Context

[Tree] (tools>dump>nat sessions)

Full Context

tools dump nat sessions

Description

This command dumps ISA sessions.

Parameters

icmp

Specifies to dump only ICMP information.

ieee-address

Specifies a MAC address, using the format xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

ip-address

Specifies an IPv4 or IPv6 address.

Values *ipv4-address* — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

x — 0 to FFFF (in hexadecimal)

d — 0 to 255 (in decimal)

ipv6-address

Specifies an IPv6 address.

Values x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (in hexadecimal)

d — 0 to 255 (in decimal)

mda-id

Specifies an MDA ID.

Values *slot*/*mda*

nat-group-id

Specifies a NAT group ID.

Values 1 to 4

policy-name

Specifies a policy name, up to 32 characters maximum.

port-number

Specifies a port number.

Values 0 to 65535

router-instance

Specifies a router name or service ID.

tcp

Specifies to dump only TCP information.

udp

Specifies to dump only UDP information.

upnp

Specifies to dump only UPNP information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of this command.

Output Example

```
*A:SR12_PPPOE# tools dump nat sessions
===============================================================================
Matched 2 sessions on Slot #3 MDA #1
```

Context

[Tree] (show>oam-pm sessions)

Full Context

show oam-pm sessions

Description

This command displays a summary of the OAM-PM sessions.

Parameters

test-family

Keyword to display sessions that match the specified test family type when an optional filter is included.

ethernet

Keyword to display Ethernet session types.

ip

Keyword to display IP session types.

mpls

Keyword to display MPLS session types.

event-mon

Keyword to display a summary of all event monitoring and current state for each session.

detectable-rx-errors

Keyword to display all MPLS sessions with a reported non-successful return code. The results of all return codes, other than "success”, are included. When a return code is not available it is reported as "none”. Sessions with a successful return code are filtered and not displayed in the list. This is specific to **test-family mpls** only.

detectable-tx-errors

Keyword to display a summary of tests with detectable transmission errors that prevent the test from sending packets. Not all errors are detectable.

streaming delay

Keyword to display all sessions with an assigned delay template.

Platforms

All

Output

The following outputs are examples of OAM-PM session summary information, and the associated table describes the output fields:

Table 535: Output fields: OAM-PM session summary information

Label	Description
Session	The session name
State/Test State	Displays if the state is active
Bin Group	The bin group identifier
Sess Type	The session type: • proactive – the type is set to always on, with an immediate start and no stop • on-demand – the type is set to on-demand, with an immediate start and no stop, or stop based on the offset
Test Types/Test Type	Displays the test types
FD	The frame delay bin threshold
FDR	The frame delay range bin threshold
IFDV	The interframe delay variation bin threshold
FLR	The frame loss ratio

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
CHLI	The consecutive high loss interval
HLI	The high loss interval
UNAV	The unavailable events
UDAV	The undetermined available events
UDUN	The undetermined unavailable events
FBR	The FBR
FB	The FB
FBA	The FBA
MPLS DM Receive status	The MPLS DM receive status
Detectable Transmit Error	The detectable transmit error
Str Template Admin	The Str template admin status

24.6 set-epoch-value

set-epoch-value

Syntax

set-epoch-value *value*

Context

[Tree] (tools>perform>router>pcp-server set-epoch-value)

Full Context

tools perform router pcp-server set-epoch-value

Description

This command sets the epoch value for a specified PCP server.

Parameters

value

Specifies the epoch value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

24.7 set-fabric-speed

set-fabric-speed

Syntax

set-fabric-speed *fabric-speed*

Context

[Tree] (tools>perform>system set-fabric-speed)

Full Context

tools perform system set-fabric-speed

Description

This command configures the fabric speed. This command is necessary to define the mode of operation for the system.

Default

set-fabric-speed none (for the 7750 SR-7s/14s FP4 and 7950 XRS systems)

set-fabric-speed fabric-speed-d (or the 7750 SR-7s/14s FP5 systems)

set-fabric-speed fabric-speed-a (for the other 7750 SR and 7450 ESS systems)

Parameters

fabric-speed

Specifies the fabric speed of the system.

Values fabric-speed-a — Sets the chassis to operate at the following speeds using N+1 switch fabric redundancy:

- up to 100 Gb/s per slot for the 7450 ESS-7/12 and the 7750 SR-7/12
- up to 200 Gb/s per slot for the 7750 SR-12e

This permits a mixture of FP2- and FP3-based cards to co-exist.

fabric-speed-b — Sets the chassis to operate at the following speeds using N+1 switch fabric redundancy:

- up to 200 Gb/s per slot for the 7450 ESS-7/12 and the 7750 SR-7/12

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- up to 400 Gb/s per slot for the 7750 SR-12e

All cards in the system are required to be FP3-based (FP3 IMM or newer). The system does not support any FP2-based cards when the chassis is set to **fabric-speed-b**.

fabric-speed-c — Sets the use of both FP3- and FP4-based cards and is compatible with SFM6 for the 7750 SR-7/12/12e and 7450 ESS-7/12. This speed is mandatory if FP4 cards are used. The performance of FP3 cards is the same as **fabric-speed-b**. For the 7950 XRS 20/20e this parameter enables the of use both FP3- and FP4-based cards and is compatible with **sfm2-x20s**. The performance of FP3 cards is the same as the **none** parameter.

fabric-speed-d — Sets the use of FP4- and FP5-based cards and is compatible with **sfm2-s** for the 7750 SR-7s and 7750 SR-14s. This speed is mandatory if FP5 cards are used.

none — For a 7950 XRS-20/20e, enables use of only FP3 cards.For 7750 SR-7s/14s, enables the use of only FP4 cards.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

24.8 set-role

set-role

Syntax

set-role {**extension** | **master** | **standalone**}

Context

[Tree] (tools>perform>chassis set-role)

Full Context

tools perform chassis set-role

Description

This command sets the role of the 7950 XRS chassis from which the command is invoked.

- When run on a standalone chassis this will update the EEPROM on the (one) Chassis backplane.
- Master and Extension chassis are blocked if any SFMs are configured as type **sfm-x20** (must be **sfm-x20-b**). The following message displays:
- When the **extension** option is specified, the chassis will immediately reboot as part of the command. The following warning and prompt will be provided:

```
WARNING: You are about to provision the chassis as an XRS-40 Extension chassis.
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
This chassis will immediately reboot after the command is executed. No CLI shell is
available directly on an Extension chassis. An Extension chassis will not completely
 boot up unless it is properly cabled to and controlled by an XRS-40 Master
chassis. Do you wish to proceed (yes/no) ?
```

- When the **master** option is specified, the chassis will immediately reboot as part of the command. The Operational mode is not changed until a reboot is performed. The following warning and prompt will be provided:

  ```
  WARNING: You are about to provision the chassis as an XRS-
  40 Master chassis. This chassis will immediately reboot after the command is
  execute

  Do you wish to proceed (yes/no) ?
  ```

- When the **master** or **extension** options are specified and the chassis has any SFM slots with a configured type of sfm-x20, then the command will fail with the following message:

  ```
  Configured sfm-type of sfm-x20 is not compatible with XRS-40 mode operation.
  ```

  If you want to change the role of the chassis anyways, you can deconfigure the SFMs and then change the role.

tools perform system set-trim-mode

Description

This command should only be used with authorized direction of Nokia technical support.

Parameters

set-trim-mode

Specifies the trim operating mode for the system.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values trim-mode-a, trim-mode-b

Platforms

7450 ESS, 7750 SR-7/12/12e

24.10 sflow

sflow

Syntax

sflow

Context

[Tree] (show sflow)

Full Context

show sflow

Description

This command displays the primary and backup receiver statistics, the mapping configuration and a summary of how many ports and SAPs have sFlow enabled.

Platforms

7750 SR, 7750 SR-s, 7950 XRS

Output

The following output is an example of sFlow information. Table 536: Output fields: sFlow describes the show sFlow output fields.

Output Example

```
*B:bkvm10# show sflow

```

Table 536: Output fields: sFlow

Label	Description
sFlow Status	
Receiver	Displays the configured name for the sFlow receiver.
Max Data Size	The configured maximum data size for sFlow UDP packets.
IP Addr Primary	The primary IP address and destination port for sFlow receiver.
IP Addr Backup	The backup IP address and destination port for sFlow receiver.
Packets Sent	The number of packets sent successfully to the primary or backup receiver destination, since the destination was configured, CPM card HA switchover, or system reboot.
Packet Errors	The number of packets that could not be sent to the primary or backup receiver destination because of an error, since the destination was configured, CPM card HA switchover, or system reboot. An example of an error is destination IP not reachable.
Last Packet Sent	Displays the date and time of the last packet sent.
Counter Pollers	
Port	Displays the port on which sFlow is enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
No. of SAPs	The number of SAPs on the port with sFlow enabled.
No. of sFlow counter pollers	The number of sFlow counter pollers.
Counter Mappings	
Direction	Displays the direction of traffic (ingress or egress) the map entry applies to.
Policer/Queue	Displays the policer or queue instance being mapped by s Flow map.
Traffic type	Displays the type of sFlow traffic statistics (unicast, multicast or broadcast) that the policer/queue maps to.
No. of sFlow counter mappings	The number of entries in the sFlow ingress and egress counter map.

Output Fields: show sfm

Table 537: Output fields: SFM describes output fields for the **show sfm** command.

Table 537: Output fields: SFM

Label	Description
Slot	The number of the slot in which the SFM is installed.
Provisioned Type Equipped Type (if different)	The SFM type provisioned.
Admin State	The administrative state.
Operational State	The operational state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Hardware Data	
Part number	The SFM part number.
CLEI code	The SFM CLEI code.
Serial number	The SFM serial number.
Manufacture date	The date the SFM was manufactured.
Manufacturing deviations	Specifies any manufacturing deviations.
Manufacturing assembly number	The SFM assembly number.
Administrative state	Specifies the administrative state of the SFM.
Operational state	Specifies the operational state of the SFM.
Time of last boot	Indicates the time stamp of the last system restart.
Current alarm state	Indicates the current alarm state.
Inter Chassis SFM Interconnect	
SFM Interconnect Port	Port number of the interconnect port.
oper state	Up — The SFM is administratively up. Down — The SFM is administratively down.
Misconnect Info	Only displayed if the oper state is **invalid-connection**.
SFF Status	The SFF status
fabric degrade state	Indicates state.

24.12 sfm-interco-test

sfm-interco-test

Syntax

sfm-interco-test [**sfm x**]

Context

[Tree] (tools>perform>system>inter-chassis sfm-interco-test)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

tools perform system inter-chassis sfm-interco-test

Description

Use this command to run inter-chassis SFM loopback tests for the 7950 XRS.

Run on an out-of-service standalone chassis that will later become the Extension chassis of an XRS-40 system. The out of service chassis (Chassis 1 – future Master chassis) must be connected by means of SFM interconnect links (cable bundles) before this test is run. This test operates without requiring any XCMs in either chassis, but they can be present.

The test should not be initiated from Chassis 1.

The following conditions must be satisfied for the test to be permitted:

- The system must be in standalone mode; error message:

```
        The test can only be performed on a standalone system
```

- The system must have only XRS-40 compatible SFMs provisioned; error message:

```
        The chassis can not have SFMs with a configured type of sfm-x20s-b
        when performing the test
```

- All provisioned SFMs must be operational; error message:

```
All provisioned SFMs must be operational before performing the test
```

- The same test cannot be running in another session (that is, only one test can be executed at a time); error message:

```
        The test is already in-progress in another session
```

Other notes (which are also relayed to the operator when the test is attempted):

- All provisioned XCMs will be reset at the start of the test and will be held in the *booting* state until the test has completed.
- All SFMs will be cleared when the operator exits the test. This will trigger a reset of the XCMs and the standby CPM.

Platforms

7950 XRS

Output

The following output is an example of SFM interconnection test information.

Output Example

```
*A:Dut-A# tools perform system inter-chassis sfm-interco-test
WARNING: This test is intended for an out-of-service standalone chassis that is
going to later become the extension chassis of an XRS-40 system.
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
At the start of the test, all provisioned IOMs will be reset and will be held
in the 'booting' state until the test has completed.

While the test is running avoid altering this system or the attached system
(e.g. do not shutdown, clear, or remove the CPMs/SFMs/IOMs and do not issue
CPM switchovers)

Once testing has completed all SFMs in this system will be cleared.

Do you wish to proceed (y/n)? y
Clearing provisioned IOMs ...

===============================================================================

Correct any mis-cabling and replace any suspected faulty equipment. Press Q to
quit the test or any other key to run the test again. q
Test complete, clearing the SFMs to return them to normal operational state.
Done. Exiting test.
```

24.13 sgt-qos

sgt-qos

Syntax

sgt-qos

Context

[Tree] (show>router sgt-qos)

Full Context

show router sgt-qos

Description

This command displays QoS information for self-generated traffic. In the output, "none” means that the default values for each application are used, not that there is no value set. For a list of application defaults, refer to "QoS for Self-Generated (CPU) Traffic on Network Interfaces” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Quality of Service Guide*.

Platforms

All

24.14 sham-link

sham-link

Syntax

sham-link [*interface-name*] [**detail**]

sham-link *interface-name* **remote** *ip-address* [**detail**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>ospf sham-link)

Full Context

show router ospf sham-link

Description

This command displays OSPFv2 sham-link neighbor information.

Parameters

interface-name

Displays only the sham link identified by this interface name, up to 32 characters.

remote

Displays sham-link information for the sham link identified by the specified remote IP address.

ip-address

Displays only the sham link identified by this IP address.

Platforms

All

Output

The following output is an example of OSPFv2 sham-link neighbor information and Table 538: Output fields: OSPF sham links describes the output fields.

Output Example

```

===============================================================================
*A:PE#
```

Table 539: Output fields: QoS shared queue

Label	Description
Policy	The ID that uniquely identifies the policy.
Description	A text string that helps identify the policy context in the configuration file.

24.17 shcv-policy

shcv-policy

Syntax

shcv-policy [*policy-name*]

Context

[Tree] (show>subscr-mgmt shcv-policy)

Full Context

show subscriber-mgmt shcv-policy

Description

This command displays the SHCV policy parameters.

Parameters

policy-name

Specifies the SHCV policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of SHCV policy information. Table 540: Output fields: SHCV policy describes the output fields.

```

Table 540: Output fields: SHCV policy

Label	Description
Description	Displays the SHCV policy description
Last management change	Displays the date and time when the policy was last changed
VPLS	SHCV parameters applicable for VPLS services
IPv4 source address	Displays the IPv4 source address (sender IP address) used in SHCV ARP requests sent to host addresses learned using DHCP snooping in a VPLS service

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Source MAC address	Displays the source MAC address used in SHCV ARP requests sent to host addresses learned using DHCP snooping in a VPLS service
Layer 3	SHCV parameters applicable for Layer 3 services
Source IP address origin	Displays the source IP address origin: • interface = use the interface MAC and IP address as source addresses for SHCV ARP requests on regular IES or VPRN interfaces • vrrp = use the VRRP MAC and IP address as source addresses for SHCV ARP requests on regular IES or VPRN interfaces when in SRRP master state
Unnumbered source IP address	Displays the IPv4 source address (sender IP address) used in SHCV ARP requests for unnumbered hosts
Periodic	SHCV parameters applicable for periodic and OAM checks
Administrative state	Displays the administrative state for periodic and OAM checks (enabled, disabled)
Action	Displays the action for unsuccessful checks: • alarm = raise an event • remove = raise and event and delete the subscriber host from the system
Interval (minutes)	Displays the interval between subsequent periodic checks
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry or execution of the SHCV unsuccessful check action
Triggered	SHCV parameters applicable for triggered checks
ip-conflict	SHCV parameters applicable for checks triggered by an IP conflict: a new host with different MAC address and same IP address as an existing host active on the same SAP
Administrative state	Displays the administrative state for ip-conflict triggered checks (enabled, disabled)
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry or deletion of the existing host from the system

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
host-limit-exceeded	SHCV parameters applicable for checks triggered by a host limit exceeded event
Administrative state	Displays the administrative state for host-limit-exceeded triggered checks (enabled, disabled)
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry or deletion of the unresponsive existing host from the system
inactivity	SHCV parameters applicable for checks triggered by an inactivity detection
Administrative state	Displays the administrative state for host-limit-exceeded triggered checks (enabled, disabled)
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry or deletion of the unresponsive inactive host from the system
mobility	SHCV parameters applicable for checks triggered by a mobility event: a new host with same MAC address and same IP address as an existing host active on a different SAP
Administrative state	Displays the administrative state for mobility triggered checks (enabled, disabled)
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry or deletion of the existing host from the system
mac-learning	SHCV parameters applicable for checks triggered for mac learning of IP only static hosts
Administrative state	Displays the administrative state for mac-learning triggered checks (enabled, disabled)
Retry count	Displays the number of SHCV check retries when no response is received withing the retry timeout interval
Retry timeout (s)	Displays the time to wait for an SHCV check response before the next retry

24.18 sid-egress-stats

sid-egress-stats

Syntax

sid-egress-stats adj [*interface-name*]

sid-egress-stats adj-set [*id*]

sid-egress-stats all

sid-egress-stats node [*ip-prefix*[/ *prefix-length*]]

Context

[Tree] (clear>router>isis sid-egress-stats)

[Tree] (clear>router>ospf sid-egress-stats)

Full Context

clear router isis sid-egress-stats

clear router ospf sid-egress-stats

Description

This command clears the IS-IS or OSPF egress SID statistics.

Parameters

adj

Clears the egress statistics of the adjacency SID specified by the corresponding interface name. Clears all adjacency SIDs egress statistics if no adjacency SID is specified.

interface-name

Clears the SID egress statistics for the interface specified by this interface name up to 32 characters.

adj-set

Clears the egress statistics of the adjacency set specified by the corresponding ID. Clears all adjacency sets egress statistics if no adjacency set is specified.

id

Clears the SID egress statistics for the identifier specified for this adjacency set.

Values 0 to 4294967295

all

Clears all the SID egress statistics.

node

Clears the egress statistics for the node SID specified by the corresponding prefix. Clears all node SIDs egress statistics if no node SID is specified.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix[/prefix-length]

Clears the IP prefix and prefix length of the node SID.

Values ipv4-prefix:

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

Platforms

All

sid-egress-stats

sid-egress-stats node [*ip-prefix*[/ *prefix-length*]]

Context

[Tree] (clear>router>ospf3 sid-egress-stats)

Full Context

clear router ospf3 sid-egress-stats

Description

This command clears the OSPF3 egress SID statistics.

Parameters

adj

Clears the egress statistics of the adjacency SID specified by the corresponding interface name. Clears all adjacency SIDs egress statistics if no adjacency SID is specified.

interface-name

Clears the SID egress statistics for the interface specified by this interface name up to 32 characters.

all

Clears all the SID egress statistics.

node

Clears the egress statistics for the node SID specified by the corresponding prefix. Clears all node SIDs egress statistics if no node SID is specified.

ip-prefix[/prefix-length]

Clears the IP prefix and prefix length of the node SID.

Values ipv4-prefix:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

sid-ingress-stats node [*ip-prefix*[/ *prefix-length*]]

Context

[Tree] (clear>router>ospf3 sid-ingress-stats)

Full Context

clear router ospf3 sid-ingress-stats

Description

This command clears the OSPF3 ingress SID statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

adj

Clears the ingress statistics of the adjacency SID specified by the corresponding interface name. Clears all adjacency SIDs ingress statistics if no adjacency SID is specified.

interface-name

Clears the SID ingress statistics for the interface specified by this interface name up to 32 characters.

all

Clears all the SID ingress statistics.

node

Clears the ingress statistics for the node SID specified by the corresponding prefix. Clears all node SIDs ingress statistics if no node SID is specified.

ip-prefix[/prefix-length]

Clears the IP prefix and prefix length of the node SID.

Values ipv4-prefix:

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

ipv6-prefix-length: [0 to 128]

show router ospf sid-stats

Description

This command displays information about IGP SIDs statistics.

Parameters

interface-name

Displays only the SID statistics identified by this interface name up to 32 characters.

id

Displays the adjacency set ID.

Values 0 to 4294967295

ip-prefix[/prefix-length]

Displays information for the specified IP prefix and prefix length.

Values ipv4-prefix:

- a.b.c.d (host bits must be 0)

ipv4-prefix-length: [0 to 32]

algo-id

Displays the algorithm identifier.

Values 0 to 255

adj

Displays the ingress and egress statistics, if any, of the adjacency SID specified by the corresponding interface name. Displays statistics for all adjacency SIDs if none is specified.

adj-set

Displays the ingress and egress statistics, if any, of the adjacency set specified by its associated ID. Displays statistics for all adjacency sets if none is specified.

node

Displays the ingress and egress statistics, if any, of the node SID specified by the corresponding prefix. Displays statistics for all node SIDs if none is specified.

algo

Displays statistics for the specified algorithm identifier.

summary

Displays statistics indices usage for SID statistics.

Table 541: Output fields: SID statistics adjacency set

Label	Description
Label	The ILM MPLS label corresponding to the SID.
Type	The type of the SID.
Prefix	The prefix corresponding to the node SID, or the IP address of the neighbor (adjacency SID) or the destination IP associated to the adjacency set.
Interface	The OSPF interface.
Ingress Oper State	Indicates if ingress statistics are enabled or disabled, or if no statistics index is allocated to that SID (no resources).
Egress Oper State	Indicates if egress statistics are enabled or disabled, or if no statistics index is allocated to that SID (no resources).
Ingress Octets	The number of octets received on ingress for that SID.
Egress Octets	The number of octets sent on egress for that SID.
Ingress Packets	The number of packets received on ingress for that SID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Egress Packets	The number of packets sent on egress for that SID.

Table 542: Output fields: SLA profile describes subscriber management SLA profile output fields.

Table 542: Output fields: SLA profile

Field	Description
Name	The Service Level Agreement (SLA) profile name
Description	The user provided description of this policy
Number of SLA Profiles	The total number of SLA profiles configured on this node
Control plane(s)	The SLA profile controlled by local control plane or CUPS control plane
Host Limits	The configured maximum number of hosts per SLA profile instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Session Limits	The configured maximum number of sessions per SLA profile instance
Ingress Qos-Policy	The ingress QoS policy ID
Egress Qos-Policy	The egress QoS policy ID
Ingress Queuing Type	The queuing type
Ingress Filter-Id	The ingress IP filter
Egress Filter-Id	The egress IP filter
Last Mgmt Change	The time and date of the most recent management-initiated change
Queue	The ingress queue ID
Rate	The SLA profile queue rate
CIR	The CIR rate
HiPrio	The number of high priority packets as determined by the SLA profile ingress QoS policy
CBS	The amount of reserved buffer space (in bytes) for the policer
MBS	The amount of buffer space (in bytes) allowed for the policer

24.25 slm

slm

Syntax

slm lmm [**interval** *interval-value*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>oam-pm>session slm)

Full Context

monitor oam-pm session slm

Description

This command monitors the SLM statistics for the raw measurement interval of the specified test.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

interval-value

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Keyword to specify the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Keyword to specify the rate-per-second is displayed.

Default delta

Table 544: Output fields: QoS slope policy

Label	Description
Policy	The ID that uniquely identifies the policy.
Description	A string that identifies the policy context in the configuration file.
Time Avg	The weighting between the previous shared buffer average utilization result and the new shared buffer utilization.
Slope Parameters	
Start Avg	Specifies the RED slope position for the shared buffer average utilization value where the packet discard probability starts to increase above zero.
Max Avg	Specifies the percentage of the shared buffer space for the buffer pool at which point the drop probability becomes one, expressed as a decimal integer.
Admin State	Enabled The administrative status of the RED slope is enabled. Disabled The administrative status of the RED slope is disabled.
Max Prob.	Specifies the RED slope position for the maximum non-one packet discard probability value before the packet discard probability rises directly to one.

24.27 smet

smet

Syntax

smet [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**aspath-regex** *reg-exp*] [**originator-ip** *ip-address* | *ipv6-address*]

Context

[Tree] (show>router>bgp>routes>evpn smet)

Full Context

show router bgp routes evpn smet

Description

This command displays BGP-EVPN SMET routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535

  – *comm-val1* — 0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the SMET route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

ip-address* | *ipv6-address

Specifies the originator IPv4 or IPv6 address, up to 64 characters.

snippets

Syntax

snippets [**detail**]

snippets name *snippet-name* [**instance** *snippet-instance*] [**detail**]

Context

[Tree] (show>service>dynsvc>script snippets)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service dynamic-services script snippets

Description

This command displays the dynamic services snippets information. A snippet is the name of a set of Python functions to create, modify or destroy configuration; for example: a snippet called 'vprn' to create, modify, or destroy VPRN services.

The CLI output generated by a single dynamic service python function call is a snippet instance.

Note:
This command is not available in the MD-CLI.

Parameters

detail

Displays dynamic services snippet information.

snippet-name

Specifies the snippet name.

snippet-instance

*S*pecifies the snippet instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic service snippets.

Output Example

```
# show service dynamic-services script snippets
===============================================================================

Parameters

log-id

Displays only SNMP trap group information for the specified trap group log ID.

