Table 392: Output fields: NTP

Label	Description
Configured	Yes — NTP is configured No — NTP is not configured
Admin Status	up — Administrative state is enabled down — Administrative state is disabled
Server Enabled	Yes — This node is configured to serve external clients No — This node is not configured to server external clients
Stratum	Displays stratum level of this node
Oper Status	up — The operational state is enabled down — The operational state is disabled
Auth Check	Displays the authentication requirement
Auth KeyChain	Displays the authentication keychain name
Server Authenticate	Yes — Authentication is mandatory on received requests No — Authentication is not mandatory on received requests
Clock Source	Address of the chosen server
Auth Errors	Displays the number of authentication errors
Auth Errors Ignored	Displays the number of authentication errors ignored
Auth key Id Errors	Displays the number of key identification errors
Auth Key Type Errors	Displays the number of authentication key type errors
Current Date & Time	Current date and time as determined by the NTP process in the node
vRouter	The router instance containing the interface
Router	The router instance containing the address
Interface	The interface configured in NTP
Address	The address used for transmitted messages
Type	bcast — broadcast interface mcast — multicast interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	bclnt — broadcast client srvr — server actpr — active peer paspr — passive peer
Auth	yes — Authentication in use no — Authentication not in use
Poll	# — Current poll interval used on the interface
State	Reject — The peer is rejected and will not be used for synchronization. Rejection reasons could be the peer is unreachable, the peer is synchronized to this local server so synchronizing with it would create a sync loop, or the synchronization distance is too large. This is the normal startup state. Invalid — The peer is not maintaining an accurate clock. This peer will not be used for synchronization. Excess — The peer's synchronization distance is greater than ten other peers. This peer will not be used for synchronization. Outlier — The peer is discarded as an outlier. This peer will not be used for synchronization. Candidate — The peer is accepted as a possible source of synchronization. Selected — The peer is an acceptable source of synchronization, but its synchronization distance is greater than six other peers. Chosen — The peer is chosen as the source of synchronization. ChosenPPS — The peer is chosen as the source of synchronization, but the actual synchronization is occurring from a pulse-per-second (PPS) signal.
Remote	The IP address of the remote NTP server or peer with which this local host is exchanging NTP packets
Reference ID	When stratum is between 0 and 15 this field shows the IP address of the remote NTP server or peer with which the remote is exchanging NTP packets. For reference clocks, this field shows the identification assigned to the clock, such as, ".GPS.” For an NTP server or peer, if the client has not yet synchronized to a server/peer, the status cannot be determined and displays the following codes: Peer Codes: ACST — The association belongs to any cast server. AUTH — Server authentication failed. Wait while the association is restarted.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	AUTO — Autokey sequence failed. Wait while the association is restarted. BCST — The association belongs to a broadcast server. CRPT— Cryptographic authentication or identification failed. The details should be in the system log file or the cryptostats statistics file, if configured. No further messages will be sent to the server. DENY — Access denied by remote server. No further messages will be sent to the server. DROP — Lost peer in symmetric mode. Wait while the association is restarted. RSTR — Access denied due to local policy. No further messages are sent to the server. INIT — The association has not yet synchronized for the first time. MCST — The association belongs to a manycast server. NKEY — No key found. Either the key was never installed or is not trusted. RATE — Rate exceeded. The server has temporarily denied access because the client exceeded the rate threshold. RMOT — The association from a remote host running the ntpdc utility has had unauthorized attempted access. STEP — A step change in system time has occurred, but the association has not yet resynchronized. System Codes: INIT — The system clock has not yet synchronized for the first time. STEP — A step change in system time has occurred, but the system clock has not yet resynchronized.
St	Stratum level of this node
A	y — Authentication is enabled n — Authentication is disabled
Poll	Polling interval
Reach	Shows the reachability for the most recent polls (up to 8) Y — The NTP peer or server did respond in the indicated poll No — The NTP peer or server did not respond in the indicated poll
Offset	The time between the local and remote UTC time, in milliseconds
Time Last Request Rx	The time at which the last request was received from the client

16.19 number-of-tunnels

number-of-tunnels

Syntax

number-of-tunnels tunnel-type *tunnel-type* **isa** *mda*

number-of-tunnels tunnel-type *tunnel-type* **esa-vm** *esa-id/vm-id*

number-of-tunnels tunnel-type *tunnel-type* **system**

number-of-tunnels tunnel-type *tunnel-type* **tunnel-group** *tunnel-group-id*

Context

[Tree] (show>isa>stats>ip-tunnel-stats number-of-tunnels)

Full Context

show isa statistics ip-tunnel-stats number-of-tunnels

Description

This command displays the number of tunnels that are operationally up for the specified tunnel and scope.

The following scope types are supported:

- per ISA
- per tunnel group
- per system

  Note that L2TPv2 does not have a per-ISA scope.

The system collects statistics every hour for the past 24 hours per wall clock. A current value is also included in the output.

Parameters

tunnel-type

Displays information about the tunnel type.

Values gre, ip-in-ip, l2tpv3

mda

Displays information about the ISA ID.

Values slot/mda

system

Displays information about the system.

tunnel-group-id

Displays information about the tunnel group ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 16

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context

[Tree] (show>isa>stats>ipsec-stats number-of-tunnels)

Full Context

show isa statistics ipsec-stats number-of-tunnels

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information for the number of IPsec tunnel statistics of the specified tunnel type and scope. The system collects statistics every hour for the last 24 hour according to the wall clock. The current value is also included in the output.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The **start time** value in the output indicates the time when the results are collected.

Parameters

tunnel-type

Displays information about the specified the tunnel type.

Values all, sl2l, dl2l, ra

mda

Displays information about the specified ISA ID.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

name

Displays information about the specified IPsec GW name up to 32 characters in length.

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 96

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current value. The values of count and minutes are ignored by the system once this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa statistics ipsec-stats number** of tunnels command.

Output Example

```
show>isa>stats>ipsec-stats# number-of-tunnels tunnel-group 1

17 o Commands

17.1 oam-config-summary

oam-config-summary

Syntax

oam-config-summary

Context

[Tree] (show>test-oam oam-config-summary)

Full Context

show test-oam oam-config-summary

Description

This command displays the OAM configuration resources in use, as well as the percentage of available and per-system limits for the platform. The lines produced by the **show** command output vary by platform and may account for resource allocation in different ways. The resource accounting is tied to different resource pools across different platforms.

Platforms

All

Output

The following output is an example of OAM configuration information and Table 393: Output fields: OAM configuration summary describes the output fields.

This example is for platforms that have separate resource pools for OAM-PM (tests and packet per second). OAM-PM resources are tracked separately from the background OAM and SAA tests and transmit capacity. The limits are platform-specific.

```
show test-oam oam-config-summary
```

Output Example

```
-------------------------------------------------------------------------------
      OAM-Managed Test Capacity (tests)
      -------------------------------------------------------------------------
      Resource                                                InUse %InUse  Limit
      -------------------------------------------------------------------------
      Background ICMP Bridged Residential Gateway tests           0    0.0  50000
      Background ICMP Interface Control tests                     0    0.0   4000
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
      Background OAM and SAA tests                                    0    0.0  10000
      Background Static Host CPE Check tests                          0    0.0   5000
      Background Static Route CPE Check tests                         0    0.0  10000
      LSP Self Ping tests                                             0    0.0   1250
      OAM-PM tests                                                    0    0.0  24000
      -------------------------------------------------------------------------------
      -------------------------------------------------------------------------------
      OAM-Managed Transmit Capacity (pps)
      -------------------------------------------------------------------------------
      Resource                                                  InUse %InUse  Limit
      -------------------------------------------------------------------------------
      Shared Resource Pool Maximum                                    0    0.0  24000
        Background Shared Pool Maximum                                0    0.0  10000
          Background OAM and SAA-continuous Tx capacity               0    0.0   6000
          Background Static Route CPE Check Tx capacity               0    0.0  10000
        OAM-PM Tx capacity                                            0    0.0  18000
      Dedicated Resources
        LSP Self Ping Tx capacity                                     0    0.0    125
      -------------------------------------------------------------------------------
```

The following output is an example of those platforms that have a common resource pool (tests and packet per second) for background OAM, OAM-PM and SAA and Table 393: Output fields: OAM configuration summary describes the output fields.

```
show test-oam oam-config-summary
```

Output Example

```
-------------------------------------------------------------------------------
OAM-Managed Test Capacity (tests)
-------------------------------------------------------------------------------
Resource                                                 InUse %InUse  Limit
-------------------------------------------------------------------------------
Background OAM, OAM-PM, and SAA tests                        0    0.0
Background ICMP Interface Control tests                      0    0.0
LSP Self Ping tests                                          0    0.0
-------------------------------------------------------------------------------
OAM-Managed Transmit Capacity (pps)
-------------------------------------------------------------------------------
Resource                                                 InUse %InUse  Limit
-------------------------------------------------------------------------------
Background OAM, OAM-PM, and SAA-continuous Tx capacity       0    0.2
LSP Self Ping Tx capacity                                    0    0.0
-------------------------------------------------------------------------------
```

The following output is an example of CPE check information and Table 393: Output fields: OAM configuration summary describes the output fields.

```
show test-oam oam-config-summary
```

Output Example

```
-------------------------------------------------------------------------------
      OAM-Managed Test Capacity (tests)
      -------------------------------------------------------------------------------
      Resource                                                  InUse %InUse  Limit
      -------------------------------------------------------------------------------

-------------------------------------------------------------------------------
Resource                                                 InUse %InUse  Limit
-------------------------------------------------------------------------------
Shared Resource Pool Maximum                                    0    0.0  24000
  Background Shared Pool Maximum                                0    0.0  10000
    Background OAM and SAA-continuous Tx capacity               0    0.0   6000
    Background Static Route CPE Check Tx capacity               0    0.0  10000
  OAM-PM Tx capacity                                            0    0.0  18000
Dedicated Resources
  LSP Self Ping Tx capacity                                     0    0.0    125
-------------------------------------------------------------------------------
```

The following table describes the test OAM configuration limit fields.

Table 393: Output fields: OAM configuration summary

Label	Description
InUse	Indicates the number of resources in use
%InUse	Indicates the percentage of resources in use
Limit	Indicates the total number of available resources

17.2 oam-perf

oam-perf

Syntax

oam-perf [**detail**]

Context

[Tree] (show>test-oam oam-perf)

Full Context

show test-oam oam-perf

Description

This command displays OAM performance information, including packet per second rates and the cumulative packets receive and transmitted. Statistics are cleared using the **clear>test-oam>oam-perf** command to properly interpret current data rate. The counts are displayed since the last clear and may be skewed because of irrelevant historical data.

oam-perf

Syntax

oam-perf

Context

[Tree] (clear>test-oam oam-perf)

Full Context

clear test-oam oam-perf

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears OAM performance statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

oam-perf

Syntax

oam-perf [**interval** *seconds*] [**repeat** *repeat*] [{**absolute** | **rate**}]

Context

[Tree] (monitor>test-oam oam-perf)

Full Context

monitor test-oam oam-perf

Description

This command monitors the OAM performance statistics.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

All

17.3 oam-pm

oam-pm

Syntax

oam-pm

Context

[Tree] (show oam-pm)

Full Context

show oam-pm

Description

Commands in this context display OAM information.

Platforms

All

oam-pm

Syntax

oam-pm session *session-name* {**dm** | **dmm** | **lmm** | **slm** | **twamp-light**}

Context

[Tree] (clear oam-pm)

Full Context

clear oam-pm

Description

This command clears OAM performance statistics reported by the **show test-oam oam-perf** [**detail**].

Parameters

session-name

Specifies the session name, up to 32 characters, that the test is associated with.

dm

Keyword that specifies the MPLS delay measurement test that is affected by the command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dmm

Keyword that specifies the DMM test that is affected by the command.

lmm

Keyword that specifies the LMM test that is affected by the command.

slm

Keyword that specifies the SLM test that is affected by the command.

twamp-light

Keyword that specifies the TWAMP-light test that is affected by the command.

Platforms

All

oam-pm

Syntax

oam-pm

Context

[Tree] (monitor oam-pm)

Full Context

monitor oam-pm

Description

Commands in this context monitor OAM information.

Platforms

All

17.4 oam-template

oam-template

Syntax

oam-template

Context

[Tree] (show>router>mpls>mpls-tp oam-template)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router mpls mpls-tp oam-template

Description

This command displays MPLS-TP OAM template information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS OAM template detail information.

Output Example

```
*A:mlstp-dutA# show router mpls mpls-tp oam-template

===============================================================================
MPLS-TP OAM Templates
===============================================================================
Template Name : privatebed-oam-template Router ID     : 1

                                        Hold-Up Time  : 20 deciseconds
===============================================================================
```

17.5 ocsp-cache

ocsp-cache

Syntax

ocsp-cache [*entry-id*]

Context

[Tree] (show>certificate ocsp-cache)

Full Context

show certificate ocsp-cache

Description

This command displays the current cached OCSP results. The output includes the following information:

Certificate issuer

Certificate serial number

OCSP result

Cache entry expire time

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

entry-id

Specifies the local cache entry identifier of the certificate that was validated by the OCSP responder.

Values 1 to 2000

Platforms

All

17.6 omcr

omcr

Syntax

omcr

Context

[Tree] (show>redundancy>multi-chassis omcr)

Full Context

show redundancy multi-chassis omcr

Description

Commands in this context display OMCR information for subscribers.

Platforms

7750 SR

17.7 on-change-paths

on-change-paths

Syntax

on-change-paths

on-change-paths {**nokia** | **nokia-scale** | **openconfig**}

Context

[Tree] (tools>dump>system>telemetry on-change-paths)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools dump system telemetry on-change-paths

Description

This command lists all state paths supporting gRPC ON_CHANGE subscriptions. The keywords **nokia**, **nokia-scale**, and **openconfig** specify which paths should be displayed in the output.

Parameters

nokia

Specifies that the Nokia model paths be displayed.

nokia-scale

Specifies that the Nokia gRPC RIB API paths be displayed.

openconfig

Specifies that the OpenConfig model paths be displayed.

Platforms

All

Output

The following output is an example of ON_CHANGE state paths information.

Output Example

```
A:node-6# tools dump system telemetry on-change-paths nokia
===============================================================================

17.8 opaque-database

opaque-database

Syntax

opaque-database [**area** *area-id* | **as**] [**adv-router** *router-id*] [*ls-id*] [**detail**]

Context

[Tree] (show>router>ospf opaque-database)

Full Context

show router ospf opaque-database

Description

This command displays OSPF opaque database information.

Parameters

area *area-id*

Displays all opaque databases configured in this area.

Values ip-address — a.b.c.d

area — 0 to 4294967295

as

Displays opaque databases configured in the autonomous system (AS).

adv-router *router-id* [*ls-id*]

Displays opaque database information associated with the specified advertising router. To further narrow the number of items displayed, the *ls-id* can optionally be specified.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

OSPF Opaque Database Output

Table 394: Output fields: OSPF opaque database describes the OSPF opaque database output fields.

Table 394: Output fields: OSPF opaque database

Label	Description
Area Id	A 32-bit integer uniquely identifying an area. Area ID 0.0.0.0 is used for the OSPF backbone.
Type	NSSA — This area is configured as an NSSA area. Area — This area is configured as a standard area (not NSSA or stub). Stub — This area is configured as an NSSA area.
Link State Id	The link state ID is an LSA type specific field containing either a Router-Id or an IP Address; it identifies the piece of the routing domain being described by the advertisement.
Adv Rtr Id	The router identifier of the router advertising the LSA.
Age	The age of the link state advertisement in seconds.
Sequence	The signed 32-bit integer sequence number.
Cksum	The 32-bit unsigned sum of the link-state advertisements' LS checksums.

Output Example

```
*A:Dut-C# show router ospf opaque-database

17.9 oper-group

oper-group

Syntax

oper-group [*group-name*]

oper-group [*group-name*] **detail**

oper-group [*group-name*] **members** [**sap**] [**sdp**] [**site**] [**egr-vtep**] [**service**] [**bgp-evpn**] [**ethernet-segment**] [**port**] [**vrrp**] [**pfcp-association**]

oper-group [*group-name*] **monitoring** [**sap**] [**sdp**] [**site**] [**srrp**] [**mvrp**] [**pw-port**] [**up-resiliency**] [**sap-mep**]

Context

[Tree] (show>service oper-group)

Full Context

show service oper-group

Description

This command displays oper-group information, member count, monitor-client count, and status in a single line for each of the configured oper-groups.

Parameters

group-name

Displays oper-group information.

detail

Displays detailed information for each of the configured oper-groups.

members

Displays the members of the specified oper-group, or all oper-groups. A filter can be applied on the output to display only required member type, by specifying an optional parameter.

Values sap, sdp, site, egr-vtep, service, bgp-evpn, ethernet-segment, port, vrrp, pfcp-association

monitoring

Displays the clients that are monitoring the specified oper-group, or all oper-groups. A filter can be applied on the output to display only required client type, by specifying an optional parameter.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values sap, sdp, site, srrp, mvrp, pw-port, up-resiliency, sap-mep

Platforms

All

Output

The following are output examples of application assurance group information, and Table 395: Output fields: operational group detail describes the output fields.

- Output Example: show service oper-group
- Output Example: show service oper-group detail
- Output Example: show service oper-group "test" monitoring

Output Example: show service oper-group

```

Table 395: Output fields: operational group detail

Label	Description
PortId	The monitored port ID
Adm Admin-state	Displays the administrative state
Opr Oper-state	Displays the operational state
Oper Group	The name of the monitored operational group
Creation Origin	Displays how the operational group was created
Oper Status	Displays the operational status
Hold Downtime	Displays the time, in seconds, that the system waits before declaring the status as "down”
Hold UpTime	Displays the time, in seconds, that the system waits before declaring the status as "up”
Members	Displays the number of members
Member AA Group for OperGroup	
Name	Displays the member AA group name
Id	Displays the member AA group ID
Admin	Displays the administrative state of the operational group. The state remains up as long as there are enough AA-ESA-VMs available compared to the configured limit of the AA-group.
Oper	Displays the operational state of the operational group. The state remains up as long as there are enough AA-ESA-VMs available compared to the configured limit of the AA-group.

Label	Description
Monitoring	Displays the number of objects monitoring the operational group
SdpId	Displays the SDP ID
SvcId	Displays the SVC ID
Type	Displays the type of SDP binding
IP address	Displays the IP address
SvcId:Instance	Displays the SVC ID and EVPN instance number
(Type)	Displays the instance type
Status	Displays the status of the EVPN instance
Lag-Id	Displays the monitoring LAG ID
Weighted	Displays whether or not the LAG is weighted
Threshold	Displays the threshold number
Up-Count	Displays the up-count number
Act/Stdby	Displays whether the LAG is active or standby
Sap	Displays the associated SAP ID
Md-index	Displays the Maintenance Domain (MD) index
Ma-index	Displays the Maintenance Association (MA) index
MepId	Displays the integer that is unique among all MEPs in the same MA
Defect	Displays the defects for the local MEP
md-admin-name	Displays the administrative MD name
ma-admin-name	Displays the administrative MA name

17.11 optimize

optimize

Syntax

optimize lsp-container *lsp-container* **delay** *delay*

Context

[Tree] (tools>perform>router>mpls optimize)

Full Context

tools perform router mpls optimize

Description

This command optimizes a specific LSP container.

Parameters

lsp-container

Specifies the LSP container name, up to 64 characters.

delay

Specifies the delay amount in minutes.

Values 0 to 15

The 0 value leads to an immediate opitmization.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Full Context

tools dump filter overload

Description

This command, when used without parameters, allows the operator to identify filter memory banks with one or more policies in overload in the system by slot number, FP number, direction (ingress or egress), and type (IP-MAC or IPv6).

The command, when used with only the **card** and **fp** parameters, lists the filter policy ID as well as the number of entries in overload on a specified FP when the optional parameters *slot-number* and *fp-number* are specified.

This command, when used with the **ip**, **ipv6**, or **mac** parameters in conjunction with the **direction** parameter, displays the entries not programmed for a specified filter policy due to an overload condition.

This command, when used with the **cpm-ip**, **cpm-ipv6**, or **cpm-mac** parameters, displays the entries not programmed for a specified CPM filter policy. This command is available on applicable platforms only. Refer to the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide*, *CPM Filters and Traffic Management* section for more details.

Parameters

slot-number

Specifies the IOM slot number or CPM for the overload command.

Values 1 to 10

Values A (when used with **cpm-ip**, **cpm-ipv6**, or **cpm-mac** parameters)

fp-number

Specifies the FP number.

Values 1 to 8

ip-filter-id

Specifies the IP filter policy ID or name for which to display information.

Values 1 to 65535 (Specifies the policy ID)

name (Specifies a string of up to 64 characters uniquely identifying this filter policy name)

direction

Specifies the direction.

Values ingress or egress

ipv6-filter-id

Specifies the IPv6 filter policy ID or name for which to display information.

Values 1 to 65535 (Specifies the policy ID)

name (Specifies a string of up to 64 characters uniquely identifying this filter policy name)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-filter-id

Specifies the MAC filter ID policy for which to display information. Values can be expressed in different formats and refer to static or dynamic filters. The following values only shows decimal integer format.

Values 1 to 65535

filter-name (Specifies a string of up to 64 characters uniquely identifying this filter policy name)

overload

Syntax

overload {rtm | fib | prefix-limit}

Context

[Tree] (clear>router>isis overload)

Full Context

clear router isis overload

Description

This command clears the IS-IS overload.

Parameters

rtm

Clears the overload because IS-IS reached the configured maximum route limit set with **maximum-routes** or **maximum-ipv6-routes** in a VPRN.

fib

Clears the overload because adding routes to the hardware FIB failed.

prefix-limit

Clears the overload when IS-IS has reached the configured maximum prefix limit set with the **prefix-limit** command.

Platforms

All

overload

Syntax

overload {**rtm** | **fib** | **rtr-adv-lsa-limit**}

Full Context

clear router ospf3 overload

clear router ospf overload

Description

This command clears the OSPF or OSPF3 overload.

Parameters

rtm

Clears the overload because OSPF or OSPF3 reached the configured maximum route limit set with **maximum-routes** or **maximum-ipv6-routes** in a VPRN.

fib

Clears the overload because adding routes to the hardware FIB failed.

rtr-adv-lsa-limit

Clears the overload because OSPF or OSPF3 exceeded the configured maximum limit on LSAs advertised by another router, which was set with **rtr-adv-lsa-limit**.

Context

[Tree] (show>router>ldp>bindings p2mp)

Full Context

show router ldp bindings p2mp

Description

This command displays LDP P2MP FEC bindings.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

detail

Displays detailed information.

family

Displays either IPv4 or IPv6 active LDP information.

group *mcast-address*

Displays the P2MP group multicast address bindings.

inner-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address.

innermost-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address and non-recursive FECs that have a root address that matches the specified address.

opaque-type *opaque-type*

Specifies the type of a Multi-Point Opaque Value Element.

Values generic, ssm, vpn-ssm, recursive-ssm, vpn-recursive, grt-recursive

p2mp-id *identifier*

Displays LDP active P2MP identifier bindings.

Values 0 to 4294967295

rd *rd*

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

root *ip-address*

Displays root IP address information.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

session *ip-addr*[label-space]

Displays information for the LDP session IP address and label space.

source *ip-address*

Displays LDP active P2MP source bindings.

Values

ipv4-address	- a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

stitching

Displays stitching information for LDP P2MP FEC bindings.

summary

Displays information in a summarized format.

Platforms

All

Output

Output Example

The following show output displays recursive FECs.

Context

[Tree] (show>router>ldp>bindings>active p2mp)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router ldp bindings active p2mp

Description

This command displays LDP active P2MP bindings.

Parameters

identifier

Specifies the P2MP ID.

Values 0 to 4294967295

ip-address

Specifies the IPv4 or IPv6 address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

mcast-address

Displays the P2MP group multicast address bindings.

Values ipv4-mcast-addr, ipv6-mcast-addr

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

family

Specifies the address family.

Values ipv4, ipv6

port-id

Specifies the port ID.

Values

slot[/*mda*[/*port*]] or *slot*/*mda*/*port* [.*channel*]

aps-id	**aps**-*group-id*[.channel]	
	aps	keyword
	group-id	1 to 128

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-sat-id	**esat**-*id*[/*slot*/[**u**]*port*]	
	esat	keyword
	id	1 to 20
	u	keyword for up-link port
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a to b

tunnel-id

Specifies the tunnel ID.

Values 0 to 4294967295

opaque-type

Specifies the multi-point opaque value element type.

Values generic, ssm, vpn-ssm, recursive-ssm, vpn-recursive, grt-recursive

Platforms

All

18.2 p2mp-candidate-path

p2mp-candidate-path

Syntax

p2mp-candidate-path [*path-name*] [**oper** { **up** | **down**}] [**in-use**]

Context

[Tree] (show>router>p2mp-sr-tree>p2mp-policy p2mp-candidate-path)

Full Context

show router p2mp-sr-tree p2mp-policy p2mp-candidate-path

Description

This command displays candidate path information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

path-name

Specifies the candidate path name, up to 32 characters.

oper up

Displays the candidate paths with operational status up.

oper down

Displays the candidate paths with operational status down.

in-use

Displays candidate paths that are in use.

Platforms

All

18.3 p2mp-info

p2mp-info

Syntax

p2mp-info [**type** {**originate** | **transit** | **terminate**}] [**s2l-endpoint** *ip-address*]

Context

[Tree] (show>router>mpls p2mp-info)

Full Context

show router mpls p2mp-info

Description

This command displays P2MP cross-connect information.

Parameters

type

Specifies the P2MP type.

Values **originate** — Displays the static LSPs that originate at this virtual router.

transit — Displays the static LSPs that transit through this virtual router.

terminate — Displays the static LSPs that terminate at this virtual router

Context

[Tree] (show>router>mpls p2mp-lsp)

Full Context

show router mpls p2mp-lsp

Description

This command displays MPLS P2MP LSP information.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters, used in the path.

detail

Keyword used to display detailed information.

p2mp-instance [*p2mp-instance-name*

Specifies the administrative name for the P2MP instance which must be unique within a virtual router instance.

mbb

Keyword used to display make-before-break (MBB) information.

s2l

Keyword used to display the source-to-leaf (S2L) name.

to *s2l-to-address*

Keyword used to display the IP address of the destination address of the S2L sub-LSP.

status

Keyword used to display the status of the P2MP LSP.

Values up — Displays the total time that this S2l has been operational.
down — Displays the total time that this S2l has not been operational.

dns

Keyword used to display reverse DNS resolution of actual and explicit hop information.

Platforms

All

Output

The following output is an example of MPLS P2MP LSP detailed DNS information, and Table 397: Output fields: MPLS P2MP LSP detailed DNS describes the output fields.

Output Example

```
show router mpls p2mp-lsp p2mp-instance s2l detail dns

Table 397: Output fields: MPLS P2MP LSP detailed DNS

Label	Description
LSP Name	Displays the LSP name
S2L LSP ID	Displays the S2L LSP ID
P2MP ID	Displays the P2MP ID
S2L Grp Id	Displays the S2L group ID
Admin State	Displays the administrative state
Oper State	Displays the operational state
S2L State	Displays the S2L state
S2L Name	Displays the S2L name
To	Displays the to destination IP address
S2L Admin	Displays the S2L administrative state
S2L Oper	Displays the S2L operational state
Out Interface	Displays the outing interface port
Out Label	Displays the out label value
S2L Up Time	Displays the S2L up time
S2L Dn Time	Displays the S2L down time
RetryAttempt	Displays the retry attemp value
NextRetryIn	Displays the next retry time value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
S2L Trans	Displays the S2L trans value
CSPF Queries	Displays the CSPF queries value
Failure Code	Displays the failure code
Failure Node	Displays the failure node
Inter-area	Displays the inter area status
ExplicitHops	Displays the explicit hops
Actual Hops	Displays the actual hops
Record Label	Displays the record label
LastResignal	Displays the resignal time

The following output is an example of MPLS P2MP LSP information.

18.5 p2mp-policy

p2mp-policy

Syntax

p2mp-policy [**root-address** *ip-address*] [**tree-id** *tree-id*] [**candidate-path** *path-name*] [**detail**]

Context

[Tree] (show>router>p2mp-sr-tree>database p2mp-policy)

Full Context

show router p2mp-sr-tree database p2mp-policy

Description

This command displays the policy information present in the P2MP SR tree database.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Specifies the root IPv4 address.

tree-id

Specifies the P2MP SR tree ID.

Values 8193 to 16286

path-name

Specifies the candidate path name, up to 64 characters.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of P2MP SR tree database policy information.

Output Example

```
A:node-2>show>router>p2mp-sr-tree>database# p2mp-policy

18.6 p2mp-sr-tree

p2mp-sr-tree

Syntax

p2mp-sr-tree

Context

[Tree] (show>router p2mp-sr-tree)

Full Context

show router p2mp-sr-tree

Description

Commands in this context display P2MP SR tree information.

Platforms

All

18.7 packet

packet

Syntax

packet *packet-number*

Context

[Tree] (show>test-oam>build-packet packet)

Full Context

show test-oam build-packet packet

Description

This command displays the OAM egress port finder information for a specific packet.

Parameters

packet-number

Specifies the packet number.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

18.8 packet-size

packet-size

Syntax

packet-size *protocol* [**clear**]

Context

[Tree] (tools>dump>cflowd packet-size)

Full Context

tools dump cflowd packet-size

Description

This command displays packet size distribution for sampled IP traffic. Values are displays in decimal format (1.0 = 100%, .500 = 50%). Separate statistics are maintained and shown for IPv4 and IPv6 traffic.

Platforms

All

Output

The following output is an example of cflowd packet size information.

Output Example

```
SR-12# tools dump cflowd packet-size ipv4
 IP packet size distribution (801600 total packets):
   1-32   64   96  128  160  192  224  256  288  320  352  384  416  448  480
   .000 .250 .000 .000 .010 .100 .500 .090 .000 .000 .000 .000 .000 .000 .000

    512  544  576 1024 1536 2048 2560 3072 3584 4096 4608 9000
   .000 .000 .000 .050 .000 .000 .000 .000 .000 .000 .000 .000
```

18.9 parameters

parameters

Syntax

parameters

Context

[Tree] (show>router>ldp parameters)

Full Context

show router ldp parameters

Description

This command displays configuration information about LDP parameters.

Platforms

All

Output

LDP Parameters Output

Table 398: Output fields: LDP parameters describes the LDP parameters output fields.

Table 398: Output fields: LDP parameters

Label	Description
Keepalive Timeout	The time interval (in s), that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages).
Timeout Factor	The value by which the keepalive timeout should be divided to give the keepalive time, for example, the time interval (in s), between LDP keepalive messages. LDP keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors.
Hold Time	The hello time, also known as hold time. It is the time interval (in s), that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor.
Hello Factor	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Auth	Enabled — Authentication using MD5 message based digest protocol is enabled. Disabled — No authentication is used.
Admin Status	inService — The LDP is administratively enabled. outService — The LDP is administratively disabled.
Deaggregated FECs	False — LDP aggregates multiple prefixes into a single Forwarding Equivalence Class (FEC) and advertises a single label for the FEC. This value is only applicable to LDP interfaces and not for targeted sessions. True — LDP de-aggregates prefixes into multiple FECs.
Propagate Policy	The Propagate Policy value specifies whether the LSR should generate FECs and which FECs it should generate. system — LDP distributes label bindings only for the router's system IP address. interface — LDP distributes label bindings for all LDP interfaces. all — LDP distributes label bindings for all prefixes in the routing table. none — LDP does not distribute any label bindings.
Transport Address	interface — The interface's IP address is used to set up the LDP session between neighbors. If multiple interfaces exist between two neighbors, the 'interface' mode cannot be used because only one LDP session is actually set up between the two neighbors. system — The system's IP address is used to set up the LDP session between neighbors.
Label-Retention	liberal — All advertised label mappings are retained whether they are from a valid next hop or not. When the label distribution value is downstream unsolicited, a router may receive label bindings for the same destination for all its neighbors. Labels for the non-next hops for the FECs are retained in the software but not used. When a network topology change occurs where a non-nexthop becomes a true next hop, the label received earlier is then used. conservative — Advertised label mappings are retained only if they are used to forward packets; for example, if the label came from a valid next hop. Label bindings received from non-next hops for each FEC are discarded.
Control Mode	ordered — Label bindings are not distributed in response to a label request until a label binding has been received from the next hop for the destination. independent — Label bindings are distributed immediately in response to a label request even if a label binding has not yet been received from the next hop for the destination.
Route Preference	The route preference assigned to LDP routes. When multiple routes are available to a destination, the route with the lowest preference is used. This value is only applicable to LDP interfaces and not for targeted sessions.
Loop Detection	none — Loop detection is not supported on this router. This is the only valid value because Path Vector based loop detection is not supported.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	other — Loop detection is supported but by a method other than hopCount, path Vector, or hopCountAndPathVector. hopCount — Loop detection is supported by hop count only. pathVector — Loop detection is supported by path vector only. hopCountAndPathVector — Loop detection is supported by both path vector and hop count.
Keepalive Timeout	The factor used to derive the Keepalive interval.
Keepalive Factor	The time interval (in s), that LDP waits before tearing down the session.
Hold-Time	The time left before a neighbor is declared to be down.
Hello Factor	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.
Auth	Enabled — Authentication using MD5 message based digest protocol is enabled. Disabled — No authentication is used.
Passive-Mode	true — LDP responds only when it gets a connect request from a peer and does not attempt to actively connect to its neighbors. false — LDP actively tries to connect to its peers.
Targeted-Sessions	true — Targeted sessions are enabled. false — Targeted sessions are disabled.

Number of invalid attempts permitted per login  : 3
Time in minutes per login attempt               : 5
Lockout period (when threshold breached)        : 10
Authentication order                            : radius tacplus local
User password history length                    : disabled
Password hashing                                : bcrypt
Accepted password length                        : 6..56 characters
Credits for each character type                 : none
Required character types                        : none
Minimum number different character types        : 0
Required distance with previous password        : 5
Allow consecutively repeating a character       : always
Allow passwords containing username             : yes
Palindrome allowed                              : no
===============================================================================
A:ALA-7#
```

Table 399: Output fields: password options

Label	Description
Password aging in days	Displays the number of days a user password is valid before the user must change their password.
Time required between password changes	Displays the time interval between changed passwords.
Number of invalid attempts permitted per login	Displays the number of unsuccessful login attempts allowed for the specified **time**.
Time in minutes per login attempt	Displays the period of time, in minutes, that a specified number of unsuccessful attempts can be made before the user is locked out.
Lockout period (when threshold breached)	Displays the number of minutes that the user is locked out if the threshold of unsuccessful login attempts has been exceeded.
Authentication order	Displays the sequence in which password authentication is attempted among RADIUS, TACACS+, and local passwords.
User password history length	Displays the size of the password history file to be stored.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Password hashing	Displays the system hashing algorithm for passwords.
Accepted password length	Displays the minimum length required for local passwords.
Credits for each character type	Displays the credit for each character type. A credit is obtained for a specific character type; for example, uppercase, lowercase, numeric, or special character. Credits per character type are configurable. Credits can be used toward the minimum length of the password, so a trade-off can be made between a very long, simple password and a short, complex one.
Required character types	Displays the character types that are required in a password; for example, uppercase, lowercase, numeric, or special character.
Minimum number different character types	Displays the minimum number of each different character types in a password.
Required distance with previous password	Displays the minimum Levenshtein distance between a new password and the old password.
Allow consecutively repeating a character	Displays the number of times the same character is allowed to be repeated consecutively.
Allow passwords containing username	Displays whether the user name is allowed as part of the password.
Palindrome allowed	Displays whether palindromes are allowed as part of the password.

18.13 path

path

Syntax

path [*path-name*] [*lsp-binding*]

path *path-name p2mp-lsp-binding*

Context

[Tree] (show>router>mpls path)

Full Context

show router mpls path

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays MPLS paths.

Parameters

path-name

Specifies the unique name label for the LSP path.

lsp-binding

Displays binding information.

p2mp-lsp-binding

Displays binding information.

Platforms

All

Output

The following output is an example of MPLS path information.

Table 400: Output fields: MPLS path describes MPLS Path output fields.

Table 400: Output fields: MPLS path

Label	Description
Path Name	The unique name label for the LSP path.
Adm	Down — The path is administratively disabled. Up — The path is administratively enabled.
Hop Index	The value used to order the hops in a path.
IP Address	The IP address of the hop that the LSP should traverse on the way to the egress router.
Strict/Loose	Strict — The LSP must take a direct path from the previous hop router to the next router. Loose — The route taken by the LSP from the previous hop to the next hop can traverse through other routers.
LSP Name	The name of the LSP used in the path.
Binding	Primary — The preferred path for the LSP. Secondary — The standby path for the LSP.
Paths	Total number of paths configured.

Output Example

```
*A:SRU4>config>router>mpls# show router mpls path
===============================================================================
```

path-request

Syntax

path-request [**lsp-type** *lsp-type*] [**dest** *ip-address*] [**detail**]

Context

[Tree] (show>router>pcep>pcc path-request)

Full Context

show router pcep pcc path-request

Description

This command displays the PCEP path request information.

Parameters

lsp-type

Specifies the LSP type.

Values rsvp-p2p, rsvp-p2mp, seg-rt

Note:
The LSP type, **rsvp-p2mp**, is not supported for PCE controlled or PCE initiated LSPs.

ip-address

Specifies the IP address.

Values a.b.c.d

detail

Specifies detailed information.

Table 401: Output fields: BGP path

Label	Description
BGP Router ID	The local BGP router ID.
AS	The configured autonomous system number.
Local AS	The configured local AS setting. If not configured, then the value is the same as the AS.
Path	The AS path attribute.
Origin	EGP — The NLRI is learned by an EGP protocol. IGP — The NLRI is interior to the originating AS. INCOMPLETE — NLRI was learned another way.
Next Hop	The advertised BGP nexthop.
MED	The Multi-Exit Discriminator value.
Local Preference	The local preference value.
Refs	The number of routes using a specified set of path attributes.
ASes	The number of autonomous system numbers in the AS path attribute.
Segments	The number of segments in the AS path attribute.
Flags	EBGP-learned — Path attributes learned by an EBGP peering. IBGP-Learned — Path attributes learned by an IBGP peering.
Aggregator	The route aggregator ID.
Community	The BGP community attribute list.
Originator ID	The originator ID path attribute value.
Cluster List	The route reflector cluster list.

Use subject to Terms available at: www.nokia.com/terms.

Table 402: Output fields: PCAP

Label	Description
Buffer Size	The maximum buffer size is 20 Mb. If the number of packets in the buffer exceeds 20 Mb, packets are dropped.
File Size	The current size of the capture file.
Write Failures	The number of errors that occurred when packets were written into the buffer. A number greater than zero indicates that some packets were not captured.
Read Failures	The errors occurred when packets were read from the buffer for exporting to FTP or TFTP. A number greater than zero indicates that some packets were not captured.
Process Time Bailouts	A system process timeout. Some packets were not captured.
Dropped Packets	The number of packets dropped from the buffer due to errors.

Table 403: Output fields: PCC rule

Field	Description
Nbr Active PCC Rules	The number of active PCC rules
Nbr Active Combinations	The number of active IP PCC rule combinations
IPv4 Filter	The number of IPv4 filter combinations
IPv6 Filter	The number of IPv6 filter combinations
Egress QoS	The number of active egress QoS PCC rule combinations
Ingress QoS	The number of active ingress QoS PCC rule combinations
Id	The PCC ID
Dir	The flow direction on which the PCC-rule acts
ForwardAction	The filter action of the PCC-rule
QosAction	The Qos action of the PCC-rule. The value account(3) is only relevant if the PCC-rule was received by the system as part of a RADIUS Subscriber Service attribute
name	The PCC rule name
monitorKey	The monitor key name that can be received in a PCC rule. An empty string (length 0) indicates that no monitor key is defined in the PCC rule
PCC rule name	The name of a PCC rule
PCC rule id	The PCC rule ID
Monitoring key	The monitoring key defined in this PCC-rule. This value is only considered if **monitor** is set in the QoS action.
Flow status	The PCC rule flow status; enabled or disabled
Nbr of Flows	The number of flow rules defined in this PCC rule
HTTP-Redirect	The URL to which all data flows that pertain to this PCC-rule must be redirected
Next-Hop Redir. IPv4	The IPv4 address to which all IPv4 data flows that pertain to this PCC-rule be redirected
Next-Hop Redir. IPv6	The IPv6 address to which all IPv6 data flows that pertain to this PCC-rule be redirected
QoS Ingr. CIP/PIR	The ingress QoS CIP and PIR values

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
QoS Egr. CIP/PIR	The egress QoS CIP and PIR values
FC change	The forwarding class (FC) that is assigned to all data flows that pertain to this PCC-rule
Src. IP	The address type of the source address
Src. Port	The port type of the source address
Dst. IP	The address type of the destination address
Protocol	The IPv4 protocol value, and for IPv6 the next header type used in the match criteria for this flow • 6 — TCP • 7 — UDP
DSCP	The DSCP to be matched for this flow
Subscriber	The subscriber SAP
SLA Profile Instance sap	The SLA profile instance SAP
Ingr QoS Policy Override	The ID of the overriding ingress Qos policy
Egr QoS Policy Override	The ID of the overriding egress Qos policy
IP Address	The subscriber IP address
MAC Address	The subscriber MAC address
PPPoE-SID	The PPPoE session ID of this subscriber host
Origin	The origin of this subscriber host
Preference	The preference with respect to other PCC rules
Rule ID	The PCC rule ID
Rule Name	The PCC rule name

pcc-rule

Syntax

pcc rule [**subscriber** *sub-ident-string*]

pcc rule [**subscriber** *sub-ident-string*] **detail**

Context

[Tree] (show>service>active-subscribers pcc-rule)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service active-subscribers pcc-rule

Description

This command specifies the PCC rule.

Parameters

sub-ident-string

Specifies the sub-ident-string, up to 32 characters.

detail

Displays detailed information for the specified PCC rule.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

18.22 pce-associations

pce-associations

Syntax

pce-associations

Context

[Tree] (show>router>pcep>pcc pce-associations)

Full Context

show router pcep pcc pce-associations

Description

Commands in this context display information about PCE associations configured under the PCC.

Platforms

All

[Tree] (tools>dump>router pcep)

Full Context

tools dump router pcep

Description

Commands in this context dump tools for PCEP.

Platforms

All

18.24 pcm

pcm

Syntax

pcm [*pcm-slot*] [**chassis** *chassis-id*] [**detail**]

Context

[Tree] (show pcm)

Full Context

show pcm

Description

This command displays PCM information.

Parameters

pcm-slot

Specifies the PCM slot identifier.

Values 1 to 12

chassis-id

Specifies the chassis ID for the router chassis.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 2

detail

Displays detailed information.

Platforms

7950 XRS-20e

Output

The following output is an example of PCM information.

Output Example: show pcm

```
*A:Dut-A# show pcm
===============================================================================
PCM Summary
===============================================================================
Chassis/   Provisioned Type             Operational    Input      Zone
Slot           Equipped Type (if diff)  State          A B2 A2 B
-------------------------------------------------------------------------------
1/9        (not provisioned)            unprovisioned               1
               (present)
1/10       (not provisioned)            unprovisioned  Y Y   Y Y    1
               quad-pcm
1/11       quad-pcm                     unprovisioned  Y Y   Y Y    1
1/12       quad-pcm                     unprovisioned  Y Y   Y Y    1

pcp-server

Syntax

pcp-server

pcp-server *server-name*

pcp-server *server-name* **statistics interface** *interface-name*

pcp-server *server-name* **statistics**

Context

[Tree] (show>router pcp-server)

Full Context

show router pcp-server

Description

This command displays PCP server information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

server-name

Specifies the PCP server name, up to 32 characters.

statistics

Displays PCP server statistics information.

interface-name

Specifies the interface name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of router PCP server information.

Output Example

```
*A:Dut-C# show router 20 pcp-server "pcp-server-1"

pcp-server

Syntax

pcp-server *server-name* **interface** *interface-name* **statistics**

Context

[Tree] (clear>router pcp-server)

Full Context

clear router pcp-server

Description

This command clears NAT PCP server data.

Parameters

server-name

Clears NAT PCP server data for the specified PCP server, up to 32 characters.

interface-name

Clears NAT PCP server data for the specified interface, up to 32 characters.

statistics

Clears NAT PCP server statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pcp-server

Syntax

pcp-server *server-name*

Context

[Tree] (tools>perform>router pcp-server)

Full Context

tools perform router pcp-server

Description

This command configures performance tools for a specified NAT port control policy server.

Parameters

server-name

Specifies the PCP server name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

18.26 pcp-server-policy

pcp-server-policy

Syntax

pcp-server-policy

pcp-server-policy *name*

show system license-statistics peak

Description

This command displays peak values of application license statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

license-app

Specifies the application license.

Values lns, nat, sub-mgmt, wlan-gw, aa, ipsec

Platforms

VSR

18.29 peakvalue-stats

peakvalue-stats

Syntax

peakvalue-stats iom (*slot* | **all**) [**recursive**]

peakvalue-stats mda (*mda* | **all**) [**recursive**]

peakvalue-stats port (*port-id* | **all**)

peakvalue-stats pw-port (*pw-port* | **all**)

peakvalue-stats system [**recursive**]

peakvalue-stats service {*svc-id* | **all**} [**recursive**]

peakvalue-stats service {*svc-id*} **subscriber-interface** { *sub-itf* | **all**} [**recursive**]

peakvalue-stats service {*svc-id*} **group-interface** { *grp-itf* | **all**}

Context

[Tree] (clear>subscriber-mgmt peakvalue-stats)

Full Context

clear subscriber-mgmt peakvalue-stats

Description

This command resets the most recent peak enhanced subscriber management counter per port, PW port, MDA, IOM, system, service, subscriber interface, or group interface.

Note:
Clearing one counter will not impact other counters. For example, clearing the most recent peak value for an IOM will not impact chassis peak value.

Parameters

slot

Clears IOM host peak value statistics for the specified IOM.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mda

Clears MDA host peak value statistics for the specified MDA.

port-id

Clears port host peak value statistics for the specified port ID.

pw-port

Clears pseudowire port host peak value statistics for the specified port.

Values 1 to 10239

system

Clears system host peak value statistics.

all

Clears all host peak value statistics.

recursive

Resets the sub-level counters. For example, clearing IOM counters with the **recursive** keyword also clears counters of all port counters on that IOM.

service *svc-id*

Clears service host peak value statistics for the specified service.

Values 1 to 2148278386 | *svc-name*: up to 64 characters

subscriber-interface *sub-itf*

Clears subscriber interface host peak value statistics for the specified subscriber interface, up to 32 characters.

group-interface *grp-itf*

Clears group interface host peak value statistics for the specified group interface, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

18.30 peer

peer

Syntax

peer [**peer-profile** *profile-name*] [**local-address** *ip-address*] [**control** *protocol*] [**interface-type** *interface-type*]

peer remote-address {*ip-address* | *ipv6-address*] [**udp-port** *port*] [**dsm-local-ip-address** {*ip-address* | *ipv6-address*}

peer remote-address {*ip-address* | *ipv6-address*] [**udp-port** *port*] **statistics** [**dsm-local-ip-address** { *ip-address* | *ipv6-address*}

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>gtp peer)

Full Context

show router gtp peer

Description

This command displays GTP peer information.

Parameters

profile-name

Specifies the name that identifies the profile.

ip-address

Specifies the local IP address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

protocol

Specifies the control plane protocol used for the connection with this Mobile Gateway.

Values gtpv1-c, gtpv2-c

interface-type

Specifies the interface type used in the context of this peer.

Values gn — Gn interface
s2a — S2a interface
s2b —S2b interface
s11 —S11 interface

ip-address

Specifies the remote IP address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

d - [0 to 255]D

port

Specifies the UDP port.

Values 1 to 65535

statistics

Displays statistics information about the Mobile Gateways connected to this system.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of peer GTP information.

Output Example

```
Node# show router 10 gtp peer
===============================================================================
Peers
===============================================================================
Remote address              : 192.168.100.1

Context

[Tree] (clear>router>gtp peer)

Full Context

clear router gtp peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears all states for a given peer in this routing context. The system no longer sends keep-alive messages to the peer, and all active sessions are terminated.

If the optional statistics parameter is specified, only the peer statistics are cleared and all sessions remain.

Parameters

ip-address

Specifies the IP address of the peer.

Values

ipv4-address: a.b.c.d (host bits must be 0)

ipv6-address: x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H

d - [0 to 255]D

port

Specifies the UDP port used by the peer.

statistics

Specifies to clear only the peer statistics with all sessions remaining active.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer

Syntax

peer *ip-address* [**udp-port** *port*] [**ip**]

peer *ip-address* **statistics**[**udp-port** *port*] [**ip**]

peer [**draining**] [**blacklisted** | **selectable** | **unreachable**]

Context

[Tree] (show>router>l2tp peer)

Full Context

show router l2tp peer

Description

This command displays L2TP peer operational information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If this command is executed without specifying a peer IP address, a list of all L2TP peers is displayed along with the type of transport used and statistics on the total number of tunnels and sessions, and the number of active tunnels and sessions.

If this command is executed with a specific peer IP address, a detailed view for that peer is displayed.

Parameters

ip-address

Specifies the L2TP peer address.

Values

ipv4-address	a.b.c.d
ipv6-address	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

port

Specifies the UDP port for the L2TP peer. This parameter is only supported with L2TPv2 peers.

Values 1 to 65535

ip

Keyword that displays peers that use IP transport.

statistics

Keyword that displays the statistics for the specified IP address.

draining

Keyword that displays peers with draining tunnels.

blacklisted

Keyword that displays information about the peers deemed unreachable and put in the tunnel selection denylist.

selectable

Keyword that displays peers that are selectable.

unreachable

Keyword that displays peers that are unreachable.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TP peer operational information.

peer

Syntax

peer *ip-address* [**udp-port** *port*] [**ip**]

Context

[Tree] (clear>router>l2tp peer)

Full Context

clear router l2tp peer

Description

This command clears L2TP peer data.

Parameters

ip-address

Clears the peers associated with the specified IP address.

Values

ipv4-address:	a.b.c.d	
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D

port

Clears the peers associated with the specified UDP port.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tools perform router l2tp peer

Description

This command configures performance tools for an L2TP peer.

Parameters

ip-address

Specifies the IP address of the L2TP peer.

port

Specifies the UDP port for the L2TP peer. This parameter is only supported with L2TPv2 peers.

ip

Enables performance tools for peers using IP transport.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer

Syntax

peer [*ip-int-name*]

Context

[Tree] (show>router>rip peer)

Full Context

show router rip peer

Description

This command displays RIP peer information.

Parameters

ip-int-name

Displays peer information for the specified IP peer interface name, up to 32 characters.

Default display peers for all interfaces

Table 407: Output fields: PTP peer router detail

Label	Description
IEEE 1588/PTP Peer Information	
Router	The name of the router instance
IP Address	The IP address of the PTP peer
Announce Direction	The direction from which PTP announce messages were sent or received
Admin State	The administrative state of the PTP peer
G.8275 Priority	The priority used in the BTCA for the local port when the clock profile is G.8275.1 or G.8275.2
Sync Interval	The message rate for Sync messages for this peer
Local PTP Port	The number of local PTP ports
PTP Port State	The state of the PTP port
monitorReceiver	The monitorReceiver state
Clock Id	The clockIdentity value of the local PTP clock

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Remote PTP Port	The number of remote PTP ports
GM Clock Id	The clockIdentity value of the grandmaster clock advertised by the parent clock
GM Clock Class	The clockClass value of the grandmaster clock advertised by the parent clock
GM Clock Accuracy	The clockAccuracy value of the grandmaster clock advertised by the parent clock
GM Clock Variance	The offsetScaledLogVariance value of the grandmaster clock advertised by the parent clock
GM Clock Priority1	The priority1 value of the grandmaster clock advertised by the parent clock
GM Clock Priority2	The priority2 value of the grandmaster clock advertised by the parent clock
Steps Removed	The number of steps removed the PTP peer is from a grandmaster clock
Alarms	The alarm conditions raised against the PTP peer. ptsfLossOfTimingMsgs — the local clock is not receiving timing messages from the neighbor clock
Tx Timestamp Point	The transmit timestamp point
Rx Timestamp Point	The receive timestamp point
Last Tx Port	The *port-id* of the last port from which a synchronization packet was transmitted
Last Rx Port	The *port-id* of the last port into which a synchronization packet was received
Port Asymmetry	The configured asymmetry for the port (either Tx or Rx port)
Best Master	Indicates if this peer was selected as the best master clock by the BTCA
Parent Clock	Indicates if this is the parent clock. May differ from the Best Master if there is a local GNSS.
Backup Source	Indicates if this port is operating as a backup slave to the parent clock
Monitor Time State	Time recovery state of the monitored PTP port or peer
Last Packet Offset from Master	The offsetFromMaster calculated from the last packet exchange with the parent clock

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Last Packet Mean Path Delay	The meanPathDelay calculated from the last packet exchange with the parent clock
APTS Asymmetry	The asymmetry computed by the backup source. This is used to compensate if the clock switches to this backup.
Offset from LclClk	The offset from master computed by the PTP source. This is the difference between the backup PTP source and the local clock set by the GNSS. This is similar to APTS Asymmetry but when using G.8275.1 profile.
Last Calc	The date and time at which the APTS Asymmetry or Offset from LclClk was last updated
Profile Name	The profile in use with this peer
Profile	The underlying standard profile used in the profile identified by profile name
Domain	The domain number used for this peer
IEEE 1588/PTP Unicast Negotiation Information	
Dir	The direction (transmitted or received) of the unicast negotiation packet
Type	The unicast negotiation packet type
Rate	The rate of packet transmission or reception
Duration	The duration of the packet transmission or reception interval, in seconds
State	The state of the negotiation
Time	The date and time that the negotiation state was changed
IEEE 1588/PTP Packet Statistics	
Input	The number of input packets within the specified category
Output	The number of output packets within the specified category

peer

Syntax

peer *ip-address* [**detail**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>service>id>ptp peer)

Full Context

show service id ptp peer

Description

This command displays PTP information for a specific peer.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following command displays PTP information for a single peer and Table 408: Output fields: service PTP peer describes the output fields.

```
show service id ptp peer detail
```

```

Table 408: Output fields: service PTP peer

Label	Description
IEEE 1588/PTP Peer Information	
Router	The name or ID of the router instance
IP Address	The IP address of the PTP peer
Announce Direction	The configured directions (transmit, receive, or both) for Announce messages
Admin State	The administrative state of the PTP peer
G.8265.1 Priority	Displays if the G.8265.1 profile has priority
Local PTP Port	The local PTP port number
PTP Port State	The PTP port state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Clock ID	The ID of the referenced clock
Remote PTP Port	The remote PTP port number
GM Clock Id	The clockIdentity value of the grandmaster clock advertised by the parent clock
GM Clock Class	The clockClass value of the grandmaster clock advertised by the parent clock
GM Clock Accuracy	The clockAccuracy value of the grandmaster clock advertised by the parent clock
GM Clock Variance	The offsetScaledLogVariance value of the grandmaster clock advertised by the parent clock
GM Clock Priority1	The priority1 value of the grandmaster clock advertised by the parent clock
GM Clock Priority2	The priority2 value of the grandmaster clock advertised by the parent clock
Steps Removed	The number of steps removed the PTP peer is from a grandmaster clock
Parent Clock	Displays whether a parent clock is referenced
IEEE 1588/PTP Unicast Negotiation Information	
IP Address	The IP address of the PTP peer
Dir	The direction (transmitted or received) of the unicast negotiation packet
Type	The unicast negotiation packet type
Rate	The rate of packet transmission or reception
Duration	The duration of the packet transmission or reception interval, in seconds
State	The state of the negotiation
Time	The date and time that the negotiation state was changed
IEEE 1588/PTP Packet Statistics	
Input	The number of input packets within the specified category
Output	The number of output packets within the specified category
PTP Packets	The total number of PTP packets across all PTP packet categories

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Announce	The number of PTP Announce packets
Sync	The number of PTP Sync packets
Follow Up	The number of PTP Follow Up packets
Delay Request	The number of PTP Delay Request packets
Delay Response	The number of PTP Delay Response packets
Signaling	The number of PTP signaling packets
Request TLVs	The total number of Request TLV packets of all types (Announce, Sync, and Delay Response)
Grant TLVs (Granted)	The total number of granted Grant TLV packets of all types (Announce, Sync, and Delay Response)
Grant TLVs (Rejected)	The total number of rejected Grant TLV packets of all types (Announce, Sync, and Delay Response)
Cancel TLVs	The total number of Cancel TLV packets of all types (Announce, Sync, and Delay Response)
Ack Cancel TLVs	The total number of Ack Cancel TLV packets of all types (Announce, Sync, and Delay Response)
Announce	The number of Announce packets of the specified TLV category
Sync	The number of Sync packets of the specified TLV category
Delay Response	The number of Delay Response packets of the specified TLV category
Other TLVs	The total number of other TLV packets that do not match the other categories or types
Other	The number of PTP packets that do not match the other categories or types
Discards	The total number of discarded packets across all categories
Bad PTP domain	The number of packets discarded because of a bad PTP domain
Alternate Master	The number of packets discarded because of an alternate master being referenced
Out of Sequence	The number of out-of-sequence packets discarded

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Peer Disabled	The number of packets discarded because of the peer being disabled
Other	The number of packets discarded for reasons not matching the other categories or types

peer

Syntax

peer *ip-address*

Context

[Tree] (clear>redundancy>multi-chassis>mcr>statistics peer)

Full Context

clear redundancy multi-chassis mc-ring statistics peer

Description

This command clears multi-chassis ring peer statistics.

Parameters

ip-address

Clears ring peer statistics for the specified IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

Platforms

All

peer

Syntax

peer *ip-address* [**router** *router-instance* | **service name** *service-name*] **statistics**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>system>ptp peer)

Full Context

clear system ptp peer

Description

This command clears PTP peer information.

Parameters

ip-address

Specifies the IPv4 or IPv6 address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

router-instance

Clears information that is specific to a virtual router instance, up to 32 characters.

service-name

Clears information that is specific to a service name, up to 64 characters.

statistics

Clears statistics information of the specified IP address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

peer

Syntax

peer [*ip-int-name*]

Context

[Tree] (show>router>ripng peer)

Full Context

show router ripng peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays RIPng peer information.

Parameters

ip-int-name

Displays peer information for peers on the specified IPv6 interface.

Default Display peers for all interfaces

Platforms

All

Output

The following output is an example of RIPng peer information.

Output Example

```
*A:Dut-C>config>router>if# show router ripng peer
===============================================================================
RIP-NG Peers
===============================================================================
Peer IP Addr                                        Version     Last Update
  Interface Name
-------------------------------------------------------------------------------
fe80::6629:ffff:fe00:0                              ripNg-v1    0
  one
fe80::6629:ffff:fe00:0                              ripNg-v1    0
  two
fe80::6629:ffff:fe00:0                              ripNg-v1    0
  three
fe80::6629:ffff:fe00:0                              ripNg-v1    0
  four
-------------------------------------------------------------------------------
No. of Peers: 4
===============================================================================
*A:Dut-C>config>router>if# show router ripng peer "one"
===============================================================================
RIP-NG Peers
===============================================================================
Peer IP Addr                                        Version     Last Update
  Interface Name
-------------------------------------------------------------------------------
fe80::6629:ffff:fe00:0                              ripNg-v1    0

peer

Syntax

peer [**peer-address** {*ip-address* | *ipv6-address*}] [**router** *router-instance*] [**local-address** {*ip-address* | *ipv6-address*}]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>subscr-mgmt>pfcp peer)

Full Context

show subscriber-mgmt pfcp peer

Description

This command displays connectivity details for a specific PFCP connection to a peer and the PFCP association to which the peer is linked. Multiple connections can exist per PFCP association.

