1 Getting started

This guide contains command descriptions for the common operational **clear**, **monitor**, **show**, and **tools** CLI commands that are used to manage the SR OS in either the classic CLI or the MD-CLI.

See the *7250 IXR, 7450 ESS, 7705 SAR Gen 2, 7750 SR, 7950 XRS, and VSR Acronyms Reference Guide* for expansions of acronyms used in this guide.

The output of the common operational commands is always the same in the classic CLI and the MD-CLI. The command names and syntaxes of the common operational commands in the classic CLI and the MD-CLI are also compatible. The MD-CLI ? help and command completion only displays parameters that are valid next in order based on what has been entered, while the classic CLI displays all parameters that can be entered out of order. Commands in the MD-CLI can be entered out of order by entering the complete command and parameters without using command completion.

This guide does not include any other classic or MD-CLI commands. These commands are documented in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide* and the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide*.

Note:
This guide generically covers Release 26.*x*.R*x* content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the SR OS R26.*x*.R*x* Software Release Notes, part number 3HE 29176 000*x* TQZZA, for information about the supported features and applicable platforms in each load of the Release 26.*x*.R*x* software.

The full set of CLI commands supported by the SR OS is documented in three related guides that are listed in the following table.

Table 1: Documentation for SR OS CLI commands

Guide title	Classic CLI commands	MD-CLI commands
7450 ESS, 7750 SR, 7950 XRS, and VSR Clear, Monitor, Show, and Tools CLI Command Reference Guide	All **clear**, **monitor**, **show**, and **tools** commands	All **clear**, **monitor**, **show**, and **tools** commands
7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide	All other commands	—
7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide	—	All other commands

1.1 Platforms and terminology

Note:
Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 2: Platforms and terminology

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platform	Collective platform designation
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	7450 ESS
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-1-24D	7750 SR-1 (FP5)
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	7750 SR-7/12/12e
7750 SR-12	
7750 SR-12e	
7750 SR-7	7750 SR-7/12
7750 SR-12	
7750 SR-a4	7750 SR-a
7750 SR-a8	
7750 SR-1e	7750 SR-e
7750 SR-2e

Platform	Collective platform designation
7750 SR-3e	
7750 SR-1s	7750 SR-s
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	7950 XRS
7950 XRS-20e	
7950 XRS-40	
VSR	VSR
VSR-NRC	

1.2 Command tree

The SR OS CLI command tree is a hierarchical inverted tree. The highest level is the root level. Below this level are other tree levels with the major command groups; for example, **show** commands and **tools** commands are levels below root.

In the tree, you can click a command to link directly to the command description.

Note: Commands that are listed in the tree but are not linked to an associated description are available on one or more platforms but are not currently described in the guide.

1.3 Command descriptions

Command descriptions are listed in alphabetical order by command name.

The following figure shows an example of a command description.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 1: Command description example

policers

Syntax **policers**

Context [Tree] (show>app-assure>group>policy>aa-sub policers)

Full Context show application-assurance group policy aa-sub policers

Description This command displays policer configuration information.

Output The following is an example output for the **policers** command.

Sample Output

```
A:cpm-a>show>app-assure>group>aa-sub# policers
=============================================================
Application-Assurance Subscriber Policer Summary
=============================================================
AA-Subscriber        : Alex (esm)
-------------------------------------------------------------
Type: single-bucket-bandwidth Direction: subscriber-to-network
-------------------------------------------------------------
AQP    Policer                          Resource Exceeded?
-------------------------------------------------------------
61     SuspectUp_policer                N
-------------------------------------------------------------

-------------------------------------------------------------
Type: single-bucket-bandwidth Direction: network-to-subscriber
-------------------------------------------------------------
AQP    Policer                          Resource Exceeded?
-------------------------------------------------------------
62     SuspectDown_policer              N
-------------------------------------------------------------
Policer usage counts:
single-bucket-bandwidth
   subscriber-to-network  1     out of      32
   network-to-subscriber  1     out of      32
dual-bucket-bandwidth
   subscriber-to-network  0     out of       1
   network-to-subscriber  0     out of       1
flow-count-limit          0     out of       8
flow-rate-limit           0     out of       8
=============================================================
A:cpm-a>show>app-assure>group>aa-sub#
```

sw3088

The following table describes the fields that may be shown for a command. Not all fields are applicable for all commands.

Table 3: Command description fields

Field	Description
Command Name	Name of the command
Syntax	Command syntax required to execute the command. For further information about command syntax, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide* or the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.
Context	Path to the command as it is displayed in the CLI prompt. Clicking on [Tree] links to the command in the CLI tree.
Full Context	Complete contextual path to perform the command
Description	Description of the command functionality and any restrictions
Default	Command default value

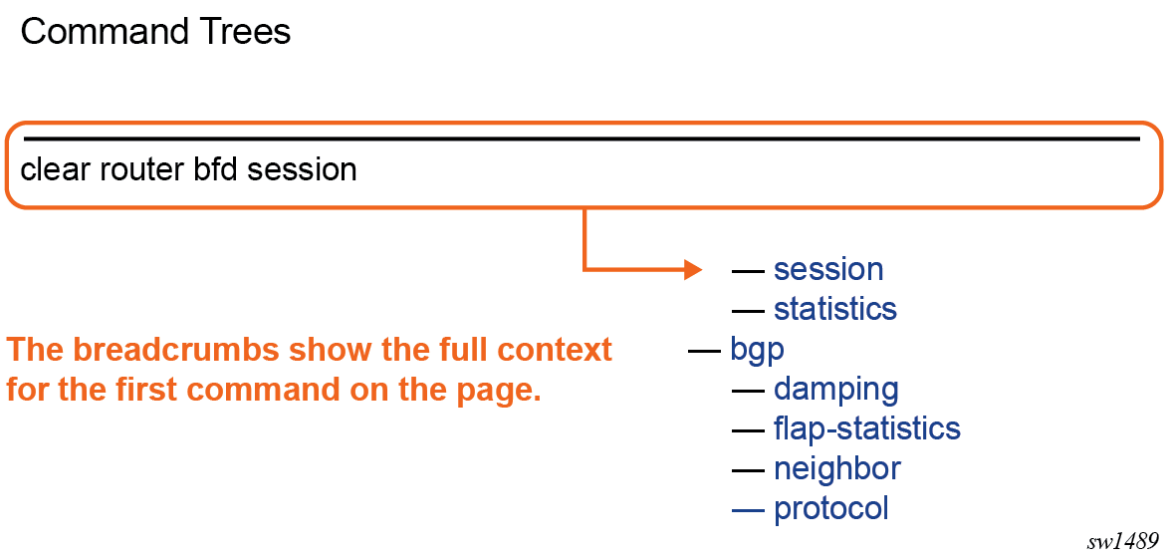
© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Parameters	Descriptions of command parameters
Values	Values allowed for the parameter
Default	Parameter default value
Platforms	Hardware platforms on which the command is available. See Platforms and terminology for more information about the platforms. **Note**: Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the SR OS R26.*x*.R*x* Software Release Notes, part number 3HE 29176 000*x* TQZZA, for information about platform support.

The **monitor** and **show** commands may also show command output and a description of the fields found in that output. Command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

Note: All options for enumerated types and numerical ranges are listed in the command descriptions; however, not all options or ranges are valid on all platforms.

1.4 Navigational aids



The following aids help you navigate the guide and find specific commands.

1.4.1 Context path

In the CLI tree section, the complete contextual path to the first command on the page is shown at the top of the page, as shown in the following figure.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 2: Command tree navigation

1.4.2 Search tips

Use the following search tips to easily find information about a specific command using a search function:

- Enter the command name in the search input field.
- To optimize your search, specify one or more levels of the contextual path before the command name.

Note: The Full Context section in each command description shows the full path to the command, as described in Command descriptions.

- Do not include variables in the search phrase.

For example, to search for the **show router mpls lsp status** command, entering "**lsp status**" is more efficient than "**status**" and limits the number of search results. Using "**lsp <lsp-name> status**" does not return any results.

Caution: Using a combination of hyphenated terms with other terms within the same quoted search phrase (for example, searching for "**cert-profile entry send-chain**") may produce inaccurate search results in WebHelp

1.4.3 Linking to the tree

Clicking on [Tree] in a command description context links directly to the command in the CLI tree. The following figure shows the [Tree] element.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 3: Link to CLI tree

policers

Syntax	**policers**
Context	[Tree] (show>app-assure>group>policy>aa-sub policers)
Full Context	show application-assurance group policy aa-sub policers
Description	This command displays policer configuration information.
Output	The following is an example output for the **policers** command.

2.1 clear Commands

The CLI **clear** commands are primarily used to set statistics in a specific area back to a value of zero, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

```
- clear
    - aaa
        - diameter
            - restarted-sessions
        - diameter-node
        - isa-radius-policy
        - l2tp-accounting-policy
        - radius-server-policy
        - route-downloader
    - anysec
    - application-assurance
        - group
            - cflowd
            - event-log
            - gtp
            - statistics
            - status
        - radius-accounting-policy
    - call-trace
        - ipoe
            - session
            - trace
        - pppoe
            - session
        - trace
    - card
        - virtual
            - cpu-scheduling
    - cflowd
    - chassis
        - power-shelf
            - power-module
    - cpm-filter
        - ip-filter
        - ipv6-filter
        - mac-filter
    - cpm-queue
    - cpu-protection
        - eth-cfm-monitoring
        - excessive-sources
        - protocol-protection
        - violators
    - esa
    - esa-vm
    - eth-cfm
        - auto-discovered-meps
        - learned-remote-mac
        - mep
        - statistics
    - filter
        - ip
        - ip-exception
        - ipv6
        - ipv6-exception
        - log
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear filter mac

```
            - mac
            - policer
                - filter-scope
                - system-scope
        - group-encryption
            - encryption-keygroup
        - ip
            - tunnel
        - ipsec
            - gateway
            - lockout
            - stats
                - ike-stats
            - transport-mode
            - tunnel
        - isa
            - lns-group
        - lag
        - ldap
        - li
            - filter
                - li-ip
                - li-ipv6
                - li-mac
            - log
            - radius
                - mirror-dest
        - log
            - event-handling
                - handler
                - information
            - log-events
            - log-id
        - macsec
            - mka-session
        - management-access-filter
            - ip-filter
            - ipv6-filter
            - mac-filter
        - mcast-management
            - mcast-reporting-dest
        - mda
        - nat
            - classic-lsn-sub
            - dslite-lsn-sub
            - isa
                - map-e-group
                - map-t-group
                - nat-group
            - l2-aware-sub
            - map

2.2 monitor Commands

The CLI **monitor** commands are found in the **monitor** context of the operational root of the CLI tree. The **monitor** commands display specified statistical information related to the monitor subject (such as filter, port, QoS, router, service, and VRRP) at a configurable interval until a count is reached.

The **monitor** command output displays a snapshot of the current statistics. The output refreshes with subsequent statistical information at each configured interval and is displayed as a delta to the previous output.

The <Ctrl-C> keystroke interrupts a monitoring process. **monitor** command configurations cannot be saved. You must enter the command for each monitoring session. If the maximum limits are configured, you can monitor the statistical information for a maximum of 60 x 999 s (approximately 1000 minutes).

```

2.3 show Commands

The CLI **show** commands display useful information in the format of a human-readable report, with the ability to add or remove output based on additional parameters. The information in the output of the **show** commands consists of configuration and operational information, and may also perform calculations or additional processing to display some of the output.

The information in the output of the **show** commands can also be found in the **state** and **configure** branches of the MD-CLI (as well as via model-driven interfaces such as NETCONF and gRPC). The output of these branches is fully modeled in YANG with structured data that can be easily manipulated by tools and applications (including pySROS and NETCONF clients). The pySROS and MD-CLI command alias features can be used together to create custom **show** commands using the modeled data. See "Command aliases" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* .

2.4 tools Commands

The CLI **tools** commands provide two primary functions:

- dump
- perform

The **tools dump** commands provide additional detailed and enhanced information about the router.

The **tools perform** commands provide the ability to trigger a variety of actions in the router, such as a card power cycle (**tools perform card power-cycle**), and APS switchovers.

```
- tools
    - dump

3 2 Commands

3.1 24-hours

24-hours

Syntax

24-hours

24-hours application *license-app*

24-hours application *license-app* **history**

24-hours history

Context

[Tree] (show>system>license-statistics 24-hours)

Full Context

show system license-statistics 24-hours

Description

This command displays application license statistics for the last 24 hours.

Parameters

license-app

Specifies the application license.

Values lns, nat, sub-mgmt, wlan-gw, aa, ipsec

history

Displays additional 24 hour statistics.

Platforms

VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4 a Commands

4.1 aa-anl-list

aa-anl-list

Syntax

aa-anl-list [**congested-only**] [**sort-type** { **top-by-subs** | **top-by-rate**} [**isa** *mda-id*]

aa-anl-list summary

Context

[Tree] (tools>dump>app-assure>group aa-anl-list)

Full Context

tools dump application-assurance group aa-anl-list

Description

This command displays the list of active ANLs detected by AA along with the associated conditions (for example, congestion, measured rate, and number of subscribers).

Parameters

congested-only

Specifies only congested ANLs.

sort-type

Filters by the specified sub-type.

Values **top-by-subs** — Displays the top ANLs sorted by measured ANL bandwidth.

top-by-rate — Displays the top ANLs sorted by those ANLs that have the highest number of subscribers.

mda-id

Specifies the slot and MDA in the format *slot*/*mda*.

Values *slot*—1 to 10

mda—1 or 2

summary

Displays summary information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA ANL list information.

Output example

```
A:Dut-C# tools dump application-assurance group 120:10 aa-anl-list
===============================================================================
Application-Assurance Access Network Location List: Group 120:10, ISA 3/1
===============================================================================
Type          Location               Congestion State     Rate (kbps) Subscribers
-------------------------------------------------------------------------------
AP-MAC+VLAN   23:89:be:c2:64:50+1034  RTT Limits Exceeded  21961       113
AP-MAC+VLAN   83:2d:3d:73:c4:9a+4090  RTT Limits Exceeded  15963       86
AP-MAC+VLAN   f2:ee:cc:47:71:f7+0034  Not Congested        6147        12
===============================================================================
```

4.2 aa-interface

aa-interface

Syntax

aa-interface isa *mda-id*

Context

[Tree] (show>app-assure>group aa-interface)

Full Context

show application-assurance group aa-interface

Description

This command displays AA interface information.

Parameters

mda-id

Specifies the MDA ID.

Values

<mda-id>	<slot>/<mda>
slot	[1 to 10] (depending on platform)
mda	[1 to 2]

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.3 aa-sub

aa-sub

Syntax

aa-sub esm *sub-ident-string* [**snapshot**]

aa-sub esm-mac *esm-mac-name* [**snapshot**]

aa-sub sap *sap-id*

aa-sub spoke-id *sdp-id:vc-id* [**snapshot**]

aa-sub transit *transit-aasub-name* [**snapshot**]

Context

[Tree] (show>app-assure>group aa-sub)

Full Context

show application-assurance group aa-sub

Description

This command displays per-subscriber statistics.

Parameters

esm *sub-ident-string*

Specifies an existing subscriber identification string.

esm-mac *esm-mac-name*

Specifies an existing subscriber MAC.

sap *sap-id*

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407

1 to 4294967295

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

transit *transit-aasub-name*

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber information.

Output example

```

Full Context

tools dump application-assurance group aa-sub

Description

This command displays **aa-sub** command information for a specific ISA.

Parameters

esm-mac-name

Specifies the ESM MAC name; a maximum of 32 characters.

mac-address

Specifies the MAC address in *xx:xx:xx:xx:xx:xx* or *xx-xx-xx-xx-xx-xx* format.

snapshot

Displays snapshot statistics.

sub-ident-string

Specifies the AA subscriber identifier string, up to 32 characters.

transit-aasub-name

Specifies the AA transit subscriber name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber information.

tools perform application-assurance group aa-sub

Description

This command performs application assurance group aa-sub operations.

Parameters

esm *sub-ident-string*

Specifies an existing subscriber identification string.

esm-mac *esm-mac-name*

Specifies an existing subscriber MAC.

sap *sap-id*

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407
1 to 4294967295

transit *transit-aasub-name*

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Description

This command displays the AA subscriber list for a specific ISA.

Parameters

filter-by-type *sub-type*

Filters by the specified sub-type.

Values dsm, esm, esm-mac, sap, spoke-sdp, transit

mda-id

Specifies the slot and MDA in the format *slot*/*mda*.

Values *slot*—1 to 10

mda—1 or 2

summary

Displays summary information.

quarantined-only

Displays the AA subscribers that are under quarantine.

policers-exceeded

Displays subscribers that have exceeded policer resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber list information.

Output example

```

4.5 aa-sub-search

aa-sub-search

Syntax

aa-sub-search *search-type granularity* [**direction** *direction*] [**max-count** *max-count*]

Context

[Tree] (tools>dump>app-assure>group aa-sub-search)

Full Context

tools dump application-assurance group aa-sub-search

Description

This command displays AA aa-sub information.

Parameters

search-type

Specifies the type of search.

Values top

granularity

Specifies the granularity of the search.

Values bytes, packets, flows

direction *direction*

Specifies the network/subscriber direction.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values from-sub, to-sub, both

max-count ***max-count***

Specifies the maximum flows to display.

Values 1 to 100

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA subscriber search information.

Output example

```
A:Dut-C#  tools dump application-assurance group 74 aa-sub-search top bytes
===============================================================================
Application-Assurance aa-sub search for Group 74: Top 10 by bytes (both)
===============================================================================
Entry isa   SubType     SubName
         From-sub-count   To-sub-count         Group:Partition Interval(UTC)

aa-sub-study transit *transit-aasub-name* [**snapshot**]

Context

[Tree] (show>app-assure>group aa-sub-study)

Full Context

show application-assurance group aa-sub-study

Description

This command displays per-subscriber special study statistics.

Parameters

esm *sub-ident-string*

Specifies an existing subscriber identification string.

esm-mac *esm-mac-name*

Specifies an existing subscriber MAC.

sap *sap-id*

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407

1 to 4294967295

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

transit *transit-aasub-name*

Specifies an existing transit subscriber name string.

Platforms

4.8 aa-transit-redundancy

aa-transit-redundancy

Syntax

aa-transit-redundancy [*aatr-id*]

Context

[Tree] (show>app-assure aa-transit-redundancy)

Full Context

show application-assurance aa-transit-redundancy

Description

This command displays information about AATR instances configured on the system.

Parameters

aatr-id

Specifies the AATR instance ID for which to display information. If an ID is not specified, the system displays summary information about all configured AATR instances.

Values 1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AATR information, and Table 4: Output fields: aa-transit-redundancy describes the output fields.

Output example

```

4.10 aarp

aarp

Syntax

aarp

aarp *aarpId*

Context

[Tree] (show>app-assur aarp)

Full Context

show application-assurance aarp

Description

This command displays the Application Assurance Redundancy Protocol (AARP) instance status.

Parameters

aarpId

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpId* **event-history** [**clear**]

Context

[Tree] (tools>dump>application-assurance aarp)

Full Context

tools dump application-assurance aarp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command dumps application-assurance AARP information for a specified instance.

Parameters

aarpId

Specifies the AARP ID.

Values 1 to 65535

event-history

Dumps historical information for the instance.

clear

Clears the event history after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpId* **force-evaluate**

Context

Full Context

tools perform application-assurance aarp

Description

This command performs Application Assurance Redundancy Protocol instance operations.

Parameters

aarpId

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

force-evaluate

Forces a re-evaluation of the preferred AARP instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.11 abort-startup-wait

abort-startup-wait

Syntax

abort-startup-wait

Context

[Tree] (tools>perform>router>dhcp>server>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp6>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp6>server>failover abort-startup-wait)

Full Context

tools perform router dhcp local-dhcp-server failover abort-startup-wait

tools perform router dhcp local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server failover abort-startup-wait

Description

This command aborts the running start-up-wait time, forcing the DCHP server to transition immediately to the COMMUNICATIONS-INTERRUPTED state.

The start-up-wait time is started after a boot to enable two redundant routers to synchronize the DHCP server lease database before transitioning to the (PRE-)NORMAL state when the last state record from the peer is synchronized. If the last state record is not received before the start-up-wait time expires, it is assumed that the remote DHCP server is not operational and the DHCP server goes in COMMUNICATIONS-INTERRUPTED state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.12 access-group

Table 6: Output fields: accounting policy

Label	Description
Policy ID	The identifying value assigned to a specific policy.
Type	Identifies accounting record type forwarded to the configured accounting file. access — Indicates that the policy is an access accounting policy. network — Indicates that the policy is a network accounting policy. none — Indicates no accounting record types assigned.
Def	Yes — Indicates that the policy is a default access or network policy. No — Indicates that the policy is not a default access or network policy.
Admin State	Displays the administrative state of the policy. Up — Indicates that the policy is administratively enabled. Down — Indicates that the policy is administratively disabled.
Oper State	Displays the operational state of the policy. Up — Indicates that the policy is operationally up. Down — Indicates that the policy is operationally down.
Intvl	Displays the interval, in minutes, in which statistics are collected and written to their destination. The default depends on the record name type.
File ID	The log destination.
Record Name	The accounting record name which represents the configured record type.
This policy is applied to	Specifies the entity where the accounting policy is applied.

Output

The following output is an example of accounting records output information, and Table 7: Output fields: accounting records describes the output fields. Table 8: Default collection interval for accounting records lists the accounting record names available and the default collection intervals.

Output example

Note:
aa, video and subscriber records are not applicable to the 7950 XRS.

```

4.15 acct-off

acct-off

Syntax

acct-off [**radius-server-policy** *policy-name*] [**force**] [**acct-terminate-cause** *number*]

Context

[Tree] (tools>perform>aaa acct-off)

Full Context

tools perform aaa acct-off

Description

This command triggers a RADIUS Accounting-Off message:

- for all radius-server-policies that have acct-on-off configured
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-Off message is not sent when the last successful event for the radius server policy was an Accounting-Off message. In this case, an Accounting-On should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-Off should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-Off.

number

Overrides the default Acct-Terminate-Cause (User-Request) in the Accounting-Off message.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.16 acct-on

acct-on

Syntax

acct-on [**radius-server-policy** *policy-name*] [**force**]

Context

[Tree] (tools>perform>aaa acct-on)

Full Context

tools perform aaa acct-on

Description

This command triggers a RADIUS Accounting-On message:

- for all radius-server-policies that have acct-on-off configured.
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-On message is not sent when the last successful event for the RADIUS server policy was an Accounting-On message. In this case, an Accounting-Off should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-On should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-On.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.17 acct-on-off-group

acct-on-off-group

Syntax

acct-on-off-group [*group-name*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>aaa acct-on-off-group)

Full Context

show aaa acct-on-off-group

Description

This command displays Acct-On-Off group information and the associated RADIUS server policies.

Parameters

group-name

Displays information pertaining to the specified acct-on-off group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA Acct-On-Off group information, and Table 9: Output fields: Acct-On-Off group describes the output fields.

Output example

```
# show aaa acct-on-off-group "group-1"
===============================================================================
Acct-On-Off-Group Information
===============================================================================
acct on off group name               : group-1
  - controlling Radius-Server-policy :
        aaa-server-policy-3
  - monitored by Radius-Server-policy :
        aaa-server-policy-4
-------------------------------------------------------------------------------
Nbr of Acct-on-off-groups displayed : 1
-------------------------------------------------------------------------------
===============================================================================
```

Table 9: Output fields: Acct-On-Off group

Label	Description
acct on off group name	The name of a RADIUS server policy Accounting-On-Off-Group
controlling Radius-Server-policy	The controlling RADIUS server policy name
monitored by Radius-Server-policy	The policy monitored a RADIUS server policy.

Label	Description
Nbr of Acct-on-off-groups displayed	The RADIUS policy that controls the Acct-On-Off group

4.18 accu-stats

accu-stats

Syntax

accu-stats subscriber *subscriber-id*

Context

[Tree] (show>subscriber-mgmt accu-stats)

Full Context

show subscriber-mgmt accu-stats

Description

This command displays the accumulated statistics for both online and offline statistics.

Parameters

subscriber-id

Specifies the subscriber ID, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber statistics, and Table 10: Output fields: accumulated statistics describes the output fields.

Output example

```
A:active# show subscriber-mgmt accu-stats subscriber home-1
===============================================================================
Subscriber accumulated statistics for "home-1”
===============================================================================

-------------------------------------------------------------------------------
Subscriber accumulated statistics ingress queue 1
-------------------------------------------------------------------------------
                                    packets               octets
-------------------------------------------------------------------------------
Offered high priority               0                     0
Offered low priority                0                     0
```

Dropped low priority                0                    0
Forwarded in-profile                0                    0
Forwarded out-of-profile            0                    0
-------------------------------------------------------------------------------

-------------------------------------------------------------------------------
Subscriber accumulated statistics egress queue 1
-------------------------------------------------------------------------------
                                    packets              octets
Forwarded in-profile                0                    0
Forwarded out-of-profile            0                    0
Dropped in-profile                  0                    0
Dropped out-of--profile             0                    0
-------------------------------------------------------------------------------
===============================================================================
```

Table 10: Output fields: accumulated statistics

Field	Description
packets	The number of packets associated with this policy
octets	The number of octets associated with this policy
Offered high priority	The number of offered high priority packets or octets
Offered low priority	The number of offered low priority packets or octets
Dropped high priority	The number of dropped high priority packets or octets
Forwarded in-profile	The number of forwarded in-profile packets or octets
Forwarded out-of-profile	The number of forwarded out-of-profile packets or octets
Dropped in-profile	The number of dropped in-profile packets or octets
Dropped out-of-profile	The number of dropped out-of-profile packets or octets

accu-stats

Syntax

accu-stats active-subs no-accu-stats-policy

accu-stats active-subs sub-profile *profile-name*

accu-stats inactive-subs

accu-stats subscriber *subscriber-id*

Context

[Tree] (clear>subscriber-mgmt accu-stats)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear subscriber-mgmt accu-stats

Description

This command removes the accumulated statistics for a subscriber.

Parameters

active-subs no accu-stats-policy

Removes the accumulated statistics that are no longer associated with an **accu-stats-policy**. These are active subscribers that are referencing a subscriber profile that removed an **accu-stats-policy**.

active-subs sub-profile *profile-name*

Removes the accumulated statistics for the specified subscriber profile.

inactive-subs

Removes the accumulated statistics from all inactive subscribers.

profile-name

Specifies the subscriber profile up to 32 characters.

subscriber-id

Specifies the subscriber up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.19 accu-stats-policy

accu-stats-policy

Syntax

accu-stats-policy

accu-stats-policy *policy-name* [**associations**]

Context

[Tree] (show>subscriber-mgmt accu-stats-policy)

Full Context

show subscriber-mgmt accu-stats-policy

Description

This command displays the configuration of the accumulated statistics policy for the subscriber profile that referenced the accumulated statistics policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

policy-name

Specifies the policy name, up to 32 characters.

associations

Lists the sub-profile that referenced the policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management accumulated statistics information, and Table 11: Output fields: accumulated statistics policy describes the output fields.

Output example

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01” associations
===============================================================================
Subscriber profile associations
===============================================================================
no-prof
sub-prof
-------------------------------------------------------------------------------
===============================================================================
No. of subscriber profiles: 2
===============================================================================
```

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01”
===============================================================================
Subscriber accumulated statistics policy accu-stats-policy-01
===============================================================================
Description                         : (Not Specified)
Last management change              : 09/23/2016 16:48:46
===============================================================================

===============================================================================
Entries
===============================================================================
Direction Type     Id
-------------------------------------------------------------------------------
ingress   queue    1
egress    queue    1
===============================================================================
```

Table 11: Output fields: accumulated statistics policy

Field	Description
Description	The user provided description of this policy
Last management change	The date and time of the last management change
Direction Type	The specific direction for the policer or the queue to be stored, ingress or egress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ID	The queue ID
No. of subscriber profiles	The number of entries matching the search criteria

4.20 accu-stats-subscribers

accu-stats-subscribers

Syntax

accu-stats-subscribers [**subscriber** *sub-ident*] [**sub-profile** *name*]

Context

[Tree] (show>subscriber-mgmt accu-stats-subscribers)

Full Context

show subscriber-mgmt accu-stats-subscribers

Description

This command lists all subscribers on the system that had referenced an accumulated statistics policy. The list contains subscribers that are currently referencing an **accu-stats-policy** as well as subscribers that no longer reference an **accu-stats-policy** (due to removal of the policy from the subscriber profile).

Parameters

sub-ident

Specifies a specific subscriber ID, up to 32 characters.

sub-profile *name*

Lists all subscribers that are referencing the specified subscriber profile, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of subscriber management information:

- Output example: subscriber management accumulated statistics
- Output example: subscriber management status system, Table 12: Output fields: status system

Output example: subscriber management accumulated statistics

```
*DUT# show subscriber-mgmt accu-stats-subscribers

```

Table 12: Output fields: status system

Field	Description
Chassis	The chassis number
Memory usage high	The memory usage of the subscriber management function on this chassis is near the limit; Yes or No
DHCP message processing overload	The subscriber management DHCP message processing function is in overload; Yes or No

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Statistics usage high	The memory used for subscriber statistics on this chassis is near the limit; Yes or No
Number of subscribers using statistics	The number of subscribers using memory to store accumulated statistics
Packets received	The number of data packets received that may trigger creation of data-triggered subscriber hosts on this system
Packets dropped	The number of data packets dropped that could have triggered creation of data-triggered subscriber hosts on this system
Packets in queue (actual)	The number of data packets currently in the waiting queue that may trigger creation of data-triggered subscriber hosts on this system
Packets in queue (peak)	The maximum value of the packets in queue object since the start up of this system or the last time that the value of packets in queue was reset
BRG initialized	The number of BRGs with the init timer running; waiting for the first host
BRG operational	The number of BRGs in the normal operating state, with dynamic hosts
BRG in connectivity verification	The number of BRGs with no hosts, pinging the residential gateway
BRG on hold	The number of BRGs with no hosts attached, in hold
BRG authenticated by proxy	The number of BRGs in this system

4.21 activate-best-dest

activate-best-dest

Syntax

activate-best-dest

Context

[Tree] (tools>perform>filter>redirect-policy activate-best-dest)

Full Context

tools perform filter redirect-policy activate-best-dest

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command allows the operator to force a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If **hold-time-up** is running, the timer is also expired.

Platforms

All

4.22 activate-primary-action

activate-primary-action

Syntax

activate-primary-action

Context

[Tree] (tools>perform>filter>mac-filter>entry activate-primary-action)

[Tree] (tools>perform>filter>ipv6-filter>entry activate-primary-action)

[Tree] (tools>perform>filter>ip-filter>entry activate-primary-action)

Full Context

tools perform filter mac-filter entry activate-primary-action

tools perform filter ipv6-filter entry activate-primary-action

tools perform filter ip-filter entry activate-primary-action

Description

This command allows an operator to activate the primary action for the given filter policy entry. If the primary action is already active, the command has no effect. If a secondary action is active, the primary action will be activated unless the primary target is down. If the sticky destination timer is running for the primary action entry, it will expire.

Context

[Tree] (show>router>ldp>bindings active)

Full Context

show router ldp bindings active

Description

This command display information about LDP active bindings.

Parameters

detail

Displays detailed information.

summary

Displays information in a summarized format.

family

Displays either IPv4 or IPv6 active LDP information.

opaque-type *opaque-type*

Specifies the type of a Multi-Point Opaque Value Element.

Values generic, ssm, vpn-ssm, recursive-ssm

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress-lsp *tunnel-id*

Displays LDP active bindings by matching on the egress RSVP-TE LSP *tunnel-id* for LDP FECs which are tunneled over a RSVP-TE LSP. The *tunnel-id* for the RSVP-TE LSP can be found in the output of the **show router mpls lsp detail** command and in the **show router tunnel-table** command. It is not the *path LSP ID* shown in the output of the **show router mpls lsp path detail** command.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

inner-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address.

innermost-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address and non-recursive FECs that have a root address that matches the specified address.

p2mp source *ip-address*

Displays LDP active P2MP source bindings.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

p2mp-id *identifier*

Displays LDP active P2MP identifier bindings.

Values 0 to 4294 967 295

group *mcast-address*

Displays the P2MP group multicast address bindings.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

root *ip-address*

Displays root IP address information.

rd *rd*

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

prefix *ip-prefix*/*ip-prefix-length*

Specifies information for the specified IP prefix and mask length.

Values

ipv4-address	- a.b.c.d
ipv6-address	- x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

The following outputs are examples of LDP binding information:

- Output example: active LDP bindings
- Output example: active LDP P2MP bindings
- Output example: LDP prefix-specific and recursive bindings

Output example: active LDP bindings

```
*A:Dut-C# show router ldp bindings active
===============================================================================

4.24 active-subscribers

active-subscribers

Syntax

active-subscribers detail

active-subscribers mirror

active-subscribers [**summary**]

Context

[Tree] (show>service active-subscribers)

Full Context

show service active-subscribers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays active subscriber information.

Parameters

detail

Displays detailed output.

mirror

Displays active subscriber mirror information.

summary

Displays active subscriber information in a brief format.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output are examples of active service subscriber information, and Table 13: Output fields: active subscriber describes the output fields:

- Output example: active subscribers
- Output example: active subscribers mirroring
- Output example: detailed active subscribers

Output example: active subscribers

```
*A:Dut-C# show service active-subscribers

adjacency

Syntax

adjacency [*ip-address* | *ip-int-name* | *nbr-system-id*] [**detail**]

Context

[Tree] (show>router>isis adjacency)

Full Context

show router isis adjacency

Description

This command displays information regarding IS-IS neighbors. When no *ip-address*, *ip-int-name,* or *nbr-system-id* is specified, all adjacencies are displayed.

Parameters

ip-address

When specified, only adjacencies with that interface is displayed.

Values ipv4-address:

- a.b.c.d (host bits must be 0)

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

ip-int-name

When specified, only adjacencies with that interface is displayed.

nbr-system-id

When specified, only the adjacency with that ID is displayed.

detail

All output is displayed in the detailed format.

mt-id-number

Specifies the multi topology ID number for this route.

Platforms

All

Output

The following output is an example of IS-IS adjacency information, and Table 14: Output fields: adjacency describes the output fields.

Output example

```

Table 14: Output fields: adjacency

Label	Description
Interface	Interface name associated with the neighbor.
System-id	Neighbor’s system ID.
Level	1-L1 only, 2-L2 only, 3-L1 and L2.
State	Up, down, new, one-way, initializing, or rejected.
Hold	Hold time remaining for the adjacency.
SNPA	Subnetwork point of attachment, MAC address of the next hop.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Circuit type	Level on the interface L1, L2, or both.
Expires In	Number of seconds until adjacency expires.
Priority	Priority to become designated router.
Up/down transitions	Number of times neighbor state has changed.
Event	Event causing last transition.
Last transition	Time since last transition change.
Speaks	Supported protocols (only IP).
IP address	IP address of neighbor.
MT enab	Yes — The neighbor is advertising at least 1 non MTID#0.
Topology	Derived from the MT TLV in the IIH • MT#0, MT#2 => "Topology : Unicast, IPv6-Unicast” • Native IPv4 or native IPv6 => "Topology : Unicast” Not supported MTIDs => Topology line suppressed
IPv4 SID Allocation	Indicates whether the IPv4 adjacency SID was statically configured or dynamically allocated
IPv6 SID Allocation	Indicates whether the IPv6 adjacency SID was statically configured or dynamically allocated
SRv6 SID Information	Lists SRv6 adjacency SIDs associated with the ISIS adjacency. Each SID entry includes type, locator, function, SRH-mode, protection, algorithm, and allocation
SID	The SRv6 segment identifier value
Type	The SRv6 SID function type (for example, End.X)
Locator	The locator name associated with the SRv6 SID
Function	The function in decimal value assigned to the SRv6 SID within the locator
SRH-mode	The SRH behavior mode for the SRv6 SID (for example, PSP)
Protection	Indicates whether the SRv6 adjacency SID is protected or unprotected
Algorithm	The flex-algorithm identifier value associated with the SRv6 SID
Allocation	Indicates whether the SRv6 adjacency SID was statically configured or dynamically allocated

adjacency

Syntax

adjacency [*system-id*]

Context

[Tree] (clear>router>isis adjacency)

Full Context

clear router isis adjacency

Description

This command clears and resets the entries from the IS-IS adjacency database.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Platforms

All

adjacency

Syntax

adjacency [*system-id*]

Context

[Tree] (clear>service>id>spb adjacency)

Full Context

clear service id spb adjacency

Description

This command clears and resets IS-IS adjacencies.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

4.26 adjust-autobandwidth

adjust-autobandwidth

Syntax

adjust-autobandwidth [**lsp** *lsp-name* [**force** [**bandwidth** *mbps*]]]

Context

[Tree] (tools>perform>router>mpls adjust-autobandwidth)

Full Context

tools perform router mpls adjust-autobandwidth

Description

This command initiates an immediate auto-bandwidth adjustment attempt for either one specific LSP or all active LSPs. The auto-bandwidth adjustment is made to the primary or secondary path of the LSP, whichever is the currently active path. If an LSP is not specified, the system assumes the command applies to all LSPs.

The optional **force** parameter, which is available only when an LSP is referenced, determines whether to apply **adjust-up** and **adjust-down** threshold checks.

The adjust count and maximum average data rate are not reset when using this command to manually initiate an auto-bandwidth adjustment, regardless of whether the bandwidth adjustment succeeds or fails. The overflow count is reset only if the manual auto-bandwidth adjustment attempt succeeds.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters. If this parameter is not specified, the command applies to all active LSPs.

force

Keyword to force the bandwidth adjustment to ignore configured thresholds.
If this parameter is not specified, the maximum average data rate must differ from the current bandwidth reservation by more than the **adjust-up** or **adjust-down** thresholds, otherwise no bandwidth adjustment occurs.

bandwidth *mbps*

Specifies the bandwidth that the LSP should be immediately resized to, in Mb/s.

If a **bandwidth** is specified as part of the **force** parameter, the bandwidth of the LSP is changed to the specified value, otherwise the bandwidth is changed to the maximum average data rate that has been measured by the system in the current adjust interval.

Label	Description
Group Name	The name of the administrative group
Group Value	The integer value of the administrative group
No. of Groups	The total number of displayed administrative groups

4.29 admin-lock

admin-lock

Syntax

admin-lock

Context

[Tree] (tools>perform>service>id admin-lock)

Full Context

tools perform service id admin-lock

Description

Commands in this context apply an administrative lock for a spoke SDP that is bound to a VLL SAP, another spoke-\ sdp or a VPLS interface for an MPLS-TP PW. After the PW is locked, it can be put into loopback mode. The command must be executed at both ends of the PW or MS-PW represented by the spoke-\ SDP. Test traffic can then be injected using a test SAP.

===============================================================================
*APE#
```

Table 16: Output fields: QoS scheduler hierarchy customer

Label	Description
Policy Name	Displays the policy name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Description	Displays the policy description.
OM Add PIR Prcnt	Displays the percentage of the administrative PIR by which the measured rate is increased.
OM Add Rate	Displays the amount, in kb/s, by which the measured rate is increased.
OM Add	min-only — When this option is true, the system uses the specified increase as a minimum offered rate even for inactive queues or policers associated with the policy. active-min-only — When this option is true, the respective rate or percentage is treated as the minimum offered rate for a queue only when the queue has an actual non-zero offered rate. This is intended to limit the artificial increase in offered rate to queues that are currently active. When a queue's measured offered rate drops to zero, the system stops enforcing the minimum value.
OM Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the threshold sensitivity to the offered rate change. If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity.
OM Gran Rate	Displays the explicit rate, in kb/s, that are used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Max Dec PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the decrement limit to the offered rate change. If a value of 100 or 100.00 is used, the system interprets this equivalent as **no max-decrement**.
Max Dec Rate	Displays the rate, in kb/s, that is used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity.
Abv Off PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the fair share increase limit. The new operational PIR result is capped by the child's PIR. If a value of 0 or 0.00 is specified, the system will disable the fair share increase function and only configure the actual distribution rate. If a value of 100 or 100.00 is used, the system will interpret this equivalent to executing the **no above-offered-cap** command and return the fair-share operation to the default behavior.
Abv Off Rate	Specifies the explicit rate, in kb/s, that is used as the limit to the child's fair share increase to the operational PIR. The new operational PIR result is capped by the child's PIR.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	If a value of 0 is used, the system will disable the fair share increase function and only configure the actual distribution rate.
BWD Gran PIR Prcnt	Displays the percentage of the child's administrative PIR that is used as the rounding step value. If a value of 0 or 0.00 is used, the system will interpret this equivalent to **no granularity**.
BWD Gran Rate	Displays the rate, in kb/s, that is used as the rounding step value. If a value of 0 is used, the system will interpret this equivalent to **no granularity**.
Fast Start	Displays whether fast detection of initial bandwidth on a child policer or queue associated with the policy is enabled.
Fast Stop	Displays whether fast detection of lack of offered rate on a child policer or queue associated with the policy is enabled.
Time Average Factor	Displays the time average factor used to calculate the weight of the new offered rate using a portion of the previous offered rate. If **dec-only** is true, the time average factor adjustment is only applied if the new offered rate is decreasing compared to the previous offered rate.
Hi Rate Hold Time	Displays the time period that the current offered rate is maintained for a child policer or queue when it is seen that the offered rate is decreasing. The offered measurement that triggers the hold time is used when the hold timer expires, unless a higher offered rate is seen in the interim. When a higher rate is observed, the hold timer is canceled and the higher offered rate is used immediately. If **active-min-only** is true, the respective rate or percentage is treated as the minimum offered rate for a queue, only when the queue has an actual non-zero offered rate.
Sample Interval	Displays the number of intervening sample periods before a new offered rate is measured.
Enqueue on PIR Zero	Displays whether **enqueue-on-pir-zero** is enabled. If it is enabled, when the operational PIR is set to zero, the queue's MBS remains set to the normal value and is not also set to zero.
Limit PIR Zero Drain	If true, the system to use the minimum configurable PIR instead of an H-QoS derived zero operational PIR.
Init LUB with min PIR	If true, new queues associated with a LUB context are assigned a minimum rate operational PIR to be applied to the queue for use by enqueued packets prior to an H-QoS iteration.
Internal Sched Wght Mode	Specifies the internal scheduler weight:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	default — Specifies that queues are equally weighted, except at ingress for mixed-speed LAGs without per-fp-inq-queuing enabled and at egress for all mixed-speed LAGs, in which cases the queues are weighted based on port speed. **force-equal** — Specifies that the queues are always equally weighted. **offered-load** — Specifies that the queues are weighted based on observed offered load. **capped-offered-load** — Specifies that the queues are weighted based on observed offered load capped by PIR.
Unconsumed Agg-rate	Displays the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Agg-rate	Displays the percentage of the delta consumed aggregate rate that can be given to a queue at the end of an H-QoS pass.
Unconsumed Hi-tier-rate	Displays the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS pass.
Delta Consumed Hi-tier-rate	Displays the percentage of the delta consumed higher tier rate that can be given to a queue at the end of an H-QoS pass.

```

Table 18: Output fields: alarm contact input

Label	Description
Alarm Input Pin Number	Indicates the alarm contact input pin number.
Description	Displays the configured description string for the alarm contact input
Alarm Input Pin Current State	Indicates the configured administrative state of the alarm contact input. Disabled — The alarm contact input is disabled (**shutdown**) and log events will not be generated for changes to the input pin status. Enabled — The alarm contact input is enabled (**no shutdown**) and log events are generated for changes to the input pin status as long as the log events are not suppressed in **event-control** configuration.
Alarm Severity	Indicates the configured severity of the associated CHASSIS log event.
Alarm Raised	Indicates if the input pin is triggered or not.
Last State Change	Indicates when the input pin last changed state.

Resource	Facility associated with the alarm
Details	Description of the alarm

4.36 ale-adjust

ale-adjust

Syntax

ale-adjust

ale-adjust subscriber *sub-ident-string*

Context

[Tree] (show>service>active-subscribers ale-adjust)

Full Context

show service active-subscribers ale-adjust

Description

This command displays subscriber Access Loop Encapsulation adjust information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sub-ident-string

Displays subscriber Access Loop Encapsulation adjust for the specified subscriber, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.37 alias

alias

Syntax

alias

Context

[Tree] (show alias)

Full Context

show alias

Description

This command shows command aliases.

Note:
This command is not available in the MD-CLI. Use the MD-CLI **info detail environment command-alias** command.

Platforms

All

Output

The following output is an example of alias information, and Table 20: Output fields: alias describes the output fields.

Output example

```
A:ALA-103>config>system# show alias
===============================================================================
Alias-Name                    Alias-command-name
===============================================================================
sri                           show router interface
sse                           show service service-using epipe
ssvpls                        show service service-using vpls
ssvprn                        show service service-using vprn
ssi                           show service service-using ies
```