Values 1 to 100

Platforms

All

Output

SNMP Trap Group Output

Table 546: Output fields: SNMP trap group describes SNMP trap group output fields.

Table 546: Output fields: SNMP trap group

Label	Description
Log-ID	The log destination ID for an event stream.
Address	The IP address of the trap receiver.
Port	The destination UDP port used for sending traps to the destination, expressed as a decimal integer.
Version	Specifies the SNMP version format to use for traps sent to the trap receiver. Valid values are snmpv1, snmpv2c, snmpv3.
Community	The community string required by **snmpv1** or **snmpv2c** trap receivers.
Security-Level	The required authentication and privacy levels required to access the views on this node.
Replay	Indicates whether or not the replay parameter has been configured, enabled or disabled, for the trap-target address.
Replay from	Indicates the sequence ID of the first missed notification that will be replayed when a route is added to the routing table by which trap-target address can be reached. If no notifications are waiting to be replayed this field shows n/a.
Last Replay	Indicates the last time missed events were replayed to the trap-target address. If no events have ever been replayed this field shows never.

tools dump router ldp sockets

Description
This command dumps information for all LDP sockets.

Platforms
All

24.33 software-repository

software-repository

Syntax
software-repository [*repository-name*]

Context
[Tree] (show>system software-repository)

Full Context
show system software-repository

Description
This command displays software repository information.

Parameters
repository-name
Specifies the software repository name, up to 32 characters.

Platforms
7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

24.34 source

source

Syntax
source [*ip-address/mask*] [**type** {**configured** | **dynamic** | **both**}] [**detail**]

Context

[Tree] (show>router>msdp source)

Full Context

show router msdp source

Description

This command displays the discovery method for the multicast source.

Parameters

ip-address/mask

Specifies the source IP address and mask.

Values *ip-address* — a.b.c.d

mask — 1 to 32

configured

Keyword to display user-created sources.

dynamic

Keyword to display dynamically created sources.

both

Keyword to display both user-configured and dynamically created sources.

detail

Keyword to display detailed MSDP source information.

Platforms

All

Full Context

show router msdp source-active

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays SA messages accepted by MSDP.

Parameters

group *ip-address*

Displays information about the specified group IP address.

local

Keyword to display information about local source-active messages.

originator *ip-address*

Displays information about the specified originator IP address.

peer *ip-address*

Displays information about the specified peer IP address.

source *ip-address*

Displays information about the specified source IP address.

group *ip-address*

Displays information about the specified group IP address.

detail

Keyword to display detailed MSDP source-active information.

Platforms

source-active-rejected

Syntax

source-active-rejected [**peer-group** *name*] [**group** *ip-address*] [**source** *ip-address*] [**originator** *ip-address*] [**peer** *ip-address*]

Context

[Tree] (show>router>msdp source-active-rejected)

Full Context

show router msdp source-active-rejected

Description

This command displays SA messages rejected by MSDP.

Parameters

peer-group *name*

Displays information about rejected SA messages for the specified peer group.

group *ip-address*

Displays information about the specified group IP address.

source *ip-address*

Displays information about the source address of the source active entry that is rejected.

originator *ip-address*

Displays information about the specified originator IP address.

peer *ip-address*

Displays information about the peer from which this rejected source active entry was last received.

Output

SPF Output Fields

Table 553: Output fields: SPF describes SPF output fields.

Table 553: Output fields: SPF

Label	Description
Total SPF Runs	The total number of SPF runs triggered by new or updated LSAs.
Last Full SPF run @	The date and time when the last full SPF was run.
Last Full SPF Time	The duration, in seconds, of the last full SPF calculation. Last Full SPF Time = Intra SPF Time + Inter SPF Time + Extern SPF Time + RTM Updt Time.
Intra SPF Time	The duration, in seconds, of the Intra-area phase of the last SPF calculation.
Inter SPF Time	The duration, in seconds, of the Inter-area phase of the last SPF calculation.
Extern SPF Time	The duration, in seconds, of the External phase of the last SPF calculation.
RTM Updt Time	The duration, in seconds, of the RTM update phase of the last SPF calculation.
Min/Avg/Max Full SPF Time	Min The minimum time, in seconds, used to perform a full SPF calculation. Avg The average time, in seconds, of all the full SPF calculations performed by this OSPF router. Max The maximum time, in seconds, used to perform a full SPF calculation.
Total Sum Incr SPF Runs	The total number of incremental SPF runs triggered by new or updated type-3 and type-4 summary LSAs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Total Ext Incr SPF Runs	The total number of incremental SPF runs triggered by new or updated type-5 external LSAs.

Table 554: Output fields: IS-IS SPF log describes the IS-IS SPF log output fields.

Table 554: Output fields: IS-IS SPF log

Label	Description
When	Displays the timestamp when the SPF run started on the system.
Duration	Displays the time (in hundredths of a second) required to complete the SPF run.
L1 Nodes	Displays the number of Level 1 nodes involved in the SPF run.
L2 Nodes	Displays the number of Level 2 nodes involved in the SPF run.
Event Count	Displays the number of SPF events that triggered the SPF calculation.
Type	Displays the SPF type, Reg (regular) or Lfa (loop free alternative).
Trigger LSP	Displays the LSP that triggered the SPF run.
Reason	Displays the reason(s) for the SPF run. NEWADJ: An adjacency changed. NEWLSP: A new LSP was received. NEWAREA: An area changed. NEWREACH: A prefix changed. ECMPCHANGED: An ECMP path changed. NEWMETRIC: A prefix metric changed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	RESTART: The graceful restart exited. LSPEXPIRED: An LSP expired. DBCHANGED: The LSP database was cleared by an administrator. LSPCONTENT: The content of an LSP changed. NEWPREF: The external route preference changed. NEWNLPID: The routed protocols (IPv4 or IPv6) changed. MANUALREQ: An SPF calculation was requested by an administrator. ADMINTAGCHANGED: An administrative tag changed. TUNNELCHANGED: An MPLS tunnel changed.

24.42 spmsi-ad

spmsi-ad

Syntax

spmsi-ad [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] **[aspath-regex** *reg-exp*] [**originator-ip** *ip-address* **|** *ipv6-address*]

Context

[Tree] (show>router>bgp>routes>evpn spmsi-ad)

Full Context

show router bgp routes evpn spmsi-ad

Description

This command displays BGP-EVPN SPMSI AD routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following: *type*:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

  where:

  – *as-number1* — 0 to 65535
  – *comm-val1* — 0 to 65535
  – **type** — target, origin
  – *ip-address* — a.b.c.d
  – *comm-val2* — 0 to 4294967295
  – *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the SPMSI AD route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

ipv4-address:	a.b.c.d
ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

ip-address* | *ipv6-address

Specifies the originator IPv4 or IPv6 address, up to 64 characters.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

24.43 spoke-sdp

spoke-sdp

Syntax

spoke-sdp *sdp-id*[**:***vc-id*] {**all** | **counters** | **stp** | **l2pt** | **mrp**}

Context

[Tree] (clear>service>statistics>id spoke-sdp)

Full Context

clear service statistics id spoke-sdp

Description

This command clears statistics for the spoke SDP bound to the service.

Parameters

sdp-id

The spoke SDP ID for which to clear statistics

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be reset

Values 1 to 4294967295

all

Clears all queue statistics and STP statistics associated with the SDP

counters

Clears all queue statistics associated with the SDP

stp

Clears all STP statistics associated with the SDP

l2pt

Clears all L2PT statistics associated with the SDP

mrp

Clears all MRP statistics associated with the SDP

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

spoke-sdp

Syntax

spoke-sdp *sdp-id*:*vc-id* **ingress-vc-label**

spoke-sdp *sdp-id:vc-id* **l2tpv3**

spoke-sdp *sdp-id:vc-id* **vccv-bfd** {**session** | **statistics**}

Context

[Tree] (clear>service>id spoke-sdp)

Full Context

clear service id spoke-sdp

Description

This command clears and resets the spoke SDP bindings for the service.

Parameters

sdp-id

The spoke SDP ID to be reset.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be reset.

Values 1 to 4294967295

ingress-vc-label

Specifies to clear the ingress VC label.

l2tpv3

Specifies to clear the session mismatch flag on the spoke-SDP binding after the flag was set to true by a detected mismatch between the configured parameters and the received parameters.

vccv-bfd

Specifies to clear the following information related to VCCV BFD on the spoke-sdp.

session

Clears session information.

statistics

Clears spoke SDP statistics.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

24.44 spoke-sdp-fec

spoke-sdp-fec

Syntax

spoke-sdp-fec [1 to 4294967295]

Context

[Tree] (show>service>id spoke-sdp-fec)

Full Context

show service id spoke-sdp-fec

Description

This command displays spoke-SDP FEC information.

Parameters

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of spoke-SDP FEC information.

Output Example

24.45 spoke-sdp-fec-using

spoke-sdp-fec-using

Syntax

spoke-sdp-fec-using [**spoke-sdp-fec-id** *spoke-sdp-fec-id*] [**saii-type2** *global-id:prefix:ac-id*] [**taii-type2** *global-id:prefix:ac-id*] [**path** *name*] [**expired**]

Context

[Tree] (show>service spoke-sdp-fec-using)

Full Context

show service spoke-sdp-fec-using

Description

Displays the SDPs used by spoke-sdp-fecs at this node.

Parameters

spoke-sdp-fec-id

Specifies the spoke-SDP FEC ID for which to show SDP information.

Values 1 to 4294967295

global-id

Specifies the SAII or TAII global ID.

Values 1 to 4294967295

prefix

Specifies the SAII or TAII prefix.

Values a.b.c.d, 1 to 4294967295

ac-id

Specifies the SAII or TAII AC ID.

Values 1 to 4294967295

name

Specifies the path name. 32 characters maximum.

expired

Displays information for expired SDPs.

Platforms

All

24.46 squelch-ingress-levels

squelch-ingress-levels

Syntax

squelch-ingress-levels [**all** | **ctag-space**] [*sdp-id*[:*vc-id*]]

Context

[Tree] (show>service>sdp-using>eth-cfm squelch-ingress-levels)

Full Context

show service sdp-using eth-cfm squelch-ingress-levels

Description

This command displays the squelch ingress levels associated with SDP bindings.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sdp-id[:vc-id]

Specifies the SDP ID and virtual circuit ID on the SDP ID.

Values sdp-id: 1 to 32767
vc-id: 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

24.47 sr-adj-sets

sr-adj-sets

Syntax

sr-adj-sets [*adjacency-set-id*] [**detail**]

Context

[Tree] (show>router>isis sr-adj-sets)

Full Context

show router isis sr-adj-sets

Description

This command displays IS-IS SR adjacency set log information.

Parameters

adjacency-set-id

Displays SR adjacency set ID information.

Values 1 to 4294967295

detail

Displays detailed SR adjacency set information.

Platforms

All

Output

The following output is an example of **sr-adj-sets** log information.

Full Context

tools dump router isis sr-adjacencies

Description

This command displays IS-IS SR adjacency information.

Parameters

ip-int-name

Specifies the IP interface name. An interface name cannot be in the form of an IP address. Interface names can be any string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, etc.), the entire string must be enclosed within double quotes.

ip-address

Specifies the interface's IP address.

Context

[Tree] (tools>dump>router>isis sr-database)

Full Context

tools dump router isis sr-database

Description

This command displays IS-IS SR database information.

Parameters

sid

Displays information for the specific segment identifier.

Values 0 to 524287

ip-address

Specifies the IP address in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x [eight 16-bit pieces]
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

sr

Displays information for SR next-hop route.

bgp

Displays information for BGP next-hop route.

rsvp

Displays information for RSVP next-hop route.

ipv4-unicast

Displays IPv4 unicast parameters.

ipv6-unicast

Displays IPv6 unicast parameters.

algo *algo-id*

Filters information based on the specific algorithm only.

Values 0 to 255

detail

Displays detailed IS-IS SR database information.

Table 557: Output fields: IS-IS SR database

Label	Description
Label	The ILM MPLS label corresponding to the SID
Prefix	The route prefix and mask
Metric	Interface metric for Level 1 and Level 2; if none are set to 0

sr-database

Syntax

sr-database [**sid** *sid*] [**prefix** *ip-address*] [**nh-type** {**sr** | **ldp** | **rsvp**}] [**algo** *algo-id*] [**detail**]

Context

[Tree] (tools>dump>router>ospf sr-database)

Full Context

tools dump router ospf sr-database

Description

This command displays OSPFv2 SR database information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sid

Displays information for the specific segment identifier.

Values 0 to 524287

ip-address

Specifies the IP address in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x [eight 16-bit pieces]
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

algo-id

Displays the OSPFv2 database information for the specified algorithm identifier.

Values 0 to 255

Platforms

All

Output

The following output is an example of OSPFv2 SR database information.

Output Example

```

sr-database

Syntax

sr-database [**sid** *sid*] [**prefix** *ip-address*] [**nh-type** {**sr** | **ldp** | **rsvp**}] [**detail**]

Context

[Tree] (tools>dump>router>ospf3 sr-database)

Full Context

tools dump router ospf3 sr-database

Description

This command displays OSPFv3 SR database information.

Parameters

sid

Displays information for the specific segment identifier.

Values 0 to 524287

ip-address

Specifies the IP address in dotted decimal notation.

Values ipv4-address:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x [eight 16-bit pieces]
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

24.50 sr-label

sr-label

Syntax

sr-label

Context

[Tree] (show>router>bgp sr-label)

Full Context

show router bgp sr-label

Description

This command displays BGP SR label information.

Platforms

All

24.51 sr-lfa-coverage

sr-lfa-coverage

Syntax

sr-lfa-coverage [**flex-algo** {*flex-algo-id* | **all**}]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>isis sr-lfa-coverage)

Full Context

show router isis sr-lfa-coverage

Description

This command displays IS-IS SR LFA coverage information. This corresponds to the coverage provided by the various LFA algorithms for SR-ISIS tunnel, SR-TE LSP, and LDP FEC if the **fast-reroute backup-sr-tunnel** option is enabled. The LFA algorithms activate the backup next hops in the following preference order:

1. TI-LFA
2. LFA
3. R-LFA

Parameters

flex-algo *flex-algo-id*

Displays SR LFA coverage information for the specified algorithm.

Values 128 to 255

all

Displays all the flexible algorithms that are configured.

Values 128 to 255, all

Platforms

All

Output

The following output is an example of SR LFA coverage information, and Table 558: Output fields: IS-IS SR LFA coverage describes the output fields.

Output Example

```
*A:Dut-C>config>router>isis# show router isis 0 sr-lfa-coverage
===============================================================================
Rtr Base ISIS Instance 0 SR LFA Coverage
===============================================================================
MT-ID  SidType  Level  Proto        LFA        RLFA       TILFA      Coverage

Table 558: Output fields: IS-IS SR LFA coverage describes the IS-IS SR LFA coverage output fields.

Table 558: Output fields: IS-IS SR LFA coverage

Label	Description
MT-ID	Displays the MT identification
SidType	Displays the SID type
Level	Displays the level
Proto	Displays the protocol
LFA	Displays the LFA
RLFA	Displays the RLFA
TIFLA	Displays the TI-LFA
Coverage	Displays the percentage of coverage

sr-lfa-coverage

Syntax

sr-lfa-coverage [**area** *area-id*] [**flex-algo** { *flex-algo-id* | **all**}]

Context

[Tree] (show>router>ospf sr-lfa-coverage)

Full Context

show router ospf sr-lfa-coverage

Description

This command displays the details of the OSPF SR LFA coverage. This corresponds to the coverage provided by the various LFA algorithms for SR-OSPF tunnel, SR-TE LSP, and LDP FEC if **fast-reroute**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

backup-sr-tunnel option is enabled. The LFA algorithms activate the backup next hops using the preference order:

1. TI-LFA
2. LFA
3. R-LFA

Parameters

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d
area — 0 to 4294967295

flex-algo *flex-algo-id*

Displays the OSPF SR LFA coverage details for the specified segment routing algorithm.

Values 128 to 255

flex-algo all

Displays the OSPF SR LFA coverage details for all segment routing algorithms.

Platforms

All

Output

The following output is an example of OSPF SR LFA coverage, and Table 559: Output fields: OSPF SR LFA coverage describes the output fields.

Output Example

```
*A:Dut-C# show router ospf sr-lfa-coverage flex-algo 128
===============================================================================
Rtr Base OSPFv2 Instance 0 Flex-Algo 128 SR LFA Coverage
===============================================================================
SidType      Area            LFA        RLFA       TILFA      Coverage
-------------------------------------------------------------------------------
node-sid     0.0.0.0         2(100%)    0(0%)      0(0%)      2/2(100%)
===============================================================================
*A:Dut-C#
```

Table 559: Output fields: OSPF SR LFA coverage

Label	Description
SidType	Displays the SID type.
Area	Displays the OSPF area.
LFA	Displays the LFA.
RLFA	Displays the RLFA.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
TIFLA	Displays the TI-LFA.
Coverage	Displays the percentage of coverage.

sr-lfa-coverage

Syntax

sr-lfa-coverage [**area** *area-id*]

Context

[Tree] (show>router>ospf3 sr-lfa-coverage)

Full Context

show router ospf3 sr-lfa-coverage

Description

This command displays the details of the OSPF SR LFA coverage. This corresponds to the coverage provided by the various LFA algorithms for SR-OSPF tunnel, SR-TE LSP, and LDP FEC if **fast-reroute backup-sr-tunnel** option is enabled. The LFA algorithms activate the backup next hops using the preference order:

1. TI-LFA
2. LFA
3. R-LFA

Parameters

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d
area — 0 to 4294967295

Platforms

All

Output

Output Example

```
*A:Dut-C>config>router>ospf3# show router ospf3 0 sr-lfa-coverage
===============================================================================
Rtr Base OSPFv3 Instance 0 SR LFA Coverage
===============================================================================
SidType      Area            LFA        RLFA       TILFA      Coverage
```

Use subject to Terms available at: www.nokia.com/terms.

```
-------------------------------------------------------------------------------
node-sid     0.0.0.1         4(40%)     6(60%)     0(0%)      10/10(100%)
adj-sid      0.0.0.1         0(0%)      2(100%)    0(0%)      2/2(100%)
===============================================================================
```

The following table describes the OSPF SR LFA coverage output fields.

Table 560: Output fields: OSPF3 SR LFA coverage

Label	Description
SidType	Displays the SID type.
Area	Displays the OSPF area.
LFA	Displays the LFA.
RLFA	Displays the RLFA.
TIFLA	Displays the TI-LFA.
Coverage	Displays the percentage of coverage.

24.52 sr-lfa-info

sr-lfa-info

Syntax

sr-lfa-info [**ipv4-unicast** | **ipv6-unicast** | **mt** *mt-id-number*] [**prefix** *ip-prefix*[/*prefix-length*]] [**algo** *algo-id*] [**detail**]

sr-lfa-info adjacency [**id** *ip-int-name* | *ip-address* | *nbr-system-id*] [**mt** *mt-id-number*] [**assign-type** {**static** | **dynamic**}] [**sid** *value*] [**detail**]

Context

[Tree] (show>router>isis sr-lfa-info)

Full Context

show router isis sr-lfa-info

Description

This command displays LFA information for an SR-ISIS remote node SID tunnel and SR-ISIS local adjacency SID tunnel.

Parameters

ipv4-unicast

Keyword used to display LFA information of IPv4 unicast SR-ISIS tunnels.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-unicast

Keyword used to display LFA information of IPv6 unicast SR-ISIS tunnels.

mt-id-number

Filters information based on the specific MT ID value.

Values 0 | 2 | 3 | 4

ip-prefix/prefix-length

Displays the LFA information for the SR-ISIS tunnel of the specified IP prefix.

Values *ipv4-prefix* — a.b.c.d (host bits must be 0)

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

algo-id

Filters information based on a specific SR algorithm only.

Values 0 | 128 to 255

detail

Keyword to display detailed information.

adjacency

Keyword to display adjacency SID LFA information.

ip-int-name | *ip-address* | *nbr-system-id*

Displays the LFA information for the SR-ISIS local adjacency identified as an IP interface, IP address, or neighbor system ID.

Values *ip-int-name* — 32 characters max

ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x [0 to FFFF]H

d [0 to 255]D

nbr-system-id — xxxx.xxxx.xxxx

assign-type

Keyword to display filters information based on the specific SID assignment type.