Parameters

ip-address

Specifies the peer or local IPv4 address.

Values a.b.c.d

ipv6-address

Specifies the peer or local IPv6 address.

Values x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H

d - [0 to 255]D

router-instance

Specifies the identifier of the router where the peer is terminated.

Values *router-name* – base

vprn-svc-id – 1 to 2147483647

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of output of the **show subscriber-mgmt PFCP peer** command.

Output Example

```
A:BNG-UPF# show subscriber-mgmt pfcp peer
===============================================================================
PFCP Peers
===============================================================================
Peer router                 : 990002
Peer Address                : 17.17.17.10
Local Address               : 192.0.2.11
Association                 : bng-cpf
Path Mgmt State             : up
Restoration Timer Expiry    : (Not Specified)
Restart Reason              : none
===============================================================================
```

```
No. of PFCP Peers: 1
===============================================================================
```

peer

Syntax

peer *ip-address* **statistics**

Context

[Tree] (clear>service>id>ptp peer)

Full Context

clear service id ptp peer

Description

This command clears PTP peer information.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

statistics

Clears statistics information of the specified peer.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

peer

Syntax

peer *[ip-address]* **statistics**

Context

[Tree] (clear>router>pcep>pcc peer)

Full Context

clear router pcep pcc peer

Description

This command clears PCEP PCC peer statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

statistics

Clears PCEP PCC peer statistics.

Platforms

All

18.31 peer-profile

peer-profile

Syntax

peer-profile [*profile-name*]

peer-profile *profile-name* **associations**

Context

[Tree] (show>subscr-mgmt>gtp peer-profile)

Full Context

show subscriber-mgmt gtp peer-profile

Description

This command displays GTP peer profile information.

Parameters

profile-name

Specifies the name that identifies the profile.

associations

Specifies the associated contexts for the specified peer profile.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of GTP peer profile information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
Node# show subscriber-mgmt gtp peer-profile
===============================================================================
GTP peer profiles

18.33 peers

peers

Syntax

peers [**router** *router-instance* | **service-name** *service-name*] [**detail**]

Context

[Tree] (show>system>ptp peers)

Full Context

show system ptp peers

Description

This command displays summary information for all the PTP peers.

Parameters

router-instance

Displays only the information for a specific router instance.

Values router-name – Base
vprn-svc-id – 1 to 2147483647

service-name

Specifies the service name, up to 64 characters, used to identify the router instance.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Table 409: Output fields: PTP peers

Label	Description
Router	The name of the router instance
IP Address	The IP address of the PTP peer
Announce Direction Anno Flow	The direction from which PTP announce messages were sent or received
Admin State	The administrative state of the PTP peer
G.8275 Priority	The priority used in the best master clock algorithm (BMCA) for the local PTP port when the clock profile is G.8275.*x*
Sync Interval	The network synchronization interval, in packets per second
Local PTP Port	The number of local PTP ports
PTP Port State	The state of the PTP port
Clock Id	The clockIdentity value of the local PTP clock
Remote PTP Port	The number of remote PTP ports
GM Clock Id	The clockIdentity value of the grandmaster clock advertised by the parent clock
GM Clock Class	The clockClass value of the grandmaster clock advertised by the parent clock
GM Clock Accuracy	The clockAccuracy value of the grandmaster clock advertised by the parent clock
GM Clock Variance	The offsetScaledLogVariance value of the grandmaster clock advertised by the parent clock

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
GM Clock Priority1	The priority1 value of the grandmaster clock advertised by the parent clock
GM Clock Priority2	The priority2 value of the grandmaster clock advertised by the parent clock
Steps Removed	The number of steps removed the PTP peer is from a grandmaster clock
Last Tx Port	The *port-id* of the last port from which a synchronization packet was transmitted
Last Rx Port	The *port-id* of the last port into which a synchronization packet was received
Port Asymmetry	The asymmetry value of the PTP peer, in nanoseconds
Best Master	Whether the clock has been deemed to be the best master clock
Parent Clock	Whether there is an external parent clock
APTS Asymmetry	The APTS asymmetry value of the PTP peer, in nanoseconds
Last Calc	The date and time of the last asymmetry value calculation
Profile Name	The name of the alternate profile configuration. If an alternate profile is not configured, Primary is displayed as the profile name.
Profile	The PTP profile used for the alternate profile configuration. • g8275dot1-2014 — The PTP profile specified in the ITU-T G.8275.1 recommendation. • g8275dot2-2016 — The PTP profile specified in the ITU-T G.8275.2 recommendation.
Domain	The domain in which PTP 1588 runs on the system.

Table 410: Output fields: service PTP peers

Label	Description
Router	The name of the router instance
IP Address	The IP address of the PTP peer
Announce Direction Anno Flow	The direction from which PTP announce messages were sent or received
Admin State	The administrative state of the PTP peer
G.8265 Priority	The priority used in the best master clock algorithm (BMCA) for the local PTP port when the clock profile is G.8265.*x*
Sync Interval	The network synchronization interval, in packets per second
Alarms	The alarms that are active for the PTP peer
Tx Timestamp Point	The transmission timestamp point
Rx Timestamp Point	The reception timestamp point
Last Tx Port	The *port-id* of the last port from which a synchronization packet was transmitted
Last Rx Port	The *port-id* of the last port into which a synchronization packet was received
Port Asymmetry	The asymmetry value of the PTP peer, in nanoseconds
Best Master	Whether the clock has been deemed to be the best master clock
Parent Clock	Whether there is an external parent clock
Profile Name	The name of the alternate profile configuration. If an alternate profile is not configured, Primary is displayed as the profile name.
Profile	The PTP profile used for the alternate profile configuration. • g8275dot1-2014 — The PTP profile specified in the ITU-T G.8275.1 recommendation. • g8275dot2-2016 — The PTP profile specified in the ITU-T G.8275.2 recommendation.

18.34 peq

peq

Syntax

peq [*peq-slot*] [**chassis** *chassis-id*] [**detail**]

Context

[Tree] (show peq)

Full Context

show peq

Description

This command displays APEQ information.

Parameters

peq-slot

Specifies the APEQ slot identifier.

Values 1 to 12

chassis-id

Specifies the chassis ID for the router chassis.

Values 1 to 2

detail

Displays detailed information.

Platforms

7750 SR-12e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of PEQ information, and Table 411: Output fields: PEQ describes the output fields.

Output Example: show peq

```
*A:Dut-A# show peq
===============================================================================
```

Output Fields: show peq

Table 411: Output fields: PEQ

Label	Description
Slot	The number of the slot in which the APEQ is installed.
Provisioned Type Equipped Type (if different)	The APEQ type provisioned.
Admin State	The administrative state.
Operational State	The operational state.
Input	Specifies the input battery feed: A, or B.
Zone	Specifies the chassis power zone.
Hardware Data:	
Part number	The APEQ part number.
CLEI code	The APEQ CLEI code.
Serial number	The APEQ serial number.
Manufacture date	The date the APEQ was manufactured.
Manufacturing deviations	Specifies any manufacturing deviations.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Manufacturing assembly number	The APEQ assembly number.
Administrative state	Specifies the administrative state of the APEQ.
Operational state	Specifies the operational state of the APEQ.
Time of last boot	Indicates the time stamp of the last system restart.
Current alarm state	Indicates the current alarm state.

18.35 per-link-hash

per-link-hash

Syntax

per-link-hash [**class** {**1** | **2** | **3**}]

per-link-hash port *port-id*

Context

[Tree] (show>lag per-link-hash)

Full Context

show lag per-link-hash

Description

This command displays LAG per-link hash information.

Parameters

port-id

Displays information about a specified LAG link-map profile.

Values 1 to 32 (VSR)
1 to 64 (all other platforms)

Platforms

All

Output

The following output is an example of per-link hash SAP information.

Table 412: Output fields: per-link hash SAP describes per-link hash SAP output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
show lag 1 associations per-link-hash sap [class]
===============================================================================
SAP Associations

Label	Description
Group-interface	The group interface name associated with this service ID
Sub Profile	The subscriber profile associated with this service ID
SLA Profile	The service level profile associated with this service ID
Egress Vport	The egress Vport name associated with this service ID
LAG Active Link	The associated SAP ID

18.36 per-peer-queuing

per-peer-queuing

Syntax

per-peer-queuing [**detail**]

Context

[Tree] (show>system>security per-peer-queuing)

Full Context

show system security per-peer-queuing

Description

This command displays the number of queues in use by the Qchip, which in turn is used by PPQ, CPM filter, SAP, and so on.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of per peer queuing information, and Table 415: Output fields: per-peer queuing describes the output fields.

Output Example

```
A:ALA-48>show>system>security# per-peer-queuing
===============================================
CPM Hardware Queuing
===============================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
Per Peer Queuing        : Enabled
Total Num of Queues     : 8192
Num of Queues In Use    : 0
===============================================
A:ALA-48>show>system>security#
```

Table 415: Output fields: per-peer queuing

Label	Description
Per Peer Queuing	Displays whether per-peer-queuing is enabled or disabled. When enabled, a peering session is established and the router automatically allocates a separate CPM hardware queue for that peer. When disabled, no hardware queuing per peer occurs.
Total Num of Queues	Total number of CPM hardware queues
Num of Queues In Use	Number of CPM hardware queues that are in use

Context

[Tree] (tools perform)

Full Context

tools perform

Description

Commands in this context perform troubleshooting operations.

Platforms

All

18.39 performance

performance

Syntax

performance mda *mda-id* **last** *time-span time-unit*

Context

[Tree] (tools>dump>wlan-gw>isa performance)

Full Context

tools dump wlan-gw isa performance

Description

This command generates an overview of the processing load and data processed by the specified ISA over a period of time. The following time periods are supported:

- last minute with seconds granularity
- last hour with minutes granularity
- last day with hours granularity

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- last day with days granularity

Parameters

mda-id

Specifies the MDA for getting performance measurements in *slot*/*mda* format.

Values slot — 1 to 10
mda — 1 to 2

time-span

Specifies the period for which to get measurements.

Values 1 to 60 (sec), 1 to 60 (min), 1 to 24 (hrs), 1 (days)

time-unit

Specifies the period for which to get measurements.

Values sec, min, hrs, days

Platforms

7750 SR, 7750 SR-e, 7750 SR-s

Output

This command displays performance information.

Output Example

```
Node# /tools dump wlan-gw isa performance mda 2/1 last 5 min
===============================================================================
Measurements for last 5 minutes on Slot #2 MDA #1
===============================================================================
Timestamp            |     Wait     Idle     Work | Total jobs |    Total data

tools dump nat isa performance

Description

This command generates an overview of the processing load and data processed by the specified ISA over a period of time. The following time periods are supported:

- last minute with seconds granularity
- last hour with minutes granularity
- last day with hours granularity
- last 31 days with days granularity

Parameters

mda-id

Specifies the MDA for getting performance measurements in format *slot*/*mda*.

Values slot — 1 to 10
mda — 1 to 2

time-span

Specifies the period for which to get measurements.

Values 1 to 60 (sec) | 1 to 60 (min) | 1 to 24 (hrs) | 1 to 31 (days)

time-unit

Specifies the period for which to get measurements.

Values sec | min | hrs | days

performance-monitoring

Syntax

performance-monitoring record *record*

Context

[Tree] (show>system>ptp performance-monitoring)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show system ptp performance-monitoring

Description

This command displays the collected performance monitoring information for the PTP clock.

Parameters

record

Specifies the time window for the record.

Values		
	0	current 15-minute interval
	1-96	15-minute interval within the last 24 hours
	97	current 24-hour interval
	98	previous 24-hour interval
	501	current minute interval
	502-516	one-minute interval within the last 15 minutes

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of PTP monitoring performance statistics and Table 416: Output fields: PTP performance monitoring describes the output fields.

Output Example

```
show system ptp performance-monitoring record 503

pfcp-association

Syntax

pfcp-association *name* **statistics**

Context

[Tree] (clear>subscr-mgmt pfcp-association)

Full Context

clear subscriber-mgmt pfcp-association

Description

This command clears all message statistics associated with the specified PFCP association.

Parameters

name

Specifies the name of a PFCP association, up to 32 characters, for which information is cleared.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Specifies that statistics for the specified PFCP association are cleared.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

18.45 pfcp-session

pfcp-session

Syntax

pfcp-session session-id *session-id*

pfcp-session sap *sap-id* **mac** *mac-address*

Context

[Tree] (clear>subscr-mgmt pfcp-session)

Full Context

clear subscriber-mgmt pfcp-session

Description

This command locally clears a PFCP session, either by providing the session ID or the associated SAP ID and MAC address.

Note:
This command does not delete the session on the BNG CPF and should only be used as a last attempt to delete the PFCP sessions. It is always recommended to first attempt to gracefully delete the session from the BNG CPF.

Parameters

session-id

Specifies the locally assigned PFCP session ID, up to 20 characters.

sap-id

Specifies the SAP ID associated with the session.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*

ping-template

Context

[Tree] (show>test-oam>icmp ping-template)

Full Context

show test-oam icmp ping-template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays a summary of configured ping templates and the total number service interfaces that reference the template. By specifying template name, the values for the specified interface and the total and active references for that specific template are displayed.

Parameters

template-name

Specifies the name of the ping template to be queried, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ping template information.

Output Example

```
show test-oam icmp ping-template

18.51 ping-template-sync

ping-template-sync

Syntax

ping-template-sync *template-name*

Context

[Tree] (tools>perform>test-oam>icmp ping-template-sync)

Full Context

tools perform test-oam icmp ping-template-sync

Description

This command updates all values for service IP interfaces that reference the specified **config>test-oam>icmp>ping-template** *template-name*. Changes to the **ping-template** in this context are not automatically pushed to service IP interfaces. Values imported by the service interface are those configured when the service IP interface referenced the ping- template.

Parameters

template-name

Specifies the ping template name, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

18.52 ping-template-using

ping-template-using

Syntax

ping-template-using [*template-name*]

Context

[Tree] (show>test-oam>icmp ping-template-using)

Full Context

show test-oam icmp ping-template-using

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information about service IP interfaces that reference a ping template, the associated router instance, and the administrative state of the ping template under that interface.

Parameters

template-name

Displays the interfaces mapped to the **ping-template** *template-name*, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example ping template output information.

Output Example

```
show test-oam icmp ping-template-using

Parameters

policy-name

Specifies an existing multicast CAC (MCAC) policy name.

bundle *bundle-id*

Specifies an existing multicast bundle name.

protocol *protocol-name*

specifies an applicable protocol to display.

Values igmp, pim, igmpSnpg

interface *if-name*

Specifies an interface name to display.

detail

Displays detailed information.

Context

[Tree] (show>router policy)

Full Context

show router policy

Description

This command displays configured policy statement information.

Parameters

admin

When this keyword is specified, the entire policy option configuration is displayed, including any uncommitted configuration changes. This command is similar to the **info** command.

Note:
This parameter is not available in the MD-CLI.

as-path

When this keyword is specified, the parameter displays configured as-path regular expressions (optionally filtered by name).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as-path-group

When this keyword is specified, the command displays configured as-path-groups, optionally filtered by name.

community

When this keyword is specified, the command displays configured community lists, optionally filtered by name.

damping

When this keyword is specified, the information about the route policy damping configurations is displayed.

entry *entry-id*

Displays the configuration (with parameter value substitution) of the subroutine policy called by the entry with entry ID.

exclusive-access

Displays the policy that edits exclusive access and lock information.

Note:
This parameter is not available in the MD-CLI.

extended-comm-set-name

Specifies the name of the extended community set.

expand-variables

Displays the variables that are replaced with values in main policies or in sub-policies.

prefix-list *name*

Displays the prefix lists configured in the route policy.

policy *name*

Displays information similar to the info command for a specific policy-statement. If a *name* is provided, the matching policy-statement displays. If no *statement* name is specified, a list of all policies statements and descriptions display.

route-distinguisher *rd-list-name*

Keyword to display all the configured route distinguisher lists. If an *rd-list-name* is provided, the specified route distinguisher list is displayed.

sub-policy

When this keyword is specified, the configuration of a subroutine policy is displayed.

subpol-name

Specifies the policy name up to 64 characters.

entry-id

Specifies the numeric entry identifier of the policy.

Values 1 to 4294967295

Platforms

All

Output

Table 419: Output fields: route policy describes route policy output fields.

Use the following command to display all configured route policies.

```
show router policy
```

Output Example

```
===============================================================================
Route Policies
===============================================================================
Policy                          Description
-------------------------------------------------------------------------------
Direct And Aggregate            Policy Statement ABC
-------------------------------------------------------------------------------
Policies :
===============================================================================
```

Use the following command to display the entire policy option configuration, including any uncommitted configuration changes.

```
show router policy admin
```

Note: This command option is similar to the **info** command, which displays information about the route policies and parameters.

Output Example

```
prefix-list "All-Routes"
            prefix 0.0.0.0/0 longer
            prefix 2.0.0.0/8 longer
            prefix 3.0.0.0/8 longer
            prefix 4.0.0.0/8 longer
            prefix 5.0.0.0/8 longer
            prefix 6.0.0.0/8 exact
            prefix 224.0.0.0/24 longer
    exit
...
```

Use the following command to display information about a specific route policy.

```
show router policy name
```

Output Example

```
description "Policy Statement For 'BGP To RIP'"
    entry 10
        description "Entry For Policy 'BGP To RIP'"
        from
            protocol bgp
        exit
        to
            protocol rip
        exit
        action accept
            metric set 1
            next-hop 10.0.18.200
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
            tag 805
        exit
    exit
    default-action reject
```

Use the following command to display information about the route policy damping configurations.

```
show router policy damping
```

Output Example

```
==========================================
Route Damping Profiles
==========================================
    damping "TEST-LOW"
        half-life 22
        max-suppress 720
        reuse 10000
        suppress 15000
    exit
    damping "TEST-HIGH"
        half-life 22
        max-suppress 720
        reuse 1000
        suppress 5000
    exit
    damping "TEST-MEDIUM"
        half-life 22
        max-suppress 720
        reuse 5000
        suppress 11000
    exit
==========================================
```

Use the following command to display information about the subroutine called by an entry of the route policy.

```
show router policy "poll" sub-policy entry 10 name "pol2"
```

Output Example

```
===============================================================================
pol1 entry 10 sub-policies
===============================================================================
-------------------------------------------------------------------------------
Level1 Sub-policy : pol2    Parent-policy : pol1, Parent-entry 10
-------------------------------------------------------------------------------
    entry 20
        from
            community "telnet"
        exit
    exit
===============================================================================
```

policy [*policy-id* [**event** *event-type specific-qualifier*]]

Context

[Tree] (show>vrrp policy)

Full Context

show vrrp policy

Description

This command displays VRRP priority control policy information.

If no command line options are specified, a summary of the VRRP priority control event policies displays.

Parameters

policy-id

Displays information on the specified priority control policy ID.

Default All VRRP policies IDs

Values 1 to 9999

event-type

Displays information on the specified VRRP priority control event within the policy ID.

Default All event types and qualifiers

Values port-down, lag-port-down, host-unreachable, route-unknown, mc-ipsec-non-forwarding

specific-qualifier

Display information about the specified qualifier.

Values port-id, lag-id, host-ip-addr, route-prefix/mask, tunnel-group-id

Output

VRRP Policy Output — The following output is an example of VRRP policy information, and Table 420: Output fields: VRRP policy describes the fields.

Table 420: Output fields: VRRP policy

Label	Description
Policy Id	The VRRP priority control policy associated with the VRRP virtual router instance A value of 0 indicates that no control policy is associated with the virtual router instance
Current Priority & Effects	
Current Explicit	When multiple explicitly defined events associated with the priority control policy happen simultaneously, the lowest value of all the current explicit priorities will be used as the in-use priority for the virtual router
Current Delta Sum	The sum of the priorities of all the delta events when multiple delta events associated with the priority control policy happen simultaneously; this sum is subtracted from the base priority of the virtual router to give the in-use priority
Delta Limit	The delta-in-use-limit for a VRRP policy; once the total sum of all delta events has been calculated and subtracted from the base-priority of the virtual router, the result is compared to the delta-in-use-limit value; if the result is less than this value, the delta-in-use-limit value is used as the virtual router in-use priority value; if an explicit priority control event overrides the delta priority control events, the delta-in-use-limit has no effect If the delta-in-use-limit is 0, the sum of the delta priority control events to reduce the virtual router's in-use-priority to 0 can prevent it from becoming or staying master
Current Priority	The configured delta-in-use-limit priority for a VRRP priority control policy or the configured delta or explicit priority for a priority control event
Applied	The number of virtual router instances to which the policy has been applied; the policy cannot be deleted unless this value is 0
Description	A text string which describes the VRRP policy
Event Type & ID	A delta priority event is a conditional event defined in a priority control policy that subtracts a given amount from the base

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	priority to give the current in-use priority for the VRRP virtual router instances to which the policy is applied An explicit priority event is a conditional event defined in a priority control policy that explicitly defines the in-use priority for the VRRP virtual router instances to which the policy is applied Explicit events override all delta events; when multiple explicit events occur simultaneously, the event with the lowest priority value defines the in-use priority
Event Oper State	The operational state of the event
Hold Set Remaining	The amount of time that must pass before the set state for a VRRP priority control event can transition to the cleared state to dampen flapping events
Priority & Effect	Delta — the *priority-level* value is subtracted from the associated virtual router instance's base priority when the event is set and no explicit events are set; the sum of the priority event *priority-level* values on all set delta priority events are subtracted from the virtual router base priority to derive the virtual router instance in-use priority value If the **delta** priority event is cleared, the *priority-level* is no longer used in the in-use priority calculation
	Explicit — the *priority-level* value is used to override the base priority of the virtual router instance if the priority event is set and no other **explicit** priority event is set with a lower *priority-level* The set **explicit** priority value with the lowest *priority-level* determines the actual in-use protocol value for all virtual router instances associated with the policy
In Use	Specifies whether the event is currently affecting the in-use priority of some virtual router

Output Example

```

```

Table 421: Output fields: VRRP policy event

Label	Description
Description	A text string which describes the VRRP policy
Policy Id	The VRRP priority control policy associated with the VRRP virtual router instance A value of 0 indicates that no control policy is associated with the virtual router instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Current Priority	The Base router priority for the virtual router instance used in the master election process
Current Explicit	When multiple explicitly defined events associated with the priority control policy happen simultaneously, the lowest value of all the current explicit priorities will be used as the in-use priority for the virtual router
Applied	The number of virtual router instances to which the policy has been applied; the policy cannot be deleted unless this value is 0
Current Delta Sum	The sum of the priorities of all the delta events when multiple delta events associated with the priority control policy happen simultaneously; this sum is subtracted from the base priority of the virtual router to give the in-use priority
Delta Limit	The delta-in-use-limit for a VRRP policy; once the total sum of all delta events has been calculated and subtracted from the base-priority of the virtual router, the result is compared to the delta-in-use-limit value; if the result is less than this value, the delta-in-use-limit value is used as the virtual router in-use priority value; if an explicit priority control event overrides the delta priority control events, the delta-in-use-limit has no effect If the delta-in-use-limit is 0, the sum of the delta priority control events to reduce the virtual router's in-use-priority to 0 can prevent it from becoming or staying master
Applied to Interface Name	The interface name where the VRRP policy is applied
VR ID	The virtual router ID for the IP interface
Opr	Up — indicates that the operational state of the VRRP instance is up
	Down — indicates that the operational state of the VRRP instance is down
Base Pri	The base priority used by the virtual router instance
InUse Priority	The current in-use priority associated with the VRRP virtual router instance
Master Priority	The priority of the virtual router instance which is the current master
Priority	The base priority used by the virtual router instance
Priority Effect	Delta — a delta priority event is a conditional event defined in a priority control policy that subtracts a given amount from the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	base priority to give the current in-use priority for the VRRP virtual router instances to which the policy is applied
	Explicit — a conditional event defined in a priority control policy that explicitly defines the in-use priority for the VRRP virtual router instances to which the policy is applied Explicit events override all delta events; when multiple explicit events occur simultaneously, the event with the lowest priority value defines the in-use priority
Current Priority	The configured delta-in-use-limit priority for a VRRP priority control policy or the configured delta or explicit priority for a priority control event
Event Oper State	The operational state of the event
Hold Set Remaining	The amount of time that must pass before the set state for a VRRP priority control event can transition to the cleared state to dampen flapping events
Priority	The base priority used by the virtual router instance
Priority Effect	Delta — the *priority-level* value is subtracted from the associated virtual router instance's base priority when the event is set and no explicit events are set; the sum of the priority event *priority-level* values on all set delta priority events are subtracted from the virtual router base priority to derive the virtual router instance in-use priority value If the **delta** priority event is cleared, the *priority-level* is no longer used in the in-use priority calculation
	Explicit — the *priority-level* value is used to override the base priority of the virtual router instance if the priority event is set and no other **explicit** priority event is set with a lower *priority-level* The set **explicit** priority value with the lowest *priority-level* determines the actual in-use protocol value for all virtual router instances associated with the policy
Hold Set Config	The configured number of seconds that the hold-set timer waits after an event enters a set state or enters a higher threshold set state, depending on the event type
Value In Use	Yes — the event is currently affecting the in-use priority of some virtual router
	No — the event is not affecting the in-use priority of some virtual router
# trans to Set	The number of times the event has transitioned to one of the 'set' states

© 2026 Nokia.

[Tree] (show>system>security>dist-cpu-protection policy)

[Tree] (show>system>security>cpu-protection policy)

Full Context

show system security dist-cpu-protection policy

show system security cpu-protection policy

Description

This command displays CPU protection policy information.

Parameters

policy-id

Displays CPU protection policy information for the specified policy ID.

association

This keyword displays associations for the specified policy ID.

Platforms

All

- show system security dist-cpu-protection policy

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

- show system security cpu-protection policy

policy

Syntax

policy *policy-assoc-name*

Context

[Tree] (show>router>pcep>pcc>pce-assoc policy)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router pcep pcc pce-associations policy

Description

This command displays the policy association information.

If a policy association name is not specified, the information for all configured policy associations is displayed.

Parameters

policy-assoc-name

Specifies the name of the policy association, up to 32 characters.

Platforms

All

Output

The following output is an example of policy association information, and Table 422: Output fields: policy association describes the output fields.

Output Example

```
*A:Dut-C>config>router>mpls>lsp# show router pcep pcc pce-associations policy "test_pol"
===============================================================================
PCEP PCC Policy Associations Info
===============================================================================
Assocation Name    : test_pol
Association ID     : 10                Association Source : 192.168.213.59
===============================================================================
```

Table 422: Output fields: policy association

Label	Description
Association Name	The policy association name
Association ID	The policy association ID
Association Source	The source IP address of the policy association. Both IPv4 and IPv6 are supported.

Full Context

show router policy-edits

Description

This command displays edited policy information that was entered in the classic CLI.

Note:
This command is not available in the MD-CLI.

Platforms

All

18.60 policy-test

policy-test

Syntax

policy-test *plcy-or-long-expr* [*plcy-or-expr* [*plcy-or-expr*...{up tp 14 max}] [**family** *family*] [**rd** *rd*] **prefix** *ip-prefix/ip-prefix-length* [**longer**] [**neighbor** *ip-address*] [**display-rejects**] [{**detail** | **brief**}] [**display-rejects-only**] [**export**] [**protocol** *protocol*]

Context

[Tree] (show>router>bgp policy-test)

Full Context

show router bgp policy-test

Description

This command allows the operator to evaluate existing route policy or chain of route policies or route policy logical expression effects, as a BGP import or export policy, by identifying the routes that would be accepted or rejected after the complete evaluation.

When the policy, list of policies or logical expression is used as a BGP export policy, the **export** keyword must be included. When the policy is used as a BGP import policy, the **export** keyword should not be included.

Parameters

plcy-or-long-expr

Specifies up to 14 policy names or a long expression.

Values policy-name: a policy name, up to 64 characters

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

long-expr: a long expression, up to 255 characters.

plcy-or-expr

Specifies the policy name or expression.

Values policy-name: a policy name, up to 64 characters

expr: an expression, up to 64 characters

family

ipv4, ipv6, vpn-ipv4, vpn-ipv6, label-ipv4, label-ipv6.

Default ipv4

rd

Specifies the route distinguisher value in one of the following formats:

- *ip-addr*:*comm-val*
- *2byte-asnumber*:*ext-comm-val*
- *4byte-asnumber*:*comm-val*

ip-prefix/ip-prefix-length

Specifies an IPv4 or IPv6 prefix/mask to be evaluated. The keyword **longer** may be specified to evaluate longer prefix matches (optional).

ip-address

Specifies the IPv4 or IPv6 address of a peer from which the BGP routes to be evaluated were sent, up to 64 characters.

longer

Matches prefixes with a longer prefix-length.

display-rejects

Displays routes that were rejected by the policy. If not specified, only a count of rejected routes are shown.

detail

When the policy modifies route attributes, it displays the modifications made to the routes. This command requires an exact prefix to be specified.

brief

Provides a summarized display of the route attributes modifications. This command requires an exact prefix to be specified.

display-rejects-only

Displays only routes rejected by the policy test.

export

Indicates that the policy test is conducted in the context of a BGP export policy. The analyzed set of routes also include non-BGP routes that can be redistributed by BGP.

protocol

Displays routes by the protocol type. This keyword is only applicable when the **export** keyword is also present.

19 p Commands – Part II

19.1 pool

pool

Syntax

pool *pool-name*

Context

[Tree] (tools>perform>router>dhcp6>server pool)

[Tree] (tools>perform>router>dhcp>server pool)

Full Context

tools perform router dhcp6 local-dhcp-server pool

tools perform router dhcp local-dhcp-server pool

Description

This command performs local DHCP or DHCP6 server IP address pool tasks.

Parameters

pool-name

Specifies the pool name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Syntax

pool *pool-name*

pool

Context

[Tree] (show>router>nat pool)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router nat pool

Description

This command displays NAT pool information.

Parameters

pool-name

Specifies the pool name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
show router nat pool

19.2 pool-ext-stats

pool-ext-stats

Syntax

pool-ext-stats [*pool-name*]

Context

[Tree] (show>router>dhcp>server pool-ext-stats)

Full Context

show router dhcp local-dhcp-server pool-ext-stats

Description

This command displays extended statistics per DHCPv4 pool in local DHCPv4 server.

The following statistics are included in output:

- The number of stable leases in the pool
- The number of provisioned address in the pool
- The number of used address in the pool
- The number of free address in the pool
- The percentage of used address
- The percentage of free address

For each statistic (except for provisioned addresses), there is current value and peak value, peak value is the highest value since pool creation or last reset via the **clear router** *rt-id* **dhcp local-dhcp-server** *svr-name* **pool-ext-stats** command.

Parameters

pool-name

Specifies the name of DHCPv4 local server pool.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool-ext-stats

Syntax

pool-ext-stats [*pool-name*]

Context

[Tree] (show>router>dhcp6>server pool-ext-stats)

Full Context

show router dhcp6 local-dhcp-server pool-ext-stats

Description

This command displays extended statistics per DHCPv6 pool in local DHCPv6 server.

The following statistics are included in output:

- The number of stable leases in the pool
- The number of provisioned /64 address block in the pool
- The number of used /64 address block in the pool
- The number of free /64 address block in the pool
- The percentage of used address (with /64 address block)
- The percentage of free address (with /64 address block)

For each statistic (except for Provisioned Addresses), there is current value and peak value, peak value is the highest value since pool creation or last reset via command "clear router <rt-id> dhcp6 local-dhcp-server <svr-name> pool-ext-stats".

Parameters

pool-name

Specifies the name of DHCPv6 local server pool.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subnet statistics information.

Output Example

```
show router 500 dhcp6 local-dhcp-server "d6" pool-ext-stats "pool-v6"
===============================================================================
Extended pool statistics for server "d6"
===============================================================================

```

Table 426: Output fields: failover pool statistics describes pool statistics output field descriptions.

Table 426: Output fields: failover pool statistics

Field	Description
Failover Admin State	Identifiers the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for pool	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease.
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to **local** on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.
Number of pools found	The total number of pools found

19.4 pool-threshold-stats

pool-threshold-stats

Syntax

pool-threshold-stats [*pool-name*] **detail** [**format** {**exact** | **scientific**}]

pool-threshold-stats [*pool-name*]

Context

[Tree] (show>router>dhcp6>server pool-threshold-stats)

Full Context

show router dhcp6 local-dhcp-server pool-threshold-stats

Description

This commands displays pool level threshold stats of local DHCPv6 server. A minimum-free threshold needs to be configured before system collects threshold stats for the prefix.

The stats for each threshold are calculated based on the configured minimum-free prefix length.

For example, a /59 prefix is provision in the local DHCPv6 server, and the server allocated two PD leases, one /62 and one /63. And there is a /63 minimum threshold configured. The threshold stats are calculated

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

based on /63 as the base unit (block). Then the value of current used block would be 3 because there is one /62 lease and one /63 lease, that equals to a total of three /63.

Parameters

pool-name

Specifies the name of the pool in local DHCPv6 server.

detail

Displays detailed output.

format

Specifies the format in the display to be either **exact** or **scientific**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of pool threshold statistics information.

Output Example

```
show router 500 dhcp6 local-dhcp-server "d6" pool-threshold-stats "1"
===============================================================================
Server "d6"
===============================================================================
  Operational state         : inService
-------------------------------------------------------------------------------
Pool                        : 1
-------------------------------------------------------------------------------
  Stable leases             : 2
  Advertised leases         : 0
  -----------------------------------------------------------------------------
  Threshold   Used   Peak   Too low   Depleted   Peak timestamp
  -----------------------------------------------------------------------------
  /62         25%    25%    N         N          01/21/2015 21:52:12
  /63         19%    19%    N         N          01/21/2015 21:52:12
```

The command shown above displays an overview of pool level thresholds in the specified pool:

- The **Peak** field indicates the peak value of used
- The **Too low** field indicate if the configured minimum-free threshold is exceeded
- The **Depleted** field indicate if there is no available prefix with the length in the provisioned prefix
- The **Peak timestamp** field indicates the time of peak used value

```

  Remote Used Peak Time     : 01/21/2015 21:47:39
  Peak Reset Time           : 01/21/2015 21:47:39
  Valid Data                : Y
```

The above command displays detailed statistics of all pool level thresholds in the specified pool:

- **Blks** in the output means the minimum free prefix length.
- **Valid Data** output indicates whether the data you see is valid or not. The data is invalid when a background stats update is scheduled or busy.

Table 427: Output fields: pool threshold statistics describes pool threshold statistics output fields.

Table 427: Output fields: pool threshold statistics

Field	Description
Operational state	The operational state of the local DHCP server instance unknown — The operational state is unknown inService — The operational state is in service outOfService — The operational state is out of service transition — The operational state is in transition waitPersistence — The DHCP server instance is waiting for a persistence action to complete.
Pool	The pool ID
Stable Leases	The number of stable leases
Advertised leases	The number of advertised leases
Threshold	The prefix level threshold
Current Provisioned Blks	The number of provisioned blocks in this pool
Current Used Blks	The number of used blocks in this pool
Current Free Blks	The number of free blocks in this pool
Current Used Percent	The percentage of used prefixes with the minimum free threshold length in the pool compared to the number of provisioned prefixes
Current Used Peak Blks	A 64-bit word of the peak value of the number of used blocks in the pool with a prefix length
Current Used Peak Percent	The peak value of the number of used prefixes with the minimum free threshold length in the pool as a percentage of the provisioned prefixes. This depends on the current failover state of the DHCP server or pool
Current Used Peak Time	The time at which the peak value of the number of used prefixes in the pool was reached
Current Free Percent	The percentage of free prefixes with the minimum free threshold length in the pool compared to the number of provisioned prefixes. This depends on the current failover state of the DHCP server or pool
Current Free Too Low	The number of free prefixes with the minimum free threshold length available in the pool that is below the configured number of prefixes with the minimum free threshold length

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Current Free Depleted	The number of prefixes with the minimum free threshold length available in the pool
Local Provisioned Blks	A 64-bit word of the number of provisioned prefixes with the minimum free threshold length local in the pool
Local Used Blks	A 64-bit word of the number of used prefixes with the minimum free threshold length local in the pool
Local Free Blks	A 64-bit word of the number of free prefixes with the minimum free threshold length local in the pool
Local Used Peak Blks	A 64-bit word of the peak value of the number of used prefixes with the minimum free threshold length local in the pool
Local Used Peak Percent	The peak value of the number of used prefixes with the minimum free threshold length local in the pool as a percentage of the provisioned prefixes
Local Used Peak Time	The time at which the peak value of the number of used prefixes local in the pool was reached
Remote Provisioned Blks	A 64-bit word of the number of provisioned prefixes with the minimum free threshold length remote in the pool
Remote Used Blks	A 64-bit word of the number of used prefixes with the minimum free threshold length remote in the pool
Remote Free Blks	A 64-bit word of the number of free prefixes with the minimum free threshold length remote in the pool

show pools

Description

This command displays pool information.

Parameters

***mda-id*[*/port*]**

Displays the pool information of the specified MDA and port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values slot/mda[/port]

access-app

Specifies the pool application as either access ingress or egress.

Values **access-ingress**, **access-egress**

pool-name

Displays the pool information of the specified pool. If specified, the name must be **default**.

service-id

Displays the pool information for the specified service.

Values 1 to 2148278386, *svc-name*: 64 char max

queue-group-name

Displays the information for the specified queue group.

Values 32 chars max

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

network-egress

Displays the network egress information.

direction

Displays the information for the ingress or egress direction.

Values **ingress**, **egress**

slot-number

Displays the information for the specified card slot.

Values 1 to 10

fp-number

Displays the information for the specified FP.

Values 1 to 8

app-ingress

Displays the network ingress or access ingress information.

Values **network-ingress**, **access-ingress**

statistics

Displays the buffer pool statistics.

Platforms

All

Output

The following outputs are example of pool information, and Table 428: Output fields: pools describes the output fields.

Note:
The pool shared in use stat only increases when a queue is asking for a buffer outside its reserved size. If all the buffers in a pool are assigned to queues within their reserved size, then only the reserved in use size will increase. In case of resv CBS over subscription (CBS sum for all queues is bigger than pool resvCbs), it is possible that pool resv in use stat can increase above the actual pool reserved size.

Output Example: show pools

```
*A:PE# show pools 5/1

Output Fields: show pools

Table 428: Output fields: pools describes the output fields for the **show pools** command.

Table 428: Output fields: pools

Label	Description
Type	Specifies the pool type.
ID-FP	Specifies the card-FP or MDA-FP or card, MDA, or port designation.
Application/Type	Specifies what the pool would be used for. The pools could be used for access or network traffic at either ingress or egress.
Pool Name	Specifies the name of the pool being used.
Resv CBS	Specifies the percentage of pool size reserved for CBS.
Utilization	Specifies the type of the slope policy.
State	The administrative status of the port.
Start-Avg	Specifies the percentage of the buffer utilized after which the drop probability starts to rise above 0.
Max-Avg	Specifies the percentage of the buffer utilized after which the drop probability is 100 percent. This implies that all packets beyond this point will be dropped.
Time Avg Factor	Specifies the time average factor the weighting between the previous shared buffer average utilization result and the new shared buffer utilization in determining the new shared buffer average utilization.
Actual ResvCBS	Specifies the actual percentage of pool size reserved for CBS.
Admin ResvCBS	Specifies the percentage of pool size reserved for CBS.
PoolSize	Specifies the size in percentage of buffer space. The value '-1' implies that the pool size should be computed as per fair weighting between all other pools.
Pool Total	Displays the total pool size.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Pool Shared	Displays the amount of the pool which is shared.
Pool Resv	Specifies the percentage of reserved pool size.
Pool Total In Use	Displays the total amount of the pool which is in use.
Pool Shared In Use	Displays the amount of the pool which is shared that is in use.
Queue	Specifies the number of packets/octets discarded in the queue.
Exceed-Slope	Specifies the number of packets/octets discarded because of wred-slope (exceed).
Low-Slope	Specifies the number of packets/octets discarded because of wred-slope (low).
High-Slope	Specifies the number of packets/octets discarded because of wred-slope (high).
HiPlus-Slope	Specifies the number of packets/octets discarded because of wred-slope (hiPlus).
Pool Shared	Specifies the number of packets/octets discarded by exceeding shared-buffer-pool size.
Pool Total	Specifies the number of packets/octets discarded after the total size of the bufferpool is reached.

show port

Description

This command displays port or channel information.

If the *port-id* parameter only specifies a portion of a port identifier, a summary of all ports that start with that portion is displayed. For example, specifying a slot number and MDA number displays a summary of all ports on that MDA. If no *port-id* is provided, a summary of all ports in the system is displayed.

If the **detail** keyword is specified without any *port-id*, the detailed output of every port is displayed. This is useful for generating a complete report or as an input into the **| match** post-filtering command to display only specific fields for all ports (customized summaries).

If the *port-id* specifies a unique port, information about that port is displayed. The specific information displayed depends on the port type. Additional information can be displayed if the **detail** keyword is included. Information subsets can also be displayed by using various keywords. For example, the **otu** keyword displays only the OTU interface information for the port.

When the **associations** keyword is specified and the *port-id* is a member of a LAG, the command is interpreted as a request to display the associations of that LAG (see the **show lag** *lag-id* **associations** command).

Parameters

port-id

Specifies the physical port ID in the form *slot/mda/port*. The following table describes the port ID values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 429: Output fields: port ID values

Product	Slot	MDA	Port	Values
7750 SR-12	1 to 10	1, 2	1 to 60 (depending on the MDA type)	—
7750 SR-7	1 to 5	1, 2		—

	WLAN-GW tunnel traffic from/toward access points, or for a reassembly traffic over a SAP-based interface
nat-out-ip	Information/statistics on the internal interface toward a BB ESA-VM for NAT44, DS-Lite, NAT64 and L2-aware NAT upstream/downstream traffic on the outside, or for WLAN-GW UE traffic from/toward the network
nat-in-l2	Information/statistics on the internal interface toward a BB ESA-VM for L2-aware NAT
lns-net	Information/statistics on the internal interface toward a LNS ESA-VM, L2TP encapsulated packets from the LAC undergoes L2TP header removal
lns-esm	Information/statistics on the internal interface toward a LNS ESA-VM, IP packets from the network which undergoes L2TP encapsulation
nat-in-ds	Information/statistics on the internal interface toward a BB ESA-VM for DS-lite upstream/downstream traffic on the inside
lo-gre	Information/statistics on the internal interface between a WLAN-GW anchor ESA VM and tunnel ESA VM, for both up and downstream traffic

access

Keyword that displays the queue group name is on an access port.

active

Keyword that displays only active events.

aggregate-queue

Keyword that displays the aggregated number of forwarded and dropped packets and bytes per direction across all queues on a PXC port (pxc-<id>.a or pxc-<id>.b).

The system aggregates statistics from all queues under the specified PXC port for presentation. The duration required to gather these statistics is typically brief, though it may vary based on the system load at the time of querying and the number of queues and member ports in a LAG.

Statistics are cached for a 30-second interval. Consequently, executing this command more frequently than every 30 seconds yields identical results and the tmnxPortLastFetchedTime MIB entry and YANG state variable does not change.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aps

Keyword that displays the ports on APS groups.

associations

Keyword that displays a list of port association.

cleared

Keyword that displays remote information about the bridge MAC.

degraded

Keyword that displays degrade severity events.

description

Keyword that displays port description strings.

detail

Keyword that displays detailed information.

dot1x

Keyword that displays information about 802.1x status and statistics.

egress

Keyword that displays whether the queue group name is an egress policy.

egress-aggregate

Keyword that displays aggregate egress statistics.

ethernet

Keyword that displays Ethernet port information.

failure

Keyword that displays failure severity events.

A/gnss

Keyword that displays interface information for the GNSS port on CPM A.

B/gnss

Keyword that displays interface information for the GNSS port on CPM B.

hs-secondary-shaper

Keyword that displays information about a specific HS secondary shaper on a port.

ingress

Keyword that displays whether the queue group name is an ingress policy.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

macsec

Keyword that displays the MACsec information for the port.

monitor-threshold

Keyword that displays the exceed-count for the port-scheduler under Vport (if specified) or for a physical port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

optical

Keyword that displays optical information.

otu

Keyword that displays optical transport unit (OTU) information.

nearest-bridge

Keyword that displays nearest bridge information.

nearest-customer

Keyword that displays nearest customer information.

nearest-non-tpmr

Keyword that displays nearest Two-Port MAC Relay (TPMR) information.

network

Keyword that displays the queue group name is on a network port.

port-scheduler

Keyword that displays the packet and octet counters for traffic exiting the specified port with an applied port scheduler policy, showing the total forwarded and dropped packets and octets, and the forwarded and dropped packets and octets per level.

queue

Keyword that displays the queue information.

queue-depth

Keyword that displays queue depth information for the specified queue group queue.

queue-group

Keyword that displays the queue group information.

queue-group-name

Specifies the name of an existing queue group template, up to 32 characters.

queue-id

Specifies the queue identification.

Values 1 to 16

remote-info

Keyword that displays remote information about the bridge MAC.

secondary-shaper-name

Displays information about the HS secondary name, up to 32 characters.

statistics

Keyword that displays port statistics.

vport-name

Specifies the name of the Vport up, to 32 characters in length.

Platforms

All

A:ALA-48#
```

Output Example: show port <port-id> [statistics [egress-aggregate]] [detail]

The output displays the aggregate egress queue statistics for ports configured with monitor-agg-egress-queue-stats which have non-zero counters. This can be shown for a single port, or all ports on an MDA or card. When the detail parameter is added, the output includes those ports with counters that are all zero.

```

