description

Commands in this context dump information about IPoE session-related tools in the specified routing instance.

#### Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## 12.48 ipoe-session-policy

### ipoe-session-policy

#### Syntax

**ipoe-session-policy** *ipoe-session-policy-name* [**association**]

**ipoe-session-policy**

#### Context

[\[Tree\]](#) (show>subscr-mgmt ipoe-session-policy)

#### Full Context

show subscriber-mgmt ipoe-session-policy

#### Description

This command displays IPoE session policy information.

Parameters

- ipoe-session-policy-name**

Specifies the IPoE session policy name up to 32 characters.
- association**

Displays the interface and captures SAPs that reference the IPoE session policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPoE session policy information.

Output Example

```
show subscriber-mgmt ipoe-session-policy "ipoe-policy-1"
=====
IPoE Session Policy "ipoe-policy-1"
=====

Table 237: Output fields: IPsec domain

Label	Description
Designated Role	The designated role, active or standby.
Priority	The priority.
Tunnel Group	The tunnel group ID.
Revertive	The revertive value. <b>true</b> means that revertive is configured. <b>false</b> means that revertive is not configured.
Admin State	The administrative state.
Protection Status	Displays nominal or notReady.

Label	Description
	<p><b>notReady</b> means the system is not ready for a switchover. There could be a major traffic impact if switchover happens in the case of notReady.</p> <p><b>nominal</b> means the tunnel-group is in a better situation to switchover than notReady. However, there still might be a traffic impact.</p>
Router Id	The router ID.
Current Active	The router ID of the active router.
Activity State	The activity state.
Adjacencies	
Peer	The IP address of the peer.
Router-Id	The router ID.
Oper State	The operational state of the peer.
Remote Activity State	The activity state of the peer.
Remote Designated Role	The designated role of the peer.
Domain Adjacency Entries found	The total number of domain peer entries found.
Multi-Chassis Tunnel Statistics	
Static	The number of static multi-chassis tunnels.
Dynamic	The number of dynamic multi-chassis tunnels.
Installed	The number of tunnels that have been successfully installed.
Installing	The number of tunnels that are being installed.
Awaiting Config	The number of synchronized tunnels that do not have a corresponding configuration ready.
Failed	The number of tunnels that failed to be installed.

## 12.51 ipsec-interface

### ipsec-interface

#### Syntax

**ipsec-interface**

**ipsec-interface** *ip-int-name* [**group** *grp-ipv6-address*]

**ipsec-interface** **gateway-name** *gw-name* [**remote-address** *ip-address* | *ipv6-address*] [**port** *port-id*] [**sa-id** *sa-id*]

**ipsec-interface** **static-tunnel-name** *tunnel-name* [**sa-id** *sa-id*]

#### Context

[\[Tree\]](#) (show>router>mld ipsec-interface)

#### Full Context

show router mld ipsec-interface

#### Description

This command displays information about the MLD states over IPsec tunnels.

#### Parameters

##### *ip-int-name*

Specifies the dynamic name for the MLD-enabled child\_SA.

##### *grp-ipv6-address*

Displays IPv6 multicast group address for which this entry contains information.

**Values**    ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces)  
              x:x:x:x:x:x:d.d.d.d  
              x - [0..FFFF]H  
              d - [0..255]D  
              - multicast group IPv6 address

##### *gw-name*

Specifies the IPsec gateway name, up to 32 characters.

##### *ip-address*

Displays the information associated with the specified IP address.

##### *ipv6-address*

Displays the information associated with the specified IPv6 address.

##### *port-id*

Specifies the peer's UDP port.

**Values** 0 to 4294967295

**sa-id**

Specifies the child\_SA ID.

**Values** 0 to 4294967295

**tunnel-name**

Specifies the IPsec static tunnel name up to 32 characters.

**Platforms**

All

**Output**

The following output is an example of MLD IPsec interface information. The interface name in the output is the dynamic name for an MLD-enabled child\_sa. There is a corresponding MLD interface name in the **show>ipsec>gateway name tunnel tunnel** output

**Output Example**

```
*A:DUT-A# show router 40 mld ipsec-interface "ipsec-if-1583392"
=====
mld ipsec dynamic tunnel interfaces detail
=====
name           : ipsec_gw_1040_1

12.52 ipsec-stats

ipsec-stats

**Syntax**

**ipsec-stats**

**Context**

[\[Tree\]](#) (show>isa>stats ipsec-stats)

**Full Context**

show isa statistics ipsec-stats

**Description**  
Commands in this context display IPsec tunnel statistics.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.53 ipsec-transport-mode-profile

ipsec-transport-mode-profile

**Syntax**  
`ipsec-transport-mode-profile [name]`  
`ipsec-transport-mode-profile name association`

**Context**  
[\[Tree\]](#) (show>ipsec ipsec-transport-mode-profile)

**Full Context**  
show ipsec ipsec-transport-mode-profile

**Description**  
This command displays IPsec transport mode profile information. If a name is specified, the command displays details about the named **ipsec-transport-mode-profile** , otherwise, a list of configured IPsec transport mode profiles is displayed.

