All

Output

The following output is an example of FP card resource usage information.

Output Example

```
# tools dump resource-usage card 1 fp 1
===============================================================================
Resource Usage Information for Card Slot #1 FP #1
===============================================================================
                                                    Total  Allocated       Free
-------------------------------------------------------------------------------
...
    Dynamic Policer Stats (in use by Egress) -                    0
                 Fast Depth Monitored Queues |      10000         25       9975
                         Egress User Queues |     253952          6     253946
                       Egress User Policers |     393215          1     393214
```

9.50 fp-resource-policy

fp-resource-policy

Syntax

fp-resource-policy [*fp-resource-policy-name*] [**association**]

fp-resource-policy [*fp-resource-policy-name*] [**detail**]

Context

[Tree] (show>qos fp-resource-policy)

Full Context

show qos fp-resource-policy

Description

This command displays the FP resource policies configured on the system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

fp-resource-policy-name

Displays the FP resource policy name, up to 32 characters.

association

Displays the entities associated to the specified FP resource policy.

detail

Displays detailed FP resource policies information, including FP resource policy associations.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Output

The following output is an example of FP resource policy information.

Output Example

```
A:PE# show qos fp-resources-policy
===============================================================================
FP Resource Policy Summary
===============================================================================
Policy Name                     Description
-------------------------------------------------------------------------------
default                         Default FP resource policy.
fp-res-policy-1

9.51 fp-tunnel-table

fp-tunnel-table

Syntax

fp-tunnel-table *slot-number* [*ip-prefix/prefix-length*]

fp-tunnel-table *slot-number* [{ **ipv4** | **ipv6**}]

Context

[Tree] (show>router fp-tunnel-table)

Full Context

show router fp-tunnel-table

Description

This command displays the IOM/IMM label, next hop and outgoing interface information for BGP, LDP, and RSVP tunnels used in any of the following applications:

- BGP shortcut (**configure router bgp next-hop-resolution shortcut-tunnel**)
- IGP shortcut (**configure router isis igp-shortcut**)

  (**configure router ospf igp-shortcut**)
- IGP prefix resolved to an LDP LSP (**configure router ldp-shortcut**)
- Static route resolved to a LDP or RSVP LSP
- VPRN auto-bind
- 6PE/6VPE

Parameters

slot-number

Displays information for the specified slot.

Values 1 to 10

***ip-prefix*[/*prefix-length*]**

Displays routes only matching the specified *ip-address* and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

		ipv4-prefix-length:	0 to 32
	ipv6	ipv6-prefix[/pref*:	x:x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:x:d.d.d.d x: [0 to FFFF]H d: [0 to 255]D
		prefix-length:	1 to 128

ipv4

Keyword to display the output to IPv4-based FP tunnel tables.

ipv6

Keyword to display the output to IPv6-based FP tunnel tables.

Platforms

All

Output

The following outputs are examples of router FP tunnel information:

- Output example: FP tunnel information for a specific IP address, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information for a specific IP address, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information for IPv6, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information for IPv6, Table 175: Output fields: FP tunnel table
- Output example: FP tunnel information for a specific IPv6 addressTable 175: Output fields: FP tunnel table
- Output example: FP tunnel informationTable 175: Output fields: FP tunnel table
- Output example: FP tunnel informationTable 175: Output fields: FP tunnel table

Table 176: Output fields: map fragmentation statistics

Label	Description
Rx Resolved Packets	Specifies fragments that were resolved and never buffered. This includes: • first fragments (MF=1, FO=0), which are always resolved by definition • non-first fragments that have matching flow records
Rx Unresolved Packets	Specifies the number of packets that were queued in the system since the last clear command was invoked. For example, out-of-order fragments without a matching flow record (missing the first fragment). These packets can be eventually resolved and forwarded, or discarded (for example, as a result of timeout).
Tx Frags	Specifies the fragments that were transmitted (Rx Resolved and Rx Unresolved that were eventually resolved) out of the fragmentation logic within the VSR. There is no guarantee that these fragments will be transmitted out of the system as they may be dropped on egress due to congestion or restrictions imposed by the configured filter.
Dropped Frags	Specifies the dropped fragments due to some fragmentation issue (timeout, buffer full).
Created Flows	A cumulative counter that represents the total number of flow records since the last **clear** command was invoked. It only counts the first fragment and roughly represents the amount of fragmented packets that were processed by the system since the last clear command. The counter does not provide any indication about the number of flows (packets whose fragments were transmitted fully) that were actually transmitted.
Flow Collisions	Represents the number of overlapping first fragments. For example, when a flow record already exists and another first fragment for this flow is received.
Exceeded Max Flows	Specifies the number of occurrences when the number of flows in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last **clear** command): • Rx unresolved (buffered) fragments that have timed out, due to a missing first fragment • deleted flow-records because they have not received all fragments within the timeout period

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Timeouts	Specifies the number of fragments that have timed out (since the last clear command): • Rx unresolved (buffered) fragments that have timed out, due to a missing 1st fragment • deleted flow-records because they have not received all fragments within the timeout period
Exceeded Max Buffers	Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value.
Exceeded Max Buffers Per Flow	Specifies the number of occurrences when a fragment count per flow has exceeded its limit.
In-Use Flows	An approximation of the number of flow records that are currently in use. The counter provides an estimate, expressed in percent, of the number of fragmented packets that were being processed at the time the counter was invoked.
Max Flows	Specifies the amount of time in seconds that the system will remain in a hold down state before being used again.
In-Use Buffers	Represents the amount of buffered fragments, expressed in percent of the maximum buffer space, that can be used for fragmentation.
Max Buffers	A non-cumulative counter that represents the maximum number of buffers allocated since the last **clear** command. The counter captures the highest value of the **buffers-in-use** counter since the last **clear** command. The counter shows the percentage of the total buffer space that can be used by fragmentation.

9.53 free-addresses

free-addresses

Syntax

free-addresses *ip-address*[/*mask*]

free-addresses summary [**subnet** *ip-address*[/ *mask*]

free-addresses pool *pool-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>dhcp>local-dhcp-server free-addresses)

Full Context

show router dhcp local-dhcp-server free-addresses

Description

This command displays the free addresses in a subnet.

Parameters

pool-name

Specifies a DHCP pool name on the router.

subnet

Specifies a subnet of IP addresses that are served from the pool.

summary

Displays summary output of the free addresses.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of free address information

Output Example

```
*A:ALA-48>show>router>dhcp>local-dhcp-server# free addresses pool test subnet 10.0.0.0/24
===============================================================================
Free addresses in subnet 10.0.0.0/24
===============================================================================
IP Address
-------------------------------------------------------------------------------
No. of free addresses: 0
===============================================================================
*A:ALA-48>show>router>dhcp>local-dhcp-server#
```

Table 177: Output fields: DHCP server free addresses describes free addresses pool command output fields.

Table 177: Output fields: DHCP server free addresses

Field	Description
IP Address	The free IP addresses in the subnet
No of free addresses	The total number of free addresses in the subnet

9.54 ftn

ftn

Syntax

ftn [**endpoint** *endpoint* **| sender** *sender* **| nexthop** *nexthop* **| lsp-id** *lsp-id* **| tunnel-id** *tunnel-id* **| label** *start-label end-label*]

Context

[Tree] (tools>dump>router>mpls ftn)

Full Context

tools dump router mpls ftn

Description

This command dumps FEC-to-NHLFE (FTN) information for MPLS.

Parameters

endpoint

Specifies the endpoint or destination IP address.

Values a.b.c.d

sender

Specifies the sender IP address.

Values a.b.c.d

lsp-id

Specifies the LSP ID.

Values 0 to 65535

tunnel-id

Specifies the tunnel ID.

Values 0 to 65535

nexthop

Specifies the next hop IP address.

Values a.b.c.d

start-label

Specifies the start label value for the label range of the display.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 32 to 524287

end-label

Specifies the end label value for the label range of the display.

Values 32 to 524287

Platforms

All

9.55 fwd-path-ext

fwd-path-ext

Syntax

fwd-path-ext [**fpe** *fpe-id*]

fwd-path-ext fpe *fpe-id* **associations**

Context

[Tree] (show fwd-path-ext)

Full Context

show fwd-path-ext

Description

This command displays FPE information.

Parameters

fpe-id

Specifies the FPE ID.

Values 1 to 64

associations

Displays a list of current fwd path extensions to which the FPE is associated.

Platforms

All

Output

The following outputs are examples of **show fwd-path-ext fpe** command information, and Table 178: Output fields: forwarding path extension describes the output fields.

```

Table 178: Output fields: forwarding path extension

Field	Description
FPE Id	Displays the configured ID of the FPE
Path pxc/ xc-a, xc-b	Displays the path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE. In case of a PXC based LAG, the path is referred to as xc-a and xc-b.
Application	Displays the application associated with this FPE. Based on the application type, the system internally configures logic on underlying PXC (or PXC based LAG) necessary to accommodate the application.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Description	Displays the user-configurable string used to describe the use of the FPE
Cups Steering	Displays the configured CUPS steering status
Multi-path	Displays the configured multipath status
MVPN UMH rate monitoring	Displays the configured MVPN UMH rate monitoring status
SDP-id Range	Displays the configurable SDP ID range used for internal SDPs that are used by FPEs
Sub Mgt Extension	Displays the configured subscriber management extension status
Segment-Routing V6	Displays the configured Segment Routing v6 status
SRv6 Type	Displays the FPE application type
Path	Path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE.
PW-Port	Displays the FPE that is used by PW-port application
VXLAN-Termination	Displays the FPE that is used by Vxlan-Termination application
Oper	Displays the status of the application
EPIPE svc Id	Displays the Epipe service ID with which the PW-port is associated
PW-Port Id	Displays the PW-port ID that is associated with the Epipe
Tunnel termination	Displays the IP addresses on which the VXLAN tunnel is terminated

10 g Commands

10.1 gateway

gateway

Syntax

gateway brg-id *brg-ident*

Context

[Tree] (show>subscr-mgmt>vrgw>brg gateway)

Full Context

show subscriber-mgmt vrgw brg gateway

Description

This command displays all operational data related to the BRG.

Parameters

brg-ident

Specifies the BRG identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management BRG gateway information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05"
===============================================================================

gateway

Syntax

gateway brg-id *brg-ident*

gateway brg-id *brg-ident* **idle-bindings** [**binding** *ieee-address*]

gateway all-gateways

gateway brg-id *brg-ident* **all-hosts**

gateway brg-id *brg-ident* **host** *ieee-address*

Context

[Tree] (clear>subscr-mgmt>vrgw>brg gateway)

Full Context

clear subscriber-mgmt vrgw brg gateway

Description

This command clears BRG gateway data.

Parameters

brg-ident

Clears the specified BRG and all related hosts from the system.

idle-bindings

Clears a specific idle binding or all idle binding from the BRG. An idle binding is a DHCP lease that has not been expired but for which the host has been removed due to idle timeout.

ieee-address

Specifies the MAC address of the binding to remove.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all-gateways

Clears all BRGs and related hosts from the system.

all-hosts

Clears all hosts belonging to a specified BRG.

ieee-address

Clears a specific host belonging to a specified BRG.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gateway

Syntax

gateway name *name*

gateway [**name** *name*] **tunnel** [**private-address-type** *private-address-type*] [**tunnel-type** *tunnel-type*]

gateway [**service** *service-id*]

gateway tunnel [*ip-address:port*]

gateway name *name* **tunnel** *ip-address:port*

gateway name *name* **tunnel** [**tunnel-type** *tunnel-type*]

gateway [**name** *name*] **tunnel state** *state* [**tunnel-type** *tunnel-type*]

gateway [**name** *name*] **tunnel idi-value** *idi-prefix*

gateway tunnel count

gateway tunnel [**private-address-type** *private-address-type*] [**tunnel-type** *tunnel-type*]

Context

[Tree] (show>ipsec gateway)

Full Context

show ipsec gateway

Description

This command displays IPsec gateway information.

Parameters

name

Specifies an IPsec gateway name.

service-id

Specifies the service ID of the default security service used by the IPsec gateway.

Values 1 to 214748364 svc-name: Up to 64 characters maximum

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address:port

Displays the IP address and UDP port of the SAP IPsec gateway to the tunnel. For the remote tunnel endpoint, the *port* part is optional. In the case of an IPv6 address with a port, use the format "*IPv6Address:port*", for example "[2001:db8::100]:500"; a double quote is required around this format.

Values 0 to 65535

state

Specifies the state of the tunnel.

Values up, down

idi-prefix

Displays a string as an IDi prefix. With this parameter, the system lists all the peers with IDi that has specified prefixes.

count

Displays the number of IPsec gateway tunnels with the **ike-policy>authmethod** command set to **psk**.

tunnel-type

Specifies the tunnel type supported on the IPsec gateway.

Values dl2l, ra

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of IPsec gateway information:

- Output Example: show IPsec gateway tunnel; Table 179: Output fields: show IPsec gateway tunnel
- Output Example: show IPsec gateway name; Table 180: Output fields: show IPsec gateway name

Output Example: show IPsec gateway tunnel

```

gateway

Syntax

gateway name *name* **tunnel** *ip-address:port* [**statistics**] [**saved-key**] [**removed-tunnels**]

gateway name *name* **tunnel** *ip-address:port* [**temp-mtu**]

gateway name *name* [**saved-key**] [**removed-tunnels**]

gateway name *name* **tunnel** *ip-address:port* [**saved-key**] [**removed-tunnels**]

Context

[Tree] (clear>ipsec gateway)

Full Context

clear ipsec gateway

Description

This command clears dynamic IPsec tunnel states.

The system clears the statistics counter for the specified tunnel when the **statistics** parameter option is specified.

The system clears the saved IKE and ESP keys for the specified tunnel, or for all tunnels on the specified gateway if no tunnel is specified when using the **saved-key** parameter.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The system removes the specified tunnel when the **statistics, saved-key**, **temp-mtu**, or **removed-tunnels** parameters are not specified.

Parameters

name

Specifies the name of the IPsec gateway, up to 32 characters.

ip-address

Specifies the IP address and port of the remote peer.

Values

<ip-address>	ip-address	a.b.c.d
	ipv6-address	x:x:x:x:x:x:x:x
		x:x:x:x:x:x:d.d.d.d
		x - [0 to FFFF]H
		d - [0 to 255]D

port

Specifies the port of the remote peer. The specified channel is cleared if the **statistics, saved-key**, **temp-mtu**, or **removed-tunnels** parameters are not specified.

Values 0 to 65535

statistics

Keyword to clear the statistics counter.

saved-key

Keyword to clear the saved IKE and ESP keys.

temp-mtu

Keyword to clear the temporary MTU learned from MTU propagation for the specified tunnel.

removed-tunnels

Keyword to clear the saved keys of removed tunnels.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateways brg-profile *profile-name*

Context

[Tree] (show>subscr-mgmt>vrgw>brg gateways)

Full Context

show subscriber-mgmt vrgw brg gateways

Description

This command lists operational gateway information for all BRGs active on the system. This list can optionally be reduced by specifying a BRG profile.

Parameters

profile-name

Specifies the name of the BRG profile to filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway information.

Output Example

```
Node# show subscriber-mgmt brg gateways
===============================================================================
Bridged Residential Gateways

10.3 generate-event

generate-event

Syntax

generate-event [*application* [**all** | *event-name* | *event-number*]]

Context

[Tree] (tools>perform>log generate-event)

Full Context

tools perform log generate-event

Description

This command generates test events for an application's event name or event number.

Parameters

application

Specifies the application name.

The following are some sample applications:

Values adp, anysec, application_assurance, auto_prov, bfd, bgp, bier, bmp, calltrace, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtp, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, maffilter, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp, oam, ospf, pcap, pcep, pfcp, pim, pim_snooping, pools, port, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, satellite, security, sflow, snmp, sr_mpls, sr_policy, srv6, stp, subscr_mgmt, sub_host_trk, svcmgr, system, telemetry, tip, tls, tree_sid, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

all

Keyword to specify all of the application events.

event-name

Specifies the application event name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

event-number

Specifies the application event number.

Values 0 to 4294967295

Platforms

All

10.4 generate-key

generate-key

Syntax

generate-key authentication *authentication-protocol authentication-password* [**privacy** *privacy-protocol privacy-password*] [**engine-id** *identifier*]

Context

[Tree] (tools>perform>system>mgmt-itf>snmp generate-key)

Full Context

tools perform system management-interface snmp generate-key

Description

This command generates localized SNMPv3 authentication and privacy keys, which are a hash of the SNMP engine ID and a password. The SNMP engine ID can be displayed with the **show system information | match "SNMP Engine ID"** command and does not need to be entered. If keys are being generated for a different system, its SNMP engine ID must be specified.

Parameters

authentication

Generates a localized authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

Values **hmac-md5-96** — Specifies use of the HMAC-MD5-96 authentication protocol.

hmac-sha1-96 — Specifies use of the HMAC-SHA-96 authentication protocol.

hmac-sha2-224 — Specifies use of the HMAC-SHA-224 authentication protocol.

hmac-sha2-256 — Specifies use of the HMAC-SHA-256 authentication protocol.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hmac-sha2-384 — Specifies use of the HMAC-SHA-384 authentication protocol.

hmac-sha-512 — Specifies use of the HMAC-SHA-512 authentication protocol.

authentication-password

Specifies the password used to generate the authentication key.

privacy

Keyword to generate a localized privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

Values **cbc-des** — Specifies the use of the CBC-DES privacy protocol.

cfb128-aes-128 — Specifies the use of the CFB128-AES-128 privacy protocol.

cfb128-aes-192 — Specifies the use of the CFB128-AES-192 privacy protocol.

cfb128-aes-256 — Specifies the use of the CFB128-AES-256 privacy protocol.

privacy-password

Specifies the privacy password used to generate the privacy key.

engine-id ***identifier***

Keyword that specifies the SNMP engine ID. The identifier must be a hexadecimal string between 10 and 64 digits in length.

Platforms

All

Output

The following output is an example of a generated authentication and privacy key.

Output Example

```
A:ALA-1# tools perform system management-interface snmp generate-key authentication hmac-sha2-

10.7 gnss

gnss

Syntax

gnss

Context

[Tree] (tools>dump>port gnss)

Full Context

tools dump port gnss

Description

This command displays signal strength information for visible satellites for the port.

This command is supported only for use with global navigation satellite system (GNSS) RF ports, for platforms that support one or more GNSS receivers.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

Output

The following output is an example of GNSS port information.

Output Example (Supported 7750 SR FP5 platforms)

```
tools dump port A/gnss gnss

show router igmp group

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ip-address* parameters are specified, then all IGMP group, (*,G) and (S,G) addresses are displayed.

Parameters

grp-ip-address

Displays specific multicast group addresses.

hosts

Displays hosts for the multicast group address.

interfaces

Displays interfaces for the multicast group address.

saps

Displays SAPs for the multicast group address.

Platforms

All

Output

The following output is an example of IGMP group information. Table 181: Output fields: IGMP group describes the output fields for IGMP group information.

group

Syntax

group [*name*] [**detail**]

Context

[Tree] (show>router>bgp group)

Full Context

show router bgp group

Description

This command displays group information for a BGP peer group. This command can be entered with or without parameters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this command is issued without a group name, information about all peer groups displays.

When the command is issued with a specific group name, information only pertaining to that specific peer group displays.

The "State" field displays the BGP group's operational state. Other valid states are:

- Up - BGP global process is configured and running.
- Down - BGP global process is administratively shutdown and not running.
- Disabled - BGP global process is operationally disabled. The process must be restarted by the operator.

Parameters

name

Displays information for the specified BGP group, up to 64 characters.

detail

Displays detailed information.

Platforms

All

Output

The following outputs are example of BGP group information, and Table 182: Output fields: standard and detailed group describes the output fields.

Output Example

```
*A:Dut-B#
*A:Dut-B# show router bgp group
===============================================================================

```

Table 182: Output fields: standard and detailed group

Label	Description
Group	BGP group name
Group Type	No Type — Peer type not configured External — Peer type configured as external BGP peers Internal — Peer type configured as internal BGP peers
State	Disabled — The BGP peer group has been operationally disabled Down — The BGP peer group is operationally inactive Up — The BGP peer group is operationally active
Peer AS	The configured or inherited peer AS for the specified peer group
Local AS	The configured or inherited local AS for the specified peer group

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Local Address	The configured or inherited local address for originating peering for the specified peer group
Loop Detect	The configured or inherited loop detect setting for the specified peer group
Connect Retry	The configured or inherited connect retry timer value
Authentication	n/a — No authentication is configured MD5 — MD5 authentication is configured
Local Pref	The configured or inherited local preference value
MED Out	The configured or inherited MED value assigned to advertised routes without a MED attribute
Min Route Advt.	The minimum amount of time that must pass between route updates for the same IP prefix
Min AS Originate	The minimum amount of time that must pass between updates for a route originated by the local router
Multihop	The maximum number of router hops a BGP connection can traverse
Multipath	The configured or inherited multipath value, determining the maximum number of ECMP routes BGP can advertise to the RTM
Prefix Limit	No Limit — No route limit assigned to the BGP peer group 1 to 4294967295 — The maximum number of routes BGP can learn from a peer
Passive	Disabled — BGP attempts to establish BGP connections with neighbors in the specified peer group Enabled — BGP does actively attempt to establish BGP connections with neighbors in the specified peer group
Next Hop Self	Disabled — BGP is not configured to send only its own IP address as the BGP nexthop in route updates to neighbors in the peer group Enabled — BGP sends only its own IP address as the BGP nexthop in route updates to neighbors in the specified peer group
Aggregator ID 0	Disabled — BGP is not configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group Enabled — BGP is configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Remove Private	Disabled — BGP will not remove all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group Enabled — BGP removes all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group
Damping	Disabled — The peer group is configured not to dampen route flaps Enabled — The peer group is configured to dampen route flaps
Export Policy	The configured export policies for the peer group
Import Policy	The configured import policies for the peer group
Hold Time	The configured hold time setting
Keep Alive	The configured keepalive setting
Cluster Id	n/a — No cluster ID has been configured
Client Reflect	Disabled — The BGP route reflector will not reflect routes to this neighbor Enabled — The BGP route reflector is configured to reflect routes to this neighbor
NLRI	The type of NLRI information that the specified peer group can accept Unicast — IPv4 unicast routing information can be carried
Preference	The configured route preference value for the peer group
Egress Engineering	Enabled — EPE is enabled for the peer group Disabled — EPE is disabled for the peer group
List of Peers	A list of BGP peers configured under the peer group
Total Peers	The total number of peers configured under the peer group
Established	The total number of peers that are in an established state

group

Syntax

group *aa-group-id* [**:***partition-id*]

Context

[Tree] (show>app-assure group)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show application-assurance group

Description

Commands in this context display application-assurance group information.

Parameters

aa-group-id

Specifies an AA ISA group ID.

Values 1

partition-id

Specifies a partition within a group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of application assurance group information.

Output Example

```
*A:Dut-C#  /show application-assurance group 1:1 aa-sub esm Subscriber1 summary
===============================================================================
Application-Assurance Subscriber Summary (realtime)
===============================================================================
AA-Subscriber           : Subscriber1 (esm)
ISA assigned            : esa-1/1
App-Profile             : dpi
App-Profile divert      : Yes
Capacity cost           : 1
Aarp Instance Id        : N/A
Sub-quarantined         : No
HTTP URL Parameters     : (Not Specified)
Last HTTP Notified Time : N/A
SAP                     : 6/1/5:1
MAC                     : c2:4d:ff:8a:b2:cc
Circuit Id : (Not Specified)
Remote Id  : (Not Specified)
Tethering Status        : not-detected (disabled)
Devices Detected        : N/A
Sub Congestion State    : Not Congested|RTT Limits Exceeded (Stage X)
```

group

Syntax

group *aa-group-id* [**:** *partition-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (tools>dump>app-assure group)

Full Context

tools dump application-assurance group

Description

This command dumps application-assurance information within a group and partition.

Parameters

aa-group-id

Specifies the AA group identifier.

Values

aa-group-id:	partion:aa-group-id[:partition-id]	
	aa-group-id	1 to 255
	partition-id	1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group *aa-group-id* **load-balance** [**service** *service-id*]

Context

[Tree] (tools>perform>app-assure group)

Full Context

tools perform application-assurance group

Description

This command performs application assurance group operations.

Parameters

aa-group-id

Specifies the application assurance group ID.

Values 1 to 255

load-balance

Load balances subscribers within the group.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

service *service-id*

Load balances the specified service.

Values 1 to 2148278381, svc-name (up to 64 char max.)

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group [*grp-ipv6-address*] [**hosts** | **interfaces** | **saps**]

group summary [**hosts** | **interfaces** | **saps**]

Context

[Tree] (show>router>mld group)

Full Context

show router mld group

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ipv6-address* parameters are specified, then all MLD group, (*,G) and (S,G) addresses are displayed.

Parameters

grp-ipv6-address

Displays specific multicast group addresses.

hosts

Displays hosts for the multicast group address.

interfaces

Displays interfaces for the multicast group address.

saps

Displays SAPs for the multicast group address.

Platforms

All

Output

The following output is an example of MLD group information. Table 183: Output fields: MLD group describes the output fields for MLD group information.

© 2026 Nokia.

Table 184: Output fields: MSDP group

Label	Description
Group Name	The MSDP group name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Mode	The groups of peers in a full mesh topology to limit excessive flooding of SA messages to neighboring peers
Act Srcs	The configured maximum number of active source messages that will be accepted by MSDP
Local Address	The local end of a MSDP session
Admin State	The administrative state of the MSDP group
Receive Msg Rate	The rate that the messages are read from the TCP session
Receive Msg Time	The time of MSDP messages that are read from the TCP session within the configured number of seconds
Receive Msg Thd	The time interval, in seconds, that MSDP messages are read from the TCP session for rate limiting
Mode	The MSDP group mode
SA Limit	The source-active limit
Export Policy	The export policy specified for the group
Import Policy	The import policy specified for the group

group

Syntax

group *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

group *grp-ip-address* [**source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*] **rpfv**

Context

[Tree] (show>router>pim group)

Full Context

show router pim group

Description

This command displays PIM source group database information.

Parameters

grp-ip-address

Specifies the IP multicast group address for which this entry contains information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source *ip-address*

Specifies the source address for which this entry contains information.

type starstarrp

Specifies that only (*, *, rp) entries are displayed.

type starg

Specifies that only (*,G) entries are displayed.

type sg

Specifies that only (S,G) entries are displayed.

detail

Displays detailed group information.

family

Displays family information.

Values ipv4, ipv6

rpfv

Displays proxy RPF vectors that are used for inter-AS Rosen MVPN.

Platforms

All

Output

The following output is an example of PIM group information. Table 185: Output fields: PIM group provides PIM group field descriptions.

PIM Source Group ipv4
```

Table 185: Output fields: PIM group

Label	Description
Group Address	The IP multicast group address for which this entry contains information
Source Address	The source address of the multicast sender. The value is 0 if the type is configured as **starg**. The address of the Rendezvous Point (RP) display when the type is configured as **starRP**.
RP Address	The RP address
Type	The type of entry, (*,*, rp)/(*,G) or (S,G).
Spt Bit	Specifies whether to forward on (*,*, rp)/(*,G) or on (S,G) state. It is updated when the (S,G) data comes on the RPF interface towards the source.
Incoming Intf	The interface on which the traffic comes in. It can be the RPF interface to the RP (if **starg**) or the source (if **sg**).
Num Oifs	The number of interfaces in the inherited outgoing interface list. An inherited list inherits the state from other types.
Flags	The different lists to which this interface belongs
Keepalive Timer Exp	The keepalive timer expiration which is applicable only for (S,G) entries.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	The (S,G) keepalive timer is updated by data being forwarded using this (S,G) Forwarding state. It is used to keep (S,G) state alive in the absence of explicit (S,G) joins.
MRIB Next Hop	The next hop address towards the RP
MRIB Src Flags	MRIB information about the source. If the entry is of type starg or starstarrp, it will contain information about the RP for the group.
Up Time	The time since this source group entry was created.
Resolved By	The route table used for RPF check.
Up JP State	The upstream join prune state for this entry on the interface. PIM join prune messages are sent by the downstream routers towards the RPF neighbor.
Up JP Expiry	The minimum amount of time remaining before this entry will be aged out.
Up JP Rpt	The join prune Rpt state for this entry on the interface. PIM join/ prune messages are sent by the downstream routers towards the RPF neighbor. (S,G, rpt) state is a result of receiving (S,G, rpt) JP message from the downstream router on the RP tree.
Up JP Rpt Override	The value used to delay triggered Join (S,G, rpt) messages to prevent implosions of triggered messages. If this has a non-zero value, it means that the router was in 'not Pruned' state and it saw a prune (S,G, rpt) message being sent to RPF (S,G, rpt). If the router sees a join (S,G, rpt) override message being sent by some other router on the LAN while the timer is still non-zero, it simply cancels the override timer. If it does not see a join (S,G, rpt) message, then on expiry of the override timer, it sends its own join (S,G, rpt) message to RPF (S,G, rpt). A similar scenario exists when RPF (S,G, rpt) changes to become equal to RPF (*,G).
Register State	The register state. The register state is kept at the source DR. When the host starts sending multicast packets and if there are no entries programmed for that group, the source DR sends a register packet to the RP (g). Register state transition happen based on the register stop timer and the response received from the RP.
Register Stop Exp	The time remaining before the register state might transition to a different state
Register from Anycast RP	The status of the register packet for that group received from one of the RP from the anycast-RP set
RPF Neighbor	The address of the RPF neighbor

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Outgoing Intf List	A list of interfaces on which data is forwarded.
Curr Fwding Rate	The current forwarding rate of the multicast data for this group and source. This forwarding rate is calculated before ingress QoS policing or shaping is applied.
Forwarded Packets	The number of multicast packets that were forwarded to the interfaces in the outgoing interface list. This packet count is before ingress QoS policing or shaping is applied.
Discarded Packets	The number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
Forwarded Octets	The number of octets forwarded
RPF Mismatches	The number of multicast packets that matched this source group entry but they did not arrive on the interface.
Spt threshold	The value of the SPT threshold configured for that group. 0 kb/s means that the switch to the SP tree occurs immediately.

group

Syntax

group *aa-group-id* [**:** *partition-id*]

Context

[Tree] (clear>application-assurance group)

Full Context

clear application-assurance group

Description

This command clears application assurance group data.

Parameters

aa-group-id

Specifies a group of ISA MDAs.

Values 1 to 255

partition-id

Specifies a partition within a group.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group [*group-name*] [**detail**]

Context

[Tree] (show>router>rip group)

Full Context

show router rip group

Description

This command displays RIP group information.

Parameters

group-name

Displays RIP group information for the specified group.

detail

Displays detailed RIP group information.

Platforms

All

Output

Table 186: Output fields: RIP group describes the standard command output fields for a RIP group.

Table 186: Output fields: RIP group

Label	Description
Group	The RIP group name.
Adm	Down — The RIP group is administratively down. Up — The RIP group is administratively up.
Opr	Down — The RIP group is operationally down. Up — The RIP group is operationally up.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Send Mode	Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address. Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address. None — Specifies that no RIP messages are sent (silent listener). RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.asp
Recv Mode	Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted. None — Specifies that RIP updates will not be accepted. RIPv1 — Specifies that RIP updates in version 1 format only will be accepted. RIPv2 — Specifies that RIP updates in version 2 format only will be accepted.
Metric In	The metric value added to routes received from a RIP neighbor.

The following output is an example of RIP group information.

Output Example: Standard RIP Group

group

Syntax

group *grp-ip-address* [**source** *ip-address*] [**interval** *interval*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>pim group)

Full Context

monitor router pim group

Description

This command monitors statistics for a PIM source group.

Parameters

grp-ip-address

Specifies the IP address of an multicast group that identifies a set of recipients that are interested in a particular data stream.

ip-address

Specifies the source IP address to use in the ping requests in dotted decimal notation.

Values 0.0.0.0 to 255.255.255.255

Default the IP address of the egress IP interface

interval

Configures the interval for each display, in seconds.

Values 10, 20, 30, 40, 50, 60

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

10.14 grpc

grpc

Syntax

grpc

grpc connection

grpc rpc [*rpc-id*]

grpc custom-proto [*name*]

Context

[Tree] (show>system grpc)

Full Context

show system grpc

Description

This command displays gRPC server information.

Parameters

connection

This command displays information for gRPC connections.

rpc-id

Specifies an rpc ID.

Values 0 to 4294967295

name

Specifies a custom proto filename, up to 32 characters.

Platforms

All

Output

The following output is an example of system gRPC information.

Table 187: Output fields: system gRPC describes system gRPC output fields.

gtp

Syntax

gtp session all

gtp session apn *apn*

gtp session apn *apn* **imsi** *imsi*

gtp session imsi *imsi*

gtp statistics

Context

[Tree] (clear>subscr-mgmt gtp)

Full Context

clear subscriber-mgmt gtp

Description

This command clears all GTP sessions matching the specified criteria. Associated objects, such as the ESM subscriber in a GTP uplink scenario are also removed.

Parameters

session

Specifies to remove GTP sessions.

all

Specifies to remove all GTP sessions in the system.

statistics

Specifies to clear GTP statistics.

apn

Specifies the APN identifying the session, up to 100 characters.

imsi

Specifies the IMSI identifying the session, in the format of a string of digits between 9 and 15.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

11 h Commands

11.1 handler

handler

Syntax

handler [*handler-name*]

handler detail

Context

[Tree] (show>log>event-handling handler)

Full Context

show log event-handling handler

Description

Commands in this context display EHS handler information.

Parameters

handler-name

Specifies the name of a specific handler up to 32 characters in length.

detail

Keyword to list details of all handlers.

Platforms

All

Output

The following output is an example of handler information.

Table 188: Output fields: handler describes handler output fields.

Output Example

```
A:node1>show>log>event-handling# handler
===============================================================================
Event Handling System - Handler List

  Err Adm Status : 0
Total            : 4
===============================================================================
```

Table 188: Output fields: handler

Label	Description
Handler	The name of the handler.
Description	The handler description string.
Admin State	The administrative state of the handler.
Oper State	The operational state of the handler.
Handler Action-List Entry	
Entry-id	The action-list entry identifier.
Description	The action-list entry description string.
Admin State	The administrative state of the action-list entry.
Policy Name	The name of the related script policy.
Policy Owner	The owner of the related script policy.
Last Exec	The timestamp of the last successful execution of the action-list entry.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Handler Action-List Entry Execution Statistics	
Enqueued	The number of times the action-list entry was successfully passed on to the SR OS sub-system or module that will attempt to process and execute the action. For a script-policy entry, this indicates that the script request has been enqueued but does not necessarily indicate that the script has successfully launched or completed. For status and information about the script, use the **show>system>script-control** command.
Err Launch	The number of times the action-list entry was not successfully handed over to the next SR OS sub-system or module in the processing chain. This can be caused by a variety of conditions including a full script request input queue.
Err Adm Status	The number of times the action-list entry was not executed because the entry was administratively disabled.
Total	The total number of times that the action-list entry attempted execution.

handler

Syntax

handler *event-handler-name*

Context

[Tree] (clear>log>event-handling handler)

Full Context

clear log event-handling handler

Description

This command clears the counters in the **show log event-handling handler** *handler-name* output. It does affect the global or aggregate counters shown using the **information** command.

Parameters

handler-name

Specifies the name of the event handler, up to 32 characters in length.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

11.2 hash-control

hash-control

Syntax

hash-control

Context

[Tree] (show>system>security hash-control)

Full Context

show system security hash-control

Description

Commands in this context display hash-control configuration information.

Platforms

All

11.3 hierarchy

hierarchy

Syntax

hierarchy [**subscriber** *sub-ident-string*]

Context

[Tree] (show>service>active-subscribers hierarchy)

Full Context

show service active-subscribers hierarchy

Description

This command displays active subscriber hierarchy information. To display an IPoE/PPP session, the group of hosts within the session is visually indented. Additional information related to the session is also shown. For PPPoE, the circuit ID and remote ID if used is shown. For IPoE, the key used to group the session is shown (for example, the circuit ID). The command also display PD host which are modeled as a managed route. The PD managed route is directly underneath and points to the host that it is using as the next hop. The PD managed route forwarding status is also shown, where (N) indicates that the route is not forwarding.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sub-ident-string

Specifies the subscriber ID of the active subscriber, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber hierarchy information.

11.4 histogram

histogram

Syntax

histogram router *router-instance* **pool** *pool-name* **bucket-size** [**1..65536**] **num-buckets** [**2..50**]

Context

[Tree] (tools>dump>nat histogram)

Full Context

tools dump nat histogram

Description

This command displays a NAT pool port usage histogram

Parameters

router *router-instance*

Specifies the router instance.

pool *pool-name*

Specifies the identification of the NAT pool.

bucket-size [1..65536]

Specifies the unit of the X-axis of the histogram; a value of ten, for example, would return in a histogram with results for [0-9], [10-19], [20-29], ... ports.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

num-buckets [2..50]

Specifies the size of the histogram; a value of five, for example, would result in five results: [0-9], [10-19], [20-29], [30-39], [40-infinite].

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

11.5 history

history

Syntax

history

Context

[Tree] (tools>dump>system>nsp-proxy history)

Full Context

tools dump system nsp-proxy history

Description

This command displays system NSP proxy history information.

Platforms

VSR-NRC

11.6 host

host

Syntax

host [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

host interface *interface-name* [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

host sap *sap-id* [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

Context

[Tree] (show>service>id>slaac host)

Full Context

show service id slaac host

Description

This command displays SLAAC host related information.

Parameters

detail

Specifies to display detailed SLAAC host related information.

service-id

Specifies the service ID of the wholesaler.

Values 1 to 2147483647

session

Specifies to display information about SLAAC hosts that are associated with an IPoE session or a PPP session.

Values none, ipoe, ppp

interface-name

Specifies the interface name, up to 32 characters.

ieee-address

Specifies the MAC address for which to display SLAAC host information.

ipv6-address

Specifies the IPv6 address for which to display SLAAC host information.

sap-id

Specifies the physical port identifier portion of the SAP definition.

policy-name

Specifies the name of the router advertisement policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of detailed SLAAC host information.

Output Example

```
*A:eng-BNG-2# show service id 1000 slaac host detail
```

Table 189: Output fields: SLAAC host describes service SLAAC host information.

Table 189: Output fields: SLAAC host

Field	Description
Service ID	The service identifier.
Prefix	The prefix for the service
Interface Id	The interface identifier of this SLAAC host. If the SLAAC host has multiple addresses, this field will only show the interface identifier of one of them.
Mac Address	The MAC address of the this SLAAC host
Subscriber-interface	The subscriber interface name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Group-interface	The subscriber interface group interface name
SAP	The service SAP ID
Termination Type	The termination type of this SLAAC host
Creation Time	The date and time the service was created
Persistence Key	The key value that can be used to track this SLAAC host in the persistence file.
Router adv. policy	The name of the router advertisement policy associated with the SLAAC host during authentication
IPoE|PPP session	The indication if this SLAAC host belongs to an IPoE or PPP session
Radius sub-if prefix	The subscriber interface prefix that is received from a Radius server
IPoE Trigger	The trigger name
Last Auth Time	The sysUpTime at the time of the last authentication for this session
Inactivity Timer	The remaining time in seconds before the host is removed. A value of 0 indicates no inactivity timer is active.
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
ANCP-String	The ANCP string applicable for this session
Int Dest ID	The intermediate destination identifier applicable for this session
Category-Map-Name	The category map name applicable for this session
Info origin	The server that provided the Sub-profile, SLA profile, Ancp string and Intermediate Destination Id
Pool	the DHCP server pool from which the SLAAC prefix is allocated
Primary-Dns	the primary DNS server
Secondary-Dns	the secondary DNS server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Circuit ID	circuit ID of this host
Remote ID	remote ID of this host
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 PPPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

host

Syntax

host mac *ieee-address* **ip** *ip-address*

Context

[Tree] (show>subscr-mgmt>vrgw>brg>gateway host)

Full Context

show subscriber-mgmt vrgw brg gateway host

Description

This command lists pool information about a specific host in the BRG.

Parameters

ieee-address

Specifies the MAC address identifying a specific host.

ip-address

Displays only the prefixes associated with this host.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host [*ipv6-addr*ess]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>mld>statistics host)

Full Context

show router mld statistics host

Description

This command displays MLD host statistics information.

Parameters

ipv6-address

Displays information associated with the specified IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host all

host ipv6-address *ipv6-prefix*

host mac *ieee-address*

host sap *sap-id*

Context

[Tree] (clear>service>id>slaac host)

Full Context

clear service id slaac host

Description

This command clears SLAAC host data.

Parameters

ieee-address

Specifies the MAC address.

ipv6-prefix

Specifies the IPv6 prefix and length.

sap-id

Specifies the SAP ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Clears all SLAAC host data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host [*ip-address*]

Context

[Tree] (show>router>igmp>statistics host)

Full Context

show router igmp statistics host

Description

This command displays IGMP statistics for hosts.

Parameters

ip-address

Specifies the host IP address.

Values a.b.c.d

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.7 host-connectivity-verify

host-connectivity-verify

Syntax

host-connectivity-verify statistics [**sap** *sap-id*]

Context

[Tree] (show>service>id host-connectivity-verify)

Full Context

show service id host-connectivity-verify

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays host connectivity check statistics.

Parameters

statistics

Displays host connectivity verification data

sap-id

Specifies the physical port identifier portion of the SAP definition

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service host connectivity information.

Output Example

```
A:ALA-48>show>service>id# host-connectivity-verify statistics sap 1/1/9:0
===============================================================================
Host connectivity check statistics
===============================================================================
Svc   SapId/          DestIp          Last                 Time        Oper
Id    SdpId           Address         Response             Expired     State
-------------------------------------------------------------------------------
10001/2/3:01.144.145.1                                  Up
===============================================================================
A:ALA-48>show>service>id#
```

Table 190: Output fields: host connectivity check verify describes show service-id host connectivity verification output fields.

Table 190: Output fields: host connectivity check verify

Label	Description
Svc Id	The service identifier.
SapId/SdpId	The SAP and SDP identifiers.
DestIp Address	The destination IP address.
Last Response	The time when the last response was received.
Time Expired	Displays whether the interval value has expired.
Oper State	Displays the current operational state of the service.

Use subject to Terms available at: www.nokia.com/terms.

11.8 host-if-fec

host-if-fec

Syntax

host-if-fec

Context

[Tree] (show>port>ethernet host-if-fec)

Full Context

show port ethernet host-if-fec

Description

This command displays statistics for FEC as reported at the router receiver side of the host interface.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of host RS-FEC statistics information, and Table 191: Output fields: Host interface FEC describes the output fields.

Output Example

```
A:node-2# show port 1/1/c1/1 ethernet host-if-fec
===============================================================================
Router Rx RS-FEC Statistics: 1/1/c1/1
===============================================================================
Operational RS-FEC : cl119
FEC Status : locked
Pre-FEC BER
Current : 7.549292E-10
Post-FEC BER
Current : 0.000000E+00

Total Blocks : 418954114614
Uncorrectable Blocks : 0
Corrected Blocks : 1212261
Corrected Symbols : 1692749
Corrected Bits : 1720567
```

Table 191: Output fields: Host interface FEC

Label	Description
Operational RS-FEC	Displays the specific type or standard of RS-FEC that is currently active or configured for operation on this port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
FEC Status	Displays the current state of the FEC process on the port.
Pre-FEC BER Current	Displays the rate of bit errors detected on the incoming signal before any error correction is applied by the FEC decoder. A higher Pre-FEC BER indicates a noisier or poorer quality signal.
Post-FEC BER Current	Displays the rate of bit errors that remain in the signal after the FEC decoder has attempted to correct them. This is the residual error rate. Ideally, this should be low or zero. Any non-zero value here indicates uncorrectable errors.
Total Blocks	Displays the total number of data blocks that the FEC decoder has processed on the receive side. A "block" is a unit of data that FEC operates on.
Uncorrectable Blocks	Displays the number of data blocks where the FEC decoder detected more errors than it could correct. These blocks are considered corrupted and typically result in data loss or retransmissions at higher layers.
Corrected Blocks	Displays the number of data blocks where the FEC decoder successfully detected and corrected errors.
Corrected Symbols	Displays the total number of symbols that the FEC decoder successfully corrected across all processed blocks.
Corrected Bits	Displays the total number of individual bits that the FEC decoder successfully corrected across all processed blocks.

11.9 host-lockout-policy

host-lockout-policy

Syntax

host-lockout-policy [**policy** *host-lockout-policy-name*] *lockout-state*

host-lockout-policy sap *sap-id* [**circuit-id** *circuit-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [*lockout-state*]

Context

[Tree] (clear>subscr-mgmt host-lockout-policy)

Full Context

clear subscriber-mgmt host-lockout-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command removes host lockout contexts from the system.

Parameters

sap-id

Specifies to clear information for hosts in a specific lockout state.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *eth-sat-id*	
dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id* | *eth-sat-id*:[qtag1 | *cp-conn-prof-id*]	
qinq	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *pw-id* | *eth-sat-id*:[qtag1 **cp**-*conn-prof-id*].[qtag2 | **cp**-*conn-prof-id*]	
	cp	keyword
	conn-prof-id	*1 to 8000*

	cp	keyword
	conn-prof-id	1 to 8000
port-id	*slot/mda/port*[.channel]	
aps-id	**aps**-*group-id*[.channel]	
	aps	keyword
	group-id	1 to 128
eth-tunnel	eth-tunnel-*id*[:*eth-tun-sap-id*]	
	id	1 to 1024
	eth-tun-sap-id	0 to 4094
lag-id	**lag**-*id* | **lag**-*string*	
	lag	keyword
	id	1 to 800
	string	23 characters max
pw-id	**pw**-*id*	
	pw	keyword
	id	1 to 32767
qtag1	null | 0 to 4094	
qtag2	* | null | 0 to 4094	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel-id	**tunnel**-*id.private* | *public*:*tag*	
	tunnel	keyword
	id	1 to 16
	tag	0 to 4094
eth-sat-id	**esat**-*id/slot/port*	
	esat	keyword
	id	1 to 20
pxc-id	**pxc**-*id.sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a, b

circuit-id

Specifies the circuit ID, up to 253 characters.

ieee-address

Specifies the MAC address, up to 30 characters.

remote-id

Specifies the remote ID, up to 253 characters.

lockout-state

Specifies to clear information for hosts in a specific lockout state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lockout-policy

Syntax

host-lockout-policy

host-lockout-policy *policy-name* **association**

host-lockout-policy *policy-name*

host-lockout-policy *policy-name lockout-state* **sap** *sap-id* [**summary**]

host-lockout-policy *policy-name lockout-state* [**circuit-id** *circuit-id*] [**sap** *sap-id*] [**summary**]

host-lockout-policy *policy-name lockout-state* [**remote-id** *remote-id*] [**sap** *sap-id*] [**summary**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>subscr-mgmt host-lockout-policy)

Full Context

show subscriber-mgmt host-lockout-policy

Description

This command displays host lockout policy information.

Parameters

policy-name

Specifies a specific subscriber host lockout policy name up to 32 characters.

association

Specifies to display the association of the host lockout policy.

lockout-state

Specifies to display information for hosts in a specific lockout state.

Values all, active, graceful

sap *sap-id*

Specifies to display SAP ID information.

circuit-id circuit-id

Specifies to display circuit ID information. The *circuit-id* is up to 256 characters .

mac *ieee-address*

Specifies to display MAC address information up to 30 characters.

remote-id remote-id

Specifies to display remote ID information, up to 256 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management host lockout policy information.

Output Example

```
*A:cses-E11# show subscriber-mgmt host-lockout-policy
===============================================================================
Host Lockout Policies

Table 192: Output fields: host lockout policy describes subscriber management host lockout policy output fields.

Table 192: Output fields: host lockout policy

Field	Description
Lockout Policy	The subscriber Host Lockout Policy name
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout Time Min	The minimum lockout-time for this host lockout policy
Lockout Time Max	The maximum lockout-time for this host lockout policy
Description	The user-provided description of this subscriber Host Lockout Policy
Max Lockout Hosts	The maximum number of lockouts for this host
Last Mgmt Change	The sysUpTime at the time of the most recent management-initiated change to this policy
Lockout time min	The minimum lockout-time for this Host Lockout Policy
Lockout time max	The maximum lockout-time for this Host Lockout Policy
Lockout reset time	The lockout reset time for this Host Lockout Policy
Max lockout hosts	The maximum number of locked out hosts for this Host Lockout Policy
Host key	The method for host matching

11.10 host-lookup

host-lookup

Syntax

host-lookup [**mac** *ieee-address*] [**remote-id** *remote-id-ascii*] [**sap-id** *sap-id*] [**service-id** *service-id*] [**string** *vso-string*] [**system-id** *system-id*] [**option60** *option-60-ascii*] [**circuit-id** *circuit-id-ascii*] [**circuit-id-hex** *circuit-id-hex*] [**option60-hex** *option60-hex*] [**remote-id-hex** *remote-id-hex*] [**derived-id** *derived-id*] [**ip-prefix** *ip-prefix/ip-prefix-length*]

Context

[Tree] (tools>perform>subscr-mgmt>loc-user-db>ipoe host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ipoe host-lookup

Description

This command performs a lookup in the local user database. This command looks up the host with the match-list configured in the local user database.

Parameters

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information which goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sap-id

Specifies a SAP identifier to be used.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

vso-string

Specifies a Vendor Specific Option (VSO) string.

system-id

Specifies the system ID.

Values up to 255 characters maximum

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hex-string

Specifies the content of option 60 for this lookup.

Values 0x0 to 0xFFFFFFFF (maximum 64 hex nibbles)

circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters maximum.

option-60-ascii

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in ASCII.

option-60-hex

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in HEX.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lookup

Syntax

host-lookup [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*] [**user-name** *user-name*]

Context

[Tree] (tools>perform>subscr-mgmt>loc-user-db>ppp host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ppp host-lookup

Description

This command performs a lookup in the local user database.

Parameters

circuit-id

Specifies the circuit ID from the Option 82.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id *derived-id*

Specifies an ASCII string, up to 255 characters, that uniquely identifies a host and is derived by a Python script from packet content available during a DHCP transaction.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510 hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies a PPP service name, up to 255 characters.

user-name

Specifies a user name, up to 253 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command for an example of PPP host lookup information.

```
tools perform subscriber-mgmt local-user-db "ludb-1" ppp host-lookup user-name user-1@best.net
```

```

Full Context

show service active-subscribers host-tracking

Description

This command displays active subscriber host tracking information.

Parameters

sub-ident-string

Displays subscriber ID of the active subscriber, up to 32 characters.

detail

Displays detailed host tracking information for the specified subscriber ID.

summary

Displays summarized host tracking information for the specified subscriber ID.

statistics

Displays statistical host tracking information for the specified subscriber ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Full Context

show subscriber-mgmt vrgw brg gateway hosts

Description

This command lists all the hosts connected to the BRG.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway host information.

Output Example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05" hosts
===============================================================================
Bridged Residential Gateway hosts
===============================================================================
Identifier                  : 00:00:00:00:00:05

Full Context

show router mld hosts

Description

This command shows MLD hosts information.

Parameters

grp-ipv6-address

Specifies the group IPv6 address.

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386

svc-name: up to 64 characters.

ip-int-name

Specifies the IP interface name, up to 32 characters.

ipv6-address

Specifies the IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of MLD host information.

Output Example

```
A:Dut-C# show router mld hosts

Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear router wpp hosts-logging-out

Description

This command clears WPP hosts that are logging out.

Parameters

name

Specifies the portal name, up to 32 characters.

ip-address

Specifies the IP address.

Values a.b.c.d

circuit-id

Specifies the circuit ID, up to 256 characters.

remote-id

Specifies the remote ID, up to 256 characters.

sap-id

Specifies the SAP ID.

ieee-address

Specifies the MAC address, up to 30 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hs-attachment-policy

Syntax

hs-attachment-policy [*policy-name*] [**association** | **detail**]

Context

[Tree] (show>qos hs-attachment-policy)

Full Context

show qos hs-attachment-policy

Description

This command displays information about HS attachment policies in the system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

policy-name

Displays information about the specified policy name, up to 32 characters.

association

Displays the entities associated with all HS attachment policies or the specified HS attachment policy.

detail

Displays detailed policy information, including policy associations, of all HS attachment policies, or the specified HS attachment policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS attachment policy information.

Output Example

```
*A:PE# show qos hs-attachment-policy "default"

11.17 hs-pool-policy

hs-pool-policy

Syntax

hs-pool-policy [*policy-name*] [**association** | **detail**]

Context

[Tree] (show>qos hs-pool-policy)

Full Context

show qos hs-pool-policy

Description

This command displays information about HS pool policies in the system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

policy-name

Displays information about the specified HS pool policy name, up to 32 characters.

association

Displays the entities associated with all HS pool policies or the specified HS pool policy.

detail

Displays detailed policy information, including policy associations, of all HS pool policies or the specified HS pool policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS pool policy information.

Output Example

```

Context

[Tree] (show hs-pools)

Full Context

show hs-pools

Description

This command shows the egress pool information relating to an HSQ IOM.

The **card** and **fp** output shows the total buffer allocation, the number of allocated buffers, the available buffer allocation, and the buffer high-water marks for the system pools and the hierarchy of user-provisioned root and mid pools on the specified card and FP. The output includes the applied slope policy and the related instantaneous slope drop probabilities (as a percentage) for the user-provisioned pools.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The port output adds the port class pool information to the above hierarchy of user-provisioned pools for the specified port. The queue information for network queues, queue group instances, SAPs, or subscribers on the specified port is included when the associated parameter is added.

Parameters

card-slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM slots are numbered from 1 to 10.

forwarding-plane

Displays information for the specified forwarding plane.

Values 1

port-id

Displays information about the specified physical port ID in the slot/mda/port format.

network-queues

Displays information about the egress network queues on the specified port.

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the specified SAP, up to 64 characters, on the specified port.

sub-ident-string

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS pool information.

Output Example

```
*A:PE4# show hs-pools port 1/1/2 egress sap 1/1/2:1

11.20 hs-scheduler-hierarchy

hs-scheduler-hierarchy

Syntax

hs-scheduler-hierarchy port *port-id* [**hs-secondary-shaper** *shaper-name*] [**interval** *time-in-seconds*]

hs-scheduler-hierarchy port *port-id* [**interval** *time-in-seconds*] **hs-secondary-shapers**

hs-scheduler-hierarchy port *port-id* [**interval** *time-in-seconds*] **queue-group** *queue-group-name* **instance** *instance-id* {**access** | **network**}

hs-scheduler-hierarchy sap *sap-id* **egress** [**interval** *time-in-seconds*]

hs-scheduler-hierarchy subscriber *sub-ident* **egress** [**interval** *time-in-seconds*]

Context

[Tree] (show>qos hs-scheduler-hierarchy)

Full Context

show qos hs-scheduler-hierarchy

Description

This command displays the egress HS scheduler hierarchy for the HS scheduler policy applied to the related port. The output includes the current maximum rate and each scheduling class rate on the port. The parameters allow for the current rates for the scheduling classes for all HS secondary shapers or a specific HS secondary shaper, or for the queue rates in a specified access or network queue group instance, SAP or subscriber to be included in the output.

Parameters

port-id

Specifies the physical port ID in the slot/mda/port format.

shaper-name

Displays information about the specified HS secondary name, up to 32 characters, and includes the scheduling class rates for the HS secondary shaper on the port.

time-in-seconds

Displays the time interval used to calculate the rates, in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 5

hs-secondary-shapers

Displays information about scheduling class rates for all HS secondary shapers on the port.

queue-group-name

Displays information about the specified queue group name on the port, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the queue rates for the specified SAP, up to 64 characters, on the specified port.

sub-ident

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS scheduler hierarchy information.

Output Example

```
*A:PE# show qos hs-scheduler-hierarchy port 1/1/1 hs-secondary-shaper "default"

11.22 hs-secondary-shaper

hs-secondary-shaper

Syntax

hs-secondary-shaper *secondary-shaper-name* [**statistics** | **associations**]

Context

[Tree] (show>port hs-secondary-shaper)

Full Context

show port hs-secondary-shaper

Description

This command displays port HS secondary shaper information.

Parameters

secondary-shaper-name

Specifies the secondary shaper name, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Displays the statistics related to the port HS secondary shaper.

association

Displays the associations related to the port HS secondary shaper.

Platforms

7750 SR-7/12/12e

11.23 http-client

http-client

Syntax

http-client any

http-client [*ip-address/prefix-length*]

http-client [*ipv6-address/prefix-length*]

Context

[Tree] (tools>dump>router>web-rd http-client)

Full Context

tools dump router web-rd http-client

Description

Commands in this context dump the HTTP client hash table.

Parameters

any

Specifies all HTTP clients.

ip-address/prefix-length

Dumps HTTP clients only matching the specified IP address and prefix length.

Values

ip-address:	a.b.c.d
prefix-length:	0 to 32

ipv6-address/prefix-length

Dumps HTTP clients only matching the specified IPv6 address and prefix length.

Values

ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D
prefix-length:	0 to 128

Platforms

11.26 http-host-recorder

http-host-recorder

Syntax

http-host-recorder detail [**isa** *mda-id/esa-vm-id*] **url** *file-url*

http-host-recorder status [**isa** *mda-id*]

http-host-recorder top *granularity* [**max-count** *max-count*] [**isa** *mda-id*]

Context

[Tree] (tools>dump>app-assure>group http-host-recorder)

Full Context

tools dump application-assurance group http-host-recorder

Description

This command configures the dump of application-assurance http-host-recorder information. The http-host-recorder is configured using debug commands.

Parameters

detail

Saves the http host values recorded by the tool into a file.

status

.Displays the current status of the http-host-recorder with current-time, start-time, stop-time, sample-rates, filters, buffer as well as number of bytes and flows recorded for the specified AA ISA.

top

.Displays by bytes or flows the top values recorded by the tool.

isa mda-id /esa-vm-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

url *file-url*

Specifies the URL for the file to direct the http-host-recorder output to.

Values

local-url: <cflash-id>/][<file-path>]

200 chars max, including cflash-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

directory length 99 chars max each

remote-url: [{ftp://| tftp://}<login>:<pswd>@<remote-locn>/][<file-path>]

255 chars max

directory length 99 chars max each

remote-locn: <hostname> | <ipv4-address> | <ipv6-address>]

ipv4-address a.b.c.d

ipv6-address x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x:d.d.d.d[-interface]

x - [0..FFFF]H

d - [0..255]D

interface 32 chars max, for link local addresses

cflash-id flash slot ID

granularity

Specifies if the output is sorted by bytes or flows.

Values bytes, flows

max-count *max-count*

Specifies the maximum count of flows to display.

Values 1 to 25

Description

This command displays HTTP notification static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification

Syntax

http-notification *http-notification-name* [**summary**]

Context

[Tree] (show>app-assure>group http-notification)

Full Context

show application-assurance group http-notification

Description

This command displays information about the configured http-notification policy with associated raw statistics:

- Template: Template Id in use
- Script URL: URL address of the script used in the notification message
- Admin Status: Up / Down
- AQP Referenced: Yes/No
- Notified: Total number of notifications sent
- Notification criteria selection not matched: Number of HTTP request not matching the selection criteria for in browser notification

Parameters

http-notification-name

Displays the name of the http-notification policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **http-notification** command information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

http-redirect

Syntax

http-redirect

Context

[Tree] (show>app-assure http-redirect)

Full Context

show application-assurance http-redirect

Description

This command displays HTTP redirect static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

http-redirect

Syntax

http-redirect *redirect-name* [**detail**]

Context

[Tree] (show>app-assure>group http-redirect)

Full Context

show application-assurance group http-redirect

Description

This command displays application assurance http-redirect statistics and status information.

Parameters

redirect-name

Specifies the name of the http-redirect policy.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following table describes the show command output fields:

Table 196: Output fields: HTTP redirect

Label	Description
Template	Specifies HTTP redirect template id information. Each HTTP redirect template returns a specific HTTP redirect message such as HTTP 302 or Javascript and can optionally use macro substitution.
Redirect URL	Specifies the address the subscriber will be redirected to.
Captive Redirect	Specifies Yes if captive redirect is used and No if captive redirect is not used.
Redirect HTTPS	Specifies Yes if redirect https is used and No if redirect https is not used.
VLAN ID	Specifies the AA interface VLAN id used for captive redirect.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Admin Status	Specifies the administrative status (Up/Down) of the HTTP redirect policy.
AQP Ref	Specifies Yes if the HTTP redirect policy is referenced in AQP, and No if it is not.