```

If the Vport name is omitted, statistics for all Vports are displayed (bulk read). The statistics are displayed only for the levels, groups, and agg-eps for which the monitor-threshold is enabled. The output information filtering per level, group, or agg-eps is not embedded in the show commands natively. Instead, the output can be filtered with the match extensions for the show command. For example, **show port 1/1/1 vport test monitor-threshold | match Lvl-1**.

```

Table 430: Output fields: port ID

Label	Description
50GHz Ch Min/Max	The 50 GHz channel minimum and maximum
100GHz Ch Min/ Max	The 100 GHz channel minimum and maximum
Acct Pol	The accounting policy for the egress queue-group
ACL Filter Discards	The packet was dropped by a filter (ACL) on the line card (such as IP or MAC filter). Packets dropped by CPM filters or ESM anti-spoof filters do not increment this counter.
Active Pre-Shared Key CKN	The active PSK CAK name
Active Pre-Shared Key Index	The active pre-shared key index: 1 to 2 (default 1)
Adapter Type	The type of adapter module
Addr Ctrl Invalid	The number of invalid address control received
Address	The IP address associated with the index
Admin CIR	The administrative Committed Information Rate (CIR) parameters for the queue. The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth.
Admin FIR	The admin queue FIR rate
Admin PIR	The administrative Peak Information Rate (PIR) parameters for the queue. The PIR defines the maximum rate that the queue can transmit packets through the switch fabricor out an egress interface.
Admin State	Up — The entity is administratively up Down — The entity is administratively down
Agg. Limit	The agg-rate adaptation rule setting
AIS	The number of AIS cells transmitted and received on this connection for both end to end and segment
AIS-P	The number of AIS-P packets received
Alarm Status	The bits used to indicate alarms: loc — A loss of clock which causes the operational state of the port to be downed lais — Line alarm indication signal errors lrdi — Line remote defect indication errors. LRDIs are caused by remote LOF, LOC, and LOS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	ss1f — Section synchronization failure as reported by the S1 byte sb1err — Section B1 errors lb2erSd — Line signal degradation BER errors lb2erSf — Line signal failure BER errors slof — Section loss of frame errors slos — Section loss of signal errors stxptr — Section synchronization error on the transmit side. Indicates if there is a positive or negative justification count per channel srxptr — Section synchronization error on the receive side. Indicates if there is a positive or negative justification count per SONET path lrei — Line error condition raised by the remote as a result of B1 errors received from this node
Alignment Errors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets
Altitude (m MSL)	The altitude of the GNSS antenna above mean sea level, in meters
Amplifier Gain (dB)	The amplifier gain high and low warning alarms
Amplifier Input Power (dBm)	The amplifier input power high and low warning alarms
Amplifier Output Power (dBm)	The amplifier output power high and low warning alarms
AN	The AN for identifying the receiving SA
Ant. Cable Delay	The amount of time, in nanoseconds, compensated for signal delay because of cable length Refer to the cable manufacturer data to determine accurate signal delay statistics for the type and length of cable used
Antenna status	ok: valid antenna connection under-current: open condition. The port remains operationally up in the event that any GNSS splitters used do not provide a load. over-current: short circuit, or maximum power limits for the receiver have been exceeded no-bias voltage: antenna power disabled
Assigned ports	Specifies all ports that contain this CA
authentication method	The 802.1x session authentication method

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Authenticator PAE state	The 802.1x port authenticator PAE state
Auto-negotiate	True — The link attempts to automatically negotiate the link speed and duplex parameters False — The duplex and speed values are used for the link
Average Elapsed Time	The average elapsed time
Backend state	The 802.1x port backend state
Bad Tag Packets	The number of received packets discarded with an invalid SecTAG or a zero value Packet Number (PN) or an invalid Integrity Check Value (ICV)
BFD Spoof Check Failed	The received BFD packet either failed the TTL check (single hop BFD TTL should be 255) or failed the source IP address lookup of known sessions. This counter may increment when BFD sessions are first configured since one side may start sending before the other is completely programmed and ready.
Breakout	The connector breakout configured for the port
Broadcast Packets Input/Output	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a broadcast address at this sub-layer. The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
Broadcast Packets	Input — The number of input broadcast packets Output — The number of output broadcast packets
Broadcast Pckts	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a broadcast address at this sub-layer. The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
CA name/ca-name	The CA name assigned to the port
Cast Type	The connection topology type
CBS	The CBS value defining the reserved size for the queue
Cells	The number of input and output cells HEC discarded cells are not included in the input cell numbers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Cfg Alarm	The alarms that are reported when raised or cleared. Alarms that are not in this list are not reported when they are raised or cleared but appear in the Alarm Status. pais — Path alarm indication signal errors plop — Path loss of pointer (per tributary) errors prdi — Path remote defect indication errors pb3err — Path B3 errors pplm — Path payload mismatch. As a result, the path can be operationally downed prei — Path error condition raised by the remote as a result of B3 errors received from this node puneq — Unequipped path errors. plcd — Path loss of codegroup delineation error. It is applicable only when the value of tmnxPortEtherXGigMode is set to 'wan'.
Cfg MTU	The configured MTU
Cfg Rx Channel	The configured DWDM ITU channel at which the coherent optical module is expected to operate
Cfg Rx LOS Thresh	The configured LOS threshold of the average input power
Cfg Tx Pwr Maximum	The maximum power setting supported by the transceiver (only displayed if the equipped optical module supports configurable transmit power)
Cfg Tx Pwr Minimum	The minimum power setting supported by the transceiver (only displayed if the equipped optical module supports configurable transmit power)
Cfg Tx Target power	The manually-configured average target output power
Chan-Grp IfIndex	The channel group’s interface index number which reflects its initialization sequence
Cipher Suite	The cipher suite used for encrypting the SAK: gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
CIR Rule	min — The operational CIR for the queue is equal to or greater than the administrative rate specified using the rate command except where the derived operational CIR is greater than the operational PIR. If the derived operational CIR is greater than the derived operational PIR, the operational CIR will be made equal to the operational PIR. max — The operational CIR for the queue is equal to or less than the administrative rate specified using the rate command. closest — The operational CIR for the queue is the rate closest to the rate specified using the rate command without exceeding the operational CIR.
CIR Weight	The weight the queue or scheduler uses at the within-CIR port priority level

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Clear Tag Mode	In the case of VLAN-tagged traffic, if the traffic is crossing a network, one or two VLAN tags can be transmitted in clear text so that this traffic can receive preferential treatment over the network based on 802.1 q-tag or p-bits. Values: single-tag, dual-tag
Clock Identity	SyncE clock identity of the originator of the extended QL TLV
Coherent Optical Module	Information for the coherent optical module
Coherent Optical Port Statistics	Statistics for the coherent optical port For Coherent CFP, the Rx Power field displays per-channel power.
Collect-stats Collect Stats	Enabled — The collection of accounting and statistical data for the network Ethernet port is enabled. When applying accounting policies the data by default will be collected in the appropriate records and written to the designated billing file. Disabled — Collection is disabled. Statistics are still accumulated by the IOM cards, however, the CPU will not obtain the results and write them to the billing file.
Collisions	The best estimate of the total number of collisions on this Ethernet segment
Compatibility	The coherent compatibility mode
Config Duplex	Full — The link is set to full duplex mode Half — The link is set to half duplex mode
Config Revision	The configuration revision
Config Speed	The configured speed of the interface
Configured Address	The configured Ethernet MAC address
Configured Freq	The configured frequency for the transceiver
Configured Mode	network — The port is configured for transport network use access — The port is configured for service access
Configured Mode	network — The port is configured for transport network use access — The port is configured for service access. Channelized ports are always access ports
Configured VCs	The number of configured VCs
Connector Code	The vendor organizationally unique identifier field (OUI) contains the IEEE company identifier for the vendor
Constellation	The type of GNSS satellite navigation system used
CRC	The precision of the cyclic redundancy check.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	16 — A 16-bit CRC calculation. 32 — A 32-bit CRC calculation. 32-bit CRC increases the error detection ability, but it also adds some performance overhead.
CRC Mon SD Thresh	The error rate (for CRC errors) at which to declare the Signal Degrade (SD) condition on an Ethernet interface. If the field displays Disabled, no error rate has been specified.
CRC Mon SF Thresh	The CRC error rate at which to declare the Signal Fail (SF) condition on an Ethernet interface. If the field displays Disabled, no error rate has been specified.
CRC Mon Window	The size of the sliding window, in seconds, over which the Ethernet frames are sampled to detect signal fail or signal degrade conditions.
CRC/Align Errors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
CRC-10 Errors	The number of cells discarded on this VPL with CRC 10 errors
CRC-32 Errors	The number of valid AAL-5 SDUs and AAL-5 SDUs with CRC-32 errors received by the AAL-5 VCC
CSE	The number of times that the carrier sense condition was lost or never asserted when attempting to transmit a frame on a particular interface
CV-P	The number of Coding Violations
Current Freq	The current frequency
Current Penalties	The current accumulated penalties for port dampening
DAC Percent	The DAC percentage of the transceiver
Dampening State	The port dampening state: Disabled, Idle, or Active
Data Rate	The data rate at which the port is operating. When OTU is encapsulating 10-Gigabit Ethernet WAN, the data rate is 10.709 Gb/s, the G.709 standard OTU2 data rate. When OTU is encapsulating 10-Gigabit Ethernet LAN, the data rate is either 11.049 Gb/s or 11.096 Gb/s, depending on the otu2-lan-data-rate configuration parameter of the port's OTU parameters. These data rates (11.049 Gb/s and 11.096 Gb/s) are considered OTU2e data rates that are non-standard or over-clocked with respect to G.709, but have become widely used in optical networking to transport un-altered 10-Gigabit Ethernet LAN payloads.
DDM Events	Enabled — DDM events are enabled Disabled — DDM events are disabled
Decrypted Octets	The number of octets of plain text recovered from received packets that were integrity protected and encrypted

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Delayed Packets	The number of received packets with the condition a PN lower than the lower bound of the replay protection on this SC
Description	A text description for the entity
Diag Capable	Indicates whether the transceiver is capable of performing diagnostics
Discards	Input — The number of discarded input packets Output — The number of discarded output packets
Discards Input/ Output	The number of inbound packets chosen to be discarded to possibly free up buffer space
Disp Control Mode	The current operational mode of the tunable dispersion compensation module
DOIE Tx Disable	Enabled — Laser is enabled if an internal MAC transmit error is encountered Disabled — Laser is disabled if an internal MAC transmit error is encountered
Dot1Q Ethertype	The Ethertype expected when the port's encapsulation type is Dot1Q
Down On Int. Error	Enabled — Down on internal error feature is enabled Disabled — Down on internal error feature is disabled
Down-when-looped	The feature is enabled or disabled
Drop Count	The number of keepalive or LQR messages that were missed before the line was brought down
Dropped	The number of dropped packets and octets
Drop Events	The total number of events in which packets were dropped by the probe due to lack of resources. Note that this number is not necessarily the number of packets dropped; it is just the number of times this condition has been detected.
Dropped CLP	The number of times the CLP1 cells have been dropped. CLP1 cells have lower priority than CLP0 cells and are expected to be discarded first in times of congestion.
Dying Gasp	Indicates whether dying gasp is enabled or disabled
Dying Gasp on Reset	EFM OAM dying gasp messages on reset: true or false
eapol-destination-address	The destination MAC address used in the EAPoL packet for MACsec Key Agreement (MKA) PDUs
EEC count	The number of cascaded EECs from the nearest SSU/PRC/ePRC
eEEC count	The number cascaded eEECs from the nearest SSU/PRC/ePRC
EgrAmp	The egress amplifier alarm information, including:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• temperature • gain • power out • power in
Encryption Offset	The encryption offset configured on this node: 0, 30, 50. In the case of IP traffic, the IP header can be transmitted in clear text so that the traffic is routed accordingly when crossing the network. A value of 30 is used for IPv4 and 50 for IPv6.
EFM OAM	Enabled — EFM OAM is enabled Disabled — EFM OAM is disabled
EFM OAM Link Mon	Enabled — Link monitoring functionality is enabled Disabled — Link monitoring functionality is disabled
Egr. Sched. Pol	The port scheduler policy or that the default policy default is in use
Egress CBR	The total CBR bandwidth consumed on this interface in the egress direction
Egress NRT-VBR	The total non-real-time variable bit rate (nrt-VBR) bandwidth consumed on this interface in the egress direction
Egress Octets	The egress octets on a per-port basis
Egress Octets Drop	The number of egress octets dropped
Egress Octets Fwd	The number of egress octets forwarded
Egress Packets	The egress packets on a per-port basis
Egress Packets Drop	The number of egress packets dropped
Egress Packets Fwd	The number of egress packets forwarded
Egress Rate	The maximum amount of egress bandwidth (in kilobits per second) that this Ethernet interface can generate
Egress RT-VBR	The total real-time variable bit rate (rt-VBR) bandwidth consumed on this interface in the egress direction
Egress UBR	The total unspecified bit rate (UBR) bandwidth consumed on this interface in the egress direction
Elev. Mask Angle	The configured elevation angle below which satellites are ignored. The default elevation mask angle is 10°.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Five or more satellites must be in view of the GNSS receiver antenna at all times when the receiver is in the process of obtaining a position fix, and these satellites must be above the configured elevation mask angle.
Encap-match	Specifies which types of traffic MACsec is enabled for
Encap Type	Null — Ingress frames will not use any tags or labels to delineate a service dot1q — Ingress frames carry 802.1Q tags where each tag signifies a different service
Encap Value	The dot1q or qinq encapsulation value on the port for this IP interface
Encrypted Octets	The number of plain text octets that are integrity protected and encrypted on the transmitting SC
Encrypted Packets	The number of packets that are integrity protected and encrypted for this transmitting SA
Encrypted SA Packets	The number of packets that are integrity protected and encrypted for this SA
Encryption Offset	Specifies the encryption offset configured on this node: 0, 30, 50. In the case of IP traffic, the IP header can be transmitted in clear text so that the traffic is routed accordingly when crossing the network. A value of 30 will be used for IPv4 and 50 for IPv6.
Endpoint Type	The endpoint type
Errored Frame Enabled	Specifies whether errored frames are enabled
Errored Frame Event Notify	Specifies whether errored frame events notification is enabled
Errored Frame Period Enabled	Specifies whether an errored frame period is enabled
Errored Frame Period Event Notify	Specifies whether an errored frame period event notification is enabled
Errors Input/Output	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
ESMC Tunnel	Indicates whether ESMC frames are tunneled in Epipe or VPLS service

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ES-P	The number of Errored Seconds
Exceed Drop	The queue depth beyond which exceed-profile packets are not accepted into the queue and are discarded
Excess Collisns	The number of frames for which transmission on a particular interface fails due to excessive collisions
Far End	The SONET path far end
FCS Errors	The number of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check
FEC Corrected 0s	The number of bits that were received as 0s but corrected to 1s
FEC Corrected 1s	The number of bits that were received as 1s but corrected to 0s
FEC Mode	Type of FEC (Forward Error Correction) in effect: g709, enhanced or disabled. When g709 is selected, the standard FEC method is used. When enhanced is selected, a proprietary FEC algorithm is used that extends optical reach in long haul applications. When disabled the bytes that are reserved for FEC in the OTU frame are transmitted as zeros and the FEC decoder is bypassed, but OTU framing is still in effect.
FEC SES	The number of severely Errored seconds were the number of uncorrectable sub-rows was greater than 15% of the maximum
FEC Uncorrectable Sub-Rows	The number of sub-rows that were not corrected because too many errors were detected
Fifo Error	The number of FIFO errors
Fine Tuning	Indicates whether the transceiver supports fine tuning for the frequency
FIR Rule	The queue FIR rule
Firmware Version	Firmware version of the GNSS receiver
FR Interface Status	The status of the Frame Relay interface as determined by the performance of the DLCMI. If no DLCMI is running, the Frame Relay interface stays in the running state indefinitely.
Forwarded	The number of forwarded packets and octets
FP Number	The number of the FP that manages this port
Fragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Frame Based Acc	Frame-based accounting for queues parented to the scheduling policy and for the schedulers within the scheduler policy
Grace Tx Enable	Specifies whether grace Tx is enabled
Grace Vendor OUI	The EFM OAM grace vendor Organizationally Unique Identifier (OUI)
Grp-<name> Group Name	The group name
Half Life	The time, in seconds, that must pass before penalties decay to one-half the initial amount
Hardware Address	The interface's hardware or system assigned MAC address at its protocol sub-layer
HEC Errors (Dropped)	The number of cells with uncorrectable HEC errors on this interface
HEC Errors (Fixed)	The number of fixed HEC errors on this interface
HiPlus Drop Tail	The queue depth beyond which inplus-profile packets are not accepted into the queue and are discarded
Hi Drop Tail	The queue depth beyond which in-profile packets are not accepted into the queue and are discarded
Hold Time	The EFM OAM hold-time
Hold time down	The link down dampening time in seconds. The **down** timer controls the dampening timer for link down transitions
Hold Time Down Rmng	The time remaining for a hold down timer. If the **hold** timer is not active, this displays zero.
Hold time up	The link up dampening time in seconds. The port link dampening timer value which reduces the number of link transitions reported to upper layer protocols.
Hold Time Up Rmng	The time remaining for a hold up timer. If the **hold** timer is not active, this displays zero.
HS Turbo Queues	HS turbo queues that allow the corresponding HSQ queue group queues for higher throughput
IfIndex	The interface's index number which reflects its initialization sequence
Ignore Efm State	The suppress port operational state changes due to EFM OAM: true or false
Ignr EFM OAM State	Enabled — Any failure in the protocol state machine does not impact the state of the port Disabled — The port state is affected by any existing EFM-OAM protocol fault condition

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Index 1	Management IP information, one per type maximum (system IPv4, IPv6 system, oob, oob IPv6)
IngAmp	The ingress amplifier alarm information, including: • temperature • gain • power out • power in
In Packets	The number of echo-reply packets received
In Pause Frames	The number of In Pause frames
Ingress CBR	The total CBR bandwidth consumed on this interface in the ingress direction
Ingress NRT-VBR	The total non-real-time variable bit rate (nrt-VBR) bandwidth consumed on this interface in the ingress direction
Ingress Octets	The ingress octets on a per-port basis
Ingress Octets Drop	The number of ingress octets dropped
Ingress Octets Fwd	The number of ingress octets forwarded
Ingress Packets	The ingress packets on a per-port basis
Ingress Packets Drop	The number of ingress packets dropped
Ingress Packets Fwd	The number of ingress packets forwarded
Ingress Port Forwarding Engine Drop Reason Statistics	When any of the packet counters increments, it indicates that a packet was dropped in the ingress data path or extracted to the control plane for further processing. The detailed per-reason drop statistics are available per-port for Ethernet ports (local on the 7450 ESS, 7750 SR, 7950 XRS, or satellite client ports) and for PXC sub-ports. An aggregate forwarding engine drop counter (packet and byte) is available per-SAP.
Ing. QGroup	The ingress queue group name
Ingress Rate	The maximum amount of ingress bandwidth (in mb/s) that this Ethernet port can receive with the configured sub-rate using packet-based accounting
Ingress RT-VBR	The total real-time variable bit rate (rt-VBR) bandwidth consumed on this interface in the ingress direction
Ingress UBR	The total unspecified bit rate (UBR) bandwidth consumed on this interface in the ingress direction

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Host-Matches	A string optionally used by subscriber management to map subscriber's and subscriber host's queued traffic to a specific egress port virtual port
Input/Output	When the collection of accounting and statistical data is enabled, then octet, packet, error, and utilization statistics are displayed
Instance-Id	The queue-group instance ID
Int MAC Rx Errs	The number of frames for which reception on a particular interface fails due to an internal MAC sublayer receive error
Int MAC Tx Errs	The number of frames for which transmission on a particular interface fails due to an internal MAC sublayer transmit error
Interface	The port ID displayed in the *slot/mda/port* format
Interface-name port-id	The interface name of the port
ip ip-address	The IP address
IP Route Blackholed	The destination IP address of the packet matches a black hole route
IPv4 Header Error	The IPv4 packet header contains an error such as an IPv4 header checksum error, an invalid IP version number (not 4 or 6), or an incorrect Total Length field
IPv4 Invalid Address	An error in the source (SA) or destination (DA) IPv4 address was detected. For example class D or class E IPv4 DAs, loopback SA (127.0.0.0/8), 0.0.0.0/8 DA, SA is a subnet broadcast or network address and cases where the IPv4 address is a multicast address but the Ethernet destination address is not RFC1112 compliant. RFC1112 checks are also carried out on Ipipe traffic.
IPv6 Header Error	The IPv6 packet header contains an error such as an incorrect Payload Length field or an IP version not equal to '6' when the Ethernet etype indicates it is IPv6
IPv6 Invalid Address	An error in the source (SA) or destination (DA) IPv6 address was detected. For example, an unspecified IPv6 DA, an IPv6 multicast SA and cases where the IPv6 address is a multicast address but the Ethernet destination address is not RFC2464 compliant. RFC 2464 checks are also carried out on IPIPE traffic.
Jabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error)
Keep Alive	The time interval, in seconds, between keep-alive PDUs
L2 Service MTU Exceeded	The length of the packet received on a SAP bound to a layer 2 service (such as VPLS or EPIPE) exceeded the configured MTU for the service
LACP Tunnel	Indicates whether LACP packet tunneling is enabled or disabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
LAG ID	The LAG or multi-link trunk (MLT) that the port is assigned to
Laser Tunability	The laser tune-ability of the transceiver
Last Changed	The date and time when the interface connection entered its current operational state
Last Cleared Last Cleared Time	The date and time the restart count reset to zero
Last cleared time Last Cleared Time	The time of the last clear
last session id	The 802.1x last session ID
last session term cause	The 802.1x last session term cause
last session time	The 802.1x last session time
last session username	The 802.1x last session username
Last State Change	The system time moment that the entity is up
Last Unknown VPI/VCI	The last unknown VPI/VCI that was received on this interface
Late Collisions	The number of times that a collision is detected on a particular interface later than one slot time into the transmission of a packet
Late Packets	The number of received packets that have been discarded due to replay window protection on this SC
Latitude	The latitude of the GNSS antenna
LCD-P	The number of LCD-P packets received
Level	The level number
Licensed	The licensed state
Limit Unused BW	The aggregate rate overrun protection on the aggregate context
Link Length support	The link length support for the transceiver
Link Monitoring	The EFM OAM link monitoring parameters: enabled or disabled
Link-level	Ethernet — The port is configured as Ethernet
LMI Type	The LMI type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Load-balance-algo	The load balancing algorithm used on the port
Local Magic Number	The local magic number to be sent to the peer. The magic number provides a method to detect loopbacks. If the value of the local magic number is the same as the value of remote magic number, then it is possible that the link might be looped back. If the two magic numbers do not match, then the link is not looped back.
Longitude	The longitude of the GNSS antenna
Loopback	The number of loopback requests and responses transmitted and received on this connection for both end to end and segment
Loop Detected	True — Loop detected False — No loop detected
LOP-P	The number of Loss Of Pointer path (LOP) occurrences
Low Drop Tail	The low drop tail percent reduction from MBS
mac mac-address	The MAC address
Mac-based-authentication	Enable or disable MAC-based authentication
MAC Chip Number	The number of the MAC chip that manages this port
Macsec Encrypt	Enabled — MACsec encryption is enabled on the traffic. All fields behind source or destination MAC addresses are encrypted on each packet. Disabled — MACsec encryption is disabled for the traffic. The packet fields are sent in clear text but data integrity is checked on each packet, and the MACsec overhead (header and ICV) is still added to each packet.
macsec-enabled	The MACsec is enabled or disabled
Manufacture date	The manufacturing date of the hardware component in the mmddyyyy ASCII format
Max auth requests	The 802.1x port maximum authorization requests
Max Packet Error	The number of maximum packet errors
Min Packet Error	The number of minimum packet errors
Max Penalties	The maximum penalty value for port dampening
Maximum Frequency	The supported maximum frequency for the transceiver
Max Suppress Time	Elapsed time, in seconds, after the link comes up before the worst case accumulated penalties have decayed to the reuse threshold

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
MBS	The MBS value defining the maximum size for the queue
Media	The media supported for the SFP
Min Frame Length	The configured minimum transmitted frame length
Minimum Frequency	The supported minimum frequency for the transceiver
Mixed EEC/eEEC	true — at least one of the clocks is not an eEEC false — all clocks are eEEC
MKA Key Server Priority	The MKA key server priority: 0 to 255 (default 16). A priority of 0 means more it is more likely to become the MKA server. If multiple participants have the same priority, the MAC address becomes the differentiator for electing the MKA server.
Mode	The mode of the interface. It can be set as Data Terminal Equipment (DTE) or Data Circuit-terminating Equipment (DCE)
Mode	The mode of OAM operation for an Ethernet port: active or passive
Mode Select Method	The coherent mode of the transceiver
Module oper modes	The operational modes associated with the installed coherent module.
Model Number	The model number of the transceiver or adapter
Monitor Depth	Queue depth monitoring for the specified queue enabled or disabled
Monitor Oper Group	Operational group being monitored
Monitor Port Sched	Enabled — Congestion monitoring on an Egress Port Schedule (EPS) is enabled Disabled — Congestion monitoring on an EPS is disabled
MTU	The size of the largest packet which can be sent/received on the Ethernet physical interface, specified in octets
Mult Collisions	The number of frames that are involved in more than one collision and are subsequently transmitted successfully
Multicast MAC With Unicast Dest IP	The Ethernet destination (MAC) address is multicast but the IP address is unicast
Multicast Packets Input/Output	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both group and functional addresses. The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Multicast Packets	Input — The number of input multicast packets Output — The number of output multicast packets
Multicast Pckts	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses. The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
Name	The entity name
Needs ICMP	The received packet requires the router to generate an ICMP message. For example, the IP packet TTL is expired or the destination host, network, or ESM subscriber is unreachable. Host unreachable can occur, among other reasons, if the destination address (for example, 10.0.1.2) of a packet resolves to a loopback interface subnet (for example, 10.0.1.1/24) but does not match the specific loopback address (for example, 10.0.1.1). Destination unreachable can also occur, for example, in response to an IPv6 packet received by a router from a point-to-point link (a non-Ethernet link) destined to an address within a subnet assigned to that same link (other than one of the receiving router's own addresses) as described in RFC 4443.
Net. Egr. Queue Pol	The network egress queue policy or that the default policy is used
No SCI Packets	The number of received packets discarded with unknown SCI information when the C bit in the SecTAG is set
No Tag Packets	The number of received packets discarded without the MAC security tag (SecTAG)
No Using SA Packets	The number of received packets that have been discarded on this SA which is not currently in use
Notifications	LLDP notifications (enabled, disabled)
Not Valid Packets	The number of not valid packets that have been discarded on this active SA
Number OCD Events	The number of times the Out of Cell Delineation (OCD) events occurred
Number of Lanes	The number of lanes of the transceiver
Number of Logs	The number of logs
Octets	The number of input and output octets. HEC discarded cells are not included in the input octet numbers.
Octets	The total number of octets received
OctetsIn Dropped	The number dropped egress octets that were in-profile

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
OctetsIn Forwarded	The number of forwarded egress octets that were in-profile
OctetsIn Total	The total number of egress octets that were forwarded and dropped
OctetsOut Dropped	The number of dropped egress octets that were out-of-profile
OctetsOut Forwarded	The number of forwarded egress octets that were in-profile
OctetsOut Total	The total number of egress octets that were forwarded and dropped
OK Packets	The number of validated packets on this SA
Oper Duplex	full — The link is set to full duplex mode half — The link is set to half duplex mode
Oper Egress Rate	The operational egress bandwidth (in kilobits per second) that the Ethernet interface can generate
Oper Group	Displays the configured operational group name for this port
Oper MTU	For channels that are used for transmitting network datagrams, this is the size of the largest network datagram that can be sent on the channel.
Oper Speed	The operating speed of the interface
Oper State	up — The entity is operationally up down — The entity is operationally down Additionally, the *lag-id* of the LAG it belongs to in addition to the status of the LAG member (active or standby) is specified
Oper Status	The operational status of the port
Oper Status	up: the port is operationally up (communication between the main board and the GNSS receiver is established, and the port is ready to receive GNSS signals) down: the port is operationally down (none of the up conditions have been met)
Operational Channel	The operational channel for the transceiver
Operational Frequency	The operational frequency for the transceiver
Operational Mode	The coherent operational mode of the transceiver
Optical Compliance	The optical compliance code of the transceiver
Optical Compliance	The optical compliance code of the transceiver
Other	The number of OAM cells that are received but not identified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
OTU Status	The status of the OTU (Optical Transport Unit): enabled or disabled. When OTU is enabled, and additional layer of framing encapsulates an MDA's natively programmed mode of operation, 10-Gigabit Ethernet LAN or WAN, adding SONET-Like Framing with FEC (Forward Error Correction). When OTU is disabled, the MDA operates in a 10-Gigabit Ethernet LAN or WAN as per Ethernet provisioning.
Out packets	The number of echo-request packets sent
Out Pause Frames	The number of Out Pause frames
Over Sized SDUs	The total number of oversized SDU discards
Overrun Packets	The number of packets discarded because the number of received packets exceeded the cryptographic performance capabilities
Oversize Pckts	The total number of packets received that were longer than can be accepted by the physical layer of that port (9900 octets excluding framing bits, but including FCS octets for GE ports) and were otherwise well formed
Packet Abort Error	The number of packets aborted due to errors received
Packets	The total number of packets received
Packets	The number of input and output packets. Packets discarded due to HEC or oversize discards are not counted. CRC errors are also in the packet counts show up on the VC level statistics but not on the port level.
PacketsIn Dropped	The number dropped egress packets that were out-of-profile
PacketsIn Forwarded	The number of forwarded egress packets that were in-profile
PacketsIn Total	The total number of egress packets that were forwarded and dropped
PacketsOut Dropped	The number of dropped egress packets that were out-of-profile
PacketsOut Forwarded	The number of forwarded egress packets that were in-profile
PacketsOut Total	The total number of egress packets that were forwarded and dropped
Parity Error	The number of parity errors received
Part Number	The vendor part number contains ASCII characters, defining the vendor part number or product name
Partial chain	true — indicates TLV has been generated in the middle of the chain and the count of the EEC/eEEC is incomplete

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	false — indicates TLV has not been generated in the middle of the chain and the count of the EEC/eEEC is complete
PBB Ethertype	The Ethertype used for PBB encapsulation
Per-host authentication	Enable or disable per-host authentication
Per Threshold MDA Discard Statistics	See the 7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide, "Packet Classification and Scheduling" section
Phy Link Physical Link	Yes — A physical link is present No — A physical link is not present
Phys State Chng Cnt	Increments when a fully qualified (de-bounced, including hold-time and dampening) transition occurs at the physical layer of an Ethernet port which includes the following transitions of the Port State as shown in the **show port** summary: - from "Down" to either "Link Up" or "Up" - from either "Link Up" or "Up" to "Down" This counter does not increment for changes purely in the link protocol states (for example, "Link Up" to "Up"). The counter is reset if the container objects for the port are deleted (for example, MDA deconfigured, or IOM type changes).
PIR Rule	min — The operational PIR for the queue is equal to or greater than the administrative rate specified using the rate command max — The operational PIR for the queue is equal to or less than the administrative rate specified using the rate command closest — The operational PIR for the queue is the rate closest to the rate specified using the rate command
Physical Link	Yes — A physical link is present No — A physical link is not present For GNSS ports: Yes — The port is operationally up (communication between the main board and the GNSS receiver is established and the port is ready to receive GNSS signals. For example, if the GNSS port is configured, the operational status is up, the receiver status is 3D FIX, and you disconnect the GNSS RF cable from the port, the physical link on the port still shows as up. No — The port is operationally down (none of the up conditions apply)
PLM-P	The number of PLM-P packets received
PM BEI	The number of backward error indications received from the far end in the path monitor overhead
PM BIP8	The number of detected BIP-8 errors in the path monitor overhead

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
PM SES	The section monitor severely errored seconds where the number of PM-BIP8 was greater than 15% of the maximum
Polar Depend Loss (dB)	The polarization dependent loss in decibels
Policy-Name	The policy name
Port control	The 802.1x port control: auto, force-auth, force-unauth
Port Encap	Null — Ingress frames will not use tags or labels to delineate a service dot1q — Ingress frames carry 802.1Q tags where each tag signifies a different service
Port ID	The port ID that is configured or displayed.
Port <id> Bridge nearest-bridge	
Port <id> Bridge nearest-non-tpmr	
Port <id> Bridge nearest-customer	
Port IfIndex	The GNSS interface index number, which reflects its initialization sequence
Port Mode	Network — The port is configured for transport network use Access — The port is configured for service access Hybrid — The port is configured for both access and network use
Port State	Up — The port is physically present and has physical link present Down — The port is physically present but does not have a link. This state may also be considered as Link Down Ghost — A port that is not physically present None — The port is in its initial creation state or about to be deleted Link Up — A port that is physically present and has physical link present
Port status	The 802.1x port status
PorID TLV Subtype	The encoding of the port identifier TLVs transmitted to the peer (tx-if-alias, tx-if-name, tx-local)
Port Type	The type of port or optics installed
Power Save	Enabled — Low-power optic mode is administratively enabled Disabled — Low-power optic mode is administratively disabled
Present Channel	The channel that the transceiver is currently on
Protected Octets	The number of plain text octets that are integrity protected but not encrypted on the transmitting SC

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Protected Packets	The number of packets that are integrity protected but not encrypted for this transmitting SA
Protected SA Packets	The number of packets that are integrity protected but not encrypted for this SA
Protocol	The applicable protocols for the specified port
PTP IPv4 address	IPv4 destination address of incoming PTP messages that should be timestamped. Only unicast addresses are supported.
PTP IPv6 address	IPv6 destination address of incoming PTP messages that should be timestamped. Only unicast addresses are supported.
PTP Timestamping	Filter status for ingress timestamping of PTP messages to match multiple PTP flows
Pump Temperature (C)	The pump temperature high and low warning alarms
QinQ Ethertype	The Ethertype expected when the port's encapsulation type is QinQ
Queue	The queue information
Queue Depths (percentage)	The queue depth percentages
Queue-Id	The *queue-id* that uniquely identifies the queue
Quiet period	The 802.1x port quiet period: 1 to 3600 seconds
Radius-plcy	The 802.1x port RADIUS policy name
Range	The usable range to fine tune the frequency
RDI	The number of RDI cells transmitted and received on this connection for both end to end and segment
RDI-P	The number of RDI-P packets received
Reassembly Timeouts	The number of reassembly timeout occurrences
Reauth enabled	no — The 802.1x port reauth enabled is not up yes — The 802.1x port reauth enabled is up
Reauth period	The 802.1x port reauthorization period
Receiver status	Acquiring Satellites: GNSS receiver is attempting to track satellite Position Hold: GNSS receiver position is determined and GNSS receiver is no longer solving for position; TRAIM algorithm is correcting for time bias

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	2D Fix: GNSS receiver is attempting to obtain a two-dimensional position (latitude, longitude) solution 3D Fix: GNSS receiver is attempting to obtain a three-dimensional position (latitude, longitude, altitude) solution Unknown: default state on power-up Communication Lost: occurs after 30 s of missing Channel/Data/Status messages or TRAIM status messages from the GNSS receiver Communication Established: occurs after a successful reestablishment of communication following a Communication Lost status
Remote Error	The number of remote error received
Remote Magic Number	The magic number sent by the peer. If the value of remote magic number is the same as the value of the local magic number, then it is possible that the link might be looped back. If the two magic numbers do not match, then the link is not looped back.
Replay Protection	Enabled — Replay Protection is enabled Disabled — Replay Protection is disabled If replay protection is enabled for this CA, the out of replay-window packets will be discarded. Otherwise, the Replay Window Size value is ignored. The default value is disabled, so that when adding MACsec to an interface, it will not affect traffic immediately.
Replay Window Size	The size, in packets, of the replay window. Each packet is assigned a unique packet number. Replay protection enforces strict ordering of the packets and protects against replay attacks. In networks where out-of-order packets are expected, the window size can be set up to 4294967295.
Request Interval	The time interval in seconds at which keepalive requests are issued
Resolution	The resolution used to fine tuning the frequency
Restart Count	The number of times that this Control Protocol has reached the 'open' state
Retry	The minimum wait time, in seconds, before re-enabling the port after loop detection
Reuse Threshold	The threshold at which the port up state is no longer suppressed, after the port has been in a suppressed state and the accumulated penalties decay drops below this threshold
RS-FEC Mode	The RS-FEC mode
RxDTV Adjust	The Rx DTV adjust status
Rx Ageouts	The number of LLDP frames received on the port with a properly formatted TLV that was not supported on the receiving port

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Rx Ageouts	The number of LLDP frames received on the port with a properly formatted TLV that was not supported on the receiving port
Rx enh SSM code	The numeric value of the received enhanced SSM code
Rx enh SSM code	The numeric value of the received enhanced SSM code
Rx Frames	The number of LLDP frames received on the port
Rx Frame Discard	The number of LLDP frames received but discarded on the port
Rx Frame Errors	The number of LLDP frames received with errors on the port
Rx Media Frame Error Count	The receive media frame error count
Rx SSM code	The numeric value of the received SSM code
Rx TLV Discard	The number of LLDP frames received on the port discarded because of the TLV
Rx TLV Unknown	The number of LLDP frames received on the port with a properly formatted TLV that was not supported on the receiving port
Rx Total Power (dbm)	The receive total power
Rx Quality Level	Indicates which QL value has been received from the interface
Rx Signal Label	The received signal label
Rx Trace Str (Hex)	The received SONET path trace string in hexadecimal
sap	The physical port identifier portion of the SAP definition
Sat Port Queue Statistics	The satellite queue statistics with per-queue forward and drop information (packet and octet counters) for satellite uplink and client ports
Sched Policy	The name of the scheduler policy assigned to the virtual port
SCI	The Secure Channel Identifier (SCI)
SD Threshold	The configured error rate threshold at which the SD (Signal Degrade) alarm is raised
Security Zone	The security zone this port belongs
Serial Number	The vendor serial number of the hardware component
Server timeout	The 802.1x port server timeout
Service-id port-id	The service IDs affected by the encap-match configured under this sub-port. One or more services can be affected by the match (by using * or by targeting ports with traffic aggregations, for example).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
SES-P	The number of Severely Errored Seconds
SF Threshold	The configured error rate threshold at which the SF (Signal Fail) alarm is raised
SF/SD Method	The selected method for declaring the SF (Signal Fail) or SD (Signal Degrade) alarm. When BIP8 is selected, the error rate of SM-BIP8 errors in the OTU frames declares SF or SD (This is very similar to SONET SF/SD which uses a rate of B2 errors). When FEC is selected, the rate of corrected bits declares SF or SD. This effectively indicates that the link would be degraded (SD) or failed (SF) if FEC was disabled and gives the user an early warning that the link is degrading or is about to fail.
Sflow	Enabled — sFlow data collection for the port is enabled Disabled — sFlow data collection is disabled
C/QS/S/XFP/MDI MDX	Additional information related to the port. This can include optical compliance and the link length if available from the installed optics. If there is no optical compliance information programmed in the part, “Unspecified” is displayed. GIGE — The GigE SFP type FASTE — The FastE SFP type GIGX — The GigX SFP type MDI — Indicates that the Ethernet interface is of type MDI (Media Dependent Interface) MDX — Indicates that the Ethernet interface is of type MDX (Media Dependent Interface with crossovers)
Shaped Bandwidth	The total shaped bandwidth consumed on this interface in the egress direction
Signal CNR Mask	The CNR mask in dB-Hz to filter satellites based on signal strength
Signal Label	The C2 byte value
Single Fiber Mode	Yes - Single fiber option is configured No - Single fiber option is not configured
Slot ID	The slot number of the card in the chassis
SM BEI	The number of backward error indications received from the far end in the section monitor overhead
SM BIP8	The number of detected BIP-8 errors in the section monitor overhead
SM SES	Section monitor severely errored seconds where the number of SM-BIP8 was greater than 15% of the maximum
SM-TTI Rx	This is the SM-TTI (Section Monitor Trail Trace Identifier received by this port. When the received TTI is a printable string of characters, it will be displayed as a text string. When the received TTI contains one or more non-printable characters,

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	it will be displayed at a sequence of 64 hex bytes. When the received TTI is all zeros, the string "Not Specified" will be displayed.
SM-TTI Tx (<mode>)	This is the configured SM-TTI (Section Monitor Trail Trace Identifier) to be transmitted by this port in the OTU overhead bytes. The modes are auto, string, or bytes. In the auto and string modes, a printable character string will be displayed. In bytes mode, up to 64 hex bytes are displayed.
Sngl Collisions	The number of frames that are involved in a single collision, and are subsequently transmitted successfully
Speed	The speed of the DS0 channels used in the associated channel-group
SQE Errors	The number of times that the SQE TEST ERROR is received on a particular interface
SSM Code Type	The SSM code type in use on the port
State of polar ROC (krad/s)	The state of polarization rate of change
Subport	The MACsec sub-port used. Multiple MACsec instances can be configured under one port, matching traffic based on the **encap-match** parameter.
subscr Subscriber	The subscriber ID
Supplicant timeout	The 802.1x port supplicant timeout
Supply Voltage (V)	The supply voltage of the DDM
Supported Grids	A list of supported grids for the transceiver
Supp. Oper Modes	The operational modes that can be configured on this DWDM coherent port for current breakout and installed module
Suppress Threshold	The threshold at which the port up state is suppressed until the accumulated penalties drop below the reuse threshold again
Svc ID svc-id	The service identifier
Symbol Errors	For an interface operating at 100 Mb/s, the number of times there was an invalid data symbol when a valid carrier was present
Sym Mon SD Thresh	The error rate (for symbol errors) at which to declare the Signal Degrade (SD) condition on an Ethernet interface. If the field displays Disabled, no error rate has been specified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Sym Mon SF Thresh	The symbol error rate at which to declare the Signal Fail (SF) condition on an Ethernet interface. If the field displays Disabled, no error rate has been specified
Sym Mon Window	The size of the sliding window, in seconds, over which the errors are measured
Sync Status	locked: GNSS time is within alarm limits not locked: GNSS time is outside of the alarm limits and/or there is an insufficient number of tracked satellites
Sync. Status Msg	Whether synchronization status messages are enabled or disabled
Tagged Cells	The number of cells that have been demoted from CLP0 to CLP1
Temperature (C)	The temperature of the DDM
Threshold exceeded	The number of times that the drop count was reached
Time	GPS date and time
Time to link drop	The time remaining before the link will be declared dropped if a keepalive echo reply packet is not received
Too long Frames	The number of frames received on a particular interface that exceed the maximum permitted frame size
Too Long Packets	The number of transmitted packets discarded because the packet length is greater than the Maximum Transmission Unit (MTU) of the Ethernet physical interface
Total number of access-egress queue groups	The total number of access-egress queue groups associated with the queue-group summary
Total number of network-egress queue groups	The total number of network-egress queue groups associated with the queue-group summary
Total number of access-ingress queue groups	The total number of access-ingress queue groups associated with the queue-group summary
Tot Sym Mon Errs	The total number of symbol errors
Trace String	The SONET path trace string
Traffic Statistics	See the *7450 ESS, 7750 SR, 7950 XRS, and VSR Interface Configuration Guide*, "Statistics on Physical PXC Ports” section
Transceiver Code	The code for the transmission media
Transceiver Digital Diagnostic Monitoring (DDM)	Transceiver Digital Diagnostic Monitoring (DDM) information, such as temperature and supply voltage

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Transceiver Lane Digital Diagnostic Monitoring (DDM)	Transceiver lane DDM information, such as lane temperature and Tx bias current
Transceiver Status	The status of the transceiver
Transceiver Type	The type of transceiver
Transmit Interval	The transmit interval of OAMPDUs
Transmit period	The 802.1x port transmit period
Transmit TLVs	The LLDP TLV to transmit (port-desc, sys-name, sys-desc, sys-cap)
Trigger Fault	The triggered EFM OAM fault
Tunneling	true — The 802.1x port tunneling is on false — The 802.1x port tunneling is not on.
Tunnel Nearest Bridge	The nearest bridge tunneling frames (enabled, disabled)
Tx DUS/DNU	Whether the QL value is forcibly set to QL-DUS/QL-DNU
Tx Frames	The number of LLDP frames transmitted from the port
TX Laser Frequency	The transceiver laser frequency
TX Laser Wavelength	The transceiver laser wavelength
Tx Length Err Frames	The number of LLDP frames transmitted with length error from the port
Tx Pause Frames	Setting to control transmission of PAUSE frames
Tx Quality Level	The QL value being transmitted out of the interface
Type	The connection type
UAS-P	The number of Unavailable Seconds
Unchecked Packets	The number of packets that have failed the integrity check on this SC
Unequipped	The number of unequipped packets received
Undersize Pckts	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed
Unicast MAC Destination Address Mismatch	The unicast destination MAC address is a null address or does not match any of the expected MAC addresses associated with the receiving interface. Packets with multicast or broadcast MAC addresses do not increment this counter

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Unicast Packets	Input — The number of input unicast packets Output — The number of output unicast packets
Unicast Packets Input/Output	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were not addressed to a multicast or broadcast address at this sub-layer. The total number of packets that higher-level protocols requested be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
Unicast Packets Input/Output	The number of packets, delivered by this sub-layer to a higher (sub-) layer, which were not addressed to a multicast or broadcast address at this sub-layer
Unicast RPF Check Failed	The IP packet failed the unicast reverse path forwarding (uRPF) check
Unknown Labeled Packet	The MPLS packets dropped by the ingress port forwarding engine because of an unknown label (ILM lookup failure) or an unexpected service label
Unknown MAC Destination Address Discarded in VPLS	The MAC destination address lookup in the MAC FDB failed and the VPLS service is configured to discard packets with unknown destination MAC addresses
Unknown Proto Discards Input/ Output	For packet-oriented interfaces, the number of packets received through the interface which were discarded because of an unknown or unsupported protocol. For character-oriented or fixed-length interfaces that support protocol multiplexing the number of transmission units received via the interface which were discarded because of an unknown or unsupported protocol. For any interface that does not support protocol multiplexing, this counter will always be 0.
Unknown Proto Discards	Input — The number of discarded unknown protocol packets
Untagged Packets	The number of transmitted packets without the MAC security tag (SecTAG) when the value oftmnxMacsecConnAssocReplayProtect for the configured CA is set to 'false'
Use Broadcast Addr	True — Indicates that the broadcast address is to be used for the destination MAC address False — Indicates that the local port MAC address is to be used for the destination MAC address
Used Satellites	Displays the number of tracked satellites
user rx frames	The 802.1x session user Rx frames
user rx octets	The 802.1x session user Rx octets
user tx frames	The 802.1x session user Tx frames
user tx octets	The 802.1x session user Tx octets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
UTC offset	Displays the difference between GPS time and UTC time *UTC time = GPS time – UTC offset*
Utilization Input/ Output	The value computed as the average of the traffic observed over the configured interval, presented as a percentage of the maximum possible traffic
Validated Octets	The number of octets of plain text recovered from received packets that were integrity protected but not encrypted
Vendor OUI	The vendor-specific Organizationally Unique Identifier (OUI) field containing the IEEE company identifier for the vendor
Violation Last Seen	The date and time of the last violation
Violation Threshold Percnt	The violation threshold percentage
Violation Total Count	The violation total count
Visable Satellites	The number of satellites that the GNSS receiver should see at the current time. This number can be 0 if the GNSS receiver has not yet downloaded an almanac, even if Used Satellites is more than 0.
VPI/VCI	The VPI/VCI values
Vport Name	The virtual port name
Weight	The relative weight of this scheduler in comparison to other child schedulers and queues at the same strict level
Wghtd Avg Queue Poll Interval	The weighted average queue poll interval
Wghtd Avg HiWtr Mark Poll Interval	The weighted average high water mark queue poll interval

Context

[Tree] (clear port)

Full Context

clear port

Description

This command clears port statistics for the specified ports.

Parameters

port-id

Specifies the physical port identifier.

Values *slot* [/*mda*[/*port*]] or *slot*/*mda*/*port* [.*channel*]]

aps-id

Specifies the APS group identifier.

aps-*group-id*[.*channel*]

aps	keyword
group-id	1 to 64

esa-vm-id

Specifies the ESA VM identifier.

Values esa-*esa-id*/*vm-id*/*vm-port*

esa	keyword
esa-id	1 to 16
vm-id	1 to 4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	vm-port	vm-type specific [fm-sub|to-sub|..]

statistics

Keyword that clears the statistics for the specified port.

cp

Clears Connection Profile statistics.

Values 1 to 8000

interface-connection

Keyword that clears the interface-connection statistics.

ilmi

Keyword that clears the ILMI information. This parameter is only applicable for ports/bundles that support ILMI.

pvc

Keyword that clears the PVC statistics.

pvp

Keyword that clears the PVP statistics.

pvt

Keyword that clears the PVT statistics.

slot

Specifies the slot number.

Values 1 to10

mda

The MDA number.

Values 1, 2

Default All MDAs

port-connection

Keyword that clears the port-connection statistics.

phys-state-change-count

Keyword that clears the counter that tracks physical port state transitions for ethernet ports ("Phys State Chng Cnt" in "show port" output, or tmnxPortPhysStateChangeCount in the TIMETRA-PORT-MIB).

port-scheduler

Keyword that clears the packet and octet counters for the port scheduler that is applied to the specified port.

queue-group-name

Clears the specified port queue group name. It uniquely identifies a port ingress queue group in the managed system, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

instance-id

Specifies the specific instance of a queue group.

Values 1 to 65535

ingress

Keyword that clears the ingress queue group information.

egress

Keyword that clears the egress queue group information.

access

Keyword that clears the access mode statistics for the queue group.

network

Keyword that clears the network mode statistics for the queue group.

ethernet

Keyword that clears the Ethernet port statistics.

dampening

Keyword that clears the current accumulated penalties of the exponential port dampening feature for the port. The accumulated penalties can be cleared only with this command keyword.

efm-oam

Keyword that clears the efm-oam statistics on the port.

events

Keyword that clears the efm-oam events.

local

Keyword that clears only local EFM OAM events.

remote

Keyword that clears only remote (received from peer) events. Local and remote is not specified.

Default Without specifying an option, both local and remote are cleared.

shaper-name

Clears information about the specified shaper name, up to 32 characters.

name

Clears information about the specified Vport name up to 32 characters.

standard *value*

Keyword that clears the high water marks within specific standard port class pools using the standard parameters.

Values 1 to 6

alternate *value*

Keyword that clears the high water marks within specific alternative port class pools using the alternative parameters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 6

aggregate-queue

Keyword that clears the aggregated forwarded and dropped packets in all queued statistics for the specified port.

Platforms

All

port

Syntax

port *port-id*

Context

[Tree] (tools>dump port)

Full Context

tools dump port

Description

Commands in this context dump port information.

Parameters

port-id

Specifies the physical port ID.

port-id	*slot*/*mda*/*port*		
	aps-id	aps-*group-id*	
		aps	keyword
		group-id	1 to 128

Platforms

Context

[Tree] (show>service>id>pim-snooping port)

Full Context

show service id pim-snooping port

Description

This command displays PIM port information.

Parameters

sap-id

Displays the port information associated with the specified SAP

sdp-id:vc-id

Displays the port information associated with the specified SDP

grp-ip-address

Specifies the IP multicast group address for which this entry contains information

detail

Displays detailed port information

family

Displays either IPv4 or IPv6 information for the specified port

Values ipv4 or ipv6

Platforms

All

Output

The following output is an example of service PIM snooping information.

Output Example

```
*A:PE# show service id 1 pim-snooping port
===============================================================================
PIM Snooping Ports ipv4
===============================================================================
Sap/Sdp Id                          Opr
-------------------------------------------------------------------------------
SAP:1/1/1                           Up
SAP:1/1/2                           Up

[Tree] (show>qos>policer-hierarchy port)

Full Context

show qos policer-hierarchy port

Description

This command displays information about the policer hierarchy per port.

Parameters

port-id

Displays information about the specified port.

Values *slot/mda/port*[.*channel*]

ingress

Displays ingress port information.

egress

Displays egress port information.

access

Displays policer-hierarchy statistics applied on the specified access port.

network

Displays policer hierarchy statistics applied on the specified network port.

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the instance of the named queue group.

Values 1 to 65535

detail

Displays detailed information.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays the threshold, parenting, rate, and traffic information related to a policer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priority-info

Displays the threshold information related to the root arbiter.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

name

Displays information about the name of the QoS arbiter of this forwarding plane.

root

Displays information about the arbiter root.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

id	1 to 64
sub-port	a, b

detail

Displays detailed information.

queue-group-name

Displays information about the specified queue group on the port.

scheduler-name

Displays information about the specified scheduler policy on the port.

ingress

Specifies to display ingress queue group information.

egress

Specifies to display egress queue group information.

access

Displays scheduler-hierarchy statistics applied on an access port.

network

Displays scheduler-hierarchy statistics applied on a network port.

instance-id

Specifies the identification of a specific instance of the queue group.

vport *name*

Displays statistics for the named VPORT.

Platforms

All

Output

The following output is an example of port scheduler hierarchy information, and Table 431: Output fields: QoS schedule hierarchy port describes port scheduler hierarchy fields.

Context

[Tree] (show>qos>agg-rate port)

Full Context

show qos agg-rate port

Description

This command displays the H-QoS aggregate rate limit per port or Vport.

Parameters

port-id

Specifies the port ID.

port-id	*slot*/*mda*/*port* [.*channel*]		
	eth-sat-id	esat-*id*/*slot*/*port*	
		esat	keyword
		id	1 to 20
	pxc-id	pxc-*id*.*sub-port*	
		pxc	keyword
		id	1 to 64
		sub-port	a, b

queue-group *queue-group-name*

Displays information about the specified queue group on the port.

egress

Displays egress queue group information.

access

Displays H-QoS aggregate rate limit information on an access port.

network

Displays H-QoS aggregate rate limit information on a network port.

instance *instance-id*

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

vport *name*

Displays H-QoS aggregate rate limit information for the specified Vport.

detail

Displays detailed information.

|    LastMileOnTheWireRates : false
|
-------------------------------------------------------------------------------
===============================================================================
*A:PE#
```

Table 432: Output fields: QoS aggregation rate

Label	Description
Egress Scheduler Policy	Indicates the name of the egress scheduler policy.
Egress Queue-Group	Indicates the queue group name.
Instance-Id	Indicates the identifier of a specific instance of the queue group.
AdminRate	Displays the configured aggregate rate in the subscriber profile.
OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the **limit-unused-bandwidth** command is enabled to protect against exceeding the aggregated bandwidth
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

Table 434: Output fields: PTP port detail

Label	Description
IEEE 1588/PTP Ethernet Port Information	
Port	The port ID
PTP Admin State	The PTP administrative state
PTP Oper State	The PTP operational state
Local MAC Addr	The local MAC address op
Multicast MAC Addr	The multicast MAC address
Cfg Sync Rate	The configured synchronization rate
Cfg Delay Req Rate	The configured delay request rate
Master-Only	The master-only value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
G.8275 Priority	The G.8275 priority
monitorReceiver	The monitorReceiver state
monitorSender	The monitorSender state
PTP Port Number	The PTP port number
PTP Port State	The PTP port state
Neighbors	The neighbors
Timestamp Point	The timestamp point
Port Asymmetry	The port asymmetry time
Tx path trace	true – transmit Announce messages include the PATH_TRACE TLV false – transmit Announce messages do not include the PATH_TRACE TLV
Profile Name	The profile name
Profile	The profile
Domain	The domain
IEEE 1588/PTP Ethernet Port Neighbor Clocks	
Port	The port ID
MAC Address	The MAC address
Clock Id	The clock ID
PTP Port #	The port number assigned to this PTP clock
Rx Packet Rate	The receive rate
PTSF-unusable	Indicates if there is a Packet Timing Signal Fail (PTSF)-unusable condition associated with a neighbor port
PTSF-LOTM	The PTSF-LOTM state for the neighbor clock • yes — The local clock is not receiving timing messages from the neighbor clock • no — The local clock is receiving all necessary timing messages from the neighbor clock
Best Master	Indicates if this peer is selected as the best master clock by the BTCA

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Parent Clock	Indicates if this is the parent clock. May differ from the best master if there is a local GNSS.
Backup Source	Indicates if this port is operating as a backup slave to the parent clock
Monitor Time State	Time recovery state of the monitored PTP port or peer
Last Packet Offset from Master	The offsetFromMaster calculated from the last packet exchange with the parent clock
Last Packet Mean Path Delay	The meanPathDelay calculated from the last packet exchange with the parent clock
APTS Asymmetry	The asymmetry computed by the backup source. This is used to compensate if the clock switches to this backup.
IEEE 1588/PTP Packet Statistics	
Input	The number of input packets within the specified category
Output	The number of output packets within the specified category
PTP Packets	The number of PTP packets
Announce	The number of Announce packets
Sync	The number of Sync packets
Follow Up	The number of Follow_Up packets
Delay Request	The number of Delay_Req packets
Delay Response	The number of Delay_Resp packets
Signaling	The number of Signaling packets
Other	The number of other packets
Discards	The number of input and output discards
Bad PTP domain	The number of messages discarded because of a bad PTP domain
Alternate Master	The number of messages discarded because of an alternate master
Out Of Sequence	The number of messages discarded because of out-of-sequence messages
Packet Timing Signal Fail - Unusable	The number of Announce messages discarded because of packet timing signal failure

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Local clock found in path trace	The number of Announce messages discarded because the local clock identifier was found in the PATH-TRACE TLV
Other	The number of messages discarded because of other reasons

clear system ptp port

Description

This command clears PTP port information.

Parameters

port-id

Clears the specified port ID.

Values *slot*/*mda*/*port*

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

ptsf-unusable

Keyword used to clear the PTSF-unusable condition associated with a neighbor port.

statistics

Keyword used to clear statistics information of the specified port ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port

Syntax

port *port-id* [*port-id*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**multiclass**] [**aggregate-queue**]

port all-ethernet-rates [**interval** *seconds*] [**repeat** *repeat*]

Context

[Tree] (monitor port)

Full Context

monitor port

Description

This command enables port traffic monitoring. The specified port(s) statistical information displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified port(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the **rate** is specified, the "rate per second" for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

port-id

Specify up to 5 port IDs. Port-IDs are only MLPPP bundles or bundle protection groups when the multiclass is specified.

port-id	*slot*/*mda*/*port* [.*channel*]		
	eth-sat-id	esat-*id*/*slot*/*port*	
		esat	keyword
		id	1 to 20
	pxc-id	pxc-*id*.*sub-port*	
		pxc	keyword
		id	1 to 64
		sub-port	a, b
	aps-id	aps-*group-id*[.*channel*]	
		aps	keyword
		group-id	1 to 64

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Keyword that displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Keyword that displays the rate-per-second for each statistic; instead of the delta.

all-ethernet-rates

Keyword that displays port traffic monitoring and utilization output for all data Ethernet ports enabled in the system, in a table output format.

aggregate-queue

Keyword that periodically displays the aggregated number of forwarded and dropped packets and bytes per direction across all queues on a PXC port (pxc-<id>.a or pxc-<id>.b).

The system periodically aggregates statistics from all queues under the specified PXC port for presentation. The duration required to gather these statistics is typically brief, though it may vary based on the system load at the time of querying and the number of queues and member ports in a LAG.

Statistics are cached for a 30-second interval, which is also the minimum interval at which this command can output results.

Platforms

All

Output

The following outputs are examples of port information.

Output Example

```
A:ALA-12>monitor# port 2/1/4 interval 3 repeat 3 absolute

port

Syntax

port *port-id* **egress** *network* **queue-group** *queue-group-name* **instance** *instance-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**arbiter** [**root** | *name*]]

Context

[Tree] (monitor>qos>arbiter-stats port)

Full Context

monitor qos arbiter-stats port

Description

This command monitors arbiter statistics in an egress port queue group.

Parameters

port *port-id*

port-id	*slot*/*mda*/*port* [.*channel*]		
	eth-sat-id	esat-*id*/*slot*/*port*	
		esat	keyword
		id	1 to 20
	pxc-id	pxc-*id*.*sub-port*	
		pxc	keyword
		id	1 to 64
		sub-port	a, b

Values slot/mda/port

egress *network*

Specifies statistics are for an egress network queue group.

queue-group *queue-group-name*

Specifies the name of the queue group up to 32 characters.

instance *instance-id*

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

interval *seconds*

Configures the interval for each display in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default 11 seconds

Values 11 to 60

repeat *repeat*

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed.

arbiter ***name***

Specify the name of the policer control policy arbiter.

Values An existing arbiter-name in the form of a string up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, etc.), the entire string must be enclosed within double quotes.

root

Specify the root arbiter.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

port

Syntax

port *port-id* **queue-group** *queue-group-name* [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**access** | **network**] [**instance** *instance-id*]

port *port-id* **vport** *name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>scheduler-stats port)

Full Context

monitor qos scheduler-stats port

Description

This command enables port traffic monitoring.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

port *port-id*

Specifies the port ID.

Values

slot/*mda*/*port* [.*channel*]		
eth-sat-id	esat-*id*/*slot*/*port*	
	esat	keyword
	id	1 to 20
pxc-id	pxc-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a, b

queue-group *queue-group-name*

Specifies the name of the queue group up to 32 characters.

instance *instance-id*

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

ingress

Specifies statistics are for an ingress queue group.

egress

Specifies statistics are for an egress queue group.

interval *seconds*

Configures the interval for each display in seconds.

Default 11 seconds

Values 11 to 60

repeat *repeat*

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

access

Displays scheduler statistics applied on an access port.

network

Displays scheduler statistics applied on a network port.

Platforms

All

port

Syntax

port *port-id* **exp-secondary-shaper** *shaper-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

port *port-id* **vport** *name* [**interval** *seconds*] [**repeat** *repeat*]

Context

[Tree] (monitor>qos port)

Full Context

monitor qos port

Description

This command monitors expanded secondary shaper statistics.

Parameters

port-id

Specifies the port ID.

Values *slot/mda/port*
esat-*id*/*slot*/*port*
pxc-*id*.*sub-port*

shaper-name

Displays statistics for the named exp secondary shaper.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Full Context

show service id igmp-snooping port-db

Description

This command displays information on the IGMP snooping port database for the VPLS service.

Parameters

grp-ip-address

Displays the IGMP snooping port database for a specific multicast group address

sap-id

Displays the IGMP snooping port database for a specific SAP

sdp-id

Displays only IGMP snooping entries associated with the specified mesh SDP or spoke-SDP. For a spoke-SDP, the VC ID must be specified, for a mesh SDP, the VC ID is optional.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID for which to display information

Default For mesh SDPs only, all VC IDs

Values 1 to 4294967295

grp-address

Displays IGMP snooping statistics matching the specified group address.

ip-address

Displays IGMP snooping statistics matching one particular source within the multicast group.

vxlan vtep *ip-address* vni *<1..16777215>*

Displays the IGMP snooping entries associated with a specific VXLAN binding, given by the VXLAN Termination Endpoint (VTEP) and VXLAN Network Identifier (VNI).

vni

The VXLAN Network Identifier (VNI) for which to display information.

Values 1 to 16777215

Table 436: Output fields: IGMP snooping port database describes the show output fields.

Table 436: Output fields: IGMP snooping port database

Label	Description
Group Address	The IP multicast group address for which this entry contains information.
Mode	Specifies the type of membership reports received on the interface for the group. In the include mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In the exclude mode, reception of packets sent to the specified multicast address is requested from all IP source addresses except those listed in the **source-list** parameter.
Type	Indicates how this group entry was learned. If this group entry was learned by IGMP, the value is set to dynamic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	For statically configured groups, the value is set to static.
Compatibility mode	Specifies the IGMP mode. This is used for routers to be compatible with older-version routers. IGMPv3 hosts must operate in Version 1 and Version 2 compatibility modes. IGMPv3 hosts must keep state per local interface regarding the compatibility mode of each attached network. A host's compatibility mode is determined from the host compatibility mode variable which can be in one of three states: IGMPv1, IGMPv2 or IGMPv3. This variable is kept per interface and is dependent on the version of general queries heard on that interface as well as the older-version querier present timers for the interface.
V1 host expires	The time remaining until the local router will assume that there are no longer any IGMP Version 1 members on the IP subnet attached to this interface. Upon hearing any IGMPv1 membership report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv2 leave messages for this group that it receives on this interface.
V2 host expires	The time remaining until the local router will assume that there are no longer any IGMP Version 2 members on the IP subnet attached to this interface. Upon hearing any IGMPv2 membership report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv3 leave messages for this group that it receives on this interface.
Source address	The source address for which this entry contains information.
Up Time	The time since the source group entry was created.
Expires	The amount of time remaining before this entry will be aged out.
Number of sources	Indicates the number of IGMP group and source specific queries received on this SAP.
Forwarding/Blocking	Indicates whether this entry is on the forward list or block list.
Number of groups	Indicates the number of groups configured for this SAP.

port-db

Syntax

port-db sap *sap-id* [**group** *grp-ip-address*]

Context

[Tree] (clear>service>id>igmp-snooping port-db)

Full Context

clear service id igmp-snooping port-db

Description

This command clears the information on the IGMP snooping port database for the VPLS service.

Parameters

sap-id

Clears IGMP snooping statistics matching the specified SAP ID and optional encapsulation value

sdp-id

Clears only IGMP snooping entries associated with the specified mesh SDP or spoke-SDP. For a spoke-SDP, the VC ID must be specified, for a mesh SDP, the VC ID is optional.

Values 1 to 17407

vc-id

Clears information for the specified virtual circuit ID on the SDP ID

Default For mesh SDPs only, all VC IDs

Values 1 to 4294967295

grp-ip-address

Clears IGMP snooping statistics matching the specified group address

src-ip-address

Clears IGMP snooping statistics matching the specified particular source

vxlan vtep *ip-address* vni *<1..16777215>*

Clears the IGMP snooping statistics associated with a specific VXLAN destination given by the VXLAN Termination Endpoint (VTEP) and VXLAN Network Identifier (VNI).

vni-id

Displays information for the specified VXLAN Network Identifier (VNI)

Values 1 to 16777215

Platforms

show filter match-list port-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays TCP/UDP/SCTP port values or ranges for match criteria in IPv4 and IPv6 ACL and CPM filter policies.

Parameters

port-list-name

A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

references

Displays the filter policies, policy entries and source/destination/port match type per entry referring to this match list.

Platforms

All

port-list

Syntax

Table 437: Output fields: port list

Label	Description
Port List Name	Displays the port list name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Description	Displays the port list description.
Num Ports/Range	Displays the number of ports or range of ports.
No. of Port-List	Displays the number of port lists.
QoS Policy ID	Displays the QoS policy ID.

20.5 port-map

port-map

Syntax

port-map [*client-map-id*]

Context

[Tree] (show>system>satellite>eth-sat port-map)

Full Context

show system satellite eth-sat port-map

Description

This command displays information about configured satellites port maps.

Parameters

client-map-id

Specifies the client map to display. If a client port is associated with a resilient secondary uplink, a second line shows the current secondary uplink association.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of satellite port map information.

Output Example

```
A:admin@Dut-A# show system satellite eth-sat 1 port-map
===============================================================================

```

20.6 port-policy

port-policy

Syntax

port-policy

port-policy *policy-name*

port-policy *policy-name* **associations**

Context

[Tree] (show port-policy)

Full Context

show port-policy

Description

This command displays port policy information.

Parameters

policy-name

Specifies the port policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

20.7 port-queues

port-queues

Syntax

port-queues queue-depth [**queue** *queue-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>port port-queues)

Full Context

clear port port-queues

Description

This command clears the port queues and queue depth.

Parameters

queue-depth

Clears the queue depth.

queue-id

Specifies the queue ID.

Values 1 to 16

Platforms

All

port-queues

Syntax

port-queues queue *queue-id*

port-queues queue-depth [**queue** *queue-id*]

Context

[Tree] (show>port port-queues)

Full Context

show port port-queues

Description

This command displays port queues, queue override, and queue depth information.

Parameters

queue-depth

Displays queue depth information for the specified queue group queue.

queue-id

Specifies the queue ID.

Values 1 to 16

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

20.8 port-recorder

port-recorder

Syntax

port-recorder detail [**flow-count** *flows*] [**byte-count** *kbytes*] [**isa** *mda-id /esa-vm-id*] **url** *file-url*

port-recorder status [**isa** *mda-id/esa-vm-id*]

port-recorder top *granularity* [**max-count** *max-count*] [**isa** *mda-id*]

Context

[Tree] (tools>dump>app-assure>group port-recorder)

Full Context

tools dump application-assurance group port-recorder

Description

This command saves the port recorded by the tool into a file. The port-recorder is configured using debug commands.

Parameters

flow-count *flows*

Match ports with flow count greater than the specified value.

Values slot 1 to 4294967295

bytes-count *kbytes*

Match ports with bytes count greater than the specified value.

Values slot 1 to 4294967295

status

Displays the current status of the port-recorder with current-time, start-time, stop-time, sample-rates as well as number of bytes and flows for UDP and TCP traffic on the specified AA ISA card. The port-recorder is configured using debug commands.

top

Displays by bytes or flows the top ports recorded by the tool on a particular AA ISA.

mda-id/esa-vm-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

file-url

Specifies the URL for the file to direct the port-recorder output to.

Values

local-url:	<cflash-id>/][<file-path>]	
	200 chars max, including cflash-id	
	directory length 99 chars max each	
remote-url:	[{ftp://| tftp://}<login>:<pswd>@<remote-locn>/][<file-path>]	
	255 chars max	
	directory length 99 chars max each	
remote-locn:	<hostname> | <ipv4-address> | <ipv6-address>]	
	ipv4-address	a.b.c.d
	ipv6-address	x:x:x:x:x:x:x:x[-interface]
		x:x:x:x:x:x:d.d.d.d[-interface]
		x - [0..FFFF]H
		d - [0..255]D
	interface	32 chars max, for link local addresses
	cflash-id	flash slot ID

granularity

Specifies if the output is sorted by bytes or flows.

Values bytes, flows

max-count

Specifies the maximum number of values to display.

Values 1 to 25

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

20.9 port-scheduler

port-scheduler

Syntax

port-scheduler [**interval** *seconds*] [**repeat** *repeat*] [**absolute**| **rate**]

Context

[Tree] (monitor>port port-scheduler)

Full Context

monitor port port-scheduler

Description

This command monitors port scheduler statistics.

Parameters

seconds

Configures the interval for each display in seconds.

Values 11 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

port-scheduler

Syntax

port-scheduler statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>port port-scheduler)

Full Context

clear port port-scheduler

Description

This command clears port scheduler statistics.

Parameters

statistics

Clears port scheduler statistics.