```
-------------------------------------------------------------------------------
Number of aliases : 5
===============================================================================
A:ALA-103>config>system#
```

Table 20: Output fields: alias

Label	Description
Alias-Name	Displays the name of the alias.
Alias-command-name	The command and parameter syntax that define the alias.
Number of aliases	The total number of aliases configured on the router.

4.38 all

all

Syntax

all

Context

[Tree] (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following outputs are examples of detailed service information:

- Output example: VPLS service details, Table 21: Output fields: service ID all (VPLS)
- Output example: Epipe service details, Table 22: Output fields: service ID all (Epipe)
- Output example: IES service details, Table 23: Output fields: service ID all (IES)
- Output example: VPRN service details and Output example: PW SAP service details, Table 24: Output fields: service ID all (VPRN; PW SAPs)

Table 21: Output fields: service ID all (VPLS)

Label	Description
Service Id	The value that identifies a service
VPN Id	The number that identifies the VPN
Service Type	The type of service
SDP Id	The SDP identifier
Description	The text string describing general information about the service
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service
Evpn Mcast GW	The status of the EVPN multicast gateway
Mcast-GW Type	The multicast gateway type: MEG, PEG, or MEG-PEG
Split Horizon Group	The name of the split horizon group for this service
Description	The text string describing the split horizon group
Last Changed	The date and time of the most recent management-initiated change to this split horizon group
SDP Id	The SDP identifier
Type	The service SDP binding type, spoke or mesh
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Delivery	The type of delivery used by the SDP: GRE or MPLS
Admin State	The administrative state of this SDP
Oper State	The operational status of the KeepAlive protocol.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP
Ingress Filter	The ID of the ingress filter policy
Egress Filter	The ID of the egress filter policy
Far End	The IP address of the remote end of the GRE or MPLS tunnel defined by this SDP
Last Changed	The date and time of the most recent change to this customer
Signaling	The signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	The operating status of the SDP
Oper State	The operational state of the SDP
Hello Time	The frequency that SDP echo request messages are transmitted on this SDP
Hello Msg Len	The length of the SDP echo request messages transmitted on this SDP
Max Drop Count	The maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault
Hold Down Time	The amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field. If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS
Number of SDPs	The total number SDPs applied to this service ID
Service Access Points	
Service Id	The value that identifies a service
Port Id	The ID of the access port where this SAP is defined
Description	The generic information about the SAP
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper State	The operating state of the SAP
Last Changed	The date and time of the last change
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented
Ingress qos-policy	The SAP ingress QoS policy ID
Egress qos-policy	The SAP egress QoS policy ID
Ingress Filter-Id	The SAP ingress filter policy ID
Egress Filter-Id	The SAP egress filter policy ID
Multi Svc Site	The multi-service site in which the SAP is a member
Ingress sched-policy	The ingress QoS scheduler for the SAP
Egress sched-policy	The egress QoS scheduler for the SAP
Acct. Pol	The accounting policy applied to the SAP
Collect Stats	Accounting statistics collected on the SAP
Dropped	The number of packets or octets dropped
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded
Dropped In Profile	The number of in-profile packets or octets discarded
Dropped Out Profile	The number of out-of-profile packets or octets discarded
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ingress Queue 1	The index of the ingress QoS queue of this SAP
High priority offered	The packets or octets count of the high priority traffic for the SAP
High priority dropped	The number of high priority traffic packets or octets dropped
Low priority offered	The packets or octets count of the low priority traffic
Low priority dropped	The number of low priority traffic packets or octets dropped
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded
Egress Queue 1	The index of the egress QoS queue of the SAP
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded
In profile dropped	The number of in-profile packets or octets dropped for the SAP
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded
Out profile dropped	The number of out-of-profile packets or octets discarded
State	The DHCP relay state on this SAP
Info Option	Option 82 processing state on this SAP
Action	Option 82 processing state SAP or interface: keep, replace or drop
Circuit ID	If index is inserted in Circuit ID sub-option of Option 82
Remote ID	The far-end MAC address inserted in remote ID sub-option of Option 82
Managed by Service	The service-id of the management VPLS managing this SAP
Managed by SAP	The SAP ID inside the management VPLS managing this SAP
Prune state	The STP state inherited from the management VPLS
Managed by Service	The service ID of the management VPLS managing this spoke SDP
Managed by Spoke	The SAP ID inside the management VPLS managing this spoke SDP
Prune state	The STP state inherited from the management VPLS

Table 22: Output fields: service ID all (Epipe)

Label	Description
Service Id	The service identifier
VPN Id	The number that identifies the VPN
Service Type	The type of service
VLL Type	The VLL type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Description	Generic information about the service
Customer Id	The customer identifier
Last Mgmt Change	The date and time of the most recent management-initiated change
Endpoint	The name of the service endpoint for the 7450 ESS or 7750 SR
Flags	The conditions that affect the operating status of this SAP. Display output includes: ServiceAdminDown, SapAdmin Down, InterfaceAdminDown, PortOperDown, PortMTUToo Small, L2OperDown, SapIngressQoSMismatch, SapEgress QoSMismatch,RelearnLimitExceeded, RxProtSrcMac, Parent IfAdminDown, NoSapIpipeCeIpAddr, SapParamMismatch, Cem SapNoEcidOrMacAddr, StandByForMcRing, ServiceMTUToo Small, NoSapEpipeRingNode.
SAP Count	The number of SAPs specified for this service
SDP Bind Count	The number of SDPs bound to this service for the 7450 ESS or 7750 SR
Split Horizon Group Specifics	
Split Horizon Group	The name of the split horizon group for this VPLS for the 7450 ESS or 7750 SR
Description	The description of the split horizon group for the 7450 ESS or 7750 SR
Last Changed	The date and time of the most recent management-initiated change to this split horizon group for the 7450 ESS or 7750 SR
Service Destination Points (SDPs)	
SDP Id	The SDP identifier for the 7450 ESS or 7750 SR
Type	Indicates whether this service SDP binding is a spoke or a mesh for the 7450 ESS or 7750 SR
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Delivery	The type of delivery used by the SDP: GRE or MPLS for the 7450 ESS or 7750 SR
Admin State	The administrative state of this SD for the 7450 ESS or 7750 SR
Oper State	The operational state of this SDP for the 7450 ESS or 7750 SR
Jitter Buffer (packets)	The jitter buffer length in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	The playout buffer packets threshold in number of packet buffers for the 7450 ESS or 7750 SR
Playout Threshold (packets)	Indicates the current packet depth of the jitter buffer for the 7450 ESS or 7750 SR
Peer Pw Bits	The bits set by the LDP peer when there is a fault on its side of the pseudowire for the 7450 ESS or 7750 SR. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pw NotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults. pwNotForwarding — Pseudowire not forwarding lacIngressFault Local — Attachment circuit RX fault lacEgressFault Local — Attachment circuit TX fault psnIngressFault Local — PSN-facing PW RX fault psnEgressFault Local — PSN-facing PW TX fault pwFwdingStandby — Pseudowire in standby mode
Signaling Override	The overriding signaled pseudowire type, as configured under the **signaled-vc-type-override** option for Apipes. This field is only displayed if **signaled-vc-type-override** is configured for the 7750 SR.

Table 23: Output fields: service ID all (IES)

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Service Type	Specifies the type of service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
SDP Id	The SDP identifier.
Description	Generic information about the service.
Customer Id	The customer identifier.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper State	The current status of the service.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far-end field. If the SDP type is GRE, then the following message displays: "SDP Delivery Mechanism is not MPLS”.
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
IPCP Address Extension Details	
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional).

Output example: VPRN service details

Note:
Ing ipv6 Fltr and Egr ipv6 Fltr are for the 7750 SR only.

Table 24: Output fields: service ID all (VPRN; PW SAPs)

Label	Description
Service Detailed Information	
Service Id	The service identifier.
VPN Id	The number which identifies the VPN.
Customer Id	The customer identifier.
Last Status Change	The date and time of the most recent change in the administrative or operating status of the service.
Last Mgmt Change	The date and time of the most recent management-initiated change to this customer.
Admin State	The current administrative state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper State	The current operational state.
Route Dist.	Displays the route distribution number.
AS Number	Displays the autonomous system number.
Router Id	Displays the router ID for this service.
ECMP	Displays equal cost multipath information.
ECMP Max Routes	Displays the maximum number of routes that can be received from the neighbors in the group or for the specific neighbor.
Max Routes	Displays the maximum number of routes that can be used for path sharing.
Auto Bind	Specifies the automatic binding type for the SDP assigned to this service.
Vrf Target	Specifies the VRF target applied to this service.
Vrf Import	Specifies the VRF import policy applied to this service.
Vrf Export	Specifies the VRF export policy applied to this service.
SDP Id	The SDP identifier.
Description	Generic information about the service.
SAP Count	The number of SAPs specified for this service.
SDP Bind Count	The number of SDPs bound to this service.
Split Horizon Group	Name of the split horizon group for this service.
Description	Description of the split horizon group.
Last Changed	The date and time of the most recent management-initiated change to this split horizon group.
ETH-CFM Service Specifics	
Tunnel Faults	Whether tunnel faults are ignored or accepted.
Service Destination Points (SDPs)	
SDP Id	The SDP identifier.
Type	Indicates whether this Service SDP binding is a spoke or a mesh.
Admin Path MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper Path MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Delivery	Specifies the type of delivery used by the SDP: GRE or MPLS.
Admin State	The administrative state of this SDP.
Oper State	The operational state of this SDP.
Ingress Label	The label used by the far-end device to send packets to this device in this service by this SDP.
Egress Label	The label used by this device to send packets to the far-end device in this service by this SDP.
Ingress Filter	The ID of the ingress filter policy.
Egress Filter	The ID of the egress filter policy.
Far End	Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP.
Last Changed	The date and time of the most recent change to this customer.
Signaling	Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP.
Admin State	Specifies the operating status of the keepalive protocol.
Oper State	The current status of the keepalive protocol.
Hello Time	Specifies how often the SDP echo request messages are transmitted on this SDP.
Hello Msg Len	Specifies the length of the SDP echo request messages transmitted on this SDP.
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Hold Down Time	Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state.
SDP Delivery Mechanism	When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far end field. If the SDP type is GRE, then the following message displays: SDP delivery mechanism is not MPLS.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Max Drop Count	Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault.
Number of SDPs	The total number SDPs applied to this service ID.
Service Access Points	
Service Id	The service identifier.
Port Id	The ID of the access port where this SAP is defined.
Description	Generic information about the SAP.
Encap Value	The value of the label used to identify this SAP on the access port.
Admin State	The desired state of the SAP.
Oper State	The operating state of the SAP.
Last Changed	The date and time of the last change.
Admin MTU	The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Oper MTU	The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented.
Ingress qos-policy	The SAP ingress QoS policy ID.
Egress qos-policy	The SAP egress QoS policy ID.
Ingress Filter-Id	The SAP ingress filter policy ID.
Egress Filter-Id	The SAP egress filter policy ID.
Multi Svc Site	Indicates the multi-service site that the SAP is a member.
Ingress sched-policy	Indicates the ingress QoS scheduler for the SAP.
Egress sched-policy	Indicates the egress QoS scheduler for the SAP.
Acct. Pol	Indicates the accounting policy applied to the SAP.
Collect Stats	Specifies whether accounting statistics are collected on the SAP.
SAP Statistics	
Dropped	The number of packets or octets dropped.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Offered Hi Priority	The number of high priority packets, as determined by the SAP ingress QoS policy.
Offered Low Priority	The number of low priority packets, as determined by the SAP ingress QoS policy.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Queueing Stats	
Dropped In Profile	The number of in-profile packets or octets discarded.
Dropped Out Profile	The number of out-of-profile packets or octets discarded.
Forwarded In Profile	The number of in-profile packets or octets (rate below CIR) forwarded.
Forwarded Out Profile	The number of out-of-profile packets or octets (rate above CIR) forwarded.
SAP per Queue stats	
Ingress Queue 1	The index of the ingress QoS queue of this SAP.
High priority offered	The packets or octets count of the high priority traffic for the SAP.
High priority dropped	The number of high priority traffic packets/octets dropped.
Low priority offered	The packets or octets count of the low priority traffic.
Low priority dropped	The number of low priority traffic packets/octets dropped.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
Out profile forwarded	The number of out-of-profile octets (rate above CIR) forwarded.
Egress Queue 1	The index of the egress QoS queue of the SAP.
In profile forwarded	The number of in-profile packets or octets (rate below CIR) forwarded.
In profile dropped	The number of in-profile packets or octets dropped for the SAP.
Out profile forwarded	The number of out-of-profile packets or octets (rate above CIR) forwarded.
Out profile dropped	The number of out-of-profile packets or octets discarded.

Label	Description
State	Specifies whether DHCP relay is enabled on this SAP.
Info Option	Specifies whether Option 82 processing is enabled on this SAP.
Action	Specifies the Option 82 processing on this SAP or interface: keep, replace or drop.
Circuit ID	Specifies whether the If index is inserted in circuit ID sub-option of Option 82.
Remote ID	Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82.
Service Access Points	
Managed by Service	Specifies the service-id of the management VPLS managing this SAP.
Managed by SAP	Specifies the sap-id inside the management VPLS managing this SAP.
Prune state	Specifies the STP state inherited from the management VPLS.
Spoke SDPs	
Managed by Service	Specifies the service-id of the management VPLS managing this spoke SDP.
Managed by Spoke	Specifies the sap-id inside the management VPLS managing this spoke SDP.
Prune state	Specifies the STP state inherited from the management VPLS.
Peer Pw Bits	Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults. pwNotForwarding — Pseudowire not forwarding. lacIngressFault Local — Attachment circuit RX fault. lacEgressFault Local — Attachment circuit TX fault. psnIngressFault Local — PSN-facing PW RX fault. psnEgressFault Local — PSN-facing PW TX fault. pwFwdingStandby — Pseudowire in standby mode.
IPCP Address Extension Details

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Peer IP Addr	Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions.
Peer Pri DNS Addr	Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.
Peer Sec DNS Addr	Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions.

all

Syntax

all

Context

[Tree] (show>service>id>mld-snooping all)

Full Context

show service id mld-snooping all

Description

This command displays detailed information about MLD snooping.

Platforms

All

Output

The following output is an example of service MLD snooping information.

Output example

```
*A:rbae_C# show service id 1 mld-snooping all

all [**color** *color*] [**end-point** {*ipv4-address* | *ipv6-address*}] [**preference** *preference-id*] [**distinguisher** *distinguisher-id*] [**tunnel-id** *tunnel-id*]

all summary

Context

[Tree] (show>router>seg-rt>sr-policies all)

Full Context

show router segment-routing sr-policies all

Description

This command displays the traffic statistics of all or a filtered set of the BGP and static policies, or displays summary parameters.

Parameters

color

Specifies the color to filter on.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Specifies the end-point IPv4 or IPv6 address to filter on.

Values ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:x:d:d:d:d

x — [0..FFFF]H

d — [0..255]D

preference-id

Specifies the preference ID to filter on.

Values 0 to 4294967295

distinguisher-id

Specifies the distinguisher ID to filter on.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 4294967295

summary

Displays the summary information for the BGP and static policies.

tunnel-id

Specifies the tunnel ID to filter on.

Values 0 to 4294967295

Platforms

All

Output

The following output is an example of traffic statistics for all BGP and static policies.

Output example

```
A:node-2# show router segment-routing sr-policies all
===============================================================================

4.42 ancp

ancp

Syntax

ancp ancp-sub-string *string*

Context

[Tree] (clear>subscr-mgmt ancp)

Full Context

clear subscriber-mgmt ancp

Description

This command clears subscriber ANCP data.

Parameters

string

Specifies the ANCP string to clear, up to 63 characters, corresponding to this subscriber ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.43 ancp-policy

ancp-policy

Full Context

show subscriber-mgmt ancp-policy

Description

This command displays subscriber Access Node Control Protocol (ANCP) policy information.

Parameters

policy-name

Displays information for the specified ANCP policy.

association

Displays the information configured with the ANCP policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management ANCP policy information, and Table 27: Output fields: ANCP policy describes the output fields.

Full Context

show subscriber-mgmt ancp-string

Description

This command displays subscriber ANCP string information.

Parameters

ancp-string

Specify the ASCII representation of the DSLAM circuit-id name.

customer-id

Specify the associated existing customer name.

customer-site-name

Specify the associated customer's configured MSS name.

sap-id

Specifies the physical port identifier portion of the SAP definition.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management ANCP string information, and Table 28: Output fields: ANCP string describes the output fields.

4.45 anycast

anycast

Syntax

anycast [**family**] [**detail**]

Context

[Tree] (show>router>pim anycast)

Full Context

show router pim anycast

Description

This command displays PIM anycast rp-set information.

Parameters

family

Specifies the address family.

Values ipv4, ipv6

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of a PIM anycast information, and Table 29: Output fields: PIM anycast describes the output fields.

Output example

```
A:dut-d# show router pim anycast
===============================================
PIM Anycast RP Entries

Table 29: Output fields: PIM anycast

Label	Description
Anycast Address	Displays the candidate anycast address.
Anycast RP Peer	Displays the candidate anycast RP peer address.

4.46 anysec

anysec

Syntax

anysec port *port-id*

Context

[Tree] (tools>dump anysec)

Full Context

tools dump anysec

Description

This command dumps ANYsec information.

Parameters

port-id

Specifies the port ID.

Values slot, mda, connector, port

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

anysec

Syntax

anysec encryption-group *group-name* **peer** *ip-address* **statistics**

Context

[Tree] (clear anysec)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear anysec

Description

This command clears ANYsec statistics.

Parameters

group-name

Specifies the encryption group name, up to 32 characters.

ip-address

Specifies a peer IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

statistics

Keyword used to clear ANYsec statistics

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

anysec

Syntax

anysec

Context

[Tree] (show anysec)

Full Context

show anysec

Description

This command displays ANYsec information.

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.47 app-filter

app-filter

Syntax

app-filter [*entry-id*]

Context

[Tree] (show>app-assure>group>policy app-filter)

Full Context

show application-assurance group policy app-filter

Description

This command displays application-assurance policy filter information.

Parameters

entry-id

Specifies an existing application filter entry.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.48 app-group

app-group

Syntax

app-group [*app-group-name*] **count** [**detail**]

app-group count top *granularity* [**max-count** *max-count*]

Context

[Tree] (show>app-assure>group app-group)

[Tree] (show>app-assure>group>aa-sub app-group)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show application-assurance group app-group

show application-assurance group aa-sub app-group

Description

This command displays per-application-group statistics. System-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Parameters

app-group-name

Displays information about the specified application group name.

count

Displays the counters for the application group.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of application group information.

Output example

```
A:ALU>show>app-assure>group# app-group count

app-profile

Syntax

app-profile [*app-prof-name*]

app-profile *app-prof-name* **associations**

Context

[Tree] (show>app-assure>group>policy app-profile)

Full Context

show application-assurance group policy app-profile

Description

This command displays application-assurance policy application profile information.

Parameters

app-prof-name

Specifies an existing application profile name.

associations

Displays subscriber management associations.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.50 app-qos-policy

app-qos-policy

Syntax

app-qos-policy [*entry-id*]

app-qos-policy non-zero

Context

[Tree] (show>app-assure>group>policy app-qos-policy)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show application-assurance group policy app-qos-policy

Description

This command displays application-assurance policy application QoS policy information.

Parameters

entry-id

Specifies an existing application QoS policy entry id.

Values 1 to 65535

non-zero

Selects only non-zero count entries.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.51 app-service-option

app-service-option

Syntax

app-service-option [*characteristic-name*]

Context

[Tree] (show>app-assure>group>policy app-service-option)

Full Context

show application-assurance group policy app-service-option

Description

This command displays application-assurance policy application service option information.

Parameters

characteristic-name

Specifies the characteristic name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.52 application

application

Syntax

application [*application-name*] **count** [**detail**]

application count top *granularity* [**max-count** *max-count*]

Context

[Tree] (show>app-assure>group application)

[Tree] (show>app-assure>group>aa-sub application)

[Tree] (show>app-assure>group>aa-sub-study application)

Full Context

show application-assurance group application

show application-assurance group aa-sub application

show application-assurance group aa-sub-study application

Description

This command displays per-application statistics. The system-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Subscriber statistics are available for special-study subscribers and account for all completed and active flows at the moment of this statistics request.

Parameters

application-name

Displays information about the specified application name.

count

Displays counter information.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Displays counters sorted by octets, packets, or floe. This is indicated by granularity.

Values octets, packets, flows

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-count

If the value is greater than 0, displays up to the indicated value of statistic rows. If 0, displays all.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of application information.

Full Context

show router sgt-qos application

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays application QoS settings.

Parameters

app-name

Specifies the application.

Values Some of the following values may only apply to specific products. Refer to the *SR OS R26.x.Rx Software Release Notes* for details about application support for different SR OS products:

arp, bgp, bmp, call-trace, cflowd, dhcp, diameter, dns, ftp, grpc, gtp, http, icmp, igmp, igmp-reporter, isis, l2tp, ldp, mld, mpls-udp-return, msdp, mtrace2, ndis, ntp, ospf, pcep, pim, pppoe, ptp, radius, rip, rsvp, sflow, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp

dscp

Specifies to show DSCP values only.

dot1p

Specifies to show dot1p values only.

Platforms

All

Output

The following output is an example of SGT QoS application information.

Output example

Note:
Some applications have multiple DSCP default values depending on the context or service.

```
A:ALA-A# show router sgt-qos application
===============================================================================
DSCP Application Values

4.54 application-assurance-group

application-assurance-group

Syntax

application-assurance-group [*aa-group-id* [**load-balance** [**unassigned**]]]

Context

[Tree] (show>isa application-assurance-group)

Full Context

show isa application-assurance-group

Description

This command displays ISA group information.

Parameters

aa-group-id

Specifies the AA ISA group ID.

load-balance

Specifies load balancing information.

unassigned

Specifies load balancing unassigned aa-sub information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following are output examples of application assurance group information, and Table 30: Output fields: application assurance group describes the output fields.

- Output example: ISA application assurance group
- Output example: ISA application assurance group load balance
- Output example: ISA application assurance group load balance unassigned

Output example: ISA application assurance group

```
*A:Dut-A# show isa application-assurance-group 1

Table 30: Output fields: application assurance group

Label	Description
ISA-AA Group Index	Indicates the group number of this group of MDAs.
Description	
Primary ISA-AA	Displays the primary slot and card number and whether the status is up or down and is either active or standby.
Backup ISA-AA	Displays the backup slot and card number and whether the status is up or down and is either active or standby. The status should be up and standby.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Last Active change	Indicates the last time a successful change was performed.
Admin State	Displays the administrative state, up or down.
Oper State	Displays the operational state, up or down.
Diverted FCs	Displays the forwarding class to be diverted.
Fail to mode	Displays how traffic is handled when there are no available ISA-AA cards to handle the traffic, either failToWire or failToOpen.
Egress **from** subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for subscriber to network traffic egressing towards the ISA-AA MDA.
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for subscriber to network traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetwork QueueTable for subscriber to network traffic egressing towards the ISA-AA MDA.
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA
Egress **to** subscriber	
Pool	Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for network to subscriber traffic egressing towards the ISA-AA MDA.
Reserved Cbs	Displays the percentage of the buffer pool reserved for high priority traffic for network to subscriber traffic egressing towards the ISA-AA MDA.
Slope Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Queue Policy	Displays the policy as defined in TIMETRA-QOS-MIB::tNetwork QueueTable for network to subscriber traffic egressing towards the ISA-AA MDA.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Scheduler Policy	Displays the policy as defined in TIMETRA-QOS-MIB::t SchedulerPolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA.
Overload Sub-quarantine	Displays the overload quarantine state, up or down.
Overload Cut Through	Displays the overload cut through state, enabled or disabled.
VM Traffic Distribution by IP	Displays the state of VM Traffic Distribution by IP
VM Traffic Distribution by TEID	Displays the state of VM Traffic Distribution by TEID
Sub Traffic Distribution by IP	Displays the state of Sub Traffic Distribution by IP
Oper Group	Displays the configured operational group name

applications

Syntax

applications [**isa** *mda-id/esa-vm-id*]

Context

[Tree] (tools>dump>app-assure>group>ipassist applications)

Full Context

tools dump application-assurance group ip-identification-assist applications

Description

This command dumps statistics showing the amount of traffic detected by IP identification assist for supported applications.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot*/*mda*.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values	*slot*/*mda*	
	slot	1 to 10, depending on chassis model
	mda	1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format esa-*esa-id*/*vm-id*.

Values	esa-*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of application-assurance group application statistics information.

Output example

```

tools dump port transceiver applications

Description

This command displays the CMIS application-selector table for the installed coherent transceiver, including each appsel's host and media interface IDs, related application details, and any matching operational mode(s).

Platforms

All

Output

The following output is an example of port transceiver applications.

Output example

```
A:node-2# tools dump port 1/1/c9 transceiver applications detail
CMIS Transceiver Applications for 1/1/c9 (1 NAD block(s), 3 app(s), class 400G)
       Host Num                    Media Num
AppSel ID   Ports Host ID Text     ID    Lns Media ID Text                          Oper Mode(s)

aps

Syntax

aps [*aps-id*] [**detail**]

Context

[Tree] (show aps)

Full Context

show aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

aps-id

Displays information for the specified APS group ID.

Values aps-*group-id*aps: keyword*group-id*: 1 to 128

detail

Displays detailed APS information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

The following outputs are examples of APS information, and Table 31: Output fields: APS describes the output fields:

- Output example: show aps (Working Multi-chassis APS Node)
- Output example: show aps (Protect MC-APS Node)

Output example: show aps (Working Multi-chassis APS Node)

```

Table 31: Output fields: APS

Label	Description
Interface	Specifies the APS interface name (the APS group port).
Admin State	Up — APS is administratively up. Down — APS port is administratively down.
Oper State	Up — APS port is operationally up. Down — APS is operationally down.
MC-CTL State	Specifies the multi-chassis state.
Work Circuit	Specifies the working circuit ID.
Prot Circuit	Specifies the physical port that acts as the protection circuit for this APS group.
Active Circuit	Specifies the active circuit.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Tx/Rx K1 Byte	Displays the value of the SONET/SDH K1 byte received or transmitted on the protection circuit.
Group Id	Displays the APS group name.
Protection Circuit	Displays the physical port that will act as the protection circuit for this APS group.
Switching-mode	Displays the switching mode of the APS group.
Switching-arch	The architecture of the APS group.
Revertive-mode	Displays the revertive mode of the APS group. non-revertive — Traffic remains on the protection line until another switch request is received. revertive — When the condition that caused a switch to the protection line has been cleared the signal is switched back to the working line.
Revert-time	Displays the configured time, in minutes, to wait after the working circuit has become functional again, before making the working circuit active again. If the revertive mode is non-revertive, then this field will be empty.
Rx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte received on the interface.
Tx K1/K2 byte	Displays the value of the SONET/SDH K1/K2 byte transmitted on the interface.
Current APS Status	Displays the current APS status.
Mode Mismatch Cnt	Indicates the number of times a conflict occurs between the current local mode and the received K2 mode information.
Channel mismatch Cnt	Indicates the number of mismatches between the transmitted K1 channel and the received K2 channel has been detected.
PSB failure Cnt	Displays a count of Protection Switch Byte (PSB) failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected.
FEPL failure Cnt	Displays a count of far-end protection-line (FEPL) failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte.
No. of Switchovers	Displays the number of times a switchover has occurred.
Last Switchover	Displays the time stamp of the last switchover.
Switchover seconds	Displays the cumulative Protection Switching Duration (PSD) time in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled.
Signal Degrade Cnt	Displays the number of times the signal was degraded.
Signal Failure Cnt	Displays the number of times the signal failed.
Last Switch Cmd	Reports the last switch command that was performed on a circuit.
Last Exercise Result	The result of the last exercise request on a circuit.
Neighbor address	Displays the neighbor IP address.
Advertise Interval	Displays the advertise interval.
Hold time	Displays the hold time.

tools dump aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

aps-id

Specifies the APS ID.

Values aps-*group-id*
aps: keyword
group-id: 1 to 64

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear

Removes all Automated Protection Switching (APS) operational commands.

mc-aps-signaling

Displays multi-chassis APS signaling information.

mc-aps-ppp

Displays multi-chassis APS PPP information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

The following outputs are examples of APS information:

- Output example: APS group operational status
- Output example: multichassis APS PPP debug counters
- Output example: multichassis APS signaling debug counters

Output example: APS group operational status

Context

[Tree] (show>router>ospf area)

Full Context

show router ospf area

Description

This command displays configuration information about all areas or the specified area.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values ip-address — a.b.c.d
area — 0 to 4294967295

flex-algo-id

Displays the flexible algorithm identifier.

Values 128 to 255

detail

Displays detailed operational and statistical information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

flex-algo

Displays OSPFv2 information for the specified algorithm identifier.

flex-algo all

Displays OSPFv2 information for all flexible algorithms.

Platforms

All

Output

The following outputs are examples of OSPF area information, and Table 32: Output fields: OSPF area describes the output fields:

- Output example: router OSFP area detail
- Output example: router ospf area LFA flex-algo

Output example: router OSFP area detail

```

Table 32: Output fields: OSPF area

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area.
Export Policies	The export policies configured in this area.
Export Fltrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Fltrd LSAs	The total number of LSAs filtered by area import policies.

area

Syntax

area [*area-id*] [**detail**] [**lfa**]

Context

[Tree] (show>router>ospf3 area)

Full Context

show router ospf3 area

Description

This command displays configuration information about all areas or the specified area. When detail is specified operational and statistical information will be displayed.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

Values ip-address — a.b.c.d

area — 0 to 4294967295

detail

Displays detailed information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

Table 33: Output fields: OSPv3 area

Label	Description
Area Id	A 32 bit integer uniquely identifying an area.
Type	NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area.
SPF Runs	The number of times that the intra-area route table has been calculated using this area's link state database.
LSA Count	The total number of link-state advertisements in this area's link state database, excluding AS External LSAs.
LSA Cksum Sum	The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5).
No. of OSPF Areas	The number of areas configured on the router.
Virtual Links	The number of virtual links configured through this transit area.
Active IFs	The active number of interfaces configured in this area.
Area Bdr Rtrs	The total number of ABRs reachable within this area.
AS Bdr Rtrs	The total number of ASBRs reachable within this area.
Last SPF Run	The time when the last intra-area SPF was run on this area.
Router LSAs	The total number of router LSAs in this area.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Network LSAs	The total number of network LSAs in this area.
Summary LSAs	The summary of LSAs in this area.
Asbr-summ LSAs	The summary of ASBR LSAs in this area.
Nssa-ext LSAs	The total number of NSSA-EXT LSAs in this area.
Area opaque LSAs	The total number of opaque LSAs in this area.
Total Nbrs	The total number of neighbors in this area.
Total IFs	The total number of interfaces configured in this area.
Total LSAs	The sum of LSAs in this area excluding autonomous system external LSAs.
Blackhole Range	False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area.
Export Database	False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area.
Export Policies	The export policies configured in this area.
Export Fltrd LSAs	The total number of LSAs filtered by area export policies.
Import Policies	The import policies configured in this area.
Import Fltrd LSAs	The total number of LSAs filtered by area import policies.

4.59 arp

arp

Syntax

arp {[*ip-address*] | [**mac** *ieee-address*] | [**sap** *sap-id*] | [**interface** *ip-int-name*] | [**sdp** *sdp-id:vc-id*] **|** [**summary**] **}**

Context

[Tree] (show>service>id arp)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service id arp

Description

This command displays the ARP cache entries for this service.

Parameters

ip-address

Specifies the IP address in IP address dotted decimal notation.

ieee-mac-address

Specifies the 48-bit MAC address in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sap-id

Specifies a Service Access Point (SAP) within a service.

ip-int-name

Specifies the name of the IP interface. Interface names can be from 1 to 32 alphanumeric characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed between double quotes.

sdp-id

Specifies the SDP identifier. Allowed values are integers in the range of 1 and 17407 for existing SDPs.

vc-id

Specifies the virtual circuit identifier.

Values 1 to 4294967295

Platforms

All

Output

The following output is an example of service ID information, and Table 34: Output fields: service ID ARP describes the output fields.

Output example

```

Table 34: Output fields: service ID ARP

Label	Description
IP Address	Specifies the IP address of the ARP cache entry.
MAC Address	Specifies the MAC address associated with the IP address.
Type	Other — Learned through normal ARP queries. Static — Configured by **static-arp** commands. Managed — Learned from DHCP snooping or configured by **host** commands.
Age	Indicates age of the ARP entry.
Interface	Indicates the name of the IP interface.
Port	Indicates the port upon which the entry was learned.

arp

Syntax

arp {**all** | *ip-address*}

arp interface {*ip-int-name* | *ip-address*}

Context

[Tree] (clear>router arp)

Full Context

clear router arp

Description

This command clears all or specific ARP entries.

The scope of ARP cache entries cleared depends on the command line options specified.

Parameters

all

Clears all ARP cache entries.

ip-address

Clears the ARP cache entry for the specified IP address.

Values ipv4-address: a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-int-name

Clears all ARP cache entries for the IP interface with the specified name, up to 32 characters.

ip-address

Clears all ARP cache entries for the specified IP interface with the specified IP address.

Values ipv4-address: a.b.c.d

Platforms

All

arp

Syntax

arp

Context

[Tree] (clear>service>id arp)

Full Context

clear service id arp

Description

This command clears all ARP entries. This command is only valid for Ipipe and VPRN services.

Platforms

All

arp

Syntax

arp [{*ip-int-name* | *ip-address*[*/mask*] | **mac** *ieee-mac-address* | **summary**}] [*arp-type*]

Context

[Tree] (show>router arp)

Full Context

show router arp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the router ARP table sorted by IP address. If no command line options are specified, all ARP entries are displayed.

Parameters

ip-int-name

Only displays ARP entries associated with the specified IP interface name.

ip-address[/mask]

Only displays ARP entries associated with the specified IP address and mask.

ieee-mac-address

Only displays ARP entries associated with the specified MAC address.

summary

Displays an abbreviate list of ARP entries.

arp-type

Only displays ARP information associated with the keyword.

Values local, dynamic, static, managed

Platforms

All

Output

The following output is an example of router ARP table information, and Table 35: Output fields: ARP describes the output fields.

Output example

arp-host summary {[**interface** *interface-name* **| saps]**

Context

[Tree] (show>service>id arp-host)

Full Context

show service id arp-host

Description

This command displays ARP host related information.

Parameters

service-id

The VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

Values 1 to 2148007980, *svc-name: 64 chars max*

sap-id

Specifies the physical port identifier portion of the SAP definition.

interface-name

Displays information for the specified IP interface. 32 characters maximum.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address[/mask]

Displays information associated with the specified IP address.

Values ip-address: a.b.c.d.

mask: 1 to 32

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

port-id

Specifies the port ID.

Values slot, mda, port

no-inter-dest-id

Displays the information about no intermediate destination ID.

inter-dest-id

Indicates the intermediate destination identifier received from either the DHCP or the RADIUS server or the local user database. 32 characters maximum

detail

Displays detailed information.

statistics

Displays ARP host statistics.

summary

Displays summary information.

saps

Displays SAP ARP host related information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example ARP host information for specified service IDs, and Table 36: Output fields: service ID ARP host describes the output fields.

Output example

Table 36: Output fields: service ID ARP host

Field	Description
IP Address	The IP address
Mac Address	The MAC address of the this ARP host
Sap Id	The service SAP ID
Remaining Time	The remaining time
MC Stdby	The MC standby
Number of ARP hosts	The total number of ARP hosts
Service ID	The service identifier
Sub-Ident	The name of the subscriber identification policy
Sub-Profile-String	The name of the subscriber profile
SLA-Profile-String	The name of the SLA profile
App-Profile-String	The application profile string
ARP host ANCP-String	The name of the ARP host
ARP host Int Dest Id	The ARP host internal destination ID
RADIUS-User-Name	The RADIUS user name
Session Timeout (s)	The session timeout value
Start Time	The start time
Last Auth	The date and time of the last authentication
Last Refresh	The date and time of the last refresh
Persistence Key	The key value that can be used to track this ARP host in the persistence file.
Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active)	
ipv4-arp	The total number of IPv4 ARP hosts limit
ipv4-dhcp	The total number of IPv4 DHCP hosts limit
ipv4-ppp	The total number of IPv4 PPP hosts limit
ipv4-overall	The total number of IPv4 hosts limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ipv6-pd-ipoe-dhcp	The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-ppp-dhcp	The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-pd-overall	The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit
ipv6-wan-ipoe-dhcp	The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ipoe-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-ppp-dhcp	The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit
ipv6-wan-ppp-slaac	The total number of IPv6 IPoE SLAAC WAN hosts limit
ipv6-wan-overall	The total number of IPv6 WAN hosts limit
ipv6-overall	The total number of IPv6 hosts limit
lac-overall	The total number of L2TP LAC hosts limit
overall	The total number of subscriber hosts limit
Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active)	
ipoe	The total number of IPoE sessions limit
ppoe-local	The total number of PPPoE local terminated sessions (PTA) limit
ppoe-lac	The total number of PPPoE L2TP LAC sessions limit
ppoe-overall	The total number of PPPoE sessions limit
l2tp-lns	The total number of L2TP LNS sessions limit
l2tp-lts	The total number of L2TP LTS sessions limit
l2tp-overall	The total number of L2TP sessions limit
overall	The total number of subscriber sessions limit
Number of hosts	The total number of hosts matching the search criteria
MC-Stdby	The number of SAPs defined on this service on a port which is in multi-chassis standby mode

arp-host

Syntax

arp-host {**all** | **mac** *ieee-address* | **sap** *sap-id* | **ip-address** *ip-address*[*/mask*]}

arp-host {**port** *port-id* | {**inter-dest-id** *intermediate-destination-id* | **no-inter-dest-id**} [**port** *port-id*]}

arp-host statistics [**sap** *sap-id* | **interface** *interface-name*]

Context

[Tree] (clear>service>id arp-host)

Full Context

clear service id arp-host

Description

This command clears ARP host data.

Parameters

all

Clears all ARP host statistics.

ieee-address

Clears the ARP host MAC address information. The 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

sap-id

Clears the specified SAP information.

ip-address[/mask]

Clears the specified IP address and mask.

Values a.b.c.d

mask: 1 to 32

port-id

Clear the specified port ID information.

Values

port-id	*slot*/*mda*/*port* [.*channel*]		
	aps-id	aps-*group-id*[.*channel*]	
		aps	keyword
		group-id	1 to 64

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ccag-id	ccag-id.path-id [cc-type]	
	ccag	keyword
	id	1 to 8
	path-id	a, b
	cc-type	.sap-net, net-sap
eth-tunnel-id	eth-tunnel-id	
	eth-tunnel	keyword
	id	1 to 1024
lag-id	lag-*id*	
	lag	keyword
	id	1 to 800

intermediate-destination-id

Displays information about the specified intermediate destination ID. 32 characters maximum.

no-inter-dest-id

Displays the information about no intermediate destination ID.

interface-name

Clears the interface name. 32 characters maximum.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

4.61 arp-table

arp-table

Syntax

arp-table [**ip** *ipv4-address*] [**class** *class*] [**next-index** *index*]

Context

[Tree] (tools>dump>wlan-gw>lanext>bd arp-table)

Full Context

tools dump wlan-gw lanext bd arp-table

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command dumps the specified ARP table entries for the specified HLE BD.

Parameters

ipv4-address

Specifies the IP address of the ARP entry to be displayed.

class

Specifies the source on which to filter the ARP table entries.

Values access, network, remote

index

Specifies the next set of results if there are more results than the current output. The additional results are shown at the bottom of the current output.

Values 0 to 4294967295

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ARP table information.

Output example

```
tools>dump>wlan-gw>lanext>bd# arp-table
===============================================================================
MATCHED 1 ARP ENTRY ON SLOT #2 MDA #1
===============================================================================
IP ADDRESS       MAC ADDRESS        CLASS    TIMESTAMP
-------------------------------------------------------------------------------
192.168.0.1      AA:BB:CC:00:00:01  ACCESS   05/30/2017 23:49:11
===============================================================================
```

4.62 aspath-regex

aspath-regex

Syntax

aspath-regex *reg-exp* {**detail** | **longer**}

aspath-regex *reg-exp*

aspath-regex *reg-exp* **hunt**

Context

[Tree] (show>router>bgp>routes aspath-regex)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router bgp routes aspath-regex

Description

This command displays BGP routes with an AS path matching the specified regular expression.

aspath-regex is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

4.63 association

association

Syntax

association [*ma-index* | *ma-admin-name*] [**detail**]

Context

[Tree] (show>eth-cfm association)

Full Context

show eth-cfm association

Description

This command displays ETH-CFM association information.

Parameters

ma-index

Specifies the MA index.

Values 1 to 4294967295

ma-admin-name

Specifies the administrative name for the association, up to 64 characters.

detail

Keyword to display detailed information for the ETH-CFM association.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following outputs are examples of ETH-CFM information:

- Output example: ETH-CFM association information, Table 37: Output fields: ETH-CFM association
- Output example: ETH-CFM association detailed information, Table 38: Output fields: ETH-CFM detailed association information

Output example: ETH-CFM association information

Num Vids	The number of VIDs
Remote Mep ID	The remote MEP ID

association

Syntax

association

association *name* **[statistics]**

Context

[Tree] (show>subscr-mgmt>pfcp association)

Full Context

show subscriber-mgmt pfcp association

Description

This command displays PFCP association information. If no parameters are entered, it displays an overview of all PFCP associations present on the system.

Parameters

name

Specifies the name of the configured PFCP association, up to 32 characters, for which detailed overview information is displayed.

statistics

Specifies that the packet counters for each PFCP message and upstream IBCP message for the specified PFCP association *name* are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of PFCP association output information, and the associated tables describe the output fields:

- Output example: subscriber management PFCP association; Table 39: Output fields: PFCP association
- Output example: subscriber management PFCP association name; Table 40: Output fields: PFCP association name
- Output example: subscriber management PFCP association name statistics

associations

Syntax

associations

Context

[Tree] (show>router>dhcp6>local-dhcp-server associations)

[Tree] (show>router>dhcp>local-dhcp-server associations)

Full Context

show router dhcp6 local-dhcp-server associations

show router dhcp local-dhcp-server associations

Description

This command displays the interfaces associated with this DHCP or DHCP6 server.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of information associated with the DHCP or DHCP6 server, and Table 41: Output fields: DHCP summary describes the output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output example

```
*A:SUB-Dut-A# show router dhcp local-dhcp-server dhcpS1 associations
===============================================================================
DHCP server s1  router 3
===============================================================================
Associations                    Admin
-------------------------------------------------------------------------------
tosim5                          Up
===============================================================================
*A:SUB-Dut-A#
```

```
*A:SUB-Dut-A# show router dhcp6 local-dhcp-server abc associations
===============================================================================
DHCP server abc  router 3
===============================================================================
Associations                    Admin
-------------------------------------------------------------------------------
tosimxyz                          Up
===============================================================================
*A:SUB-Dut-A#
```

Table 41: Output fields: DHCP summary

Label	Description

Full Context

show lag associations

Description

This command displays LAG association information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

link-map-profile

Displays information about a specified LAG link map profile.

Values 1 to 32 (VSR)
1 to 64 (all other platforms)

Platforms

All

4.65 auth-keychain

auth-keychain

Syntax

auth-keychain [*keychain*]

Context

[Tree] (show>router>bgp auth-keychain)

Full Context

show router bgp auth-keychain

Description

This command displays BGP sessions using a particular authentication keychain.

Parameters

keychain

Specifies an existing keychain name.

Platforms

All

Output

The following output is an example of authentication keychain information.

Output example

```
*A:ALA-48# show router 2 bgp auth-keychain
===============================================================================
Sessions using key chains
===============================================================================
Peer address             Group              Keychain name

Context

[Tree] (tools>perform>subscr-mgmt>loc-user-db>ppp authentication)

Full Context

tools perform subscriber-mgmt local-user-db ppp authentication

Description

This command authenticates the PPPoE user name.

Parameters

user-name

Specifies the PPP user name up to 253 characters.

password

Specifies the password of this host up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

circuit-id

Specifies the circuit ID up to 127 characters.

circuit-id-hex

Specifies the circuit ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction up to 255 characters.

ieee-address

Specifies information about the MAC address of the PPP session.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies the service name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication [*policy-name*] **statistics**

authentication coa-statistics

Context

[Tree] (show>subscr-mgmt authentication)

Full Context

show subscriber-mgmt authentication

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays subscriber management RADIUS authentication policy information and statistics.

Parameters

policy-name

Specifies the subscriber management RADIUS authentication policy name, up to 32 characters, for which information is requested.

association

Displays SAP, interface, local user database host, AA and L2TP associations of this policy.

coa-statistics

Displays the overall statistics for incoming RADIUS Change of Authorization (CoA) messages and Disconnect Messages. For dropped requests, a counter for different drop reasons is available.

statistics

Displays a list of policies with basic statistics (without specifying a policy name) or detailed statistics, including per-server statistics for the specified policy-name. These statistics apply only to the legacy RADIUS server configuration method where the servers are directly configured in the authentication policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of subscriber management authentication information, and Table 42: Output fields: subscriber authentication describes the output fields:

- Output example: authentication policy information
- Output example: Change of Authorization (CoA) statistics information

Output example: authentication policy information

Table 42: Output fields: subscriber authentication

Label	Description
Re-authentication	Whether re-authentication on IPOE renewal is enabled
Username Format	The user name format in RADIUS message
PPPoE Access Method	The PPPoE access method, none, padi, pap-chap
Username Mac-Format	The username is represented when contacting a RADIUS server.
PPP-Username Oper	The PPP user name operation
PPP-Domain-Name	The PPP domain name
Username Oper	The username
Acct-Stop-On-Fail	The failure condition a RADIUS accounting-stop message indicating the failure has to be sent
RADIUS Server Policy	The RADIUS server policy name
Fallback Action	The authentication action in case no RADIUS server is available
Lack Mgmt Change	The time of the most recent management-initiated change to this policy server
Remote Id	The value of the remote ID sub-option
NAS Port Id	NAS port ID generation enabled or disabled
PPPoE Service Name	The PPPoE service name
Access Loop Options	The generation of the DSL forum access loop characteristics RADIUS attributes enabled or disabled
NAS Port Prefix	The type of prefix added to the NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Type	The kind of value to be put in the RADIUS NAS-Port-Type attribute if included in RADIUS authentication request messages
Calling Station Id	The string will be put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
Tunnel Server Attr	The tunnel-server-attrs RADIUS attribute enabled or disabled
NAS Port	The NAS-Port attribute included or excluded
NAS Port Bits Spec	The number that will be put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages

Label	Description
Circuit Id	Circuit ID generation enabled or disabled
NAS Identifier	NAS-Identifier RADIUS attribute enabled or disabled
DHCP Vendor Class Id	dhcp-vendor-class-id RADIUS attribute enabled or disabled
MAC Address	The generation of the client MAC address RADIUS attribute enabled or disabled
NAS Port Suffix	The type of suffix is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
Acct Session Id	The RADIUS accounting session id for this subscriber host
DHCP Options	DHCP options enabled or disabled
Router	The RADIUS router name
Access Algorithm	The algorithm used to access the set of RADIUS servers
Timeout (s)	The timeout for a response from the RADIUS server
Source Address	The source address of the RADIUS message
Retry	The number of retries for contacting the RADIUS server
Hold down time (s)	The hold down time
Index IP Address	The IP address of the index
Port	The port ID
Pend-Req-Limit	The limit of the number of pending RADIUS authentication requests for this RADIUS server
Out/Overload time (s)	The accumulated time that the value of the object RADIUS server has been equal to 'overloaded' since created
Oper State	The operational state
Access-Request	The number of Access-Request packets received by this RADIUS proxy server
Access-Accept	The number of Access-Accept packets received by this RADIUS proxy server
Change-of-Authorization	Change of authorization enabled or disabled
Policy Name	The authentication policy name

Label	Description
Subscr. Pkts Authenticated	The number of subscriber packets authenticated
Subscr. Pkts Rejected	The number of subscriber packets rejected
Subscr. Pkts Rejected Send Failed	The number of subscriber messages (such as DHCP and PPPoE) failed to be sent
subscriber packets authenticated	The number of subscriber packets authenticated
subscriber packets rejected	The number of subscriber packets rejected
subscriber packets send failed	The number of subscriber packets failed to be sent
Requests Received	The number of notify Change-of-Authorization requests received
Requests Accepted	The number of notify Change-of-Authorization requests accepted
Requests Rejected	The number of notify Change-of-Authorization requests rejected
Requests Dropped	The number of notify Change-of-Authorization requests dropped
No Auth Policy found	The number of notify Change-of-Authorization requests found
Invalid message	The number of notify Change-of-Authorization requests rejected because of decode errors
Out of resources	The number of notify Change-of-Authorization requests rejected due to lack of resources
Authentication Failure	The number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id

authentication [**router-instance** *router-or-service*] [**statistics**]

Context

[Tree] (show>system>security authentication)

Full Context

show system security authentication

Description

This command displays system login authentication configuration and statistics.

Parameters

statistics

Keyword to append login and accounting statistics to the display.

detail

Keyword to display authentication for all router instances.

service-name

Specifies the service name, up to 64 characters.

router-or-service

Specifies the router instance, expressed as the router name or the service ID.

Values *router-name* — "Base", "management", "vpls-management"
vprn-svc-id — 1 to 2147483647

Default Base

Platforms

All

Output

The following output is an example of authentication information, and Table 43: Output fields: system security authentication describes the output fields.

Output example

```

Table 43: Output fields: system security authentication

Label	Description
sequence	Sequence in which authentication and authorization is attempted
type	Type of server
status	Status of the server
timeout (secs)	Number of seconds the system waits for a response from a server
retry count	Number of retry attempts to contact the LDAP or RADIUS server
retry timeout (secs)	Number of seconds the system waits before retrying the TACACS+ server
server address	IP address of the server
server name	Optional description of the LDAP server
admin/oper status	Administrative and operational status for each type, and RADIUS server ports in use
health check	Whether the servers are periodically monitored
single connection	Whether TACACS+ single-connection mode is enabled
No. of Servers	Total number of configured servers
conn errors	Number of connection errors
accepted logins	Number of logins accepted by the server
rejected logins	Number of logins rejected by the server
sent pkts	Number of packets sent
rejected pkts	Number of packets rejected
valid	Number of valid VSAs received
invalid	Number of invalid VSAs received
unknown	Number of unknown VSAs received
malformed	Number of malformed VSAs received

4.67 authentication-origin

authentication-origin

Syntax

authentication-origin [**priority** [*priority*]]

Context

[Tree] (show>subscr-mgmt authentication-origin)

Full Context

show subscriber-mgmt authentication-origin

Description

This command displays subscriber authentication origin information.

Parameters

priority

Displays information about the specified authentication origin priority override.

Values 1 to 7

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of authentication origin information, and Table 44: Output fields: authentication origin describes the output fields.

Output example

```
*A:cses-V26>config>subscr-mgmt>auth-orig# show subscriber-mgmt authentication-origin

4.68 authentication-server-check

authentication-server-check

Syntax

authentication-server-check server-address *ip-address* [**port** *port*] {{**user-name** *user-name* **password** *password*} | **attr-from-file** *file-url*} **secret** *key* [**source-address** *ip-address*] [**timeout** *seconds*] [**router** *router-instance* | **service-name** *service-name*] **nas-identifier** *nas-id* [**debug**]

Context

[Tree] (tools>perform>security authentication-server-check)

Full Context

tools perform security authentication-server-check

Description

This command is used to perform an authentication check on the RADIUS server.

Parameters

server-address ip-address

Specifies the IP address of the RADIUS server.

port

Specifies the port of the RADIUS server.

Values 1 to 65535

user-name

Specifies the user name, up to 253 characters.

password

Specifies the user password, up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

file-url

Specifies to attach additional VSAs from a file.

Values

local-url: [*cflash-id*] [*file-path*]

200 characters maximum, including cflash-id directory length, up to 99 characters each

remote-url: [{ftp://| tftp://}<login>:<pswd>@<remote-locn>/][<file-path>]

255 characters maximum, directory length, up to 99 characters each

remote-locn: [<hostname> | <ipv4-address> | <ipv6-address>]

ipv4-address: a.b.c.d

ipv6-address: x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x:d.d.d.d[-interface]

x - [0..FFFF]H

d - [0..255]D

interface - up to 32 characters for link local addresses

cflash-id: cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

key

Specifies the secret key shared between the RADIUS client and server, up to 64characters.

source address *ip-address*

Specifies the source address used for the access-request message.

Values

ipv4-address a.b.c.d

ipv6-address x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H

d - [0 to 255]D

seconds

Specifies the time to wait for the RADIUS server response.

Values 1 to 90

router-instance

Specifies the router instance that should be used by the access request message.

Values *router-name* | *vprn-svc-id*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-name	Base, management Default - Base
vprn-svc-id	1 to 2147483647

service-name

Specifies the service name that should be used by the access request message, up to 64 characters.

nas-id

Specifies the NAS identifier, up to 64 characters.

debug

Specifies to display the full debug message, including all VSAs and full hex sting, of the RADIUS reply message.

Platforms

All

4.69 auto-boot

auto-boot

Syntax

auto-boot {**retry** | **terminate**}

auto-boot echo [**debugger**]

no auto-boot echo [**debugger**]

Context

[Tree] (tools>perform auto-boot)

Full Context

tools perform auto-boot

Description

This command starts and stops the auto-boot process. It is also used to enable the display of auto-discovery information in the CLI.

This command can be used only if the **auto-boot** flag is enabled in the BOF.

The **no** form of this command disables the display of auto-discovery information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

retry

Executes the auto-boot process.

terminate

Stops an ongoing auto-boot process.

echo

Enables the display of auto-discovery information in the CLI.

debugger

Includes debugging information in the displayed auto-discovery information.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

auto-boot

Syntax

auto-boot [**detail**]

auto-boot log

Context

[Tree] (tools>dump auto-boot)

Full Context

tools dump auto-boot

Description

This command displays auto-boot process information.

Parameters

detail

Displays detailed information.

log

Saves auto-boot process information to a log file.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

© 2026 Nokia.

4.70 auto-disc

auto-disc

Syntax

auto-disc [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

Context

[Tree] (show>router>bgp>routes>evpn auto-disc)

Full Context

show router bgp routes evpn auto-disc

Description

This command displays BGP-EVPN auto discovery routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535

  – *comm-val1* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the auto discovery route tag.

Values 0 to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example,ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',' ')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

Output

4.71 auto-discovered-meps

auto-discovered-meps

Syntax

auto-discovered-meps [*mep-id*] **domain** *md-index* **association** *ma-index*

Context

[Tree] (clear>eth-cfm auto-discovered-meps)

Full Context

clear eth-cfm auto-discovered-meps

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears remote MEPs that were auto discovered. The function clears a specific auto-discovered MEP learned within an association or all auto-discovered MEPs in the association. When the *mep-id* representing the auto-discovered MEP is omitted and only the **domain** *md-index* and **association** *ma-index* are provided, all auto-discovered MEPs in the association are cleared. At a minimum the **domain** *md-index* and the **association** *ma-index* must be provided.

Only auto-discovered MEPs may be cleared. This command has no effect on manually configured MEPs.

Parameters

mep-id

Specifies the MEP ID of the remote MEP that was auto-discovered.

Values 1 to 8191

md-index

Specifies the domain context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

ma-index

Specifies the association context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

5 b Commands

5.1 bandwidth-policy

bandwidth-policy

Syntax

bandwidth-policy *policy-name* [**detail**]

Context

[Tree] (show>mcast-management bandwidth-policy)

Full Context

show mcast-management bandwidth-policy

Description

This command displays multicast path management bandwidth policy information.

Parameters

policy-name

Specifies the bandwidth policy name, up to 32 characters.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of multicast management bandwidth policy information.

Output example

```
*A:PE-1# show mcast-management bandwidth-policy "default" detail
===============================================================================

5.2 base

base

Syntax

base [**msap**]

Context

[Tree] (show>service>id base)

Full Context

show service id base

Description

This command displays basic information about the service ID, including service type, description, SAPs, and SDPs.

Parameters

msap

Displays MSAPs.

Platforms

All

Output

The following outputs are examples of base service ID information, and Table 46: Output fields: service ID base describes the output fields.