Output Example

```
*A:7750# show application-assurance group 1 http-redirect "redirect-portal"

===============================================================================
Application Assurance Group 1 HTTP Redirect redirect-portal
===============================================================================
Description        : (Not Specified)
Template           : 5

Syntax

http-redirect-policy *name*

Context

[Tree] (show>subscr-mgmt http-redirect-policy)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show subscriber-mgmt http-redirect-policy

Description

This command displays HTTP redirect policy information.

Parameters

name

Specifies the HTTP redirect policy name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

11.30 hunt

hunt

Syntax

hunt [**brief**]

Context

[Tree] (show>router>bgp>routes hunt)

Full Context

show router bgp routes hunt

Description

This command displays detailed information about the BGP routes, including information about the advertised routes (RIB-OUT).

hunt is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

brief

Displays summary information about the BGP routes.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

11.31 hw-agg-shaper-scheduler-policy

hw-agg-shaper-scheduler-policy

Syntax

hw-agg-shaper-scheduler-policy [*hw-agg-shaper-scheduler-policy-name*] [**association**]

Context

12.2 icmp

icmp

Syntax

icmp

Context

[Tree] (show>router icmp)

Full Context

show router icmp

Description

This command displays Internet Control Message Protocol version 4 (ICMP) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions.

Platforms

All

Output

The following output is an example of router ICMP statistics, and Table 197: Output fields: ICMP describes the fields.

Output Example

```
*A:cses-V93# show router icmp

Table 197: Output fields: ICMP

Label	Description
Total	The total number of all messages
Error	The number of error messages
Destination Unreachable	The number of message that did not reach the destination
Redirect	The number of packet redirects
Echo Request	The number of echo requests
Echo Reply	The number of echo replies
TTL Expired	The number of messages that exceeded the time to live threshold
Source Quench	The number of source quench requests (deprecated)
Timestamp Request	The number of timestamp requests (deprecated); ICMP timestamp requests are counted and dropped on ingress
Timestamp Reply	The number of timestamp replies (deprecated); sending ICMP timestamp replies is not supported, so this counter will always be 0

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Address Mask Request	The number of address mask requests (deprecated)
Address Mask Reply	The number of address mask replies (deprecated)
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of messages that exceed the configured interface ICMP rate or have an expired TTL

12.5 icmp6

icmp6

Syntax

icmp6

Context

[Tree] (show>router icmp6)

Full Context

show router icmp6

Description

This command displays Internet Control Message Protocol Version 6 (ICMPv6) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions. ICMPv6 packets can be used in the neighbor discovery protocol and path MTU discovery.

Platforms

All

Output

The following output is an example of router ICMPv6 statistics, and Table 198: Output fields: ICMPv6 describes the fields.

Output Example

```
A:SR-3# show router icmp6

Table 198: Output fields: ICMPv6

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location
Parameter Problem	The number of packets with a parameter problem in the IP header
Discarded	The number of ICMPv6 messages that exceed the configured interface ICMPv6 rate or have an expired TTL

tools dump service id

tools perform service id

Description

This command specifies a service for which service debugging tools are enabled.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278386, *svc-name*: 64 chars max

Platforms

All

id

Syntax

id *service-id*

Context

[Tree] (clear>video id)

Full Context

clear video id

Description

This command clears video information pertaining to the specified service ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

service *service-id*

Specifies the service ID to clear.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

id

Syntax

id *service-id*

Context

[Tree] (clear>video>statistics id)

Full Context

clear video statistics id

Description

This command clears video statistics for a particular service.

Parameters

service *service-id*

Specifies the service ID to clear statistics.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

id

Syntax

id *service-id*

Context

[Tree] (monitor>service id)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

monitor service id

Description

This command displays statistics for a specific service, specified by the *service-id*, at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the *service-id*. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

service-id

Specifies the unique service identification number which identifies the service in the service domain.

Platforms

All

12.9 idle-only-msap

idle-only-msap

Syntax

idle-only-msap *msap-policy-name*

Context

[Tree] (clear>subscr-mgmt idle-only-msap)

Full Context

clear subscriber-mgmt idle-only-msap

Description

This command removes all idle MSAPs associated with the MSAP policy. This command only removes idle MSAPs without active subscribers. This command is considered safer than the **clear>subscr-mgmt>msap-policy** *msap-policy-name* **idle-only** command because in that command, the parameter **idle-only** is optional. Not specifying **idle-only** deletes MSAPs with active subscribers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

msap-policy-name

Specifies the MSAP policy for which all associated idle MSAPs are cleared.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Full Context

show router if-attribute

Description

Commands in this context display interface attribute related information.

Platforms

All

12.11 if-policy

if-policy

Syntax

if-policy [*if-policy-name*]

if-policy *if-policy-name* **users**

Context

[Tree] (show>router>mcac if-policy)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router mcac if-policy

Description

This command displays information about MCAC interface policies. Display options are:

- no parameters: displays summary of configured MCAC interface policies in the system
- *if-policy-name*: if an existing interface policy name is specified, the configuration and operational details for the specified policy are displayed
- *if-policy-name* **users**: if **user** options is specified with the existing MCAC interface policy, then all instances where a given MCAC interface policy is used are listed

ignore-sap-port-state

Syntax

ignore-sap-port-state

Context

[Tree] (tools>dump>service>id>interface ignore-sap-port-state)

Full Context

tools dump service id interface ignore-sap-port-state

Description

This command displays all service interfaces that have accepted an **ignore-sap-port-state start** command.

Run this command without a *service-id* to display a complete list of interfaces that have accepted an **ignore-sap-port-state start** command. The command can be run within a specific *service-id* context for a list of all interfaces for the specified service that have accepted the **ignore-sap-port-state start** command. The *ip-int-name* parameter may be optionally configured to display results only for the specified interface. If the command is run against a specific interface that has not accepted an **ignore-sap-port-state start** command, the display command will display a message indicating that no action has been started for the interface.

ignore-sap-port-state

Syntax

ignore-sap-port-state {**start** | **stop**}

Context

[Tree] (tools>perform>service>id>interface ignore-sap-port-state)

Full Context

tools perform service id interface ignore-sap-port-state

Description

This command enables bypassing of the Ethernet operational state check, which would otherwise be part of the Ethernet SAP operational state checking function. All other checks are performed as normal.

This command may be run against IES and VPRN service IP interfaces directly configured over an Ethernet SAP. When the command is run against an operational Ethernet SAP, the command enters a pending state, waiting for a non-operational change. Network interfaces have no SAP association and do not support this feature. When using **subscriber-interface** and **group-interface**, the command is only applicable to the **group-interface** associated with the SAP. R-VPLS does not have Ethernet SAPs directly configured under the interface, and is not supported.

This command is meant to allow service validation and reachability testing when a physical Ethernet port has not been connected. The command may be run for a non-operational SAP that is cabled. However, if the SAP transitions to an operational state, ingress and egress packet processing may still occur.

This command configuration does not survive a system restart.

Parameters

start

Enables port state bypass mode for the interface. If the Ethernet port SAP is already operational, there is no immediate effect of the command, and the Ignore Port state under the **show service id all** command will show "pending". However, if the interface Ethernet port transitions to a non-operational state, the command then bypasses this port state and executes the remainder of the operational checks, and the flag for the Ignore Port state transitions to "active". When this command is in effect, the SAP represents the state of the SAP ignoring the port state.

stop

Disables port state bypass mode for the interface attached to the SAP.

Context

[Tree] (show>isa>stats>ipsec-stats ike-exchange-failure-rate)

Full Context

show isa statistics ipsec-stats ike-exchange-failure-rate

Description

This command displays IKE exchange failure rate statistics of the specified scope.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The rate includes the following reasons:

- authentication failure
- non-proposal chosen
- internal address assignment failure
- invalid traffic selector (TS)
- invalid key exchange (KE)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- DPD timeout
- Others

The start time value indicates the starting timestamp of measurement. The sampling duration indicates the duration of the measurement.

If a record has non-zero value, the system also shows the timestamp and local or remote tunnel endpoint for the first and last occurrence in the sampling duration.

Parameters

name

Displays information about the specified IPsec GW name up to 32 characters in length.

tunnel-type

Displays information about the specified the tunnel type.

Values all, sl2l, dl2l, ra

reason

Displays information for the cause of the failure.

Values auth-failure, non-proposal-chosen, internal-addr-assignment-failure, invalid-ts, invalid-ke, dpd-timeout, other

system

Displays information about the system.

mda

Displays information about the specified ISA ID.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

name

Displays information about the specified IPsec GW name up to 32 characters in length.

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 96

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system once this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	*esa-id*/*vm-id*	
		esa-id	1 to 16
		vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

12.17 ike-initiate

ike-initiate

Syntax

ike-initiate tunnel-group-id *ipsec-group-id*

ike-initiate tunnel-name *ipsec-tunnel-name*

Context

[Tree] (tools>perform>ipsec ike-initiate)

Full Context

tools perform ipsec ike-initiate

Description

This command initiates tunnel setup for the specified LAN-to-LAN tunnel or for all static LAN-to-LAN tunnels in the specified tunnel group. This command initiates tunnel setup regardless of the configuration of the **ipsec-responder-only** command under the specified tunnel group.

The command only initiates tunnel setup when the tunnel group is in the MC-IPsec master state, or if MC-IPsec is not enabled for the tunnel group. If MC-IPsec is enabled and the tunnel group is not in the master state, the system will abort tunnel setup if MIMP goes down or if mastership changes during the tunnel setup.

Operationally up tunnels are not affected by this command. The system will not try to initiate a tunnel setup if the tunnel's operation flags are not clear.

The system does not automatically retry tunnel setup if a tunnel setup fails.

Parameters

ipsec-group-id

Specifies the ID of the tunnel group where all static LAN-to-LAN tunnels are initiated.

ipsec-tunnel-name

Specifies the name of the IPsec tunnel to be initiated.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tools dump ipsec stats ike-stats

Description

This command dumps various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Dumps information about the name of the IPsec GW, up to 32 characters.

ip-address:port

Dumps information about the IP address and port of the peer for dynamic tunneling.

mda

Dumps information about the specified ISA.

Values slot/mda

ipsec-tunnel-name

Dumps the name of the static LAN-to-LAN tunnel, up to 32 characters.

clear ipsec stats ike-stats

Description

This command clears various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Clears information about the name of the IPsec GW up to 32 characters.

ip-address:port

Clears information about the IP address and port of the peer for dynamic tunneling.

mda

Clears information about the specified ISA.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values slot/mda

ipsec-tunnel-name

Clears the name of the static LAN-to-LAN tunnel up to 32 characters.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.20 ike-transform

ike-transform

Syntax

ike-transform [*ike-transform-id*]

Context

[Tree] (show>ipsec ike-transform)

Full Context

show ipsec ike-transform

Description

This command displays information for the specified IKE transform instance. Information for all IKE transform instances is displayed when an *ike-transform-id* is not specified.

Parameters

ike-transform-id

Specifies an existing IKE transform instance

Values 1 to 4096

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of IKE transform information.

Output Example

```
Node# show ipsec ike-transform
===============================================================================
IKE Transforms
===============================================================================
ID      Diffie-Hellman    Authentication        Encryption       ISAKMP
        Group             Algorithm             Algorithm        Lifetime
-------------------------------------------------------------------------------
100     14                sha1                  aes128           86400
-------------------------------------------------------------------------------
No. of IKE Transforms: 1
===============================================================================
```

12.21 ikev2-msg-drop

ikev2-msg-drop

Syntax

ikev2-msg-drop message-type *message-type* [**show-oid**] **esa-vm** *esa-id/vm-id*

ikev2-msg-drop message-type *message-type* **isa** *mda* [**show-oid**]

Context

[Tree] (show>isa>stats>ipsec-stats ikev2-msg-drop)

Full Context

show isa statistics ipsec-stats ikev2-msg-drop

Description

This command displays the early drop counter for received IKEv2 messages on the specified ISA. These counters reflect the number of packets dropped early in the process when ISA is congested.

Parameters

message-type

Specifies the exchange type of the packet to display.

Values ike-sa-init, ike-auth, create-child-and-info

mda

Specifies the slot and MDA in the format *slot/mda*.

Values *slot — 1 to 10*

mda — 1 or 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

show-oid

Displays the SNMP object ID of the counter.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **ikev2-msg-drop message-type** command.

Output Example

```
show>isa>stats>ipsec-stats# ikev2-msg-drop message-type ike-sa-init isa 1/2 show-oid
-------------------------------------------------------------------------------
Current Statistic Info
-------------------------------------------------------------------------------

Context
[Tree] (show>router>bier inband-tunnel)

Full Context
show router bier inband-tunnel

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command shows the BIER tunnels.

Parameters

type

Specifies the type of tunnel.

Values tx, rx

prefix

Specifies the BFR prefix of the tunnel in IP address form.

tunnel-id

Specifies the tunnel ID.

Values 0 to 4294967295

leaf

Specifies that the tunnel leafs are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of a BIER in-band tunnel configuration. Table 200: Output fields: BIER tunnel provides BIER in-band tunnel descriptions.

Output Example

```
*A:Dut-B# /show router bier inband-tunnel
===============================================================================
BIER Tunnels
===============================================================================
Tunnel-id           Type                Oper                No. Of Leaves

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
BFR Prefix	The BFR prefix of the tunnel
Bfr-IFD	The BFR ID of the tunnel
MPLS Label	The MPLS Label of the tunnel
Sub-domain	The sub-domain associated with the tunnel

12.25 incl-mcast

incl-mcast

Syntax

incl-mcast [**hunt** | **detail**] [**rd** *rd*] [**originator-ip** *originator-ip*] [**next-hop** *next-hop*] [**community** *comm-id*] **[tag** *tag*] **[aspath-regex** *reg-exp*]

Context

[Tree] (show>router>bgp>routes>evpn incl-mcast)

Full Context

show router bgp routes evpn incl-mcast

Description

This command displays BGP-EVPN inclusive multicast routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

originator-ip

Specifies the IPv4 or IPv6 originator address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

x:x:x:x:x:x:d.d.d.d

x: [0 to FFFF]H

d: [0 to 255]D

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

comm-id

Specifies community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535

  – *comm-val1* — 0 to 65535

  – **type** — target, origin

  – *ip-address* — a.b.c.d

  – *comm-val2* — 0 to 4294967295

  – *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the inclusive multicast route tag.

Values 0to 4294967295 | MAX-ET

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Table 201: Output fields: system information

Label	Description
System Name	The configured system name
System Type	The system is administratively configured to function as a Nokia SR OS Ethernet Service Switch (ESS) or not.
Chassis Topology	Indicates the inter-chassis topology mode in which the system is operating. It indicates how multiple chassis are arranged and operate together as a single system. A value of 'standalone' indicates that the system is composed of a single physical router chassis. A value of 'extended' (for a 7950 XRS based system) indicates that two router chassis are connected together in a 'back-to-back' topology with no additional switch fabric chassis. An extended chassis topology is composed of two XRS-20 chassis and is also known as an XRS-40 system.
System Version	The software product release version number for the software image currently running
Crypto Module Version	Version of the SR OS cryptographic module
System Contact	A text string that describes the system contact information
System Location	A text string that describes the system location
System Coordinates	A text string that describes the system coordinates
System Active Slot	Slot of the active CPM
System Up Time	The system uptime as a 32-bit value from the RFC 2578 sys UpTime MIB object. This value rolls over every 497 days.
System Up Time (64-bit)	The system uptime as a 64-bit value that does not roll over
Configuration Mode Cfg	Configured setting of the management interface configuration mode. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Configuration Mode Oper	Current management interface configuration mode that is operational in the router. The configuration mode affects the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router.
Last Mode Changed	The date and time at which the operational management interface configuration mode last changed
SNMP Port	The port number used by this node to receive SNMP request messages and to send replies
SNMP Engine ID	The SNMP engineID to uniquely identify the SNMPv3 node
SNMP Engine Boots	The number of times the SNMP engine has rebooted with the current SNMP Engine ID
SNMP Max Message Size	The maximum SNMP packet size generated by this node
SNMP Max Bulk Duration	The maximum duration to process before bulk responses are returned
SNMP Admin State	Enabled — SNMP is administratively enabled and running. Disabled — SNMP is administratively shutdown and not running.
SNMP Oper State	Enabled — SNMP is operationally enabled. Disabled — SNMP is operationally disabled.
SNMP Failure Reason	Additional information about general failure of the SNMP engine to be ready for normal operation
SNMP Index Boot Status	Persistent — System indices are saved between reboots. Not Persistent — System indices are not saved between reboots.
SNMP Sync State	The SNMP persistent indices synchronization state. • Mismatch — There is a mismatch between the primary and standby CPM. • N/A — The standby CPM is not inserted or is offline, or indices are not persistent. • OK — The standby CPM is present and synchronized.
Tel/Tel6/SSH/FTP Admin	Displays the administrative state of the Telnet, SSH, and FTP sessions
Tel/Tel6/SSH/FTP Oper	Displays the operational state of the Telnet, SSH, and FTP sessions
Console Port Logins	Enabled — Logins on the serial console port of the active CPM are enabled. Disabled — Logins on the serial console port of the active CPM are disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
BOF Source	The location of the BOF
Image Source	Primary — Indicates that the directory location for runtime image file was loaded from the primary source. Secondary — Indicates that the directory location for runtime image file was loaded from the secondary source. Tertiary — Indicates that the directory location for runtime image file was loaded from the tertiary source.
Config Source	Primary — Indicates that the directory location for configuration file was loaded from the primary source. Secondary — Indicates that the directory location for configuration file was loaded from the secondary source. Tertiary — Indicates that the directory location for configuration file was loaded from the tertiary source.
Last Booted Config File	The URL and filename of the last loaded configuration file
Last Boot Cfg Version	The date and time of the last boot
Last Boot Config Header	The header information, such as image version, date built, date generated
Last Boot Index Version	The version of the persistence index file read when this card was last rebooted
Last Boot Index Header	The header of the persistence index file read when this card was last rebooted.
Last Saved Config	The location and filename of the last saved configuration file
Time Last Saved	The date and time of the last time configuration file was saved
Changes Since Last Save	Yes — There are unsaved configuration file changes. No — There are no unsaved configuration file changes.
Max Cfg/BOF Backup Rev	The maximum number of backup revisions maintained for a configuration file. This value also applies to the number of revisions maintained for the BOF file.
Cfg-OK Script	URL — The location and name of the CLI script file executed following successful completion of the bootup configuration file execution.
Cfg-OK Script Status	Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-OK Script location. Not used — No CLI script file was executed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Cfg-Fail Script	URL — The location and name of the CLI script file executed following a failed bootup configuration file execution. Not used — No CLI script file was executed.
Cfg-Fail Script Status	Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-Fail Script location. Not used — No CLI script file was executed.
IPv4 autoconfiguration	Indicates whether the IPv4 DHCP-based router autoconfigure functionality is enabled or disabled
IPv6 autoconfiguration	Indicates whether the IPv6 DHCP-based router autoconfigure functionality is enabled or disabled
Management IP Addr	The management IPv4 address and mask
Management IP Addr	The management IPv6 address and mask
Primary DNS Server	The IP address of the primary DNS server
Secondary DNS Server	The IP address of the secondary DNS server
Tertiary DNS Server	The IP address of the tertiary DNS server
DNS Domain	The DNS domain name of the node
DNS Resolve Preference	ipv4-only — Dns-names are queried for A-records only. ipv6-first — Dns-server is queried for AAAA-records first and a successful reply is not received, the dns-server is queried for A-records.
DNSSEC AD Validation	Indicates whether the presence of the AD-bit is validated in responses from DNS servers
DNSSEC Response Control	fall-through — Permit DNS responses that do not pass DNSSEC validation fail — Reject DNS Responses that do not pass DNSSEC validation
BOF Static Routes	To — The static route destination. Next Hop — The next hop IP address used to reach the destination. Metric — Displays the priority of this static route versus other static routes. None — No static routes are configured.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ICMP Vendor Enhancement	Indicates whether vendor specific extensions to ICMP are enabled or disabled
Eth QinQ Untagged SAP	False — The **new-qinq-untagged-sap** flag is disabled. True — The **new-qinq-untagged-sap** flag is enabled.
EFM OAM Grace Tx Enable	True — Sending of EFM OAM grace period messages is enabled. False — Sending of EFM OAM grace period messages is disabled.
EFM OAM Dying Gasp Rst	Indicates whether EFM OAM dying gasp messages on reset are enabled or disabled
System Reboot Required	Indicates if a configuration change has been made that requires an operator-driven reboot to fully active
Reason(s)	Indicates the configuration change reason(s) that set the System Reboot Required to true
Last Reboot Reason	Indicates the reason that the system was last rebooted. • admin – Administrative reboot (for example, **admin reboot** command) from any management interface (for example, CLI, SNMP, and so on) • other – The system was rebooted for other unspecified reasons (for example, power cycle, system crash).
Admin Reboot User	Indicates the name of the user who initiated the reboot. Value of “CRON/EHS”, indicate that the system was rebooted by a script. This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Router	Indicates the source router for the management session used to reboot the router. If the session was via the console ports, the router shall be “Base” and the address shall be “0.0.0.0”. This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Address	Indicates the IP address for the management session used to reboot the router. If the session was via the console ports, the router is “Base” and the address is “0.0.0.0”. This is only displayed if the "Last System Reboot Reason" is "admin".
Admin Reboot Time	Indicates the date and time that the reboot was initiated. Format is based on settings at time of the reboot. This is only displayed if the "Last System Reboot Reason" is "admin".

clear log event-handling information

Description

This command clears handler statistics in the **show log event-handling information** output.

Platforms

All

12.27 ingress-label

ingress-label

Syntax

ingress-label *start-label* [*end-label*]

Context

[Tree] (show>service ingress-label)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service ingress-label

Description

This command displays services using the range of ingress labels.

If only the mandatory *start-label* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X, where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

Specifies the starting ingress label value for which to display services using the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0, 18432 to 524287

end-label

Specifies the ending ingress label value for which to display services using the label range.

Values 18432 to 524287

Default *start-label* value

Platforms

All

Output

The following output is an example of service ingress label information, and Table 202: Output fields: service ingress label describes the output fields.

Output Example

```
*A:ALA-12# show service ingress-label 0

Table 202: Output fields: service ingress label

Label	Description
Svc ID	The service identifier
SDP Id	The SDP identifier
Type	Indicates whether the SDP is spoke or mesh
I.Lbl	The ingress label used by the far-end device to send packets to this device in this service by the SDP
E.Lbl	The egress label used by this device to send packets to the far-end device in this service by the SDP
Number of Bindings Found	The number of SDP bindings within the label range specified

12.28 ingress-statistics

ingress-statistics

Syntax

ingress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (show>router>segment-routing>sr-policies ingress-statistics)

Full Context

show router segment-routing sr-policies ingress-statistics

Description

This command displays the ingress traffic statistics of the SR policy specified by its color and end-point.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of ingress traffic statistics of the SR policy, and Table 203: Output fields: ingress statistics describes the output fields.

Output Example Show Router Segment Route Policy Ingress Statistics

```
show router segment-routing sr-policies ingress-statistics color 10 end-point 3ffe::a14:102
===============================================================================
SR-Policies Ingress Statistics
===============================================================================

Ingress Statistics:

Color           : 10                    Endpoint Addr   : 3ffe::a14:102
TunnelId        : 917520                BSID            : 100008
Pkt Count       : 3015                  Octet Count     : 301500

===============================================================================
```

Table 203: Output fields: ingress statistics

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the end-point address of the SR policy.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

ingress-statistics

Syntax

ingress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (clear>router>segment-routing>sr-policies ingress-statistics)

Full Context

clear router segment-routing sr-policies ingress-statistics

Description

This command clears the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H

ingress-statistics

Syntax

ingress-statistics color [*0..4294967295*] **end-point** *ip-address* | *ipv6-address* [**interval** *seconds*] [**repeat** *repeat*]

Context

[Tree] (monitor>router>seg-rt>sr-policies ingress-statistics)

Full Context

monitor router segment-routing sr-policies ingress-statistics

Description

This command monitors SR policy ingress statistics.

Parameters

ip-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

Platforms

All

12.29 ingress-stats-template

ingress-stats-template

Syntax

ingress-stats-template [**type** {**p2p** | **p2mp**}] [SessionNameString] [**sender** *ip-address*] [**detail**]

Context

[Tree] (show>router>mpls ingress-stats-template)

Full Context

show router mpls ingress-stats-template

Description

This command displays ingress statistics template details.

Parameters

SessionNameString

Displays the session name, up to 64 characters.

ip-address

Displays the sender IP address.

detail

Displays the number of static LSPs that terminate at the router.

Platforms

All

Output

The following output is an example of MPLS ingress statistics template information

Table 204: Output fields: ingress statistics template describes MPLS Ingress Statistics Template output fields.

Output Example

```
*A:cses-V23# show router mpls ingress-stats-template
===============================================================================
MPLS LSP Template Ingress Stats
===============================================================================
Session Name                          Type      Sender         Session Count
-------------------------------------------------------------------------------
No Matching Entries Found
===============================================================================
```

Full Context

show router vrrp instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information for VRRP instances.

If no command line options are specified, summary information for all VRRP instances displays.

Parameters

interface-name

Displays detailed information for the VRRP instances on the specified IP interface including status and statistics.

Default Summary information for all VRRP instances.

virtual-router-id

Displays detailed information for the specified VRRP instance on the IP interface.

Default All VRIDs for the IP interface.

Values 1 to 255

ipv6

Specifies the IPv6 instance.

Platforms

All

Output

The following output is an example of VRRP instance information for the 7450 ESS, and Table 206: Output fields: VRRP instance interface describes the fields.

Output Example

```

Table 206: Output fields: VRRP instance interface

Label	Description
Interface name	The name of the IP interface
VR ID	The virtual router ID for the IP interface
Own Owner	Yes — specifies that the virtual router instance as owning the virtual router IP addresses
	No — indicates that the virtual router instance is operating as a non-owner
Adm	Up — indicates that the administrative state of the VRRP instance is up
	Down — indicates that the administrative state of the VRRP instance is down
Opr	Up — indicates that the operational state of the VRRP instance is up
	Down — indicates that the operational state of the VRRP instance is down
State	• When owner, **backup** defines the IP addresses that are advertised within VRRP advertisement messages • When non-owner, **backup** actually creates an IP interface IP address used for routing IP packets and communicating with the system when the access commands are defined (**ntp-reply**, **ping-reply**, **telnet-reply**, and **ssh-reply**)
Pol Id	The value that uniquely identifies a priority control policy
Base Priority	The *base-priority* value used to derive the in-use priority of the virtual router instance as modified by any optional VRRP priority control policy
InUse Priority	The current in-use priority associated with the VRRP virtual router instance
Msg Int	The administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages and to derive the master down timer as backup
Inh Int	Yes — when the VRRP instance is a non-owner and is operating as a backup and the **master-int-inherit** command is enabled, the master down timer is indirectly derived from the value in the advertisement interval field of the VRRP message received from the current master

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	No — when the VRRP instance is operating as a backup and the **master-int-inherit** command is *not* enabled, the configured advertisement interval is matched against the value in the advertisement interval field of the VRRP message received from the current master; if the two values do not match then the VRRP advertisement is discarded; if the VRRP instance is operating as a master, this value has no effect
Backup Addr	The backup virtual router IP address
BFD	Indicates BFD is enabled
VRRP State	Specifies whether the VRRP instance is operating in a master or backup state
Policy ID	The VRRP priority control policy associated with the VRRP virtual router instance A value of 0 indicates that no control policy is associated with the virtual router instance
Preempt Mode	Yes — the preempt mode is enabled on the virtual router instance where it will preempt a VRRP master with a lower priority
	No — the preempt mode is disabled and prevents the non-owner virtual router instance from preempting another, less desirable virtual router
Ping Reply	Yes — a non-owner master is enabled to reply to ICMP Echo requests directed to the virtual router instance IP addresses Ping Reply is valid only if the VRRP virtual router instance associated with this entry is a non-owner A non-owner backup virtual router never responds to such ICMP echo requests irrespective if Ping Reply is enabled
	No — ICMP echo requests to the virtual router instance IP addresses are discarded
Telnet Reply	Yes — non-owner masters can to reply to TCP port 23 Telnet requests directed at the virtual router instances IP addresses
	No — telnet requests to the virtual router instance IP addresses are discarded
SSH Reply	Yes — non-owner masters can to reply to SSH requests directed at the virtual router instances IP addresses
	No — all SSH request messages destined to the non-owner virtual router instance IP addresses are discarded

Label	Description
Primary IP of Master	The IP address of the VRRP master
Primary IP	The IP address of the VRRP owner
Up Time	The date and time when the operational state of the event last changed
Virt MAC Addr	The virtual MAC address used in ARP responses when the VRRP virtual router instance is operating as a master
Auth Type	Specifies the VRRP authentication Type 0 (no authentication), Type 1 (simple password), or Type 2 (MD5) for the virtual router
Addr List Mismatch	Specifies whether a trap was generated when the IP address list received in the advertisement messages received from the current master did not match the configured IP address list This is an edge triggered notification; a second trap will not be generated for a packet from the same master until this event has been cleared
Master Priority	The priority of the virtual router instance which is the current master
Master Since	The date and time when operational state of the virtual router changed to master For a backup virtual router, this value specifies the date and time when it received the first VRRP advertisement message from the virtual router which is the current master
OperGroup	The operational group name associated with the VRRP interface, if configured
Monitor OperGroup	The monitor operational group associated with the VRRP

instance

Syntax

instance [**ipv4** | **ipv6**]

Context

[Tree] (clear>router>ldp instance)

Full Context

clear router ldp instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command resets the LDP instance.

Platforms

All

instance

Syntax

instance

Context

[Tree] (tools>dump>router>ldp instance)

Full Context

tools dump router ldp instance

Description

This command dumps information for the LDP instance.

Platforms

All

instance

Syntax

instance interface *interface-name* **vr-id** *virtual-router-id* [**ipv6**] [**interval** *seconds*] [**repeat** *repeat*] [{ **absolute** | **rate**}]

Context

[Tree] (monitor>router>vrrp instance)

Full Context

monitor router vrrp instance

Description

Monitor statistics for a VRRP instance.

Parameters

interface-name

Specifies the name of the existing IP interface on which VRRP is configured.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

virtual-router-id

Specifies the virtual router ID for the existing IP interface, expressed as a decimal integer.

ipv6

Monitors IPv6 instances.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 5 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

Platforms

All

Output

The following output is an example of VRRP instance information.

Output Example

```
*A:ALA-A# monitor router vrrp instance interface n2 vr-id 1

inter-as-label

Syntax

inter-as-label [**next-hop** *ip-address* | **backup-next-hop** *ip-address*] [**received-label** *received-label*]

Context

[Tree] (show>router>bgp inter-as-label)

Full Context

show router bgp inter-as-label

Description

This command displays BGP inter-AS label information.

Parameters

ip-address

Displays information for the specified IP address.

Values ipv4-address:

- a.b.c.d (host bits must be 0)

received-label

Displays information for the received label.

Values 0 to 429496729

12.34 interface

interface

Syntax

interface *subscriber-interface* [**id** *srrp-id*]

Context

[Tree] (clear>router>srrp interface)

Full Context

clear router srrp interface

Description

This command clears and resets SRRP interface instances.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

subscriber-interface

Specifies an existing subscriber interface name up to 32 characters.

srrp-id

Specifies an existing SRRP ID.

Values 1 to 4294967295

Platforms

All

interface

Syntax

interface [{[*ip-address* | *ip-int-name*] [**interface-type**] [**detail**] [**family**]} **summary**]

Context

[Tree] (show>service>id interface)

Full Context

show service id interface

Description

This command displays information for the IP interfaces associated with the service.

If no optional parameters are specified, a summary of all IP interfaces associated to the service are displayed.

Parameters

ip-address

Specifies the IP address of the interface for which to display information.

Values 1.0.0.0 — 223.255.255.255

ip-int-name

Specifies the IP interface name for which to display information, 32 characters.

family

Specifies the family to display.

Values ipv4, ipv6

interface-type

Specifies the interface type.

Values subscriber, group, redundant

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Displays detailed IP interface information.

Default IP interface summary output

summary

Displays a summary.

Platforms

All

Output

The following output is an example of IP interface information, and Table 207: Output fields: service ID interface describes the output fields.

Output Example

```
A:cses-V96# /show service id 1 interface
  - interface [{[<ip-address|ip-int-name>] [interface-type] [detail]
    [family]} | summary]
 <ip-int-name|ip-ad*> : ip-int-name    - 32 chars max
                        ipv4-address   - a.b.c.d
                        ipv6-address   - x:x:x:x:x:x:x:x   (eight 16-bit
                                         pieces)
                                         x:x:x:x:x:x:d.d.d.d
                                         x - [0..FFFF]H
                                         d - [0..255]D
 <detail>             : keyword - adds details to the display
 <family>             : ipv4|ipv6
 <interface-type>     : subscriber|group|redundant
 <summary>            : keyword - displays summary
```

Output Example

```

Table 207: Output fields: service ID interface

Label	Description
Interface-Name	The name used to refer to the interface.
Type	Specifies the interface type.
IP-Address	Specifies the IP address/IP subnet/broadcast address of the interface.
Adm	The desired state of the interface.
Opr	The operating state of the interface.
Interface	
If Name	The name used to refer to the interface.
Admin State	The desired state of the interface.
Oper State	The operating state of the interface.
IP Addr/mask	Specifies the IP address/IP subnet/broadcast address of the interface.
Ignore Port State	Indicates whether or not the **tools perform service id** *service-id* **interface** *ip-int-name* **ignore-sap port-state** command has been executed for a service interface directly connected to a SAP: none — The command has not been executed for or accepted by the interface. active — The command has been executed and accepted, and the port state check is currently being bypassed for the interface. pending — The command has been executed and accepted, but the port state for the interface is already operational.
Details	
If Index	The index corresponding to this interface. The primary index is 1. For example, all interfaces are defined in the Base virtual router context.
If Type	Specifies the interface type.
Port Id	Specifies the SAP’s port ID.
SNTP B.Cast	Specifies whether SNTP broadcast client mode is enabled or disabled.
Arp Timeout	Specifies the timeout for an ARP entry learned on the interface.
MAC Address	Specifies the 48-bit IEEE 802.3 MAC address.
ICMP Mask Reply	Specifies whether ICMP mask reply is enabled or disabled.
Cflowd	Specifies whether cflowd collection and analysis on the interface is enabled or disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ICMP Details	
Redirects	Specifies the rate for ICMP redirect messages.
Unreachables	Specifies the rate for ICMP unreachable messages.
TTL Expired	Specifies the rate for ICMP TTL messages.
Admin State (DHCP6 Lease Split)	DHCPv6 lease split admin state (subscriber and group interfaces only)
Valid LT	DHCPv6 lease split valid lifetime (subscriber and group interfaces only)

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**group**] [*grp-ip-address*] [**detail**]

Context

[Tree] (show>router>igmp interface)

Full Context

show router igmp interface

Description

This command displays IGMP interface information.

Parameters

ip-int-name

Displays information associated with the specified IP interface name.

ip-address

Displays information associated with the specified IP address.

group *grp-ip-address*

Displays IP multicast group address information for the specified group IP address.

detail

Displays detailed IP interface information along with the source group information learned on that interface.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of IGMP interface information. Table 208: Output fields: IGMP interface provides IGMP field descriptions.

Output Example

```

Table 208: Output fields: IGMP interface

Label	Description
Interface	The interfaces that participate in the IGMP protocol.
Adm Admin Status	The administrative state for the IGMP protocol on this interface.
Oper Oper Status	The current operational state of IGMP protocol on the interface.
Querier	The address of the IGMP querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	Cfg — The configured version of IGMP running on this interface. For IGMP to function correctly, all routers on a LAN must be configured to run the same version of IGMP on that LAN. Opr — The operational version of IGMP running on this interface. If the cfg value is 3 but all of the routers in the local subnet of this interface use IGMP version v1 or v2, the operational version will be v1 or v2.
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.
Group Address	The IP multicast group address for which this entry contains information.
Up Time	The time since this source group entry got created.
Last Reporter	The IP address of the source of the last membership report received for this IP Multicast group address on this interface. If no membership report has been received, this object has the value 0.0.0.0.
Mode	The mode is based on the type of membership report(s) received on the interface for the group. In the 'include' mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In 'exclude' mode, reception of packets sent to the given multicast address is requested from all IP source addresses except those listed in the source-list parameter.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
V1 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 1 members on the IP subnet attached to this interface. Upon hearing any IGMPv1 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv2 Leave messages for this group that it receives on this interface.
V2 Host Timer	The time remaining until the local router will assume that there are no longer any IGMP version 2 members on the IP subnet attached to this interface. Upon hearing any IGMPv2 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv3 Leave messages for this group that it receives on this interface.
Type	Indicates how this group entry was learned. If this group entry was learned by IGMP, it will be set to "dynamic". For statically configured groups, the value will be set to 'static'.
Compat Mode	Used in order for routers to be compatible with older version routers. IGMPv3 hosts must operate in version 1 and version 2 compatibility modes. IGMPv3 hosts must keep state per local interface regarding the compatibility mode of each attached network. A host's compatibility mode is determined from the Host Compatibility Mode variable which can be in one of three states: IGMPv1, IGMPv2 or IGMPv3. This variable is kept per interface and is dependent on the version of General Queries heard on that interface as well as the Older Version Querier Present timers for the interface.

interface

Syntax

interface

Context

[Tree] (show>service>id>spb interface)

Full Context

show service id spb interface

Description

This command displays SPB interfaces.

interface

Syntax

interface [{*ip-int-name* | *ip-address*}] [**urpf-stats**] [**statistics**] [**hold-time**]

interface [{*ip-int-name* | *ip-address*}] **policy-accounting** [**class**] [**index**]

interface {*ip-int-name* | *ip-address*} **mac** [*ieee-address*]

Context

[Tree] (clear>router interface)

Full Context

clear router interface

Description

This command clears IP interface statistics.

If no IP interface is specified either by IP interface name or IP address, the command will perform the clear operation on all IP interfaces.

Parameters

ip-int-name* | *ip-address

Specifies IP interface name or IP interface address.

Values ip-int-name: 32 chars max

ip-address: a.b.c.d

Default all IP interfaces

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

urpf-stats

Resets the statistics associated with uRPF failures.

statistics

Resets the IP interface traffic statistics.

hold-time

Clears the IP interface activation hold time.

policy-accounting

Clears the accounting statistics.

class

Specifies whether to clear source class counters or destination class counters.

Values source-class, dest-class

index

Specifies the source or destination class index.

Values 1 to 255

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

Platforms

All

interface

Syntax

interface *interface-name* [**vrid** *virtual-router-id*]

interface *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[Tree] (clear>router>vrrp interface)

Full Context

clear router vrrp interface

Description

This command resets VRRP protocol instances on an IP interface.

Parameters

interface-name

Specifies the IP interface to reset the VRRP protocol instances.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

virtual-router-id

Resets the VRRP protocol instance for the specified VRID on the IP interface.

Default All VRIDs on the IP interface.

Values 1 to 255

ipv6

Clears IPv6 information for the specified interface.

Platforms

All

interface

Syntax

interface *ip-int-name*

Context

[Tree] (tools>dump>service>id interface)

[Tree] (tools>perform>service>id interface)

Full Context

tools dump service id interface

tools perform service id interface

Description

This command specifies an IP interface for which service debugging tools are enabled.

Parameters

ip-int-name

Specifies the name of the IP interface, up to 32 characters.

Platforms

All

interface

Syntax

interface [{{[{*ip-address* | *ip-int-name*}] [**detail**] [**family**]} | **summary** | **exclude-services**}]

interface {*ip-address* | *ip-int-name*} **eth-cfm** [**detail**]

interface {*ip-address* | *ip-int-name*} **mac** [*ieee-address*]

interface {*ip-address* | *ip-int-name*} **statistics**

interface {*ip-address* | *ip-int-name*} **dist-cpu-protection** [**detail**]

interface {*ip-address* | *ip-int-name*} **policy-accounting** [**class** [*index*]]

interface description

interface global-if-index *global-if-index* [**family**] [**detail**]

interface global-if-index *global-if-index* **statistics**

Context

[Tree] (show>router interface)

Full Context

show router interface

Description

This command displays the router IP interface table sorted by interface index.

Parameters

ip-address

Displays the interface information associated with the specified IP address.

Values

ipv4-address	a.b.c.d (host bits must be 0)
ipv6-address	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	where:
	x: [0 to FFFF]H
	d: [0 to 255]D

ip-int-name

Displays the interface information associated with the specified IP interface name, up to 32 characters.

detail

Keyword to display detailed IP interface information. For **dist-cpu-protection**, **detail** includes the adapted operational rate parameters in the CLI output. The adapted operational rate parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed and include the adapted operational rate parameters in the CLI output. The adapted operational rate parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

family

Keyword to specify the router IP interface family to display.

Values **ipv4** — Displays only those peers that have the IPv4 family enabled.

ipv6 — Displays the peers that are IPv6-capable.

summary

Keyword to display summary IP interface information for the router.

exclude-services

Keyword to display IP interface information, excluding IP interfaces configured for customer services. Only core network IP interfaces are displayed.

eth-cfm

Keyword to display Ethernet CFM information.

mac

Keyword to display information associated with the MAC address.

ieee-address

Displays the information associated with the specified IEEE address. The address is in the *xx-xx-xx-xx-xx-xx* or *xx:xx:xx:xx:xx:xx* format.

statistics

Keyword to display packet statistics for an interface on the router.

Note:
The **show router interface statistics** command also shows the MPLS statistics that are displayed when using the **show router mpls interface statistics** command. This allows the user to see MPLS statistics from interfaces that are not added to MPLS, such as the network interfaces of a carrier. Output example for an example of the MPLS fields that are displayed. These fields are displayed regardless of the state of MPLS.

dist-cpu-protection

Keyword to display the distributed CPU protection parameters and status at the interface level.

class

Displays whether to display accounting policy statistics for the source or destination class.

Values source-class, dest-class

index

Displays interface information for a specific an integer value for the accounting source or destination class index.

Values 1 to 255

description

Keyword to display all interfaces in all routing contexts.

global-if-index

Displays information for a specific global interface index value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 262144

Platforms

All

Output

Standard IP interface output — The following output is an example of standard IP interface information, and Table 209: Output fields: IP interface describes the fields.

Output example

```

Table 209: Output fields: IP interface

Label	Description
Interface-Name IF Name	The IP interface name
Type	n/a — no IP address has been assigned to the IP interface, so the IP address type is not applicable Pri — the IP address for the IP interface is the primary address on the IP interface Sec — the IP address for the IP interface is a secondary address on the IP interface
IP-Address	The IP address and subnet mask length of the IP interface n/a — indicates no IP address has been assigned to the IP interface
Adm Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Opr Oper State	Down — the IP interface is operationally disabled Up — the IP interface is operationally disabled
Mode	Network — the IP interface is a network or core IP interface Service — the IP interface is a service IP interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Port/SAP Id	The physical network port or the SAP identifier associated with the IP interface
MACSec	Lists the MACsec settings for the IP interface
Class	The source or destination class index
Policer	The policer ID
Rx Fwd Packets	The number of received forwarded packets
Rx Fwd Bytes	The number of received forwarded bytes
Drop Packets	The number of dropped packets
Drop Bytes	The number of dropped bytes
Fwd Packets	The number of forwarded packets
Fwd Bytes	The number of forwarded bytes

Detailed IP interface output — The following output is an example of detailed IP interface information, and Table 210: Output fields: IP interface detail describes the fields.

Output example

```
A:node-2# show router interface "to101port1-1" detail

Table 210: Output fields: IP interface detail

Label	Description
If Name	The IP interface name
Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Oper (v4/v6)	Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled
IP Addr/mask	The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface
IPv6 Addr	The IPv6 address of the interface
If Index	The interface index of the IP router interface
Virt If Index	The virtual interface index of the IP router interface
Last Oper Change	The last change in operational status
Global If Index	The global interface index of the IP router interface
Sap ID	The SAP identifier
TOS Marking	The ToS byte value in the logged packet
If Type	Network — the IP interface is a network or core IP interface Service — the IP interface is a service IP interface
SNTP B.cast	Displays if the **broadcast-client** global parameter is configured
IES ID	The IES identifier
QoS Policy	The QoS policy ID associated with the IP interface
MAC Address	The MAC address of the interface
Arp Timeout	The ARP timeout for the interface, in seconds, which is the time an ARP entry is maintained in the ARP cache without being refreshed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ICMP Mask Reply	False — the IP interface does not reply to a received ICMP mask request True — the IP interface does reply to a received ICMP mask request
Arp Populate	Displays whether ARP is enabled or disabled
Host Conn Verify	The host connectivity verification
LdpSyncTimer	The IGP/LDP sync timer value
uRPF Chk	Displays whether unicast RPF (uRPF) Check is enabled on this interface
uRPF Iv6 Chk	Displays whether unicast RPF (uRPF) Check IPv6 is enabled on this interface
PTP HW Assist	Displays whether the PTP Hardware Assist function is enabled on this interface
cflowd	Displays the type of cflowd analysis that is applied to the interface acl — ACL cflowd analysis is applied to the interface interface — interface cflowd analysis is applied to the interface none — no cflowd analysis is applied to the interface
Inter-AS selective ILM untrusted	Displays whether the inter-AS selective ILM untrusted function is enabled on this interface
Untrusted default forwarding	Displays whether the untrusted default forwarding function is enabled on this interface

Detailed IP interface output — The following output is an example of detailed IP interface information showing detailed link delay information, and Table 211: Output fields: IP interface detail output describes the output fields.

Output example

```

Table 211: Output fields: IP interface detail

Label	Description
If Name	The IP interface name
Admin State	Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled
Oper (v4/v6)	Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled
Down Reason Code	The down reason code

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Down Reason V4	The down reason for IPv4
Down Reason V6	The down reason for IPv6
Protocols	The protocols for the interface
IP Address	The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface
Description	The description for the IP interface
If Index	The interface index of the IP router interface
Virt. If Index	The virtual interface index of the IP router interface
Last Oper Change	The last change in operational status
Global If Index	The global interface index of the IP router interface
Lag Link Map Prof	The LAG link map profile for the IP router interface
MACSec	The MACsec information for the IP router interface
Port Id	The port ID for the IP router interface
TOS Marking	Displays the ToS marking: • Trusted – the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted • Untrusted – all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface
If Type	Displays the interface type: • Network – the IP interface is a network or core IP interface • Service – the IP interface is a service IP interface
Egress Filter	The egress filter policy
Ingress Filter	The ingress filter policy
Egr Ipv6 Flt	The egress IPv6 filter policy
Ingr IPv6 Flt	The ingress IPv6 filter policy
SNTP B.Cast	Displays if the **broadcast-client** global parameter is configured: • True – the **broadcast-client** is enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• False – the **broadcast-client** is disabled
Network QoS Policy	The network QoS policy ID
MAC Address	The MAC address of the IP interface
Mac Accounting	The state of MAC accounting: • Enabled – MAC accounting is enabled • Disabled – MAC accounting is disabled
Ingress stats	The state of ingress statistics collection: • Enabled – ingress statistics are being collected • Disabled – ingress statistics are not being collected
IPv6 DAD	The state of IPv6 duplicate address detection (DAD) on the IP interface: • Enabled – IPv6 DAD is enabled • Disabled – IPv6 DAD is disabled
ARP Timeout	The ARP timeout for the interface, which is the time an ARP entry is maintained in the ARP cache without being refreshed
IPv6 Nbr ReachTime	The IPv6 neighbor reachable time
ARP Retry Timer	The ARP retry timer value
IPv6 stale time	The maximum interval in which to confirm if an IPv6 neighbor is reachable
ARP Limit	The state of the ARP limit on the IP interface: • Enabled – the ARP limit is enabled • Disabled – the ARP limit is disabled
IPv6 Nbr Limit	The state of the IPv6 neighbor limit on the IP interface: • Enabled – the IPv6 neighbor limit is enabled • Disabled – the IPv6 neighbor limit is disabled
ARP Threshold	The state of the ARP threshold on the IP interface: • Enabled – the ARP threshold is enabled • Disabled – the ARP threshold is disabled
IPv6 Nbr Threshold	The state of the IPv6 neighbor threshold on the IP interface: • Enabled – the IPv6 neighbor threshold is enabled • Disabled – the IPv6 neighbor threshold is disabled
ARP Limit Log On*	The state of ARP limit log only configuration on the IP interface:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Enabled – the ARP limit log only configuration is enabled • Disabled – the ARP limit log only configuration is disabled
IPv6 Nbr Log Only	The state of the IPv6 neighbor log only configuration on the IP interface: • Enabled – the IPv6 neighbor log only configuration is enabled • Disabled – the IPv6 neighbor log only configuration is disabled
ARP Learn Unsoli*	The state of ARP learn unsolicited on the IP interface: • Enabled – ARP learn unsolicited is enabled • Disabled – ARP learn unsolicited is disabled
ND Learn Unsolici*	Displays if neighbor discovery learn unsolicited is configured
ARP Proactive Re*	The state of ARP proactive refresh on the IP interface: • Enabled – ARP proactive refresh is enabled • Disabled – ARP proactive refresh is disabled
ND Proactive Refr*	Displays if neighbor proactive refresh is configured. When configured, neighbor proactive refresh helps keep the entries active by sending an ARP refresh 30 seconds before the timeout or by starting neighbor unreachable detection (NUD) when the stale time expires.
TCP MSS V4	The TCP maximum segment size (MSS) for TCP connections originated from the associated IPv4 interface
TCP MSS V6	The TCP MSS for TCP connections originated from the associated IPv6 interface
IP MTU	The IP maximum transmission unit (MTU) for the IP interface
IP Oper MTU	The IP oper MTU
ARP Populate	The state of ARP populate on the IP interface: • Enabled – ARP populate is enabled • Disabled – ARP populate is disabled
Cflowd (unicast)	The type of cflowd unicast analysis that is applied to the interface: • acl — ACL cflowd analysis is applied to the interface • interface — interface cflowd analysis is applied to the interface • none — no cflowd analysis is applied to the interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Cflowd (multicast)	The cflowd multicast configuration
LdpSyncTimer	The IGP LDP synchronized timer value
Strip-Label	The state of strip label on the IP interface: • Enabled – strip label is enabled • Disabled – strip label is disabled
LSR Load Balance	Displays if LSR load balancing occurs at the router interface level or system level of the interface. Configuration at the router interface level overrides the system level configuration.
EGR Load Balance	Displays the address used in the LAG or ECMP hash on IP interfaces: • both – the source and destination addresses are both used • destination – the destination address is used • source – the source address is used
Vas If Type	The value added service (VAS) interface type: • both – the type of VAS is both to and from the access and to and from the network • access – the type of VAS is to and from the access • network – the type of VAS is to and from the network
TEID Load Balance	The state of TEID load balancing on the IP interface: • Enabled – TEID load balancing is enabled • Disabled – TEID load balancing is disabled
SPI Load Balance	The state of SPI load balancing on the IP interface: • Enabled – SPI load balancing is enabled • Disabled – SPI load balancing is disabled
uRPF Chk	Displays whether unicast RPF (uRPF) check is enabled on this interface
uRPF Ipv6 Chk	Displays whether unicast RPF check IPv6 is enabled on this interface
uRPF Select VPRN	The state of uRPF checks on incoming traffic on the interface: • True – the router performs uRPF checks of incoming traffic on the network interface for the following: – packets associated with the global routing table (Base router) context – packets associated with the VPRNs that have enabled the uRPF check

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• False – the router performs uRPF checks for all ingress traffic on the network interface (associated with the Base router and all VPRNs) based on the IPv4 and IPv6 **urpf-check** command configuration options on the network interface
PTP HW Assist	Displays if the PTP hardware assist function is enabled on this interface
RX Pkts	The received packets
Rx Bytes	The received bytes
Rx V4 Pkts	The received IPv4 packets
Rx V4 Bytes	The received IPv4 bytes
Rx V4 Help. Pkts	The received IPv4 Helper packets
Rx V4 Help. Bytes	The received IPv4 Helper bytes
Tx Pkts	The transmitted packets
Tx Bytes	The transmitted bytes
Tx V4 Pkts	The transmitted IPv4 packets
Tx V4 Bytes	The transmitted IPv4 bytes
Tx V4 Discard Pk*	The transmitted IPv4 discarded packets
Tx V4 Discard Byt*	The transmitted IPv4 discarded packets
Tx V6 Pkts	The transmitted IPv6 packets
Tx V6 Bytes	The transmitted IPv6 bytes
Tx V6 Discard Pk*	The transmitted IPv6 discarded packets
Tx V6 Discard Byt*	The transmitted IPv6 discarded bytes
Tx DBcast Dis. P*	The transmitted DBcast discarded packets
Tx DBcast Dis. By*	The transmitted DBcast discarded bytes
Mpls Rx Pkts	The MPLS received packets
Mpls Rx Bytes	The MPLS received bytes
Mpls Tx Pkts	The MPLS transmitted packets
Mpls Tx Bytes	The MPLS transmitted bytes
GRE Termination	The state of GRE termination:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Enabled – the termination of MPLS-over-GRE and IP-over-GRE packets on destination IP addresses from a user-defined subnet is enabled • Disabled – the termination of MPLS-over-GRE and IP-over-GRE packets on the subnet of the interface is disabled
Inter-AS selective ILM untrusted	Displays if the inter-AS selective ILM untrusted function is enabled on this interface
Untrusted default forwarding	The untrusted default forwarding behavior on the interface: • forward – the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a Layer 2 service context • drop – all labeled packets received on the interface are automatically dropped
OperDCpuProtPlcy	The distributed CPU protection policy
IP-Helper Address	The IPv4 address of the target UDP broadcast gateway
Ingress destination class lookup	The state of the ingress destination class lookup: • Enabled – the router performs a destination class lookup • Disabled – the router does not perform a destination class lookup
Link Delay Details	
Operational Delay	The operational delay on the IP interface
Delay selection	The delay selection for the IP interface
Static Delay	The static delay for the IP interface
Dynamic Delay	The dynamic delay for the IP interface
Link Measure Tmpl	The link measurement template
Proxy ARP Details	
Rem Proxy ARP	The state of remote proxy ARP on the IP interface: • Enabled – the remote proxy ARP is enabled. Remote proxy ARP is similar to proxy ARP. It allows the router to answer an ARP request on an interface for a subnet that is not provisioned on that interface. This allows the router to forward to the other subnet on behalf of the requester. • Disabled – the remote proxy ARP is disabled
Local Proxy ARP	The state of local proxy ARP on the IP interface:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Enabled – the local proxy ARP is enabled. When local proxy ARP is enabled on an IP interface, the system responds to all ARP requests for IP addresses belonging to the subnet with its own MAC address, and thus becomes the forwarding point for all traffic between hosts in that subnet. • Disabled – the local proxy ARP is disabled
Policies	Displays ARP policies for the IP interface
Proxy Neighbor Discovery Details	
Local Pxy ND	The state of the local proxy neighbor discovery on the IP interface: • Enabled – the local proxy neighbor discovery is enabled. When enabled, the interface replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled. • Disabled – the local proxy neighbor discovery is disabled. When disabled, the interface does not reply to neighbor solicitation requests if both the hosts are on the same subnet.
Policies	The local proxy neighbor discovery policies for the IP interface
ICMP Details	
Redirects	The number of packet redirects
Unreachables	The number of packets that did not reach the destination
TTL Expired	The number of messages that exceeded the time to live (TTL) threshold
Parameter Problem	The number of packets with a parameter problem in the IP header
ICMP Mask Reply	The number of address mask replies
ICMPv6 Details	
Packet Too Big	The number of packets that were too big
Parameter Problem	The number of packets with a parameter problem in the IP header
Redirects	The number of packet redirects
Time Exceeded	The number of packets where the time was exceeded
Unreachables	The number of packets that did not reach the destination
IPCP Address Extension Details	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Peer IP Addr	The remote IP address to be assigned to the far end of the associated PPP/MLPPP link via IPCP extensions
Peer Pri DNS Addr	The unicast IPv4 address for the primary DNA server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions
Peer Sec DNS Addr	The unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional)
Network Domains Associated	The network domain for the interface
Admin Groups	The administrative groups for the interface
Srlg Groups	The SRLG groups for the interface
QoS Queue-Group Redirection Details	
Ingress FP QGrp	The ingress FP queue group
Egress Port QGrp	The egress port queue group
Ing FP QGrp Inst	The ingress FP queue group instance
Egr Port QGrp Inst	The egress port queue group instance

Statistics IP interface output — The following output is an example of router IP interface statistics when **enable-interface-statistics** is enabled, and Table 212: Output fields: statistics IP interface describes the fields.

Output example

```

```

Table 215: Output fields: distributed CPU protection policy

Label	Description
Distributed CPU Protection Policy	The DCP policy assigned to the object
Policer-Name	The configured name of the static policer
Card/FP	The card and FP identifier. FP identifies the instance of the FP (FastPath) chipset. Some cards have a single FP and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMAs).
Policer-State	The state of the policer with the following potential values: Exceed – the policer has been detected as nonconforming to the associated DCP policy parameters (packets exceeded the configured rate and the DCP polling process identified this occurrence) Conform – the policer has been detected as conforming to the associated DCP policy parameters (rate) not-applicable – newly-created policers or policers that are not currently instantiated. This includes policers configured on line cards that are not in service.
Protocols Mapped	A list of protocols that are configured to map to the particular policer
Oper. xyz fields	The actual hardware may not be able to perfectly rate limit to the exact configured rate parameters in a DCP policy. In this case, the configured rate parameters will be adapted to the closest supported rate. These adapted operational values are displayed in CLI when the **detail** keyword is included in the show command. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the

© 2026 Nokia.

Label	Description
	associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise, values of 0 kb/s, and so on, are displayed. *Oper. Kbps* - Displays the adapted "kilobits-per-second" value for DCP "kbps" rates *Oper. MBS* - Displays the adapted "mbs size" value for DCP "kbps" rates *Oper. Depth* - Displays the calculated policer bucket depth in packets (for DCP "packets" rates) or in bytes (for DCP "kbps" rates) *Oper. Packets* - Displays the adapted "ppi" value for DCP "packets" rates *Oper. Within* - Displays the adapted "within seconds" value for DCP "packets" rates *Oper. Init. Delay* - Displays the adapted "initial-delay packets" value for DCP "packets" rates
Exceed-Count	The count of packets exceeding the policing parameters since the specific policer was previously declared as conforming or newly-instantiated. This counter has the same behavior as the exceed counter in the DCP the log events; the counter is baselined (reset) when the policer transitions to conforming.
Detec. Time Remain	The remaining time in the detection-time countdown during which a policer in the exceed state is being monitored to see if it conforms again
Hold-Down Remain	The remaining time in the hold-down countdown during which a policer is treating all packets as exceeding
All Dyn-Plcr Alloc.	Indicates that all the dynamic enforcement policers have been allocated and instantiated for a specific local-monitor
Dyn-Policer Alloc.	Indicates that a dynamic policer has been instantiated

Full Context

show router ldp interface

Description

This command displays configuration information about LDP interfaces.

Parameters

ip-int-name

The name of an existing interface. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

detail

Displays detailed information.

family

Displays either IPv4 or IPv6 active LDP information.

resource-failures

Displays which interfaces are in overload.

Platforms

All

Output

LDP Interface Output

Table 216: Output fields: LDP interface describes the LDP interface output fields.

Table 216: Output fields: LDP interface

Label	Description
Interface	Specifies the interface associated with the LDP instance.
Adm	Up — The LDP is administratively enabled. Down — The LDP is administratively disabled.
Opr	Up — The LDP is operationally enabled. Down — The LDP is operationally disabled.
Hello Factor	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.
Hold Time	The hello time, also known as hold time. It is the time interval (in s), that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor.
KA Factor	The value by which the keepalive timeout should be divided to give the keepalive time, for example, the time interval (in s), between LDP keepalive messages. LDP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors.
KA Timeout	The time interval (in s), that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages).

Output Example

```
*A:Dut-A# show router ldp interface
===============================================================================

interface

Syntax

interface [*ip-int-name*] [*family*]

interface [*ip-int-name*] [**statistics**] [*family*]

Context

[Tree] (clear>router>ldp interface)

Full Context

clear router ldp interface

Description

This command restarts or clears statistics for LDP interfaces.