Platforms

All

port-scheduler

Syntax

port-scheduler statistics

Context

[Tree] (show>lag port-scheduler)

Full Context

show lag port-scheduler

Description

This command displays port scheduler policy information applied to the LAG.

Parameters

statistics

Displays statistics for the port scheduler policy applied to the LAG.

Platforms

All

port-scheduler

Syntax

port-scheduler statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>port port-scheduler)

Full Context

show port port-scheduler

Description

This command displays port schedule policy information applied to the port.

Parameters

statistics

Displays port schedule policy statistics.

Platforms

All

20.10 port-scheduler-policy

port-scheduler-policy

Syntax

port-scheduler-policy [*port-scheduler-policy-name*] [**association**]

port-scheduler-policy *port-scheduler-policy-name* **network-policy** *network-queue-policy-name*

port-scheduler-policy *port-scheduler-policy-name* **sap-egress** *policy-id*

port-scheduler-policy *port-scheduler-policy-name* **scheduler-policy** *scheduler-policy-name*

port-scheduler-policy *port-scheduler-policy-name* **scheduler-policy** *scheduler-policy-name* **sap-egress** *policy-id*

Context

[Tree] (show>qos port-scheduler-policy)

Full Context

show qos port-scheduler-policy

Description

This command displays port-scheduler policy information

Parameters

port-scheduler-policy-name

Displays information for the specified existing port scheduler policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

association

Displays associations related to the specified port scheduler policy.

network-policy *network-queue-policy-name*

Displays information for the specified existing network queue policy.

sap-egress *policy-id*

Displays information for the specified existing SAP egress policy.

scheduler-policy *scheduler-policy-name*

Displays information for the specified existing scheduler policy.

Platforms

All

Output

The following output is an example of QoS port scheduler policy information, and Table 438: Output fields: QoS port scheduler describes the QoS port scheduler policy fields.

Table 438: Output fields: QoS port scheduler

Label	Description
Policy Name	Displays the port scheduler policy name.
HQOS Algorithm	Displays the port scheduler H-QoS algorithm used to calculate the operational rates for the children connected to the port scheduler.
Max Rate	Displays the explicit maximum frame-based bandwidth limit of this port scheduler.
Lvlx PIR	Displays the total bandwidth limit, PIR, for the specified priority level.
Lvlx CIR	Displays the within-CIR bandwidth limit for the specified priority level.
Orphan Lvl	Displays above-CIR port priority of orphaned queues and scheduler.
Orphan Weight	Displays the weight of orphaned queues and schedulers that are above-CIR.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Orphan CIR-Lvl	Displays the port priority of orphaned queues and schedulers that are within-CIR.
Orphan CIR-Weight	Displays the weight of orphaned queues and schedulers that are within-CIR.
Associations	Displays associations related to the specified port scheduler policy.
Mode	Displays the port scheduler policy mode (STRICT, RR, WRR, WDRR).
Accounting	Displays whether the accounting mode is frame-based or packet-based
Last Changed	Displays the last time the configuration changed.
Queue #	Displays the weight of the queue if configured.

20.11 port-topology

port-topology

Syntax

port-topology [**uni-dir**]

Context

[Tree] (show>system port-topology)

Full Context

show system port-topology

Description

This command generates a listing of the internal connections within the router. These include connections to satellite ports. Use of the **uni-dir** keyword will list each connection twice; once for each direction.

Parameters

uni-dir

Specifies to list each direction as a separate row.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of port topology information.

Output Example

```
*A:Dut-A# show system port-topology
================================================================================

20.12 port-xc

port-xc

Syntax

port-xc [pxc *pxc-id***]**

Context

[Tree] (show>port-xc port-xc)

Full Context

show port-xc

Description

This command displays information about Port Cross-Connect (PXC) information.

Parameters

pxc-id

Specifies the PXC ID.

Values 1 to 64

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of PXC information, and Table 439: Output fields: port cross connect describes the output fields.

Output Example

```

Table 439: Output fields: port cross connect

Label	Description
PXC Id	The port cross-connect identifier
Admin State	The administrative state of the port
Oper State	The operational state of the port
Port Id	The port ID
Description	The PXC ID description
Interface	The port ID
MAC Chip Number	The MAC chip number for this port

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Licensed	Yes — The port is licensed and can be used in a service configuration. No — The port is unlicensed and may not be used
IFIndex	Displays the interface's index number which reflects its initialization sequence.
Last State Change	Displays the last time the operational status of the port changed state.
Ing. Pool % Rate	The increment or decrement of the active bandwidth associated with the ingress port. This active bandwidth affects the amount of ingress buffer space managed by the port.
Egr. Pool % Rate	The increment or decrement of the active bandwidth associated with the egress port. This active bandwidth affects the amount of egress buffer space managed by the port.

20.13 positive-app-id

positive-app-id

Syntax

positive-app-id

Context

[Tree] (tools>dump>app-assure>group>ipassist positive-app-id)

Full Context

tools dump application-assurance group ip-identification-assist positive-app-id

Description

This command dumps the statistics related to IP identification assist for top applications using IP addresses learned from successfully classified traffic using the AA application database.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

Use this command to dump the statistics.

```
tools dump application-assurance group "1" ip-identification-assist positive-app-id isa "1/1"
```

Output Example

```

20.14 post-policer-mapping

post-policer-mapping

Syntax

post-policer-mapping [*post-policer-name*] [**association** | **detail**]

Context

[Tree] (show>qos post-policer-mapping)

Full Context

show qos post-policer-mapping

Description

This command displays information about post-policer mapping policies. Omitting the policy name will list all policies.

Parameters

post-policer-name

Specifies the name of the post-policer mapping policy, up to 32 characters.

association

Displays the entities associated with the post-policer mapping policy.

detail

Displays the detailed information for the post-policer mapping policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Output

This section shows output example for post-policer mapping.

Output Example

```
*A:PE# show qos post-policer-mapping
===============================================================================
Post Policer Mapping Summary
===============================================================================
Policy                        Description

20.15 power-cycle

power-cycle

Syntax

power-cycle

Context

[Tree] (tools>perform>card power-cycle)

Full Context

tools perform card power-cycle

Description

This command power cycles a card.

Note: If CPM **A** is specified, the chassis is power cycled. Power cycling the chassis is not supported on the 7750 DMS-1-24D, 7750 SR-1, 7750 SR-1x, single-CPM 7750 SR-7s, and single-CPM 7750 SR-14s platforms.

Platforms

20.16 power-management

power-management

Syntax

power-management [*zone*]

Context

[Tree] (show>chassis power-management)

Full Context

show chassis power-management

Description

This command shows the power management requirement and utilization information.

Parameters

zone

The chassis power zone.

Values 1, 2

Platforms

7750 SR-12e, 7750 SR-s, 7950 XRS

Output

The following output is an example of power management information, and Table 440: Output fields: chassis power management describes the output fields.

Output Example: show chassis power-management

```
*A:Dut-A#  show chassis power-management

Chassis 2 Detail
===============================================================================
```

Table 440: Output fields: chassis power management

Label	Description
Power Management Mode	Specifies the configured power management mode: None, Basic, or Advanced.
Power Safety Level	Specifies the configured Power Safety Level, which is a percentage of the worst case power consumption level.
Power Safety Alert	Specifies the configured power level in watts, which causes the system to raise an alarm if the available power level drops below a set level.
Power-Zone	Specifies the chassis power zone.
Number of PEQs	Specifies the total number of APEQs installed.
PEQ number:	Specifies the APEQ to which the information is associated
PEQ Equipped Type	Specifies the APEQ type installed.
PEQ Provisioned Type	Specifies the APEQ type provisioned.
Status	Specifies the APEQ status.
Input Feed Status	Specifies the feed status. This field indicates that power is detected on all inputs or lists the inputs where no power is detected.
PCM Equipped Type	Indicates the type of PCM installed in the specified PIM or PCM slot: • (empty slot) • indeterminate • quad-pcm

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Some PCMs can only be verified for presence based on power available at the associated APEQ. These are indicated as indeterminate. When the equipped type is quad-pcm, the additional fields of Power-Zone, Status, and Input Feed Status and Hardware Data are displayed.
PCM Provisioned Type	One of the following types: • (not specified) • dual-pcm • quad-pcm For a given PCM number, if the equipped type is not detected and the provisioned type is not specified, the PCM is not displayed.
Hardware Data:	
Part number	The APEQ part number.
CLEI code	The APEQ CLEI code.
Serial number	The APEQ serial number.
Manufacture date	The date the APEQ was manufactured.
Manufacturing deviations	Specifies any manufacturing deviations.
Manufacturing assembly number	The APEQ assembly number.
Administrative state	Specifies the administrative state of the APEQ.
Operational state	Specifies the operational state of the APEQ.
Time of last boot	Indicates the time stamp of the last system restart.
Current alarm state	Indicates the current alarm state.

power-management

Syntax

power-management

Context

[Tree] (tools>perform>system power-management)

Full Context

tools perform system power-management

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

Commands in this context perform power management operations.

Platforms

7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

20.17 power-module

power-module

Syntax

power-module [*power-module-id*] [**detail**]

Context

[Tree] (show>chassis>power-shelf power-module)

Full Context

show chassis power-shelf power-module

Description

This command displays the power-module.

Parameters

power-module-id

Specifies the power module ID.

Values 1 to 10

detail

Displays detailed power module information.

Platforms

7750 SR-s

Output

The following output is an example of a power module

Output Example: show chassis power-shelf power-module

```
A:DUT-A# show chassis power-shelf 1 power-module

A:DUT-A#
```

power-module

Syntax

power-module *power-module-id*

Context

[Tree] (clear>chassis>power-shelf power-module)

Full Context

clear chassis power-shelf power-module

Description

This command toggles the output power of the power module, turning it off for two seconds then on. This procedure can be used to clear an ovSD (output voltage shutdown) fault. The only alternative method to clear the ovSD fault is to physically remove the power module from the power shelf and re-insert. Running this command does not clear the latched faults.

Parameters

power-module-id

Specifies the power-module ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 10

Platforms

7750 SR-s

power-module

Syntax

power-module *power-module-id* **telemetry**

Context

[Tree] (tools>dump>power-shelf power-module)

Full Context

tools dump power-shelf power-module

Description

This command displays the specified power module information, telemetry, and fault data. When a fault is no longer active it remains marked as a latched fault for tracking purposes until manually cleared.

Parameters

power-module-id

Displays information about the specified power-module ID.

Values 1 to 10

telemetry

Displays telemetry and fault data for the specified power module.

Platforms

7750 SR-s

power-module

Syntax

power-module *power-module-id* **clear-faults**

Context

[Tree] (tools>perform>power-shelf power-module)

Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears all the latched faults for inactive faults.

Parameters

power-module-id

Specifies power-module ID.

Values 1 to 10

clear-faults

Clears fault conditions against the specified power module.

Platforms

7750 SR-s

20.18 power-save

power-save

Syntax

power-save

Context

[Tree] (show>chassis>power-management power-save)

Full Context

show chassis power-management power-save

Description

This command displays power save information.

Platforms

7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

Output

The following output is an example of power save information, and Table 441: Output fields: power management power save describes the output fields.

Output Example: show chassis power-management power-save

```
[/]

Table 442: Output fields: subscriber management PPP policy

Label	Description
Description	Specifies the description.
Last Mgmt Change	Specifies the date and time of the last management change.
PPP-mtu	Specifies the configured maximum PPP MTU size.
Force PPP-mtu >1492	Specifies if PPPoE MRU negotiations greater than 1492 bytes are enabled without receiving a "PPP-Max-Payload" tag in the PADI/PADR client message (Yes, No).
Keepalive Interval	Specifies the keepalive interval, in seconds.
Keepalive Multiplier	Specifies the keepalive multiplier value.
Disable AC-Cookies	Specifies to disable AC cookies (Yes, No).
PADO Delay	Specifies the PADO delay value, in milliseconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Max Sessions-Per-Mac	Specifies the maximum number of sessions with the same client MAC address and active on the same SAP or MSAP.
Reply-On-PADT	Specifies to reply on PADT (Yes, No).
Allow Same CID	Specifies to allow the same Circuit ID for multiple PPPoE sessions with the same client MAC address and active on the same SAP when using the internal DHCPv4 client for IPv4 address allocation (Yes, No).
Re-establish Session	Specifies if a PPPoE session can be re-established upon receiving a PADR from a PPPoE client that previously disconnected without sending a PADT and for which a session is still active in the BNG (PADR, Disabled).
Max Sessions-Per-Cid	Specifies the maximum number of sessions with the same Agent Circuit ID that can be active on the same SAP or MSAP.
Allow No CID	Specifies whether PPPoE sessions without an Agent Circuit ID to be established on a SAP or MSAP with a **max-sessions-per-cid** limit configured (Yes, No).
PPP-Authentication	Specifies the PPP Authentication method (PAP, CHAP, pref-PAP or pref-CHAP).
PPP-CHAP Challenge	Specifies the minimum and maximum length of a PPP CHAP Challenge (in bytes).
PPP-Init-Delay (ms)	Specifies the delay in milliseconds for sending an LCP configure request after the discovery phase.
IPCP negotiate subnet	Specifies if IPCP subnet negotiation is enabled (Yes, No).
Unique SIDs-Per-SAP	Specifies the unique SIDs per-SAP (disabled, per-capture-sap, per-msap).
Reject-Disabled-Ncp	Specifies if an LCP protocol reject is sent for an unconfigured NCP (Yes, No).
Ignore-Magic-Num	Specifies if the LCP peer magic number should be ignored (Yes, No).
Session Timeout	Specifies the session timeout value in seconds (default = unlimited).
SID Allocation	Specifies the PPPoE Session ID allocation method (sequential, random).
PADO AC-Name	Specifies the AC name used in PADO messages.
Default username	Specifies the default username for PAP or CHAP authentication.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Default password	Specifies the default PAP password (Specified, Not specified).
Accept MRRU	Specifies to accept MRRU (true, false).
Request short sequence nr.	Specifies to request short sequence numbers (true, false).
Endpoint class	Specifies the endpoint class (null, ipv4-address or mac-address).
Endpoint address	Specifies the endpoint IPv4 or mac address.

show subscriber-mgmt pppoe-client-policy

Description

This command displays PPPoE client policy information.

Parameters

name

Specifies the PPPoE client policy name, up to 32 characters.

associations

Displays information associated with the policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

20.25 prefix-ext-stats

prefix-ext-stats

Syntax

prefix-ext-stats *ipv6-address/prefix-length*

prefix-ext-stats pool *pool-name*

Context

[Tree] (show>router>dhcp6>server prefix-ext-stats)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router dhcp6 local-dhcp-server prefix-ext-stats

Description

This command displays extended statistics per DHCPv6 prefix in local DHCPv6 server.

The following statistics are included in output:

- The number of stable leases in the prefix
- The number of provisioned /64 address block in the prefix
- The number of used /64 address block in the prefix
- The number of free /64 address block in the prefix
- The percentage of used address (with /64 address block)
- The percentage of free address (with /64 address block)

For each statistic (except for Provisioned Addresses), there is current value and peak value, peak value is the highest value since prefix creation or last reset via command **clear>router** *rt-id*>**dhcp6**>**local-dhcp-server** *svr-name*>**prefix-ext-stats**.

When the **pool** parameter is used, the statistics of each prefix in the pool are displayed.

Parameters

ipv6-address/prefix-length

Specifies the IPv6 prefix.

pool-name

The name of DHCPv6 local server pool.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of prefix extended stats information.

Output Example

```
show router 500 dhcp6 local-dhcp-server "d6" prefix-ext-stats 2001:ABCD::/62
===============================================================================
Extended statistics for prefix 2001:ABCD::/62

Table 443: Output fields: prefix extended statistics describes extended prefix statistics output fields.

Table 443: Output fields: prefix extended statistics

Field	Description
Current	The current extended prefix statistics
Peak	The peak value since the last reset
TimeStamp	The date and time of the last reset
Failover Oper State	The operational state of the DHCP specified prefix
Stable Leases	The number of stable leases
Provisioned Blks	The number of provisioned blocks
Used Blks	The number of used blocks
Free Blks	The number of free blocks
Used Pct	The percentage of extended prefixes in use
Free Pct	The percentage of free prefixes in use
Last Reset Time	The date and time of the last reset
Number of entries	The total number of entries

prefix-ext-stats

Syntax

prefix-ext-stats *ipv6-address/prefix-length*

prefix-ext-stats pool *pool-name*

Context

[Tree] (clear>router>dhcp6>server prefix-ext-stats)

Full Context

clear router dhcp6 local-dhcp-server prefix-ext-stats

Description

This command reset the begin time of peak values in output of the **show router** *rt-id* **dhcp6 local-dhcp-server** *svr-name* **prefix-ext-stats** command/

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ipv6-address/prefix-length

Clears information about the specified IPv6 prefix.

pool-name

Clears information about the specified local DHCPv6 server pool name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

20.26 prefix-label

prefix-label

Syntax

prefix-label [*family*] [*[rd:]ip-prefix[/ip-prefix-length]*]

prefix-label [*family*] *[rd:]ip-prefix[/ip-prefix-length]* **detail**

Context

[Tree] (show>router>bgp prefix-label)

Full Context

show router bgp prefix-label

Description

This command displays BGP per-prefix label information for label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 prefixes.

Parameters

family

Specifies the BGP address family of the prefixes to display.

Values label-ipv4 | label-ipv6 | vpn-ipv4 | vpn-ipv6

[rd:]ip-prefix[/ip-prefix-length]

Specifies the IP prefix to display. Include the route distinguisher for VPN-IPv4 and VPN-IPv6 prefixes. An IP prefix is required when **detail** is specified.

Values *rd*: *ip-address:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

where:

- *ip-address* — a.b.c.d
- *comm-val* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *2byte-asnumber* — 0 to 65535
- *ext-comm-val* — 0 to 4294967295
- *4byte-asnumber* — *asn1.asn2* (two 2-byte pieces)
  - *asn1* — 1 to 65535
  - *asn2* — 0 to 65535

ip-prefix:

- ipv4-prefix — a.b.c.d
- ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)
- ipv6-prefix — x:x:x:x:x:x:d.d.d.d

where:

- *x* — 0 to FFFF (hexadecimal)
- *d* — 0 to 255 (decimal)

ip-prefix-length:

- ipv4-prefix-length — 0 to 32
- ipv6-prefix-length — 0 to 128

detail

Keyword that displays detailed per-next-hop information.

Platforms

All

Output

The following output is an example of VPN-IPv6 per-prefix labels, and Table 444: Output fields: prefix-labels describes the output fields.

Output example: VPN-IPv6

```
A:node-2# show router bgp prefix-label vpn-ipv6 1:1:3ffe::300:0/128 detail

```

Table 444: Output fields: prefix-labels

Label	Description
Network	Displays the VPN-IPv6 prefix for which the per-prefix label is allocated, including the route distinguisher, IPv6 prefix, and prefix length.
Prefix	Displays the label-IPv4 prefix and prefix length for which the per-prefix label is allocated.
Advertised Label	Displays the per-prefix label that this router advertises to BGP peers for the prefix. The value is shown on the prefix line.
Received Label	Displays the label received from the BGP peer. The value is shown on each next-hop line.
Flags	Displays the flags associated with the prefix entry. The flag is set to one of the following values: • B — entry has backup next-hop • E — entry has ECMP next-hops
Next-Hop	Displays the BGP next-hop address for the prefix. A backup next hop is marked (backup).
Resolution	Displays how the next hop is resolved. The line shows the resolved address and the route owner.
Total Labels allocated	Displays the number of per-prefix labels allocated for the prefixes in the display.

20.27 prefix-sids

prefix-sids

Syntax

prefix-sids [**ipv4-unicast**| **ipv6-unicast** | **ipv4-multicast** | **ipv6-multicast** | **mt** *mt-id-number*] [*ip-prefix*[/*prefix-length*]] [**sid** *sid*] [**adv-router** *system-id* | *hostname*] [**srms** | **no-srms**] [**algo** *algo-id*]

Context

[Tree] (show>router>isis prefix-sids)

Full Context

show router isis prefix-sids

Description

This command displays IS-IS prefix SIDs.

Parameters

ipv4-unicast

Displays IPv4 unicast parameters.

ipv6-unicast

Displays IPv6 unicast parameters.

ipv4-multicast

Displays IPv4 multicast parameters.

ipv6-multicast

Displays IPv6 multicast parameters.

mt-id-number

Displays multi-topology parameters.

Values 0, 2, 3, 4

ip-prefix[/prefix-length]

Displays information about the specified IP prefix and length.

Values ipv4-prefix:

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

ipv6-prefix-length:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x: [0 to FFFF]H
- d: [0 to 255]D
- ipv6-prefix-length: [0 to 128]

sid

Displays information for the specific segment identifier.

Values 0 to 524287

system-id* | *hostname

Displays information for the specific IS-IS advertising router. Host name up to 38 characters.

srms

Displays parameters filtered for segment routing mapping server.

no-srms

Displays parameters filtered for no segment routing mapping server.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

Platforms

All

Output

The following outputs are examples of prefix SID information, and Table 445: Output fields: IS-IS prefix SIDs describes the output fields.

Output Example

```

Table 445: Output fields: IS-IS prefix SIDs

Label	Description
Prefix	Displays the IP prefix for the SID
SID	Displays the SID value
Adv-Rtr	Displays the IP address of the advertised router
SRMS	Displays whether the prefix SID is advertised by the SR mapping server (Y or N) or selected to be programmed (S)
Flags	Displays the SID flags
No. of Prefix/SIDs	Displays the number of Prefix/SIDs

prefix-sids

Syntax

prefix-sids [*ip-prefix*[/*prefix-length*]] [**sid** *sid*] [**adv-router** *router-id*] [**algo** *algo-id*]

Context

[Tree] (show>router>ospf prefix-sids)

Full Context

show router ospf prefix-sids

Description

This command displays OSPF prefix SIDs.

Parameters

ip-prefix[/prefix-length]

Displays information about the specified IP prefix and length, up to 64 characters.

sid

Displays information for the specific segment identifier.

Values 0 to 524287

router-id

Displays information for the specific advertising router identified by its router identifier.

algo-id

Displays the algorithm identifier.

Values 0 to 255

Platforms

All

Output

The following outputs are examples of OSPF prefix SIDs information, and Table 446: Output fields: OSPF prefix SIDs describes the output fields.

Output Example

```
*A:Dut-F# show router ospf prefix-sids
===============================================================================
Rtr Base OSPFv2 Instance 0 Prefix-Sids
===============================================================================

Table 446: Output fields: OSPF prefix SIDs

Label	Description
Prefix	Displays the IP prefix for the SID
Area	Displays the OSPF area
RtType	Displays the route type (INTRA-AREA or INTER-AREA)
SID	Displays the SID value
Adv-Rtr	Displays the IP address of the advertised router
SRMS	Displays whether the prefix SID is advertised by the SR mapping server (Y or N) or selected to be programmed (S)
Flags	Displays the SID flags
No. of Prefix/SIDs	Displays the number of Prefix/SIDs

prefix-sids

Syntax

prefix-sids [*ip-prefix*[/*prefix-length*]] [**sid** *sid*] [**adv-router** *router-id*]

Context

[Tree] (show>router>ospf3 prefix-sids)

Full Context

show router ospf3 prefix-sids

Description

This command displays OSPF prefix SIDs.

Parameters

ip-prefix[/prefix-length]

Displays information about the specified IP prefix and length, up to 64 characters.

sid

Displays information for the specific segment identifier.

Values 0 to 524287

router-id

Displays information for the specific advertising router identified by its router ID.

Platforms

All

Output

The following outputs are examples of OSPFv3 prefix SIDs information, and Table 447: Output fields: OSPFv3 prefix SIDs describes the output fields.

Output Example

```

Table 447: Output fields: OSPFv3 prefix SIDs

Label	Description
Prefix	Displays the IP prefix for the SID
Area	Displays the OSPF area
RtType	Displays the route type (INTRA-AREA or INTER-AREA)
SID	Displays the SID value
Adv-Rtr	Displays the IP address of the advertised router
SRMS	Displays whether the prefix SID is advertised by the SR mapping server (Y or N) or selected to be programmed (S)
Flags	Displays the SID flags
No. of Prefix/SIDs	Displays the number of Prefix/SIDs

prefix-sids

Syntax

prefix-sids [**interface** *ip-int-name*] [**ipv4** | **ipv6**] [**algo** *algo-id*]

Context

[Tree] (show>router>seg-rt>sr-mpls prefix-sids)

Full Context

show router segment-routing sr-mpls prefix-sids

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information about the prefix SIDs and their state on the router.

Parameters

algo-id

Displays information about the specified algorithm associated with the prefix SID.

ip-int-name

Displays information about the specified interface, up to 32 characters.

ipv4

Displays the prefix SIDs that are IPv4 capable.

ipv6

Displays the prefix SIDs that are IPv6 capable.

Platforms

All

Output

The following output is an example of prefix SIDs information, and Table 448: Output fields: SR-MPLS prefix SIDs describes the output fields.

Output Example

```

```

Table 448: Output fields: SR-MPLS prefix SIDs

Label	Description
Interface Name/ Interface	The name of the loopback or system interface
AF	The address family associated with the prefix SID
SID	The SID index
Label	The SID label
State	The operational state of the prefix SID • enabled – operational state up • adminDown – administrative state down (for example, no SID configured) • failed – operational state down due to failure (for example, resource allocation failure) • ifDown – the interface is down • ifFailed – interface configuration failure (for example, the interface is not a loopback)
Algo	The algorithm associated with the prefix SID

20.28 prefix-stats

prefix-stats

Syntax

prefix-stats *ipv6-address/prefix-length*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix-stats pool *pool-name*

Context

[Tree] (show>router>dhcp6>local-dhcp-server prefix-stats)

Full Context

show router dhcp6 local-dhcp-server prefix-stats

Description

This command displays prefix statistics.

Parameters

ipv6-address

Specifies the base IP address of the subnet. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

pool-name

Specifies the name of DHCPv6 local server pool.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

20.29 prefix-threshold-stats

prefix-threshold-stats

Syntax

prefix-threshold-stats pool *pool-name* **detail** [**format** {**exact** | **scientific**}]

prefix-threshold-stats pool *pool-name*

prefix-threshold-stats *ipv6-address*/*prefix-length* **detail** [**format** {**exact** | **scientific**}]

prefix-threshold-stats *ipv6-address*/*prefix-length*

Context

[Tree] (show>router>dhcp6>server prefix-threshold-stats)

Full Context

show router dhcp6 local-dhcp-server prefix-threshold-stats

Description

This commands displays prefix level threshold stats of local DHCPv6 server prefix. A minimum-free threshold needs to be configured before system collects threshold stats for the prefix.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The stats for each threshold are calculated based on the configured minimum-free prefix length.

For example, a /59 prefix is provision in the local DHCPv6 server, and the server allocated two PD leases, one /62 and one /63. And there is a /63 minimum threshold configured. The threshold stats are calculated based on /63 as the base unit (block). Then the value of the current used block would be 3 because there is one /62 lease and one /63 lease, that equals to a total three /63.

Parameters

pool *pool-name*

Specifies the name of the pool in local DHCPv6 server, up to 32 characters.

detail

Displays detailed output statistics.

format

Specifies that the number format in the display is either **exact** or **scientific**.

ipv6-address/prefix-length

Specifies the IPv6 prefix with prefix length.

Values

ipv6-address x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x [0 to FFFF]H

d [0 to 255]D

prefix-length [1 to 128]

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of prefix threshold information.

Output Example

```
show router 500 dhcp6 local-dhcp-server "d6" leases
===============================================================================

The command shown above displays detailed statistics of all prefix level thresholds in the specified pool:

- **Blks** means the minimum free prefix length.
- **Valid Data** output indicates whether the data is or is not valid. The data is invalid when a background stats update is scheduled or busy.

The command displayed above displays detailed statistics of prefix level thresholds in the specified provision prefix.

Table 449: Output fields: prefix threshold statistics describes prefix threshold statistics output fields.

Table 449: Output fields: prefix threshold statistics

Field	Description
Operational state	The operational state of the local DHCP server instance unknown — The operational state is unknown inService — The operational state is in service outOfService — The operational state is out of service transition — The operational state is in transition waitPersistence — The DHCP server instance is waiting for a persistence action to complete.
Pool	The number of pools in the specified prefix
Stable leases	The number of stable leases associated with the prefix
Advertised leases	The advertised leases associated with the prefix
Prefix	The specified prefix
Draining	The draining state Y — enabled N — disabled
Threshold	The prefix level threshold
Current Provisioned Blks	The number of provisioned blocks for this prefix
Current Used Blks	The number of used blocks for this prefix
Current Free Blks	The number of free blocks for this prefix

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Current Used Percent	The percentage of used prefixes with the minimum free threshold length for this prefix
Current Used Peak Blks	A 64-bit word of the peak value of the number of used blocks for this prefix
Current Used Peak Percentage	The peak value of the number of used prefixes with the minimum free threshold length in the pool as a percentage of the provisioned prefixes.
Current Used Peak Time	The time at which the peak value of the number of used prefixes in the pool was reached
Current Free Percent	The percentage of free prefixes with the minimum free threshold length in the pool compared to the number of provisioned prefixes.
Current Free Too Low	The number of free prefixes with the minimum free threshold length available in the pool that is below the configured number of prefixes with the minimum free threshold length
Current Free Depleted	The number of prefixes with the minimum free threshold length available
Local Provisioned Blks	A 64-bit word of the number of provisioned prefixes with the minimum free threshold length local
Local Used Blks	The higher 64-bits word of the number of used prefixes with the minimum free threshold length
Local Free Blks	A 64-bit word of the number of free prefixes with the minimum free threshold length
Local Used Peak Blks	A 64-bit word of the peak value of the number of used prefixes with the minimum free threshold length
Local Used Peak Percent	The peak value of the number of used prefixes with the minimum free threshold length local in the pool as a percentage of the provisioned prefixes
Local Used Peak Time	The time at which the peak value of the number of used prefixes local in the pool was reached
Remote Provisioned Blks	A 64-bit word of the number of provisioned prefixes with the minimum free threshold length
Remote Used Blks	A 64-bit word of the number of used prefixes with the minimum free threshold length remote in the pool
Remote Free Blks	A 64-bit word of the number of free prefixes with the minimum free threshold length remote in the pool

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Remote Used Peak Blks	The higher 64-bit word of the number of used prefixes with the minimum free threshold length
Remote Used Peak Percent	The peak value of the number of used prefixes with the minimum free threshold length remote in the pool as a percentage of the provisioned prefixes
Remote Used Peak Time	The time at which the peak value of the number of used prefixes remote in the pool was reached.
Peak Reset Time	The time at which the peak values have been reset
Valid Dada	The actual status of the threshold statistics data of the pool. Y — the data is up to date and may be used. N — the data is being recalculated in the background and is not stable for further use

prefix-threshold-stats

Syntax

prefix-threshold-stats *ipv6-address/prefix-length*

prefix-threshold-stats pool *pool-name*

Context

[Tree] (clear>router>dhcp6>server prefix-threshold-stats)

Full Context

clear router dhcp6 local-dhcp-server prefix-threshold-stats

Description

This commands resets the peak stats in the prefix level threshold stats in the specified provision prefix or pool.

Parameters

pool-name

Clears information about the specified pool in local DHCPv6 server.

ipv6-address/prefix-length

Clears information about the specified IPv6 prefix with prefix length.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Context

[Tree] (show>router>ldp>bindings prefixes)

Full Context

show router ldp bindings prefixes

Description

This command displays LDP Prefix fec bindings.

Parameters

prefix *ip-prefix*/*ip-prefix-length*

Specify information for the specified IP prefix and mask length.

Values		
	ipv4-prefix	- a.b.c.d
	ipv4-prefix-length	[0 to 32]
	ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x:d.d.d.d
		x - [0 to FFFF]H
		d - [0 to 255]D
	ipv6-prefix-length	[0 to 128]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session *ip-addr*[*label-space*]

Specify information for the specified IP address and label space.

Values

ipv4-address	- a.b.c.d:*label-space*
ipv6-address	- x:x:x:x:x:x:x:x[*label-space*]
label-space	0 to 65535

detail

Displays detailed information.

summary

Displays information in a summarized format.

family

Displays either IPv4 or IPv6 active LDP information.

Values ipv4 or ipv6

egress-lsp *tunnel-id*

Specifies the tunnel identifier for this egress LSP.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Values up to 32 characters | no-community (selects FEC with no community string

show router ldp bindings active prefixes

Description

This command displays LDP active prefix bindings.

Parameters

ip-prefix/ip-prefix-length

Specifies information for the IP prefix and mask length.

Values

ipv4-prefix:	a.b.c.d
ipv4-prefix-length:	0 to 32
ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D
ipv6-prefix-length:	1 to 128

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Specifies the IPv4 or IPv6 address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

family

Specifies the address family.

Values ipv4, ipv6

port-id

Specifies the port ID.

Values *slot*[/*mda*[/*port*]] or *slot*/*mda*/*port* [.*channel*]

aps-id	**aps**-*group-id*[.channel]	
	aps	keyword
	group-id	1 to 128
eth-sat-id	**esat**-*id*[/*slot*/[**u**]*port*]	
	esat	keyword
	id	1 to 20
	u	keyword for up-link port
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a to b

tunnel-id

Specifies the tunnel ID.

Values 0 to 4294967295

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding

© 2026 Nokia.

Action       : permit
-------------------------------------------------------------------------------
No. of profiles:
===============================================================================
A:ALA-7#
```

Table 450: Output fields: user profile

Label	Description
User Profile	Displays the profile name used to deny or permit user console access to a hierarchical branch or to specific commands.
Def. action	Permit all — Permits access to all commands. Deny — Denies access to all commands. None — No action is taken.
Entry	The entry ID in a policy or filter table.
Description	Displays the text string describing the entry.
Match Command	Displays the command or subtree commands in subordinate command levels.
Action	Permit all — Commands matching the entry command match criteria are permitted. Deny — Commands not matching the entry command match criteria are not permitted.
No. of profiles	The total number of profiles listed.

Description

This command displays MPLS-TP protection template information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS protection template fields.

Output Example

```
*A:mlstp-dutA# show router mpls mpls-tp protection-template
===============================================================================
MPLS-TP Protection Templates
===============================================================================
Template Name  : privatebed-protection-template  Router ID      : 1
Protection Mode: one2one                         Direction      : bidirectional
Revertive      : revertive                       Wait-to-Restore: 300sec
Rapid-PSC-Timer: 10ms                            Slow-PSC-Timer : 5sec
===============================================================================
```

20.33 protocol

protocol

Syntax

protocol

Context

[Tree] (clear>router>bgp protocol)

Full Context

clear router bgp protocol

Description

This command resets the entire BGP protocol. If the AS number was previously changed, the BGP AS number does not inherit the new value.

Platforms

All

[Tree] (show>app-assure>group>aa-sub protocol)

Full Context

show application-assurance group protocol

show application-assurance group aa-sub protocol

Description

This command displays per-protocol statistics. The system-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Subscriber statistics are available for special study subscribers and account for all completed and active flows at the moment of this statistics request.

Parameters

protocol-name

Displays information about the specified protocol name.

count

Displays protocol counters.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **protocol** command.

Output Example

```
A:ALU>show>app-assure>group# protocol count

Table 451: Output fields: provider tunnel

Label	Description
Service Provider Tunnel Information	
Type	The provider tunnel type (inclusive or selective)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Root and Leaf	The root and leaf status
Admin State	The administrative state
Data Delay Intvl	The data delay interval in seconds
PMSI Type	The PMSI type
LSP Template	The LSP template name
Remain Delay Intvl	The remaining delay interval in seconds
LSP Name used	The LSP name
PMSI Owner	The PMSI owner
Oper State	The operational state
Root Bind Id	The root binding ID
wildcard-spmsi/ Wildcard SPMSI	The wildcard SPMSI status
Maximum-p2mp-spmsi/Max P2MP SPMSI	The maximum P2MP SPMSI value
Group-range/Group range	The group range
s-pmsi-threshold/ S-PMSI Threshold	The SPMSI threshold so that the root node attempts to setup an S-PMSI tree, in Kbps
Pe-threshold-add/ PE Threshold add	The PE threshold add value
Pe-threshold-delete/ PE Threshold del	The PE threshold delete value
LDP Spmsi tunnels	
LSP ID	The LSP ID
Root Addr/Root Address	The root address
Spmsi IfIndex/S-PMSI If Index	The SPMSI If Index value
Num. Leaf PEs	The number of leaf PEs
Number of SGs	The number of SGs

© 2026 Nokia.

provider-tunnel-using

Syntax

provider-tunnel-using leaf-only [**bgp-ad** | **bgp-vpls** | **bgp-evpn-mpls**]

provider-tunnel-using root-and-leaf [**bgp-ad** | **bgp-vpls** | **bgp-evpn-mpls**]

Context

[Tree] (show>service provider-tunnel-using)

Full Context

show service provider-tunnel-using

Description

This command displays the list of provider tunnels existing in the router for all services. The output can be filtered based on the provider tunnel owner.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

leaf-only

Displays the leaf-only provider tunnels for all services.

root-and-leaf

Displays the root and leaf provider tunnels for all services.

bgp-ad

Filters the provider tunnels owned by BGP AD services.

bgp-vpls

Filters the provider tunnels owned by BGP VPLS services.

bgp-evpn-mpls

Filters the provider tunnels owned by BGP EVPN-MPLS services.

Platforms

All

Output

The following output is an example of provider tunnel using information.

Output Example

```
A:PE-76# show service provider-tunnel-using root-and-leaf
=====================================================
Provider-Tunnel Using (Root-and-Leaf)
=====================================================

show service id proxy-arp

Description

This command displays the existing proxy-ARP entries for a particular service in a table. The table entries are populated by EVPN MAC routes that contain a MAC and an IP address, as well as static entries or dynamic entries learned from snooped ARP messages on access SAP or SDP-bindings.

A 7750 SR, 7450 ESS, or 7950 XRS that receives an ARP request from a SAP or SDP-binding performs a lookup in the proxy-ARP table for the service. If a match is found, the router replies to the ARP and prevents ARP flooding in the VPLS service. If no match is found, the ARP is flooded within the service if the configuration allows it.

This command allows specific IP addresses to be displayed. Dynamic IP entries associated with a MAC list are displayed with the corresponding MAC list and resolve-timer information.

Parameters

ip-address

Specifies an IP address.

Values a.b.c.d

detail

Displays detailed information.

dynamic

Displays detailed information about dynamic entries.

Table 452: Output fields: proxy-ARP detail

Label	Description
Proxy ARP	
Admin State	The administrative state of proxy-arp
Dyn Populate	The addition of dynamic entries to the table
Age Time	The aging timer for proxy entries, where entries are flushed upon timer expiry
Send Refresh	The time at which to send a refresh message in seconds
Table Size	The maximum number of learned and static entries allowed in the proxy table of the service
Total	The total number of entries in the service
Static Count	The current number of static entries in the service
EVPN Count	The current number of EVPN entries in the service
Dynamic Count	The current number of dynamic entries in the service
Duplicate Count	The current number of duplicate entries in the service
Process Probes	The process probe status
Restrict Non Configured IPs	The restrict non-configured IPs status
Sponge MAC	The sponge MAC address
Evpn Local ES type	The EVPN local ES type applied to the proxy-ARP
Retention timer	The retention timer for the EVPN local ES entry

Label	Description
Dup Detect	
Detect Window	The window size in minutes
Num Moves	The number of moves required to declare a duplicate entry
Hold down	The hold-down time for a duplicate entry
Anti Spoof MAC	The MAC address to replace the proxy-arp offending entry's MAC
VPLS Flood Control	
Rcvd Garp Flood	The received VPLS Garp flood status
Rcvd Req Flood	The received VPLS request flood status
EVPN	
Garp Flood	The EVPN received Garp flood status
Req Flood	The received EVPN request flood status
Static Black Hole	The static black hole status
EVPN Route Tag	The route tag of the entry
VPLS Proxy Arp Entries	
IP Address	The IP address of proxy-arp
Mac Address	The optional anti-spoof-mac to use
Type	The type of entry
Status	The status of entry
Flags	The flag type
Last Update	The date and time of the last update
Number of entries	The number of VPLS proxy ARP entries

Table 453: Output fields: IGMP snooping proxy describes the show output fields.

Table 453: Output fields: IGMP snooping proxy

Label	Description
Group Address	The IP multicast group address for which this entry contains information.
Mode	Specifies the type of membership report(s) received on the interface for the group. In the include mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In the "exclude" mode, reception of packets sent to the specified multicast address is requested from all IP source addresses except those listed in the source-list parameter.
Up Time	The total operational time in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Num Sources	Indicates the number of IGMP group and source specific queries received on this interface.
Number of groups	Number of IGMP groups.
Source Address	The source address for which this entry contains information.

20.42 proxy-nd

proxy-nd

Syntax

proxy-nd [*ipv6-address*] [**detail**]

proxy-nd [*ipv6-address*] **dynamic**

Context

[Tree] (show>service>id proxy-nd)

Full Context

show service id proxy-nd

Description

This command displays the existing proxy-ND entries for a particular service in a table. The table entries are populated by the EVPN MAC routes containing a MAC and an IPv6 address, as well as static entries or dynamic entries learned from snooped NA messages on access SAP or SDP-bindings.

A 7750 SR, 7450 ESS, or 7950 XRS that receives a Neighbor Solicitation (NS) from a SAP or SDP-binding performs a lookup in the proxy-ND table for the service. If a match is found, the router replies to the NS and prevents NS flooding in the VPLS service. If no match is found, the NS is flooded in the service if the configuration allows it.

This command allows specific IPv6 addresses to be displayed. Dynamic IPv6 entries associated with a MAC list are displayed with the corresponding MAC list and resolve-timer information.

Parameters

ipv6-address

Specifies an IPv6 address.

Values ipv6-address:

x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

where:

Label	Description
Dynamic Count	The current number of dynamic entries in the service
Duplicate Count	The current number of duplicate entries in the service
Process DAD NS	The response to DAD neighbor solicitations
Restrict Non Configured IPs	The restrict non-configured IPs status
Sponge MAC	The sponge MAC address
Evpn Local ES	The EVPN local ES type applied to the proxy-ND EVPN local ES entry
Retention timer	The retention timer for the EVPN local ES entry
Dup Detect	
Detect Window	The window size in minutes
Num Moves	The number of moves required to declare a duplicate entry
Hold down	The hold-down time for a duplicate entry
Anti Spoof MAC	The MAC address to replace the proxy-nd offending entry's MAC
VPLS Flood Control	
Rcvd Unknown NS Flood	The received unknown neighbor solicitations flood status
Rcvd Rtr Unsol NA Flood	The received router unsolicited neighbor association flood status
Rcvd Host Unsol NA Fld	The received host unsolicited neighbor association flood status
EVPN	
Unknown NS Flood	Displays if unknown Neighbor Solicitation messages floods into the EVPN network
ND Advertise	The advertisement of static or dynamic entries that are learned as host or routers
Rtr Unsol NA Flood	Displays if system floods router unsolicited Neighbor Advertisements to EVPN
Host Unsol NA Fld	Displays if the system floods host unsolicited Neighbor Advertisements to the EVPN
EVPN Route Tag	The route tag of the entry
VPLS Proxy ND Entries	
IP Address	The IP address of proxy-nd
Mac Address	The optional anti-spoof-mac to use
Type	The type of entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Status	The status of entry
Flags	The flag type
Last Update	The date and time of the last update
Number of entries	The number of VPLS proxy ARP entries

proxy-nd

Syntax

proxy-nd

Context

[Tree] (tools>perform>service>id proxy-nd)

Full Context

tools perform service id proxy-nd

Description

Commands in this context provide proxy-nd tools.

Platforms

All

proxy-nd

Syntax

proxy-nd

proxy-nd duplicate [*ipv6-address*]

proxy-nd dynamic [*ipv6-address*]

Context

[Tree] (clear>service>id proxy-nd)

Full Context

clear service id proxy-nd

Description

This command allows all the duplicate or dynamic proxy-ND entries to be cleared from the table. Individual IPv6 entries can also be specified.

Platforms

All

proxy-nd

Syntax

proxy-nd usage

Context

[Tree] (tools>dump>service proxy-nd)

Full Context

tools dump service proxy-nd

Description

This command provides information about the usage and limit of the system-wide proxy-nd table for all the services. The command also shows if the limit has been exceeded and a trap raised.

Platforms

All

Output

Output Example

```
*A:Dut# tools dump service proxy-nd usage
Proxy nd Usage
Current Usage       :         0
System Limit        :     511999
High Usage Trap Raised:       No
High Usage Threshold:         95 percent
High Usage Clear Threshold:   90 percent
```

20.43 psb

psb

Syntax

psb [**endpoint** *endpoint-address*] [**sender** *sender-address*] [**tunnelid** *tunnel-id*] [**lspid** *lsp-id*] [**detail**] [**status** {**up** | **down**}]

Context

[Tree] (tools>dump>router>rsvp psb)

Full Context

tools dump router rsvp psb

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays path state block (PSB) information for RSVP.

When a PATH message arrives at an LSR, the LSR stores the label request in the local PSB for the LSP. If a label range is specified, the label allocation process assigns a label from that range.

The PSB contains the IP address of the previous hop, and the session, sender, and TSPEC. This information is used to route the corresponding RESV message back to LSR 1.

Parameters

endpoint *endpoint-address*

Specifies the IP address of the last hop.

sender *sender-address*

Specifies the IP address of the sender.

tunnelid *tunnel-id*

Specifies the SDP ID.

Values 0 to 4294967295

lspid *lsp-id*

Specifies the label switched path that is signaled for this entry.

Values 1 to 65535

detail

Displays detailed RSVP PSB information.

status {up | down}

Specifies the LSP status.

Platforms

All

Output

The following output is an example of MPLS RSVP PSB information.

Output Example

```
*A:Dut-C# tools dump router rsvp psb detail

Table 457: Output fields: system PTP

Label	Description
Local Clock	
Clock Type	The type of clock of the network element.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• ordinarySlave — The system is always a TimeReceiver clock in the PTP hierarchy. The system derives its timing from one or more TimeTransmitter clocks in the network. • ordinaryMaster — The system is a grandmaster clock in the PTP hierarchy. The system provides timing to multiple TimeReceiver clocks in the network. • boundary — The system is a boundary clock, which may be anywhere in the PTP clock hierarchy. It can obtain timing from a TimeTransmitter clock, and provide timing to multiple Time Receiver clocks.
PTP Profile	The Precision Time Protocol (PTP) profile specifies the standard to which PTP conforms • g8265dot1-2010 — The PTP profile specified in the ITU-T G.8265.1 recommendation • ieee1588-2008 — The default PTP profile specified in the IEEE 1588-2008 standard • g8275dot1-2014 — The PTP profile specified in the ITU-T G.8275.1 recommendation
Domain	The domain in which PTP 1588 runs on the system
Network Type	The SR OS is configured to use PTP clock classes corresponding to either SONET or SDH quality levels
Admin State	The administrative state of PTP
Oper State	The operational state of PTP
Announce Interval	The packet rate requested in REQUEST_UNICAST_TRANSMISSION signaling messages for announce packets
Announce Rx Timeout	The number of announce intervals that have to occur without receiving a PTP announce message before the PTP event ANNOUNCE_RECEIPT_TIMEOUT_EXPIRES occurs
Holdover Spec Time	The configured amount of time to be considered within the holdover specifications, for the purposes of determining the clockClass after the PTP clock has lost reference to GNSS for a GM PTP clock or lost reference to the GM as a Boundary Clock
Peer Limit	The maximum number of PTP peers that may be automatically created by the system on this router instance
G.8275.1 Priority	The priority used in the best TimeTransmitter clock algorithm for the local (internal) PTP port when Clock Profile is g8275dot1-2014
PTSF-unusable	The PTSF unusable administrative state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Number of Ports	The numberPorts value of the local PTP clock (defaultDS)
SDO ID	The sdoId value of the local PTP clock (defaultDS)
Clock ID	The clock Identity value of the local PTP clock (defaultDS)
Clock Class	The clockClass value of the local PTP clock (defaultDS)
Clock Accuracy	The clockAccuracy value accuracy of the local PTP clock (defaultDS)
Clock Variance	The offsetScaledLogVariance value of the local PTP clock (defaultDS)
Clock Priority1	The priority1 value of the local PTP clock (defaultDS)
Clock Priority2	The priority2 value of the local PTP clock (defaultDS)
max Steps Removed	Any Announce message received with Steps Removed that is equal or greater than the configured maximum steps removed value, are ignored. This is useful to ensure the desired level of PTP performance, as longer paths may degrade the accuracy
Steps Removed	The steps removed value used in Announce messages sent from this PTP clock
Clock Mode	The clockMode value of the local PTP clock (defaultDS), as described in ITU-T G.8275 Appendix VIII • freerun • acquiring • locked • holdover within specification • holdover out of specification
Elapsed	The amount of time that the clock has been in the current clock mode
Sync Uncertain	For the local clock: the value of the synchronization uncertainty that is used in Announce messages transmitted by this node. For the parent clock: the value received in the Announce messages from that clock.
Reason Uncertain	Provides an explanation for a Sync Uncertain true indication. • parent uncertain — Parent clock has syncUncertain true in its Announce messages • parent clock class — Parent clock quality is not clockClass 6 • local clock class — Local clock is the parent clock and the local clock quality is not clockClass 6 • sets not locked — Central frequency clock is not locked to a reference

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• sets quality — Central frequency clock is locked to a reference that is not PRC or PRS • time not locked — PTP time algorithm is not locked • freq not locked — PTP frequency algorithm is not locked
TxWhileSync Uncertain	The value of the **tx-while-sync-uncertain** configuration item
PTP Port State	The PTP port state. Only shown for ordinary clocks which contain only one PTP port
Last Changed	The date and time of the last change of the PTP port state
Parent Clock	
Port	The port that is being used as a backup to a local GNSS time source
Remote MAC Address	The MAC address of the parent clock port sending PTP message to the local PTP clock
Parent Clock ID	The clock Identity of the parent clock
Remote PTP Port	The port number of the PTP port on the parent clock that is used to communicate with the local PTP clock
Local Clock is Parent Clock	Displayed if there is no external parent clock
GM Clock Id	The clockIdentity value of the grandmaster clock advertised by the parent clock
GM Clock Class	The clockClass value of the grandmaster clock advertised by the parent clock
GM Clock Accuracy	The clockAccuracy value of the grandmaster clock advertised by the parent clock
GM Clock Variance	The offsetScaledLogVariance value of the grandmaster clock advertised by the parent clock
GM Clock Priority1	The priority1 value of the grandmaster clock advertised by the parent clock
GM Clock Priority2	The priority2 value of the grandmaster clock advertised by the parent clock
Time Properties	
Timescale	The time scale of the time distributed by PTP
Frequency Traceable	Indicates if the time distributed by PTP is traceable a primary reference

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Time Traceable	Indicates if the time distributed by PTP is traceable to a primary reference
Time Source	The source of time used by the grandmaster clock
UTC Offset	The current offset between the International Atomic Time (TAI) and Universal Coordinated Time (UTC) timescales
Leap Second	Indicates if there is a leap second pending
Central Frequency Clock	
Status	The state of the central frequency clock
Quality	The quality level of the source into the central frequency clock
Reference Selected	The reference currently in use as the source into the central frequency clock
PTP Frequency Recovery	
Frequency Recovery State	The state of the frequency recovery algorithm. • notApplicable — The system is not attempting to recover a clock. • initial — The system is configured to recover a clock, but not enough information has yet been received to adjust the local clock to match a TimeTransmitter clock. • acquiring — The system has enough information to attempt clock recovery, and has started the process of adjusting its local clock frequency to match the TimeTransmitter clock. • phaseTracking — The system has adjusted its local clock to the approximate frequency of the TimeTransmitter clock, and is adjusting the local clock to minimize the phase difference between the two clocks. • holdover — The system has stopped receiving useful information from the chosen TimeTransmitter clock, and is maintaining the last estimated frequency for its local clock. • locked — The system is locked to the chosen TimeTransmitter clock and the phase error between the TimeTransmitter clock and the local clock is relatively small.
Last Changed	The date and time of the last change of the PTP Recovery State
Frequency Offset	The offset computed by the frequency recovery algorithm required to align the local oscillator to the frequency of the parent clock. The value is provided in parts per billion. Positive values indicate that the recovered clock is faster than nominal, and negative values indicate that the recovered clock is slower than nominal.
PTP Time Recovery	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Role	The role of the PTP time recovery clock • backup — The PTP time recovery clock is in a backup clock scenario • time source — The PTP time recovery clock is in a time source clock scenario
Clock Source	The IP address of the clock source
Router	The router used for PTP time recovery
Current Time	The date and time. If the timescale is PTP, then the time is converted to UTC time based on the current offset between UTC and PTP time.
Time Recovery State	The state of the time recovery algorithm. • acquiring — The time recovery is active but it is not in locked or holdover state • locked — The time recovery algorithm is generating time adjustments within the locked performance range • holdover — No adjustment has been made out of the time recovery algorithm for a period of time
Last Packet Offset From Master	The offsetFromMaster calculated from the last packet exchange with the parent clock
Last Calc	The time at which the previous field was calculated
Last Packet Mean Path Delay	The meanPathDelay calculated from the last packet exchange with the parent clock
Last Adjustment	The nanosecond change to the local time scale that last came out of the time recovery algorithm

clear system ptp

Description

Commands in this context clear Precision Timing Protocol (PTP) information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

20.45 ptp-reset

ptp-reset

Syntax

ptp-reset

Context

[Tree] (tools>perform>mda ptp-reset)

Full Context

tools perform mda ptp-reset

Description

This command resets the PTP timing subsystem on the target MDA. When a PTP timeReceiver port indicates abnormal or extreme values for the offsetFromMaster or the meanPathDelay, it may be because of the PTP timing subsystem of the MDA on the timeTransmitter or on the MDA of the timeReceiver. This command can be used to reinitialize the timing subsystem on an MDA without impacting traffic.

Note: While this command can be used to remedy such a situation, Nokia recommends to first capture any relevant debug files, like admin tech-support, for Nokia investigation.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

20.48 pw

pw

Syntax

pw

Context

[Tree] (tools>perform>service>id>admin-lock pw)

[Tree] (tools>perform>service>id>loopback pw)

Full Context

tools perform service id admin-lock pw

tools perform service id loopback pw

Description

In the admin-lock context, this command administratively locks the specified spoke SDP by locking the host service. The command must be executed at both ends of the PW or MS-PW represented by the spoke SDP. Test traffic can then be injected using a test SAP.

In the loopback context, this command enters the MPLS-TP PW context for starting or stopping a loopback on a specified spoke SDP. An administrative lock should first be applied to both ends of the PW or MS-PW represented by the spoke SDP prior to configuring the loopback.

Loopback functions for MPLS-TP pseudowire can be specified for either a T-PE or S-PE.

Context

[Tree] (show pw-port)

Full Context

show pw-port

Description

Displays pseudo-wire port information.

If no optional parameters are specified, the command displays a summary of all defined PW ports. The optional parameters restrict output only to ports matching the specified properties.

Parameters

pw-port-id

Specifies the pseudo-wire port identifier.

Values 1 to 32767

detail

Displays detailed port information that includes all the **pw-port** output fields.

sdp-id

The SDP ID for which to display matching PW port information.

Values 1 to 32767

sdp none

Displays information about FPE-based PW-ports that are not associated with any internal SDPs.

statistics

Displays port statistics information.

Platforms

All

Output

The following output is an example of PW port information, and Table 458: Output fields: PW port describes the output fields.

Output Example

Table 460: Output fields: PW port statistics

Label	Description
PW Port	The PW port identifier
Encap	The encapsulation type of the PW port
SDP:VD-Id	This field is not applicable to the Flex PW port
IfIndex	The interface index used for the PW port
Epipe	The ID of the Epipe service in which this PW port is configured. The tunnel type that is terminated on this PW port can be determined from the Epipe.
Description	The description string for the PW port

20.55 python-policy

python-policy

Syntax

python-policy *name* **cache**

python-policy *name* **cache hex-key** *hex-string*

python-policy *name* **cache string-key** *string-key*

Context

[Tree] (tools>dump>python python-policy)

Full Context

tools dump python python-policy

Description

This command dumps all cached entries or a specified entry of a specified Python policy.

The DDP key in the output is the python cache persistency record key.

Note:
The DDP Key in the output could be used for the **tools>dump>persistence>python** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

name

Specifies the name of the Python policy, up to 32 characters.

string-key

Specifies the key of the entry to be updated in ASCII strong format, up to 512 characters maximum.

hex-key

Specifies the key of the entry to be updated in hex string format.

Values 0x0..0xFFFFFFFF...(988 hex nibbles maximum)

Platforms

All

python-policy

Syntax

python-policy *name* **cache hex-key** *hex-string* **set-lifetime** [*lifetime*]

python-policy *name* **cache** *string-key* [512 chars max] **set-lifetime** [*lifetime*]

Context

[Tree] (tools>perform python-policy)

Full Context

tools perform python-policy

Description

This command set the lifetime of a specified python cache entry.

Parameters

name

Specifies the name of the Python policy, up to 32 characters.

string-key

Specifies the key of the entry to be updated in ASCII strong format.

hex-string

Specifies the key of the entry to be updated in hex string format.

set-lifetime

Specifies the new lifetime of the entry.

Values 1 to 2147483647

20.56 python-script

python-script

Syntax

python-script

python-script *script-name* [**association** | **source-in-use**]

Context

[Tree] (show>python python-script)

Full Context

show python python-script

Description

This command displays information about the currently configured Python script.

The system will display a list of currently configured Python script names if no parameter is specified.

Parameters

script-name

Specifies the Python script name, up to 32 characters, to display information.

association

Displays the associations of the specified Python script.

source-in-use

Displays the Python source code in use.

Platforms

All

Output

The following output is an example of Python script information.

Output Example

```
show python python-script "dhcpv4"
===============================================================================
Python script "dhcpv4"

Syntax

python-script *script-name* **nat-group** *nat-group-id* **statistics**

python-script *script-name* **wlan-gw-group** *wlan-gw-group-id* **statistics**

Context

[Tree] (clear>python python-script)

Full Context

clear python python-script

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears Python script statistics.

Parameters

script-name

Specifies the Python script name, up to 32 characters, to display information.

wlan-gw-group-id

Specifies the WLAN-GW group ID.

Values 1 to 4

nat-group-id

Specifies the NAT group ID.

Values 1 to 8 (7750 SR-12)
1 to 4 (all other platforms)

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

20.57 python-script protect

python-script protect

Syntax

python-script protect input *file-url* **hmac-sha256 key** *secret-key* **output** *file-url*

Context

[Tree] (tools>perform python-script protect)

Full Context

tools perform python-script protect

Description

This command converts a normal (unprotected) Python script file into an SRPY format with specified key.

Parameters

input *file-url*

Specifies the URL of the input script file, up to 180 characters.

key *secret-key*

Specifies the key used to compute the hash, up to 128 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

output *file-url*

Specifies the URL of the output script file, up to 180 characters.

Platforms

All

20.58 python-script reload

python-script reload

Syntax

python-script reload *name*

Context

[Tree] (tools>perform python-script reload)

Full Context

tools perform python-script reload

Description

This command reloads and recompiles the primary, secondary, and tertiary scripts in the specified Python script, in that order. The system uses the first script that comes up.

Note:
Executing this command may update the last modified time for the system configuration.

Parameters

name

Specifies the name of the Python script to be reloaded, up to 32 characters.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

21 q Commands

21.1 qos

qos

Syntax

qos

Context

[Tree] (clear qos)

Full Context

clear qos

Description

===============================================================================
*A:ALA-1>show>service>id>snooping#
```

Table 461: Output fields: IGMP snooping queriers describes the show output fields.