Values **static** — Displays only the statically configured adjacency SIDs per IS-IS interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dynamic — Displays only the dynamically assigned adjacency SIDs per IS-IS interface.

value

Displays LFA information for the specified SID value.

Values 0 to 1048575

Platforms

All

Output

The following outputs are examples of LFA information, and the associated tables describe the output fields:

- SR-ISIS remote node SID tunnel
  - Output example, Table 561: Output fields: IS-IS SR LFA node SID information
  - Output example (detail), Table 562: Output fields: IS-IS SR LFA node SID detailed information
- SR-ISIS local adjacency SID tunnel
  - Output example (adjacency SID with LFA backup using a parallel interface), Output example (adjacency SID with LFA backup not using a parallel interface), Table 563: Output fields: IS-IS SR LFA adjacency SID information
  - Output example (adjacency SID with LFA backup using a parallel interface detail), Output example (adjacency SID with LFA backup not using a parallel interface detail), Table 564: Output fields: IS-IS SR LFA adjacency SID detailed information

Full Context

tools perform router mpls sr-te-cspf

Description

This command computes and returns one or more SR-TE paths and corresponding label stack to a specific destination router and with the specified constraints.

By default, or when the user specifies the value of **ip-to-label** for the **path-computation-method** parameter, MPLS passes the **to** path and the **from** parameters to TE-DB, which converts the list of hops into a label stack by scanning the TE database for adjacency and node SID information that belongs to the router or link identified by each hop address. If the conversion is successful, the TE database returns the actual selected hop SIDs plus labels, as well as the configured path hop addresses that were used as the input for this conversion. None of the TE constraint parameters are used in this path computation method.

When the user specifies the value of **local-cspf** for the **path-computation-method** parameter, MPLS passes all parameters of the **tools** command, including the TE constraint parameters. In this case, a full CSPF is run using these parameters.

When the user runs this **tools** command without specifying a path name, CSPF returns the set of candidate ECMP paths. When the user specifies a path name, CSPF returns a single path, which is selected randomly similar to a configured SR-TE LSP, with the **path-computation-method local-cspf** command enabled.

Parameters

to *ip-address*

Specifies the destination address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values a.b.c.d

path *path-name*

Specifies the path name, up to 64 characters.

from *ip-address*

Specifies the originating IP address.

Values a.b.c.d

path-computation-method path-computation-method

Specifies the path computation method of the LSP path.

Values ip-to-label, local-cspf

hop-limit limit

Specifies the maximum number of hops for the path.

Values 0 to 255

exclude-bitmap *bitmap*

Specifies a bit-map of the admin groups that should be excluded in the path computation. Accepted in decimal, hex, or binary.

Values 0 to 4294967295

include-bitmap *bitmap*

Specifies a bit-map of the admin groups that should be included in the path. Accepted in decimal, hex, or binary.

Values 0 to 4294967295

metric-type-te

Specifies the use of the TE metric to optimize the path. By default, the link IGP metric is used.

This parameter is deprecated. When used, it is automatically translated to **metric-type te** and an INFO message is displayed that the parameter is deprecated and **metric-type te** should be used instead.

local-sr-protection

Specifies the local LFA protection desired for the CSPF computed explicit path with adjacency SIDs.

Values none, preferred, mandatory

label-stack-reduction

Specifies to apply label stack reduction to the CSPF computed explicit path with adjacency SIDs.

max-sr-labels label-stack-size

Specifies the maximum label stack size of the CSPF computed path with or without label stack reduction.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 11

exclude-address ***ip-addr***

Specifies a list of up to eight IP addresses that should be excluded in the path computation.

Values a.b.c.d

exclude-node ***excl-node-id***

Specifies a list of up to eight addresses that should be excluded during the path computation.

Values a.b.c.d

skip-interface ***interface-name***

Specifies an interface name, up to 32 characters, that should be skipped during the path computation.

metric-type ***metric-type***

Specifies the metric type.

Values **igp** — Specifies use of the IGP metric.

te — Specifies use of the traffic-engineering metric. This is the default metric type.

delay — Specifies computation delay metrics.

delay-metric-limit ***delay-metric-limit***

This parameter is valid for **metric-type delay** only and specifies the upper limit of the delay for a path, in microseconds. If **metric-type delay** and **delay-metric-limit**are specified, this command returns the lowest latency path that satisfies the **delay-metric-limit**. If **metric-type delay** is specified and the **delay-metric-limit** is not, the lowest latency path through the network is returned.

Values 1 to 16777215

Full Context

show router mpls sr-te-lsp

Description

This command displays SR-TE LSP information.

Parameters

lsp-name

Specifies the SR-TE LSP name, up to 64 characters.

status

Keyword used to filter the output based on the status of the SR-TE LSP.

Values **up**, **down**

detail

Keyword used to display detailed information.

path-name

Specifies the SR-TE LSP path name, up to 64 characters.

auto-lsp

Keyword used to display the type of automatic LSP.

Values **all**, **mesh-p2p-srte**, **one-hop-p2p-srte, on-demand-p2p-srte**

family

Displays the family of IP addresses.

Values **ipv4**, **ipv6**

count

Keyword used to display the total number of SR-TE LSPs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

to {*ip-address* | *ipv6-address*}

Keyword used to display the IPv4 or IPv6 address of the egress router for the LSP.

egress-stats

Keyword used to display the traffic statistics for the specified SR-TE LSP or for all SR-TE LSPs if none is explicitly specified. Traffic statistics are provided for primary path, secondary path if any, and secondary standby paths, if any. Statistics are preserved across switchover only for primary and secondary standby paths.

mbb

Keyword used to display make-before-break (MBB) information.

activepath

Keyword used to display the SR-TE active paths, which are candidate paths selected as the best paths by the SR policy make-before-break (MBB) information.

dns

Keyword used to display reverse DNS resolution of actual and explicit hop information.

Platforms

All

Output

The following outputs are examples of MPLS SR-TE LSP information. The associated tables describe the output fields.

Output Example

The following outputs apply to an SR-TE LSP for which the path is computed using the local SR-TE CSPF method.

Table 565: Output fields: MPLS SR-TE-LSP detail

Label	Description
LSP Name	The name of the LSP
LSP Type	The type of the LSP
LSP Tunnel ID	The tunnel ID number for the LSP used in the interaction with PCC/PCE
LSP Index	The LSP index used for indexing the LSP in the MIB table shared with the RSVP-TE LSP
TTM Tunnel Id	The tunnel ID number for the tunnel representing the LSP in the tunnel table
From	The IP address for the ingress router for the LSP
To	The IP address for the egress router for the LSP
Admin State	The administrative state of the LSP
Oper State	The operational state of the LSP
LSP Up Time	The length of time the LSP has been operational
LSP Down Time	The amount of time the LSP has been down
Transitions	The number of transitions that have occurred for the LSP
Path Changes	The number of times the path has changed
Retry Limit	The number of attempts that the software makes to reestablish the LSP after it has failed
Retry Timer	The time, in seconds, for LSP reestablishment attempts after LSP failure
Hop Limit	The maximum number of hops that an LSP can traverse, including the ingress and egress routers
Negotiated MTU	The size of the maximum transmission unit (MTU) that is negotiated during establishment of the LSP
PathCompMethod	pce — PCE path computation method is configured local-cspf — Local CSPF path computation method is configured none — No computation method is configured
FallbkPathComp	none — No fallback method is configured

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	local-cspf — Local CSPF fallback is configured
Metric	The cost of the TE path for the LSP
Local Sr Protection	The local LFA protection wanted for the CSPF computed explicit path with adjacency SIDs
Label Stack Reduction	The label stack reduction applied to the CSPF computed explicit path with adjacency SIDs
Load Bal Wt	The load balance weight value
Include Grps	The included groups. None indicates that no groups are included
Exclude Grps	The excluded groups. None indicates that no groups are excluded
Egress Stats	The traffic statistics for the specified SR-TE LSP or for all SR-TE LSPs if none is explicitly specified. Traffic statistics are provided for primary path, secondary path, if any, and secondary standby paths, if any. Statistics are preserved across switch over for primary and secondary standby paths
BFD Template	The BFD template name
BFD Ping Intvl	The BFD ping interval
BFD Enable	The operational state of the BFD on the LSP
BFD Failure-action	The failure action that is configured for the BFD LSP
WaitForUpTimer	The BFD wait for up timer value
ReturnPathLabel	The return path label added to the MPLS label to the bottom of the label stack for S-BFD. With this configured, the S-BFD packet returns to the initiator through the MPLS return path
Revert Timer	The length of time before a named LSP using the secondary path to revert to the primary path
Next Revert In	The next revert interval
Entropy Label	The enabled or disabled status for the entropy label
Oper Entropy Label	Indicates that the entropy label is in use
Negotiated EL	Indicates if the entropy label is negotiated for the LSP
Override Tunnel ELC	The enabled or disabled status of the override tunnel ELC

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
VPRNAutoBind	The enabled or disabled status for VRPN autobind
IGP Shortcut	The enabled or disabled status for IGP shortcut
BGP Shortcut	The enabled or disabled status for BGP shortcut
IGP LFA	The enabled or disabled status for IGP LFA
BGPTransTun	The enabled or disabled status for BGP transport tunnels
Oper Metric	The enabled or disabled status of the operational metric
PCE Report	The enabled or disabled status of PCE report
PCE Control	The enabled or disabled status of PCE control
Max SR Labels	The maximum label stack size of the computed path with or without label stack reduction
Additional FRR Labels	The additional FRR labels value that the router is configured to take into account during TI-LFA
Path Profile	The path profile value for the LSP
Admin Tags	The administrative tag names. None indicates that there are no tags.
Primary (a)	The preferred path for the LSP
Up Time	The total time in increments that the LSP path has been operational
Bandwidth	The amount of bandwidth in Mb/s reserved for the LSP path
Secondary	The alternate path that the LSP uses if the primary path is not available
Downtime	The time that the LSP has been down
Bandwidth	The amount of bandwidth in Mb/s reserved for the LSP path

Table 566: Output fields: MPLS SR-TE-LSP path detail

Label	Description
LSP Name	The name of the LSP
Path LSP ID	The path LSP ID
From	The IP address for the ingress router for the LSP
To	The IP address for the egress router for the LSP
Admin State	The administrative state of the LSP
Oper State	The operational state of the LSP
Path Name	The name of the LSP path
Path Type	The type of LSP path
Path Admin	The administrative state of the LSP path
Path Oper	The operational state of the LSP path
Path Up Time	The length of time the LSP path has been operational
Path Down Time	The length of time the LSP path has been down
Retry Limit	The number of attempts that the software makes to reestablish the path after it has failed
Retry Timer	The time, in seconds, for path reestablishment attempts after LSP failure

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Retry Attempt	The number of retry attempts
Next Retry In	The next retry value
PathCompMethod	The path computation method for the specific LSP pce — PCE path computation method is configured local-cspf — Local CSPF path computation method is configured none — No computation method is configured
OperPathCompMethod	The operational state of the path computation method pce — PCE path computation method is configured local-cspf — Local CSPF path computation method is configured none — No computation method is configured
MetricType	The cost of the TE path for the specific LSP
Oper MetricType	The operational state of cost of the TE path
LocalSrProt	The local LFA protection for the CSPF computed explicit path with adjacency SIDs
Oper LocalSrProt	The operational state of LFA protection for the CSPF computed explicit path with adjacency SIDs
LabelStackRed	The label stack reduction applied to the CSPF computed explicit path with adjacency SIDs
Oper LabelStackRed	The operational state of the label stack reduction applied to the CSPF computed explicit path with adjacency SIDs
Bandwidth	The amount of bandwidth in Mb/s to be reserved
Oper Bandwidth	The operational state of the bandwidth
Hop Limit	The maximum number of hops for the path
Oper HopLimit	The operational state of the maximum number of hops for the path
Setup Priority	The setup priority value to use for the path
Oper SetupPriority	The operational state of the setup priority value for the path
Hold Priority	The hold priority to use for the path
Oper HoldPriority	The operational state of the hold priority for the path

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
PCE Updt ID	The update ID
PCE Updt State	The update state
PCE Upd Fail Code	The update failure code
PCE Report	The enabled or disabled status of PCE report
Oper PCE Report	The operational state of the PCE report
PCE Control	The enabled or disabled status of PCE control
Oper PCE Control	The operational state of PCE control
Include Groups	The included groups. None indicates that no groups are included
Oper IncludeGroups	The operational state of the included groups
Exclude Groups	The excluded groups. None indicates that no groups are included
Oper ExcludeGroups	Oper ExcludeGroups
Last Resignal	The last resignal time
IGP/TE Metric	The IGP or TE metric value
Oper Metric	The operational metric value
Oper MTU	The largest service frame size that can be transmitted to the far-end router without requiring the packet to be fragmented
Path Trans	The path transmission value
Degraded	The degraded status
Failure Code	The reason code for in-progress MBB value. A value of none indicates that no failure has occurred.
Failure Node	The IP address of the node in the LSP path at which the in-progress MBB failed. When no failure has occurred this value is none.
Explicit Hops	The explicit configured hops for an LSP path
Actual Hops	The actual hops an LSP path takes
Record Label	The record label value
BFD Configuration and State	
Template	Indicates if the BFD template configured

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ping Interval	The BFD ping interval value
Enable	Indicates if BFD is enabled
State	The state of BFD
ReturnPathLabel	The return path label to add to the MPLS label on the bottom of the label stack for S-BFD. When configured, the S-BFD packet returns to the initiator through the MPLS return path.
BFD Source Addr	The BFD source address
WaitForUpTimer	The BFD wait for up timer value
OperWaitForUpTimer	The operational state of the wait for up timer value
WaitForUpTmLeft	The length of time remaining for the wait for up timer
StartFail Rsn	The start fail RSN value

Output Example

The following outputs apply to an SR-TE auto-LSP for which the path is computed by the hop-to-label translation method.

```

Table 567: Output fields: MPLS SR-TE LSP describes the MPLS SR-TE LSP count statistics output fields.

Table 567: Output fields: MPLS SR-TE LSP

Label	Description
LSP Name	The name of the LSP used in the path.
Adm State	Down — The path is administratively disabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Up — The path is administratively enabled.
PathCompMethod	pce — PCE path computation method is configured. local-cspf — Local CSPF path computation method is configured.
FallbkPathComp	none — No fallback method is configured. local-cspf — Local CSPF fallback is configured.
Retry Limit	The number of attempts that the software should make to reestablish the LSP after it has failed.
Hop Limit	The maximum number of hops that an LSP can traverse, including the ingress and egress routers.
Retry Timer	The time in seconds, for LSP re-establishment attempts after an LSP failure.
LSP Up Time	The total time in increments that the LSP path has been operational.
LSP Down Time	The total time in increments that the LSP path has not been operational.
SR-TE LSPs	Displays the number of SR-TE LSPs
Mesh SR-TE LSPs	Displays the number of mesh SR-TE LSPs
One Hop-P2P SR-TE LSPs	Displays the number of one-hop SR-TE LSPs
PCE Init SR-TE LSPs	Displays the number of PCE initiated SR-TE LSPs

Output Example

The following outputs apply to a router-controlled or to a PCC-controlled SR-TE LSP for which the path is computed using the hop-to-label transition method.

```

```

Table 568: Output fields: MPLS SR-TE LSP egress statistics describes the MPLS SR-TE LSP egress statistics output fields.

Table 568: Output fields: MPLS SR-TE LSP egress statistics

Label	Description
LSP Name	The name of the LSP for which the statistics are provided
Admin State	The administrative state of the LSP
Path Name	The path name of the LSP
StatsOperState	Indicates whether the system is able to allocate a statistical index to that specific path
Aggregate Pkts	The number of packets recorded by the statistical index for that path
Aggregate Octets	The number of octets recorded by the statistical index for that path
Tot.Aggr Pkts	The sum of packets over all paths of the LSP
Tot.Aggr Octets	The sum of octets over all paths of the LSP
Packet Rate	The packet rate for the LSP (across all paths, for all FCs in/out-of profile) expressed in packets per second

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Bit Rate	The bit rate for the LSP (across all paths, for all FCs in/out-of profile) expressed in Mb/s

24.59 sr-te-lsp-egress-stats

sr-te-lsp-egress-stats

Syntax

sr-te-lsp-egress-stats *lsp-name*

Context

[Tree] (clear>router>mpls sr-te-lsp-egress-stats)

Full Context

clear router mpls sr-te-lsp-egress-stats

Description

This command clears or resets the egress statistics for MPLS SR-TE LSP.

Parameters

lsp-name

Specifies the LSP to clear, up to 64 characters.

Platforms

All

sr-te-lsp-egress-stats

Syntax

sr-te-lsp-egress-stats lsp *lsp-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute**| **rate**] [**bits**]

Context

[Tree] (monitor>router>mpls sr-te-lsp-egress-stats)

Full Context

monitor router mpls sr-te-lsp-egress-stats

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command monitors MPLS SR-TE LSP Egress Statistics.

Parameters

lsp-name

Specifies the LSP name.

Values 64 characters maximum

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

bits

Displays output value in bits.

Platforms

All

24.60 src-access-list

src-access-list

Syntax

src-access-list [*list-name*]

Context

[Tree] (show>system>security>snmp src-access-list)

Full Context

show system security snmp src-access-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays source access lists and the hosts for each. Including the *list-name* parameter modifies the output show only the specified **src-access-list**.

Platforms

All

Output

The following output is an example of SR access list information.

Table 569: Output fields: source access list describes the source access list output fields.

Output Example

```
A:ALA-1# show system security snmp src-access-list
===============================================================================
Source Access Lists
===============================================================================
List Name
  HostName                              Host Address
-------------------------------------------------------------------------------

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Total Access Lists	Displays the total number of source access lists.

24.61 src-bmac-lsb

src-bmac-lsb

Syntax

src-bmac-lsb

Context

[Tree] (tools>dump>redundancy src-bmac-lsb)

Full Context

tools dump redundancy src-bmac-lsb

Description

This command dumps PBB source Backbone MAC address LSB information.

Platforms

All

24.62 srlg-database

srlg-database

Syntax

srlg-database [**router-id** *ip-address*] [**interface** *ip-address*]

Context

[Tree] (show>router>mpls srlg-database)

Full Context

show router mpls srlg-database

Description

This command displays MPLS SRLG database information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

router-id *ip-address*

Specifies a 32-bit integer uniquely identifying the router in the Autonomous System. By convention to ensure uniqueness, this may default to the value of one of the router's IPv4 host addresses, represented as a 32-bit unsigned integer, if IPv4 is configured on the router. The **router-id** can be either the local one or some remote router.

interface *ip-address*

Specifies the IP address of the interface.

Platforms

All

24.63 srlg-group

srlg-group

Syntax

srlg-group [*name*]

Context

[Tree] (show>router>if-attribute srlg-group)

Full Context

show router if-attribute srlg-group

Description

This command displays SRLG statistics.

Parameters

name

Displays entries that are associated with the specified SRLG name, up to 32 characters.

Platforms

All

Output

The following output is an example of SRLG statistics, and Table 570: Output fields: SRLG describes the fields.

Output Example

```
B:CORE2# show router if-attribute srlg-group
===============================================
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
Interface Srlg Groups
================================================
Group Name             Group Value  Penalty Weight
------------------------------------------------
1                      1            100
2                      2            200
3                      3            300
------------------------------------------------
No. of Groups: 3
================================================
B:CORE2#
```

Table 570: Output fields: SRLG

Label	Description
Group Name	The name of the SRLG
Group Value	The integer value of the SRLG
Penalty Weight	The penalty weight that is assigned to the SRLG
No. of Groups	The total number of displayed SRLGs

24.64 srrp

srrp

Syntax

srrp

Context

[Tree] (clear>router srrp)

Full Context

clear router srrp

Description

Commands in this context clear and reset SRRP virtual router instances.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

srrp

Syntax

srrp [*srrp-id* [**detail**]]

Context

[Tree] (show srrp)

Full Context

show srrp

Description

This command displays information related to the SRRP.

Parameters

srrp-id

Specifies the SRRP ID.

Values 1 to 4294967295

detail

Displays detailed information.

Platforms

All

24.65 srrp-sync-database

srrp-sync-database

Syntax

srrp-sync-database [**instance** *instance-id*] [**peer** *ip-address*]

Context

[Tree] (tools>dump>redundancy>multi-chassis srrp-sync-database)

Full Context

tools dump redundancy multi-chassis srrp-sync-database

Description

This command dumps SRRP database information and applies to the 7450 ESS.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Specifies the peer's IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

instance-id

Dumps information for the specified Subscriber Router Redundancy Protocol instance configured on this system.

Values 1 to 4294967295

Platforms

All

24.66 ssh

ssh

Syntax

ssh [**detail** | **server-lists** | **client-lists** | **server-public-keys** | **client-known-hosts** [**host-name**]]

Context

[Tree] (show>system>security ssh)

Full Context

show system security ssh

Description

This command displays all SSH sessions, the SSH status, and fingerprints. The type of SSH application (CLI, SCP, SFTP, or NETCONF) is indicated for each SSH connection.

Parameters

detail

Keyword to display detailed information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server-lists

Keyword to display the lists of cipher, MAC, KEX, and host key algorithms allowed by the SSH server.

client-lists

Keyword to display the lists of cipher, MAC, KEX, and host key algorithms allowed by the SSH client.

server-public-keys

Keyword to display the SSH server public keys.

client-known-hosts

Keyword to display static and dynamic host public keys accepted by the SSH client.

host-name

Specifies the host name.

Platforms

All

Output

The following outputs are examples of SSH information, and Table 571: Output fields: ssh describes the output fields.