Parameters

ip-int-name

Specifies the name of an existing interface. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

family

Specifies the IP family information to restart or clear.

Values **ipv4** – Keyword used to clear IPv4 information

ipv6 – Keyword used to clear IPv6 information

statistics

Keyword used to clear traffic statistics.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following example displays the **clear router ldp interface** command.

Output example

```
A:nodd-2# clear router ldp interface "ip-10.10.1.1" ipv4

A:node-2# clear router ldp interface "ip-10.10.1.1" ipv6
```

interface

Syntax

interface *ip-int-name*

Context

[Tree] (tools>dump>router>ldp interface)

Full Context

tools dump router ldp interface

Description

This command dumps information for an LDP interface.

Parameters

ip-int-name

Specifies the name of an existing router.

Platforms

All

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**label-map** *label*]

interface [*ip-int-name* | *ip-address*] **statistics** [**aux-stats**]

Context

[Tree] (show>router>mpls interface)

Full Context

show router mpls interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays MPLS interface information.

Parameters

ip-int-name

Specifies the name of the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

label-map label

Specifies the MPLS label on which to match.

Values 32 to 1048575

statistics

Displays the MPLS interface name and the number of packets and octets sent and received on an MPLS interface.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

Table 217: Output fields: MPLS interface describes MPLS interface output fields.

Table 217: Output fields: MPLS interface

Label	Description
Interface	The interface name.
Port-id	The port ID.
Adm	Specifies the administrative state of the interface.
Opr	Specifies the operational state of the interface.
Te-metric	Specifies the traffic engineering metric used on the interface.
Srlg Groups	Specifies the shared risk loss group (SRLG) name(s).
Interfaces	The total number of interfaces.
Transmitted	Displays the number of packets and octets transmitted from the interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Received	Displays the number of packets and octets received.
In Label	Specifies the ingress label.
In I/F	Specifies the ingress interface.
Out Label	Specifies the egress label.
Out I/F	Specifies the egress interface.
Next Hop	Specifies the next hop IP address for the static LSP.
Type	Specifies whether the label value is statically or dynamically assigned.

Output Example

interface

Syntax

interface [*ip-int-name* | *ip-address*] **statistics** [**detail**]

Context

[Tree] (show>router>rsvp interface)

Full Context

show router rsvp interface

Description

This command shows RSVP interfaces.

Parameters

ip-int-name

Specifies the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

statistics

Displays the RSVP interface name and counts of various RSVP packets sent and received on the interface.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of RSVP interface information.

Table 218: Output fields: RSVP interface describes RSVP interface output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 218: Output fields: RSVP interface

Label	Description
Interface	The name of the IP interface.
Total Sessions	The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signaled but a response has not yet been received.
Active Sessions	The total number of active RSVP sessions on this interface.
Total BW (Mbps)	The amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on the interface.
Resv BW (Mbps)	The amount of bandwidth in Mb/s reserved on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Adm	Down — The RSVP interface is administratively disabled. Up — The RSVP interface is administratively enabled.
Bfd	Yes — BFD is enabled on the RSVP interface. No — BFD is disabled on the RSVP interface.
Opr	Down — The RSVP interface is operationally down. Up — The RSVP interface is operationally up.
Port ID	Specifies the physical port bound to the interface.
Active Resvs	The total number of active RSVP sessions that have reserved bandwidth.
Subscription	Specifies the percentage of the link bandwidth that RSVP can use for reservation. When the value is zero (0), no new sessions are permitted on this interface.
Port Speed	Specifies the speed for the interface.
Unreserved BW	Specifies the amount of unreserved bandwidth.
Reserved BW	Specifies the amount of bandwidth in Mb/s reserved by the RSVP session on this interface. A value of zero (0) indicates that no bandwidth is reserved.
Total BW	Specifies the amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on this interface.
Aggregate	Aggregate messages are used to pack multiple RSVP messages into a single packet to reduce the network overhead. When the value is true, RSVP negotiates with each neighbor and gets consensus before sending aggregate messages.
Hello Interval	Specifies the length of time (in s) between the hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. When the value is zero (0), the sending of hello messages is disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Refresh Time	Specifies the interval between the successive Path and Resv refresh messages. RSVP declares the session down after it misses ((keep-multiplier + 0.5) * 1.5 * refresh-time)) consecutive refresh messages.
Hello Timeouts	The total number of hello messages that timed out on this RSVP interface.
Neighbors	The IP address of the RSVP neighbor.
Sent	The total number of error free RSVP packets that have been transmitted on the RSVP interface.
Recd	The total number of error free RSVP packets received on the RSVP interface.
Total Packets	The total number of RSVP packets, including errors, received on the RSVP interface.
Bad Packets	The total number of RSVP packets with errors transmitted on the RSVP interface.
Paths	The total number of RSVP PATH messages received on the RSVP interface.
Path Errors	The total number of RSVP PATH ERROR messages transmitted on the RSVP interface.
Path Tears	The total number of RSVP PATH TEAR messages received on the RSVP interface.
Resvs	The total number of RSVP RESV messages received on the RSVP interface.
Resv Confirms	The total number of RSVP RESV CONFIRM messages received on the RSVP interface.
Resv Errors	Total RSVP RESV ERROR messages received on RSVP interface.
Resv Tears	Total RSVP RESV TEAR messages received on RSVP interface.
Refresh Summaries	Total RSVP RESV summary refresh messages received on interface.
Refresh Acks	Total RSVP RESV acknowledgment messages received when refresh reduction is enabled on the RSVP interface.
Bundle Packets	Total RSVP RESV bundled packets received on the RSVP interface.
Hellos	Total RSVP RESV HELLO REQ messages received on the interface.
DBw Multiplier	Displays the configured dark bandwidth multiplier.
DBw Up Threshold	Displays the configured dark bandwidth up threshold (per interface or inherited).
DBw Down Threshold	Displays the configured dark bandwidth down threshold (per interface or inherited).
DBw Sample Index	Displays the index of the dark bandwidth current sample.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
DBw Last Sample	Displays the latest sampled value of the dark bandwidth.
Latest Cal DBw	Displays the latest value of the calculated dark bandwidth (calculated over average interval = sample-interval X sample-multiplier). The value indicated here has already been multiplied by the dbw-multiplier.
Advertised MRLB	Displays the value of the latest advertised Maximum Reservable Link Bandwidth.

```

interface

Syntax

interface *ip-int-name* [**statistics** | **aux-stats**]

Context

[Tree] (clear>router>mpls interface)

Full Context

clear router mpls interface

Description

This command resets or clears statistics for MPLS interfaces.

Parameters

ip-int-name

Specifies an existing IP interface. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only packet and octet counters, and only these of the default MPLS statistics.

aux-stats

Clears only packet and octet counters, and only these of the default auxiliary MPLS statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

interface

Syntax

interface [*ip-int-name*] [**statistics**]

Context

[Tree] (clear>router>rsvp interface)

Full Context

clear router rsvp interface

Description

This command resets or clears statistics for an RSVP interface.

Parameters

ip-int-name

Specifies the IP interface to clear. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only statistics.

Platforms

All

interface

Syntax

interface [**service** *service-id*] [**interface** *ip-int-name*] [**stats** { **rt-server** | **fcc-server**}]

interface [**service** *service-id*] [**interface** *ip-int-name*] **summary**

Context

[Tree] (show>video interface)

Full Context

show video interface

Description

This command displays video interface information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

service *service-id*

Displays video interface information pertaining to the specified service ID.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

interface *ip-int-name*

Displays video interface information pertaining to the specified interface.

stats

Displays video interface statistics.

Values **rt-server** — Displays video interface statistics for the RET server.

fcc-server — Displays video interface statistics for the FCC server.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

Output

The following output is an example of this command.

Output Example

```
*A:Dut-C# show video  interface

interface

Syntax

interface *ip-int-name* [**address** *ip-address*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

Context

[Tree] (clear>video>statistics>id interface)

Full Context

clear video statistics id interface

Description

This command clears video statistics for a particular channel.

Parameters

ip-int-name

Clears statistics for the specified interface.

address *ip-address*

Clears statistics for the specified IP address.

rt-client

Clears all RET client related statistics.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

interface [*ip-int-name* | *ipv6-address*] [**group**] [*grp-ipv6-address*] [**detail**]

Context

[Tree] (show>router>mld interface)

Full Context

show router mld interface

Description

This command displays MLD interface information.

Parameters

ip-int-name

Displays the information associated with the specified IPv6 interface name.

ipv6-address

Displays the information associated with the specified IPv6 address.

group ***grp-ipv6-address***

Displays IPv6 multicast group address for which this entry contains information.

detail

Displays detailed IPv6 interface information along with the source group information learned on that interface.

Platforms

All

Output

The following output is an example of MLD interface information. Table 219: Output fields: MLD interface displays MLD field descriptions.

Output Example

```
*A:Dut-A# show router mld interface
===============================================================================
MLD Interfaces
===============================================================================
Interface               Adm  Oper Cfg/Opr         Num Policy

```
*A:Dut-A#
```

Table 219: Output fields: MLD interface

Label	Description
Interface	The interfaces that participate in the MLD protocol.
Adm Admin Status	The administrative state for the MLD protocol on this interface.
Oper Oper Status	The current operational state of MLD protocol on the interface.
Querier	The address of the MLD querier on the IP subnet to which the interface is attached.
Querier Up Time	The time since the querier was last elected as querier.
Querier Expiry Timer	The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero.
Cfg/Opr Version Admin/Oper version	Cfg — The configured version of MLD running on this interface. For MLD to function correctly, all routers on a LAN must be configured to run the same version of MLD on that LAN. Opr — The operational version of MLD running on this interface.
Num Groups	The number of multicast groups which have been learned by the router on the interface.
Policy	The policy that is to be applied on the interface.
Group Address	The IP multicast group address for which this entry contains information.

interface

Syntax

interface [*ip-int-name* | *mt-int-name* | *ip-address*] [**group** *grp-ip-address* | **source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

Context

[Tree] (show>router>pim interface)

Full Context

show router pim interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays PIM interface information and the (S,G)/(*,G)/(*, *, rp) state of the interface.

Parameters

ip-int-name

Displays interface information associated with the specified IP interface name.

mt-int-name

Displays Multicast Tunnel (MT) interface information for a VPRN.

Values <*vprn-id*>-mt-<*grp-ip-address*>

ip-address

Displays interface information associated with the specified IP address.

group *grp-ip-address*

Displays the IP multicast group address information for which this entry contains information.

source *ip-address*

Displays information about the source address for which this entry contains information.

If the type is **starg**, the value of this object is zero.

If the type is **starstarrp**, the value of this object is the address of the RP.

type

Displays information for the specified entry type.

Values **starstarrp**, **starg**, **sg**

detail

Displays detailed interface information.

family

Displays family information for the interface.

Values ipv4, ipv6

Platforms

All

Output

The following output is an example of a PIM interface configuration. Table 220: Output fields: PIM interface provides PIM interface field descriptions.

Output Example

```

Table 220: Output fields: PIM interface

Label	Description
Admin State	The administrative state for PIM protocol on this interface
Oper State	The current operational state of PIM protocol on this interface
DR	The designated router on this PIM interface
DR Priority	The priority value sent in PIM Hello messages and that is used by routers to elect the designated router (DR).
Hello Intvl	The frequency at which PIM Hello messages are transmitted on this interface
OperGroup	The OperGroup name associated with the PIM interface

Label	Description
OprGrp Active oper	The OperGroup operation (add, set, subtract) to the DR priority
Cfg OprGrp Priority	The configured OperGroup DR priority

interface

Syntax

interface [*ip-int-name*]

Context

[Tree] (show>cflowd interface)

Full Context

show cflowd interface

Description

This command displays the administrative and operational status of interfaces that have cflowd enabled.

Parameters

ip-int-name

Displays information only for the IP interface with the specified name.

Default All interfaces with cflowd enabled.

Platforms

All

Output

The following output is an example of cflowd interface information, and Table 221: Output fields: cflowd interface describes the output fields.

Output Example

```
A:Dut-B# show cflowd interface

===============================================================================
Cflowd Interfaces

show router bfd interface

Description

This command displays interface information.

Parameters

interface-name

Specifies the interface name.

family

Specifies whether IPv4 or IPv6 routes are displayed.

detail

Displays detailed interface information.

summary

Displays summary interface information for the router.

Platforms

All

Output

The following output is an example of BFD interface information, and Table 222: Output fields: BFD interface describes the fields.

Output Example

```
*A:Dut-B# show router bfd interface
===============================================================================
BFD Interface

===============================================================================
B:CORE2#
```

Table 223: Output fields: ICMP6 interface

Label	Description
Total	The total number of all messages
Destination Unreachable	The number of message that did not reach the destination
Time Exceeded	The number of messages that exceeded the time threshold
Echo Request	The number of echo requests
Router Solicits	The number of times the local router was solicited
Neighbor Solicits	The number of times the neighbor router was solicited
Errors	The number of error messages
Redirects	The number of packet redirects
Pkt Too big	The number of packets that exceed appropriate size
Echo Reply	The number of echo replies
Router Advertisements	The number of times the router advertised its location
Neighbor Advertisements	The number of times the neighbor router advertised its location

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**detail**]

Context

[Tree] (show>router>isis interface)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router isis interface

Description

This command displays IS-IS interface information. When no *ip-addr* or the *ip-int-name* is specified, all interfaces are listed.

Parameters

ip-address

Displays only the interface information associated with the specified IP address.

Values ipv4-address

- a.b.c.d (host bits must be 0)

ipv6-address

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

ip-int-name

Displays only the interface information associated with the specified IP interface name.

detail

Keyword to display detailed information.

Platforms

All

Output

The following outputs are examples of IS-IS interface information, and Table 225: Output fields: detailed IS-IS interface describes the output fields.

Output example

```
A:node-2# show router isis interface
===============================================================================
Rtr Base ISIS Instance 0 Interfaces
===============================================================================
Interface                       Level CircID  Oper      L1/L2 Metric     Type
                                            State
-------------------------------------------------------------------------------
To_PE1                          L1L2  2       Down      0/0              bcst
-------------------------------------------------------------------------------
Interfaces : 1
===============================================================================
```

Table 225: Output fields: detailed IS-IS interface

Label	Description
Interface	The interface name
Level Capability	The interface level (1, 2, or 1 and 2)
Oper State	Up — the interface is operationally up Down — the interface is operationally down
Admin State	Up — the interface is administratively up Down — the interface is administratively down
Auth Keychain	The authentication keychain name
Auth Type	The authentication type
Auth State	The authentication state
Circuit Id	The circuit identifier
Retransmit Int.	The retransmit interval, which is the minimum time between LSP PDU retransmissions
Type	Pt-to-Pt — the interface type is point-to-point Broadcast — the interface type is broadcast Non-Broadcast — X.25, Frame Relay, and similar technologies
LSP Pacing Int.	The LSP pacing interval defining the flooding pace to neighboring devices

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper Type	The operational interface type: • Broadcast – the operational interface type is broadcast • Pt-to-Pt – the operational interface type is point-to-point
CSNP Int.	The interval between successive CSN PDUs being sent
Mesh Group	Displays if the mesh group is active or inactive
BER	The bit error rate
LFA NH Template	The LFA next-hop (NH) template configuration
Bfd Enabled	Displays if Bidirectional Forwarding (BFD) is enabled: • Yes – BFD is enabled • No – BFD is disabled
Topology	The IS-IS topology information
Te Metric	The TE metric configured for the interface
Te State	Displays if TE is enabled on the interface
Admin Groups	Displays the bitmap inherited from the MPLS interface that identifies the administrative groups to which this interface belongs
Delay Normaliz.	The state of delay normalization: • Enabled – Delay normalization is enabled. When delay normalization is enabled, the normalized delay is used by the respective TLVs within the IGP link-state packets. • Disabled – Delay normalization is disabled. When delay normalization is disabled, the measured delay is used by the respective TLVs within the IGP link-state packets
Minimum Delay	The minimum delay configured on the interface
Delay Tolerance	The interval granularity within the range
Measured Delay	The measured delay on the interface
Normalized Delay	The normalized delay on the interface
Ldp Sync	Displays if the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the IS-IS routing protocol
Ldp Sync Wait	The time to wait for the LDP adjacency to come up
Ldp Timer State	The state of the LDP synchronized time left on the IS-IS interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ldp Tm Left	The time left before IS-IS reverts back to advertising the normal metric for this interface
Route Tag	The route tag of the entry
LFA	Displays if the Loop-Free Alternate (LFA) next-hop is included
Default Instance	The default instance for the entry
Load Bal Weight	The load balancing weight, if this weight is configured
Hello Padding	Displays if Hello padding is enabled
Fast Flooding (oper)	The operational Fast Flooding information for the interface
LSP Receiver	Displays if Fast Flooding LSP receiver behavior is enabled
Burst Size	The maximum number of LSPs that can be received back-to-back
Adv Flooding TLV	Displays if the RFC 9681 Flooding Parameters TLV is advertised
LSP per PSNP	The number of received, unacknowledged LSPs that triggers immediate PSNP transmission
LSP Tx Interval	The minimum interval between consecutive LSP arrivals after a complete burst, in milliseconds
PSNP Interval	The maximum timer-based delay for acknowledging received LSPs with a PSNP, in milliseconds
Receive Window	The maximum number of unacknowledged LSPs that can be received from a neighbor
LSP Sender	Displays if Fast Flooding LSP sender behavior is enabled
Enforce RWIN	Displays if the sender enforces the receive window advertised by the neighbor
Enfrc Burst Size	Displays if the sender enforces the LSP burst size advertised by the neighbor
Def Burst Size	The locally configured default LSP burst size used when the neighbor has not advertised a burst size
Def LSP per PSNP	The locally configured default number of LSPs per PSNP used when the neighbor has not advertised an LSPs-per-PSNP value
Def RWIN	The locally configured default receive window used when the neighbor has not advertised a receive window
Level	The routing level for the IS-IS routing instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Adjacencies	Displays the number of adjacencies with IS-IS neighbors
Desg. IS	The designated intermediate system
Auth Keychain	Displays if the authentication keychain is enabled
Auth Type	Displays the authentication type. If no type exists, the field displays as None.
Metric	The interface metric for Level 1 and Level 2, if none are set to 0
Hello Timer	The Hello timer for the entry
Ipv6-Ucast-Met	The IPv6 unicast metric for the entry
Priority	The priority for the entry
Ipv6-Mcast-Met	The IPv6 multicast metric for the entry
Passive	Displays if the interface operates as a normal IS-IS interface with regard to adjacency forming and network and link behavior
Ipv4-Mcast-Met	The IPv4 multicast metric for the entry
SD-Offset	The SD offset for the entry
SF-Offset	The SF offset for the entry
Hello Mult.	The Hello multiplier for the entry
LSP Tx Q Count	The LSP transmission Q count for the entry
Hello Padding	The Hello padding for the entry

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**detail**]

interface [**area** *area-id*] [**detail**]

interface [*ip-int-name* | *ip-address*] **database** [**detail**]

Context

[Tree] (show>router>ospf interface)

Full Context

show router ospf interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the details of the OSPF interface identifiable by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

Note:
The **detail** keyword generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 address.

Values ipv4-address:

- a.b.c.d

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d

area — 0 to 4294967295

detail

Keyword to display detailed information for the interface.

database

Keyword to display database information for the interface.

Platforms

All

Output

The following output is an example of the OSPF interface information, and Table 226: Output fields: OSPF Interface describes the output fields.

Output example – OSPFv2 system interface

```
A:node-2# show router ospf interface "system"
===============================================================================
Rtr Base OSPFv2 Instance 0 Interface "system"
===============================================================================
If Name               Area Id         Designated Rtr  Bkup Desig Rtr  Adm  Oper
-------------------------------------------------------------------------------
system                0.0.0.0         10.20.1.3       0.0.0.0         Up   DR
-------------------------------------------------------------------------------
No. of OSPF Interfaces: 1
===============================================================================
```

Output example – OSPFv2 interface output

```
A:node-2# show router ospf 1 interface "DUTC_TO_DUTB.1.0"
===============================================================================
Rtr Base OSPFv2 Instance 1 Interface "DUTC_TO_DUTB.1.0"
===============================================================================
If Name               Area Id         Designated Rtr  Bkup Desig Rtr  Adm  Oper
-------------------------------------------------------------------------------
DUTC_TO_DUTB.1.0      0.0.0.0         0.0.0.0         0.0.0.0         Up   PToP
-------------------------------------------------------------------------------
No. of OSPF Interfaces: 1
===============================================================================
```

Table 226: Output fields: OSPF Interface

Label	Description
If Name	The interface name
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
D Rtr Id	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated Router.
BD Rtr Id	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated router.
Adm	Dn — OSPF on this interface is administratively disabled Up — OSPF on this interface is administratively enabled
Opr	Down — this is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. Wait — the router is trying to determine the identity of the (Backup) Designated router for the network PToP — the interface is operational, and connects either to a physical point-to-point network or to a virtual link DR — this router is the Designated Router for this network BDR — this router is the Backup Designated Router for this network ODR — the interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router
No. of OSPF Interfaces	The number of interfaces listed

```

Table 227: Output fields: detailed OSPF Interface

Label	Description
IP Address	The IP address and mask of this OSPF interface
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The length of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that the Hello packets of a router have not been seen before its neighbors declare the router down. This should be some multiple of the Hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor
Cfg Metric	The metric to be advertised for this interface
Advert Subnet	False — when a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes True — when a point-to-point interface is configured to true, the subnet is advertised
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface
Cfg IF Type	The configured interface type
Passive	False — this interface operates as a normal OSPF interface with regard to adjacency forming and network or link behavior True — no OSPF Hellos will be sent out on this interface and the router advertises this interface as a stub network or link in its router LSAs
Cfg MTU	The required size of the largest packet that can be sent or received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.
LSA-filter-out	This field indicates if LSA filter out is configured
Adv Rtr Capab	The capability of the advertising router
LFA	This field indicates if Loop-Free Alternate (LFA) is configured
LFA NH Template	The LFA Next-Hop (NH) template configuration
Load Bal Weight	The load balancing weight, if this weight is configured
Bfd Enabled	This field indicates if Bidirectional Forwarding Detection (BFD) is enabled. The field will include the following values: • Yes – BFD is enabled • No – BFD is disabled
Bfd Strict Mode	This field indicates if BFD strict-mode is enabled. The field includes the following values: • Yes – BFD strict-mode is enabled • No – BFD strict-mode is disabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Bfd Str Holddown	The BFD strict-mode holddown timer
RIB-priority	The RIB prioritization for the OSPF protocol specified as either high (enabled) or none (disabled). When enabled at the OSPF interface level, all routes learned through the associated OSPF interface are processed through the OSPF route calculation process at a higher priority. This field is configured using the **configure router ospf area interface rib-priority [high]** command.
Delay Normaliz.	Displays the state of delay normalization: • Enabled – delay normalization is enabled and normalized delay is used by the respective TLVs within the IGP link-state packets. • Disabled – delay normalization is disabled and measured delay is used by the respective TLVs within the IGP link-state packets
Minimum Delay	The lowest delay allowed on the interface
Delay Tolerance	The delay interval granularity
Auth Type	Displays the authentication procedure to be used for the packet:. None — routing exchanges over the network/subnet are not authenticated Simple — a 64-bit field is configured on a per-network basis. All packets sent on a particular network must have this configured value in their OSPF header 64-bit authentication field. This essentially serves as a "clear” 64-bit password. MD5 — a shared secret key is configured in all routers attached to a common network or subnet. For each OSPF protocol packet, the key is used to generate or verify a "message digest” that is appended to the end of the OSPF packet.
State	
Admin Status	Disabled — OSPF on this interface is administratively shut down Enabled — OSPF on this interface is administratively enabled
Oper State	Down — this is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable Waiting — the router is trying to determine the identity of the (Backup) Designated Router for the network Point To Point — the interface is operational, and connects either to a physical point-to-point network or to a virtual link. Designated Rtr — this router is the Designated Router for this network

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Other Desig Rtr — the interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router Backup Desig Rtr — this router is the Backup Designated Router for this network
Designated Rtr	The IP interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router.
Backup Designated Router	The IP interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated Router.
IF Type	Broadcast — LANs, such as Ethernet Non-Broadcast — X.25, Frame Relay and similar technologies Point-To-Point — Point-to-point links
Network Type	Stub – OSPF has not established a neighbor relationship with any other OSPF router on this network, as such only traffic sourced or destined to this network is routed to this network Transit – OSPF has established at least one neighbor relationship with any other OSPF router on this network, as such traffic enroute to other networks may be routed via this network
Oper MTU	The operational size of the largest packet which can be sent or received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface
Oper Metric	The operational metric for the interface used by OSPF
Te Metric	The TE metric configured for this interface. This metric is flooded out in the TE metric sub-TLV in the OSPF TE LSAs. Depending on the configuration, either the TE metric value or the native OSPF metric value is used in CSPF computations.
Te State	Displays if TE is enabled on the interface
Admin Groups	Displays the bitmap inherited from MPLS interface that identifies the admin groups to which this interface belongs
Measured Delay	The measured delay on the interface. When delay normalization is disabled, the measured delay is used by the respective TLVs within IGP link-state packets.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Normalized Delay	The delay normalized based on the configuration. When normalized delay is configured, the respective TLVs within the IGP link-state packets use the normalized delay value
Ldp Sync	Displays whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol
Ldp Sync Wait	The time to wait for the LDP adjacency to come up
Ldp Timer State	The state of the LDP sync time left on the OSPF interface
Ldp Tm Left	Displays the time left before OSPF reverts back to advertising normal metric for this interface
Statistics	
Nbr Count	The number of OSPF neighbors on the network for this interface
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled
Tx LSRs	The total number of Link State Requests (LSRs) transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled
Tx LSUs	The total number of Link State Updates (LSUs) transmitted on this interface since this interface was last enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Rx LS Acks	The total number of Link State Acknowledgments received on this interface since this interface was last enabled
Tx LS Acks	The total number of Link State Acknowledgments transmitted on this interface since this interface was last enabled
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled
Tx Failures	The transmitted OSPF packets that are dropped due to resource shortage
Retransmits	The total number of OSPF Retransmits sent on this interface since this interface was last enabled
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled
Bad Dest Addrs	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length provided in the packet itself since this interface was last enabled
Bad Hello Int.	The total number of OSPF packets received where the hello interval provided in packet was not equal to that configured on this interface since this interface was last enabled
Bad Dead Int.	The total number of OSPF packets received where the dead interval provided in the packet was not equal to that configured on this interface since this interface was last enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled
Bad Checksums	The number of bad checksums for the interface
LSA Count	The LSA count for the interface
LSA Checksum	The sum of all link-scoped LSA checksums on the interface

interface

Syntax

interface [*ip-int-name* | *ip-address* | *ipv6-address*] [**detail**]

interface [**area** *area-id*] [**detail**]

interface [*ip-int-name* | *ip-address*]| *ipv6-address* **database** [**detail**]

Context

[Tree] (show>router>ospf3 interface)

Full Context

show router ospf3 interface

Description

This command displays the details of the OSPFv3 interface identified by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 or IPv6 address.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d

area — 0 to 4294967295

detail

Displays detailed information for the interface.

database

Displays database information for the interface.

Platforms

All

Output

The following output is an example of an OSPFv3 interface information, and Table 228: Output fields: OSPFv3 interface detail describes the output fields.

Output Example (OSPFv3 Detailed)

```

Table 228: Output fields: OSPFv3 interface detail

Label	Description
IP Address	The IP address and mask of this OSPF interface.
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Priority	The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm.
Hello Intrvl	The interval of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network.
Rtr Dead Intrvl	The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the hello interval. This value must be the same for all routers attached to a common network.
Retrans Intrvl	The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets.
Poll Intrvl	The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor.
Advert Subnet	False — When a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	True — When a point-to-point interface is configured to true, then the subnet is advertised.
Transit Delay	The estimated number of seconds it takes to transmit a link state update packet over this interface.
Passive	False — This interfaces operates as a normal OSPF interface with regard to adjacency forming and network/link behavior. True — No OSPF Hello messages sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs.
MTU	The desired size of the largest packet, specified in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Admin Status	Disabled — OSPF on this interface is administratively shut down.
	Enabled — OSPF on this interface is administratively enabled.
Oper State	Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. Waiting — The router is trying to determine the identity of the (Backup) Designated router for the network. Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link. Designated Rtr — This router is the Designated router for this network. Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated router. Backup Desig Rtr — This router is the Backup Designated router for this network.
IF Type	Broadcast — LANs, such as Ethernet. Non-Broadcast — X.25, Frame Relay and similar technologies. Point-To-Point — Point-to-point links.
Network Type	Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network.
	Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network.

Label	Description
Oper MTU	The operational size of the largest packet, in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers.
Last Enabled	The time that this interface was last enabled to run OSPF on this interface.
Nbr Count	The number of OSPF neighbors on the network for this interface.
If Events	The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled.
Tot Rx Packets	The total number of OSPF packets received on this interface since this interface was last enabled.
Tot Tx Packets	The total number of OSPF packets transmitted on this interface since this interface was last enabled.
Rx Hellos	The total number of OSPF Hello packets received on this interface since this interface was last enabled.
Tx Hellos	The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled.
Rx DBDs	The total number of OSPF database description packets received on this interface since this interface was last enabled.
Tx DBDs	The total number of OSPF database description packets transmitted on this interface since this interface was last enabled.
Rx LSRs	The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled.
Tx LSRs	The total number of LSRs transmitted on this interface since this interface was last enabled.
Rx LSUs	The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled.
Tx LSUs	The total number of LSUs transmitted on this interface since this interface was last enabled.
Rx LS Acks	The total number of Link State Acknowledgments (LSAs) received on this interface since this interface was last enabled.
Tx LS Acks	The total number of LSAs transmitted on this interface since this interface was last enabled.
Retransmits	The total number of OSPF retransmits sent on this interface since this interface was last enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Discards	The total number of OSPF packets discarded on this interface since this interface was last enabled.
Bad Networks	The total number of OSPF packets received with invalid network or mask since this interface was last enabled.
Bad Virt Links	The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled.
Bad Areas	The total number of OSPF packets received with an area mismatch since this interface was last enabled.
Bad Dest Addrs	The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled.
Bad Auth Types	The total number of OSPF packets received with an invalid authorization type since this interface was last enabled.
Auth Failures	The total number of OSPF packets received with an invalid authorization key since this interface was last enabled.
Bad Neighbors	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled.
Bad Pkt Types	The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled.
Bad Lengths	The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled.
Bad Hello Int.	The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled.
Bad Dead Int.	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled.
Bad Options	The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled.
Bad Versions	The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled.
Te State	Indicates the MPLS interface TE status from OSPF standpoint.
Admin Groups	Indicates the bit-map inherited from MPLS interface that identifies the admin groups to which this interface belongs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ldp Sync	Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol.
Ldp Sync Wait	Indicates the time to wait for the LDP adjacency to come up.
Ldp Timer State	Indicates the state of the LDP sync time left on the OSPF interface.
Ldp Tm Left	Indicates the time left before OSPF reverts back to advertising normal metric for this interface.
Tx Failures	Transmitted OSPFv3 packets that are dropped due to resource shortage.

interface

Syntax

interface *interface-name* [**detail** | **aggregate** | **sample** | **debug-counters**]

interface *interface-name* **lag-micro-sessions** [**detail** | **aggregate** | **sample** | **debug-counters**]

interface *interface-name* **lag-micro-sessions port** *port-id* [**detail** | **aggregate** | **sample** | **debug-counters**]

Context

[Tree] (show>test-oam>link-measurement interface)

Full Context

show test-oam link-measurement interface

Description

This command displays the link measurement operational information, reporting, and recorded results for a specific interface.

Parameters

interface-name

Specifies the interface name, up to 32 characters, for which link measurement information is displayed.

detail

Optional keyword to display complete link measurement operational information, reporting, and results.

aggregate

Optional keyword to display operational information, reporting and aggregate sample window results.

sample

Optional keyword to display operational information, reporting, and sample window results.

debug-counters

Optional keyword to display debug counter information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lag-micro-sessions

Keyword to display LAG micro-session information.

port-id

Specifies the port ID to display LAG micro-session information for a specific port.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of link measurement information, and Table 229: Output fields: link measurement interface describe the output fields:

- Output example — single Ethernet port with LAG micro sessions disabled
- Output example — LAG with two member ports and LAG micro sessions disabled
- Output example — LAG with two member ports and LAG micro sessions enabled
- Output example — detailed
- Output example — LAG micro sessions
- Output example — detailed LAG micro-sessions information

Output example — single Ethernet port with LAG micro sessions disabled

===============================================================================
Sample and Aggregate Legend:
      *: Value greater than column width allows
    N/A: Nonexistent or incalculable value
      I: Integrity threshold satisfied
      E: Indicates reception of duplicate packets or zero or negative values
      F: Indicates unexpected STAMP flag state
===============================================================================
```

Table 229: Output fields: link measurement interface

Label	Description
Interface Link Measurement Information	
Template Name	The name of the link measurement template
Oper State	The operational state of the test configured under the interface Up — assigned link-measurement template. A test protocol is enabled; UDP port is available, and internal resources are available. Down — one or more requirements for the Up state is not met

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
LAG Micro Sessions	The administrative status of LAG micro sessions
Port	The port assigned to the interface, if link measurement is configured on a single port
LAG ID	The LAG assigned to the interface, if link measurement is configured on a LAG
LAG Name	The LAG name, if link measurement is configured on a LAG
LAG Micro Session Count	The number of LAG micro sessions
Session Sender Type	The Session-Sender type
STAMP Session Identifier	The STAMP session ID
Protocol	The active protocol encapsulating the test packet IPv4 or IPv6
Oper Source Address	The source address of the test packet
Source Auto-Assigned	The source address is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Oper Destination Address	The destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	The destination address is automatically determined No — the destination is configured or cannot be automatically determined Yes — the destination is automatically determined
Failure Condition(s)	The requirements not met causing an Oper Down state
Detectable Tx Errors	The error condition detected that may prevent the test packet from being sent
Reporting	
Reporting Enabled	The current value should be compared to a threshold and possibly reported Yes — at least one threshold in either window is configured No — none of the thresholds in either window is configured
Delay Measurement Last Reported	The value of the last measurement reported to the routing engine
Timestamp	The end timestamp (UTC) of the last reported delay measurement
Trigger By	The window and threshold type that was exceeded triggering the reporting. Only one will be reported if multiple are triggered in the same window.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Measurement Source	The measurement source of the reported delay value. This is an interface name when LAG micro sessions is disabled, and a port ID when LAG micro sessions is enabled.
Aggregate Sample Window Delay Measurement Detail	
Count	The number of sample widows included in the aggregate sample window
Sample Window Delay Measurement Detail	
Rcv/Snt	The number of response test packets received (Rcv) and sent (Snt)
Err	The number of errors included in the sample window. This is the total of duplicates, zero, and negative valued measurements. The negative error count is incremented if either direction is negative, regardless of the unidirectional-measurement configuration method. A negative measurement in either direction calls into question the validity of both directions. Errors are included in the receive count, but do not count toward integrity. * — value exceeds column width; value more than 999
Common Table Labels	
Currently Reporting	The configured value of the delay measurement to consider (Min, Max, Avg, MoX, XoM)
End Timestamp (UTC)	The time at which the window closed
State	The state of the window InProgress — currently executing Completed — closed via normal execution Terminated — preempted by some action; closed and not considered for report SwReported — new delay reported from this sample window AswReported — new delay reported from this aggregate sample window (only applicable to Aggregate Sample Windows)
Min (us)	The minimum delay value recorded in this window, in units microseconds N/A — not applicable or incalculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
Max (us)	The maximum delay value recorded in this window, in units microseconds N/A — not applicable or incalculable, when no responses are received, or all are in error

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	* — value exceeds column width; value in excess of 9999999
Avg (us)	The average delay value recorded in this window, in units microseconds N/A — not applicable or incalculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999
I	The window has integrity and should be considered Y — yes, achieved integrity N — no, did not meet configured integrity percentage
Results	The metric considered for reporting in this window N/A — not applicable or incalculable, when no responses are received, or all are in * — value exceeds column width; value more than 9999999

interface

Syntax

interface *interface-name*

interface *interface-name* **port** *port-id* [**debug-counters**]

Context

[Tree] (show>test-oam>lag-meas interface)

Full Context

show test-oam lag-ip-measurement interface

Description

This command displays LAG measurement data for the specified LAG interface.

Parameters

interface-name

Specifies the interface name, up to 32 characters.

port-id

Specifies the port ID.

Values

slot[/*mda*[/*port*]]		
eth-sat-id	**esat**-*id*[/*slot*/[**u**]*port*]	
	esat	keyword

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	id	1 to 40
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 256
	sub-port	a to b

debug-counters

Keyword to display the debug counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of LAG measurement data:

- Output example: LAG IP measurement interface summary, Table 230: Output fields: LAG IP measurement interface summary
- Output example: LAG IP measurement interface port 1/1/1, Table 231: Output fields: LAG IP measurement port 1/1/1 summary
- Output example: LAG IP measurement port 1/1/1 debug-counters, Table 232: Output fields: LAG IP measurement port 1/1/1 debug-counters

Output example: LAG IP measurement interface summary

Table 230: Output fields: LAG IP measurement interface summary

Label	Description
LAG IP Measurement Results for Interface	
LAG Template	Displays the name of the link measurement interface on the LAG template
LAG Measurement Oper State	Displays the operational state of the test configured under the interface Up — assigned link measurement template. A test protocol is enabled, a UDP port is available, and internal resources are available. Down — one or more requirements for the Up state are not met
LAG Name	Displays the name of the LAG
LAG Member Count	Displays the number of ports in the LAG (micro sessions)
Protocol	Displays the active protocol encapsulating the test IPv4 or IPv6 packet
Oper Source Address	Displays the source address of the test packet (IPv4 or IPv6)
Source Auto-Assigned	Displays the source address that is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Destination Address	Displays the destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	Displays the destination address that is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Destination UDP Port	Displays the destination UDP port that is the listening port on the Session-Reflector
Session Sender Type	Displays the format of the test packet that will be transmitted
STAMP Session ID	Displays the STAMP session ID
Failure Condition	Displays if the requirements are not met, which causes an operationally down state
Detectable Tx Errors	Displays the detected error condition that may prevent the test packet from being sent
LAG IP Measurement Results Summary for Port Information	
Detectable Tx Error	Displays the detected error condition that may prevent the test packet from being sent for the micro session on the port
End Timestamp	Displays the time of last completed sample window
Sample Window State	Displays the state of the sample window complt – completed sample window discrd – operational state of the LAG IP measurement transitioned to per down during the sample window inProg – the micro session is currently running
Frame Loss Ratio	Displays the round trip Frame Loss Ratio (FLR) using the count of transmitted and received packets in the sample window
Average Round Trip Delay	Displays the average round trip delay, in microseconds, for the sample window
Average Round Trip IFDV	Displays the average Inter Frame Delay Variation (IFDV) for the sample window in microseconds

Table 231: Output fields: LAG IP measurement port 1/1/1 summary

Label	Description
LAG IP Measurement Results for Interface	
LAG Template	Displays the name of the link measurement on the LAG template
LAG Measurement Oper State	Displays the operational state of the test configured under the interface Up — assigned link measurement template. A test protocol is enabled, a UDP port is available, and internal resources are available. Down — one or more requirements for the Up state are not met
LAG Name	Displays the name of the LAG
LAG Member Count	Displays the number of ports in the LAG (micro sessions)
Protocol	Displays the active protocol encapsulating the test IPv4 or IPv6 packet
Oper Source Address	Displays the source address of the test packet (IPv4 or IPv6)
Source Auto-Assigned	Displays the source address that is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Destination Address	Displays the destination address of the test packet (IPv4 or IPv6)
Destination Auto-Assigned	Displays the destination address that is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined
Destination UDP Port	Displays the destination UDP port that is the listening port on the Session-Reflector
Session Sender Type	Displays the format of the test packet that will be transmitted
STAMP Session ID	Displays the STAMP session ID
Failure Condition	Displays if the requirements are not met, which causes an operationally down state
Detectable Tx Errors	Displays the detected error condition that may prevent the test packet from being sent
LAG IP Measurement Results for Port Information	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Sender Micro Session ID	Displays the micro-session ID in the packet added by the Session-Sender
Reflector Micro Session ID	Displays the micro-session ID in the packet added by the Session-Reflector
Detectable Tx Error	Displays the error condition detected that may prevent the test packet from being sent for the micro session on the port
Sender Micro Session ID Zero	Displays the number of packets arriving on the Session-Sender with all zeros in the sender micro-session ID field
Reflector Micro Session ID Zero	Displays the number of packets arriving on the Session-Sender with all zeros in the reflector micro-session ID field
Sender Micro Session ID Mismatch	Displays the number of packets arriving on the Session-Sender with a different sender micro-session ID than expected
LAG IP Measurement Sample Window for Port Information	
End Timestamp	Displays the time of the last completed sample window. "N/A" indicates the window is not completed and results are not computed.
State	Displays the state of the sample window complt – completed sample window discrd – the operational state of the LAG IP measurement transitioned to per down during the sample window inProg – the micro session is currently running
Rcv/Sent	Displays the number of test packets sent and received
FLR%	Displays the round trip FLR using the number transmitted and received packets in the sample window
Dir	Displays the direction relative to the result RT – round trip
Type	Displays the type of measurement FD – Frame Delay IFDV – InterFrame Delay Variation
E	Displays if zero or negative round trip delay is calculated Y – yes Blank – no
Min(us)	Displays the minimum measured value in microseconds
Max(us)	Displays the maximum measured value in microseconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Avg(us)	Displays the maximum computed valued in microseconds

Output example: LAG IP measurement interface debug-counters

```
show test-oam lag-ip-measurement interface "to-sr7" port "1/1/1" debug-counters
-------------------------------------------------------------------------------
LAG IP Measurement Sample Window Debug Counters for Port 1/1/1
-------------------------------------------------------------------------------
End Timestamp (UTC)  State  Rcv/Sent MFlag UFlag 0Neg
-------------------------------------------------------------------------------
N/A                 inProg    8/8        0     0    N
2025/03/03 21:37:14 complt   10/10       0     0    N
2025/03/03 21:37:04 complt   10/10       0     0    N
2025/03/03 21:36:54 complt   10/10       0     0    N
2025/03/03 21:36:44 complt   10/10       0     0    N
2025/03/03 21:36:34 complt   10/10       0     0    N
2025/03/03 21:36:24 complt   10/10       0     0    N
-------------------------------------------------------------------------------
MFlag: number of Malformed STAMP packets reported by the far end.
UFlag: number of Unrecognized STAMP packets reported by the far end.
0Neg : at least one negative (or zero) Round Trip delay calculated.
```

Table 232: Output fields: LAG IP measurement port 1/1/1 debug-counters

Label	Description
End Timestamp	Displays the time of the last completed sample window. "N/A" indicates the window is not completed and results are not computed.
State	Displays the state of the sample window complt – completed sample window discrd – the operational state of the LAG IP measurement transitioned to per down during the sample window inProg – the micro session is currently running
Rcv/Sent	Displays the number of test packets sent and received
MFlag	Displays the number of malformed STAMP packets reported by the far end
UFlag	Displays the number of unrecognized STAMP packets reported by the far end
0Neg	Displays whether at least one negative (or zero) Round Trip delay was calculated

interface

Syntax

interface *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**aux-stats**]

Context

[Tree] (monitor>router>mpls interface)

Full Context

monitor router mpls interface

Description

This command displays statistics for MPLS interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the MPLS interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name*, *ip-address*

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate

Displays rate-per-second for each statistic instead of the delta.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

Output Example

```
A:ALA-12>monitor>router>mpls# interface system interval 3 repeat 3 absolute

interface

Syntax

interface *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>ospf interface)

[Tree] (monitor>router>ospf3 interface)

Full Context

monitor router ospf interface

monitor router ospf3 interface

Description

This command displays statistics for OSPF interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the OSPF interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*s) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values *ip-int-address*, *ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

interface

Syntax

interface *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>rsvp interface)

Full Context

monitor router rsvp interface

Description

This command displays statistics for RSVP interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the RSVP interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*s) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name*, *ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

12.35 interface-id-mapping

interface-id-mapping

Syntax

interface-id-mapping

Context

[Tree] (show>router>dhcp6>local-dhcp-server interface-id-mapping)

Full Context

show router dhcp6 local-dhcp-server interface-id-mapping

Description

This command displays information about the DHCPv6 server that uses a unique /64 prefix per interface-ID options combination.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of interface ID mapping information.

Output Example

```
show router 600 dhcp6 local-dhcp-server "d6" interface-id-mapping
===============================================================================
Interface-ID Mappings for DHCPv6 server d6
===============================================================================
Mapped Prefix      : 2001:AAAA::/64
Relay Interface ID : 1/1/10
LDRA Interface ID  : (Not Specified)
Active Leases      : 2001:AAAA::1 (stable)
===============================================================================
1 prefix found
===============================================================================
```

Table 233: Output fields: interface ID mapping describes interface ID mapping field descriptions.

Use subject to Terms available at: www.nokia.com/terms.

Table 233: Output fields: interface ID mapping

Field	Description
Mapped Prefix	The mapped prefix
Relay Interface ID	The value of the Interface-ID Option assigned by the DHCPv6 Relay Agent
LDRA Interface ID	The value of the Interface-ID Option assigned by the Lightweight DHCPv6 Relay Agent
Active Leases	The number of active leases
No. of prefixes found	The total number of prefixes found.

Full Context

show subscriber-mgmt interface-statistics

Description

This command displays subscriber interface statistics.

Parameters

service-id

Specifies the service ID of the service.

Values 1 to 2148278386

svc-name: up to 64 characters

grp-id

Specifies the group interface name, up to 32 characters

sub-id

Specifies the subscriber interface, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service interface statistics information.

Output Example

```
*B:Dut-C# show subscriber-mgmt interface-statistics service 10 all
===============================================================================
Subscriber statistics for svc 10, itf si-1
```

interfaces

Syntax

interfaces

Context

[Tree] (show>test-oam>lag-meas interfaces)

Full Context

show test-oam lag-ip-measurement interfaces

Description

This command displays LAG measurement data on all LAG interfaces.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of the LAG measurement data on all LAG interfaces, and Table 234: Output fields: LAG IP measurement summary for all interfaces describes the output fields.

Output Example: LAG IP measurement summary for all interfaces

```
show test-oam lag-ip-measurement interfaces
-------------------------------------------------
LAG IP Measurement Interface Operational Summary
-------------------------------------------------
Interface
     Oper  Protocol    Detectable Tx Error  Ports

#uS: number of micro sessions (0 lag micro sessions not enabled)
===============================================================================
```

Table 235: Output fields: link measurement interfaces

Label	Description
Interface	The interface name
#uS	The number of LAG micro-sessions
Oper	The operational state of the LAG measurement
Protocol	The IP protocol enabled for the LAG measurement
DetectableTxErr	The error preventing the LAG measurement from transmitting packets on any of the ports
Report	The reporting status of the interface
Monitor	The type of delay being reported: • Max — maximum value • Min — minimum value • Avg — average value • MoX — minimum of all maximum values • XoM — maximum of all minimum values
Delay (us)	The reported delay, in microseconds
Timestamp	The timestamp of the last reported value

12.38 iom

iom

Syntax

Context

[Tree] (tools>dump>filter>resources iom)

Full Context

tools dump filter resources iom

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command shows information about filter resource utilization on all IOMs or a specified IOM. Resource utilization per filter type is available, as well as filters using most resources on a given line card.

Parameters

slot-number

Specifies that only the filter resource utilization associated with the IOM card in this slot will be displayed.

Values 1 to 10

Platforms

All

Output

The following output is an example of filter resource utilization information for all IOMs.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># iom

=====================================================

Context

[Tree] (show>filter ip)

Full Context

show filter ip

Description

This command displays IPv4 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv4 filter policy.

Parameters

filter-type

Specifies the type of filter to display.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values config, flowspec, host-common

inactive

Displays all, or optionally inactive embeddings. If *ip-filter-id* is specified, displays embeddings for the IP filter ID.

ip-filter-id

Specifies the IPv4 filter policy for which to display information. Values can be expressed in different formats; the following shows decimal integer format.

Values 1 to 65535

detail

Displays detailed information.

associations

Appends, to the detailed filter policy output, information about where the specified filter policy is applied.

entry-type

Specifies the type of filter entry to display.

Values fixed, radius-insert, credit-control-insert, flow-spec, embedded, radius-shared, pcc-rule

counters

Displays counter information for the specified filter ID. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

entry-id

Specifies the filter policy entry (of the specified filter policy) for which to display information.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base" instance).

service-id

Filters the output and only displays the information for the specified service. The specified value must correspond to an existing service in which the filter has been applied.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

Show Filter (no policy specified) — The following is an output example of IPv4 filter information when no policy is specified. Table 236: Output fields: IP filter ID describes the command output fields.

Output Example

```
A:ALA-49# show filter ip
===============================================================================
Configured IP Filters                                          Total:     2

Filter-Id   Scope     Applied Description
-------------------------------------------------------------------------------
5           Template  Yes
6           Template  Yes

===============================================================================
Host Common IP Filters                                         Total:     2
===============================================================================
Filter-Id                   Description
-------------------------------------------------------------------------------
5:P4                        Auto-created PCC-Rule Ingress Filter
6:P5                        Auto-created PCC-Rule Egress Filter
===============================================================================
Num IP filters: 4
===============================================================================
```

Table 236: Output fields: IP filter ID

Label	Description
Filter Id	The IP filter ID
Scope	Template — the filter policy is of type template
	Exclusive—the filter policy is of type exclusive
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Description	The IP filter policy description

Show Filter (no filter-id specified, embedded keyword specified) — The following output is an example of IPv4 filter information when no filter ID is specified but the embedded keyword is specified. Table 237: Output fields: IP (no filter ID specified) describes the command output fields.

Output Example

```
*A:Dut-C>config>filter# show filter ip embedded
===============================================================================
IP Filter embedding
===============================================================================
In    From      Priority       Inserted      Status
-------------------------------------------------------------------------------
10    2           50          1/1           OK
      1           100         1/2           OK- 1 entry overwritten

20    2           100         0/5           Failed – out of resources
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
===============================================================================
```

Table 237: Output fields: IP (no filter ID specified)

Label	Description
In	Shows embedding filter index
From	Shows embedded filters included
Priority	Shows priority of embedded filter
Inserted	Shows embedded/total number of entries from embedded filter. Status: **OK** — embedding operation successful, if any entries are overwritten this will also be indicated **Failed** — embedding failed, the reason is displayed (out of resources)

Show Filter (with filter-id specified) — The following output is an example of IPv4 filter information with the filter ID specified. Table 238: Output fields: IP filter policy describes the command output fields.

Output Example

```
*A:Dut-B>config>filter>ip-filter# show filter ip 10
===============================================================================
IP Filter
===============================================================================
Filter Id           : 10
Scope               : Embedded
Type                : Normal
Entries             : 4
Description         : (Not Specified)
Filter Name         : 10
```

Table 238: Output fields: IP filter policy

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRl. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy entry description string
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Description	The IPv4 filter policy entry description string
Log Id	The filter log ID
Src. IP	The source IPv4 address and prefix length match criterion; "0.0.0.0/0” indicates no criterion specified for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. IP	The destination IPv4 address and prefix length match criterion; "0.0.0.0/0” indicates no criterion specified for the filter entry
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Protocol	The protocol for the match criteria; undefined indicates no protocol specified
Dscp	The DiffServ Code Point (DSCP) name
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
ICMP Code	The ICMP code field in the ICMP header of an IPv4 packet

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Fragment	False — Indicates if the filter is configured to match on all non-fragmented packets
	True — Indicates if the filter is configured to match on all fragmented packets
	First-Only — Indicates if the filter is configured to match the first fragment of a fragmented packet
	Non-First-Only — Indicates if the filter is configured to match a fragment of a fragmented packet, but not the first fragment
	Off — fragments are not a matching criteria. All fragments and non-fragments implicitly match
Src Route Opt	Indicates if the source route option has been set
Sampling	Off — specifies that traffic sampling is disabled
	On—specifies that traffic matching the associated IPv4 filter entry is sampled
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
IP-Option	Specifies matching packets with a specific IPv4 option or a range of IPv4 options in the IPv4 header for IPv4 filter match criteria
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv4 header will be used as IPv4 filter match criteria
Tcp-flag	Specifies the list of TCP flags selected: • match true is represented with the TCP flag value • match false is represented with an exclamation mark before the flag value TCP flags not selected as match criteria are not displayed Example: Matching "tcp-ack true” and "tcp-rst false” is represented in the show command as Tcp-flag : Ack !Rst
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv4 filter match criteria
Egress PBR	Indicates if the **egress-pbr** flag is set for this entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Primary Action	Indicates the configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	Indicates the configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
PBR Target Status	The status of the target of the primary or secondary action based on simple checks
Extended Action	Indicates the configured extended action, if any
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Downloaded Action	The action downloaded by CPM to IOM
Dest. Stickiness	Indicates whether stickiness is configured
Hold Remain	The stickiness timer
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter Associations — The following output is an example of IPv4 filter information when the **associations** keyword is specified. Table 239: Output fields: IP associations describes the command output fields.

Output Example

```
A:ALA-49# show filter ip 1 associations
===============================================================================

Table 239: Output fields: IP associations

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Type	Normal — the filter policy is of type normal
	src-mac — the filter policy is of type src-mac
	Packet-length — the filter policy is of type packet-length
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop—the default action for the filter ID for packets that do not match the filter entries is to drop
System filter	Indicates if the filter has been chained to a system filter
Radius Ins Pt	Indicates the RADIUS insertion point, if any
CrCtl. Ins Pt	Indicates the Credit Control insertion point, if any
RadSh. Ins Pt	Indicates the RADIUS shared insertion point, if any
PccRl. Ins Pt	Indicates the PCC rule insertion point, if any
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Association	Indicates the filter is an IPv4 filter policy
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The type of service of the service ID
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface

Show Filter Counters — The following output is an example of IPv4 filter information when the **counters** keyword is specified. Table 240: Output fields: IP counters describes the command output fields.

Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Output Example

```
*A:ALA-48# show filter ip 100 counters
===============================================================================

Label	Description
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter IP Output (with effective-action specified) — The following output is an example of IPv4 filter information when the **effective-action** keyword is specified. Table 241: Output fields: filter IP effective action describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- action not supported in L2 service
- action not supported in L3 service
- action not supported on egress
- destination not reachable
- egress-pbr is off
- egress-pbr is on
- entry-default
- filter-default-action
- not POS unnumbered interface
- pbr-down-action-override
- target does not exist

Output Example

```
show filter ip 1 effective-action

  Ingress
    Effective Action: Drop (entry-default)
===============================================================================
```

Table 241: Output fields: filter IP effective action

Label	Description
Filter Id	The IPv4 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Description	The IPv4 filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Stickiness	No — stickiness is not configured
	Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down

Label	Description
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if any configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if any configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	The effective action that the packet will be subject to
Extended Action	Indicates the configured extended action, if any

ip

Syntax

ip *ip-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[Tree] (clear>filter ip)

Full Context

clear filter ip

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

Clears the counters associated with the entries of the specified IPv4 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified IPv4 filter policy.

Parameters

ip-filter-id

The IPv4 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following shows decimal integer format.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

All

ip

Syntax

ip *ip-filter-id*

Context

[Tree] (tools>dump>filter>resources ip)

Full Context

tools dump filter resources ip

Description

This command displays information about the specified IP filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-filter-id

Specifies that only the filter resource utilization associated with this IP filter will be displayed.

Values 1 to 65535

Platforms

All

Output

The following output is an example of IP filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># ip 100

ip

Syntax

ip entry *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>cpm-filter ip)

Full Context

monitor cpm-filter ip

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays monitor command statistics for IP filter entries.

Parameters

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2048

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip

Syntax

ip *ip-filter-id* **entry** *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>filter ip)

Full Context

monitor filter ip

Description

This command enables IP filter monitoring. The statistical information for the specified IP filter entry displays at the configured interval until the configured count is reached.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The first screen displays the current statistics related to the specified IP filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ip-filter-id

Displays detailed information for the specified filter ID and its filter entries.

Values [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | _tmnx_tms_egr- *mda-id*-F | _tmnx_tms-ing-*mda-id*-F | _tmx_ofs_*ofs-name* | *name*: 64 chars max

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values [1 to 65535], fSpec-[0 to 2147483647]-[1 to 65353]

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Table 242: Output fields: IPv4 exception

Label	Description
Filter-Id	The filter ID.
Scope	Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive.
Applied	No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied.
Entries	The number of entries.
Description	The description of the specified filter, if specified.
Filter Name	The filter name.
Filter Match Criteria	IP — Indicates the filter is an IPv4 filter policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Entry	The number of active or inactive entries.
Description	The IPv4 filter policy entry description string.
Src. IP	The source IP address of the logged packet.
Src. Port	The source port of the logged packet.
Dst. IP	The destination IP address of the logged packet.
Dst. Port	The destination port of the logged packet.
Protocol	The protocol for the match criteria; undefined indicates no protocol specified.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
Ing. Matches	The number of packets matched on ingress.
Egr. Matches	The number of packets matched on egress.

```

Table 243: Output fields: CPM IP filter

Label	Description
Entry-Id	Displays information about the specified management access filter entry
Dropped	Displays the number of dropped events.
Forwarded	Displays the number of forwarded events.
Description	Displays the CPM filter description.
Log ID	Displays the log ID where matched packets will be logged.
Src IP	Displays the source IP address(/netmask or prefix-list)
Dest. IP	Displays the destination IP address(/netmask).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Src Port	Displays the source port number (range).
Dest. Port	Displays the destination port number (range).
Protocol	Displays the Protocol field in the IP header.
Dscp	Displays the DSCP field in the IP header.
Fragment	Displays the 3-bit fragment flags or 13-bit fragment offset field.
ICMP Type	Displays the ICMP type field in the ICMP header.
ICMP Code	Displays the ICMP code field in the ICMP header.
TCP-syn	Displays the SYN flag in the TCP header.
TCP-ack	Displays the ACK flag in the TCP header
Match action	When the criteria matches, displays drop or forward packet.
Next Hop	In case match action is forward, indicates destination of the matched packet.
Dropped pkts	Indicates number of matched dropped packets
Forwarded pkts	Indicates number of matched forwarded packets.

ip-filter

Syntax

ip-filter [**entry** *entry-id*]

Context

[Tree] (show>system>security>mgmt-access-filter ip-filter)

Full Context

show system security management-access-filter ip-filter

Description

This command displays management-access IP filters.

Parameters

entry-id

Displays information for the specified entry.

Values 1 to 9999

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

Output

The following output is an example of MAF IP filter information and Table 244: Output fields: management access filter describes the management access filter output fields.

Output Example

```
*A:Dut-F# show system security management-access-filter ip-filter
===============================================================================
IPv4 Management Access Filter
===============================================================================
filter type:  : ip
Def. Action   : permit
Admin Status  : enabled (no shutdown)
-------------------------------------------------------------------------------
Entry         : 1
Description   : (Not Specified)
Src IP        : ip-prefix-list "MAF-MATCH-ALLOW"
Src interface : undefined
Dest port     : undefined
Protocol      : undefined
Router        : undefined
Action        : none
Log           : disabled
Matches       : 0
===============================================================================
*A:Dut-F#
```

Table 244: Output fields: management access filter

Label	Description
Def. action	Permit — Specifies that packets not matching the configured selection criteria in any of the filter entries are permitted. Deny — Specifies that packets not matching the configured selection criteria in any of the filter entries are denied and that a ICMP host unreachable message will be issued. Deny-host-unreachable — Specifies that packets not matching the configured selection criteria in the filter entries are denied.
Entry	The entry ID in a policy or filter table.
Description	A text string describing the filter.
Src IP	The source IP address or prefix list used for management access filter match criteria.
Src interface	The interface name for the next hop to which the packet should be forwarded if it hits this filter entry.
Dest port	The destination port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Matches	The number of times a management packet has matched this filter entry.
Protocol	The IP protocol to match.
Action	The action to take for packets that match this filter entry.

ip-filter

Syntax

ip-filter [**entry** *entry-id*]

Context

[Tree] (clear>cpm-filter ip-filter)

Full Context

clear cpm-filter ip-filter

Description

This command clears IP filter statistics.