- Output example: service ID base
- Output example: service ID 2000 base

Output example: service ID base

```
*A:Dut-C>config>service>vpls#  show service  id 1 base

Table 46: Output fields: service ID base

Label	Description
Service Id	Displays the service identifier
Vpn Id	Displays the VPN ID assigned to the service
Service Type	Displays the type of service: Epipe, Apipe, Fpipe, Ipipe, VPLS, IES, VPRN
MACSec enabled	Indicates whether MACsec is enabled
Name	Displays the service name
Description	Displays the generic information about the service
Customer Id	Displays the customer identifier
Creation Origin	Displays how the service was created
Last Status Change	Displays the date and time of the most recent status change to this customer
Last Mgmt Change	Displays the date and time of the most recent management-initiated change to this customer
Etree Mode	Indicates whether Etree mode is enabled
Admin State	Displays the state of the service
Oper State	Displays the operating state of the service
MTU	Displays the largest frame size (in octets) that the service can handle
SAP Count	Displays the number of SAPs defined on the service
SDP Bind Count	Displays the number of SDPs bound to the service
Snd Flush on Fail	Indicates whether sending MAC flush messages is enabled
Host Conn Verify	Indicates whether the host is connected
Propogate MacFlush	Indicates whether MAC flush messages are propagated to remote Target LDP (TLDP) peers
Per Svc Hashing	Indicates whether per-service hashing is enabled for this service
Allow IP Intf Bind	Indicates whether allow IP interface binding is enabled for R-VPLS services
Fwd-IPv4-Mcast-To*	Indicates whether IPv4 multicast traffic to the VPRN interface attached to the R-VPLS is enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Fwd-IPv6-Mcast-To*	Indicates whether IPv6 multicast traffic to the VPRN interface attached to the R-VPLS is enabled
Mcast IPv6 scope	Displays the IPv6 multicast scope
Def. Gateway IP	Displays the default gateway
Def. Gateway MAC	Displays the default gateway MAC address
Temp Flood Time	Displays the temporary flood time
Temp Flood	Displays the temporary flood time state
Temp Flood Chg Cnt	Displays the temporary flood change count
SPI load-balance	Indicates whether SPI load-balance is enabled
TEID load-balance	Indicates whether TEID load balancing is enabled
Lbl Eth/IP L4 TEID	Indicates whether load balancing based on MPLS labels and inner Ethernet, IP addresses, L4 ports, and TEID is enabled
Src Tep IP	Displays the Termination Endpoint address
Vxlan ECMP	Indicates whether VXLAN ECMP is enabled
MPLS ECMP	Indicates whether MPLS ECMP is enabled
Ignore MTU Mismatch	Displays the configuration state of the **ignore-l2-mtu-mismatch** command for the service
SAP Type	Displays the type of SAPs allowed in the service and describes the processing applied by the node packets received on these SAPs
Vxlan Src Tep Ip	Displays the VXLAN source tunnel endpoint (TEP) ID
Force QTag Fwd	Indicates whether force Q-tag forwarding is enabled
Oper Group	Displays the operational group for this service
Identifier	Displays the service access (SAP) and destination (SDP) points
Type	Displays the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on the SDP
AdmMTU	Displays the largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented
OprMTU	Displays the operational MTU of the SAP or SDP bind

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Admin State (Adm)	Displays the administrative state
Oper State (Opr)	Displays the operation state
PBB Tunnel Point	Displays the endpoint in the B-VPLS environment where the Epipe terminates
Admin MTU	Displays the B-VPLS admin MTU
Backbone-Flooding	Indicates whether traffic is flooded in the B-VPLS for the destination instead of unicast. If the backbone destination MAC is in the B-VPLS FDB, it is unicast.
ISID	Displays the 24 bit field carrying the service instance identifier associated with the frame. It is used at the destination PE as a demultiplex or field.
Router Oper State	Displays the operational state of the router
Route Dist.	Displays the route distinguisher (RD) type
VPRN Type	Displays the VPRN type
Oper Route Dist	Displays the IP address of the operational RD
Oper RD Type	Displays the operational RD type
AS Number	Displays the AS number
Router Id	Displays the router ID
ECMP	Displays the status of ECMP
ECMP Max Routes	Displays the maximum ECMP routes
Max IPv4 Routes	Displays the maximum IPv4 routes
Local Rt Domain-id	Displays the local route domain ID

Full Context

show router segment-routing-v6 base-routing-instance

Description

This command displays SRv6 Base routing instances.

Parameters

locator-name

Specifies the locator or micro-segment locator name, up to 64 characters.

end-x

Displays the End.X SID function associated with a P2P interface.

end-dt4

Displays the End.DT4 function associated with the Base routing instance.

end-dt6

Displays the End.DT6 function associated with the Base routing instance.

end-dt46

Displays the End.DT46 function associated with the Base routing instance.

end

Displays the End SID function of a locator.

ua

Displays the uA SID function associated with a P2P interface.

udt4

Displays the uDT4 function associated with the Base routing instance.

5.4 bcg

bcg

Syntax

bcg *Burst-Control-Group-name* **member-queues** [**at-risk-only**] [**exp-util-bw** *megabits-persecond*] [**port** *port-id*] [**sap** *sap-id*] [**subscriber** *sub-ident*] [**access-queue-grp** *queue-group-name*] [**service-id** *service-id*]

bcg *burst-control-group-name* [**member-queues**] [**exp-util-bw** *mega-bits-per-second*]

bcg *card-slot-number* [**ingress** | **egress**]

Context

[Tree] (show>qos bcg)

Full Context

show qos bcg

Description

The **show qos bcg** command outputs the current and historical visitation time associated with the specified BCG name.

A Burst Control Group (BCG) represents a list of queues that share the same non-scheduling PIR and CIR bucket target update interval. When a queue's scheduled rate bursts above its PIR bucket depth, the queue is removed from its scheduling context. The system uses a BCG in order to visit the queues PIR bucket to periodically drain an appropriate amount from the bucket. When the bucket has been drained below the PIR bucket threshold, the queue is allowed back onto its scheduling context. The amount decremented from the bucket is a function of the amount of time that has elapsed since the last bucket update and the queue's shaping rate (PIR). If the queue's shaping rate is configured as 1 Mb/s and 1 ms has elapsed since the last bucket update, the system decrements the PIR bucket by 125 bytes. One caveat is that the bucket cannot be decremented past a depth of 0. This fact drives how the system chooses which BCG is used to manage the queue bucket update interval.

If a queue's shaping rate is 1 Mb/s and the threshold (burst limit) is set to 10 kbytes, the maximum amount of time that can expire before the queue is updated without resulting in a negative bucket depth is 81.92 ms. This can be calculated by taking the number of bits represented by the bucket depth (10 kbytes = 10 * 1,024 * 8 = 81,920 bits) and dividing it by the rate (81,920 bits / 1,000,000 bits per second = 81.92 ms). The queue is not removed from the scheduler until the PIR bucket depth has equaled or exceeded the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

configured burst threshold, so the bucket is at least 10 kbytes deep. If the system visits the queue PIR bucket within 81.92 ms, the resulting decrement operation leaves the bucket. If the system takes longer than 81.92 ms, the decrement result will be greater than 10 kbytes and part of the decrement result is lost. The net result is that, because of less than timely updates, the queue will not be returned to the scheduler context fast enough and some shaping bandwidth for the queue will be lost (underrun the shaping rate).

Each FP2- and FP3-based Q-chip maintains eight BCGs, each targeting a certain queue bucket visitation time. A 1 s, 40 ms, 20 ms, 10 ms, 5 ms, 1 ms, 500 µs, and 100 µs BCG is supported. An FP4- or FP5-based Q-chip has an additional four BCGs with target visitation times of 50 µs, 10 µs, 5 µs, and 1 µs. By default, queues are placed in a BCG based on shaping rate and the queue's burst limit (PIR threshold depth) is set based on the BCG visitation time and the queue's specified shaping rate.

When explicit burst-limit threshold values are defined for a shaping queue, the system picks an appropriate BCG based on the queue's configured shaping rate and the explicit threshold to find a BCG with the best target visitation time that results in worst-case decrement values that are less than the configured threshold. However, when a queue is placed on a 'faster' BCG, more visitation resources are consumed and it is possible that the system will not meet a queue's decrement constraints.

The **show qos bcg** command allows visibility into a BCG's historic and current visitation time. The system samples the amount of time it takes each list to visit each of its associated queues once each second and stores the last 10 samples. It also keeps the longest visitation time seen since the last time the BCG statistics were cleared, the longest visitation time for the current queue-to-BCG lists associations, calculated longest visitation time based on maximum scheduling bandwidth, and the longest visitation time for an optionally defined scheduling rate.

With each sample, the system indirectly calculates the amount of scheduling bandwidth based on how many Q-chip resources were diverted from BCG visitation processing. This calculated scheduling bandwidth is used to evaluate the worst-case visitation times for each BCG. The calculated scheduling bandwidth value is stored with the longest-seen-visitation time and the longest-seen-visitation time with the current queue-to-BCG mappings. This is not applicable to an FP4- or FP5-based Q-chip, so the **exp-util-bw** parameter is not applicable to an FP4- or FP5-based Q-chip.

Parameters

Burst-Control-Group-name

Specifies which globally unique Burst Control Group to display. If the specified Burst Control Group does not exist, the show command will fail.

Values <*slot*>/<*fp*>-< *target-visitation-time*>[-<*direction*>]

slot - 1 to 20

fp - 1 to 8

target-visitation-time -1 µs, 5 µs, 10 µs, 50 µs, 100 µs, 500 µs, 1ms, 5ms, 10ms, 20ms, 40ms, 1s

direction - i, e

member-queues

Includes a list of all queues attached to the specified burst-control-group-name. The 100% scheduling bandwidth used in the 'at-risk' determination may be overridden with a specified scheduling bandwidth by using the exp-util-bw parameter. When the **member-queues** parameter is specified, the output includes a single-entry summary of the internal queues.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

exp-util-bw *mega-bits-per-second*

Displays a calculated worst-case visitation rate for the specified BCG name based on the specified value of *megabits-persecond* which also modifies the member queue's 'at-risk' state output. This parameter is not applicable to FP4- or FP5-based hardware which has dedicated internal resources for handling BCG visitations and is unaffected by scheduling bandwidth.

Values 0 to 4294967

port *port-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *port-id*. If the specified *port-id* does not exist, the show command will fail.

Values Up to 17 characters

sap *sap-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sap-id*. If the specified *sap-id* does not exist, the show command will fail.

Values Up to 64 characters

subscriber *sub-ident*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sub-ident*. If the specified *sub-ident* does not exist, the show command will fail.

Values Up to 32 characters

access-queue-grp *queue-group-name*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *queue-group-name*. If the specified *queue-group-name* is not found, the show command will fail.

Values Up to 32 characters

service *service-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *service-id*. If the specified *service-id* does not exist, the show command will fail.

Values 1 to 2147483647

card-slot-number

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for all queues associated with the specified *card-slot-number*. If the specified *card-slot-number* does not exist, the show command will fail.

Values 1 to 40

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[ingress | egress]

The **ingress** and **egress** keywords specify the direction to display and are mutually exclusive.

5.8 bfd-templates-in-use

bfd-templates-in-use

Syntax

bfd-templates-in-use

Context

[Tree] (tools>dump>router>ldp>lsp-bfd bfd-templates-in-use)

Full Context

tools dump router ldp lsp-bfd bfd-templates-in-use

Description

This command indicates the named BFD templates that are configured for use by LSP BFD for LDP.

Platforms

All

5.9 bgp

bgp

Syntax

bgp [*bgp-instance*]

Context

[Tree] (show>service>id bgp)

Full Context

show service id bgp

Description

This command displays BGP-related information for the service.

Parameters

bgp-instance

Specifies the ID value for the BGP instance.

Context

[Tree] (show>router>seg-rt>sr-policies bgp)

Full Context

show router segment-routing sr-policies bgp

Description

This command displays the traffic statistics of all or a filtered set of the BGP policies, or displays summary parameters.

Parameters

color

Filters on the color.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Filters on the end-point IPv4 or IPv6 address.

Values ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:x:d:d:d:d

x — [0 to FFFF]H

d — [0 to 255]D

preference-id

Filters on the preference ID.

Values 0 to 4294967295

distinguisher-id

Filters on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information for the BGP policies.

In Use             : 1
===============================================================================
```

5.11 bgp-evpn

bgp-evpn

Syntax

bgp-evpn [**instance** *instance-id*]

Context

[Tree] (show>service>id bgp-evpn)

Full Context

show service id bgp-evpn

Description

This command displays the BGP-EVPN configured parameters for a specified service, including the administrative status of VXLAN, the configuration for **mac-advertisement** and **unknown-mac-route**, as well as the **mac-duplication** parameters. The command displays the duplicate MAC addresses that **mac-duplication** has detected.

This command also displays whether the **ip-route-advertisement** command (and the **incl-host** parameter) is enabled. If the service is BGP-EVPN MPLS, the command also displays the parameters corresponding to EVPN-MPLS.

Parameters

instance-id

Displays information about the instance ID.

Values 1 to 2

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following are examples of BGP EVPN information, and Table 48: Output fields: BGP-EVPN describes the output fields:

- Output example (BGP-EVPN showing the static service label configured)
- Output example (BGP-EVPN information), Table 48: Output fields: BGP-EVPN
- Output example (BGP-EVPN information), Table 48: Output fields: BGP-EVPN

Output example (BGP-EVPN showing the static service label configured)

```
A:node-2# show service id 31 bgp-evpn

Table 48: Output fields: BGP-EVPN

Label	Description
Admin State	The administrative state
Oper State	The operational state
VRF Import	The VRF import
VRF Export	The VRF export
Route Dist.	The route distinguisher
Oper Route Dist.	The operational route distinguisher
Oper RD Type	The operational RD type
Route Target	The route target
Route Target Import	The route target import
Route Target Export	The route target export
Default Route Tag	The default route tag, which is the configurable internal tag value associated with routes.
Domain-Id	Attribute used for loop prevention and route traceability. The primary purpose of the Domain ID is to prevent routing loops when EVPN routes are exchanged between different domains or translated between EVPN and IPVPN services, especially in setups with redundant gateways. It helps ensure that a route does not return to its originating domain.
Dyn Egr Lbl Limit	Indicates if the dynamic egress label limit is enabled. The dynamic egress label limit manages the allocation of labels in the MPLS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	egress stack for EVPN services, ensuring that only necessary labels contribute to the stack depth calculation.
EVI	The EVPN Instance (EVI) represents a logical grouping of all the Broadcast Domains or MAC-VRFs that belong to a single EVPN service. It acts as a container for a specific Layer 2 (and sometimes Layer 3) VPN service of a customer across the network.
Advertise	Indicates if advertising is enabled
Weighted ECMP	Indicates if Weighted ECMP is enabled. Weighted ECMP allows for the unequal distribution of traffic across multiple paths that are considered equal in terms of routing cost.
Static Serv Lbl	The static service label, which configures the static per-VRF MPLS service label. This enables the use of the static service label and anycast addresses or SIDs to reach any one of two or more provider edge nodes in the forwarding of Layer 3 service traffic.
Oper Serv Lbl	The operational service label identifies the egress PE router. It is used by the core MPLS network to tunnel the packet from the ingress PE to the correct egress PE.
Auto-Bind Tunnel	
Resolution	Indicates if resolution is enabled, which is a mechanism used by a PE router to automatically select an appropriate transport tunnel to carry VPN service traffic
Strict Tnl Tag	Indicates if strict tunnel tagging is enabled. When enabled, it means the system only considers tunnels that have a matching tunnel tag to the one specified or implied by the service or route.
ECMP	The ECMP value
Untagged Route	The untagged route refers to a BGP route that does not have an administrative tag policy applied to it
Weighted ECMP	Indicates if Weighted ECMP is enabled
Flex Algo FB	The flexible algorithm fallback allows users to define custom routing algorithms beyond the standard shortest path calculation
Bgp Instance	The BGP instance
Filter Tunnel Types	The field tunnel types specify which types of underlying tunnels are allowed or preferred for resolving the BGP next hop of EVPN routes
Tunnel Encap	
MPLS	Indicates if MPLS is configured to one of the following: • True

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• False
MPLSoUDP	Indicates if MPLS over UDP is configured to one of the following: • True • False

bgp-evpn

Syntax

bgp-evpn

bgp-evpn ethernet-segment

bgp-evpn ethernet-segment name *name* [**all**]

bgp-evpn ethernet-segment name *name* **evi** [*evi*]

bgp-evpn ethernet-segment name *name* **isid** [*isid*]

bgp-evpn ethernet-segment name *name* **port-active**

bgp-evpn ethernet-segment name *name* **virtual-ranges**

Context

[Tree] (show>service>system bgp-evpn)

Full Context

show service system bgp-evpn

Description

This command displays all the information related to the base EVPN instance, including the base RD used for Ethernet Segment (ES) routes, the ESs or individual ES information.

Parameters

ethernet-segment

Displays information for ES.

name

Specifies the name of an ES, up to 32 characters.

all

Displays all available information for the specified ES.

evi

Displays information for the specified EVI.

Values 1 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

isid

Displays information for the specified ISID.

Values 1 to 16777215

virtual-ranges

Keyword that displays the VD-ID, Q-tag, S-tag, or C-tag per S-tag virtual ranges configured on the virtual ES.

port-active

Keyword to display the port-active mode for the ES.

Platforms

All

Output

The following outputs are example of BGP EVPN information, and the associated tables describe the output fields:

- Output example, Table 49: Output fields: BGP-EVPN
- Output example: Ethernet segment, Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information , Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information for configured auto-ESI with operational ESI derived, Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information for configured auto-ESI with operational ESI pending derivation, Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information for manually configured ESI, Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information for manually configured ESI with all option , Output fields: BGP EVPN ES
- Output example: show service system BGP EVPN ES information for unconfigured auto-ESI and ESI , Output fields: BGP EVPN ES
- Output example: port-active mode, Output fields: BGP EVPN ES

Output example

```
*A:node-2# show service system bgp-evpn

Table 49: Output fields: BGP-EVPN

Label	Description
Eth Seg Route Dist	Specifies the ES Route Distinguisher.
Eth Seg Oper Route Dist	Specifies the operational ES Route Distinguisher.
Eth Seg Oper Route Dist Type	Specifies the operational ES Route Distinguisher type.
Ad Per ES Route Target	Specifies the AD per-ES route target.
Leaf Label	Specifies the leaf label.
Alloc Leaf Label	Specifies the allocated leaf label.
Leaf Label Value	Specifies the leaf label value.
EVI RT set Route Dist.	Specifies the EVI RT set range.
Extended Evi Range	Specifies the EVI extended range status.
Mcast Leave Sync Prop	Specifies the multicast leave synchronization propagation time.
Attribute Uniform Prop	Specifies the attribute uniform propagation configuration.
BGP Path Selection	Specifies the configuration of the BGP Path Selection.
D-Path Length ignore	Specifies the configuration of the D-Path Length ignore.
EVPN Tunnel Dot1ad Ethertype	Specifies the configuration of the EVPN Tunnel 802.1ad Ethertype.

Table 50: Output fields: BGP EVPN ES

Field	Description
Name	The Ethernet Segment name
Eth Seg Type	The Ethernet Segment type
Admin State	The administrative state for this service Ethernet Segment
Oper State	The operational state for this service Ethernet Segment

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
ESI	The Ethernet Segment Identifier
Oper ESI	The current operational Ethernet Segment Identifier
Auto-ESI Type	The auto-derived Ethernet Segment Identifier type
AC DF Capability	The AC-DF Capability status (Exclude or Include)
Multi-homing	The multihoming mode for the Ethernet Segment
Oper Multi-homing	The operational multihoming mode for the Ethernet Segment
ES SHG Label	The ES Split Horizon Group label
Source BMAC LSB	The source BMac least significant bit
Vprn Next Hop	The IP address associated with an Ethernet Segment
PW Port Id	The PW port ID
PW Port Headend	The PW port headend status
ES BMac Tbl Size	The ES BMac table size
ES BMac Entries	The ES BMac entries
Lag Id	The LAG ID
ES Activation Timer	The ES activation timer
Svc Carving	The service carving type
Oper Svc Carving	The operational service carving type
Cfg Range Type	The configured range type
DF Pref Election Information	
Preference Mode	The preference mode
Preference Value	The preference value
Last Admin Change	The date and time of the last administrative change
Oper Pref Value	The operational preference value
Do No Preempt	The Do Not Preempt status
EVI Ranges	The EVI ranges
ISID Ranges	The ISID ranges
Vprn NextHop Evi Ranges	The Vprn NextHop Evi ranges

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Adv IFL Host Ad Routes	The Adv IFL Host Ad ranges
Route-Tag	The route tag value
EVPN Nbr Sync	The EVPN neighbor synchronization status
From	The beginning point of the EVI range
To	The ending point of the EVI range
Last Update	The date and time of the last range update
EVI Information	
EVI	The EVPN instance
SvcId	The service ID
Actv Timer Rem	The active timer rem value
DF	The designated forwarder status
Number of entries:	The number of entries
EVI DF and Candidate List	
DF Last Change	The date and time of the last DF candidate change
DF Candidates	The DF candidate IP address
Time Added	The date and time of the DF candidate addition
Q-Tag Ranges	
Q-Tag Start	The Q-Tag start range value
Q-Tag End	The Q-Tag end range value
Last Changed	The date and time of the last change
VC-Id Ranges	
VC-Id Start	The VC-Id start range value
VC-Id End	The VC-Id end range value
S-Tag Ranges	
S-Tag Start	The S-Tag start value
S-Tag End	The S-Tag end value
S-Tag C-Tag Ranges	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
C-Tag Start	The C-Tag start value
C-Tag End	The C-Tag end value
Vxlan Instance Service Ranges	
Svc Range Start	The service range start in this Vxlan instance
Svc Range End	The service range end in this Vxlan instance
Port Active	
Designated Forwarder	The designated forwarder status
DF timer remaining	The time remaining for the designated forwarder
DF last changed	The time of the last update to the designated forwarder
DF Candidates	The designated forwarder name
Time Added	The time the designated forwarder was added
Oper Pref Value	The operational preference value
Do Not Preempt	The Do Not Preempt status

```

Table 51: Output fields: BGP IPVPN

Label	Description
Admin State	The administrative state
Oper State	The operational state
VRF Import	The VRF import
VRF Export	The VRF export
Route Dist.	The route distinguisher
Oper Route Dist	The operational route distinguisher
Oper RD Type	The operational RD type
Route Target	The route target
Route Target Impor	The route target import
Route Target Expor	The route target export
Domain-Id	The domain ID
Dyn Egr Lbl Limit	The dynamic egress label limit
Static Serv Lbl	The static service label, which configures the static per-VRF MPLS service label. This enables the use of the static service label and anycast addresses or SIDs to reach any one of two or more provider edge (PE) nodes in the forwarding of Layer 3 service traffic.
Oper Serv Lbl	The operational service label is used by the core MPLS network (P routers) to forward the packet from the ingress PE router to the egress PE router.
Auto-Bind Tunnel	
Resolution	Indicates if resolution is enabled, which is a mechanism used by a PE router to automatically select an appropriate transport tunnel to carry VPN service traffic
Strict Tnl Tag	Indicates if strict tunnel tagging is enabled. When enabled, it means the system only considers tunnels that have a matching tunnel tag to the one specified or implied by the service or route.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
ECMP	The ECMP value
Untagged Route	The untagged route refers to a BGP route that does not have an administrative tag policy applied to it
Weighted ECMP	Indicates if Weighted ECMP is enabled
Flex Algo FB	The flexible algorithm fallback allows users to define custom routing algorithms beyond the standard shortest path calculation
St Blackhole First	Mechanism for a PE router to locally override BGP-learned VPN routes with a blackhole route. This gives immediate control over traffic forwarding for specific prefixes, often used for traffic suppression or mitigation purposes.
BGP Instance	The BGP instance
Filter Tunnel Type	The field tunnel types specify which types of underlying tunnels are allowed or preferred for resolving the BGP next hop of IPVPN routes

5.14 bgp-ls

bgp-ls

Syntax

bgp-ls [**hunt**] [**node** | **link** | **ipv4-prefix** [*ipv4-prefix*/*mask-len*]]

Context

[Tree] (show>router>bgp>routes bgp-ls)

Full Context

show router bgp routes bgp-ls

Description

This command displays BGP Link-State (BGP-LS) routes.

Parameters

hunt

Displays detailed information about the routes, including information about the advertised routes (RIB-OUT).

node

Displays BGP-LS link NLRI routes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

link

Displays BGP-LS node NLRI routes.

ipv4-prefix

Displays BGP-LS IPv4-prefix NLRI routes.

ipv4-prefix/prefix-length

Displays the entries matching the specified IPv4 prefix and length.

Values		
	ipv4-prefix:	a.b.c.d (host bits must be 0)
	ipv4-prefix-length:	0 to 32

Platforms

All

Output

The following outputs are examples of BGP-LS information:

- Output example: router bgp routes bgp-ls
- Output example: router bgp routes bgp-ls hunt link

Output example: router bgp routes bgp-ls

```
# show router bgp routes bgp-ls

bgp-nh-info

Syntax

bgp-nh-info [**location** *location-id*] [**bgp-nh** *ip-address*]

Context

[Tree] (show>router>bgp>orr bgp-nh-info)

Full Context

show router bgp optimal-route-reflection bgp-nh-info

Description

This command displays the calculated IGP cost from a particular location ID to all prefixes containing BGP next-hop addresses.

Parameters

location-id

Specifies the ORR location identifier.

Values 1 to 16 (7750 SR-12, VSR)
1 to 255 (all other platforms)

ip-address

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d.
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

Platforms

All

Output

The following output is an example of BGP next-hop information, and Output fields: ORR BGP next-hop information describes the output fields.

===============================================================================
```

Table 52: Output fields: ORR BGP next-hop information

Label	Description
Next Hop Loc	The address of the next-hop location.
Dest-Prefix	Displays the longest prefix match for the BGP next-hop address from the point of view of a specific location. Displays "unreachable” if no route exists to the BGP next-hop from the location.
DB-Source	Displays the source of the reachability information in the TE database.
Type	Displays the type of route or reachability, either intra-area or inter-area.
Proto	Displays the source protocol that is providing reachability to the BGP next-hop address.
Metric	Displays the IGP cost to reach the BGP next-hop from the location reference point.
Preference	Displays the routing preference of the route that is providing reachability to the BGP next-hop address. This is derived from standard protocol preference values.

bgp-peering-policy

Syntax

bgp-peering-policy [*policy-name*]

Context

[Tree] (show>subscr-mgmt bgp-peering-policy)

Full Context

show subscriber-mgmt bgp-peering-policy

Description

This command displays BGP peering policy information.

Parameters

policy-name

Specifies the BPG peering policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BGP peering policy information, and Table 53: Output fields: BGP peering policy describes the output fields.

Output example

```
*A:Dut-C# show subscriber-mgmt bgp-peering-policy "bgp-policy-1"

Table 53: Output fields: BGP peering policy

Label	Description
Description	Displays the description of the BGP peering policy
IP address family IPv4	Displays whether the IPv4 family is enabled
IP address family IPv6	Displays whether the IPv6 family is enabled
Advertise Inactive	Displays whether inactive BGP routes are advertised to other BGP peers
Aggregator id zero	Displays whether the router ID in the BGP aggregator path attribute is set to zero when BGP aggregates routes
AS Override	Displays whether the peer ASN is overridden with the local ASN in AS Path
Auth Key Chain	Displays the authentication key chain name
Authentication Key	Displays whether and authentication key is configured
BFD enable	Displays the BFD enable status
Cluster Id	Displays the cluster ID
Connect Retry	Displays the connect retry timer value in seconds
Damping	Displays whether BGP route damping for learned routes is enabled
Disable Client Ref*	Displays whether routes received from neighbors considered to be RR clients are reflected to other clients

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Disable Communities	Displays whether standard or extended communities are sent
Disable FE Failover	Displays the BGP fast external failover state
Hold Time	Displays the hold time in seconds before closing the BGP connection
Keep Alive	Displays the keepalive timer value in seconds
Local Address	Displays the local IP address
Local AS	Displays the local AS value
Local Preference	Displays the local preference value
Loop Detect	Displays the loop detect type: drop-peer|ignore-loop|off|discard-route
MED Out	Displays the Multi-Exit Discriminator value or "IGP Cost"
Min Route Advertis*	Displays the minimum interval in seconds for a prefix to be advertised to a peer
Multihop	Displays the TTL value entered in IP header of packets sent to peer
Next Hop Self	Displays whether the next hop path attribute is set to self when advertising
Passive	Displays whether to wait passively for BGP peer to connect
Peer AS	Displays the peer AS value
Preference	Displays the preference value
Prefix Limit	Displays the prefix limit type
Prefix Log Only	Displays the prefix log only type
Prefix Threshold	Displays the prefix threshold type
Remove Private AS	Displays whether private AS numbers up to first public ASN encountered should be removed
TTL Security	Displays the minimum TTL value for incoming BGP packets
Type	Displays the BGP peer type (Internal | External | No Type)
Disable 4byte ASN	Displays whether 4-byte AS numbers are used
Export Policy	Displays the export policies
Import Policy	Displays the import policies

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Last Mgmt Change	Displays the date and time of the last management change
Prefix Limits Per Address Family	
Family	Displays the address family: ipv4 | ipv6
Limit	Displays the maximum number of BGP routes per address family that can be received from an ESM dynamic BGP peer before an administrative action is taken
Idle Timeout	Displays the time, in minutes, before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, this value is "forever" and a manual reset must be performed to re-establish the BGP peer after reaching the prefix limit.
Threshold	Displays the percentage threshold before triggering a warning message
Log Only	Displays whether only a warning message is sent or also the BGP session is taken down
Post Import	Displays the state on whether limits should be applied after import policies

5.18 bgp-route-distinguisher

bgp-route-distinguisher

Syntax

bgp-route-distinguisher [**vprn**] [**vpls**] [**epipe**]

bgp-route-distinguisher svc

bgp-route-distinguisher ad-evi-rt-set

bgp-route-distinguisher system

Context

[Tree] (show>service>system bgp-route-distinguisher)

Full Context

show service system bgp-route-distinguisher

Description

This command displays the BGP operational route distinguishers (RDs) used by all the BGP-enabled services in the system. The information can be filtered by service: VPRN, VPLS, or Epipe. The output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

can also be filtered to show only the relevant RD information related to services (**svc**), or the EVPN Auto-Discovery routes (**ad-evi-rt-set**), or the system RDs (**system**).

Platforms

All

Output

The following output is an example of service BGP route disinguisher information.

Note: In the "Service System BGP Route Distinguisher Information" section of the sample output, the EVI RT Set RD Range is 1.2.3.6:1 to 1.2.3.6:512 when the Extended Evi Range is disabled. When the Extended Evi Range is enabled, the EVI RT Set RD Range is 1.2.3.6:1 to 1.2.3.6:65535.

Output example: service system bgp-route-distinguisher

```

Table 54: Output fields: OAM-PM bin group information

Label	Description
Configured Lower Bounds for Delay Tests, in microseconds	
Group Description	The OAM-PM bin group description
Admin	Displays if the bin group is administratively up
Bin	The identifier for the bin group that is referenced by OAM-PM sessions
FD(us)	The number of frame delay (FD) bins created
FDR(us)	The number of frame delay range (FDR) bins created
IFDV(us)	The number of interframe delay variation (IFDV) bins created
Bins Excluded from Average	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the roundtrip direction bin

Label	Description
Bins	The identifier for the bin group that is referenced by OAM-PM sessions
Delay Events Configured	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the roundtrip direction bin
Lowest Bin	The lowest bin number
Lower Bound (us)	The lower bound
Raise	The rising threshold that determines when the even is to be generated
Clear	The threshold when to generate the clear event
Bins Excluded from Delay Event Count	
Bin Type	The bin type: • FD – FD bin threshold configuration • FDR – FDR bin threshold configuration • IFDV – IFDV bin threshold configuration
Direction	The direction of the bin: • forward – the threshold is applied to the forward direction bin • backward – the threshold is applied to the backward direction bin • round-trip – the threshold is applied to the roundtrip direction bin
Lowest Excluded Bin	The lowest excluded bin
Lower Bound (us)	The lower bound

5.23 bin-group-using

bin-group-using

Syntax

bin-group-using [**bin-group** *bin-group-number*]

Context

[Tree] (show>oam-pm bin-group-using)

Full Context

show oam-pm bin-group-using

Description

This command displays the list of sessions configured against one or all OAM-PM bin groups.

Parameters

bin-group-number

Specifies an OAM-PM bin group.

Values 1 to 255

Platforms

All

Output

The following outputs are examples of OAM-PM bin group session information, and Table 55: Output fields: OAM-PM bin group session information describes the output fields:

- Output example: OAM-PM bin group using
- Output example: OAM-PM bin group using bin-group 2

Output example: OAM-PM bin group using

```
A:node-2# show oam-pm bin-group-using
===============================================================================
OAM Performance Monitoring Bin Group Configuration for Sessions
===============================================================================
Bin Group       Admin   Session                           Session State
-------------------------------------------------------------------------------
2               Up      vpls1000-PM-AL5-1/1/9:1000.1000             Act
-------------------------------------------------------------------------------
3               Up      vpls1000-PM-YL4-1/1/9:1000.1000             Act
-------------------------------------------------------------------------------
===============================================================================
Admin: State of the bin group
Session State: The state of session referencing the bin-group
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output example: OAM-PM bin group using bin-group 2

```
A:node-2# show oam-pm bin-group-using bin-group 2
===============================================================================
OAM Performance Monitoring Bin Group Configuration for Sessions
===============================================================================
Bin Group       Admin   Session                              Session State
-------------------------------------------------------------------------------
2               Up      vpls1000-PM-AL5-1/1/9:1000.1000              Act
-------------------------------------------------------------------------------
===============================================================================
Admin: State of the bin group
Session State: The state of session referencing the bin-group
```

Table 55: Output fields: OAM-PM bin group session information

Label	Description
OAM Performance Monitoring Bin Group Configuration for Sessions	
Bin Group	The identifier for the bin group that is referenced by OAM-PM sessions
Admin	Displays if the bin group is administratively up
Session	The session associated with the bin group
Session State	Displays if the session is active

5.24 binding-label

binding-label

Syntax

binding-label [*label*] [**detail**]

binding-label [*label*] **egress-stats**

binding-label [*label*] **ingress-stats**

Context

[Tree] (show>router>mpls>forwarding-policies binding-label)

Full Context

show router mpls forwarding-policies binding-label

Description

This command displays the MPLS forwarding policy binding label information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

label

Specifies the label value.

Values 32 to 1048575

detail

Displays detailed information of the binding label.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

ingress-stats

Displays ingress statistics information.

Platforms

All

Output

The following outputs are examples of MPLS forwarding policy binding label information, and Table 56: Output fields: MPLS binding label describes the output fields:

- Output example
- Output example: router MPLS forwarding policies binding label egress stats

Output example

```

Table 56: Output fields: MPLS binding label

Label	Description
Label	Specifies the label number.
Preference	Specifies the preference.
Oper State	Specifies the operational state (up | down).
Policy Name	Specifies the MPLS forwarding policies binding label name.
No. of Binding Labels	Specifies the number of binding labels.
OperDown Reason	Specifies the reason for being operationally down.
Down Time	Specifies the downtime date and time.
NumNextHop Grps	Specifies the number of next-hop groups.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ingress Stats	Specifies if ingress stats are enabled for collection (disabled | enabled).
IngOperState	Specifies the ingress operational state (up | down)
Revert Timer	Specifies the revert timer value.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct | indirect).
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.
Next Revert In	Specifies the next revert interval.
Primary nexthop	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false | true).
NHopDown Reason	Specifies the reason for the next-hop down.
Backup nexthop	Specifies the IP address of the backup next-hop.
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

binding-label

Syntax

binding-label *label* **ingress-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>mpls>forwarding-policies binding-label)

Full Context

monitor router mpls forwarding-policies binding-label

Description

This command monitors statistics for Forwarding Policy Binding Label.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

binding-label

Syntax

binding-label *label* **ingress-stats**

Context

[Tree] (clear>router>mpls>forwarding-policies binding-label)

Full Context

clear router mpls forwarding-policies binding-label

Description

This command clears or resets statistics for the MPLS forwarding policy binding label.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

Platforms

All

5.25 bindings

bindings

Syntax

bindings [**mac** *ieee-address*]

Context

[Tree] (show>subscr-mgmt>vrgw>brg>gateway bindings)

Full Context

show subscriber-mgmt vrgw brg gateway bindings

Description

This command lists all the DHCP bindings of the local pool associated with the specified BRG. If the MAC attribute is specified, only the binding for that MAC address is displayed.

Parameters

ieee-address

specifies the MAC address identifying a specific binding.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway binding information.

Output example

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05" bindings
===============================================================================
Bridged Residential Gateway home-aware pool address bindings

5.26 bmca

bmca

Syntax

bmca

Context

[Tree] (show>system>ptp bmca)

Full Context

show system ptp bmca

Description

This command displays BMCA information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of BMCA information, and Table 57: Output fields: BMCA describes the output fields.

Output Example

```
show system ptp bmca

5.28 bof

bof

Syntax

bof [*cflash-id* | **booted**]

Context

[Tree] (show bof)

Full Context

show bof

Description

This command displays the Boot Option File (BOF) executed on last system boot or on the specified device.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If no device is specified, the BOF used in the last system boot displays. If the BOF has been modified since the system boot, a message displays.

Note:
This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration bof** command or the **info** command in the bof configuration region.

Parameters

cflash-id

Displays the cflash directory name. The slot name is not case-sensitive. Use upper or lowercase "A" or "B" for the slot name.

Values cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

booted

displays the boot option file used to boot the system.

Platforms

All

Output

The following output is an example of BOF information, and Table 58: Output fields: BOF describes the output fields.

Output example

```

Table 58: Output fields: BOF

Label	Description
primary-image	The primary location of the directory that contains the runtime images of both CPM and XCM/IOM.
primary-config	The primary location of the file that contains the configuration.
primary-dns	The primary DNS server for resolution of host names to IP addresses.
secondary-image	The secondary location of the directory that contains the runtime images of both CPM and XCM/IOM.
secondary-config	The secondary location of the file that contains the configuration.
secondary-dns	The secondary DNS server for resolution of host names to IP addresses.
tertiary-image	The tertiary location of the directory that contains the runtime images of both CPM and XCM/IOM.
tertiary-config	The tertiary location of the file that contains the configuration.
address	The IP address and mask associated with the CPM Ethernet port or the secondary CPM port.
tertiary-dns	The tertiary DNS server for resolution of host names to IP addresses.
persist	on — Persistent indexes between system reboots is enabled. off — Persistent indexes between system reboots is disabled.
wait	The time configured for the boot to pause while waiting for console input.
autonegotiate	no autonegotiate — Autonegotiate not enabled. autonegotiate — Autonegotiate is enabled.
duplex	half — Specifies that the system uses half duplex. full — Specifies that the system uses full duplex.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
speed	The speed of the CPM Ethernet interface.
console speed	The console port baud rate.
dns domain	The domain name used when performing DNS address resolution.
uplinkA-address	Displays the Uplink-A IP address.
uplinkA-port	Displays the primary port to be used for auto-boot.
uplinkA-route	Displays the static route associated with Uplink-A.
uplinkA-vlan	Displays the VLAN ID to be used on Uplink-A.
uplinkB-address	Displays the Uplink-B IP address.
uplinkB-port	Displays the secondary port to be used for auto-boot.
uplinkB-route	Displays the static route associated with Uplink-B.
uplinkB-vlan	Displays the VLAN ID to be used on Uplink-B.
uplink-mode	Displays the uplink mode of the device.
no-service-ports	Displays the ports on which service traffic is not processed.
use-expansion-card-type	The expansion card type.
system-profile	The system profile used by the system when it is rebooted.

Context

[Tree] (show>service bonding)

Full Context

show service bonding

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays an overview of active bonding contexts and the associated access connections.

When a bonding ID is specified, only information for that specific context is displayed.

Parameters

bonding-id

Specifies the ID of a specific bonding context.

detail

Displays additional detailed bonding settings, such as load-balancing.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of bonding information.

Output example

```
Node# show service bonding

5.37 bypass-tunnel

bypass-tunnel

Syntax

bypass-tunnel [**to** *ip-address*] [**protected-lsp** [*name*]] [**dynamic** | **manual** | **p2mp**] [**detail**] [**lsp-name** *session-name*]

bypass-tunnel [**detail**] [**dns**]

Context

[Tree] (show>router>mpls bypass-tunnel)

Full Context

show router mpls bypass-tunnel

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays MPLS bypass tunnel information.

If fast reroute is enabled on an LSP and the facility method is selected, instead of creating a separate LSP for every LSP that is to be backed up, a single LSP is created and serves as a backup for a set of LSPs. Such an LSP tunnel is called a bypass tunnel.

Parameters

ip-address

Specifies the IP address of the egress router.

name

Specifies the name of the LSP protected by the bypass tunnel up to 160 characters. "*" is accepted as a wild card character.

dynamic

Keyword used to display dynamically-assigned labels for bypass protection.

manual

Keyword used to display manually-assigned labels for bypass protection.

detail

Keyword used to display detailed information.

p2mp

Keyword used to display P2MP bypass tunnel information.

session-name

Specifies the session name, up to 160 characters, of the LSP used in the path. "*" can be used as a wildcard character.

dns

Keyword used to display reverse DNS resolution of actual and explicit hop information.

Platforms

All

Output

The following outputs are examples of MPLS bypass tunnel detailed information, and the associated tables describe the output fields:

- Output example, Table 59: Output fields: MPLS bypass tunnel
- Output example: router MPLS bypass tunnel detail, Table 60: Output fields: MPLS bypass tunnel detail

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Protected LSP Count	Specifies the protected LSP count
Type	Specifies the type

Table 60: Output fields: MPLS bypass tunnel detail

Label	Description
Up Time	Specifies the up time
Active Time	Specifies the active time
Bypass Path Cost	Specifies the bypass path cost
Setup Priority	Specifies the setup priority
Hold Priority	Specifies the hold priority
Class Type	Specifies the class type
Exclude Node	Specifies the excluded nodes
Inter-Area	Specifies the inter-area status
Computed Hops	Specifies the computed hops
Egress Admin Groups	Specifies the Egress administration groups
Actual Hops	Specifies the actual hops
Record Label	Specifies the record label
Last Resignal	Specifies the resignal time
Attempted At	Specifies the attempted at time
Resignal Reason	Specifies the resignal reason
Resignal Status	Specifies the resignal status
Reason	Specifies the reason

bypass-tunnel

Syntax

bypass-tunnel [*lsp-name*] **plr**

Context

[Tree] (tools>dump>router>mpls bypass-tunnel)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools dump router mpls bypass-tunnel

Description

This command displays information about the MPLS bypass tunnel.

Parameters

lsp-name

Specifies the LSP name up to 64 characters in length.

plr

Specifies the point of local repair (PLR).

Platforms

All

Output

The following output is an example of MPLS bypass tunnels PLR fields.

Output example

```
tools dump router mpls bypass-tunnel plr

6.1 ca-profile

ca-profile

Syntax

ca-profile

ca-profile *name* [**association**]

Context

[Tree] (show>certificate ca-profile)

Full Context

show certificate ca-profile

Description

This command shows certificate-authority profile information.

Parameters

name

Specifies the name of the Certificate Authority (CA) profile.

association

Displays associated CA profiles.

Platforms

All

6.2 cache

cache

Syntax

cache [**peer** *ip-address*] [**group** *ip-address*] [**source** *ip-address*] [**originrp** *ip-address*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>router>msdp cache)

Full Context

clear router msdp cache

Description

This command clears the MSDP cache.

Parameters

peer *ip-address*

Clears the cache of the IP address of the peer to which MSDP source-active (SA) requests for groups matching this entry's group range were sent.

group *ip-address*

Clears the group IP address of the SA entry.

source *ip-address*

Clears the source IP address of the SA entry.

originrp *ip-address*

Clears the origin rendezvous point (RP) address type of the SA entry.

Platforms

All

cache

Syntax

cache aggregate {**src-dst-proto** | **src-dst-proto-port**} **family** {**ipv4** | **ipv6**}

cache all family {**ipv4** | **ipv6**}

Context

[Tree] (tools>dump>cflowd cache)

Full Context

tools dump cflowd cache

Description

This command displays the contents of the cflowd active cache. This information can be displayed either in raw form where every flow entry is displayed or in an aggregated form.

Table 61: Output fields: tools dump cflowd cache describes the cflowd cache output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 61: Output fields: tools dump cflowd cache

Label	Description
Proto/Protocol	Displays the IPv4 or IPv6 protocol type
Source Address/Src-IP	Displays the source IP address of the flow (IPv4 or IPv6)
Destination Address/ Dst-IP	Displays the destination IP address of the flow (IPv4 or IPv6)
Intf/Ingr	Displays the ingress interface associated with the sampled flow (only displayed with the raw (all) output)
Intf/Egr	Displays the egress interface associated with the sampled flow (only displayed with the raw (all) output)
S-Port	Displays the source protocol port number
D-Port	Displays the destination protocol port number
Pkt-Cnt	Displays the total number of packets sampled for the associated flow
Byte-Cnt	Displays the total number of bytes of traffic sampled for the associated flow
Start-Time	Displays the system time when the first packet was sampled for the associated flow
Flags	Displays the IP flag value from the sampled IP flow header (only displayed with the raw (all) output)
ToS	Displays the ToS byte values from the sampled IP flow header (only displayed with the raw (all) output)
(Src) Mask	Displays the IP route mask for the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) Mask	Displays the IP route mask for the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)
(Src) AS	Displays the ASN associated with the route to the flow source IP address associated with the flow (only displayed with the raw (all) output)
(Dst) AS	Displays the ASN associated with the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
vRtr-ID	Displays the Virtual Router ID associated with the reported IP flow (only displayed with the raw (all) output)

Parameters

aggregate

Displays the aggregated active cache flow data.

Values src-dst-proto — Aggregates the active flow cache based on the source and destination IP address and the IP protocol value.

src-dst-proto-port — Aggregates the active flow cache based on the source and destination IP address, IP protocol value, and the source and destination port numbers.

family

Specifies which IP address family flow data should be displayed.

Values ipv4 — Displays the IPv4 flow data.

ipv6 — Displays the IPv6 flow data.

all

Displays the raw active cache flow data with no aggregation.

Platforms

All

6.3 cache-contents

cache-contents

Syntax

cache-contents [**isa** *mda-id/esa-vm-id*] **url** *file-url*

Context

[Tree] (tools>dump>app-assure>group>ipassist cache-contents)

Full Context

tools dump application-assurance group ip-identification-assist cache-contents

Description

This command dumps the cache contents generated by the IP identification assist feature into a local or remote destination.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot*/*mda*.

Values	*slot*/*mda*	
	slot	1 to 10, depending on chassis model
	mda	1 to 2, depending on chassis model

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format esa-*esa-id*/*vm-id*.

Values	esa-*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

url *file-url*

Specifies a local or remote destination to which the cache content output is directed.

Values	*local-url* | *remote-url*	
	local-url	[*cflash-id*/]*file-path* 200 characters maximum, including cflash-id directory length 99 characters maximum each
	remote-url	{ftp | tftp}://[*login*:*pswd*@]*remote-locn*/[*filepath*] 255 characters maximum, *filepath* 199 characters maximum
	remote-locn	{*hostname* | *ipv4-address* | "["*ipv6-address*"]" }[:*port*]
	ipv4-address	*a.b.c.d*
	ipv6-address	*x:x:x:x:x:x:x:x*[-*interface*] *x:x:x:x:x:x:d.d.d.d*[-*interface*] *x* - [0 to FFFF]H *d* - [0 to 255]D interface - 32 characters maximum, for link local addresses
	port	[0 to 65535]

© 2026 Nokia.

cflash-id	cf1: | cf1-A: | cf1-B: | cf2: | cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to direct the cache contents generated by the IP identification assist feature to a remote destination.

```
tools dump application-assurance group 1 ip-identification-assist cache-contents isa 1/1 url
 ftp://exuser:expassword@192.0.2.1/tmp/sample-cache
```

Output Example

```
===============================================================================
Application-Assurance Group 1 ip-identification-assist cache contents
===============================================================================

Writing to file ftp://exuser:expassword@192.0.2.1/tmp/sample-cache_1_1.ip-ident-assist-
cache ...

File closed

-rw-r--r-- 1 exuser exuser 16553 Aug 24 09:22 sample-cache_1_1.ip-ident-assist-cach
```

Use the following command to dump information stored in the cache related to the IP identification assist feature for top applications.

```
tools dump application-assurance group "1" ip-identification-assist cache-contents isa "1/1"
```

Output Example

```
===============================================================================
Application-Assurance Group 1 ip-identification-assist cache contents
===============================================================================

6.4 calculate-maps

calculate-maps

Syntax

calculate-maps router *router-instance* **subscriber-type** *nat-sub-type* **prefix** *ip-prefix/length*

Context

[Tree] (tools>perform>nat>deterministic calculate-maps)

Full Context

tools perform nat deterministic calculate-maps

Description

This command allows the operator to reveal the auto-mappings before they are created in the system, while the inside prefix is still out of service (in a **shutdown** administrative state). Based on the auto-mapping results, the user can decide to use the auto-mapping and operationalize the prefix (**no shutdown** command), or to use custom mappings.

The inside IP addresses for deterministic subscribers and for 1:1 protocol agnostic subscribers can be mapped to outside IP addresses in the following ways:

- Automatically by the system. By enabling the deterministic prefix (**no shutdown** command), the system will automatically create map commands and sequentially map subscribers into outside IP address space.
- Manually by the operator by configuring the map commands. This gives the operator control over mappings beyond the sequential auto-mapping.

Parameters

router-instance

Specifies the inside router name or VPRN service instance where the deterministic prefix resides.

Values <router-name> | <vprn-svc-id>

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-name — "Base"

vprn-svc-id — 1 to 2147483647

nat-sub-type

Specifies the NAT subscriber type.

Values classic-lsn-sub, dslite-lsn-sub

ip-prefix/length

Specifies the inside prefix containing IP addresses for which mapping is sought. The IP prefix is IPv4 family type for classic LSN subscriber and IPv6 family type for a DS-Lite subscriber.

Values

<ip-prefix/ip-prefix-length>	<ipv4-prefix>/<ipv4-prefix-length>
	<ipv6-prefix>/<ipv6-prefix-length>
<ipv4-prefix>	a.b.c.d (host bits must be 0)
<ipv4-prefix-length>	0 to 32
<ipv6-prefix>	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D
<ipv6-prefix-length>	[0 to 128]

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.5 call-home

call-home

Syntax

call-home

Context

[Tree] (clear>system>management-interface>netconf call-home)

Full Context

clear system management-interface netconf call-home

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

Commands in this context reset statistics for NETCONF call-home clients.