Table 461: Output fields: IGMP snooping queriers

Label	Description
SAP Id	Specifies the SAP ID of the service.
IP address	Specifies the IP address of the querier.
Expires	The time left, in seconds, that the query will expire.
Up time	The length of time the query has been enabled.
Version	The configured version of IGMP.
General Query Interval	The frequency at which host-query packets are transmitted.
Query Response Interval	The time to wait to receive a response to the host-query message from the host.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Robust Count	Specifies the value used to calculate several IGMP message intervals.

querier

Syntax

querier

Context

[Tree] (clear>service>id>igmp-snooping querier)

Full Context

21.3 query-results

query-results

Syntax

query-results id *query-id*

query-results name *query-name*

Context

[Tree] (show>subscr-mgmt>wlan-gw>tunnels query-results)

Full Context

show subscriber-mgmt wlan-gw tunnels query-results

Description

This command shows the results of a query configured under **subscr-mgmt>wlan-gw>ue-query**.

Parameters

query-id

Identifies the query by numeric ID.

Values 1 to 1024

query-name

Identifies the query name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the results of a tunnel query.

Output Example

```
WLAN-GW> show subscriber-mgmt wlan-gw tunnels query-results name "min_3_dsm_ue"
===============================================================================
WLAN-GW tunnels

query-results

Syntax

query-results id *query-id*

query-results name *query-name*

Context

[Tree] (show>subscr-mgmt>wlan-gw>ue query-results)

Full Context

show subscriber-mgmt wlan-gw ue query-results

Description

This command shows the results of a query configured under **subscr-mgmt>wlan-gw>ue-query**.

Parameters

query-id

Identifies the query by numeric ID.

Values 1 to 1024

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

query-name

Identifies the query name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display the results of a UE query.

```
show subscriber-mgmt wlan-gw ue query-results name "all"
```

Output Example

```

21.4 queue

queue

Syntax

queue queue-group *queue-group-name port-id* { **ingress** | **egress**} [**id** *queue-id*] [**instance** *instance-id*]

queue sap *sap-id* {**ingress** | **egress**} [**id** *queue-id*]

queue subscriber *sub-ident-string* [**sla-profile** *sla-profile-name*] {**ingress** | **egress**} [**id** *queue-id*]

Context

[Tree] (show>qos queue)

Full Context

show qos queue

Description

The **show qos queue** command outputs the Burst Control Group (BCG) name and slowest accurate visitation time for the specified queues.

For each queue specified, the system may find multiple hardware queues. This may be true for ingress queues on multipoint services (VPLS, IES, VPRN) or for queues created on an Ethernet Link Aggregation Group (LAG). When this is true, the show command displays the BCG name for each individual hardware queue.

The BCG name associated with a queue may be specified in the **show bcg** command to display the historical and current visitation time for the BCG managing the burst tolerance of the queue. If the output visitation time is greater (longer time) than the queue returned slowest accurate visitation time, the queue's shaping rate may be negatively impacted.

Parameters

queue-group-name port-id

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *queue-group-name* on the specified *port-id*. If the specified *port-id* is not provisioned on the system or the specified *queue-group-name* is not found on the port's specified direction, the show command will fail.

Values port-id: up to 17 characters

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

queue-group-name: up to 32 characters

{ingress | egress}

Specifies the direction to display and are mutually exclusive.

queue-id

Limits the return queues to a single *queue-id*.

Values 1 to 16

instance-id

Specifies which instance of a queue group with template queue-group-name to which this queue should be redirected. This parameter is only valid for queue groups on egress ports where policy-based redirection is required.

Values 1 to 65535

sap-id

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *sap-id*. If the specified *sap-id* is not found, the show command will fail.

Values up to 64 characters

sub-ident-string

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sub-ident-string*. If the specified *sub-ident-string* does not exist, the show command will fail.

Values up to 32 characters

sla-profile-name

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified subscriber and sla-profile sla-profile-name. If the specified sla-profile-name does not exist, the show command will fail.

Platforms

All

21.5 queue-depth

queue-depth

Syntax

queue-depth [**queue** *queue-id*] [**ingress** | **egress**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>service>id>sap queue-depth)

Full Context

clear service id sap queue-depth

Description

This command clears queue depth information for the specified SAP.

Parameters

queue-id

Specifies the queue ID.

Values 1 to 32

ingress

Clears information for the ingress policy.

egress

Clears information for the egress policy.

Platforms

All

21.6 queue-depth-violations

queue-depth-violations

Syntax

queue-depth-violations *mda-id*[*/port*] [**non-zero-counts-only**]

queue-depth-violations *mda-id*[*/port*] **access-egress** [**non-zero-counts-only**]

queue-depth-violations *mda-id*[*/port*] **access-egress** **service** *service-id* [**non-zero-counts-only**]

Context

[Tree] (show>qos queue-depth-violations)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show qos queue-depth-violations

Description

This command displays queue depth violation information, with the option of requesting only the information with a non-zero violation count.

Parameters

mda-id[/port]

Displays the pool information associated with the specified XMA or MDA and port.

Values slot/mda[/port]

non-zero-counts-only

Displays only non-zero counts.

access-egress

Displays access egress information.

service-id

Specifies that the system should find and display queue depth violation information for the queues associated with the specified *service-id*.

Values 1 to 2147483648, *svc-name*: up to 64 characters

queue-group-name

Specifies that the system should find and display information for the queues within the specified *queue-group-name,* up to 32 characters, on the specified *mda-id*.

instance-id

Specifies which instance of a queue group with template queue-group-name to which this queue should be redirected. This parameter is only valid for queue groups on egress ports where policy-based redirection is required.

Values 1 to 65535

network-egress

Displays network egress information.

Platforms

queue-group

Syntax

queue-group [*queue-group-name*] {**ingress** | **egress**} [{**association** | **detail**}]

queue-group summary

Context

[Tree] (show>qos queue-group)

Full Context

show qos queue-group

Description

This command displays queue-group information.

Parameters

queue-group-name

Specifies the name of an existing queue group template up to 32 characters.

ingress

Specifies whether the queue group name is an ingress policy.

egress

Specifies whether the queue group name is an egress policy.

association

Displays the entities associated with the specified queue group name.

detail

Displays detailed queue group information for the specified queue group name.

summary

Displays the total number of queue-group instances per card (IOM or XCM).

Platforms

All

Output

The following outputs are examples of queue group information.

Output Example

Context

[Tree] (monitor>port queue-group)

Full Context

monitor port queue-group

Description

This command enables queue-group monitoring for the specified parameters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

queue-group-name

Specifies the name of the queue-group up to 32 characters.

access

Specifies the access type.

Values access

network

Specifies the network type.

Values network

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

policer-id

The specified policer ID must exist within the queue-group template applied to the ingress context of the forwarding plane.

Values 1 to 8

egress-queue-id

Monitors statistics fir this queue.

Values 1 to 8

ingress-queue-id

Monitors statistics for this queue.

Values 1 to 32

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

When the absolute keyword is specified, the raw statistics are displayed without processing. No calculations are performed on the delta or rate statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate

When the rate keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

Full Context

show port queue-group

Description

This command displays queue group information.

Parameters

queue-group-name

Specifies the queue group name, up to 32 characters.

statistics

Displays queue group port statistics.

associations

Displays queue group port associations.

summary

Displays summary information.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

queue-depth

Displays queue depth information for the specified queue group queue.

queue-id

Specifies the queue ID.

Context

[Tree] (clear radius)

Full Context

clear radius

Description

This command clears RADIUS server statistics for servers that are configured for user access with the **configure system security radius server** command (classic CLI **configure system security radius server**).

Parameters

server-index

Specifies the index for the RADIUS server.

Values 1 to 5

service-name

Specifies the service name, up to 64 characters.

router-name

Specifies the router instance, expressed as the router name or the service ID.

Values *router-name* — "Base", "management", "vpls-management"

vprn-svc-id — 1 to 2147483647

Table 463: Output fields: RADIUS accounting policy describes subscriber management RADIUS accounting policy output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 463: Output fields: RADIUS accounting policy

Label	Description
Tx Requests/TX Reqs	Displays the number of accounting requests transmitted for this policy.
Rx Responses/Rx Resps	Displays the number of accounting responses received for this policy.
Request Timeouts/ Req Timeouts	Displays the number of accounting requests which have timed out for this policy.
Send Retries	Displays the number of retries to a different server for a single accounting request for this policy.
Send Failed Req Send Failed	Displays how many accounting requests failed because the packet could not be sent out for this policy.
Radius Servers	Displays a table in which the statistics associated with this RADIUS accounting policy are broken down by individual RADIUS server. The table columns are: Index—displays the index number assigned to the RADIUS server. The index determines the sequence in which the servers are queried for authentication requests. Servers are queried in order from lowest to highest index. IP Address—the address of the RADIUS server. TX Reqs—see TX Requests in this table. Rx Resps—see RX Responses in this table. Req Timeouts—see Request Timeouts in this table. Req Send Failed—see Send Failed in this table.

22.4 radius-acct

radius-acct

Syntax

radius-acct

Context

[Tree] (show>service>active-subscribers>hierarchy radius-acct)

Full Context

show service active-subscribers hierarchy radius-acct

Description

This command provides information about subscriber RADIUS accounting sessions including: the accounting policy name, the accounting mode, the interim intervals, the accounting session ID, and the multi-session ID. If there are no RADIUS accounting sessions enabled for subscribers, this command still shows the session ID that can be used by CoA.

PD hosts modeled as routes are not considered hosts, and therefore, are not shown in the output of this command.

This command only shows a numeric RADIUS session ID even if the RADIUS accounting policy is configured using the descriptive format.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber RADIUS accounting session information.

Output Example

```
# show service active-subscribers hierarchy radius-acct
===============================================================================

22.5 radius-acct-terminate-cause

radius-acct-terminate-cause

Syntax

radius-acct-terminate-cause

Context

[Tree] (tools>dump>aaa radius-acct-terminate-cause)

Full Context

tools dump aaa radius-acct-terminate-cause

Description

This command shows all available termination causes and their respective number values. The TermCause is equivalent to VSA 226 Alc-Error-Code numeric values. The description is equivalent to VSA 227Alc-Error-Message string.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

22.6 radius-attr-username

radius-attr-username

Syntax

radius-attr-username [*user-name*] [**summary**]

Context

[Tree] (tools>dump>subscr-mgmt radius-attr-username)

Full Context

tools dump subscriber-mgmt radius-attr-username

Description

This command displays a list of subscriber IDs associated to each username and statistics associated to the username.

Parameters

user-name

Specifies the username that matches the RADIUS attribute VSA [1] username. A single username can also be specified to query the list of associated subscriber IDs.

summary

Displays summary RADIUS attribute username information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

22.7 radius-authentication-policy

radius-authentication-policy

Context

[Tree] (show>ipsec radius-authentication-policy)

Full Context

show ipsec radius-authentication-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays IPsec RADIUS authentication policy information.

Parameters

name

Specifies an existing RADIUS authentication policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

22.8 radius-configuration

radius-configuration

Syntax

radius-configuration

Context

[Tree] (show>aaa radius-configuration)

Full Context

show aaa radius-configuration

Description

This command displays RADIUS configuration information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA RADIUS configuration information.

Output Example

```
# show aaa radius-configuration
===============================================================================
RADIUS configuration
===============================================================================
CoA Port                    : 3799
===============================================================================
```

22.9 radius-proxy-server

radius-proxy-server

Syntax

radius-proxy-server *server-name*

radius-proxy-server *server-name* **cache**

radius-proxy-server *server-name* **cache hex-key** *hex-string*

radius-proxy-server *server-name* **cache string-key** *string*

radius-proxy-server *server-name* **cache summary**

radius-proxy-server *server-name* **statistics**

radius-proxy-server

Context

[Tree] (show>router radius-proxy-server)

Full Context

show router radius-proxy-server

Description

This command displays RADIUS proxy server information.

Parameters

server-name

Specifies the default RADIUS proxy server name created in the **config>router>radius-proxy** context.

cache

Displays cached information.

hex-string

Displays the hex key string.

Values [0x0 to 0xFFFFFFFF (max 64 hex nibbles)]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

string

Displays the packet type of the RADIUS messages to use to generate the key for the cache of this RADIUS proxy server.

summary

Displays summarized information.

statistics

Displays statistics for the specified RADIUS proxy server.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber RADIUS proxy server.

Output Example

```

Table 465: Output fields: proxy server describes subscriber RADIUS proxy server output fields.

Table 465: Output fields: proxy server

Label	Description
Invalid response Authenticator Rx packet	The number of packets received by this RADIUS proxy server
Rx Access-Request	The number of Access-Request packets received by this RADIUS proxy server
Rx Accounting-Request	The number of Accounting-Request packets received by this RADIUS proxy server
Rx dropped	The number of packets received by this RADIUS proxy server but dropped

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Retransmit	The number of packets received by this RADIUS proxy server that were rejected because they are retransmitted
Wrong purpose	The number of packets received by this RADIUS proxy server that were rejected because the value of tmnxRadProxSrv Purpose is set to a value not matching the type of packet
No UE MAC to cache	The number of packets received by this RADIUS proxy server that were rejected because the UE MAC address was not present in the packet
Client context limit reached	The number of packets received by this RADIUS proxy server that were rejected because the limit of client contexts was reached. For each RADIUS transaction a client context is created, and are deleted once the transaction is finished.
No ISA RADIUS policy configured	The number of packets received by this RADIUS proxy server that were rejected because it has no ISA RADIUS server policy configured for that type of packet
Server admin down	The number of packets received by this RADIUS proxy server that were rejected because it is administratively shut down
No RADIUS policy configured	The number of packets received by this RADIUS proxy server that were rejected because it has no RADIUS server policy configured for that type of packet
No load-balance-key configured	The number of packets received by this RADIUS proxy server that were rejected because the selected RADIUS server policy's algorithm is set to hashBased and no load balance key is configured
Invalid length	The number of packets received by this RADIUS proxy server that were rejected because their length was invalid
Invalid Code field	The number of packets received by this RADIUS proxy server that were rejected because they had an invalid Code field
Invalid attribute encoding	The number of packets received by this RADIUS proxy server that were rejected because one of the attributes was incorrectly encoded
Invalid User-Name	The number of packets received by this RADIUS proxy server that were rejected because they contained an invalid User-Name attribute
Invalid password	The number of packets received by this RADIUS proxy server that were rejected because the User-Password attribute could not be decoded

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Invalid accounting Authenticator	The number of accounting packets received by this RADIUS proxy server that were rejected because they contained an invalid Authenticator field
Invalid Message-Authenticator	The number of packets received by this RADIUS proxy server that were rejected because they contained an invalid Message-Authenticator attribute
Management core overload	The number of packets that were rejected by this RADIUS server because the ISA management core is not able to process any new RADIUS requests because of overload
No memory	The number of packets that were rejected by this RADIUS server because there was not enough memory to store them
Accounting-Request with invalid Acct-Status-Type	The number of accounting packets received by this RADIUS proxy server that were rejected because they contained an invalid Acct-Status-Type attribute
Accounting-Request with no Acct-Status-Type	The number of accounting packets received by this RADIUS proxy server that were rejected because they contained no Acct-Status-Type attribute
Registered user overload	The number of packets that were rejected by this RADIUS server because the registered user indicated to be in overload
Dropped by Python	The number of packets received by this RADIUS proxy server but dropped by Python
Tx Access-Accept	The number of Access-Accept packets transmitted by this RADIUS proxy server
Tx Access-Reject	The number of Access-Reject packets transmitted by this RADIUS proxy server
Tx Access-Challenge	The number of Access-Challenge packets transmitted by this RADIUS proxy server
Tx Accounting-Response	The number of Accounting-Response packets transmitted by this RADIUS proxy server
Tx dropped	The number of packets dropped by this RADIUS proxy server before transmission
No key to cache	The number of packets that could not be cached by this RADIUS proxy server because the key information was not present in the packet
Cache key too long	The number of packets that could not be cached by this RADIUS proxy server because the key information present in the packet was too long

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Cache attributes too long	The number of packets that could not be cached by this RADIUS proxy server because the total length of the attributes is too long
Reached maximum number of cache entries	The number of packets that could not be cached by this RADIUS proxy server because the limit has been reached
No memory	The number of packets that could not be transmitted by this RADIUS proxy server because there was not enough memory
Server timeout	The number of packets that were dropped because the RADIUS servers have timed out
Server authentication failure	The number of packets that were dropped because the RADIUS server replied with a packet which failed authentication (invalid response Authenticator or Message Authenticator attribute)
Server invalid Code	The number of packets that were dropped because the RADIUS server replied with a packet with an invalid Code field
Invalid attribute encoding	The number of packets that were dropped because the RADIUS server replied with a packet with an invalid attribute
Registered user overload	The number of packets that were dropped because the registered user indicated to be in overload
No RADIUS server configured	The number of packets that were dropped by this RADIUS server because the RADIUS server policy has no servers configured
RADIUS server send failure	The number of packets that were dropped by this RADIUS server because the packet could not get transmitted to one of the servers in the RADIUS server policy
Dropped by Python	The number of packets that were dropped by this RADIUS server because the packet was dropped by the Python script
Invalid response Authenticator	The number of packets that were dropped because the RADIUS server replied with a packet which failed authentication

radius-proxy-server

Syntax

radius-proxy-server *server-name* **statistics**

Context

[Tree] (clear>router radius-proxy-server)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear router radius-proxy-server

Description

This command clears RADIUS proxy server data.

Parameters

server-name

Specifies the proxy server name.

statistics

Clears statistics for the specified server.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

22.10 radius-script-policy

radius-script-policy

Syntax

radius-script-policy [*policy-name*]

radius-script-policy *policy-name* **association**

radius-script-policy *policy-name* **script** {**primary** | **secondary**}

Context

[Tree] (show>aaa radius-script-policy)

Full Context

show aaa radius-script-policy

Description

This command displays RADIUS script policy information.

Parameters

policy-name

Specifies the RADIUS script policy name, up to 32 characters.

association

Displays the associations related to the RADIUS script policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

22.12 radius-server-policy

radius-server-policy

Syntax

radius-server-policy *policy-name* [**acct-on-off**]

radius-server-policy *policy-name* **associations**

radius-server-policy *policy-name* **msg-buffer-stats**

radius-server-policy *policy-name* **statistics**

radius-server-policy [**acct-on-off**]

Context

[Tree] (show>aaa radius-server-policy)

Full Context

show aaa radius-server-policy

Description

This command displays RADIUS server policy configuration information.

Parameters

policy-name

Displays information for the specified RADIUS server policy.

association

Displays the information configured with the RADIUS server policy.

msg-buffer-stats

Displays statistics related to the RADIUS messages that are buffered for each specified RADIUS server policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Displays statistics for the specified RADIUS server policy.

act-on-off

Displays the admin state of the acct-on-off feature.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA RADIUS server policy information.

Output Example

```
*B:asd-tr0610-dr421# show aaa radius-server-policy "ZiggoAAA_anycast" statistics
===============================================================================
RADIUS server policy "ZiggoAAA_anycast" statistics
===============================================================================
Tx transaction requests                          : 24818681
Rx transaction responses                         : 24817329
Transaction requests timed out                   : 1351
Transaction requests send failed                 : 0
Packet retries                                   : 12410
Transaction requests send rejected               : 0
Authentication requests failed                   : 303530
Accounting requests failed                       : 0
Ratio of access-reject over auth responses       : 13%
Transaction success ratio                        : 99%
Transaction failure ratio                        : 1%
Statistics last reset at                         : 05/21/2015 01:11:39
```

Table 466: Output fields: RADIUS server policy statistics describes RADIUS server policy statistics output fields.

Table 466: Output fields: RADIUS server policy statistics

Label	Description
Tx transaction requests	The number of RADIUS transaction requests transmitted
Rx transaction responses	The number of RADIUS transaction responses received
Transaction requests timed out	The number of RADIUS transaction requests that have timed out
Transaction requests send failed	The number of RADIUS transaction requests that could not be transmitted
Packet retries	The number of times a RADIUS request packet was retransmitted to a server
Transaction requests send rejected	The number of RADIUS transaction requests that were not transmitted due to unacceptable configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Authentication requests failed	The number of authentication failures for this policy
Accounting requests failed	The number of accounting failures for this policy
Ratio of access-reject over auth responses	The ratio of access-rejects in the auth responses for this policy
Transaction success ratio	The transaction success ratio for this policy
Transaction failure ratio	The transaction failure ratio for this policy
Statistics last reset at	Indicated the date and time at which the statistics for this policy were last reset

radius-server-policy

Syntax

radius-server-policy *policy-name* **msg-buffer** [**session-id** *acct-session-id*]

Context

[Tree] (tools>dump>aaa radius-server-policy)

Full Context

tools dump aaa radius-server-policy

Description

This command dumps the RADIUS message buffer content for the specified radius-server-policy:

- message-type (acct-interim or acct-stop)
- Acct-Session-Id
- Remaining lifetime

When specifying the session-id, the message details are displayed.

Parameters

policy-name

Specifies the **radius-server-policy** for which the message buffer content should be displayed.

acct-session-id

Displays the RADIUS message details for the message with specified session-id that is stored in the RADIUS message buffer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy

Syntax

radius-server-policy *policy-name* **msg-buffer** [**acct-session-id** *acct-session-id*]

radius-server-policy *policy-name* **statistics** [**msg-buffer-only**]

radius-server-policy *policy-name* **server** *server-index* **statistics**

Context

[Tree] (clear>aaa radius-server-policy)

Full Context

clear aaa radius-server-policy

Description

This command dumps the RADIUS message buffer content for the specified radius-server-policy:

- message-type (acct-interim or acct-stop)
- Acct-Session-Id
- Remaining lifetime

When specifying the session-id, the message details are displayed.

Parameters

policy-name

Specifies the radius-server-policy for which the information should be cleared.

acct-session-id

Deletes all RADIUS messages or the RADIUS message with specified session-id from the RADIUS message buffer.

msg-buffer-only

Clears all statistics for the specified radius-server-policy: radius-server-policy statistics, RADIUS server statistics and RADIUS message buffer statistics. With the optional keyword **msg-buffer-only**, only the RADIUS message buffer statistics are cleared.

server-index

Clears the RADIUS server statistics for the specified server-index in the specified radius-server-policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

22.13 range

range

Syntax

range [*area-id*]

Context

[Tree] (show>router>ospf range)

[Tree] (show>router>ospf3 range)

Full Context

show router ospf range

show router ospf3 range

Description

This command displays ranges of addresses on an Area Border Router (ABR) for the purpose of route summarization or suppression.

Parameters

area-id

Displays the configured ranges for the specified area.

Values ip-address — a.b.c.d

area — 0 to 4294967295

Platforms

All

Output

OSPF Range Output

Table 467: Output fields: OSPF range describes the OSPF range output fields.

Table 467: Output fields: OSPF range

Label	Description
Area Id	A 32-bit integer uniquely identifying an area. Area ID 0.0.0.0 is used for the OSPF backbone.
Address/Mask	The mask for the range expressed as a decimal integer mask length or in dotted decimal notation.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Advertise	False — The specified address/mask is not advertised outside the area. True — The specified address/mask is advertised outside the area.
LSDB Type	NSSA — This range was specified in the NSSA context, and specifies that the range applies to external routes (via type-7 LSAs) learned within the NSSA when the routes are advertised to other areas as type-5 LSAs. Summary — This range was not specified in the NSSA context, the range applies to summary LSAs even if the area is an NSSA.

Output Example

```
A:ALA-A# show router ospf 1 range
===============================================================
Rtr Base OSPFv2 Instance 1 Ranges
===============================================================
Area Id         Address/Mask       Advertise   LSDB Type
---------------------------------------------------------------
No. of Ranges: 0
===============================================================
A:ALA-A#

A:ALA-A# show router ospf range 180.0.7.9
===============================================================
Rtr Base OSPFv2 Instance 0 Ranges for Area-Id 180.0.7.9
===============================================================
Area Id         Address/Mask       Advertise   LSDB Type
---------------------------------------------------------------
No. of Ranges: 0
===============================================================
A:ALA-A#
```

22.14 reassembly-statistics

reassembly-statistics

Syntax

reassembly-statistics group *nat-group-id* **member** [*member*]

Context

[Tree] (clear reassembly-statistics)

Full Context

clear reassembly-statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears IP reassembly statistics.

Parameters

nat-group-id

Specifies the NAT group ID.

Values 1 to 8 (7750 SR-12)
1 to 15 (VSR)
1 to 4 (all other platforms)

member

Specifies the member ID.

Values 1 to 255

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

22.15 reboot-required

reboot-required

Syntax

reboot-required

Context

[Tree] (clear>system reboot-required)

Full Context

clear system reboot-required

Description

This command clears the reboot required information. Use this command after a configuration triggers the reboot required state, but the configuration is removed.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

22.16 recover-l2aw-bypass

recover-l2aw-bypass

Syntax

recover-l2aw-bypass *mda*

Context

[Tree] (tools>perform>nat recover-l2aw-bypass)

Full Context

tools perform nat recover-l2aw-bypass

Description

This command restores NAT resources to the recovered MS-ISA and resumes forwarding subscriber traffic.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

22.17 redirect

redirect

Syntax

redirect statistics

Context

[Tree] (tools>dump>system>cpm-http-redirect redirect)

Full Context

tools dump system cpm-http-redirect redirect

Description

This command displays system level statistics for all redirected TCP sessions in **optimized- mode**. These include the following:

- Close requests to TCP: TCP layer requested to send a FIN
- Abort requests to TCP: error in the received packet and the TCP layer needs to send a RST

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Data requests to TCP: number of redirects sent to the TCP layer
- Connections deleted: number of connections closed without a successful redirect performed
- HTTP GET parse errors: formatting error in the HTTP request
- HTTP GET process errors: HTTP GET is formatted properly but the redirect still fails. Example: system unable to find a corresponding host
- HTTP Response dropped: communication error; the redirect failed to be sent to the TCP layer

Parameters

statistics

Specifies system level statistics for all redirected TCP sessions.

Platforms

All

Output

The following output is an example of the **statistics** command information.

Output Example

```
A# tools dump system cpm-http-redirect redirect statistics
===============================================================================
CPM HTTP Redirect statistics
===============================================================================
Close requests to TCP                                 : 2
Abort requests to TCP                                 : 0
Data requests to TCP                                  : 2
Requests rejected - out of memory                     : 0
Connections deleted                                   : 0
HTTP GET parse errors                                 : 0
HTTP GET process errors                               : 0
HTTP Response dropped                                 : 0
```

22.18 redirect-policy

redirect-policy

Syntax

redirect-policy [*redirect-policy-name* {**dest** *ip-address* | **associations**}]

Context

[Tree] (show>filter redirect-policy)

Full Context

show filter redirect-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command shows redirect filter information.

Parameters

redirect-policy-name

Displays information for the specified redirect policy, up to 32 characters.

dest *ip-address*

Directs the router to use a specified IP address for communication.

Values	ipv4-address:	a.b.c.d.
	ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

associations

Appends association information.

Platforms

All

Output

Redirect Policy Output — The following output is an example of redirect policy information, and Table 468: Output fields: redirect policy describes the fields.

Output Example

```

Table 468: Output fields: redirect policy

Label	Description
Redirect Policy	Specifies a specific redirect policy
Applied	Specifies whether the redirect policy is applied to a filter policy entry
Description	Displays the user-provided description for this redirect policy
Active Destination	IP address — specifies the IP address of the active destination
	none — indicates that there is currently no active destination
Destination	Specifies the destination IP address
Oper Priority	Specifies the operational value of the priority for this destination; the highest operational priority across multiple destinations is used as the preferred destination
Admin Priority	Specifies the configured base priority for the destination
Admin State	Specifies the configured state of the destination
	Out of Service — tests for this destination will not be conducted
Oper State	Specifies the operational state of the destination
Ping Test	Specifies the name of the ping test
Source Address	Specifies the source address of the ping test (if any)
Timeout	Specifies the amount of time in seconds that is allowed for receiving a response from the far-end host; if a reply is not received within this time the far-end host is considered unresponsive
Interval	Specifies the amount of time in seconds between consecutive requests sent to the far end host

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Drop Count	Specifies the number of consecutive requests that must fail for the destination to declared unreachable
Hold Down	Specifies the amount of time in seconds that the system should be held down if any of the test has marked it unreachable
Hold Remain	Specifies the amount of time in seconds that the system will remain in a hold down state before being used again
Last Action at	Displays a time stamp of when this test received a response for a probe that was sent out

redirect-policy

Syntax

redirect-policy *redirect-policy-name*

Context

[Tree] (tools>perform>filter redirect-policy)

Full Context

tools perform filter redirect-policy

Description

Commands in this context perform redirect policy operations.

Parameters

redirect-policy-name

Specifies a particular redirect policy name, up to 32 characters.

Platforms

All

22.19 redirect-policy-binding

redirect-policy-binding

Syntax

redirect-policy-binding [*name*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>filter redirect-policy-binding)

Full Context

show filter redirect-policy-binding

Description

This command shows configured redirect-policy bindings information.

Parameters

name

Displays information for the specified redirect policy binding, up to 32 characters.

Platforms

All

Output

Redirect Policy Output — The following output is an example of redirect policy binding information, and Table 469: Output fields: redirect policy bindings describes the fields.

Output Example

```
A:ALA-A>config>filter# show filter redirect-policy-binding
===============================================================================
Redirect Policy Bindings

22.21 reflectors

reflectors

Syntax

reflectors

Context

[Tree] (show>test-oam>twamp>twamp-light reflectors)

Full Context

show test-oam twamp twamp-light reflectors

Description

This command displays TWAMP-Light reflector information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of TWAMP Light reflector information, and Table 470: Output fields: TWAMP Light reflectors describes the output fields.

Output Example

```
show test-oam twamp twamp-light reflectors
===============================================================================
TWAMP-Light Reflectors
===============================================================================
Router/VPRN   Admin  Type uS UDP Port Prefix    Frames Rx    Frames Tx IPv6Udp0
-------------------------------------------------------------------------------
Base             Up STAMP  Y      862      1      2425283      2425283       No
500              Up STAMP         862      2         6340         6340       No
-------------------------------------------------------------------------------
No. of TWAMP-Light Reflectors: 2
uS = Y: LAG micro-session delay and loss measurement enabled
===============================================================================
```

Table 470: Output fields: TWAMP Light reflectors

Label	Description
Router/VPRN	Displays the routing instance
Admin	Displays the administrative state of the reflector
Type	Displays the configured packet processing of the reflector STAMP – supports STAMP formatted packets and optional STAMP TLVs, as well as processing TWAMP Light formatted packets TWL – supports TWAMP Light formatted packets, but not the decoding of STAMP options. STAMP packets are processed using TWAMP Light logic and additional STAMP-specific fields are treated as padding.
uS	Displays if LAG micro session delay and loss measurement is enabled Y – Yes Blank – No
UDP Port	Displays the listening UDP port on the Session-Reflector
Prefix	Displays the IP source-allowed prefixes configured
Frames Rx	Displays the number of packets received on the Session-Reflector
Frames Tx	Displays the number of packets transmitted by the Session-Reflector
IPv6Udp0	Allow for the processing of IPv6 packets that arrive with a UDP port of zero

Context

[Tree] (tools>perform>security>dist-cpu-protection release-hold-down)

Full Context

tools perform security dist-cpu-protection release-hold-down

Description

This command releases a Distributed CPU Protection (DCP) policer from a hold-down countdown (or indefinite hold-down if configured as such).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

interface *interface-name*

Specifies Router interface name.

sap *sap-id*

Specifies sap identifier.

protocol *protocol*

Specifies DCP protocol name (for example, arp, dhcp).

static-policer *name*

Specifies DCP static policer name as defined in the DCP policy.

Platforms

All

22.24 remap-lease-state

remap-lease-state

Syntax

remap-lease-state old-mac *ieee-address* **mac** *ieee-address*

remap-lease-state sap *sap-id* [**mac** *ieee-address*]

Context

[Tree] (tools>perform>subscr-mgmt remap-lease-state)

Full Context

tools perform subscriber-mgmt remap-lease-state

Description

This command allows the remapping of all existing hosts if network card on CMTS/WAC side is changed is required.

When this command is executed, the following restrictions apply:

- When **sap** is taken, all leases associated with the SAP are re-written.
  - For a SAP with a configured MAC in **lease-populate** command, this MAC is taken.
  - For a SAP without a configured MAC the MAC from tools command is taken.
  - For a SAP without a configured MAC and no MAC in tools command no action is performed.
- When using the **old-mac** option, providing a new MAC *ieee-address* is mandatory.

This command is applicable only when dealing with DHCP lease states which were instantiated using l2header mode of DHCP operation.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

old-mac ***ieee-address***

Specifies the old MAC address to remap.

mac ***ieee-address***

Specifies that the provisioned MAC address is used in the anti-spoofing entries for this SAP when l2-header is enabled. The parameter may be changed mid-session. Existing sessions will not be re-programmed unless a **tools perform** command is issued for the lease.

sap-id

Specifies the physical port identifier portion of the SAP definition.

When configured, the SAP parameter remaps all MAC addresses of DHCP lease states on the specified SAP. When no optional MAC parameter is specified, the **sap** *sap-id* command remaps all MAC addresses of lease states towards the MAC address specified in the l2-header configuration.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

22.25 remote-bfd-discrim

remote-bfd-discrim

Syntax

remote-bfd-discrim *bfd-discriminator*

Context

[Tree] (tools>dump>router>lsp-bfd remote-bfd-discrim)

Full Context

tools dump router lsp-bfd remote-bfd-discrim

Description

This command displays information the BFD-on-LSP sessions with a specified remote discriminator.

Parameters

bfd-discriminator

Specifies the BFD discriminator.

Cancelled registrations	Displays the number of canceled registration messages for this manager

22.27 remove-key

remove-key

Syntax

remove-key all-users all-hosts

remove-key host *ip-address*|*dns-name* **all-users**

remove-key user *user-name* **all-hosts**

remove-key user *user-name* **host** *ip-address*|*dns-name*

Context

[Tree] (tools>perform>system>ssh>client-known-hosts remove-key)

Full Context

tools perform system ssh client-known-hosts remove-key

Description

This command removes dynamically learned SSH host public keys for a specified user or for all users.

Use this command to delete a dynamic known-host entry when an SSH server presents a new host key for a host that is already in the known-host list. SR OS drops the SSH connection until the existing dynamic entry is removed.

This command does not remove statically configured known-host keys.

Note: Nokia recommends restricting this command to administrative users by using user profiles.

Parameters

all-users

Keyword that removes dynamically learned host keys for all users.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all-hosts

Keyword that removes dynamically learned host keys for all hosts.

user-name

Specifies the user whose dynamically learned host keys are removed.

Values 32 chars max

ip-address*|*dns-name

Specifies the IP address or DNS name of the SSH host whose dynamically learned key is removed.

Values 128 chars max

Platforms

All

22.28 remove-my-key

remove-my-key

Syntax

remove-my-key all-hosts

remove-my-key *ip-address*|*dns-name*

Context

[Tree] (tools>perform>system>ssh>client-known-hosts remove-my-key)

Full Context

tools perform system ssh client-known-hosts remove-my-key

Description

This command removes dynamically learned SSH host public keys for the user who executes the command.

Use this command to delete a dynamic known-host entry when an SSH server presents a new host key for a host that is already in the known-host list. SR OS drops the SSH connection until the existing dynamic entry is removed.

This command does not remove statically configured known-host keys.

Parameters

all-hosts

Keyword that removes all dynamically learned host keys for the user who executes the command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address*|*dns-name

Specifies the IP address or DNS name of the SSH host whose dynamically learned key is removed for the user who executes the command.

Values 128 chars max

22.29 replication-segment

replication-segment

Syntax

replication-segment [**root-address** *ip-address*] [**tree-id** *tree-id*] [**inst-id** *instance-id*] [**origin** {**Static** | **PCEP** | **SR-Policy**}] [**detail**] [**downstream-nodes** *id*]

Context

[Tree] (show>router>p2mp-sr-tree>database replication-segment)

Full Context

show router p2mp-sr-tree database replication-segment

Description

This command displays information for the replication segments in the P2MP SR tree database.

Parameters

ip-address

Displays replication segment information for the root with the specified IPv4 address.

tree-id

Displays replication segment information for the P2MP SR tree with the specified ID.

Values 8193 to 16286

instance-id

Displays replication segment information for the instance ID of a candidate path.

Values 0 to 4294967295

origin

Displays information for policies created using the specified method.

Static

Displays static policies.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

PCEP

Displays PCEP policies.

SR-Policy

Displays SR policies.

detail

Displays detailed information.

downstream-nodes

Displays next hop information.

id

Displays information for the next hop with the specified ID.

-------------------------------------------------------------------------------
Total SRv6 Replication Segments : 24
===============================================================================
```

Table 474: Output fields: P2MP SR tree replication segment

Label	Description
Action	Displays the SR MPLS replication segment action (pop, push, swap)
Adm/Opr	Displays the administrative or operational state of the segment (up, down)
Function	Displays the incoming SID locator function (end-replicate) for the SRv6 segment
InSID	Displays the SR MPLS incoming replication SID IP address used to find the replication state
Incoming SID	Displays the SRv6 incoming replication SID used to find the replication state
InstId	Displays the Instance ID represented by the replication SID. Each candidate path has two instances IDs. The instance ID is unique within a P2MP policy.
Locator	Displays the SRv6 incoming SID locator
Name	Displays the name of the segment
NumNhIds	Displays the number of the next hop IDs
Origin	Displays policies created using the configured method (static, PCEP)
Role	Displays the role the SRv6 replication segment performs in handling the packets (leaf, root, transit)
RootAddr	Displays the root IP address of the segment
TreeId	Displays the tree ID of the segment

22.30 request

request

Syntax

request *aps-id* {**protect** | **working**}

Context

[Tree] (tools>perform>aps request)

Full Context

tools perform aps request

Description

This command requests a manual switch to protection or working circuit.

Parameters

aps-id

Specifies the APS ID.

Values

aps-id	aps-*group-id*	
	aps	keyword
	group-id	1 to 128

protect

This command requests a manual switch to a port that is acting as the protection circuit for the APS group.

working

This command requests a manual switch to a port that is acting as the working circuit for this APS group.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

22.31 requirements

requirements

Syntax

requirements [**detail**]

Context

[Tree] (show>chassis>power-management requirements)

Full Context

show chassis power-management requirements

Description

This command displays maximum power requirements for the installed devices.

Parameters

detail

Displays detailed information.

Platforms

7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following output is an example of power management requirements information, and Table 475: Output fields: chassis power management requirements describes the output fields.

Output Example: show chassis power-management requirements

```
*A:Dut-A# show chassis power-management requirements

Table 475: Output fields: chassis power management requirements

Label	Description
SUPPLY	
Power Capacity	Specifies the total amount of power available to the chassis.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Safety Level	Specifies the configured Power Safety Level, which is a percentage of the worst case power consumption level.
Alert Level	Specifies the configured power level in Watts, which causes the system to raise an alarm if the available power level drops below a set level.
Mode	Specifies the configured mode: none, basic, advanced.
Reserved Power	Signifies the amount of power in reserve. For basic and advanced modes, the system keeps an additional margin of reserve power capacity. This margin is the provisioned capacity of the highest-rated power module. In advanced mode, the system will shed load to always keep this amount of power in reserve. In basic mode, it won't shed load to maintain the reserve, but it only allows cards or MDAs to load as long as the reserve power margin can be maintained.
Reqd. + Reserve	Specifies the Safety Level (Watts) + Reserved Power.
Remaining Power	Specifies the excess capacity. It is equal to ("Power Capacity" - "Reqd + Reserve").
REQUIREMENTS	
Fan	Specifies the amount of power required for each fan tray.
IO Module	Specifies the amount of power required for each IO Module.
CPM Module	Specifies the amount of power required for each CPM.
Fabric Module	Specifies the amount of power required for each SFM.
MDA Module	Specifies the amount of power required for each line card.
Total Required	Specifies the total amount of power required for all system elements.
Safety Level	Specifies the percentage configured with **configure system power-management power-safety-level** *percent*. This is a percentage of the total system requirement (Total Required). The corresponding value in Watts is also shown for information.
Safety Alert	Specifies the output of **configure system power-management power-safety-alert** *wattage*. A non-zero value indicates that the user wants to receive a warning when the system power capacity drops to within this number of Watts of the system level. If the power safety is 0, "N/A" is displayed in the output since no alert will be produced.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Alert Level	Specifies the value when the safety alert will be issued (= safety-level + safety alert). If the power safety alert is 0, "N/A" is displayed in the output since no alert will be produced.

22.32 resignal

resignal

Syntax

resignal {**lsp** *lsp-name* **path** *path-name* | **delay** *minutes*}

resignal {**p2mp-lsp** *p2mp-lsp-name* **p2mp-instance** *p2mp-instance-name* | **p2mp-delay** *p2mp-minutes*}

resignal {**sr-te-lsp** *sr-te-lsp-name* **path** *path-name* | **sr-te-delay** *sr-te-minutes*}

Context

[Tree] (tools>perform>router>mpls resignal)

Full Context

tools perform router mpls resignal

Description

This command resignals a specific path of a RSVP-TE P2P LSP, a RSVP P2MP LSP tree, or a SR-TE LSP. When an **lsp-name** and **path-name** are provided, a manual resignal is performed for the named path of the named LSP only. In this case, the new path is always programmed in data path regardless of the metric comparison between the new path and the current path.

The **delay**, **p2mp-delay**, or the **sr-te-delay** parameters override the global resignal timer value of all LSPs of the corresponding type for resignal. At the expiry of this override timer, the procedures of the timer based resignal are applied to all LSPs of the corresponding type. The resignal timer is then reset to its configured value in MPLS configuration. In this case, the new path is programmed in data path only if the metric of the new path is different from one of the current path.

Parameters

lsp lsp-name

Specifies an existing LSP name, up to 64 characters in length, to resignal.

path path-name

Specifies an existing path name to resignal.

delay ***minutes***

Configures an override of the global resignal timer or all RSVP-TE P2P LSPs.

Values 0 to 30

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

p2mp-lsp ***p2mp-lsp-name***

Specifies an existing point-to-multipoint RSVP-TE LSP name, up to 64 characters, to resignal.

p2mp-instance ***p2mp-instance-name***

Specifies a name, up to 32 characters, that identifies the P2MP LSP instance.

p2mp-delay ***p2mp-minutes***

Configures an override of the global resignal timer or all RSVP-TE P2MP LSPs.

Values 0 to 60

sr-te-delay ***sr-te-minutes***

Configures an override of the global resignal timer or all SR-TE LSPs.

Values 0 to 30

sr-te-lsp ***sr-te-lsp-name***

Specifies the name of a SR-TE LSP to resignal. The name must be 64 characters maximum.

Platforms

All

22.33 resignal-bypass

resignal-bypass

Syntax

resignal-bypass {**lsp** *bypass-lsp-name* [**force**] | **delay** *minutes*}

Context

[Tree] (tools>perform>router>mpls resignal-bypass)

Full Context

tools perform router mpls resignal-bypass

Description

This command performs a manual re-optimization of a specific dynamic or manual bypass LSP, or of all dynamic bypass LSPs.

The name of a manual bypass LSP is the one provided by the user at configuration time. The name of a dynamic bypass LSP is shown in the output of **show>router>mpls>bypass-tunnel dynamic detail**.

The **delay** option triggers the global re-optimization of all dynamic bypass LSPs at the expiry of the specified delay. Effectively, this option forces the global bypass resignal timer to expire after an amount of time equal to the value of the **delay** parameter. This option has no effect on a manual bypass LSP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

However, when *bypass-lsp-name* is specified, the named dynamic or manual bypass LSP is signaled and the associations are moved only if the new bypass LSP path has a lower cost than the current one. This behavior is different from that of the similar command for the primary or secondary active path of an LSP, which signals and switches to the new path regardless of the cost comparison. This handling is required because a bypass LSP may have a large number of PSB associations and the processing churn is much higher.

In the specific case where the name corresponds to a manual bypass LSP, the LSP is torn down and resignaled using the new path provided by CSPF if no PSB associations exist. If one or more PSB associations exist but no PLR is active, the command fails and the user is required to explicitly enter the **force** option. In this case, the manual bypass LSP is torn down and resignaled, leaving temporarily the associated LSP primary paths unprotected. If one or more PLRs associated with the manual bypass LSP is active, the command fails.

Finally, and as with the timer based resignal, the PSB associations are checked for the SRLG and admin group constraints using the updated information provided by CSPF for the current path and new path of the bypass LSP.

Parameters

lsp bypass-lsp-name [force]

Specifies the name of the dynamic or manual bypass LSP. The force option is required when the name corresponds to a manual bypass LSP and the LSP has PSB associations.

delay *minutes*

Specifies the time, in minutes, MPLS waits before attempting to re-signal dynamic bypass LSP paths originated on the system.

tools dump nat isa resources

Description

This command dumps ISA resources for an MDA, ESA VM, NAT group, or redundancy utilization.

Parameters

mda-id

Specifies the card and slot identifying a provisioned ISA.

Values

mda-id:	*slot* [*xiom*/]*mda*	
	slot	1 to 2 (7750 SR-2s)
		1 to 5 (7750 SR-7)
		1 to 6 (7750 SR-14s)
		1 to 10 (7450 ESS, 7750 SR-12)
		1 to 14 (VSR)
		1 to 20 (VSR)
	xiom	x1 to x2
	mda	1 to 2 (7450 ESS, 7750 SR-1, SR-2s, SR-7, SR-12, SR-14s)
		1 to 4 (VSR)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4 (7450 ESS, 7750 SR-1, SR-2s, SR-7, SR-12, SR-14s, VSR)
1 to 8 (7750 SR-12)
1 to 15 (VSR)

vapp-id

Specifies the ID of the configured ESA and ESA VM.

Values

vapp-id:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

member-id

Specifies the member ID.

Values 1 to 255

redundancy-utilization

Keyword that specifies redundancy utilization.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ISA NAT ESA-VM system resources.

Output Example

tools dump wlan-gw isa resources

Description

This command dumps ISA resources for an MDA or ESA VM.

Parameters

mda-id

Specifies the card and slot identifying a provisioned ISA.

Values

mda-id:	*slot* [*xiom*/]*mda*	
	slot	1 to 2 (7750 SR-2s)
		1 to 5 (7750 SR-7)
		1 to 6 (7750 SR-14s)
		1 to 10 (7450 ESS, 7750 SR-12)
		1 to 14 (VSR)
		1 to 20 (VSR)
	xiom	x1 to x2
	mda	1 to 2 (7450 ESS, 7750 SR-1, SR-2s, SR-7, SR-12, SR-14s)
		1 to 4 (VSR)

vapp-id

Specifies the ID of the configured ESA and ESA VM.

Values

vapp-id:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ISA WLAN gateway system resources.

22.37 restart

restart

Syntax

restart brg-id *brg-ident*

Context

[Tree] (tools>perform>subscr-mgmt>pppoe-client restart)

Full Context

tools perform subscriber-mgmt vrgw brg pppoe-client restart

Description

This command forcibly restarts the PPPoE client linked to the BRG instance. The restart does not remove BRG or related session state, however, forwarding is impacted.

Parameters

brg-ident

The string identifying the BRG.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

22.38 restart-position-survey

restart-position-survey

Syntax

restart-position-survey

Context

[Tree] (tools>perform>port>gnss restart-position-survey)

Full Context

tools perform port gnss restart-position-survey

Description

This command enables a restart of the GNSS position survey.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

22.39 retailers

retailers

Syntax

retailers

Context

[Tree] (show>service>id retailers)

Full Context

show service id retailers

Description

This command displays service retailer information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of service retailer information.

Output Example

```
*A:ALA-48>config# show service id 101 retailers
===============================================================================
Retailers for service 101
===============================================================================
Retailer Svc ID              Num Static Hosts         Num Dynamic Hosts
-------------------------------------------------------------------------------
102                          3                        1
105                          0                        1
-------------------------------------------------------------------------------
Number of retailers : 2
===============================================================================
*A:ALA-48>config#
```

22.40 revert

revert

Syntax

revert [**lsp** *lsp-name*]

Context

[Tree] (tools>perform>router>mpls revert)

Full Context

tools perform router mpls revert

Description

Use this command to cause a named LSP, which is currently using a secondary path and for which the revert-timer has been configured, to switch back to using the primary path. Any outstanding revert-timer is canceled.

The primary path must be up for this command to be successful.

Parameters

lsp-name

Specifies an existing LSP name, up to 64 characters in length.

22.42 ring

ring

Syntax

ring peer *ip-address* **ring** *sync-tag*

Context

[Tree] (clear>redundancy>multi-chassis>mcr>statistics ring)

Full Context

clear redundancy multi-chassis mc-ring statistics ring

Description

This command clears multi-chassis ring statistics.

Parameters

ip-address

Clears ring statistics for the specified IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

sync-tag

Clears ring statistics for the specified sync tag. 32 characters maximum.

Platforms

All

22.43 ring-node

ring-node

Syntax

ring-node peer *ip-address* **ring** *sync-tag* **node** *ring-node-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>redundancy>multi-chassis>mcr>statistics ring-node)

Full Context

clear redundancy multi-chassis mc-ring statistics ring-node

Description

This command clears multi-chassis ring statistics.

Parameters

ip-address

Clears ring-node peer statistics for the specified IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

sync-tag

Clears ring-node peer statistics for the specified synchronization tag. The tag can be up to 32 characters.

ring-node-name

Clears ring-node peer statistics for the specified ring node name. The ring node name can be up to 32 characters.

Platforms

All

22.44 ring-nodes

22.49 root-objects

root-objects

Syntax

root-objects

Context

[Tree] (show>service>dynsvc root-objects)

Full Context

show service dynamic-services root-objects

Description

This command displays the root objects created by dynamic data services.