Parameters

entry-id

Specifies a particular CPM IP filter entry.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-filter

Syntax

ip-filter *ip-filter-id*

Context

[Tree] (tools>perform>filter ip-filter)

Full Context

tools perform filter ip-filter

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

Commands in this context perform IP filter operations.

Parameters

ip-filter-id

Specifies a particular IP filter ID or filter name.

Values *filter-id* | *filter-name*

filter-id

Specifies the IP filter ID.

Values *1 to 65535*

filter-name

Specifies name of the IP filter, up to 64 characters.

Platforms

All

12.42 ip-identification-assist

ip-identification-assist

Syntax

ip-identification-assist [**isa** *mda-id/esa-vm-id*]

Context

[Tree] (show>app-assure>group ip-identification-assist)

Full Context

show application-assurance group ip-identification-assist

Description

This command displays the status and statistics for the IP identification assist feature.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot*/*mda*.

Values

slot/*mda*	
slot	1 to 10, depending on chassis model

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	mda	1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format esa-*esa-id*/*vm-id*.

Values	esa-*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display IP identification assist information for a group.

```
show application-assurance group 1 ip-identification-assist isa 1/1
```

Output Example

```
===============================================================================
Application Assurance Group 1 IP Identification Assist

12.43 ip-prefix

ip-prefix

Syntax

ip-prefix [**hunt** | **detail**] [**rd** *rd*] [**prefix** *ip-prefix/ip-prefix-length*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**aspath-regex** *reg-exp*]

Context

[Tree] (show>router>bgp>routes>evpn ip-prefix)

Full Context

show router bgp routes evpn ip-prefix

Description

This command displays BGP-EVPN IPv4 prefix routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

ip-prefix/ip-prefix-length

Specifies the IPv4 address and mask length.

Values

ip-address:	a.b.c.d
mask:	0 to 32

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535
  – *comm-val1* — 0 to 65535
  – **type** — target, origin
  – *ip-address* — a.b.c.d
  – *comm-val2* — 0 to 4294967295
  – *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the IPv4 prefix route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

12.44 ip-prefix-list

ip-prefix-list

Syntax

ip-prefix-list

ip-prefix-list *prefix-list-name* [**association**]

Context

[Tree] (show>qos>match-list ip-prefix-list)

Full Context

show qos match-list ip-prefix-list

Description

Displays the list of configured IPv4 QoS prefix lists or the details of a specific IPv4 QoS prefix list together with the SAP and network QoS policies in which it is used and the entry number within that policy.

Parameters

prefix-list-name

Specifies an IPv4 prefix list which contains IPv4 address prefixes to be matched.

Values A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

association

Displays the QoS policy and entry number in which the specified prefix list is used.

Platforms

All

Output

The following output is an example of ip-prefix-list information

Output Example

===============================================================================
```

Table 247: Output fields: IPsec domain

Label	Description
Designated Role	The designated role, active or standby.
Priority	The priority.
Tunnel Group	The tunnel group ID.
Revertive	The revertive value. **true** means that revertive is configured. **false** means that revertive is not configured.
Admin State	The administrative state.
Protection Status	Displays nominal or notReady.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	notReady means the system is not ready for a switchover. There could be a major traffic impact if switchover happens in the case of notReady. **nominal** means the tunnel-group is in a better situation to switchover than notReady. However, there still might be a traffic impact.
Router Id	The router ID.
Current Active	The router ID of the active router.
Activity State	The activity state.
Adjacencies	
Peer	The IP address of the peer.
Router-Id	The router ID.
Oper State	The operational state of the peer.
Remote Activity State	The activity state of the peer.
Remote Designated Role	The designated role of the peer.
Domain Adjacency Entries found	The total number of domain peer entries found.
Multi-Chassis Tunnel Statistics	
Static	The number of static multi-chassis tunnels.
Dynamic	The number of dynamic multi-chassis tunnels.
Installed	The number of tunnels that have been successfully installed.
Installing	The number of tunnels that are being installed.
Awaiting Config	The number of synchronized tunnels that do not have a corresponding configuration ready.
Failed	The number of tunnels that failed to be installed.

12.51 ipsec-interface

ipsec-interface

Syntax

ipsec-interface

ipsec-interface *ip-int-name* [**group** *grp-ipv6-address*]

ipsec-interface gateway-name *gw-name* [**remote-address** *ip-address* | *ipv6-address*] [**port** *port-id*] [**sa-id** *sa-id*]

ipsec-interface static-tunnel-name *tunnel-name* [**sa-id** *sa-id*]

Context

[Tree] (show>router>mld ipsec-interface)

Full Context

show router mld ipsec-interface

Description

This command displays information about the MLD states over IPsec tunnels.

Parameters

ip-int-name

Specifies the dynamic name for the MLD-enabled child_SA.

grp-ipv6-address

Displays IPv6 multicast group address for which this entry contains information.

Values ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x - [0..FFFF]H
d - [0..255]D
- multicast group IPv6 address

gw-name

Specifies the IPsec gateway name, up to 32 characters.

ip-address

Displays the information associated with the specified IP address.

ipv6-address

Displays the information associated with the specified IPv6 address.

port-id

Specifies the peer’s UDP port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 4294967295

sa-id

Specifies the child_SA ID.

Values 0 to 4294967295

tunnel-name

Specifies the IPsec static tunnel name up to 32 characters.

Platforms

All

Output

The following output is an example of MLD IPsec interface information. The interface name in the output is the dynamic name for an MLD-enabled child_sa. There is a corresponding MLD interface name in the **show>ipsec>gateway** *name* **tunnel** *tunnel* output

Output Example

```
*A:DUT-A# show router 40 mld ipsec-interface "ipsec-if-1583392"
===============================================================================
mld ipsec dynamic tunnel interfaces detail
===============================================================================
name          : ipsec_gw_1040_1

ipsec-transport-mode-profile *name* **association**

Context

[Tree] (show>ipsec ipsec-transport-mode-profile)

Full Context

show ipsec ipsec-transport-mode-profile

Description

This command displays IPsec transport mode profile information. If a name is specified, the command displays details about the named **ipsec-transport-mode-profile** , otherwise, a list of configured IPsec transport mode profiles is displayed.

Parameters

name

Displays information about the specified IPsec transport mode profile, up to 32 characters.

association

Displays a list of IP tunnels that reference the specified **ipsec-transport-mode-profile** *name*.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPsec transport mode profile information. Table 248: Output fields: IPsec transport mode profile describes the fields.

Output Example

```
A:v70# show ipsec ipsec-transport-mode-profile "test"
===============================================================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 248: Output fields: IPsec transport mode profile

Label	Description
Description	The text string to describe the transport mode profile
Keying Type	The keying type
Replay Window	The replay window size
IKE Policy ID	The ID of the IKE policy used for IKE negotiation
Auto Establish	The status of auto-establish
Transform Id1, Id2, Id3, Id4	The transform ID
Pre Shared Key	The pre-shared key used for authentication (hashed)
Local Id Type	The local ID used for IDi or IDr for IKEv2 tunnels
Cert Profile	The name of certificate profile to be used for certificate authentication
TrustAnchor Prof	The name of trust anchor profile to be used for certificate authentication.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Default Result	The default result when both the primary and secondary method failed to provide an answer
Primary	The primary method that is used to verify the revocation status of the peer's certificate; either CRL or OCSP.
Secondary	The secondary method that is used to verify the revocation status of the peer's certificate; either CRL, OCSP, or none.
Max Num of Keys	Phase 1 — The maximum number of IKE_SA keys, which can be saved by the system. Phase 2 — The maximum number of CHILD_SA keys, which can be saved by the system.
Transport Mode Profile	The transport mode profile name
SvcID	The service ID
Type	The service type
SAP	The SAP ID
Tunnel	The tunnel ID

12.54 ipv4

ipv4

Syntax

ipv4 all

ipv4 entry *entry-id*

Context

[Tree] (clear>subscr-mgmt>isa-filter ipv4)

Full Context

clear subscriber-mgmt isa-filter ipv4

Description

This command resets the entry hit counts associated with the specified **isa-filter** to zero. If an *entry-id* is specified, only counters for that entry are reset, otherwise all entry counters are reset.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

all

Clears all IPv4 ISA filter entries.

entry-id

Specifies the ID of the entry within the ISA filter for which to reset the counters.

Values 1 to 1024

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4

Syntax

ipv4 [**summary** | **detail**] [**egress-if** *port-id*]

ipv4 [**summary** | **detail**] [**egress-lsp** *tunnel-id*]

ipv4 [**summary** | **detail**] [**egress-nh** *ip-address*]

Context

[Tree] (show>router>ldp>bindings>active ipv4)

Full Context

show router ldp bindings active ipv4

Description

This command display LDP active IPv4 bindings.

Parameters

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

egress-lsp *tunnel-id*

Specifies the tunnel identifier for this egress LSP.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d

ipv4

Syntax

ipv4 [**timeout** *seconds*] [**dhcp-client-identifier** {**string** *ascii-string* | **hex** *hex-string*}] [**reboot-on-success**] [**save-provision-file-destination** *file-url*] [**include-user-class**]

Context

[Tree] (tools>perform>system>auto-node-provisioning ipv4)

Full Context

tools perform system auto-node-provisioning ipv4

Description

This command initiates the IPv4 auto-provisioning of the node on all the ports that have an operationally up port but no IP address.

Parameters

seconds

DHCP request timeout period, before the system tries the next interface. Within this timeout, the DHCP client tries to retransmit the DHCP request with randomized exponential backoff (RFC 2131). This randomized exponential backoff begins at 2 s and goes to 64 s (2,4,8,32,64,64,64,64). After 64 seconds, the system will retry every 64 s.

Values 1 to 65535 seconds

Default 10

ascii-string

DHCP client identifier in ASCII format, up to 127 characters long.

hex-string

DHCP client identifier in hexadecimal format, up to 254 hexadecimal nibbles long.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0x0 to 0xFFFFFFFF

file-url

The file URL as a *local-url.* The local file or folder name should not exceed 99 characters).

local-url	[*cflash-id*/][*file-path*]
cflash-id	cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

include-user-class

Keyword to include user class data in network discovery requests.

Platforms

Full Context

show router bgp routes ipv4

Description

This command displays BGP IPv4 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*

- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

originState

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

Values valid — Displays valid validation state information.

invalid — Displays invalid validation state information.

notfound — Displays state information for unfound origin values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

leaked

Filters BGP routes displayed by the command to those routes leaked into this router's BGP instance from another BGP instance.

leakable

Filters BGP routes displayed by the command to those routes eligible for leaking from this router's BGP instance to another BGP instance.

brief

Displays the IPv4 BGP route information in a brief format.

all

Displays all output for imported routes.

Platforms

All

12.55 ipv4-prefix

ipv4-prefix

Syntax

ipv4-prefix [*ip-prefix*/*ip-prefix-length*]

Context

[Tree] (show>router>bgp>routes>bgp-ls ipv4-prefix)

Full Context

show router bgp routes bgp-ls ipv4-prefix

Description

This command displays BGP-LS NLRIs with an IPv4 prefix.

Parameters

ip-prefix/ip-prefix-length

Specifies information for the specified IPv4 prefix and mask length, up to 64 characters.

Platforms

All

© 2026 Nokia.

Context

[Tree] (show>filter ipv6)

Full Context

show filter ipv6

Description

This command shows IPv6 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv6 filter policy.

Parameters

filter-type

Specifies the type of filter to display.

Values config, flowspec, host-common

inactive

Shows all embeddings, optionally shows inactive embedding only, if *ipv6-filter-id* is not specified shows all embedded filters.

ipv6-filter-id

Specifies the IPv6 filter policy for which to display information. Values can be expressed in different formats. The following only shows decimal integer format.

Values 1 to 65535

detail

Displays detailed information.

associations

Appends, to the detailed filter policy output, information as to where the specified filter policy ID is applied.

entry-type

Specifies type of filter entry to display.

Values fixed, radius-insert, credit-control-insert, embedded, radius-shared

counters

Displays counter information. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry-id

Specifies the filter policy entry (of the specified filter policy) to display information.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base" instance).

service-id

Filters the output and only displays the information for the specified service. The specified value should correspond to an existing service in which the filter has been applied.

Platforms

All

Output

Show Filter (no filter-id specified) — The following output is an example of IPv6 filter information when no filter ID is specified, and Table 249: Output fields: filter IPv6 (no filter ID specified) describes the fields.

Output Example

```
A:ALA-48# show filter ipv6
===============================================================================

Table 249: Output fields: filter IPv6 (no filter ID specified)

Label	Description
Filter Id	The IPv6 filter ID
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Applied	No — the filter policy ID has not been applied
	Yes—the filter policy ID is applied
Description	The IPv6 filter policy description
In	Shows embedding filter index
From	Shows embedded filters included
Priority	Shows priority of embedded filter
Inserted	Shows embedded/total number of entries from embedded filter Status: **OK** — embedding operation successful, if any entries are overwritten this will also be indicated **Failed** — embedding failed, the reason is displayed (out of resources)

Show Filter (with filter-id specified) — The following output is an example of IPv6 filter information when filter-id is specified, and Table 250: Output fields: IPv6 filter policy describes the fields.

Output Example

```
A:ALA-48# show filter ipv6 100

Table 250: Output fields: IPv6 filter policy

Label	Description
Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Entries	The number of entries configured in this filter ID
Description	The IPv6 filter policy description
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	IP — Indicates the filter is an IPv6 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Log Id	The filter log ID
Src. IP	The source IPv6 address and mask match criterion • "::/0” indicates no criterion specified for the filter entry
Dest. IP	The destination IPv6 address and mask match criterion • "::/0” indicates no criterion specified for the filter entry
Protocol	The protocol ID for the match criteria; undefined indicates no protocol specified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified
Fragment	False — configures a match on all non-fragmented IPv6 packets
	True — configures a match on all fragmented IPv6 packets
	Off — fragments are not a matching criteria; all fragments and nonfragments implicitly match
Sampling	Off — specifies that traffic sampling is disabled
	On — specifies that traffic matching the associated IPv6 filter entry is sampled
IP-Option	Specifies matching packets with a specific IPv6 option or a range of IPv6 options in the IPv6 header for IPv6 filter match criteria
Match action	Default — the filter does not have an explicit forward or drop match action specified; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
	Drop — drop packets matching the filter entry
	Forward—the explicit action to perform is forwarding of the packet; if the action is Forward, then if configured, the next hop information should be displayed, including nexthop: *IPv6 address*, Indirect: *IPv6 address* or Interface: *IPv6 interface name*
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Dscp	The DiffServ Code Point (DSCP) name
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet
Tcp-flag	Specifies the list of TCP flags selected: • match true is represented with the TCP Flag value • match false is represented with an exclamation mark before the flag value TCP flags not selected as match criteria are not displayed Example: Matching "tcp-ack true” and "tcp-rst false” is represented in the show command as Tcp-flag : Ack !Rst

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero
	On — matches packets that contain the option field or have an option field of zero be used as IPv6 filter match criteria
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv6 header will be used as IPv6 filter match criteria
Egr. Matches	The number of egress filter matches/hits for the filter entry
Ing. Rate-limiter	The number of offered, forwarded, and dropped packet matches for the filter entry

Show Filter Associations — The following output is an example of IPv6 filter information when the **associations** keyword is specified, and Table 251: Output fields: IPv6 filter associations describes the fields.

Output Example

```
A:ALA-48# show filter ipv6 1 associations
===============================================================================

Table 251: Output fields: IPv6 filter associations

Label	Description
Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Entries	The number of entries configured in this filter ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
SAP	The Service Access Point on which the filter policy ID is applied
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface
Type	The type of service of the service ID
Entry	The filter entry ID; if the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified
Log Id	The filter log ID
Src. IP	The source IPv6 address and mask match criterion • "0.0.0.0/0” indicates no criterion specified for the filter entry
Dest. IP	The destination IPv6 address and mask match criterion • "0.0.0.0/0” indicates no criterion specified for the filter entry
Protocol	The protocol ID for the match criteria; undefined indicates no protocol specified
ICMP Type	The ICMP type match criterion; undefined indicates no ICMP type specified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Fragment	False — configures a match on all non-fragmented IPv6 packets
	True — configures a match on all fragmented IPv6 packets
	Off — fragments are not a matching criteria; all fragments and nonfragments implicitly match
Sampling	Off — specifies that traffic sampling is disabled
	On — specifies that traffic matching the associated IPv6 filter entry is sampled
IP-Option	Specifies matching packets with a specific IPv6 option or a range of IPv6 options in the IPv6 header for IPv6 filter match criteria
TCP-syn	False — configures a match on packets with the SYN flag set to false
	True — configures a match on packets with the SYN flag set to true
	Off — the state of the TCP SYN flag is not considered as part of the match criteria
Match action	Default — the filter does not have an explicit forward or drop match action specified; if the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified
	Drop — drop packets matching the filter entry
	Forward — the explicit action to perform is forwarding of the packet; if the action is Forward, then if configured the nexthop information should be displayed, including Nexthop: <IPv6 address>, Indirect: <IPv6 address> or Interface: <IPv6 interface name>
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Src. Port	The source TCP, UDP, or SCTP port number, port range, or port match list
Dest. Port	The destination TCP, UDP, or SCTP port number, port range, or port match list
Dscp	The DiffServ Code Point (DSCP) name
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet
Option-present	Off — specifies not to search for packets that contain the option field or have an option field of zero

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	On — matches packets that contain the option field or have an option field of zero be used as IPv6 filter match criteria
Int. Sampling	Off — interface traffic sampling is disabled
	On — interface traffic sampling is enabled
Multiple Option	Off — the option fields are not checked
	On — packets containing one or more option fields in the IPv6 header will be used as IPv6 filter match criteria
TCP-ack	False — configures a match on packets with the ACK flag set to false
	True — configured a match on packets with the ACK flag set to true
	Off — the state of the TCP ACK flag is not considered as part of the match criteria
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter Counters — The following output is an example of IPv6 filter information when the **counters** keyword is specified, and Table 252: Output fields: IPv6 filter counters describes the output fields.

Egress count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Output Example

```
A:ALA-48# show filter ipv6 8 counters
===============================================================================
IPv6 Filter
===============================================================================
Filter Id    : 8                                Applied        : Yes
Scope        : Template                         Def. Action    : Forward
Entries      : 4
Description  : Description for Ipv6 Filter Policy id # 8
-------------------------------------------------------------------------------
Filter Match Criteria : IPv6
-------------------------------------------------------------------------------
Entry        : 5
Ing. Matches : 0 pkts
Egr. Matches : 0 pkts

Entry        : 6
Ing. Matches : 0 pkts
Egr. Matches : 0 pkts

Entry        : 8
Ing. Matches : 160 pkts (14400 bytes)
Egr. Matches : 80 pkts (6880 bytes)

Entry        : 10
Ing. Matches : 80 pkts (7200 bytes)
Egr. Matches : 80 pkts (6880 bytes)
```

```

Table 252: Output fields: IPv6 filter counters

Label	Description
IP Filter Filter Id	The IPv6 filter policy ID
Scope	Template — the filter policy is of type template
	Exclusive — the filter policy is of type exclusive
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	IP — Indicates the filter is an IPv6 filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Egress count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

Show Filter IPv6 Output (with effective-action specified) — The following output is an example of IPv6 filter information when the **effective-action** keyword is specified. Table 253: Output fields: IPv6 filter effective action describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- action not supported in L2 service
- action not supported in L3 service
- action not supported on egress
- destination not reachable
- egress-pbr is off
- egress-pbr is on
- entry-default

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- filter-default-action
- pbr-down-action-override
- target does not exist

Output Example

```
show filter ipv6 10 entry 10 effective-action

Table 253: Output fields: IPv6 filter effective action

Label	Description
Filter Id	The IPv6 filter policy ID
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Description	The IPv6 filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Origin	The type of filter entry
Egress PBR	Indicates if the **egress-pbr** flag is set for this entry
Stickiness	No — stickiness is not configured
	Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	Indicates the effective action the packet will be subject to
Extended Action	Indicates the configured extended action, if any

ipv6

Syntax

ipv6 *ipv6-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[Tree] (clear>filter ipv6)

Full Context

clear filter ipv6

Description

Clears the counters associated with the entries of the specified IPv6 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified IPv6 filter policy.

Parameters

ipv6-filter-id

The IPv6 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following only shows decimal integer format.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

All

ipv6

Syntax

ipv6 *ipv6-filter-id*

Context

[Tree] (tools>dump>filter>resources ipv6)

Full Context

tools dump filter resources ipv6

Description

This command displays information about the specified IPv6 filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

Parameters

ipv6-filter-id

Specifies that only the filter resource utilization associated with this IPv6 filter will be displayed.

Values 1 to 65535

Platforms

All

Output

The following output is an example of IPv6 filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># ipv6 "fSpec-0"

===============================================================================
Resource utilization details for Ipv6 filter fSpec-0

ipv6

Syntax

ipv6 [**timeout** *seconds*] [**dhcp-client-identifier** {**duid-link-local** | **duid-enterprise**} { **string** *ascii-string* | **hex** *hex-string*}] [**reboot-on-success**] [**save-provision-file-destination** *file-url*] [**include-user-class**]

Context

[Tree] (tools>perform>system>auto-node-provisioning ipv6)

Full Context

tools perform system auto-node-provisioning ipv6

Description

This command initiates the IPv6 auto-provisioning of the node on all the ports that have an operationally up port but no IP address.

Parameters

seconds

DHCP request timeout period, before the system tries the next interface. Within this timeout, the DHCP client tries to retransmit the DHCP request with randomized exponential backoff (RFC 2131). This randomized exponential backoff begins at 2 s and goes to 64 s (2,4,8,32,64,64,64,64). After 64 seconds, the system will retry every 64 s.

Values 1 to 65535 seconds

Default 10

duid-link-local

Keyword to configure the type code of the server DUID.

duid-enterprise

Keyword to configure the type code of the server DUID.

ascii-string

DHCP client identifier in ASCII format, up to 127 characters long.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hex-string

DHCP client identifier in hexadecimal format, up to 254 hexadecimal nibbles long.

Values 0x0 to 0xFFFFFFFF

file-url

The file URL as a *local-url.* The local file or folder name should not exceed 99 characters).

local-url	[*cflash-id*/][*file-path*]
cflash-id	cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

reboot-on-success

Keyword to reboot the router when the auto-provisioning process completes successfully.

include-user-class

Keyword to include user class data in network discovery requests.

Platforms

All

ipv6

Syntax

ipv6 entry *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>cpm-filter ipv6)

Full Context

monitor cpm-filter ipv6

Description

This command displays monitor command statistics for IPv6 filter entries.

Parameters

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2048

seconds

Configures the interval for each display in seconds.

Values 3 to 60

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6

Syntax

ipv6 *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>management-access-filter ipv6)

Full Context

monitor management-access-filter ipv6

Description

This command monitors statistics for the MAF IPv6 filter entry.

Parameters

entry-id

Specifies an existing IP MAF entry ID.

Values 1 to 9999

interval seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

ipv6

Syntax

ipv6 *ipv6-filter-id* **entry** *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>filter ipv6)

Full Context

monitor filter ipv6

Description

This command enables IPv6 filter monitoring. The statistical information for the specified IPv6 filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified IPv6 filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ipv6-filter-id

Displays detailed information for the specified IPv6 filter ID and its filter entries.

Values [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | _tmnx_tms_egr- *mda-id*-F | _tmnx_tms-ing-*mda-id*-F | _tmx_ofs_*ofs-name* | *name*: 64 chars max

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Context

[Tree] (show>router>bgp>routes ipv6)

Full Context

show router bgp routes ipv6

Description

This command displays BGP IPv6 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ex \t**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

originState

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

Values valid — Displays valid validation state information.

invalid — Displays invalid validation state information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

notfound — Displays state information for unfound origin values.

leaked

Filters BGP routes displayed by the command to those routes leaked into this router's BGP instance from another BGP instance.

leakable

Filters BGP routes displayed by the command to those routes eligible for leaking from this router's BGP instance to another BGP instance.

brief

Displays the IPv4 BGP route information in a brief format.

all

Displays all output for imported routes.

Table 254: Output fields: IPv6 exception

Label	Description
Configured IPv6-Exception Filters	The number of configured IPv6 exception filters.
Filter-Id	The filter ID.
Scope	Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive.
Applied	No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied.
Entries	The number of entries.
Description	The description of the specified filter, if specified.
Filter Name	The filter name.
Num IPv6-Exception filters	The number of IPv6 exception filters.
Entry	The number of active or inactive entries.
Src. IP	The source IP address of the logged packet.
Src. Port	The source port of the logged packet.
Dst. IP	The destination IP address of the logged packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Dst. Port	The destination port of the logged packet.
Next Header	8-bit selector. Identifies the type of header immediately following the IPv6 header.
ICMP Type	The ICMP type match criterion. Undefined indicates no ICMP type specified.
ICMP Code	The ICMP code field in the ICMP header of an IPv6 packet.
Ing. Matches	The number of packets matched on ingress.
Egr. Matches	The number of packets matched on egress.
Filter Association	Indicates the filter is an IPv6 filter policy.
Service Id	The service ID on which the IPv6 exception ID is applied.
Filter association with IOM	The number of filters associated with an IOM.

ipv6-exception

Syntax

ipv6-exception *exception* [**entry** *entry-id*] [**ingress**]

Context

[Tree] (clear>filter ipv6-exception)

Full Context

clear filter ipv6-exception

Description

This command clears the information about the IPv6 exception filter.

Parameters

exception

Specifies the IPv6 exception filter by ID or name.

Values *exception-id* | *exception-name*

exception-id

Specifies the IPv6 exception filter ID for which to clear the entry counters.

Values 1 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

exception-name

Specifies name of the IPv6 exception filter, up to 64 characters.

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

Context

[Tree] (show>router>bgp>routes>evpn ipv6-prefix)

Full Context

show router bgp routes evpn ipv6-prefix

Description

This command displays BGP-EVPN IPv6 prefix routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

ipv6-prefix/ipv6-prefix-length

Specifies the IPv6 prefix and length.

Values

ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length:	0 to 128

comm-id

Specifies the community ID, up to 256 characters.

tag

Specifies the IPv6 prefix route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

ipv6-prefix-list

Syntax

ipv6-prefix-list

ipv6-prefix-list *prefix-list-name* [**association**]

Context

[Tree] (show>qos>match-list ipv6-prefix-list)

Full Context

show qos match-list ipv6-prefix-list

Description

Displays the list of configured IPv6 QoS prefix lists or the details of a specific IPv6 QoS prefix list together with the network QoS policies in which it is used and the entry number within that policy.

Parameters

prefix-list-name

Specifies an IPv6 prefix list which contains IPv6 address prefixes to be matched.

Values A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

association

Displays the QoS policy and entry number in which the specified prefix list is used.

Platforms

All

Output

The following output is an example of ipv6-prefix-list information

Output Example

```

isa-subnets

Syntax

isa-subnets all

isa-subnets interface *ip-int-name*

isa-subnets prefix *ipv6-address/prefix-length*

Context

[Tree] (clear>router>wlan-gw isa-subnets)

Full Context

clear router wlan-gw isa-subnets

Description

This command clears specific subnets from the pool-manager. Associated UE's is removed from the system.

When clearing the last subnet on an ISA the pool-manager will automatically allocate a new subnet with allocation-level 0%.

Parameters

all

Clears all the isa-subnets.

ip-int-name

Clears all the isa-subnets of a specific subscriber-interface.

ipv6-address/prefix-length

Clears a specific IPv6 address and prefix length.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.70 isis

isis

Syntax

isis [*isis-instance*]

Context

[Tree] (clear>router isis)

Full Context

clear router isis

Description

Commands in this context clear and reset IS-IS protocol entities.

Parameters

isis-instance

Specifies the IS-IS instance.

Values 0 to 127

level

Specifies the IS-IS level.

Values 1, 2

Platforms

All

Output

The following outputs are examples of IS-IS traffic engineering database information.

Output Example

```
A:Dut-B# tools dump router te-database isis
===============================================================================

A:Dut-B#
```

isis

Syntax

isis [*isis-instance*]

Context

[Tree] (show>router isis)

Full Context

show router isis

Description

This command displays information for a specified IS-IS instance.

Parameters

isis-instance

Specifies the instance ID for an IS-IS instance.

Values 0 to 127

Default 0

Platforms

All

isis

Syntax

isis

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (tools>dump>router isis)

Full Context

tools dump router isis

Description

Commands in this context dump tools for IS-IS.

Parameters

isis-instance

Specifies the IS-IS protocol instance within the router instance.

Values 0 to 127

Platforms

All

isis

Syntax

isis

Context

[Tree] (tools>perform>router isis)

Full Context

tools perform router isis

Description

This command enables the tools to perform certain IS-IS tasks.

Parameters

isis-instance

Specifies the IS-IS protocol instance within the router instance.

Values 0 to 127

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

isis

Syntax

isis [*isis-instance*]

Context

[Tree] (monitor>router isis)

Full Context

monitor router isis

Description

This command monitors commands for the IS-IS instance.

Parameters

isis-instance

Specifies the IS-IS protocol instance within the router instance.

Values 0 to 127

Platforms

All

12.71 issu-post-process

issu-post-process

Syntax

issu-post-process

Context

[Tree] (tools>perform>redundancy issu-post-process)

Full Context

tools perform redundancy issu-post-process

Description

This command allows requests for new LSPs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

13 k Commands

13.1 keychain

keychain

Syntax

keychain [*key-chain*] [**detail**]

Context

[Tree] (show>system>security keychain)

Full Context

show system security keychain

Description

This command displays keychain information.

Parameters

key-chain

Specifies the keychain name to display.

detail

Displays detailed keychain information.

Platforms

All

Output

The following output is an example of keychain information.

Output Example

```
*A:Dut-A# show system security keychain "test"

===============================================================================
Key chain:test
===============================================================================
Description               : (Not Specified)

14 I Commands

14.1 l2-aware

l2-aware

Syntax

l2-aware create subscriber *sub-ident-string* **ip** *ip-address* **protocol** {**tcp** | **udp**} [**port** *port*] **lifetime** *lifetime* [**outside-ip** *ip-address*] [**outside-port** *port*] [**nat-policy** *policy-name*]

l2-aware delete subscriber *sub-ident-string* **ip** *ip-address* **protocol** {**tcp** | **udp**} **port** *port* [**nat-policy** *policy-name*]

l2-aware modify subscriber *sub-ident-string* **ip** *ip-address* **protocol** {**tcp** | **udp**} **port** *port* **lifetime** *lifetime* [**nat-policy** *policy-name*]

Context

[Tree] (tools>perform>nat>port-forwarding-action l2-aware)

Full Context

tools perform nat port-forwarding-action l2-aware

Description

This command enables Layer-2-Aware NAT port forwarding action.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

14.2 l2-aware-blocks

l2-aware-blocks

Syntax

l2-aware-blocks [**outside-ip-prefix** *ip-prefix/length*] [**outside-port** [*1..65535*]] [**pool** *pool-name*]

Context

[Tree] (show>router>nat l2-aware-blocks)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router nat l2-aware-blocks

Description

This command displays Layer 2 aware NAT blocks.

Parameters

ip-prefix

Specifies the IP prefix.

Values a.b.c.d (host bits must be 0)

length

Specifies the IP prefix length.

Values 1 to 32

pool-name

Specifies the pool name up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
show router nat l2-aware-blocks
===============================================================================
Layer-2-Aware NAT blocks for Base
===============================================================================
10.81.0.0 [32..33]
Pool : MyPool
Policy : outPolicy
Started : 2010/02/04 16:24:55
Subscriber ID : Sub001
10.81.0.0 [34..35]
Pool : MyPool
Policy : outPolicy
Started : 2010/02/04 16:25:24
Subscriber ID : Sub003
10.81.0.203 [32..41]
Pool : MyPool2
Policy : outPolicy2
Started: 2010/02/04 16:25:21
Subscriber ID : Sub002
-------------------------------------------------------------------------------
Number of blocks: 3
===============================================================================
```

Use subject to Terms available at: www.nokia.com/terms.

14.3 l2-aware-hosts

l2-aware-hosts

Syntax

l2-aware-hosts [**outside-router** *router-instance*] [**outside-ip** *outside-ip-address*] [**inside-ip-prefix** *ip-prefix/mask*] [**vas-filter** *vas-filter-name*]

Context

[Tree] (show>service>nat l2-aware-hosts)

Full Context

show service nat l2-aware-hosts

Description

This command displays layer-2 aware NAT hosts.

Parameters

nat-policy-name

Specifies the NAT policy name, up to 32 characters.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

router-instance

Specifies the router instance.

Values

router-name:	Base , management
service-id:	1 to 2147483647
svc-name:	A string up to 64 characters in length.

outside-ip-address

Specifies the outside IP address.

Values a.b.c.d

sub-ident

Specifies the identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of this command.

Output Example

```
show service nat l2-aware-hosts
===============================================================================
Layer-2-Aware NAT hosts
===============================================================================
Inside IP Out-Router Outside IP Subscriber
-------------------------------------------------------------------------------
10.0.0.100 Base 10.81.0.0 Sub001
10.0.0.102 Base 10.81.0.0 Sub001
10.0.0.101 Base 10.81.0.203 Sub002
10.0.0.103 Base 10.81.0.0 Sub003
-------------------------------------------------------------------------------
No. of hosts: 4
===============================================================================
```

14.4 l2-aware-sub

l2-aware-sub

Syntax

l2-aware-sub *sub-ident-string*

l2-aware-sub *sub-ident-string* **firewall-statistics**

Context

[Tree] (clear>nat l2-aware-sub)

Full Context

clear nat l2-aware-sub

Description

This command clears NAT mappings for L2-Aware subscribers.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 64 characters.

firewall-statistics

Clears only the firewall counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

14.5 l2-aware-subscribers

l2-aware-subscribers

Syntax

l2-aware-subscribers subscriber *sub-ident*

l2-aware-subscribers [**nat-policy** *nat-policy-name*] [**nat-group** *nat-group-id*] [**member** [*1..255*]] [**outside-router** *router-instance*] [**outside-ip** *outside-ip-address*] [**firewall-policy** *policy-name*]

Context

[Tree] (show>service>nat l2-aware-subscribers)

Full Context

show service nat l2-aware-subscribers

Description

This command displays layer-2 aware NAT subscribers.

Parameters

nat-policy-name

Specifies the NAT policy name, up to 32 characters.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

router-instance

Specifies the router instance.

Values

router-name:	Base, management
service-id:	1 to 2147483647
svc-name:	A string up to 64 characters.

outside-ip-address

Specifies the outside IP address.

Values a.b.c.d

sub-ident

Specifies the identifier, up to 32 characters.

14.6 l2-route-table

l2-route-table

Syntax

l2-route-table [**detail**] [**bgp-ad**] [**multi-homing**] [**bgp-vpls**] [**bgp-vpws**] [**all-routes**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>service l2-route-table)

Full Context

show service l2-route-table

Description

This command displays Layer 2 route table information.

Parameters

detail

Displays detailed information.

bgp-ad

Displays BGP AD related information.

multi-homing

Displays multihoming related information.

bgp-vpls

Displays BGP VPLS related information.

bgp-vpws

Displays BGP VPWS related information.

all-routes

Displays active or inactive routes.

Platforms

All

Output

Use the following command to display Layer 2 route table information.

Output Example

```
show service l2-route-table
```

```

Table 258: Output fields: service ID Layer 2 route table

Label	Description
Admin State	Displays the administrative state of the service Up — Indicates the service is administratively enabled Down — Indicates the service is administratively disabled
Vpls Id	Displays the Virtual Private LAN Service (VPLS) ID
Prefix	Displays information for the specified IP prefix and mask length
VeId	Displays the VEID for BGP-VPLS routes
PW Temp Id	Displays the Pseudowire (PW) temporary ID
RD	Displays information for the route distinguisher
Next Hop	Displays the next hop for the route
State (D-Bit)	Displays the state of the Disable-bit (D-bit).The D-bit ensures packet integrity between the terminal and host packet assembler/disassemblers
Path MTU	Displays the maximum transmission unit (MTU) of the path
Hash Label Tx	Displays the transmit hash label value
Hash Label Rx	Displays the receive hash label value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Control Word	Displays information about the control word. The control word is an optional 4-byte field used in the pseudowire packet
Seq Delivery	Displays information about sequence delivery
DF Bit	Displays information about the DF bit
Status	Displays the status of the service
Sdp Bind Id	Displays information about the SDP binding ID

l2-vpn [**detail** | **longer**] [**aspath-regex** *reg-exp*] [**community** *comm-id*] [**rd** *rd*] [**l2vpn-type**] [**veid** *veid*] [**offset** *vpls-base-offset*] [**siteid** *site-id*]

Context

[Tree] (show>router>bgp>routes l2-vpn)

Full Context

show router bgp routes l2-vpn

Description

This command displays BGP flow L2-VPN routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

brief

Displays the BGP flow L2-VPN route information in a brief format.

l2vpn-type

Specifies a 12-byte Virtual Switch Instance identifier (VSI-ID) type.

Values bgp-ad, bgp-vpls, bgp-vpws, and multi-homing

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

veid

Specifies a two byte identifier that represents the local bridging instance in a VPLS and is advertised through the BGP NLRI. This value must be lower than or equal to the *max-ve-id*.

Values 0 to 4294967295

vpls-base-offset

Specifies a two byte identifier advertised through the NLRI that is used to indicate which VE-ID should use the advertised NLRI at the receiving PE according to the following rule: if the offset <= local VE-ID <= offset+VBS-1 (VBS = virtual block size = 8 in our implementation) then the NLRI is processed. Otherwise it is ignored. The NLRI with this offset is generated as soon as the first VE-ID value between (offset, offset + VBS-1) is advertised in the network.

Values 0 to 4294967295

site-id

Specifies a two byte identifier usually employed for the BGP multi-homing solution. This value identifies the BGP multi-homing site associated with one or a set of objects (SAPs, pseudowires, or a combination). The *site-id* must be identical between the two PEs carrying the connection to the access device multi-homed to the PEs.

Values 0 to 4294967295

Table 259: Output fields: L2PT describes show L2PT output fields.

Table 259: Output fields: L2PT

Label	Description
Service id	Displays the 24 bit (0 to 16777215) service instance identifier for the service.
L2pt-term enabled	Indicates if L2-PT-termination and/or Bpdu-translation is in use in this service by at least one SAP or spoke-SDP binding. If in use, at least one of L2PT-termination or Bpdu-translation is enabled. When enabled it is not possible to enable STP on this service.
L2pt-term disabled	Indicates that L2-PT-termination is disabled.
Bpdu-trans auto	Specifies the number of L2-PT PDUs are translated before being sent out on a port or sap.
Bpdu-trans disabled	Indicates that Bpdu-translation is disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
SAPs	Displays the number of SAPs with L2PT or BPDU translation enabled or disabled.
SDPs	Displays the number of SDPs with L2PT or BPDU translation enabled or disabled.
Total	Displays the column totals of L2PT entities.
SapId	The ID of the access point where this SAP is defined.
L2pt-termination	Indicates whether L2pt termination is enabled or disabled.
Admin Bpdu-translation	Specifies whether Bpdu translation is administratively enabled or disabled.
Oper Bpdu-translation	Specifies whether Bpdu translation is operationally enabled or disabled.
SdpId	Specifies the SAP ID.

Full Context

show router p2mp-sr-tree label

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays P2MP SR label information.

Parameters

start-label

specifies the starting label value from which to display the P2MP SR label information. If only *start-label* is specified, only labels using *start-label* are displayed.

Values 32 to 524287

end-label

Specifies the ending label value for which to display P2MP SR label information.

Values 32 to 524287

in-use

Displays labels that are in use.

owner

Displays labels owned by the specified owner.

static

Displays labels owned by the static owner.

pce

Displays labels owned by the PCE.

sr-pol

Displays labels owned by the SR policy.

Platforms

Full Context

monitor router rib-api label

Description

This command monitors the egress statistics of the specified RIB-API label.

Parameters

label

Specifies the label of the specified RIB-API entry.

Values 0 to 4294967295

preference

Specifies the preference of the specified RIB-API entry.

Values 0 to 4294967295

client-tag

Specifies the client tag of the specified RIB-API entry.

Values 0 to 4294967295

egress-stats

Specifies to monitor the egress statistics of the specified RIB-API label.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays the absolute statistics of the specified RIB-API label.

rate

Displays the rate-per-second statistics of the specified RIB-API label.

  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**

originState

Filters the BGP routes displayed by the command to those routes with a particular RPKI route origin validation state.

Values valid — Displays valid validation state information.

invalid — Displays invalid validation state information.

notfound — Displays state information for unfound origin values.

hunt

Displays entries for the specified route.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

leaked

Filters the BGP routes displayed by the command to those routes leaked into this router's BGP instance from another BGP instance.

leakable

Filters the BGP routes displayed by the command to those routes eligible for leaking from this router's BGP instance to another BGP instance.

brief

Provides a summarized display of the set of peers to which a BGP route is advertised.

longer

Displays the specified route and subsets of the route.

detail

Display the longer, more detailed version of the output.

all

Displays output for all label BGP IPv4 routes.

Full Context

show router mpls-labels label-range

Description

This command displays the MPLS label range.

Platforms

All

Output

The following output is an example of MPLS label range information.

Table 261: Output fields: MPLS label range describes the MPLS label range output fields.

Table 261: Output fields: MPLS label range

Label	Description
Label Type	Displays the information about **static-lsp**, **static-svc**, and **dynamic** label types.
Start Label	The label value assigned at the ingress router.
End Label	The label value assigned for the egress router.
Aging	The number of labels released from a service which are transitioning back to the label pool. Labels are aged 15 s.
Total Available	The number of label values available.

Output Example

```
*A:Atlanta 224>show>router>mpls-labels># label-range
===============================================================================
Label Ranges
===============================================================================
Label Type      Start Label End Label   Aging       Available   Total
-------------------------------------------------------------------------------
Static          32          18431       -           18400       18400
Dynamic         18432       524287      0           505443      505856
    Seg-Route   200501      200900      -           0           400

Full Context

show router ldp bindings label-type

Description

This command displays LDP FEC bindings by matching labels.

Parameters

start-label

Specifies a label value to begin the display.

Values 16 to 1048575

end-label

Specifies a label value to end the display.

Values 17 to 1048575

family

Displays either IPv4 or IPv6 LDP information.

Context

[Tree] (show lag)

Full Context

show lag

Description

This command displays Link Aggregation Group (LAG) information.

If no command line options are specified, a summary listing of all LAGs is displayed.

Parameters

lag-id

Displays only information on the specified LAG ID.

Values 1 to 800

Default Displays information for all LAG IDs.

detail

Keyword that displays detailed LAG information.

Default Displays summary information.

statistics

Keyword that displays LAG statistics information.

lacp-statistics

Keyword that displays the number of LACP PDUs transmitted and received per LAG port.

description

Keyword that displays the user-defined description for the LAG.

egress-rate-distribution

Keyword that displays the egress traffic rate in kb/s per LAG port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port

Keyword that displays port information.

associations

Keyword that displays a list of current router interfaces to which the LAG is assigned.

interface

Keyword that displays interface information.

bfd

Keyword that displays per-member BFD information.

eth-cfm

Keyword that displays a list of Ethernet tunnels to which the LAG is assigned.

tunnel-id

Filters ETH-CFM MEP information to one tunnel.

Values 1 to 4094

flow-distribution

Keyword that displays the flow distribution per active LAG port in a given LAG. The operator can control the flow distribution per LAG by configuring a **hash-weight** value on each ports of a LAG.

Inactive LAG ports are not displayed.

per-link-hash

Keyword that displays information about a SAP or interface associated with this LAG sends traffic over a single link of a LAG auto-re-balancing as links are added and removed from this LAG.

lacp-partner

Keyword that displays LACP partner information.

link-map-profile

Displays information about a specified LAG link map profile.

Values 1 to 64

sap

Keyword that displays SAP information.

port-id

Specifies the port ID.

Values *slot*/*mda*/*port*

```

Output Fields: show lag

Table 263: Output fields: LAG describes the output fields for the **show lag** command.

Table 263: Output fields: LAG

Label	Description
Lag-id	The LAG or multi-link bundle ID that the port is assigned to.
Lag-name	The LAG name.
Adm	Up — The LAG is administratively up. Down — The LAG is administratively down.
Opr	Up — The LAG is operationally up.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Down—The LAG is operationally down.
Threshold	The number of operational links for the LAG at or below which the configured action is invoked.
Up-Count	The number of ports that are physically present and have physical links present.
MC Act/Stdby	Member port is selected as active or standby link.

Output Example: show lag <lag-id> detail

```
A:Dut-B# show lag  1 detail

Output Fields: show lag <lag-id> detail

Table 264: Output fields: LAG detail describes the output fields for the **show lag** *lag-id* **detail** command. The output is dependent on whether or not the LAG was configured as a multi-chassis (MC) LAG.

Table 264: Output fields: LAG detail

Label	Description
Lag-id	The LAG identification.
Lag-name	The LAG name.
Mode	The LAG mode: • access • hybrid • network
Adm	Administrative state of the LAG. Up — The LAG is administratively up. Down — The LAG is administratively down.
Opr	Operational state of the LAG. Up — The LAG is operationally up. Down — The LAG is operationally down.
Thres. Last Cleared	The last time that port or weight thresholds were cleared: • when there is a falling or rising hit • when they are configured and immediately reached • when they are not configured when reached Not cleared by the threshold cfg or deconfig command when the port or weight threshold is removed. The port or weight threshold can then be configured but not immediately reached.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Thres. Exceeded Cnt	The number of times that the weight or port threshold rising counter was reached. The Thresh. Exceed counter displays the rising counter, as the falling counter is only available via SNMP. When we configure or deconfigure the port or weight threshold, the Thresh. Exceed counter is set to 0.
Dynamic Cost	Enabled — Dynamic cost is enabled. Disabled — Dynamic cost is disabled.
Encap Type	The LAG port encapsulation type: • dot1q • null • qinq
Configured Address	The configured Ethernet MAC address.
Lag-IfIndex	A box-wide unique number assigned to this interface.
Hardware Address	The Ethernet MAC address.
Adapt Qos (access)	Displays the configured QoS mode: • distribute • link • port-fair
Hold-Time Down	The timer, in tenths of seconds, which controls the delay between detecting that a LAG is down and reporting it to the higher levels.
Port Type	The port type: • hs • standard
Per-Link-Hash	Enabled — Per link hash is enabled. Disabled — Per link hash is disabled.
Include-Egr-Hash-Cfg	The explicitly configured hashing that is included to the egress buffering and rate distribution.
Per FP Ing Queuing	The per FP ingress queuing status.
Per FP Egr Queuing	The per FP egress queuing status.
Per FP SAP Instance	The per FP SAP instance status.
Access Bandwidth	The LAG access bandwidth value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Access Booking Factor	The LAG access booking factor.
Access Available BW	The access available bandwidth.
Access Booked BW	The access booked bandwidth.
LACP	Enabled — LACP is enabled. Down — LACP is disabled.
LACP Transmit Intvl	The LACP transmit interval mode.
LACP xmit stdby	The LACP transmit standby mode.
Selection Criteria	Configured LAG selection criteria.
Slave-to-partner	The LACP slave-to-partner enabled or disabled state.
MUX control	Configured type of multiplexing machine control used in a LAG with LACP in active/passive modes. coupled — TX and RX activate together. independent — RX activates independent of TX.
Subgrp hold time	The sub-group hold time value.
Remaining time	The sub-group remaining time value.
Subgrp selected	The number of sub-group selected in this LAG.
Subgrp candidate	The sub-group candidate.
Subgrp count	The number of sub-group configured in this LAG.
System Id	System ID used by actor in LACP messages.
System Priority	System priority used by actor in LACP messages.
Admin Key	Configured LAG key.
Oper Key	Key used by actor in LACP messages.
Prtr System Id	System ID used by partner in LACP messages.
Prtr System Priority	System priority used by partner in LACP messages.
Prtr Oper Key	Key used by partner in LACP messages.
Standby Signaling	The standby signaling mode used in this LAG.
Port hashing	Displays the LAG port hashing mechanism for flow distribution per LAG port. • **port-speed** — the port hashing value is inherited from the port speed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• **hash-weight** — the LAG port **hash-weight** value is used to customize flow distribution per port
Port weight speed	The LAG port weight speed value for mixed-speed LAG.
Ports Up	The number of ports that are operationally up for this LAG.
Weights Up	Sum of weights for ports that are operationally up in this LAG.
Hash-Weights Up	Sum of hash weights for ports that are operationally up in this LAG.
Threshold Type	The type of threshold used in this LAG: • hash-weight-threshold • port-threshold • weight-threshold
Monitor oper group	The name of the operational group being monitored for this LAG.
Adaptive loadbal	The adaptive load balancing status. Enabled — The adaptive load balancing is enabled. Disabled — The adaptive load balancing is disabled.
Tolerance	The adaptive load balancing tolerance value.
Interval	The adaptive load balancing statistics pooling interval.
MC Peer Address	The multi-chassis peer IP address.
MC Peer Lag-id	The LAG ID for the multi-chassis peer.
MC System Id	The multi-chassis LAG system identifier MAC address.
MC System Priority	The multi-chassis LAG system priority.
MC Admin Key	The multi-chassis LAG administrative key.
MC Active/Standby	The multi-chassis LAG active or standby state.
MC Lacp ID in use	The multi-chassis LAG in use state.
MC extended timeout	The multi-chassis LAG extended timeout value.
MC Selection Logic	The multi-chassis LAG selection logic state.
MC Config Mismatch	The multi-chassis LAG configuration mismatch state.

Output Fields: Show LAG Statistics

Table 265: Output fields: LAG statistics describes the output fields for the **show lag statistics** command.

Table 265: Output fields: LAG statistics

Label	Description
Lag-id	The LAG or multi-link trunk (MLT) that the port is assigned to.
Lag-name	The LAG name.
Port-id	The port ID.
Input Bytes	The number of incoming bytes for the LAG on a per-port basis.
Input Packets	The number of incoming packets for the LAG on a per-port basis.
Output Bytes	The number of outbound bytes for the LAG on a per-port basis.
Output Packets	The number of outbound packets for the LAG on a per-port basis.
Input/Output Errors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol. For character- oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol. For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
Totals	Displays the column totals for bytes, packets, and errors.

Output Fields: show lag <lag-id> lacp-statistics

Table 267: Output fields: LAG LACP statistics describes the output fields for the **show lag <lag-id> lacp-statistics** command.

Table 267: Output fields: LAG LACP statistics

Label	Description
LAG-id	The LAG ID that the port is assigned to.
Port-id	The port ID.
Tx (Pdus)	The number of LACP PDUs transmitted.
Rx (Pdus)	The number of LACP PDUs received.
Rx Error	The number of LACP PDUs received when **admin-down** or when LACP is not enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
(Pdus)	
Rx Illegal (Pdus)	The number of illegal packets received.

Output Example: Show lag <lag-id> flow-distribution

```
A:Dut-A# show lag 3 flow-distribution
===============================================================================
Distribution of allocated flows
===============================================================================
Port                        Bandwidth (Gbps) Hash-weight  Flow-share (%)
-------------------------------------------------------------------------------
1/1/1                       10.000           300          37.50
1/1/2                       10.000           500          62.50
-------------------------------------------------------------------------------
Total operational bandwidth: 20.000
===============================================================================
```

Output Fields: show lag <lag-id> flow-distribution

Table 268: Output fields: LAG flow distribution describes the output fields for the **show lag flow-distribution** command.

Table 268: Output fields: LAG flow distribution

Label	Description
Bandwidth	The physical bandwidth speed per active LAG port.
Hash-Weight	The hash-weight value configured or inherited from port-speed on this LAG port.
Flow-Share	The traffic flow distribution per active LAG port.

Output Example: Show lag <lag-id> associations

```
A:ALA-1# show lag 5 associations
===============================================================================
Interface Table
===============================================================================
Router/ServiceId               Name                           Encap Val
-------------------------------------------------------------------------------
Router: Base                   LAG2West                       0
-------------------------------------------------------------------------------
Interfaces
===============================================================================
A:ALA-1#
```

Output Fields: Show lag <lag-id> associations

Table 269: Output fields: LAG associations describes the output fields for the **show lag <lag-id> associations** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 269: Output fields: LAG associations

Label	Description
Service ID	The service associated with the LAG.
Name	The name of the IP interface.
Encap Val	The Dot1q or QinQ values of the port for the IP interface.

Output Example: Show lag <lag-id> detail (with MC-LAG Output)

```
A:Dut-C# show lag 1 detail
===============================================================================

lag

Syntax

lag *lag-id* **network-aggregate-qos-stats**

Context

[Tree] (show>qos lag)

Full Context

show qos lag

Description

This command displays the aggregate QoS statistics for the default ingress and egress queues configured on a network interface LAG.

Parameters

lag-id

Displays only information about the specified LAG ID.

Values 1 to 800

network-aggregate-qos-stats

Displays the aggregate QoS statistics about network interface LAG queues.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of network aggregate QoS statistics information.

Table 270: Output fields: QoS LAG describes the output fields.

Output Example

```
*A:PE# show qos lag 1 network-aggregate-qos-stats
```

Context

[Tree] (clear lag)

Full Context

clear lag

Description

This command clears statistics for the specified LAG ID.

Parameters

lag-id

Clears the LAG ID.

Values 1 to 800

bfd-session

Keyword that clears the specified BFD session.

family

Keyword that clears the IP address family.

ipv4

Keyword that clears IPv4.

ipv6

Keyword that clears IPv6.

port-id

Clears the port ID.

Values *slot* [/*mda* [/*port*]]

lacp-statistics

Keyword that clears the LACP PDUs statistics.

statistics

Keyword that clears the statistics or the BFD session for the specified LAG ID.

aggregate-queue

Keyword that clears the aggregate queue statistics on a PXC-based LAG.

Platforms

All

Context

[Tree] (monitor lag)

Full Context

monitor lag

Description

This command monitors traffic statistics for Link Aggregation Group (LAG) ports. Statistical information for the specified LAG ID(s) displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified LAG ID. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

lag-id

Specifies the number of the LAG, with a maximum of five LAG numbers specified in a single statement.

Values 1 to 200

bytes

Keyword that displays the statistics in bytes only.

packets

Keyword that displays the statistics in packets only.

errors

Keyword that displays the statistics for errors only.

utilization

Keyword that displays the statistics in percentage utilization only.

network-aggregate-qos-stats

Keyword that displays the aggregate QoS statistics on network interface LAG default ingress and egress queues.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default 10

absolute

Keyword that displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Keyword that displays the rate-per-second for each statistic instead of the delta.

Platforms

All

Output

The following output is an example of monitor lag command information.

Output Example

```
A:Dut-B# monitor lag 1 interval 3 repeat 1
===============================================================================
Monitor statistics for LAG ID 1

Full Context

show test-oam lag-ip-measurement lag-ip-measurement-template

Description

This command displays LAG measurement template information.

Parameters

template-name

Specifies the template name, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of the LAG IP measurement template information, and Table 271: Output fields: LAG IP measurement template summary describes the output fields.

Output Example: LAG IP measurement template summary

```
show test-oam lag-meas# lag-ip-measurement-template "ri"
===============================================================================
LAG Template: ri
===============================================================================
Description        : (Not Specified)
Admin State        : Down
Interval           : 1 seconds
Active Interfaces  : 0
Total Interfaces   : 0

-------------------------------------------------------------------------------
Session Sender Type:  TWAMP-Light

14.23 lbm-svc-act-responder

lbm-svc-act-responder

Syntax

lbm-svc-act-responder [**domain** {*md-index* | *md-admin-name*}] [**association** {*ma-index* | *ma-admin-name*}] [**mep** *mep-id*]

Context

[Tree] (show>eth-cfm lbm-svc-act-responder)

Full Context

show eth-cfm lbm-svc-act-responder

Description

This command displays the MEPs created with the optional **lbm-svc-act-responder** configuration command, which allocates additional resources to facilitate high-speed LBM-to-LBR processing typically used during service activation testing. The optional filters are cumulative. These filters can be used to narrow the focus of the display to a specific area.

Parameters

md-index

Specifies the MD index.

Values 1 to 4294967295

md-admin-name

Specifies the administrative name for the domain, up to 64 characters.

ma-index

Specifies the MA index.

Values 1 to 4294967295

ma-admin-name

Specifies the administrative name for the association, up to 64 characters.

mep-id

Specifies the local MEP ID.

Values 1 to 8191

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of ETH CFM LBM service activation responder information, and Table 272: Output fields: LBM service activation responder describes the output fields.

Output example

```

14.28 learned-remote-mac

learned-remote-mac

Syntax

learned-remote-mac [**domain** {*md-index* | *md-admin-name*}] [**association** {*ma-index* | *ma-admin-name*}] [**mep** *mep-id*] [**remote-mepid** *mep-id*]

Context

[Tree] (show>eth-cfm learned-remote-mac)

Full Context

show eth-cfm learned-remote-mac

Description

This command displays the local MEP and remote MEP MAC address information relationship. The MAC address information in this table is populated and used in place of the remote *mep-id* in various ETH-CFM tests that opt to use the **remote-mepid** *mep-id* configuration instead of specifying the remote peer MAC address. This table is maintained by the ETH-CC process. If a CCM is not received for a remote peer, no entry is made in the learned-remote-mac table. However, when a CCM is received for an expected peer, an entry in the learned-remote-mac table is populated and maintained. This entry remains until the remote peer statement is deleted from the association, the local MEP is deleted, or if a manual **clear eth-cfm learned-remote-mac** command has been executed for the specified local MEP.

The optional parameters are treated as independent filters that are combined to refine the output. Omitting all optional parameters produces output that includes the entire table.

Parameters

md-index

Specifies the MD index.

Values 1 to 4294967295

md-admin-name

Specifies the MD name, up to 64 characters.

ma-index

Specifies the MA index.

Values 1 to 4294967295

ma-admin-name

Specifies the MD name, up to 64 characters.

mep *mep-id*

Specifies the local *mep-id*.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 8191

remote-mepid *mep-id*

Specifies the remote *mep-id*.

Values 1 to 8191

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of learned remote MAC information, and Table 273: Output fields: learned remote MAC describe the output fields.

Table 273: Output fields: learned remote MAC

Label	Description
MdIndex	The local MEP domain index
MaIndex	The local MEP association index
L-MepId	The local MEP identifier
R-MepId	The remote MEP identifier
Learned Remote MAC	The learned MAC address of the remote peer
Stale	Results of the comparison between the CCM database and the learned-remote-mac table: False — match True — mismatch
Updated	Indicates if the learned MAC in this table has been updated in the last CCM interval
md-admin-name	The administrative MD name
ma-admin-name	The administrative MA name

learned-remote-mac

Syntax

learned-remote-mac [**mep** *mep-id* [**remote-mepid** *mep-id*]] **domain** *md-index* **association** *ma-index*

Context

[Tree] (clear>eth-cfm learned-remote-mac)

Full Context

clear eth-cfm learned-remote-mac

Description

This command clears the MAC addresses stored in the CFM learned-remote-mac address table. A valid MAC address must exist in the **learned-remote-mac** table for a successful PDU generation when that test uses the **remote-mepid** *mep-id* option in place of a *mac-address*.

The local **domain** and **association** parameters must be included as part of the clear command. The **mep** and **remote-mepid** parameters are optional. The clear command clears all matching entries based on the configured parameters. The table is populated based on the reception and processing of ETH-CC PDUs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

mep *mep-id*

Specifies the local MEP ID.

Values 1 to 8191

remote-mepid *mep-id*

Specifies the remote MEP ID.

Values 1 to 8191

md-index

Specifies the MD index.

Values 1 to 4294967295

ma-index

Specifies the MA index.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

14.29 lease-state

lease-state

Syntax

lease-state [**wholesaler** *service-id*] [**sap** *sap-id* | **sdp** *sdp-id:vc-id* | **interface** *interface-name* | **ip-address** *ip-address* [*/mask*] | **chaddr** *ieee-address* | **mac** *ieee-address* | {[**port** *port-id*] [**no-inter-dest-id** | **inter-dest-id** *inter-dest-id*]}] [**session** { **none** | **ipoe**}] [**detail**]

Context

[Tree] (show>service>id>dhcp lease-state)

Full Context

show service id dhcp lease-state

Description

This command displays DHCP lease state related information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

service-id

Specifies the service ID of the wholesaler.