Platforms

6.6 call-trace

call-trace

Syntax

call-trace

Context

[Tree] (show call-trace)

Full Context

show call-trace

Description

Commands in this context display information related to the call-trace module.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-trace

Syntax

call-trace

Context

[Tree] (clear call-trace)

Full Context

clear call-trace

Description

This command clears call trace jobs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.7 cam-utilization

cam-utilization

Syntax

cam-utilization [**card** *slot-number*]

Context

[Tree] (tools>dump>filter cam-utilization)

Full Context

tools dump filter cam-utilization

Description

This command, when used without parameters, specifies the utilization per CAM table for line card ACL filters per FP for FP4- and FP5-based cards in the system. Optionally, the card number can be provided as a parameter to limit the output to a single card.

Parameters

slot-number

Specifies the IOM slot number.

Values 1 to 10, **A**, **B**

Platforms

All

Output

The following output is an example of CAM utilization information for filters.

Output Example

```
*A:7750# tools dump filter cam-utilization
===========================================
Filter Cam Utilization
===========================================
Slot FP  Dir   Type       Cam Utilization %
-------------------------------------------
2    1   Ing   ip-mac                    0
2    1   Egr   ip-mac                  100
2    1   Ing   ipv6                     0
2    1   Egr   ipv6                     0
===========================================

6.8 candidate

candidate

Syntax

candidate

Context

[Tree] (show>system candidate)

Full Context

show system candidate

Description

This command shows classic CLI candidate configuration information.

Note:
This command is not available in the MD-CLI. Use the MD-CLI **info** command in a configuration region.

Platforms

All

Output

The following output is an example of candidate information, and Table 62: Output fields: candidate describes the output fields.

Output Example

```
*A:bksim3107# show system candidate
===============================================================================
Candidate Config Information
===============================================================================
Candidate configuration state          : modified
Num editors/viewers                    : 0
Candidate cfg exclusive locked         : no
Last commit state                      : revert-failed
Last commit time                       : 10/23/2012 17:21:47
Checkpoint created with last commit    : yes
Scheduled revert time                  : N/A
Last commit revert time                : 10/23/2012 17:22:47

===============================================================================

```
===============================================================================
```

Table 62: Output fields: candidate

Label	Description
Candidate configuration state	• empty — indicates there are no uncommitted changes in the candidate config • modified — indicates there are uncommitted changes in the candidate config • unconfirmed — indicates there are no uncommitted changes in the candidate config but the result of the last commit will be auto-reverted unless it is confirmed before the timeout expires
Num editors/viewers	Displays the number of CLI sessions currently in edit-cfg mode
Candidate cfg exclusive locked	Indicates if a user has exclusively locked the candidate using the **candidate edit exclusive** command
Last commit state	• none — indicates there have been no commits since the last reboot of the node • in-progress — indicates the system is currently committing the candidate config • success — indicates the last commit finished successfully • revert-pending — indicates the last commit finished successfully but has not been confirmed yet, and will be auto-reverted if it is not confirmed before the timeout expires • failed — indicates the last commit failed and has been undone • revert-in-progress — indicates the last commit finished successfully but was not confirmed in time and is currently being reverted • reverted — indicates the last commit finished successfully but was not confirmed in time and has been reverted • revert-failed — indicates the last commit finished successfully but was not confirmed in time and the system attempted to revert it but failed
Last commit time	Displays the time at which the last commit attempt was started
Checkpoint created with last commit	Indicates if a rollback checkpoint was created after the previous commit completed
Scheduled revert time	Indicates the currently scheduled auto-revert time based on the confirmed option being used with a candidate commit
Last commit revert time	Displays the time the commit was last reverted

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Users in edit-cfg mode	Lists all the user sessions that are currently in edit-cfg mode
Type (from)	Indicates the type of session (such as Console, Telnet, and so on) and also the source of the session (such as the source IP address of the remote host)

6.9 capabilities

capabilities

Syntax

capabilities [*system-id* | *lsp-id*] [**level** *level*]

Context

[Tree] (show>router>isis capabilities)

Full Context

show router isis capabilities

Description

This command displays the IS-IS capability information.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed.

lsp-id

Only the specified LSP is listed.

level

Specifies the interface level (1, 2, or 1 and 2).

Platforms

All

Output

The following output is an example of IS-IS capability information, and Table 63: Output fields: IS-IS capabilities describes the output fields.

Output Example

```
*A:Dut-B# show router isis 0 capabilities
```

Context

[Tree] (show>service>id>dynsvc capture-sap)

Full Context

show service id dynamic-services capture-sap

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the status and statistics of a dynamic services capture. Statistics include counters for the number of data triggers received and data trigger drop reasons.

Note:
This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services capture SAP.

statistics

Displays data trigger receive and drop reason counters for this dynamic services capture SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of capture SAP information.

Output Example

```
# show service id 10 dynamic-services capture-sap 1/1/1:10.*

Table 64: Output fields: capture SAP

Counter	Description
Data packets received by SAP	The number of dynamic service data triggers received on the capture SAP that reached the CPM.
No policy configured at capture SAP level	There is no dynamic-services-policy configured at the capture SAP. This is required to determine the authentication destination.
No authentication configured in policy	The authentication section in the specified in dynamic services policy is missing or incomplete.
Data-trigger already exists	A new data trigger frame is received for an existing data trigger that is authenticated, but the corresponding dynamic SAP is not yet created. The new data trigger packet is dropped.
Lockout is active	The data trigger for this managed SAP is currently in a lockout state due to previous authentication failures.
Reached data-trigger system limit	The maximum number of dynamic service data triggers supported on the system is reached. Additional data triggers are dropped.
No memory available	There is not enough system memory available to process the data trigger.
Unsuccessful authentication	The authentication for a data trigger on this capture SAP failed or timed out.
No data-trigger SAP-id in authentication	The dynamic services data trigger SAP ID is not provided in authentication. This is a mandatory parameter.
Corresponding dynamic SAP is not created	The data trigger successfully authenticated but the corresponding dynamic SAP was not created. This is typically caused by a dynamic services script error.

capture-sap

Syntax

capture-sap [**statistics**] *sap-id*

© 2026 Nokia.

Context

[Tree] (clear>service>id>dynsvc capture-sap)

Full Context

clear service id dynamic-services capture-sap

Description

This command clears the dynamic services capture SAP control plane statistics (data triggers received and data trigger drop reason counters).

Parameters

statistics

Clears the data trigger statistics for a capture SAP.

sap-id

Specifies the dynamic services capture SAP.

Context

[Tree] (show card)

Full Context

show card

Description

This command displays card information.

If no command line parameters are specified, a card summary for all cards is displayed.

Parameters

slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM/XCM slots are numbered from 1 to 10. CPM slots are A, B. The 7950 XRS has additional slots C, D (upper or lowercase). SFM slots are not addressed as cards. See the **show sfm** command.

cpu

Displays CPU utilization.

seconds

Displays the number of seconds over which to sample CPU task utilization.

Values 1 to 300

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

dist-cpu-protection

Displays the distributed CPU protection information.

policy-accounting

Displays the policy accounting information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

memory-pools

Displays the memory pools for the card.

state

Displays provisioned and equipped card and MDA information.

detail

Displays detailed card information.

fwd-engine

Displays forwarding engine information.

drop-reason

Displays drop reason information.

statistics

Displays statistics information.

ingress

Specifies statistics are ingress related.

egress

Specifies statistics are egress related.

tap-number

Displays the source TAP number.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

queue-group

Displays queue group information.

mode

Specifies the mode in which the card will operate.

access

Displays information for the queue groups related to access mode.

network

Displays information for the queue groups related to network mode.

Platforms

All

Output

The following outputs are examples of card information, and the associated tables describe the output fields:

Output Fields: show card

Table 65: Output fields: card describes the output fields for the **show card** command.

Table 65: Output fields: card

Label	Description
Slot	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40).
Equipped Type	The card type that is actually populated in the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the7950 XRS-40).
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Down — The card is operationally down. active — The CPM is the Active CPM for the system (actively managing the system components, processing various protocols, and so on). standby — The CPM is the Standby CPM. The standby is hot synchronized with the Active CPM. ext-actv — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the active extension CPM for the chassis in which it sits. ext-stby — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the standby extension CPM for the chassis in which it sits.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Example: show card state (showing 7750 SR-12 Chassis)

Output Fields: show card state

Table 66: Output fields: card state describes the output fields for the **show card state** command.

Table 66: Output fields: card state

Label	Description
Slot/MDA	The slot number of the card in the chassis.
Provisioned Type	The card type that is configured for the slot.
Equipped Type	The card type that is actually populated in the slot.
Admin State	Up — The card is administratively up. Down — The card is administratively down.
Operational State	Up — The card is operationally up. Provisioned — There is no card in the slot but it has been pre-configured.
Num Ports	The number of ports available on the MDA.
Num MDA	The number of MDAs installed.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.

Output Fields: show card <slot-number> detail (for an IOM or XCM Card)

Table 67: Output fields: card detail (for an IOM or XCM Card) describes the output fields for the **show card detail** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 67: Output fields: card detail (for an IOM or XCM Card)

Label	Description
Clock source	Source of clock for the IOM. Currently this parameter always displays "none”.
Available MDA slots	The number of MDA slots available on the IOM.
Installed MDAs	The number of MDAs installed on the IOM.
FP Resource Policy	The FP resource policy for the specified FP.
Initial Extract Priority Mode	The scheme used to select the initial drop priority of extracted control plane traffic. uniform — Initializes the drop priority of all extracted control traffic as high priority. l3-classify — Initializes the drop priority of all Layer 3 extracted control traffic (for example, BGP or OSPF) based on the QoS classification of the packets. See "Classification-Based Priority for Extracted Protocol Traffic" in the*7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more details.
Part number	The IOM part number.
CLEI code	The Common Language Location Identifier (CLLI) code string for the router.
Serial number	The serial number. Not user-modifiable.
Manufacture date	The chassis manufacture date. Not user-modifiable.
Manufacturing string	Factory-inputted manufacturing text string. Not user-modifiable.
Manufacturing deviations	Displays a record of changes by manufacturing to the hardware or software that is outside the normal revision control process.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Software version	The software version number.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Base MAC address	Displays the base MAC address of the hardware component.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Memory capacity	Displays the memory capacity of the card.
Generation	Displays the FP generation of the assembly. N/A is displayed if there is no XMA installed in the card slot.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.
Network ingress queue policy	Displays the name of the network ingress queue policy applied to the FP.

Output Example: show card <slot-number> detail (showing CPM5 Cards)

```
B:Dut-D# show card A detail

Output Fields: show card <slot-number> detail (for a CPM)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 68: Output fields: card detail (for a CPM) describes the output fields for the **show card detail** command for a CPM card.

Table 68: Output fields: card detail (for a CPM)

Label	Description
Slot	The slot of the card in the chassis.
Card Provisioned	The CPM type that is configured for the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Card Equipped	The CPM type that is actually populated in the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40).
Admin State	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational State	Up — The CPM is operationally up. Down — The CPM is operationally down.
Inter chassis cpm interconnect	Up — The CPM is operationally up. Down — The CPM is operationally down.
BOF last modified	The date and time of the most recent BOF modification.
Config file version	The configuration file version.
Config file last modified	The date and time of the most recent config file modification.
Config file last modified	The date and time of the most recent config file modification.
Config file last saved	The date and time of the most recent config file save.
CPM card status	active — The card is acting as the primary (active) CPM in a redundant system. standby — The card is acting as the standby (secondary) CPM in a redundant system.
Administrative state	Up — The CPM is administratively up. Down — The CPM is administratively down.
Operational state	Up — The CPM is operationally up. Down — The CPM is operationally down.
Serial number	The compact flash part number. Not user modifiable.
Firmware revision	The firmware version. Not user modifiable.
Model number	The compact flash model number. Not user modifiable.
Size	The amount of space available on the compact flash card.
Free space	The amount of space remaining on the compact flash card.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Part number	The CPM part number.
CLEI code	The code used to identify the router.
Serial number	The CPM part number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	Factory-set manufacturing text string. Not user modifiable.
Administrative state	Up — The card is administratively up. Down — The card is administratively down.
Operational state	Up — The card is operationally up. Down — The card is operationally down.
Time of last boot	The date and time the most recent boot occurred.
Current alarm state	Displays the alarm conditions for the specific board.
Status	Displays the current status.
Temperature	Internal chassis temperature.
Temperature threshold	The value above which the internal temperature must rise in order to indicate that the temperature is critical.
Software boot version	The version of the boot image.
Memory capacity	The total amount of memory.
Secure boot status	Status of the Secure Boot for this CPM. enabled — Secure Boot is enabled disabled — Secure Boot is disabled
UEFI variable status	Status of the Secure Boot UEFI variables for this CPM. ok — no update required update required — update is required
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.

Table 69: Output fields: card detail (showing IOM with license level) describes the output fields for the **show card detail** command with IOM licensing information.

Table 69: Output fields: card detail (showing IOM with license level)

Label	Description
Slot	The slot of the card in the chassis.
Provisioned Type	The IOM type and level that is configured for the slot.
Equipped Type (if different)	The IOM type and level that is actually populated in the slot if it is different than the Provisioned Type.
Admin State	Up — The IOM is administratively up. Down — The IOM is administratively down.
Operational State	Up — The IOM is operationally up. Down — The IOM is operationally down.
Licensed Level	License level of the card.
Description	Description of the license.
Licensed Bandwidth Used	The total connector bandwidth configured on the assembly.
Comments	Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.

Output Example: show card <slot-number> fp fwd-engine drop-reason statistics

```
*A:cses-V93# show card 1 fp 1 fwd-engine drop-reason statistics
===============================================================================
Card 1 FP 1 Egress Forwarding Engine Drop Reason Statistics
===============================================================================
Egress Encapsulation Exceeded                          0
MTU Exceeded                                           0
Frame too big for port                                 4
===============================================================================
```

Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics

Table 70: Output fields: card forwarding plane forwarding engine drop reason describes the output fields for the **show card fp fwd-engine drop-reason** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 70: Output fields: card forwarding plane forwarding engine drop reason

Label	Description
Card	The card in the chassis.
FP	The egress forwarding plane hardware component.
Egress Encapsulation Exceeded	Addition of egress encapsulation headers would have exceeded the maximum frame size.
MTU Exceeded	Protocol supports packet fragmentation but fragmentation was blocked (for example, packet is IPv6 or packet is IPv4 and DF set to one).
Frame too big for port	Final check before transmitting has detected frame exceeded the port MTU.

Note:
A single frame can only result in one drop reason statistic being incremented.

Output Example: show card <slot-number> fp <fp-number> ingress per-egress-fp-stats

```
# show card 4 fp 5 ingress per-egress-fp-stats

Table 72: Output fields: card CPU sample-period

Label	Description
Name	The name of the CPU task
CPU Time (uSec)	The CPU usage time, in microseconds
CPU Usage	The CPU usage as a percentage of the total sampled time
Capacity Usage	The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity. This column does not reflect the true CPU utilization value; that data is still available in the **CPU Usage** column. This column is the **busiest** task in each group, where **busiest** is defined as either actually running or blocked attempting to acquire a lock.
Total	The total CPU time measured in the sample period
Idle	The total CPU idle time
Usage	The total CPU usage time
Busiest Core Utilization	The CPU utilization of the busiest core

card

Syntax

card *slot-number*

card *slot-number* **fp** *fp-number* **hs-pool high-water-mark**

card *slot-number* **fp** *fp-number* **hs-pool high-water-mark mid-pool** [*value*]

card *slot-number* **fp** *fp-number* **hs-pool high-water-mark root-pool** [*value*]

card *slot-number* **fp** *fp-number* **hs-pool high-water-mark system**

card *slot-number* **fp** *fp-number* **dist-cpu-protection**

card *slot-number* **fp** *fp-number* **ingress per-egress-fp-stats**

card *slot-number* **fp** *fp-number* **egress per-ingress-fp-stats**

card *slot-number* **soft** [**hard-reset-unsupported-mdas**]

card *slot-number* **fp** *fp-number* **fwd-engine drop-reason statistics**

card *slot-number* **fp** *fp-number* **ingress mode** {**access** | **network**} **queue-group** *group-name* **instance** *instance* **statistics**

Context

[Tree] (clear card)

Full Context

clear card

Description

This command re-initializes the card in the specified slot. A **clear card** command (without the soft) is referred to as a *Hard Reset*. A **clear card x soft** command (with the soft) is referred to as a *Soft Reset*.

Parameters

slot-number

Clears information for the specified card slot.

Values 1 to 20, A, B, C, D

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

high-water-mark

Clears the high water marks within the HS pool on the specified card and FP.

mid-pool

Clears the high water marks within the mid pools in the HS pool and on the specified card and FP.

Values 1 to 16

root-pool

Clears the high water marks within the root pools in the HS pool and on the specified card and FP.

Values 1 to 16

system

Clears the high water marks within the in the HS system pool and on the specified card and FP.

dist-cpu-protection

Clears the distributed CPU protection information.

soft

Issues a soft reset of the I/O module (IOM).

hard-reset-unsupported-mdas

Allows a soft reset operation when some of the MDA's cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset and a hard reset is performed on MDAs that do not support soft resets.

fwd-engine

Specifies to clear the forwarding engine information.

drop-reason

Specifies to clear the drop reason information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Specifies to clear the statistics.

ingress

Specifies to clear the ingress information.

egress

Specifies to clear the egress information.

per-egress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

mode

Specifies the mode in which the card is to operate.

access

Specifies to clear the access mode information.

network

Specifies to clear the network mode information.

group-name

Specifies the group name, to a maximum of 32 characters.

instance

Specifies the instance of the named queue group to be cleared.

Values 1 to 65535

Platforms

All

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *queue-group-name* **instance** *instance-id* [{**access** | **network**}] [{**ingress** | **egress**}] [**arbiter** {*name* | *root*}] [**port** *port-id*] [{**detail** | **root-detail** | **thresholds** | **priority-info** | **depth**}]

Context

[Tree] (show>qos>policer-hierarchy card)

Full Context

show qos policer-hierarchy card

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays physical card related information.

Parameters

slot-number

Displays information about the slot number of the card in the chassis. The maximum slot number is platform dependent.

Values 1 to 10

fp-number

Displays information about the specified forwarding plane number.

Values 1

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the instance of the named queue group.

Values 1 to 65535

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

port-id

Displays information about the specified port ID.

access

Displays policer-hierarchy statistics applied on an access port.

network

Displays policer-hierarchy statistics applied on a network port.

ingress

Displays ingress queue group information.

egress

Displays egress queue group information.

detail

Displays detailed information.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays the threshold, parenting, rate, and traffic information related to a policer.

priority-info

Displays the threshold information related to the root arbiter.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card [*slot-num*]

card [*slot-num*] **all**

Context

[Tree] (tools>dump>resource-usage card)

Full Context

tools dump resource-usage card

Description

This command displays resource information for cards.

Parameters

slot-num

Specifies a card slot.

Values 1 to 10

all

Displays all available information for the card, including resource usage information for all child objects of the card such as FPs and MDAs.

Platforms

All

card

Syntax

card *slot-number* **fp** *fp-number* **ingress** {**access** | **network**} **queue-group** *queue-group-name* **instance** *instance-id* [**absolute** | **percent-rate**] [**interval** *seconds*] [**repeat** *repeat*] **policer** *policer-id* [*reference-rate*]

card *slot-number* **fp** *fp-number* **ingress** [**tap** *tap-number*] **per-egress-fp-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

card *slot-number* **fp** *fp-number* [**tap** *tap-number*] **egress per-ingress-fp-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor card)

Full Context

monitor card

Description

This command monitors statistics in an ingress and egress Forwarding Plane (FP).

Parameters

slot-number

Monitors information on the specified card slot.

Values 1 to 20 (The maximum slot number is platform dependent)

fp-number

Monitors information on the specified FP.

Values 1 to 8

ingress

Monitors information on the ingress.

egress

Monitors information on the egress.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

absolute

Displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

Displays the rate-per-second for each statistic based on the reference rate of 10G.

seconds

Specifies the interval for each display in seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 11 to 60

Default 11

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

policer-id

Must exist within the queue-group template applied to the ingress context of the forwarding plane.

Values 1 to 32

reference-rate

Displays the rate-per-second for each statistic as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

Default 10G

tap-number

Specifies the source TAP.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP.

rate

Displays the rate-per-second for each statistic instead of the delta.

Platforms

All

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *queue-group-name* **instance** *instance-id* [**ingress**] [**access** | **networks**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **percent-rate** [*reference-rate*]] [**arbiter root** | *name*]

Context

[Tree] (monitor>qos>arbiter-stats card)

Full Context

monitor qos arbiter-stats card

Description

This command monitors arbiter statistics in an ingress FP queue group.

Parameters

slot-number

Specifies the slot number associated with the queue group, expressed as an integer.

Values 1 to 20

fp-number

Specifies the FP number associated with the queue group, expressed as an integer.

Values 1 to 8

ingress

Displays policer statistics applied on the ingress FP.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the name of the queue group up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Default 11 seconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 11 to 60

repeat

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

When the absolute keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

When the percent-rate keyword is specified, the rate-per-second for each statistic is displayed based on the reference rate of 10G.

reference-rate

When a reference-rate value is specified, the rate-per-second for each statistic is displayed as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

name

Specify the name of the policer control policy arbiter.

Values An existing arbiter-name in the form of a string up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, etc.), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] **queue-group** *queue-group-name* [**instance** *instance-id*] [**arbiter** {*name* | *root*}]

Context

[Tree] (clear>qos>arbiter-stats card)

Full Context

clear qos arbiter-stats card

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears arbiter statistics per card.

Parameters

slot-number

Specifies the slot number associated with the queue group.

Values 1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1 to 4

access

Clears policer statistics on the FP access.

network

Clears policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] [**queue-group** *queue-group-name*] [**instance** *instance-id*] [**arbiter** *name* | *root*]

Full Context

show qos arbiter-stats card

Description

This command displays the arbiter statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 (7750 SR-1, VSR)
1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1

access

Displays arbiter statistics applied on an access port.

network

Displays arbiter statistics applied on a network port.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *group-name* **instance** *instance-id* {**access** | **network**} [**detail**] [**ingress**]

Context

[Tree] (show>qos>policer card)

Full Context

show qos policer card

Description

This command displays the policer statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 (7750 SR-1, VSR)
1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1

group-name

Specifies the queue group name, up to 32 characters.

access

Displays policer statistics applied on an access port.

network

Displays policer statistics applied on a network port.

detail

Displays detailed information.

ingress

Displays ingress queue group information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

6.13 category-map

category-map

Syntax

category-map [*category-map*]

category-map *category-map* **subscribers**

Context

[Tree] (show>subscr-mgmt category-map)

Full Context

show subscriber-mgmt category-map

Description

This command displays category map information.

With no parameters specified, a summary view of all configured category maps is displayed.

With the optional *category-map* name parameter specified, the detailed configuration of the specified category map name is displayed.

With the *category-map* **subscribers** parameters specified, all subscribers that have the specified *category-map* associated are displayed.

Parameters

category-map

Specifies the category map name for which information is displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management category map information.

Output Example

```
Node# show subscriber-mgmt category-map "cat-map-1"
===============================================================================
Category Map: cat-map-1
===============================================================================
Description        : gy - time and volume
Credit Type        : volume             Credit Exh. Thresh.: 80%
Activity Thresh.   : 0 kb/s

```

Table 73: Output fields: category map describes category map output fields.

Table 73: Output fields: category map

Field	Description
Description	The user provided description of this policy
Credit Type	The volume or time based accounting is performed
Credit Exh. Thresh	The credit exhaust threshold considered to take action
Activity Thresh.	The threshold (in kb/s) that is applied to determine whether or not activity is occurring
Gx session level usage monitoring	Whether category map supports Gx session level usage monitoring
Credit Type Over.	Credit type override
Rating Group	The rating group applicable for this category
OutOfCredit Action	The action to be taken if the credit es exhausted
Default Credit	The default value for the Time credit
Ingress Queues	The ingress queues defined in this category
Egress Queues	The egress queues defined in this category
Ingress Policers	The ingress policers defined in this category
Egress Policers	The egress queues defined in this category

6.15 ccrt-replay

ccrt-replay

Syntax

ccrt-replay [**session-id** *session-id*] [**diameter-application-policy** *name*]

ccrt-replay diameter-application-policy *name* **summary**

ccrt-replay summary

Context

[Tree] (show>subscr-mgmt>diam-session ccrt-replay)

Full Context

show subscriber-mgmt diameter-session ccrt-replay

Description

This command displays:

- information for all diameter sessions that are in CCR-T replay mode:
  - Diameter session ID
  - Diameter Application Policy
  - Replay Time left
- statistics per diameter application policy for diameter sessions in CCR-T replay mode or that were in CCR-T replay mode and were dropped or terminated:
  - Sessions in CCR-T replay mode: the number of Diameter Gx or Gy sessions from the specified diameter application policy that are currently in CCR-T replay mode
  - Replay sessions dropped (maximum life-time expired): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before **max-lifetime** expiration
  - Replay sessions dropped (to free resources): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of active Diameter sessions for Gx or Gy was reached
  - Replay sessions dropped (cleared): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a **clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy** *name* **sessions** command
  - Replay sessions terminated (CCA-T received): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before **max-lifetime** expiration
  - Statistics last cleared time: timestamp when the statistics were last cleared or n/a if the statistics were never cleared

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

name

Specifies the application policy, up to 32 characters.

session-id

Specifies a diameter session ID.

summary

Displays summarized information about CCR-T replay.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management CCR-T replay information.

Table 74: Output fields: CCR-T replay describes CCRT replay output fields.

Table 74: Output fields: CCR-T replay

Field	Description
Session-id	The diameter session ID that is in CCR-T replay mode
Diameter Application Policy	The diameter application policy name to which the Gx or Gy session in CCR-T replay mode belongs
Replay Time Left	The remaining **max-lifetime** before the Diameter Gx or Gy session in CCR-T replay mode is dropped
No. of Matching Entries	The number of entries matching the search criteria
Sessions in CCR-T replay mode	The number of Diameter Gx or Gy sessions from the specified diameter application policy that are in CCR-T replay mode
Replay sessions dropped (maximum life-time expired)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before max-lifetime expiration
Replay sessions dropped (to free resources)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of Diameter sessions was reached
Replay sessions dropped (cleared)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a **clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy** *name* **sessions** command
Replay sessions terminated (CCA-T received)	The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before max-lifetime expiration

Field	Description
Statistics last cleared time	The timestamp when the statistics were last cleared or n/a if the statistics were never cleared

ccrt-replay

Syntax

ccrt-replay diameter-application-policy *name* **statistics**

ccrt-replay diameter-application-policy *name* **sessions**

Context

[Tree] (clear>subscr-mgmt>diam-session ccrt-replay)

Full Context

clear subscriber-mgmt diameter-session ccrt-replay

Description

This command, when the **statistics** parameter is specified, clears the CCR-T replay statistics and updates the "Statistics last cleared time" value.

This command, when the **sessions** parameter is specified, drops the diameter Gx or Gy sessions that are in CCR-T replay mode.

Parameters

name

Specifies the diameter application policy, up to 32 characters.

statistics

Clears the CCR-T replay statistics.

sessions

Clears the sessions that are in CCR-T replay mode.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cert-profile

Syntax

cert-profile [*name*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cert-profile *name* **association**

cert-profile *name* **entry** *entry*

Context

[Tree] (show>system>security>tls cert-profile)

Full Context

show system security tls cert-profile

Description

This command displays information about server and client profiles that are using this certificate profile.

Parameters

entry

Specifies a certificate profile entry number for which to display information.

Values 1 to 8

name

Specifies the name of a certificate profile for which to display information.

Platforms

All

6.18 certificate

certificate

Syntax

certificate *filename* **association**

Context

[Tree] (show certificate)

[Tree] (show>ipsec certificate)

Full Context

show certificate

show ipsec certificate

Description

This command displays certificate-related information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

filename

Specifies the certificate file name.

association

Displays information for which this IPsec certificate is associated.

Platforms

All

- show certificate

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

- show ipsec certificate

Output

The following output is an example of the **show certificate** command.

Output Example

```
*A:Dut-B# show certificate ca-profile

Context

[Tree] (show>eth-cfm cfm-stack-table)

Full Context

show eth-cfm cfm-stack-table

Description

This command displays stack-table information. This stack-table is used to display the various management points MEPs and MIPs that are configured on the system. These can be service-based or facility-based. The various options allow the operator to be specific. If no parameters are included then the entire stack-table is displayed.

Parameters

port *port-id*

Displays the bridge port or aggregated port on which MEPs or MHFs are configured.

Values	*port-id*	*slot*/*mda*/*port*[.channel]	
		lag-id	lag-*id*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	lag	keyword
	id	1 to 800
eth-sat-id	esat-<id>/<slot>/[u]<port>	
	esat	keyword
	id	1 to 20
	u	keyword for up-link port

vlan *vlan-id*

Displays the associated VLAN ID.

Values 1 or 4094 or all

level

Displays the MD level of the maintenance point.

Values 0 to 7

collect-lmm-stats

Displays facility MEPs on which LMM collection is enabled.

direction up | down

Displays the direction in which the MP faces on the bridge port.

facility

Displays the CFM stack table information for facility MEPs. The base command displays all the facility MEPs. Options may be included in order to further parse the table for specific facility MEP information.

sdp *sdp-id*[:*vc-id*]

Displays CFM stack table information for the specified SDP.

Values sdp-id: 1 to 32767

vc-id: 1 to 4294967295

virtual *service-id*

Displays CFM stack table information for the specified SDP.

Values service-id: 1..2148278386]

svc-name: up to 64 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of stack table information. Table 75: Output fields: ETH-CFM CFM stack table describes the output content.

Table 75: Output fields: ETH-CFM CFM stack table

Label	Description
Sap	Displays associated SAP IDs.
Sdp	Displays the SDP binding for the bridge.
Level Dir	Displays the MD level of the maintenance point.
Md-index	Displays the maintenance domain (MD) index.
Ma-index	Displays the maintenance association (MA) index.
Mep-id	Displays the integer that is unique among all the MEPs in the same MA.
Mac-address	Displays the MAC address of the MP.
md-admin-name	Displays the administrative MD name.
ma-admin-name	Displays the administrative MA name.

6.22 change-key

change-key

Syntax

change-key authentication *authentication-protocol old-authentication-key new-authentication-key*

change-key authentication *authentication-protocol* **privacy** *privacy-protocol old-privacy-key new-privacy-key*

Context

[Tree] (tools>perform>system>mgmt-itf>snmp change-key)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform system management-interface snmp change-key

Description

This command generates KeyChange strings to change SNMPv3 authentication or privacy keys. The SNMP engine ID is not needed because localized keys are required as input. The KeyChange algorithm uses a random string, which generates a different output each time the command is executed.

Parameters

authentication

Generates a KeyChange string for an authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

Values **hmac-md5-96** — Specifies use of the HMAC-MD5-96 authentication protocol.

hmac-sha1-96 — Specifies use of the HMAC-SHA-96 authentication protocol.

hmac-sha2-224 — Specifies use of the HMAC-SHA-224 authentication protocol.

hmac-sha2-256 — Specifies use of the HMAC-SHA-256 authentication protocol.

hmac-sha2-384 — Specifies use of the HMAC-SHA-384 authentication protocol.

hmac-sha-512 — Specifies use of the HMAC-SHA-512 authentication protocol.

old-authentication-key

Specifies the old localized authentication key.

new-authentication-key

Specifies the new localized authentication key.

privacy

Keyword to generate a KeyChange string for a privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

Values **cbc-des** — Specifies the use of the CBC-DES privacy protocol.

cfb128-aes-128 — Specifies the use of the CFB128-AES-128 privacy protocol.

cfb128-aes-192 — Specifies the use of the CFB128-AES-192 privacy protocol.

cfb128-aes-256 — Specifies the use of the CFB128-AES-256 privacy protocol.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

old-privacy-key

Specifies the old localized privacy key.

new-privacy-key

Specifies the new localized privacy key.

Platforms

All

Output

The following output is an example of a generated KeyChange string.

Output Example

```
A:ALA-1# tools perform system management-interface snmp change-key authentication hmac-sha1-96

```

6.23 channel

channel

Syntax

channel [**router** *router-instance* | **vpls** *service-id* | **service-name** *service-name*] [fp *slot-number*[*/fp-number*]] [**group** *ip-address* [**source** *ip-address*]] [**path** *path-type*] [**detail**]

Context

[Tree] (show>mcast-management channel)

Full Context

show mcast-management channel

Description

This command displays multicast path management channel related information.

Parameters

service-id

Specifies an existing VPLS service ID.

Values 1 to 214748364

service-name

A string up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

slot-number

Displays information for the specified card slot.

fp-number

Specifies an FP.

Values 1 to 8

ip-address

ipv4-address in the form *a.b.c.d*

path-type

Specifies the path type.

Values primary, secondary

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of multicast management channel information.

Output Example

```

channel

Syntax

channel all [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

channel *grp-address* [**source** *srcAddr*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

Context

[Tree] (clear>video>statistics>id channel)

Full Context

clear video statistics id channel

Description

This command clears video statistics for a particular channel.

Parameters

all

Clears statistics for all channels.

rt-client

Clears all RET client related statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

6.24 charging-filter

charging-filter

Syntax

charging-filter {*charging-filter-id* **| non-zero}**

Context

[Tree] (show>app-assure>group>policy charging-filter)

Full Context

show application-assurance group policy charging-filter

Description

This command displays information about the charging filter.

Parameters

charging-filter-id

Specifies the ID of an existing charging filter entry.

Values 1 to 65535

non-zero

Specifies to show all non-zero count entries.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of the charging filter information, and Table 76: Output fields: AA group policy charging filter describes the fields.

```
show application-assurance group 1:0 policy charging-filter 1
```

Output Example

```
============================================================
Charging Filter Entry 1
============================================================
Description         : "Charging-filter entry for WhatsApp Video"
Admin State         : in-service
Charging Group      : "cgVideo100"
Hits                : 0 flows

Match :
    Application     : eq "Whats App"
    Flow Attribute  : flow-attribute video confidence gte 100
============================================================
```

Table 76: Output fields: AA group policy charging filter

Label	Description
Charging Filter Entry	The charging filter
Description	The description of the charging filter
Admin State	The administrative state of the filter
Charging Group	The charging group
Hits	The number of hits
Application	The matched application
Flow Attribute	The flow attribute used by the match criteria

6.25 charging-group

charging-group

Syntax

charging-group

charging-group *charging-group-name*

Context

[Tree] (show>app-assure>group>policy charging-group)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show application-assurance group policy charging-group

Description

This command displays application-assurance policy application information.

Parameters

charging-group-name

Specifies the application name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

charging-group [*charging-group-name*] **count** [**detail**]

charging-group count top *granularity* [**max-count** *max-count*]

Context

[Tree] (show>app-assure>group>aa-sub charging-group)

Full Context

show application-assurance group aa-sub charging-group

Description

This command displays application-assurance group charging group information.

Parameters

charging-group-name

Specifies an existing charging group.

count

Displays the counters for the charging group.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Specifies the granularity of the search.

Values octets, packets, flows

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-count

Specifies the maximum flows to display.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

charging-group [*charging-group-name*] **count**

Context

[Tree] (show>app-assure>group>aa-sub>um charging-group)

Full Context

show application-assurance group aa-sub usage-monitor charging-group

Description

This command displays usage monitor statistics for the charging group.

Parameters

charging-group-name

Specifies the charging group name, up to 32 characters.

count

Displays counters for the charging group.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

charging-group [*charging-group-name*] **count** [**detail**]

Context

[Tree] (tools>dump>app-assure>group>aa-sub charging-group)

Full Context

tools dump application-assurance group aa-sub charging-group

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays per-subscriber per-charging-group statistics.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.26 chassis

chassis

Syntax

chassis [**environment**] [**ccm**] [**power-supply**] [*chassis-id*]

chassis class *chassis-class*

chassis detail [**class** *chassis-class*]

Context

[Tree] (show chassis)

Full Context

show chassis

Description

This command displays general status information about the chassis.

Parameters

chassis-id

Specifies the ID of the chassis.

chassis-class

Displays information related to the chassis of the specified class.

Values router or eth-sat

environment

Displays environmental status information about the chassis.

Default Displays all chassis information.

power-supply

Displays the status of the power supply in the chassis.

Default Displays all chassis information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Displays detailed information for all chassis in the system.

ccm

Displays chassis control module information for platforms that support CCMs.

Platforms

All

Output

The following outputs are examples of chassis information, and Table 77: Output fields: chassis describes the output fields.

- Output example: show chassis (showing 7750 SR)
- Output example: show chassis environment
- Output example: show chassis power-supply (showing 7750 SR-1)
- Output example: show chassis ccm
- Output example: show chassis (showing 7950 XRS)
- Output example: show chassis detail (showing 7950 XRS)
- Output example: show chassis (showing 7750 SR with Ethernet satellites configured)
- Output example: show chassis (showing the state of the Ethernet satellite compact flash)

Output example: show chassis (showing 7750 SR)

Table 77: Output fields: chassis

Label	Description
Name	The system name for the router
Type	The router model number
Chassis Topology	The inter-chassis topology mode in which the system is operating: • Standalone – indicates that the system is comprised of a single physical router chassis • Extended (7950 XRS-40) on a 7950 XRS based system – indicates that two router chassis are connected together in a "back-to-back” topology with no additional switch fabric chassis. An extended chassis topology is comprised of two 7950 XRS-20 chassis and is also known as an 7950 XRS-40 system.
Chassis Status	The status of the chassis

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Chassis role	The chassis roles: Standalone – specifies the value for all non-7950 XRS SR OS systems and for 7950 XRS-20 standalone systems 7950 XRS-40 Master 7950 XRS-40 Extension
Location	The system location for the device
Coordinates	A user-configurable string that indicates the Global Positioning System (GPS) co-ordinates for the location of the chassis For example: • N 45 58 23, W 34 56 12 • N37 37' 00 latitude, W122 22' 00 longitude • N36*39.246' W121*40.121'
CLLI Code	The Common Language Location Identifier (CLLI) that uniquely identifies the geographic location of places and certain functional categories of equipment unique to the telecommunications industry
Number of slots	The number of slots in the 7450 ESS and 7750 SR chassis that are available for plug-in cards. The total number includes the IOM or CCM slot or slots and the CPM slots.
Number of ports	The total number of ports currently installed in this chassis. This count does not include the Ethernet ports on the CPMs or CCMs that are used for management access.
Oper Number of Slots	The number of slots in the 7950 XRS chassis that are available for XCM cards and CPM cards operating as the active or standby CPM. The operational number of slots can reach to 24 when the chassis topology is extended.
Critical LED state	The current state of the Critical LED in this chassis
Major LED state	The current state of the Major LED in this chassis
Minor LED state	The current state of the Minor LED in this chassis
Base MAC address	The base chassis Ethernet MAC address
FP Generations	Identifies the FP generations for cards in the system
System Profile	The scaling profile in use by the system
Over Temperature state	Indicates if there is currently an over temperature condition (OK = not currently over temp)
Admin chassis mode	The configured chassis mode (chassis mode D)
Oper chassis mode	The current chassis mode

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Part number	The part number of the particular hardware assembly. In the **show chassis** output, the first section of Hardware Data output is for the chassis midplane.
CLEI code	The Common Language Equipment Code Identifier (CLEI) code of the particular hardware assembly
Serial number	The serial number of the particular hardware assembly
Manufacture date	The manufacture date of the particular hardware assembly
Manufacturing string	The factory inputted manufacturing text string for the particular hardware assembly
Manufacturing deviations	Additional manufacturing data
Manufacturing assembly number	Additional manufacturing data
Time of last boot	The date and time the most recent boot occurred
Current alarm state	The alarm conditions for the specific board
Number of fan trays	The total number of fan trays installed in this chassis
Number of fans	The total number of fans installed in this chassis
Fan tray number	The ID for each fan tray installed in the chassis
Fan tray type	The type of fan tray: • Chassis – standard fan tray • PCM – dedicated to cooling PCMs in the 7950 XRS-20e Universal chassis
Operational status	The current status of the fan tray
Speed	The speed of the fans as a percentage
Status	The current status of the particular hardware assembly (up, down, or not equipped)
Power Supply Information	
Number of power supplies	The number of power supplies in the chassis
Power supply number	The ID for each power supply installed in the chassis
Power supply type	The basic type of the power supply
Status	The power supply status
DC power	Indicates if the DC power is over the safe range
Over temp	Indicates if the power supply is over the safe temperature range
Power supply model	The model of the power supply

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Input voltage	The input voltage for the specific power supply or power module. This field is only displayed for a subset of platforms.
CCM Slot	The identifier of the CCM (A or B)
Equipped	Indicates if the CCM is detected as physically present
Temperature	The current temperature detected by the particular hardware assembly
Temperature threshold	The temperature at which the particular hardware assembly considers an over temperature condition to exist
Part number	The CCM part number
CLEI code	The code used to identify the router
Serial number	The CCM serial number. Not user modifiable.
Manufacture date	The chassis manufacture date. Not user modifiable.
Manufacturing string	The factory-inputted manufacturing text string. Not user modifiable.
Administrative state	The administrative state of the card: • Up — The card is administratively up • Down — The card is administratively down
Operational state	The operational state of the card: • Up — The card is operationally up • Down — The card is operationally down
Temperature	The internal chassis temperature
Temperature threshold	The value above which the internal temperature must rise to indicate that the temperature is critical
Time of last boot	The date and time the most recent boot occurred
Current alarm state	The alarm conditions for the CCM
Flash Information	
Flash	The compact flash (CF) name
Administrative State	The administrative state of the CF: • Up — The CF is administratively up • Down — The CF is administratively down
Operational state	The operational state of the CF: • Up — The CF is operationally up

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Down — The CF is operationally down
Serial number	The serial number of the CF
Firmware revision	The firmware revision
Model number	The model number of the CF
Size	The size of the CF
Free space	The free space available on the CF
Percent used	The percentage of the CF that has been used

chassis

Syntax

chassis [*phys-chassis-id*]

Context

[Tree] (tools>perform chassis)

Full Context

tools perform chassis

Description

The following command performs chassis maintenance operations.

Parameters

phys-chassis-id

The identifier of the physical chassis for the tools perform context.

Values 1

Platforms

All

chassis

Syntax

chassis

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context
[Tree] (clear chassis)

Full Context
clear chassis

Description
Commands in this context clear data for various pieces of equipment that sit in a chassis.

Platforms
7750 SR-s

chassis

Syntax
chassis

Context
[Tree] (show>mcast-mgmt chassis)

Full Context
show mcast-management chassis

Description
This command displays multicast path management chassis information.

Platforms
7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform chassis check-bp-eprom

Description

This command checks the chassis BP EPROM. The function reads the EPROM and is corrected with one of the following:

- for each SEEP that is found to be acceptable or can be corrected:

  "BP eprom X: ok” with X = seep number

- for each SEEP that is found to be unacceptable and cannot be corrected:

  "BP eprom X: not ok”

6.28 class-forwarding-policy

class-forwarding-policy

Syntax

class-forwarding-policy [*policy-name*]

Context

[Tree] (show>router>mpls class-forwarding-policy)

Full Context

show router mpls class-forwarding-policy

Description

This command displays the mapping of the Forwarding Classes (FCs) to the set IDs as well as the default set ID of the CBF policy. It also shows the number of MPLS LSPs that reference this CBF policy.

Parameters

policy-name

Specifies the name of the class-forwarding-policy, up to 256 characters and composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of class forwarding policy information.

Output Example

```
*A:Dut-B>show>router# show router mpls class-forwarding-policy "policy1"
===============================================================================
MPLS Class Forwarding Policy Table

6.29 classic-lsn-sub

classic-lsn-sub

Syntax

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length*

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length* **subscriber-string**

Context

[Tree] (clear>nat classic-lsn-sub)

Full Context

clear nat classic-lsn-sub

Description

This command clears NAT mappings for classic LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ip-prefix/length

Specifies the IP prefix and length.

Values ip-prefix: a.b.c.d (host bits must be 0)length: 0 to 32

subscriber-string

Clears subscriber string information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.30 clear

clear

Syntax

clear *aps-id* {**protect** | **working**} [**number** *number*]

Context

[Tree] (tools>perform>aps clear)

Full Context

tools perform aps clear

Description

This command removes all Automated Protection Switching (APS) operational commands.

Parameters

aps-id

This option clears a specific APS on un-bundled SONET/SDH ports.

Values

aps-id	aps-*group-id*	
	aps	keyword
	group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

Values 1, 2

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear

Syntax

clear *ring-index*

Context

[Tree] (tools>perform>eth-ring clear)

Full Context

tools perform eth-ring clear

Description

The clear command, at the Ethernet Ring Node, is used for the following operations:

- Clearing an active local administrative command, such as a Forced Switch or Manual Switch
- Triggering reversion before the WTR or WTB timer expires in case of revertive operation
- Triggering reversion in case of non-reactive operation

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear

Syntax

clear id *tunnel-id*

clear *lsp-name*

Context

[Tree] (tools>perform>router>mpls>tp-tunnel clear)

Full Context

tools perform router mpls tp-tunnel clear

Description

This command clears all the MPLS-TP linear protection operational commands for the specified LSP that are currently active.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 1 to 61440

lsp-name

Specifies the name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear

Syntax

clear

Context

[Tree] (clear)

Full Context

clear

Description

Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).

Platforms

Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform wlan-gw lanext bd clear-arp

Description

This command clears all ARP table entries for the specified HLE BD or a specific entry if an IPv4 address is specified.

Parameters

ipv4-address

Specifies the IPv4 address of the ARP table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.32 clear-force

clear-force

Syntax

clear-force all-mc

clear-force lag-id *lag-id* [**sub-group** *sub-group-id*]

clear-force peer-mc *ip-address*

Context

[Tree] (tools>perform>lag clear-force)

Full Context

tools perform lag clear-force

Description

This command clears forced status.

Parameters

all-mc

Specifies all MC-LAGs.

lag-id

Specifies the LAG ID.

Values 1 to 800

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the peer MC IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

Full Context

tools perform wlan-gw lanext bd clear-mac

Description

This command clears all MAC table entries for the specified HLE BD or a specific entry if a MAC address is specified.

Parameters

ieee-address

Specifies the MAC address of the MAC table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.36 clear-neighbor

clear-neighbor

Syntax

clear-neighbor [**ip6** *ipv6-address*]

Context

[Tree] (tools>perform>wlan-gw>lanext>bd clear-neighbor)

Full Context

tools perform wlan-gw lanext bd clear-neighbor

Description

This command clears all neighbor table entries for the specified HLE BD or a specific entry if an IPv6 address is specified.

Parameters

ipv6-address

Specifies the IPv6 address of the neighbor table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.39 client

client

Syntax

client all

client client-address *ip-address*

Context

[Tree] (show>test-oam>twamp client)

Full Context

show test-oam twamp client

Description

This command displays TWAMP client information.

Parameters

ip-address

Specifies the IPv4 or IPv6 address of a client.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

all

Displays all TWAMP client information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of TWAMP client information.

client-db *db-name* **client** *client-index*

client-db *db-name*

Context

[Tree] (show>ipsec client-db)

Full Context

show ipsec client-db

Description

This commands displays information for client databases. Using this command without any parameters will list all configured client database.

Parameters

db-name

Species to list all IPsec gateways that use the specified client database.

association

Displays information for which this client database is associated.

client *client-index*

Specifies the client index or client name of client entry in the client database.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show client-db** command.

Output Example

```
show ipsec client-db
===============================================================================
```

```
Elapsed Time (us)   :  2
```

Parameters

db-name

Specifies the name of the client-db.

peer-ip *peer-ip-address*

Specifies the peer's tunnel IP address as input, either v4 or v6.

string-type

Specifies the peer's IDi as input.

Values asn1dn, fqdn, rfc822

idi-ip-address

Specifies the peer's IDi of address type as input, either v4 or v6

string-value *string-value*

Specifies the value of FQDN or RFC822 IDi.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

6.41 client-known-hosts

client-known-hosts

Syntax

client-known-hosts [*ip-address*|*dns-name*]

Context

[Tree] (show>system>ssh client-known-hosts)

Full Context

show system ssh client-known-hosts

Description

This command displays SSH known-host public keys information.

The output includes dynamically learned and statically configured keys.

Parameters

ip-address*|*dns-name

Displays known-host public keys for the specified SSH host.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 128 chars max

Platforms

All

Output

The following output is an example of SSH known-host public key information, and Table 78: Output fields: SSH known-host public keys describes the output fields.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Source	dynamic_list — Indicates the key was learned dynamically configuration — Indicates the key was configured statically
Number of public keys	The number of known-host public keys displayed

client-known-hosts

Syntax

client-known-hosts

Context

[Tree] (tools>perform>system>ssh client-known-hosts)

Full Context

tools perform system ssh client-known-hosts

Description

Commands in this context remove dynamically learned SSH client known-host public keys.

Known-host keys are stored per user. Use these commands to delete a dynamic entry when an SSH server presents a new host key for a host that is already in the known-host list. SR OS drops the SSH connection until the existing dynamic entry is removed.

6.43 clock-recovery

clock-recovery

Syntax

clock-recovery

Context

[Tree] (clear>system>ptp clock-recovery)

Full Context

clear system ptp clock-recovery

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command resets the PTP recovery algorithm.

The algorithms involved in PTP frequency and time recovery are reset to the initial conditions. This command clears any previous history and can be used to ensure a consistent starting state for a test or can be used to clear any unexpected behaviour in the algorithm.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Context

[Tree] (tools>perform>subscr-mgmt coa)

Full Context

tools perform subscriber-mgmt coa

Description

This command triggers a Change of Authorization (CoA) without a RADIUS authentication policy.

This command can be used to spoof a CoA from a configured server for purposes such as testing CoA python scripts. However, spoofing a CoA from a RADIUS server requires the configuration of a RADIUS authentication policy.

Parameters

nas-port-id *attr-string*

Specifies the physical access circuit of the NAS up to 253 characters.

ip-address

Specifies the IPv4 host address.

Values *ipv4-address*: a.b.c.d

ipv6-address

Specifies the IPv6 host address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values

ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

ipv6-prefix[/ipv6-prefix-length]

Specifies the IPv6 PD host prefix.

Values

ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length	[0 to 128]

ipv6-prefix[/ipv6-prefix-length]

Specifies the IPv6 SLAAC host prefix.

Values

ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length	[0 to 128]

serv-id

Specifies the service ID of the LNS subscriber.