**Parameters**

**name**  
Displays information about the specified IPsec transport mode profile, up to 32 characters.

**association**  
Displays a list of IP tunnels that reference the specified **ipsec-transport-mode-profile name**.

**Platforms**  
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**Output**  
The following output is an example of IPsec transport mode profile information. [Table 238: Output fields: IPsec transport mode profile](#) describes the fields.

**Output Example**

```
A:v70# show ipsec ipsec-transport-mode-profile "test"
=====
```

```

IPsec Transport Mode Profile Configuration Detail
=====
Description      : (Not Specified)

=====

```

Table 238: Output fields: IPsec transport mode profile

Label	Description
Description	The text string to describe the transport mode profile
Keying Type	The keying type
Replay Window	The replay window size
IKE Policy ID	The ID of the IKE policy used for IKE negotiation
Auto Establish	The status of auto-establish
Transform Id1, Id2, Id3, Id4	The transform ID
Pre Shared Key	The pre-shared key used for authentication (hashed)
Local Id Type	The local ID used for IDi or IDr for IKEv2 tunnels
Cert Profile	The name of certificate profile to be used for certificate authentication
TrustAnchor Prof	The name of trust anchor profile to be used for certificate authentication.

Label	Description
Default Result	The default result when both the primary and secondary method failed to provide an answer
Primary	The primary method that is used to verify the revocation status of the peer's certificate; either CRL or OCSP.
Secondary	The secondary method that is used to verify the revocation status of the peer's certificate; either CRL, OCSP, or none.
Max Num of Keys	Phase 1 — The maximum number of IKE_SA keys, which can be saved by the system. Phase 2 — The maximum number of CHILD_SA keys, which can be saved by the system.
Transport Mode Profile	The transport mode profile name
SvcID	The service ID
Type	The service type
SAP	The SAP ID
Tunnel	The tunnel ID

## 12.54 ipv4

### ipv4

#### Syntax

**ipv4 all**

**ipv4 entry** *entry-id*

#### Context

[\[Tree\]](#) (clear>subscr-mgmt>isa-filter ipv4)

#### Full Context

clear subscriber-mgmt isa-filter ipv4

#### Description

This command resets the entry hit counts associated with the specified **isa-filter** to zero. If an *entry-id* is specified, only counters for that entry are reset, otherwise all entry counters are reset.

Parameters

- all**

Clears all IPv4 ISA filter entries.
- entry-id**

Specifies the ID of the entry within the ISA filter for which to reset the counters.

**Values**1 to 1024

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Syntax

- ipv4 [summary | detail] [egress-if *port-id*]
- ipv4 [summary | detail] [egress-lsp *tunnel-id*]
- ipv4 [summary | detail] [egress-nh *ip-address*]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active ipv4)

Full Context

show router ldp bindings active ipv4

Description

This command display LDP active IPv4 bindings.

Parameters

- egress-if *port-id***

Displays LDP active bindings by matching egress-if.
- egress-lsp *tunnel-id***

Specifies the tunnel identifier for this egress LSP.

**Values**0 to 4294967295
- egress-nh *ip-address***

Displays LDP active bindings by matching egress-nh.

**Values**

ipv4-address

- a.b.c.d

ipv6-address

- x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H  
d - [0 to 255]D

- detail**  
Displays detailed information.
- summary**  
Displays information in a summarized format.

**Platforms**  
All

ipv4

**Syntax**  
`ipv4 [timeout seconds] [ dhcp-client-identifier {string ascii-string | hex hex-string}] [reboot-on-success] [save-provision-file-destination file-url] [ include-user-class]`

**Context**  
[\[Tree\]](#) (tools>perform>system>auto-node-provisioning ipv4)

**Full Context**  
tools perform system auto-node-provisioning ipv4

**Description**  
This command initiates the IPv4 auto-provisioning of the node on all the ports that have an operationally up port but no IP address.

**Parameters**

**seconds**  
DHCP request timeout period, before the system tries the next interface. Within this timeout, the DHCP client tries to retransmit the DHCP request with randomized exponential backoff (RFC 2131). This randomized exponential backoff begins at 2 s and goes to 64 s (2,4,8,32,64,64,64,64). After 64 seconds, the system will retry every 64 s.

<b>Values</b>	1 to 65535 seconds
<b>Default</b>	10

**ascii-string**  
DHCP client identifier in ASCII format, up to 127 characters long.

**hex-string**  
DHCP client identifier in hexadecimal format, up to 254 hexadecimal nibbles long.

**Values** 0x0 to 0xFFFFFFFF

- file-url**  
The file URL as a *local-url*. The local file or folder name should not exceed 99 characters).
- local-url** [flash-id][file-path]
- flash-id** cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

**include-user-class**  
Keyword to include user class data in network discovery requests.

**Platforms**  
All

ipv4

- Syntax**