Values 1 to 2148278316, *svc-name:* up to 64 characters

sap-id

Specifies the physical port identifier portion of the SAP definition.

sdp-id

The SDP identifier.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID for which to display information.

Values 1 to 4294967295

interface-name

Displays information for the specified IP interface.

***ip-address*[*/mask*]**

Displays information associated with the specified IP address.

ieee-address

Specifies the source MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx (cannot be all zeros)

port-id

Specifies the port ID.

no-inter-dest-id

Displays the information about no intermediate destination ID.

inter-dest-id

Displays information about the specified intermediate destination ID, up to 64 characters.

session

Shows DHCPv4 lease states for hosts that are associated with an IPoE session or for hosts that are not associated with an IPoE session.

Values none, ipoe

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of the DHCP **lease-state** command.

Table 274: Output fields: DHCP lease state describes service DHCP lease-state information.

Table 274: Output fields: DHCP lease state

Field	Description
Service ID	The service ID
IP Address	The IP address
Client HW Address	The client hardware address
Subscriber-interface	The subscriber interface name
Group-interface	The group interface name
SAP	The SAP
Termination Type	The termination type
Up Time	The up time
Remaining Lease Time	The remaining lease time
Remaining SessionTime	The remaining session time
Persistence Key	The persistence key
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The subscriber profile string
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
Lease ANCP-String	The lease ANCP string
Lease Int Dest Id	The lease internal destination ID
Category-Map-Name	The category map name
Lease Info origin	The origin of the lease
Ip-Netmask	The IP netmask address
Broadcast-Ip-Addr	The broadcast IP address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Default-Router	The default router
Primary-Dns	The primary DNS address
Secondary-Dns	The secondary DNS address
Primary-Nbns	The primary NBNS
Secondary-Nbns	The secondary NBNS
ServerLeaseStart	The date and time of the start of the server lease
ServerLastRenew	The date and time of the renewal of the server lease
ServerLeaseEnd	The date and time of the end of the server lease
Session-Timeout	The session timeout value
IPoE|PPP session	The type of session
Lease-Time	The lease time
DHCP Server Addr	The DHCP server IP address
Relay Agent Information	
Circuit Id	The circuit ID
Radius Class 1	The RADIUS Class 1 value
Radius User-Name	The RADIUS user name
Overrides: (only shown when overrides are active)	
Dir Type	The direction type
Id	The ID
PIR	The PIR value
CIR	The CIR value
CBS	The CBS value
MBS	The MBS value
WRR	The WRR value
Class-Weight	The class weight
No. of Overrides	The total number of overrides
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides:	

© 2026 Nokia.

Field	Description
(only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit

Context

[Tree] (show>service>id>dhcp6 lease-state)

Full Context

show service id dhcp6 lease-state

Description

This command displays DHCPv6 lease state information.

Note:
The **wholesaler** *service-id* parameter is applicable only in the VPRN context.

Parameters

detail

Displays detailed lease state information.

service-id

The service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored. This parameter only applies to the 7750 SR.

Values *service-id*: 1 to 2147483647

session

Shows DHCPv6 lease states for clients that are associated with an IPoE session or for clients that are associated with a PPP session or for clients that are not associated with an IPoE session.

Values none, ipoe, ppp

policy-name

Specifies the name of the router advertisement policy.

interface-name

Specifies the interface name, up to 32 characters.

***ipv6-address*[/*mask*]**

Shows information for the specified IPv6 address and mask.

ieee-address

Shows information for the specified 48-bit MAC address, expressed in the form *aa*:*bb*:*cc*:*dd*:*ee*:*ff* or *aa-bb-cc-dd-ee-ff*, where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

Platforms

All

Output

The following output is an example of DHCP6 lease state information.

Table 275: Output fields: DHCPv6 lease state router advertisement describes DHCPv6 lease state router advertisement policy output fields.

Table 275: Output fields: DHCPv6 lease state router advertisement

Field	Description
Service ID	The service ID provided by the access node to which this subnet is bound
IP Address	The IP address of the service
Client HW Address	The MAC address of the client
Subscriber-Interface	The subscriber interface for the service
Group-interface	The group interface for the service
Sap/Sdp ID	The service SAP and SDP IDs
Termination Type	The PPP session type
Up Time	The value of the up time at the time of the last modification of an entry
Remaining Lease Time	The time left before the DHCPv6 lease expires. The client should renew its lease before this timer expires. (Lease Split) indicates that DHCPv6 lease split is active.
Remaining SessionTime	The time left for this session
Persistence Key	The persistence key
Sub-Ident	The subscriber identification policy name
Sub-Profile-String	The subscriber profile policy name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
App-Profile-String	The application profile policy name
Lease ANCP-String	The ANCP string
Category-Map-Name	The category map name
Dhcp6 ClientID (DUID)	The DHCP client ID
Dhcp6 IAID	The DHCPv6 Identity Association Identifier (IAID) assigned by the client
Dhcp6 IAID Type	The DHCPv6 Identity Association type of this lease (non-temporary or prefix)
Dhcp6 Client Ip	The DHCPv6 IP address of the client
Primary-Dns	The primary DNS, if configured
Secondary-Dns	The secondary DNS, if configured
Pool Name	The pool name
Dhcp6 Server Addr	The DHCPv6 server address
Dhcp6 ServerID (DUID)	The DHCPv6 server ID
Dhcp6 InterfaceId	The DHCPv6 interface ID
Dhcp6 RemoteId	The DHCPv6 remote ID
Radius sub-if prefix	The RADIUS subscriber interface prefix
Router adv. policy	The router advertisement policy
Lease Info origin	The lease info origin
ServerLeaseStart	The date and time the lease was created
ServerLastRenew	The last renew was done for this lease
ServerLeaseEnd	The time left for this lease
Session-Timeout	The session timeout interval
IPoE|PPP	IPoE or PPP
Radius User-Name	The RADIUS user name
Overrides: (only shown when overrides are active)	
Dir Type	The direction type
Id	The ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
PIR	The PIR value
CIR	The CIR value
CBS	The CBS value
MBS	The MBS value
WRR	The WRR value
Class-Weight	The class weight
No. of Overrides	The total number of overrides
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 PPPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides:	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
(only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of lease states	The total number of lease states

lease-state

Syntax

lease-state all [**no-dhcp-release**]

lease-state [**port** *port-id*] **inter-dest-id** *intermediate-destination-id* [**no-dhcp-release**]

lease-state [**port** *port-id*] **no-inter-dest-id** [**no-dhcp-release**]

lease-state ip-address *ip-address* [*/mask*] [**no-dhcp-release**]

lease-state mac *ieee-address* [**no-dhcp-release**]

lease-state port *port-id* [**no-dhcp-release**]

lease-state sap *sap-id* [**no-dhcp-release**]

lease-state sdp *sdp-id:vc-id* [**no-dhcp-release**]

Context

[Tree] (clear>service>id>dhcp lease-state)

Full Context

clear service id dhcp lease-state

Description

This command removes the DHCPv4 lease state information from the system and sends a DHCP release message on behalf of the client to the DHCP server. A DHCP release is not sent when the remaining lease-time is less than 5 minutes or when the **no-dhcp-release** parameter is specified.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

all

Clears all lease state statistics.

port-id

Displays information about the specified port ID.

intermediate-destination-id

Displays information about the specified intermediate destination ID, up to 32 characters.

no-inter-dest-id

Displays the information about no intermediate destination ID.

ip-address[/mask]

The IP address of the IP interface. The *ip-address* portion of the **address** command specifies the IP host address that is used by the IP interface within the subnet. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

Values a.b.c.d.

mask: 1 to 32

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

sap-id

Specifies the physical port identifier portion of the SAP definition.

sdp-id

The SDP ID to be cleared.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be cleared.

Values 1 to 4294967295

no-dhcp-release

Specifies that the node clears the state without sending the DHCP release message.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lease-state

Syntax

lease-state all [**no-dhcp-release**]

lease-state ipv6-address *ipv6-prefix*[*/prefix-length*] [**no-dhcp-release**]

lease-state mac *ieee-address* [**no-dhcp-release**]

lease-state sap *sap-id* [**no-dhcp-release**]

Context

[Tree] (clear>service>id>dhcp6 lease-state)

Full Context

clear service id dhcp6 lease-state

Description

This command removes the DHCPv6 lease state information from the system and sends a DHCP release message on behalf of the client to the DHCP server. A DHCP release is not sent when the remaining lease-time is less than 5 minutes or when the no-dhcp-release parameter is specified.

Parameters

all

Clears all lease-states.

no-dhcp-release

Specifies that the node clears the state without sending the DHCP release message.

ipv6-prefix[/prefix-length]

Clears routes only matching the specified IP address and length and only applies to the 7750 SR.

Values	ipv6	ipv6-prefix[/pref*:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
			x:x:x:x:x:x:d.d.d.d
			x: [0 to FFFF]H
			d: [0 to 255]D
		prefix-length:	1 to 128

ieee-address

Clears DHCP6 MAC address lease state information. The 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sap-id

Clears the specified lease state SAP information.

Platforms

All

14.30 leases

leases

Syntax

leases [**detail**]

leases *ip-address*[/*mask*] **address-from-user-db** [**detail**]

leases *ip-address*[/*mask*] **dhcp-host** *dhcp-host-name* [**detail**]

leases *ip-address*[/*mask*] [**detail**]

Context

[Tree] (show>router>dhcp>local-dhcp-server leases)

Full Context

show router dhcp local-dhcp-server leases

Description

This command displays the DHCP leases.

Parameters

ip-address

Specifies the base IP address of the subnet. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

mask

The subnet mask in dotted decimal notation.

Values 0 to 32

address-from-user-db

Displays only leases that have IP addresses from the local-user-db.

dhcp-host-name

Shows the leases that match a certain DHCP host from the local-user-db.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ppp-host-name

Displays the leases that match a certain PPPoE host from the local-user-db.

detail

Displays detailed information of all leases that fall into the indicated subnet.

The command with no parameters shows all leases from the local-user-db.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of lease information

Output Example

```
*A:ALA-48>show>router>dhcp>local-dhcp-server# leases ip-address 10.0.0.4
===============================================================================
Leases for DHCP server test router Base
===============================================================================
IP Address      Lease State       Mac Address       Remaining Clnt
  PPPoE user name/Opt82 Circuit Id                  LifeTime  Type
-------------------------------------------------------------------------------
No leases found
*A:ALA-48>show>router>dhcp>local-dhcp-server#
```

Table 276: Output fields: leases describes leases output fields.

Table 276: Output fields: leases

Field	Description
IP Address	The IP address for the specified lease
Lease State	The lease state of the IP address
Mac Address	The MAC address of the lease
Remaining Lifetime	The remaining lifetime of the lease
Clnt Type	The address type
PPPoE user name	The PPPoE user name
Opt82	The option number that the DHCP server uses to send the identification strings to the PPPoE client
Circuit ID	The circuit ID from Option 82

leases

Syntax

leases [*ipv6-address/prefix-length*] [*type*] [*state*] [**detail**]

Context

[Tree] (show>router>dhcp6>local-dhcp-server leases)

Full Context

show router dhcp6 local-dhcp-server leases

Description

This command displays the DHCP6 leases.

Parameters

ipv6-address

Specifies the base IP address of the subnet. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

mask

The subnet mask in dotted decimal notation.

Values 0 to 32

type

Displays the lease type.

Values pd, wan-host

state

Displays the state of the lease.

Values advertised, remove-pending, held

detail

Displays detailed information of all leases that fall into the indicated subnet.

The command with no parameters shows all leases from the local user database.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of lease information.

===============================================================================
```

Table 277: Output fields: DHCP6 lease describes DHCP6 lease fields.

Table 277: Output fields: DHCP6 lease

Field	Description
IP Address/Prefix	The IP address and prefix of the lease
Link-local Address	The link local address of the lease
Lease State	The lease state of the lease
Remaining Lifetime	The remaining lifetime of the lease
Fail Ctrl	The type of failover control
No. leases found	The total number of leases

leases

Syntax

leases *ip-address*[*/mask*] [*state*]

leases all [*state*]

Context

[Tree] (clear>router>dhcp>server leases)

Full Context

clear router dhcp local-dhcp-server leases

Description

This command clears DHCP leases.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address[/mask]

Clears the specified IP address and mask.

state

Clears the state of the lease to be removed.

Values offered, stable, force-renew-pending, remove-pending, held, internal, internal-orphan, internal-held, sticky

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

leases

Syntax

leases [*ipv6-address/prefix-length*] [*type*] [*state*]

leases all [*type*] [*state*]

Context

[Tree] (clear>router>dhcp6>server leases)

Full Context

clear router dhcp6 local-dhcp-server leases

Description

This command removes the specified leases in the specified local DHCPv6 server.

Parameters

ipv6-address/prefix-length

Specifies the prefix of the leases to be removed.

type

Specifies the type of the lease to be removed.

Values pd, slaac, wan-host

state

Specifies the state of the lease to be removed.

Values advertised, remove-pending, held, internal, internal-orphan, internal-offered

all

Removes all leases of specified type or state.

14.32 lfa-info

lfa-info

Syntax

lfa-info [**mt** *mt-id-number*] [**prefix** *ipv6-prefix*[/*prefix-length*]] [**algo** *algo-id*] [**detail**]

lfa-info adjacency [**assign-type** {**static** | **dynamic**}] [**mt** *mt-id-number*] [**id** *ip-int-name* | *ip-address* | *nbr-system-id*] [**algo** *algo-id*] [**locator** *locator-name*] [**sid** *ipv6-address*] [**detail**]

Context

[Tree] (show>router>isis>srv6 lfa-info)

Full Context

show router isis segment-routing-v6 lfa-info

Description

This command displays LFA information for a SRv6-ISIS remote locator tunnel .

Parameters

mt-id-number

Filters information based on the specific MT ID value.

Values 0 | 2 | 3 | 4

ipv6-prefix/prefix-length

Displays the LFA information for the SRv6-ISIS tunnel of the specified IPv6 prefix.

Values *ipv6-prefix* — x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x — 0 to FFFF (hexadecimal)
d — 0 to 255 (decimal)
prefix-length — 0 to 128

algo-id

Filters information based on the specific SR algorithm value.

Values 0 | 128 to 255

detail

Keyword to display detailed information.

adjacency

Keyword to display adjacency SID LFA information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-int-name | *ip-address* | *nbr-system-id*

Displays the LFA information for the SRv6-ISIS local adjacency identified as either an IP interface, IP address, or neighbor system ID.

Values *ip-int-name* — 32 characters max

ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x [0 to FFFF]H

d [0 to 255]D

nbr-system-id — xxxx.xxxx.xxxx

assign-type

Filters information based on the specific SID assignment type.

Values **static** — Displays only the statically configured adjacency SIDs per IS-IS interface.

dynamic — Displays only the dynamically assigned adjacency SIDs per IS-IS interface.

locator-name

Displays the SRv6-ISIS local adjacency LFA information for the specified locator name, up to 64 characters.

ipv6-address

Displays the SRv6-ISIS local adjacency LFA information for the specified SID IPv6 address.

Values *ipv6-address* — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x [0 to FFFF]H

d [0 to 255]D

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

14.38 license

license

Syntax

license available-licenses

Context

[Tree] (show>system license)

Full Context

show system license

Description

Displays information related to the active license(s) within the system. This includes the license name, target UUID, target product, target SR OS release, and the start, end, and issue date of the license.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If the **available-licenses** attribute is included, then the information for each active license shall be displayed. The usual case for more than one license in a system is during an upgrade procedures when there needs to be both the originating and destination release licenses available in the system.

Parameters

available-licenses

Includes information for all licenses active in the system.

Platforms

All

Output

The following output is an example of license information.

Output Example

```
*A:ExitLeaf-35# show system license

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show licensing

Description

This command displays information related to the active application licenses on the system. The licenses are either monitored RTUs or entitlement ASLs, both of which cover features and scale in use in the SR OS system.

For monitored RTUs, there is a legal requirement to purchase the RTU parts to cover the administrative enabling of the related features and scale; however, the SR OS does not block the activation or scale of the feature.

For entitlement ASLs, feature activation on the SR OS system requires the installation of the ASL via the license-file mechanism before the related feature can be enabled. See the *7750 SR and 7950 XRS Pay-as-You-Grow Licensing Reference Guide* for more information.

When the **audit** keyword is used, the display shows all the monitored RTUs and entitlement ASLs of the node. Using the optional **monitored** keyword together with **audit** restricts the display to only the monitored RTUs.

When the **entitlements** keyword is used, the display shows all the entitlements in the active licenses in the system, the type of license, the quantity of POOL licenses, and the number of each that is in use or available for use.

Parameters

audit

Specifies that the state of all features covered by licenses is displayed.

monitored

Specifies that only the monitored RTUs are included in the audit display.

entitlements

Specifies that the number of instances allowed by the active license is displayed.

port-id

Specifies the port identifier in the format *slot*[/*mda*[/*connector*[/*port*]]].

slot	1 to 10
mda	1 to 2
connector	c1 to c36
port	1 to 10

```

Output Fields

Table 283: Output fields: licensing describes the output fields for the **show licensing** command.

Table 283: Output fields: licensing

Label	Description
Connector	The identity of connector for the license limits.
MAC	The index of the MAC on the card or MDA to which the connector is attached.
Licensed	Whether or not the connector is licensed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Yes — the connector is included in the licensed level of the card or MDA and may be configured for a breakout. Other rules may apply as described in the restrictions field. No — this connector is not included in the licensed level of the card or MDA and it cannot be configured for breakout.
Restrictions	Additional license rules that may apply to the use of the connector, for example, bandwidth limits to the set of connectors on the same MAC.

Output Example: show licensing audit

```
# show licensing audit

Output Fields

Table 284: Output fields: licensing audit describes the output fields for the **show licensing audit** command.

Table 284: Output fields: licensing audit

Label	Description
License	The name of the entitlement ASL or the monitored RTU, grouped by category

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Current Allocated	The number of instances of the license that are currently in use
Current Max	The maximum number of instances of the license that were recorded as in use within the current 24-hour monitoring period
Previous 24 Hr Max	The maximum number of instances of the license that were recorded in the previous full 24-hour monitoring period; shows as "n/a" if it has been less than 24 hours since startup
Last 24 Hr Interval Ended	Indicates the end time of the last 24-hour monitoring period; not displayed if it is less than 24 hours since startup

Output Example: show licensing entitlements

```
# show licensing entitlements

Output Fields

Table 285: Output fields: licensing entitlement describes the output fields for the **show licensing entitlement** command.

Table 285: Output fields: licensing entitlement

Label	Description
License	The description of the license
Available	The number of instances that are not currently being used. "License err" if in use is greater than the number of the allowed entitlements.
In-Use	The number of instances that are currently being used.
State	Indicates the state of the license as: • VALID — license can be used in the node.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• VIOLATION — license is in use but not covered by the currently activated license key file.

14.41 link

link

Syntax

link

link-check

Syntax

link-check

Context

[Tree] (tools>perform>chassis link-check)

Full Context

tools perform chassis link-check

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command checks the connection between an XCM and XMA cards on a SR-2/7/14s chassis. The function checks the connection between all XCM and XMA cards present in the system and outputs one of the following for each XMA:

- OK — the connection is good and no action is required
- NOK — the connection is suspect, re-seat the XMA to determine if this corrects the issue. If this issue persists, contact Nokia support.

Platforms

7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

14.50 lmm

lmm

Syntax

lmm [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>oam-pm>session lmm)

Full Context

monitor oam-pm session lmm

Description

This command monitors the Ethernet Loss Measurement Message (LMM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

All

14.51 lns-group

lns-group

Syntax

lns-group *lns-group-id* [**associations**]

lns-group *lns-group-id* **statistics esa-vm** *vapp-id*

lns-group [*lns-group-id*] **esa-vm**

lns-group *lns-group-id* **mda** *mda-id* **statistics**

lns-group [*lns-group-id*] **mda**

lns-group

Context

[Tree] (show>isa lns-group)

Full Context

show isa lns-group

Description

This command shows information such as the number of ESAs provisioned and in service, the LNS group operational status, and the number of L2TP sessions and ESA VM associated to the LNS group, as well as the detailed statistics of the ESA VM in relation to the LNS group.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lns-group-id

Specifies the LNS group identifier.

Values 1 to 4

associations

Displays information associated with the LNS group in the ISA context.

statistics

Displays statistics information.

mda-id

Specifies the ESA and VM identifying an LNS group.

Values			
	mda-id:	*slot*/*mda*	
		slot	1 to 10
		mda	1 to 2

vapp-id

Specifies the ESA and VM identifying an LNS group.

Values			
	vapp-id:	*esa-id*/*vm-id*	
		esa-id	1 to 16
		vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of the number of ESAs provisioned, the LNS group information status, and the statistics of the ESA VM in relation to the LNS group.

Output Example

```
*A:LNS# show isa lns-group esa-vm
===============================================================================

lns-group

Syntax

lns-group *lns-group-id* **statistics esa-vm** *vapp-id*

lns-group *lns-group-id* **mda** *mda-id* **statistics**

Context

[Tree] (clear>isa lns-group)

Full Context

clear isa lns-group

Description

This command clears the statistics for the identified VM within the specified LNS group.

Parameters

lns-group-id

Specifies the LNS group identifier.

Values 1 to 4

statistics

Displays statistics information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mda-id

Specifies the ESA and VM identifying an LNS group.

Values

mda-id:	*slot*/*mda*	
	slot	1 to 10
	mda	1 to 2

vapp-id

Specifies the ESA and VM identifying an LNS group.

Values

vapp-id:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

14.52 load-balance

load-balance

Syntax

load-balance lag-id *lag-id* [**class** {**1** | **2** | **3**}]

Context

[Tree] (tools>perform>lag load-balance)

Full Context

tools perform lag load-balance

Description

Load balance specified LAG's links when per-link-hash weighted is deployed. Load balancing can be per specified class or on all classes if no class is specified.

Parameters

lag-id

Specifies the LAG ID.

Values 1 to 800

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

class

Specifies the class.

Values 1, 2, 3

Platforms

All

load-balance

Syntax

load-balance [**service** *service-id*]

Context

[Tree] (tools>perform>app-assure>group load-balance)

Full Context

tools perform application-assurance group load-balance

Description

This command rebalances AA subscribers between ISAs within a group, in case imbalance occurs such as with the addition of new cards.

Parameters

service *service-id*

Specifies the service

Values 1 to 2147483648

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

14.53 load-balancing-alg

Full Context

tools dump router lsp-bfd local-bfd-discrim

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information for the BFD-on-LSP session with a specified local discriminator.

Parameters

bfd-discriminator

Specifies the BFD discriminator.

Values to 4294967295

Platforms

All

14.55 local-dhcp-db

local-dhcp-db

Syntax

local-user-db *local-user-db-name*

Context

[Tree] (tools>perform>subscr-mgmt>local-user-db local-dhcp-db)

Full Context

tools perform subscriber-mgmt local-user-db local-dhcp-db

Description

This command enables tools to control the local user database.

Parameters

local-user-db-name

Specifies the name of a local user database.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

14.58 local-sid

local-sid

Syntax

local-sid [*ipv6-address] [/prefix-length*]] [**locator** *locator-name*] [**longer**] [**end**] [**end-x**] [**end-dt**4] [**end-dt6**] [**end-dt46**] [**end-dx2**] [**context** *context*] [**end-dt2u**] [**end-dt2m**]

Context

[Tree] (show>router>srv6 local-sid)

Full Context

show router segment-routing-v6 local-sid

Description

This command displays SRv6 local-SID information.

Parameters

ipv6-address

Specifies the IPv6 address.

Values x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x - [0 to FFFF]H
d - [0 to 255]D

locator-name

Specifies the locator name, up to 64 characters.

longer

Displays the specified route and subsets of the route.

end

Displays the End SID function of a locator.

end-x

Displays the End.X SID function associated with a P2P interface.

end-dt4

Displays the End.DT4 function associated with the Base routing instance.

end-dt6

Displays the End.DT6 function associated with the Base routing instance.

end-dt46

Displays the End.DT46 function associated with the Base routing instance.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

end-dx2

Displays the End.DX2 function associated with the SRv6 instance in the service.

context

Specifies the router context.

Values *vprn-svc-name* | 'Base' | *vprn-svc-id*

end-dt2u

Displays the End.DT2U function associated with the SRv6 instance in the service.

end-dt2m

Displays the End.DT2M function associated with the SRv6 instance in the service.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of local SID information.

Output Example

```
*A:Dut-B# show router segment-routing-v6 local-sid

Table 288: Output fields: local SID

Field	Description
SID	The segment ID
Locator	The locator name
Context	The context of the SID
Type	The type of SRv6 behavior
Function	The function value
SIDs	The total number of SIDs

14.59 local-tx-pdu

local-tx-pdu

Syntax

local-tx-pdu [**domain** {*md-index* | *md-admin-name*}] [**association** {*ma-index* | *ma-admin-name*}] [**mep** *mep-id*]

Context

[Tree] (show>eth-cfm local-tx-pdu)

Full Context

show eth-cfm local-tx-pdu

Description

This command displays the transmission for ETH-CC, ETH-AIS, and ETH-CFM Grace (ETH-VSM or ETH-ED) using a character representation for each protocol per MEP. ETH-CC is expanded to include columns for RDI, Port Status TLV, and Interface Status TLV. The additional ETH-CC columns represent the actual transmitting value of the TLV, or "Absent” if not present in the ETH-CC PDU. These additional ETH-CC columns are represented with a series of dashes if the ETH-CC column under the TxPDU is a dash ("-”) or "c”.

The optional parameters are treated as independent and cumulative filters that are combined to refine the output. Rows in the output are populated for matches against all specified filters. Omitting all optional parameters produces output that includes all MEPs.

Parameters

md-index

Specifies the MD index.

© 2026 Nokia.

Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 4294967295

md-admin-name

Specifies the MD name, up to 64 characters.

ma-index

Specifies the MA index.

Values 1 to 4294967295

ma-admin-name

Specifies the MD name, up to 64 characters.

mep-id

Specifies the local MEP ID.

Values 1 to 8191

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of local PDU transmission information, and Table 289: Output fields: ETH-CFM local PDU transmission describes the output fields.

Output example

```
show eth-cfm local-tx-pdu

Table 289: Output fields: ETH-CFM local PDU transmission

Label	Description
MdIndex	The local MEP domain index
MaIndex	The local MEP association index
MepId	The local MEP identifier
SrcMacAddress	The local MEP source MAC address
TxRdi	The RDI value
PortTLV	The Port Status TLV value
IfTLV	The Interface Status TLV value
TxPDU	The transmission, summarized in three single-character columns. The left column displays ETH-CC, the middle column displays ETH-AIS, and the right column displays ETH-CFM Grace (ETH-VSM or ETH-ED). For ETH-AIS, "A” is displayed when a facility MEP has determined that the AIS state is active, regardless of interaction, linkages, or active transmission of associated MEPs.
md-admin-name	Displays the administrative MD name.
ma-admin-name	Displays the administrative MA name.

Context

[Tree] (show>subscr-mgmt local-user-db)

Full Context

show subscriber-mgmt local-user-db

Description

This command displays local user database information.

Parameters

local-user-db-name

Specifies the name of a local user database up, to 32 characters.

association

Displays entities associated with the specified local user database.

dhcp

Displays entities associated with the specified local user database for DHCP clients or server.

ppp

Displays entities associated with the specified local user database for PPP sessions.

l2tp

Displays entities associated with the specified local user database for L2TP sessions.

radius

Displays entities associated with the specified local user database for RADIUS fallback.

pppoe

Displays entities associated with the specified local user database for PPPoE sessions.

dhcp6

Displays entities associated with the specified local user database for DHCPv6 clients.

capture-sap

Displays capture-saps associated with the specified local user database.

rt-solicit

Displays entities associated with the specified local user database for rtr-solicit session.

wpp

Displays entities associated with the specified local user database for WPP.

ipoe

Displays entities associated with the specified local user database for IPoE sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gtp

Displays GTP APN policies associated with the specified local user database.

ipoe-all-hosts

Displays a summary overview of all IPoE hosts .

ipoe-host-name

Displays detailed information about the specified IPoE host.

ipoe-unmatched-hosts

Displays unmatched IPoE hosts and the reason why they cannot be matched in the specified local user database.

ppp-all-hosts

Displays a summary overview of all PPP hosts.

ppp-hosts

Displays detailed information about the specified PPP host.

ppp-unmatched-hosts

Displays unmatched PPP hosts and the reason why they cannot be matched in the specified local user database.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following commands display local user database information and Table 290: Output fields: local user database describes the output fields.

Output Example

```
show subscriber-mgmt local-user-db
```

```

Table 290: Output fields: local user database

Field	Description
Name	The local user database name
Admin State	The administrative state of the local user database

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Host Count	The number of hosts associated with the local user database
Description	The user-provided description of the local user database
Number of Local User Databases	The number of local user databases configured on the node
Number of Hosts	The number of hosts configured on the node
Last Mgmt Change	The sysUpTime at the time of the last modification
DHCP Match Types	The DHCP match type
DHCP CircId Mask Pfx	The DHCP circuit ID mask prefix
DHCP CircId Mask Sfx	The DHCP circuit ID mask suffix
PPPoE Match Types	The PPPoE match types; circuit-id, derived-id, dual-stack-remote-id, encap-tag-range, ip, mac, option60, remote-id, sap-id, service-id, string, system-id
PPPoE CircId Mask Pfx	The PPPoE circuit ID mask prefix
PPPoE CircId Mask Sfx	The PPPoE circuit ID mask suffix
Circuit Id	The circuit ID to match during host identification
Mac Address	The MAC address to matching during host identification
Remote Id	The remote ID from option 82 to match against
Sap Id	The SAP ID from the Nokia vendor specific sub-option in option 82 to match against
Service Id	The service ID to match during host identification
String	The string from the Nokia vendor specific sub-option in option 82 to match against
Option 60	The Vendor-Identifying Vendor Option to match against
System Id	The system ID from the Nokia vendor specific sub-option in option 82 to match against
Subscriber Id	The subscriber ID which is encoded in the identification strings
SLA Profile String	The SLA profile string which is encoded in the identification strings
Sub Profile String	The subscriber profile string which is encoded in the identification strings

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
App Profile String	The application profile string which is encoded in the identification strings
ANCP String	The ANCP string which is encoded in the identification strings
Inter Destination Id	The intermediate destination identifier which is encoded in the identification strings
Name	The unmatched host name
Reason	Indicates why this host is not matched
Duplicate Host	The name of the host that is already matched and that has the same values, configured for the objects that correspond with the match types, as this unmatched host
Server-Name	The service name of the unmatched host
Router-Name	The router name of the unmatched host
Interface-Name	The interface name of the unmatched host
Service-Id	The service ID that matches the host identification the Nokia vendor specific sub-option in option 82, or the service where the IPoE session is established
Interface-Name	The interface name associated with the local user database
Svc-Id Svc-Id	The service ID associated with the local user database
Type	The service type
SAP	The capture SAP associated with the local user database
PPPoE	PPPoE associated with the capture SAP; Y or N
PPP	PPPoE associated with the capture SAP; Y or N
IpoE	IPoE associated with the capture SAP; Y or N
DHCP	DHCP associated with the capture SAP; Y or N
DHCP6	DHCP6 associated with the capture SAP; Y or N
RS	RS associated with the capture SAP; Y or N
No. of SAP(s)	The total number of SAPs
Keepalive	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Interval	The LCP keepalive interval override value configured for this PPP host. N/A means no override is configured
Hold up multiplier	The LCP keepalive hold up multiplier override value configured for this PPP host. N/A means no override is configured

local-user-db

Syntax

local-user-db *local-user-db-name*

Context

[Tree] (tools>perform>subscr-mgmt local-user-db)

Full Context

tools perform subscriber-mgmt local-user-db

Description

This command provides tools to control the local user database.

Parameters

local-user-db-name

Specifies the name of a local user database up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

14.61 locator

locator

Syntax

locator [**mt** {**0** | **2**}] [**prefix** *ipv6-prefix*[/*prefix-length*]] [**adv-router** *system-id* | *hostname*] [**algo** *algo-id*]

Context

[Tree] (show>router>isis>srv6 locator)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router isis segment-routing-v6 locator

Description

This command displays IS-IS SRv6 locators.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values *ipv6-prefix*[/*prefix*]: x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D
prefix-length: 1 to 128

system-id* | *hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

locator

Syntax

locator [*locator-name*]

Context

[Tree] (show>router>srv6 locator)

Full Context

show router segment-routing-v6 locator

Description

This command displays the SRv6 locator status.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

locator-name

Specifies the locator name, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

14.62 lockout

lockout

Syntax

lockout *aps-id*

Context

[Tree] (tools>perform>aps lockout)

Full Context

tools perform aps lockout

Description

This command locks out the protection circuit.

Parameters

aps-id

Specifies the APS ID.

Values

aps-id	aps-*group-id*	
	aps	keyword
	group-id	1 to 128

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

lockout

Syntax

lockout id *tunnel-id*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lockout *lsp-name*

Context

[Tree] (tools>perform>router>mpls>tp-tunnel lockout)

Full Context

tools perform router mpls tp-tunnel lockout

Description

This command performs a lockout of protection for an MPLS-TP LSP. This prevents a switchover to the protect path.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 0 to 42949667295

lsp-name

Specifies the name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lockout

Syntax

lockout router *router-id* **local-gateway-address** *local-gateway-address* **mda** *mda*

lockout router *router-id* **local-gateway-address** *local-gateway-address* **esa-vm** *esa-id/vm-id*

lockout router *router-id* **local-gateway-address** *local-gateway-address* **remote** *ip-address*[**:***port*]

lockout router *router-id* **mda** *mda*

Context

[Tree] (show>ipsec lockout)

Full Context

show ipsec lockout

Description

This command displays the lockout status for the specified IPsec clients. If remote address information is not specified, the system displays a list of clients that have been locked out on the specified ISA, along with the IPsec gateway if *local-gateway-address* is specified.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

router-id

Specifies the ID of the router where the IPsec gateway is configured.

local-gateway-address

Specifies the IP address of the local IPsec gateway.

mda

Specifies the MDA ID of the ISA.

ip-address

Specifies the IP address of the remote client.

port

Specifies the port of the remote client.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values	esa-vm:	*esa-id*/*vm-id*	
		esa-id	1 to 16
		vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of lockout information.

Output Example

```
show ipsec lockout router 300 local-gateway-address 172.16.100.1 remote
192.168.61.100:500
===============================================================================
IPsec Lockout Client
===============================================================================
Lockout               : True
Router ID             : 300
Local Gateway Address : 172.16.100.1
Lockout Client Address: 192.168.61.100
Lockout Client Port   : 500
No. of Failed Attempts: 2
No. of Dropped Packets: 2
Remaining Block Time  : 289 seconds
===============================================================================
```

lockout

lockout router *router-id* **local-gateway-address** *local-gateway-address*

lockout router *router-id* **local-gateway-address** *local-gateway-address* **remote** *ip-address*[**:***port*]

Context

[Tree] (clear>ipsec lockout)

Full Context

clear ipsec lockout

Description

This command clears the lockout state for the specified clients. If remote address information is not specified, the system clears the lockout state for all clients within the specified routing instance, along with all clients within the specified IPsec gateway if *local-gateway-address* is specified.

Parameters

router-id

Specifies the ID of the router where the IPsec gateway is configured.

local-gateway-address

Specifies the IP address of the local IPsec gateway.

ip-address

Specifies the IP address of the remote client.

port

Specifies the port of the remote client.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

show filter log

Description

This command shows the contents of a memory-based or a file-based filter log.

If the optional keyword **match** and *string* parameter are given, the command displays the given filter log from the first occurrence of the given string.

Parameters

bindings

Displays the number of filter logs currently instantiated.

log-id

Specifies the filter log ID destination expressed as a decimal integer.

Values 101 to 199

string

Specifies to start displaying the filter log entries from the first occurrence of *string*.

Platforms

Log Message Formatting — Each filter log entry contains the following information in case summary log feature is not active (as appropriate).

Table 291: Output fields: filter log

Label	Description
yyyy/*mm*/*dd hh*:*mm*:*ss*	The date and timestamp for the log filter entry where *yyyy* is the year, *mm* is the month, *dd* is the day, *hh* is the hour, *mm* is the minute and *ss* is the second
Filter	The filter ID and the entry ID which generated the filter log entry in the form *Filter_ID*:*Entry_ID*
Desc	The description of the filter entry ID which generated the filter log entry
Interface	The IP interface on which the filter ID and entry ID was associated which generated the filter log entry
Action	The action of the filter entry on the logged packet
Src MAC	The source MAC address of the logged packet
Dst MAC	The destination MAC of the logged packet
EtherType	The Ethernet type of the logged Ethernet type II packet
Src IP	The source IP address of the logged packet; the source port is displayed after the IP address as appropriate separated with a colon
Dst IP	The destination IP address of the logged packet; the source port is displayed after the IP address as appropriate separated with a colon
Flags (IP flags)	M — the more fragments IP flag is set in the logged packet DF — the do not fragment IP flag is set in the logged packet
TOS	The ToS byte value in the logged packet
Protocol	The IP protocol of the logged packet (TCP, UDP, ICMP or a protocol number in hex)
Flags (TCP flags)	URG — Urgent bit set ACK — Acknowledgment bit set RST — Reset bit set SYN — Synchronize bit set FIN — Finish bit set
HEX	If an IP protocol does not have a supported decode, the first 32 bytes following the IP header are printed in a hex dump

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Log entries for non-IP packets include the Ethernet frame information and a hex dump of the first 40 bytes of the frame after the Ethernet header
Total Log Instances (Allowed)	Specifies the maximum allowed instances of filter logs allowed on the system
Total Log Instances (In Use)	Specifies the instances of filter logs presently existing on the system
Total Log Bindings	Specifies the count of the filter log bindings presently existing on the system
Type	The type of service of the service ID
Filter ID	Uniquely identifies an IP filter as configured on the system
Entry ID	The identifier which uniquely identifies an entry in a filter table
Log	Specifies an entry in the filter log table
Instantiated	Specifies if the filter log for this filter entry has or has not been instantiated

If the packet being logged does not have a source or destination MAC address (that is, POS) then the MAC information output line is omitted from the log entry.

If log summary is active, the filter log mini-tables contain the information described in Table 292: Output fields: filter log summary (mini-tables).

Table 292: Output fields: filter log summary (mini-tables)

Label	Description
Summary Log LogID	Displays the log ID
Crit1	Summary criterion that is used as index into the mini-tables of the log
TotCnt	The total count of logs
ArpCnt	Displays the total number of ARP messages logged for this log ID
Src... Dst...	The address type indication of the key in the mini-table
count	The number of messages logged with the specified source/ destination address
address	The address for which count messages where received

```

Table 293: Output fields: log collector

Label	Description
<Collector Name>	Main — The main event stream contains the events that are not explicitly directed to any other event stream.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Security — The security stream contains all events that affect attempts to breach system security such as failed login attempts, attempts to access MIB tables to which the user is not granted access or attempts to enter a branch of the CLI to which access has not been granted. Change — The change event stream contains all events that directly affect the configuration or operation of this node. Debug — The debug-trace stream contains all messages in the debug stream.
Dest. Log ID	Specifies the event log stream destination.
Filter ID	The value is the index to the entry which defines the filter to be applied to this log's source event stream to limit the events output to this log's destination. If the value is 0, then all events in the source log are forwarded to the destination.
Status	Enabled — Logging is enabled. Disabled — Logging is disabled.
Dest. Type	Console — A log created with the console type destination displays events to the physical console device. Events are displayed to the console screen whether a user is logged in to the console or not. Session — A user logged in to the console device or connected to the CLI via a remote telnet or SSH session can also create a log with a destination type of 'session'. Events are displayed to the session device until the user logs off. Syslog — Log events are sent to a syslog receiver. SNMP traps — Events defined as SNMP traps are sent to the configured SNMP trap destinations and are logged in NOTIFICATION-LOG-MIB tables. File — All selected log events are directed to a file on one of the compact flash disks. Memory — All selected log events are directed to an in-memory storage area.

Context

[Tree] (show>service>id>log log-id)

Full Context

show service id log log-id

Description

This command displays an event log summary with settings and statistics or the contents of a specific log file, SNMP log, or memory log.

If the command is specified with no command line options, a summary of the defined system logs is displayed. The summary includes log settings and statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If the log ID of a memory, SNMP, or file event log is specified, the command displays the contents of the log. Additional command line options control what and how the contents are displayed.

Contents of logs with console, session or syslog destinations cannot be displayed. The actual events can only be viewed on the receiving syslog or console device.

Parameters

log-id

Displays the contents of the specified file log or memory log ID. The log ID must have a destination of an SNMP or file log or a memory log for this parameter to be used.

Values 1 to 100

Default Displays the event log summary.

severity-level

Displays only events with the specified and higher severity.

Values cleared, indeterminate, critical, major, minor, warning

Default All severity levels.

application

Displays only events generated by the specified application.

Values anysec, application_assurance, aps, atm, bfd, bgp, calltrace, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtungrp, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, mcac, mcpath, mc_redundancy, mirror, mld, mld_snooping, mpls, mpls_tp, mrp, msdp, nat, ntp, oam, open_flow, ospf, pcep, pim, pim_snooping, port, ppp, pppoe, pppoe_clnt, ptp, pxc, python, qos, radius, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

Default All applications.

from-seq [to-seq]

Displays the log entry numbers from a particular entry sequence number (*from-seq*) to another sequence number (*to-seq*). The *to-seq* value must be larger than the *from-seq* value.

If the *to-seq* number is not provided, the log contents to the end of the log is displayed unless the **count** parameter is present in which case the number of entries displayed is limited by the **count**.

Values 1 **to** 4294967295

Default All sequence numbers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

count

Limits the number of log entries displayed to the *number* specified.

Values 1 **to** 4294967295

Default All log entries.

subject

Displays only log entries matching the specified text *subject* string, up to 32 characters. The subject is the object affected by the event, for example the port-id would be the subject for a link-up or link-down event.

regexp

Specifies to use a regular expression as parameters with the specified **subject** string.

ascending* | *descending

Specifies sort direction. Logs are normally shown from the newest entry to the oldest in **descending** sequence number order on the screen. When using the **ascending** parameter, the log is shown from the oldest to the newest entry.

Default Descending.

format

Specifies a message string, up to 400 characters, to be used in the display criteria.

msg-regexp

Specifies to use a regular expression as parameters with the specified message string.

Platforms

All

Output

Table 294: Output fields: log ID describes the log ID field output.

Table 294: Output fields: log ID

Label	Description
Log Id	An event log destination.
Source	no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID.
Filter ID	The value is the index to the entry which defines the filter to be applied to this log's source event stream to limit the events output to this log's destination. If the value is 0, then all events in the source log are forwarded to the destination.
Admin State	Up — Indicates that the administrative state is up. Down — Indicates that the administrative state is down.
Oper State	Up — Indicates that the operational state is up.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Down — Indicates that the operational state is down.
Logged	The number of events that have been sent to the log source(s) that were forwarded to the log destination.
Dropped	The number of events that have been sent to the log source(s) that were not forwarded to the log destination because they were filtered out by the log filter.
Dest. Type	Console — All selected log events are directed to the system console. If the console is not connected, then all entries are dropped. Syslog — All selected log events are sent to the syslog address. SNMP traps — Events defined as SNMP traps are sent to the configured SNMP trap destinations and are logged in NOTIFICATION-LOG-MIB tables. File — All selected log events are directed to a file on one of the CPM's compact flash disks. (7750 SR and 7450 ESS only). Memory — All selected log events are directed to an in-memory storage area.
Dest ID	The event log stream destination.
Size	The allocated memory size for the log.
Time format	The time format specifies the type of timestamp format for events sent to logs where log ID destination is either syslog or file. When the time format is UTC, timestamps are written using the Coordinated Universal Time value. When the time format is local, timestamps are written in the system's local time.

log-id

Parameters

log-id | log-name

Specifies the log ID or name.

Values 1 to 100

severity-level

Specifies the severity level.

Values cleared, indeterminate, critical, major, minor, warning

application

Specifies the application name.

Values anysec, application_assurance, aps, atm, auto_prov, bfd, bgp, bier, bmp, calltrace, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtp, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp, oam, open_flow, ospf, pcap, pcep, pfcp, pim, pim_snooping, port, ppp, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, sr_policy, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

from-seq [to-seq]

Specifies the sequence value.

Values 1 to 4294967295

count

Specifies the count.

Values 1 to 4294967295

router-instance

Specifies the router instance.

subject

Specifies a subject string to match.

regexp

Specifies to use a regular expression match.

ascending | descending

Specifies the sort direction.

message

Specifies the message, up to 400 characters.

msg-regexp

Specifies to use a message regular expression match.

Context

[Tree] (show>log log-id)

Full Context

show log log-id

Description

This command displays an event log summary with settings and statistics or the contents of a specific log file, SNMP log, or memory log.

If the command is specified with no command line options, a summary of the defined system logs is displayed. The summary includes log settings and statistics.

If the log ID of a memory, SNMP, or file event log is specified, the command displays the contents of the log. Additional command line options control what and how the contents are displayed.

Contents of logs with console, session or syslog destinations cannot be displayed. The actual events can only be viewed on the receiving syslog or console device.

Parameters

log-id* | *log-name

Displays the contents of the specified file log or memory log ID. The log ID, or optional log name (up to 64 characters), must have a destination of an SNMP or file log or a memory log for this parameter to be used.

Default Displays the event log summary

Values 1 to 101

severity-level

Displays only events with the specified and higher severity.

Default All severity levels

Values cleared, indeterminate, critical, major, minor, warning

application

Displays only events generated by the specified application.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default All applications

The following values are examples of applications:

Values bgp, cflowd, chassis, dhcp, debug, filter, igmp, ip, isis, lag, ldp, lldp, logger, mirror, mpls, oam, ospf, pim, port, ppp, rip, route_policy, rsvp, security, snmp, stp, svcmgr, system, user, vrrp, vrtr, ospf_ng, ntp

expression

Specifies to use a regular expression as match criteria for the router instance string.

from-seq [to-seq]

Displays the log entry numbers from a particular entry sequence number (*from-seq*) to another sequence number (*to-seq*). The *to-seq* value must be larger than the *from-seq* value.

If the *to-seq* number is not provided, the log contents to the end of the log is displayed unless the **count** parameter is present in which case the number of entries displayed is limited by the **count**.

Default All sequence numbers

Values 1 to 4294967295

count

Limits the number of log entries displayed to the *number* specified.

Default All log entries

Values 1 to 4294967295

router-instance

Specifies a router name up to 32 characters in length to be used in the display criteria.

message

Specifies a message string up to 400 characters in length to be used in the display criteria.

msg-regexp

Specifies to use a regular expression as parameters with the specified *message* string.

subject

Displays only log entries matching the specified text *subject* string. The subject is the object affected by the event, for example the port-id would be the subject for a link-up or link-down event.

regexp

Specifies to use a regular expression as parameters with the specified *subject* string.

ascending | descending

Specifies sort direction. Logs are normally shown from the newest entry to the oldest in **descending** sequence number order on the screen. When using the **ascending** parameter, the log is shown from the oldest to the newest entry.

Default Descending

Table 295: Output fields: log ID

Label	Description
Log Name/Id	An event log destination.
Source	no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID.
Filter ID	The value is the index to the entry which defines the filter to be applied to this log's source event stream to limit the events output to this log's destination. If the value is 0, then all events in the source log are forwarded to the destination.
Admin State	Up — Indicates that the administrative state is up. Down — Indicates that the administrative state is down.
Oper State	Up — Indicates that the operational state is up. Down — Indicates that the operational state is down.
Logged	The number of events that have been sent to the log source(s) that were forwarded to the log destination.
Dropped	The number of events that have been sent to the log source(s) that were not forwarded to the log destination because they were filtered out by the log filter.
Dest. Type	Console — All selected log events are directed to the system console. If the console is not connected, then all entries are dropped. Syslog — All selected log events are sent to the syslog address. SNMP traps — Events defined as SNMP traps are sent to the configured SNMP trap destinations and are logged in NOTIFICATION-LOG-MIB tables. File — All selected log events are directed to a file on one of the CPM's compact flash disks. Memory — All selected log events are directed to an in-memory storage area.
Dest ID	The event log stream destination.
Size	The allocated memory size for the log.
Time format	The time format specifies the type of timestamp format for events sent to logs where log ID destination is either syslog or file. When the time format is UTC, timestamps are written using the Coordinated Universal Time value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	When the time format is local, timestamps are written in the system's local time.

log-id

Syntax

log-id *log-id*

Context

[Tree] (clear>log log-id)

Full Context

clear log log-id

Description

Reinitializes or rolls over the specified memory/file event log ID. Memory logs are reinitialized and cleared of contents. File logs are manually rolled over by this command.

This command is only applicable to event logs that are directed to file destinations and memory destinations.

SNMP, syslog, console, or session logs are not affected by this command.

Parameters

log-id

Specifies the event log ID to be initialized or rolled over.

Values 1 to 100

Platforms

All

14.68 logger-event-bundling

logger-event-bundling

Syntax

logger-event-bundling

14.71 low-power-fabric

low-power-fabric

Syntax

low-power-fabric capacity *percentage*

Context

[Tree] (tools>perform>system>power-management>power-save low-power-fabric)

Full Context

tools perform system power-management power-save low-power-fabric

Description

This command operationally enables low-power switch fabric mode to reduce SFM power consumption. Setting the capacity to a percentage less than 100.00 puts the corresponding number of SFMs into power save mode. Setting the capacity to 100.00 operationally disables low-power fabric mode.

Parameters

percentage

Specifies the switch fabric capacity percentage.

Values 7750 SR-2s: 50.00, 100.00
7750 SR-2se: 50.00, 75.00, 100.00
7750 SR-7s: 25.00, 50.00, 75.00, 100.00

lsn-blocks

Syntax

lsn-blocks [**inside-router** *router-instance*] [**inside-ip** *ip-address*] [**outside-ip-prefix** *ip-prefix/length*] [**outside-port** [*0..65535*]] [**pool** *pool-name*]

Context

[Tree] (show>router>nat lsn-blocks)

Full Context

show router nat lsn-blocks

Description

This command displays large scale NAT blocks.

Parameters

router-instance

Specifies the router instance name and service ID.

Values

router-name:	Base , management
service-id:	1 to 2147483647
svc-name:	A string up to 64 characters.

ip-address

Specifies the IP address in a.b.c.d format.

ip-prefix

Specifies the IP prefix.

Values a.b.c.d (host bits must be 0)

length

Specifies the IP prefix length.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 32

pool-name

Specifies the pool name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

14.74 lsn-subscribers

lsn-subscribers

Syntax

lsn-subscribers subscriber *lsn_sub-id* [**detail**] [**outside-ip-address**]

lsn-subscribers subscriber [**nat-policy** *nat-policy-name*] [**nat-group** *nat-group-id*] [**member** [*1..255*] [**outside-router** *router-instance*] [**outside-ip** *outside-ip-address*] [**inside-router** *router-instance*] [**inside-ip** *lsn-subscriber-address*] [**detail**]

lsn-subscribers subscriber-string *subscriber-string* [**detail**]

Context

[Tree] (show>service>nat lsn-subscribers)

Full Context

show service nat lsn-subscribers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays LSN subscriber information.

Parameters

subscriber

Keyword used to specify a LSN subscriber.

lsn-sub-id

Specifies the LSN subscriber ID.

Values 1 to 4294967295

detail

Keyword used to specify detailed information.

outside-ip-address

Keyword used to specify outside IP address information.

nat-policy

Keyword used to specify a NAT policy.

nat-policy-name

Specifies the NAT policy name, up to 32 characters.

nat-group

Keyword used to specify a NAT group.

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

member

Keyword used to specify a member.

outside-router

Keyword used to specify an outside router.

router-instance

Specifies the router instance.

Values *router-name* | *vprn-svc-id*

router-name — "Base”

vprn-svc-id — 1 to 2147483647

outside-router

Keyword used to specify an outside IP address.

outside-ip-address

Specifies the outside IP address.

Values a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inside-router

Keyword used to specify an inside router.

lsn-sub-address

Specifies the LSN subscriber IP address.

Values		
	<ipv4-address>	a.b.c.d (host bits must be 0)
	<ipv6-prefix>	x:x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x:d.d.d.d
		x - [0 to FFFF]H
		d - [0 to 255]D
	<ipv6-prefix-length>	[0 to 128]

type

Keyword used to specify the LSN subscriber type.

Values classic-lsn-sub, dslite-lsn-sub, nat64-lsn-sub, nat66-lsn-sub

subscriber-string

Keyword used to specify a subscriber string.

subscriber-string

Specifies the subscriber string, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of LSN subscriber information and Table 296: Output fields: LSN subscribers describes the output fields.