Note:
This command is not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic services root object information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
# show service dynamic-services root-objects
===============================================================================
Dynamic Service Root Objects
===============================================================================
OID prefix                  : svcRowStatus
OID index                   : .100000
Snippet name                : vprn
Snippet instance            : VRF-1
Orphan time                 : N/A
-------------------------------------------------------------------------------
No. of Root Objects: 1
===============================================================================
```

Table 476: Output fields: root objects describes the Root Objects fields.

Table 476: Output fields: root objects

Output field	Description
OID prefix	The corresponding SNMP OID prefix for this root object.
OID index	The corresponding SNMP OID index for this root object.
Snippet name	The name of the python function that created this root object. The name is set to N/A when the root-object is orphaned.
Snippet instance	The instance for which the python function with "Snippet name" created this root object. If the snippet is a result from a dynamic reference, then the snippet instance is the reference-id string passed in the dyn.reference(). If the snippet is not the result from a dynamic reference, then the snippet instance is the dynamic data service SAP-ID. The instance is set to N/A when the root object is orphaned.
Orphan time	The timestamp when the root-object became orphaned (root-object not deleted when corresponding teardown function is called) or N/A if the root-object is not orphaned.

22.50 route

route

Syntax

route [**family**] [*ip-prefix/prefix-length*] [**detail**]

route next-hop {*ip-address* | *ipv6-address*} [**detail**]

Context

[Tree] (show>router>rib-api route)

Full Context

show router rib-api route

Description

This command displays RIB-API route information.

Parameters

family

Specifies the IPv4 or IPv6 address route family.

Values ipv4, ipv6

ip-prefix/prefix-length

Displays RIB-API route entries only matching the specified IP prefix and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)	
ipv4-prefix-length	0 to 32	
ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D
	ipv6-prefix-length:	0 to 128

detail

Displays detailed RIB-API route information.

ip-address

Specifies the next-hop IPv4 address of the RIB-API route.

Values

ipv4-address:	a.b.c.d

ipv6-address

Specifies the next-hop IPv6 address of the RIB-API route.

Values

ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H

Table 477: Output fields: RIB-API route

Label	Description
Family	The route family: • ipv4 • ipv6
Prefix	The IP prefix for the route RTM entry
Rib-Api Pref	The RIB-API preference opposing to the routes from different clients with the same prefix
Client IP	The IP address of the gRPC client that configured the RIB-API route entry
Act	The boolean (YES or NO) that indicates whether the status of the RIB-API route in RTM is active or not
Next Hop	The next-hop IP address of the RIB-API route entry
No. of Rib-Api Routes	The total number of the displayed RIB-API routes
Client Tag	The client tag unique identifier assigned to each gRPC connection by the gRPC server
Stale client	The stale client (Y or N) that indicates if the route is from a disconnected gRPC client
Metric	The metric of the route
RTM Preference	The RTM preference opposing to the routes having the same prefix from different protocols (BGP, OSPF)
Last Updated	The time stamp of when the route was added or modified from a gRPC client
Nexthop	The next-hop IP address of the RIB-API route entry
Active In RTM	The boolean (Y or N) that indicates whether the status of the RIB-API route is active or not in RTM
Inactive Reason	The inactive reason or the route not active in RTM

22.51 route-downloader

route-downloader

Syntax

route-downloader *route-downloader-name* [**router** *router-instance* | **service-name** *service-name*] [**family** *family*]

Context

[Tree] (clear>aaa route-downloader)

Full Context

clear aaa route-downloader

Description

This command clears all the radius-downloaded routes from the internal downloader cache (or protocol RIB/db) (and thus eventually from the RTM itself). The parameters **vprn** and/or **family** allow to restrict the deletion of those routes learned in a particular address family (IPv4 or IPv6) and/or a particular VPRN.

By default, all VPRNs and both IPv4 and IPv6 families are affected.

Note:
Clearing the internal protocol DB means the corresponding prefixes that were deleted should be removed from the RTM (and from any other exports) as well.

Parameters

route-downloader-name

Specifies the route downloader name, up to 32 characters.

router-instance

Specifies the router instance name (Base) or service ID.

service-name

Specifies the configured service name for the routing instance, up to 64 characters

family

Specifies to limit he removal or prefixes only belonging to the address family IPv4 or IPv6. Only these two values are accepted.

Values ipv4, ipv6

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

22.53 route-table

route-table

Syntax

route-table [*family*] [*ip-prefix*[/*prefix-length*] [**longer** | **exact** | **protocol** *protocol-name*] [**instance** *instance-id*] [**all**] [**next-hop-type** *type*] [**qos**] [**alternative**] [**accounting-class**]

route-table [*family*] [**summary**]

route-table *tunnel-endpoints* [*ip-prefix* [*/prefix-length*] [**longer** | **exact**] [**detail**]

route-table [*family*] [*ip-prefix[/prefix-length*] [**longer** | **exact** | **protocol** *protocol-name*] [**instance** *instance-id*] [**extensive** [**all**]

Context

[Tree] (show>router route-table)

Full Context

show router route-table

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the active routes in the routing table.

If no command line arguments are specified, all routes are displayed, sorted by prefix.

Parameters

family

Displays the specified family.

Values ipv4, ipv6, mcast-ipv4, mcast-ipv6

ip-prefix[/prefix-length]

Displays routes only matching the specified *ip-prefix* and optional *mask*.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv4-prefix-le: 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

ipv6-prefix-le: 0 to 128

longer

Displays routes matching the *ip-prefix/mask* and routes with longer masks.

exact

Displays the exact route matching the ip-prefix/mask.

protocol-name

Displays routes learned from the specified protocol.

Values aggregate, arp-nd, bgp, bgp-label, bgp-vpn, dhcpv6-na, dhcpv6-pd, dhcpv6-pd-exc, dhcpv6-ta, evpn-iff, evpn-ifl, host, ipsec, isis, ldp, local, managed, nat, nd-ra, ospf, ospf3, periodic, rib-api, rip, ripng, srv6, srv6-policy, static, sub-mgmt, video, vpn-leak

Note:
It is possible that a specific platform only supports a subset of the above protocol values.

instance-id

Specifies the IGP instance of the route table.

Values For isis — 0 to 127

For ospf — 0 to 31

For ospfv3 —

- 0 to 31 (when ospfv3 is used for IPv6)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- 64 to 95 (when ospfv3 is used for IPv4)

Note:
It is possible that a specific platform only supports a subset of the above values.

all

Displays all routes, including inactive routes.

type

Displays only the tunneled next-hops. For each route entry, the tunnel owner and tunnel ID is shown.

Values tunneled

qos

Displays QoS active routes in the routing table.

alternative

Displays LFS and backup route details.

accounting-class

Displays accounting class information.

Note:
Not all platforms support this parameter.

summary

Displays route table summary information.

tunnel-endpoints

Displays tunnel endpoint information.

extensive

Displays detailed information.

Platforms

All

Output

The following output are examples of route table information, and Table 478: Output fields: route table describes the output fields.

22.54 route-target

route-target

Syntax

route-target [**source-as** *as-number*] [**brief**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

route-target [**rtc-prefix** *rtc-prefix*] [**hunt**] [**brief**] [**aspath-regex** *reg-exp] [* **community** *comm-id*]

route-target rtc-prefix *rtc-prefix* [**aspath-regex** *reg-exp*] [**community** *comm-id*]

route-target [**rtc-prefix** *rtc-prefix*] [**detail** | **longer**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

Context

[Tree] (show>router>bgp>routes route-target)

Full Context

show router bgp routes route-target

Description

This command displays BGP route target routes.

Parameters

as-number

Specifies the source AS number.

Values 0 to 4294967295

rtc-prefix

Filters the route-target constraint routes to include only those routes matching a specific NLRI string.

Values *source-as*:{*ip-addr*:*comm-val* | *2byte-asnumber*:*ext-comm-val* | *4byte-asnumber*:*comm-val*}/*prefix-length*

ip-addr: a.b.c.d

comm-val: 0 to 65535

2byte-asnumber: 0 to 65535

ext-comm-val: 0 to 4294967295

4byte-asnumber: 0 to 4294967295

prefix-length: 0 to 96

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Displays detailed information.

longer

Displays the specified route and subsets of the route.

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

22.55 router

router

Syntax

router [*router-instance*]

router service-name *service-name*

Context

[Tree] (show router)

Full Context

show router

Description

Commands in this context display various types of information for the specified router instance.

Parameters

router-instance

specifies the router name, CPM router instance, or VPRN service ID.

Values *router-instance* : *router name* | *vprn-svc-id*

router-name	Base | management | *cpm-vr-name* | vpls-management
cpm-vr-name	[32 characters maximum]
vprn-svc-id	[1..2147483647]

Default Base

service-name

specifies the service name, up to 64 characters.

router

Syntax

router [*router-instance*]

router service-name *service-name*

Context

[Tree] (tools>dump router)

Full Context

tools dump router

Description

This command dumps tools for the router instance.

Parameters

router-instance

Specifies the router name or service ID used to identify the router instance.

Values

router-name | vprn-svc-id	
router-name	Base | Management | *cpm-vr-name* | vpls-management Default: Base
vprn-svc-id	1 to 2147483647
cpm-vr-name	32 chars max

service-name

Specifies the service name used to identify the router instance. 64 characters maximum.

Platforms

All

router

Syntax

router [*router-instance*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router service-name *service-name*

Context

[Tree] (clear router)

Full Context

clear router

Description

Clear router commands affect the router instance in which they are entered.

Parameters

router-instance

Specifies the router name or service ID used to identify the router instance.

Values

router-name | vprn-svc-id	
router-name	Base | Management | *cpm-vr-name* | vpls-management Default: Base
vprn-svc-id	1 to 2147483647
cpm-vr-name	32 chars max

service-name

Specifies the service name used to identify the router instance. 64 characters maximum.

Platforms

All

router

Syntax

router

Context

[Tree] (tools>perform router)

Full Context

tools perform router

Description

This command enables the tools for the router instance.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

router

Syntax

router [*router-instance*]

router service-name *service name*

Context

[Tree] (monitor router)

Full Context

monitor router

Description

Commands in this context configure criteria to monitor statistical information for a variety of routing protocols.

Parameters

router-instance

Specifies the router name or service ID.

Values

router-name:	Base, management, *cpm-vr-name*, vpls-management
vprn-service-id:	1 to 2147483647
cpm-vr-name	up to 32 characters

Default Base

service-name

Specifies the service name used to identify the router instance. The name can be up to 64 characters long.

Platforms

All

router

Syntax

router [**Base**] [**security-policy-id** *security-policy-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>ipsec>security-policy router)

Full Context

show ipsec security-policy router

Description

This command displays IPsec security policy information for the router.

Parameters

security-policy-id

Specifies the security policy ID.

Values 1 to 32768

Platforms

VSR

22.56 router-advertisement

router-advertisement

Syntax

router-advertisement

Context

[Tree] (clear>router>autoconfigure router-advertisement)

Full Context

clear router autoconfigure router-advertisement

Description

Commands in this context clear router advertisement information.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

© 2026 Nokia.

router-advertisement

Syntax

router-advertisement all

router-advertisement interface *interface-name*

Context

[Tree] (clear>router router-advertisement)

Full Context

clear router router-advertisement

Description

This command clears all router advertisement counters.

Parameters

all

Clears all router advertisement counters for all interfaces.

interface-name

Clears router advertisement counters for the specified interface.

Platforms

All

router-advertisement

Syntax

router-advertisement

router-advertisement routes

Context

[Tree] (show>router>autoconfigure router-advertisement)

Full Context

show router autoconfigure router-advertisement

Description

This command displays router advertisement information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

routes

Displays routes received from router advertisements.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

22.57 router-advertisement-policy

router-advertisement-policy

Syntax

router-advertisement-policy [*name*]

Context

[Tree] (show>subscr-mgmt router-advertisement-policy)

Full Context

show subscriber-mgmt router-advertisement-policy

Description

This command displays IPv6 router advertisement policy information.

Parameters

name

Specifies the router advertisement policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Full Context

show router bgp routes

Description

This command displays routes in the BGP Routing Information Base (RIB). When this command is issued without any command options, the output displays all learned BGP routes belonging to the IPv4 address family. When this command is issued with other parameters, the output can display a narrower or wider set of routes, including routes belonging to other address families.

Parameters

bgp-ls

Displays BGP-LS routes.

bgp-ls ipv4-prefix

Displays BGP-LS IPv4-prefix NLRI routes.

bgp-ls link

Displays BGP-LS link NLRI routes.

bgp-ls node

Displays BGP-LS node NLRI routes.

evpn auto-disc

Displays EVPN autodiscovery routes.

evpn eth-seg

Displays EVPN Ethernet Segment (ES) routes.

evpn incl-mcast

Displays EVPN IMET routes.

evpn ip-prefix

Displays EVPN IP prefix routes (type 5).

evpn ipv6-prefix

Displays EVPN IPv6 prefix routes (type 5).

evpn mac

Displays EVPN MAC routes (type 2).

evpn mcast-join-synch

Displays EVPN multicast join sync routes.

evpn mcast-join-leave

Displays EVPN multicast join leave routes.

evpn smet

Displays EVPN SMET routes.

flow-ipv4

Displays IPv4 flow-spec routes.

flow-ipv6

Displays IPv6 flow-spec routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4

Displays unlabeled unicast IPv4 routes.

ipv6

Displays unlabeled unicast IPv6 routes.

l2-vpn

Displays BGP-VPLS, BGP-VPWS, BGP multihoming and BGP-AD routes (or some subset).

label-ipv4

Displays labeled unicast IPv4 routes (AFI1, SAFI4).

label-ipv6

Displays labeled unicast IPv6 routes (AFI2, SAFI4).

mcast-ipv4

Displays multicast IPv4 routes (AFI1, SAFI2).

mcast-ipv6

Displays multicast IPv6 routes (AFI2, SAFI2).

mcast-vpn-ipv4

Displays multicast VPN IPv4 routes.

mcast-vpn-ipv6

Displays multicast VPN IPv6 routes.

mdt-safi

Displays MVPN MDT SAFI routes.

ms-pw

Displays multisegment pseudowire routes.

mvpn-ipv4

Displays MVPN IPv4 routes.

mvpn-ipv6

Displays MVPN IPv6 routes.

route-target

Displays RT constraint routes.

sr-policy-ipv4

Displays BGP segment routing policy routes (IPv4 endpoint).

sr-policy-ipv6

Displays BGP segment routing policy routes (IPv6 endpoint).

vpn-ipv4

Displays unicast IPv4 VPN routes (AFI1, SAFI128).

vpn-ipv6

Displays unicast IPv6 VPN routes (AFI2, SAFI128).

brief

Displays summary information about the BGP routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Displays detailed information about the BGP routes, including information about the original path attribute values.

hunt

Displays detailed information about the BGP routes, including information about the advertised routes (RIB-OUT).

longer

When used within a command that also provides a specific IP prefix value, this filters the output to include all routes that match the prefix with the same or a longer prefix length.

as-path-regex

Filters the BGP routes to include only those routes with an AS path matching the specified regular expression.

community

Filters the BGP routes to include only those routes with a community value matching the specified value.

all

Includes active routes of other (non-BGP) protocols that BGP has imported into its RIB.

leakable

Filters the BGP routes to include only those routes that have been marked as leakable to other BGP instances (by means of a BGP import policy).

leaked

Filters the BGP routes to include only those routes that have been leaked from other BGP instances (by means of a leak-import policy).

original-val

Filters the BGP routes to include only those routes that have a specific RPKI route origin validation state (Not-Found, Valid, Invalid).

esi

Filters the BGP EVPN routes to include only those routes with a specific Ethernet Segment identifier value.

next-hop

Filters the BGP EVPN routes to include only those routes with a specific BGP next-hop address.

rd

Filters the BGP routes to include only those routes with a specific route distinguisher value.

tag

Filters the BGP EVPN routes to include only those routes with a specific administrative tag value.

originator-ip

Filters the BGP EVPN or MVPN routes to include only those routes with a specific originator IP address (in the NLRI).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix

Filters the BGP type 5 EVPN routes to include only those routes with a specific IPv4 or IPv6 prefix.

mac-address

Filters the BGP type 2 EVPN routes to include only those routes that have a specific MAC address.

grp-address

Filters the MDT-SAFI routes to include only those routes matching a specific multicast group address.

source-as

Filters the MVPN or RT-constraint routes to include only those routes matching a specific source AS number (in the NLRI).

source-ip

Filters the multicast routes to include only those routes matching a specific source address.

group-ip

Filters the MVPN routes to include only those routes matching a specific group address.

type

Filters the MVPN routes based on type (intra-ad, inter-ad, spmsi-ad, leaf-ad, source-ad, shared-join, source-join).

aii-type2

Filters the MS-PW routes based on AII type 2 value.

offset

Filters BGP-VPLS routes based on offset value.

siteid

Filters BGP multihoming routes based on the site ID value.

veid

Filters BGP-VPLS routes based on VEID value.

rtc-prefix

Filters the RT-constraint routes to include only those routes matching a specific NLRI string (formatted as *source-as*:*route-target*/*prefix-length*).

color

Filters the SR policy routes to include only those routes matching a specific color value.

endpoint

Filters the SR policy routes to include only those routes matching a specific endpoint address.

mvpn-type

Specifies the MVPN type.

Values intra-ad, inter-ad, spmsi-ad, leaf-ad, source-ad, shared-join, and source-join.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix

Specifies an IP prefix to match. For some address families this parameter has no meaning and should be omitted.

Values ip-address: a.b.c.d

ipv4-prefix: a.b.c.d

ipv4-prefix-length: [0 to 32]

ipv6-prefix [/pref* ipv6-prefix]:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

prefix-length: [0 to 128]

reg-exp

An AS path regular expression to match routes based on their AS path attribute *reg-exp*, up to 80 characters.

comm-id

Specifies a community value, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*

rd

Specifies a route distinguisher value.

Values ip-addr:comm-va
2byte-asnumber:ext-comm-val
4byte-asnumber:comm-val}

veid

Specifies a two-byte identifier that represents the local bridging instance in a VPLS and is advertised through the BGP NLRI. This value must be lower than or equal to the max-ve-id.

Values 0 to 4294967295

vpls-base-offset

Specifies a two-byte identifier advertised through the NLRI that is used to indicate which VE-ID should use the advertised NLRI at the receiving PE according to the following rule: if the offset<= local VE-ID <= offset+VBS-1 (VBS = virtual block size = 8 in our implementation), then the NLRI is processed. Otherwise, it is ignored. The NLRI with this offset is generated as soon as the first VE-ID value between (offset, offset + VBS-1) is advertised in the network.

Values 0 to 4294967295

site-id

Specifies a two-byte identifier usually employed for the BGP multihoming solution. It identifies the BGP multihoming site associated with one or a set of objects (SAPs, pseudowires or combination). The site-id must be identical between the two PEs carrying the connection to the access device multihomed to the PEs.

Values 0 to 4294967295

l2vpn-type

Specifies a 12-byte Virtual Switch Instance identifier (VSI-ID) type.

Values bgp-ad, bgp-vpls, bgp-vpws, and multi-homing

rtc-prefix

source-as:{*ip-addr*:*comm-val* | *2byte-asnumber*:*ext-comm-val* | *4byte-asnumber*:*comm-val*}/*prefix-length*

Values *ip-addr*: a.b.c.d

comm-val: 0 to 65535

2byte-asnumber: 0 to 65535

ext-comm-val: 0 to 4294967295

4byte-asnumber: 0 to 4294967295

prefix-length: 0 to 96

origin-val

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

Values valid — Displays valid validation state information.

invalid — Displays invalid validation state information.

notfound — Displays state information for not found origin values.

Platforms

All

Output

The following outputs are examples of BGP route information, and Table 479: Output fields: BGP routes describes the output fields:

- Output example: BGP SR IPv6 policy routes
- Output example: BGP SR IPv6 policy routes with advertised routes (RIB-OUT)
- Output example: BGP routes that match a specific address
- Output example: BGP-VPLS, BGP-VPWS, BGP multihoming, and BGP-AD routes (detailed)
- Output example: BGP-VPLS, BGP-VPWS, BGP multihoming, and BGP-AD routes (with advertised routes) that match a specific address and route distinguisher (RD) value (detailed)
- Output example: unicast IPv4 VPN routes (with advertised routes) that match a specific RD value and address (detailed)
- Output example: unicast IPv4 VPN routes (with advertised routes) that match a specific address (detailed)
- Output example: unicast IPv6 VPN routes (with advertised routes) that match a specific address (detailed)
- Output example: unicast IPv6 VPN routes (with advertised routes) that match a specific RD value and address (detailed)
- Output example: BGP routes (with advertised routes) that match a specific address (detailed)
- Output example: unlabeled unicast IPv4 routes
- Output example: BGP routes that match a specific address (detailed)

Table 479: Output fields: BGP routes

Label	Description
Add Paths Send	The local BGP router ID
Aggregator	The aggregator attribute value none — Aggregator attributes are not present
Aggregator AS	The aggregator AS value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	none — Aggregator AS attributes are not present
AIGP Metric	The Accumulated IGP metric
AII-Type2/Preflen	The FEC 129 AII Type 2/preference length
AS	The configured Autonomous System (AS) number
AS-Path	The BGP AS path attribute
Atomic Aggr.	Atomic — The atomic aggregator flag is set Not Atomic — The atomic aggregator flag is not set
AttrSet	The attribute set
AttrSet OriginAS	The attribute set origin AS
BGP Router ID	The local BGP router ID
BSID/Pref/TunnType	The binding SID (BSID), preference, and tunnel type
Cluster	The route reflector cluster list
Community	The BGP community attribute list
Connector	The connector attribute value
DB Orig Val	The database RPKI route origin validation state
Dest Class	The destination class
D-Path	The D-Path
ESI	The Ethernet Segment Identifier
EVPN type	The Ethernet VPN route type
Extended Tunne* (Extended Tunnel ID)	The extended tunnel ID
Final Orig Val	The final RPKI route origin validation state
Flag	The flag is set to one of the following: • u — used • s — suppressed • h —history • d — decayed • * — valid • i — igp • e — egp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• ? — incomplete • > — best • S — sticky
From	The IP address of the advertising BGP neighbor
Fwd Class	The forwarding class
Gateway Address	The gateway address
GroupIP/Group IP	The group IP address
Identifier	The service access (SAP) points
IGP Cost	The Interior Gateway Protocol (IGP) cost for the route
Interface Name	The name of the interface
Last Modified	The time elapsed since the next hop was modified
Local AS	The configured local AS setting If not configured, the value is the same as the AS
Local Pref.	The local preference value This value is used if the BGP route arrives from a BGP peer without the Local Pref attribute set. It is overridden by any value set via a route policy
MED	The MED metric value none — MED metrics are present
MPLS Label	The MPLS label
Neighbor-AS	The neighbor AS
Network	The IP prefix and mask length
Nexthop	The BGP next hop
Originator Id	The originator ID path attribute value none — The originator ID attribute is not present
OriginatorIP/Originator IP	The originator IP
OSPFLevel	The Open Shortest Path First (OSPF) level
P2MP-ID	The Internal identifier of point-to-multipoint LSP
Path Id	The path ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Peer Router Id	The router ID of the advertising router
PMSI Tunnel Attribute	The P-Multicast Service Interface (PMSI) tunnel attribute
Prefix	The number of interfaces on the nodes on which BGP is enabled
Priority	The priority of the BGP route
Protocol	The protocol
RD	The Route Distinguisher (RD)
RD/Color/End Point RD/Color/End Pt	The RD, color, and end point
Res. Nexthop	The resolved next hop
RIB Priority	The Routing Information Base (RIB) priority
Route Dist.	The route distinguisher identifier attached to routes that distinguishes the VPN to which it belongs
Route Source	The route source
Route Tag	The route tag of the entry
Route Type	The route type
Source Class	The source class
SourceAS/Source AS	The source AS
SourceIP/Source IP	The source IP
Tag	The tag information
TieBreakReason	The step in the BGP decision process where a BGP route lost the tiebreak with the next better BGP route for the same prefix LocalPref — This route is not the best because the next better route has a higher LOCAL_PREF AIGP — This route is not the best because the next better route has a lower derived AIGP metric value ASPathLen — This route is not the best because the next better route has a shorter AS PATH length Origin — This route is not the best because the next better route has a lower origin value MED — This route is not the best because the next better route has a lower MED, and MED comparison of the routes was allowed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	IBGP — This IBGP route is not the best because the next better route is an EBGP route NHCost — This route is not the best because the next better route has a lower metric value to reach the BGP NEXT HOP BGPID — This route is not the best because the next better route has a lower Originator ID or BGP Identifier ClusterLen — This route is not the best because the next better route has a shorter cluster list length PeerIP — This route is not the best because the next better route has a lower neighbor IP address
Tunnel-ID	The tunnel ID
Tunnel-type	The tunnel type
Type	The type
VPN Label	The label generated by the PEs label manager
VPRN Imported	The VPRNs where a particular BGP-VPN received route has been imported and installed
Attributes	
Flags	The flags of the BGP-LS route
IGP Metric	The IGP metric
Admin-Grp	The admin group
Maximum Link BW (kbps)	The maximum link bandwidth (BW)
Maximum Reservable BW (kbps)	The maximum reservable bandwidth (BW)
TE Default Metric	The Traffic Engineering (TE) default metric
Unreserved BW (kbps)	The unreserved bandwidth (BW)
Descriptor	
IPv4 Address	The IPv4 address of the descriptor
Link descriptor	
IPV4 Interface Addr	The IPv4 interface address
IPV4 Neighbor Addr	The IPv4 neighbor address
Link State Attribute TLVs	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Administrative group (color)	The administrative group color
Maximum link bandwidth	The maximum link bandwidth
Max. reservable link bandwidth	The maximum reservable link bandwidth
Unreserved bandwidth0	The unreserved bandwidth0
Unreserved bandwidth1	The unreserved bandwidth1
Unreserved bandwidth2	The unreserved bandwidth2
Unreserved bandwidth3	The unreserved bandwidth3
Unreserved bandwidth4	The unreserved bandwidth4
Unreserved bandwidth5	The unreserved bandwidth5
Unreserved bandwidth6	The unreserved bandwidth6
Unreserved bandwidth7	The unreserved bandwidth7
TE Default Metric	The traffic engineering (TE) default
IGP Metric	The IGP metric
Adjacency Segment Identifier (Adj-SID)	The Adjacency Segment Identifier (Adj-SID)
Local Node	
Name	The name of the local node
Autonomous System	The Autonomous System
Area ID	The area ID
Rtr ID	The router ID
Flags	The flags in the detailed output display additional information about BGP routes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Local Node descriptor	
Autonomous System	The Autonomous System
Link State Id	The link-state ID
IGP Router Id	The IGP router
Prefix descriptor	
IPv4 Address	The IPv4 address
Prefix-len	The prefix length
MT_ID	The multitopology ID
Route Type	The route type
Remote Node	
Name	The remote node name
Autonomous System	The Autonomous System
Area ID	The area ID
Rtr ID	The router ID
Remote Node descriptor	
Autonomous System	The Autonomous System
Link State Id	The link-state ID
IGP Router Id	The Interior Gateway Protocol (IGP) ID

routes

Syntax

routes [**ipv4-unicast** | **ipv6-unicast** | **ipv4-multicast** | **ipv6-multicast** | **mt** *mt-id-number*] [*ip-prefix*[/*prefix-length*]] [**alternative**] [**exclude-shortcut**] [**flex-algo** {*flex-algo-id* | **all**}] [**status** {**reachable** | **unreachable**}] [**detail**]

Context

[Tree] (show>router>isis routes)

Full Context

show router isis routes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the routes in the IS-IS route table.

Parameters

ipv4-unicast

Displays IPv4 unicast parameters.

ipv6-unicast

Displays IPv6 unicast parameters.

mt *mt-id-number*

Displays multi-topology parameters.

Values 0, 2

alternative

Displays LFA details.

exclude-shortcut

Displays the routes without shortcuts.

detail

Displays detailed information.

flex-algo *flex-algo-id*

Displays the flexible algorithm aware forwarding path.

Values 128 to 255, all

flex-algo all

Displays all the flexible algorithms-aware forwarding paths.

reachable

Displays the reachable unicast routing table. When the status is not specified, the complete unicast routing table is displayed.

unreachable

Displays the unreachable unicast routing table. When the status is not specified, the complete unicast routing table is displayed.

Platforms

All

Output

The following output is an example of IS-IS route unreachable information, and Table 480: Output fields: IS-IS routes describes the output fields.

Output example

```
A:node-2>show>router>isis# routes status unreachable

===============================================================================

Table 480: Output fields: IS-IS routes

Label	Description
Prefix or Prefix [Flags]	Displays the route prefix and mask
Algorithm	Displays the algorithm
Status	Displays the status
Level or Lvl	Displays the IS-IS level
NextHop	Displays the system ID of the next hop
Metric	Displays the metric of the route  **Note:** • For an unreachable route, the short table view shows UPA as the metric value. • In the detailed view, the real metric value with (UPA) shows for an unreachable route and the status indicates Unreachable.
Type	Displays the route type as either Internal or External
SPF Version or Ver.	Displays the SPF version that generated the route
SysID/Hostname	Displays the hostname for the specific *system-id*
MT	Displays the IS-IS topology for the route

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
AdminTag	Displays the number of administrative tags
SID[F]	Displays the segment identifier flags of a Prefix-SID as defined by IETF segment routing R: Re-advertisement flag. If set, the prefix to which this Prefix-SID is attached has been propagated by the router either from another level (in other words, from level 1 to level 2 or the opposite) or from redistribution (for example, from another protocol). N: Node-SID flag. The N-Flag is set on Prefix-SIDs attached to a router loopback address. nP: no-PHP flag. If set, the penultimate hop must not pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID E: Explicit-Null Flag. If set, any upstream neighbor of the Prefix-SID originator must replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet V: Value flag. If set, the Prefix-SID carries a value (instead of an index) L: Local Flag. If set, the value/index carried by the Prefix-SID has local significance
No. of Routes	Displays the total number of routes

routes

Syntax

routes [*ip-prefix*[/*prefix-length*]] [**type**] [**detail**] [**alternative**] [**summary**] [**exclude-shortcut**] [**flex-algo** {*flex-algo-id* | **all**}]

Context

[Tree] (show>router>ospf routes)

Full Context

show router ospf routes

Description

This command displays information about OSPF routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-prefix[/prefix-length]

Displays information about the specified IP prefix and length.

flex-algo-id

Displays information about the specified flexible algorithm identifier.

Values 128 to 255

type

Displays information about the specified type.

Values intra-area, inter-area, external-1, external-2, nssa-1, nssa-2

detail

Displays detailed information about the routes.

alternative

Displays the level of protection per prefix (ref. show router OSPF routes alternative).

summary

Displays summarized information about the routes.

exclude-shortcut

Displays routes without shortcut, in the **show**>**router**>**ospf** context.

flex-algo

Displays the OSPFv2 routes associated with a segment routing algorithm specified by the flexible algorithm identifier.

all

Displays the OSPFv2 routes associated with all flexible algorithms.

Platforms

All

Output

The following output shows an example of OSPF routes information.

Output Example

```
*A:Dut-C# show router ospf routes flex-algo 128

22.59 routing

routing

Syntax

routing [**sub-domain** *sub-domain*] [**bsl** *bsl*] [**neighbor-prefix** *ip-address*] [**dest-prefix** *ip-address*]

Context

[Tree] (show>router>bier routing)

Full Context

show router bier routing

Description

This command shows the BIER routing table.

Parameters

sub-domain

Specifies a sub-domain.

Values 0 to 255

bsl

Specifies a bit string length.

Values 256 to 1024

ip-address

Specifies a prefix in IP address format.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of a BIER router table. Table 481: Output fields: BIER routing provides BIER routing field descriptions.

Output Example

```
*A:Dut-A# show router bier routing sub-domain 0
===============================================================================
Destination Prefix                          Bfr-ID          Age
  Neighbor
    Nexthop
    Interface
-------------------------------------------------------------------------------
===============================================================================
BIER Routing Database Sub-Domain 0 BSL 256
===============================================================================

Label	Description
Nexthop	The next-hop IP address
Interface	The egress interface name for the programmed tunnel

22.60 rp

rp

Syntax

rp [*family* | *ip-address*]

Context

[Tree] (show>router>pim rp)

Full Context

show router pim rp

Description

This command displays the rendezvous point (RP) set information built by the router.

Parameters

family

Displays information about RP family.

Values ipv4, ipv6

ip-address

Specifies the IP address of the RP.

Platforms

All

Output

The following output is an example of a PIM RP configuration.

Output Example

```
A:ALA-1# show router pim rp
===============================================================
PIM RP Set
===============================================================
Group Address      RP Address      Type        Priority  Holdtime
---------------------------------------------------------------
224.0.0.0/4        239.200.200.4   Dynamic     192       150
```

A:ALA-1# show router pim rp 10.1.7.1
===================================================================
PIM RP Set
===================================================================
Group Address      RP Address      Type        Priority  Holdtime
-------------------------------------------------------------------
224.0.0.0/4        10.1.7.1        Static      1         N/A
-------------------------------------------------------------------
Group Prefixes : 1
===================================================================
A:ALA-1#
```

Table 482: Output fields: PIM RP

Label	Description
Group Address	The multicast group address of the entry.
RP Address	The address of the Rendezvous Point (RP)
Type	Displays whether the entry was learned through the Bootstrap mechanism or if it was statically configured.
Priority	The priority for the specified group address. The higher the value, the higher the priority.
Holdtime	The value of the hold time present in the BSM message

22.61 rp-hash

rp-hash

Syntax

rp-hash *ip-address*

Context

[Tree] (show>router>pim rp-hash)

Full Context

show router pim rp-hash

Description

This command hashes the RP for the specified group from the RP set.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Displays specific multicast group addresses.

Platforms

All

Output

The following output is an example of a PIM RP-Hash configuration. Table 483: Output fields: RP hash provides RP-Hash output field descriptions.

Output Example

```
A:ALA-1# show router pim rp-hash 239.101.0.0
===============================================
PIM Group-To-RP mapping
===============================================
Group Address      RP Address      Type
-----------------------------------------------
239.101.0.0        239.200.200.4   Bootstrap
===============================================
A:ALA-1#

A:ALA-1# show router pim rp-hash 239.101.0.6
===============================================
PIM Group-To-RP mapping
===============================================
Group Address      RP Address      Type
-----------------------------------------------
239.101.0.6        239.200.200.4   Bootstrap
===============================================
A:ALA-1#
```

Table 483: Output fields: RP hash

Label	Description
Group Address	The multicast group address of the entry
RP Address	The address of the Rendezvous Point (RP)
Type	Specifies whether the entry was learned through the Bootstrap mechanism or if it was statically configured.

22.62 rpki-session

rpki-session

Syntax

rpki-session [*ip-address*] [**detail**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>origin-validation rpki-session)

Full Context

show router origin-validation rpki-session

Description

This command displays RPKI session information, including the TLS client profile and DNS name used to authenticate the SAN field of the cache server certificate.

Parameters

ip-address

Displays RPKI session information for the specified IP address.

Values ipv4-address: a.b.c.d

ipv6-address: x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d

x: [0 to FFFF]H

d: [0 to 255]D

detail

Keyword to display detailed RPKI session information.

Platforms

All

Output

The following outputs are examples of RPKI session information when TLS is configured and when TLS is not configured, and Table 484: Output fields: RPKI session describes the output fields.

Output Example

```
*A:Dut-A# show router origin-validation rpki-session 10.1.1.1
===============================================================================
RPKI Session Information
===============================================================================
IP Address         : 10.1.1.1

Table 484: Output fields: RPKI session

Label	Description
IP Address	The IP address of the RPKI cache server
Description	The configured description of the RPKI session
TLS Client Profile	The TLS client profile assigned to the RPKI session (Not Specified) — A TLS client profile is not assigned
TLS SAN Auth	The DNS domain name used to authenticate the(SAN field in the cache server certificate. (Not Specified) — SAN authentication is not configured
Port	The destination TCP port used to contact the cache server
Oper State	The operational state of the RPKI session
Uptime	The length of time the RPKI session has been operationally up
Flaps	The number of times the RPKI session has gone down
Active IPv4 Records	The number of active IPv4 VRP records learned from the cache server
Active IPv6 Records	The number of active IPv6 VRP records learned from the cache server
Admin State	Up — The RPKI session is administratively enabled Down — The RPKI session is administratively disabled
Local Address	The local IP address used for the RPKI session
Hold Time	The hold time, in seconds, used for liveness detection of the RPKI session
Refresh Time	The refresh time, in seconds, used for liveness detection of the RPKI session
Stale Route Time	The maximum duration, in seconds, that prefix origin validation records learned from the cache server remain usable after the RPKI session goes down
Connect Retry	The time, in seconds, between a failed TCP connection attempt and the next attempt
Serial ID	The serial number of the last cache payload received from the cache server
Session ID	The session ID of the RPKI session
No. of Sessions	The number of RPKI sessions displayed

22.67 rtp-session

rtp-session

Syntax

rtp-session [**service** *service-id*] [**source** *ip-address*] [**detail** [**stats** {**rt-server** | **fcc-server**}]]

rtp-session [**service** *service-id*] **summary**

Context

[Tree] (show>video rtp-session)

Full Context

show video rtp-session

Description

This command displays video session information.

Parameters

service *service-id*

Displays video session information pertaining to the specified service ID.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

source *ip-address*

Displays session information for the specified IP address.

detail

The output displays detailed video session information.

stats

Displays video session statistics.

Values **rt-server** — Displays video session statistics for the RT server.

fcc-server — Displays video session statistics for the FCC server.

summary

The output displays summarized video session information.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

Output

The following output is an example of this command.

22.68 rtr-advertisement

rtr-advertisement

Syntax

rtr-advertisement [**interface** *interface-name*] [**prefix** *ipv6-prefix*[*/prefix-length*]]

rtr-advertisement [**conflicts**]

Context

[Tree] (show>router rtr-advertisement)

Full Context

show router rtr-advertisement

Description

This command displays router advertisement information.

If no command line arguments are specified, all routes are displayed, sorted by prefix.

Parameters

interface-name

Specifies the interface name, up to 32 characters.

***ipv6-prefix*[*/prefix-length*]**

Displays routes only matching the specified *ip-address* and length and only applies to the 7750 SR and 7950 XRS.

Values

ipv6	ipv6-prefix[/pref*:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D
	prefix-length:	1 to 128

Table 485: Output fields: router advertisement

Label	Description
Rtr Advertisement Tx/ Last Sent	The number of router advertisements sent and time since they were sent
Nbr Solicitation Tx	The number of neighbor solicitations sent and time since they were sent
Nbr Advertisement Tx	The number of neighbor advertisements sent and time since they were sent

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Rtr Advertisement Rx	The number of router advertisements received and time since they were received
Nbr Advertisement Rx	The number of neighbor advertisements received and time since they were received
Max Advert Interval	The maximum interval between sending router advertisement messages
Managed Config	True — indicates that DHCPv6 has been configured
	False — indicates that DHCPv6 is not available for address configuration
Reachable Time	The time, in milliseconds, that a node assumes a neighbor is reachable after receiving a reachability confirmation
Retransmit Time	The time, in milliseconds, between retransmitted neighbor solicitation messages
Link MTU	The MTU number the nodes use for sending packets on the link
Rtr Solicitation Rx	The number of router solicitations received and time since they were received
Nbr Solicitation Rx	The number of neighbor solicitations received and time since they were received
Min Advert Interval	The minimum interval between sending ICMPv6 neighbor discovery router advertisement messages
Other Config	True — indicates there are other stateful configurations False — indicates there are no other stateful configurations
Router Lifetime	The router lifetime in seconds
Hop Limit	The current hop limit

Router-Advertisement Conflicts Output — The following output is an example of router advertisement conflicts, and Table 486: Output fields: router advertisement conflicts describes the fields.

Table 486: Output fields: router advertisement conflicts

Label	Description
Advertisement from	The address of the advertising router
Reachable Time	The time, in milliseconds, that a node assumes a neighbor is reachable after receiving a reachability confirmation
Router Lifetime	Displays the router lifetime in seconds
Retransmit Time	The time, in milliseconds, between retransmitted neighbor solicitation messages
Hop Limit	Displays the current hop limit
Link MTU	The MTU number the nodes use for sending packets on the link

The following output is an example of a router advertisement interface, and Table 487: Output fields: router advertisement interface describes the fields.

Output Example

```
show router rtr-advertisement interface "MyExampleInterface"

===============================================================================
Router Advertisement

===============================================================================
```

Table 487: Output fields: router advertisement interface

Label	Description
Rtr Advertisement Tx/ Last Sent	The number of router advertisements sent and time since they were sent
Nbr Solicitation Tx/ Last Sent	The number of neighbor solicitations sent and time since they were sent

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Nbr Advertisement Tx/ Last Sent	The number of neighbor advertisements sent and time since they were sent
Rtr Advertisement Rx	The number of router advertisements received and time since they were received
Rtr Solicitation Rx	The number of router solicitations received and time since they were received
Nbr Advertisement Rx	The number of neighbor advertisements received and time since they were received
Nbr Solicitation Rx	The number of neighbor solicitations received and time since they were received
Max Advert Interval	The maximum interval between sending router advertisement messages
Min Advert Interval	The minimum interval between sending ICMPv6 neighbor discovery router advertisement messages
Managed Config	True — indicates that DHCPv6 has been configured
	False — indicates that DHCPv6 is not available for address configuration
Other Config	True — indicates there are other stateful configurations False — indicates there are no other stateful configurations
Reachable Time	The time, in milliseconds, that a node assumes a neighbor is reachable after receiving a reachability confirmation
Router Lifetime	The router lifetime in seconds
Retransmit Time	The time, in milliseconds, between retransmitted neighbor solicitation messages
Hop Limit	The current hop limit
Link MTU	The MTU number the nodes use for sending packets on the link
ND Router-preference	High — indicates the router advertises a high router default gateway preference Medium — indicates the router advertises a medium default gateway preference Low — indicates the router advertises a low default gateway preference
MAC Addr to Use	The MAC address to use
Creation Origin	The creation origin

23 s Commands – Part I

23.1 s-pmsi

s-pmsi

Syntax

s-pmsi [[**group-ip** *group-ip*][**source-ip** *source-ip*] **detail**]

s-pmsi [*mdSrcAddr* [**mdGrpAddr**]] [[**group-ip** *group-ip*] [**source-ip** *source-ip*] **detail**]

s-pmsi ext-tunnel-id *ext-tunnel-id* [**tunnel-id** *tunnel-id*] [[**group-ip** *group-ip*] [**source-ip** *source-ip*] **detail**]

s-pmsi root-addr *root-addr* [**lsp-id** *lsp-id*] [[**group-ip** *group-ip*] [**source-ip** *source-ip*] **detail**]

s-pmsi bier-root-addr *ip-address* [[**sub-domain** *sub-domain*] [**bfr-id** *bfr-id*] [**mpls-lbl** *mpls-lbl*] **detail**]

Context

[Tree] (show>router>pim s-pmsi)

Full Context

show router pim s-pmsi

Description

This command displays information about selective provider multicast service interfaces that are currently active.

Parameters

group-ip

Displays group IP address information.

source-ip

Displays source IP address information.

mdSrcAddr

Displays source address information of the multicast sender.

mdGrpAddr

Displays group address information of the multicast sender.

ext-tunnel-id

Displays information about the extended tunnel address.

tunnel-id

Displays information about the tunnel identifier.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 4294967295

root-addr

Displays information about the root address.

lsp-id

Displays information about the specified LSP ID.

Values 0 to 4294967295

sub-domain

Displays information about the BIER sub-domain ID.

bfr-id

Displays information about the BIER-ID of the router.

Values 1 to 4096

mpls-lbl

Displays information about the specified MPLS service label.

detail

Displays detailed output.

Platforms

All

Output

The following output is an example of a PIM data MDT configuration. Table 488: Output fields: PIM data MDT provides PIM data MDT descriptions.

Output Example PIM Selective Provider Tunnel

```

===============================================================================
*A:Dut-D#
```

Table 488: Output fields: PIM data MDT

Label	Description
MD Grp Address	The IP multicast group address for which this entry contains information
MD Src Address	The source address of the multicast sender. The value is 0 if the type is configured as **starg**. The address of the Rendezvous Point (RP) displays if the type is configured as **starRP**.
MT Index	The index number
Num VP SGs	The VPN number

s-pmsi

Syntax

s-pmsi [**source** *mdSrcAddr*] [**group** *mdGrpAddr*] [**vprn-source** *vprnSrcAddr* **vprn-group** *vprnGrpAddr*]

Context

[Tree] (clear>router>pim s-pmsi)

Full Context

clear router pim s-pmsi

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears PIM selective provider multicast service interface cache.

Parameters

mdSrcAddr

Clears the specified source address used for Multicast Distribution Tree (MDT).

mdGrpAddr

Clears the specified group address used for Multicast Distribution Tree (MDT).

vprnSrcAddr

Clears the specified source address of the multicast sender.

vprnGrpAddr

Clears the specified multicast group address.

Platforms

All

23.2 s11

s11

Syntax

s11

Context

[Tree] (show>subscr-mgmt>gtp s11)

Full Context

show subscriber-mgmt gtp s11

Description

Commands in this context display information related to established S11 connections.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

s11

Syntax

s11

Context

[Tree] (show>router>gtp s11)

Full Context

show router gtp s11

Description

Commands in this context display S11 information.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

23.3 saa

saa

Syntax

saa [*test-name*] [**owner** *test-owner*]

Context

[Tree] (show saa)

Full Context

show saa

Description

This command displays information about the SAA test.

If no specific test is specified a summary of all configured tests is displayed.

If a specific test is specified then detailed test results for that test are displayed for the last three occurrences that this test has been executed, or since the last time the counters have been reset via a system reboot or clear command.

Parameters

test-name

Specifies the optional parameter is used to enter the name of the SAA test for which the information needs to be displayed. The test name must already be configured in the **config>saa>test** context.

test-owner

Specifies the owner of an SAA operation, up to 32 characters. If a **test-owner** value is not specified, tests created by the CLI have a default owner "TiMOS CLI”.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default "TiMOS CLI"

Platforms

All

Output

The following output is an example of SAA test information. Table 489: Output fields: SAA describes the SAA test fields.

Output Example

```
*A:bksim130>config>saa>test>trap-gen# show saa mySaaPingTest1

Table 489: Output fields: SAA

Label	Description
Test Name	Specifies the name of the test.
Owner Name	Specifies the owner of the test.
Description	Specifies the description for the test type.
Accounting policy	Specifies the associated accounting policy ID.
Administrative status	Specifies whether the administrative status is enabled or disabled.
Test type	Specifies the type of test configured.
Trap generation	Specifies the trap generation for the SAA test.
Test runs since last clear	Specifies the total number of tests performed since the last time the tests were cleared.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Number of failed tests run	Specifies the total number of tests that failed.
Last test run	Specifies the last time a test was run.
Threshold type	Indicates the type of threshold event being tested, jitter-event, latency-event, or loss-event, and the direction of the test responses received for a test run: in — inbound out — outbound rt — roundtrip
Direction	Indicates the direction of the event threshold, rising or falling.
Threshold	Displays the configured threshold value.
Value	Displays the measured crossing value that triggered the threshold crossing event.
Last event	Indicates the time that the threshold crossing event occurred.
Run #	Indicates what test run produced the specified values.

saa

Syntax

saa-test [*test-name* [**owner** *test-owner*]]

Context

[Tree] (clear saa)

Full Context

clear saa

Description

This command clears the SAA results for the latest and the history for this test. If the test name is omitted, all the results for all tests are cleared.

Parameters

test-name

Specifies the name of the SAA test. The test name must already be configured in the **config>saa>test** context.

test-owner

Specifies the owner of an SAA operation up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default If a **test-owner** value is not specified, tests created by the CLI have a default owner "TiMOS CLI".

Platforms

All

23.4 saii-type2-using

saii-type2-using

Syntax

saii-type2-using *global-id*[:*prefix*[:*ac-id*]]

Context

[Tree] (show>service saii-type2-using)

Full Context

show service saii-type2-using

Description

This command displays the SDP used by a spoke SDP FEC with a specified FEC129 Type 2 SAII.

Parameters

global-id[:prefix[:ac-id]]

Specifies the switch-point information using SAII-Type2.

Values <global-id[:prefix*> : <global-id>[:<prefix>[:<ac-id>]]

global-id	1 to 4294967295
prefix	a.b.c.d | 1 to 4294967295
ac-id	1 to 4294967295

Platforms

All

Output

The following output is an example of SAII information.

Output Example

```
*A:Dut-E# show service saii-type2-using 3:10.20.1.3:1

23.5 sap

sap

Syntax

sap {all | *sap-id***}**

Context

[Tree] (show>subscr-mgmt>errors sap)

Full Context

show subscriber-mgmt errors sap

Description

This command sorts all the subscriber errors by SAP.

Parameters

all

Shows all errors starting with the lowest SAP index.

sap-id

Shows only the error of a specific SAP index.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management errors listed by SAP.

Output Example

```
A:BNG-2# show  subscriber-mgmt errors sap all

Context

[Tree] (show>service>id sap)

Full Context

show service id sap

Description

This command displays information for the SAPs associated with the service.

If no optional parameters are specified, a summary of all associated SAPs is displayed.

Parameters

sap-id

The ID that displays SAPs for the service.

detail

Displays detailed information for the SAP. For **dist-cpu-protection**, **detail** includes the adapted operational rate parameters in the CLI output. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.

static-isids

Displays static ISIDs for the SAP.

range-id

Specifies the range ID.

Values 1 to 4294967295

dist-cpu-protection

Displays information about the distributed CPU protection policy and parameters associated with the SAP.

group-name

Specifies the group name, up to 32 characters in length.

encap-id

Specifies the encapsulation ID.

Values 0 to 16777215

encap-detail

Displays encapsulation details for the specified encapsulation ID.

encap-stats

Displays encapsulation statistics.

encap-group

Displays the encapsulation group.

base

Displays base information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dhcp

Displays DHCP information.

mc-ring

Displays MC ring information.

mcac

Displays MCAC information.

mrp

Displays MRP information.

qos

Displays QoS information.

sap-stats

Displays SAP statistics.

stats

Displays statistics.

stp

Displays STP information.

sub-mgmt

Displays subscriber management information.

ipsec-gw

Displays IPSEC gateway information.

circuit-id

Specifies the circuit ID, up to 256 characters.

ieee-address

Specifies the IEEE address, up to 30 characters.

remote-id

Specifies the remote-ID, up to 256 characters.

host-lockout-policy

Displays the host lockout policy.

summary

Displays summary information.

queue-id

Specifies the queue ID.

Values 1 to 32

ingress

Displays ingress information.

egress

Displays egress information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mfib

Displays MFIB information.

queue-group-redirection

The output lists the queue group name and the instances configured in the related queue group redirect list. For each instance, the FP (for ingress) and port (for egress) is displayed. If there is a mismatch between the SAP and redirect list configuration and the queue group instance configuration, this is highlighted.

ingress

Displays information for the ingress policy.

egress

Displays information for the egress policy.

Platforms

All

Output

The following output is an example of SAP information, and Table 491: Output fields: service ID SAP describes the output fields.

Table 491: Output fields: service ID SAP

Label	Description
Service Access Points(SAP)	
Service Id	The service identifier.
SAP	The SAP and qtag.
Encap	The encapsulation type of the SAP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ethertype	Specifies an Ethernet type II Ethertype value.
Admin State	The administrative state of the SAP.
Oper State	The operating state of the SAP.
Flags	Specifies the conditions that affect the operating status of this SAP. Display output includes: ServiceAdminDown, SapAdminDown, Interface AdminDown, PortOperDown, PortMTUTooSmall, L2OperDown, SapIngress QoSMismatch, SapEgressQoSMismatch, RelearnLimitExceeded, RxProtSrc Mac, ParentIfAdminDown, NoSapIpipeCeIpAddr, SapParamMismatch, CemSap NoEcidOrMacAddr, StandByForMcRing, ServiceMTUTooSmall, NoSapEpipeRing Node.
Last Status Change	Specifies the time of the most recent operating status change to this SAP.
Last Mgmt Change	Specifies the time of the most recent management-initiated change to this SAP.
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through the SAP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through the SAP to the far-end router, without requiring the packet to be fragmented.
Restr MacUnpr Dst	The administrative and operational state of the restrict unprotected destination MAC (restrict-unprotected-dst) functionality.
Auto Learn Mac Prot	The administrative and operational state of the protected MAC auto learning (auto-learn-mac-protect) functionality.
RestMacProtSrc Act	The administrative and operational state of the restrict protected source MAC (restrict-protected-src) functionality.
Eth Loopback	Specifies whether Ethernet loopback operations are enabled.
Mode	Specifies whether the associated port or channel is configured in line or internal loopback mode.
MAC Swap	Specifies whether source and destination MAC address swapping is enabled.
MAC Swap Address	Specifies the MAC address.
FXC VLAN normalization mode	The Flexible Cross Connect (FXC) VLAN normalization mode.
PPPoE Intermediate Agent	
Admin State	Specifies the administrative state of the PPPoE Intermediate Agent.
MTU	Specifies the MTU value.
BBF Vendor Specific Tag	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Agent Circuit-id	Specifies the Agent Circuit ID action and value.
Agent Remote-id	Specifies the Agent Remote ID action and value.
Other sub-tags	Specifies the Agent other sub-tag action.
QOS	
Ingress qos-policy	The ingress QoS policy ID assigned to the SAP.
Egress qos-policy	The egress QoS policy ID assigned to the SAP.
Ingress Filter-Id	The ingress filter policy ID assigned to the SAP.
Egress Filter-Id	The egress filter policy ID assigned to the SAP.
Acct. Pol	The accounting policy ID assigned to the SAP.
Collect Stats	Specifies whether collect stats is enabled.
Dropped	The number of packets and octets dropped due to SAP state, ingress MAC or IP filter, same segment discard, bad checksum, etc.
Received Valid	The number of valid packets and octets received on the SAP.
Off. HiPrio	The number of high priority packets and octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
Off. LowPrio	The number of low priority packets and octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
Off. Uncolor	The number of uncolored packets and octets, as determined by the SAP ingress QoS policy, offered by the Pchip to the Qchip.
Dro. HiPrio	The number of high priority packets and octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
Dro. LowPrio	The number of low priority packets and octets, as determined by the SAP ingress QoS policy, dropped by the Qchip due to: MBS exceeded, buffer pool limit exceeded, etc.
For. InProf	The number of in-profile packets and octets (rate below CIR) forwarded by the ingress Qchip.
For. OutProf	The number of out-of-profile packets and octets discarded by the egress Qchip due to MBS exceeded, buffer pool limit exceeded, etc.
Dro. InProf	The number of in-profile packets and octets discarded by the egress Qchip due to MBS exceeded, buffer pool limit exceeded, etc.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Dro. OutProf	The number of out-of-profile packets and octets discarded by the egress Qchip due to MBS exceeded, buffer pool limit exceeded, etc.
For. InProf	The number of in-profile packets and octets (rate below CIR) forwarded by the egress Qchip.
For. OutProf	The number of out-of-profile packets and octets (rate above CIR) forwarded by the egress Qchip.
Ingress TD Profile	The profile ID applied to the ingress SAP.
Egress TD Profile	The profile ID applied to the egress SAP.
Alarm Cell Handling	The indication that OAM cells are being processed.
AAL-5 Encap	The AAL-5 encapsulation type.
Mult Svc Site	Specifies the customer's multiservice site name.
I. Sched Pol	The ingress scheduler policy applied to the customer's multiservice site.
E. Sched Pol	The egress scheduler policy applied to the customer's multiservice site.
HW Agg Shaper Q Set	Whether the hardware aggregate shaper queue sets are in use.
HW Add Shpr QSet Sz	The size of the hardware aggregate shaper queue set.
HW Agg Shpr In-Use	Whether hardware aggregate shapers are in use.
LLF Admin State	Displays the Link Loss Forwarding administrative state.
LLF Oper State	Displays the Link Loss Forwarding operational state.
pw-port	**pw**-*id[:qtag1[.qtag2]]* **pw**-*id[:qtag1[.qtag2]]* pw-2:1.1
DHCP6	
LDRA	The state of the Lightweight DHCPv6 Relay Agent: • Enabled • Disabled
Interface Type	The LDRA interface type: • client-facing • network-facing • N/A
Interface-Id	The format for the Interface ID option: • **ascii-tuple** system name | service ID | sap ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	For example: pe1|3000|1/x1/1/c1/1:2000.10 • **vlan-ascii-tuple** system name | service ID | sap ID | dot1p inner vlan | inner vlan ID For example: pe1|3000|1/x1/1/c1/1:2000.10|0|10 • N/A
Remote-Id	The format for the Remote ID option: • **mac** The DHCPv6 client source MAC address encoded as six hexadecimal numbers • **ASCII string in remote-id field** The configured ascii encoded string • N/A

The following output is an example of distributed CPU Protection Policer Output information and Table 492: Output fields: distributed CPU protection policer describes the output fields.

```

Table 492: Output fields: distributed CPU protection policer

Label	Description
Distributed CPU Protection Policy	The DCP policy assigned to the object.
Policer-Name	The configured name of the static policer
Card/FP	The card and FP identifier. FP identifies the instance of the FP (FastPath) chipset. Some cards have a single FP and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMAs).
Policer-State	The state of the policer with the following potential values:
	Exceed — The policer has been detected as not conforming to the associated DCP policy parameters (for example, packets exceeded the configured rate and the DCP polling process identified this occurrence)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Conform — The policer has been detected as conforming to the associated DCP policy parameters (rate)
	not-applicable — Newly-created policers or policers that are not currently instantiated. This includes policers configured on line cards that are not in service.
Protocols Mapped	A list of protocols that are configured to map to the particular policer.
Oper. xyz fields	The actual hardware may not be able to perfectly rate limit to the exact configured rate parameters in a DCP policy. In this case the configured rate parameters will be adapted to the closest supported rate. These adapted operational values are displayed in CLI when the **detail** keyword is included in the show command. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.
	Oper. Kbps - The adapted "kilobits-per-second” value for DCP "kbps” rates
	Oper. MBS - The adapted "mbs size” value for DCP "kbps” rates
	Oper. Depth - The calculated policer bucket depth in packets (for DCP "packets” rates) or in bytes (for DCP "kbps” rates)
	Oper. Packets - The adapted "ppi” value for DCP "packets” rates
	Oper. Within - The adapted "within seconds” value for DCP "packets” rates
	Oper. Init. Delay - The adapted "initial-delay packets” value for DCP "packets” rates
Exceed-Count	The count of packets exceeding the policing parameters since the given policer was previously declared as conforming or newly-instantiated. This counter has the same behavior as the exceed counter in the DCP the log events, they are baselined (reset) when the policer transitions to conforming.
Detec. Time Remain	The remaining time in the detection-time countdown during which a policer in the exceed state is being monitored to see if it conforms again.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Hold-Down Remain	The remaining time in the hold-down countdown during which a policer is treating all packets as exceeding.
All Dyn-Plcr Alloc.	Indicates that all the dynamic enforcement policers have been allocated and instantiated for a given local-monitor.
Dyn-Policer Alloc.	Indicates that a dynamic policer has been instantiated.

sap

Syntax

sap *sap-id*

Context

[Tree] (clear>service>id sap)

Full Context

clear service id sap

Description

This command clears information for the specified SAP.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition

Platforms

All

sap

Syntax

sap *sap-id* {**all** | **cem** | **counters** | **stp** | **l2pt** | **mrp**}

sap *sap-id* **encap-group** *group-name* [**member** *encap-id*]

Context

[Tree] (clear>service>statistics sap)

Full Context

clear service statistics sap

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears SAP statistics for a SAP.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

all

Clears all SAP queue statistics and STP statistics.

counters

Clears all queue statistics associated with the SAP.

stp

Clears all STP statistics associated with the SAP.

l2pt

Clears all L2PT statistics associated with the SAP.

mrp

Clears all MRP statistics associated with the SAP.

group-name

Specifies the group name, up to 32 characters.

encap-id

Specifies the encapsulation ID.

Values 0 to 16777215

Platforms

All

sap

Syntax

sap [*sap-id*] [**level** *level*] [**primary-vlan-enabled** *vlan-id*]

sap port *port-id* [**level** *level*] [**primary-vlan-enabled** *vlan-id*]

Context

[Tree] (show>eth-cfm>mip-instantiation sap)

Full Context

show eth-cfm mip-instantiation sap

Description

This command displays MIP creation information for SAPs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

level

Specifies the MIP instantiation level.

Values 0 to 7

vlan-id

Specifies the VLAN ID to display.

Values 1 to 4094, or all

port-id

Specifies the port ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap

Syntax

sap *sap-id* [{**ingress** | **egress**}] [{**detail** | **root-detail** | **thresholds** | **priority-info** | **depth**}] [**port** *port-id*] [**arbiter** {*name* | *root* }]

Context

[Tree] (show>qos>policer-hierarchy sap)

Full Context

show qos policer-hierarchy sap

Description

This command displays information about the policer hierarchy per SAP.

Parameters

sap-id

Displays information about the specified SAP.

ingress

Displays ingress SAP information.

egress

Displays egress SAP information.

detail

Displays detailed information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays the threshold, parenting, rate, and traffic information related to a policer.

priority-info

Displays the threshold information related to the root arbiter.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

port-id

Displays information about the specified port.

Values *slot/mda/port*[.*channel*]

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of SAP policer hierarchy information.

Table 493: Output fields: QoS policer hierarchy SAP

Label	Description
Policer Hierarchy - SAP	Displays the SAP ID
slot	Displays the slot number
(A)	An arbiter, an object that is configured in the policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
a3	Displays the name of the arbiter
(P)	Displays the policer name
[Level X Weight XX]	Displays the CIR level and weight configured in the policy
Assigned PIR	Displays the assigned PIR value
Offered	Displays the Offered PIR value
Consumed	Displays the amount of bandwidth consumed by the policer
Assigned FIR	Displays the assigned FIR based on weights of individual policers and the offered traffic

sap

Syntax

sap *sap-id* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}] [**detail**]

sap *sap-id* **encap-group** *group-name* [**scheduler** *scheduler-name*] [**member** *encap-id*] [**detail**]

Context

[Tree] (show>qos>scheduler-hierarchy sap)

Full Context

show qos scheduler-hierarchy sap

Description

This command displays the scheduler hierarchy per SAP.

Parameters

sap-id

Specifies the SAP assigned to the service.

Values The following values apply to the 7750 SR and 7950 XRS:

sap-id	null	[*port-id* | *lag-id*]
	dot1q	[*port-id* | *lag-id*]:*qtag1*
	qinq	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id*]: *qtag1.qtag2*
	port-id	*slot*/*mda*/*port* [.*channel*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

		esat-*id*/*slot*/*port*	
		esat	keyword
		id	1 to 20
		pxc-*id*.*sub-port*	
		pxc	keyword
		id	1 to 64
		sub-port	a, b
	lag-id	lag-id	
		lag	keyword
		id	1 to 800
	qtag1	0 to 4094	
	qtag2	*, 0 to 4094	

Values The following values apply to the 7750 SR only:

sap-id	null	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*]	
	dot1q	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*]:*qtag1*

		lag keyword
		id 1 to 800
	qtag1	0. to 4094
	qtag2	*, 0 to 4094

scheduler-name

The unique scheduler name created in the context of the scheduler policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ingress

The keyword to display ingress SAP scheduler stats.

egress

The keyword to display egress SAP scheduler stats.

group-name

Specifies the name of the encap-group and can be up to 32 ASCII characters.

encap-id

Specifies the value of the single encap-id.

Values 1 to 16777215

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of SAP scheduler hierarchy information, and Table 494: Output fields: QoS scheduler hierarchy SAP describes the SAP scheduler hierarchy fields.

Output Example

```

Table 494: Output fields: QoS scheduler hierarchy SAP

Label	Description
Admin CIR/PIR	Specifies the configured value of CIR/PIR.
Assigned CIR/ PIR	Specifies the PIR/CIR rate given to a member by that parent level.
Offered CIR/ PIR	Specifies the offered load on that member.
Consumed CIR/ PIR	Specifies the amount of scheduler bandwidth used by this member.
S	Displays the scheduler name and information.
Q	Displays the queue ID and information.
P	Displays the policer ID and information.

sap

Syntax

sap *sap-id* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}]

sap *sap-id* **encap-group** *group-name* [**scheduler** *scheduler-name*] [**member** *encap-id*]

Context

[Tree] (show>qos>scheduler-stats sap)

Full Context

show qos scheduler-stats sap

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information about the scheduler stats per SAP.

Parameters

sap-id

Displays information about the SAP and encapsulation value used to identify the SAP.

Values The following values apply to the 7750 SR and 7950 XRS:

sap-id	null	[*port-id* | *lag-id*]	
	dot1q	[*port-id* | *lag-id*]:*qtag1*	
	qinq	[*port-id* | *lag-id*]:*qtag1.qtag2*	
	lag-id	lag-id	
		lag	keyword
		id	1 to 800
	qtag1	0 to 4094	
	qtag2	*, 0 to 4094	
	ipsec-id	ipsec-*id*.[private | public]:*tag*	
		ipsec	keyword
		id	1 to 4
		tag	0 to 4094

Values The following values apply to the 7750 SR only:

sap-id	null	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*]	
	dot1q	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*]:*qtag1*	
	qinq	[*port-id* | *bundle-id* | *bpgrp-id* | *lag-id*]: *qtag1.qtag2*	
	cem	*slot/mda/port.channel*	
	ima-grp	[*bundle-id*[:vpi/vci | vpi | *vpi1.vpi2*]	
	port-id	*slot/mda/port*[.*channel*]	
	aps-id	aps-*group-id*[.*channel*]	
		aps	keyword
		group-id	1 to 64
	ccag-id	ccag-*id.path-id*[*cc-type*]:*cc-id*	
		ccag	keyword

lag-id	lag-*id*	
	lag	keyword
	id	1 to 800
qtag1	0. to 4094	
qtag2	*, 0 to 4094	

scheduler-name

Displays information about the specified schedule.

ingress

Display only the policy displayed on the ingress SAP.

egress

Display only the policy displayed on the egress SAP.

group-name

Specifies the name of the encap-group and can be up to 32 ASCII characters.

encap-id

Specifies the value of the single encap-id.

Values 1 to 16777215

Platforms

All

Output

The following output is an example of scheduler-stats SAP information, and Table 495: Output fields: QoS scheduler stats SAP describes the scheduler-stats SAP fields.

===============================================================================
*A:PE#
```

Table 496: Output fields: H-QoS aggregate rate limit per SAP

Label	Description
AdminRate	Displays the configured aggregate rate in the subscriber profile.
OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the **limit-unused-bandwidth** command is enabled to protect against exceeding the aggregated bandwidth
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

sap

Syntax

sap *sap-id* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}]

Context

[Tree] (clear>qos>scheduler-stats sap)

Full Context

clear qos scheduler-stats sap

Description

This command clears scheduler statistics.