- Output example (show system security ssh)
- Output example (show system security ssh detail)
- Output example (show system security ssh server-lists)
- Output example (show system security ssh client-lists)
- Output example (show system security ssh server-public-keys)
- Output example (show system security ssh client-known-hosts)

Table 571: Output fields: ssh

Label	Description
Administrative State	Enabled — The administrative state of the SSH server is enabled Disabled — The administrative state of the SSH server is disabled
Operational State	Up — The operational state of the SSH server is up Down — The operational state of the SSH server is down
Preserve Key	Enabled — preserve-key is enabled Disabled — preserve-key is disabled
Key-re-exchange	The maximum amount of time and the maximum number of megabytes to be transmitted before a key re-exchange is initiated by the server
SSH Protocol Version 2	Enabled — SSH2 is enabled Disabled — SSH2 is disabled
Host Key Fingerprints	The key fingerprint is the server identity. If a client attempts and fails to verify the key fingerprint of the server, the client session is disconnected.
Connection	The IP address of the connected routers (remote client)
ConnectionID	The connection ID
Username	The name of the user
ConnectionStatus	The connection status
Version	The SSH version
KEX	KEX algorithm negotiated between SR OS SSH server and SSH client
Cipher	Cipher algorithm negotiated between SR OS SSH server and SSH client
MAC	MAC algorithm negotiated between SR OS SSH server and SSH client

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
HostKey	Host key algorithm negotiated between SR OS SSH server and SSH client
SessionID	The session ID
ChannelID	The channel ID
ServerName	The server name
ChannelStatus	The channel status
Number of SSH connections	The total number of SSH connections
Number of SSH sessions	The total number of active SSH sessions
Hostname	The IP address or FQDN of the host
Key-Type	The algorithm used to generate the host public key
Key-Value	The host public key value
Source	configuration — static host public key configured by the user dynamic — dynamically-learned host public key
Number of public keys	The total number of known host public keys

standby-ip-addresses

Syntax

standby-ip-addresses

Context

[Tree] (show>subscr-mgmt>vrgw>brg>gateway standby-ip-addresses)

Full Context

show subscriber-mgmt vrgw brg gateway standby-ip-addresses

Description

This command shows associated home-aware pool standby IP addresses.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

24.71 start

start

Syntax

start

Context

[Tree] (tools>perform>router>l2tp>group>tunnel start)

Full Context

tools perform router l2tp group tunnel start

Description

This command triggers an attempt to start the control connection for a specified L2TP tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start

Syntax

start *route-downloader-name* [**force**]

Context

[Tree] (tools>perform>aaa>route-downloader start)

Full Context

tools perform aaa route-downloader start

Description

This command causes the download process to start immediately. If an ongoing download is already in progress then no further action is needed, except if the **force** keyword is added. In case the **force** keyword is added, then the current download is aborted and a new one is immediately restarted. If aborting the current download, the internal route table should not be emptied or cleared.

Parameters

route-downloader-name

Specifies the route downloader name, up to 32 characters.

force

Causes the current download to be aborted and a new one is immediately restarted.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

24.72 static

```

static

Syntax

static [**sap** *sap-id* | **sdp** *sdp-id:vc-id*]

Context

[Tree] (show>service>id>igmp-snooping static)

Full Context

show service id igmp-snooping static

Description

This command displays information on static IGMP snooping source groups for the VPLS service.

Parameters

sap *sap-id*

Displays static IGMP snooping source groups for a specific SAP.

sdp *sdp-id*

Displays the IGMP snooping source groups for a specific spoke or mesh SDP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID for which to display information.

Default For mesh SDPs only, all VC IDs.

Values 1 to 4294967295

Platforms

All

show router segment-routing sr-policies static

Description

This command displays the traffic statistics of all or a filtered set of the static policies, or displays summary parameters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

head-end local

Filters on local head end.

head-end *ip-address*

Filters on the head end IP address value.

Values a.b.c.d

color

Filters on the color.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Filters on the end-point IPv4 or IPv6 address.

Values ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:x:d:d:d:d

x — [0 to FFFF]H

d — [0 to 255]D

preference-id

Filters on the preference ID.

Values 0 to 4294967295

distinguisher-id

Filters on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information of the static policies.

Platforms

All

Output

The following output is an example of traffic statistics for the static policies.

Output Example Information for Static Policies

24.73 static-arp

static-arp

Syntax

static-arp [{*ip-int-name* | *ip-address* | **mac** *ieee-mac-address*}]

Context

[Tree] (show>router static-arp)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show router static-arp

Description

This command displays the router static ARP table sorted by IP address. If no options are present, all ARP entries are displayed.

Parameters

ip-int-name

Only displays static ARP entries associated with the specified IP interface name.

ip-address

Only displays static ARP entries associated with the specified IP address.

ieee-mac-address

Only displays static ARP entries associated with the specified MAC address.

Platforms

All

Output

Static ARP Table Output — The following output is an example of static AARP table information, and Table 577: Output fields: static ARP describes the output fields.

Output Example

```
A:ALA-A# show router static-arp
===============================================================================
ARP Table
===============================================================================
IP Address      MAC Address       Age      Type Interface

```

Table 577: Output fields: static ARP

Label	Description
IP Address	The IP address of the static ARP entry
MAC Address	The MAC address of the static ARP entry
Age	The age of the ARP entry. Static ARPs always have 00:00:00 for the age
Type	Inv — the ARP entry is an inactive static ARP entry (invalid) Sta — the ARP entry is an active static ARP entry
Interface	The IP interface name associated with the ARP entry
No. of ARP Entries	The number of ARP entries displayed in the list

24.74 static-host

static-host

Syntax

static-host [**sap** *sap-id*] [**wholesaler** *service-id*] [**port** *port-id*][**inter-dest-id** *intermediate-destination-id*] [**detail**] [**mac** *ieee-address*] [**ip-address** *ip-prefix*[*/prefix-length*]]

static-host [**sap** *sap-id*][**wholesaler** *service-id*][**port** *port-id*] **no-inter-dest-id** [**detail**]

static-host summary

Context

[Tree] (show>service>id static-host)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service id static-host

Description

This command displays static hosts configured on this service.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

summary

Displays summary static host information.

detail

Displays detailed static host information.

service-id

The service ID of the wholesaler.

Values 1 to 2147483647

ieee-address

Specifies the MAC address.

***ip-prefix*[*/prefix-length*]**

Specifies the IP address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of service static host information.

Output Example

```
*A:ALA-48# show service id 88 static-host
===============================================================================
Static Hosts for service 88
===============================================================================
Sap                         IP Address      Configured MAC    Dynamic MAC
  Subscriber                                  Admin State       Fwding State

24.75 static-lsp

static-lsp

Syntax

static-lsp [*lsp-name*]

static-lsp {**transit** | **terminate**}

static-lsp count

Context

[Tree] (show>router>mpls static-lsp)

Full Context

show router mpls static-lsp

Description

This command displays MPLS static LSP information.

Platforms

All

Output

The following output is an example of MPLS static LSP information.

Table 578: Output fields: MPLS static LSP describes the MPLS static LSP output fields.

Table 578: Output fields: MPLS static LSP

Label	Description
Lsp Name	The name of the LSP used in the path up to 64 characters in length.
To	The system IP address of the egress router for the LSP.
Next Hop	The system IP address of the next hop in the LSP path.
In I/F	The ingress interface.
Out Label	The egress interface.
Out I/F	The egress interface.
Adm	Down — The path is administratively disabled. Up — The path is administratively enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Opr	Down — The path is operationally down. Up — The path is operationally up.
LSPs	The total number of static LSPs.

Output Example

```
A:ALA-12# show router mpls static-lsp
===============================================================================
MPLS Static LSPs (Originating)

24.76 static-policy

static-policy

Syntax

static-policy [**detail**] [**head-end** {**local** | *ip-address*}] [**color** *color*] [**preference** *preference-id*] [**distinguisher** *distinguisher-id*] [**tunnel-id** *tunnel-id*] [**end-point** { *ipv4-address* | *ipv6-address*}]

static-policy *name* [**detail**]

Context

[Tree] (show>router>seg-rt>sr-policies static-policy)

Full Context

show router segment-routing sr-policies static-policy

Description

This command displays information about all static policies or the specified static policy.

Parameters

detail

Keyword used to specify detailed information about the static policy.

head-end local

Keyword used to filter on the local head end.

head-end *ip-address*

Specifies to filter on the head-end IP address value.

Values a.b.c.d

color

Specifies to filter on the color.

Values 0 to 4294967295

preference-id

Specifies to filter on the preference ID.

Values 0 to 4294967295

distinguisher-id

Specifies to filter the distinguisher ID.

Values 0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel-id

Specifies to filter the tunnel ID.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Specifies to filter on the endpoint IPv4 or IPv6 address.

Values ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:x:d:d:d:d

x — [0 to FFFF]H

d — [0 to 255]D

name

Specifies the name of the static policy, up to 64 characters.

Platforms

All

Output

The following outputs are examples of static policy information, and Table 579: Output fields: static policy describes the output fields:

Table 579: Output fields: static policy

Label	Description
SR-Policies Static Policy	
Policy Name	Specifies the policy name
Type	Specifies the policy type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Admin Status	Specifies the policy administrative status
Color	Specifies the color value
Head End Addr	Specifies the head end IP address
Endpoint Addr	Specifies the endpoint IP address
Preference	Specifies the preference value
BSID	Specifies the binding segment ID
RD	Specifies the route distinguisher value
Maintenance Plcy	Specifies the maintenance policy
Ret Path BFD SID	Specifies the return path BFD SID
Pce Report	Specifies the PCE reporting status
SRv6 BSID 1	Specifies the SRv6 BSID value
Path Entry	Specifies the path entry value
Active	Specifies the active state
Owner	Specifies the owner type
Operational	Specifies the operational state
TunnelId	Specifies the tunnel ID
Age	Specifies the age
Origin ASN	Specifies the origin autonomous system number
Origin	Specifies the origin IP address
NumReEval	Specifies the number of reevaluations
LastReEvalReason	Specifies the reason for the last reevaluation
NumActPathChange	Specifies the number of active path changes
Last Change	Specifies the date and time of the last change
ACT S-BFD Sess	Specifies the ACT S-BFD session
S-BFD Threshold	Specifies the S-BFD threshold
Path Segment Lists	Specifies the path segment lists
Segment-List	Specifies the segment list number

Label	Description
Weight	Specifies the weight value
S-BFD State	Specifies the S-BFD state
S-BFD Transitio*	Specifies the S-BFD transition
Admin Status	Specifies the admin status
Last Change	Specifies the last change
Segment Stack	Specifies the segment stack information
Num Segments	Specifies the number of segments
1 MPLS Label	Specifies the first MPLS label value
State	Specifies the state of the first or second MPLS label
2 MPLS Label	Specifies the second MPLS label value
1SRv6 SID/2 SRv6	Specifies the first SRv6 label value
State	Specifies the state of the first or second SRv6 label
Behavior	Specifies the behavior of the first or second SRv6 label
Block Length	Specifies the block length of the first or second SRv6 label
Node Length	Specifies the node length of the first or second SRv6 label
Function Length	Specifies the function length of the first or second SRv6 label

24.77 static-route

static-route

Syntax

static-route [*family*] [{*ip-prefix/prefix-length* | **preference** *preference* | [**next-hop** *ip-address* | **tag** *tag*}] [**detail**]

Context

[Tree] (show>router static-route)

Full Context

show router static-route

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the static entries in the routing table. If no options are present, all static routes are displayed sorted by prefix.

Parameters

family

Specifies the type of routing information to be distributed by this peer group.

Values **ipv4** — Displays only those BGP peers that have the IPv4 family enabled and not those capable of exchanging IP-VPN routes.

ipv6 — Displays the BGP peers that are IPv6 capable.

mcast-ipv4 — Displays the BGP peers that are IPv4 multicast capable.

mcast-ipv6 — Displays the BGP peers that are IPv6 multicast capable.

ip-prefix/prefix-length

Displays static routes only matching the specified *ip-prefix* and *mask*.

Values The following values apply to the 7750 SR and 7950 XRS:

ipv4-prefix:	a.b.c.d (host bits must be 0)	
	ipv4-prefix-length:	0 to 32
ipv6-prefix:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D
	ipv6-prefix-length:	0 to 128

Values The following values apply to the 7450 ESS:

ipv4-prefix:	a.b.c.d (host bits must be 0)
ipv4-prefix-length:	0 to 32

preference

Only displays static routes with the specified route preference.

Values 0 to 65535

ip-address

Only displays static routes with the specified next hop IP address.

Values The following values apply to the 7750 SR and 7950 XRS:

ipv4-address:	a.b.c.d (host bits must be 0)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address:	x:x:x:x:x:x:x:x (eight 16-bit pieces)	
	x:x:x:x:x:x:d.d.d.d	
	x:	[0 to FFFF]H
	d:	[0 to 255]D

Values The following values apply to the 7450 ESS:

ipv4-address: a.b.c.d (host bits must be 0)

tag

Displays the tag used to add a 32-bit integer tag to the static route. The tag is used in route policies to control distribution of the route into other protocols.

Values 1 to 4294967295

detail

Displays detailed static routes information.

Platforms

All

Output

Static Route Output — The following output is an example of static route information, and Table 580: Output fields: static route describes the fields.

Output Example

```
A:ALA-A# show router static-route

Table 580: Output fields: static route

Label	Description
IP Addr/mask	The static route destination address and mask
Pref	The route preference value for the static route
Metric	The route metric value for the static route
Type	BH — the static route is a black hole route; the nexthop for this type of route is black-hole ID — the static route is an indirect route, where the nexthop for this type of route is the non-directly connected next hop NH — the route is a static route with a directly connected next-hop; the next-hop for this type of route is either the next-hop IP address or an egress IP interface name
Nexthop	The next hop for the static route destination
Protocol	The protocol through which the route was learned
Interface	The egress IP interface name for the static route n/a — indicates there is no current egress interface because the static route is inactive or a black hole route
Active	N — the static route is inactive; for example, the static route is disabled or the next hop IP interface is down Y — the static route is active
No. of Routes	The number of routes displayed in the list
Backup Nexthop	The backup next hop for the static route destination
Backup Tag	The tag value used for the static route when the primary next hop fails and the backup next hop is active
Backup Status	The status of the backup next hop

Full Context

tools dump router static-route

Description

This command enables the synchronization status that static route keeps track of LDP interfaces.

Parameters

ldp-sync-status

Specifies the LDP synchronization status.

Platforms

All

Output

The following output is an example of static route information.

Output Example

```
*A:Dut-C#  tools dump router static-route ldp-sync-status
===============================================================================
Sync Status of LDP interfaces
===============================================================================
If          If Name                     Timer Running?  Timeout     Time
Index                                    Yes/No          Used        Left
-------------------------------------------------------------------------------
2       ip-10.10.2.3                    Yes             30          5
3       ip-10.10.3.3                    No              30          0
4       ip-10.10.5.3                    No              30          0
5       ip-10.10.22.3                   No              30          0
6       ip-10.10.12.3                   No              30          0

Table 581: Output fields: DHCP statistics

Label	Description
Rx Packets	The number of packets received from the DHCP clients
Tx Packets	The number of packets transmitted to the DHCP clients
Rx Malformed Packets	The number of malformed packets received from the DHCP clients
Rx Untrusted Packets	The number of untrusted packets received from the DHCP clients
Client Packets Discarded	The number of packets received from the DHCP clients that were discarded
Client Packets Relayed	The number of packets received from the DHCP clients that were forwarded
Client Packets Snooped	The number of packets received from the DHCP clients that were snooped
Client Packets Proxied (RADIUS)	The number of client packets proxied through RADIUS
Client Packets Proxied (Diameter)	The number of client packets proxied through Diameter
Client Packets Proxied (User-Db)	The number of client packets proxied through User-Db
Client Packets Proxied (Lease-Split)	The number of client packets proxied through a lease split
Server Packets Discarded	The number of packets received from the DHCP server that were discarded
Server Packets Relayed	The number of packets received from the DHCP server that were forwarded
Server Packets Snooped	The number of packets received from the DHCP server that were snooped
DHCP RELEASEs Spoofed	The number of spoofed DHCP releases
DHCP FORCERENEWs Spoofed	The number of spoofed FORCERENEW messages
Client packets streamed	The number of client packets streamed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Routed Subnet Transparent Forwarded	
Client Packets (BOOTREQUEST)	The number of DHCP client packets (BOOTREQUEST) received on a subscriber interface with the source IP in a routed subnet that is associated with a routed IPoE session or host. The **routed-subnet-transparent-forwarding** command must be configured in the routing instance.
Server Packets (BOOTREPLY)	The number of DHCP server packets (BOOTREPLY) received on a subscriber interface with the source IP in a routed subnet that is associated with a routed IPoE session or host. The **routed-subnet-transparent-forwarding** command must be configured in the routing instance.
Other Opcode Packets	The number of DHCP packets (Opcode field that are different from BOOTREQUEST and BOOTREPLY) received on a subscriber interface with the source IP in a routed subnet associated with a routed IPoE session or host. The **routed-subnet-transparent-forwarding** command must be configured in the routing instance. **Note:** When transparent forwarding is enabled, the system does not check if the DHCP packet is valid and therefore packets with an Opcode field different from BOOTREQUEST and BOOTREPLY are forwarded.

Full Context

show service id dhcp statistics

Description

This command displays DHCP relay and snooping statistics.

Parameters

bgp-evpn

Keyword used to display DHCP snooping statistics for all EVPN destinations.

ip-int-name

Displays DHCP relay statistics for the specified interface.

sap-id

Displays DHCP snooping statistics for the specified VPLS SAP.

***sdp-id*[:*vc-id*]**

Displays DHCPv6 snooping statistics for the specified VPLS SDP binding.

Values sdp-id: 1 to 32767
vc-id: 1 to 4294967295

Output

The following output is an example of PPPoE statistics information, and Table 586: Output fields: PPP statistics describes the output fields.

Output Example

```
show service id "vpls-205" ppp statistics sap "1/1/c1/4:2411.205"