Output Example

```
# show service nat lsn-subscribers type nat66-lsn-sub firewall-policy <firewall-policy>

lsp

Syntax

lsp [*lsp-name*] [**status** {**up** | **down**}] [**from** *ip-address* | **to** *ip-address*] [**detail**] [**auto-lsp** {**all** | **mesh-p2p** | **one-hop-p2p** | **member-p2p**}]

lsp {**transit** | **terminate**} [**status** {**up** | **down**}] [**from** *ip-address* | **to** *ip-address* | **lsp-name** *name*] [**detail**]

lsp count

lsp [*lsp-name*] **activepath** [**auto-lsp** {**all** | **mesh-p2p** | **one-hop-p2p** | **member-p2p**}]

lsp [*lsp-name*] **path** [*path-name*] [**status** {**up** | **down**}] [**detail**] [**auto-lsp** {**all** | **mesh-p2p** | **one-hop-p2p** | **member-p2p**}]

lsp [*lsp-name*] **path** [*path-name*] **mbb** [**auto-lsp** {**all** | **mesh-p2p** | **one-hop-p2p** | **member-p2p**}]

lsp [*lsp-name*] **auto-bandwidth** [**auto-lsp** {**all** | **mesh-p2p** | **one-hop-p2p** | **member-p2p**}]

lsp [*lsp-name*] **path** [*path-name*] [**detail**] [**dns**]

Context

[Tree] (show>router>mpls lsp)

Full Context

show router mpls lsp

Description

This command displays LSP details.

Parameters

lsp-name

Specifies the name of the LSP used in the path, up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

status up

Keyword used to display an LSP that is operationally up.

status down

Keyword used to display an LSP that is operationally down.

from *ip-address*

Displays the IP address of the ingress router for the LSP.

to *ip-address*

Displays the IP address of the egress router for the LSP.

detail

Keyword used to display detailed information.

auto-lsp all

Keyword used to display all the auto-LSP types.

auto-lsp mesh-p2p

Keyword used to display the mesh-P2P auto-LSP types.

auto-lsp one-hop-p2p

Keyword used to display the one-hop P2P auto LSP types.

auto-lsp member-p2p

Keyword used to display the P2P auto-LSP types.

transit

Keyword used to display the number of static LSPs that transit through the router.

terminate

Keyword used to display the number of static LSPs that terminate at the router.

count

Keyword used to display the total number of LSPs.

activepath

Keyword used to display the present path being used to forward traffic.

path-name

Specifies the LSP path name.

mbb

Keyword used to display MBB information.

dns

Keyword used to display reverse DNS resolution of actual and explicit hop information.

Platforms

All

Output

The following outputs are examples of MPLS LSP information:

- Output example: LSP information, Table 297: Output fields: MPLS LSP information

Table 297: Output fields: MPLS LSP information

Label	Description
LSP Name	The name of the LSP used in the path.
To	The IP address of the egress router for the LSP
Fastfail Config	enabled — Fast Reroute is enabled. In the event of a failure, traffic is immediately rerouted on the pre-computed detour LSP, thus minimizing packet loss. disabled — There is no detour LSP from each node on the primary path

Table 298: Output fields: MPLS LSP detailed information

Label	Description
LSP Name	The name of the LSP used in the path
LSP Type	The LSP type
LSP Tunnel ID	The tunnel ID number for the LSP used in the interaction with PCC and PCE
LSP Index	The LSP index used for indexing the LSP in the MIB table shared with the RSVP-TE LSP
TTM Tunnel Id	The tunnel ID number for the tunnel representing the LSP in the TTM
From	The IP address of the ingress router for the LSP
To	The IP address of the egress router for the LSP
Adm State	Down — The path is administratively disabled Up — The path is administratively enabled
Oper State	Down — The path is operationally down Up — The path is operationally up
LSP Up Time	The length of time the LSP has been operationally up
LSP Down Time	The length of time the LSP has been operationally down

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Transitions	The number of transitions that have occurred for the LSP
Path Changes	The number of path changes for this LSP. For every path change (path down, path up, path change), a corresponding syslog or trap (if enabled) is generated.
Retry Limit	The number of attempts that the software should make to reestablish the LSP after it has failed
Retry Timer	The time in seconds, for LSP reestablishment attempts after an LSP failure
Signaling	The signaling style
Resv. Style	se — a shared reservation environment with a limited reservation scope. This reservation style creates a single reservation over a link that is shared by an explicit list of senders. ff — a shared reservation environment with an explicit reservation scope. Specifies an explicit list of senders and a distinct reservation for each .
Hop Limit	The maximum number of hops that an LSP can traverse, including the ingress and egress routers
Negotiated MTU	The size of the maximum transmission unit (MTU) that is negotiated during establishment of the LSP
Adaptive	The adaptive status: • Enabled – the adaptive is enabled • Disabled – the adaptive is disabled
ClassType	The class type
Fast Reroute	enabled – Fast Reroute is enabled. In the event of a failure, traffic is immediately rerouted on the pre-computed detour LSP, thus minimizing packet loss. disabled – there is no detour LSP from each node on the primary path
Oper FR	Indicates if the operational Fast Reroute in enabled
PathCompMethod	pce — PCE path computation method is configured local-cspf — local CSPF path computation method is configured
CSPF	The CSPF status: • Enabled – CSPF is enabled • Disabled – CSPF is disabled
ADSPEC Adspec	Enabled – the LSP includes advertising data (ADSPEC) objects in RSVP messages Disabled – the LSP does not include advertising data (ADSPEC) objects in RSVP messages
FallbkPathComp	none – no fallback method is configured

Label	Description
	local-cspf – local CSPF fallback is configured
Metric	The metric
Use TE metric	The TE metric status: • Enabled – class forwarding is enabled • Disabled – class forwarding is disabled
Metric Type	The metric type
Load Bal Wt	The load balance weight value
Class Forwarding	The class forwarding status: • Enabled – class forwarding is enabled • Disabled – class forwarding is disabled
CBF FC	The CBF forwarding class
CBF Default LSP	Indicates if the CBF default LSP exists
CBF Fwding Plcy	The CBF forwarding policy name
CBF Fwding Set	The CBF forwarding set
Include Grps	The included groups. None indicates that no groups are included.
Exclude Grps	The excluded groups. None indicates that no groups are excluded.
Least Fill	The least fill status
BFD Template	The BFD template name
BFD Ping Intvl	The BFD ping interval
BFD Enable	The operational state of the BFD on the LSP
BFD Failure-action BFD failure-ac*	The failure action that is configured for the BFD LSP
Revert Timer	The length of time for a named LSP using the secondary path to revert to the primary path
Next Revert In	The next revert interval
Entropy Label EntropyLbl	The entropy label status: • Enabled – the entropy label is enabled • Disabled – the entropy label is disabled
Oper Entropy Label	Indicates if the entropy label is in use

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper EntropyLbl	
Negotiated EL	Indicates if the entropy label is negotiated for the LSP
Auto BW	The status of the auto-bandwidth adjustment: • Enabled – auto-bandwidth adjustment is configured on this LSP • Disabled – auto-bandwidth adjustment is not configured on this LSP
AB OpState	The auto-bandwith operational state: • Up – auto-bandwidth is operationally enabled on this LSP • Down – auto-bandwidth is operationally disabled on this LSP
Auto BW Min	The minimum bandwidth of the LSP that auto-bandwidth can request (in Mb/s)
Auto BW Max	The maximum bandwidth of the LSP that auto-bandwidth can request (in Mb/s)
AB Up Thres	The percent threshold for increasing LSP bandwidth
AB Down Thres	The percent threshold for decreasing LSP bandwidth
AB Up BW	The absolute bandwidth threshold for increasing LSP bandwidth (in Mb/s)
AB Down BW	The absolute bandwidth threshold for decreasing LSP bandwidth (in Mb/s)
AB Curr BW	The auto-bandwidth current bandwidth
AB Samp Intv	The auto-bandwidth sample interval
AB Adj Mul	The adjust-multiplier for this LSP (may be configured or inherited)
AB Samp Mul	The sample-multiplier for this LSP (may be configured or inherited)
AB Adj Time	The adjust-multiplier times for the collection interval (in minutes)
AB Samp Time	The sample-multiplier times for the collection interval (in minutes)
AB Adj Cnt	The adjust count (number of whole collection intervals since the start of the current adjust interval)
AB Samp Cnt	The sample count (number of whole collection intervals since the start of the current sample interval)
AB Last Adj	The system time of the last auto-bandwidth adjustment
AB Next Adj	The approximate remaining time in the current adjust interval (adjust multiplier – adjust count) times the collection interval (in minutes). This overstates the actual remaining time because the elapsed time in the current collection interval is not accounted for.
ABMaxAvgRt	The maximum average data rate in any sample interval of the current adjust interval
AB Lst AvgRt	The average data rate measured in the sample interval that ended most recently

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
AB Ovfl Lmt	The configured value of the auto-bandwidth overflow limit
AB Ovfl Cnt	The number of overflow samples since the last reset
ABOvflThres	The percent threshold for declaring an overflow sample
AB Ovfl BW	The absolute bandwidth threshold for declaring an overflow sample (in Mb/s)
AB Adj Cause	The cause of the last auto-bandwidth adjustment: • none – no adjustment has occurred • manual • adj-count • overflow
AB Monitor BW	True – monitor bandwidth is enabled on the LSP False – monitor bandwidth is not enabled on the LSP
LdpOverRsvp	The status of LDP over RSVP: • Enabled – LDP over RSVP is enabled • Disabled – LDP over RSVP is disabled
VprnAutoBind	The status of VPRN autobind: • Enabled – VRPN autobind is enabled • Disabled – VPRN autobind is disabled
IGP Shortcut	The status of IGP shortcut: • Enabled – IGP shortcut is enabled • Disabled – IGP shortcut is disabled
BGP Shortcut	The status of BGP shortcut: • Enabled – BGP shortcut is enabled • Disabled – BGP shortcut is disabled
IGP LFA	The status of IGP LFA: • Enabled – IGP LFA is enabled • Disabled – IGP LFA is disabled
IGP Rel Metric	The status of IGP relative metric: • Enabled – IGP relative metric is enabled • Disabled – IGP relative metric is disabled
BGPTransTun	The status of the BGP transport tunnels: • Enabled – BGP transport tunnels are enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Disabled – BGP transport tunnels are disabled
Oper Metric	The status of the operational metric: • Enabled – the operational metric is enabled • Disabled – the operational metric is disabled
Prop Adm Grp	The status of the propagate admin group: • Enabled – the propagate admin group is enabled • Disabled – the propagate admin group is disabled
PCE Report	The status of the PCE report: • Enabled – the PCE report is enabled • Disabled – the PCE report is disabled
Binding SID	The binding SID
PCE Compute	The status of PCE compute: • Enabled – PCE compute is enabled • Disabled – PCE compute is disabled
PCE Control	The status of the PCE control: • Enabled – the PCE control is enabled • Disabled – the PCE control is disabled
Path Profile	The path profile value for the LSP
Admin Tags	The administrative tag names. None indicates that there are no tags.
Lsp Self Ping	Enabled – LSP self ping on this RSVP LSP or these RSVP LSPs (one-hop P2P or mesh P2P) using the LSP template is enabled Disabled – LSP self ping on this RSVP LSP or these RSVP LSPs (one-hop P2P or mesh P2P) using the LSP template is disabled Inherited – inherits the value configured under **configure router mpls lsp-self-ping rsvp-te**
Self Ping Timeouts	The LSP self ping timeout value
SelfPingOAMFail*	The self ping OAM failure value
Primary	The preferred path for the LSP
Up Time	The total time in increments that the LSP path has been operational
Bandwidth	The amount of bandwidth in Mb/s reserved for the LSP path.
Standby	The standby path for the LSP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Downtime	The time that the LSP has been down
LastResignal Attempt	The system up time when the last attempt to resignal this LSP was made

Output example: MPLS LSP count information

```
A:node-2# show router mpls lsp count

===============================================================================

Table 301: Output fields: MPLS LSP detailed path information

Label	Description
LSP Name	The name of the LSP used in the path
Path LSP ID	The path LSP ID
From	The IP address of the ingress router for the LSP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
To	The IP address of the egress router for the LSP
Admin State	Down — the path is administratively disabled Up — the path is administratively enabled
Oper State	Down — the path is operationally down Up — the path is operationally up
Path Name	The path name
Path Type	The path type
Path LSP ID	The path LSP ID
Path Admin	The path administrative state
Path Oper	The operational path state
Out Interface	The port of the out interface
Out Label	The out label value
Path Up Time	The duration of path up
Path Down Time	The duration of path down
Retry Limit	The retry limit value
Retry Timer	The retry timer value
Retry Attempt	The number of retries attempted
Next Retry In	The next retry in value
BFD Configuration and State	
BFD Template Template	The BFD template
BFD Ping Interval Ping Interval	The ping interval value
BFD Enable Enable	The BFD enable status
State	The BFD state
BFD failure-action	The BFD failure action
WaitForUpTimer	The wait for up timer value

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
OperWaitFor UpTimer	The operational wait for up timer value
WaitForUpTmLeft	The wait for the up time left value
Adspec	The ADSPEC status
Oper Adspec	The operational ADSPEC status
CSPF	The CSPF
Oper CSPF	The operational CSPF
PathCompMethod	The path computation method
OperPathComp Method	The operational path computation method
MetricType	The metric type value
Oper MetricType	The operational metric type value
Least Fill	The least fill status
Oper LeastFill Oper LeastF*	The operational least fill status
FRR	The FRR status
Oper FRR	The operational FRR status
FRR NodeProtect FRR NodePro*	The FRR node protect status
Oper FRR NP	The operational FRR node protect status
FR Hop Limit	The FR hop limit value
Oper FRHopLimit Oper FRHopL*	The operational FR hop limit value
Prop Admin Grp FR Prop Adm* Propagate Adm Grp FR Prop Admin Gr*	The FR prop administrative group status
Oper Prop AG/ Oper FRProp*	The operational prop administrative group status

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper Prop Adm Grp Oper FRPropAdm Grp	
Propagate Adm Grp Propo Adm Grp	The prop administrative group status
Oper PropAdmGrp Oper PropAG	The operational prop administrative group status
Inter-area	The inter area status
PCE Report	The operational PCE report status
Oper PCE Report	The operational PCE report
PCE Control	The PCE control status
Oper PCE Control	The operational PCE control status
PCE Update ID PCE Updt ID	The PCE update ID
PCE Compute	The PCE compute status
Neg MTU	The negotiated MTU value
Oper MTU	The operational MTU value
Bandwidth	The bandwidth type
Oper Bandwidth Oper Bw	The operational bandwidth
Hop Limit	The hop limit
Oper HopLimit Oper HopLim*	The operational hop limit
Record Route	The record route value
Oper Rec Route Oper RecRou* Oper Record Route	The operational record route value
Record Label	The record label

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper Rec Label Oper RecLab* Oper Record Label	The operational record label
Setup Priority SetupPriori* Oper SetupPriority	The setup priority value
Oper Setup Priority Oper SetupP*	The operational setup priority value
Hold Priority Hold Priori*	The hold priority value
Oper Hold Priority Oper HoldPr*	The operational hold priority value
Bandwidth	The bandwidth
Oper Bw	The operating bandwidth
Class Type	The class type
Oper CT	The operational class type
Backup CT	The backup class type
MainCT Retry Rem	The main class type rem value
MainCT Retry Limit	The main class type retry limit
Include Groups	The include groups
Oper Include Groups	The operational include groups
Exclude Groups	The exclude groups
Oper Exclude Groups	The operational exclude groups
Adaptive	The adaptive status
Oper Metric	The operational metric
Preference	The preference
Path Trans	The path trans value
CSPF Queries	The number of CSPF queries

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Degraded	The degraded status
Failure Code	The failure code
Failure Node	The failure node
Explicit Hops	The explicit hops
Actual Hops	The actual hops
Record Label	The record label
Computed Hops	The computed hops
Resignal Eligible ResigEligib*	The resignal eligibility status
Last Resignal	The last resignal
CSPF Metric	The CSPF metric value
LastResignal	The system up time when the last attempt to resignal this LSP was made
CSPF Metric	The CSPF metric
MBB Type	The enumerated integer that specifies the type of MBB. If none displays, no MBB is in progress or no last MBB.
NextRetryIn	The amount of time (in seconds) remaining, before the next attempt is made to retry the in-progress MBB
Started At	The time when the action started
RetryAttempt	The number attempts for the MBB is in progress
FailureCode	The reason code for in-progress MBB failure. A value of **none** indicates that no failure has occurred. See "LSP Failure Codes" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide* for more information.
FailtureNode	The IP address of the node in the LSP path at which the in-progress MBB failed. When no failure has occurred, this value is none.
MBB State	The state of the most recent invocation of the MBB functionality
Ended At	The system up time when the last MBB ended
Old Metric	The cost of the traffic engineered path for the LSP path prior to MBB

clear router mpls lsp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command resets and restarts an LSP.

Parameters

lsp-name

Specifies the LSP to clear, up to 64 characters in length.

Platforms

All

lsp

Syntax

lsp [**plsp-id** *plsp-id*]

lsp lsp-type *lsp-type* [**tunnel-id** *tunnel-id*]

Context

[Tree] (tools>dump>router>pcep>pcc lsp)

Full Context

tools dump router pcep pcc lsp

Description

This command displays LSP information.

Parameters

plsp-id

Specifies the PLSP ID.

Values 1 to 1048575

lsp-type

Specifies the LSP type.

Values rsvp-p2p, rsvp-p2mp, seg-rt

tunnel-id

Specifies the tunnel ID.

Values 1 to 1048575

Platforms

All

lsp-autobandwidth

Syntax

lsp-autobandwidth [*lsp-name*]

Context

[Tree] (clear>router>mpls lsp-autobandwidth)

Full Context

clear router mpls lsp-autobandwidth

Description

This command clears the following counters/timers, as follows:

- The sample count is reset to zero, and the average data rate of the current sample interval is discarded.
- The adjust count is reset to zero.
- The maximum average data rate is zeroed.
- The overflow count is zeroed.

Parameters

lsp-name

Specifies the LSP to clear, up to 64 characters.

Platforms

All

14.77 lsp-bfd

lsp-bfd

Syntax

lsp-bfd [*prefix-list-name* [**prefixes**]]

Context

[Tree] (show>router>ldp lsp-bfd)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router ldp lsp-bfd

Description

This command displays information about prefixes that have LSP BFD configured.

Parameters

prefixes

Shows all FECs that the system has received a label mapping message for and which are also eligible for LSP BFD.

prefix-list-name

Specifies a prefix list for which to display prefix information, and whether BFD is active for each prefix.

Platforms

All

Output

The following output is an example of LSP BFD information for prefixes.

Output Example

```
A:b1# show router ldp lsp-bfd "prefixListName_12345678901234567"
===============================================================================
BFD on LDP LSP Configuration Detail
===============================================================================

Full Context

show test-oam lsp-bfd

Description

This command displays information about Bidirectional Forwarding Detection (BFD) sessions on LSPs.

Parameters

ip-prefix/prefix-length

Specifies an IP prefix for which to display BFD session information, and the length of the prefix.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values *ipv4-prefix* — a.b.c.d

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

bfd-discriminator

Displays information about the unique local discriminator for this session.

lsp-name

Specifies information about the specified LSP name up to 64 characters in length.

Platforms

All

Output

The following output is an example of BFD LSP information.

Output Example

Table 304: Output fields: detailed LSP container information

Label	Description
LSP Container Name	The LSP container name
Member LSP Template	The member LSP template
Admin State	The administrative state of the LSP container
Oper State	The operational state of the LSP container
Oper Down Reason	The operational down state reason
Suffix	The suffix shows an optional string for the formation of LSP member names
To Address	The IP address of the egress router of the member LSPs of the LSP container
Min Member LSPs	The minimum number of member LSPs the LSP container can have
Max Member LSPs	The maximum number of member LSPs the LSP container can have
Initial Num LSPs	The initial number of LSPs. This is the initial number of LSPs the LSP container tries to create when it transitions to being administratively up.
Initial LSP BW	The initial LSP bandwidth. This is the initial bandwidth, in Mb/s, reserved by each member LSP when the LSP container transitions to being administratively up.
Num Member LSPs	The number of member LSPs
Num LSPs Up	The number of LSPs that are operationally up
Nominal Num LSPs	The nominal number of LSPs
Nominal BW	The nominal bandwidth
Optimization Timer	The optimization timer value, which is the period at which the LSP container performs an optimization

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
NextOptimization In	The next optimization interval
Ad Hoc Optimization	The status of ad hoc optimization: • Enabled – ad hoc optimization is enabled • Disabled – ad hoc optimization is disabled
Ad Hoc Pending	Indicates if an ad hoc optimization is pending
Min Avg BW	The minimum average bandwidth value, below which the LSP container reduces the number of its member LSPs
Max Avg BW	The maximum average bandwidth value, above which the container increases the number of its member LSPs
Last Optimization	The date and time the last optimization occurred
Last Opt Status	The last optimization status
Last Opt Reason	The last optimization reason
Ad Hoc Opt Event	The ad hoc optimization event
Member LSPs	
LSP Name	The LSP name
Oper	The operational status of the LSP
Tunnel Id	The tunnel ID
Oper BW (Mbps)	The operational bandwidth in Mb/s
Sampled Avg Rate (Mbps)	The sampled average rate in Mb/s

```

Table 305: Output fields: LSP-DB

Label	Description
PCEP-specific LSP ID	Specifies the PCEP specific LSP ID.
LSP ID	Specifies the LSP ID.
LSP Type	rsvp-p2p — Indicates the LSP type is rsvp-p2p. rsvp-p2mp — Indicates the LSP type is rsvp-p2mp. seg-rt — Indicates the LSP type is seg-rt. pce-init-seg-rt — Indicates the LSP type is pce-init-seg-rt.
Tunnel ID	Specifies the tunnel ID.
Extended Tunnel Id	Specifies the extended tunnel ID.
LSP Name	Specifies the LSP name
Source Address	Specifies the source IP address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Destination Address	Specifies the destination IP address.
LSP Delegated	True — Specifies that LSP Delegation is true. False— Specifies that LSP Delegation is false.
Delegate PCE Address	Specifies the delegate PCE IP address.
Oper Status	active — Specifies that the operational status is active. down — Specifies that the operational status is down.

Syntax

lsp-egress-stats [**active**]

lsp-egress-stats lsp *lsp-name*

Context

[Tree] (show>router>mpls>mpls-tp lsp-egress-stats)

Full Context

show router mpls mpls-tp lsp-egress-stats

Description

This command displays MPLS-TP LSP egress statistics information.

Parameters

active

Displays statistics for all active LSPs.

lsp-name

Displays statistics for the specified LSP name, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-egress-stats

Syntax

lsp-egress-stats

lsp-egress-stats *lsp-name*

Context

[Tree] (clear>router>mpls lsp-egress-stats)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear router mpls lsp-egress-stats

Description

This command clears MPLS LSP egress statistics information.

Parameters

lsp-name

Specifies the LSP to clear, up to 64 characters.

Platforms

All

lsp-egress-stats

Syntax

lsp-egress-stats lsp *lsp-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**bits**]

Context

[Tree] (monitor>router>mpls lsp-egress-stats)

Full Context

monitor router mpls lsp-egress-stats

Description

This command displays egress statistics for LSP interfaces at the configured interval until the configured count is reached.

Default

no lsp-egress-stats

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

seconds

Specifies the interval for each display, in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 3 to 60

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

bits

Displays the output values in bits rather than in octets.

Platforms

All

Output

The following output is an example of LSP egress statistics information.

Output Example

```

14.81 lsp-history

lsp-history

Syntax

lsp-history [*lsp-name*]

Context

[Tree] (tools>dump>router>mpls lsp-history)

Full Context

tools dump router mpls lsp-history

Description

This command displays the recorded history of LSP events for all RSVP-TE and SR-TE LSPs if no LSP name is provided, or only the named LSP if an LSP name is provided.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

Platforms

All

Output

The following example shows the LSP history output, and Table 306: Output fields: MPLS LSP history describes the output fields.

```
tools dump router mpls lsp-history "C_F_5"
```

show router mpls lsp-ingress-stats

Description

This command displays MPLS LSP ingress statistics information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

Platforms

All

Output

The following output is an example of MPLS LSP ingress statistics information.

Output Example

```
*A:Dut-A# show router mpls lsp-ingress-stats lsp "1" sender 10.20.1.3

Syntax

lsp-ingress-stats [**active**]

lsp-ingress-stats lsp *lsp-name*

Context

[Tree] (show>router>mpls>mpls-tp lsp-ingress-stats)

Full Context

show router mpls mpls-tp lsp-ingress-stats

Description

This command displays MPLS-TP LSP ingress statistics information.

Parameters

active

Displays statistics for all active LSPs.

lsp-name

Displays statistics for the specified LSP name, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-ingress-stats

Syntax

lsp-ingress-stats

lsp-ingress-stats *ip-address* **lsp** *lsp-name*

lsp-ingress-stats *sender-address*:*lsp-name*

Context

[Tree] (clear>router>mpls lsp-ingress-stats)

Full Context

clear router mpls lsp-ingress-stats

Description

This command clears MPLS LSP ingress statistics information.

Platforms

All

lsp-ingress-stats

Syntax

lsp-ingress-stats lsp *lsp-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] *ip-address* [**bits**]

Context

[Tree] (monitor>router>mpls lsp-ingress-stats)

Full Context

monitor router mpls lsp-ingress-stats

Description

This command displays ingress statistics for LSP interfaces at the configured interval until the configured count is reached.

Parameters

lsp-name

Specifies the LSP name up to 64 characters.

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

seconds

Specifies the interval for each display, in seconds.

Values 3 to 60

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

ip-address

Specifies the IP address.

Values *a.b.c.d*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bits

Displays the output values in bits rather than in octets.

Platforms

All

Output

The following output is an example of LSP ingress statistics information.

Output Example

```

14.83 lsp-ldp

lsp-ldp

Syntax

lsp-ldp prefix *ip-prefix*/*ip-prefix-length*

Context

[Tree] (tools>dump>router>bfd lsp-ldp)

Full Context

tools dump router bfd lsp-ldp

Description

This command displays the local and remote discriminator values for LSP BFD sessions for a given prefix, as well as the BFD session state.

Parameters

prefix *ip-prefix*/*ip-prefix-length*

Specifies information for the specified IP prefix and mask length.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H

lsp-rsvp

Syntax

lsp-rsvp {**head** | **tail**} [**tunnel-id** *tunnel-id*]

Context

[Tree] (tools>dump>router>bfd lsp-rsvp)

Full Context

tools dump router bfd lsp-rsvp

Description

This command displays the local and remote discriminator values for LSP RSVP sessions.

Parameters

head

Specifies information for the head of the LSP LDP link.

tail

Specifies information for the tail of the LSP LDP link.

tunnel-id *tunnel-id*

Displays information about the specified tunnel.

Values 0 to 4294967295

14.85 lsp-self-ping

lsp-self-ping

Syntax

lsp-self-ping

Context

[Tree] (show>router>mpls lsp-self-ping)

Full Context

show router mpls lsp-self-ping

Description

This command displays LSP Self-ping timeout statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS LSP Self-ping information.

Table 307: Output fields: MPLS LSP self ping describes the MPLS LSP Self-ping output fields.

Table 307: Output fields: MPLS LSP self ping

Label	Description
RSVP-TE LSP Self Ping	Specifies the status of LSP Self-ping
LSP Self Ping Timeout	Specifies the value of the LSP timeout in seconds
LSP Self Ping Interval	Specifies the LSP Self-ping interval in seconds
Number of LSP Self Ping Timeouts	Specifies the total number of LSP Self-ping timeouts

Output Example

```
*A:Dut-C>config>router>mpls# show router mpls lsp-self-ping
===============================================
MPLS LSP Self Ping Timeout Statistics
===============================================
RSVP-TE LSP Self Ping                  : Enabled
LSP Self Ping Timeout                  : 60 seconds

14.86 lsp-template

lsp-template

Syntax

lsp-template [*lsp-template-name*] [**detail**]

lsp-template [*lsp-template-name*] **bindings**

Context

[Tree] (show>router>mpls lsp-template)

Full Context

show router mpls lsp-template

Description

This command displays MPLS LSP template information.

Parameters

lsp-template-name

Specifies the LSP template name, up to 32 characters.

detail

Displays detailed information.

bindings

Displays any bindings associated with the LSP template.

Platforms

All

Output

The following outputs are examples of LSP template information, and Table 308: Output fields: LSP template describes the output fields.

Output Example

```
*A:Dut-C>config>router>mpls# show router mpls lsp-template
===============================================================================
MPLS LSP Templates
===============================================================================

Table 308: Output fields: LSP template

Label	Description
Name	Specifies the name.
Type	Specifies the type.
Admin State	Specifies the up or down administrative state.
No of LSPs	Specifies the number of LSPs.
LSP Templates	Specifies the number of LSP templates.
LSP Template	Specifies the name of the LSP template.
From	Specifies the from IP address.
Template ID	Specifies the template ID.
Default Path	Specifies the default path value.
Bandwidth	Specifies the bandwidth value in Mbps.
Hop Limit	Specifies the maximum number of hops.
CSPF	Specifies the enabled or disabled status for CSPF.
Use TE metric	Specifies the enabled or disabled status for use TE metric.
Include Groups	Specifies the included groups or none for no included groups.
Exclude Groups	Specifies the excluded groups or none for no excluded groups.
Record Route	Specifies the record route value.
Record Label	Specifies the record label value.
Retry Limit	Specifies the retry limit value.
Retry Timer	Specifies the retry timer value.
LSP Count	Specifies the LSP count.
Ref Count	Specifies the reference count number.
Load Bal Wt	Specifies the load balance weight value.
ClassForwarding	Specifies the enabled or disabled status for class forwarding.
VprnAutoBind	Specifies the enabled or disabled status for VPRN autobind.
IGP Shortcut	Specifies the enabled or disabled status for IGP shortcut.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
IGP LFA	Specifies the enabled or disabled status for IGP LFA.
IGP Rel Metric	Specifies the enabled or disabled status for IGP Rel metric.
Metric	Specifies the metric value.
BGP Transport Tunn	Specifies the enabled or disabled status for BGP transport tunnels.
Entropy Label	Specifies the enabled or disabled status for entropy label.
PCE Report	Specifies the enabled or disabled status for PCE reports.
Admin Tags	Specifies the administrative tag names or none.
PCE Control	Specifies the enabled or disabled status for the PCE control.
FallbkPathComp	none — No fallback method is configured. local-cspf— Local CSPF fallback is configured.

14.87 lspinfo

lspinfo

Syntax

lspinfo [*lsp-name*] [**detail**]

Context

[Tree] (tools>dump>router>mpls lspinfo)

Full Context

tools dump router mpls lspinfo

Description

This command dumps MPLS LSP information.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

detail

Specifies detailed LSP information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

Output

The following output is an example of a BFD session that is up (LSPS UP).

Output Example

```
*A:Dut-B# tools dump router mpls lspinfo
LSP "lsp1"  LspIdx 1  LspType Dynamic  State LSPS_UP  Flags 0x2000

15 m Commands

15.1 mac

mac

Syntax

mac all | *ieee-address* | **unknown**

Context

[Tree] (show>subscr-mgmt>errors mac)

Full Context

show subscriber-mgmt errors mac

Description

This command sorts all the subscriber errors by MAC address.

Parameters

all

Shows all errors starting with the lowest MAC address.

ieee-address

Shows only the error of a specific MAC address.

unknown

Shows errors with unknown MAC addresses.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management listed by MAC addresses.

Output Example

```
*A:eng-BNG-2# show  subscriber-mgmt errors mac all
===============================================================================
Subscriber management errors
===============================================================================
-------------------------------------------------------------------------------
MAC       : 00:00:10:10:12:13

Error     : No Offer from DHCP server after Discover from DHCP client
Extra     : DHCPv4
===============================================================================
```

Table 309: Output fields: subscriber management MAC error describes subscriber management MAC error output fields.

Table 309: Output fields: subscriber management MAC error

Field	Description
MAC	The MAC address associated with the error
Time	The time the error was reported
Service	The service ID
SAP	The SAP on which the error occurred
Error	The error that occurred on the MAC address
Extra	Extra information about the error that occurred

mac

Syntax

mac *mac-filter-id*

mac *mac-filter-id* **associations**

mac *mac-filter-id* [**type** *entry-type*] **counters** [**detail**]

mac *mac-filter-id* [**entry** *entry-id*] **effective-action** [{**ingress** | **egress**}]

Full Context

show filter mac

Description

This command displays MAC filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the MAC filter policy.

Parameters

mac-filter-id

Displays detailed information for the specified filter ID and its filter entries.

Values 1 to 65535

associations

Appends information as to where the filter policy ID is applied to the detailed filter policy ID output.

entry-type

Specifies the type of filter entries as "fixed” or "embedded”.

counters

Displays counter information for the specified filter ID.

detail

Displays detailed information.

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base” instance).

service-id

Filters the output and only displays the information for the specified service. The specified value must correspond to an existing service in which the filter has been applied.

filter-type

Specifies the type of filter entries as "config”.

Platforms

All

Output

No Parameters Specified — A brief listing of MAC filters is produced when no parameters are specified; Table 310: Output fields: filter MAC describes the output fields.

Output Example

```
*A:Dut-C# show filter mac
===============================================================================
Configured Mac Filters                                        Total:     1

```

Table 311: Output fields: MAC filter ID

Label	Description
MAC Filter Filter Id	The MAC filter policy ID
Scope	Template — the filter policy is of type Template
	Exclusive — the filter policy is of type Exclusive
Description	The MAC filter policy description
Applied	No — the filter policy ID has not been applied
	Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward
	Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	MAC — indicates the filter is an MAC filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
Description	The filter entry description
FrameType	Ethernet — the entry ID match frame type is Ethernet IEEE 802.3
	Ethernet II — the entry ID match frame type is Ethernet Type II
Src MAC	The source MAC address and mask match criterion; when both the MAC address and mask are all zeros, no criterion specified for the filter entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Dest MAC	The destination MAC address and mask match criterion; when both the MAC address and mask are all zeros, no criterion specified for the filter entry
Dot1p	The IEEE 802.1p value for the match criteria; undefined indicates no value is specified
Ethertype	The Ethertype value match criterion
DSAP	The DSAP value match criterion; undefined indicates no value specified
SSAP	SSAP value match criterion; undefined indicates no value specified
Snap-pid	The Ethernet SNAP PID value match criterion; undefined indicates no value specified
Esnap-oui-zero	Non-Zero — filter entry matches a non-zero value for the Ethernet SNAP OUI
	Zero — filter entry matches a zero value for the Ethernet SNAP OUI
	Undefined — no Ethernet SNAP OUI value specified
Match action	Default — the filter does not have an explicit forward or drop match action specified; if the filter entry ID indicates the entry is Inactive, the filter entry is incomplete, no action was specified
	Drop — packets matching the filter entry criteria will be dropped
	Forward — packets matching the filter entry criteria is forwarded
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Filter Associations — The associations for a filter ID will be displayed if the **associations** keyword is specified. The association information is appended to the filter information.

The following output is an example of MAC filter information when the associations keyword is specified, and Table 312: Output fields: MAC associations describes the fields.

Output Example

```
A:ALA-49# show filter mac 3 associations
===============================================================================
Mac Filter
===============================================================================
Filter ID    : 3                    Applied          : Yes
Scope        : Template             Def. Action      : Drop
Entries      : 1
-------------------------------------------------------------------------------
Filter Association : Mac
-------------------------------------------------------------------------------
Service Id   : 1001                 Type             : VPLS
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
- SAP          1/1/1:1001            (Egress)
===============================================================================
```

Table 312: Output fields: MAC associations

Label	Description
Filter Association	Mac — the filter associations displayed are for a MAC filter policy ID
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
SAP	The Service Access Point or spoke/mesh SDP on which the filter policy ID is applied
Type	The type of service of the Service ID
(Ingress)	The filter policy ID is applied as an ingress filter policy on the interface
(Egress)	The filter policy ID is applied as an egress filter policy on the interface

Filter Entry Counters Output — When the **counters** keyword is specified, the filter entry output displays the filter matches/hit information. The following table describes the command output for the command.

```
A:ALA-49# show filter mac 8 counters
===============================================================================
Mac Filter
===============================================================================
Filter Id   : 8                                 Applied         : Yes
Scope       : Template                          Def. Action     : Forward
Entries     : 2
Description : Description for Mac Filter Policy id # 8
-------------------------------------------------------------------------------
Filter Match Criteria : Mac
-------------------------------------------------------------------------------
Entry       : 8                                 FrameType       : Ethernet
Ing. Matches: 80 pkts (5440 bytes)
Egr. Matches: 62 pkts (3968 bytes)

Entry       : 10                                FrameType       : Ethernet
Ing. Matches: 80 pkts (5440 bytes)
Egr. Matches: 80 pkts (5120 bytes)
===============================================================================
```

Table 313: Output fields: MAC counters

Label	Description
Mac Filter Filter Id	The MAC filter policy ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Scope	Template — the filter policy is of type Template Exclusive — the filter policy is of type Exclusive
Description	The MAC filter policy description
Applied	No — the filter policy ID has not been applied Yes — the filter policy ID is applied
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Filter Match Criteria	Mac — indicates the filter is an MAC filter policy
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified
FrameType	Ethernet — the entry ID match frame type is Ethernet IEEE 802.3 802.2LLC — the entry ID match frame type is Ethernet IEEE 802.2 LLC 802.2SNAP — the entry ID match frame type is Ethernet IEEE 802.2 SNAP Ethernet II — the entry ID match frame type is Ethernet Type II
Ing. Matches	The number of ingress filter matches/hits for the filter entry
Egr. Matches	The number of egress filter matches/hits for the filter entry

Show Filter MAC Output (with effective-action specified) — The following output is an example of MAC filter information when the **effective-action** keyword is specified. Table 314: Output fields: MAC effective action describes the command output fields.

If the main action (either primary or secondary) cannot be performed, a reason will be given. This will be displayed on the same line as the Effective Action. The reason codes as currently defined are:

- entry-default
- filter-default-action
- pbr-down-action-override
- action not supported on egress
- target does not exist

Output Example

```
show filter mac 1 effective-action
===============================================================================

PBR Down Action     : Drop (entry-default)

Configuration
Primary Action      : Forward (SAP)
  Next Hop          : 1/1/3
  Service Id        : Not configured
Secondary Action    : None

Status
Target status based on extended checks
  Primary Action    : Target does not exist
  Secondary Action  : None
Downloaded Action   : Forward
Stickiness Timer    : Not Running

Effective Action based on application context
Service Id          : 10                          Type           : VPLS
  Ingress
    Effective Action: Forward (target does not exist)
===============================================================================
```

Table 314: Output fields: MAC effective action

Label	Description
Filter Id	The MAC filter policy ID
Applied	No — the filter policy ID has not been applied Yes — the filter policy ID is applied
Scope	Template — the filter policy is of type Template Exclusive — the filter policy is of type Exclusive
Def. Action	Forward — the default action for the filter ID for packets that do not match the filter entries is to forward Drop — the default action for the filter ID for packets that do not match the filter entries is to drop
Entries	The number of entries configured in this filter ID
Type	The type of entries configures in this filter
Description	The MAC filter policy description
Entry	The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Stickiness	No — stickiness is not configured Yes — stickiness is configured
PBR Dwn Act Override	Indicates whether or not the action to take when the PBR target is down has been overridden
PBR Down Action	The action to take in case the target is down
Configuration	Section of the output providing information on the configured parameters
Primary Action	The configured action, if any; indented sub-labels in the show output provide configured parameters for this action
Secondary Action	The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action
Status/Target status based on extended checks	Section of the output providing information on the operational status of certain parameters
Primary Action	The status of the target of the primary action, if configured, based on extended checks
Secondary Action	The status of the target of the secondary action, if configured, based on extended checks
Downloaded Action	The action downloaded by the CPM to the IOM
Stickiness Timer	The status of the stickiness timer, if any
Effective Action based on application context	Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to
Service Id	The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied
Type	The service type in which the service has been applied
Ingress/Egress	The direction in which the service has been applied
Effective Action	Indicates the effective action the packet will be subject to

mac

Syntax

mac *mac-filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[Tree] (clear>filter mac)

Full Context

clear filter mac

Description

Clears the counters associated with the entries of the specified MAC filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified MAC filter policy.

Parameters

mac-filter-id

The MAC filter policy ID for which to clear the entry counters. Values can either be expressed as a decimal integer or as an ASCII string of up to 64 characters. The following values only shows decimal integer.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry will be cleared. The values are expressed as a decimal integer.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Full Context

tools dump filter resources mac

Description

This command displays information about the specified MAC filter including resource utilization on CPM and IOM, the IOMs on which the filter is used, and the entries using the most resources.

Parameters

mac-filter-id

Specifies that only the filter resource utilization associated with this IPv6 filter will be displayed.

Values 1 to 65535

Platforms

All

Output

The following output is an example of MAC filter resource utilization information.

Output Example

```
*A:Dut-C>tools>dump>filter>resources># mac 1

===============================================================================
Resource utilization details for Mac filter 1
===============================================================================
CPM entries used                      : 1
CPM subentries used                   : 1
TCAM entries used (per FlexPath)      : 1

Full Context

monitor filter mac

Description

This command enables MAC filter monitoring. The statistical information for the specified MAC filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified MAC filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

mac-filter-id

Specifies the MAC filter policy ID.

Values *filter-id* | *filter-name*

filter-id: 1 to 65535

filter-name: 64 chars max

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

show router bgp routes evpn mac

Description

This command displays BGP-EVPN MAC routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

mac-address

Specifies the MAC address in *xx:xx:xx:xx:xx:xx* or *xx-xx-xx-xx-xx-xx* format.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{*ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535
  – *comm-val1* — 0 to 65535
  – **type** — target, origin
  – *ip-address* — a.b.c.d
  – *comm-val2* — 0 to 4294967295
  – *as-number2* — 0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the MAC route tag.

Values 0to 4294967295 | MAX-ET

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

15.6 mac-status

mac-status

Syntax

mac-status [**mac** *ieee-address*] [**card** *slot-id*] [**pending**]

Context

[Tree] (tools>dump>service>id>fdb mac-status)

Full Context

tools dump service id fdb mac-status

Description

This command displays the status of MAC addresses within the service, displaying the line cards on which FDB entries are allocated for the MAC addresses (if a MAC address has been allocated an entry on all cards provisioned in the system, it is displayed as "All") and those for which there are pending FDB entry updates (allocate, displayed as "PendAlloc", or free, displayed as "PendFree") for each MAC address. The MAC address status is displayed per service or line card and for a single MAC address. In addition, only MAC addresses with pending updates can be displayed.

Parameters

ieee-address

The 48-bit MAC address for which the FDB entry will be displayed in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers.

slot-id

The slot ID of the card in the chassis. The maximum slot ID is platform-dependent. See the hardware installation guides for more information.

pending

Displays only those MAC address with pending FDB entry line card updates (allocate or free).

15.7 mac-table

mac-table

Syntax

mac-table [**mac** *ieee-address*] [**class** *class*] [**next-index** *index*] [**detail**]

Context

[Tree] (tools>dump>wlan-gw>lanext>bd mac-table)

Full Context

tools dump wlan-gw lanext bd mac-table

Description

This command dumps the specified MAC table entries for the specified HLE BD.

Parameters

ieee-address

Specifies the MAC address of the MAC table entry.

class

Specifies the source on which to filter the MAC table entries.

Values access, network, remote

index

Specify the **next-index** *index* parameter to display the next set of results If there are more results than the current output. The additional results are indicated at the bottom of the current output.

Values 0 to 4294967295

15.9 managed-hosts

managed-hosts

Syntax

managed-hosts type {**aaa** | **bonding** | **data-triggered** | **gtp**} [**ip** *ip-address*] [**mac** *ieee-address*]

Context

[Tree] (show>service>id managed-hosts)

Full Context

show service id managed-hosts

Description

This command displays information about hosts that are not yet linked to an in-band control plane protocol, such as DHCP or DHCPv6. Examples include hosts installed by data-triggers and hosts installed by RADIUS.

Parameters

aaa

Displays information about managed hosts installed and removed only by RADIUS.

bonding

Displays information about managed hosts installed in a connection bonding subscriber context.

data-triggered

Displays information about managed hosts installed by data-triggers.

gtp

Displays information about managed hosts installed via GTP access.

ip-address

Displays information about a managed host with the specified IPv4 or IPv6 address.

ieee-address

Displays information about a managed host with the specified MAC address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of managed host information.

15.15 manual-switch-path

manual-switch-path

Syntax

manual-switch-path lsp *lsp-name*

no manual-switch-path lsp *lsp-name*

manual-switch-path sr-te-lsp *sr-te-lsp-name*

no manual-switch-path sr-te-lsp *sr-te-lsp-name*

Context

[Tree] (tools>perform>router>mpls manual-switch-path)

Full Context

tools perform router mpls manual-switch-path

Description

This command forces a manual degraded state on the active primary path, which triggers a switchover to another best-preference non-degraded secondary path that is already up. Non-degraded standby paths are preferred over secondary paths. If non-degraded standby paths do not exist, a setup is triggered for secondary paths.

For LSPs, the **revert-timer** and **hold-timer** apply to any switchover triggered by the **manual-switch-path** command. For SR-TE LSPs, only the revert-timer applies to any switchover triggered by the **manual-switch-path sr-te-lsp** command. The revert timer is started in the case where both the primary and standby paths are initially degraded and the system is using a second secondary path, and the primary path then comes back up.

The revert timer is started only when switching from a non-degraded secondary or standby path to the primary path. If the active secondary or standby path is degraded and then the primary path comes up, the system does not start the revert timer because the intention is to move the LSP away from the degraded active path as quickly as possible.

The manually degraded state remains in effect if the path goes down or is resignaled, either by make-before-break (MBB) or break-before-make (BBM). BBM applies regardless of whether the resignalling is due to a locally initiated change or through PCEP. To reset the manually degraded state, use the **no manual-switch-path** CLI command or the **delete manual-switch-path** MD-CLI command.

To revert to the primary path when the revert timer is configured prior to the expiry of the revert timer, use the following commands:

- **no manual-switch-path lsp** or **no manual-switch-path sr-te-lsp** to reset the manual degraded state on the primary path
- **tools perform router mpls revert lsp** to revert the LSP to the primary path
- **tools perform router mpls revert sr-te-lsp** to revert the SR-TE LSP to the primary path

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

sr-te-lsp-name

Specifies the SR-TE LSP name, up to 64 characters.

map-domain

Syntax

map-domain

map-domain *domain-name*

map-domain *domain-name* **mapping-rule** *map-rule-name*

map-domain *domain-name* **statistics**

Context

[Tree] (show>service>nat>map map-domain)

Full Context

show service nat map map-domain

Description

This command displays the MAP domains configured in the system and displays whether the domain is instantiated (that is, shows the association with the routing context). It also provides information about the domain and the specific rules configured within the domain

Parameters

domain-name

Specifies the MAP domain name.

Values 32 chars maximum

map-rule-name

Specifies the MAP rule name.

Values 32 chars maximum

mapping-rule

Keyword that displays the router instances and/or subscriber profiles associated with the NAT policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Keyword that displays statistics of the specified MAP domain.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, VSR

Output

The following output is an example of the **map-domain** command, and Table 316: Output fields: map domain describes the fields.

Output Example

```
*A:Dut-D>show>service>nat>map# show service nat map map-domain
===============================================================================
MAP domains
===============================================================================

```

Table 318: Output fields: map domain statistics

Label	Description
Upstream (IPv6->IPv4) forwarded packets	Specifies the number of forwarded packets in the upstream direction within the MAP domain.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Upstream (IPv6->IPv4) forwarded octets	Specifies the number of forwarded octets in the upstream direction within the MAP domain.
Upstream (IPv6->IPv4) dropped packets	Specifies the number of dropped packets in the upstream direction within the MAP domain.
Upstream (IPv6->IPv4) dropped octets	Specifies the number of dropped octets in the upstream direction within the MAP domain.
Upstream (IPv6->IPv4) dropped anti-spoof packets	Specifies the number of packet drops due to antispoof failure
Upstream (IPv6->IPv4) dropped icmpv6 packets	Specifies the number of ICMPv6 drops due to truncated errors, antispoof ICMP failures, or malformed ICMPs
Upstream (IPv6->IPv4) dropped other packets	Specifies the number of packet drops due to unknown protocol (not TCP/UDP/ICMP)
Upstream (IPv6->IPv4) dropped unknown protocol packets	Specifies the number of all other drops that are not previously listed
Upstream (IPv6->IPv4) fragmented packets	Specifies the number of received fragments
Upstream (IPv6->IPv4) icmpv6 node info packets	Specifies the number of received ICMPV6 node info
Upstream (IPv6->IPv4) cpe icmpv6 error packets	Specifies the number of received ICMPV6 errors from the CPE
Upstream (IPv6->IPv4) intermediate icmpv6 error packets	Specifies the number of received ICMPV6 errors received from intermediate nodes between the BR and CPE
Downstream (IPv4->IPv6) forwarded packets	Specifies the number of forwarded packets in the downstream direction within the MAP domain.
Downstream (IPv4->IPv6) forwarded octets	Specifies the number of forwarded octets in the downstream direction within the MAP domain.
Downstream (IPv4->IPv6) dropped packets	Specifies the number of dropped packets in the downstream direction within the MAP domain.
Downstream (IPv4->IPv6) dropped octets	Specifies the number of dropped octets in the downstream direction within the MAP domain.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Downstream (IPv4->IPv6) dropped fragmented packets	Specifies the number of fragmentation required but the packet is dropped due to DF flag being set
Downstream (IPv4->IPv6) dropped icmpv4 packets	Specifies the total number of ICMPV4 drops
Downstream (IPv4->IPv6) dropped unknown protocol packets	Specifies the number of packet drops because of unknown protocol (not TCP/UDP/ICMP)
Downstream (IPv4->IPv6) fragmented packets	Specifies the number of received fragments
Downstream (IPv4->IPv6) need fragmentation packets	Specifies the number of frames for which IPv6 fragmentation is required (these frames can be received as packets or fragments)
Downstream (IPv4->IPv6) icmpv4 error packets	Specifies the number of ICMPV4 errors received
Downstream (IPv4->IPv6) icmpv4 echo packets	Specifies the number of ICMPV4 echoes received

Context

[Tree] (show>service>nat>map map-e-domain)

Full Context

show service nat map map-e-domain

Description

This command displays MAP-E domain information. The output includes whether a domain is instantiated in a routing context, the domain and mapping-rule configuration, and MAP-E statistics on the FP and ESA-VM.

Parameters

domain-name

Specifies the MAP-E domain name.

Values 32 chars max

rule-name

Specifies the mapping-rule name.

Values 32 chars max

vapp-id

Specifies the ESA-VM.

Values esa-id/vm-id

esa-id: 1 to 16

vm-id: 1 to 4

mapping-rule

Keyword that displays mapping-rule information.

fp

Keyword that displays FP statistics.

esa-vm

Keyword that displays ESA-VM statistics.

statistics

Keyword used with **fp** or **esa-vm** to display statistics. When used after **fp**, the keyword displays forwarding statistics on the FP. When used after **esa-vm**, the keyword displays statistics on the specified ESA-VM.

upstream

Keyword that displays upstream statistics.

downstream

Keyword that displays downstream statistics.

ipv6-reassembly

Keyword that displays IPv6 reassembly statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fragment-handling

Keyword that displays fragment-handling statistics.

histogram

Keyword that displays histogram statistics.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

Output

The following outputs are examples of MAP-E domain information:

- MAP-E domain information: Output example (MAP-E domains), Output fields: MAP-E domain
- MAP-E domain name information: Output example (MAP-E domain name), Output fields: MAP-E domain name
- MAP-E domain FP statistics: Output example (FP statistics), Output fields: MAP-E domain FP statistics
- MAP-E mapping rule FP statistics: Output example (mapping rule FP statistics), Output fields: MAP-E mapping rule FP statistics
- MAP-E domain ESA-VM statistics: Output example (ESA-VM statistics), Output fields: MAP-E domain ESA-VM statistics
- MAP-E fragment-handling statistics: Output example (fragment-handling statistics), Output fields: MAP-E fragment-handling statistics
- MAP-E IPv6 reassembly histogram: Output example (IPv6 reassembly histogram), Output fields: MAP-E IPv6 reassembly histogram
- MAP-E fragment-handling histogram: Output example (fragment-handling histogram), Output fields: MAP-E fragment-handling histogram
- MAP-E IPv6 reassembly statistics: Output example (IPv6 reassembly statistics), Output fields: MAP-E IPv6 reassembly statistics

Output example (MAP-E domains)

```
*A:node-2# show service nat map map-e-domain
===============================================================================
MAP-E domains
===============================================================================
Name                                                Admin-state    Router
-------------------------------------------------------------------------------
demo-domain-1                                       in-service     Base
demo-domain-2                                       in-service     N/A
-------------------------------------------------------------------------------
No. of domains: 2
===============================================================================
```

Table 319: Output fields: MAP-E domain

Label	Description
Name	Specifies the MAP-E domain name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Admin-state	Configured administrative state of the MAP-E domain
Router	Specifies the routing context in which the MAP-E domain is instantiated N/A – The MAP-E domain is not instantiated
No. of domains	Specifies the number of MAP-E domains

Output example (MAP-E domain name)

```
*A:node-2# show service nat map map-e-domain "demo-domain-1"
===============================================================================
MAP-E domain "demo-domain-1"
===============================================================================
Description                 : (Not Specified)
Border Relay address        : 2001:db8:ffff::1
MTU                         : 1500
Reassembly                  : enabled
MAP-E group                 : 1
FPE                         : 1
Administrative state        : in-service
Router                      : Base
Last management change      : 09/17/2026 12:00:00
Mapping rule "map-domain1-rule1"
-------------------------------------------------------------------------------
Description                 : (Not Specified)
Rule prefix                 : 2001:db8::/44

===============================================================================
```

Table 320: Output fields: MAP-E domain name

Label	Description
Description	Specifies the configured description of the MAP-E domain or mapping rule (Not Specified) – A description is not configured
Border Relay address	Specifies the BR IPv6 address of the MAP-E domain
MTU	Specifies the MTU of the MAP-E domain
Reassembly	Specifies whether IPv6 reassembly is enabled for the MAP-E domain
MAP-E group	Specifies the MAP-E group associated with the domain

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
FPE	Specifies the FPE associated with the MAP-E domain
Administrative state	Specifies the administrative state of the MAP-E domain or mapping rule
Router	Specifies the routing context in which the MAP-E domain is instantiated
Last management change	Specifies the date and time of the last management change
Rule prefix	Specifies the IPv6 rule prefix of the mapping rule
IPv4 prefix	Specifies the IPv4 prefix of the mapping rule
Embedded Address bits	Specifies the EA length of the mapping rule
PSID offset	Specifies the PSID offset of the mapping rule
Address sharing ratio	Specifies the number of CEs covered by this rule that share the same IPv4 address, each with a different PSID
No. of excluded ports	Specifies the ports excluded from PSID, according to the configured PSID offset
No. of ports per user	Specifies the number of PSID ports available to each user

Output example (FP statistics)

```
*A:node-2# show service nat map map-e-domain "demo-domain-1" fp statistics

Table 323: Output fields: MAP-E domain ESA-VM statistics

Label	Description
Upstream (IPv6->IPv4) forwarded packets	Specifies the number of packets forwarded in the upstream direction
Upstream (IPv6->IPv4) forwarded octets	Specifies the number of octets forwarded in the upstream direction
Upstream (IPv6->IPv4) dropped packets	Specifies the number of packets discarded in the upstream direction
Upstream (IPv6->IPv4) dropped octets	Specifies the number of octets discarded in the upstream direction
Upstream (IPv6->IPv4) dropped anti-spoof packets	Specifies the number of packets dropped in the upstream direction due to anti-spoof lookup failure
Upstream (IPv6->IPv4) dropped icmpv6 packets	Specifies the number of ICMPv6 packets dropped in the upstream direction
Upstream (IPv6->IPv4) dropped unknown protocol packets	Specifies the number of packets dropped in the upstream direction because of unknown protocol (not TCP/UDP/ICMP)
Upstream (IPv6->IPv4) fragmented packets	Specifies the number of fragmented packets received in the upstream direction
Upstream (IPv6->IPv4) icmpv6 echo packets	Specifies the number of transient ICMPv6 echo packets received in the upstream direction
Upstream (IPv6->IPv4) cpe icmpv6 error packets	Specifies the number of CE-generated ICMPv6 error report packets received in the upstream direction
Upstream (IPv6->IPv4) intermediate icmpv6 error packets	Specifies the number of intermediate-node generated ICMPv6 error report packets received in the upstream direction
Downstream (IPv4->IPv6) forwarded packets	Specifies the number of packets forwarded in the downstream direction

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Downstream (IPv4->IPv6) forwarded octets	Specifies the number of octets forwarded in the downstream direction
Downstream (IPv4->IPv6) dropped packets	Specifies the number of packets discarded in the downstream direction
Downstream (IPv4->IPv6) dropped octets	Specifies the number of octets discarded in the downstream direction
Downstream (IPv4->IPv6) dropped fragmented packets	Specifies the number of fragments discarded in the downstream direction
Downstream (IPv4->IPv6) dropped need fragmentation pckts	Specifies the number of packets discarded in the downstream direction that need fragmentation, but the DF bit is set
Downstream (IPv4->IPv6) dropped icmpv4 packets	Specifies the number of ICMPv4 packets discarded in the downstream direction
Downstream (IPv4->IPv6) dropped unknown protocol packets	Specifies the number of packets dropped in the downstream direction because of unknown protocol (not TCP/UDP/ICMP)
Downstream (IPv4->IPv6) fragmented packets	Specifies the number of fragmented packets received in the downstream direction
Downstream (IPv4->IPv6) need fragmentation packets	Specifies the number of packets received in the downstream direction that are larger than the domain MTU
Downstream (IPv4->IPv6) icmpv4 echo packets	Specifies the number of ICMPv4 echo packets received in the downstream direction
Downstream (IPv4->IPv6) icmpv4 error packets	Specifies the number of ICMPv4 error report packets received in the downstream direction
Generated icmpv4 Fragmentation Problem	Specifies the number of generated ICMPv4 error messages with code Fragmentation Needed and DF Set

A fragment list represents all fragments belonging to a single original IPv4 packet. Fragments are associated with the same list based on the matching IPv4 source address, destination address, protocol, and IP Identification field.

Dropped fragment lists timeout                      : 0
Overlapping first fragments                         : 0
===============================================================================
```

Table 324: Output fields: MAP-E fragment-handling statistics

Label	Description
RX Resolved frags	Specifies the number of fragments that were successfully assembled into packets
RX Unresolved frags	Specifies the number of fragments that were not successfully assembled into a packet and were discarded
TX Frags	Specifies the number of transmitted fragments
Dropped timeout	Specifies the number of fragment discards due to timeout
Dropped buffer exhaustion	Specifies the number of fragment discards due to buffer exhaustion
Dropped too many frags	Specifies the number of fragment discards due to too many fragments
Dropped too many lists	Specifies the number of fragment discards because the number of fragmentation lists exceeded the maximum value
Dropped fragment lists timeout	Specifies the number of list drops due to timeout
Overlapping first fragments	Specifies the number of fragment discards due to overlap

Output example (IPv6 reassembly histogram)

```
*A:node-2# show service nat map map-e-domain "demo-domain-1" esa-vm 1/1 statistics upstream
 ipv6-reassembly histogram
===============================================================================
MAP-E domain "demo-domain-1" esa-vm 1/1 fragment lists histogram
===============================================================================
Histogram of reassembled fragment lists upstream (during reassembly):
0 fragments                                         : 0
1 fragments                                         : 0
```

Label	Description
Reassembly failures due to other reasons	Specifies the number of reassembly failures due to reasons other than the ones above
Total reassembly failures	Specifies the total number of reassembly failures regardless of reason

15.19 map-e-group

map-e-group

Syntax

map-e-group *map-e-group-id* [**members**]

map-e-group *map-e-group-id* **esa-vm** *vapp-id* **resources**

map-e-group *map-e-group-id* **member** *member*

Context

[Tree] (show>isa map-e-group)

Full Context

show isa map-e-group

Description

This command displays MAP-E group information.

Parameters

map-e-group-id

Specifies the MAP-E group ID.

Values 1 to 4

vapp-id

Specifies the ESA-VM.

Values esa-id/vm-id

esa-id: 1 to 16

vm-id: 1 to 4

member

Specifies the member.

Values 1 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

members

Keyword that displays MAP-E group information for all members of the group.

member

Keyword that displays MAP-E group information for the specified member.

esa-vm

Keyword that displays ESA-VM information.

resources

Keyword that displays fragmentation resource usage for the specified ESA-VM.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

Output

The following outputs are examples of MAP-E group information:

- MAP-E group information: Output example (MAP-E group), Output fields: MAP-E group
- MAP-E group resource information: Output example (resources), Output fields: MAP-E group resources

Output example (MAP-E group)

```
*A:node-2# show isa map-e-group 1
===============================================================================
ISA MAP-E Group 1

15.21 map-to-phy-port

map-to-phy-port

Syntax

map-to-phy-port {**lag** *lag-id* | **eth-tunnel** *tunnel-index*} {**isid** *isid* [**end-isid** *isid*] | **service** *service-id* | *svc-name* [**end-service** *service-id* | *svc-name*]} [**summary**]

Context

[Tree] (tools>dump map-to-phy-port)

Full Context

tools dump map-to-phy-port

Description

This command provides the ability to respond to a query to provide the link in a LAG/Ethernet tunnel (load sharing protection mode)/CCAG that is currently assigned to a given service-id or ISID.

Parameters

lag-id

Specifies the LAG ID.

Values 1 to 800

isid

Specifies the ISID.

Values 0 to 16777215

service-id

Specifies the service ID.

Values 1 to 2148278381, svc-name: 64 char max

tunnel-index

Specifies the tunnel index.

Values 1 to 1024

summary

Displays summary information.

15.22 mapping-server

mapping-server

Syntax

mapping-server [**prefix** *ip-address*[/*mask*]] [**index** *index*] [**level** *level*] [**flag** {**s**}]

Context

[Tree] (show>router>isis mapping-server)

Full Context

show router isis mapping-server

Description

This command displays IS-IS mapping-server information.

Parameters

***ip-address*[/*mask*]**

Specifies the IP address and mask of a prefix that has received a node-sid in a SID/Label binding TLV.

Values *ip-address:* **a.b.c.d.** (host bits must be 0)

mask: **0 to 32**

index

Specifies the node-sid index value for the generated SID/Label binding TLV.

Values 0 to 4294967295

Default none

level

Specifies a match on the mapping server's own flooding scope for the generated SID/Label binding TLV.

Values 1, 2, 1/2

flag

Specifies a match on the flooding scope of the generated SID/Label binding TLV.

Values s — Specifies to match on the S flag value of 1. A SID/Label Binding TLV with the S flag set is flooded across the entire IS-IS routing domain, except across another IS-IS instance. If the S flag is not set (value of zero), the SID/Label Binding TLV is not leaked between levels.

15.24 match-criteria-overload

match-criteria-overload

Syntax

match-criteria-overload

match-criteria-overload card *slot-number* **fp** *fp-number*

match-criteria-overload card *slot-number* **fp** *fp-number* **network** *network-policy-id* **direction** *direction*

match-criteria-overload card *slot-number* **fp** *fp-number* **sap-egress** *policy-id*

match-criteria-overload card *slot-number* **fp** *fp-number* **sap-ingress** *policy-id*

Context

[Tree] (tools>dump>qos match-criteria-overload)

Full Context

tools dump qos match-criteria-overload

Description

This command, when used without parameters, allows the operator to identify QoS match-criteria memory banks with one or more policies in overload in the system by slot number, FP number, type (IP-MAC or IPv6), SAP ingress, SAP egress, network, and direction (ingress or egress).

This command, when used with the **card** and **fp** parameters, lists the QoS policy with match criteria in overload on a specified FP when the optional parameters *slot-number* and *fp-number* are specified.

This command, when used with the **network**, **sap-egress**, or **sap-ingress** parameters, displays the match-criteria entries not programmed for a specified QoS policy due to an overload condition.

Parameters

card slot-number

Specifies the IOM slot number for the overload command.

Values 1 to 10

fp fp-number

Specifies the FP number.

Values 1 to 8

network network-policy-id

Specifies the network policy ID.

Values 1 to 65538

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

direction direction

Specifies the memory bank ingress or egress direction.

Values ingress or egress

sap-egress policy-id

Specifies the SAP policy ID.

Values 1 to 65535

sap-ingress policy-id

Specifies the SAP policy ID.

Values 1 to 65535

15.26 mc-ecmp-balance

mc-ecmp-balance

Syntax

mc-ecmp-balance [**detail**]

Context

[Tree] (show>router>pim mc-ecmp-balance)

Full Context

show router pim mc-ecmp-balance

Description

This command displays multicast balance information.

Parameters

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of PIM mc-ecmp-balance information.