Values 0 to 4294967295

acct-session-id *attr-string*

Specifies the subscriber accounting session ID up to 22 characters.

alc-subscr-id *attr-string*

Specifies the subscriber ID up to 32 characters.

alc-brg-id *attr-string*

Specifies the BRG ID to a maximum of 32 characters.

user-name *attr-string*

Specifies the string matching RADIUS VSA [1] username associated to the host(s), up to 32 characters.

mac-address

Specifies the subscriber host MAC address in the form: xx:xx:xx:xx:xx:xx.

attribute

Specifies the attributes (RADIUS VSAs) for override. The VSA must be specified in number format. For example, VSA Alc-Subsc-Prof-Str=”1M-prof” is expressed as 6527.12 ="1M-prof”. Up to five attributes can be specified within this command.

For more information on VSAs, refer to the *7750 SR and VSR RADIUS Attributes Reference Guide*.

evs,<type>,<vendor>,<vendor-type>=<value>

levs,<type>,<vendor>,<vendor-type>=<value>

file-url

Specifies the file URL where the VSAs are located.

Values

local-url	[*cflash-id/*] [*file-path*] (up to 200 characters including the cflash-id directory length of up to 99 characters each)
remote-url	[{**ftp**://| **tftp**://}*login*:*pswd@remote-locn/*][*file-path*] (up to 255 characters with the directory length of up to 99 characters each)
remote-locn	[*hostname* | *ipv4-address* | *ipv6-address*]
ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x [-*interface*]
	x:x:x:x:x:x:d.d.d.d[-*interface*]
	x - [0 to FFFF]H
	d - [0 to 255]D
	interface - Specifies the link local addresses, up to 32 characters
cflash-id	cf1: | cf1-A: | cf1-B: | cf2 :| cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

attr-string

Specifies the RADIUS server name that is configured under the router or VPRN service context, up to 32 characters.

attr-string

Specifies the router or VPRN service instance where the RADIUS server is configured, up to 32 characters.

debug

Displays the debug message associated with the CoA command.

6.46 collect-lmm-fc-stats

collect-lmm-fc-stats

Syntax

collect-lmm-fc-stats [{**sap** {*sap-id* | **all**} | **sdp** {*sdp-id* | **all**} | **interface** {*interface-name* | **all**}}]

Context

[Tree] (show>eth-cfm collect-lmm-fc-stats)

Full Context

show eth-cfm collect-lmm-fc-stats

Description

This command displays the entities that are configured with per-FC LMM counters, and whether those counters are counting in-profile packets only or all countable packets.

Each entity may have up to eight individual FC-based counters. Each FC includes a positional index value (1 to 8) under the FC that is counting. A "P" indicates that the index is only counting in-profile traffic.

When no display filters are applied, this command displays all entities and the individual FC counters. Optional filters help to reduce the output that is visible to the operator.

Parameters

sap-id

Specifies a SAP entity for which to display active individual FC counters.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*	
dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id*:[qtag1| cp-conn-prof-id]

tunnel-id	**tunnel**-*id*.*private* | *public*:*tag*	
	tunnel	keyword
	id	1 to 16
	tag	0 to 4094

sdp-id

Specifies an SDP entity for which to display active individual FC counters.

Values *sdp-id* — 1 to 32767

vc-id — 1 to 4294967295

© 2026 Nokia.

Use subject to Terms available at: www.nokia.com/terms.

interface-name

Specifies an interface entity for which to display active individual FC counters, up to 32 characters maximum.

all

Keyword to display all SAP, SDP, and interface entities, and the associated active individual FC counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output example shows information about entities that are configured with per-FC counters.

Output Example

```
A:node-2# show eth-cfm collect-lmm-fc-stats
===============================================================================
The FC to priority bit mapping for collect-lmm-fc-stats is as follows:
NC = 7, H1 = 6, EF = 5, H2 = 4, L1 = 3, AF = 2, L2 = 1, BE = 0

The number below each FC column indicates which counter index PDUs matching
that FC will be counted in. Entries with a "P" beside the number indicate
that only in-profile traffic is being counted. Entries without a "P" are not
profile aware and count all PDUs associated with that FC.

collector

Syntax

collector [*ip-address*[**:***port*]] [**detail**]

Context

[Tree] (show>cflowd collector)

Full Context

show cflowd collector

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays administrative and operational status of data collector configuration.

Parameters

ip-address

Displays information only about the specified collector IP address.

Default all collectors

:*port*

Displays information only about the collector on the specified UDP port.

Default all UDP ports

Values 1 to 65535

detail

Displays details about either all collectors or the specified collector.

Platforms

All

Output

The following output is an example of cflowd collector information, and Table 79: Output fields: cflowd collector describes the output fields.

```
A:node-2# show cflowd collector

===============================================================================
Cflowd Collectors
===============================================================================
Host Address    Port  Version   AS Type   Admin   Oper            Sent
-------------------------------------------------------------------------------
138.120.135.103 2055  v5        peer      up      up              1380 records

-------------------------------------------------------------------------------
Collectors : 4
===============================================================================
```

Table 79: Output fields: cflowd collector

Label	Description
Host Address	The IP address of a remote cflowd collector host to receive the exported cflowd data
Port	The UDP port number on the remote cflowd collector host to receive the exported cflowd data
AS Type	The style of AS reporting used in the exported flow data

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	origin — reflects the endpoints of the AS path which the flow is following
	peer — reflects the AS of the previous and next hops for the flow
Version	Specifies the configured version for the associated collector
Admin	The desired administrative state for this cflowd remote collector host
Oper	The current operational status of this cflowd remote collector host
Recs Sent	The number of cflowd records that have been transmitted to this remote collector host
Collectors	The total number of collectors using this IP address

The following output is an example of cflowd collector information, and Table 80: Output fields: cflowd collector detail describes the output fields.

Output Example

```
A:node-2# show cflowd collector detail

===============================================================================
```

Table 80: Output fields: cflowd collector detail

Label	Description
Address	The IP address of a remote cflowd collector host to receive the exported cflowd data
Port	The UDP port number on the remote cflowd collector host to receive the exported cflowd data
Router	The router
Description	A user-provided descriptive string for this cflowd remote collector host
Version	The version of the flow data sent to the collector
AS Type	The style of AS reporting used in the exported flow data
	origin — reflects the endpoints of the AS path which the flow is following

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	peer — reflects the AS of the previous and next hops for the flow
Admin State	The desired administrative state for this cflowd remote collector host
Oper State	The current operational status of this cflowd remote collector host
Records Sent	The number of cflowd records that have been transmitted to this remote collector host
Last Changed	The time when this row entry was last changed
Last Pkt Sent	The time when the last cflowd packet was sent to this remote collector host
Aggregation Type	The bit mask which specifies the aggregation schemes used to aggregate multiple individual flows into an aggregated flow for export to this remote host collector
	none — no data will be exported for this remote collector host
	raw — flow data is exported without aggregation in version 5 format
	All other aggregation types use version 8 format to export the flow data to this remote host collector
Collectors	The total number of collectors using this IP address
Status	The status of the aggregation type
Sent	The number of packets with flow date sent to the associated collector
Open	This counter shows the number of partially filled packets which have some flow data but are not yet filled or have been timed out (60 seconds maximum)
Errors	This counter increments when there was an error during exporting of the collector packet; the most common reason will be a UDP unreachable destination for the configured collector
Packets sent	The number of packets sent
Template set	The template set sent to the collector when using cflowd version 9 or version 10. basic – basic flow data is sent mpls-ip – extended flow data is sent, which includes IP and MPLS flow information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	l2-ip – extended flow data is sent, which includes Layer 2 (Ethernet) and IP flow information. This template is only applicable for version 10 IPFIX collectors. mpls-transport – flow statistics for MPLS traffic using only the outer transport label, EXP bit value, and ingress interface as the flow identifier. This template enables the collection of flow statistics on a core router to develop LSP usage statistics.
Traffic Type	The traffic type
Template sent	The time and date at which the template is sent

6.49 commit-history

commit-history

Syntax

commit-history

commit-history [*keyword*] [**commit-id** *number*]

Context

[Tree] (show>system>management-interface commit-history)

Full Context

show system management-interface commit-history

Description

This command displays the history of configuration changes that were committed in model-driven interfaces. A separate history of the last commits is maintained for each configuration region (bof, configure, debug, and LI). Each commit is uniquely identified by a numerical sequential incrementing commit ID assigned by the system.

When a gNMI, NETCONF, or MD-CLI Set request starts a commit transaction, an entry, including the persist ID and rollback duration, displays in the router commit history. When the system confirms the commit, the commit history displays the confirmation or, if the commit is not confirmed and the rollback duration expires, the commit history displays a rollback entry.

Note:
This command is not available in the classic CLI.

Parameters

keyword

Specifies the configuration region to display.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values bof, configure, debug, li

Default configure

number

Specifies the commit history ID to display.

Values 1 to 4294967295

Platforms

All

Output

The following output is an example of commit history information, and Table 81: Output fields: commit history describes the commit history output fields.

Output Example

```
A:admin@node-2# show system management-interface commit-history
===============================================================================
Commit History

Table 82: Output fields: community

Label	Description
Community	Displays the community string name for SNMPv1 and SNMPv2c access only.
Access	Displays access information. r — The community string allows read-only access. rw — The community string allows read-write access. rwa — The community string allows read-write access. mgmt — The unique SNMP community string assigned to the management router. vpls-mgmt — The unique SNMP community string assigned for vpls management.
View	Displays the view name.
Version	Displays the SNMP version.
Group Name	Displays the access group name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
src-access-list	Displays the name of the list of source IP addresses that are allowed to use the community, as configured using the **community** configuration command.
authFailures	Displays the number of SNMP requests that have failed validation using this **community**.
No of Communities	Displays the total number of configured community strings.

community

Syntax

community *comm-id* {**detail** | **longer**}

community *comm-id* **hunt**

Context

[Tree] (show>router>bgp>routes community)

Full Context

show router bgp routes community

Description

This command displays BGP routes with routes with a community value matching the specified value.

community is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

– {*target* | *origin*}:*ext-asnum*:*comm-val*
– **bandwidth**:*asnum*:*val-in-mbps*
– **ext:4300**:*ovstate*
– **ex \t**:*value1*:*value2*
– **flowspec-set**:*ext-asnum*:*group-id*

where:

– *target* — route target
– *origin* — route origin
– *ip-address* — a.b.c.d
– *ext-comm-val* — 0 to 4294967295
– *ext-asnum* — 0 to 4294967295
– **bandwidth** — bandwidth
– *val-in-mbps* — 0 to 16777215
– **ext** — extended
– **ext:4300** — origin verification
– *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
– *value1* — 0000 to FFFF
– *value2* — 0 to FFFFFFFFFFFF
– **flowspec-set —** flow-spec set
– *group-id* — 0 to 16383

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

hunt

Displays entries for the specified route.

tools perform system management-interface configuration-mode

Description

This command checks if the configuration meets the prerequisite reference requirements to change the management interface configuration mode. Incompatible configuration commands are displayed with an error reason if the prerequisite is not met. This command does not check if the configuration has commands that are unsupported in model-driven interfaces.

Parameters

mixed

Specifies to check mixed management interface configuration mode.

model-driven

Specifies to check model-driven management interface configuration mode.

li

Specifies to only check the li configuration region.

configure

Specifies to only check the configure configuration region.

Number of sessions: 5
'#' indicates the current active session
'(n)' indicates the number of internal sessions
================================================================================
```

Table 84: Output fields: configuration sessions

Label	Description
Session ID	The session ID.
Region	The region or scope that the datastore belongs to.
Datastore	Datastores that can be locked. For example: Running and Candidate.
Lock State	Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state.
Username	The name of the user.
Session Mode	Exclusive — An exclusive session. Global — A shared session. Private — A private session.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Private Exclusive — A private exclusive session. Read-Only — A read-only session.
Idle Time	The idle time of the session.
Session Type	NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system session is running.
From	The originating IP address, CRON, or EHS.

6.56 connection-profile-vlan

connection-profile-vlan

Syntax

connection-profile-vlan [*conn-prof-id*]

Context

[Tree] (show connection-profile-vlan)

Full Context

show connection-profile-vlan

Description

This command displays information about the connection-profiles (VLAN) in the system. When a specific connection profile is shown, the vlan-ranges that it contains are displayed.

Parameters

conn-prof-id

Specifies the VLAN connection profile ID.

Values 1 to 8000

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of connection profile VLAN information.

Output Example

```
*A:Dut# show connection-profile-vlan
===============================================================================
Connection Profile Vlan Summary Information
===============================================================================
CP Index                                Number of Members
-------------------------------------------------------------------------------
1                                       2
===============================================================================
*A:Dut# show connection-profile-vlan 1
===============================================================================
Connection Profile 1 Information
===============================================================================
Description : (Not Specified)
Last Change : 12/01/2015 16:50:34
===============================================================================
Connection Profile Vlan Eth Information
===============================================================================
Range Start         Range End                     Last Change
-------------------------------------------------------------------------------
5                   100                           12/01/2015 16:50:34
150                 300                           12/01/2015 16:50:34
===============================================================================
```

6.57 connections

connections

Syntax

connections

Context

[Tree] (show>li>x-interfaces connections)

Full Context

show li x-interfaces connections

Description

This command displays the connections between the X1, X2, and X3 interfaces.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

connections

Syntax

connections [**detail**] [**address** *ip-address*] [**port** *port-number*]

Context

[Tree] (show>system connections)

Full Context

show system connections

Description

This command displays UDP and TCP connection information.

If no command line options are specified, a summary of the TCP and UDP connections displays.

Entries in the output with a vRtrID of 4095 and a local address of 127.x.x.x are internal connections serving internal SR OS purposes, and are not used for external protocols.

Parameters

ip-address

Displays only the connection information for the specified IP address.

Values

ipv4-address:	a.b.c.d (host bits must be 0)	
ipv6-address:	x:x:x:x:x:x:x:x[-interface]	
	x:x:x:x:x:x:d.d.d.d[-interface]	
	where	
	x:	[0 to FFFF]H
	d:	[0 to 255]D
	interface:	up to 32 characters, mandatory for link local addresses

port-number

Displays only the connection information for the specified port number.

Values 0 to 65535

detail

Appends TCP statistics to the display output.

Table 85: Output fields: system connections

Label	Description
Proto	The socket protocol, either TCP or UDP.
RecvQ	The number of input packets received by the protocol.
TxmtQ	The number of output packets sent by the application.
Local Address	The local address of the socket. The socket port is separated by a period.
Remote Address	The remote address of the socket. The socket port is separated by a period.
State	Listen — The protocol state is in the listen mode. Established — The protocol state is established. vRtrID — The virtual router identifier. • vRtrID 0 — listens for connections in all routing instances including the Base and management VRFs. • vRtrID 1 — Base routing instance • vRtrID 4095 — management routing instance MSS — The TCP maximum segment size.

Description

This command displays MACsec specific CA information.

Parameters

ca-name

Displays MACsec information for the specified CA name, up to 256 characters in length.

detail

Displays MACsec CA detailed information.

anysec

Displays ANYsec CA information.

macsec

Displays MACsec CA information.

Platforms

All

Table 86: Output fields: MACsec connectivity association

Label	Description
ca-name	Specifies the CA name.

Output Example: show macsec connectivity-association <ca-name>

```
A:Dut-C# show macsec connectivity-association "abcdefghijklmnoprstuvxyz@!"
===============================================================================
Connectivity Association "abcdefghijklmnoprstuvxyz@!"
===============================================================================
Admin State        : Up
Description        : alsfjalsfjafja;lsjflasjflasjfl
Replay Protection  : Disabled
Replay Window Size : 333
Macsec Encrypt     : Enabled
Clear Tag Mode     : dual-tag
Cipher Suite       : gcm-aes-256
Encryption Offset  : 30
Assigned ports     : 2/1/9 2/1/10
-------------------------------------------------------------------------------
Static Cak
-------------------------------------------------------------------------------
MKA Key Server Priority      : 16
Active Pre-Shared-Key Index  : 1
Active Pre-Shared-Key CKN    : aabbccddeeff00112233445566778899
===============================================================================
```

Output Fields: show macsec connectivity-association <ca-name>

Table 87: Output fields: MACsec connectivity association name describes the output fields for the **show macsec connectivity-association <ca-name>** command.

Table 87: Output fields: MACsec connectivity association name

Label	Description
Admin State	Up — The CA is administratively up. Down — The CA is administratively down. If port <x/y/z> ethernet>macsec is shutdown, the admin state will be down. Otherwise, the admin state is up.
Description	Specifies a user description for this CA.
Replay Protection	Enabled — Replay Protection is enabled. Disabled — Replay Protection is disabled. If replay protection is enabled for this CA, the out of window packet will be discarded.
Replay Window Size	Specifies the size, in packets, of the replay window.
Macsec Encrypt	Enabled — MACsec is enabled. Disabled — MACsec is disabled.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Clear Tag Mode	Specifies the clear tag mode: single-tag, dual-tag.
Cipher Suite	Specifies the cipher suite used for encrypting the SAK: gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256.
Encryption Offset	Specifies the encryption offset configured on this node: 0, 30, 50.
Assigned ports	Specifies all ports that contain this CA.
MKA Key Server Priority	Specifies the MKA key server priority: 0-255 (default 16).
Active Pre-Shared Key Index	Specifies the active pre-shared key index: 1-2 (default 1).
Active Pre-Shared Key CKN	Specifies the active PSK CAK name.

Output Example: show macsec connectivity-association <ca-name> detail

```
A:Dut-C# show macsec connectivity-association "abcdefghijklmnoprstuvxyz@!" detail
===============================================================================
Connectivity Association "abcdefghijklmnoprstuvxyz@!"

6.59 convergence

convergence

Syntax

convergence [*family*]

Context

[Tree] (show>router>bgp convergence)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router bgp convergence

Description

This command displays information about how the router reconverged its routing state after the last restart of BGP.

Parameters

family

Specifies an address family for which to display BGP route convergence information.

Values ipv4, ipv6, vpn-ipv4, vpn-ipv6, label-ipv4, label-ipv6

Platforms

All

Output

Table 89: Output fields: BGP convergence describes the BGP convergence output fields.

Use the following command to display BGP route convergence information for routes of all address families.

```
show router bgp convergence
```

Output Example

```
===============================================================================
BGP IPv4 Convergence
===============================================================================
Min wait advertise timer                    : 30

===============================================================================
```

Table 89: Output fields: BGP convergence

Label	Description
Min wait advertise timer	The operational value of **min-wait-to-advertise** (0 if the feature is disabled) Use the **min-wait-to-advertise** command in the **configure router bgp convergence** context to configure the minimum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises any routes in a specific set of address families.
Established peers at min wait timer expiry	The number of address-family peers that were established when the **min-wait-to-advertise** command timer value expired (N/A if the feature is disabled)
Current established peers	The current number of address family peers that are in the established state
First session established time	The time, relative to BGP instance restart at time T=0, when the first address family session was established. This stops being tracked when the **min-wait-to-advertise** timer expires.
Last session established time	The time, relative to BGP instance restart at time T=0, when the last address-family session was established.
Max Wait advertise timer	The operational value of the **max-wait-to-advertise** command for the address family (0 if the feature is disabled) Use the **max-wait-to-advertise** command in the **configure router bgp convergence family** context to configure the maximum amount of time BGP waits after the first session is established, following a BGP-instance restart, before it advertises the routes of a specific address family to BGP peers.
Converged peers	The number of address-family converged peers. This is the number of BGP neighbors that have, up to now, sent an EOR marker for the address family. N/A if the feature is disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Converged state	The convergence state of the address family: waiting, started, partial, timeout or converged. N/A if the feature is disabled. Waiting is when no peers have reconnected yet. The waiting to start transition occurs when the first session comes up. The started to partial transition occurs when at least one address-family peer has sent the EOR marker. The partial to converged transition occurs when all address-family peers that have been up continuously since the **min-wait-to-advertise** timer expired have sent the EOR marker. The partial to timeout transition occurs when the **max-wait-to-advertise** timer expires and not all address family peers that have been up continuously since the **min-wait-to-advertise** timer expired have sent the EOR marker.
Converged time	The convergence time of the address family after the last restart, relative to BGP instance restart at time T=0. N/A is displayed if the convergence state is waiting, started, partial, or timeout.

6.60 count

count

Syntax

count [**detail**]

Context

counters

Syntax

counters

Context

[Tree] (show>snmp counters)

Full Context

show snmp counters

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays SNMP counters information. SNMP counters will continue to increase even when SNMP is shut down. Some internal modules communicate using SNMP packets.

Platforms

All

Output

The following output is an example of SNMP counter information.

Table 90: Output fields: counters describes the SNMP counters output fields.

Output Example

```
A:ALA-1# show snmp counters
===============================================================================
SNMP counters:
===============================================================================
  in packets :  463
-------------------------------------------------------------------------------
    in gets     : 93
    in getnexts : 0
    in sets     : 370

  out packets   : 463
-------------------------------------------------------------------------------
    out get responses :  463
    out traps         :  0

  variables requested :  33
  variables set       :  497
===============================================================================
A:ALA-1#
```

Table 90: Output fields: counters

Label	Description
in packets	Displays the total number of messages delivered to SNMP from the transport service.
in gets	Displays the number of SNMP get request PDUs accepted and processed by SNMP.
in getnexts	Displays the number of SNMP get next PDUs accepted and processed by SNMP.
in sets	Displays the number of SNMP set request PDUs accepted and processed by SNMP.
out packets	Displays the total number of SNMP messages passed from SNMP to the transport service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
out get responses	Displays the number of SNMP get response PDUs generated by SNMP.
out traps	Displays the number of SNMP Trap PDUs generated by SNMP.
variables requested	Displays the number of MIB objects requested by SNMP.
variables set	Displays the number of MIB objects set by SNMP as the result of receiving valid SNMP set request PDUs.

6.65 cpm-queue

cpm-queue

Syntax

cpm-queue *queue-id*

Context

[Tree] (show>system>security cpm-queue)

Full Context

show system security cpm-queue

Description

This command displays CPM queues.

Parameters

queue-id

Specifies an integer value that identifies a CPM queue.

Values 0, 33 to 2000

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of CPM IPv6 filter information.

Table 92: Output fields: CPM IPv6 filter describes CPM queue output fields.

Output Example

```
A:ALA-35# show system security cpm-queue 1001
===============================================================================
CPM Queue Entry
===============================================================================
Queue Id           : 1001
-------------------------------------------------------------------------------
Queue Parameters :
-------------------------------------------------------------------------------
PIR                : 10000000          CIR               : 1000000
CBS                : 4096              MBS               : 8192
===============================================================================
A:ALA-35#
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 92: Output fields: CPM IPv6 filter

Label	Description
PIR	Displays the administrative Peak Information Rate (PIR) for the queue.
CIR	Displays the amount of bandwidth committed to the queue.
CBS	Displays the amount of buffer drawn from the reserved buffer portion of the queue's buffer pool.
MBS	Displays the maximum queue depth to which a queue can grow.

cpm-queue

Syntax

cpm-queue *queue-id*

Context

[Tree] (clear cpm-queue)

Full Context

clear cpm-queue

Description

This command clears CPM queue information.

Parameters

queue-id

Specifies the CPM queue ID.

Values 33 to 2000

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

6.66 cpu

cpu

Syntax

cpu [**sample-period** *seconds*]

Context

[Tree] (show>system cpu)

Full Context

show system cpu

Description

This command displays CPU utilization per task over a sample period.

Parameters

seconds

Specifies the number of seconds over which to sample CPU task utilization.

Values 1 to 300

Default 1

Platforms

All

Output

The following output is an example of CPU information, and Table 93: Output fields: system CPU describes the output fields.

Output Example

```
*A:cses-E11# show system cpu sample-period 2
===============================================================================
CPU Utilization (Sample period: 2 seconds)

```

Table 93: Output fields: system CPU

Label	Description
CPU Utilization	The total amount of CPU time.
Name	The process or protocol name.
CPU Time (uSec)	The CPU time each process or protocol has used in the specified time.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
CPU Usage	The sum of CPU usage of all the processes and protocols.
Capacity Usage	The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity. This column does not reflect the true CPU utilization value; that data is still available in the **CPU Usage** column. This column is the **busiest** task in each group, where **busiest** is defined as either actually running or blocked attempting to acquire a lock.
Idle	The current CPU utilization for the system.
Usage	The overall percentage of CPU idleness over the specified sample time.
Busiest Core Utilization	The utilization percentage of the busiest processor core over the specified sample time. On single core CPUs, this is the overall system utilization percentage over the specified sample time.

6.67 cpu-protection

cpu-protection

Syntax

cpu-protection

Context

[Tree] (show>system>security cpu-protection)

Full Context

show system security cpu-protection

Description

Commands in this context display CPU protection information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following output is an example of ETH CFM monitoring.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
show system security cpu-protection eth-cfm-monitoring

cpu-protection

Syntax

cpu-protection

Context

[Tree] (clear cpu-protection)

Full Context

clear cpu-protection

Description

Commands in this context clear CPU protection data.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

6.68 cpu-scheduling

cpu-scheduling

Syntax

cpu-scheduling

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>card>virtual cpu-scheduling)

Full Context

show card virtual cpu-scheduling

Description

This command displays the CPU scheduling health on the card. The scheduling health is a measure of the hypervisor load and is expressed by the percentage of clock interrupts that arrive within an accepted time period compared to the last clock interrupt.

Platforms

VSR

cpu-scheduling

Syntax

cpu-scheduling

Context

[Tree] (clear>card>virtual cpu-scheduling)

Full Context

clear card virtual cpu-scheduling

Description

This command clears virtual CPU scheduling statistics on the card.

Platforms

VSR

6.69 cpu-usage

cpu-usage

Syntax

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**]

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] **esa-vm** *esa-id/vm-id*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**}

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**} **esa-vm** *esa-id/vm-id*

Context

[Tree] (show>isa>stats>tunnel-isa cpu-usage)

Full Context

show isa statistics tunnel-isa cpu-usage

Description

This command displays the CPU usage of the specified ISA. The information includes control plane usage and data plane usage.

The data plane usage collection depends on the configuration of the **config>isa>tunnel-grp>stats-collection>isa-dp-cpu-usage system** and collects usage every 5 minutes for the last 24 hours. The output also includes the current value.

Parameters

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 24

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system when this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

mda

Displays information about the specified ISA.

Values slot/mda

control-plane

Displays information about the control plane.

data-plane

Displays information about the data plane.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa stats tunnel-isa cpu-usage** configuration.

Output Example

```
show>isa>stats>tunnel-isa# cpu-usage 1/2

6.70 create-sticky-lease

create-sticky-lease

Syntax

create-sticky-lease *host-name* [**mac** *ieee-address*] [**circuit-id** *circuit-id*] [**client-id** *client-id*] [**requested-ip-address** *ip-address*] [**circuit-id-hex** *circuit-id-hex-string*] [**client-id-hex** *client-id-hex-string*]

Context

[Tree] (tools>perform>router>dhcp>server>pool create-sticky-lease)

Full Context

tools perform router dhcp local-dhcp-server pool create-sticky-lease

Description

This command tries to create a lease-state in the specified local-dhcp-server pool with the supplied parameters. The hostname uniquely identifies this lease for subsequent operations. mac, circuit-id, and client-id should also have a unique combination of values according to the configured user-ident variables. If the requested-ip-address is provided the server tries to create a lease with this address. If this address is not available in the pool, the command fails.

Parameters

host-name

Specifies a string to identify the lease, up to 32 characters. If not specified, it can be internally generated based on MAC@ or another key.

ieee-address

Specifies the MAC address in xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx format.

circuit-id

Specifies the circuit-id string, up to 255 characters.

client-id

Specifies the client-id string, up to 255 characters.

ip-address

Specifies the IPv4 address in dotted notation a.b.c.d.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.71 credit-control

credit-control

Syntax

credit-control [**subscriber** *sub-ident-string*]

credit-control out-of-credit [**action** *action*] [**summary**]

credit-control extended-failure-handling [*state*] [**summary**]

Context

[Tree] (show>service>active-subscribers credit-control)

Full Context

show service active-subscribers credit-control

Description

This command displays active subscriber credit control information. Without additional filters, the output lists information for all active subscribers.

The output of this command can be filtered:

- per subscriber by specifying the optional **subscriber** *sub-ident-string* parameter
- per all subscribers that are out of credit by specifying the **out-of-credit** parameter with the optional **action** *action* parameter
- per subscribers that have a Diameter Gy session with Extended Failure Handling (EFH) enabled by specifying the **extended-failure-handling** parameter with the optional *state* parameter.

Parameters

sub-ident-string

Displays credit control information for the specified subscriber, up to 32 characters.

out-of-credit [action *action*]

Displays credit control information for subscribers that are out of credit and, optionally, have the specified out of credit action enabled.

Values continue, block-category, change-service-level

extended-failure-handling [*state*]

Displays credit control information for subscribers with a Diameter Gy session with EFH enabled. The optional *state* parameter lists subscribers for which the Diameter Gy session EFH is active, inactive, or both (all).

Values active, inactive, all

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

summary

Lists the number of matching entries for the specified filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber's credit control information.

Output Example

```
A:eng-BNG-2 #  show  service active-subscribers credit-control

The following table describes credit control output fields.

Table 94: Output fields: credit control

Label	Description
Credit Control Policy	The credit control policy name in use for this subscriber session
Category Map	The active category map in use for this subscriber session
Diameter Session Gy	The Diameter Gy session ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
CC Failure Handling	The current value for Credit Control Failure Handling (CCFH) as configured in the Diameter Gy application policy or as received in an Answer message from the Online Charging Server (OCS) in the CCFH AVP Values: terminate, continue, or retry-and-terminate
Extended Failure Handling (EFH) - State[1]	The EFH state: active — EFH is enabled and currently active inactive — EFH is enabled and currently inactive
EFH - Attempts [1 2]	The number of times interim credit is assigned to all rating groups followed by an attempt to establish a new Diameter Gy session with the Online Charging Server (OCS), or credit control server
EFH - Maximum Attempts[1 2]	The configured maximum attempts value in the Diameter application policy When an attempt to establish a new Diameter Gy session with the OCS continues to fail after the maximum attempts value is reached, then the user session is terminated (the subscriber hosts are deleted from the system).
EFH - Active Time [1 2]	The time since the EFH state became active for this subscriber session
EFH - Total Active Time[1]	The accumulated time of all occurrences that EFH was active during the lifetime of this subscriber session
EFH - Total Active Count [1]	The number of times that EFH was active during the lifetime of this subscriber session
Number of categories - static	The number of static categories in use for this subscriber session.
Number of categories - gx-session	The number of categories reserved for this subscriber session for Gx session level Usage Monitoring.
Number of categories - gx-pcc	The number of dynamic categories in use by this subscriber session for Gx PCC rule-based Usage Monitoring.
Category - Category Name	The name of the category as configured in the category map
Category - Ingress Queues	The ingress queues for which credit control is applied in this category as configured in the category map
Category - Egress Queues	The egress queues for which credit control is applied in this category as configured in the category map

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Category - Ingress Policers	The ingress policers for which credit control is applied in this category as configured in the category map
Category - Egress Policers	The egress policers for which credit control is applied in this category as configured in the category map
Category - Credit Volume Used	The used total octets counter (ingress and egress combined) since the last usage reporting of this rating group
Category - Credit Volume Avail.	The remaining total granted octets available before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Category - Credit Volume Thres.	The volume quota threshold in octets as received from the OCS. When the Credit Volume Available octets fall below the Credit Volume Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Volume Threshold value is set to Expired and Credit Negotiating is set to True.
Category - Credit Time Used	The number of seconds passed since the last reporting of this rating group
Category - Credit Time Avail.	The remaining number of seconds before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered
Category - Credit Time Thres.	The time quota threshold in seconds as received from the OCS When the Credit Time Available falls below the Credit Time Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Time Threshold value is set to Expired and Credit Negotiating is set to true.
Category - Credit Expired	The credit expired value: False—Negotiated credit is still available True—All granted credit is exhausted; either new credit is being negotiated with the OCS or the out of credit action is activated.
Category - Credit Negotiating	The credit negotiating value: False—There is no credit being requested to the OCS True—New credit is being requested to the OCS
Category - Out Of Credit Action	The out of credit action value:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	None—Out-of-credit action is not active When the out-of-credit action is active, the value is set to one of: ChangeServiceLevel, BlockCategory, Continue, or DisconnectHost
Category - Quota Holding Time	The Idle timeout associated with the granted quota. When no traffic associated with the quota is observed for the time specified, a credit negotiation is triggered with the OCS.
Category - Validity Time Used	The number of seconds passed since the Validity Time was installed
Category - Validity Time Avail.	The remaining number of seconds of the Validity Time before a new usage reporting is triggered for this rating group (category)
Category - EFH Unreported Credit - Current Volume [1] [2]	The unreported volume credit for the current occurrence of EFH in an active state. This counter includes the unreported used volume credit for the initial Diameter Gy session that caused the active EFH state and the unreported volume interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Volume Used counter.
Category - EFH Unreported Credit - Total Volume [1]	The accumulated total unreported volume credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported volume credit during the lifetime of the subscriber session.
Category - EFH Unreported Credit - Current Time [1] [2]	The unreported time credit for the current occurrence of EFH in an active state. This counter includes the unreported used time credit for the initial Diameter Gy session that caused the active EFH state and the unreported time interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Time Used counter.
Category - EFH Unreported Credit - Total Time [1]	The accumulated total unreported time credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters

Label	Description
	accumulate the total unreported time credit during the lifetime of the subscriber session.
Category - HTTP Rdr URL Override	The URL returned by a Diameter OCS in a Credit Control Answer (CCA) message Final-Unit-Indication/ Redirect-Server/Redirect-Server-Address AVP. This URL is used for Diameter Gy http-redirect out-of-credit actions when **allow-override** is configured.

Note:

1. These fields are only shown when EFH is enabled in the Diameter application policy. EFH is enabled using the **configure subscriber-mgmt diameter-application-policy gy extended-failure-handling no shutdown** command.
2. These fields are only shown when the EFH state is active.

6.72 credit-control-policy

credit-control-policy

Syntax

credit-control-policy [*policy-name*]

credit-control-policy *policy-name* **subscribers**

Context

[Tree] (show>subscr-mgmt credit-control-policy)

Full Context

show subscriber-mgmt credit-control-policy

Description

This command displays credit control policy information.

Parameters

policy-name

Specifies the credit control policy name, up to 32 characters.

subscribers

Displays the subscribers associated with the credit control policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

6.73 credit-reset

credit-reset

Syntax

credit-reset sap *sap-id* **subscriber** *sub-ident-string* **sla-profile** *sla-profile-name* {**category** *category-name* | **all-categories**} [**spi-sharing-type** *spi-sharing-type*] [**spi-sharing-id** *spi-sharing-id*]

credit-reset sap *sap-id* **ip** *ip-address* {**category** *category-name*| **all-categories**} [**mac** *mac-address*]

credit-reset svc *service-id* **ip** *ip-address* {**category** *category-name* | **all-categories**} [**mac** *mac-address*]

Context

[Tree] (tools>perform>subscr-mgmt credit-reset)

Full Context

tools perform subscriber-mgmt credit-reset

Description

This command resets the credit for an SLA-profile instance.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

sub-ident-string

Resets the credit for the specified subscriber identification, up to 32 characters.

sla-profile-name

Resets the credit for the specified SLA profile, up to 32 characters.

category-name

Resets the credit for the specified category, up to 32 characters.

spi-sharing-type

Resets the credit for sessions with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Resets the credit for sessions with the specified SPI sharing type and sharing identifier. The SPI sharing identifier is:

- an identifier when the sharing type is per-group
- an internal PPP or IPoE identifier when the sharing type is a per-PPP or per-IPoE session

Values 0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Resets the credit for the specified IP address.

mac-address

Resets the credit for the specified MAC IP address.

sub-profile-string

Resets the credit for the specified subscriber profile, up to 32 characters.

service-id

Resets the credit for the specified service ID.

Values service-id: 1 2147483647 svc-name: up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

6.74 cron

6.75 crp

crp

Syntax

crp [*family* | *ip-address*]

Context

[Tree] (show>router>pim crp)

Full Context

show router pim crp

Description

This command displays PIM candidate RP (CRP) information received at the elected Bootstrap router (BSR).

Parameters

family

Displays CRP information for the address family.

Values ipv4, ipv6

ip-address

Displays the IP address of the candidate RP.

Platforms

All

Output

The following output is an example of a PIM CRP configuration.

Output Example

```
A:WAS# show router pim crp
===============================================================================

```

Table 95: Output fields: PIM CRP provides PIM CRP field descriptions.

Table 95: Output fields: PIM CRP

Label	Description
RP Address	The Candidate RP address
Group Address	The range of multicast group addresses for which the CRP is the Candidate RP
Priority	The Candidate RP's priority for becoming a rendezvous point (RP). This value is used to elect RP for a group range. A value of 0 is considered as the highest priority.
Holdtime	The hold time of the candidate RP. It is used by the Bootstrap router to time out the RP entries if it does not listen to another CRP advertisement within the holdtime period.
Expiry	The minimum time remaining before the CRP will be declared down. If the local router is not the BSR, this value is 0.
Candidate RPs	The number of CRP entries.

6.76 cspf

cspf

Syntax

cspf to *ip-addr* [**from** *ip-addr*] [**bandwidth** *bandwidth*] [**include-bitmap** *bitmap*] [**exclude-bitmap** *bitmap*] [**hop-limit** *limit*] [**exclude-address** *excl-addr*] [**use-te-metric**] [**strict-srlg**] [**srlg-group**] [**exclude-node** *excl-node-id* [*excl-node-id*] [**skip-interface** *interface-name*] [**ds-class-type** *class-type*] [**cspf-reqtype** *req-type*] [**least-fill-min-thd** *thd*] [**setup-priority** *val*] [**hold-priority** *val*]

Context

[Tree] (tools>perform>router>mpls cspf)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform router mpls cspf

Description

This command computes a CSPF path with specified user constraints.

Parameters

to *ip-addr*

Specifies the destination IP address.

Values a.b.c.d

from *ip-addr*

Specifies the originating IP address.

Values a.b.c.d

bandwidth *bandwidth*

Specifies the amount of bandwidth in Mb/s to be reserved.

Values 1 to 6400000

include-bitmap *bitmap*

Specifies to include a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

exclude-bitmap *bitmap*

Specifies to exclude a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

hop-limit *limit*

Specifies the maximum number of hops for the path.

Values 2 to 255

exclude-address *ip-addr*

Specifies IP addresses, up to eight, that should be excluded in the path computation.

Values a.b.c.d

use-te-metric

Specifies the use of the link traffic engineering metric to optimize the path. By default, the link IGP metric is used.

strict-srlg

Specifies the computation of a path which is strictly disjoint from links which are members of the entered SRLG

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

srlg-group *grp-id*

Specifies up to eight Shared Risk Loss Groups (SRLGs) that path computation should avoid, or must avoid if the **strict-srlg** option is enabled. An SRLG group represents a set of interfaces which could be subject to the same failures or defects and thus share the same risk of failing.

Values 0 to 4294967295

exclude-node *excl-node-id*

Specifies a list of up to eight addresses, that should be excluded during the path computation.

Values a.b.c.d

skip-interface *interface-name*

Specifies an interface name of up to 32 characters, that should be skipped during the path computation.

ds-class-type *class-type*

Specifies the class type (CT) to associate with the computed path.

Values 0 to 7

cspf-reqtype *req-type*

Specifies the if all ECMP paths or a single path, selected randomly or using the **least-fill** parameter, should be returned.

Values all, random, least-fill

least-fill-min-thd *thd*

Specifies the use of the least-fill path selection method in the computation of the path.

Values 1 to 100

setup-priority *val*

Specifies the setup priority value to use for the path.

Values 0 to 7

hold-priority *val*

Specifies the hold priority value to use for the path.

Values 0 to 7

Label	Description
Customer-ID	The ID that uniquely identifies a customer.
Contact	The name of the primary contact person.
Description	Generic information about the customer.
Phone	The phone/pager number to reach the primary contact person.
Total Customers	The total number of customers configured.
Multi-service site	
Site	Multi-service site name. A multi-service customer site is a group of SAPs with common origination and termination points.
Description	Information about a specific customer's multi-service site.
Assignment	The port ID, MDA, or card number, where the SAP's that are members of this multi- service site are defined.
I. Sched Pol	The ingress QoS scheduler policy assigned to this multi-service site.
E. Sched Pol	The egress QoS scheduler policy assigned to this multi-service site.
Service Association	
Service-ID	The ID that uniquely identifies a service.
SAP	The SAP assigned to the service.

Context

[Tree] (show>qos>policer-hierarchy customer)

Full Context

show qos policer-hierarchy customer

Description

This command displays information about the policer hierarchy per customer.

Parameters

customer-id

Specifies the customer ID that identifies the customer to the service.

customer-site-name

Specifies the unique customer site name, up to 32 characters.

ingress

Displays ingress queue group information.

egress

Displays egress queue group information.

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

detail

Displays detailed information.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Table 97: Output fields: QoS scheduler hierarchy customer

Label	Description
Legend	Admin CIR/PIR: Specifies the configured value of CIR/PIR. Assigned CIR/PIR: Specifies the PIR/CIR rate given to a member by that parent level. Offered CIR/PIR: Specifies the offered load on that member. Consumed CIR/PIR: Specifies the amount of scheduler bandwidth used by this member.
Lvl/Wt	Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level.
Cir Lvl/Wt	Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue as compared to other child schedulers and queues while vying for bandwidth on the parent scheduler.
PIR	Specifies the PIR rate.
CIR	Specifies the CIR rate.
Parent	Specifies the parent scheduler that governs the available bandwidth given the queue aside from the queue's PIR setting.
Service-Id	The ID that uniquely identifies the policy.
Customer-Id	The ID that uniquely identifies the customer.
SAP	Specifies the Service Access Point (SAP) within the service where the policy is applied.
Multi Service Site	Specifies the multiservice site name.
Orphan Queues	Specifies the number of queues in an orphaned state.
Hierarchy	Displays the scheduler policy tree structure.
Tier0	Specifies the weight of the queue at its parent internal (Tier0) scheduler. This is a normalized value based on the port speed, or hash weight when used within a LAG.

Table 99: Output fields: QoS aggregation rate customer

Label	Description
AdminRate	Displays the configured aggregate rate in the subscriber profile.
OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the **limit-unused-bandwidth** command is enabled to protect against exceeding the aggregated bandwidth.
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**arbiter** {**root** | *name*}] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>arbiter-stats customer)

Full Context

monitor qos arbiter-stats customer

Description

This command monitors arbiter statistics for a customer site.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site which is an anchor point for ingress and egress arbiter hierarchy.

name

Specifies the name of the policer control policy arbiter. This parameter is mandatory if the SAP resides on a LAG in adapt-qos link or port-fair mode.

Values An existing arbiter-name in the form of a string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

ingress

Displays arbiter-name statistics applied on the site ingress.

egress

Displays arbiter-name statistics applied on the site egress.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>scheduler-stats customer)

Full Context

monitor qos scheduler-stats customer

Description

This command monitors scheduler statistics per customer multi-service-site. The first screen displays the current statistics related to the specified customer ID and customer site name. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta. Monitor commands are similar to **show** commands but only statistical information displays. These commands display selected statistics per the configured number of times at the interval specified.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site, which is an anchor point for ingress and egress virtual scheduler hierarchy.

scheduler-name

Specifies an existing *scheduler-name*. Scheduler names are configured in the **config>qos>scheduler-policy>tier** *level* context. This parameter is mandatory if the customer resides on a LAG in adapt-qos link or port-fair mode.

Values An existing *scheduler-name* is in the form of a string, up to 32 characters, composed of printable, 7-bit ASCII characters. If the string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

ingress

Displays the customer's multi-service-site ingress scheduler policy.

egress

Displays the customer's multi-service-site egress scheduler policy.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

damping

Syntax

damping [*ip-prefix* [*/ip-prefix-length*]] [**damp-type**] [**detail**] [**ipv4**]

damping [*ip-prefix* [*/ip-prefix-length*]] [**damp-type**] [**detail**] { **ipv6** | **label-ipv4** | **label-ipv6** | **mcast-ipv4** | **mcast-ipv6** | **mvpn-ipv4** | **vpn-ipv4** | **vpn-ipv6**}

Context

[Tree] (show>router>bgp damping)

Full Context

show router bgp damping

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays BGP routes with have been dampened due to route flapping. This command can be entered with or without a route parameter.

When the keyword **detail** is included, more detailed information displays.

When only the command is entered (without any parameters included except **detail**), then all dampened routes are listed.

When a parameter is specified, then the matching route or routes are listed.

When a **decayed**, **history,** or **suppressed** keyword is specified, only those types of dampened routes are listed.

Parameters

ip-prefix[ip-prefix-length]

Displays damping information for the specified IP prefix length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv4-prefix-le: 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

ipv6-prefix-le: 0 to 128

damp-type

Displays damping type for the specified IP address.

decayed

Displays damping entries that are decayed but are not suppressed.

history

Displays damping entries that are withdrawn but have history.

suppressed

Displays damping entries suppressed because of route damping.

detail

Displays detailed information.

ipv4

Displays damped routes for the IPv4 family.

ipv6

Displays damped routes for the IPv6 family.

label-ipv4

Displays damped routes for the label IPv4 family.

label-ipv6

Displays damped routes for the label IPv6 family.

© 2026 Nokia.

Table 100: Output fields: BGP damping

Label	Description
BGP Router ID	The local BGP router ID.
AS	The configured autonomous system number.
Local AS	The configured or inherited local AS for the specified peer group. If not configured, then it is the same value as the AS.
Network	Route IP prefix and mask length for the route.
Flag(s)	Legend: Status codes: u- used, s-suppressed, h-history, d-decayed, *-valid. If a * is not present, then the status is invalid. Origin codes: i-IGP, e-EGP, ?-incomplete, >-best
Network	The IP prefix and mask length for the route.
From	The originator ID path attribute value.
Reuse time	The time when a suppressed route can be used again.
AS Path	The BGP AS path for the route.
Peer	The router ID of the advertising router.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
NextHop	BGP nexthop for the route.
Peer AS	The autonomous system number of the advertising router.
Peer Router-Id	The router ID of the advertising router.
Local Pref	BGP local preference path attribute for the route.
Age	The time elapsed since the service was enabled.
Last update	The time when BGP was updated last in second/minute/hour (SS:MM:HH) format.
FOM Present	The current Figure of Merit (FOM) value.
Number of Flaps	The number of flaps in the neighbor connection.
Reuse time	The time when the route can be reused.
Path	The BGP AS path for the route.
Applied Policy	The applied route policy name.

damping

Syntax

damping [{*ip-prefix*/ip-prefix-length] [**neighbor** *ip-address*]} | **group** *name*]

Context

[Tree] (clear>router>bgp damping)

Full Context

clear router bgp damping

Description

This command clears or resets the route damping information for received routes.

Parameters

ip-prefix/ip-prefix-length

Clears damping information for entries that match the IP prefix and prefix length.

Values ipv4-prefix:

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

ipv6-prefix:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

ipv6-prefix-length: [0 to 128]

neighbor *ip-address*

Clears damping information for entries received from the BGP neighbor.

Values ipv4-address:

- a.b.c.d

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

interface: up to 32 characters, mandatory for link local addresses

group *name*

Clears damping information for entries received from any BGP neighbors in the peer group.

Values up to 32 characters

Platforms

All

7.3 data-trigger

data-trigger

Syntax

data-trigger sap *sap-id*

Context

[Tree] (clear>service>dynsvc data-trigger)

Full Context

clear service dynamic-services data-trigger

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command deletes all dynamic services associated with a dynamic services data trigger.

Note:
This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services data trigger SAP to delete.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.4 data-triggers

data-triggers

Syntax

data-triggers [**sap** *sap-id*] [**summary**]

Context

[Tree] (show>service>dynsvc data-triggers)

Full Context

show service dynamic-services data-triggers

Description

This command displays the active dynamic services data trigger details.

Note:
This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services SAP for which the details are shown.

summary

Limits the output to one line per data trigger SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of data trigger information.

Output Example

```
# show service dynamic-services data-triggers
===============================================================================
Dynamic Services Data-triggers
===============================================================================
SAP                         : 1/1/4:1214.101
-------------------------------------------------------------------------------
Acct session-ID             : 144DFF0000009156A24138
MAC                         : 00:51:00:dd:01:01
IP                          :
State                       : sapCreated
-------------------------------------------------------------------------------
No. of Data-triggers: 1
===============================================================================
```

Table 101: Output fields: data trigger describes data trigger fields.

Table 101: Output fields: data trigger

Output field	Description
Acct session-ID	The RADIUS accounting session ID for this dynamic services data trigger. This accounting session ID is used as an accounting multi-session ID in RADIUS accounting for the associated dynamic services. It can also be used as a key in CoA or Disconnect Messages to set up or terminate associated dynamic services.
MAC	The MAC address learned to set up this dynamic service data trigger. The MAC address is included in the Access-Request message for RADIUS authentication.
IP	The IPv4 or IPv6 address learned to set up this dynamic service data trigger. If the data trigger packet was not an IP packet, then this field is empty. When available, the IP address is included in the RADIUS authentication and accounting messages.
State	The current state of the dynamic service data trigger: Pending—(initial state) data trigger received and authentication started Accepted—(transient state) authentication succeeded; dynsvc script started but not yet completed sapCreated—(final state) corresponding dynamic services sap created

Context

[Tree] (clear>service>id>pim-snooping database)

Full Context

clear service id pim-snooping database

Description

This command clears PIM snooping source group database information.

Parameters

sap-id

Clears PIM snooping SAP information

sdp-id

Clears PIM snooping entries associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

Values 1 to 17407

grp-ip-address

Clears PIM snooping information matching the specified group address

src-ip-address

Clears PIM snooping information matching one particular source within the multicast group

family

Displays either IPv4 or IPv6 information

Values ipv4 or ipv6

evpn-mpls

Clears PIM snooping statistics for EVPN-MPLS destinations

Platforms

All

Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router rip database

Description

Displays all routes in the RIP database.

Parameters

ip-address /mask

Specifies the IP address.

Values ip-address: a.b.c.d

mask: 1 to 32

longer

Specifies the longer prefix match entries should also be displayed.

peer ip-address

Specifies the peer IP address.

Values a.b.c.d

detail

Displays detailed information.

qos

Specifies the QoS.

Platforms

All

Output

The following output is an example of RIP route database information, and Table 102: Output fields: RIP database describes the output fields.

Output Example

```
*A:ALA-1#  show rip database

```
No. of Routes: 11
===============================================================================
*A:ALA-12#
```

Table 102: Output fields: RIP database

Label	Description
Destination	The RIP destination for the route.
Peer	The router ID of the peer router.
NextHop	The IP address of the next hop.
Metric	The hop count to rate the value of different hops.
Tag	The value to distinguish between internal routes (learned by RIP) and external routes (learned from other protocols).
TTL	Displays the number of seconds the specific route will remain in the routing table. When an entry reaches 0, it is removed from the routing table.
Valid	No — The route is not valid. Yes — The route is valid.

database

Syntax

Full Context

show router bier database

Description

This command shows the BIER database and assigned labels for <SD, BSL, SI>.