-------------------------------------------------------------------------------
PPPoE Intermediate Agent
-------------------------------------------------------------------------------
Packet Type         Received        Transmitted
-------------------------------------------------------------------------------
PADI                39              -
PADO spoofed        -               0
PADR                11              -
PADS spoofed        -               0
PADT                9               -
-------------------------------------------------------------------------------
Drop Counters
-------------------------------------------------------------------------------
Rx Invalid Version   : 0
Rx Invalid Type      : 0
Rx Invalid Code      : 0
Rx Invalid Session   : 0
Rx Invalid Length    : 0
Rx Invalid Tags      : 0
Rx Invalid MAC       : 0
MTU exceeded         : 0
Tag too long         : 0
-------------------------------------------------------------------------------
```

Table 586: Output fields: PPP statistics

Field	Description
PPPoE Intermediate Agent	
PADI	Specifies the
PADO spoofed	Specifies the number of spoofed PADO packets transmitted on this SAP. A spoofed PADO packet is sent with a Generic Error tag when a received PADI packet is dropped by the PPPoE Intermediate Agent.
PADR	Specifies the number of PADR packets received on this SAP or service
PADS spoofed	Specifies the number of spoofed PADS packets transmitted on this SAP. A spoofed PADS packet is sent with a Generic Error tag when a received PADR packet is dropped by the PPPoE Intermediate Agent.
PADT	Specifies the number of PADT packets received on this SAP or service
Drop Counters

Field	Description
Rx Invalid Version	Specifies the number of PPPoE packets received with an invalid version field
Rx Invalid Type	Specifies the number of PPPoE packets received with an invalid type field
Rx Invalid Code	Specifies the number of PPPoE PADO or PADS packets received on a SAP with PPPoE Intermediate Agent enabled. These SAPs are PPPoE client facing.
Rx Invalid Session	Specifies the number of PPPoE packets received with an invalid session-id field
Rx Invalid Length	Specifies the number of PPPoE packets received with an invalid length field
Rx Invalid Tags	Specifies the number of PPPoE Active Discovery packets received with invalid tags
Rx Invalid MAC	Specifies the number of PPPoE packets received with an invalid MAC address
MTU exceeded	Specifies the number of PPPoE packets dropped on this SAP or service because the length of the packet after inserting the BBF vendor-specific tag is too long
Tag too long	Specifies the number of PPPoE packets dropped on this SAP or service because the generated tag is too long. For example, when the Circuit ID sub-tag after variable expansion is larger than 63 bytes.

Context

[Tree] (clear>nat>map statistics)

Full Context

clear nat map statistics

Description

This command clears MAP statistics.

Parameters

map-domain

Keyword that clears MAP-T domain statistics.

map-e-domain

Keyword that clears MAP-E domain statistics.

domain-name

Clears MAP statistics for the specified domain name.

Values 32 chars max

rule-name

Clears MAP statistics for the specified mapping-rule name.

Values 32 chars max

vapp-id

Specifies the ESA-VM.

Values esa-id/vm-id
esa-id: 1 to 16
vm-id: 1 to 4

mapping-rule

Keyword that clears mapping-rule statistics.

esa-vm

Keyword that clears ESA-VM statistics.

fp

Keyword that clears FP statistics.

frag-stats

Keyword that clears fragmentation statistics.

fragmentation-handling

Keyword that clears fragmentation-handling statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-reassembly

Keyword that clears IPv6 reassembly statistics.

lists

Keyword that clears fragment lists histogram statistics.

Platforms

7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, VSR

statistics

Syntax

statistics [{*ip-address* | *ip-int-name*}]

Context

[Tree] (clear>router>dhcp statistics)

Full Context

clear router dhcp statistics

Description

This command clears statistics for DHCP statistics.

If no IP address or interface name is specified, then statistics are cleared for all configured interfaces.

If an IP address or interface name is specified, then only data regarding the specified interface is cleared.

Parameters

ip-int-name

Clears DHCP statistics for the specified interface name.

ip-address

Clears DHCP statistics for the specified IP address.

Platforms

All

[Tree] (clear>service>id>dhcp6 statistics)

Full Context

clear service id dhcp6 statistics

Description

This command clears DHCPv6 statistics for interfaces and VPLS SAPs.

Parameters

ip-int-name

Clears DHCPv6 statistics for the specified interface name.

ipv6-address

Clears DHCPv6 statistics for the specified IP address.

sap-id

Clears DHCPv6 statistics for the specified VPLS SAP.

bgp-evpn

Clears DHCPv6 statistics for BGP-EVPN.

sdp-id:vc-id

Clears DHCPv6 statistics for the specified SDP.

Values sdp-id - 1 to 32767
vc-id - 1 to 4294967295

Full Context

clear service id dhcp statistics

Description

This command clears DHCP statistics.

Parameters

bgp-evpn

Keyword used to clear DHCP snooping statistics for all EVPN destinations.

sap-id

Clears DHCP snooping statistics for the specified VPLS SAP.

sdp-id

Clears DHCP snooping statistics for the specified VPLS SDP binding.

Values 1 to 17407

vc-id

Clears DHCP snooping statistics for the specified VPLS SDP binding.

Values 1 to 4294967295

ip-address

Clears DHCP statistics for interfaces with the specified IP address.

Values a.b.c.d

ip-int-name

Clears DHCP statistics for the specified interface name.

Table 588: Output fields: dynamic services script statistics

Output field	Description
Description	The name of the script.
Counter	The number of times the script executed.
python scripts with 0 retries due to timeout	The number of retries due to timeouts.
setup	The setup script action. jobs launched — The number of times the setup jobs launched. jobs handled — The number of times the setup jobs were handled. success — The number of times the setup jobs were successful. syntax error — The number of setup syntax errors. execution failed — The number of times the setup failed.
teardown	The teardown script action. jobs launched — The number of times the teardown jobs launched. jobs handled — The number of times the teardown jobs were handled. success — The number of times the teardown jobs were successful. syntax error — The number of teardown syntax errors.

statistics

Syntax

statistics iom (*slot* | **all**) [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

statistics mda (*mda* | **all**) [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

statistics port (*port-id* | **all**) [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

statistics pw-port (*pw-port* | **all**) [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

statistics system (*pw-port* | **all**) [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

statistics service (*svc-id* | **all**) [**host** | **session** | **summary**] [**non-zero-value-only**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics service {*svc-id*} **subscriber-interface** { *sub-itf* | **all**} [**host** | **session** | **summary**] [**non-zero-value-only**]

statistics service {*svc-id*} **group-interface** { *grp-itf* | **all**} [**host** | **session** | **summary**] [**non-zero-value-only**]

statistics sla-profiles

statistics sub-profiles

statistics system [**host** | **session** | **subscriber** | **summary**] [**non-zero-value-only**]

Context

[Tree] (show>subscr-mgmt statistics)

Full Context

show subscriber-mgmt statistics

Description

This command displays enhanced subscriber management statistics per port, PW port, MDA, IOM, system, service, subscriber interface, or group interface.

For each statistic, a current value and peak value is displayed. The peak value is the highest generated value since the last reset as a result of a system boot or the **clear subscriber-mgmt peakvalue-stats** command.

Note:
The user can execute the **clear subscriber-mgmt peakvalue-stats** command to reset the peak values.

Parameters

iom *slot*

Displays specified IOM slot information.

mda *mda*

Displays specified slot and mda information.

port *port-id*

Specifies to display information for both the physical port ID and LAG.

pw-port *pw-port*

Specifies to display information for a pseudowire port ID.

Values 1 to 10239

all

Displays statistics of all IOM or MDA or port or pseudowire port in the system

host

Displays v4/v6 host statistics only.

session

Displays PPPoX/LAC/LNS session statistics only.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sla-profiles

Displays the current and historical statistics for SLA profiles.

service *svc-id*

Displays the current and historical statistics for service level profiles.

Values 1 to 2148278386 | *svc-name*: up to 64 characters

sub-profiles

Displays the current and historical statistics for subscriber profiles.

subscriber

Displays subscriber statistics only.

subscriber-interface *sub-itf*

Displays specified subscriber interface level statistics, up to 32 characters.

group-interface *grp-itf*

Displays specified group-interface level statistics, up to 32 characters.

summary

Displays summary statistics only.

non-zero-value-only

Displays only non-zero value counters.

The following tables describe the counters available in the **show subscriber management statistics** command output.

The following terminology is used to indicate applicability of the stats:

- ESM — Enhanced Subscriber Management. Subscriber traffic forwarded via subscriber queues. Enabled with SAP **sub-sla-mgmt** in no shutdown state
- BSM — Basic Subscriber Management. Subscriber traffic forwarded via SAP queues. SAP sub-sla-mgmt must be in shutdown state. For DHCP, dhcp lease-populate or dhcp6-relay lease-populate must be enabled to count the leases. For IPv4, if anti-spoof is enabled on the SAP, a subscriber host is instantiated.
- Routed CO — IES or VPRN service with subscriber interface and group interface constructs
- Bridged CO — VPLS service with DHCPv4 lease management enabled (lease-populate)
- regular interface — IES or VPRN interface (none subscriber-interface or group-interface)
- Host (also subscriber host) — A resource in the system that is used for traffic forwarding and security related actions. The creation of a subscriber host entry is linked to anti-spoof being enabled on a SAP. For ESM, anti-spoof is mandatory and hence every connected {IP/MAC} consumes by default a subscriber host entry. A DHCP6 IA-PD can also be modeled as a managed route. In this case, no subscriber host is instantiated. For BSM, anti-spoof is optional on regular interfaces. An IPv4 static-host and DHCPv4 lease do not result in a subscriber host instantiation when anti-spoof is disabled on the SAP.

Table 589: Output fields: host and protocol statistics

Section	Counter	Counts	Applies to
IPv4	PPP Hosts - IPCP	IPv4 local terminated PPP hosts (PTA, LNS)	ESM, Routed CO
	IPOE Hosts - DHCP	DHCPv4 hosts (lease states)	ESM, Routed CO, Bridged CO
	IPOE Hosts - ARP	ARP hosts	ESM, Routed CO, Bridged CO
	IPOE Hosts – Static	IPv4 static hosts	ESM, Routed CO, Bridged CO
	IPOE Mngd Hosts – Data-trig	Data triggered IPv4 hosts	ESM, Routed CO
	IPOE Mngd Hosts – AAA	vRGW managed static IPv4 addresses: IPv4 static hosts created via RADIUS (Alc-Reserved-Addresses)	ESM, Routed CO
	IPOE Mngd Hosts – GTP	IPv4 GTP access host	ESM, Routed CO
	IPOE Mngd Hosts – Bonding	IPv4 hosts associated with an internal IPoE session of a connection bonding subscriber context	ESM, Routed CO
	IPOE Hosts BSM - DHCP	DHCPv4 hosts (lease states: anti-spoof and lease-populate enabled)	BSM, Routed CO, Bridged CO, regular interface
	IPOE Hosts BSM – Static	IPv4 static hosts (with anti-spoof enabled)	BSM, Routed CO, Bridged CO, regular interface
	IPOE BSM - DHCP	DHCPv4 lease states (with lease-populate enabled, no anti-spoof)	BSM, Routed CO, Bridged CO, regular interface
	IPOE BSM – Static	IPv4 static hosts (no anti-spoof)	BSM, Routed CO, Bridged CO, regular interface
IPv6	PPP Hosts – SLAAC	Local terminated IPv6 wan-host – SLAAC (PTA, LNS)	ESM, Routed CO
	PPP Hosts - DHCP6 (NA)	Local terminated IPv6 wan-host (PTA, LNS) – DHCP6 IA-NA leases over PPP	ESM, Routed CO

Section	Counter	Counts	Applies to
	PPP Hosts - DHCP6 (PD)	Local terminated IPv6 pd-host (PTA, LNS) – DHCP6 IA-PD leases over PPP (excluding PD as managed route)	ESM, Routed CO
	PPP Mngd Routes - DHCP6 (PD)	IPv6 (PTA, LNS) – DHCP6 IA-PD leases over PPP (PD as managed route only)	ESM, Routed CO
	IPOE Hosts – SLAAC	IPv6 wan-host – SLAAC	ESM, Routed CO
	IPOE Hosts - DHCP6 (NA)	IPv6 wan-host – DHCP6 IA-NA leases	ESM, Routed CO
	IPOE Hosts - DHCP6 (PD)	IPv6 pd-host – DHCP6 IA-PD leases (excluding PD as managed route)	ESM, Routed CO
	IPOE Mngd Routes - DHCP6 (PD)	IPv6 – DHCP6 IA-PD leases (PD as managed route only)	ESM, Routed CO
	IPOE Hosts – Static (WAN)	IPv6 static hosts with prefix-length equal to /128	ESM, Routed CO
	IPOE Hosts – Static (Pfx)	IPv6 static hosts with prefix-length shorter than /128	ESM, Routed CO
	IPOE Mngd Hosts – Data-trig (Pfx)	Data triggered IPv6 Prefix host (prefix length shorter than /128)	ESM, Routed CO
	IPOE Mngd Hosts – Data-trig (Pfx)	Data triggered IPv6 Prefix host (prefix length shorter than /128)	ESM, Routed CO
IPv6 (Cont)	IPOE Mngd Routes – Data-trig (Pfx)	Data triggered IPv6 Prefix (prefix length shorter than /128) modeled as a managed route	ESM, Routed CO
	IPOE Mngd Hosts - AAA	(currently unused)	Not applicable
	IPOE Mngd Hosts – GTP (SLAAC)	IPv6 (SLAAC) GTP Access host	ESM, Routed CO
	IPOE Mngd Hosts - Bonding	IPv6 hosts associated with an internal IPoE session of a connection bonding subscriber context..	ESM, Routed CO
	IPOE BSM - DHCP6 (NA)	IPv6 – DHCP6 IA-NA leases (lease-populate)	BSM, regular interface
	IPOE BSM - DHCP6 (PD)	IPv6 – DHCP6 IA-PD leases (lease-populate)	BSM, regular interface

Section	Counter	Counts	Applies to
Total	PPP Hosts	Local terminated PPP hosts (PTA, LNS)	ESM
	IPOE Hosts	Total IPv4 and IPv6 IPOE hosts	ESM
	IPv4 Hosts	Total IPv4 hosts, PPP (PTA, LNS) and IPOE	ESM
	IPv6 Hosts	Total IPv6 hosts, PPP (PTA, LNS) and IPOE	ESM
	IPv6 PD Mngd Routes	Total DHCP6 IA-PD leases modeled as a managed route. PPP (PTA, LNS) and IPOE	ESM
	L2TP LAC Hosts	L2TP LAC hosts – single host per single or dual stack PPP session Counter also increases for outgoing LTS sessions.	ESM, Routed CO
	L2TP LNS Hosts	L2TP LNS hosts – single host per single or dual stack PPP session	ESM, Routed CO
	Internal Hosts	Subscriber hosts for internal use. For example, LNS redirect hosts (for LTS, an LNS redirect host is also instantiated). The internal LNS redirect host only counts against the system limit and not against the per line card limit.	ESM
Total (Cont)	Non-Sub-Traffic L2-Hosts	A host on a single subscriber SAP in a VPLS service that enables non-IP traffic to be forwarded using the specified SLA profile instance queues. Host on a single subscriber SAP attached to an IES or VPRN group-interface that enables traffic normally forwarded using the SAP queues to flow using the specified SLA profile instance queues. **configure>service>vpls** *service-id*>**sap** *sap-id*>**sub-sla-mgmt single-sub-parameters**>**non-sub-traffic sub-profile** *sub-profile-name* **sla-profile** *sla-profile-name* [**subscriber** *sub-ident-string*] [**app-profile** *app-profile-name*]	ESM, Routed CO, Bridged CO

Section	Counter	Counts	Applies to
	DHCP leases	Total number of DHCPv4 lease states	ESM, BSM
	DHCPv6 leases	Total number of DHCPv6 lease states	ESM, BSM
	Subscriber Hosts	Counter displayed in the output of **show**>**subscriber-mgmt**>**statistics** [**iom** | **mda** | **port** | **pw-port**]	ESM
	System Hosts Scale	Counter displayed in the output of **show**>**subscriber-mgmt**>**statistics system** This counter matches the number of hosts accounted for in the system wide limit.	ESM

Table 590: Output fields: PPP session statistics

Section	Counter	Counts	Applies to
Local	PPP Sessions - PPPoE	Local terminated PPPoE sessions (PTA)	ESM, Routed CO
	PPP Sessions - PPPo EoA	Local terminated PPPoEoA sessions (PTA)	ESM, Routed CO
	PPP Sessions - PPPoA	Local terminated PPPoA sessions (PTA)	ESM, Routed CO
	PPP Sessions - L2TP (LNS)	Local terminated PPP sessions (L2TP LNS)	ESM, Routed CO
LAC	PPP Sessions - PPPoE	Tunneled PPPoE session (L2TP LAC)	ESM, Routed CO
	PPP Sessions - PPPo EoA	Tunneled PPPoEoA session (L2TP LAC)	ESM, Routed CO
	PPP Sessions - PPPoA	Tunneled PPPoA session (L2TP LAC)	ESM, Routed CO
	PPP Sessions - L2TP (LTS)	Tunneled PPP session (L2TP LTS)	ESM, Routed CO
Total	PPP Sessions - established	PPP sessions that are established (at least one active host attached) – PTA/ LAC/LTS/LNS	ESM, Routed CO
	PPP Sessions - in setup	PPP sessions in setup (session created, host setup in progress) – PTA/LAC/LTS/LNS	ESM, Routed CO
	PPP Sessions - local	Local terminated PPPoX sessions (PTA, L2TP LNS)	ESM, Routed CO

Section	Counter	Counts	Applies to
	PPP Sessions - LAC	Tunneled PPPoX session (L2TP LAC, L2TP LTS)	ESM, Routed CO
L2TP	L2TP Tunnels - originator	Number of L2TP Tunnels originated on this node. (LAC/LTS)	ESM, Routed CO
	.L2TP Tunnels - receiver	Number of L2TP Tunnels terminated on this node. (LNS/LTS)	ESM, Routed CO
	Total L2TP Tunnels	Number of L2TP Tunnels originated or terminated on this node.	ESM, Routed CO

Table 591: Output fields: IPoE session statistics

Section	Counter	Counts	Applies to
Total	IPOE Sessions - established	IPoE sessions that are established (at least one active host attached).	ESM, Routed CO
	IPOE Sessions- in setup	IPoE sessions in setup (session created, host setup in progress).	ESM, Routed CO

Table 592: Output fields: subscriber statistics

Section	Counter	Counts	Applies to
Total	Subscribers	Total number of active subscribers.	ESM, Routed CO, Bridged CO

Table 593: Output fields: subscriber management statistics summary

Section	Counter	Counts
Hosts	IPv4	Total IPv4 hosts
	IPv6	Total IPv6 hosts
Sessions	PPP	Total PPP sessions established
	IPOE	Total IPOE sessions established
Subscribers		Total number of active subscribers

[Tree] (clear>subscriber-mgmt statistics)

Full Context

clear subscriber-mgmt statistics

Description

This command clears the current and historical statistics.

Parameters

sub-profile-name

Clears the statistics for a specific subscriber profile, limited to 32 characters.

sub-profile all

Clears all subscriber profile statistics.

sla-profile-name

Clears the statistics for a specific SLA profile, limited to 32 characters.

sla-profile all

Clears all SLA profile statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

statistics

Syntax

statistics interface *subscriber-interface* [**id** *srrp-id*]

Context

[Tree] (clear>router>srrp statistics)

Full Context

clear router srrp statistics

Description

This command clears statistics for SRRP instances.

Parameters

subscriber-interface

Specifies an existing subscriber interface name up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

srrp-id

Specifies an existing SRRP ID.

Full Context

show service id igmp-snooping statistics

Description

This command displays IGMP snooping statistics for the VPLS service.

Parameters

evpn-mpls

Displays IGMP snooping statistics for EVPN-MPLS destinations

sap-id

Displays IGMP snooping statistics for a specific SAP

sdp-id

Displays the IGMP snooping statistics for a specific spoke or mesh SDP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID for which to display information

Default For mesh SDPs only, all VC IDs.

Values 1 to 4294967295

vxlan vtep *ip-address* vni *<1..16777215>*

Displays the IGMP snooping entries associated with a specific VXLAN binding, given by the VXLAN Termination Endpoint (VTEP) and VXLAN Network Identifier (VNI). This parameter only applies to the 7450 ESS or 7750 SR.

vni

The VXLAN Network Identifier (VNI) for which to display information. This parameter only applies to the 7450 ESS or 7750 SR.

Values 1 to 16777215

Table 594: Output fields: IGMP statistics

Label	Description
IGMP Interface Statistics	Lists the IGMP statistics for a particular interface.
Message Type	Queries — The number of IGMP general queries transmitted or received on this interface.
	Report — The total number of IGMP V1, V2, or V3 reports transmitted or received on this interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Leaves — The total number of IGMP leaves transmitted on this interface.
Received	The total number of IGMP packets received on this interface.
Transmitted	The total number of IGMP packets transmitted from this interface.
General Interface Statistics	The general IGMP statistics.
Bad Length	The total number of IGMP packets with bad length received on this interface.
Bad Checksum	The total number of IGMP packets with bad checksum received on this interface.
Unknown Type	The total number of IGMP packets with unknown type received on this interface.
Drops	The total number of IGMP packets dropped on this interface.
Rx Non Local	The total number of IGMP packets received from a non-local sender.
Rx Wrong Version	The total number of IGMP packets with wrong versions received on this interface.
Policy Drops	The total number of IGMP packets dropped by import policies on this interface.
No Router Alert	The total number of IGMPv3 packets received on this interface which did not have the router alert flag set.
Rx Bad Encodings	The total number of IGMP packets with bad encodings received on this interface.
Rx Pkt Drops	The total number of IGMP receive packet drops on this interface.
Local Scope Pkts	The total number of IGMP packets with local scope received on this interface.
Resvd Scope Pkts	The total number of IGMP packets with reserved scope received on this interface.
MCAC Policy Drops	The total number of IGMP packets dropped by MCAC policies on this interface.

Full Context

clear service id mld-snooping statistics

Description

This command clears MLD snooping statistics.

Parameters

sap-id

Clears MLD snooping statistics for the specified SAP.

sdp-id

Clears MLD snooping statistics associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

Values 1 to 17407

vni-id

Clears the MLD snooping statistics for the specified VXLAN VNI id.

Values 1 to 16777215

ip-address

Specifies a specific configured static egress VTEP to clear the MLD snooping statistics associated only with the VTEP.

clear service id igmp-snooping statistics

Description

This command clears IGMP snooping statistics for the VPLS service.

Parameters

all

Clears the IGMP snooping information for all port objects in the service

evpn-mpls

Clears IGMP snooping statistics for EVPN-MPLS destinations

sap-id

Clears the IGMP snooping information on the specified SAP

sdp-id

Clears only IGMP snooping entries associated with the specified mesh SDP or spoke-SDP. For a spoke-SDP, the VC ID must be specified, for a mesh SDP, the VC ID is optional.

Values 1 to 17407

vc-id

Clears statistics for the specified virtual circuit ID on the SDP ID

Default For mesh SDPs only, all VC IDs

Table 596: Output fields: VRRP statistics

Label	Description
VR Id Errors	Displays the number of virtual router ID errors
Version Errors	Displays the number of version errors
Checksum Errors	Displays the number of checksum errors

statistics

Syntax

statistics

statistics interface *interface-name* [**vrid** *virtual-router-id*]

statistics interface *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[Tree] (clear>router>vrrp statistics)

Full Context

clear router vrrp statistics

Description

This command clears statistics for VRRP instances on an IP interface or VRRP priority control policies.

Parameters

interface-name

Clears the VRRP statistics for all VRRP instances on the specified IP interface.

virtual-router-id

Clears the VRRP statistics for the specified VRRP instance on the IP interface.

Default All VRRP instances on the IP interface.

Values 1 to 255

ipv6

Clears IPv6 statistics for the specified interface.

Platforms

All

Use subject to Terms available at: www.nokia.com/terms.

statistics

Syntax

statistics [*ip-addr* | *ip-int-name*]

Context

[Tree] (show>router>rip statistics)

Full Context

show router rip statistics

Description

Display Interface level statistics for the RIP protocol.

If no IP address or interface name is specified, then all configured RIP interfaces are displayed.

If an IP address or interface name is specified, then only data regarding the specified RIP interface is displayed.

Parameters

ip-addr* | *ip-int-name

Displays statistics for the specified IP interface.

Values ip-int-name: 32 chars max

ip-address: a.b.c.d

Platforms

All

Output

The following output is an example of RIP statistics information, and Table 597: Output fields: RIP statistics describes the output fields.

Output Example