Output Example

```
A:ALA-48>config>router>pim# show router pim mc-ecmp-balance
===============================================================================
PIM ECMP Balance
===============================================================================
MC-ECMP-Balance                  : Disabled
Rebalance in progress            : No
Last Rebalance Time              : 11/13/2007 09:03:10
Rebalance Type                   : Unknown
Optional Threshold Used          : 0

15.27 mc-ecmp-rebalance

mc-ecmp-rebalance

Syntax

mc-ecmp-rebalance [*ecmp-opt-threshold*]

Context

[Tree] (tools>perform>router>pim mc-ecmp-rebalance)

Full Context

tools perform router pim mc-ecmp-rebalance

Description

This command triggers an immediate rebalance, regardless if the hold timer has triggered or if any changes have occurred.

Parameters

ecmp-opt-threshold

Forces a rebalance of all multicast streams with a priority equal or less then the specified value.

Specifying the value of 7 forces all multicast streams to be re-balanced regardless of the configured value.

Values 1 to 7

Platforms

All

mc-endpoint

Syntax

mc-endpoint statistics

mc-endpoint peer [*ip-address*] **statistics**

mc-endpoint endpoint [*mcep-id*] **statistics**

mc-endpoint peer [*ip-address*]

Context

[Tree] (show>redundancy>multi-chassis mc-endpoint)

Full Context

show redundancy multi-chassis mc-endpoint

Description

This command displays multi-chassis endpoint information.

Parameters

statistics

Displays the global statistics for the MC endpoint.

peer

Displays information for a single peer.

ip-address

Specifies the IP address of multi-chassis end-point peer.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x – [0 to FFFF] H
- d – [0 to 255] D

endpoint

Displays multi-chassis endpoint information.

mcep-id

Specifies the multi-chassis endpoint.

Values 1 to 4294967295

Platforms

Full Context

show redundancy multi-chassis mc-ipsec

Description

This command displays the IPsec multi-chassis states. Optionally, only the state of the specified tunnel-group is displayed.

Parameters

ipsec-domain-id

Specifies the IPsec domain ID.

ip-address

Specifies the peer address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel-group-id

Specifies the tunnel-group.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPsec multi-chassis information, and Table 331: Output fields: MC-IPsec peer describes the output fields.

Output Example

```

Table 331: Output fields: MC-IPsec peer

Label	Description
Peer Name	The name of the peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Peer Addr	The IP address of the peer.
Keep Alive Intvl	The interval at which keepalive messages are exchanged.
Hold on Nbr Fail	The number of keep-alives lost before declaring the peer as failed to reach.
Discovery Intvl	The duration of the discovery interval.
Discovery Boot Intvl	The duration of the discovery boot interval.
BFD	Bi-directional forward enabled or disabled.
Last update	The date and time of the last update.
ID	The tunnel group table ID.
Peer Group	The peer group ID.
Priority	The priority for the IPsec domain.
Admin State	The administrative state of the tunnel group.
Mastership/Master State	The current mastership state.
Protection Status	Displays **nominal** or **notReady**. **notReady** means the system is not ready for a switchover. There could be major traffic impact if switchover happens in the case of notReady. **nominal** means the tunnel-group is in a better situation to switchover than notReady. However, there still might be traffic impact.
Installed	The number of tunnels that have been successfully installed on MS-ISA.
Installing	The number of tunnels that are being installed on MS-ISA.
Awaiting Config	The number of synchronized tunnels that do not have a corresponding configuration ready.
Failed	The number of tunnels that failed to be installed on MS-ISA.
Active Tunnel-Group	The specific active tunnel group.
Peer Ex Tnl Grp	The external tunnel group.
Priority	The priority of the tunnel-group
Oper State	The operational state

Table 333: Output fields: redundancy multi-chassis MC-lag peer statistics

Label	Description
Packets Rx	Indicates the number of MC-Lag packets received from the peer.
Packets Rx Keepalive	Indicates the number of MC-Lag keepalive packets received from the peer.
Packets Rx Config	Indicates the number of received MC-Lag configured packets from the peer.
Packets Rx Peer Config	Indicates the number of received MC-Lag packets configured by the peer.
Packets Rx State	Indicates the number of MC-Lag "lag” state packets received from the peer.
Packets Dropped State Disabled	Indicates the number of packets that were dropped because the peer was administratively disabled.
Packets Dropped Packets Too Short	Indicates the number of packets that were dropped because the packet was too short.
Packets Dropped Tlv Invalid Size	Indicates the number of packets that were dropped because the packet size was invalid.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Packets Dropped Tlv Invalid LagId	Indicates the number of packets that were dropped because the packet referred to an invalid or non multi-chassis lag.
Packets Dropped Out of Seq	Indicates the number of packets that were dropped because the packet size was out of sequence.
Packets Dropped Unknown Tlv	Indicates the number of packets that were dropped because the packet contained an unknown TLV.
Packets Dropped MD5	Indicates the number of packets that were dropped because the packet failed MD5 authentication.
Packets Tx	Indicates the number of packets transmitted from this system to the peer.
Packets Tx Keepalive	Indicates the number of keepalive packets transmitted from this system to the peer.
Packets Tx Peer Config	Indicates the number of configured packets transmitted from this system to the peer.
Packets Tx Failed	Indicates the number of packets that failed to be transmitted from this system to the peer.

mc-lag

Syntax

mc-lag [**peer** *ip-address* [**lag** *lag-id*]]

Context

[Tree] (clear>redundancy>multi-chassis mc-lag)

Full Context

clear redundancy multi-chassis mc-lag

Description

This command clears multi-chassis Link Aggregation Group (LAG) information.

Parameters

ip-address

Clears the specified address of the multi-chassis peer.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

lag-id

Clears the specified LAG on this system.

Values 1 to 200

Platforms

All

15.31 mc-ring

mc-ring

Syntax

mc-ring

mc-ring peer *ip-address* [**ring** *sync-tag*]

Context

[Tree] (tools>dump>redundancy>multi-chassis mc-ring)

Full Context

tools dump redundancy multi-chassis mc-ring

Description

This command dumps multi-chassis ring information.

Parameters

ip-address

Specifies the peer IP address.

sync-tag

Specifies the ring's synchronization tag created in the **config>redundancy>mc>peer>mcr> ring** context. The tag can be up to 32 characters.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mc-ring

Syntax

mc-ring peer *ip-address* **statistics**

mc-ring peer *ip-address* [**ring** *sync-tag* [**detail** | **statistics**]]

mc-ring peer *ip-address* **ring** *sync-tag* **ring-node** [*ring-node-name* [**detail** | **statistics**]]

mc-ring global-statistics

Context

[Tree] (show>redundancy>multi-chassis mc-ring)

Full Context

show redundancy multi-chassis mc-ring

Description

This command displays multi-chassis ring information.

Parameters

ip-address

Specifies the address of the multi-chassis peer to display.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

sync-tag

Specifies a synchronization tag to be displayed that was used while synchronizing this port with the multi-chassis peer up to 32 characters.

ring-node-name

Specifies a ring-node name up to 32 characters.

global-statistics

Displays global statistics for the multi-chassis ring.

detail

Displays detailed peer information for the multi-chassis ring.

Platforms

All

Output Fields: show redundancy multi-chassis mc-ring peer <ip-address> ring

Table 334: Output fields: MC ring peer ring describes the output fields for the **show redundancy multi-chassis mc-ring peer <ip-address> ring** command.

Table 334: Output fields: MC ring peer ring

Label	Description
Sync Tag	Displays the synchronization tag that was used while synchronizing this port with the multi-chassis peer.
Oper State	noPeer — The peer has no corresponding ring configured. connected — The in-band control connection with the peer is operational. broken — The in-band control connection with the peer has timed out. conflict — The in-band control connection with the peer has timed out but the physical connection is still OK; the failure of the in-band signaling connection is caused by a misconfiguration. For example, a conflict between the configuration of this system and its peer, or a misconfiguration on one of the ring access node systems. testingRing — The in-band control connection with the peer is being set up. Waiting for result. waitingForPeer — Verifying if this ring is configured on the peer. configErr — The ring is administratively up, but a configuration error prevents it from operating properly. halfBroken — The in-band control connection indicates that the ring is broken in one direction (towards the peer). localBroken — The in-band control connection with the peer is known to be broken due to local failure or local administrative action. shutdown — The ring is shutdown.
Failure Reason	Displays the failure reason.
Last Debounce	Displays the last time that the debounce mechanism (protecting the router from overload situations in case of a flapping ring) was activated.
Debounce Period	Displays the duration that the debounce mechanism was in action since the "Last Debounce”.

Output Example: show redundancy multi-chassis mc-ring peer <ip-address> statistics

```
*A:ALA-48>show>redundancy>multi-chassis# mc-ring peer 192.168.10.104 statistics
===============================================================================

Output Fields: show redundancy multi-chassis mc-ring peer <ip-address> statistics

Table 335: Output fields: MC ring peer statistics describes the output fields for the **show redundancy multi-chassis mc-ring peer <ip-address> statistics** command.

Table 335: Output fields: MC ring peer statistics

Label	Description
Message	Displays the message type.
Received	Indicates the number of valid MC-Ring signaling messages received from the peer.
Transmitted	Indicates the number of valid MC-Ring signaling messages transmitted from the peer.
MCS ID Request	Displays the number of valid MCS ID requests were received from the peer.
MCS ID Response	Displays the number of valid MCS ID responses were received from the peer.
Ring Exists Request	Displays the number of valid 'ring exists' requests were received from the peer.
Ring Exists Response	Displays the number of valid ring exists' responses were received from the peer.
Keepalive	Displays the number of valid MC-Ring control packets of type 'keepalive' were received from the peer.

Output Example: show redundancy multi-chassis mc-ring global-statistics

```

Output Fields: show redundancy multi-chassis mc-ring ring-node
Table 336: Output fields: MC ring node describes the output fields for the mc-ring ring-node command.

Table 336: Output fields: MC ring node

Label	Description
Oper State	Displays the state of the connection verification (both local and remote). notProvisioned — Connection verification is not provisioned. configErr — Connection verification is provisioned but a configuration error prevents it from operating properly. notTested — Connection verification is administratively disabled or is not possible in the current situation. testing — Connection Verification is active, but no results are yet available. connected — The ring node is reachable. disconnected — Connection verification has timed out.
In Use	Displays "True” if the ring node is referenced on an e-pipe or as an inter-dest-id on a static host or dynamic lease.

Output Fields: show redundancy multi-chassis mc-ring global-statistics
Table 337: Output fields: MC ring global statistics describes the output fields for the **show redundancy multi-chassis mc-ring global statistics** command.

Table 337: Output fields: MC ring global statistics

Label	Description
Rx	Displays the number of MC-ring signaling packets were received by this system.
Rx Too Short	Displays the number of MC-ring signaling packets were received by this system that were too short.
Rx Wrong Authentication	Displays the number of MC-ring signaling packets were received by this system with invalid authentication.
Rx Invalid TLV	Displays the number of MC-ring signaling packets were received by this system with invalid TLV.
Rx Incomplete	Displays the number of MC-ring signaling packets were received by this system that were incomplete.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Rx Unknown Type	Displays the number of MC-ring signaling packets were received by this system that were of unknown type.
Rx Unknown Peer	Displays the number of MC-ring signaling packets were received by this system that were related to an unknown peer.
Rx Unknown Ring	Displays the number of MC-ring signaling packets were received by this system that were related to an unknown ring.
Rx Unknown Ring Node	Displays the number of MC-ring signaling packets were received by this system that were related to an unknown ring node.
Tx	Displays the number of MC-ring signaling packets were transmitted by this system.
Tx No Buffer	Displays the number of MC-ring signaling packets could not be transmitted by this system due to a lack of packet buffers.
Tx Transmission Failed	Displays the number of MC-ring signaling packets could not be transmitted by this system due to a transmission failure.
Tx Unknown Destination	Displays the number of MC-ring 'unknown destination' signaling packets were transmitted by this system.
Missed Configuration Events	Displays the number of missed configuration events on this system.
Missed BFD Events	Displays the number of missed BFD events on this system.

mc-ring

Syntax

mc-ring

Context

[Tree] (clear>redundancy>multi-chassis mc-ring)

mc-ring

Syntax

mc-ring peer *ip-address* **ring** *sync-tag*

Context

[Tree] (show>service>sap-using mc-ring)

Full Context

show service sap-using mc-ring

Description

This command displays SAP information for a specific MC-RING.

Parameters

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

sync-tag

Specifies the ring's synchronization tag, up to 32 characters.

Platforms

- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the multicast join sync route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values		
	ipv4-address:	a.b.c.d
	ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
		x:x:x:x:x:x:d.d.d.d
		x: [0 to FFFF]H
		d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

ip-address* | *ipv6-address

Specifies the originator IPv4 or IPv6 address, up to 64 characters.

Full Context

show router bgp routes evpn mcast-leave-synch

Description

This command displays BGP-EVPN multicast leave sync routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{*ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535
  – *comm-val1* — 0 to 65535
  – **type** — target, origin
  – *ip-address* — a.b.c.d
  – *comm-val2* — 0 to 4294967295
  – *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the multicast leave sync route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

MDA Summary
===============================================================================
Slot  Mda   Provisioned Type                            Admin     Operational
              Equipped Type (if different)              State     State
-------------------------------------------------------------------------------
1     1     x4-100g-cxp                                 up        up
      2     x40-10g-sfp                                 up        up
2     1     x4-100g-cfp2                                up        up
      2     x40-10g-sfp-ptp                             up        up
===============================================================================
```

Table 341: Output fields: MDA

Label	Description
Slot	The chassis slot number.
MDA	The MDA slot number.
Provisioned MDA-type	The MDA type provisioned.
Equipped MDA-type	The MDA type actually installed.
Admin State	Up — Administratively up. Down — Administratively down (e.g., shutdown).
Operational State	Up — Operationally up. Down — Operationally down.

Output Example: show mda <slot/mda> detail

```
A:Dut-G# show mda 1/1 detail
===============================================================================
MDA 1/1 detail
===============================================================================
Slot  Mda   Provisioned Type                            Admin     Operational

Output Fields: show mda <slot/mda> detail

Table 342: Output fields: MDA detail describes the output fields for the **show mda <slot/mda> detail** command.

Table 342: Output fields: MDA detail

Label	Description
Slot	The chassis slot number.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Mda	The MDA slot number.
Provisioned Mda-type	The provisioned MDA type.
Equipped Mda-type	The MDA type that is physically inserted into this slot in this chassis.
Admin State	Up — The MDA is administratively up. Down — The MDA is administratively down.
Operational State	Up — The MDA is operationally up. Down — The MDA is operationally down.
Failure Reason	This hardware component has failed.
Maximum port count	The maximum number of ports that can be equipped on the MDA card.
Number of ports equipped	The number of ports that are actually equipped on the MDA.
Transmit timing selected	Indicates the source for the timing used by the MDA.
Sync interface timing status	Indicates whether the MDA has qualified one of the timing signals from the CPMs.
Network Ingress Queue Policy	Specifies the network queue policy applied to the MDA to define the queueing structure for this object.
Capabilities	Specifies the minimum size of the port that can exist on the MDA.
Egress XPL error threshold	The Egress XPL Error Threshold value used by the **fail-on-error** feature.
Egress XPL error window	The Egress XPL Error Window value used by the **fail-on-error** feature.
Max channel size	Specifies the maximum size of the channel that can exist on the channelized MDA.
Part number	The hardware part number.
CLEI code	The code used to identify the MDA.
Serial number	The MDA part number. Not user modifiable.
Manufacture date	The MDA manufacture date. Not user modifiable.
Manufacturing string	Factory-inputted manufacturing text string. Not user modifiable.
Administrative state	Up — The MDA is administratively up. Down — The MDA is administratively down.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Operational state	Up — The MDA is operationally up. Down — The MDA is operationally down.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific MDA.
Base MAC address	The base chassis Ethernet MAC address. Special purpose MAC addresses used by the system software are constructed as offsets from this base address.

mda

Syntax

mda *mda-id* [**statistics**]

Context

[Tree] (clear mda)

Full Context

clear mda

Description

This command reinitializes the specified MDA in a particular slot.

Parameters

mda-id

Clears the specified slot and MDA.

Values

slot/mda	slot: 1 to 10 mda: 1, 2
slot/xiom/mda	slot: 1 to 10 xiom: "x1" or "x2" mda: 1, 2

statistics

Clears statistics for the specified MDA.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mda

Syntax

mda [*mda-slot*]

Context

[Tree] (tools>dump>resource-usage>card mda)

Full Context

tools dump resource-usage card mda

Description

This command displays resource information for MDAs.

Parameters

mda-slot

Specifies an MDA slot.

Values 1 to 2

Platforms

All

15.46 mdt-safi

mdt-safi

Syntax

mdt-safi [**rd** *rd*] [**grp-address** *mcast-grp-address*] [**source-ip** *ip-address*] **brief** [**community** *comm-id*] [**aspath-regex** *reg-exp*]

mdt-safi [**rd** *rd*] [**grp-address** *mcast-grp-address*] [**source-ip** *ip-address*] [**detail**] [**community** *comm-id*] [**aspath-regex** *reg-exp*]

Context

[Tree] (show>router>bgp>routes mdt-safi)

Full Context

show router bgp routes mdt-safi

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays BGP MDT-SAFI routes.

Parameters

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

mcast-grp-address

Specifies the multicast group address.

Values a.b.c.d

ip-address

Specifies the source IP address.

Values a.b.c.d

detail

Displays detailed information.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended
- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFFFF
- **flowspec-set —** flow-spec set
- *group-id* — 0 to 16383

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

show oam-pm statistics session slm meas-interval

show oam-pm statistics session lmm meas-interval

show oam-pm statistics session dm meas-interval

Description

This command selects a measurement interval for the statistical display.

Parameters

raw

Keyword that excludes because there is only one raw cumulative bin.

{1-min | 5-mins | 15-mins | 1-hour | 1-day}

Keyword that identifies the measurement interval to query for the statistics.

interval-number

Specifies the numerical reference that indicates the position from the latest sample window. The number 1 is the most recent interval with all higher numbers being that position in the past from current.

Values 1 to 97

[all | bins | summary]

Keyword used to filter the output.

Platforms

All

- show oam-pm statistics session slm meas-interval
- show oam-pm statistics session dmm meas-interval
- show oam-pm statistics session lmm meas-interval

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

- show oam-pm statistics session dm meas-interval

Output

The following outputs are examples of OAM-PM configuration information:

- Output example: OAM-PM meas interval LMM configuration information, Table 343: Output fields: OAM-PM meas-interval configuration information,

Context

[Tree] (show>oam-pm>stats>session>twamp-light meas-interval)

Full Context

show oam-pm statistics session twamp-light meas-interval

Description

This command selects a measurement interval for the statistical display.

Parameters

raw

Specifies that the interval number is not to be included because there is only one raw cumulative bin.

{5-mins | 15-mins | 1-hour | 1-day}

Identifies the measurement interval to query for the statistics.

interval-number

Specifies the numerical reference that indicates the position from the latest sample window. The number 1 is the most recent interval with all higher numbers being that position in the past from current.

Values 1 to 97

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

delay

Indicates that the statistics being queried are for delay. TWAMP-light PDUs carry both delay and loss informational elements and it is not clear from only the test type name which statistic the operator requires.

loss

Indicates the statistics being queried are for loss. TWAMP-light PDUs carry both delay and loss informational elements and it is not clear from only the test type name which statistic the operator requires.

[all | bins | summary]

Specifies a keyword to filter the output.

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

15.48 measurement-template

measurement-template

Syntax

measurement-template [*measurement-template*]

Context

[Tree] (show>test-oam>link-measurement measurement-template)

Full Context

show test-oam link-measurement measurement-template

Description

This command displays basic link measurement template information, such as the administrative state and number of interfaces referencing the template.

The base command can filter and produce output for a single measurement template. When the measurement template name is specified, delayed information about the template is displayed.

Parameters

measurement-template

Specifies the link measurement template name, up to 64 characters, for which to display a filtered list.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following outputs are examples of link measurement template information. The associated tables describe the output fields.

Output Example

```
show test-oam link-measurement measurement-template
===============================================================================

Table 345: Output fields: measurement template with template name specified

Label	Description
Template Name	Displays the name of the link measurement template
Description	Displays the configured description of the link measurement template
Admin State	Displays the administrative state of the measurement template
Unidirectional Measurement	Displays the computational method used to calculate the delay metric actual — forward delay derived — half the roundup
Delay Measurement	Displays the delay metric compared to the threshold min — minimum recorded value max — maximum recorded value avg — average recorded value
Interval	Displays the probe frequency of the test packet
Last Reported Delay Hold	Displays the configured value that determines the time a reported delay measurement should be cleared if the operational state of the test transitions to down and remains there at least the length of this timer
Protocol	Displays the type of test packet used to report delay
Destination UDP Port	Displays the configured destination UDP port for test packets
Timestamp Format	Displays the format of the timestamp encoded in the test packetntp — Network Time Protocol format 32 seconds, 32 fractional

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	secondsptp — Truncated Precision Time Protocol format 32 seconds, 32 nanoseconds
DSCP	Displays the configured DSCP in the IP header of the test packet
FC	Displays the configured forwarding class in the local node
Profile	Displays the profile of the test packet in the local node
Allow Egress Remark	Displays whether the egress QoS policy can remark the DSCP of the test packetNo — the egress QoS policy is bypassed unless **force-remark** is enabled Yes — the egress QoS policy is applied
TTL	Displays the IP header time to live (IPv4) or hop limit (IPv6)
IPv6 UDP Checksum 0	Displays whether processing of IPv6 packets that arrive with UDP checksum 0 is allowed or disallowed Disallow — packets are discarded Allow — the arriving packets are processed
Sample Window	Displays the header for sample window objects
Interval Multiplier	Displays the number of probes in the sample window, multiplying this value and the interval
Aggregate Sample Window	Displays the calculated length of the window in seconds
Sample Multiplier	Displays the number of sample windows in the aggregate sample window
Duration	Displays the calculated length of the window, in seconds
Relative Threshold	Displays the configured percentage difference comparing the current and previously reported measurements
Absolute Threshold	Displays the configured microsecond difference comparing the current and previously reported measurements
Window Integrity	Displays the minimum number of measurements, expressed as a percentage, before the window is consider integral
Active Interfaces	Displays the number of interfaces actively (Oper Up) referencing the link measurement template

measurement-template-using

Syntax

measurement-template-using [*measurement-template*]

Context

[Tree] (show>test-oam>link-measurement measurement-template-using)

Full Context

show test-oam link-measurement measurement-template-using

Description

This command displays the link measurement templates and the IP interfaces associated with those templates.

The base command provides a single list of all measurement templates, but the command can filter and produce output for a single measurement template.

Parameters

measurement-template

Specifies the link measurement template name, up to 64 characters, for which to display a filtered list.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of link measurement template information, and Table 346: Output fields: measurement template using describes the output fields.

Output Example

```
show test-oam link-measurement measurement-template-using
===============================================================================
Measurement Templates
===============================================================================

 int-PE-1-PE-3                                                              IPv4
 int-PE-1-PE-4                                                              IPv4
===============================================================================
```

Table 346: Output fields: measurement template using

Label	Description
Template Name	The name of the link measurement template
Interface Name	The name of the interface using the link measurement template
Protocol	The IP protocol enabled under the dynamic delay section of the interface: IPv4, IPv6, or None. None indicates no protocol is enabled

15.50 megapools

megapools

Syntax

megapools *slot-number* **fp** *fp-number* **wred** [**detail**] **queue-group** *queue-group-name* [**instance** *instance-id*]

megapools *slot-number* **fp** *fp-number*

megapools *slot-number* **fp fp-number wred** [**detail**] [**service-id** *service-id*]

Context

[Tree] (show megapools)

Full Context

show megapools

Description

This command displays megapool information. A megapool is a mechanism the forwarding plane uses to allow over subscription of buffer pools. Every buffer pool is created in the context of a megapool.

By default, all buffer pools are associated with a single megapool and the pools are not oversubscribed. When WRED queue support is enabled on the FP, three megapools are used.

- The original megapool services the default pools.
- The second megapool services the system internal use pools.
- The third megapool is used by the buffer pools used by the WRED queues.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The traffic manager buffers are allocated to the three megapools without oversubscription. The WRED queue pools are allowed to oversubscribe their megapool, but the megapool protects the pools associated with the other megapools from buffer starvation that could be caused by that over subscription.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 to 10

fp-number

Displays information for the specified FP.

Values 1 to 8

wred

Displays WRED queue pool information.

detail

Displays detailed information.

queue-group-name

Displays information for the specified port queue group name, up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

service-id

Specifies the service ID.

Values 1 to 2148278381

service-name

Specifies a service name up to 64 characters.

Context

[Tree] (show>isa>stats>tunnel-isa memory-allocation-failure-rate)

Full Context

show isa statistics tunnel-isa memory-allocation-failure-rate

Description

This command displays memory allocation failure rate of the specified ISA. The system collects usage information every hour for last 24 hours. The output also includes a current value.

Parameters

mda

Displays information about the specified ISA.

Values slot/mda

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 24

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system after this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Parameters

mep *mep-id*

Keyword used to specify the integer that is unique among all the MEPs in the same MA.

Values 1 to 8191

domain *md-index*

Keyword used to specify the index of the MD to which the MP is associated, or 0, if none.

Values 1 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

md-admin-name

Keyword used to specify the MD name, up to 64 characters.

association *ma-index*

Keyword used to specify the index to which the MP is associated, or 0, if none.

Values 1 to 4294967295

ma-admin-name

Keyword used to specify the MA name, up to 64 characters.

loopback

Keyword used to display loopback information for the specified MEP.

linktrace

Keyword used to display linktrace information for the specified MEP.

eth-bn-notification

Keyword used to display ETH-bandwidth information for the specified MEP.

statistics

Keyword used to display statistics information for the specified MEP.

remote-mepid *mep-id*

Keyword used to display specified remote MEP ID information for specified the MEP.

all-remote-mepids

Keyword used to display all remote MEP ID information for the specified MEP.

eth-test-results

Keyword used to display eth-test-result information for the specified MEP.

one-way-delay-test

Keyword used to display one-way-delay-test information for the specified MEP.

two-way-delay-test

Keyword used to display two-way-delay-test information for the specified MEP.

two-way-slm-test

Keyword used to display two-way-slm-test information for the specified MEP.

remote-peer *mac-address*

Keyword used to include remote MEP ID information for the specified MEP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of ETH-CFM MEP information, and the associated tables describe the output fields.

- Output example: ETH-CFM MEP configuration information, Table 348: Output fields: MEP, linktrace, and loopback

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Output example: ETH-CFM MEP configuration linktrace information, Table 348: Output fields: MEP, linktrace, and loopback
- Output example: ETH-CFM MEP configuration loopback information, Table 348: Output fields: MEP, linktrace, and loopback
- Output Example (MEPs, linktrace, and loopback), Table 348: Output fields: MEP, linktrace, and loopback
- Output Example (delay test), Table 349: Output fields: ETH-CFM MEP delay test

Output example: ETH-CFM MEP configuration information

Table 348: Output fields: MEP, linktrace, and loopback

Label	Description
Mep Information	
Md-index	Displays the MD index of the domain

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Direction	Displays the direction of OAMPDU transmission
Ma-index	Displays the MA index of the association
Admin	Displays the administrative status of the MEP
Md-admin-name	Displays the administrative MD name.
Ma-admin-name	Displays the administrative MA name.
MepId	Displays the MEP identifier
CCM-Enable	Displays the status of the CCM (enabled or disabled)
IfIndex	Displays the index of the interface
PrimaryVid	Displays the identifier of the primary VLAN
FngState	Indicates the different states of the Fault Notification Generator
LowestDefectPri	Displays the lowest priority defect (a configured value) that is allowed to generate a fault alarm
HighestDefect	Identifies the highest defect that is present For example, if defRDICCM and defXconCCM are present, the highest defect is defXconCCM.
Defect Flags	Displays the number of defect flags
Mac Address	Displays the MAC address of the MEP
CcmLtmPriority	Displays the priority value transmitted in the linktrace messages (LTM)s and CCMs for this MEP The MEP must be configured on a VLAN.
CcmTx	Displays the number of Continuity Check Messages (CCM) sent The count is taken from the last polling interval (every 10 s).
CcmSequenceErr	Displays the number of CCM errors
Eth-1DM Threshold	Displays the one-way-delay threshold value
Eth-Ais	Displays the state of the ETH-AIS test (enabled or disabled)
Eth-Tst	Displays the state of the ETH-Test (enabled or disabled)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Monitor-Oper-Group	Displays the name of the operational group the MEP is monitoring. If "N/A" is displayed, no operational group is configured for the MEP.
Oper-group state	Displays the state of the operational group. If "N/A" is displayed, no operational group is configured for the MEP.
CcmLastFailure Frame	Displays the frame that caused the last CCM failure
XconCcmFailure Frame	Displays the frame that caused the XconCCMFailure
Mep Linktrace Message Information	
LtRxUnexplained	Displays the number of unexplained linktrace messages (LTM) that have been received
LtNextSequence	Displays the sequence number of the next linktrace message
LtStatus	Displays the status of the linktrace
LtResult	Displays the result of the linktrace
TargIsMepId	Identifies whether the target interface has a MEP-ID (true or false)
TargMepId	Displays the MEP-ID of the target interface
TargMac	Displays the MAC address of the target interface
TTL	Displays the TTL value
EgressId	Displays the egress ID of the linktrace message
SequenceNum	Displays the sequence number of the linktrace message
LtFlags	Displays the linktrace flags
Mep Linktrace Replies	
SequenceNum	Displays the sequence number returned by a previous transmit linktrace message, indicating which linktrace message response is returned
ReceiveOrder	Displays the order in which the linktrace initiator received the linktrace replies
Ttl	Displays the TTL field value for a returned linktrace reply
Forwarded	Indicates whether the linktrace message was forwarded by the responding MEP
LastEgressId	Displays the last egress identifier returned in the linktrace reply egress identifier TLV of the linktrace reply

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	The last egress identifier identifies the MEP linktrace initiator that initiated, or the linktrace responder that forwarded, the linktrace message for which this linktrace reply is the response. This is the same value as the egress identifier TLV of that linktrace message.
TerminalMep	Indicates whether the forwarded linktrace message reached a MEP enclosing its MA
NextEgressId	Displays the next egress identifier returned in the linktrace reply egress identifier TLV of the linktrace reply The next egress identifier identifies the linktrace responder that transmitted this linktrace reply and can forward the linktrace message to the next hop. This is the same value as the egress identifier TLV of the forwarded linktrace message, if any.
Relay	Displays the value returned in the Relay Action field
IngressMac	Displays the MAC address returned in the ingress MAC address field
Ingress Action	Displays the value returned in the Ingress Action field of the linktrace message
IngressPortIdSubType	Displays the format of the ingress port ID
IngressPortId	Displays the ingress port ID; the format is determined by the value of the IngressPortIdSubType
EgressMac	Displays the MAC address returned in the egress MAC address field
Egress Action	Displays the value returned in the Egress Action field of the linktrace message
EgressPortIdSubType	Displays the format of the egress port ID
EgressPortId	Displays the egress port ID; the format is determined by the value of the EgressPortIDSubType
Org Specific TLV	Displays all organization-specific TLVs returned in the linktrace reply, if any Includes all octets including and following the TLV length field of each TLV, concatenated
Mep Loopback Information	
LbRxReply	Displays the number of received loopback (LB) replies

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
LbRxBadOrder	Displays the number of received loopback messages that are in a bad order
LbRxBadMsdu	Displays the number of loopback replies that have been received with the wrong destination MAC address (MSDU = MAC Service Data Unit)
LbTxReply	Displays the number of loopback replies transmitted out this MEP
LbSequence	Displays the sequence number in the loopback message
LbNextSequence	Displays the next loopback sequence
LbStatus	True — Loopback is in progress False — No loopback is in progress
LbResultOk	Displays the result of the loopback test
DestIsMepId	Identifies whether the destination interface has a MEP-ID (true or false)
DestMepId	Displays the MEP-ID of the destination interface
DestMac	Displays the MAC address of the destination interface

mep

Syntax

mep *mep-id* **domain** *md-index* **association** *ma-index* **statistics**

Context

[Tree] (clear>eth-cfm mep)

Full Context

clear eth-cfm mep

Description

This command clears the MEP parameters.

Parameters

mep-id

Specifies the MEP ID.

Values 1 to 8191

md-index

Specifies the MD index.

Values 1 to 4294967295

ma-index

Specifies the MA index.

Values 1 to 4294967295

statistics

Clears the MEP statistics.

Platforms

15.55 mesh-sdp

mesh-sdp

Syntax

mesh-sdp *sdp-id*[*:vc-id*] { **all** | **counters** | **stp** | **mrp**}

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>service>statistics>id mesh-sdp)

Full Context

clear service statistics id mesh-sdp

Description

This command clears the statistics for a particular mesh SDP bind.

Parameters

sdp-id

Specifies the SDP ID for which to display information

Default All SDPs.

Values 1 to 17407

vc-id

Displays information about the virtual circuit identifier.

Values 1 to 4294967295

all

Clears all queue statistics and STP statistics associated with the SDP

counters

Clears all queue statistics associated with the SDP

stp

Clears all STP statistics associated with the SDP

mrp

Clears all MRP statistics associated with the SDP

Platforms

All

mesh-sdp

Syntax

mesh-sdp *sdp-id*[:*vc-id*] **ingress-vc-label**

mesh-sdp *sdp-id*[:*vc-id*] **vccv-bfd** {**session** | **statistics**}

Full Context

clear service id mesh-sdp

Description

This command clears and resets the mesh SDP binding.

Parameters

sdp-id

The spoke-SDP ID for which to clear statistics.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be reset.

Values 1 to 4294967295

ingress-vc-label

Specifies to clear the ingress VC label.

vccv-bfd session

Specifies to clear the session mismatch flag on the mesh-SDP binding after the flag was set to true by a detected mismatch between the configured parameters and the received parameters.

vccv-bfd statistics

Specifies to clear a VCCV BFD session statistics for a specified mesh-SDP.

Full Context

show service id mfib

Description

This command displays the multicast FIB on the VPLS service.

Parameters

brief

Displays a brief output

statistics

Displays statistics on the multicast FIB

ipv4

Displays IPv4 address information

ipv6

Displays IPv6 address information

mac

Displays MAC address information

group-address

Displays the multicast FIB for a specific multicast group address

Platforms

All

Output

The following command displays multicast FIB information and Table 350: Output fields: multicast FIB describes the output fields.

```
show service id mfib
```

Output Example

```

```

The following command shows which ISIDs are local and Table 350: Output fields: multicast FIB describes the output fields. The **mfib** command option displays ISIDs that are local and advertised. Static ISIDs are included in this display. However, ISID policy can override the ISIDs that are designated to use the default multicast tree and these do not show up in the MFIB. This is displayed on a B-VPLS control service.

```
show service id mfib
```

Output Example

```

Table 350: Output fields: multicast FIB

Label	Description
Multicast FIB, Service	
Source Address	IPv4 unicast source address
Group Address	IPv4 multicast group address
SAP ID	Indicates the SAP/SDP to which the corresponding multicast stream are forwarded or blocked
Forwarding/Blocking	Indicates whether the corresponding multicast stream is blocked or forwarded
Number of Entries	Specifies the number of entries in the MFIB
Forwarded Packets	Indicates the number of multicast packets forwarded for the corresponding source/group
Forwarded Octets	Indicates the number of octets forwarded for the corresponding source/group
Svc ID	Indicates the service to which the corresponding multicast stream is forwarded or blocked. Local means that the multicast stream is forwarded or blocked to a SAP or SDP local to the service.
Multicast FIB Statistics, Service	
Matched Pkts	The number of matched packets
Matched Octets	The number of matched octets
Forwarding Rate	The forwarding rate

Full Context

show redundancy mgmt-ethernet

Description

This command displays the management Ethernet port redundancy status. The **show router "management" interface** command can also display the CPM Ethernet port used by the management

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interface. If the port of the primary CPM is active, it shows "A/1” under the Port/SapId field. If the port of the secondary CPM is active, it shows "B/1 -> A/1” in the Port/SapId field.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following output is an example of management Ethernet port redundancy information, and Table 351: Output fields: redundancy management Ethernet describes the output fields.

Output example

```
show redundancy mgmt-ethernet
===============================================================================
Management Ethernet Redundancy
===============================================================================
Admin Status  : Enabled
Oper Status   : Management port operating on active CPM
Revert Time   : 5 seconds
===============================================================================
```

Table 351: Output fields: redundancy management Ethernet

Label	Description
Admin Status	Enabled — Administrative status is enabled Disabled — Administrative status is disabled
Oper Status	Up — The interface is operationally enabled Down — The interface is operationally shutdown
Revert Time	The wait duration (in seconds) before reverting to the management Ethernet port of the primary CPM

Output example - show router "management” interface

The following output is an example of CPM’s Ethernet port information, and Table 352: Output fields: router "management” interface describes the output fields. When the primary CPM Ethernet port is active, the output displays the Port/SapId information as "A1". When the port of the secondary CPM is active, the output displays the Port/SapId information as "B/1 -> A/1".

```
show router "management" interface
===============================================================================
Interface Table (Router: management)
===============================================================================
Interface-Name                   Adm         Opr(v4/v6)  Mode    Port/SapId

Admin State        : up                        Oper Duplex      : A/1 -> B/1
Oper State         : A/1 -> B/1
Config Duplex      : full
Physical Link      : A/1 -> B/1                MTU              : 1514
…
```

Table 353: Output fields: port "A1"

Label	Description
Description	A text description for the entity
Interface	Displays the physical port ID in the form *slot*/*mda*/*port* for all ports except QSFP28 and QSFP-DD ports, or *slot*/*mda*/**c***connector*/*port* for QSFP28 and QSFP-DD ports Displays the status of the Ethernet link behavior if management port redundancy is enabled (for example, `A/1 -> B/1`)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Link-level	Ethernet — The port is configured as Ethernet
Oper Duplex	full — The link is set to full duplex mode half — The link is set to half duplex mode Displays the status of the Ethernet link behavior if management port redundancy is enabled (for example, `A/1 -> B/1`)
Admin State	Up — The entity is administratively up Down — The entity is administratively down
Oper Speed	The operating speed of the interface Displays the status of the Ethernet link behavior if management port redundancy is enabled (for example, `A/1 -> B/1`)
Oper State	up — The entity is operationally up down — The entity is operationally down Additionally, the *lag-id* of the LAG it belongs to in addition to the status of the LAG member (active or standby) is specified Displays the status of the Ethernet link behavior if management port redundancy is enabled (for example, `A/1 -> B/1`)
Config Duplex	Full — The link is set to full duplex mode Half — The link is set to half duplex mode
Physical Link	Yes — A physical link is present No — A physical link is not present Displays the status of the Ethernet link behavior if management port redundancy is enabled (for example, `A/1 -> B/1`)
MTU	Displays the size of the largest packet which can be sent/received on the Ethernet physical interface, specified in octets

mgw-address-cache

Syntax

mgw-address-cache [**arec**] [**snaptr**] [**srv**]

mgw-address-cache apn *apn-domain-string*

Context

[Tree] (show>router>gtp>uplink mgw-address-cache)

Full Context

show router gtp uplink mgw-address-cache

Description

This command displays the DNS lookup address cache of the mobile gateway.

Parameters

apn-domain-string

Specifies the Access Point Name (APN) of this DNS cache entry, up to 108 characters.

arec

Displays A-records.

snaptr

Displays Straightforward-NAPTR information.

srv

Displays SRV records.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

15.59 micro-segment-local-sid

micro-segment-local-sid

Syntax

micro-segment-local-sid [*ipv6-prefix*[/*prefix-length*]] [**longer**] [**micro-segment-locator** *ms-locator-name*] [**context** *context*] [**ua**] [**udt4**] [**udt6**] [**udt46**] [**udx2**] [**udt2u**] [**udt2m**] [**un**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>srv6 micro-segment-local-sid)

Full Context

show router segment-routing-v6 micro-segment-local-sid

Description

This command displays SRv6 locally-configured micro-SID information.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified IP address and length.

Values *ipv6-prefix*[/*prefix*]: x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D
prefix-length: 1 to 128

longer

Displays the specified route and subsets of the route.

ms-locator-name

Specifies the micro-segment locator name, up to 64 characters.

context

Specifies the context for which to display micro-segment local micro-SID information.

Values *vprn-svc-name*, *vprn-svc-id*, 'Base'

ua

Displays the uA SID associated with a P2P interface.

udt4

Displays the uDT4 function associated with the specified context.

udt6

Displays the uDT6 function associated with the specified context.

udt46

Displays the uDT46 function associated with the specified context.

udx2

Displays the uDX2 function associated with the SRv6 instance in the service.

udt2u

Displays the uDT2U function associated with the SRv6 instance in the service.

udt2m

Displays the uDT2M function associated with the SRv6 instance in the service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

un

Displays the uN SID function of a locator.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

15.60 micro-segment-locator

micro-segment-locator

Syntax

micro-segment-locator [**mt** {**0** | **2**}] [**prefix** *ipv6-prefix*[/*prefix-length*]] [**adv-router** *system-id* | *hostname*] [**algo** *algo-id*]

Context

[Tree] (show>router>isis>srv6 micro-segment-locator)

Full Context

show router isis segment-routing-v6 micro-segment-locator

Description

This command displays the IS-IS SRv6 micro-segment locators.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values *ipv6-prefix*[/*prefix*]: x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D
prefix-length: 1 to 128

system-id* | *hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

Output

Table 354: Output fields: micro-segment locator describes the micro-segment locator output fields.

Use the following command to display micro-segment locator information.

```
show router isis segment-routing-v6 micro-segment-locator
```

Output Example

```

15.61 migration

migration

Syntax

migration [**interface** *ip-int-name*]

Context

[Tree] (tools>dump>router>ipoe-session migration)

Full Context

tools dump router ipoe-session migration

Description

This command displays details on the IPoE session migration progress. It shows per group interface the number of hosts per type (DHCPv4, DHCPv6 and SLAAC) that are associated with an IPoE session or that are not associated with an IPoE session.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPoE session migration information.

Output Example

```
# tools dump router ipoe-session migration interface group-int-1-1
===============================================================================
 Type                Total     IPoE session     Non IPoE session
===============================================================================
 Group-interface: group-int-1-1 (IPoE session enabled)
-------------------------------------------------------------------------------
 DHCPv4              2         1                1
 DHCPv6              3         2                1
 SLAAC               0         0                0
-------------------------------------------------------------------------------
 IPoE sessions       1

15.62 mip

mip

Syntax

mip

Context

[Tree] (show>eth-cfm mip)

Full Context

show eth-cfm mip

Description

This command displays provisioned entities that allow MIP creation.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ETH-CFM MIP information. The following table describes the output fields.

Output Example

```
show eth-cfm mip
===============================================================================
CFM SAP MIP Table
===============================================================================
Sap                 Qtag1 Qtag2 PVLAN Enabled           MAC Address

Table 355: Output fields: ETH-CFM MIP

Label	Description
Sap	The service SAP ID
qtag1	The outer CFM VLAN tag
qtag2	The inner CFM VLAN tag
PVLAN	The configured primary VLAN
Enabled	The state of the MIP
Mac Address	The configured MAC address of the MIP
Sdp	The service SDP ID
SvcId	The service ID
Type	The SDP type
Far End	The IP address of the far-end peer for the SDP

15.63 mip-instantiation

mip-instantiation

Syntax

mip-instantiation [**level** *level*] [{**sap** *sap-id* | **sdp** *sdp-id*}]

Context

[Tree] (show>eth-cfm mip-instantiation)

Full Context

show eth-cfm mip-instantiation

Description

This command displays the active MIPs created on the node, their related object values, and the SAP or SDP binding. The attributes include a column that indicates which MIP table was responsible and authoritative for the specific active attribute. Authorities can be the association (asn), default-domain (def), or the global read-only values (sys).

Parameters

level

The level for which all created MIPs will be displayed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 7

sap-id

The SAP for which created MIPs will be displayed

sdp-id

The SDP binding for which created MIPs will be displayed

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ETH CFM MIP instantiation information.

Table 356: Output fields: ETH-CFM MIP instantiation describes the show MIP instantiation command output fields.

Output Example

```
show eth-cfm mip-instantiation
===============================================================================
CFM SAP MIP Instantiation Information
===============================================================================
SAP                       Lvl  LA   Creation    CA   IdPerm     IdA  Pri  PA

===============================================================================
```

Table 356: Output fields: ETH-CFM MIP instantiation

Label	Description
VLAN	Displays the primary *vlan-id* associated with the MIP, or "none" if primary-vlan-enable is not configured
L	Displays the numerical value indicating the CFM level of the MIP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
LA	Displays the level authority indicating the creation routine responsible for the level
Creation	Displays the MHF creation mode that was used to create the MIP
CA	Displays the creation authority
IdPerm	Indicates whether the SenderID TLV is being included (chassis) or not (none)
IdA	Displays the IdPermission authority
Pri	Displays the numerical value that indicates the **mip-ltr-priority**
PA	Displays the **mip-ltr-priority** authority

15.64 mirror

mirror

Syntax

mirror mirror-dest *service-id*

mirror global-sampling-rate

mirror mirror-source *service-id*

Context

[Tree] (show mirror)

Full Context

show mirror

Description

This command displays mirror configuration and operation information.

Parameters

service-id

Specify the mirror service ID.

Values 1 to 2148278385

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

global-sampling-rate

Displays the global sampling rate as well as all mirror destination services that use the global sampling rate.

Platforms

All

Output

The following output is an example of mirror destination information.

Output Example

```

Table 357: Output fields: mirror lists and describes the mirroring output fields:

Table 357: Output fields: mirror

Label	Description
Service Id	The service ID associated with this mirror destination.
Type	Entries in this table have an implied storage type of "volatile”. The configured mirror source information is not persistent.
Admin State	Up — The mirror destination is administratively enabled.
	Down — The mirror destination is administratively disabled.
Oper State	Up — The mirror destination is operationally enabled.
	Down — The mirror destination is operationally disabled.
Forwarding Class	The forwarding class for all packets transmitted to the mirror destination.
Remote Sources	Yes — A remote source is configured.
	No — A remote source is not configured.
Enable Port Id	Yes — PPP Port ID Mirroring is enabled.
	No — PPP Port ID Mirroring is disabled.
Slice	The value of the slice-size, the maximum portion of the mirrored frame that will be transmitted to the mirror destination. Any frame larger than the slice-size will be truncated to this value before transmission to the mirror destination. A value of 0 indicates that mirrored packet truncation based on slice size is disabled.
Destination SAP	The ID of the access port where the Service Access Point (SAP) associated with this mirror destination service is defined.
Egr QoS Policy	This value indicates the egress QoS policy ID. A value of 0 indicates that no QoS policy is specified.

===============================================================================
```

Table 358: Output fields: mirror global sampling rate

Label	Description
Global Sampling Rate	Specifies the configured global sampling rate
Id	Specifies the mirror destination services that use the global sampling rate by ID
Name	Specifies the mirror destination services that use the global sampling rate by name

15.65 mirror-dest

mirror-dest

Syntax

mirror-dest [*service-id*]

Context

[Tree] (show>li mirror-dest)

Full Context

show li mirror-dest

Description

This command displays LI mirror destination information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

service-id

Identifies the service in the service domain. This ID is unique to this service and cannot be used by any other service, regardless of service type. The same service ID must be configured on every router that this particular service is defined on.

Values

service-id: 1 to 2148278381

svc-name: 64 characters maximum

Platforms

All

Output

Output Example

```
A:BNG-1# show li mirror-dest
===============================================================================
Mirror Services

```

mirror-dest

Syntax

mirror-dest [*service-id*]

Context

[Tree] (clear>li>radius mirror-dest)

Full Context

clear li radius mirror-dest

Description

This command deletes the mirror destination created by RADIUS.

LI configuration changes, such as updating or replacing a mirror-destination template, may prevent the RADIUS VSA "Alc-li-action" from deleting a mirror destination. To remove the mirror destination from RADIUS, the parameters for the mirror destination (a combination of the RADIUS LI VSAs and the mirror

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destination template) must match the parameters used during the mirror destination creation. This CLI command removes LI destinations in these cases.

Parameters

service-id

Specifies the mirror destination service that was created through RADIUS, which can be displayed with the **show li mirror-dest** command.

Values 1 to 2148278385

Output Fields: show macsec mka-session port

Table 359: Output fields: MACsec MKA session port describes the output fields for the following **show macsec mka-session port** command.

Table 359: Output fields: MACsec MKA session port

Label	Description
MKA Session for port	Display the MKA session for the current port
Port	Specifies the MKA session current port.
Security Zone	Specifies Security Zone does this port belongs to.
Live Peer List	Specifies Peers (Participants) which have provided their MI and MN via KMA. The peer entry is in the Live Peer List.
Member Identifier	Specifies the MI of the peer entry.
Mesg Num	Specifies the latest Member Number of the peer entry.
Rx-SCI	Specifies the Peer Rx-SCI.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
KS-priority	Specifies the Peer Key server priority.
Potential Peer List	Peers (Participants) which have Potential Peers List includes all the other peers that have transmitted an MKPDU that has been directly received by the participant or that were included in the Live Peers List of a MKPDU transmitted by a peer that has proved liveness, an MKA PDU. The peer entry is in the Potential Peer List.

Output Fields: show macsec mka-session port detail

Table 360: Output fields: MACsec MKA session port detail describes the output fields for the following commands:

- **show macsec mka-session port**
- **show macsec mka-session detail**
- **show macsec mka-session statistics**

Table 360: Output fields: MACsec MKA session port detail

Label	Description
MKA Oper State	Specifies the operational state of the MKA participant on this port. The operational MKA state will be up if MKA hellos are received on this port and have a valid session.
Oper Cipher Suite	Specifies the operational encryption algorithm used for data path PDUs when all parties in the CA have the (SAK). This value is specified by the key server:gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256.
Oper Encrypt Offset	Specifies the operational encryption offset used for the data path PDUs when all parties in the CA have the SAK. This value is specified by the key server: 0, 30, 50.
CAK Type	Specifies the type of the CAK in use by this MKA.
CAK Name	Specifies the name of the CAK in use by this MKA which is used to find the correct CAK.
MKA Member ID	Specifies indicates the Member Identifier (MI) for the MKA instance.
Transmit Interval	Specifies the time interval (in ms) at which the MKA broadcasts its liveliness to its peers and is non-configurable.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Outbound SCI	Specifies the Secure Channel Identifier (SCI) information for transmitting MACsec frames and consists of the outgoing port MAC Address and a port identifier.
Message Number	Specifies the current count of MKA messages that is attached to MKA PDUs.
Key Number	Specifies the number of the currently assigned CAK. When a new CAK is generated, this number is incremented. A SAK is identified by 128-bit Key Identifier (KI) and 32-bit Key-Number (KN).
Key Server	Specifies whether this server is the highest priority server in the peer group: no, yes.
Key Server Priority	Specifies the priority of the active key server: 0-255 (default 16).
Latest SAK AN	Specifies the Association Number (AN) of the latest Secure Association Key (SAK). This number is concatenated with an SCI to identify a Secure Association (SA). In SR OS, only 2 SAKs are supported.
Latest SAK KI	Specifies the Key Identifier (KI) of the latest SAK. This number is derived from the MI of the key server and the key number.
Previous SAK AN	Specifies the AN of the previous SAK. This number is concatenated with an SCI to identify an SA.
Previous SAK KI	Specifies the KI of the previous SAK. This number is derived from the MI of the key server and the key number.
Peer Removed Due to Timeout	Specifies the number of peers removed from the live/potential peer list due to not receiving an MKPDU within the MKA Live Time (6.0 seconds) and is not configurable.
CKN Not Found	Specifies the number of MKPDUs received with a CKN that does not match the CA configured for the port.
New Live Peer	Specifies the number of validated peers that have been added to the live peer list.
SAK Generated by Server	Specifies the number of SAKs generated by this MKA instance.
SAK Installed for TX	Specifies the number of SAKs installed for transmitting.
SAK Installed for RX	Specifies the number of SAKs installed for receiving.
PDU Too small	Indicates that the number of MKPDUs received that are less than 32 octets.
PDU Too big	Indicates the number of MKPDUs received where the EAPOL header indicates a size larger than the received packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
PDU Not Quad Size	Indicates the number of MKPDUs received with a size that is not a multiple of 4 octets long.
PDU Message Number Invalid	Indicates the number of MKPDUs received out of order as indicated by the Message Number.
PDU Param Set Size Invalid	Indicates the number of MKPDUs received which contain a parameter set body length that exceeds the remaining length of the MKPDU.
PDU Liveness Check Fail	Indicates the number of MKPDUs received which contain an MN that is not acceptably recent.
Param Set Not Quad Size	Indicates the number of MKPDUs received which contain a parameter set that is not a multiple of 4 octets long.
Unsupported Agility	Indicates the number of MKPDUs received which contain an unsupported Algorithm Agility value.
Invalid CAK Name Length	Indicates the number of MKPDUs received which contain a CAK name that exceeds the maximum CAK name length.
ICV Check Failed	Indicates the number of MKPDUs received which contain an ICV value that does not authenticate.
Peer Using Same MID	Indicates the number of MKPDUs received which contain a peer list with an MI entry which conflicts with the local MI.
SAK From Non-Live Peer	Indicates the number of SAKs received from peer that is not a member of the Live Peers List.
SAK From Non-Key Server	Indicates the number of SAKs received from an MKA participant that has not been designated as the Key Server. Only the key server should distribute SAK.
SAK Decrypt Fail	Indicates the number of AES Key Wrap SAK decryption failures that have occurred.
SAK Encrypt Fail	Indicates the number of AES Key Wrap SAK encryption failures that have occurred.
Key Number Invalid	Indicates the number of SAKs received with an invalid Key Number.
SAK Installation Failed	Indicates the number of Secy SAK installation failures that have occurred.
CAK Info Missing	Indicates the number of times internal CAK data is not available for the generation of the SAK.
Max Peers Set as Zero	Indicates the number of Secy SAK installations that have failed due to the max peer entry being set to 0.

mka-session

Syntax

mka-session [*port-id*]

Context

[Tree] (clear>macsec mka-session)

Full Context

clear macsec mka-session

Description

This command displays MACsec MKA session information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

port-id

Specifies the port ID, up to 17 characters

Platforms

All

15.67 mld

mld

Syntax

mld [**subscriber** *sub-ident-string*] [**detail**]

Context

[Tree] (show>service>active-subscribers mld)

Full Context

show service active-subscribers mld

Description

This command displays active subscriber MLD information.

Parameters

sub-ident-string

Displays the subscriber ID of the active subscriber, up to 64 characters.

detail

Displays detailed output.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of MLD information for active subscribers

Output Example

```
*A:eng-BNG-2# show service active-subscribers mld
===============================================================================
Active Subscribers
===============================================================================
Subscriber
  MLD-Policy
  HostAddr                      GrpItf                          NumGroups

15.71 mmrp

mmrp

Syntax

mmrp mac [*ieee-address*]

Context

[Tree] (show>service>id mmrp)

Full Context

show service id mmrp

Description

This command displays information on MACs. If a MAC address is specified, information will be displayed relevant to the specific group. No parameter will display information on all group MACs on a server.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ieee-address

Specifies a MAC address as a hex string in the form of xx:xx:xx:xx:xx:xx: or xx-xx-xx-xx-xx-xx

Platforms

All

Output

The following output is an example of service MRRP MAC information.

Output Example

```
*A:PE-A# show service id 10 mmrp mac 01:1E:83:00:00:65
-------------------------------------------------------------------------------
SAP/SDP                                 MAC Address       Registered  Declared
-------------------------------------------------------------------------------

15.72 mobile-gateway

mobile-gateway

Syntax

mobile-gateway remote-address *ip-address* [**udp-port** *port*] **statistics**

Context

[Tree] (clear>router>wlan-gw mobile-gateway)

Full Context

clear router wlan-gw mobile-gateway

Description

This command clears Mobile Gateway data.

Parameters

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

port

Specifies the port number.

Values 1 to 65535

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

===============================================================================
```

Table 362: Output fields: BGP IPVPN MPLS

Label	Description
Admin State	The administrative state
Oper State	The operational state
VRF Import	The VRF import
VRF Export	The VRF export
Route Dist.	The route distinguisher
Oper Route Dist	The operational route distinguisher
Oper RD Type	The operational RD type
Route Target	The route target
Route Target Impor	The route target import
Route Target Expor	The route target export
Domain-Id	The domain ID
Dyn Egr Lbl Limit	The dynamic egress label limit
Static Serv Lbl	The label configures the static per-VRF MPLS service label. This enables the use of the static service label and anycast addresses or SIDs to reach any one of two or more provider edge (PE) nodes in the forwarding of Layer 3 service traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper Serv Lbl	The operational service label is used by the core MPLS network (P routers) to forward the packet from the ingress PE router to the egress PE router.
Auto-Bind Tunnel	
Resolution	Indicates if resolution is enabled, which is a mechanism used by a PE router to automatically select an appropriate transport tunnel to carry VPN service traffic
Strict Tnl Tag	Indicates if strict tunnel tagging is enabled. When enabled, it means the system only considers tunnels that have a matching tunnel tag to the one specified or implied by the service or route.
ECMP	The ECMP value
Untagged Route	The untagged route refers to a BGP route that does not have an administrative tag policy applied to it
Weighted ECMP	Indicates if Weighted ECMP is enabled
Flex Algo FB	The flexible algorithm fallback allows users to define custom routing algorithms beyond the standard shortest path calculation
St Blackhole First	Mechanism for a PE router to locally override BGP-learned VPN routes with a blackhole route. This gives immediate control over traffic forwarding for specific prefixes, often used for traffic suppression or mitigation purposes.
BGP Instance	The BGP instance
Filter Tunnel Type	The field tunnel types specify which types of underlying tunnels are allowed or preferred for resolving the BGP next hop of IPVPN routes

15.81 ms-pw

ms-pw

Syntax

ms-pw [**rd** *rd*] [**aii-type2** *aii-type2*] [**brief**] [**hunt**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

Context

[Tree] (show>router>bgp>routes ms-pw)

Full Context

show router bgp routes ms-pw

Description

This command displays BGP Multi-Segment Pseudowire (MS-PW) routes.

Parameters

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

aii-type2

Filters the MS-PW routes based on the AII Type 2 value.

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

15.82 msap

msap

Syntax

msap {*msap-id* | **idle-only**}

Context

[Tree] (clear>service>id msap)

Full Context

clear service id msap

Description

This command clears Managed SAP (MSAP) information.

This command can remove an MSAP with active subscribers still associated with the MSAP. You can specify the **idle-only** parameter to clear only MSAPs in an idle state; MSAPs with active subscribers are not cleared.

Parameters

msap-id

Specifies a Managed SAP ID.

Values

dot1q	[port-id | lag-id]:qtag1
qinq	[port-id | lag-id]:qtag1.qtag2
qtag1	0 to 4094
qtag2	0 to 4094

idle-only

Specifies to clear only MSAPs in an idle state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap

Syntax

msap [**service** *service-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (tools>dump>service msap)

Full Context

tools dump service msap

Description

This command provides MSAP-related statistics for the chassis and tracks the number of sticky MSAPs. The statistics include the total number of MSAPs, sticky MSAPs, and idle MSAPs. When a subscriber disconnects from a sticky MSAP, it transitions to an idle MSAP. The idle MSAP transitions back to a sticky MSAP when the subscriber reconnects. A large number of idle MSAPs during peak network hours indicate that an idle MSAP cleanup is required. The total MSAP statistic counts both the total number of traditional MSAPs (non-sticky) and total number of sticky MSAPs. Idle MSAPs are counted towards the total number of sticky MSAPs.

Parameters

service-id

Specifies the service for which to show the MSAP-related statistics. The service is indicated in the chassis.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap

Syntax

msap

Context

[Tree] (show>service>id msap)

Full Context

show service id msap

Description

This command displays information for the managed SAPs associated with the service.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of managed SAP information.

Context

[Tree] (clear>subscr-mgmt msap-policy)

Full Context

clear subscriber-mgmt msap-policy

Description

This command deletes Managed SAPs (MSAPs) created by the MSAP policy.

This command can remove an MSAP with active subscribers still associated with the MSAP. Use the **idle-only** parameter to remove only MSAPs in an idle state.

Parameters

msap-policy-name

Specifies an existing managed SAP policy name. A string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

idle-only

Specifies to remove only the MSAPs in an idle state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-chassis

Syntax

multi-chassis

Context

[Tree] (clear>redundancy multi-chassis)

Full Context

clear redundancy multi-chassis

Description

Commands in this context clear multi-chassis parameters.

Platforms

All

15.87 multi-chassis-shunt-interface

multi-chassis-shunt-interface

Syntax

multi-chassis-shunt-interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>ipsec multi-chassis-shunt-interface)

Full Context

show ipsec multi-chassis-shunt-interface

Description

This command displays information about configured multi-chassis shunt interfaces or the multi-chassis shunt interface information in the specified routing instance or service.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IPsec multi-chassis shunt interfaces. Table 366: Output fields: multi-chassis shunt interface describes the output fields

Output Example

```
show>ipsec# multi-chassis-shunt-interface
===============================================================================
IPsec Multi-Chassis Shunt Interfaces
===============================================================================
Service Id  MC Shunt Interface Name          Next Hop                Resolved
-------------------------------------------------------------------------------
Base        to84                            130.100.14.4            Yes
Base        to85                            130.110.15.5            Yes
400         to84                            130.100.14.4            Yes
400         to85                            130.110.15.5            Yes
-------------------------------------------------------------------------------
No. of IPsec MC Shunt Interfaces: 4
```

Table 366: Output fields: multi-chassis shunt interface

Label	Description
Service Id	The service ID
MC Shunt Interface Name	The multi-chassis shunt interface name
Next Hop	The next hop
Resolved	Resolved: Yes or No
No. of IPsec MC Shunt Interfaces	The total number of MC shunt interfaces

15.88 multi-part-tlv-stats

multi-part-tlv-stats

Syntax

multi-part-tlv [**level** *level*] [**tlv-type** *type*]

Context

[Tree] (show>router>isis multi-part-tlv-stats)

Full Context

show router isis multi-part-tlv-stats

Description

This command displays MP-TLV statistics information. If no parameters are specified, the command displays statistics for all applicable TLVs and IS-IS levels.

Parameters

level

Specifies the IS-IS level for which to display statistics.

Values 1, 2

type

Specifies the TLV type for which to display statistics.

Values 0 to 65535

Platforms

All

Output

The following output is an example of IS-IS MP-TLV information, and Table 367: Output fields: IS-IS multi-part-TLV-stats describes the output fields.