Parameters

sub-domain

Displays detailed information about the sub-domain.

Values 0 to 255

template-name

Displays template name, up to 32 characters.

Platforms

All

Output

The following output is an example of a BIER database. Table 103: Output fields: BIER Database provides BIER database field descriptions.

Output Example

```
*A:Dut-A# show router bier database
===============================================================================
BIER Database
===============================================================================

Full Context

clear router igmp database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

group *grp-ip-address*

Clears the multicast group address (IPv4/IPv6) or zero in the specified address group.

source *src-ip-address*

Clears the IGMP database from the specified source IP address.

interface *ip-int-name*

Clears the IGMP database on the specified interface.

interface *ip-address*

Clears the IGMP database on the specified IP address.

host *ip-address*

Clears the IGMP database on the specified host.

host all

Clears the IGMP database on all hosts.

group-interface *interface-name*

Clears the IGMP database on the specified group interface.

group-interface all

Clears the IGMP database on all group interfaces.

Platforms

All

database

Syntax

database group-interface all

Context

[Tree] (clear>router>mld database)

Full Context

clear router mld database

Description

This command clears MLD database parameters.

Parameters

host *ipv6-address*

Clears the MLD database on the specified host.

host all

Clears the MLD database on all hosts.

interface *ip-int-name*

Clears database information for the specified MLD interface name.

interface *ipv6-address*

Clears database information for the specified MLD interface IPv6 address.

ipsec-interface *ip-int-name*

Clears database information for the specified dynamic name for the MLD-enabled child_SA.

group *ipv6-address*

Clears database information for the specified MLD group IPv6 address.

source *ipv6-address*

Clears database information for the specified MLD source IPv6 address.

service-id

Clears database information for the specified service ID.

Values service-id: 1 to 2148278386

svc-name: up to 64 characters.

Platforms

All

database

Syntax

Context

[Tree] (clear>router>pim database)

Full Context

clear router pim database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

ip-int-name

Clears the IGMP or PIM database on the specified interface.

mt-int-name

Clears the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

Syntax: *vprn-id*-mt-*grp-ip-addres*s

int-ip-address

Clears the IGMP or PIM database on the specified IP address.

group-ip-address

Clears the multicast group address (ipv4, ipv6) or zero in the specified address group.

ip-address

Clears the IGMP or PIM database from the specified source IP address.

family

Clears database family information.

Values ipv4, ipv6

mpls-if-name

Clears the MPLS interface name.

Syntax: mpls-if-*index*

database {**summary**}

database [*family*] [{**static**}

Context

[Tree] (show>router>origin-validation database)

Full Context

show router origin-validation database

Description

This command displays database information.

Parameters

family

Specifies the type of routing information to be displayed.

Values ipv4 — Displays IPv4 entries.
ipv6 — Displays IPv6 entries.

ip-prefix/ip-prefix-length

Displays routes only matching the specified IP address and length, up to 64 characters.

prefix-length

Displays routes matching up to the specified length.

Values 1 to 128

as-number

Specifies the origin AS number.

Values 0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

longer

Displays routes matching the *ip-prefix-l**ip-prefix-length* and routes with longer masks.

summary

Displays database summary information.

static

Displays static routes.

Platforms

All

Output

The following output is an example of database information.

Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>isis database)

Full Context

show router isis database

Description

This command displays the entries in the IS-IS link state database.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

lsp-id

Only the specified LSP (hostname) is listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

level

Specifies the interface level (1, 2, or 1 and 2).

detail

All output is displayed in the detailed format.

Platforms

All

Output

The following output is an example of the IS-IS link state database information, and Table 104: Output fields: IS-IS database describes the output fields.

Output Example

```

Table 104: Output fields: IS-IS database

Label	Description
Flex-Algorithm	The flexible algorithm number
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Prefix SID Flags	Displays the prefix SID flags
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR

database

Syntax

database [*system-id*]

Context

[Tree] (clear>router>isis database)

Full Context

clear router isis database

Description

This command removes the entries from the IS-IS link-state database which contains information about PDUs.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS link-state database.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

database

Syntax

database [**type** {**router** | **network** | **summary** | **asbr-summary** | **external** | **nssa** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

database [**type** {**router** | **network** | **inter-area-pfx** | **inter-area-rtr** | **external** | **nssa** | **intra-area-pfx** | **rtr-info** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

Context

[Tree] (show>router>ospf database)

[Tree] (show>router>ospf3 database)

Full Context

show router ospf database

show router ospf3 database

Description

This command displays information about the OSPF link state database (LSDB).

When no command line options are specified, the command displays brief output for all database entries.

Parameters

type *keyword*

Specifies to filter the OSPF LSDB information based on the type specified by *keyword*.

router

Displays only router (Type 1) LSAs in the LSDB.

network

Displays only network (Type 2) LSAs in the LSDB.

summary

Displays only summary (Type 3) LSAs in the LSDB.

asbr-summary

Displays only ASBR summary (Type 4) LSAs in the LSDB.

external

Displays only AS external (Type 5) LSAs in the LSDB. External LSAs are maintained globally and not per area. If the display of external links is requested, the area parameter, if present, is ignored.

nssa

Displays only NSSA area-specific AS external (Type 7) LSAs in the LSDB.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inter-area-pfx

Displays inter-area prefix LSAs.

inter-area-rtr

Displays inter-area router LSAs.

intra-area-pfx

Displays intra-area prefix LSAs.

rtr-info

Displays router info LSAs.

all

Displays all LSAs in the LSDB. The all keyword is intended to be used with either the **area** *area-id* or the **adv-router** *router-id* [*link-state-id*] parameters.

area *area-id*

Displays LSDB information associated with the specified OSPF *area-id*.

Values ip-address — a.b.c.d

area — 0 to 4294967295

adv-router *router-id* [*link-state-id*]

Displays LSDB information associated with the specified advertising router. To further narrow the number of items displayed, the *link-state-id* can optionally be specified.

detail

Displays detailed information on the LSDB entries.

filtered

Displays LSDB entries that were filtered by an area import or export policy.

Platforms

All

Output

OSPF Database Output

Table 105: Output fields: OSPF database describes the standard and detailed command output fields for an OSPF database.

Table 105: Output fields: OSPF database

Label	Description
Area Id	The OSPF area identifier.
Type LSA Type	Router — LSA type of router (OSPF) Network — LSA type of network (OSPF) Summary — LSA type of summary (OSPF) ASBR Summary — LSA type of ASBR summary (OSPF) Nssa-ext — LSA area-specific, NSSA external (OSPF)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Area opaque — LSA type of area opaque (OSPF) router — LSA type of router (OSPF3) Network — LSA type of network (OSPF3) IE Pfx — LSA type of inter-area prefix (OSPF3) Newline IE Rtr LSA type of inter-area router (OSPF3) IA Pfx — LSA type of intra-area prefix (OSPF3)
Link State Id	The link state Id is an LSA type specific field containing either a number to distinguish several LSAs from the same router, an interface ID, or a router-id; it identifies the piece of the routing domain being described by the advertisement.
Adv Rtr Id Adv Router Id	The router identifier of the router advertising the LSA.
Age	The age of the link state advertisement in seconds.
Sequence Sequence No	The signed 32-bit integer sequence number.
Cksum Checksum	The 32-bit unsigned sum of the link-state advertisements' LS checksums.
No. of LSAs	The number of LSAs displayed.
Options	EA — External Attribute LSA Support DC — Demand Circuit Support R — If clear, a node can participate in OSPF topology distribution without being used to forward transit traffic. N — Type 7 LSA Support MC — Multicast Support E — External Routes Support V6 — V6 works in conjunction with R. If V6 is clear, a node can participate in OSPF topology distribution without being used to forward IPv6 datagrams. If R is set and V6 is clear, IPv6 datagrams are not forwarded but diagrams belonging to another protocol family may be forwarded.
Prefix Options	P — Propagate NSSA LSA. MC — Multicast support. LA — Local address capability. If set, the prefix is an IPv6 interface address of the advertising router. NU — No unicast capability. If set, the prefix is excluded from IPv6 unicast calculations.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Flags	None — No flags set V — The router is an endpoint for one or more fully adjacent Virtual Links having the described area as the transit area E — The router is an AS Boundary Router B — The router is an Area Border Router
Link Count	The number of links advertised in the LSA.
Link Type (*n*)	The link type of the *n*th link in the LSA.
Network (*n*)	The network address of the *n*th link in the LSA.
Mask (*n*)	The mask of the *n*th link in the LSA.
No of TOS (*n*)	The ToS of the *n*th link in the LSA.
Metric-0 (*n*)	The cost metric of the *n*th link in the LSA.
Not Flooded (*n*)	Filtered on Import The nth LSA was filtered by an area import policy. Filtered on Export The nth LSA was filtered by an area export policy. **Note**: this line does not appear if there is no filtering and the LSA was flooded.

Full Context

clear router ospf database

clear router ospf3 database

Description

This command clears all LSAs received from other nodes, sets all adjacencies other than two-way to one-way, and refreshes all self-originated LSAs.

Parameters

purge

Clears all self-originated LSAs and re-originates all self-originated LSAs.

Context

[Tree] (show>router>ripng database)

Full Context

show router ripng database

Description

This command displays the routes in the RIPng database.

Parameters

ipv6-address

Specifies the RIPng IPv6 address.

Values

ipv6-address:	x:x:x:x:x:x:x:x [-interface]
	x:x:x:x:x:x:d.d.d.d [-interface]
	x: [0..FFFF]H
	d: [0..255]D
	interface — link local addresses up to 32 characters

prefix-length

The IP prefix in dotted decimal notation for the range used by the ABR to advertise that summarizes the area into another area.

Values ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Syntax

database [*system-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>service>id>spb database)

Full Context

clear service id spb database

Description

This command clears and resets the Shortest Path Bridging (SPB)database.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

Platforms

All

7.6 datapath

datapath

Syntax

datapath *port-id* [**mac** *mac-chip-number*] [**fp** *fp-number*] [**detail**]

Context

[Tree] (show datapath)

Full Context

show datapath

Description

This command displays the datapath mapping for the specified card, MDA, FP, MAC, connector, and port combinations. Fully qualified port identifiers are displayed for ports when the **detail** or **port** parameters are specified.

This command is supported on FP4-based hardware only.

Parameters

port-id

Specifies the port ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

slot

Specifies the slot number of the card in the chassis to display. The maximum slot number is platform dependent. See the *Installation Guides* for more information.

Values 1 to 10

mda

Specifies the MDA number in the slot to display. This is an integer value relative to the card.

Values 1 to 2

xiom

Specifies the XIOM number in the slot to display.

Values x1

connector

Specifies the connector number to display. This is an integer value relative to the MDA.

Values c1 to c54

port

Specifies the connector port number to display. The full port identifier is displayed. This is an integer value relative to the connector.

Values 1 to 10

fp-number

Specifies the FP number to display. This is an integer value relative to the card.

Values 1 to 8

mac-chip-number

Specifies the MAC number to display. This is an integer value relative to the MDA.

Values 1 to 12

detail

Displays the full port identifiers for all ports with configured connectors.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of the **show datapath** command.

Output Example:

```
*A:PE# show datapath 1/2/c1/1

7.7 datastore-locks

datastore-locks

Syntax

datastore-locks [**detail**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>system>management-interface datastore-locks)

Full Context

show system management-interface datastore-locks

Description

This command displays datastore locks information.

Parameters

detail

Displays session-specific information.

Platforms

All

Output

The following output is an example of detail datastore locks information for all datastores. Table 106: Output fields: datastore locks describes the output fields.

Output Example

```
[]
A:admin@node-1# show system management-interface datastore-locks detail
===============================================================================
Session ID  Region                Datastore                   Lock State
   Username                       Session Mode                Idle Time
   Session Type                   From
-------------------------------------------------------------------------------
 6          configure             Candidate                   Unlocked
   admin                          Global                      0d 00:00:09
   MD-CLI (1)                     Console
-------------------------------------------------------------------------------
Number of sessions: 1
'#' indicates the current active session
'(n)' indicates the number of internal sessions
===============================================================================
```

Table 106: Output fields: datastore locks

Label	Description
Session ID	The session ID.
Region	The region or scope that the datastore belongs to.
Datastore	Datastores that can be locked. For example: Running and Candidate.
Lock State	Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Username	The name of the user.
Session Mode	Global — A shared session. Exclusive — An exclusive session.
Idle Time	The idle time of the session.
Session Type	NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system (EHS or CRON) session is running.
From	The originating IP address.

7.8 debounce

debounce

Syntax

debounce peer *ip-address* **ring** *sync-tag*

Context

[Tree] (clear>redundancy>multi-chassis>mcr debounce)

Full Context

clear redundancy multi-chassis mc-ring debounce

Description

This command clears multi-chassis ring operational state debounce history.

Parameters

ip-address

Clears debounce history for the specified IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

sync-tag

Clears debounce history for the specified sync tag.

Platforms

All

7.9 debug

debug

Syntax

debug [*application*]

Context

[Tree] (show debug)

Full Context

show debug

Description

This command displays set debug points.

Note:
This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration debug** command or the **info** command in the debug configuration region.

Parameters

application

Display which debug points have been set.

Values aaa, anysec, application-assurance, atm, bgp, bier, call-trace, certificate, cisco-hdlc, diameter, dynamic-services, eth-cfm, ethernet, filter, frame-relay, gtp, igmp, ip, ipsec, isis, l2tp, lag, ldp, local-dhcp-server, mcast-management, mirror, mld, mpls, msdp, mtrace, mtrace2, nat, oam, ospf, ospf3, pcep, pcp, pim, ppp, python, radius, radius-proxy, rip, ripng, rpki, rsvp, service, snmp, srrp, subscriber-mgmt, system, upnp, vrrp, wlan-gw, wpp

7.10 debug-packet

debug-packet

Syntax

debug-packet [**clear**]

Context

[Tree] (tools>dump>eth-cfm debug-packet)

Full Context

tools dump eth-cfm debug-packet

Description

This command displays and optionally clears the counters representing the number of CFM PDUs that matched the debug criteria but were not passed to the debug logger. This situation is caused by a full message queue.

Parameters

clear

Clears the current counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of CFM-PDU information.

Output Example

```
tools dump eth-cfm debug-packet
===============================================================================
ETH-CFM Debug Logging Message Queue Statistics
===============================================================================
Rx Debug Exceptions        : 0
Tx Debug Exceptions        : 0
===============================================================================
```

7.11 declined-addresses

declined-addresses

Syntax

declined-addresses *ip-address*[/*mask*] [**detail**]

declined-addresses pool *pool-name*

Context

[Tree] (show>router>dhcp>server declined-addresses)

Full Context

show router dhcp local-dhcp-server declined-addresses

Description

This command display information about declined addresses.

Parameters

pool-name

Specifies a DHCP pool name on the router.

ip-address

Specifies the IP address of the DNS server. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of declined address information

Output Example

```
*A:ALA-48>show>router>dhcp>server# declined-addresses pool test
===============================================================================
Declined addresses for server test Base
===============================================================================
 Pool                              Subnet              IP Address
PPPoe User Name                  Time                MAC Address       Type
Option 82 Circuit ID
-------------------------------------------------------------------------------
No Matching Entries
===============================================================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
*A:ALA-48>show>router>dhcp>server#
```

Table 107: Output fields: declined addresses pool describes declined address pool output fields.

Table 107: Output fields: declined addresses pool

Field	Description
Pool	The name of the IP address pool
Subnet	The subnet address
IP Address	The declined IP address
Time	The creation time of this entry
MAC Address	The declined MAC address
Type	The type of declined address
PPPoE User Name	The name of the PPPoE user name
Option 82 Circuit ID	The declined circuit ID from the Option 82

declined-addresses

Syntax

declined-addresses *ip-address*[/*mask*]

declined-addresses pool *pool-name*

Context

[Tree] (clear>router>dhcp>server declined-addresses)

Full Context

clear router dhcp local-dhcp-server declined-addresses

Description

This command clears declined DHCP addresses.

Parameters

pool-name

Clears information about the declined pool name.

ip-address[/mask]

Clears information about the declined IP address and mask.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

7.12 default-domain

default-domain

Syntax

default-domain [**bridge-identifier** {*bridge-id* | *bridge-name*}] [**vlan** *vlan-id*] [**system-settings**]

Context

[Tree] (show>eth-cfm default-domain)

Full Context

show eth-cfm default-domain

Description

This command displays per-MIP index (**bridge-identifier** and **vlan**) configuration as entered under the **default-domain** entries.

Parameters

bridge-id

Specifies the bridge identifier related to the MIP. This is equivalent to the *service-id*.

Values 1 to 2147483647

bridge-name

Specifies the name of the bridge related to the MIP, up to 64 characters.

vlan-id

Specifies the VLAN ID matching the primary VLAN, or "none" if **primary-vlan-enable** is not configured.

Values 1 to 4094, none

system-settings

Keyword to display the system settings.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of default domain information, and Table 108: Output fields: ETH-CFM default domain describes the output fields.

Output Example

```
show eth-cfm default-domain
===============================================================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```

Table 108: Output fields: ETH-CFM default domain

Label	Description
BridgeName:BridgeID	The name and ID of the association service BridgeName:BridgeID combinations that exceed the allowed column length causes the associated output to be produced on a separate line.
VLAN	The numerical value of the primary VLAN associated with the MIP, or the value **none**
Level	The configured level value, or **defer** to the value specified under the system settings for the MIP
Creation	The configured MHF creation mode, or **defer** to the value specified under the system settings for the MIP
IdPerm	The configured identifier that is carried in supporting ETH-CFM PDUs, or **defer** to the value specified under the system settings
LtrPr	The configured MIP LTR priority, or **defer** to the value specified under the system settings for the MIP

7.13 delay-template

delay-template

Syntax

delay-template *template-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>oam-pm>streaming delay-template)

Full Context

show oam-pm streaming delay-template

Description

This command displays the configuration data for one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template** summary information. Table 109: Output fields: delay template describes the delay template fields.

Output Example

```
show oam-pm streaming delay-template
-------------------------------------------------------------------------------
Streaming Delay Templates

Table 109: Output fields: delay template

Label	Description
Name	Name of the delay template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Admin	State of the delay template
Tests	Number of tests referencing the delay template
Tmpl Name	Name of the delay template
Description	Description of the delay template (truncated beyond width)
Admin State	Up — The delay template is administratively enabled Down — The delay template is administratively disabled
FD Average	forward — The average frame delay metric for forward direction backward — The average frame delay metric for backward direction round-trip — The average frame delay metric for round-trip direction
IFDV Average	forward — The average inter-frame delay variation metric for forward direction backward — The average inter-frame delay variation metric for backward direction round-trip — The average inter-frame delay variation metric for round-trip direction
Sample Window	Length of the sample window
Window Integrity	Percentage required to ensure integrity of the reporting
Active Test Refs	Number of tests actively referencing the delay template
Total Test Refs	Number of total tests referencing the delay template

7.14 delay-template-using

delay-template-using

Syntax

delay-template-using [**delay-template** *template-name*]

Context

[Tree] (show>oam-pm>streaming delay-template-using)

Full Context

show oam-pm streaming delay-template-using

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the list of sessions configured against one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of OAM-PM streaming **delay-template-using** summary information.

Output Example

```
show oam-pm streaming delay-template-using
===============================================================================
OAM Performance Monitoring Tests Per Delay Template
===============================================================================
Template Name                                                          Admin
    Session Name                     Test Type   State

7.15 dest-tracking

dest-tracking

Syntax

dest-tracking ip [**detail**]

dest-tracking ipv6 [**detail**]

dest-tracking sap [**detail**]

dest-tracking sdp [**detail**]

Context

[Tree] (tools>dump>filter>resources dest-tracking)

Full Context

tools dump filter resources dest-tracking

Description

This command displays information about resources pertaining to tracked targets.

Parameters

ip

Displays information about IPv4 targets.

ipv6

Displays information about IPv6 targets.

sap

Displays information about SAP targets.

sdp

Displays information about SDP targets.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of filter resource SAP destination tracking information.

Output Example

```
A:node-2>tools>dump>filter>resources# dest-tracking sap

Table 110: Output fields: PCEP detail

Label	Description
Admin Status	Down — PCEP is administratively disabled. Up — PCEP is administratively enabled.
Oper Status	Down — PCEP is operationally down. Up — PCEP is operationally up.
Unknown Msg Limit	Specifies the unknown messages, per minute, limit.
Keepalive Interval	Specifies the keepalive interval.
DeadTimer Interval	Specifies the number of matching entries.
Capabilities List	Specifies the capabilities listing.
Address	Specifies the IP address.
Report Path Constraints	True — Path constrains will be reported. False — Path constrains will not be reported.
Redelegation Interval	Specifies the redelegation timer interval.
State Interval	Specifies the state timer interval.
State Timer Action	Remove — Specifies the state timer action is remove. None — Specifies the state timer action is none.
Max SR-TE PCE Init Lsps	Specifies the maximum number of PCE initiated SR-TE LSPs that can be created by the router.
Open Wait Timer	Specifies the open wait timer value.
Keep Wait Timer	Specifies the keep wait timer value.
Sync Timer	Specifies the sync timer value.
Request Timer	Specifies the request timer value.
Connection Timer	Specifies the connection timer value.
Allow Negotiations	True — Allow negotiations will occur. False — Allow negotiations will not occur.
Max Sessions	Specifies the maximum sessions value.

Label	Description
Max Unknown Req	Specifies the maximum unknown requests value.

detail

Syntax

detail [*partition*]

Context

[Tree] (show>app-assure>group>http-enrich detail)

Full Context

show application-assurance group http-enrich detail

Description

This command displays detailed HTTP Enrichment information.

Parameters

partition

Specifies the partition within the group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail

Syntax

detail

Context

[Tree] (show>router>bgp>routes detail)

Full Context

show router bgp routes detail

Description

This command displays detailed information about the BGP routes, including information about the original path attribute values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

7.17 detected-protocols

detected-protocols

Syntax

detected-protocols {**all** | **sap** *sap-id* | **spoke-sdp** *sdp-id*[*:vc-id*]}

Context

[Tree] (clear>service>id>stp detected-protocols)

Full Context

clear service id stp detected-protocols

Description

RSTP automatically falls back to STP mode when it receives an STP BPDU. The **clear detected-protocols** command forces the system to revert to the default RSTP mode on the SAP or spoke SDP.

Parameters

all

Clears all detected protocol information.

sap-id

Clears the specified lease state SAP information.

sdp-id

The SDP ID to be cleared.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be cleared.

Values 1 to 4294967295

Platforms

All

Clears DHCPv6 client information on the specified interface, up to 32 characters.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

dhcp6-client

Syntax

dhcp6-client interface *ip-int-name*

dhcp6-client interface *ip-int-name* **statistics**

Context

[Tree] (show>router>autoconfigure dhcp6-client)

Full Context

show router autoconfigure dhcp6-client

Description

This command displays DHCPv6 client information.

Parameters

ip-int-name

Specifies the IP interface name, up to 32 characters.

statistics

Displays DHCPv6 client statistics.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

7.24 diameter

diameter

Syntax

diameter

Context

[Tree] (show>service>active-subscribers>hierarchy diameter)

Full Context

show service active-subscribers hierarchy diameter

Description

This command provides information about the active Diameter Gx and Diameter Gy session IDs.

Note: The diameter NASREQ application is stateless in SR OS and therefore a NASREQ session ID is not included in the output.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the active Diameter Gx and Gy session IDs and Table 111: Output fields: active subscriber hierarchy diameter describes the output fields.

```
show service active-subscribers hierarchy diameter
```

Output Example

```
===============================================================================
Active Subscribers Hierarchy (diameter information)
===============================================================================

Table 112: Output fields: diameter application policy describes diameter application policy output fields.

Table 112: Output fields: diameter application policy

Field	Description
Description	The user provided description of this policy
Session failover	Failover is enabled or disabled
Failover Handling	Handling is retry-and-terminate or terminate
Peer policy	The diameter application peer policy name
Application	The policy's application, gx, gy, or nasreq
Tx timer (s)	The maximum wait time (seconds) while a client is pending
Last management change	The time of the most recent management-initiated change to this policy
Include AVP	The attribute-value-pairs for Gx messages
Calling-Station-Id type	The string that is put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages
NAS-Port bits spec	The number that is put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages
NAS-Port-Id prefix type	The type of prefix that is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages
NAS-Port-Id prefix	The user configurable string that is added as the prefix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Id suffix type	The user configurable string that is added as the suffix to the NAS-Port attribute if included in RADIUS accounting-request messages
NAS-Port-Type value	The value that is put in the RADIUS NAS-Port-Type attribute if included in RADIUS accounting-request messages
User-Equipment-Info	The user equipment info, eui64, imeisv, mac, or modified-eui64

Description

This command displays information about a Diameter node.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following outputs are examples of Diameter node information.

Output Example

```
show aaa diameter node "node1.myrealm.com" routing-table
===============================================================================
Diameter Routing Table (Node: node1.myrealm.com)
===============================================================================
Realm Name                      Appl      Pref:Index    Server-Identifier
-------------------------------------------------------------------------------
subrealm.telenet.be             Gx        30:1          node1.subrealm.telenet.be
telenet.be                      Gx        60            node2.subrealm.telenet.be
telenet.be                      relay     50            node3.subrealm.telenet.be
-------------------------------------------------------------------------------
No. of Routes: 5
===============================================================================
```

Table 113: Output fields: diameter node routing table describes routing entries in the Diameter realm-based routing table fields.

Table 113: Output fields: diameter node routing table

Field	Description
Realm Name	The destination realm name
Appl	The application for which this route will be used. Supported applications: • NASREQ • Gx • Gy • Relay (encompass all applications)
Pref:Index	The preference and index of the peer. Peers for the same realm are selected in order of preference. Peers with the lowest preference are preferred. If multiple peers have the same preference for the same realm, the peer with a lowest index is selected. Preference and index are user-configured parameters.
Server-Identifier	The next hop peer name

Table 114: Output fields: diameter node peer describes Diameter node peer fields.

Table 114: Output fields: diameter node peer

Field	Description
Diameter Node	The Diameter node under which this peer is active
Index	The Peer index is a peer configuration parameter
Remote Host Identity	The peer identity
Remote Realm	The realm to which the peer belongs
Remote IP address	The IP address of the peer
Remote Port	The port on the peer used for Diameter communication
Remote Origin-State-Id	The Origin-State-Id of the peer
Local Host Identity	The local identity
Local Realm	The local realm name
Local IP address	The local IP address
Local Port	The local port used for Diameter communication
Peer Admin State	The administrative state of the configured peer
Peer Active	Indicates whether the connection towards the peer is active
Peer Status	The operational status of the configured peer
Active Applications	The applications used over this peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Last Disconnect Cause	The last disconnect cause
Preference	The configured preference of the peer
Connection Timer (Tc)	The timer used to initiate connections towards the peer. In case that the connection is not successfully established, a new attempt is periodically tried (every Tc interval)
Watchdog Timer (Tw)	The watchdog timer value that detects the failed connection towards the peer
Last Mgmt Change	The date and time of the last management change

Context

[Tree] (show>router>ldp discovery)

Full Context

show router ldp discovery

Description

This command displays the status of the interfaces participating in LDP discovery.

Parameters

peer ip-address

Specifies to display the IP address of the peer.

interface ip-int-name

The name of an existing interface. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

state state

Specifies to display the current operational state of the adjacency.

Values established, trying, down

detail

Specifies to display detailed information.

family

Displays either IPv4 or IPv6 LDP session information.

adjacency-type *type*

Specifies to display the adjacency type.

Values link, targeted

Output

LDP Discovery Output

Table 117: Output fields: LDP discovery describes the LDP discovery output fields.

Table 117: Output fields: LDP discovery

Label	Description
Interface Name	The name of the interface.
Local Addr	The IP address of the originating (local) router.
Peer Addr	The IP address of the peer.
AdjType	The adjacency type between the LDP peer and LDP session is targeted.
State	Established — The adjacency is established. Trying — The adjacency is not yet established.
No. of Hello Adjacencies	The total number of hello adjacencies discovered.
Up Time	The amount of time the adjacency has been enabled.
Hold Time Remaining	The time left before a neighbor is declared to be down.

Output Example

```
*A:Dut-A# show router ldp discovery
===============================================================================
LDP IPv4 Hello Adjacencies

7.30 dist-cpu-protection

dist-cpu-protection

Syntax

cpu-protection

Context

[Tree] (show>system>security dist-cpu-protection)

Full Context

show system security dist-cpu-protection

Description

Commands in this context display Distributed CPU Protection information.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dist-cpu-protection

Syntax

dist-cpu-protection

Context

[Tree] (tools>perform>security dist-cpu-protection)

[Tree] (tools>dump>security dist-cpu-protection)

Full Context

tools perform security dist-cpu-protection

tools dump security dist-cpu-protection

Description

This command displays to release Distributed CPU Protection parameters and status at the per card and forwarding plane level.

Platforms

All

dist-cpu-protection

Syntax

dist-cpu-protection [**detail**]

Context

[Tree] (show>port dist-cpu-protection)

Full Context

show port dist-cpu-protection

Description

This command displays distributed CPU protection information.

Parameters

detail

Displays detailed information.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

7.31 diversity

diversity

Syntax

diversity *diversity-assoc-name*

Context

[Tree] (show>router>pcep>pcc>pce-assoc diversity)

Full Context

show router pcep pcc pce-associations diversity

Description

This command displays the diversity association information.

If a diversity association name is not specified, the information for all configured diversity associations is displayed.

Parameters

diversity-assoc-name

Specifies the diversity association name.

Platforms

All

Output

The following output is an example of diversity association information, and Table 118: Output fields: PCE associations diversity describes the output fields.

Output Example

```
*A:Dut-C>config>router>mpls>lsp# show router pcep pcc pce-associations diversity "test_div"
===============================================================================
PCEP PCC Diversity Associations Info
===============================================================================
Assocation Name    : test_div
Association ID     : 20                Association Source : 192.168.213.59
Diversity Type     : link              Disjointness Type  : loose
Disjoint Reference : False
===============================================================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 118: Output fields: PCE associations diversity

Label	Description
Association Name	The diversity association name
Association ID	The diversity association ID
Association Source	The diversity source address of the diversity association. Both IPv4 and IPv6 addresses are supported.
Diversity Type	The diversity type of the diversity association
Disjointness Type	The disjointness type of the diversity association
Disjoint Reference	The P-flag value conveyed to the disjointness configuration TLV

7.32 dm

dm

Syntax

dm [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>oam-pm>session dm)

Full Context

monitor oam-pm session dm

Description

This command monitors the MPLS Delay Measurement (DM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dm

Syntax

dm

Context

[Tree] (show>oam-pm>stats>session dm)

Full Context

show oam-pm statistics session dm

Description

This command selects the session's MPLS DM test for the statistical display.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.33 dmm

dmm

Syntax

dmm [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>oam-pm>session dmm)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

monitor oam-pm session dmm

Description

This command monitors the Ethernet Delay Measurement Message (DMM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

All

Output

The following output is an example of raw session measurement information.

Output example

```
A:node-2# monitor oam-pm session "eth-pm-service-4" dmm

Table 119: Output fields: DNS enrichment

Label	Description
Application Assurance Group	Displays the name of the application assurance group
Description	Displays the description of the group (if specified)
Admin Status	Displays the administrative status of the group
AQP Referenced	Displays whether an AQP is referenced
Enriched Requests (UDP)	Displays the number of enriched DNS UDP requests processed by the group
Missing Subscriber ID (UDP)	Displays the number of DNS UDP requests in which the subscriber ID is missing
Template Not Enabled (UDP)	Displays the number of DNS UDP requests in which the DNS enrichment policy is not enabled
Traffic Characteristics (UDP)	Displays the number of DNS UDP requests dropped due to traffic characteristics errors such as fragmented, malformed or tunneled (IP in IP) requests
Exceeded Max Packet Size (UDP)	Displays the number of DNS UDP requests dropped due to packet size exceeding the limit
Enriched Requests (TCP)	Displays the number of enriched DNS TCP requests processed by the group
Missing Subscriber ID (TCP)	Displays the number of DNS TCP requests in which the subscriber ID is missing

© 2026 Nokia.

Label	Description
Template Not Enabled (TCP)	Displays the number of DNS TCP requests in which the DNS enrichment policy is not enabled
Out Of Resources	Displays the number of DNS TCP requests dropped due to insufficient resources
Traffic Characteristics (TCP)	Displays the number of DNS TCP requests dropped due to traffic characteristics errors such as fragmented, malformed or tunneled (IP in IP) requests in addition to other errors such as exceeded TCP window size or exceeded MTU size
Exceeded Max Packet Size (TCP)	Displays the number of DNS TCP requests dropped due to packet size exceeding the limit
Total	Displays the total number of enriched DNS requests (both UDP and TCP) processed by the group

7.36 dns-ip-cache

dns-ip-cache

Syntax

dns-ip-cache *cache-name* **isa** *mda-id*

dns-ip-cache *cache-name*

Context

[Tree] (show>app-assure>group dns-ip-cache)

Full Context

show application-assurance group dns-ip-cache

Description

This command displays the application assurance DNS IP cache statistics and status information.

Parameters

cache-name

Specifies the DNS IP cache for a particular ISA-AA card, up to 32 characters.

mda-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Table 120: Output fields: DNS IP cache describes the **show** command output fields.

Table 120: Output fields: DNS IP cache

Label	Description
Admin Status	Indicates the administrative status of the DNS IP cache. [Up | Down]
Domain expressions	Indicates the number of DNS domain expressions configured.
Server addresses	Indicates the number of server-addresses configured
High-Watermark	Indicates the value, in percentage, of the configured high watermark.
Low-Watermark	Indicates the value, in percentage, of the configured low watermark.
Cache-size	Indicates the value of the configured maximum cache size.
Usage	Indicates the value, in percentage, of the total for the number of entries in the cache.
Alarm State	Indicates the status of the alarm related to the DNS IP cache high/low watermark utilization. The alarm is raised when the high watermark is crossed; it is cleared when it goes below the low watermark. [Clear | Raised]
Hit-Count	Indicates the number of times an IP address lookup in this cache was successful.
Total responses	Indicates the total number of DNS responses analyzed.
Domain name matched	Indicates the number of times a domain name defined in the DNS match criteria matched a DNS response.
Domain & server matched	Indicates the number of times both the domain name and server address defined in the DNS match criteria matched a DNS response.
Total entries added	Indicates the total number of IP entries added in the cache.
Total entries removed	Indicates the total number of IP entries removed from the cache after the entry expired.
Full count	Indicates the total number of IP entries in the cache.
Hit Count	Indicates the number of times an IP address lookup in this cache was successful. The IP address lookup is performed in

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	app-filters and is successful if the server address DNS IP cache criteria is met.
Miss Count	Indicates the number of times an IP address lookup in this cache was unsuccessful. The IP address lookup is performed in app-filters and is unsuccessful if the server address DNS IP cache criteria is not met.

Output Example

```
*A:7750# show application-assurance group 1 dns-ip-cache "Default DNS IP Cache"

dns-ip-cache

Syntax

dns-ip-cache *dns-ip-cache-name* **url** *file-url*

dns-ip-cache *dns-ip-cache-name* **isa** *mda-id/esa-vm-id* [**url** *file-url*] [**new-ip-count**]

Context

[Tree] (tools>dump>app-assure>group dns-ip-cache)

Full Context

tools dump application-assurance group dns-ip-cache

Description

This command displays the list of IP addresses stored in a DNS IP cache.

Parameters

dns-ip-cache-name

Specifies a DNS IP cache name, up to 32 characters.

url ***file-url***

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url | remote-url	local-url	[<cflash-id>/][<file-path>]	
		200 chars max, including cflash-id	
		directory length 99 chars max each	
	remote-url	{ftp| tftp}://[<login>:<pswd>@]<remote-locn>/[<file-path>]	
		255 chars max	
		<file-path> 199 chars max	
	remote-locn	{ <hostname> | <ipv4-address> | "["<ipv6-address>"]" }[:<port>]	
		ipv4-address	a.b.c.d
		ipv6-address	x:x:x:x:x:x:x:x[-interface]
			x:x:x:x:x:x:d.d.d.d[-interface]
			x - [0..FFFF]H
			d - [0..255]D

© 2026 Nokia.

		interface - 32 chars max, for link
		local addresses
	port	[0..65535]
	cflash-id	cf1:| cf1-A:| cf1-B:| cf2:| cf2-A:| cf2-B:| cf3:| cf3-A:| cf3-B:

isa *mda-id/esa-vm-id*

Specifies the DNS IP cache for a particular ISA-AA card.

Values

slot/mda	slot: 1 to 10
	mda: 1, 2
esa-esa-id/vm-id	esa-id: 1 to 16
	vm-id: 1 to 4

new-ip-count

Displays the number of new IP addresses added to the cache.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following are output examples for this command.

Output Example

```
*A:7750# tools dump application-assurance group 1 dns-ip-cache "Default DNS IP Cache"
isa 3/2

```

Table 121: Output fields: tools DNS IP cache

Label	Description
ip-address	Indicates the IP address stored in the DNS IP cache. The address is added into the cache if the DNS response meets the DNS IP cache match criteria (domain name and DNS server address).
creationTime	Indicates the time at which the entry was created. The entry is created by a DNS response meeting the DNS IP cache match criteria (domain name and DNS server address).
lastUpdated(UTC)	Indicates the time at which the entry was last updated, either from a new IP flow (fully classified) using the same IP address or a new DNS response meeting the DNS IP cache match criteria.
numDNSResponses	Indicates the number of DNS responses including this IP address meeting the DNS IP cache match criteria.
lastMatchTime(UTC)	Indicates the last time the IP address matched an app-filter with a server address DNS IP cache criteria.
numTimesMatched	Indicates the number of times the IP address matched an app-filter with a server address DNS IP cache.
domain	Indicates the domain as configured in dns-ip-cache.
hostname	Indicates the hostname as configured in dns-ip-cache.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
new-ip-count	Indicates the number of new IP addresses added in the cache for the domain.

7.37 domain

domain

Syntax

domain [*md-index* | *md-admin-name*] [**association** {*ma-index* | *ma-admin-name* | **all-associations**}] [**detail**]

Context

[Tree] (show>eth-cfm domain)

Full Context

show eth-cfm domain

Description

This command displays domain information.

Parameters

md-index

Specifies the index of the MD to which the MP is associated, or 0, if none.

Values 1 to 4294967295

md-admin-name

Specifies the administrative name for the domain, up to 64 characters.

ma-index

Specifies the MA index to which the MP is associated, or 0, if none.

Values 1 to 4294967295

ma-admin-name

Specifies the administrative name for the association, up to 64 characters.

all-associations

Keyword used to display all associations to the MD.

detail

Keyword used to display detailed domain information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following outputs are examples of ETH-CFM domain information:

- ETH-CFM domain information, Table 122: Output fields: ETH-CFM domain information
- ETH-CFM detailed domain information, Table 123: Output fields: ETH-CFM detailed domain information
- ETH-CFM all associations information, Table 124: Output fields: ETH-CFM domain all-associations

Output example: ETH-CFM domain information

```
A:node-1# show eth-cfm domain
===============================================================================
CFM Domain Table
===============================================================================
Md-index   Level Name                                          Format
    md-admin-name
-------------------------------------------------------------------------------
15         5                                                   none
    level5-common
===============================================================================
```

Table 122: Output fields: ETH-CFM domain information

Label	Description
Md-index	The MD index value
Level	The integer identifying the maintenance domain Level (MD Level) Higher numbers correspond to higher maintenance domains (those with the greatest physical reach), with the highest values for customer CFM PDUs. Lower numbers correspond to lower maintenance domains (those with more limited physical reach), with the lowest values for CFM PDUs protecting single bridges or physical links.
Name	The generic MD name
Format	The type of the MD name Values include **dns**, **none**, **mac**, and **string**
md-admin-name	The administrative MD name

Output example: ETH-CFM detailed domain information

```
A:node-1# show eth-cfm domain level5-common detail
===============================================================================
Domain 15
Md-index          : 15                        Level             : 5
                                              MHF Creation      : defMHFnone
Name Format       : none                      Next Ma Index     : 1
Name              : (Not Specified)

Table 124: Output fields: ETH-CFM domain all-associations

Label	Description
Md-index	The MD index value
Ma-index	The MA index value
Name	The generic MD name
Int	The CCM transmission interval for all MEPs in the association
Hold	The CCM hold time, in milliseconds, that is added before the defect condition is raised. A value of "n/a" indicates that the MEP is not subsecond and does not support the CCM hold time.
Bridge-id	The bridge-identifier value for the domain association
MEPS	The total local and remote maintenance association end point (MEP)
TxSid	Yes — the Sender ID TLV is included in the supported ETH-CFM PDUs No — the Sender ID TLV is not included in the supported ETH-CFM PDUs
md-admin-name	The administrative MD name
ma-admin-name	The administrative MA name
bridge-name	The administrative bridge-identifier name

domain

Syntax

domain [*domain-name*]

Context

[Tree] (show>router>firewall domain)

Full Context

show router firewall domain

Description

This command lists an overview of all firewall domains that are provisioned in the routing instance.

Configuring the *domain-name* parameter will display operational details for the specified firewall domain.

Parameters

domain-name

Specifies the name of a firewall domain, up to 32 characters maximum.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of firewall domain information.

Output Example

```
Node# show router 4 firewall domain
===============================================================================
Firewall domains
===============================================================================
Domain                          NAT-group  Admin-state

domain

Syntax

domain *ipsec-domain-id* [**now**] **auto**

domain ipsec-domain-id [**now**] **to** *router-id*

Context

[Tree] (tools>perform>redundancy>multi-chassis>mc-ipsec>force-switchover domain)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover domain

Description

This command triggers an IPsec N:M switchover for the specified IPsec domain.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ipsec-domain-id

Specifies the multi-chassis IPsec domain value.

Values 1 to 255

now

Specifies to switchover without confirmation.

auto

Automatically elects a new active node, excluding the current active node.

to *router-id*

Specifies the router ID of the new active node.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

downstream-nodes

Syntax

downstream-nodes [*id*] [**nh-addr** *ip-address*] [**nh-ifName** *interface-name*] [**replication-sid** *label*] [**oper** {**up** | **down**}]

Context

[Tree] (show>router>p2mp-sr-tree>replication-segment downstream-nodes)

Full Context

show router p2mp-sr-tree replication-segment downstream-nodes

Description

This command displays information for the specified replication segment next hops of the P2MP SR tree.

Parameters

id

Specifies the next-hop ID.

Values 1 to 4096

ip-address

Specifies the root IPv4 address.

interface-name

Specifies the interface name, up to 32 characters.

label

Displays the specified label number.

Values 0, 16 to 1048576

oper up

Displays the next-hop with operational status up.

oper down

Displays the next-hop with operational status down.

7.44 dscp-table

dscp-table

Syntax

dscp-table [**value** *dscp-value*]

Context

[Tree] (show>qos dscp-table)

Full Context

show qos dscp-table

Description

This command displays the DSCP name-to-DSCP value mappings.

Parameters

value *dscp-value*

The specific DSCP value for which to display information.

Values 0 to 63

Default Show all values

Platforms

All

Output

The following output is an example of dscp-table information, and Table 127: Output fields: QoS DHCP table describes the output fields.