```
RIP Statistics

```

Table 597: Output fields: RIP statistics

Label	Description
Learned Routes	The number of RIP-learned routes exported to RIP neighbors.
Timed Out Routes	The number of routes that have been timed out.
Current Memory	The amount of memory used by this RIP router instance.
Maximum Memory	The amount of memory allocated for this RIP router instance.
Interface	Displays the name of each interface configured in RIP and associated RIP statistics.
Primary IP	The interface IP address.
Update Timer	The current setting of the RIP update timer value expressed in seconds.
Timeout Timer	The current RIP timeout timer value expressed in seconds.
Flush Timer	The number of seconds after a route has been declared invalid that it is flushed from the route database.
Updates Sent	Total — The total number of RIP updates that were sent. Last 5 Min — The number of RIP updates that were sent in the last 5 minutes. Last 1 Min — The number of RIP updates that were sent in the last 1 minute.
Triggered Updates	Total — The total number of triggered updates sent. These updates are sent before the entire RIP routing table is sent. Last 5 Min — The number of triggered updates that were sent in the last 5 minutes. Last 1 Min — The number of triggered updates that were sent in the last 1 minute.
Bad Packets Received	Total — The total number of RIP updates received on this interface that were discarded as invalid. Last 5 Min — The number of RIP updates received on this interface that were discarded as invalid in the last 5 minutes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Last 1 Min —The number of RIP updates received on this interface that were discarded as invalid in the last 1 minute.
RIPv1 Updates Received	Total — The total number of RIPv1 updates received. Last 5 Min — The number of RIPv1 updates received in the last 5 minutes. Last 1 Min — The number of RIPv1 updates received in the last 1 minute.
RIPv1 Updates Ignored	Total — The total number of RIPv1 updates ignored. Last 5 Min — The number of RIPv1 updates ignored in the last 5 minutes. Last 1 Min — The number of RIPv1 updates ignored in the last 1 minute.
RIPv1 Bad Routes	Total — The total number of bad routes received from the peer. Last 5 Min — The number of bad routes received from the peer in the last 5 minutes. Last 1 Min — The number of bad routes received from the peer in the last minute.
RIPv1 Requests Received	Total — The total number of times the router received RIPv1 route requests from other routers. Last 5 Min — The number of times the router received RIPv1 route requests from other routers in the last 5 minutes. Last 1 Min — The number of times the router received RIPv1 route requests from other routers in the last 1 minute.
RIPv1 Requests Ignored	Total — The total number of times the router ignored RIPv1 route requests from other routers. Last 5 Min — The number of times the router ignored RIPv1 route requests from other routers in the last 5 minutes. Last 1 Min — The number of times the router ignored RIPv1 route requests from other routers in the last 1 minute.
RIPv2 Updates Received	Total — The total number of RIPv2 updates received. Last 5 Min — The number of RIPv2 updates received in the last 5 minutes. Last 1 Min — The number of RIPv2 updates received in the last minute.
RIPv2 Updates Ignored	Total — The total number of RIPv2 updates ignored. Last 5 Min — The number of RIPv2 updates ignored in the last 5 minutes. Last 1 Min — The number of RIPv2 updates ignored in the last minute.
RIPv2 Bad Routes	Total — The total number of bad routes received from the peer. Last 5 Min — The number of bad routes received from the peer in the last 5 minutes. Last 1 Min — The number of bad routes received from the peer in the last minute.

clear router bfd statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears BFD statistics.

Parameters

all

Clears all statistics for the BFD instance.

dst-ip *ip-address*

Clears statistics about the specified destination IPv4 or IPv6 address.

ip-prefix/prefix-length

Clears statistics for the specified IP prefix.

Values *ipv4-prefix* — a.b.c.d

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

lsp-id [0..4294967295]

Clears statistics about the specified LSP ID.

lsp-ldp head

Clears statistics for the head of the LSP LDP link.

lsp-ldp tail

Clears statistics for the tail of the LSP LDP link.

lsp-rsvp {head | tail}

Clears statistics about the specified link type.

mpls-tp *lsp-name*

Clears statistics about the specified MPLS TP LSP.

p2mp-interface *interface-name*

Clears statistics about the specified P2MP interface.

path {working | protect}

Clears statistics about the working or protect path.

rsvp-session-name [256 chars max]

Clears statistics about the specified RSVP session.

src-ip *ip-address*

Clears statistics about the specified source IPv4 or IPv6 address.

tunnel-id [0..4294967295]

Clears statistics about the specified tunnel ID.

clear router igmp statistics

Description

This command clears IGMP statistics on a specified interface or IP address.

Note:
An interface, group, and source cannot be specified at the same time.

Parameters

group-interface *interface-name*

Clears the IGMP statistics on the specified group interface.

group-interface all

Clears the IGMP statistics on all group interfaces.

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

host *ip-address*

Clears the IGMP statistics on the specified host.

host all

Clears the IGMP statistics on all hosts.

interface *ip-int-name*

Clears the IGMP statistics on the specified interface.

interface *ip-address*

Clears the IGMP statistics on the specified IP address.

Table 599: Output fields: MLD statistics

Label	Description
MLD Interface Statistics	The MLD statistics for a particular interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Message Type	Queries — The number of MLD general queries transmitted or received on this interface. Report — The total number of MLD V1 or V2 reports transmitted or received on this interface. Dones — The total number of MLD dones transmitted on this interface.
Received	The total number of MLD packets received on this interface.
Transmitted	The total number of MLD packets transmitted from this interface.
General Interface Statistics	The general MLD statistics.
Bad Length	The total number of MLD packets with bad length received on this interface.
Bad Checksum	The total number of MLD packets with bad checksum received on this interface.
Unknown Type	The total number of MLD packets with unknown type received on this interface.
Bad Receive If	The total number of MLD packets incorrectly received on this interface.
Rx Non Local	The total number of MLD packets received from a non-local sender.
Rx Wrong Version	The total number of MLD packets with wrong versions received on this interface.
Policy Drops	The total number of MLD packets dropped by import policies on this interface.
No Router Alert	The total number of MLD packets received on this interface which did not have the router alert flag set.
Rx Bad Encodings	The total number of MLD packets with bad encodings received on this interface.
Rx Pkt Drops	The total number of MLD receive packet drops on this interface.
Local Scope Pkts	The total number of MLD packets with local scope received on this interface.
Resvd Scope Pkts	The total number of MLD packets with reserved scope received on this interface.
MCAC Policy Drops	The total number of MLD packets dropped by MCAC policies on this interface.

clear router mld statistics

Description

This command clears MLD statistics parameters.

Parameters

service-id

Clears the MLD statistics for the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

group-interface *interface-name*

Clears the MLD statistics on the specified group interface.

group-interface all

Clears the MLD statistics on all group interfaces.

host all

Clears the MLD statistics on all hosts.

host *ipv6-address*

Clears the MLD statistics on the specified host.

ip-int-name

Clears statistics for the specified MLD interface name.

ipv6-address

Clears statistics for the specified MLD IPv6 address.

ipsec-interface *ip-int-name*

Clears statistics information for the specified dynamic name for the MLD-enabled child_SA.

Description

This command clears IP address statistics of the peer to which Multicast Source Discovery Protocol (MSDP) source-active (SA) requests for groups matching this entry's group range were sent.

Parameters

ip-address

Clears the statistics of the specified IP address.

Platforms

All

statistics

Syntax

statistics [*ip-int-name* | *mt-int-name* | *ip-address* | *mpls-if-name*] [*family*]

Context

[Tree] (show>router>pim statistics)

Full Context

show router pim statistics

Description

This command displays statistics for a particular PIM instance.

Parameters

ip-int-name

Displays interface information associated with the specified IP interface name.

mt-int-name

Displays information about the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

Syntax: *vprn-id*-mt-*grp-ip-addres*s

ip-address

Displays interface information associated with the specified IP address.

mpls-if-name

Displays information about the specified MPLS interface name.

Syntax: mpls-if-*index*

family

Displays statistics information for the specified family.

Values ipv4, ipv6

Table 601: Output fields: PIM statistics

Label	Description
PIM Statistics	The section listing the PIM statistics for a particular interface
Message Type	The type of message. Hello — The number of PIM hello messages received or transmitted Join Prune — The number of PIM join prune messages received or transmitted Asserts — The number of PIM assert messages received or transmitted Register — The number of register messages received or transmitted Null Register — The number of PIM null register messages received or transmitted Register Stop — The number of PIM register stop messages received or transmitted BSM — The number of PIM Bootstrap messages (BSM) received or transmitted Candidate RP Adv — The number of candidate RP advertisements Auto-RP Announce — The number of auto-RP announce (224.0.1.39) messages received or transmitted Auto-RP Mapping — The number of auto-RP mapping (224.0.1.40) messages received or transmitted

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Message Type	PIM DM Grafts — The number of PIM graft messages received or transmitted PIM DM Graft Acks — The number of PIM graft acknowledgment messages received or transmitted Total Packets — The total number of packets transmitted and received.
Received	The number of messages received
Transmitted	The number of multicast data packets transmitted
Rx Errors	The total number of receive errors
General Interface Statistics	The section listing the general PIM interface statistics
Register TTL Drop	The number of multicast data packets which could not be encapsulated in Register messages because the time to live (TTL) was zero
Tx Register MTU Drop	The number of Bootstrap messages received on this interface but were dropped
Rx Invalid Register	The number of invalid PIM register messages received
Rx Neighbor Unknown	The number of PIM messages (other than hello messages) which were received and were rejected because the adjacency with the neighbor router was not already established
Rx Bad Checksum Discard	The number of PIM messages received, and which were discarded because of bad checksum
Rx Bad Encoding	The number of PIM messages with bad encodings received
Rx Bad Version Discard	The number of PIM messages with bad versions received
Rx CRP No Router Alert	The number of candidate-rp advertisements (C-RP-Adv) received, and which had no router alert option set
Rx Invalid Join Prune	The number of invalid PIM join prune messages received
Rx Unknown PDU Type	The number of packets received with an unsupported PIM type
Join Policy Drops	The number of times the join policy match resulted in dropping PIM join-prune message or one of the source group contained in the message
Register Policy Drops	The number of times the register policy match resulted in dropping PIM register message

Syntax

statistics [*family*]

statistics [**interface** *ip-int-name* | **mt-int-name** | **int-ip-address**] [*family*]

statistics [**group** *grp-ip-address*] [**source** *ip-address*] [*family*]

Context

[Tree] (clear>router>pim statistics)

Full Context

clear router pim statistics

Description

This command clears PIM statistics on a specified interface or IP address.

Note:
An interface and group or source cannot be specified at the same time.

Parameters

ip-int-name

Clears PIM statistics on the specified interface.

ip-address

Clears PIM statistics on the specified IP address.

mt-int-name

Clears the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

syntax: *vprn-id*-mt-*grp-ip-addres*s

grp-ip-address

When only the group address is specified and no source is specified, (*,G) statistics are cleared. When the group address is specified along with the source address, then the (S,G) statistics are reset to zero.

ip-address

When the source address is specified along with the group address, then the (S,G) statistics are reset to zero.

family

Clears statistics family information.

Values ipv4, ipv6

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

statistics

Syntax

statistics

statistics interface {*ip-int-name* | *ip-address*}

statistics policy *name*

Context

[Tree] (show>router>authentication statistics)

Full Context

show router authentication statistics

Description

This command displays interface or policy authentication statistics.

Parameters

ip-int-name* | *ip-address

Specifies an existing interface name or IP address.

Values ip-int-name: 32 characters maximum
ip-address: a.b.c.d

name

Specifies an existing policy name.

Output

Authentication Statistics Output — The following output is an example of authentication statistics, and Table 603: Output fields: authentication statistics describes the fields.

Output Example

```
A:ALU-3>show>router>auth# statistics
===============================================================
Authentication Global Statistics
===============================================================
Client Packets Authenticate Fail     : 0
Client Packets Authenticate Ok       : 12
===============================================================
```

Table 603: Output fields: authentication statistics

Label	Description
Client Packets Authenticate Fail	The number of packets that failed authentication
Client Packets Authenticate Ok	The number of packets that were authenticated

statistics

Syntax

statistics [**interface** *ip-int-name* | *ip-address*]

Context

[Tree] (clear>router>authentication statistics)

Full Context

clear router authentication statistics

Description

This command clears authentication statistics.

Parameters

ip-int-name

Clears the authentication statistics for the specified interface name. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Clears the authentication statistics for the specified IP address.

Platforms

All

statistics

Syntax

statistics [**policy** *policy-id*]

Context

[Tree] (clear>vrrp statistics)

Full Context

clear vrrp statistics

Description

Commands in this context clear and reset VRRP entities.

Parameters

policy-id

Clears statistics for the specified policy.

Values 1 to 9999

Platforms

All

statistics

Syntax

statistics

Context

[Tree] (show>system>ptp statistics)

Full Context

show system ptp statistics

Description

This command displays the message and error statistics for the node.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of PTP statistics information, and Table 604: Output fields: system PTP statistics describes the output fields.

Output Example

```
# show system ptp statistics
===============================================================================
IEEE 1588/PTP Packet Statistics

Table 605: Output fields: IS-IS statistics describes IS-IS statistics output fields.

Table 605: Output fields: IS-IS statistics

Label	Description
Purge Initiated	The number of times purges have been initiated.
SPF Runs	The number of times shortest path first calculations have been made.
LSP Regens	The count of LSP regenerations.
Requests	The number of CSPF requests made to the protocol.
Paths Found	The number of responses to CSPF requests for which paths satisfying the constraints were found.
PDU Type	The PDU type.
Received	The count of link state PDUs received by this instance of the protocol.
Processed	The count of link state PDUs processed by this instance of the protocol.
Dropped	The count of link state PDUs dropped by this instance of the protocol.
Sent	The count of link state PDUs sent out by this instance of the protocol.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Retransmitted	The count of link state PDUs that had to be retransmitted by this instance of the protocol.

Table 606: Output fields: OSPF statistics

Label	Description
Rx Packets	The total number of OSPF packets received on all OSPF enabled interfaces.
Tx Packets	The total number of OSPF packets transmitted on all OSPF enabled interfaces.
Rx Hellos	The total number of OSPF Hello packets received on all OSPF enabled interfaces.
Tx Hellos	The total number of OSPF Hello packets transmitted on all OSPF enabled interfaces.
Rx DBDs	The total number of OSPF database description packets received on all OSPF enabled interfaces.
Tx DBDs	The total number of OSPF database description packets transmitted on all OSPF enabled interfaces
Rx LSRs	The total number of OSPF Link State Requests (LSRs) received on all OSPF enabled interfaces.
Tx LSRs	The total number of OSPF Link State Requests (LSRs) transmitted on all OSPF enabled interfaces.
Rx LSUs	The total number of OSPF Link State Update (LSUs) received on all OSPF enabled interfaces.
Tx LSUs	The total number of OSPF Link State Update (LSUs) transmitted on all OSPF enabled interfaces.
Rx LS Acks	The total number of OSPF Link State Acknowledgments (LSAs) received on all OSPF enabled interfaces.
New LSAs Recvd	The total number of new OSPF Link State Advertisements received on all OSPF enabled interfaces.
New LSAs Orig	The total number of new OSPF Link State Advertisements originated on all OSPF enabled interfaces.
Ext LSAs Count	The total number of OSPF External Link State Advertisements.
No of Areas	The number of areas configured for this OSPF instance.
Total SPF Runs	The total number of incremental SPF runs triggered by new or updated LSAs.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ext SPF Runs	The total number of incremental SPF runs triggered by new or updated type-5 external LSAs.
Retransmits	The total number of OSPF Retransmits transmitted on all OSPF enabled interfaces.
Discards	The total number of OSPF packets discarded on all OSPF enabled interfaces.
Bad Networks	The total number of OSPF packets received on all OSPF enabled interfaces with invalid network or mask.
Bad Virt Links	The total number of OSPF packets received on all OSPF enabled interfaces that are destined to a virtual link that does not exist.
Bad Areas	The total number of OSPF packets received on all OSPF enabled interfaces with an area mismatch.
Bad Dest Addrs	The total number of OSPF packets received on all OSPF enabled interfaces with the incorrect IP destination address.
Bad Auth Types	The total number of OSPF packets received on all OSPF enabled interfaces with an invalid authorization type.
Auth Failures	The total number of OSPF packets received on all OSPF enabled interfaces with an invalid authorization key.
Bad Neighbors	The total number of OSPF packets received on all OSPF enabled interfaces where the neighbor information does not match the information this router has for the neighbor.
Bad Pkt Types	The total number of OSPF packets received on all OSPF enabled interfaces with an invalid OSPF packet type.
Bad Lengths	The total number of OSPF packets received on all OSPF enabled interfaces with a total length not equal to the length given in the packet itself.
Bad Hello Int.	The total number of OSPF packets received on all OSPF enabled interfaces where the hello interval given in packet was not equal to that configured for the respective interface.
Bad Dead Int.	The total number of OSPF packets received on all OSPF enabled interfaces where the dead interval given in the packet was not equal to that configured for the respective interface.
Bad Options	The total number of OSPF packets received on all OSPF enabled interfaces with an option that does not match those configured for the respective interface or area.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Bad Versions	The total number of OSPF packets received on all OSPF enabled interfaces with bad OSPF version numbers.
Tx Failures	Transmitted OSPF packets that are dropped due to resource shortage.

statistics

Syntax

statistics

Context

[Tree] (clear>router>ospf3 statistics)

[Tree] (clear>router>ospf statistics)

Full Context

clear router ospf3 statistics

clear router ospf statistics

Description

This command clears all neighbor, router, interface, SPF and global statistics of this OSPF instance.

Platforms

All

statistics

Syntax

statistics [*ipv6-address* | *ip-int-name*]

Context

[Tree] (show>router>ripng statistics)

Full Context

show router ripng statistics

Description

This command displays the interface level statistics for the RIPng protocol.

If no IPv6 address or interface name is specified, then all configured RIPng interfaces are displayed.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If an IPv6 address or interface name is specified, then only data regarding the specified RIPng interface is displayed.

Parameters

ipv6-address* | *ip-int-name

Displays statistics for the specified IPv6 interface.

Platforms

All

Output

The following output are examples of RIPng statistics information.

Output Example

```
*A:Dut-C>config>router>if# show router ripng statistics

statistics sr-policy all

Context

[Tree] (clear>router>bfd>seamless-bfd statistics)

Full Context

clear router bfd seamless-bfd statistics

Description

This command clears BFD statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lsp-path

Keyword to clear the S-BFD statistics for LSP path.

sr-policy

Keyword to clear the S-BFD statistics for SR policy.

all

Keyword to clear all S-BFD statistics.

lsp-index *lsp-index*

Specifies the LSP index.

Values 0 to 4294967295

path-lspid *path-lspid*

Specifies the path LSP ID.

Values 0 to 4294967295

prefix

Keyword to clear information by far-end prefix.

ip-prefix/prefix-length

Specifies an IP prefix for which to clear S-BFD statistics, and the length of the prefix.

Values *ipv4-prefix* — a.b.c.d (host bits must be zero)
ipv4-prefix-length — 0 to 32
ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x — 0 to FFFF (hexadecimal)
d — 0 to 255 (decimal)
ipv6-prefix-length — 0 to 128

ip-address* | *ipv6-address

Specifies the IP address for which to clear S-BFD statistics.

Values *ipv4-address* — a.b.c.d
ipv6-address — x:x:x:x:x:x:x:x[-interface]
x:x:x:x:x:x:d.d.d.d[-interface]
x — 0 to FFFF (hexadecimal)
d — 0 to 255 (decimal)
interface — mandatory for link local address, up to 32 characters

statistics

Syntax

statistics [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>isis statistics)

Full Context

monitor router isis statistics

Description

This command displays statistical IS-IS traffic information at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified router statistics. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

25 s Commands – Part III

25.1 statistics-summary

statistics-summary

Syntax

statistics-summary [**active**] [**family**]

Context

[Tree] (show>router>ldp statistics-summary)

Full Context

show router ldp statistics-summary

Description

This command displays LDP statistics summary information.

Parameters

active

Displays LDP statistics for only active paths.

family

Displays either IPv4 or IPv6 LDP information.

Platforms

All

Output

Output Example

```
*A:Dut-A# show router ldp statistics-summary
===============================================================================
Statistics Summary
===============================================================================
LDP FEC IPv4 Prefix Egress statistics  : 0
LDP FEC IPv6 Prefix Egress statistics  : 0
===============================================================================
*A:Dut-A#
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics-summary

Syntax

statistics-summary

Context

[Tree] (show>router>mpls statistics-summary)

Full Context

show router mpls statistics-summary

Description

This command displays the number of LSP statistics configured.

Platforms

All

Output

The following output is an example of MPLS statistics summary information.

Output Example

```
*A:SRU4>config>router>mpls# show router mpls statistics-summary
===============================================================================
Statistics Summary
===============================================================================
LSP egress statistics                 : 0
LSP ingress statistics                : 0
===============================================================================
*A:SRU4>config>router>mpls#
```

25.2 stats

stats

Syntax

stats

Context

[Tree] (tools>dump>ipsec stats)

Full Context

tools dump ipsec stats

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

Commands in this context dump the IPsec statistics.

Platforms

All

stats

Syntax

stats

Context

[Tree] (clear>ipsec stats)

Full Context

clear ipsec stats

Description

Commands in this context clear IKE statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

25.3 status

status

Syntax

status

Context

[Tree] (show>call-trace status)

Full Context

show call-trace status

Description

This command gives a router-wide overview of call-trace operational data, such as number of configured profile, number of jobs and status of the compact flash.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace status information.

Output Example

```
===============================================================================
Call trace status
===============================================================================
No. of trace profiles: 1
No. of trace jobs    : 0
-------------------------------------------------------------------------------
Primary CF           : CF1             Max files number     : 200
CF1 state            : enabled         CF1 volume limit     : 1000 MB
CF2 state            : enabled         CF2 volume limit     : 1000 MB
```

Table 607: Output fields: call trace status describes call trace status output field information.

Table 607: Output fields: call trace status

Field	Descriptions
No. of trace profiles	The number of profiles configured in the system
No. of trace jobs	The number of trace jobs
Primary CF	The compact flash card to be used as the primary local storage location to save the generated call trace log files
Max files number	The cumulative number of call trace log files present on all cflash cards on the active CPM that are being used for local storage has reached the limit
CF1 state	The status of a call trace job on CF2. "running” indicates the job is active and is tracing events triggered by the host being monitored. "finished” indicates the job has already finished and is not tracing events generated by the host anymore.
CF1 volume limit	The data volume limit for the CF1 call trace job
CF2 state	The status of a call trace job on CF2. "running” indicates the job is active and is tracing events triggered by the host being monitored. "finished” indicates the job has already finished and is not tracing events generated by the host anymore.
CF2 volume limit	The data volume limit for the CF2 call trace job

Syntax

status

Context

[Tree] (show>router>igmp status)

Full Context

show router igmp status

Description

This command displays IGMP status information.

If IGMP is not enabled, the following message appears:

```
A:NYC# show router igmp status
MINOR: CLI IGMP is not configured.
A:NYC#
```

Platforms

All

Output

The following output is an example of IGMP status information. Table 608: Output fields: IGMP status provides IGMP status field descriptions.

Output Example

```
*A:ALA-BA# show router 100 igmp status
===============================================================================
IGMP Status
===============================================================================
Admin State                       : Up
Oper State                        : Up
Query Interval                    : 1024
Last Member Query Interval        : 1024
Query Response Interval           : 1023
Robust Count                      : 10
===============================================================================
*A:ALA-BA#
```

Table 608: Output fields: IGMP status

Label	Description
Admin State	The administrative status of IGMP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Oper State	The current operating state of this IGMP protocol instance on this router.
Query Interval	The frequency at which IGMP query packets are transmitted.
Last Member Query Interval	The maximum response time inserted into group-specific queries sent in response to leave group messages, and is also the amount of time between group-specific query messages.
Query Response Interval	The maximum query response time advertised in IGMPv2 queries.
Robust Count	The number of times the router will retry a query.

Table 609: Output fields: LDP status

Label	Description
Created at	The date and time when the LDP instance was created.
Last Change	The date and time when the LDP instance was last modified.
Admin State	Up — The LDP is administratively enabled. Down — The LDP is administratively disabled.
Oper State	Up — The LDP is operationally enabled. Down — The LDP is operationally disabled.
Up Time	The time, in hundredths of seconds, that the LDP instance has been operationally up.
Oper Down Reason	The reason for the operational down status.
Oper Down Events	The number of times the LDP instance has gone operationally down since the instance was created.
Tunn Down Damp Time	Indicates the value configured by **tunnel-down-damp-time**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Weighted ECMP	Indicates whether weighted ecmp is enabled or not.
Label Withdraw Del*	Indicates the value configured by **label-withdrawal-delay**.
Implicit Null Label	Indicates whether implicit null is supported.
Short. TTL Local	Indicates whether **shortcut-local-ttl-propagate** is enabled or not.
Short. TTL Transit	Indicates whether **shortcut-transit-ttl-propagate** is enabled or not.
ConsiderSysIPByPol*	Whether **consider-system-ip-in-gep** is enabled.
Imp Ucast Policies	Lists the applied import unicast policies, if any. Up to five import policies can be specified.
Exp Ucast Policies	Lists the applied export unicast policies, if any. Up to five import policies can be specified.
Imp Mcast Policies	Lists the applied import multicast policies, if any. Up to five import policies can be specified.
Tunl Exp Policies	Lists the applied tunnel export policies, if any. Up to five import policies can be specified.
FRR	Indicates whether Fast ReRoute is enabled or not.
Mcast Upstream FRR	Indicates whether multicast upstream fast reroute has been enabled or not.
Mcast Upst ASBR FRR	Indicates whether multicast upstream fast reroute has been enabled or not at ASBR.
MP MBB Time	Indicates the value configured by **mp-mbb-time**.
Aggregate Prefix	Indicates whether aggregate-prefix-match has been enabled or not.
Agg Prefix Policies	Lists the policies for the aggregate prefix match, if any. Up to five aggregate prefix policies can be specified.
Class Forwarding	Indicates whether class forwarding is in the enabled or disabled mode. Enabled modes are (lsr, ler, or lsr-and-ler).
Legacy LSR Interop	Indicates whether legacy LSR interoperability has been enabled or not.
Entropy Label Capa*	Indicates whether the support for entropy label is enabled or not.
Generate Basic FEC	Indicates whether generate-basic-fec-only has been enabled or not.
Resolve Via Mcast *	Indicates whether the route for the root address of P2MP FECs will be resolved using the unicast routing table or the multicast routing table.
Capabilities	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Dynamic	Indicates whether LDP supports changing capabilities dynamically using the LDP Capability message, or only in the Initialization message.
P2MP	Indicates whether LDP supports exchanging P2MP FECs.
IPv4 Prefix Fec	Indicates whether LDP supports exchanging IPv4 Prefix FECs.
IPv6 Prefix Fec	Indicates whether LDP supports exchanging IPv6 Prefix FECs.
Service Fec128	Indicates whether LDP supports exchanging basic pseudowire service FECs.
Service Fec129	Indicates whether LDP supports exchanging generalized pseudowire (PWE3) service FECs.
MP MBB	Indicates whether MP MBB is enabled or not.
Overload	Indicates whether LDP supports sending and receiving overload notification messages (Nokia vendor extension).
Unrecognized Notif*	Indicates whether LDP supports receiving notification messages with an unrecognized status; required for the end-of-lib feature (RFC 5919).