Output example

```
A:node-2>show>router>isis# multi-part-tlv-stats

=======================================================
Rtr Base ISIS Instance 0 Multi-Part TLV Statistics
=======================================================
TLV-Type Level Truncated   Originated
-------------------------------------------------------
22       1     0           0
22       2     0           0
138      1     0           0
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
138      2     0           0
222      1     0           0
222      2     0           0
238      1     0           0
238      2     0           0
=======================================================
```

Table 367: Output fields: IS-IS multi-part-TLV-stats

Label	Description
TLV-Type	The TLV type
Level	The IS-IS level from which the TLV originated
Truncated	The number of TLVs that were truncated to fit the size limit
Originated	The total number of TLVs originated

multi-part-tlv-stats

Syntax

multi-part-tlv [**level** *level*] [**tlv-type** *type*]

Context

[Tree] (clear>router>isis multi-part-tlv-stats)

Full Context

clear router isis multi-part-tlv-stats

Description

This command clears MP-TLV statistics information. If no parameters are specified, the command clears the statistics for all applicable TLVs and IS-IS levels.

Parameters

level

Specifies the IS-IS level for which to clear statistics.

Values 1, 2

type

Specifies the TLV type for which to clear statistics.

Values 0 to 65535

Platforms

All

15.90 mvpn

mvpn

Syntax

mvpn

mvpn source-redundancy [**root** | **leaf**]

Context

[Tree] (show>router mvpn)

Full Context

show router mvpn

Description

This command displays multicast VPN related information. The router instance must be specified.

Parameters

source-redundancy

Keyword used to display source redundancy information.

root

Keyword used to display root information.

leaf

Keyword used to display leaf information.

Platforms

All

Output

The following outputs are examples of MVPN information.

Output Example

```
# show router 1 mvpn

15.91 mvpn-ipv4

mvpn-ipv4

Syntax

mvpn-ipv4 [**aspath-regex** *reg-exp*] [**community** *comm-id*] [**rd** *rd*] [**brief**] [**type** *mvpn-type*] [**originator-ip** *ip-address*] [**source-ip** *ipv4 address* | *ipv6 address*] [**group-ip** *ipv4 address* | *ipv6 address*] [**source-as** *as-number*]

mvpn-ipv4 [**aspath-regex** *reg-exp*] **hunt** [**community** *comm-id*] [**rd** *rd*] [**brief**] [**type** *mvpn-type*] [**originator-ip** *ip-address*] [**source-ip** *ipv4 address* | *ipv6 address*] [**group-ip** *ipv4 address* | *ipv6 address*] [**source-as** *as-number*]

mvpn-ipv4 [**detail** | **longer**] [**aspath-regex** *reg-exp*] [**community** *comm-id*] [**rd** *rd*] [**type** *mvpn-type*] [**originator-ip** *ip-address*] [**source-ip** *ipv4 address* | *ipv6 address*] [**group-ip** *ipv4 address* | *ipv6 address*] [**source-as** *as-number*]

Context

[Tree] (show>router>bgp>routes mvpn-ipv4)

Full Context

show router bgp routes mvpn-ipv4

Description

This command displays BGP MVPN IPv4 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

brief

Displays the BGP MVPN IPv4 route information in a brief format.

mvpn-type

Displays information for the specified MVPN route type.

Values intra-ad | inter-ad | spmsi-ad | leaf-ad | source-ad | shared-join | source-join

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Specifies the originator IP address.

Values a.b.c.d

ipv4 address | ipv6 address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

as-number

Specifies the source AS number.

Values 0 to 4294967295

Platforms

All

show router bgp routes mvpn-ipv6

Description

This command displays BGP MVPN IPv6 routes.

Parameters

mvpn-type

Displays information for the specified MVPN route type.

Values intra-ad | inter-ad | spmsi-ad | leaf-ad | source-ad | shared-join | source-join

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

ip-address

Specifies the originator IP address.

Values a.b.c.d

ipv4 address* | *ipv6 address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

as-number

Specifies the source AS number.

Values 0 to 4294967295

detail

Displays detailed information.

longer

Displays the specified route and subsets of the route.

brief

Displays the BGP MVPN IPv6 route information in a brief format.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

mvpn-list

Syntax

mvpn-list [**type** *type*] [**auto-discovery** *auto-discovery*] [**signalling** *signalling*] [**group** *group*]

Context

[Tree] (show>router mvpn-list)

Full Context

show router mvpn-list

Description

This command displays the list of multicast VPNs.

Parameters

type

Specifies the MVPN type.

Values pim, rsvp, ldp

auto-discovery

Specifies the auto-discovery mode.

Values none, default, mdt-s

signalling

Specifies the signalling type.

Values bgp, pim

group

Specifies the group address.

Platforms

All

Output

The following output is an example of router MVPN list information.

© 2026 Nokia.

Table 368: Output fields: IGMP Snooping MVR

Label	Description
IGMP Snooping Admin State	The IGMP snooping administrative state
MVR Admin State	The MVR administrative state
MVR Policy	The MVR policy name
Svc ID	The service ID
Sap/SDP	The SAP or SDP ID
Oper State	The operational state
From VPLS	The originating VPLS name
Num Local Groups	The number of local groups

nat-group *nat-group-id* **member** *member-number* **statistics** [**non-zero-value-only**]

nat-group [*nat-group-id*] **members**

Context

[Tree] (show>isa nat-group)

Full Context

show isa nat-group

Description

This command lists all active member ISAs (or group members). Up to 16 group members can be displayed (16 is the supported number of LAG links). Members can share physical ISAs (MDAs) and the physical locality of the group members can be determined from the **Mda** column in the output.

The number of group members will be <=X and the actual number of displayed group members will depend on the configuration based calculation.

Parameters

nat-group-id

Specifies the NAT group ID.

Values 1 to 4

associations

Displays associations applicable to the specified NAT group.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Displays NAT group statistics.

member

Displays statistics information about the resources of a member of a NAT ISA group.

member-number

Specifies the member number.

Values 1 to 255

non-zero-value-only

Displays statistics information display whose value is bigger than zero.

reassembly-statistics

Displays statistics information about IP datagram reassembly on NAT-capable ISA groups.

inter-chassis-redundancy

Displays information about inter-chassis redundancy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following shows output examples.

Output Example

```

Table 370: Output fields: ISA statistics

Field	Description
State	Displays the state of the NAT inter-chassis redundancy member.
Peer state	Displays the state of the peer.
Local IP address	Displays the local IP address.
Remote IP address	Displays the IP address of the remote client.
Unsupported flows	Displays the flows other than TCP/UDP/ICMP in 1:1 NAT that are agnostic and by default created per subscriber by configuration on both nodes. There is no need to synchronize such flows.
Tracked flows	Displays the TCP/UDP/ICMP flows.
Tracked flows not synced	Displays the outstanding flows on the active node waiting to be synchronized (transient condition). On the standby node, all flows are in this state.
Tracked flows pending	Displays the flows waiting to be acknowledged.
Flows synced	Displays the flows that are synchronized.
Flows marked to delete	Displays the flows marked to be deleted due to a timeout, deleted pinhole or simply as a result of an invoked **clear** command.
Flows delete pending	Displays the flows waiting to be deleted due to a timeout, deleted pinhole or simply as a result of an invoked **clear** command.
Time of last failure	Displays the time of the last ISA failure.
Failure cause	Displays the cause of the ISA failure.

```

Table 372: Output fields: ISA member state

State	Descriptions
Active	The member is actively serving traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

State	Descriptions
Failed	The member is in a failed state where forwarding is not possible and L2-aware bypass redundancy mode is disabled. This event is normally associated with an MS-ISA failure.
failedBypass	The member is in failed state and the subscribers that it was serving before the failover occurred are in a bypass mode. In a bypass mode, subscribers are normally routed according to the routing table in the inside routing context (as opposed to steered to MS-ISA where NAT is performed). The operator should ensure that the routing leads those subscribers to a centralized CGN node that serve as a backup device. This event is normally associated with an MS-ISA failure while the L2-aware bypass redundancy mode is enabled.
activeBypass	The member transitions in this state after a recovery while the L2-aware bypass mode of operation is enabled. Some subscribers that this member was serving before the failover are in bypass mode, while others that came on-line after the restoration are actively being served by this member.

nat-group

Syntax

nat-group *nat-group-id* **member** *member-number* **l2-aware-subscribers**

nat-group *nat-group-id* **statistics mda** *mda-id*

nat-group *nat-group-id* **statistics inter-chassis-redundancy**

nat-group *nat-group-id* **member** *member-number* **resource-peak-values**

nat-group *nat-group-id* **member** *member-number* **statistics**

nat-group *nat-group-id* **member** *member-number* **statistics inter-chassis-redundancy**

Context

[Tree] (clear>nat>isa nat-group)

Full Context

clear nat isa nat-group

Description

This command clears ISA nat-group commands related statistics or removes all the subscribers that are associated with a specific NAT group member.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

nat-group-id

Specifies the NAT group ID to clear.

Values 1 to 4

member-number

Specifies the member number.

Values 1 to 255

mda-id

Specifies the MDA for which to clear performance measurements in *slot*/*mda* format.

Values slot — 1

mda — 1 to 4

l2-aware-subscribers

Specifies to clear the NAT group ID's l2-aware subscribers.

statistics

Specifies to clear the NAT group ID's statistics.

resource-peak-values

Specifies to reset the resource peak values to the current resource measurements.

inter-chassis-redundancy

Specifies to clear the inter-chassis redundancy data.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

16.3 nat-policy

nat-policy

Syntax

nat-policy *nat-policy-name* **associations**

nat-policy *nat-policy-name*

Full Context

show service nat nat-policy

Description

This command displays NAT policy information.

Parameters

nat-policy-name

Specifies the NAT Policy name.

Values 32 chars max

associations

Keyword; displays the router instances and/or subscriber profiles associated with the NAT policy.

statistics

Keyword; displays statistics of the specified NAT policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

Context

[Tree] (show>isa nat-system-resources)

Full Context

show isa nat-system-resources

Description

This command displays ISA NAT system resources.

Parameters

mda-id

Specifies the card and slot identifying a provisioned ISA.

Values

mda-id:	*slot* [*xiom*/]*mda*	
	slot	1 to 2 (7750 SR-2s)
		1 to 5 (7750 SR-7)
		1 to 6 (7750 SR-14s)
		1 to 10 (7450 ESS, 7750 SR-12)
		1 to 14 (VSR)
		1 to 20 (VSR)
	xiom	x1 to x2
	mda	1 to 2 (7450 ESS, 7750 SR-1, SR-2s, SR-7, SR-12, SR-14s)
		1 to 4 (VSR)

nat-group-id

Specifies the NAT group ID.

Values 1 to 4 (7450 ESS, 7750 SR-1, SR-2s, SR-7, SR-12, SR-14s, VSR)
1 to 8 (7750 SR-12)
1 to 15 (VSR)

vapp-id

Specifies the ID of the configured ESA and ESA VM.

Values

vapp-id:	*esa-id*/*vm-id*	
	esa-id	1 to 16

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ISA NAT ESA-VM system resources and Table 373: Output fields: ISA NAT ESA-VM system resources describes the output fields.

Output Example

```
# show isa nat-system-resources esa-vm 1/1
===============================================================================
ISA NAT ESA-VM 1/1 resources
===============================================================================
Name                                Maximum         Limit

16.5 nat64-lsn-sub

nat64-lsn-sub

Syntax

nat64-lsn-sub router *router-instance* **ipv6-address-prefix** *ipv6-prefix*

Context

[Tree] (clear>nat nat64-lsn-sub)

Full Context

clear nat nat64-lsn-sub

Description

This command clears NAT mappings for NAT64 LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ipv6-prefix

Specifies the IPv6 prefix and length.

Values

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

16.6 neighbor

neighbor

Syntax

neighbor *service-id*

Context

[Tree] (clear>service>id neighbor)

Full Context

clear service id neighbor

Description

This command clears commands for a specific service. It clears the discovered IPv6 address of the neighboring CE associated with an Ipipe SAP. When IPv6CP comes back up following the execution of this command on an IPv6CP SAP, the node checks if an IPv6 address has been learned for the remote CE attached to the Ipipe service. If one has been learned, then this is used to bring up IPv6CP.

Parameters

service-id

The ID that uniquely identifies a service.

Values service-id: 1 to 214748364

svc-name: A string up to 64 characters long.

service-name

Neighboring IPv6 address.

Platforms

All

neighbor

Syntax

neighbor [{**sap** *sap-id* | **sdp** *sdp-id:vc-id*} [**address** *ip-address*]] [**detail**] [*family*]

Context

[Tree] (show>service>id>pim-snooping neighbor)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service id pim-snooping neighbor

Description

This command displays PIM neighbor information.

Parameters

ip-int-name

Only displays the interface information associated with the specified IP interface name

sap-id

Displays the neighbor information associated with the specified SAP

sdp-id:vc-id

Displays the neighbor information associated with the specified SDP

ip-address

Displays information for the neighbor with the specified IP address

detail

Displays detailed neighbor information

family

Displays either IPv4 or IPv6 information for the specified neighbor

Values ipv4 or ipv6

Platforms

All

Output

The following output is an example of service PIM snooping neighbor information.

Output Example

```
*A:PE#  show service id 1 pim-snooping neighbor

neighbor

Syntax

neighbor [*ip-address* | **evpn-mpls** | **sap** *sap-id* | **sdp** *sdp-id:vc-id* | **vxlan vtep** *ip-address* **vni** *vni-id*] [**family**]

Context

[Tree] (clear>service>id>pim-snooping neighbor)

Full Context

clear service id pim-snooping neighbor

Description

This command clears PIM snooping neighbor information.

Parameters

ip-address

Clears information for the neighbor with the specified IP address

sap *sap-id*

Clears PIM snooping entries associated with the specified SAP

sdp *sdp-id:vc-id*

Clears PIM entries associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

Values 1 to 17407

family

Displays either IPv4 or IPv6 information

Values ipv4 or ipv6

evpn-mpls

Clears PIM snooping statistics for EVPN-MPLS destinations

Platforms

All

neighbor

Syntax

neighbor [*ip-address* [**detail**]]

neighbor [*as-number* [**detail**]]

neighbor *ip-address* [*family* [**type** *mvpn-type*] [*evpn-type*]] *routes* [*brief*] [**community** *comm-id*]

Use subject to Terms available at: www.nokia.com/terms.

neighbor *ip-address* [*family*] *damping*

neighbor *as-number* [*family*] *damping*

neighbor *ip-address* **orf** [*paths*]

neighbor *ip-address* **graceful-restart**

neighbor [**dynamic**]

neighbor *ip-address* **epe-statistics**

Context

[Tree] (show>router>bgp neighbor)

Full Context

show router bgp neighbor

Description

This command displays BGP neighbor information and can be entered with or without any parameters. Issuing the command without any parameters displays information for all BGP peers. When the command is issued with a specific IP address or ASN, information is displayed only for the specified peer or peers with the same AS.

When either **received-routes** or **advertised-routes** is specified, the routes exchanged with the specified peer are listed (see the second output example, below).

When either **history** or **suppressed** is specified, the routes learned from those peers that either have a history or are suppressed (respectively) are listed.

The "State" field displays the BGP peer's protocol state. In addition to the standard protocol states, this field can also display the "Disabled" operational state, which indicates the peer is operationally disabled and must be restarted by the operator.

Note:
The information generated by this command is not available by SNMP.

Parameters

as-number

Displays information for the specified AS number.

Values 1 to 4294967295

brief

Displays information in a brief format. This parameter is only supported with **received-routes** and **advertised-routes**.

community

Displays all routes with the specified BGP community.

comm-id

Specifies community IDs, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ext**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin
  - *ip-address* — a.b.c.d
  - *ext-comm-val* — 0 to 4294967295
  - *ext-asnum* — 0 to 4294967295
  - **bandwidth** — bandwidth
  - *val-in-mbps* — 0 to 16777215
  - **ext** — extended
  - **ext:4300** — origin verification
  - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
  - *value1* — 0000 to FFFF
  - *value2* — 0 to FFFFFFFFFFFF
  - **flowspec-set —** flow-spec set
  - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **llgr-stale** | **no-llgr** | **blackhole**

detail

Displays detailed information.

dynamic

Displays information for dynamic BGP neighbors.

evpn-type

Displays information for the specified EVPN route type.

Values **auto-disc** — Displays the auto discovery routes for this peer.

mac — Displays the MAC routes for this peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inclusive-mcast — Displays the inclusive multicast routes for this peer.

eth-seg — Displays the Ethernet segment routes for this peer.

ip-prefix — Displays the IPv4 routes for this peer.

ipv6-prefix — Displays the IPv6 routes for this peer.

smet — Displays the Selective Multicast Ethernet Tag routes for this peer.

mcast-join-synch — Displays the Multicast Join Synch routes for this peer.

mcast-leave-synch— Displays the Multicast Leave Synch routes for this peer.

family

Specifies the type of routing information to display.

Values **evpn** — Displays the BGP EVPN routes for this peer.

flow-ipv4 — Displays the BGP IPv4 flow-spec routes for this peer.

flow-ipv6 — Displays the BGP IPv6 flow-spec routes for this peer.

ipv4 — Displays the BGP IPv4 routes for this peer.

ipv6 — Displays the BGP IPv6 routes for this peer.

l2-vpn — Displays the BGP L2 VPN routes for this peer.

label-ipv4 — Displays the BGP IPv4 labeled unicast routes for this peer.

label-ipv6 — Displays the BGP IPv6 labeled unicast routes for this peer.

mcast-ipv4 — Displays the BGP multicast IPv4 routes for this peer.

mcast-ipv6 — Displays the BGP multicast IPv6 routes for this peer.

mcast-vpn-ipv4 — Displays the BGP multicast VPN IPv4 routes for this peer.

mcast-vpn-ipv6 — Displays the BGP multicast VPN Ipv6 routes for this peer.

mdt-safi — Displays the BGP multicast VPN MDT-SAFI routes for this peer.

ms-pw — Displays the BGP Multi-segment PW routes for this peer.

mvpn-ipv4 — Displays the BGP NG-MVPN IPv4 routes for this peer.

mvpn-ipv6 — Displays the BGP NG-MVPN IPv6 routes for this peer.

route-target — Displays the BGP route-target constrain routes for this peer.

vpn-ipv4 — Displays the BGP VPN IPv4 routes for this peer.

vpn-ipv6 — Displays the BGP VPN IPv6 routes for this peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

received-routes

Displays the number of routes received from this peer.

advertised-routes

Displays the number of routes advertised to this peer.

damping

Displays damping information for the specified AS number or neighbor IP address.

Values **history** — Display statistics for dampened routes.

suppressed — Display the number of paths from this peer that have been suppressed by damping.

paths

Displays ORF path information for the specified neighbor IP address.

Values **send** — Displays the number of paths sent to this peer.

receive — Displays the number of paths received from this peer.

graceful-restart

Displays neighbors configured for graceful restart.

ip-address

Displays information for the specified neighbor IP address.

Values ipv4-address:

- a.b.c.d (host bits must be 0)

ipv6-address:

- x:x:x:x:x:x:x:x [-interface]
- x:x:x:x:x:x:d.d.d.d [-interface]
- x: [0 to FFFF]H
- d: [0 to 255]D
- interface: up to 32 characters, mandatory for link local addresses

mvpn-type

Displays information for the specified MVPN route type.

Values **intra-ad** — Displays the intra-ad routes for this peer.

inter-ad — Displays the inter-ad routes for this peer.

spmsi-ad — Displays the spmsi-ad routes for this peer.

leaf-ad —Displays the leaf-ad routes for this peer.

source-ad — Displays the source-ad routes for this peer.

shared-join — Displays the shared-join routes for this peer.

source-join — Displays the source-join routes for this peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

orf

Displays outbound route filtering for the BGP instance. Outbound Route Filtering (ORF) is used to inform a neighbor of targets (using **target-list**) that it is willing to receive. This mechanism helps lessen the update exchanges between neighbors and saves CPU cycles to process routes that could have been received from the neighbor only to be dropped or ignored.

epe-statistics

Displays egress peer engineering (EPE) statistics for the specified IP address.

Platforms

All

Output

Table 375: Output fields: BGP neighbor describes the standard and detailed command output fields for a BGP neighbor.

The following outputs are examples of BGP neighbor information.

Output Example

```

Table 375: Output fields: BGP neighbor

Label	Description
Peer	The IP address of the configured BGP peer.
Group	The BGP peer group to which this peer is assigned.
Peer AS	The configured or inherited peer AS for the peer group.
Peer Address	The configured address for the BGP peer.
Peer Port	The TCP port number used on the far-end system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Local AS	The configured or inherited local AS for the peer group.
Local Address	The configured or inherited local address for originating peering for the peer group.
Local AddPath Capability	The configured number of BGP add-paths.
Local Port	The TCP port number used on the local system.
Peer Type	External — Peer type configured as external BGP peers. Internal — Peer type configured as internal BGP peers.
Bfd	Yes — BFD is enabled. No — BFD is disabled.
Dynamic Peer	Yes — The session is dynamic (unconfigured). No — The session is statically configured.
State	Idle — The BGP peer is not accepting connections. (*Shutdown*) is displayed in addition, if the peer is administratively disabled. Active — BGP is listening for and accepting TCP connections from this peer. Connect — BGP is attempting to establish a TCP connections from this peer. Open Sent — BGP has sent an OPEN message to the peer and is waiting for an OPEN message from the peer. Open Confirm — BGP has received a valid OPEN message from the peer and is awaiting a KEEPALIVE or NOTIFICATION. Established — BGP has successfully established a peering and is exchanging routing information.
Last State	Idle — The BGP peer is not accepting connections. Active — BGP is listening for and accepting TCP connections from this peer. Connect — BGP is attempting to establish a TCP connections from this peer. Open Sent — BGP has sent an OPEN message to the peer and is waiting for an OPEN message from the peer. Open Confirm — BGP has received a valid OPEN message from the peer and is awaiting a KEEPALIVE or NOTIFICATION.
Last Event	start — BGP has initialized the BGP neighbor. stop — BGP has disabled the BGP neighbor. open — BGP transport connection opened.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	close — BGP transport connection closed. openFail — BGP transport connection failed to open. error — BGP transport connection error. connectRetry — Connect retry timer expired. holdTime — Hold time timer expired. keepAlive — Keepalive timer expired. recvOpen — Receive an OPEN message. revKeepalive — Receive a KEEPALIVE message. recvUpdate — Receive an UPDATE message. recvNotify — Receive a NOTIFICATION message. None — No events have occurred.
Last Error	Displays the last BGP error and subcode to occur on the BGP neighbor.
Connect Retry	The configured or inherited connect retry timer value.
Local Pref.	The configured or inherited local preference value.
Min Route Advt.	The minimum amount of time that must pass between route updates for the same IP prefix.
Min AS Originate	The minimum amount of time that must pass between updates for a route originated by the local router.
Multihop	The maximum number of router hops a BGP connection can traverse.
Damping	Disabled — BGP neighbor is configured not to dampen route flaps. Enabled — BGP neighbor is configured to dampen route flaps.
Loop Detect	Ignore — The BGP neighbor is configured to ignore routes with an AS loop. Drop — The BGP neighbor is configured to drop the BGP peering if an AS loop is detected. Off — AS loop detection is disabled for the neighbor.
MED Out	The configured or inherited MED value assigned to advertised routes without a MED attribute.
Authentication	None — No authentication is configured. MD5 — MD5 authentication is configured.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Next Hop Self	Disabled — BGP is not configured to send only its own IP address as the BGP nexthop in route updates to the specified neighbor. Enabled — BGP will send only its own IP address as the BGP nexthop in route updates to the neighbor.
AggregatorID Zero	Disabled — The BGP Neighbor is not configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates. Enabled — The BGP Neighbor is configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates.
Remove Private	Disabled — BGP will not remove all private AS numbers from the AS path attribute, in updates sent to the specified neighbor. Enabled — BGP will remove all private AS numbers from the AS path attribute, in updates sent to the specified neighbor.
Passive	Disabled — BGP will actively attempt to establish a BGP connection with the specified neighbor. Enabled — BGP will not actively attempt to establish a BGP connection with the specified neighbor.
Prefix Limit	No Limit — No route limit assigned to the BGP peer group. 1 to 4294967295 — The maximum number of routes BGP can learn from a peer.
Hold Time	The configured hold time setting.
Keep Alive	The configured keepalive setting.
Active Hold Time	The negotiated hold time, if the BGP neighbor is in an established state.
Active Keep Alive	The negotiated keepalive time, if the BGP neighbor is in an established state.
Cluster Id	The configured route reflector cluster ID. None — No cluster ID has been configured.
Client Reflect	Disabled — The BGP route reflector is configured not to reflect routes to this neighbor. Enabled — The BGP route reflector is configured to reflect routes to this neighbor.
Preference	The configured route preference value for the peer group.
Num of Flaps	The number of route flaps in the neighbor connection.
Recd. Prefixes	The number of routes received from the BGP neighbor.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Active Prefixes	The number of routes received from the BGP neighbor and active in the forwarding table.
Recd. Paths	The number of unique sets of path attributes received from the BGP neighbor.
Suppressed Paths	The number of unique sets of path attributes received from the BGP neighbor and suppressed due to route damping.
Input Queue	The number of BGP messages to be processed.
Output Queue	The number of BGP messages to be transmitted.
i/p Messages	Total number of packets received from the BGP neighbor.
o/p Messages	Total number of packets sent to the BGP neighbor.
i/p Octets	Total number of octets received from the BGP neighbor.
o/p Octets	Total number of octets sent to the BGP neighbor.
Export Policy	The configured export policies for the peer group.
Import Policy	The configured import policies for the peer group.
Egress Engineering	Enabled — EPE is enabled for the BGP neighbor. Disabled — EPE is disabled for the BGP neighbor.

Table 376: Output fields: standard and detailed BGP neighbor describes the command output for both the standard and detailed information for a neighbor.

The following output is an example of information about routes received from a specific BGP neighbor.

Output Example

```
A:node-2>show>router>bgp# neighbor 1.101.201.201 received-routes

neighbor

Syntax

neighbor [*ip-address* | *ip-int-name*] [**detail**] [**advertised-routes**]

Context

[Tree] (show>router>rip neighbor)

Full Context

show router rip neighbor

Description

Displays RIP neighbor interface information.

Parameters

ip-address* | *ip-int-name

Displays information for the specified IP interface.

Values ip-address: a.b.c.d

ip-int-name: 32 chars max

Default all neighbor interfaces

advertised-routes

Displays the routes advertised to RIP neighbors. If no neighbors are specified, then all routes advertised to all neighbors are displayed. If a specific neighbor is given then only routes advertised to the given neighbor/interface are displayed.

Default displays RIP information

Platforms

All

Output

The following output is an example of standard RIP group information, and Table 377: Output fields: RIP neighbor describes the output fields.

Output Example

```
*A:ALA-12#  show router 3 rip neighbor

*A:ALA-12#
```

Table 377: Output fields: RIP neighbor

Label	Description
Neighbor	The RIP neighbor interface name.
Adm	Down — The RIP neighbor interface is administratively down. Up — The RIP neighbor interface is administratively up.
Opr	Down — The RIP neighbor interface is operationally down. Up — The RIP neighbor interface is operationally up.
Primary IP	The primary IP address of the RIP neighbor interface.
Send Mode	Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address None — Specifies that no RIP messages are sent (i.e., silent listener). RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.
Recv Mode	Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted. None — Specifies that RIP updates will not be accepted. RIPv1 — Specifies that RIP updates in version 1 format only will be accepted. RIPv2 — Specifies that RIP updates in version 2 format only will be accepted.
Metric In	The metric added to routes received from a RIP neighbor.

Detailed Show RIP Neighbor Output

The following output is an example of detailed RIP group information, and Table 378: Output fields: RIP neighbor detail describes the output fields.

Output Example

```

Table 378: Output fields: RIP neighbor detail

Label	Description
Neighbor	The RIP neighbor name.
Description	The RIP neighbor description. No Description Available indicates no description is configured.
Primary IP	The RIP neighbor interface primary IP address.
Group	The RIP group name of the neighbor interface.
Admin State	Down — The RIP neighbor interface is administratively down. Up — The RIP neighbor interface is administratively up.
Oper State	Down — The RIP neighbor interface is operationally down. Up — The RIP neighbor interface is operationally up.
Send Mode	Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address. Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address. None — Specifies that no RIP messages are sent (i.e., silent listener).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.
Recv Mode	Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted. None — Specifies that RIP updates will not be accepted. RIPv1 — Specifies that RIP updates in version 1 format only will be accepted. RIPv2 — Specifies that RIP updates in version 2 format only will be accepted.
Metric In	The metric value added to routes received from a RIP neighbor.
Metric Out	The value added to routes exported into RIP and advertised to RIP neighbors.
Split Horizon	Disabled — Split horizon disabled for the neighbor. Enabled — Split horizon and poison reverse enabled for the neighbor.
Check Zero	Disabled — Checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications are not checked allowing receipt of RIP messages even if mandatory zero fields are non-zero for the neighbor. Enabled — Checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting noncompliant RIP messages is enabled for the neighbor.
Message Size	The maximum number of routes per RIP update message.
Preference	The preference of RIP routes from the neighbor.
Auth. Type	Specifies the authentication type.
Update Timer	The current setting of the RIP update timer value expressed in seconds.
Timeout Timer	The current RIP timeout timer value expressed in seconds.
Export Policies	The export route policy that is used to determine routes advertised to all peers.
Import Policies	The import route policy that is used to determine which routes are accepted from RIP neighbors.

neighbor

Syntax

neighbor {*ip-address* | **as** *as-number* | **external** | **all**} [**soft** | **soft-inbound** | **hard**]

neighbor {*ip-address* | **as** *as-number* | **external** | **all**} **soft-route-refresh** [*family*]

neighbor {*ip-address* | **as** *as-number* | **external** | **all**} **statistics**

neighbor *ip-address* **end-of-rib**

Context

[Tree] (clear>router>bgp neighbor)

Full Context

clear router bgp neighbor

Description

This command resets the specified BGP peer or set of peers. By default, or when the hard option is specified, the TCP connection is brought down and the state of the BGP session returns to IDLE.

If the **soft-route-refresh** option is specified without an accompanying *family* parameter, then the session remains established and one ROUTE_REFRESH message is transmitted to the peer for each address family active on the session. If the **soft-route-refresh** option is specified with an accompanying *family* parameter, the session remains established and a single ROUTE_REFRESH message is transmitted to the peer requesting that it resend only its routes belonging to that one address family.

SR OS routers respond to route refresh requests for any supported AFI/SAFI.

Parameters

ip-address

Resets the BGP neighbor with the specified IP address.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x [-interface]
- x:x:x:x:x:x:d.d.d.d [-interface]
- x: [0 to FFFF]H
- d: [0 to 255]D
- interface: up to 32 characters, mandatory for link local addresses

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as *as-number*

Resets all BGP neighbors with the specified peer AS.

Values 1 to 65535

external

Resets all EBGP neighbors.

all

Resets all BGP neighbors.

soft

Specifies that BGP neighbors re-evaluate all routes in the Local-RIB against the configured export policies.

soft-inbound

Specifies that BGP neighbors re-evaluate all routes in the RIB-In against the configures import policies.

hard

Initiates a hard reconfiguration.

statistics

Clears BGP neighbor statistics.

end-of-rib

Clears the routing information base (RIB). This command applies when the router is helping the BGP neighbor through a BGP graceful restart. When the **clear router bgp neighbor** command is issued without the end-of-rib option and the neighbor is in the process of restarting, stale routes from the neighbor will be retained until the stale-routes-time is reached or else the neighbor exits graceful restart. When the command is issued with the **end-of-rib** option, stale routes from the neighbor are deleted immediately and graceful restart procedures are aborted.

soft-route-refresh

Clears the session by sending one or more ROUTE_REFRESH messages to the peer, but the session stays up.

family

Specifies the one address family that should be encoded in the ROUTE_REFRESH request sent to the peer.

Values ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, flow-ipv4, ms-pw, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, mcast-vpn-ipv6, bgp-ls, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6

Description

This command dumps RSVP neighbor information.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

detail

Specifies detailed information.

Platforms

All

Output

The following output is an example of MPLS RSVP neighbor details.

Output Example

```
*A:Dut-C# tools dump router rsvp neighbor
NEIGHBOR:
 nbrAddr 10.10.2.1 ifIndex 2
NEIGHBOR:
 nbrAddr 10.10.11.4 ifIndex 5

neighbor

Syntax

neighbor [*ip-address* | *ip-int-name* [**address** *neighbor-ip-address*]] [**detail**] [*family*]

Context

[Tree] (show>router>pim neighbor)

Full Context

show router pim neighbor

Description

This command displays PIM neighbor information. This can be important if an interface has more than one adjacency. For example, a LAN-interface configuration with three routers connected and all are running PIM on their LAN interfaces. These routers then have two adjacencies on their LAN interface, each with different neighbors. If the **address** *ip-address* parameter is not defined in this example, then the **show** command output would display two adjacencies.

Parameters

ip-int-name

Displays interface information associated with the specified IP interface name.

ip-address

Displays interface information associated with the specified IP address.

neighbor-ip-address

Displays information about the IP address of the neighbor, on the other side of the interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Displays detailed neighbor information.

family

Displays family information for the specified neighbor.

Values ipv4, ipv6

Platforms

All

Output

The following output is an example of a PIM neighbor configuration. Table 379: Output fields: PIM neighbor provides PIM neighbor field descriptions.

Output Example

```
ALA-1# show router pim neighbor

Table 379: Output fields: PIM neighbor

Label	Description
Interface	The neighbor’s interface name. (W) indicates wildcard tunnels.
Nbr DR Priority	The value of the neighbor's DR priority which is received in the hello message.
Nbr Address	The neighbor’s address.
Up Time	The time since this PIM neighbor (last) became a neighbor of the local router
Expiry Time	The minimum time remaining before this PIM neighbor is aged out 0 — Means that this neighbor never ages out. This happens when the PIM neighbor sends a Hello message with holdtime set to `0xffff'.
Hold Time	The value of the hold time present in the hello message
DR Priority	The value of the neighbor's DR priority which is received in the hello message
Tracking Support	Indicates if the T bit in the LAN prune delay option was present in the hello message. This indicates the neighbor's capability to disable join message suppression.
LAN Delay	The value of the LAN delay field present in the hello message received from the neighbor

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Gen Id	A randomly generated 32-bit value that is regenerated each time PIM forwarding is started or restarted on the interface, including when the router itself restarts. When a hello message with a new GenID is received from a neighbor, any old hello information about that neighbor is discarded and superseded by the information from the new hello message.
Override Intvl (ms)	The value of the override interval present in the Hello message

neighbor

Syntax

neighbor [*ip-int-name* | *ip-address* | *mpls-if-name*] [*family*]

Context

[Tree] (clear>router>pim neighbor)

Full Context

clear router pim neighbor

Description

This command clears PIM neighbor data on a specified interface or IP address.

Parameters

ip-int-name

Clears PIM neighbor on the specified interface.

ip-address

Clears PIM neighbor on the specified IP address.

mpls-if-name

Clears information associated with the specified MPLS interface.

Values mpls-if-*index*

family

Clears neighbor family information.

Values ipv4, ipv6

Platforms

All

neighbor

Syntax

neighbor [{{*ip-int-name* | *ip-address*} | **mac** *ieee-mac-address* | **summary**}] [{**dynamic** | **static** | **managed**}]

Context

[Tree] (show>router neighbor)

Full Context

show router neighbor

Description

This command displays information about the IPv6 neighbor cache.

Parameters

ip-int-name

Specifies the IP interface name.

ip-address

Specifies the address of the IPv6 interface address.

ieee-mac-address

Specifies the MAC address.

summary

Displays summary neighbor information.

dynamic

Displays dynamic neighbor information.

static

Displays static neighbor information.

managed

Displays managed neighbor information.

Platforms

All

Output

Neighbor Output — The following output is an example of IPv6 neighbor information, and Table 380: Output fields: neighbor describes the fields.

Output Example

Full Context

clear router neighbor

Description

This command clears IPv6 neighbor information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

all

Clears all IPv6 neighbors.

ipv6-address

Clears the specified IPv6 neighbors.

Values

ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

interface-name

Specifies the interface name.

ip-int-name

Clears the specified neighbor interface information, up to 32 characters.

Platforms

All

neighbor

neighbor

Syntax

neighbor [*ip-int-name* | *ip-address*] [**detail**]

neighbor [*ip-int-name*] [*router-id*] [**detail**]

neighbor overview

neighbor [**remote** *ip-address*] [**detail**]

Context

[Tree] (show>router>ospf3 neighbor)

[Tree] (show>router>ospf neighbor)

Full Context

show router ospf3 neighbor

show router ospf neighbor

Description

This command displays neighbor information. To reduce the amount of output displayed, the user can select the neighbors on a specific interface by address or name.

Note: The **detail** keyword produces a large amount of data. Nokia recommends **detail** only be used when requesting a specific neighbor.

Parameters

ip-int-name

Displays neighbor information only for neighbors of the interface identified by the interface name.

ip-address

Displays neighbor information only for neighbors of the interface identified by the IP address.

router-id

Displays neighbor information for the neighbor identified by the specified router ID in the **show router ospf3** context.

remote

Keyword used to display neighbor information for the neighbor identified by the specified remote IP address in the **show router ospf** context.

Platforms

All

Output

The following outputs are examples of OSPF neighbor information:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Output example: OSPF neighbor output, Table 381: Output fields: OSPF neighbor
- Output example: detailed OSPF neighbor output, Table 382: Output fields: OSPF neighbor detail
- OSPF neighbor output showing only the protected adjacency SID, Table 382: Output fields: OSPF neighbor detail
- Output example: detailed OSPF neighbor output, Table 382: Output fields: OSPF neighbor detail

Output example: OSPF neighbor output

```

```

Table 381: Output fields: OSPF neighbor

Label	Description
Nbr IP Addr	The IP address this neighbor is using in its IP source address. On address-less links, this is not 0.0.0.0, but the address of another of the neighbor's interfaces.
Nbr Rtr Id	A 32-bit integer uniquely identifying the neighboring router in the Autonomous System.
Nbr State	Down — this is the initial state of a neighbor conversation. It indicates that no recent information has been received from the neighbor. Attempt — this state is only valid for neighbors attached to NBMA networks. It indicates that no recent information has been received from the neighbor, but that a more concerted effort should be made to contact the neighbor. Init — in this state, a Hello packet has recently been seen from the neighbor. However, bidirectional communication has not yet been established with the neighbor (the router itself did not appear in the neighbor's Hello packet). Two Way — in this state, communication between the two routers is bidirectional. ExchStart — the first step in creating an adjacency between the two neighboring routers. The goal of this step is to decide which router is the master, and to decide the initial Database Descriptor sequence number.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Exchange — in this state, the router is describing its entire link state database by sending Database Description packets to the neighbor. Loading — in this state, Link State Request packets are sent to the neighbor asking for the more recent LSAs that have been discovered (but not yet received) in the Exchange state. Full — in this state, the neighboring routers are fully adjacent. These adjacencies will now appear in router-LSAs and network-LSAs.
Priority	The priority of this neighbor in the designated router election algorithm. The value 0 signifies that the neighbor is not eligible to become the designated router on this particular network.
RetxQ Len	The current length of the retransmission queue.
Dead Time	The time until this neighbor is declared down, this timer is set to the dead router interval when a valid hello packet is received from the neighbor.
No. of Neighbors	The number of adjacent OSPF neighbors on this interface.

Output example: detailed OSPF neighbor output

```

Table 382: Output fields: OSPF neighbor detail

Label	Description
Neighbor IP Addr	The IP address this neighbor is using in its IP source address. On address-less links, this is not 0.0.0.0, but the address of another of the neighbor's interfaces.
Local IF IP Addr	The IP address of this OSPF interface.
Area Id	A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone.
Adj SR SID	The adjacency SR SID.
Protect SID	The protected SID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Designated Rtr	The IP Interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router.
Neighbor Rtr Id	A 32-bit integer uniquely identifying the neighboring router in the AS.
Neighbor State	Down — this is the initial state of a neighbor conversation. It indicates that there has been no recent information received from the neighbor. Attempt — this state is only valid for neighbors attached to NBMA networks. It indicates that no recent information has been received from the neighbor, but that a more concerted effort should be made to contact the neighbor. Init — in this state, a Hello packet has recently been seen from the neighbor. However, bidirectional communication has not yet been established with the neighbor (the router itself did not appear in the neighbor's Hello packet). Two Way — in this state, communication between the two routers is bidirectional. Exchange start — this is the first step in creating an adjacency between the two neighboring routers. The goal of this step is to decide which router is the master, and to decide the initial Database Descriptor sequence number. Exchange — in this state, the router is describing its entire link state database by sending Database Description packets to the neighbor. Loading — in this state, Link State Request packets are sent to the neighbor asking for the more recent LSAs that have been discovered (but not yet received) in the Exchange state. Full — in this state, the neighboring routers are fully adjacent. These adjacencies will now appear in router-LSAs and network-LSAs.
Priority	The priority of this neighbor in the designated router election algorithm. The value 0 signifies that the neighbor is not eligible to become the designated router on this particular network.
Retrans Q Length	The current length of the retransmission queue.
Options	E — External Routes Support MC — Multicast Support N/P — Type 7 LSA Support EA — External Attribute LSA Support DC — Demand Circuit Support

Label	Description
	O — Opaque LSA Support
Backup Desig Rtr	The IP Interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no backup designated router.
Events	The number of times this neighbor relationship has changed state, or an error has occurred.
Last Event Time	The time when the last event occurred that affected the adjacency to the neighbor.
Up Time	This value represents the uninterrupted time, in hundredths of seconds, the adjacency to this neighbor has been up. To evaluate when the last state change occurred see last event time.
Time Before Dead	The time until this neighbor is declared down, this timer is set to the dead router interval when a valid Hello packet is received from the neighbor.
Bad Nbr States	The total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since this interface was last enabled.
LSA Inst fails	The total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since this interface was last enabled.
Bad Seq Nums	The total number of times when a database description packet was received with a sequence number mismatch since this interface was last enabled.
Bad MTUs	The total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since this interface was last enabled.
Bad Packets	The total number of times when an LS update was received with an illegal LS type or an option mismatch since this interface was last enabled.
LSA not in LSDB	The total number of times when an LS request was received for an LSA not installed in the LSDB of this router since this interface was last enabled.
Option Mismatches	The total number of times when a LS update was received with an option mismatch since this interface was last enabled.
Nbr Duplicates	The total number of times when a duplicate database description packet was received during the exchange state since this interface was last enabled.

neighbor

Syntax

neighbor [*ip-int-name* | *ip-address*]

neighbor [*ip-int-name*] [*router-id*]

Context

[Tree] (clear>router>ospf3 neighbor)

[Tree] (clear>router>ospf neighbor)

Full Context

clear router ospf3 neighbor

clear router ospf neighbor

Description

This command marks the neighbor as dead and re-initiates the affected adjacencies.

Parameters

ip-int-name

Clears all neighbors for the interface specified by this interface name.

ip-address

Clears all neighbors for the interface specified by this IP address.

router-id

Clears all neighbors for the interface specified by this router ID.

Platforms

All

neighbor

Syntax

neighbor [*ip-int-name* | *ipv6-address*] [**detail**]

neighbor [**detail**] **advertised-routes** [*ip-int-name* | *ipv6-link-local-address*]

Context

[Tree] (show>router>ripng neighbor)

Full Context

show router ripng neighbor

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays RIPng neighbor interface information. If no IPv6 interface or address is specified, this command displays information for all neighbor interfaces.

Parameters

ip-int-name* | *ipv6-address

Displays information for the specified IPv6 interface and address.

advertised-routes

Displays the routes advertised to RIPng neighbors. If no neighbors are specified, all routes advertised to all neighbors are displayed. If a neighbor is specified, only routes advertised to that neighbor/interface are displayed.

ipv6-link-local-address

Displays information about the of the IPv6 link local address for the neighbor.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of RIPng neighbor information.

Output Example

```

neighbor

Syntax

neighbor *ip-addr* [*ip-addr*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>bgp neighbor)

Full Context

monitor router bgp neighbor

Description

This command displays statistical BGP neighbor information at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified neighbor(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ip-addr

Displays damping information for entries received from the BGP neighbor. Up to five IP addresses can be specified.

Values *a.b.c.d*

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

Output

The following output is an example of BGP neighbor information.

Output Example

```
A:ALA-12>monitor>router>bgp# neighbor 192.0.2.10 interval 3 repeat 3 absolute

neighbor

Syntax

neighbor *ip-address* [*ip-address*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>ospf neighbor)

Full Context

monitor router ospf neighbor

Description

This command displays statistical OSPF neighbor information at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified OSPF neighbors. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ip-address

Specifies the IP address to display information for entries received from the specified OSPF neighbor. Up to five IP addresses can be specified.

Values a.b.c.d

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

Context

[Tree] (monitor>router>ospf3 neighbor)

Full Context

monitor router ospf3 neighbor

Description

This command displays statistical OSPF3 neighbor information at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified OSPF3 neighbor(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

router-id

Specifies the IP address.

Values a.b.c.d

interface-name

Specifies the interface name, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

area-id

Specifies the OSPF area, up to 256 characters.

16.8 neighbors

neighbors

Syntax

neighbors group [*name*] [*ip-address*]

Context

[Tree] (show>service>id>gsmp neighbors)

Full Context

show service id gsmp neighbors

Description

This command display GSMP neighbor information.

Parameters

group

A GSMP group defines a set of GSMP neighbors which have the same properties.

name

Specifies a GSMP group name is unique only within the scope of the service in which it is defined.

ip-address

Specifies the ip-address of the neighbor.

Platforms

All

Output

The following output is an example of service GSMP neighbor information.

Output Example

These commands show the configured neighbors per service, regardless that there exists an open TCP connection with this neighbor. The admin state is shown because for a neighbor to be admin enabled, the service, gsmp node, group node and the neighbor node in this service must all be in the **no shutdown** state. Session gives the number of session (open TCP connections) for each configured neighbor.

```

The following table describes show service-id gsmp neighbors group output fields:

Table 383: Output fields: GSMP neighbors group

Label	Description
Group	The GSMP group name
Neighbor	The neighbor IP address
AdminState	The administrative state of the neighbor
Sessions	The number of sessions (open TCP connections) for each configured neighbor

16.9 netconf

netconf

Syntax

netconf

netconf connection

netconf counters

netconf schema-path

Context

[Tree] (show>system netconf)

Full Context

show system netconf

Description

This command displays NETCONF information.

Parameters

connection

Keyword to display active NETCONF sessions.

counters

Keyword to display NETCONF counters.

schema-path

Keyword to display the operational schema-path state leaf, which indicates the current path of the SR OS schema files.

Platforms

All

Output

The following output is an example of NETCONF information, and Table 384: Output fields: NETCONF describes the NETCONF output fields.

Output Example

```
# show system netconf
===============================================================================
NETCONF Server
===============================================================================
Administrative State      : Enabled
Operational State         : Up
===============================================================================
```

Table 384: Output fields: NETCONF

Label	Description
Administrative State	Enabled — Indicates that NETCONF is enabled. Disabled — Indicates that NETCONF is disabled.
Operational State	Up — Indicates that NETCONF is operational.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Down — Indicates that NETCONF has no connections present. Transition — Indicates that NETCONF is waiting for the **delay-on-boot** timer to expire.

The following output is an example of NETCONF connection information, and Table 385: Output fields: NETCONF connection describes the NETCONF connection output fields.

Output Example

```
# show system netconf connection
===============================================================================
NETCONF Server connections
===============================================================================
Connection          Username       Session Status         Running    Candidate
                                   Id                     Locked?    Locked?
-------------------------------------------------------------------------------
135.121.197.102     admin          56      connected      no         no
-------------------------------------------------------------------------------
Number of NETCONF sessions : 1
===============================================================================
```

Table 385: Output fields: NETCONF connection

Label	Description
Connection	The IP address of the connected routers (remote client).
Username	The name of the user.
Session ID	The NETCONF session ID.
Status	Connected or not connected.
Running Locked?	Yes — Indicates the <running> datastore is locked. No — Indicates the <running> datastore is not locked.
Candidate Locked?	Yes — Indicates the <candidate> datastore is locked. No — Indicates the <candidate> datastore is not locked.
Number of NETCONF sessions	Total NETCONF sessions

The following output is an example of NETCONF counter information, and Table 386: Output fields: NETCONF counters describes the NETCONF counter output fields.

Output Example

```
# show system netconf counters
===============================================================================
NETCONF counters:
===============================================================================
    Rx Messages
-------------------------------------------------------------------------------
```

===============================================================================
    Failed requests due to lock being taken by other sessions
-------------------------------------------------------------------------------
      failed edit-configs: 1
      failed locks       : 0
===============================================================================
```

Table 386: Output fields: NETCONF counters

Label	Description
RX Messages	Types and numbers of received messages
RX Total	Total of all received messages
TX Messages	Types and numbers of sent messages
TX Total	Total of all sent messages
failed edit-configs	Number of failed <edit-config> requests due to a lock (including implicit ones) being taken by other netconf sessions
failed locks	Number of failed <lock> requests due to a lock (including implicit ones) being taken by other netconf sessions

The following output is an example of NETCONF schema path information, and Table 387: Output fields: NETCONF schema path describes the NETCONF schema path output fields.

Output Example

```
A:node-2# show system netconf schema-path
===============================================================================
NETCONF Schema Path
===============================================================================
Operational : cf3:\timos\yang.tim
===============================================================================
```

Table 387: Output fields: NETCONF schema path

Label	Description
Operational	Operational schema-path state leaf, indicating the current path of the SR OS schema files. This value is updated at boot time or at configuration time.

netconf

Syntax

netconf

Context

[Tree] (clear>system>management-interface netconf)

Full Context

clear system management-interface netconf

Description

Commands in this context reset NETCONF commands.

Platforms

All

16.10 netconf-client

netconf-client

Syntax

netconf-client [*netconf-client*] [**statistics**]

Context

[Tree] (clear>system>management-interface>netconf>call-home netconf-client)

Full Context

clear system management-interface netconf call-home netconf-client

Description

This command resets operations for the specified NETCONF call-home client.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

netconf-client

Specifies the NETCONF call-home client name, up to 32 characters.

statistics

Keyword that resets NETCONF call-home client statistics.

Platforms

All

16.11 network

network

Syntax

network [*policy-id*] [**detail**] [**match-criteria**]

Context

[Tree] (show>qos network)

Full Context

show qos network

Description

This command displays network policy information.

Parameters

policy-id

Displays information for the specific policy ID.

Values 1 to 65535

Default all network policies

detail

Includes information about ingress and egress DSCP and LSP EXP bit mappings and network policy interface associations.

match-criteria

Includes the match-criteria.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of network QoS Policy information, and Table 388: Output fields: QoS network describes the network QoS Policy output fields.

Output Example

```
A:PE1# show qos network

Table 388: Output fields: QoS network

Label	Description
Policy-Id	The ID that uniquely identifies the policy.
Remark	True — Remarking is enabled for all packets that egress this router where the network policy is applied. The remarking is based on the forwarding class to DSCP and LSP EXP bit mapping defined under the egress node of the network QoS policy. False — Remarking is disabled.
Description	A text string that helps identify the policy context in the configuration file.
Forwarding Class/ FC Name	Specifies the default ingress forwarding class (configured using the **network ingress default-action** command) assigned to packets for which there is no other configured forwarding class classification.
Profile	Specifies the default ingress packet profile (configured using the **network ingress default-action** command) assigned to packets for which there is no other configured packet profile classification.
DSCP Mapping:	
Out-of-Profile	Displays the DSCP used for out-of-profile traffic.
In-Profile	Displays the DSCP used for in-profile traffic.
LSP EXP Bit Mapping:	
Out-of-Profile	Displays the LSP EXP value used for out-of-profile traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
In-Profile	Displays the LSP EXP value used for in-profile traffic.
Interface	Displays the interface name.
IP Addr	Displays the interface IP address.
Port-Id	Specifies the physical port identifier that associates the interface.

16.12 network-domains

network-domains

Syntax

network-domains [**detail**] [*network-domain-name*]

network-domains *network-domain-name* **interface-association**

network-domains [*network-domain-name*] **mcast-association** [**state** {**consistent** | **inconsistent**}]

network-domains *network-domain-name* **sdp-association**

Context

[Tree] (show>router network-domains)

Full Context

show router network-domains

Description

This command displays network-domains information.

Parameters

detail

Displays detailed network-domains information.

network-domain-name

Displays information for a specific network domain.

interface-association

Displays information for an interface network domain association.

mcast-association

Displays information for a multicast network domain association.

state

Displays information for the state of a network domain.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values consistent, inconsistent

sdp-association

Displays information for an SDP network domain association

Platforms

All

Output

The following output is an example of network domain information.

Output Example

```
*A:Dut-T>config>router# show router network-domains

16.13 network-queue

network-queue

Syntax

network-queue [*network-queue-policy-name*] [**detail**]

Context

[Tree] (show>qos network-queue)

Full Context

show qos network-queue

Description

This command displays network queue policy information.

Parameters

network-queue-policy-name

The name of the network queue policy.

Values Valid names consist of any string, up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

detail

Includes each queue's rates and adaptation-rule and cbs details. It also shows FC-to-queue mapping details.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of network-queue information.

Output Example

```
*A:PE# show qos network-queue

16.14 next-hop

next-hop

Syntax

next-hop [*family* [**service-id** *service-id*]] [*ip-address*[**detail**]]

Context

[Tree] (show>router>bgp next-hop)

Full Context

show router bgp next-hop

Description

This command displays BGP next-hop information.

Parameters

family

Specifies the type of routing information to be distributed by the BGP instance.

Values ipv4, mcast-ipv4, ipv6, mcast-ipv6, label-ipv4, label-ipv6, vpn-ipv4, vpn-ipv6, evpn, mcast-vpn-ipv4, mcast-vpn-ipv6

ip-address

Displays the next hop information for the specified IP address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x[-interface]
	x:x:x:x:x:x:d.d.d.d[-interface]
	x - [0 to FFFF]H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

d - [0 to 255]D

interface - 32 characters maximum, mandatory for link local addresses

detail

Keyword to display the longer, more detailed version of the output.

service-id *service-id*

Specifies the service ID.

Values 1 to 2147483647

Platforms

All

Output

The following outputs are examples of BGP next-hop information:

- Output example, Table 389: Output fields: BGP nexthop
- Output example, Table 390: Output fields: BGP detailed next hop
- Output example, Table 391: Output fields: BGP next hop
- Output example, Table 391: Output fields: BGP next hop
- Output example, Table 391: Output fields: BGP next hop
- Output example, Table 391: Output fields: BGP next hop

The following output is an example of BGP next-hop information that displays the next-hop resolution enforcement of the administrative-tag policy, and Table 389: Output fields: BGP nexthop describes the output fields.

Output example

```
A:node-2# show router bgp next-hop vpn-ipv4
===============================================================================

Table 389: Output fields: BGP nexthop

Label	Description
BGP Router ID	The local BGP router ID
AS	The configured autonomous system number
Local AS	The configured local AS setting. If not configured, the value is the same as the AS
VPN Next Hop	The next-hop address
Owner	The routing protocol used to derive the best next hop
Autobind	The autobind status for VPRN autobind
FibProg	The status of the FIB: • y – FIB is programmed • n – FIB is not programmed
Reason	The reason
Labels (User-labels)	The labels and user labels
FlexAlgo	The status of flexible algorithms: • y – flexible algorithms are configured • n – flexible algorithms are not configured
Admin-tag-policy (enforcement)	The administrative tag policy and the next-hop resolution enforcement of the administrative tag policy
Metric	The number of routes using the resolving prefix
Last Mod.	The time elapsed since the next hop was modified
Next Hops	The number of next hops

The following output is a detailed example of BGP next-hop information that displays the next-hop resolution enforcement of the administrative-tag policy, and Table 390: Output fields: BGP detailed next hop describes the output fields.

Output example

```
A:node-2# show router bgp next-hop vpn-ipv4 10.20.1.2 detail

Table 390: Output fields: BGP detailed next hop

Label	Description
BGP Router ID	The local BGP router ID
AS	The configured autonomous system number
Local AS	The configured local AS setting. If not configured, the value is the same as the AS.
VPN Next Hop	The next-hop address
Autobind	The autobind service configured
Labels	The labels
User-labels	The user labels
Admin-tag-policy	The name of the administrative policy configured
Enforcement	The configured enforcement
Color	The configured color
Created	The time elapsed since the next hop was created
Last-modified	The time elapsed since the next hop was modified
Resolving prefix	The prefix of the best next hop
Preference	The BGP preference attribute for the routes
Metric	The IGP cost to reach the BGP next hop
Reference Count	The number of routes using the resolving prefix
Owner	The routing protocol used to derive the best next hop

Table 391: Output fields: BGP next hop

Label	Description
BGP ID	The local BGP router ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
AS	The configured autonomous system number
Local AS	The configured local AS setting. If not configured, then the value is the same as the AS
Next Hop	The next-hop address
Resolving Prefix	The prefix of the best next hop
Owner	The routing protocol used to derive the best next hop
Preference	The BGP preference attribute for the routes
Reference Count	The number of routes using the resolving prefix
Resolved Next Hop	The IP address of the next hop
Last Modified	The time elapsed since the next hop was modified
Created (only visible in detailed output)	The time elapsed since the next hop was created
Bfd-strict-mode	Y — The next hop becomes unresolved when a Strict-Mode BFD session goes down.
Reason (if the next hop is unresolvable because the BFD session is down)	BfdStrictDown — The next hop is unresolvable until a Strict-Mode BFD session to a peer with the same address comes back up after going down.

Platforms

All

16.16 nonce

nonce

Syntax

nonce

Context

[Tree] (tools>dump>sys>sec>support-mode nonce)

Full Context

tools dump system security support-mode nonce

Description

This command displays the current system nonce.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of the support-mode nonce information.

Output example

```
A:node-2>tools>dump>sys>sec>support-mode# nonce
Current System Nonce
System nonce: CsCvi3DuhRObtKRaEHt2O2NTzh3pN3H0gFgtJrPboow=
A:node-2>tools>dump>sys>sec>support-mode#
```

16.17 nsp-proxy

nsp-proxy

Syntax

nsp-proxy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (tools>perform>system nsp-proxy)

Full Context

tools perform system nsp-proxy

Description

Commands in this context perform NSP proxy functions.

Platforms

VSR-NRC

nsp-proxy

Syntax

nsp-proxy [**detail**] **module** {**bmp** | **pce** | **rom** | **topo**} **db** {**active** | **standby**}

nsp-proxy [**detail**]

nsp-proxy [**detail**] **module** {**bmp** | **pce** | **rom** | **topo**}

Context

[Tree] (tools>dump>system nsp-proxy)

Full Context

tools dump system nsp-proxy

Description

This command displays system NSP proxy information.

Parameters

detail

Keyword to display detailed information

module

Keyword to specify the module.

Values **bmp** — Displays information about the BMP module.
pce — Displays information about the PCE module.
rom — Displays information about the ROM module.
topo — Displays information about the topology module.

db

Keyword to specify the database.

Values **active** — Displays information about the active database.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

standby — Displays information about the standby database.

Platforms

VSR-NRC

16.18 ntp

ntp

Syntax

ntp [{**peers** | **peer** [**router** *router-instance* | **service-name** *service-name*] *peer-address*} | {**servers** | **server** [**router** *router-instance* | **service-name** *service-name*] *server-address*} | [**all**]] [**detail**]

Context

[Tree] (show>system ntp)

Full Context

show system ntp

Description

This command displays NTP protocol configuration and state.

Parameters

peers

Generates a list of known peers.

peer-address

Specifies the address of a specific peer.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

servers

Generates a list of known servers.

server-address

Specifies the address of a specific server.

Values ipv4-address: a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address:

- x:x:x:x:x:x:x:x
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

ptp: shows information about the internal PTP server.

router-instance

Specifies the routing context that contains the interface in the form of *router-name* or *service-id*.

Values *router-name* — Base | Management

service-id — 1 to 2147483647

Default Base

service name

Specifies the service name for the VPRN. The name can be up to 64 characters in length. Note that CPM routing instances are not supported.

all

Generates information for all clients, servers, and peers.

detail

Provides detailed information.

Platforms

All

Output

The following output is an example of NTP information, and Table 392: Output fields: NTP describes the output fields.

Output Example

```
show system ntp