Output Example

```
A:ALA-48# show qos dscp-table
===========================================================

Table 127: Output fields: QoS DHCP table

Label	Description
DSCP Name	Displays the name of the DiffServ code point to be associated with the forwarding class.
DSCP Value	Displays the DSCP values, between 0 and 63.
TOS (bin)	Displays the type of service in binary format.
TOS (hex)	Displays the type of service in hex format.

7.45 dslite-lsn-sub

dslite-lsn-sub

Syntax

dslite-lsn-sub router *router-instance* **b4-address-prefix** *ipv6-prefix*

Context

[Tree] (clear>nat dslite-lsn-sub)

Full Context

clear nat dslite-lsn-sub

Description

This command clears NAT mappings for Dual-Stack Lite (DS-Lite) LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ipv6-prefix

Specifies the IPv6 prefix and length.

Values

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- d: [0 to 255]D

Platforms
7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.46 dump

dump

Syntax
dump

Context

clear service id proxy-arp duplicate

Description
This command clears proxy-ARP duplicate entries.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

Platforms

All

duplicate

Syntax

duplicate [*ipv6-address*]

Context

[Tree] (clear>service>id>proxy-nd duplicate)

Full Context

clear service id proxy-nd duplicate

Description

This command clears proxy-ND duplicate entries.

Parameters

ipv6-address

Specifies the IPv6 address.

Values

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

dynamic-blocks

Syntax

dynamic-blocks subscriber *sub-ident-string* **[nat-policy** *policy-name***]**

Context

[Tree] (tools>dump>nat>l2-aware dynamic-blocks)

Full Context

tools dump nat l2-aware dynamic-blocks

Description

This command displays information about dynamic blocks.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 64 characters

policy-name

Specifies the NAT policy name, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic block information, and Table 128: Output fields: dynamic blocks describes the output fields.

Table 128: Output fields: dynamic blocks

Field	Description
NAT policy	The NAT policy name
Router	The router number
Outside IP	The outside IP address
Dynamic block	The dynamic block range

7.50 dynamic-resolve

dynamic-resolve

Syntax

dynamic-resolve all [**force**]

dynamic-resolve *ip-address* [**force**]

Context

[Tree] (tools>perform>service>id>proxy-arp dynamic-resolve)

Full Context

tools perform service id proxy-arp dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IP entries. When executed, a resolve message (ARP-request) is issued for the requested IP or, if the **all** option used, for all the configured dynamic IPs.

The **force** option triggers the resolve process even for IPs with an existing entry in the proxy-ARP table.

Parameters

ip-address

Specifies the IP address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values a.b.c.d

all

Runs the command for all configured dynamic IPs.

force

Issues a resolve message even when configured dynamic IP entries are present.

Platforms

All

dynamic-resolve

Syntax

dynamic-resolve all [**force**]

dynamic-resolve *ipv6-address* [**force**]

Context

[Tree] (tools>perform>service>id>proxy-nd dynamic-resolve)

Full Context

tools perform service id proxy-nd dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IPv6 entries. When executed, a resolve message (Neighbor Solicitation) is issued for the requested IPv6 or, if the **all** option used, for all the configured dynamic IPv6s.The **force** option triggers the resolve process even for IPv6 addresses with an existing entry in the proxy-ARP table.

Parameters

ipv6-address

Specifies the IPv4 or IPv6 address.

Values ip-address: a.b.c.d

ipv6-address: x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

where:

x: [0 to FFFF]H

d: [0 to 255]D

all

Runs the command for all configured dynamic IPv6 addresses.

force

Issues a resolve message even when configured dynamic IP entries are present.

[Tree] (clear>service>stats dynamic-services)

Full Context

clear service statistics dynamic-services

Description

This command resets the dynamic services script statistics. See also **show service dynamic services script statistics**.

Note:
This command is not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-services

Syntax

dynamic-services command-list

Context

[Tree] (tools>dump>service dynamic-services)

Full Context

tools dump service dynamic-services

Description

This command displays the list of supported commands that can be used in dynamic service CLI scripts.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

There are two types of CLI nodes in this list:

- Pass through nodes: navigation is allowed but attributes creation or attribute changes are prohibited in this node.
- Allowed nodes: navigation, attribute creation and attribute changes are allowed in this node.

Note:
These commands are not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.52 dynamic-services-policy

dynamic-services-policy

Syntax

dynamic-services-policy [*policy-name*]

Context

[Tree] (show>service>dynsvc dynamic-services-policy)

Full Context

show service dynamic-services dynamic-services-policy

Description

This command displays the dynamic services policy information.

Note:
This command is not available in the MD-CLI.

Parameters

policy-name

specifies for which dynamic services policy the information is requested.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic service policy information.

Output Example

```
# show service dynamic-services dynamic-services-policy "dynsvc-policy-1"

```

Table 129: Output fields: dynamic services policy describes the Dynamic Services policy fields.

Table 129: Output fields: dynamic services policy

Output Field	Description
dynsrv-policy-name	The unique name of a dynamic services policy, up to 32 characters.
cli-user	The identifier name of the CLI user associated with this Dynamic Services policy.
script-policy	The identifier name of the script policy associated with this Dynamic Services policy.
sap-limit	The limit of the number of SAPs (Service Access Point) that can be created using this Dynamic Services policy.
Stats type	The value used to identify the type of accounting statistics gathered, either **volume-time** or **time**.
server policy	The identifier name of a RADIUS server policy to be used for accounting.
update interval (minutes)	The time interval between consecutive accounting updates when using this Dynamic Services policy.
update interval jitter	The amount of jitter to be applied on the update interval.
No. of Services-policies	The total number Dynamic Services policies.

8.3 edit-lease-state

edit-lease-state

Syntax

edit-lease-state sap *sap-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

edit-lease-state svc-id *service-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

Context

[Tree] (tools>perform>subscr-mgmt edit-lease-state)

Full Context

tools perform subscriber-mgmt edit-lease-state

Description

This command provides the parameters to edit lease state information.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Modifies lease state information for the specified IP address.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sub-ident-string

Modifies the lease state information for the specified subscriber identification.

sub-profile-string

Modifies lease state information for the specified subscriber profile.

sla-profile-string

Modifies lease state information for the specified SLA profile.

service-id

Modifies lease state information for the specified service ID.

Values *service-id*: 1 to 2147483647

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

svc-name: 64 characters maximum

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.4 edit-ppp-session

edit-ppp-session

Syntax

edit-ppp-session sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-ppp-session svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[Tree] (tools>perform>subscr-mgmt edit-ppp-session)

Full Context

tools perform subscriber-mgmt edit-ppp-session

Description

This command updates the data of the PPP session identified with the given MAC address and SAP identifier. Optionally the remote-id and circuit-id can be specified to identify the IPoE session to update.

Note:
The changes take immediate effect.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name, up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up, to 16 characters.

ip-address

Specifies the peer's IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string, up to 16 characters.

sub-profile-name

Specifies the subscriber profile name, up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings, up to 32 characters.

ancp-string

Specifies the ASCII representation of the string, up to 63 characters.

app-profile-string

Specifies the application profile string, up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.5 edit-slaac-host

edit-slaac-host

Syntax

edit-slaac-host sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-slaac-host svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

string *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[Tree] (tools>perform>subscr-mgmt edit-slaac-host)

Full Context

tools perform subscriber-mgmt edit-slaac-host

Description

This command updates the data of the SLAAC host information.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up to 16 characters.

ip-address

Specifies the peer’s IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string up to 16 characters.

sub-profile-name

Specifies the subscriber profile name up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ancp-string

Specifies the ASCII representation of the up to 63 characters.

app-profile-string

Specifies the application profile string up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 131: Output fields: LAG EFM member template

Label	Description
Admin State	Displays the administrative state of EFM-OAM on the LAG member template: up or down
Mode	Displays the mode of OAM operation: active or passive
Transmit Interval	Displays the transmit interval of OAM PDUs
Multiplier	Displays the multiplier applied to the transmit interval to set the local link-down timer
Hold Time	Displays the EFM-OAM operational transition dampening time, in seconds
Tunneling	Displays whether EFM-OAM PDU tunneling is enabled: true or false
Trigger Fault	Displays the Information OAM PDU flag used to trigger a fault: dying-gasp or critical-event
Loopback Ignore Rx	Displays how received loopback control OAM PDUs are handled Process — Reactions to loopback control OAM PDUs from peers are enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Ignore — Reactions to loopback control OAM PDUs from peers are disabled
Fwd Non-Efm Frames	Displays whether non-EFM frames received from the EFM peer are forwarded when in remote loopback state: true or false
Ignore Efm State	Displays whether protocol state machine failures are suppressed from affecting the port operational state: true or false
Link Monitoring	Displays whether link monitoring is enabled or disabled
Critical Event	Peer RDI Rx — Displays the local port action when a critical event Flag field is received from the peer: log-only or out-of-service Local SF Action — Displays whether the critical event Flag field is set in Information OAM PDUs when the local signal failure threshold is reached: enabled or disabled
Dying Gasp	Peer RDI Rx — Displays the local port action when a dying gasp Flag field is received from the peer: log-only or out-of-service Local SF Action — Displays whether the dying gasp Flag field is set in Information OAM PDUs when the local signal failure threshold is reached: enabled or disabled
Link Fault	Displays the local port action when a link fault flag is received from the peer: log-only or out-of-service
Event Notify	Peer RDI Rx — Displays the local port action when an Event Notification OAM PDU is received from the peer: log-only or out-of-service Link monitoring — Displays whether Event Notification OAM PDUs are transmitted when the signal failure threshold is reached: enabled or disabled
Event Burst	Displays the number of Event Notification OAM PDUs sent to the peer when the local signal failure threshold is reached
Port Action	Displays the local port action when the local signal failure threshold is reached: log-only or out-of-service
Ad Link Mon Cap	Displays whether the link monitoring capability is advertised to the peer: yes or no
Enabled	Displays whether the associated link monitoring function is enabled: yes or no This field applies to Errored Frame, Errored Frame Period, Errored Symbol Period, and Errored Frame Seconds Summary
SF Threshold	Displays the signal failure threshold for the associated link monitoring function

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
SD Threshold	Displays the signal degrade threshold for the associated link monitoring function, or disabled (0) if no threshold is configured
Window	Displays the measurement window for the associated link monitoring function Errored Frame and Errored Symbol Period — Window size in deciseconds (ds) Errored Frame Period — Window size in frames Errored Frame Seconds Summary — Window size in deciseconds

8.8 egress-if

egress-if

Syntax

egress-if *port-id* [**summary** | **detail**] [*family*]

Context

[Tree] (show>router>ldp>bindings>active egress-if)

Full Context

show router ldp bindings active egress-if

Description

This command displays LDP active bindings by matching the egress interface.

Parameters

port-id

Specifies the port ID.

Values *slot*[/*mda*[/*port*]] or *slot*/*mda*/*port* [.*channel*]

aps-id	**aps**-*group-id*[.channel]	
	aps	keyword
	group-id	1 to 128
eth-sat-id	**esat**-*id*[/*slot*/[**u**]*port*]	
	esat	keyword
	id	1 to 20
	u	keyword for up-link port
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a to b

family

Specifies the address family.

Values ipv4, ipv6

8.9 egress-label

egress-label

Syntax

egress-label *start-label* [*end-label*]

Context

[Tree] (show>service egress-label)

Full Context

show service egress-label

Description

This command displays service information using the range of egress labels.

If only the mandatory *egress-label1* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting egress label value for the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0,18432 to 524287

end-label

The ending egress label value for the label range.

Default The *start-label* value.

Values 18432 to 524287

Platforms

All

Table 132: Output fields: service egress describes show service egress label output fields.

Table 132: Output fields: service egress

Label	Description
Svc Id	The ID that identifies a service.
Sdp Id	The ID that identifies an SDP.
Type	Indicates whether the SDP binding is a spoke or a mesh.
I. Lbl	The VC label used by the far-end device to send packets to this device in this service by the SDP.
E. Lbl	The VC label used by this device to send packets to the far-end device in this service by the SDP.
Number of bindings found	The total number of SDP bindings that exist within the specified egress label range.

Full Context

show router ldp bindings active egress-nh

Description

This command displays LDP active bindings by matching the egress Next-Hop (NH).

Parameters

family

Specifies the address family.

Values ipv4, ipv6

ip-address

Specifies the IPv4 or IPv6 address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H

8.13 egress-rate-distribution

egress-rate-distribution

Syntax

egress-rate-distribution

Context

[Tree] (show>lag egress-rate-distribution)

Full Context

show lag egress-rate-distribution

Description

This command displays adaptive load-balancing egress rate distribution information.

Platforms

All

8.14 egress-statistics

egress-statistics

Syntax

egress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (show>router>segment-routing>sr-policies egress-statistics)

Full Context

show router segment-routing sr-policies egress-statistics

Description

This command displays the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d

Table 133: Output fields: egress statistics

Label	Description
Color	Indicates the color of the SR policy.
Endpoint Addr	Indicates the endpoint address of the SR policy.
Segment-List	Indicates the index of the segment list.
TunnelId	Indicates the tunnel identifier of the SR policy.
BSID	Indicates the binding SID value.
Pkt Count	Indicates the count of packets for the corresponding segment list.
Octet Count	Indicates the count of octets for the corresponding segment list.

egress-statistics

Syntax

egress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (clear>router>segment-routing>sr-policies egress-statistics)

Full Context

clear router segment-routing sr-policies egress-statistics

Description

This command clears the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H

Full Context

monitor router segment-routing sr-policies egress-statistics

Description

This command monitors SR Policy Egress Statistics.

Parameters

ip-address

Specifies the IPv4 address of the endpoint.

Values 64 characters maximum

ipv6-address

Specifies the IPv6 address of the endpoint.

Values 64 characters maximum

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

8.15 elmi

elmi

Syntax

elmi

Context

[Tree] (show elmi)

Full Context

show elmi

Description

This command displays Ethernet Link Management Interface (E-LMI) information.

Table 134: Output fields: E-LMI describes the output fields for the **show elmi** command.

Table 134: Output fields: E-LMI

Field	Description
Link Status	Status of the E-LMI protocol when the elmi mode is set to uni-n. Link Status will indicate up if E-LMI mode is set to "none".
T391	Pooling timer used by UNI-C. UNI-N will send the consecutive single EVC asynchronous status messages every (T391/10) rounded to the second interval.
T392	Pooling verification timer for UNI-N
N393	Status counter for UNI-N.
Rx Enq. Time	Last time a status inquiry message was received from UNI-C.
Rx Enq. Msg	Number of status inquiry messages received.
Rx Check Time	Last time a status inquiry E-LMI check message was received.
Rx Inv. SeqNum	Counts the number of E-LMI messages received with invalid sequence number.
Enq Timeouts	Counts the number of T392 timer expired.
Tx Status Time	Last time a status message was sent by UNI-N.
Tx Status Msg	Number of status messages sent by UNI-N.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Tx Check Time	Last time a status E-LMI check message was sent by UNI-N.
Tx Async Status Msg	Counter for single EVC asynchronous status messages sent by UNI-N.
Discard Msg	Counter for the status inquiry messages discarded due to errors.

Label	Description
Encrypted Pkts	The number of encrypted packets forwarded by the key group
Encrypted Bytes	The number of encrypted bytes forwarded by the key group
Decrypted Pkts	The number of decrypted packets forwarded by the key group
Decrypted Bytes	The number of decrypted bytes forwarded by the key group
Encryption Keygroup Outbound Discarded Statistics (Pkts)	
Total Discard	The total number of outbound packets discarded by the key group
Unsupported Uplink	The total number of outbound packets discarded by the key group due to an unsupported uplink
Enqueue Error	The total number of outbound packets discarded by the key group due to an enqueuing error
Other	The total number of outbound packets discarded by the key group due to some other reason, such as an internal configuration error (for example, a key group that points to an SA, but the SA is not valid)
Encryption Keygroup Inbound Discarded Statistics (Pkts)	
Total Discard	The total number of inbound packets discarded by the key group
Invalid Spi	The total number of inbound packets discarded by the key group due to an invalid SPI
Authentication Failure *	The total number of inbound packets discarded by the key group due to an authorization failure
Control Word Mismatch	The total number of inbound packets discarded by the key group due to a control word (CW) mismatch between the encrypted (protected) CW in the ESP payload and the CW that is not encrypted
Padding Error	The total number of inbound packets discarded by the key group due to a padding error
Enqueue Error	The total number of inbound packets discarded by the key group due to an enqueuing error
Other	The total number of inbound packets discarded by the key group due to some other reason (for example, an incoming packet length is incorrect)

Label	Description
SDP Keygroup Association Table	
SDP ID	The SDP ID
Direction	The direction in which key group authentication and encryption occurs for traffic on the SDP
Inbound Keygroup SDP Association Count	The number of SDPs configured to use inbound SA
Outbound Keygroup SDP Association Count	The number of SDPs configured to use outbound SA
VPRN Keygroup Association Table	
VPRN SVC ID	The VPRN service identifier
Direction	The direction in which key group authentication and encryption occurs for traffic on the VPRN
Inbound Keygroup VPRN Association Count	The number of VPRNs configured to use inbound SA
Outbound Keygroup VPRN Association Count	The number of VPRNs configured to use outbound SA

encryption-keygroup

Syntax

encryption-keygroup *keygroup-id*

encryption-keygroup *keygroup-id* **spi** *spi*

Context

[Tree] (clear>grp-encryp encryption-keygroup)

Full Context

clear group-encryption encryption-keygroup

Description

This command clears NGE information for a key group.

Parameters

keygroup-id

Specifies the key group identifier.

Values 1 to 127, *keygroup-name* (up to 64 characters)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

spi

Specifies the SPI ID.

Values 1 to 127

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.17 end-sid

end-sid

Syntax

end-sid [**mt** {**0** | **2**}] [**prefix** *ipv6-prefix*[/*prefix-length*]] [**adv-router** *system-id* | *hostname*] [**algo** *algo-id*]

Context

[Tree] (show>router>isis>srv6 end-sid)

Full Context

show router isis segment-routing-v6 end-sid

Description

This command displays IS-IS SRv6 End SIDs.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values *ipv6-prefix*[/*prefix*]: x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D
prefix-length: 1 to 128

system-id* | *hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

8.18 endpoint

endpoint

Syntax

endpoint [*endpoint-name*]

Context

[Tree] (show>service>id endpoint)

Full Context

show service id endpoint

Description

This command displays service endpoint information.

Parameters

endpoint-name

Specifies the name of an existing endpoint for the service.

Platforms

All

Output

The following output is an example of service endpoint information and Table 136: Output fields: service endpoint describes the output fields.

Output Example

```
show service id 6 endpoint
```

SAP	Displays the SAP ID
Oper Status	Displays the operational status

endpoint

Syntax

endpoint [{*ip-address* | *ipv6-address*}] [**detail**]

endpoint [{*ip-address* | *ipv6-address*}] **egress-stats**

Context

[Tree] (show>router>mpls>forwarding-policies endpoint)

Full Context

show router mpls forwarding-policies endpoint

Description

This command displays the MPLS forwarding policy endpoint information.

Parameters

ip-address

Specifies the IPv4 address of the endpoint up to 64 characters.

ipv6-address

Specifies the IPv6 address of the endpoint up to 64 characters.

detail

Specifies detailed information for the endpoint.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

Platforms

All

Output

Table 137: Output fields: MPLS endpoint describes MPLS endpoint output fields.

Table 137: Output fields: MPLS endpoint

Label	Description
Endpoint	Specifies the endpoint IP address.
Preference	Specifies the preference.
Policy Name	Specifies the MPLS forwarding policies binding label name.
Active	Specifies the active state (Y | N).
InactiveReason	Specifies the inactive reason.
Last Updated	Specifies the date and time of the last update.
Num Grps	Specifies the number of groups.
OperState	Specifies the operational state (up | down).
Metric	Specifies the metric value.
TTM Preference	Specifies the TTM preference value.
Revert Timer	Specifies the revert timer value.
Path Pref	Specifies the path preference.
Retry Count	Specifies the retry count.
Next Retry In	Specifies the next retry value.
Next-hop Group	Specifies the next-hop group.
Resolution Type	Specifies the resolution type (direct | indirect).
Oper State	Specifies the operational state (down | up).
Oper Down Reas*	Specifies the reason for being operationally down.
Num Revert	Specifies the number of reverts.
Num Failover	Specifies the number of failovers.
Next Revert In	Specifies the next revert interval.
Weight	Specifies the weight value.
Primary	Specifies the IP address of the primary next-hop.
Resolved	Specifies the resolved status (false | true).
Down Reason	Specifies the down reason.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Backup	Specifies the IP address of the backup next-hop.
StatsOperState	Specifies if a statistic index is allocated to the next-hop.
EgrStatsState	Specifies if all next-hops have a statistic index allocated.

Output Example

```

```

8.21 epipe-map-access-to-egress-port

epipe-map-access-to-egress-port

Syntax

epipe-map-access-to-egress-port service *service-id* [**end-service** *service-id*] | **lag** *lag-id* **summary**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (tools>dump epipe-map-access-to-egress-port)

Full Context

tools dump epipe-map-access-to-egress-port

Description

This command will display the egress port that will be used to transmit traffic associated with the displayed Epipe service(s). The information displayed shows the egress port for traffic traveling from SAP to egress SDP or SAP.

This command will support Epipe services with the following combinations:

- SAP to SDP (with no endpoint configuration)
- SAP to SAP (with or without an ICB)
- SAP to SDP using endpoints with 1 or 2 SDPs

The command can be executed by specifying either a service ID, service-ID range or an ingress LAG ID.

This command will not display the egress port for traffic traveling from the SDP to egress SAP. This command also does not work with services that use policers or shared queues and also does not support PBB services.

This command replaces the command tools dump epipe-map-to-network, which has been deprecated.

Parameters

service service-id

Identifies the service ID for which the command will return the egress port. If used in conjunction with the end-service parameter, this value represent the beginning of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

end-service service-id

This parameter is used to identify the end of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

lag-id

This parameter caused the command to return the egress port for all service with SAPs associated with the specified LAG ID.

Values 1 to 800

Platforms

All

8.22 epipe-sap-template

epipe-sap-template

Syntax

epipe-sap-template

epipe-sap-template *name*

Context

[Tree] (show>service>template epipe-sap-template)

Full Context

show service template epipe-sap-template

Description

This command displays Epipe SAP template information.

Parameters

name

Specifies the Epipe SAP template name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.23 error-codes

error-codes

Syntax

error-codes

Context

[Tree] (show>app-assure>http-redirect error-codes)

Full Context

show application-assurance http-redirect error-codes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays http-error-redirect error-codes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of HTTP error redirect error code information, and Table 138: Output fields: application assurance HTTP redirect error codes describes the fields.

Output Example

```
*A:Dut-C>show application-assurance http-error-redirect error-codes

Full Context

tools dump test-oam twamp server error-counters

Description

This command dumps various error counters related to TWAMP server and TWAMP test.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of various error counters related to TWAMP server and TWAMP test.

Output Example

```
tools>dump>test-oam>twamp>server# error-counters
Dropped Connection Stats
------------------------
TCP connection closed                : 0
TCP connection error                 : 0
Unexpected event                     : 0
Error sending message                : 0
Error waiting for message            : 0
Connection not in a prefix           : 0
Max global limit                     : 0
Max prefix limit                     : 0
No mode specified                    : 0
Unsupported mode                     : 0
Invalid command                      : 0
Stop-sessions with bad session count : 0
Connection timeout                   : 0
Internal resource                    : 0
Invalid zero SID                     : 0
Invalid HMAC                         : 0
Dropped Connection States
-------------------------
Idle               : 0
Set-up-wait        : 0
Started            : 0
Active             : 0
Process Start      : 0
Process Stop       : 0
Process TW-session : 0
Rejected Session Stats
----------------------
Invalid address version: 0
Non-local destination : 0
Bad type-p            : 0
Padding too big       : 0
MBZ value is non-zero : 0
SID is non-zero       : 0
Timeout too large     : 0
Max global sessions   : 0
Max prefix sessions   : 0
Socket error          : 0
Source unreachable    : 0
Port in use           : 0
Duplicate session     : 0
Internal resource     : 0
REFWAIT timeout       : 0

	booting
	failed
	provisioned
	unprovisioned
	fwUpgrade — Firmware upgrade
Oper flags	Operational flag of the ESA
IOM Host Port(s)	IOM host port or ports in *slot*/*mda*/*port* format
Hardware Health	
Overall Status	Overall ESA server hardware status
	Unknown — ESA status not reported, ESA not connected or not booted yet
	OK — Normal
	Degraded — Aligns with flashing amber of the health LED
	Critical — Aligns with flashing red of the health LED
	Unsupported — ESA hardware status reporting is unsupported by the ESA
Power Supply Status	Current status of the power supply
Power Supply Temperature	Current temperature detected by the specific hardware assembly

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Power Supply Voltage	Line input voltage, in volts
Power Supply Output	Current average power, in watts
Power Supply Max Power	Maximum power draw seen since power on, in watts
Power Supply Redundancy	Redundant power supply in use. In case of failure of one power supply, the server continues to operate without issue. All variants of the ESA servers come with 2 power supplies
	Unknown — The iLO firmware has not received device status information. After the iLO is reset when the server is powered off, some subsystems display the status Unknown. The iLO cannot update the status for these subsystems when the server is powered off.
	Redundant — There is a backup component for the device
	Non-redundant — There is no backup component for the device
Power Supply Mismatch Stat*	Whether different types power supplies are connected to the server
	true — Different types of power supplies are connected to the server
	false — The same types of power supplies are connected to the server
Fan State	Fan status as reported by the ESA server
	Unknown — Fan status not reported, ESA not connected or not booted yet
	OK — Normal
	Degraded — One or more fan is degraded while the system is powered on
	Critical — One or more fan has failed while the system is powered on
Fan Redundancy	Redundant fans in use. In case of failure of one or more fans, the server continues to operate without any issue.
	Unknown — The iLO firmware has not received device status information. After the iLO is reset when the server is powered off, some subsystems display the status Unknown. The iLO cannot update the status for these subsystems when the server is powered off.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Redundant — All 7 backup fans are running
	Non-redundant — One or more fans have failed but at least one fan is running
	Failed — All fans have failed
CPU Temperature	CPU temperature as reported by the ESA
CPU Temperature Threshold	CPU temperature caution threshold as reported by the ESA A temperature threshold of 0 indicates that this functionality is not supported or cannot be retrieved from the ESA. This information is not output for ESA 400G rev AA or AB.
NIC Temperature	NIC temperature as reported by the ESA A temperature of 0 indicates that this functionality is not supported or not possible to retrieve from the ESA.
NIC Temperature Threshold	NIC temperature caution threshold as reported by the ESA A temperature threshold of 0 indicates that this functionality is not supported or cannot be retrieved from the ESA.
Temperature Status	Temperature status as reported by the ESA server
	Ok — Temperature within normal operating range
	Degraded — Temperature is outside the normal operating range
	Failed — Temperature exceeded configured range on the ESA
Hardware Data	Detailed hardware data about the ESA
NUMA Cell Topology	Number of cores, amount of memory, and Ethernet ports available to the NUMA cell
VM	VM identification number
VM Type	VM type (aa, bb, or tunnel)
Cores	Number of cores of the ESA-VM
Memory (GB)	Total memory on the ESA-VM

esa

Syntax

esa *esa-id* [**cold-reboot**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear esa)

Full Context

clear esa

Description

This command resets the ESA hypervisor, which clears the statistics or status information for the specified ESA.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

cold-reboot

Keyword to perform a cold reboot of the specified ESA, which causes the ESA hardware to physically reboot. If this keyword is not specified, the system performs a warm reboot, which causes the ESA hypervisor to reset.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

esa

Syntax

esa *esa-id*

Context

[Tree] (tools>perform esa)

Full Context

tools perform esa

Description

Commands in this context perform operations for the specified ESA.

Parameters

esa-id

Specifies ESA ID.

Values 1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

8.28 esa-vm

esa-vm

Syntax

esa [*esa-id*/*vm-id*] [**detail**]

Context

[Tree] (show esa-vm)

Full Context

show esa-vm

Description

This command displays ESA-VM details.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

detail

Specifies the detailed ESA-VM information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

The following are output examples for this command.

Output Example

```
*A:Dut-A# show esa-vm 1/1 detail

Table 140: Output fields: ESA-VM

Label	Description
ESA	The ESA identification number
VM	The VM identification number
VM Type	The VM type (aa, bb, or tunnel)
Cores	The number of cores of the ESA-VM
Memory (GB)	The memory on the ESA-VM
Admin State	up — Administratively up
	down — Administratively down
Operational State	up — Operationally up
	down — Operationally down
	booting
	failed
	provisioned
	unprovisioned
IOM Host Port	The IOM host port in *slot*/*mda*/*port* format
Oper flags	The operational flags for the ESA-VM
Virtual Core Role	The virtual core role (Mgmt-#, Worker-#, Idle-#, Scheduler-#, Nic-#)
Virtual Core Id	The Virtual Core identification number
Current %	The current processing load of the virtual core
15min Average %	The 15 minute average processing load of the virtual core

Label	Description
All-time Peak %	The all-time peak processing load of the virtual core

esa-vm

Syntax

esa-vm [*esa-id*/*vm-id*]

Context

[Tree] (clear esa-vm)

Full Context

clear esa-vm

Description

This command clears the statistics or status pertaining to the specified ESA-VM.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

8.29 est-profile

est-profile

Syntax

est-profile [*name*]

Context

[Tree] (show>certificate est-profile)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show certificate est-profile

Description

This command displays EST profile information. If a profile name is not specified, the command displays information about all the EST profiles.

Parameters

name

Specifies an existing EST profile name, up to 32 characters.

Platforms

All

Output

The following output is an example of the **show certificate est-profile** command

Output Example

```
*A:cses-V27# show certificate est-profile
===============================================================================
EST Profile         Server
                    Address:Port
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
No. of EST Profiles: 0
===============================================================================
```

eth-cfm

Syntax

eth-cfm

Context

[Tree] (tools>dump eth-cfm)

Full Context

tools dump eth-cfm

Description

Commands in this context configure debugging for Ethernet Connectivity Fault Management.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[Tree] (monitor eth-cfm)

Full Context

monitor eth-cfm

Description

Commands in this context monitor statistics for ETH-CFM.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>service>sdp-using eth-cfm)

Full Context

show service sdp-using eth-cfm

Description

Commands in this context display SDP binding information for a specific ETH-CFM.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm [**tunnel** *tunnel-id*] [**detail**]

Context

[Tree] (show>lag eth-cfm)

Full Context

show lag eth-cfm

Description

This command displays ETH-CFM information.

Parameters

tunnel-id

Filters ETH-CFM MEP information to one tunnel.

Values 1 to 4094

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm [**detail**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>port>ethernet eth-cfm)

Full Context

show port ethernet eth-cfm

Description

This command displays ETH-CFM information.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

8.32 eth-cfm-monitoring

eth-cfm-monitoring

Syntax

eth-cfm-monitoring [{**service-id** *service-id* **sap-id** *sap-id*} | {**service-id** *service-id* **sdp-id** *sdp-id:vc-id*}]

Context

[Tree] (show>system>security>cpu-protection eth-cfm-monitoring)

Full Context

show system security cpu-protection eth-cfm-monitoring

Description

This command displays sources exceeding their eth-cfm-monitoring rate limit.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278317, svc-name up to 64 characters in length

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-cfm-monitoring

Syntax

eth-cfm-monitoring

Context

[Tree] (clear>cpu-protection eth-cfm-monitoring)

Full Context

clear cpu-protection eth-cfm-monitoring

Description

This command clears records of flows exceeding the ETH-CFM monitoring rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

8.33 eth-ring

eth-ring

Syntax

eth-ring

Context

[Tree] (tools>perform eth-ring)

Full Context

tools perform eth-ring

Description

This command performs Ethernet ring operations.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-ring

Syntax

eth-ring [**status**]

eth-ring [*ring-index*] **hierarchy**

eth-ring *ring-index* [**path** {**a** | **b**}]

Context

[Tree] (show eth-ring)

Full Context

show eth-ring

Description

This command displays Ethernet Ring information.

Parameters

status

Specifies to display an Ethernet Ring status summary

ring-index

Specifies an Ethernet Ring index

Values 1 to 128

hierarchy

Specifies to display Ethernet Ring hierarchical relationships

path

Specifies to show information for a specific path

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

Syntax

eth-ring *ring-index* [**clear**]

Context

[Tree] (tools>dump eth-ring)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools dump eth-ring

Description

This command displays Ethernet Ring information.

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

clear

Keyword to clear stored information for the specified Ethernet Ring.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

8.34 eth-sat

eth-sat

Syntax

eth-sat [*sat-id*]

Context

[Tree] (show>system>satellite eth-sat)

Full Context

show system satellite eth-sat

Description

This command displays information about configured Ethernet satellites. If a sat-id is specified, this command displays information only about the specified Ethernet satellite.

Parameters

sat-id

Specifies the Ethernet satellite chassis.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of Ethernet satellite information and Table 141: Output fields: Ethernet satellite describes the output fields.

Table 141: Output fields: Ethernet satellite

Label	Description
SatID	The satellite identification
Provisioned Type	The satellite type that is configured
Equipped Type	The satellite type that is actually populated in the system
Admin State	The administrative state of the satellite: • up – the satellite is administratively up • down – the satellite is administratively down
Oper State	The operational state of the satellite: • up – the satellite is operationally up • down – the satellite is operationally down
Description	Additional information configured by the user
MAC address	The MAC address of the satellite
Software Repository	The software repository
SyncE	The SyncE feature: • enabled – the SyncE features is enabled • disabled – the SyncE feature is disabled
PTP-TC	The Ethernet satellite IEEE1588 transparent clock feature: • enabled – the Ethernet satellite IEEE1588 transparent clock function is enabled • disabled – the Ethernet satellite IEEE1588 transparent clock function is disabled
PTP-IP	The use of PTP over IPv4 or IPv6 with the satellite transparent clock feature: • enabled – the Ethernet satellite PTP IP settings are enabled • disabled – the Ethernet satellite PTP IP settings are disabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
PTP IPv4 address	The IPv4 address used to track the PTP messages crossing the satellite. This must be the address for PTP within the SR OS host system
PTP IPv6 address	IPv6 address used to track the PTP messages crossing the satellite. This must be the address for PTP within the SR OS host system
Client-Down-Delay	The client-down delay feature: • enabled – the client-down delay is enabled • disabled – the client-down delay is disabled
Console Access	The console access: • enabled – console access is enabled • disabled – console access is disabled
Port Template	The port template configured for the satellite. A port template is specific to the specified satellite type.

eth-sat

Syntax

eth-sat *sat-id*

Context

[Tree] (clear>system>satellite eth-sat)

Full Context

clear system satellite eth-sat

Description

Commands in this context clear Ethernet satellite information.

Parameters

sat-id

Specifies the Ethernet satellite ID.

Values 1 to 20

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

8.35 eth-seg

eth-seg

Syntax

eth-seg [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**originator-ip** *ip-address* **|** *ipv6-address*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

Context

[Tree] (show>router>bgp>routes>evpn eth-seg)

Full Context

show router bgp routes evpn eth-seg

Description

This command displays BGP-EVPN Ethernet Segment (ES) routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535

  – *comm-val1* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

ip-address* | *ipv6-address

Specifies the IPv4 or IPv6 originator address, up to 64 characters.

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example,ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',' ')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

8.36 eth-tunnel

eth-tunnel

Syntax

eth-tunnel [**group** *tunnel-group-name*] [**vc-id** *vc-id*]]

Context

[Tree] (show>router>l2tp eth-tunnel)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router l2tp eth-tunnel

Description

This command displays information about configured L2TPv3 Ethernet tunnels. These Ethernet tunnels are the L2TPv3 sessions setup between the local private L2 SAP and the far end device.

If this command is executed without any parameters, then a list of all configured Ethernet tunnels are displayed.

If this command is executed with a tunnel group name or a VC-ID, then a detailed view of the associated Ethernet tunnel is displayed.

Parameters

tunnel-group-name

Specifies the configured tunnel group name used for the associated Ethernet tunnel.

vc-id

Specifies the VC ID for the L2TPv3 Ethernet tunnel.

Values 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TPv3 Ethernet tunnel information

Output Example

```
A:Dut-A# show router 200 l2tp eth-tunnel
===============================================================================
L2TPv3 Ethernet Tunnel Summary
===============================================================================
Tunnel Group name                                                VC ID
-------------------------------------------------------------------------------
v3-group-1                                                       100
-------------------------------------------------------------------------------
No. of ethernet tunnels: 1
===============================================================================

A:Dut-A# show router 200 l2tp eth-tunnel group "v3-group-1"
===============================================================================

```

eth-tunnel

Syntax

eth-tunnel

eth-tunnel {**aps** | **status**}

eth-tunnel *tunnel-index* [**path** *path-index*] [**detail**]

Context

[Tree] (show eth-tunnel)

Full Context

show eth-tunnel

Description

This command displays Ethernet tunnel information. Any data SAP missing a tag for a defined path has the EthTunTagMismatch flag generated. In the example provided below, SAP eth-tunnel-1:1 does not have the tag for path 2 configured. Therefore, it is operationally down with the reason indicated by the EthTunTagMismatch flag.

Parameters

aps

Shows APS Ethernet tunnel information.

status

Shows Ethernet tunnel status information.

tunnel-index

Specifies the tunnel index.

Values 1 to 1024

path-index

Specifies the path index.

Values 1 to 16

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of Ethernet tunnel information, and Table 142: Output fields: Ethernet tunnel describes the output fields.

Output Example: show eth-tunnel

```

Table 142: Output fields: Ethernet tunnel

Field	Description
Tunnel Id	Numeric value from 1 to 64.
Admin State	Up — The eth tunnel is administratively up. Down — The eth tunnel is administratively down.
Oper State	Up — The eth tunnel is operationally up. Down — The eth tunnel is operationally down.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Protection Type	Two options: g8031-1to1 — Two members are allowed, but only one of them is active at one point in time. loadsharing — Multiple members can be active at one point in time.
Active Paths	Only two paths are supported.

eth-tunnel

Syntax

eth-tunnel *tunnel-index* [**clear**]

Context

[Tree] (tools>dump eth-tunnel)

Full Context

tools dump eth-tunnel

Description

This command displays Ethernet tunnel information.

Parameters

tunnel-id

Specifies the tunnel ID.

Values 1 to 128

clear

Clears statistics after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information.

Output Example

```
*A:PE-E# tools dump eth-tunnel 1

TunnelId 1 (Up/Up), Port eth-tunnel-1 (Up/Up): type g8031-1to1
 NumMems 2/2, Up/Dn 0/0, active 0x1, present 0x3 baseMemPort 1/1/2
  memId 1 (P), port 1/1/2 (Up), tag 1.0(Up) status (Up/Up)
    ccCnt-sf/ok 1/1 idx 0 tunId 1

8.38 ethernet-segment

ethernet-segment

Syntax

ethernet-segment *name* **evi** *evi* **df**

ethernet-segment *name* **isid** *isid* **df**

ethernet-segment *name* **local-bias**

Context

[Tree] (tools>dump>service>system>bgp-evpn ethernet-segment)

Full Context

tools dump service system bgp-evpn ethernet-segment

Description

This command shows the computed DF PE for a specified EVI or ISID when the **evi** or **isid** parameters are selected, respectively. When the **local-bias** parameter is used, the output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

The PE can only enable local bias procedures on up to three PEs that are attached to the same ES and use multihomed VXLAN services. If more than three PEs exists, the PEs are ordered by either lowest IP (if **service-carving auto** is used in the ES) or lowest preference (if preference-based service-carving is used) and only the top three PEs are considered for local bias.

Parameters

name

Specifies the name of the Ethernet Segment, up to 32 characters.

evi

Specifies the EVI.

Values 1 to 65535

isid

Specifies the ISID.

Values 1 to 16777215

local-bias

Specifies that output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of Ethernet Segment information.

Output Example

```
# tools dump service system bgp-evpn ethernet-segment "ESI-71" evi 1 df
[07/15/2015 21:52:08] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

# tools dump service system bgp-evpn ethernet-segment "ESI-71" isid 20001 df
[07/15/2015 21:52:21] Computed DF: 192.0.2.72 (Remote) (Boot Timer Expired: Yes)

8.40 eval-group-interface-template

eval-group-interface-template

Syntax

eval-group-interface-template *name*

Context

[Tree] (tools>perform>subscr-mgmt eval-group-interface-template)

Full Context

tools perform subscriber-mgmt eval-group-interface-template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command reapplies the specified group-interface template to all the group interfaces that were created using this template. This command can be used after changing the group-interface template, because not all the changed parameters are automatically applied to the existing group interfaces.

This command reports the total number of group interfaces linked to the template, the number of group interfaces that were changed or did not require a change, and the number of group interfaces for which a change was attempted but failed.

Parameters

name

Specifies a group-interface template name, up to 32 characters, as configured under **configure subscriber-mgmt group-interface-template**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the command information.

Output Example

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-group-interface-template "default"
Group interface instances:
- total submitted : 1
- changed         : 1
- change failed   : 0
```

8.41 eval-ipoe-session

eval-ipoe-session

Syntax

eval-ipoe-session [**svc-id** *service-id*] [**sap** *sap-id*] [**mac** *mac-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**subscriber** *sub-ident-string*]

Context

[Tree] (tools>perform>subscr-mgmt eval-ipoe-session)

Full Context

tools perform subscriber-mgmt eval-ipoe-session

Description

This command re-evaluates the mapping between authentication strings such as the SLA profile string and the actual profiles for the identified IPoE sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

circuit-id

Specifies the circuit ID up to 127 characters.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.42 eval-lease-state

eval-lease-state

Syntax

eval-lease-state [**svc-id** *service-id*] [**sap** *sap-id*] [**subscriber** *sub-ident-string*] [**ip** *ip-address*] [**mac** *mac-address*]

Context

[Tree] (tools>perform>subscr-mgmt eval-lease-state)

Full Context

tools perform subscriber-mgmt eval-lease-state

Description

This command evaluates lease state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Specifies the server's IP address. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

sub-ident-string

Specifies the subscriber ID string, up to 32 characters.

service-id

Specifies an existing service ID.

Values 1 to 2147483647

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.43 eval-msap

eval-msap

Syntax

eval-msap {**policy** *msap-policy-name* | **msap** *sap-id*}

Context

[Tree] (tools>perform>subscr-mgmt eval-msap)

Full Context

tools perform subscriber-mgmt eval-msap

Description

This command re-applies the managed SAP policy to the managed SAP identified by the specified *sap-id* or to all managed SAPs associated with the specified *msap-policy name*.

Parameters

msap-policy-name

Specifies an existing MSAP policy. The MSAP policy is re-applied to all associated managed SAPs.

sap-id

Specifies an MSAP SAP ID. The MSAP policy is re-applied to the specified MSAP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values [*port-id* | lag-*id*]:*qtag1*
[*port-id* | lag-*id*]:*qtag1.qtag2*

Platforms

8.44 eval-ppp-session

eval-ppp-session

Syntax

eval-ppp-session [**svc-id** *service-id*] [**user-name** *user-name*] [**sap** *sap-id*] [**ip** *ip-address*] [**subscriber** *sub-ident-string*]

eval-ppp-session [**svc-id** *service-id*] [**user-name** *user-name*] [**sap** *sap-id*] **mac** *mac-address* [**session-id** *session-id*] [**ip** *ip-address*] [**subscriber** *sub-ident-string*]

Context

[Tree] (tools>perform>subscr-mgmt eval-ppp-session)

Full Context

tools perform subscriber-mgmt eval-ppp-session

Description

This command evaluates PPP sessions.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

user-name

Specifies the PPP user name up to 253 characters.

sap-id

Specifies a SAP ID up to 255 characters.

ip-address

Specifies the peer’s IP address.

sub-ident-string

Specifies an existing subscriber identification profile.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.45 eval-rates

eval-rates

Syntax

eval-rates

Context

[Tree] (tools>perform>subscr-mgmt>bonding eval-rates)

Full Context

tools perform subscriber-mgmt bonding eval-rates

Description

This command evaluates all bonding contexts and recalculates all reference rates. This command can be useful in handling changes that are not automatically tracked, such as adapting a scheduler rate in a QoS policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Full Context

tools perform subscriber-mgmt eval-slaac-host

Description

This command evaluates the SLAAC host.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

ipv6-prefix

Specifies an IPv6 prefix and prefix length.

Values

ipv6-prefix	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.48 evaluate-script

evaluate-script

Syntax

evaluate-script sap *sap-id* **control-session** *acct-session-id* **action** *script-action* [**dynsvc-policy** *name*] [**param-string** *string*]

Context

[Tree] (tools>perform>service>dynamic-services evaluate-script)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform service dynamic-services evaluate-script

Description

This tools command performs the execution of a dynamic service script action as if the corresponding RADIUS attributes were received from RADIUS. It is possible to setup, modify or teardown a dynamic service associated with the specified control channel.

Note:
This command is not available in the MD-CLI.

Parameters

sap sap-id

specifies the dynamic service SAP id.

control-session *acct-session-id*

Specifies the accounting session id of the control channel associated with this dynamic service.

action *script-action*

Specifies the requested action: setup, modify or teardown.

dynsvc-policy *name*

Specifies the dynamic services policy to use for this action. Mandatory parameter for setup and modify actions. In case of a modify action, the dynamic services policy must be the same as the policy used at setup.

param-string *string*

Specifies the dynamic service parameter list. Mandatory parameter for setup and modify actions.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.49 evc

evc

Syntax

evc [*port-id* [**vlan** *vlan-id*]]

Context

[Tree] (show>elmi evc)

Full Context

show elmi evc

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays Ethernet Virtual Connections (EVC). No argument displays all the EVC on the service router. The port and VLAN arguments display information related to EVC associated with the port and VLAN.

Parameters

port-id

Displays information related to the EVCs configured on the port.

Values *slot*/*mda*/*port*

vlan-id

Specifies the VLAN Identifier of the EVC.

Values 0 to 4094, *

Platforms

All

Output

The following output is an example of E-LMI EVC information, and Table 143: Output fields: E-LMI EVC describes the output fields.

Output Example

```
*A:Dut-C# show elmi evc
===============================================================================

Table 143: Output fields: E-LMI EVC

Field	Description
Port	Port identifier.
Vlan	Vlan identifier.
Status	New-Act — New and active. Act — Active.
Type	Connection type.
EVC Id	EVC identifier.

8.50 event-control

event-control

Syntax

event-control [*application-id* [*event-name* | *event-number*]]

event-control *application-id event-name* **detail**

Context

[Tree] (show>log event-control)

Full Context

show log event-control

Description

This command displays event control settings for events including whether the event is suppressed or generated and the severity level for the event.

If no options are specified all events, alarms and traps are listed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

application-id

Only displays event control for the specified application.

Default All applications.

The following are some sample applications:

Values anysec, application_assurance, aps, atm, auto_prov, bfd, bgp, bier, bmp, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtp, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp, oam, open_flow, ospf, pcap, pcep, pfcp, pim, im_snooping, port, ppp, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, sr_policy, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

event-name

Only displays event control for the named application event, up to 32 characters.

Default All events for the application.

event-number

Only displays event control for the specified application event number.

Default All events for the application.

Platforms

All

Output

The following output is an example of event control information.

Table 144: Output fields: event control describes the output fields for the event control.

Output Example

```
A:gal171# show log event-control

Table 144: Output fields: event control

Label	Description
Application	The application name.
ID#	The event ID number within the application L ID# - An "L" in front of an ID represents local events that do not generate an associated SNMP trap. Most events do generate a trap, only the exceptions are marked with a preceding "L”.
Event Name	The event name.
P	CL — The event has a cleared severity or priority. CR — The event has critical severity or priority. IN — The event has indeterminate severity or priority. MA — The event has major severity or priority.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	MI — The event has minor severity or priority. WA — The event has warning severity or priority.
g/s	gen — The event will be generated or logged by event control. sup — The event will be suppressed or dropped by event control. thr — Specifies that throttling is enabled.
Logged	The number of events logged or generated.
Dropped	The number of events dropped/suppressed.
Severity	The severity level of the event (cleared, indeterminate, critical, major, minor, or warning).
Generated	Indicates whether the log event is enabled (true) or suppressed (false).
Count	The number of events logged or generated.
Drop count	The number of events dropped/suppressed.
Throttle	Indicates whether the event is subject to global throttling (true or false).
Specific throttle	Indicates whether the event is subject to specific per event throttling (true or false).
Specific throttle limit	The configured number of events per interval for specific throttling.
Specific throttle interval (s)	The configured interval over which the specific throttling limit is applied.
Specific throttle by default	Indicates whether the specific throttling is enabled or not when it has not been explicitly configured.
Specific throttle limit default	The default number of events per-interval for specific throttling of this event.
Specific throttle interval default (s)	The default interval over which the specific default throttling limit is applied.
Repeat	Specifies that the log event should be repeated every minute until the underlying condition is cleared.
Source stream	Specifies the event source (main, security, change, debug or li).

8.52 event-log

event-log

Syntax

event-log *event-log-name* **syslog**

Context

[Tree] (show>app-assure>group event-log)

Full Context

show application-assurance group event-log

Description

This command displays event log information.

Parameters

event-log-name

Specifies the event log name, up to 32 characters.

syslog

Specifies to display syslog information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an output example displaying event log information:

Output Example

```
*A:Dut-B# show  application-assurance group 1:1 event-log "sampleLog" syslog

Description

This command displays all event logs.

Parameters

failure | degrade

Only show logs with the specified severity.

active | cleared

Only show logs with the specified state.

Platforms

All

8.54 event-parameters

event-parameters

Syntax

event-parameters [*application-id* [*event-name* | *event-number*]]

Context

[Tree] (show>log event-parameters)

Full Context

show log event-parameters

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays an event's (or all events) common parameters and specific parameters. This allows a user to know what parameters can be passed from a triggering event to the triggered EHS script.

There is a common event parameter for all log events called 'timestamp' that contains the same information as 'gentime', but in a different format and unit. The 'timestamp' parameter is only available to Python applications.

Parameters

application-id

Displays event parameters for the specified application.

The following are some sample applications:

Values adp, anysec, application_assurance, auto_prov, bfd, bgp, bier, bmp, calltrace, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gtp, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, logger, maffilter, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp, oam, ospf, pcap, pcep, pfcp, pim, pim_snooping, pools, port, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, satellite, security, sflow, snmp, sr_mpls, sr_policy, srv6, stp, subscr_mgmt, sub_host_trk, svcmgr, system, telemetry, tip, tls, tree_sid, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

event-name

Displays event parameters for the named application event up to 32 characters in length.

event-number

Displays event parameters for the specified application event number.

Values 0 — 4294967295

Platforms

All

Output

The following output is an example of log event parameter information.

Output Example

```

Table 145: Output fields: EVPN usage

Label	Description
MPLS-TEP	Specifies the number of MPLS tunnel endpoints (TEPs)
VXLAN-TEP	Specifies the number of VXLAN TEPs
SRV6-TEP	Specifies the number of SRv6 TEPs
Total-TEP	Specifies the total number of TEPs
Mpls Dests (TEP, Egress Label + ES + ES-BMAC)	Specifies the number of MPLS destinations
Mpls Etree Leaf Dests	Specifies the number of MPLS E-Tree leaf destinations
Vxlan Dests (TEP, Egress VNI + ES)	Specifies the number of VXLAN destinations

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Srv6 Dests (TEP, SID + ES)	Specifies the number of SRv6 destinations
Total-Dest	Specifies the total number of destinations
Sdp Bind + Evpn Dests	Specifies the number of SDP bind and EVPN destinations
ES L2/L3 PBR	Specifies the number of elementary stream (ES) Layer 2 or Layer 3 policy-based routing (PBR)
Evpn Etree Remote BUM Leaf Labels	Specifies the number of EVPN E-Tree remote BUM leaf labels
Evpn Rvpls Mcast Dests	Specifies the number of R-VPLS multicast destinations
EVPN Etree MLDP Leaf Intf	Specifies the number of mLDP interfaces on an mLDP Leaf (receiving P2MP traffic) where the interfaces are part of EVPN E-Tree services. Leaf, in this context, refers to mLDP leaf. This number also refers to the number of roots in E-Tree services that are joinable from an mLDP leaf (for example, the number of mLDP leaf interfaces). Since each root joined potentially causes an E-Tree leaf label from that root to be programmed against the mLDP leaf, it implicitly also indicates the number of programmable labels. An entry here is counted as soon as an mLDP leaf is created in an E-Tree service.
EVPN ES Labels on MLDP Leaf Intf	Specifies the number of upstream ES labels programmed against mLDP leafs. This does not include unique upstream ES labels since these labels must be programmed on all mLDP leafs joining a specific root PE.

evpn-mpls fxc [**sap** *sap-id*]

Context

[Tree] (show>service>id evpn-mpls)

Full Context

show service id evpn-mpls

Description

This command displays the existing EVPN-MPLS destinations for a specified service and all related information. The command allows filtering based on **esi** (for EVPN multihoming) and **es-bmac** (for PBB-EVPN multihoming) to display the EVPN-MPLS destinations associated to an Ethernet Segment Identifier (ESI).

Parameters

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':',' ')

ieee-address

Specifies a 48-bit MAC address for which to display information. The parameter is entered in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx, where xx represents a hexadecimal number.

instance-id

Specifies the instance ID.

Values 1,2

detail

Keyword that displays detailed information.

fxc

Keyword that displays Flexible Cross Connect (FXC) information.

sap-id

Specifies the port ID portion of the SAP definition.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | eth-sat-id	
dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id* | eth-sat-id:[qtag1| cp-conn-prof-id]	
qinq	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *pw-id* | *eth-sat-id:[qtag1* | *cp-conn-prof-id].[qtag2* | ***cp****-conn-prof-id]*

The following table describes the EVPN-MPLS output fields.

Table 148: Output fields: service EVPN-MPLS

Label	Description
vBmacAddr	Displays the vBmac address
Num. Macs	Displays the number of MACs
Last Change	Indicates the time of the most recent state changes
TEP Address	Displays the TEP address
Egr Label	Displays the egress label
Transport	Displays the transport type
Number of entries	Indicates the number of entries
Eth SegId	Displays the Ethernet Segment ID
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the EVPN-MPLS entry
Transport:Tnl	Displays the transport tunnel
Num. MAC	Displays the number of MACs
Oper State	Disaplays the operational state
Oper Flags	Displays the operational flags
Mcast	Displays the multicast information
Sup BCast Domain	Displays the Sup BCast Domain
FXC SAP Connections	
Dest Identifier	Displays the destination ID
Sap (Normalized Tags)	Displays the SAP ID
RFC9744 Encoding	Displays whether the S-tag is encoded in compliance with RFC 9744

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Last Change	Displays the date and time of the last change
Transport:Tnl-id	Displays the transport tunnel ID
Number of Entries	Displays the total number of entries

8.60 evpn-proxy-db

evpn-proxy-db

Syntax

evpn-proxy-db [**detail**]

evpn-proxy-db [**group** *grp-ip-address*]

Context

[Tree] (show>service>id>igmp-snooping evpn-proxy-db)

[Tree] (show>service>id>mld-snooping evpn-proxy-db)

Full Context

show service id igmp-snooping evpn-proxy-db

show service id mld-snooping evpn-proxy-db

Description

This command displays the EVPN proxy database that is created when **config>service>vpls> igmp**/**mld-snooping**>**evpn-proxy** is enabled in the service. The EVPN proxy database is populated with local reports received on SAP or SDP binds but not with the received SMET routes. The output shows the IGMP and MLD versions of the database entries that are conveyed in the SMET routes advertised for the entries.

Parameters

grp-ip-address

Specifies the group IP address, in dotted decimal notation.

detail

Specifies detailed information for the EVPN proxy database.

Platforms

All

Output

The following output is an example of EVPN proxy database information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
A:PE-2# show service id 4000 igmp-snooping evpn-proxy-db

===============================================================================
IGMP Snooping Evpn-Proxy-reporting DB for service 4000
===============================================================================
Group Address    Mode     Up Time        Num Sources    V1   V2   V3
-------------------------------------------------------------------------------
239.0.0.1        exclude  0d 00:53:55    0                     V3
239.0.0.2        include  0d 00:53:55    1                     V3
-------------------------------------------------------------------------------
Number of groups: 2
===============================================================================
```

Table 149: Output fields: IGMP snooping EVPN proxy describes EVPN proxy output fields.

Table 149: Output fields: IGMP snooping EVPN proxy

Field	Description
Group Address	Group IP address
Mode	IGMPv3 or MLDv2 mode
Up Time	Time that the group is added
Num Sources	Number of sources
V1	IGMP/MLD version of the database
V2	IGMP/MLD version of the database
V3	IGMP version of the database

8.61 excessive-sources

excessive-sources

Syntax

excessive-sources [**service-id** *service-id* **sap-id** *sap-id*]

Context

[Tree] (show>system>security>cpu-protection excessive-sources)

Full Context

show system security cpu-protection excessive-sources

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays sources exceeding their per-source rate limit.

Parameters

service-id

Displays information for services exceeding their per-source rate limit.

sap-id

Displays information for SAPs exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

excessive-sources

Syntax

excessive-sources

Context

[Tree] (clear>cpu-protection excessive-sources)

Full Context

clear cpu-protection excessive-sources

Description

This command clears the records of sources exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

8.62 exercise

exercise

Syntax

exercise *aps-id* {**protect** | **working**}

Context

[Tree] (tools>perform>aps exercise)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform aps exercise

Description

This command performs an exercise request on the protection or working circuit.

Parameters

aps-id

Specifies the APS ID.

Values

aps-id	aps-*group-id*	
	aps	keyword
	group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

8.63 expand-wildcard-path

expand-wildcard-path

Syntax

expand-wildcard-path *path*

Context

[Tree] (tools>dump>system>telemetry expand-wildcard-path)

Full Context

tools dump system telemetry expand-wildcard-path

Description

This command expands XML Paths (XPaths) to include multiple wildcards.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

path

Specifies the XPath that contains the wildcards.

Platforms

All

Output

Output Example

```
# tools dump system telemetry expand-wildcard-path "/state/card/.../oper-state"
===============================================================================
Expanded paths
===============================================================================
/state/card[slot-number=*]/hardware-data/oper-state
/state/card[slot-number=*]/mda[mda-slot=*]/hardware-data/oper-state
/state/card[slot-number=*]/mda[mda-slot=*]/flex[group-index=*]/oper-state
===============================================================================
```

8.64 explicit-subscriber-map

explicit-subscriber-map

Syntax

explicit-subscriber-map

Context

[Tree] (show>subscr-mgmt explicit-subscriber-map)

Full Context

show subscriber-mgmt explicit-subscriber-map

Description

This command displays explicit subscriber mappings.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management explicit subscriber map information.

Output Example

```
B:Dut-A>show>subscr-mgmt# explicit-subscriber-map

tools perform router dhcp6 local-dhcp-server failover

tools perform router dhcp local-dhcp-server pool failover

tools perform router dhcp6 local-dhcp-server pool failover

tools perform router dhcp local-dhcp-server failover

Description

Commands in this context perform local DHCP or DHCP6 server failover tasks.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.2 failover-pool-stats

failover-pool-stats

Syntax

failover-pool-stats [*pool-name*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>dhcp>local-dhcp-server failover-pool-stats)

[Tree] (show>router>dhcp6>local-dhcp-server failover-pool-stats)

Full Context

show router dhcp local-dhcp-server failover-pool-stats

show router dhcp6 local-dhcp-server failover-pool-stats

Description

This command displays failover pool statistics.