Table 610: Output fields: MPLS status

Label	Description
Admin Status	Down — MPLS is administratively disabled. Up — MPLS is administratively enabled.
Oper Status	Down — MPLS is operationally down. Up — MPLS is operationally up.
Oper Down Reason	Specifies the operational down cause.
FRR Object	Enabled — Specifies that Fast reroute object is signaled for the LSP. Disabled — Specifies that Fast reroute object is not signaled for the LSP.
Resignal Timer	Enabled — Specifies that the resignal timer is enabled for the LSP. Disabled — Specifies that the resignal timer is disabled for the LSP.
Hold Timer	Displays the amount of time that the ingress node holds before programming its data plane and declaring the LSP up to the service module.
Next Resignal	Specifies the next resignal value.
Srlg Frr	Enabled — Specifies that SRLG Fast reroute is signaled for the LSP. Disabled — Specifies that SRLG Fast reroute is not signaled for the LSP.
Srlg Frr Strict	Enabled — Specifies that SRLG Fast reroute strict is signaled for the LSP. Disabled — Specifies that SRLG Fast reroute strict is not signaled for the LSP.
Admin Group Frr	Enabled — Specifies that the administrative group Fast reroute is signaled for the LSP. Disabled — Specifies that the administrative group Fast reroute is not signaled for the LSP.
Dynamic Bypass	Enabled — Specifies that dynamic bypass is enabled. Disabled — Specifies that dynamic bypass is disabled.
User Srlg Database	Enabled — Specifies that user SRLG databases are enabled. Disabled — Specifies that user SRLG databases are disabled.
BypassResignalTimer	Enabled — Specifies that the bypass resignal timer is enabled. Disabled — Specifies that the bypass resignal timer is disabled.
BypassNextResignal	Specifies the bypass next resignal value.
LeastFill Min Thd	Specifies the least fill minimum threshold percentage value.
LeastFill Reopti Thd	Specifies the least fill re-optimization threshold percentage value.

Label	Description
Local TTL Prop	Enabled — Specifies that local TTL property is enabled. Disabled — Specifies that local TTL property is disabled.
Transit TTL Prop	Enabled — Specifies that transit TTL property is enabled. Disabled — Specifies that transit TTL property is disabled.
P2mp TTL Prop	Enabled — Specifies that the uniform mode of operation is configured for RSVP P2MP LSPs. Disabled — Specifies that the pipe mode of operation is configured for RSVP P2MP LSPs.
AB Sample Multiplier	Specifies the AB sample multiplier value.
AB Adjust Multiplier	Specifies the AB adjust multiplier value.
Exp Backoff Retry	Enabled — Specifies that Exp Backoff retry is enabled. Disabled — Specifies that Exp Backoff is disabled.
CSPF On Loose Hop	Enabled — Specifies that CSPF On Loose Hop is enabled. Disabled — Specifies that CSPF On Loose Hop is disabled.
Lsp Init RetryTimeout	Specifies the LSP Init RetryTimeout seconds value.
MBB Pref Current Hops	Enabled — Specifies that MBB Pref Current Hops is enabled. Disabled — Specifies that MBB Pref Current Hops is disabled.
Logger Event Bundling	Enabled — Specifies that Logger Event Bundling is enabled. Disabled — Specifies that Logger Event Bundling is disabled.
Retry on IGP Overload	Enabled — Specifies that Retry on IGP Overload is enabled. Disabled — Specifies that Retry on IGP Overload is disabled.
Resignal on IGP Overload	Enabled — Specifies that Resignal on IGP Overload is enabled. Disabled — Specifies that Resignal on IGP Overload is disabled.
P2mp Resignal Timer	Enabled — Specifies that the P2MP Resignal Timer is enabled. Disabled — Specifies that the P2MP Resignal Timer is disabled.
P2mp Next Resignal	Specifies the P2MP Next Resignal Timer value.
Sec FastRetryTimer	Enabled — Specifies that the Sec Fast RetryTimer is enabled. Disabled — Specifies that the Sec Fast RetryTimer is disabled.
Static LSP FR Timer	Specifies the Static LSP FR Timer seconds value.
P2P Max Bypass Association	Specifies the P2P Max Bypass Association value.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
P2PActPathFastRetry	Enabled — Specifies that the P2P ActPath Fast Retry is enabled. Disabled — Specifies that the P2P ActPath Fast Retry is disabled.
P2MP S2L Fast Retry	Enabled — Specifies that the P2MP S2L Fast Retry is enabled. Disabled — Specifies that the P2MP S2L Fast Retry is disabled.
In Maintenance Mode	No — Specifies that the system is not in maintenance mode. Yes — Specifies that the system is in maintenance mode.
MplsTp	Enabled — Specifies that MPLS TP is enabled. Disabled — Specifies that MPLS TP is disabled.
Next Available Lsp Index	Specifies the next available LSP index value.
Entropy Label RSVP-TE	Enabled — Specifies that Entropy Label RSVP-TE is enabled. Disabled — Specifies that Entropy Label RSVP-TE is disabled.
Entropy Label SR-TE	Enabled — Specifies that Entropy Label SR-TE is enabled. Disabled — Specifies that Entropy Label SR-TE is disabled.
PCE Report RSVP-TE	Enabled — Specifies that PCE Report RSVP-TE is enabled. Disabled — Specifies that PCE Report RSVP-TE is disabled.
PCE Report SR-TE	Enabled — Specifies that PCE Report SR-TE is enabled. Disabled — Specifies that PCE Report SR-TE is disabled.
PCE Init LSP	Enabled — Specifies that PCE Init LSP is enabled. Disabled — Specifies that PCE Init LSP is disabled.
PCE Init SR-TE	Enabled — Specifies that PCE Init LSP SR-TE is enabled. Disabled — Specifies that PCE Init LSP SR-TE is disabled.
PCE Init SR-TE Admin State	Up — Specifies that the PCE Init SR-TE Admin State is up. Down — Specifies that the PCE Init SR-TE Admin State is down.
PCE Init SR-TE Oper State	Up — Specifies that the PCE Init SR-TE Operational State is up. Down — Specifies that the PCE Init SR-TE Operational State is down.
PCE Init SR-TE Oper Dn Rsn	Specifies the reason for the PCE Init SR-TE Operationally down.
LSP History	Enabled — Specifies that the LSP history is enabled. Disabled — Specifies that the LSP history is disabled.
LSP History Recording	Enabled — Specifies that the LSP history recording is enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Disabled — Specifies that the LSP history recording is disabled.
LSP Self Ping Timeout	Specifies the LSP Self Ping timeout value.
LSP Self Ping Interval	Specifies the LSP Self Ping interval value.
LSP Self Ping RSVP TE	Specifies the status of LSP Self Ping RSVP TE.
Originate	Specifies the number of originations for the various LSP types.
Transit	Specifies the number of transits for the various LSP types.
Terminate	Specifies the number of terminations for the various LSP types.

Output

The following output is an example of RSVP status information.

Table 611: Output fields: RSVP status describes RSVP status output fields.

Table 611: Output fields: RSVP status

Label	Description
Admin Status	Down — RSVP is administratively disabled. Up — RSVP is administratively enabled.
Oper Status	Down — RSVP is operationally down. Up — RSVP is operationally up.
Keep Multiplier	Displays the **keep-multiplier** *number* used by RSVP to declare that a reservation is down or the neighbor is down.
Refresh Time	Displays the **refresh-time** interval (in s), between the successive Path and Resv refresh messages.
Message Pacing	Enabled — RSVP messages, specified in the **max-burst** command, are sent in a configured interval, specified in the **period** command. Disabled — Message pacing is disabled. RSVP message transmission is not regulated.
Pacing Period	Displays the time interval (in ms), when the router can send the specified number of RSVP messages specified in the **rsvp max-burst** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Max Packet Burst	Displays the maximum number of RSVP messages that are sent in the specified period under normal operating conditions.
Soft Preemption Timer	Displays the time (in s), a node holds on to a reservation for which it has triggered the soft preemption procedure.
Rapid Retransmit	Displays the value of the rapid retransmission interval.
Rapid Retry Limit	Displays the rapid retry limit.
Graceful Shutdown	Specifies whether graceful shutdown of the RSVP node is enabled.
Dark Bandwidth	Indicates the status of the dark bandwidth accounting application.
DBw Sample Intv	Displays the configured dark bandwidth sampling interval.
DBw Up Threshold	Displays the configured dark bandwidth up threshold.
DBw Down Threshold	Displays the configured dark bandwidth down threshold.
DBw Multiplier	Displays the configured dark bandwidth multiplier.
DBw Sample Multp	Displays the configured dark bandwidth sample multiplier.

Output Example

```
B:# show router rsvp status

Table 612: Output fields: PCC status

Label	Description
Admin Status	The administrative status of the PCC: • Up – the PCC is administratively up • Down – the PCC is administratively down
Oper Status	The operational status of the PCC:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Up – the PCC is operationally up • Down – the PCC is operationally down
Unknown Msg Limit	The unknown message limit, which is the maximum rate of unknown messages that can be received on a PCEP session
Keepalive Interval	The PCC keepalive value
DeadTimer Interval	The dead timer interval value, which is the amount of time a PCEP speaker waits after the receipt of the last PCEP message before declaring its peer down
Capabilities List	The capabilities list, which displays the configured capabilities
Address	The local IPv4 address of the PCEP speaker
Address Ipv6	The local IPv6 address of the PCEP speaker
Multi-path capability	Indicates if the multipath capability is configured: • True – the advertisement of the multipath capability in the Open message is enabled • False – the advertisement of the multipath capability in the Open message is disabled
SR Policy capability	Indicates if the SR policy capability is configured: • True – the advertisement of the SR policy capability in the Open message is enabled • False – the advertisement of the SR policy capability in the Open message is disabled
SRv6 capability	Indicates if the SRv6 capability is configured: • True – the advertisement of the SRv6 capability in the Open message is enabled • False – the advertisement of the SRv6 capability in the Open message is disabled
Report Path Constraints	Indicates if report path constraints is configured: • True – report path constraints is enabled • False – report path constraints is disabled
Redelegation Interval	The redelegation interval for PCE-initiated LSPs
State Interval	The state interval for PCE-initiated LSPs
State Timer Action	The action that is taken on undelegated LSPs after the state timer expiration

Full Context

show application-assurance group status

Description

This command displays system statistics.

Parameters

isa *mda-id*

Displays information about the specified AA ISA.

Values mda-id: slot/mda: slot: 1 to 10, mda: 1 or 2

cflowd

Displays cflowd status information.

detail

Displays detailed status information.

cpu [sample-period *seconds*]

Displays DPU utilization info about the specified AA ISA. The **isa** *mda-id* must be specified. The sample period can be specified within a range of 1 5 seconds (default 1s).

Values 1 to 5

overload

Displays the overload status.

qos count

Displays information about queue statistics. The **isa** *mda-id* must be specified.

qos pools

Displays information about AA related pool utilization. The **isa** *mda-id* must be specified.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of status information.

Output Example

*A:ALA-BA#
```

Table 615: Output fields: MLD status

Label	Description
Admin State	The administrative status of MLD.
Oper State	The current operating state of this MLD protocol instance on this router.
Query Interval	The frequency at which MLD query packets are transmitted.
Last Listener Query Interval	The maximum response time inserted into group-specific queries sent in response to leave group messages, and is also the amount of time between group-specific query messages.
Query Response Interval	The maximum query response time advertised in MLDv2 queries.
Robust Count	The number of times the router will retry a query.

```

Table 616: Output fields: MSDP status

Label	Description
Admin State	The administrative state
Local Address	The local IP address
Active Src Limit	The active source limit
Act Src Lim Excd	The active source limit which has been exceeded
Number of Peers	The number of peers
Num. Peers Estab	The number of peers established
Num. Source Active	The number of active sources
Policies	The policy to export source active state from the source active list into MSDP
Data Encapsulation	The RP using MSDP to encapsulate multicast data received in MSDP register messages inside forwarded MSDP SA messages - enabled or disabled
Rate	The receive message rate
Time	The receive message time

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Threshold	The number of MSDP messages that can be processed before the MSDP message rate-limiting function is activated
RPF Table	The name of the RPF table
Last msdp Enabled	The time the last MSDP was triggered

status

Syntax

status [**detail**] [*family*]

Context

[Tree] (show>router>pim status)

Full Context

show router pim status

Description

This command displays PIM status. The Oper Status reflects the combined operational status of IPv4 or IPv6 PIM protocol status. If both are down, then Oper Status is reflected as down. If IPv4 or IPv6 reflects up, the Oper Status reflects up.

If PIM is not enabled, the following message appears:

```
A:NYC# show router pim status
MINOR: CLI PIM is not configured.
A:NYC#
```

Parameters

detail

Displays detailed status information.

family

Displays status information for the specified family.

Values ipv4, ipv6

Platforms

All

Output

The following output is an example of a PIM status configuration. Table 617: Output fields: PIM status provides PIM status output field descriptions.

```

Table 617: Output fields: PIM status

Label	Description
Admin State	The administrative status of PIM.
Oper State	The current operating state of this PIM protocol instance.
BSR State	The state of the router with respect to the Bootstrap mechanism.
Address	The address of the elected Bootstrap router.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Expiry Time	The time remaining before the router sends the next Bootstrap message.
Priority	The priority of the elected Bootstrap router. The higher the value, the higher the priority.
Hash Mask Length	The hash mask length of the Bootstrap router.
Up Time	The time since the current E-BSR became the Bootstrap router.
RPF Intf towards	The RPF interface towards the elected BSR. The value is zero if there is no elected BSR in the network.
Address	The address of the candidate BSR OS.
Expiry Time	The time remaining before the router sends the next Bootstrap message.
Auto-RP	Displays if auto-RP functionality is enabled or disabled.
Priority	The priority of the Bootstrap router. The higher the value, the higher the priority.
Hash Mask Length	The hash mask length of the candidate Bootstrap router.
Up Time	The time since becoming the Bootstrap router.
Admin State	The administrative status of CRP.
Oper State	The current operating state of the C-RP mechanism.
Address	The local RP address.
Priority	The CRP's priority for becoming a rendezvous point (RP). A 0 value is the highest priority.
Holdtime	The hold time of the candidate RP. It is used by the Bootstrap router to time out the RP entries if it does not listen to another CRP advertisement within the holdtime period.
Policy	The PIM policies for a particular PIM instance.
Default Group	The default core group address.
RPF Table	The route table used for RPF check.
MC-ECMP-Hashing	Displays whether hash-based multicast balancing of traffic over ECMP links is enabled or disabled.
SSM S,G Scaling (up to 256K)	The status of PIM SSM scaling.