Parameters

sap-id

Specifies the SAP assigned to the service.

sap

Syntax

sap *sap-id* **start** *mode* [**mac-swap**] [**mac** *ieee-address*] [**all**]

sap *sap-id* **stop**

Context

[Tree] (tools>perform>service>id>loopback>eth sap)

Full Context

tools perform service id loopback eth sap

Description

This command places and removes the specific SAP in loopback mode for reflecting Ethernet traffic back in the direction of the received stream. This is only applicable to Ethernet-based SAPs.

Parameters

sap-id

Specifies the SAP ID.

Values

null	*port-id* | lag-*id*	
dot1q	{*port-id* | lag-*id*}:{*qtag1* | cp-*conn-prof-id*	
qinq	{*port-id* | lag-*id*}:{*qtag1* | cp-*conn-prof-id*}.{*qtag2* | cp- *conn-prof-id*}	
	cp: keyword	
	conn-prof-id: 1..8000	
port-id	slot/mda/port [.channel]	
	eth-sat-id	esat-id/slot/port
		esat: keyword
		id: 1 to 20
	pxc-id	pxc-id.sub-port
		pxc pxc-id.sub-port
		pxc: keyword
		id: 1 to 64

sub-port: a, b

lag-id	lag-*id* lag*:* keyword *id*: 1..800
qtag1	0..4094
qtag2	* | null | 0..4094

start

Keyword that places the sap in loopback mode.

mode

Keywords that specify the location on the loopback in relation to the SAP.

Values **ingress** — Traffic arriving at the sap-ingress will be reflected back out the same SAP.

egress — Traffic arriving at the sap-egress will be reflected back into the service in the direction of the original source.

stop

Removes the SAP from loopback mode.

mac-swap

Enable source address and destination address swapping for the reflected packets when the arriving packet is unicast. Any broadcast and multicast packets arriving on a looped point will be dropped.

mac *ieee-address*

Optionally configures the source MAC address used in the reflected packet when the arriving packet is a broadcast or multicast. This does not apply to arriving unicast packets.

6-byte unicast mac-address in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

all

Configured *ieee-address* is used as the source address for all reflected packets regardless of the arriving destination.

Full Context

monitor qos arbiter-stats sap

Description

This command monitors arbiter statistics for a SAP.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

name

Specifies the name of the policer control policy arbiter, up to 32 characters. This parameter is mandatory if the SAP resides on a LAG in adapt-qoslink or port-fair mode.

root

Specifies the arbiter to which this queue would be feeding.

ingress

Displays *scheduler-name* statistics applied on the ingress SAP.

egress

Displays *scheduler-name* statistics applied on the egress SAP.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.

sap

Syntax

sap *sap-id* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>scheduler-stats sap)

Full Context

monitor qos scheduler-stats sap

Description

Use this command to monitor scheduler statistics for a SAP at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified SAP. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

scheduler-name

Specifies an existing *scheduler-name,* up to 32 characters. Scheduler names are configured in the **config>qos>scheduler-policy>tier** *level* context. This parameter is mandatory if the SAP resides on a LAG in adapt-qoslink or port-fair mode.

ingress

Displays *scheduler-name* statistics applied on the ingress SAP.

egress

Displays *scheduler-name* statistics applied on the egress SAP.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Context

[Tree] (monitor>service>id sap)

Full Context

monitor service id sap

Description

This command monitors statistics for a SAP associated with this service.

This command displays statistics for a specific SAP, identified by the *port-id* and encapsulation value, at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the SAP. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

Values null *port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*

© 2026 Nokia.

dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id*:[qtag1| cp-conn-prof-id]	
qinq	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *pw-id*:[qtag1 **cp**-*conn-prof-id*].[qtag2 | **cp**-conn-prof-id]	
	cp	keyword
	conn-prof-id	1 to 8000
cem	*slot/mda/port.channel*	
ima-grp	bundle-id [:vpi/vci | vpi | vpi1.vpi2 | **cp**.*conn-prof-id*]	
	cp	keyword
	conn-prof-id	1 to 8000
port-id	*slot/mda/port*[.channel]	
	esat-*id*/*slot*/*port*	
	pxc-*id*.*sub-port*	
aps-id	**aps**-*group-id*[.channel]	
	aps	keyword
	group-id	1 to 128
ccag-id	**ccag**-*id*.*path-id*[*cc-type*]:*cc-id*	
	ccag	keyword
	id	1 to 8
	path-id	a | b
	cc-type	.sap-net | .net-sap
	cc-id	1 to 4094
eth-tunnel	eth-tunnel-*id*[:*eth-tun-sap-id*]	
	id	1 to 1024
	eth-tun-sap-id	0 to 4094
lag-id	**lag**-*id*	
	lag	keyword
	id	1 to 800
pw-id	**pw**-*id*	
	pw	keyword
	id	1 to 10239
qtag1	* | 0 to 4094	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

qtag2	* | null | 0 to 4094	
tunnel-id	**tunnel**-*id*.*private* | *public*:*tag*	
	tunnel	keyword
	id	1 to 16
	tag	0 to 4094

port-id

Specifies the physical port ID in the *slot/mda/port*, **esat**-*id*/*slot*/ *port* or **pxc**-*id*.*sub-port* format.

If the card in the slot has XMAs/MDAs installed, the *port-id* must be in the slot_number/MDA_number/port_number format. For example, 6/2/3 specifies port 3 on XMA/MDA 2 in slot 6.

bundle-id

Specifies the multilink bundle to be associated with this IP interface. The **bundle** keyword must be entered at the beginning of the parameter. This parameter applies to the 7750 SR.

The command syntax must be configured as follows:

bundle-id: **bundle**-type-slot-id/mda-slot.bundle-num

bundle-id value range: 1 to 128

For example:

```
*A:ALA-12>config#  port bundle-ppp-5/1.1
*A:ALA-12>config>port# multilink-bundle
```

bgprp-id

Specifies the bundle protection group ID to be associated with this IP interface. The **bpgrp** keyword must be entered at the beginning of the parameter. This parameter applies to the 7750 SR.

The command syntax must be configured as follows:

bpgrp-id:	bpgrp-*type-bpgrp-num*
type:	ima
bpgrp-num value range:	1 to 1280

Example:

```
*A:ALA-12>config# port bpgrp-ima-1
*A:ALA-12>config>service>vpls$ sap bpgrp-ima-1
```

qtag1, qtag2

Specifies the encapsulation value used to identify the SAP on the port or sub-port. If this parameter is not specifically defined, the default value is 0.

Values

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

qtag1: 0 to 4094

qtag2 : * | 0 to 4094

The values depends on the encapsulation type configured for the interface. Table 497: qtag values by port and encapsulation type describes the allowed values for the port and encapsulation types.

Table 497: qtag values by port and encapsulation type

Port Type	Encap-Type	Allowed Values	Comments
Ethernet	Null	0	The SAP is identified by the port.
Ethernet	Dot1q	0 to 4094	The SAP is identified by the 802.1Q tag on the port. Note that a 0 qtag1 value also accepts untagged packets on the dot1q port.
Ethernet	QinQ	qtag1: 0 to 4094 qtag2: 0 to 4094	The SAP is identified by two 802.1Q tags on the port. Note that a 0 qtag1 value also accepts untagged packets on the dot1q port.

group-name

Specifies the name of the encap group, up to 32 characters.

encap-id

Specifies the value of the encapsulation ID to be displayed.

Values 0 to 16777215

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays absolute rate-per-second value for each statistic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate

Displays rate-per-second for each statistic instead of the delta.

Table 498: Output fields: QoS SAP egress

Label	Description
Policy-Id	The ID that uniquely identifies the policy.
Scope	Exclusive — Specifies that this policy can only be applied to a single SAP. Template — Specifies that this policy can be applied to multiple SAPs on the router.
Description	A text string that helps identify the policy context in the configuration file.
Queue	
CIR Admin	Specifies the administrative Committed Information Rate (CIR) parameters for the queue. The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
CIR Oper	The operational value derived by computing the CIR value from the administrative CIR and PIR values and their corresponding adaptation rules.
CIR Rule	min — The operational CIR for the queue will be equal to or greater than the administrative rate specified using the rate command except where the derived operational CIR is greater than the operational PIR. If the derived operational CIR is greater than the derived operational PIR, the operational CIR will be made equal to the operational PIR. max — The operational CIR for the queue will be equal to or less than the administrative rate specified using the rate command. closest — The operational CIR for the queue will be the rate closest to the rate specified using the rate command without exceeding the operational CIR.
PIR Admin	Specifies the administrative Peak Information Rate (PIR) parameters for the queue. The PIR defines the maximum rate that the queue can transmit packets through the switch fabric (for SAP ingress queues) or out an egress interface (for SAP egress queues).
PIR Oper	The administrative PIR specified by the user.
PIR Rule	min — The operational PIR for the queue will be equal to or greater than the administrative rate specified using the rate command. max — The operational PIR for the queue will be equal to or less than the administrative rate specified using the rate command. closest — The operational PIR for the queue will be the rate closest to the rate specified using the rate command.
CBS	def — Specifies that the CBS value reserved for the queue. value — Specifies the value to override the default reserved buffers for the queue.
MBS	def — Specifies that the MBS value is set by the def-mbs function. value — Specifies the value to override the default maximum size for the queue.
HiPrio	Specifies the percentage of buffer space for the queue, used exclusively by high-priority packets.
PIR Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level.
CIR Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue in comparison to other child schedulers and queues while vying for bandwidth on the parent scheduler.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue aside from the queue's PIR setting.
FC Name	Specifies the forwarding class queue mapping or dot1p marking is to be edited.
Queue-id	Specifies the *queue-id* that uniquely identifies the queue within the policy.
Explicit/Default	Explicit — Specifies the egress IEEE 802.1p (dot1p) bits marking for *fc-name*. Default — Specifies that the default dot1p value (0) is used.
Service Association	
Service-Id	The unique service ID number that identifies the service in the service domain.
Customer-Id	Specifies the customer ID that identifies the customer to the service.
SAP	Specifies the Service Access Point (SAP) within the service where the policy is applied.
Mirror SAPs	
Mirror Dest	Specifies the mirror service ID that identifies the service in the service domain.
SAP	Specifies the Service Access Point (SAP) within the service where the SAP egress policy is applied.

23.7 sap-ingress

sap-ingress

Syntax

sap-ingress [*policy-id*] [**association** | **match-criteria** | **detail**]

sap-ingress summary

Context

[Tree] (show>qos sap-ingress)

Full Context

show qos sap-ingress

Description

This command displays SAP ingress QoS policy information.

Parameters

policy-id

Displays information about the specific policy ID.

Values 1 to 65535

Default all SAP ingress policies

detail

Displays detailed policy information including policy associations.

summary

Displays SAP ingress policy summary.

Platforms

All

Output

The following output is an example of QoS SAP ingress information, and Table 499: Output fields: QoS SAP ingress describes the output fields.

Output Example

Table 499: Output fields: QoS SAP ingress

Label	Description
Policy-Id	The ID that uniquely identifies the policy.
Scope	Exclusive — Specifies that this policy can only be applied to a single SAP. Template - Specifies that this policy can be applied to multiple SAPs on the router.
Description	A text string that helps identify the policy context in the configuration file.
Default FC	Specifies the default forwarding class for the policy.
Priority	Specifies the enqueuing priority when a packet is marked with a *dot1p-value* specified.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Criteria-type	IP — Specifies that an IP criteria-based SAP ingress policy is used to select the appropriate ingress queue and corresponding forwarding class for matched traffic. MAC — Specifies that a MAC criteria-based SAP is used to select the appropriate ingress queue and corresponding forwarding class for matched traffic.
Mode	Specifies the configured mode of the meter (trTcm or srTcm).
CIR Admin	Specifies the administrative Committed Information Rate (CIR) parameters for the queue. The CIR defines the rate at which the system prioritizes the queue over other queues competing for the same bandwidth.
CIR Oper	The operational value derived by computing the CIR value from the administrative CIR and PIR values and their corresponding adaptation rules.
CIR Rule	min — The operational CIR for the queue will be equal to or greater than the administrative rate specified using the rate command. max — The operational CIR for the queue will be equal to or less than the administrative rate specified using the rate command. closest —The operational CIR for the queue will be the rate closest to the rate specified using the rate command without exceeding the operational CIR.
PIR Admin	Specifies the administrative Peak Information Rate (PIR) parameters for the queue. The PIR defines the maximum rate that the queue can transmit packets through the switch fabric (for SAP ingress queues) or out an egress interface (for SAP egress queues).
PIR Oper	The administrative PIR specified by the user.
PIR Rule	min — The operational PIR for the queue will be equal to or greater than the administrative rate specified using the rate command. max — The operational PIR for the queue will be equal to or less than the administrative rate specified using the rate command. closest — The operational PIR for the queue will be the rate closest to the rate specified using the rate command.
CBS	def — Specifies the default CBS value for the queue. value — Specifies the value to override the default reserved buffers for the queue.
MBS	def — Specifies the default MBS value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	value — Specifies the value to override the default MBS for the queue.
HiPrio	Specifies the percentage of buffer space for the queue, used exclusively by high-priority packets.
PIR Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queue vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation. Weight defines the relative weight of this scheduler in comparison to other child schedulers and queue at the same level.
CIR Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queue when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue in comparison to other child schedulers and queue while vying for bandwidth on the parent scheduler.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue, aside from the queue's PIR setting.
Dot1p	Specifies the forwarding class or enqueuing priority when a packet is marked with a *dot1p-value* specified.
FC	Specifies the forwarding class overrides.
Priority	The optional priority setting overrides the default enqueuing priority for the packets received on an ingress SAP that uses the policy that matches this rule. High — Specifies that the high enqueuing parameter for a packet increases the likelihood of enqueuing the packet when the ingress queue is congested. Low —Specifies that the low enqueuing parameter for a packet decreases the likelihood of enqueuing the packet when the ingress queue is congested.
DSCP	Specifies the forwarding class or enqueuing priority when a packet is marked with the DiffServ Code Point (DSCP) value.
FC	Specifies one of the predefined forwarding classes in the system. When a packet matches the rule, the forwarding class is only overridden when the **fc** *fc-name* parameter is defined on the rule.
Priority	This parameter specifies the default enqueuing priority overrides for all packets received on an ingress SAP using this policy that matches this rule.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	High — Specifies that the high enqueuing parameter for a packet increases the likelihood of enqueuing the packet when the ingress queue is congested. Low — Specifies that the low enqueuing parameter for a packet decreases the likelihood of enqueuing the packet when the ingress queue is congested.
Prec	Specifies the forwarding class or enqueuing priority when a packet is marked with an IP precedence value (*ip-prec-value)*.
UCastQ	Specifies the default unicast forwarding type queue mapping.
MCastQ	Specifies the overrides for the default multicast forwarding type queue mapping.
BCastQ	Specifies the default broadcast forwarding type queue mapping.
UnknownQ	Specifies the default unknown unicast forwarding type queue mapping.
Match Criteria	Specifies an IP or MAC criteria entry for the policy.
Entry	
Source IP	Specifies a source IP address range used for an ingress SAP QoS policy match.
Source Port	Specifies a source TCP or UDP port number or port range used for an ingress SAP QoS policy match.
Protocol	Specifies the IP protocol number to be used for an ingress SAP QoS policy match.
DSCP	Specifies a DiffServ Code Point (DSCP) name used for an ingress SAP QoS policy match.
Fragment	True — Configures a match on all fragmented IP packets. False — Configures a match on all non-fragmented IP packets.
FC	Specifies the entry's forwarding class.
Priority	Specifies the default enqueuing priority overrides for all packets received on an ingress SAP using this policy.
Src MAC	Specifies a source MAC address or range to be used as a Service Ingress QoS policy match.
Dst MAC	Specifies a destination MAC address or range to be used as a Service Ingress QoS policy match.
Dot1p	Specifies a IEEE 802.1p value to be used as the match.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Snap-pid	Specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value to be used as a Service Ingress QoS policy match.
Ethernet-type	Specifies an Ethernet type II Ethertype value to be used as a Service Ingress QoS policy match.
ESnap-oui-zero	Specifies an IEEE 802.3 LLC SNAP Ethernet Frame OUI zero or non-zero value to be used as a Service Ingress QoS policy match.
DSAP	Specifies an Ethernet 802.2 LLC DSAP value or range for an ingress SAP QoS policy match.
SSAP	Specifies an Ethernet 802.2 LLC DSAP value or range for an ingress SAP QoS policy match.
FC	Specifies the entry's forwarding class.
Priority	Specifies the default enqueuing priority overrides for all packets received on an ingress SAP using this policy.
Service Association	
Service-Id	The unique service ID number that identifies the service in the service domain.
Customer-Id	Specifies the customer ID that identifies the customer to the service.
SAP	Specifies the Service Access Point (SAP) within the service where the SAP ingress policy is applied.

23.8 sap-template

sap-template

Syntax

sap-template *template-name* **idle-saps**

Context

[Tree] (clear>subscr-mgmt sap-template)

Full Context

clear subscriber-mgmt sap-template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command deletes any SAPs created with the specified SAP template that are no longer in use by any subscriber sessions.

Parameters

template-name

Specifies the name of a template, up to 256 characters, configured under **configure subscriber-mgmt sap-template**.

idle-saps

Keyword that specifies to delete any idle SAPs associated with this template.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

23.9 sap-using

sap-using

Syntax

sap-using [**msap**] [**dyn-script**] [**description**]

sap-using [**sap** *sap-id*] [**vlan-translation** | **anti-spoof**] [**description**]

sap-using {**ingress** | **egress**} **filter** *any-filter-id*

sap-using {**ingress** | **egress**} **qos-policy** *qos-policy-id* [**msap**]

sap-using etree

Context

[Tree] (show>service sap-using)

Full Context

show service sap-using

Description

This command displays SAP information.

If no optional parameters are specified, the command displays a summary of all defined SAPs.The optional pa rameters restrict output to only SAPs matching the specified properties.

Parameters

ingress

Specifies matching an ingress policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress

Specifies matching an egress policy.

qos-policy-id

The ingress or egress QoS Policy ID for which to display matching SAPs.

Values 1 to 65535, or name of up to 64 characters

any-filter-id

Specifies the ingress or egress filter policy ID for which to display matching SAPs.

Values 1 to 65535, or name of up to 64 characters

sap-id

Specifies the physical port identifier portion of the SAP definition.

dyn-script

Displays dynamic service SAPs information.

msap

Displays MSAPs.

vlan-translation

Displays VLAN translation information.

anti-spoof

Displays anti-spoof information.

Platforms

All

Output

The following output is an example of sap-using using information, and Table 500: Output fields: service SAP describes the output fields.

Output Example

```
*A:Dut-A# show service sap-using

Table 500: Output fields: service SAP

Label	Description
Port ID	The ID of the access port where the SAP is defined
Svc ID	The service identifier
Sap MTU	The SAP MTU value
Ing. QoS	The SAP ingress QoS policy number specified on the ingress SAP
Ing Fltr	The MAC or IP filter policy ID applied to the ingress SAP
Egr. QoS	The SAP egress QoS policy number specified on the egress SAP for the 7450 ESS and 7750 SR only
Egr. Fltr	The MAC or IP filter policy ID applied to the egress SAP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Adm	The administrative state of the SAP
Opr	The operational state of the SAP
SapId	The ID that displays SAPs for the service
Squelch Level	The CFM levels configured for silent discard

23.10 sap-using aarp

sap-using aarp

Syntax

sap-using aarp *aarp-id*

Context

[Tree] (show>service sap-using aarp)

Full Context

show service sap-using aarp

Description

This command displays SAP information for a specific AARP ID.

Parameters

aarp-id

Specifies the AARP ID.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

23.11 sap-using app-profile

sap-using app-profile

Syntax

sap-using app-profile *app-profile-name*

Context

[Tree] (show>service sap-using app-profile)

Full Context

show service sap-using app-profile

Description

This command displays information about SAPs using the specified application profile.

Parameters

app-profile-name

Specifies an existing application profile name created in the **config>app-assure>group>policy** context.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **sap-using app profile** command information.

Output Example

```
*A:ALA-48# show service sap-using app-profile test
===============================================================================
Service Access Point Using Application Profile 'test'

23.12 sap-using transit-policy

sap-using transit-policy

Syntax

sap-using transit-policy ip *transit-ip-policy*

sap-using transit-policy prefix *transit-prefix-policy*

Context

[Tree] (show>service sap-using transit-policy)

Full Context

show service sap-using transit-policy

Description

This command displays SAP information for a specific transit IP policy or transit prefix policy.

Parameters

transit-ip-policy

Specifies the transit IP policy ID.

Values 1 to 65535

transit-prefix-policy

Specifies a transit prefix policy ID.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

23.13 saps

saps

Syntax

saps [**control-session** *acct-session-id*] [**port** *port-id*] [**dynsvc-policy** *policy-name*] [**summary**] [**sap** *sap-id*] [**svc-id** *service-id*]

Context

[Tree] (show>service>dynsvc saps)

Full Context

show service dynamic-services saps

Description

This command displays Dynamic Services SAPs (instances) details.

Note:
This command is not available in the MD-CLI.

Parameters

summary

Displays a summary view only.

acct-session-id

Specifies control session accounting session id.

port-id

Specifies Ethernet port.

policy-name

Specifies dynamic services policy.

sap sap-id

Specifies dynamic services SAP id.

service-id

The service ID of the dynamic service.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic service SAP information.

Output Example

```
# show service dynamic-services saps
===============================================================================
Dynamic Services SAP's
===============================================================================

Table 501: Output fields: dynamic services SAP describes Dynamic Services SAP fields.

Table 501: Output fields: dynamic services SAP

Output field	Description
SAP	The dynamic service SAP ID.
Acct session-ID	The dynamic service accounting session ID.
Acct session-ID control	The control channel accounting session ID.
Service	The dynamic service ID.
Dynamic Services policy	The policy referenced to setup the dynamic service.
Number of scripts executed	The number of times the script was executed for this dynamic service (setup, modify, revert or teardown).
Number of scripts w success	The number of times the script was executed successfully for this dynamic service.
Last script action	The setup, modify, revert, teardown.
Time of last script action	The timestamp of the last script action.
Parameters of last action	The content of the Dynamic Services Script Parameters attribute corresponding with the last action.

Use subject to Terms available at: www.nokia.com/terms.

Output field	Description
Status	RADIUS accounting is enabled or disabled.
Stats type	The type of statistics reported in accounting.
Update interval (minutes)	The time, in minutes, between Accounting Interim Update messages.

23.14 satellite

satellite

Syntax

satellite

Context

[Tree] (clear>system satellite)

Full Context

clear system satellite

Description

Commands in this context clear satellite information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

satellite

Syntax

satellite

Context

[Tree] (show>system satellite)

Full Context

show system satellite

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays a list of configured satellites including information about the satellite's esat-ID or tsat-ID, satellite type, and state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of satellite information.

Output Example

```
A:Dut-A# show system satellite

===============================================================================
Satellite Information
===============================================================================
SatID     Provisioned Type                        Admin         Oper
              Equipped Type (if different)        State         State

23.15 schedule

schedule

Syntax

schedule [*schedule-name*] [**owner** *owner-name*]

Context

[Tree] (show>system>cron schedule)

Full Context

show system cron schedule

Description

This command displays cron schedule parameters.

Parameters

schedule-name

Specifies the scheduler name, up to 32 characters.

owner-name

Specifies the scheduler owner name, up to 32 characters.

Platforms

All

Output

The following output is an example of cron schedule information. The following table describes the output fields.

Output Example

```
A:sim1>show>cron schedule test
===============================================================================
CRON Schedule Information
===============================================================================
Schedule                    : test

Number of schedule failures  : 0
Last schedule failure        : no error
Last failure time            : never
===============================================================================
A:sim1>show>cron
```

Table 502: Output fields: cron schedule

Label	Description
Schedule	Displays the schedule name.
Schedule owner	Displays the owner name of the action.
Description	Displays the schedule's description.
Administrative status	Enabled — The administrative status is enabled. Disabled — Administratively disabled.
Operational status	Enabled — The operational status is enabled. Disabled — Operationally disabled.
Action	Displays the action name.
Action owner	Displays the name of action owner.
Script	Displays the name of the script.
Script owner	Displays the name of the script.
Script owner	Displays the name of the of script owner.
Script source location	Displays the location of scheduled script.
Script results location	Displays the location where the script results have been sent.
Schedule type	Periodic — Displays a schedule which ran at a given interval. Calendar — Displays a schedule which ran based on a calendar. Oneshot — Displays a schedule which ran one time only.
Interval	Displays the interval between runs of an event.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Next scheduled run	Displays the time for the next scheduled run.
Weekday	Displays the configured weekday.
Month	Displays the configured month.
Day of Month	Displays the configured day of month.
Hour	Displays the configured hour.
Minute	Displays the configured minute.
Number of scheduled runs	Displays the number of scheduled sessions.
Last scheduled run	Displays the last scheduled session.
Number of scheduled failures	Displays the number of scheduled sessions that failed to execute.
Last scheduled failure	Displays the last scheduled session that failed to execute.
Last failure time	Displays the system time of the last failure.

23.16 scheduler-hierarchy

scheduler-hierarchy

Syntax

scheduler-hierarchy

Context

[Tree] (show>qos scheduler-hierarchy)

Full Context

show qos scheduler-hierarchy

Description

This command displays scheduler-hierarchy information.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

23.17 scheduler-name

scheduler-name

Syntax

scheduler-name *scheduler-name*

Context

[Tree] (show>qos scheduler-name)

Full Context

show qos scheduler-name

Description

This command displays the scheduler policies using the specified scheduler.

Parameters

scheduler-name

The name of a scheduler configured in the **config>qos>scheduler-policy>tier** context.

Platforms

All

Output

The following output is an example of scheduler name information.

Output Example

```
A:ALA-12# show qos scheduler-name NetworkControl
===============================================================
Scheduler : NetworkControl
===============================================================
Scheduler Policy   : SLA1
Scheduler Policy   : alpha
Scheduler Policy   : beta
===============================================================
A:ALA-12#

23.18 scheduler-policy

scheduler-policy

Syntax

scheduler-policy [*scheduler-policy-name*] [**association** | **sap-ingress** *policy-id* | **sap-egress** *policy-id*]

scheduler-policy *scheduler-policy-name* { **ingress** | **egress**} **queue-group** *queue-grp-name*

Context

[Tree] (show>qos scheduler-policy)

Full Context

show qos scheduler-policy

Description

Use this command to display scheduler policy information.

Parameters

scheduler-policy-name

The name of a scheduler policy configured in the **config>qos>scheduler-policy** context.

association

Displays the associations related to the specified scheduler name.

sap-ingress *policy-id*

Specifies the SAP ingress QoS policy information.

sap-egress *policy-id*

Specifies the SAP egress QoS policy information.

{ingress | egress}

Specifies the direction to display and are mutually exclusive.

queue-grp-name

Displays information for the specified queue group.

Platforms

All

Output

The following output is an example of scheduler policy information, and Table 503: Output fields: QoS scheduler policy describes the customer scheduler hierarchy fields.

Output Example

```
A:ALA-12# show qos scheduler-policy SLA1
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```

Table 503: Output fields: QoS scheduler policy

Label	Description
Policy-Name	Specifies the scheduler policy name.
Description	Specifies a text string that helps identify the policy context in the configuration file.
Tier	Specifies the level of hierarchy that a group of schedulers are associated with.
Scheduler	Specifies the scheduler name.
Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation. Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level.
Cir Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue in comparison to other child schedulers and queues while vying for bandwidth on the parent scheduler.
PIR	Specifies the PIR rate.
CIR	Specifies the CIR rate.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue aside from the PIR setting of the queue.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Service-Id	Specifies the ID that uniquely identifies the policy.
Customer-Id	Specifies the ID that uniquely identifies the customer.
SAP	Specifies the Service Access Point (SAP) within the service where the policy is applied.
Multi Service Site	Specifies the multiservice site name.
Orphan Queues	Specifies the number of queues in an orphaned state.
Hierarchy	Displays the scheduler policy tree structure.

23.19 scheduler-stats

scheduler-stats

Syntax

scheduler-stats

Context

[Tree] (clear>qos scheduler-stats)

Full Context

clear qos scheduler-stats

Description

This command clears scheduler statistics.

Label	Description
Max running allowed	Displays the maximum number of allowed sessions.
Max completed run histories	Displays the maximum number of sessions previously run.
Max lifetime allowed	Displays the maximum amount of time the script may run.
Completed run histories	Displays the number of completed sessions.
Executing run histories	Displays the number of sessions in the process of executing.
Initializing run histories	Displays the number of sessions ready to run/queued but not executed.
Max time tun history saved	Displays the maximum amount of time to keep the results from a script run.
Last change	Displays the system time a change was made to the configuration.
Script start error	Displays the error found while executing the script.
Max row empire time	Reserved for SNMP.
Last application	Displays the last application used to execute the script.
Last auth. user account	Displays the last user used to execute the script. If no user is specified in "configure system cli-script authorization event-handler/cron" then the user is not specified.

23.25 sctp-filter

sctp-filter

Syntax

sctp-filter *sctp-filter-name*

Context

[Tree] (show>app-assure>group sctp-filter)

Full Context

show application-assurance group sctp-filter

Description

This command displays Stream Control Transmission Protocol (SCTP) filter information

Parameters

sctp-filter-name

Specifies an SCTP filter, up to 256 characters. When a filter is specified, all traffic is examined as described in the tmnxBsxSctpFltrTable.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

23.26 sdp

sdp

Syntax

sdp all | *sdp-id:vc-id*

Context

[Tree] (show>subscr-mgmt>errors sdp)

Full Context

show subscriber-mgmt errors sdp

Description

This command sorts all the subscriber errors by SDP.

Parameters

all

Shows all errors beginning with the lowest SDP index.

sdp-id:vc-id

Shows only the error of a specific SDP index.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

Table 506: Output fields: subscriber management SDP error describes subscriber management SDP error output fields.

Table 506: Output fields: subscriber management SDP error

Field	Description
SDP	The SDP ID associated with the error
Time	The time this error was reported to the subscriber management errors subsystem
Service	The service ID associated with the error
MAC	The MAC address associated with the error
Error	The error that occurred on the SDP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Extra	Extra information about the error that occurred

sdp

Syntax

sdp [*sdp-id* [*:vc-id*]] [**detail**]

sdp far-end {*ip-address* | *ipv6-address*} [**detail**]

sdp *sdp-id* [*vc-id*] **l2tpv3**

sdp *sdp-id* [*:vc-id*] **static-isids** [**range-id** *range-id*]

sdp *sdp-id* [*:vc-id*] **static-isids mfib**

sdp *sdp-id* [*:vc-id*] [**detail**] **vccv-bfd** [**session**]

sdp *sdp-id* [*:vc-id*] **mrp**

Context

[Tree] (show>service>id sdp)

Full Context

show service id sdp

Description

Displays information for the SDPs associated with the service. If no optional parameters are specified, a summary of all associated SDPs is displayed.

Parameters

sdp-id [:vc-id]

Displays only information for the specified SDP ID.

Values sdp-id: 1 to 17407
vc-id: 1 to 4294967295

Default all SDPs

detail

Displays detailed SDP information.

ip-address* | *ipv6-address

Displays only SDPs matching the specified far-end IP address; 64 characters maximum.

Default SDPs with any far-end IP address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

l2tpv3

Indicates that the user wants to display L2TPv3-specific information for SDPs that are of type l2tpv3.

static-isids

Specifies the I-Component service IDs created on the SDP.

range-id

Displays the service using the specified I-component Service ID (ISID).

Values 1 to 4294967295

mfib

Display MFIB-related information. This parameter applies only to the 7450 ESS or 7750 SR only.

vccv-bfd

Displays detailed information about the VCCV BFD session for a spoke SDP.

session

Displays a summary of all VCCV sessions.

mrp

Displays detailed MRP information.

Platforms

All

Output

The following command displays SDP information and Table 507: Output fields: service ID SDP describes the output fields.

```
show service id sdp
```

Output Example

```

Table 507: Output fields: service ID SDP

Label	Description
Sdp Id	The SDP identifier
Type	Indicates whether the SDP is a spoke or a mesh
Split Horizon Group	Name of the split-horizon group that the SDP belongs to
VC Type	Displays the VC type: ether or vlan
VC Tag	Displays the explicit dot1Q value used when encapsulating to the SDP far end
Oper VC Tag	Displays the operational VLAN VC tag in use on the SDP binding. This value can differ from the configured VC Tag.
I. Lbl	The VC label used by the far-end device to send packets to this device in this service by the SDP
Admin Path MTU	The operating path MTU of the SDP is equal to the admin path MTU (when one is set) or the dynamically computed tunnel MTU, when no admin path MTU is set (the default case)
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Far End addr/Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS
Adm/Admin State	The administrative state of this SDP
Adv Service MTU	Displays the configured advertise service MTU value (for Epipe services only)
Opr/Oper State	The operational state of this SDP
I.Lbl/Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP
E.Lbl/Egress Label	The label used by this device to send packets to the far-end device in this service by the SDP
BFD Template	The BFD template name
BFD-Enabled	The BFD enabled status
BFD-Encap	The BFD encapsulation type
BFD Fail Action	The BFD fail action
BFD Oper State	The BFD operational state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
BFD WaitFor UpTimer	The BFD wait for up timer value
Last Changed	The date and time of the most recent change to the SDP
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP
Admin State	The administrative state of the keepalive process
Oper State	The operational state of the keepalive process
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP
Max Drop Count	Specifies the maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state
I. Fwd. Pkts.	Specifies the number of forwarded ingress packets
I. Dro. Pkts.	Specifies the number of dropped ingress packets
E. Fwd. Pkts.	Specifies the number of forwarded egress packets
Associated LSP List	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far end field If the SDP type is GRE, then the following message displays: SDP delivery mechanism is not MPLS

sdp

Syntax

sdp *sdp-id* **pw-port** [*pw-port-id*] [**statistics**]

sdp [**consistent** | **inconsistent** | **na**] **egressifs**

sdp *sdp-id* **keep-alive-history**

sdp far-end {*ip-address* | *ipv6-address*} **keep-alive-history**

sdp [*sdp-id*] [**detail**]

sdp far-end {*ip-address* | *ipv6-address*} [**detail**]

Context

[Tree] (show>service sdp)

Full Context

show service sdp

Description

This command displays SDP information.

If no optional parameters are specified, a summary SDP output for all SDPs is displayed.

Parameters

sdp-id

Specifies the SDP ID for which to display information.

Values 1 to 32767

Default all SDPs

far-end *ip-address*

Displays only SDPs matching with the specified far-end IPv4 address.

Default SDPs with any far-end IP address

far-end *ipv6-address*

Displays only SDPs matching with the specified far-end IPv6 address.

Default SDPs with any far-end IP address

detail

Displays detailed SDP information.

Default SDP summary output

keep-alive-history

Displays the last fifty SDP keepalive events for the SDP.

Default SDP summary output

consistent

Specifies that the network domain for all egress network interfaces that can carry traffic on this SDP are consistent.

inconsistent

Specifies that the network domain for one or more egress network interfaces that can carry traffic on this SDP are inconsistent.

na

Specifies that there is no egress network interface that can carry traffic on this SDP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egressifs

Specifies whether all egress network interfaces that can carry traffic on this SDP are associated with the network domain configured on this SDP.

pw-port *pw-port-id*

Displays the SAP identifier for PW-SAPs.

Platforms

All

Output

The following output is an example of SDP information, and Table 508: Output fields: service SDP describes the output fields.

Output Example

```

Table 508: Output fields: service SDP

Label	Description
SDP Id	The SDP identifier
Description	Text string describing the SDP
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented. The default value of zero indicates that the path MTU should be computed dynamically from the corresponding MTU of the tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Opr Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented. To be able to bind this SDP to a specific service, the value of this object minus the control word size (if applicable) must be equal to or larger than the MTU of the service, as defined by its service MTU.
Far End	The far end IP address.
Local End	The local end IP address
Delivery	The type of delivery used by the SDP: GRE or MPLS
IP address	The IP address of the remote end of the GRE or MPLS tunnel defined by this SDP
Adm Admin State	The desired state of the SDP
Opr Oper State	The operating state of the SDP
Flags	All the conditions that affect the operating status of this SDP
Signal Signaling	The signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on the SDP
Last Status Change	The time of the most recent operating status change to this SDP.
Adv. MTU Over	Specifies whether the advertised MTU of a VLL spoke SDP bind includes the 14-byte Layer 2 header, so that it is backward compatible with pre-2.0 software
Last Mgmt Change	The time of the most recent management-initiated change to this SDP
KeepAlive Information	This section displays Keepalive information.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP
Hello Msg Len	The length of the SDP echo request messages transmitted on this SDP
Hello Timeout	The number of seconds to wait for an SDP echo response message before declaring a timeout
Unmatched Replies	The number of SDP unmatched message replies timer expired
Max Drop Count	The maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault
Hold Down Time	The amount of time to wait before the keepalive operating status is eligible to enter the alive state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
TX Hello Msgs	The number of SDP echo request messages transmitted since the keepalive was administratively enabled or the counter was cleared
Rx Hello Msgs	The number of SDP echo request messages received since the keepalive was administratively enabled or the counter was cleared
Associated LSP List	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far-end field. If the SDP type is GRE, the following message displays: SDP Delivery Mechanism is not MPLS.
Lsp Name	The LSP name
Time Since Last Transaction	The time of the last transaction
Signaling	The signaling type
Collect Stats	Specifies whether the agent collects accounting statistics for this SDP. When the value is true, the agent collects accounting statistics on this SDP.
VLAN VC Etype	The VLAN VC type
BW Booking Factor	The value used to calculate the max SDP available bandwidth. The value specifies the percentage of the SDP max available bandwidth for VLL call admission. When the value of is set to zero (0), no new VLL spoke-SDP bindings with non-zero bandwidth are permitted with this SDP. Overbooking, >100% is allowed.
PBB Etype	The Ethertype used in frames sent out on this SDP when specified as **vlan** for Provider Backbone Bridging frames
Oper Max BW (Kbps)	The operational bandwidth in kilobits per seconds (kb/s) available for this SDP. The value is determined by the sum of the bandwidth of all the RSVP LSPs used by the SDP.
Avail BW (Kbps)	The bandwidth that is still free for booking by the SDP bindings on the SDP
Net-Domain	The network-domain name configured on this SDP. The default value of this object is the default network-domain.
Egr Interface	Indicates whether all the egress network interfaces that can carry traffic on this SDP are associated with the network-domain configured on this SDP. Not applicable — Indicates that there is no egress network interface that can carry traffic on this SDP. Consistent — Indicates that the network-domains for all the egress network interfaces that can carry traffic on this SDP are consistent.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Inconsistent — Indicates that the network-domain for one or more egress network interfaces that can carry traffic on this SDP are inconsistent.
Revert Time	The time to wait before reverting back from LDP to the configured LSPs, after having failed over to LDP
Revert Count Down	The timer countdown before reverting back from LDP on this SDP. The timer countdown begins after the first configured LSP becomes active.
Flags	Displays all the conditions that affect the operating status of this SDP.
Class Forwarding	Indicates the admin state of class-based forwarding on this SDP. When the value is "true", class-based forwarding is enabled.
EnforceDSTELspFc	Specifies whether service manager must validate with RSVP the support of the FC by the LSP
Default LSP	The LSP ID that is used as a default when class-based forwarding is enabled on this SDP. This object must be set when enabling class-based forwarding.
Multicast LSP	The LSP ID that all multicast traffic will be forwarded on when class-based forwarding is enabled on this SDP. When this object has its default value, multicast traffic will be forwarded on an LSP according to its forwarding class mapping.
Number of SDPs	The metric to be used within the Tunnel Table Manager for decision making purposes. When multiple SDPs going to the same destination exist, this value is used as a tie-breaker by Tunnel Table Manager users like MP-BGP to select a route with lower value.

sdp

Syntax

sdp *sdp-id* **keep-alive**

sdp *sdp-id* **pw-port** *sdp-id*

Context

[Tree] (clear>service>statistics sdp)

Full Context

clear service statistics sdp

Description

This command clears keep-alive statistics associated with the SDP ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sdp-id

The SDP ID for which to clear keepalive statistics.

Values 1 to 32767

keep-alive

Clears keep-alive information associated with the SDP ID. The keep-alive history is not cleared.

Platforms

All

sdp

Syntax

sdp [*sdp-id*[*:vc-id*]] [**level** *level*] [**primary-vlan-enabled** *vlan-id*]

Context

[Tree] (show>eth-cfm>mip-instantiation sdp)

Full Context

show eth-cfm mip-instantiation sdp

Description

This command displays MIP creation information for SDP bindings.

Parameters

sdp-id

Specifies the value identifying the SDP.

Values 1 to 32767

vc-id

Specifies the value identifying the virtual circuit identifier.

Values 1 to 4294967295

level

Displays the MD level of the maintenance point.

Values 0 to 7

vlan-id

Specifies the Dot1Q VLAN ID.

Values T0 to 4095, all

Syntax

sdp *sdp-id:vc-id* [**test-service-id** *service-id*] **start**

sdp *sdp-id:vc-id* **stop**

Context

[Tree] (tools>perform>service>id>admin-lock>pw sdp)

Full Context

tools perform service id admin-lock pw sdp

Description

This command specifies the spoke SDP binding to which an administrative lock will be applied for the MPLS-TP pseudowire. The administrative lock can be placed on a spoke SDP that is bound to a VLL SAP, another spoke SDP or a VPLS interface. Once the pseudowire is locked it may be put into loopback mode. The command must be executed at both ends of the pseudowire or MS-PW represented by the spoke SDP. Test traffic can then be injected using a configured test SAP on an Epipe, Apipe or Cpipe.

Parameters

sdp-id:vc-id

Specifies the SDP-ID and VC-ID.

Values sdp-id 1 to 17407]
vc-id1 to 4294967295]

test-service-id

Keyword that specifies the ID of a test service (SAP) to which the SDP is bound.

Platforms

tools perform service id loopback eth sdp

Description

This command places the specific MPLS SDP binding in loopback mode for reflecting Ethernet traffic back in the direction of the received stream. This is only applicable to MPLS SDP Bindings.

Parameters

sdp-id:vc-id

Specifies the SDP ID and VC-ID.

Values sdp-id 1 to 17407

vc-id1 to 4294967295

start *mode*

Specifies the loopback in relation to the MPLS SDP Binding.

Values **ingress** — Traffic arriving at the sap-ingress will be reflected back out the same **sap**.

egress — Traffic arriving at the sap-egress will be reflected back into the service in the direction of the original source.

stop

Keyword that removes the MPLS SD-binding from loopback mode.

mac-swap

Enable source address and destination address swapping for the reflected packets when the arriving packet is unicast. Any broadcast and multicast packets arriving on a looped point will be dropped.

mac *ieee-address*

Optionally configure the source MAC address used in the reflected packet when the arriving packet is a broadcast or multicast. This does not apply to arriving unicast packets.

Values 6-byte unicast mac-address in the form

xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

all

Configured ieee-address is used as the source address for all reflected packets regardless of the arriving destination.

mac-swap

No swapping of MAC addresses are performed without specifying this option and any non-unicast destined packets will not be reflected back to the source.

sdp

Syntax

sdp *sdp-id:vc-id* {**start** | **stop**}

Context

[Tree] (tools>perform>service>id>loopback>pw sdp)

Full Context

tools perform service id loopback pw sdp

Description

This command places or removes the specified MPLS-TP SDP binding in loopback mode for the purpose of an MPLS-TP pseudowire test service.

Note:
The loopback is created at the PW level so everything under the PW label is looped back. It is recommended to configure an administrative lock for the MPLS-TP pseudowire for the specified test service prior to configuring the loopback.

Parameters

sdp-id:vc-id

Specifies the SDP-ID and VC-ID.

Values sdp-id 1 to 17407
vc-id1 to 4294967295

start

Keyword that places the specified MPLS-TP PW in loopback mode for the purpose of an MPLS_TP PW test service.

stop

Keyword that removes the SDP binding from the loopback mode for the MPLS-TP pseudowire test service.

Platforms

All

sdp

Syntax

sdp {*sdp-id* [*:vc-id*] | **far-end** *ip-address*} [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (monitor>service>id sdp)

Full Context

monitor service id sdp

Description

This command monitors statistics for an SDP binding associated with this service.

Parameters

sdp-id

Specifies the SDP identifier.

Values sdp-id: 1 to 17407
vc-id: 1 to 4294967295

ip-address

Specifies the system address of the far-end router for the SDP in dotted decimal notation. The string may be up to 32 characters.

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays absolute rate-per-second value for each statistic.

rate

Displays rate-per-second for each statistic instead of the delta.

show service sdp-using

Description

This command displays services using SDP or far-end address options.

Parameters

node-id

Specifies the node ID.

Values a.b.c.d, 1 to 4294967295

global-id

Specifies the global ID.

Values 1 to 4294967295

aarpID

Specifies the AARP instance ID.

Values 1 to 65535

app-profile-name

32 characters max.

sdp-id

Displays only services bound to the specified SDP ID.

Values 1 to 17407

vc-id

The virtual circuit identifier.

Values 1 to 4294967295

ip-address

Displays only services matching with the specified far-end IP address. 64 characters maximum.

Default Services with any far-end IP address.

ipv6-address

Displays only services matching with the specified far-end IPv6 address. 64 characters maximum.

transit-ip-policy

Specifies a transit IP policy ID.

Values 1 to 65535

transit-prefix-policy

Specifies a transit prefix policy ID.

show service id segment-routing-v6

Description

This command displays SRv6 service information.

Parameters

instance

Specifies the instance ID for display.

Values 1 to 2

locator-name

Specifies the locator name for display, up to 64 characters.

end-dt4

Displays the End.DT4 function associated with the SRv6 instance in the service.

end-dt6

Displays the End.DT6 function associated with the SRv6 instance in the service.

end-dt46

Displays the End.DT46 function associated with the SRv6 instance in the service.

end-dx2

Displays the End.DX2 function associated with the SRv6 instance in the service.

end-dt2u

Displays the End.DT2U function associated with the SRv6 instance in the service.

end-dt2m

Displays the End.DT2M function associated with the SRv6 instance in the service.

destinations

Specifies that all destinations for display are included.

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example,ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':',' ').

ms-locator-name

Specifies the micro-segment locator name for display, up to 64 characters.

udt4

Displays the uDT4 function associated with the SRv6 instance in the service.

Displays the uDT46 function associated with the SRv6 instance in the service.

udx2

Displays the uDX2 function associated with the SRv6 instance in the service.

udt2u

Displays the uDT2U function associated with the SRv6 instance in the service.

udt2m

Displays the uDT2M function associated with the SRv6 instance in the service.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

Output

Table 510: Output fields: SRv6 instance describes the SRv6 instance field descriptions.

Output Example

Use the following command to display SRv6 instance and destination information.

```
show service id "bd-1900-srv6" segment-routing-v6 instance 1 destinations
```

```
===============================================================================

Table 510: Output fields: SRv6 instance

Field	Description
Locator	The locator name
Type	The type
Function	The function
SID	The segment ID
Status	The status
Instance	The instance
Mcast	The multicast value
TEP Address	The tunnel endpoint IP address
Segment Id	The segment ID
L2 PBR	The layer 2 policy based routing value
EvpnStatic	The EVPN static value
SupBcasDom	The Sup BCast Domain value
Num MACs	The number of MACs
Number of TEP, SID	The total number of TEP and SIDs

23.38 send-force-renew

send-force-renew

Syntax

send-force-renew *ip-address*

Context

[Tree] (tools>perform>router>dhcp>server send-force-renew)

Full Context

tools perform router dhcp local-dhcp-server send-force-renew

Description

This command sends a DHCP FORCERENEW message on behalf of the DHCP server to the DHCP client with specified IP address. A DHCP lease with the specified IP address must exist in the DHCP server.

Parameters

ip-address

Specifies the DHCP client's IP address in dotted notation a.b.c.d.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

23.39 sensor-group

sensor-group

Syntax

sensor-group *name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sensor-group

Context

[Tree] (show>system>telemetry sensor-group)

Full Context

show system telemetry sensor-group

Description

This command displays the sensor group information.

Parameters

name

Specifies the sensor group name, up to 32 characters.

Platforms

All

Output

The following output is an example of telemetry sensor group information and Table 513: Output fields: sensor group describes the output fields.

Output Example

```
# show system telemetry sensor-group
===============================================================================
Telemetry sensor-groups
===============================================================================
Name                                                          Valid   Invalid
                                                              paths     paths
-------------------------------------------------------------------------------
miro                                                          1        0
-------------------------------------------------------------------------------
No. of Telemetry sensor-groups: 1
===============================================================================
```

Table 513: Output fields: sensor group

Label	Description
Name	Displays the name of the telemetry sensor group name.
Valid paths	Displays the number of valid sensor group paths.
Invalid paths	Displays the number of invalid sensor group paths.
No. of Telemetry sensor-groups	Displays the total number of telemetry sensor groups.

server

Syntax

server all

server capability

server prefix *ip-prefix/prefix-length*

server

Context

[Tree] (show>test-oam>twamp server)

Full Context

show test-oam twamp server

Description

This command displays TWAMP server information.

Parameters

all

Displays all server information.

ip-prefix/prefix-length

Specifies the IP address prefix of the TWAMP server.

Values

ipv4-address:	a.b.c.d (host bits must be 0)
ipv4-prefix-length	0 to 32
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

capability

Displays the modes referenced or supported by the TWAMP server, with an RFC reference where those modes are defined.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Table 514: Output fields: server statistics describes server stats show command output fields.

Table 514: Output fields: server statistics

Field	Description
RX Discover Packets	The number of discover packets received by the DHCP server instance
Rx Request Packets	The number of request packets received by the DHCP server instance.
Rx Release Packets	The number of released packets received by the DHCP server instance
Rx Decline Packets	The number of declined packets received by the DHCP server instance
Rx Inform Packets	The number of inform packets received by the DHCP server instance
Tx Offer Packets	The number of offer packets sent by the DHCP server instance
Tx Ack Packets	The number of DHCP ACK packets sent by the DHCP server instance
Tx Nak Packets	The number of DHCP NAK packets sent by the DHCP server instance
Tx Forcerenew Packets	The number of DHCP force renew packets sent by the server instance
Client Ignored Offers	The number of DHCP offer packets sent by the DHCP server instance that were ignored by clients
Leases Timed Out	The number of leases timed out
Dropped Bad Packet	The number of dropped of DHCP packets received that were corrupt
Dropped Invalid Type	The number of DHCP packets received that had an invalid message type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Dropped No User Database	The number of DHCP packets dropped because the value of this server instance is not equal to the default value and a local user database with that name could not be found
Dropped Unknown Host	The number of DHCP packets dropped from hosts which were not found in the user database
Dropped User Not Allowed	The number of DHCP packets dropped from hosts which are found in the user database, but which have no address or pool specified
Dropped Lease Not Ready	The number of DHCP packets dropped by the server instance before the lease database was ready
Dropped Lease Not Found	The number of DHCP packets dropped by the server instance because no (valid) lease was found
Dropped Not Serving Pool	The number of DHCP packets dropped by the server instance because there were no more free addresses in the pool
Dropped Invalid User	The number of DHCP packets dropped by the server instance because the MAC address of the sender or the option 82 didn't match the host lease state
Dropped Overload	The number of DHCP packets dropped by the server instance because they were received more than the server instance can handle
Dropped Persistence Overload	The number of DHCP packets dropped by the server instance because they were received in more than the DHCP persistence system can handle. If this occurs, only releases and declines are still processed.
Dropped Generic Error	The number of DHCP packets dropped by the server instance because of a generic error
Dropped Destined To Other	The number of DHCP requests dropped by the server instance because the (broadcast) request was not destined to this server
Dropped Address Unavailable	The number of DHCP requests dropped by the server instance because the requested address is not available
Dropped Max Leases Reached	The number of DHCP packets dropped by the server instance because the maximum number of leases was reached
Dropped Server Shutdown	The number of DHCP packets dropped by the server instance during server instance shutdown

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Dropped No Subnet for Fixed IP	The number of DHCP packets dropped by the server instance for user-db hosts with a fixed address because the subnet to which the address belongs is not configured

23.48 service-test

service-test

Syntax

service-test *service-test-name* **run** *run-number*

Context

[Tree] (show>test-oam>sath service-test)

Full Context

show test-oam service-activation-testhead service-test

Description

This command displays the results and configuration for the specified Y.1564 service activation test run.

Parameters

service-test-name

Specifies the service test name, up to 64 characters.

run-number

Specifies a particular instance of the service test for which to display results.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of service test configuration information, and Table 517: Output fields: service test describes the output fields:

Output example (service test still running)

```

Table 517: Output fields: service test

Label	Description
Description	Displays the service test or service stream description
Oper State	running — the specified service test or service stream is running passed — the specified service test or service stream is complete and has passed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Start Time	Displays the date and time that the specified service test or service stream was started
End Time	Displays the date and time that the specified service test or service stream was completed
Stream Run Type	Sequential — the streams are run consecutively Parallel — the streams are run in parallel
Acct Policy	Displays the accounting policy
Acct Policy Status	Displays the accounting policy status
Completion Notif'n	disabled — the service test completion notification is disabled enabled — the service test completion notification is enabled
Source MEP	Displays the source MEP
MEP Domain	Displays the MEP domain
MEP Assoc.	Displays MEP associations
Source SAP	Displays the source SAP
Source MAC	Displays the source MAC address
Dest MAC	Displays the destination MAC address
Pattern (Dec)	Displays the data pattern, in decimal notation
Pattern (Hex)	Displays the data pattern, in hexidecimal notation
C-Tag Dot1p	Displays the C-tag dot1p priority value for the VLAN
C-Tag DEI	true — the C-tag DEI is enabled false — the C-tag DEI is disabled
S-Tag Dot1p	Displays the S-tag dot1p priority value for the VLAN
S-Tag DEI	true — the S-tag DEI is enabled false — the S-tag DEI is disabled
Frm Size Tmpl	Displays the frame size template, in bytes
Frm Sequence	Displays the frame sequence
Frame Size a	Displays the frame size, in bytes, for template a
Frame Size b	Displays the frame size, in bytes, for template b

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Frame Size c	Displays the frame size, in bytes, for template c
Frame Size d	Displays the frame size, in bytes, for template d
Frame Size e	Displays the frame size, in bytes, for template e
Frame Size f	Displays the frame size, in bytes, for template f
Frame Size g	Displays the frame size, in bytes, for template g
Frame Size h	Displays the frame size, in bytes, for template h
Frame Size u	Displays the frame size, in bytes, for template u
Confg Tx Cir	Displays the transmitted CIR configured
Confg Tx Pir	Displays the transmitted PIR configured
Acp Crit Templ.	Displays the acceptance criteria template
Test Types	Displays the configured test type
Complet Notif	enabled — the stream completion trap is enabled disabled — the stream completion trap is disabled
Test Duration	Displays the duration, in minutes and seconds, of the test for the service streams
Time Left	Displays the amount of time left to the test for the service stream
Frms Injected	Displays the total number of frames injected
Frms Received	Displays the total number of frames received
Min Delay (us)	Displays the minimum delay
Max Delay (us)	Displays the maximum delay
Avg. Delay (us)	Displays the average delay
Min Delay Var. (us)	Displays the minimum delay variation
Max Delay Var. (us)	Displays the maximum delay variation
Avg. Delay Var. (us)	Displays the average delay variation
M-factor (kbps)	Displays the M-factor, in kb/s
Criteria	thruput (kbps) — the throughput, in kb/s FLR — the frame loss ratio (FLR) Delay (us) — the delay time

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Delay Var. (us) — the delay variation
Acceptable	Displays the allowed values for the criteria
Configured	Displays the configured values for the criteria
M-factor	Displays the m-factor for the criteria
Measured	Displays the measured values for the criteria
Result	Pass — the test has passed for the specific criteria Fail — the test has failed for the specific criteria

service-using

Syntax

service-using [**epipe**] [**ies**] [**vpls**] [**vprn**] [**mirror**] [**apipe**] [**fpipe**] [**ipipe**] [**cpipe**] [**etree**] [**b-vpls**] [**i-vpls**] [**m-vpls**] [**sdp** *sdp-id*] [**customer** *customer-id*] [**creation** *creation-origin*]

Context

[Tree] (show>service service-using)

Full Context

show service service-using

Description

This command displays the services matching certain usage properties. Not all syntax options are available for each router type.

If no optional parameters are specified, all services defined on the system are displayed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

epipe

Displays Epipe services.

ies

Displays IES services.

vpls

Displays VPLS services.

vprn

Displays VPRN services.

mirror

Displays mirror services.

apipe

Displays Apipe services.

fpipe

Displays Fpipe services.

ipipe

Displays Ipipe services.

cpipe

Displays Cpipe services.

etree

Displays etree services.

b-vpls

Specifies the B-component instance of the Provider Backbone Bridging (PBB/IEEE 802.1ah) feature. It represents the multi-point tunneling component that multiplexes multiple customer VPNs (ISIDs) together. It is similar to a regular VPLS instance that operates on the backbone MAC addresses.

i-vpls

Specifies the I-component instance of the Provider Backbone Bridging (PBB/IEEE 802.1ah) feature. It identifies the specific VPN entity associated to a customer multipoint (E-LAN) service. It is similar to a regular VPLS instance that operates on the customer MAC addresses.

m-vpls

Specifies the M-component (managed VPLS) instance of the Provider Backbone Bridging (PBB/IEEE 802.1ah) feature.

sdp-id

Displays only services bound to the specified SDP ID.

Values 1 to 17407

Default Services bound to any SDP ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

customer-id

Displays services only associated with the specified customer ID.

Values 1 to 2147483647

Default Services associated with any customer.

creation-origin

Specifies the method by which the service was created.

Values manual, multi-segment-p-w, dyn-script

Platforms

All

Output

The following output is an example of service using information, and Table 519: Output fields: service using describes the output fields.