Parameters

pool-name

Specifies the pool name which is defined in the system.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of failover pool stats information

Output Example

```
*A:cses-V22>show>router>dhcp>server# failover-pool-stats
===============================================================

Table 151: Output fields: failover pool statistics describes failover pool statistics output fields.

Table 151: Output fields: failover pool statistics

Field	Description
Failover Admin State	Identifies the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for pool	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
	subnet range of which the failover control is set to **local** on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.
Number of pools found	The total number of pools found

failover-pool-stats

Syntax

failover-pool-stats [*pool-name*]

Context

[Tree] (clear>router>dhcp6>server failover-pool-stats)

[Tree] (clear>router>dhcp>server failover-pool-stats)

Full Context

clear router dhcp6 local-dhcp-server failover-pool-stats

clear router dhcp local-dhcp-server failover-pool-stats

Description

This command clears failover pool statistics.

Parameters

pool-name

Clears information about the pool name which is defined in the system.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 152: Output fields: failover server statistics describes failover server stats fields.

Table 152: Output fields: failover server statistics

Field	Description
Failover Admin State	Identifiers the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service
Failover Oper State	The operational state of a DHCP server instance
Failover Persist Key	The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server
Administrative MCLT	The administrative Maximum Client Lead Time (MCLT)
Operational MCLT	Indicates the operational MCLT

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Startup Wait Time	The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests.
Partner Down Delay	The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state.
Ignore McLT	The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced.
Failover statistics for server	The failover statistics for each pool
Dropped Invalid Packets	The number of BNDUPD packets that were dropped because the packet was malformed
Failover Shutdown	The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down
Lease Already Expired	The number of BNDUPD packets that were dropped because the corresponding lease has expired
Maximum Lease Count Reached	The number of BNDUPD packets that were dropped because the maximum number of leases were reached
Subnet Not Found	The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease
Range Not Found	The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease.
Host Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Address Conflict	The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host
Peer Conflict	The number of BNDUPD packets that were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to **local** on this local DHCP server instance
Persist Congestion	The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance
No Lease Hold Time Configured	The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance
Lease Not Found	The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found.

9.4 failure-recovery

failure-recovery

Syntax

failure-recovery {**start** | **abort** | **clear-hold-down**}

Context

[Tree] (tools>perform>system>switch-fabric failure-recovery)

Full Context

tools perform system switch-fabric failure-recovery

Description

This command controls the automatic switch-fabric failure recovery.

Parameters

start

Forces the initiation of the recovery process.

abort

Terminates a running recovery process.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-hold-down

Clears the hold-down condition and allows the recovery to run immediately when the trigger condition occurs.

Platforms

7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

9.5 fate-sharing

fate-sharing

Syntax

fate-sharing

Context

[Tree] (show>service>id>spb fate-sharing)

Full Context

show service id spb fate-sharing

Description

This command displays SPB fate-sharing information on User B-VPLS service, in correspond to associated Control B-VPLS service.

Platforms

All

Output

The following output is an example of service SPB fate sharing information.

Output Example

```
*A:Dut-A# Node show service id spb fate-sharing
===============================================================================
User service fate-shared sap/sdp-bind information

9.6 fdb

fdb

Syntax

fdb [**sap** *sap-id* [**expiry**]] | [**sdp** *sdp-id* [**expiry**]] | [**mac** *ieee-address* [**expiry**]] | **endpoint** *endpoint* | [**detail**] [**expiry**] [**pbb**]

Context

[Tree] (show>service>id fdb)

Full Context

show service id fdb

Description

This command displays FDB entries for a specified MAC address.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP

detail

Displays detailed information

expiry

Displays time until MAC is aged out

pbb

Displays PBB related information. This keyword is only applicable to B-VPLS or I-VPLS services. This parameter applies to the 7450 ESS or 7750 SR only.

endpoint-name

Specifies an endpoint name up to 32 characters in length. This parameter applies to the 7450 ESS or 7750 SR only.

Platforms

All

Output

The following output is an example of service FDB information.

Table 153: Output fields: service ID FDB describes service FDB output fields.

Table 153: Output fields: service ID FDB

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Transport:Tnl-Id	Displays the tunnel type and tunnel ID of the FDB entry.
Source Identifier	Displays the id of the source MAC.
Type/Age	Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs. Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. L — Learned - Dynamic entries created by the learning process. OAM — Entries created by the OAM process. P — Indicates the MAC is protected by the MAC protection feature. H — Host, the entry added by the system for a static configured subscriber host. D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease. Static — Statically configured. T — Trusted.
Last Change	Indicates the time of the most recent state changes.

fdb

Syntax

fdb {**all** | **mac** *ieee-address* | **sap** *sap-id* | **mesh-sdp** *sdp-id* [: *vc-id*] | **spoke-sdp** *sdp-id* [:*vc - id*] | **vxlan-instance** *instance* [**vtep** *ip- address*]}

Context

[Tree] (clear>service>id fdb)

Full Context

clear service id fdb

Description

This command clears the FDB entries for the service.

Parameters

all

Clears all FDB entries.

ieee-address

Clears only FDB entries in the FDB table with the specified 48-bitaddress. The MAC address can be expressed in the form aa:bb:cc:dd:ee:ff or aa-bbcc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers.

sap-id

Clears the physical port identifier portion of the SAP definition.

mesh-sdp

Clears only the service FDB entries associated with the specified mesh SDP ID. For a mesh SDP, the VC ID is optional.

spoke-sdp

Clears only the service FDB entries associated with the specified spoke-SDP ID. For a spoke-SDP, the VC ID must be specified.

sap-id

Specifies the SDP ID for which the associated FDB entries will be cleared.

vc-id

Specifies the virtual circuit ID on the SDP ID for which the associated FDB entries are cleared.

Values sdp-id[:vc-id] sdp-id: 1 to 32767
vc-id: 1 to 4294967295
sdp-id:vc-id sdp-id: 1 to 32767
vc-id: 1 to 4294967295

instance

Clears only the service FDB entries associated with the specified static VXLAN instance.

Values 1, 2

vtep *ip-address*

Specifies, optionally and along with the VXLAN instance, a specific configured static egress VTEP to clear the FDB entries associated only with the VTEP.

Table 154: Output fields: FDB information describes show FDB-Info command output.

Table 154: Output fields: FDB information

Label	Description
ServID	Displays the service ID.
MAC	Displays the associated MAC address.
Mac Move	Displays the administrative state of the MAC movement feature associated with this service.
Primary Factor	Displays a factor for the primary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Secondary Factor	Displays a factor for the secondary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate.
Mac Move Rate	Displays the maximum rate at which MACs can be re-learned in this service, before the SAP where the moving MAC was last seen is automatically disabled in order to protect the system against undetected loops or duplicate MAs. The rate is computed as the maximum number of re-learns

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	allowed in a 5 second interval: for example, the default rate of 2 re-learns per second corresponds to 10 re-learns in a 5 second period.
Mac Move Timeout	Displays the time in seconds to wait before a SAP that has been disabled after exceeding the maximum re-learn rate is re-enabled. A value of zero indicates that the SAP will not be automatically re-enabled after being disabled. If after the SAP is re-enabled it is disabled again, the effective retry timeout is doubled in order to avoid thrashing.
Mac Move Retries	Displays the number of times retries are performed for re-enabling the SAP/SDP.
Table Size	Specifies the maximum number of learned and static entries allowed in the FDB of this service.
Allocated Count	Displays the total number of allocated entries in the FDB of this service.
Total In Use	Displays the total number of entries in use in the FDB of this service.
Learned Count	Displays the current number of learned entries in the FDB of this service.
Static Count	Displays the current number of static entries in the FDB of this service.
OAM MAC Count	Displays the current number of OAM entries in the FDB of this service.
DHCP MAC Count	Displays the current number of DHCP-learned entries in the FDB of this service.
Host MAC Count	Displays the current number of host-learned entries in the FDB of this service.
Intf MAC Count	Displays the total number of interface MAC entries in the FDB of this service.
SPB Count	Displays the total number of SPB entries in the FDB of this service.
Cond MAC Count	Displays the total number of conditional static MAC entries in the FDB of this service.
BGP EVPN Count	Displays the total number of BGP EVPN entries in the FDB of this service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
EVPN Static Cnt	Displays the total number of BGP EVPN MAC entries with the sticky bit set in the FDB of this service.
EVPN Dup Det Cnt	Displays the total number of times a BGP EVPN duplicate MAC address has been detected in this service.
Remote Age	Displays the number of seconds used to age out FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs.
Local Age	Displays the number of seconds used to age out FDB entries learned on local SAPs.
High Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be raised by the agent.
Low Watermark	Displays the utilization of the FDB table of this service at which a table full alarm will be cleared by the agent.
Mac Learning	Specifies whether the MAC learning process is enabled.
Discard Unknown	Specifies whether frames received with an unknown destination MAC are discarded.
Mac Aging	Indicates whether the MAC aging process is enabled.
Relearn Only	When one of the FDB table size limits (service, line card, system) has been reached, the learning of new MAC addresses is temporary disabled and only MAC relearns are allowed. When in this state, the Relearn Only flag is True, otherwise it is False.
Mac Subnet Len	Displays the number of bits to be considered when performing MAC-learning or MAC-switching.
Source-Identifier	The location where the MAC is defined.
Type/Age	Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs. Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. L — Learned - Dynamic entries created by the learning process. OAM — Entries created by the OAM process. H — Host, the entry added by the system for a static configured subscriber host. D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	P — Indicates the MAC is protected by the MAC protection feature. Static — Statically configured.
Last Change	Indicates the time of the most recent state changes.
Sel Learned FDB	Displays the administrative state of the selective learned FDB feature associated with this service.

9.8 fdb-mac

fdb-mac

Syntax

fdb-mac *ieee-address* [**expiry**]

Context

[Tree] (show>service fdb-mac)

Full Context

show service fdb-mac

Description

This command displays the FDB entry for a specified MAC address.

Parameters

ieee-address

The 48-bit MAC address for which the FDB entry will be displayed in the form *aa*:*bb*:*cc*:*dd*:*ee*:*ff* or *aa-bb-cc-dd-ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

expiry

Shows the time until the MAC is aged out.

Platforms

All

Output

The following output is an example of FDB MAC information.

Output Example

```

Use subject to Terms available at: www.nokia.com/terms.

Table 155: Output fields: FDB MAC

Label	Description
Service ID	The service ID number.
MAC	The specified MAC address.
Source-Identifier	The location where the MAC is defined.
Type/Age	Static — FDB entries created by management.
	Learned — Dynamic entries created by the learning process.
	OAM — Entries created by the OAM process.
	H — Host, the entry added by the system for a static configured subscriber host.
	D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.
	P — Indicates the MAC is protected by the MAC protection feature.

9.9 fdb-usage

fdb-usage

Syntax

fdb-usage [**card** *slot-id*]

Context

[Tree] (show>service>system fdb-usage)

Full Context

show service system fdb-usage

Description

This command displays the FDB usage, excluding the pending updates (which can be seen using the tools dump service id *id* fdb {card-status | mac-status} command) for the system and all line cards.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

slot-id

Displays the information for the line card in the specified slot IDs, expressed as an integer.

Values 1 to 20

Platforms

All

Output

The following output is an example of FDB usage information.

Output Example

```
*A:PE1# show service system fdb-usage

Context

[Tree] (tools>dump>router>ldp fec)

Full Context

tools dump router ldp fec

Description

This command dumps information for an LDP FEC.

Parameters

p2mp-id *identifier*

Dumps LDP active P2MP identifier bindings information.

Values 0 to 4294967295

inner-root *ip-address*

Dumps inner root IP address information.

root *ip-address*

Dumps root IP address information.

prefix *ip-address*[*/mask*]

Dumps LDP active prefix and mask information.

Values ip-address[/mask]:

ipv4-prefix	a.b.c.d
ipv4-prefix-le	0 to 32
ipv6-prefix	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF] H
	d: [0 to 255] D
ipv6-prefix-le	0 to 128

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source *ip-address*

Dumps source IP address information.

group *mcast-address*

Dumps the group multicast address bindings.

rd *rd*

Dumps information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

vc-type *vc-type*

Dumps information for the specified VC type.

Values ethernet, vlan, framerelay, atm-all5, atm-cell, hdlc, ppp, cem, atm-vcc, atm-vpc, ipipe, atm-vcc-1-1, atm-vpc-1-1, atm-aal5-pdu, fr, cep, e1-satop, t1-satop, e3-satop, t3-satop, cesopsn, tdmoip, cesopsn-cas, tdmoip-cas, fr-dlci, mirror

vc-id *vc-id*

Dumps information for the specified VC-ID.

Values 1 to 4294967295

agi *agi*

Specifies the Attachment Group identifier TLV associated with this service FEC.

Values <ip-addr:comm-val> | <2byte-asnumber:ext-comm-val> | <4byte-asnumber:comm-val>

ip-addr - a.b.c.d

comm-val - [0 to 65535]

2byte-asnumber - [1 to 65535]

ext-comm-val - [0 to 4294967295]

4byte-asnumber - [1 to 4294967295]

null - means all value is 0

saii-type2 *global-id*:*prefix:ac-id*

Dumps Source Attachment Individual Identifier (SAII) information.

Values <number>:<number> | <a.b.c.d>:<number>

taii-type2 *global-id:prefix:ac-id*

Dumps Target Attachment Individual Identifier (TAII)

svc-fec-type

Specifies the FEC type.

Values fec128, fec129

Table 156: Output fields: LDP FEC describes the LDP FEC parameters output fields.

Table 156: Output fields: LDP FEC

Label	Description
LSP ID	Specifies the LSP identifier.
Metric	Specifies the metric type of the LSP.
inLabel	Specifies the incoming MPLS label on which to match.
egress Label	Specifies the egress label associated with this next-hop entry.

9.11 fec-egress-stats

fec-egress-stats

Syntax

fec-egress-stats [*ip-prefix/mask*]

fec-egress-stats [**active**] [**family**]

Context

[Tree] (show>router>ldp fec-egress-stats)

Full Context

show router ldp fec-egress-stats

Description

This command displays LDP prefix FECs egress statistics.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask

Specifies the address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values IPv4: 0 to 32

IPv6: 0 to 128

family

Displays either IPv4 or IPv6 LDP session information.

Platforms

All

Output

The following output is an example of LDP FEC egress statistics information.

Output Example

```

fec-egress-stats

Syntax

fec-egress-stats *ip-prefix/mask* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>ldp fec-egress-stats)

Full Context

monitor router ldp fec-egress-stats

Description

This command monitors egress statistics for LDP FEC prefixes.

Parameters

ip-prefix/mask

Specifies information for the specified IP prefix and mask length.

Values

ipv4-prefix	a.b.c.d
ipv4-prefix-le	0 to 32

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-prefix	x:x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:x:d.d.d.d x: [0 to FFFF] H d: [0 to 255] D
ipv6-prefix-le	0 to 128

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

9.12 fec-originate

fec-originate

Syntax

fec-originate [*ip-prefix/mask*] [*operation-type*]

Context

[Tree] (show>router>ldp fec-originate)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router ldp fec-originate

Description

This command displays LDP static prefix FECs.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

mask

Specifies the 32-bit address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values 0 to 32

operation-type

Specify the operation type to display.

Values pop, swap

Platforms

All

Output

FEC Originate Output

Table 157: Output fields: FEC originate describes the FEC originate parameters output fields.

Table 157: Output fields: FEC originate

Label	Description
Prefix	Specifies the static prefix FEC.
NHType	Specifies the type of next-hop represented by this row entry: unknown — The next-hop type has not been set. IP Addr — The next-hop is an IP address. pop — There is no next-hop (pop the label and route).
NextHop	The IP address of the next-hop.
NHIfName	The name of the next-hop.
IngLabel	Specifies the label that is advertised to the upstream peer. If this variable is set to the default value of 4294967295, the ingress label will be dynamically assigned by the label manager.
EgrLabel	Specifies the egress label associated with this next-hop entry. The LSR will swap the incoming label with the configured egress label. If this

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	egress label has a value of 4294967295, the LSR will pop the incoming label.
OprInLbl OperIngLabel	Specifies the actual or operational value of the label that was advertised to the upstream peer.

9.13 fetch-ahs-log

fetch-ahs-log

Syntax

fetch-ahs-log period *days* **file-url** *file-url*

Context

[Tree] (tools>perform>esa fetch-ahs-log)

Full Context

tools perform esa fetch-ahs-log

Description

This command retrieves the ESA instance AHS log for a specified number of past days and copies it to a local or remote destination.

Note: To retrieve an AHS log that includes all AHS log events saved on the ESA, configure the **period** keyword to use a value of *all*. This is helpful when trying to retrieve a record of AHS log events occurring over 31 days ago.

Parameters

period *days*

Specifies the number of past days for which AHS log events are retrieved.

Values 1 to 31, all

file-url *file-url*

Specifies a local or remote destination for the AHS log.

Values

local-url | *remote-url*

local-url	[*cflash-id*/]*file-path* 200 characters maximum, including cflash-id directory length 99 characters maximum each
remote-url	{ftp | tftp}://[*login*:*pswd*@]*remote-locn*/[*filepath*] 255 characters maximum, *filepath* 199 characters maximum
remote-locn	{*hostname* | *ipv4-address* | "["*ipv6-address*"]" }[:*port*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4-address	*a.b.c.d*
ipv6-address	*x:x:x:x:x:x:x:x*[-*interface*] *x:x:x:x:x:x:d.d.d.d*[-*interface*] *x* - [0 to FFFF]H *d* - [0 to 255]D interface - 32 characters maximum, for link local addresses
port	[0 to 65535]
cflash-id	cf1: | cf1-A: | cf1-B: | cf2: | cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

Use the following command to copy the AHS log to a local destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url cf3:/test.ahs
```

Output Example

```
Updating (1 day) AHS Log @09/19/2022 21:28:25 on esa-1 ... DONE @ 09/19/2022
21:30:50 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54104161 bytes

Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to cf3:/test.ahs ...

100%... DONE @09/19/2022 21:32:21 File Size: 54104161 bytes md5 cksum:
3f761a3a3d9c15b8ce3079ecb2015c3d
```

Use the following command to copy the AHS log to a remote destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url ftp://exuser:expassword@192.0.2.1/exuser/
Public/esa.ahs
```

Output Example

```
Updating (1 day) AHS Log @09/19/2022 21:34:45 on esa-1 ... DONE @ 09/19/2022
21:37:10 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54110350 bytes

Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to
ftp://exuser:expassword@192.0.2.1/exuser/Public/esa.ahs ...

9.14 fetch-hardware-data

fetch-hardware-data

Syntax

fetch-hardware-data file-url *file-url*

Context

[Tree] (tools>perform>esa fetch-hardware-data)

Full Context

tools perform esa fetch-hardware-data

Description

This command generates a retrievable file containing the ESA server iLO event log, integrated management log, and key server information.

Parameters

file-url

Specifies a local or remote destination for the generated log file.

Values

local-url | *remote-url*	
local-url	[*cflash-id*/]*file-path* 200 characters maximum, including cflash-id
	directory length 99 characters maximum each
remote-url	{ftp | tftp}://[*login*:*pswd*@]*remote-locn*/[*filepath*]
	255 characters maximum, *filepath* 199 characters maximum
remote-locn	{*hostname* | *ipv4-address* | "["*ipv6-address*"]" }[:*port*]
ipv4-address	*a.b.c.d*
ipv6-address	*x:x:x:x:x:x:x:x*[-*interface*]
	x:x:x:x:x:x:d.d.d.d[-*interface*]
	x - [0 to FFFF]H
	d - [0 to 255]D

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	interface - 32 characters maximum, for link local addresses
port	[0 to 65535]

fib *slot-number* **nh-table-usage**

fib [**family**] **summary**

Context

[Tree] (show>router fib)

Full Context

show router fib

Description

This command displays the active FIB entries for a specific IOM or line card.

Parameters

family

Keyword that displays the router IP interface table.

Values **ipv4** — Displays IPv4 routes installed in the FIB.

ipv6 — Displays IPv6 routes installed in the FIB.

summary

Keyword that displays summary FIB information for the specified slot number.

© 2026 Nokia.

Use subject to Terms available at: www.nokia.com/terms.

all

Keyword that displays all information.

slot-number

Displays routes that match only the specified chassis slot number.

Values 1 to 20

Note:
The actual range can be less depending on the platform.

ip-prefix/prefix-length

Displays FIB entries that match only the specified *ip-prefix* and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)
ipv4-prefix-length:	0 to 32
ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D
ipv6-prefix-length:	0 to 128

Note:
It is possible that a specific platform only supports a subset of the preceding values.

longer

Keyword that displays FIB entries matching the *ip-prefixlmask* and routes with longer masks.

secondary

Keyword that displays secondary VRF ID information.

qos

Keyword that displays the QoS priority and FC values.

accounting-class

Keyword that displays the accounting class information.

Note:
Not all platforms support this parameter.

extensive

Keyword that displays extensive FIB information.

nh-table-usage

Keyword that displays next-hop table usage.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Next-Hop	The next hop
QoS	The QoS value
Source-Class	The source class
Dest-Class	The destination class value
ECMP-Weight	The ECMP weight value
Resolving Next-Hop	The resolving next hop

fib

Syntax

fib *slot-number* [{**ipv4** | **ipv6**}] **summary**

Context

[Tree] (tools>dump>router fib)

Full Context

tools dump router fib

Description

This command configures the dump tools for FIB information for a specific IOM.

Parameters

slot-number

Specifies the slot number.

Values 1 to 10

ipv4 | ipv6

Specifies the IPv4 or IPv6 addresses.

Default ipv4

summary

Displays summary FIB information for the specified slot number.

Platforms

All

Output

The following output is an example of FIB summary information.

© 2026 Nokia.

9.16 fib-telemetry

fib-telemetry

Syntax

fib-telemetry label [*label*]

fib-telemetry route [**family**]

fib-telemetry route [*ip-prefix/prefix-length*]

fib-telemetry tunnel [**family**]

fib-telemetry tunnel [*ip-prefix/prefix-length*]

Context

[Tree] (show>router fib-telemetry)

Full Context

show router fib-telemetry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays FIB telemetry information.

Parameters

label

Specifies the label value.

Values 0 to 1048575

family

Specifies the IPv4 or IPv6 address FIB telemetry route or tunnel family.

Values ipv4, ipv6

ip-prefix/prefix-length

Displays FIB telemetry route or tunnel entries only matching the specified IP prefix and length.

Values

ipv4-prefix:	a.b.c.d (host bits must be 0)	
ipv4-prefix-length	0 to 32	
ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D
	ipv6-prefix-length:	0 to 128

Platforms

All

Output

The following output is an example of FIB telemetry information.

Output Example

Table 159: Output fields: FIB telemetry

Label	Description
Label	The label number of the FIB entry
Owner	The owner (protocol name) of the label entry
LastUpdt	The time stamp of when the entry was last updated
Primary NextHop[If]/TnlId	The primary path next-hop IP or tunnel ID or interface
Weight	The normalized ECMP weight associated with the next-hop
GrpId	The next-hop group ID
PriActv	The boolean value (YES or NO) that indicates whether the primary path is active or not
Pushed Labels	The pushed labels number
Backup NextHop[If]/TnlId	The backup path next-hop IP or tunnel ID or interface
Number of Entries	The total number of displayed labels
Flags	The flags: • b — backup • i — indirect • l — LFA
Dest Prefix	The destination IP prefix of the route FIB entry
Owner	The protocol owner (routing protocol) of the FIB entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
FIB Update Time	The time stamp of when the route was last updated in FIB
NextHop [If/TnlId]	The IP address of the next-hop and interface name or tunnel ID
Number of Entries	The total number of displayed routes
Flags	The flags: • a — active • b — backup • l — LFA
Dest Prefix	The destination IP prefix of the FIB tunnel entry
Owner	The protocol owner of the FIB tunnel entry
Pref	The preference number that indicates the priority of the tunnel
FIB Update Time	The time stamp of when the tunnel was last updated in FIB
TnlId	The global tunnel ID
TnlInst	The tunnel instance of the type indicated by protocol
Number of Entries	The total number of displayed tunnels

Full Context

show service id spb fid

Description

This command displays SPB control service FID information.

Parameters

fid

A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

Values 1 to 4095

fate-sharing

Displays fate-sharing information

user-service

Specifies user VPLS information for each control VPLS per forwarding data-base identifier. A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

fdb

Displays forwarding database (FDB) information

mfib

Displays multicast forwarding information base (MFIB) information

ieee-address

Specifies the 48-bit IEEE 802.3 group MAC address

isid

Specifies the value of ISID of the group MAC address of this entry

Values 0 to 16777215

Platforms

All

Output

The following output is an example of service SPB FID fare sharing information.

Output Example

```

tools perform system auto-node-provisioning file

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command executes the auto-provisioning process. When the auto-provisioning process is executed using the **file** command, DHCP discovery and solicitation is not performed.

Parameters

provisioning-file-url

Specifies the location of the provisioning file.

Values *local-url*, *remote-url*

local-url — [*cflash-id*/]*file-path*; 200 characters max

remote-url — {ftp | http | https}://[*login*:*password*@]*remote-locn*/[*file-path*]

remote-locn — {*hostname* | *ipv4-address* | *ipv6-address*}[:*port*]

ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x[-*interface*]

x:x:x:x:x:x:d.d.d.d[-*interface*]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

port — 0 to 65535

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

file-url

Specifies the location to save the provisioning file.

Values [*cflash-id*/]*file-path*

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

reboot-on-success

Reboots the router when the auto-provisioning process completes successfully.

Full Context

show log file-id

Description

This command displays event file log information.

If no command line parameters are specified, a summary output of all event log files is displayed.

Specifying a file ID displays detailed information on the event file log.

Parameters

log-file-id

Displays detailed information on the specified event file log.

Platforms

All

Output

The following output is an example of log file summary information.

The following table describes the output fields for a log file summary.

Output Example

```

Table 160: Output fields: log file

Label	Description
name	Displays the string name of the log file policy
file-id	Displays the log file ID
rollover	Displays the rollover time for the log file, which is how long in between partitioning of the file into a new file
retention	Displays the retention time for the file in the system, which is how long the file will be retained in the file system
admin location	Displays the primary flash device specified for the file location none — indicates no specific flash device is specified
oper location	Displays the actual flash device on which the log file exists
Format	The format used for log events in the file: • standard – The standard SR OS log event format is being used • rfc5424 – An RFC 5424 syslog format is being used
file name	Displays the complete pathname of the file associated with the log ID
expired	Indicates whether the retention period for this file has passed
state	in progress — Indicates the current open log file complete — Indicates the old log file

show call-trace files

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command gives an overview of all the files in use by the call-trace module, either for running or finished jobs.

Parameters

running

Displays the active jobs that are tracing events triggered by the host being monitored.

finished

Displays the jobs that have already finished and not tracing events generated by the host anymore.

detail

Displays detailed information about the files.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace local log files information.

Output Example

```
Node# show call-trace files
===============================================================================
Call trace files of running jobs
===============================================================================
File path                                                          File size
                                                                     (bytes)

9.25 filter-id

filter-id

Syntax

filter-id [*filter-id*]

Context

[Tree] (show>service>id>log filter-id)

Full Context

show service id log filter-id

Description

This command displays event file log information.

If no command line parameters are specified, a summary output of all event log files is displayed.

Specifying a file ID displays detailed information on the event file log.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

filter-id

Specifies the filter policy.

Values 1 to 65535

Platforms

All

Output

Table 162: Output fields: filter ID describes the output fields for a log file summary.

Table 162: Output fields: filter ID

Label	Description
file-id	The log file ID.
rollover	The rollover time for the log file which is how long in between partitioning of the file into a new file.
retention	The retention time for the file in the system which is how long the file should be retained in the file system.
admin location	The primary flash device specified for the file location. n/a — Indicates no specific flash device was specified.
backup location	The secondary flash device specified for the file location if the admin location is not available. n/a — Indicates that no backup flash device was specified.
oper location	The actual flash device on which the log file exists.
file-id	The log file ID.
rollover	The rollover time for the log file which is how long in between partitioning of the file into a new file.
retention	The retention time for the file in the system which is how long the file should be retained in the file system.
file name	The complete pathname of the file associated with the log ID.
expired	Indicates whether or not the retention period for this file has passed.
state	In progress — Indicates the current open log file. Complete —Indicates the old log file.

Event Log Filter Detailed Output

Table 163: Output fields: event log filter detail describes the output fields for detailed event log filter information.

Table 163: Output fields: event log filter detail

Label	Description
Filter Name/Id	The event log filter name or ID.
Applied	no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID.
Default Action	drop — The default action for the event log filter is to drop events not matching filter entries. forward — The default action for the event log filter is to forward events not matching filter entries.
Description (Filter-id)	The description string for the filter ID.

Table 164: Output fields: log filter match criteria describes the output fields for log filter match criteria information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 164: Output fields: log filter match criteria

Label	Description
Entry-id	The event log filter entry ID.
Action	default — There is no explicit action for the event log filter entry and the filter's default action is used on matching events. drop — The action for the event log filter entry is to drop matching events. forward — The action for the event log filter entry is to forward matching events.
Description (Entry-id)	The description string for the event log filter entry.
Application	The event log filter entry application match criterion.
Event Number	The event log filter entry application event ID match criterion.
Severity	cleared — The log event filter entry application event severity cleared match criterion. indeterminate — The log event filter entry application event severity indeterminate match criterion. critical — The log event filter entry application event severity critical match criterion. major — The log event filter entry application event severity cleared match criterion. minor — The log event filter entry application event severity minor match criterion. warning — The log event filter entry application event severity warning match criterion.
Subject	Displays the event log filter entry application event ID subject string match criterion.
Router	Displays the event log filter entry application event ID **router** *router-instance* string match criterion.
Operator	There is an operator field for each match criteria: application, event number, severity, and subject. equal — Matches when equal to the match criterion. greaterThan — Matches when greater than the match criterion. greaterThanOrEqual — Matches when greater than or equal to the match criterion. lessThan — Matches when less than the match criterion.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	lessThanOrEqual — Matches when less than or equal to the match criterion. notEqual — Matches when not equal to the match criterion. off — No operator specified for the match criterion.

9.26 firewall

firewall

Syntax

firewall

Context

[Tree] (show>router firewall)

Full Context

show router firewall

Description

This command displays firewall information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.27 firewall-hosts

firewall-hosts

Syntax

firewall-hosts [**subscriber** *sub-ident*] [**ip** *ipv6-address*|*prefix-length*] [**mac** *ieee-address*] [**firewall-policy** *policy-name*] [**router** *router-instance*]

Context

[Tree] (show>service>nat firewall-hosts)

Full Context

show service nat firewall-hosts

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command lists ESM hosts that have an active firewall. Configuring the optional parameters will narrow the scope of the list.

Parameters

ieee-address

Specifies the MAC address of a host, in the format xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

ipv6-address/prefix-length

Specifies the IPv6 prefix of a host.

Values *ipv6-address* — x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x — 0 to FFFF (in hexadecimal)
d — 0 to 255 (in decimal)
prefix-length — 1 to 128

policy-name

Specifies the name of a firewall policy, up to 32 characters.

router-instance

Specifies the ID of the router that contains the firewall domain.

Values *router-name* | *vprn-svc-id*
router-name — "Base", "management"
vprn-svc-id — 1 to 2147483647

sub-ident

Specifies the subscriber identity string, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.28 firewall-policy

firewall-policy

Syntax

firewall-policy [*policy-name* [**associations**] [**statistics**]]

Context

[Tree] (show>service>nat firewall-policy)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service nat firewall-policy

Description

This command lists the firewall policies that are present in the system.

Configuring the *policy-name* parameter displays all information for the specified policy.

Parameters

policy-name

Specifies the name of a firewall policy, up to 32 characters.

associations

Keyword to display all configuration objects that use the specified firewall policy.

statistics

Keyword to display all statistics for the specified firewall policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of firewall policy information and Table 165: Output fields: show service nat firewall-policy describes the output fields

Output Example: show service nat firewall-policy

```
# show service nat firewall-policy
===============================================================================
Firewall policies
===============================================================================
Firewall policy                  Description
-------------------------------------------------------------------------------
firewall_dhcp6_0                 IPv6 Firewall policy for DHCP6 on service Base
firewall_dhcp6_300               IPv6 Firewall policy for DHCP6 on service 300
firewall_dhcp6_4                 IPv6 Firewall policy for DHCP6 on service 4
firewall_slaac_0                 IPv6 Firewall policy for SLAAC on service Base
firewall_slaac_300               IPv6 Firewall policy for SLAAC on service 300
firewall_slaac_4                 IPv6 Firewall policy for SLAAC on service 4

9.29 flap-statistics

flap-statistics

Syntax

flap-statistics [{*ip-prefixlmask* [**neighbor** *ip-addr*] | **group** *group-name* | **regex** *reg-exp* | [**policy** *policy-name*}]

Context

[Tree] (clear>router>bgp flap-statistics)

Full Context

clear router bgp flap-statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears route flap statistics.

Parameters

ip-prefix/mask

Clears route flap statistics for entries that match the specified IP prefix and mask length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv4-prefix-le: 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

ipv6-prefix-le: 0 to 128

ip-addr

Clears route flap statistics for entries received from the specified BGP neighbor.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

interface: 32 chars max, mandatory for link local addresses

group-name

Clears route flap statistics for entries received from any BGP neighbors in the specified peer group. 32 characters maximum.

reg-exp

Clears route flap statistics for all entries which have the regular expression and the AS path that matches the regular expression. 80 characters maximum.

policy-name

Clears route flap statistics for entries that match the specified route policy. 32 characters maximum.

Platforms

All

9.30 flex-algo

flex-algo

Syntax

flex-algo [flex-algo-id] [**level** *level*] [**detail**]

Context

[Tree] (show>router>isis flex-algo)

Full Context

show router isis flex-algo

Description

This command displays the IS-IS flexible algorithm information.

This command displays the flexible algorithms, the winning FAD for which the router is enabled and whether the local router is advertising a FAD.

When the keyword **detail** is used, all other FADs (beyond the winning FAD) advertised by any other router in the area are also displayed.

The displayed output can be filtered by using the *flex-algo-id* or *level* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

level

Displays the IS-IS area level information constrained to IS-IS level-1 or level-2 only.

level

Specifies the IS-IS area level, it filters the displayed information constrained to IS-IS level-1 or level-2 only.

detail

Displays not only the winning FAD information, but also all other FADs that the router has advertised in IS-IS.

Platforms

All

Output

The following output is an example of flexible algorithm information, and Table 169: Output fields: IS-IS flexible algorithm describes the output fields.

Table 169: Output fields: IS-IS flexible algorithm

Label	Description
Flex-Algo	The flexible algorithm number
Advertising FAD	The FAD name when the local router is advertising a FAD
Participating	The flexible algorithm participation is enabled
Loop-Free-Alternate	Displays Loop-Free-Alternates; if enabled, then the configuration is inherited from base SPF
L1 Oper State	Displays the L1 operational flexible algorithm state
L2 Oper State	Displays the L2 operational flexible algorithm state
FADs-Count	Displays the number of FADs in the area available to the router

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
FAD-Owner	Displays the winning FAD owner
Supported	Displays local router support for the flexible algorithm definition that is advertised in the FAD
Priority	Displays the FAD priority; It is the tiebreaker when multiple FADs are received
Metric Type	The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used
Calculation Type	Displays the calculation type; for SPF a zero value is only defined
Exclude	The list of administrative groups for links to be excluded from the flexible algorithm topology graph
Include Any	The list of administrative groups for links to be included in the flexible algorithm topology graph
Include All	The list of administrative groups for links where all administrative groups have to match to be included in the flexible algorithm topology graph
Fad Flags	Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR
Level	The IS-IS area level where the FAD is received

flex-algo

Syntax

flex-algo [*flex-algo-id*] [**area** *area-id*] [**detail**]

Context

[Tree] (show>router>ospf flex-algo)

Full Context

show router ospf flex-algo

Description

This command displays OSPFv2 flexible algorithm information, which includes the flexible algorithms, the winning FAD for which the router is enabled, and whether the local router is advertising a FAD.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The displayed output can be filtered using either the *area-id* or *flex-algo-id* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

area-id

Specifies the OSPFv2 area to display output.

area

Displays the information constrained to a particular OSPFv2 area.

detail

Displays the winning FAD information and all other FADs that the router has advertised in OSPFv2.

Platforms

All

Output

The following output is an example of flexible algorithm information, and Table 170: Output fields: OSPF flexible algorithm describes the output fields.

Output Example

```

9.31 flexible-algorithm-definitions

flexible-algorithm-definitions

Syntax

flexible-algorithm-definitions [**flex-algo** *fad-name*]

Context

[Tree] (show>router flexible-algorithm-definitions)

Full Context

show router flexible-algorithm-definitions

Description

This command displays information about the locally configured FADs.

If **flex-algo** *fad-name* is specified as the output filter, only filtered FAD definitions are shown. If no output filter is specified, all configured FADs are shown.

Parameters

flex-algo *fad-name*

Displays the configuration information for the specified FAD name.

Platforms

All

Output

The following output is an example of FAD information, and Table 171: Output fields: FAD describes the output fields.

Output Example

```
*A:Dut-B# show router flexible-algorithm-definitions
===============================================================================
Flexible Algorithm Definitions
===============================================================================

9.32 flood-table

flood-table

Syntax

flood-table [**class** *class*] [**detail**]

Context

[Tree] (tools>dump>wlan-gw>lanext>bd flood-table)

Full Context

tools dump wlan-gw lanext bd flood-table

Description

This command dumps the specified flood table entries for the specified HLE BD.

Parameters

class

Specifies the source on which to filter the flood table entries.

Values access, network, remote

detail

Dumps detailed information for the flood table.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of flood table information.

Output Example

```

9.34 flow-distribution

flow-distribution

Syntax

flow-distribution

Context

[Tree] (show>lag flow-distribution)

Full Context

show lag flow-distribution

Description

This command displays the allocated distribution of traffic flows.

Platforms

All

9.35 flow-ipv4

flow-ipv4

Syntax

flow-ipv4 [**hunt**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

Context

[Tree] (show>router>bgp>routes flow-ipv4)

Full Context

show router bgp routes flow-ipv4

Description

This command displays BGP flow IPv4 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*

9.36 flow-ipv6

flow-ipv6

Syntax

flow-ipv6 [**hunt**] [**aspath-regex** *reg-exp*] [**community** *comm-id*]

Context

[Tree] (show>router>bgp>routes flow-ipv6)

Full Context

show router bgp routes flow-ipv6

Description

This command displays BGP flow IPv6 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*
  - **bandwidth**:*asnum*:*val-in-mbps*
  - **ext:4300**:*ovstate*
  - **ex \t**:*value1*:*value2*
  - **flowspec-set**:*ext-asnum*:*group-id*

  where:
  - *target* — route target
  - *origin* — route origin

Full Context

tools dump application-assurance group flow-record-search

Description

This command dumps application-assurance flow-records matching the specified criteria for a specific AA subscriber.

Parameters

application *app-name*

Displays flows for the specified application name.

app-group *app-group-name*

Displays flows for the specified application group.

bytes-tx *kbytes*

Display flows with the specified minimum kilobytes.

Values 0 to 4294967295

classified *classified*

Specifies the starting flow ID.

Values yes, no

client-ip *ip-address*

Display flows with the specified client IP address.

Values ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces)

dsm mac *mac-address*

Displays flows for the specified subscriber.

esm *sub-ident-string*

Displays flows for the specified subscriber.

esm-mac *esm-mac-name*

Displays flows for the specified ESM MAC.

flow-duration *minutes*

Display flows with the specified minimum duration in minutes.

Values 0 to 4294967295

flow-status *flow-status*

Displays only flows that are active or closed.

Values active, closed

max-count *max-count*

Specifies the maximum count of flows to display.

Values 1 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

protocol *protocol-name*

Displays flows for the specified protocol.

sap *sap-id*

Displays flows for the specified SAP.

search-type *search-type*

Specifies the level of detail displayed for flows that match the search criteria.

Values default — Displays some per flow information.

count — Displays the number of matching flows.

detail — Displays all per flow information available.

server-ip *ip-address*

Display flows with the specified server IP address.

Values ipv4-address - a.b.c.d

ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces)

server-port *port-num*

Display flows with the specified server port number.

Values 0 to 65535

spoke-sdp *sdp-id:vc-id*

Displays flows for the specified spoke SDP.

start-flowid *start-flowid*

Specifies the starting flow ID.

Values 0 to 4294967295

transit *transit-aasub-name*

Displays flows for the specified transit subscriber.

url *file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url | remote-url

local-url	[<cflash-id>/][<file-path>] 200 chars max, including cflash-id directory length 99 chars max each
remote-url	[{ftp:// | tftp://}<login>:<pswd>@<remote-locn>/][<file-path>] 255 chars max directory length 99 chars max each

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

remote-locn	[<hostname> | <ipv4-address> | <ipv6-address>]	
	ipv4-address	a.b.c.d
	ipv6-address	x:x:x:x:x:x:x:x[-interface]
		x:x:x:x:x:x:d.d.d.d[-interface]
		x - [0..FFFF]H
		d - [0..255]D

tools perform aps force

Description

This command forces a switch to either the protect or working circuit

Parameters

aps-id

Specifies the APS ID.

Values

aps-id	aps-*group-id*	
	aps	keyword
	group-id	1 to 128

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

Values 1, 2

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Context

[Tree] (tools>perform>lag force)

Full Context

tools perform lag force

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command allows forcing the specified LAG, subgroup, all MC-LAGs, or remote peer for MC-LAGs to become active or standby when LAG runs in Active/Standby mode. To remove the forced condition, execute the **tools perform lag clear-force** command.

Parameters

all-mc

Specifies all MC-LAGs.

active

Specifies to become active.

standby

Specifies to become standby.

lag-id

Specifies the LAG ID.

Values 1 to 800

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

tools perform router dhcp6 local-dhcp-server pool failover force-partner-down

tools perform router dhcp local-dhcp-server failover force-partner-down

tools perform router dhcp6 local-dhcp-server failover force-partner-down

Description

This command forces a DHCP server to transition from the COMMINICATIONS-INTERRUPTED state to the PARTNER-DOWN state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

It is important to note that this command should only be used if the remote DHCP server is out of service, else duplicate address allocations could occur.

In case of a communication failure between two redundant DHCP servers, the DHCP server transitions to the COMMUNICATIONS-INTERRUPTED state. In this state, the DHCP server allocates IP addresses for new leases from the local and address-driven address-ranges only. This prevents duplicate address allocations.

If during the partner-down-delay time, the communication with the remote DHCP server is not restored, then the DHCP server transitions to the PARTNER-DOWN state. In this state, the DHCP server also allocates IP addresses for new leases from the remote ranges. A DHCP server should only reach this state when the remote DHCP server is out of service, else IP address conflicts can occur.

9.40 force-switch-path

force-switch-path

Syntax

force-switch-path [**lsp** *lsp-name*] [**path** *path-name*]

no force-switch-path lsp *lsp-name*

Context

[Tree] (tools>perform>router>mpls force-switch-path)

Full Context

tools perform router mpls force-switch-path

Description

Use this command to move from a standby path to any other standby path regardless of priority.

The **no** form of the command reverts to priority path.

Parameters

lsp-name

Specifies an existing LSP name, up to 64 characters in length.

path-name

Specifies the path name to which to move the specified LSP.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

9.41 force-switchover

force-switchover

Syntax

force-switchover tunnel-group *local-group-id* [**now**] [**to** {**master** | **standby**}]

Context

[Tree] (tools>perform>redundancy>multi-chassis>mc-ipsec force-switchover)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover

Description

This command manually switches over the 7750 SR mc-ipsec mastership of specified tunnel-group.

Parameters

local-group-id

Specifies the local tunnel-group id configured in the **config**>**redundancy**>**multi-chassis**>**peer**>**mc-ipsec** context.

now

This optional parameter removes the prompt of confirmation.

to {master | standby}

specifies the desired mastership state to be achieved following a forced switch between this tunnel group and its redundant peer. If the target state matches the current state when the switch is attempted, then no switch will occur.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-switchover

Syntax

force-switchover *sdp-id:vc-id*

force-switchover *vc-id*

no force-switchover

Context

[Tree] (tools>perform>service>id>endpoint force-switchover)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform service id endpoint force-switchover

Description

This command forces the VLL path to switch to the specified spoke SDP, which effectively disables the algorithm used to automatically select the VLL endpoint active transmit object.

If the specified spoke SDP is operationally down, the router rejects this command. If the specified spoke SDP is operationally up, the router switches the VLL path to the specified endpoint spoke SDP and stays on it regardless of subsequent changes to its operational status.

The **no** form of this command re-enables the algorithm used to automatically select the VLL endpoint active transmit object, which switches the VLL path to the best available object in the endpoint.

Note: The router cannot perform force switchover to or from a spoke SDP that is configured with the **standby-signaling-slave** command.

Parameters

sdp-id

Specifies the spoke SDP ID.

Values 1 to 32767

vc-id

Specifies the virtual circuit ID on the spoke SDP ID.

Values 1 to 4294967295

Platforms

All

Context

[Tree] (tools>perform>subscr-mgmt forcerenew)

Full Context

tools perform subscriber-mgmt forcerenew

Description

This command forces the renewal of lease state and only applies to the 7450 ESS and 7750 SR.

In cases where the IPoE hosts resides in a private retail subnet VPRN, the MAC address must be used for the **tools**>**perform**>**subscriber-mgmt**>**forcerenew** command instead of the IP address.

Parameters

service-id

Forces renewal of the lease state for the specified service ID.

Values 1 to 2147483647

sap-id

Forces renewal of the lease state for the specified SAP.

ip-address

Forces renewal of the lease state for the specified IP address.

ieee-address

Forces renewal of the lease state for the specified MAC address.

interface-name

Forces renewal of the lease state for the specified interface name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 174: Output fields: MPLS forwarding policy

Label	Description
Policy Name	Specifies the MPLS forwarding policy name.
Binding Label	Specifies the binding label number.
Admin	Specifies the administrative state (up | down).
OperState	Specifies the operational state (up | down).
No. of Forwarding Policies	Specifies the number of forwarding policies.

forwarding-policy

Syntax

forwarding-policy *name* **egress-stats**

Context

[Tree] (clear>router>mpls>forwarding-policies forwarding-policy)

Full Context

clear router mpls forwarding-policies forwarding-policy

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

name

Specifies the forwarding policy name up to 64 characters.

egress-stats

Clears the egress statistics of the specified forwarding policy.

Platforms

All

forwarding-policy

Syntax

forwarding-policy *plcy* **egress-stats** [**interval** *seconds*] [**repeat** *repeat*] [{ **absolute** | **rate**}]

Context

[Tree] (monitor>router>mpls>forwarding-policies forwarding-policy)

Full Context

monitor router mpls forwarding-policies forwarding-policy

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

plcy

Specifies the forwarding policy up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress-stats

Monitors the egress statistics of the specified forwarding policy.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays the absolute statistics of the specified forwarding policy.

rate

Displays the rate statistics of the specified forwarding policy.

Platforms

All

9.48 forwarding-table

forwarding-table

Syntax

forwarding-table [*slot-number*]

Context

[Tree] (clear>router forwarding-table)

Full Context

clear router forwarding-table

Description

This command clears the route table on the specified IOM with the route table.

If the slot number is not specified, the command forces the route table to be recalculated.

Parameters

slot-number

Clears the specified IOM slot.

Values 1 to 10 (depending on chassis model)

Default all IOMs

Platforms

All

9.49 fp

fp

Syntax

fp

Context

[Tree] (show>card>virtual fp)

Full Context

show card virtual fp

Description

This command displays virtual FP information on the card.

Platforms

VSR

fp

Syntax

fp [*slot-number*[/*fp-number*]] [**path** *path-type*]

Context

[Tree] (show>mcast-management fp)

Full Context

show mcast-management fp

Description

This command displays multicast path management FP-related information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

slot-number

Displays information for the specified card slot.

fp-number

Specifies an FP.

Values 1 to 8

path-type

Specifies the path type.

Values primary, secondary, blackhole

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of multicast management MDA information.

Output Example

```
*A:PE# show mcast-management fp 5/1
===============================================================================
Fp 5/1
===============================================================================
S/F  Bw-policy                      Type            In-use-Bw          Admin
-------------------------------------------------------------------------------
5/1  reduce-paths                   Primary         3964 Kbps          up
     reduce-paths                   Secondary       0 Kbps             up
     reduce-paths                   Blackhole       0 Kbps             up
-------------------------------------------------------------------------------
*A:PE#
```

fp

Syntax

fp [*fp-number*]

Context

[Tree] (tools>dump>resource-usage>card fp)

Full Context

tools dump resource-usage card fp

Description

This command displays resource information for FPs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

fp-number

Specifies an FP.

Values 1 to 8

Platforms