Output Example

```

Full Context

show router ldp bindings services

Description

This command displays LDP service FEC bindings.

Parameters

vc-type *vc-type*

Displays information about the VC type associated with this service FEC.

ethernet, vlan, mirror, ipipe, satop-e1, satop-t1, cesopsn, cesopsn-cas

vc-id *vc-id*

Displays information about the VC ID associated with this service FEC.

saii *global-id*:*prefix:ac-id*

Specifies the a SAII (Source Attachment Individual Identifier).

Values <number>:<number> | <a.b.c.d>:<number>

taii

Specifies the TAII ID, up to 256 characters, associated with this service FEC.

svc-fec-type

Specifies the FEC type.

Values fec128, fec129

agi *agi*

Specifies the Attachment Group identifier TLV associated with this service FEC.

Values <ip-addr:comm-val> | <2byte-asnumber:ext-comm-val> | <4byte-asnumber:comm-val> ip-addr - a.b.c.d comm-val - [0 to 65535] 2byte-asnumber - [1 to 65535] ext-comm-val - [0 to 4294967295] 4byte-asnumber - [1 to 4294967295] null - means all value is 0

detail

Displays detailed information.

service-id

Specifies the service ID number to display.

Values 1 to 2147483647

svc-fec-type

Specifies the FEC type.

Values fec128, fec129

session *ip-addr*

displays configuration information about LDP sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

label-space

Specifies the label space identifier that the router is advertising on the interface.

Values 0 to 65535

Platforms

All

Context

[Tree] (show>service>id>ppp session)

Full Context

show service id ppp session

Description

This command displays PPP session information.

Parameters

user-name

Displays session information about the PPP user name.

sub-ppp-type

Displays session information about the sub PPP type.

Values oe, ol2tp

ip-int-name

Displays session information about the specified interface.

ip-address

Displays session information about the IP address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

intermediate-destination-id

Displays session information about the intermediate destination identifier, up to 32 characters, which is encoded in the identification strings.

no-inter-dest-id

Displays session information about no intermediate destination ID.

ip-prefix/prefix-length

Displays session information about the specified IP address and mask.

port-id

Displays session information about the specified port.

sap-id

Displays session information about the specified SAP.

ppp-session-type

Displays session information about the specified PPP session type.

Values local, wholesale-local, retail-local, l2tp

mlppp

Displays session information about MLPPP.

steering-profile

Displays session information about the specified steering profile, up to 32 characters.

circuit-id

Displays session information about the specified circuit ID, up to 256 characters.

remote-id

Displays session information about the specified remote ID, up to 256 characters.

detail

Displays detailed session information.

statistics

Displays PPP session statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service PPP session information.

Output Example

```
show service id 1000 ppp session detail
```

```

Table 520: Output fields: service PPP session describes PPP session field information.

Table 520: Output fields: service PPP session

Field	Description
User-Name	The user name
Description	The description
Up Time	The time of the last modification
Type	The PPP type
Termination	The termination type
IP/L2TP-Id/If-Id	The IP/L2TP or IF ID
MC-Standby	The MC standby
Session Time Left	The time remaining for the session timeout
LCP State	The LCP open/closed state
IPCP State	The IP CP open/closed state
IPv6CP State	The IPv6 CP open/closed state
PPP MTU	The PPP MTU value
PPP Auth-Protocol	The PPP authentication protocol
PPP User-Name	The PPP user name
Subscriber-interface	The subscriber interface name
Group-interface	The group interface name
IP Origin	The IP origin
DNS Origin	The DNS origin

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
NBNS Origin	The NBNS origin
Subscriber	The subscriber identification string
Sub-Profile-String	The subscriber profile name
SLA-Profile-String	The SLA profile name
SPI group ID	The SPI group ID
ANCP-String	The value of the ancp-string received from either the DHCP or the RADIUS server
Int-Dest-Id	Intermediate destination identifier received from the RADIUS server
App-Profile-String	The application profile string
Category-Map-Name	The value of the category map name received from the RADIUS server
Acct-Session-Id	The accounting session ID
Sap-Session-Index	The sap session index of the PPP session
IP Address	The IP address
Primary DNS	The primary DNS server
Secondary DNS	The secondary DNS server
Primary NBNS	The primary NBNS server
Secondary NBNS	The secondary NBNS server
Address-Pool	The IP address pool used to search for an IP address for this session
IPv6 Prefix	The IPv6 prefix
IPv6 Prefix Origin	The origin of the IPv6 prefix
IPv6 Prefix Pool	The DHCP server pool from which the IPv6 prefix is allocated
IPv6 Del.Pfx.	The IPv6 delegated prefix
IPv6 Del.Pfx. Origin	The origin of the IPv6 delegated prefix
IPv6 Del.Pfx. Pool	The DHCP server pool from which the delegated prefix is allocated
IPv6 Address	The IPv6 address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
IPv6 Address Origin	The origin of the IPv6 address
IPv6 Address Pool	The DHCP server pool from which the address is allocated
Primary IPv6 DNS	The primary IPv6 DNS server
Secondary IPv6 DNS	The secondary IPv6 DNS server
Router adv. policy	The router advertisement policy
Ignoring DF bit	The true/false status of ignoring DF bit
Radius sub-if prefix	The RADIUS subscriber interface prefix
Circuit-Id	The circuit ID of the PPP session
Remote-Id	The remote ID of the PPP session
Radius Session-TO	The value to interpret the session timeout VSA from RADIUS
Radius Class 1	The Class attribute returned by the RADIUS server in an Access-Accept message
Radius User-Name	The User-Name attribute returned by the RADIUS server in an Access-Accept message
Logical-Line-Id	The logical line ID
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Managed Routes	
Status	The installation status
Metric	The metric value
Tag	The tag value
Pref	The preference value
Number of session	The number of sessions returned from the search criteria

session

Context

[Tree] (show>router>l2tp session)

Full Context

show router l2tp session

Description

This command displays L2TP session operational information.

Parameters

connection-id

Specifies the identification number for a Layer Two Tunneling Protocol connection.

Values 1 to 429496729

detail

Displays detailed L2TP session information.

ppp-statistics

Displays PPP statistics for the session.

session-id

Specifies the identification number for a Layer Two Tunneling Protocol session.

Values 1 to 65535

session-state

Specifies the values to identify the operational state of the L2TP session.

Values closed, closed-by-peer, established, idle, wait-reply, wait-tunnel

ip-address

Specifies the IP address of the peer.

Values The following values apply to the 7750 SR:

ipv4-address	a.b.c.d (host bits must be 0)
ipv6-address	x:x:x:x:x:x:x:x[-interface]
	x:x:x:x:x:x:d.d.d.d[-interface]
	x: [0 to FFFF]H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

d: [0 to 255]D

interface: 32 characters maximum, mandatory for link local addresses

Values The following values apply to the 7450 ESS:

ipv4-address: a.b.c.d (host bits must be 0)

group-name

Specifies a string to identify a Layer Two Tunneling Protocol Tunnel group.

assignment-id

Specifies a string that distinguishes this Layer Two Tunneling Protocol tunnel.

local-host-name

Specifies the host name used by this system during the authentication phase of tunnel establishment.

remote-host-name

Specifies a string that is compared to the host name used by the tunnel peer during the authentication phase of tunnel establishment.

tunnel-id

Specifies the local identifier of this Layer Two Tunneling Protocol tunnel, when L2TP version 2 is used.

Values 1 to 65535

service-id

Specifies the service identification number.

ip-int-name

Specifies the IP interface name.

ip-address

Specifies the IPv4 or IPv6 addresses.

ip-prefix/mask

Specifies information for the specified IP prefix and mask length.

connection-id

Specifies an identification number for a Layer Two Tunneling Protocol session.

Values 1 to 429496729

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TP session operational information.

session

Syntax

session [**interface** *ip-int-name* | *ip-address* | **sap** *sap-id*] [**session-id** *session-id*] [**mac** *ieee-address*] [**ip-address** *ip-address*[/ *mask*]] [**port** *port-id*] [**no-inter-dest-id** | **inter-dest-id** *intermediate-destination-id*] [**steering-profile** *steering-profile*] [**router-advertisement-policy** *policy-name*] [**fragmentation** *state*] [**detail** | **statistics**]

session l2tp-connection-id *connection-id* [**detail** | **statistics**]

Context

[Tree] (show>service>id>pppoe session)

Full Context

show service id pppoe session

Description

This command displays PPPoE session information.

Parameters

ip-int-name

Specifies the IP interface name.

ip-address

Specifies the IP address of the PPPoE session.

sap-id

Specifies the SAP ID.

session-id

Specifies the ID of the PPPoE session.

ieee-address

Specifies the MAC address of the PPPoE session.

port-id

Specifies the port ID.

no-inter-dest-id

Displays the information of PPPoE sessions that do not have an intermediate destination ID associated.

intermediate-destination-id

Specifies the intermediate destination ID.

steering-profile

Specifies the name of the steering profile, up to a maximum of 32 characters.

policy-name

Specifies the name of the router advertisement policy, up to a maximum of 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

state

Specifies the fragmentation state.

Values active, inactive

detail

Displays detailed information.

statistics

Displays statistics about the PPPoE session.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of PPPoE session information and Table 521: Output fields: service PPPoE session describes the output fields.

Note: The output varies depending on the configuration and functionality of the operational data within the PPPoE session, therefore not all fields appear in the output example.

Output

```
show service id 20 pppoe session
```

```

Table 521: Output fields: service PPPoE session

Field	Description
Sap Id	The SAP ID
Mac Address	The MAC address
Sid	The SID number
Up Time	The time of the last modification
Type	The PPPoE type
IP/L2TP-Id/If-Id	The IP/L2TP or IF ID
MC-Standby	The MC standby
Session Time Left	The time remaining for the session timeout
LCP State	The LCP open/closed state
IPCP State	The IP CP open/closed state
IPv6CP State	The IPv6 CP open/closed state
PPP MTU	The PPP MTU value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
PPP Auth-Protocol	The PPP authentication protocol
PPP User-Name	The PPP user name
Subscriber-interface	The subscriber interface name
Group-interface	The group interface name
IP Origin	The IP origin
DNS Origin	The DNS origin
NBNS Origin	The NBNS origin
Subscriber	The subscriber identification string
Sub-Profile-String	The subscriber profile name
SLA-Profile-String	The SLA profile name
SPI group ID	The SPI group ID
ANCP-String	The value of the ancp-string received from either the DHCP or the RADIUS server
Int-Dest-Id	Intermediate destination identifier received from the RADIUS server
App-Profile-String	The application profile string
Category-Map-Name	The value of the category map name received from the RADIUS server
Acct-Session-Id	The accounting session ID
Sap-Session-Index	The sap session index of the PPP session
IP Address	The IP address
Primary DNS	The primary DNS server
Secondary DNS	The secondary DNS server
Primary NBNS	The primary NBNS server
Secondary NBNS	The secondary NBNS server
Address-Pool	The IP address pool used to search for an IP address for this session
IPv6 Prefix	The IPv6 prefix
IPv6 Prefix Origin	The origin of the IPv6 prefix

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
IPv6 Prefix Pool	The DHCP server pool from which the IPv6 prefix is allocated
IPv6 Del.Pfx.	The IPv6 delegated prefix
IPv6 Del.Pfx. Origin	The origin of the IPv6 delegated prefix
IPv6 Del.Pfx. Pool	The DHCP server pool from which the delegated prefix is allocated
IPv6 Address	The IPv6 address
IPv6 Address Origin	The origin of the IPv6 address
IPv6 Address Pool	The DHCP server pool from which the address is allocated
Primary IPv6 DNS	The primary IPv6 DNS server
Secondary IPv6 DNS	The secondary IPv6 DNS server
Router adv. policy	The router advertisement policy
Ignoring DF bit	The true/false status of ignoring DF bit
Radius sub-if prefix	The RADIUS subscriber interface prefix
L2TP Router Name	The L2TP router name
L2TP Group Name	The L2TP group name
L2TP Assignment ID	The L2TP assignment ID
L2TP LAC Frag FPE id	The L2TP LAC fragmentation FPE ID
L2TP LAC Frag Action	The L2TP LAC fragmentation action
L2TP LAC Frag State	The L2TP LAC fragmentation state
L2TP Steering Profile	The LAC steering profile name
L2TP Steering State	The LAC steering state type
Circuit-Id	The circuit ID of the PPP session
Remote-Id	The remote ID of the PPP session
Radius Session-TO	The value to interpret the session timeout VSA from RADIUS
Radius Class	The Class attribute returned by the RADIUS server in an Access-Accept message
Radius User-Name	The User-Name attribute returned by the RADIUS server in an Access-Accept message

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Logical-Line-Id	The logical line ID
Keepalive Origin	LCP Keepalive Interval and Multiplier parameters are by default obtained from the ppp-policy configuration and can be overridden with parameters obtained from RADIUS, Diameter Gx or local user database. This field indicates the origin of the LCP Keepalive parameters for this session: Policy = values configured in the subscriber-mgmt ppp-policy for PPPoE PTA sessions or l2tp group context for L2TP LNS sessions. Ludb = values from the local user database Radius = values from RADIUS authentication Diameter Gx = values from Diameter Gx
Keepalive Interval	The time interval in seconds at which LCP echo requests are transmitted for the PPP session
Keepalive Multiplier	The number of LCP keepalive messages that can be missed before the PPP session is brought down
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Managed Routes	
Status	The installation status
Metric	The metric value
Tag	The tag value
Pref	The preference value
Number of session	The number of sessions returned from the search criteria

session

Syntax

session connection-id *connection-id* **eth-tunnel-statistics**

Context

[Tree] (clear>router>l2tp session)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear router l2tp session

Description

This command clears L2TP session data.

Parameters

connection-id

Specifies the L2TPv3 connection ID.

eth-tunnel-statistics

Clears the Ethernet tunnel statistics associated with the specified session.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session

Syntax

session stop *connection-id*

Context

[Tree] (tools>perform>router>l2tp session)

Full Context

tools perform router l2tp session

Description

This command configures performance tools for a specified L2TP session.

Parameters

stop

Stops the performance tools for a specified L2TP session.

connection-id

Specifies the L2TPv3 connection ID.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session

Syntax

session [**sap** *sap-id*] [**mac** *ieee-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**interface** *ip-int-name* | *ip-address*] [**inter-dest-id** *intermediate-destination-id*] [**no-inter-dest-id**] [**ip-address** *ip-prefix*[*/prefix-length*]] [**port** *port-id*] [**subscriber** *sub-ident-string*] [**sap-session-id** *sap-session-index*] [**detail**] [**wholesaler** *service-id*] [**router-advertisement-policy** *policy-name*]

Context

[Tree] (show>service>id>ipoe session)

Full Context

show service id ipoe session

Description

This command displays the identified IPoE session details active on the specified service instance.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

circuit-id

Specifies the circuit ID, up to 127 characters.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

ip-int-name

Specifies the name of the IP interface, up to 32 characters.

ip-address[/prefix-length]

Specifies information for the specified IP address and mask.

no-inter-dest-id

Displays the information about no intermediate destination ID.

port-id

Displays information about the specified port ID.

sap-session-index

Displays sap-session-index information.

service-id

Specifies the service ID of the wholesaler.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values *service-id*: 1 to 2147483647

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

detail

Displays all IPoE session details.

policy-name

Specifies the name of the router advertisement policy, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service IPoE session information.

Output Example

```

Table 522: Output fields: service IPoE session describes IPoE session field information.

Table 522: Output fields: service IPoE session

Field	Description
SAP Id	The SAP ID of the IPoE session
Mac Address	The MAC address of the IPoE session
Up Time	The time of the last modification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
MC-Stdby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode
SAP	The SAP ID of the IPoE session
Circuit-Id	The circuit ID of the IPoE session
Remote-Id	The remote ID of the IPoE session
Session Key	The session key used for this IPoE session to group subscriber hosts
MC-Standby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode
Subscriber-interface	The subscriber interface name
Group-interface	The group interface name
Up Time	The time of the last modification
Session Time Left	The time remaining for the session timeout
Last Auth Time	The date and time of the last authentication
Min Auth Intvl (left)	The minimum interval between two consecutive authentication attempts for the same ARP host
Persistence Key	The key value that is used to track this in the persistence file
Subscriber	The subscriber identification string
Sub-Profile-String	The subscriber profile name
SLA-Profile-String	The SLA profile name
ANCP-String	The value of the ancp-string received from either the DHCP or the RADIUS server
Int-Dest-Id	Intermediate destination identifier received from the RADIUS server
App-Profile-String	The application profile string
Category-Map-Name	The value of the category map name received from the RADIUS server
Acct-Session-Id	The accounting session ID
Sap-Session-Index	The sap session index of the PPP session
IP Address	The IP address

Field	Description
IP Origin	The origin of the source IP address used for connectivity verification
Primary DNS	The primary DNS server
Secondary DNS	The secondary DNS server
Primary NBNS	The primary NBNS server
Secondary NBNS	The secondary NBNS server
Address-Pool	The IP address pool used to search for an IP address for this session
IPv6 Prefix	The IPv6 prefix
IPv6 Prefix Origin	The origin of the IPv6 prefix
IPv6 Prefix Pool	The DHCP server pool from which the SLAAC prefix is allocated
IPv6 Del.Pfx.	The IPv6 delegated prefix
IPv6 Del.Pfx. Origin	The origin of the IPv6 delegated prefix
IPv6 Del.Pfx. Pool	The DHCP server pool from which the delegated prefix is allocated
IPv6 Address	The IPv6 address
IPv6 Address Origin	The origin of the IPv6 address
IPv6 Address Pool	The DHCP server pool from which the address is allocated
Primary IPv6 DNS	The primary DNS server
Secondary IPv6 DNS	The secondary DNS server
Radius Session-TO	The value to interpret the session timeout VSA from RADIUS
Radius Class	The Class attribute returned by the RADIUS server in an Access-Accept message
Radius User-Name	The User-Name attribute returned by the RADIUS server in an Access-Accept message
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides:	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 PPPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides:	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of session	The number of sessions returned from the search criteria

session

Syntax

session [**name** *trace-name*] [**detail**]

session sap *sap-id* **mac** *ieee-address* [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**username** *user-name*] [**detail**]

Context

[Tree] (show>call-trace>ppp session)

[Tree] (show>call-trace>ipoe session)

Full Context

show call-trace ppp session

show call-trace ipoe session

Description

This command displays call trace information for the active session.

Configuring this command with specified session filters, displays information for the specified trace job only.

Parameters

detail

Displays detailed information.

sap-id

Specifies the SAP ID that identifies a session.

ieee-address

Specifies a MAC address that identifies a session.

circuit-id

Specifies a circuit ID that identifies a session, up to 255 characters.

remote-id

Specifies a remote ID that identifies a session, up to 255 characters.

trace-name

Specifies the name of the trace, up to 32 characters, that triggered the job.

user-name

Specifies the user name, up to 32 characters, that identifies a PPPoE session.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace information for the active IPoE session.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
Node # show call-trace ipoe session
=========================================================
Call trace IPoE session
=========================================================
IEEE address             Status          No. of messages
  Trace name
---------------------------------------------------------
00:02:00:00:00:19        running                      10
     default
---------------------------------------------------------
No. of call trace IPoE debug jobs: 1
=========================================================

Node# show call-trace ipoe session detail
===============================================================================
Call trace IPoE session

===============================================================================
```

Table 523: Output fields: call trace IPoE session describes call trace IPoE session output fields.

Table 523: Output fields: call trace IPoE session

Field	Description
IEEE address	The IEEE address of the equipment to match by this trace
Status	The status of the trace session
No. of messages	The number of messages from the trace session
Trace name	The name of the trace profile
Size limit	The maximum data volume generated by a single call trace job to the output, in megabytes
Time limit	The maximum duration of a single call trace job, in seconds
Live output	The live output destination for trace logs
Destination	The destination address of the trace logs
Started	The date and time the trace began

© 2026 Nokia.

Field	Description
No. of captured msgs	The number of captured messages
Size of captured msgs	The size of the captured messages

session

Syntax

session sap *sap-id* **mac** *ieee-address*

session sap *sap-id* **mac** *ieee-address* **circuit-id** *circuit-id* [**remote-id** *remote-id*] [**user-name** *user-name*]

session sap *sap-id* **mac** *ieee-address* [**circuit-id** *circuit-id*] **remote-id** *remote-id* [**user-name** *user-name*]

session sap *sap-id* **mac** *ieee-address* [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] **user-name** *user-name*

Context

[Tree] (clear>call-trace>ipoe session)

[Tree] (clear>call-trace>pppoe session)

Full Context

clear call-trace ipoe session

clear call-trace pppoe session

Description

This command clears the trace job identified by this session.

This command does not affect any of the debug trace commands, and new jobs can still be executed for other sessions.

After a session is cleared, tracing for the session will not be restarted by any configured trace. Only explicitly starting a new trace with the **trace-existing-sessions** parameter can restart tracing for the session.

Parameters

circuit-id

Specifies a circuit ID, up to 255 characters, that identifies a session.

ieee-address

Specifies a MAC address that identifies a session.

remote-id

Specifies a remote ID, up to 255 characters, that identifies a session

sap-id

Specifies the SAP ID that identifies a session.

user-name

Specifies the user name, up to 32 characters, that identifies a session.

session

Syntax

session [**family**] [**summary** | **detail**] *ip-addr*[*label-space*]

Context

[Tree] (show>router>ldp>bindings session)

Full Context

show router ldp bindings session

Description

This command displays LDP FEC bindings by matching peer LSR ID.

Parameters

detail

Displays detailed information.

summary

Displays information in a summarized format.

family

Displays either IPv4 or IPv6 LDP session information.

ip-addr

displays configuration information about LDP sessions.

label-space

Specifies the label space identifier that the router is advertising on the interface.

Values 0 to 65535

Platforms

All

session [*session-type*] [**state** *state*] [**summary** | **detail**] [*family*] [**community** *community*]

Context

[Tree] (show>router>ldp session)

Full Context

show router ldp session

Description

This command displays configuration information about LDP sessions.

Parameters

ip-addr

Specifies the IP address of the LDP peer.

label-space

Specifies the label space identifier that the router is advertising on the interface.

Values 0 to 65535

statistics

Specifies the statistics for a targeted peer.

packet-type

Specifies the packet type.

Values hello, keepalive, init, label, notification, address, capability

session-type

Specifies to display the session type.

Values link, targeted, both

state

Specifies to display the current operational state of the adjacency.

Values up - Established down - Initialized, OpenRecv, OpenSent, Nonexistent

summary

Displays information in a summarized format.

detail

Displays detailed information including the community and if a local LSR ID is advertised.

local-addresses

Specifies the local address information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Specifies the IPv4 or IPv6 address.

Values <ip-address> : ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D

overload

Specifies the overload information.

fec-type

Specifies the specified FEC type.

Values ipv4-prefixes, ipv6-prefixes, ipv4-p2mp, ipv6-p2mp, svc-fec128, svc-fec129

family

Displays either IPv4 or IPv6 active LDP information.

Values ipv4, ipv6

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

Table 524: Output fields: LDP session describes the LDP session output fields.

Table 524: Output fields: LDP session

Label	Description
Peer LDP Id	The IP address of the LDP peer.
Adj Type	The adjacency type between the LDP peer and LDP session is targeted.
	Link — Specifies that this adjacency is a result of a link hello. Targeted — Specifies that this adjacency is a result of a targeted hello.
State	Established — Specifies that the adjacency is established. Trying — Specifies that the adjacency is not yet established.
Msg Sent Mesg Sent	The number of messages sent.
Msg Rcvd	The number of messages received.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Mesg Rcvd	
Up Time	The amount of time the adjacency has been enabled.
Session Community	Specifies the LDP community associated with a session.
Local LSR ID Advertised	Specifies if a local LSR ID is advertised.

Output Example

```
*A:Dut-A# show router ldp session

session

Syntax

session *ip-addr* [*label-space*] [**statistics**]

session *ip-addr* [*label-space*] **overload** [**fec-type p2mp** | **prefixes sub-type** *sub-type*]

session *ip-addr*[*label-space*] **overload** [**fec-type svc-fec128** | **svc-fec129**]

Context

[Tree] (clear>router>ldp session)

Full Context

clear router ldp session

Description

This command restarts or clears statistics for LDP sessions.

Parameters

ip-address

Clears the IP address of the session

label-space

Specifies the label space identifier that the router is advertising on the interface.

Values 0 to 65535

statistics

Clears only the statistics for a session.

overload

Clears overload information.

fec-type

Clears the specified FEC type.

Values p2mp, svc-fec128, svc-fec129

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session *ip-addr*[*label-space*]

Specifies the IP address and label space identifier.

Values <ip-addr[label-spa*> : ipv4-address:label-space
ipv6-address [label-space]
label-space — [0 to 65535]

Platforms

All

session

Syntax

session *ip-addr*[*label-space*] [**connection** | **peer** | **adjacency**]

Context

[Tree] (tools>dump>router>ldp session)

Full Context

tools dump router ldp session

Description

This command dumps information for an LDP session.

Parameters

***ip-addr*[*label-space*]**

Dumps information for the specified IP address and label space identifier.

Values ip-addr[label-spa*]: ipv4-address:label-space ipv6-address[label-space]
label-space - [0 to 65535]

connection

Filters output for connection information.

peer

Filters output for peering information.

adjacency

Filters output for adjacency information.

Platforms

All

Context

[Tree] (show>router>bfd>seamless-bfd session)

Full Context

show router bfd seamless-bfd session

Description

This command displays Seamless-BFD session information.

Parameters

lsp-index *lsp-index*

Specifies the LSP index.

Values 0 to 4294967295

path-lspid *path-lspid*

Specifies the path LSP ID.

Values 0 to 4294967295

detail

Displays detailed information.

lsp-name *lsp-name*

Displays information about the specified LSP name, up to 64 characters.

lsp-path

Keyword to display information by LSP path.

prefix

Keyword to display information by far-end prefix.

sr-policy

Keyword to display information by SR policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix/prefix-length

Specifies an IP prefix for which to display Seamless-BFD session information, and the length of the prefix.

Values *ipv4-prefix* — a.b.c.d (host bits must be zero)

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

ip-address/link-local-address

Specifies the source IP address for which to display Seamless-BFD session information.

Values *ipv4-address* — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x:d.d.d.d[-interface]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

interface — mandatory for link local address, up to 32 characters

Platforms

All

Output

The following output is an example of BFD session information and Table 525: Output fields: MPLS seamless BFD session describes Seamless-BFD session output fields.

Output Example

```
# show router bfd seamless-bfd session lsp-index 70000

===============================================================================

Table 525: Output fields: MPLS seamless BFD session

Label	Description
Session Id	Specifies the session ID
State	Specifies the session state (Up/Down)
Tx Pkts	Specifies the number of packets transmitted
Rx Pkts	Specifies the number of packets received
Rem Addr/Info/ SdpId:VcId	Specifies the session remote endpoint address information
Multipl	Specifies the multiplier
Tx Intvl	Specifies the transmit interval
Rx Intvl	Specifies the receive interval
Protocols	Specifies the protocol that the session is bound to
Type	Specifies the BFD type cpm-np — Specifies to use CPM network processor
LAG Port	Specifies the LAG Port
LAG ID	Specifies the LAG ID
No. of BFD sessions	Specifies the number of BFD sessions
Prefix	Specifies the prefix
Local Address	Specifies the local address
LSP Name	Specifies the LSP name
LSP Index	Specifies the LSP index
Path LSP ID	Specifies the path LSP ID
Fec Type	Specifies the FEC type
Return Path	Specifies the return path label for the S-BFD packet
Oper State	Specifies the operational state (Up/Down)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Protocols	Specifies the protocol used
Up Time	Specifies the up time
Up Transitions	Specifies the number of up transitions
Down Time	Specifies the down time
Down Transitions	Specifies the number of down transitions
Version Mismatch	Specifies the number of version mismatches
Local Discr	Specifies the local Discr information
Local State	Specifies the local state (Up/Down)
Local Diag	Specifies the local diag information
Local Mode	Specifies the local mode
Local Min Tx	Specifies the local Min Tx value
Local Mult	Specifies the local Mult value
Last Sent (ms)	Specifies the last sent forwarding information
Local Min Rx	Specifies the local Min Rx value
Type	Specifies the session endpoint type
Remote Discr	Specifies the remote Discr value
Remote State	Specifies the remote state (Up/Down)
Remote Diag	Specifies the remote diagnostic value
Remote Mode	Specifies the remote mode
Remote Min Tx	Specifies the remote minimum transmit value
Remote Mult	Specifies the remote multiplier
Remote C-flag	Specifies the remote C-flag value
Last Recv (ms)	Specifies the last received value
Remote Min Rx	Specifies the remote minimum receive value

Context

[Tree] (show>router>bfd session)

Full Context

show router bfd session

Description

This command displays information for existing BFD sessions.

Parameters

detail

Keyword to display detailed session information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lsp-rsvp

Keyword to display the BFD sessions on RSVP LSPs.

head

Keyword to limit the output to the BFD sessions at the headend of LSPs.

tail

Keyword to limit the output to the BFD sessions at the tail end of LSPs.

ipv4

Keyword to limit the output to IPv4-based BFD sessions.

ipv6

Keyword to limit the output to IPv6-based BFD sessions.

lag-id

Displays the output for the micro-BFD sessions associated with the specified LAG ID.

port-id

Displays the output for the micro-BFD sessions associated with the specified port ID.

lsp-ldp

Keyword to display the BFD sessions on LDP LSPs.

src *ip-address*

Displays the BFD sessions with the specified source IPv4 or IPv6 addresses.

src *link-local-address*

Displays the BFD sessions with the specified source IPv6 link-local addresses.

ip-prefix/prefix-length

Displays IPv4 or IPv6 addresses of the BFD sessions.

Values The following values apply to the 7750 SR and 7950 XRS:

ipv4-prefix	a.b.c.d (host bits must be 0)	
ipv4-prefix-length	0 to 32	
ipv6-prefix	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D
ipv6-prefix-length	0 to 128	

dest *ip-address*

Displays the BFD sessions with the specified destination IPv4 or IPv6 addresses.

dest *link-local-address*

Displays the BFD sessions with the specified destination IPv6 link-local addresses.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lsp-name

Displays the BFD sessions associated with the specified LSP.

tunnel-id

Displays the BFD sessions associated with the specified tunnel ID.

lsp-id

Displays the BFD sessions associated with the specified LSP ID.

mpls-tp

Keyword to display the BFD sessions on MPLS-TP LSPs.

link-type

Keyword to display the link type.

Values **cc-only** – keyword to limit the output to CC BFD sessions on MPLS-TP LSPs

cc-cv – keyword to limit the output to CV BFD sessions on MPLS-TP LSPs

interface-name

Displays the BFD session for the specified interface.

rsvp-session-name

Displays the BFD session for the specified RSVP session.

summary

Keyword to display summary session information for the router.

type

Displays the BFD sessions associated with the specified type.

Values **iom** – keyword to specify the IOM BFD session

central – keyword to specify the central BFD session

cpm-np – keyword to specify the CPM network processor

Platforms

All

Output

The following outputs are examples of BFD session information:

- Output example (BFD session output showing the padded size field), Table 526: Output fields: BFD session for specific IP or IPv6 addresses
- Output example (BFD session output for a specific IPv6 source) , Table 526: Output fields: BFD session for specific IP or IPv6 addresses
- Output example (BFD session output for a specific IPv6 source and destination) , Table 526: Output fields: BFD session for specific IP or IPv6 addresses
- Output example (BFD session output for a specific IPv4 source and destination), Table 526: Output fields: BFD session for specific IP or IPv6 addresses

Table 526: Output fields: BFD session for specific IP or IPv6 addresses

Label	Description
BFD Session	
Rsvp Session name	The RSVP session name
Remote Address	The remote address for the BFD session
Admin State	The administrative state of the BFD session
LSP Id	The LSP ID for the BFD session
Tunnel Id	The tunnel ID for the BFD session
Oper State	The operational state of the BFD session
Protocols	The protocols for the BFD session
Recd Msgs	The received messages for the BFD session
Sent Msgs	The sent messages for the BFD session

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Rx Interval	The expected interval, in milliseconds, between the received BFD messages to maintain the session
Tx Interval	The interval, in milliseconds, between the transmitted BFD messages to maintain the session
Multiplier	The integer used by BFD to declare when the neighbor is down. If a BFD control packet is not received for a period of multiplier x receive-interval (the parameter value of the **receive-interval** command), the session is declared down.
Echo Interval	The minimum echo receive interval, in milliseconds, for a session. This is not used by a BFD session for MPLS-TP.
Padded-size	The configured value from the interface level BFD settings. When unconfigured, the field displays as None.
Up Time	The uptime for the BFD session
Up Transitions	The number of up transitions for the BFD session
Down Time	The downtime for the BFD session
Down Transitions	The number of down transitions for the BFD session
Version Mismatch	Indicates if there is a version mismatch
Forwarding Information	
Local Discr	The local BFD reflector discriminator
Local State	Describes the overall current health of the BFD session: • Up – the BFD session on the local device is currently active and functioning properly • Down – the BFD session on the local device is currently down • Init – the BFD session on the local device is currently initializing
Local Diag	The diagnostic code that the local system sends to its BFD peer. This code indicates the view of the local system in relation to the health of the session or any specific event that caused a state transition.
Local Mode	The local mode: • Async – both BFD endpoints periodically send BFD control packets to each other • Demand – after the BFD session is established, BFD control packets are generally not exchange periodically • Echo – one system sends echo packets that are addressed to itself, but sent to the Layer 2 address of the next-hop node

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Local Min Tx	The local minimum transmitted BFD messages
Local Mult	The local multiplier for the BFD session
Last Sent (ms)	The last message sent for the BFD session
Local Min Rx	The local minimum received BFD messages
Type	The local termination point for the BFD session. When this shows as cpm-np, the local termination point is the CPM network processor.
Remote Discr	The remote discriminator for the BFD session
Remote State	The remote state: • Up – the BFD session on the remote device is currently active and functioning properly • Down – the BFD session on the remote device is currently down • Init – the BFD session on the remote device is currently initializing
Remote Diag	The diagnostic code that the remote BFD endpoint (peer) has sent in its BFD control packets. This tells about the state and any reported issues from the perspective of the remote system.
Remote Mode	The remote mode: • Async – both BFD endpoints periodically send BFD control packets to each other • Demand – after the BFD session is established, BFD control packets are generally not exchange periodically • Echo – one system sends echo packets that are addressed to itself, but sent to the Layer 2 address of the next-hop node
Remote Min Tx	The remote minimum transmitted BFD messages
Remote Mult	The remote multiplier for the BFD session
Last Recv (ms)	The last received BED message
Remote Min Rx	The remote minimum received BFD messages

Table 527: Output fields: BFD session

Label	Description
Session ID	The BFD session ID
Rem Addr/Info/ SdpID:VcId	The remote address or SDP ID
Protocols	The protocols used
Loc Addr	The local address for the BFD session
State	The state of the BFD session: • Up – the BFD session is currently active and functioning properly • Down – the BFD session is currently down • Init – the BFD session is currently initializing
Multipl	The integer used by BFD to declare when the neighbor is down. If a BFD control packet is not received for a period of multiplier x receive-interval (the parameter value of the **receive-interval** command), the session is declared down.
Type	The local termination point for the BFD session. When this shows as cpm-np, the local termination point is the CPM network processor.

Table 530: Output fields: BFD session detailed output

Label	Description
Interface	The prefix for the BFD session
Local Address	The local address for the BFD session
LSP Name	The LSP name for the BFD session
LSP Index	The LSP index for the BFD session
Path LSP ID	The path LSP ID for the BFD session
Fec Type	The FEC type for the BFD session
Oper State	The operational state of the BFD session: • Up – the BFD session is currently active and functioning properly • Down – the BFD session is currently down • Init – the BFD session is currently initializing
Protocols	The protocols for the BFD session
Up Time	The uptime for the BFD session
Up Transitions	The up transitions for the BFD session
Down Time	The downtime for the BFD sessions
Down Transitions	The down transitions for the BFD session
Version Mismatch	Indicates if there is a version mismatch

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Forwarding Information	
Local Discr	The local BFD reflector discriminator
Local State	Describes the overall current health of the BFD session: • Up – the BFD session on the local device is currently active and functioning properly • Down – the BFD session on the local device is currently down • Init – the BFD session on the local device is currently initializing
Local Diag	The diagnostic code that the local system sends to its BFD peer. This code indicates the view of the local system in relation to the health of the session or any specific event that caused a state transition.
Local Mode	The local mode: • Async – both BFD endpoints periodically send BFD control packets to each other • Demand – after the BFD session is established, BFD control packets are generally not exchange periodically • Echo – one system sends echo packets that are addressed to itself, but sent to the Layer 2 address of the next-hop node
Local Min Tx	The local minimum transmitted BFD messages
Local Mult	The local multiplier for the BFD session
Last Sent (ms)	The last message sent
Local Min Rx	The local minimum received BFD messages
Type	The local termination point for the BFD session. When this shows as cpm-np, the local termination point is the CPM network processor.
Remote Discr	The remote discriminator for the BFD session
Remote State	The remote state: • Up – the BFD session on the remote device is currently active and functioning properly • Down – the BFD session on the remote device is currently down • Init – the BFD session on the remote device is currently initializing
Remote Diag	The diagnostic code that the remote BFD endpoint (peer) has sent in its BFD control packets. This tells about the state and any reported issues from the perspective of the remote system.
Remote Mode	The remote mode: • Async – both BFD endpoints periodically send BFD control packets to each other

Label	Description
	• Demand – after the BFD session is established, BFD control packets are generally not exchange periodically • Echo – one system sends echo packets that are addressed to itself, but sent to the Layer 2 address of the next-hop node
Remote Min Tx	The remote minimum transmitted BFD messages
Remote Mult	The remote multiplier
Last Recv (ms)	The last received BED message
Remote Min Rx	The remote minimum received BFD messages

session

Syntax

session [*session-type*] [**from** *ip-address* [**to** *ip-address*] [**lsp-name** *session-name*] [**status** {**up** | **down**}] [**detail**] [**interface** *ip-int-name*]

Context

[Tree] (show>router>rsvp session)

Full Context

show router rsvp session

Description

This command shows RSVP session information.

Parameters

session-type

Specifies the session type.

Values originate, transit, terminate, detour, detour-transit, detour-terminate, bypass-tunnel

from ip-address

Specifies the IP address of the originating router.

to ip-address

Specifies the IP address of the egress router.

session-name

Specifies the name, up to 160 characters in length, of the LSP used in the path. "*" can be used as a wildcard character.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

status up

Specifies to display a session that is operationally up.

status down

Specifies to display a session that is operationally down.

detail

Displays detailed information.

ip-int-name

Specifies the name of an existing MPLS interface.

If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

The **interface** option filters the display to include all RSVP sessions that use this interface name as "In Interface" or as "Out Interface".

Platforms

All

Output

The following output is an example of RSVP session information.

Table 531: Output fields: RSVP session describes RSVP session output fields.

Table 531: Output fields: RSVP session

Label	Description
From	The IP address of the originating router.
To	The IP address of the egress router.
Tunnel ID	The IP address of the tunnel's ingress node supporting this RSVP session.
LSP ID	The ID assigned by the agent to this RSVP session.
Name	The administrative name assigned to the RSVP session by the agent.
State	Down — The operational state of this RSVP session is down. Up — The operational state of this RSVP session is up.

Output Example

```
*A:SRU4>show>router>rsvp#   session

session

Syntax

session src-ip *ip-address* **dst-ip** *ip-address*

Context

[Tree] (clear>router>bfd session)

Full Context

clear router bfd session

Description

This command clears BFD sessions.

Parameters

src-ip ***ip-address***

Specifies the address of the local endpoint of this BFD session.

dst-ip ***ip-address***

Specifies the address of the remote endpoint of this BFD session.

Platforms

All

session

Syntax

session all

session client *srcAddr*

Context

[Tree] (clear>video>id session)

Full Context

clear video id session

Description

This command clears session information.

Parameters

all

Clears all sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

client *srcAddr*

Clears information for the client source address.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

session

Syntax

session all [**rt-server**] [**fcc-server**]

session client *srcAddr* [**rt-server**] [**fcc-server**]

Context

[Tree] (clear>video>statistics>id session)

Full Context

clear video statistics id session

Description

This command clears video statistics for a particular channel.

Parameters

all

Clears statistics for all sessions.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

client *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

session

Syntax

session *session-name* [{**all** | **base** | **bin-group** | **event-mon** | **meas-interval**}]

Context

[Tree] (show>oam-pm session)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show oam-pm session

Description

This command displays the configuration and status information for an OAM-PM session.

Parameters

session-name

Specifies the session name, up to 32 characters.

all

Keyword to display all attributes.

base

Keyword to display the base configuration option for the session.

bin-group

Keyword to display the associated bin group and its attributes.

event-mon

Keyword to display event monitoring and last TCA.

meas-interval

Keyword to display event monitoring and last TCA.

Platforms

All

Output

The following outputs are examples of OAM-PM configuration information, and the associated table describes the output fields:

- OAM-PM all configuration information, Table 532: Output fields: OAM-PM configuration information
- OAM-PM base configuration information, Table 532: Output fields: OAM-PM configuration information
- OAM-PM bin-group configuration information, Table 532: Output fields: OAM-PM configuration information
- OAM-PM meas-interval configuration information, Table 532: Output fields: OAM-PM configuration information
- OAM-PM specific session configuration information, Table 532: Output fields: OAM-PM configuration information

Output example: OAM-PM all configuration information

Table 532: Output fields: OAM-PM configuration information

Label	Description
Basic Session Configuration	
Session Name	The session name
Description	The session description

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Test Family	The test family: • ethernet – the test family is based on the MPLS layer • ip – the test is based on the IP layer
Session Type	The session type: • proactive – the type is set to always on, with an immediate start and no stop • on-demand – the type is set to on-demand, requires a start and stop, or could be stopped when test-duration expires
Bin Group	The bin group identifier
Ethernet Configuration	
Source MEP	The Maintenance Association Endpoint (MEP) identifier of the launch point
Priority	The priority
Source Domain	The Maintenance Domain (MD)
Dest MAC Address	The unicast destination MAC address
Source Assoc'n	The source Maintenance Association (MA)
Remote MEP	The remote MEP ID of the peer within the association
DMM Test Configuration and Status	
Test ID	The numerical value assigned to the protocol-specific test
Admin State	The administrative state of the test: • Up – The test has been enabled by configuration • Down – The test has not been enabled by configuration
Oper State	The operational state of the test: • Up – the test is administratively up and currently transmitting, attempting to transmit packets, or ready to transmit packets • Down – the test is administratively down or an OAM-PM session configured with **session-type on-demand** has not been enabled using the global CLI **oam oam-pm session start** command
Data TLV Size	The optional Data TLV to the PDU.
On-Demand Duration	The on-demand test-duration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
On-Demand Remaining	The on-demand test-duration time remaining
Interval	The packet spacing interval
Detectable Tx Err	The detected error condition that may prevent the test packet from being sent
SLM Test Configuration and Status	
Test ID	The numerical value assigned to the protocol-specific test
Admin State	The administrative state of the test: • Up – the test has been enabled by configuration • Down – the test has not been enabled by configuration
Oper State	The operational state of the test: • Up – the test is administratively up and currently transmitting, attempting to transmit packets, or ready to transmit packets • Down – the test is administratively down or an OAM-PM session configured with **session-type on-demand** has not been enabled using the global CLI **oam oam-pm session start** command
Data TLV Size	The optional Data TLV to the PDU
On-Demand Duration	The on-demand test-duration
On-Demand Remaining	The on-demand test-duration time remaining
Interval	The packet spacing interval
CHLI Threshold	The Consecutive High Loss Interval (CHLI) threshold
Frames Per Delta-T	The frames per Delta-T
Consec Delta-Ts	The number of consecutive Delta-T that make up the sliding window over which availability and unavailability is determined
FLR Threshold	The Frame Loss Ratio (FLR) threshold for the test
HLI Force Count	The high loss interval (HLI) force count
Detectable Tx Err	The detected error condition that may prevent the test packet from being sent
Measurement Interval Configuration	
Duration	The measurement interval duration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Intervals Stored	The number of intervals stored
Boundary Type	The alignment of the start of the measurement interval either with the day clock or the start of the test: • clock-aligned – aligns with the measurement interval with the time of day clock • test-relative – aligns the start of the measurement interval with the start of the test
Clock Offset	The offset from the default time of the day clock for measurement intervals with a **boundary-type** of **clock-aligned**
Accounting Policy	The accounting policy assigned by a user with a **record-type** of **complete-pm**. If configured, this runs the data collection process for completed measurement intervals in memory, file storage, and maintenance functions moving data from memory to flash. A single accounting policy can be applied to a measurement interval.
Event Monitoring	Displays if event monitoring (the different threshold events on a specific measurement interval) are enabled
Delay Event Mon	Displays if the monitoring of all configured delay events are enabled
Loss Event Mon	Displays if the monitoring of all configured loss events is enabled
Configured Lower Bounds for Delay Tests, in microseconds	
Group Description	The group description
Admin	Displays if the group is administratively up
Bin	The identifier for the bin group that is referenced by the OAM-PM sessions
FD(us)	The frame delay in microseconds
FDR(us)	The frame Delay Range in microseconds
IFDV(us)	The InterFrame Delay Variation in microseconds
Bins Excluded from Average	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• round-trip – the threshold is applied to the round trip direction bin
Bins	The bin group identifier
Bins Excluded from Delay Event Count	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the round trip direction bin
Lowest Excluded Bin	The lowest excluded bin
Lower Bound (us)	The lower bound
Delay Events for the DMM Test	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the round trip direction bin
LowerBound (us)	The lower bound
Raise	The rising threshold that determines when the even is to be generated
Clear	The threshold when to generate the clear event
Last TCA (UTC)	The Threshold Crossing Alert (TCA)
Loss Events for the SLM Test	
Event Type	The event type
Direction	The direction of the bin:

Label	Description
	• forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the round trip direction bin
Raise	The rising threshold that determines when the even is to be generated
Clear	The threshold when to generate the clear event
Last TCA (UTC)	The TCA
LMM Test Configuration and Status	
Test ID	The numerical value, between 0 to 2147483647, that is assigned to the protocol-specific test
Admin State	The administrative state of the test: • Up – the test has been enabled by configuration • Down – the test has not been enabled by configuration
Oper State	The operational state of the test: • Up – the test is administratively up and currently transmitting, attempting to transmit packets, or ready to transmit packets • Down – the test is administratively down or an OAM-PM session configured with **session-type on-demand** has not been enabled using the global CLI **oam oam-pm session start** command
Interval	The test interval, in milliseconds, between the received messages to maintain the session
On-Demand Duration	The on-demand test-duration
On-Demand Remaining	The on-demand test-duration time remaining
Availability	Displays if availability is enabled
CHLI Threshold	The CHLI threshold
Frames Per Delta-T	The number of frames per Delta-T
Consec Delta-Ts	The number of consecutive Delta-T measurement intervals that make up the sliding window over which availability and unavailability is determined
FLR Threshold	The FLR threshold for the test

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Detectable Tx Err	The detected error condition that may prevent the test packet from being sent
Enable FC Collect	Displays if FC collect is enabled

session

Syntax

session [**sap** *sap-id*] [**interface** *ip-int-name* | *ip-address*] [**mac** *ieee-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**inter-dest-id** *intermediate-destination-id*] [**no-inter-dest-id**] [**ip-address** *ip-prefix*[/*prefix-length*]] [**port** *port-id*] [**subscriber** *sub-ident-string*] [**sap-session-id** *sap-session-index*]

session all

Context

[Tree] (clear>service>id>ipoe session)

Full Context

clear service id ipoe session

Description

This commands clears all identified IPoE sessions for the specified service instance. All associated subscriber hosts are deleted from the system.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-int-name

Specifies the name of the IP interface up to 32 characters.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

circuit-id

Specifies the circuit ID up to 127 characters.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

ip-address[/prefix-length]

Specifies information for the specified IP address and mask.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

no-inter-dest-id

Displays the information about no intermediate destination ID.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

port-id

Displays information about the specified port ID.

sap-session-index

Displays sap-session-index information.

service-id

Specifies the service ID of the wholesaler.

Values

service-id: 1 to 2147483647

svc-name: 64 characters maximum

sub-ident-string

Specifies an existing subscriber identification profile.

service-id

Specifies information for the specified service ID.

Values

service-id: 1 to 2147483647

svc-name: 64 characters maximum

detail

Displays all IPoE session details.

all

clears all active IPoE sessions for the specified service instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session

Syntax

session default-tunnel

session [**sap** *sap-id*] [**mac** *mac-address*] [**local-session-id** *local-id*] [**remote-session-id** *remote-id*] [**detail**]

Context

[Tree] (show>subscr-mgmt>pfcp session)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show subscriber-mgmt pfcp session

Description

This command displays information on PFCP sessions, including the default session. By default, all sessions are shown; filters can be applied to reduce the number of sessions or select a specific session.

Parameters

default-tunnel

Specifies that session information for the default tunnel is displayed.

detail

Specifies that associated forwarding information is displayed.

local-id

Specifies a local PFCP Session ID, up to 20 characters, which displays information for that local session ID.

remote-id

Specifies a remote PFCP session ID, up to 20 characters, which displays information for that remote session ID.

mac-address

Specifies the MAC address associated with the session, in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx, which displays information associated with the specified MAC address.

sap-id

Specifies the SAP ID associated with the session.

session

Syntax

session lsp-path [**lsp-index** *lsp-index*] [**path-lspid** *path-lspid*] [**prefix** *ip-prefix Iprefix-length*] [**src** *ip-address* | *ipv6 address*]

session lsp-path all

session sr-policy [**lsp-index** *lsp-index*] [**path-lspid** *path-lspid*] [**prefix** *ip-prefix Iprefix-length*] [**src** *ip-address* | *ipv6 address*]

session sr-policy all

Context

[Tree] (clear>router>bfd>seamless-bfd session)

Full Context

clear router bfd seamless-bfd session

Description

This command clears Seamless-BFD (S-BFD) session information.

Parameters

lsp-path

Keyword to clear the S-BFD sessions for the LSP path.

sr-policy

Keyword to clear the S-BFD sessions for the SR policy.

all

Keyword to clear all S-BFD sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lsp-index ***lsp-index***

Specifies the LSP index.

Values 0 to 4294967295

path-lspid ***path-lspid***

Specifies the path LSP ID.

Values 0 to 4294967295

prefix

Keyword to clear information by far-end prefix.

ip-prefix/prefix-length

Specifies an IP prefix for which to clear S-BFD session information, and the length of the prefix.

Values *ipv4-prefix* — a.b.c.d (host bits must be zero)

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

ip-address* | *ipv6-address

Specifies the IP address for which to clear S-BFD session information.

Values *ipv4-address* — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x:d.d.d.d[-interface]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

interface — mandatory for link local address, up to 32 characters

Platforms

All

session

Syntax

session *session-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (monitor>oam-pm session)

Full Context

monitor oam-pm session

Description

This command monitors the raw measurement interval for the specified session and test.

Parameters

session-name

Specifies the session name, up to 32 characters.

Platforms

All

session

Syntax

session *ldp-id* [*ldp-id*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>ldp session)

Full Context

monitor router ldp session

Description

This command displays statistical information for LDP sessions at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified LDP session(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ldp-id

Specifies the IP address of the LDP session to display. Up to five IP addresses can be specified in a single statement.

Values ipv4-address label-space

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address	[label-space]	
	label-space	0 to 65535
ipv4-address	a.b.c.d	
ipv6-address	x:x:x:x:x:x:x:x (16 eight-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x: [0 to FFFF] H	
	d: [0 to 255] D	

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

Output

The following output is an example of LDP session information.

Output Example

```

session

Syntax

session imsi *imsi* **apn** *apn-string*

session [**peer-address** *ip-address*] [**router** *router-instance*] [**remote-control-teid** *teid*] [**local-control-teid** *teid*] [**detail**]

session imsi *imsi*

Context

[Tree] (show>subscr-mgmt>gtp>s11 session)

Full Context

show subscriber-mgmt gtp s11 session

Description

This command displays GTP S11 session information.

Parameters

imsi

Specifies the IMSI (International Mobile Subscriber Identity) of this UE.

apn-string

Specifies the APN (Access Point Name), up to 100 characters.

ip-address

Specifies the IP address.

Values *ipv4-address* — a.b.c.d
ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x - [0 to FFFF]H
d - [0 to 255]D
length: 0 to 128

router-instance

Specifies the identifier of the virtual router instance where the GTP tunnel is terminated.

Values *router-name* | *vprn-svc-id*
router-name — "Base”
vprn-svc-id — 1 to 2147483647

remote-control-teid ***teid***

Specifies the remote control plane Tunnel Endpoint Identifier (TEID).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 4294967295

local-control-teid *teid*

Specifies the local control plane TEID.

Values 1 to 4294967295

detail

Displays detailed information.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of GTP S11 session information.

Output Example

```
Node# show subscriber-mgmt gtp s11 session
===============================================================================
GTP S11 sessions
===============================================================================
IMSI                        : 001020000000001
APN                         : demo.mnc001.mcc001.gprs
-------------------------------------------------------------------------------
Peer router                 : 10

Remote control TEID         : 1
Local control TEID          : 4293919008
PDN TEID                    : 4293919008
Charging characteristics    : (None)
Uplink AMBR (kbps)          : 10000
Downlink AMBR (kbps)        : 20000
Ipoe-session SAP            : [pxc-1.b:1.8]
Ipoe-session Mac Address    : 00:03:ff:f0:01:20
-------------------------------------------------------------------------------
No. of GTP S11 sessions: 1
===============================================================================
```

session

Syntax

session *session-name*

Context

[Tree] (show>oam-pm>stats session)

Full Context

show oam-pm statistics session

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command selects the session for the statistical display.

Parameters

session-name

Specifies the session name, up to 32 characters.

Platforms

All

Use subject to Terms available at: www.nokia.com/terms.

24 s Commands – Part II

24.1 session-filter

session-filter

Syntax

session-filter

session-filter *session-filter-name*

Context

[Tree] (show>app-assure>group session-filter)

Full Context

show application-assurance group session-filter

Description

This command displays session filter information.

Parameters

session-filter-name

Specifies a session-filter-name up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **session-filter** command information.

Output Example

```
show application-assurance group <aa-group-id>[:<partition>] session-filter <filter-
name>
# session-filter<filter-id>
===============================================================================
AA Session Filter
===============================================================================
Filter Name  : Block UDP Session Initiation
Applied      : Yes                        Def. Action    : Permit
Entries      : 1
Description  : Block UDP initiated towards subscribers
-------------------------------------------------------------------------------
Filter Match Criteria
```

```
-------------------------------------------------------------------------------
Entry        : 1
Description  : (Not Specified)
Protocol     : 17
Action       : deny
Hit Count    : 0 pkts
===============================================================================
```

24.2 session-parameters

session-parameters

Syntax

session-parameters [*family*] [**community** *community*]

session-parameters *peer-ip-address*

Context

[Tree] (show>router>ldp session-parameters)

Full Context

show router ldp session-parameters

Description

This command displays LDP peer information.

Parameters

peer-ip-address

Specify the peer IP address.

family

Displays either IPv4 or IPv6 active LDP information.

Values ipv4, ipv6

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

Table 533: Output fields: LDP session parameters describes the LDP session-parameters output.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 533: Output fields: LDP session parameters

Label	Description
Peer	The IP address of the peer.
TTL security	Enabled — LDP peering sessions protected. Disabled — LDP peering sessions unprotected.
Min-TTL-Value	Displays the minimum TTL value for an incoming packet.
Auth	Enabled — Authentication using MD5 message based digest protocol is enabled. Disabled — No authentication is used.

Output Example
Example with community RED:

```
*A:SRU4# show router ldp session-parameters 10.20.1.1

24.3 session-restart

session-restart

Syntax

session-restart service-id *service-id* **group-interface** *group-interface* **application** *application*

Context

[Tree] (tools>perform>aaa>diameter session-restart)

Full Context

tools perform aaa diameter session-restart

Description

This command initiates the restart of Gx and Gy sessions. Depending on the application for which it is invoked, this command triggers a full Diameter Gx or Gy session resynchronization by issuing a CCR-T (Termination Request) followed by a CCR-I (Initial Request) to reestablish the sessions, without impacting user traffic.

The BNG sends a CCR-T for all affected Gx and Gy sessions, while preserving the DHCP state of the subscriber (that is, the DHCP session on the BNG remains intact). It then issues a CCR-I to reestablish the corresponding Gx and Gy sessions.

In a Gx multichassis redundancy configuration, the **tools** command must be run only under the group-interface where SRRP is in a "master" state.

In a Gy multiredundancy configuration, the **tools** command must be run on both nodes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

application

Specifies the application to restart.

Values gx – restarts the Gx AVP information

gy – retarts the Gy AVP information

service-id

Specifies the routing context under which the subscriber management sessions are established.

Values service-id: 1 to 2148278386

svc-name: up to 64 characters

group-interface

Specifies the group interface name, up to 32 characters, under which the sessions are established.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

24.4 session-tokens

session-tokens

Syntax

session-tokens

Context

[Tree] (tools>dump>sys>sec>support-mode session-tokens)

Full Context

tools dump system security support-mode session-tokens

Description

This command displays the current **shell** and **kernel** session tokens on the system.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of session token information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output example

```
A:node-2>tools>dump>sys>sec>support-mode# session-tokens
No tokens in current session for shell
No tokens in current session for kernel
A:node-2>tools>dump>sys>sec>support-mode#
```

24.5 sessions

sessions

Syntax

sessions [**group** *name*] **neighbor** *ip-address*] [**port** *port-number*] [**association**] [**statistics**]

Context

[Tree] (show>service>id>gsmp sessions)

Full Context

show service id gsmp sessions

Description

This command displays GSMP sessions information.

Parameters

group

A GSMP group defines a set of GSMP neighbors which have the same properties.

name

Specifies a GSMP group name is unique only within the scope of the service in which it is defined.

ip-address

Specifies the ip-address of the neighbor.

port

Specifies the neighbor TCP port number use for this ANCP session.

Values 0 to 65535

association

Displays to what object the ANCP-string is associated.

statistics

Displays statistics information about an ANCP session known to the system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

Output

The following output is an example of GSMP sessions information.

Output Example

This show command gives information about the open TCP connections with DSLAMs.

```

The following table describes service ID GSMP sessions output fields:

Table 534: Output fields: service ID GSMP sessions

Label	Description
Port	The port ID number
Ngbr-IpAddr	The neighbor IP address
Gsmp-Group	The GSMP group ID
State	The GSMP state of this TCP connection
Peer Instance	The unique GSMP ID for each end of the GSMP connection
Peer Port	The unique GSMP ID for each end of the GSMP connection
Peer Name	The unique GSMP ID for each end of the GSMP connection
timeouts	The number of successive timeouts for this session
Peer Timer	The GSMP keepalive timer
Capabilities	The ANCP capabilities negotiated for this session
Conf Capabilities	The ANCP capabilities configured for this session
Priority Marking	The priority marking configured for this session
Local Addr	The IP address used by the box's side of the TCP connection
Conf. Local Addr.	The configured IP address used by the box's side of the TCP connection
Sender Instance	The instance sent to the neighbor in this session
Sender Port	The port sent to the neighbor in this session
Sender Name	The name sent to the neighbor in this session
Max. Timeouts	The maximum number of successive timeouts configured for this session
Sender Timer	The timeout value that is announced toward the neighbor. The neighbor uses this timeout value while waiting for an acknowledgment from this system.