===============================================================================
```

Table 618: Output fields: cflowd status

Label	Description
Cflowd Admin Status	The desired administrative state for this cflowd remote collector host
Cflowd Oper Status	The current operational status of this cflowd remote collector host
Cflowd Export Mode	The cflowd export mode: • Automatic – export generated messages automatically • Manual – export generated messages by CLI or SNMP request

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Active Flow Timeout	The maximum amount of time, in minutes, before an active flow is exported; if an individual flow is active for this amount of time, the flow is exported and a new flow is created
Inactive Flow Timeout	The inactive flow timeout in seconds
Template Retransmit	The time in seconds before template definitions are sent
Cache Size	The maximum number of active flows to be maintained in the flow cache table
Overflow	The percentage number of flows to be flushed when the flow cache size has been exceeded
Aggregation Summary	The aggregation summary
VRtr If Index Context	Global – indicates the default behavior, which populates the ingress and egress interface ID with the global IF index IDs vrtr – indicates the **use-vrtr-if-index** command is configured, enabling the export of flow data using interface indexes, which can be used directly as the index into the IF_MIB tables for retrieving interface statistics
Analyze GRE	Displays whether cflowd analysis of the inner IP packet in a sampled GRE packet that is transiting the local router is enabled or disabled
Analyze L2TPv2	Displays whether cflowd looking for and analyzing the inner IP header of an L2TPv2 frame is enabled or disabled
Analyze IPV4overV6	Displays whether cflowd looking for and analyzing the inner IPv4 header of IPv4overIPv6 frames that include MAP-E as well as DS-Lite and SAM traffic is enabled or disabled
Analyze SRv6	Displays whether cflowd analyzing SRv6 encapsulated packets is enabled or disabled
Sample Rate	The rate at which traffic is sampled and forwarded for cflowd analysis: one (1) — all packets are analyzed 1000 (default) — every 1000th packet is analyzed
Active Flows	The current number of active flows being collected
Dropped Flows	The total number of flows dropped due to cache overflow events
Total Pkts Rcvd	The total number of packets sampled and forwarded for cflowd analysis
Total Pkts Dropped	The total number of packets dropped

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Total IE315 Pkts Rcvd	The total number of IE315 packets received
Overflow Events	The number of times the active cache overflowed
Raw Flow Counts	The raw flow counts
Aggregate Flow Counts	The aggregate flow counts
Flows Created	The flows created
Flows Matched	The flows matched
Flows Flushed	The flows flushed
Sample Profile Info	
Profile Id	The profile ID associated with the sample profile
Sample Rate	The cflowd sampling rate for the sample profile ID
Slice selection	The slice selection for this sample profile: • standard – slice selection is 128 bytes • extended – slice selection is 256 bytes
Export IE315	Displays if export IE315 is enabled. When enabled, samples are sent to the IPFIX collector using the IPFIX IE315 fields.
Version Info:	
Type	The type of data to be aggregated and to the collector
Version	The cflowd version: • 5 – this format generates a fixed export record for each individual flow captured • 8 – this format aggregates multiple individual flows into a fixed aggregate record • 9 – this format generates a variable export record, depending on user configuration and sampled traffic type (IPv4, IPv6, or MPLS), for each individual flow captured • 10 – this format generates a variable export record, depending on user configuration and sampled traffic type (IPv4, IPv6, or MPLS), for each individual flow captured
Status	Enabled — specifies that the aggregation type is enabled Disabled — specifies that the aggregation type is disabled
Sent	The number of packets with flow date sent to the associated collector

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Open	This counter shows the number of partially filled packets which have some flow data but are not yet filled or have been timed out (60 seconds maximum)
Errors	This counter increments when there was an error during exporting of the collector packet; the most common reason will be a UDP unreachable destination for the configured collector

Table 619: Output fields: IS-IS status

Label	Description
ISIS Cfg System Id	Displays the configured IS-IS system ID
ISIS Oper System Id	Displays the operational IS-IS system ID
ISIS Cfg Additional Sys Id	Displays the configured additional IS-IS system IDs
ISIS Oper Additional Sys Id	Displays the operational additional IS-IS system IDs
ISIS Cfg Router Id	Displays the configured IS-IS router ID
ISIS Oper Router Id	Displays the operational IS-IS router ID
ISIS Cfg IPv6 Router Id	Displays the configured IS-IS IPv6 router ID
ISIS Oper IPv6 Router Id	Displays the operational IS-IS IPv6 router ID
ASN	Displays the Autonomous System Number (ASN) the IGP uses when the IS-IS Traffic Engineering Database (TEDB) export is enabled. The ASN value represents either the ASN from the confederation AS, or the router AS if confederations are not configured.
Admin State Oper State	Displays one of the following: • Up — IS-IS is administratively up • Down — IS-IS is administratively down
Ipv4 Routing	Displays one of the following: • Enabled — IPv4 routing is enabled • Disabled — IPv4 routing is disabled
Ipv6 Routing	Displays one of the following: • Disabled — IPv6 routing is disabled • Enabled, Native — IPv6 routing is enabled • Enabled, Multi-topology — Multi-topology TLVs for IPv6 routing is enabled
Mcast Ipv4 Routing	Displays one of the following: • Enabled — Multicast is enabled • Disabled — Multicast is disabled • Native — Multicast in IS-IS MT0 is enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• Multi-topology — Multicast in IS-IS MT3 (IPv4) is enabled
Mcast Ipv6 Routing	Displays one of the following: • Enabled — Multicast is enabled • Disabled — Multicast is disabled • Native — Multicast in IS-IS MT0 is enabled • Multi-topology — Multicast in IS-IS MT4 (IPv6) is enabled
Last Enabled	Displays the date and time when IS-IS was last enabled in the router
Level Capability	Displays the routing level for the IS-IS routing process
Authentication Check	Displays one of the following: • True — All IS-IS mismatched protocol packets are rejected • False — Authentication is performed on received IS-IS protocol packets but mismatched packets are not rejected
Auth Keychain	Displays the authentication keychain name used by IS-IS for the session when enabled
Authentication Type	Displays the authentication method used to verify the authenticity of packets sent by neighboring routers on an IS-IS interface
CSNP-Authentication	Displays one of the following: • Enabled — Complete Sequence Number Packet (CSNP) authentication is enabled • Disabled — CSNP authentication is disabled
HELLO-Authentication	Displays one of the following: • Enabled — Hello packet authentication is enabled • Disabled — Hello packet authentication is disabled
PSNP-Authentication	Displays one of the following: • Enabled — Partial Sequence Number Packet (PSNP) authentication is enabled • Disabled — PSNP authentication is disabled
Traffic Engineering	Displays one of the following: • Enabled — TE is enabled for the router • Disabled — TE is disabled so that TE metrics are not generated and are ignored when received by this node
Oper IPv6 TE Router Id	Displays the value of the IS-IS IPv6 TE Router ID TLV (TLV 140) defined by RFC 6119. The IPv6 TE Router ID is configured using the **configure router ipv6-te-router-id interface** *name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	command. By default, the system IPv6 address is used when IPv6 TE is enabled.
Graceful Restart	Displays one of the following: • Enabled — Graceful restart is enabled for this instance of IS-IS on the router • Disabled — Graceful restart capability is disabled for this instance of IS-IS on the router
GR Helper Mode	Displays if GR helper mode is configured
Overload-On-Boot Timeout	Displays if the overload-on-boot timeout is configured
Overload Max-Metric	Displays if overload max metric is configured
Overload-On-Boot Max-Metric	Displays if the overload-on-boot maximum metric is configured
Overload Include Locators	Displays if overload include locators is enabled
Ovl Export Interlevel	Displays if overload export interlevel is configured
Ovl Export External	Displays if overload export external is configured
Ovl FIB Error Notify Only	Displays if overload notification only is configured: • Disabled — Indicates the router will go into overload mode when the overload condition is reached. • Enabled — Indicates the router will not go into overload mode when the overload condition is reached and instead will only advertise a notification.
Ovl FIB Error Retry	Displays the amount of time in seconds until the router periodically retries to program the FIB during the gracious overload condition
LSP Lifetime	Displays the LSP lifetime value
LSP Min Remaining Lifetime	Displays the LSP minimum remaining lifetime information
LSP Refresh Half Interval	Displays the LSP refresh half interval
LSP Wait (ms)	Displays the max, initial, and initial wait times
LSP MTU Size	Displays the LSP Maximum Transmission Unit (MTU) size
L1 LSP MTU Size	Displays the level 1 LSP MTU size

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
L2 LSP MTU Size	Displays the level 2 LSP MTU size
L1 MAX LSP MTU Size	Displays the level 1 maximum LSP MTU size
L2 MAX LSP MTU Size	Displays the level 2 maximum LSP MTU size
Adjacency Check	Displays the adjacency check configuration
L1 Auth Keychain or L2 Auth Keychain	Displays if authentication keychain is enabled
L1 Auth Type or L2 Auth Type	Displays if the authentication type is configured
L1 CNSP-Authentication or L2 CSNP-Authentication	Displays one of the following: • Enabled — Complete Sequence Number Packet (CSNP) authentication is enabled • Disabled — CSNP authentication is disabled
L1 HELLO-Authentication or L2 HELLO-Authentication	Displays one of the following: • Enabled — Hello packet authentication is enabled • Disabled — Hello packet authentication is disabled
L1 PSNP-Authentication or L2 PSNP-Authentication	Displays one of the following: • Enabled — Partial Sequence Number Packet (PSNP) authentication is enabled • Disabled — PSNP authentication is disabled
L1 Preference or L2 Preference	Displays the preference
L1 Ext. Preference or L2 Ext. Preference	Displays the external preference
L1 Wide Metrics or L2 Wide Metrics	Displays if the wide metrics features is enabled
L1 LSDB Overload or L2 LSDB Overload	Displays if the Link-State Database (LSDB) overload is enabled
L1 LSPs or L2 LSPs	Displays the number of LSPs
L1 Default Metric or L2 Default Metric	Displays the default metric
L1 IPv6 Def Metric or L2 IPv6 Def Metric	Displays the IPv6 default metric

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
L1 Mcast IPv4 Def Metric or L2 Mcast IPv4 Def Metric	Displays the multicast IPv4 default metric
L1 Mcast IPv6 Def Metric or L2 Mcast IPv6 Def Metric	Displays the multicast IPv6 default metric
L1 Adv Router Cap or L2 Adv Router Cap	Displays if the advanced router capacity is enabled for the level
L1 Bier Template or L2 Bier Template	Displays if the Bit Indexed Explicit Replication (BIER) template is enabled
L1 Total Exp Routes or L2 Total Exp Routes	Displays the total exp routes for the level
All-L1-Mac_Addr (Cfg) or All-L2-MacAddr (Cfg)	Displays the MAC addresses for the level
Last SPF	Displays the last shortest path first (SPF) calculation time
SPF Wait (ms)	Displays the SPF wait time before doing another calculation
Muti-topology	Displays if multi-topology is enabled
IPv6-Unicast MT2	Displays if IPv6 unicast MT2 is enabled
IPv4-Multicast MT3	Displays if IPv4 multicast MT3 is enabled
IPv6-Multicast MT4	Displays if IPv6 multicast MT4 is enabled
Area Addresses	Displays the area addresses
Standard Multi-Instance	Displays if a standard multi-instance is enabled
IID TLV	Displays if the Instance ID TLV is enabled
Prefix TLV	Displays if the Prefix Attributes TLV is enabled
Export Policies	Displays if there are export policies
Import Policies	Displays if there are import policies
LFA Policies	Displays if there are Loop-Free Alternate policies
Multicast Import	Displays if there is a multicast import
Advertise-Passive-Only	Displays if advertise passive only is enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Ignore Attached Bit	Displays if ignore attached bit is enabled
Suppress Attached Bit	Displays if suppress attached bit is enabled
Default Route Tag	Displays the default route tag if one exists
Rib Prio List High	Displays the Routing Information Base (RIB) high priority list
Rib Prio Tag High	Displays the RIB high priority tag
Ldp Sync Admin State	Displays if the IGP-LDP synchronization feature is enabled on all interfaces participating in the OSPF routing protocol
LDP-over-RSVP	Displays if LDP over RSVP is enabled
IGP-Shortcut	Displays if Interior Gateway Protocol (IGP) shortcuts are enabled
IPv4 IGP SC Tunn-Nhop	Displays if IPv4 IGP shortcut tunnel next hop is enabled
IPv6 IGP SC Tunn-Nhop	Displays the IPv6 IGP shortcut tunnel next hop is enabled
SRv4 IGP SC Tunn-Nhop	Displays if the SRv4 IGP shortcut tunnel next hop is enabled
SRv6 IGP SC Tunn-Nhop	Displays if the SRv6 IGP shortcut tunnel next hop is enabled
Advertise-Tunnel-Link	Displays if advertise tunnel link is enabled
Export Limit	Displays the export limit
Exp Lmt Log Percent	Displays the export limit log percentage
Loopfree-Alternate	Displays if Loop-Free Alternate (LFA) is enabled in this IS-IS instance
Remote-LFA	Displays if remote LFA is enabled
Max PQ Cost	Displays the maximum PQ cost
Remote-LFA (node-protect)	Displays if remote LFA is enabled
Max PQ Nodes (node-protect)	Displays the maximum PQ nodes
LFA NH Template	Displays if the LFA Next-Hop (NH) template is applied for the configured LFA policies
Augment-route-table	Displays if the augment route table feature is enabled

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
TI-LFA	Displays if Topology-Independent Loop-Free Alternate (TI-LFA) is enabled
Max SR FFR Labels	Displays the maximum Segment Routing Fast Reroute (SR FRR) labels
TI-LFA (node-protect)	Displays if TI-LFA node protect is enabled
L1 LFA	Displays if level 1 LFA is included
L2 LFA	Displays if level 2 LFA is included
Advertise Router Cap	Displays the advertise router capacity
Hello Padding L1 Hello Padding L2 Hello Padding	Displays if Hello padding is enabled
Ignore Lsp Errors	Displays if ignoring LSP errors is enabled
Ignore Narrow Metric	Displays if ignoring narrow metric is enabled
Reference Bandwidth	Displays the reference bandwidth
Ucast Import Disable	Displays the Ucast import disable configuration information
Segment Routing	Displays if Segment Routing is enabled
Segment Routing MT2	Displays if Segment Routing MT2 is enabled.
Flex Algo	Displays if Flexible Algorithms are up
Mapping Server	Displays if the mapping server is up
Purge Originator Id	Displays if purge originator ID is enabled
Class Based Forwarding	Displays if class based forwarding is enabled
Entropy Label	Displays if the entropy label is enabled
Override ELC	Displays if override ELC is enabled
Micro loop avoidance	Displays if micro-loop avoidance is enabled and the Forwarding Information Base (FIB) delay
UPA Received Processing	Displays if Unreachable Prefix Announcement (UPA) processing is enabled. When enabled, this allows processing of received UPAs from other routers. When disabled, received UPAs are handled briefly with normal IGP routes and ignored by the router.
UPA Lifetime	Displays the amount of time a UPA is advertised

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
UPA Metric	Displays the metric to an advertised UPA
UPA Max Number Advertised	Displays the maximum number of UPAs the router can advertise
Cfg Max ECMP Routes	Displays the configured maximum number of ECMP routes
Oper ECMP	Displays the operational number of ECMP routes currently in use

[Tree] (show>router>ospf3 status)

Full Context

show router ospf status

show router ospf3 status

Description

This command displays the general status of OSPF.

Platforms

All

Output

The following outputs are examples of OSPF status information:

- Output example: OSPF status, Table 620: Output fields: OSPF status
- Output example:OSPFv3 status, Table 620: Output fields: OSPF status
- Output example: OSPF status showing neighbor path disabled, Table 620: Output fields: OSPF status
- Output example: OSPF status showing neighbor path enabledTable 620: Output fields: OSPF status

Output example: OSPF status

```
A:node-2>config>service# show router ospf status

Table 620: Output fields: OSPF status

Label	Description
OSPF Router Id	A 32-bit integer uniquely identifying the router in the Autonomous System. The SR OS system defaults to the System IP address, or if not configured, the 32 least significant bits of the system MAC address.
OSPF Version	The current version number of the OSPF protocol is 2
OSPF Admin Status	Disabled — denotes that the OSPF process is disabled on all interfaces

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Enabled — denotes that the OSPF process is active on at least one interface
OSPF Oper Status	Disabled — denotes that the OSPF process is not operational on all interfaces Enabled — denotes that the OSPF process is operational on at least one interface
Preference	The route preference for OSPF internal routes
External Preference	The route preference for OSPF external routes
Backbone Router	False — this variable indicates that this router is not configured as an OSPF backbone router True — this variable indicates that this router is configured as an OSPF backbone router
Area Border Router	False — this router is not an area border router True — this router is an area border router
AS Border Router	False — this router is not configured as an Autonomous System border router True — this router is configured as an Autonomous System border router
OSPF Ldp Sync Admin Status	Indicates whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol
TI-LFA (nbr-path-expand)	Indicates if the TI-LFA expanded neighbor backup path feature is enabled or disabled
TI-LFA (node-protect)	Indicates if the TI-LFA node protect feature is enabled or disabled

show router bier status

Description

This command displays the BIER status.

Platforms

All

Output

The following output is an example of BIER status information, and Table 621: Output fields: BIER status describes the output fields.

Output Example

```
# show router bier status
===============================================================
BIER Status
===============================================================
Admin State        : Up                Oper State         : Up
FRR State          : Disabled          BFD State          : Disabled
Service-reserved-label-block: [NA | name of reserved block]
===============================================================
```

Table 621: Output fields: BIER status

Label	Description
Admin State	Displays the administrative state
Oper State	Displays the operational state
FRR State	Displays the FRR state
BFD State	Displays the BFD state
Service-reserved-label-block	Displays the service reserved label block name

25.4 steering-profile

steering-profile

Syntax

steering-profile *steering-profile-name*

Context

[Tree] (show>subscr-mgmt steering-profile)

Full Context

show subscriber-mgmt steering-profile

Description

This command displays steering profile information.

Parameters

steering-profile-name

Specifies an existing steering profile name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

25.5 sticky-dest

sticky-dest

Syntax

sticky-dest

Context

[Tree] (tools>dump>filter>resources sticky-dest)

Full Context

tools dump filter resources sticky-dest

Description

This command displays information about resources pertaining to sticky destinations timers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

Output

The following output is an example of sticky destination filter action information.

Output Example

```
===============================================================================
Filter action - Sticky-dest resources
===============================================================================
Used  : 1
Free  : 2047
Total : 2048
===============================================================================
```

25.6 sticky-leases

sticky-leases

Syntax

sticky-leases [*hostname*]

Context

[Tree] (show>router>dhcp>server sticky-leases)

Full Context

show router dhcp local-dhcp-server sticky-leases

Description

This command shows either all sticky leases or a single specific sticky lease created under the specified DHCP server.

Parameters

hostname

Specifies the name of the host for which an entry is created.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of sticky lease information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example

```
Node# show router dhcp local-dhcp-server "dhcp_server" sticky-leases
===============================================================================
DHCP Server Sticky Leases
===============================================================================
Hostname                          IP address
-------------------------------------------------------------------------------
test_lease                        10.0.0.1
-------------------------------------------------------------------------------
No. of Matching Entries: 1
===============================================================================
```

Table 622: Output fields: sticky leases describes the sticky leases field descriptions.

Table 622: Output fields: sticky leases

Field	Description
Hostname	The name of the sticky host
IP address	The IP address of the sticky host
No. of Matching Entries	The total numbers of entries matching the command criteria

sticky-leases

Syntax

sticky-leases hostname [*hostname*]

sticky-leases hostname-prefix [*hostname-prefix*]

Context

[Tree] (clear>router>dhcp>server sticky-leases)

Full Context

clear router dhcp local-dhcp-server sticky-leases

Description

This command clears sticky leases.

Parameters

hostname

Clears information about the name of the host for which an entry is cleared.

hostname-prefix

Clears information about the sub-string of all host names starting with that sub-string.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

25.7 stop

stop

Syntax

stop

Context

[Tree] (tools>perform>router>l2tp>group stop)

Full Context

tools perform router l2tp group stop

Description

This command triggers an attempt to immediately stop all the L2TP connections within the specified L2TP tunnel group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop

Syntax

stop

Context

[Tree] (tools>perform>router>l2tp>group>tunnel stop)

[Tree] (tools>perform>router>l2tp>tunnel stop)

Full Context

tools perform router l2tp group tunnel stop

tools perform router l2tp tunnel stop

Description

This command triggers an attempt to immediately stop all the L2TP connections within the specified L2TP tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop

Syntax

stop [*script-policy-name*] [**owner** *script-policy-owner*] [**all**]

Context

[Tree] (tools>perform>system>script-control>script-policy stop)

Full Context

tools perform system script-control script-policy stop

Description

This command stops the execution of scripts.

Parameters

script-policy-name

Specifies to only stop scripts with the specified script-policy, up to 32 characters.

script-policy-owner

Specifies to only stop scripts that are associated with script-policies with the specified owner, up to 32 characters.

Default TiMOS CLI

all

Specifies to stop all running scripts.

Platforms

All

25.8 stp

stp

Syntax

stp [**detail**]

Context

[Tree] (show>service>id stp)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show service id stp

Description

Displays information for the spanning tree protocol instance for the service.

Parameters

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of service STP information.

Output Example

```
A:ALA-12# show service id 1 stp

Table 623: Output fields: service ID STP describes show service-id STP output fields:

Table 623: Output fields: service ID STP

Label	Description
RSTP Admin State	The administrative state of the Rapid Spanning Tree Protocol instance associated with this service
Core Connectivity	The connectivity status to the core
RSTP Oper State	The operational state of the Rapid Spanning Tree Protocol instance associated with this service. This field is applicable only when STP is enabled on the router.
Bridge-id	The MAC address used to identify this bridge in the network.
Hold Time	The interval length during which no more than two Configuration BPDUs shall be transmitted by this bridge
Bridge fwd delay	The speed of bridge state changes when moving toward the forwarding state
Bridge Hello time	The amount of time between the transmission of Configuration BPDUs
Bridge max age	The maximum age of spanning tree protocol information learned from the network on any port before it is discarded. This is the actual value that this bridge is currently using.
Bridge priority	The priority of the spanning tree protocol instance associated with this service
Topology change	Topology change is currently in progress.
Last Top. change	The time (in hundredths of a second) since the last time a topology change was detected by the Spanning Tree Protocol instance associated with this service
Top. change count	The total number of topology changes detected by the Spanning Tree Protocol instance associated with this service since the management entity was last reset or initialized
Root bridge-id	The Root bridge-id
Root path cost	The Root path cost

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Root forward delay	The Root forward delay
Root hello time	The Root hello time
Root max age	The Root maximum age
Root priority	The Root priority level
Root port	The Root port number
SAP Identifier	The SAP identifier
RSTP State	The RSTP state
STP Port State	The STP port state
BPDU encap	The BPDU encapsulation
Port Number	The port number
Priority	The priority level
Cost	The cost
Fast Start	The fast start state
Designated Port	The designated port
Designated Bridge	The designated bridge
Sap/Spoke Id	The SAP or spoke ID
Oper-State	The operational state
Prune-State	The prune state
Port-State	The port state
Managed by Service	The managed service
Managed by Sap/ spoke	The managed SAP or spoke

Table 624: Output fields: subscriber identification policy describes subscriber identification policy output fields.

Table 624: Output fields: subscriber identification policy

Field	Description
Name	The subscriber identification policy name
Description	The user provided description of this policy
Number of Subscriber Identification Policies	The total number of subscriber identification policies configured on the node
Sub Profile Map	The subscriber profile used to define the aggregate QoS for all hosts within a subscriber context
Key	The key that defines the auto-generated subscriber identification key for PPP hosts.
Sub profile	A list of subscriber identification profiles
SLA profile	A list of SLA profiles
Admin State	The administrative state of the Python scripts
Oper State	The operational state of the Python scripts
Script Name	The Python policy script name
SAP Associations	The subscriber identification policy SAP associations
Service-Id	The service ID associated with the subscriber identification policy
SAP	The SAP ID associated with the subscriber identification policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
URL	The URL of the script to change the Python message
Admin State	The admin state of the script
Oper State	The operational state of the script
Primary Script	Information about the primary Python script
Secondary Script	Information about the secondary Python script

25.11 sub-mcac

sub-mcac

Syntax

sub-mcac [**subscriber** *sub-ident-string*] [**policy** *sub-mcac-policy-name*]

Context

[Tree] (show>service>active-subscribers sub-mcac)

Full Context

show service active-subscribers sub-mcac

Description

This command displays active subscriber MCAC information.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 32 characters.

sub-mac-policy-name

Specifies the subscriber MAC policy name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber MCAC information.

Output Example

```
*A:eng-BNG-2# show service active-subscribers sub-mcac
===============================================================================
Active Subscribers Sub-MCAC
```

Table 625: Output fields: subscriber profile describes subscriber management profile field descriptions.

Table 625: Output fields: subscriber profile

Field	Description
Name	The subscriber profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Description	The user provided description of this policy
Control plane(s)	The subscriber profile controlled by the local control plane or CUPS control plane
I. Sched. Policy	The ingress scheduler policy assigned to the ingress subscriber profile
E. Sched. Policy	The egress scheduler policy assigned to the egress subscriber profile
E. Agg Rate Limit	The egress aggregate rate limit
E. Min Resv Bw	The egress minimum reserved bandwidth
I. Policer Ctrl	The ingress policer control status
E. Policer Ctrl	The egress policer control status
I. vport-hashing	The ingress vport-hashing status
I. sec-sh-hashing	The ingress security sh hashing status
Q Frame-Based Ac*	The Q frame-based accounting status
Acct. Policy	The number of accounting policies associated with this subscriber profile
ANCP Pol.	The ANCP policy
Accu-stats-pol	The accu-stats policy
HostTrk Pol.	The HostTrk policy
IGMP Policy	The IGMP policy
MLD Policy	The MLD policy
PIM Policy	The PIM policy
Sub. MCAC Policy	The subscriber MCAC policy
NAT Policy	The NAT policy
Host Limits	The configured maximum number of hosts per subscriber associated with this subscriber profile
Session Limits	The configured maximum number of sessions per subscriber associated with this subscriber profile
Number of Subscriber Profiles	The total number of subscriber profiles configured on this node

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Ingress Scheduler Overrides	Information about ingress scheduler overrides for the subscriber profile
Scheduler	The scheduler name
Rate	The scheduler rate
CIR	The CIR rate allowed for this scheduler
Egress Scheduler Overrides	Information about egress scheduler overrides for the subscriber profile
Key	The lookup key in the map
SLA Profile	Information about the SLA profile map
Collect Stats	The accounting statistics collected on this subscriber profile.
Last Mgmt Change	The time of the most recent management-initiated change

25.14 sub-services

sub-services

Syntax

sub-services [**id** *service-id*] [**sap sap-id**] [**ip** *ip-prefixIprefix-length*] [**mac** *ieee-address*] [**pppoe-session-id** *pppoe-session-id*] [**sub-service-name** *sub-service-name*] [**sub-service-type** *sub-service-type*] [**summary** | **associations**]

Context

[Tree] (show>service sub-services)

Full Context

show service sub-services

Description

This command displays subscriber service information.

Parameters

service-id

Specifies the subscriber service ID.

Values 1 to 2148278386 | *svc-name*: 64 char max

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sap-id

Specifies the SAP ID.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *eth-sat-id*	
dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id*:[qtag1| cp-conn-prof-id]	
qinq	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *pw-id*:[qtag1 **cp**-*conn-prof-id*].[qtag2 | **cp**-conn-prof-id]

	esat	keyword
	id	1 to 20
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a, b

ip-prefix/ip-prefix-length

Specifies information for the specified IP prefix and mask length.

Values *ipv4-prefix* — a.b.c.d
ipv4-prefix-length — 0 to 32
ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x — [0..FFFF]H
d — [0..255]D
ipv6-prefix-length — 0 to 128

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx (cannot be all zeros)

pppoe-session-id

Specifies the PPPoE session ID.

Values 0 to 65535

sub-service-name

Specifies the subscriber service name, up to 255 characters.

sub-service-type

Specifies the subscriber service type, up to 255 characters.

summary

Displays summary information.

associations

Displays information associated with the subscriber service.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

25.15 subnet-ext-stats

subnet-ext-stats

Syntax

subnet-ext-stats *ip-address*[/*mask*]

subnet-ext-stats pool *pool-name*

Context

[Tree] (show>router>dhcp>server subnet-ext-stats)

Full Context

show router dhcp local-dhcp-server subnet-ext-stats

Description

This command displays extended statistics per DHCPv4 subnet in local DHCPv4 server.

The following statistics are included in output:

- The number of stable leases in the subnet
- The number of provisioned address in the subnet
- The number of used address in the subnet
- The number of free address in the subnet
- The percentage of used address
- The percentage of free address

For each statistic (except for Provisioned Addresses), there is current value and peak value, peak value is the highest value since subnet creation or last reset via the **clear router** *rt-id* **dhcp local-dhcp-server** *svr-name* **subnet-ext-stats** command.

When parameter pool is used, the statistics of each subnet in the pool are displayed.

Parameters

ip-address[/mask]

Specifies the subnet and mask.

pool-name

Specifies the name of local DHCPv4 server pool.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of subnet extended statistics information.

Output Example

```
show router 500 dhcp local-dhcp-server "d4" subnet-ext-stats 239.10.10.0/24
===============================================================================
Extended statistics for subnet 239.10.10.0/24
===============================================================================
                          Current         Peak            TimeStamp
-------------------------------------------------------------------------------

```

Table 626: Output fields: extended subnet statistics describes extended subnet statistics output field descriptions.

Table 626: Output fields: extended subnet statistics

Field	Descriptions
Current	The current statistics for the subnet
Peak	The peak statistics for the subnet
TimeStamp	The timestamp for the last reset
Stable Leases	The number of stable leases
Provision Addresses	The number of provisioned addresses in this subnet
Used Addresses	The number of used addresses in this subnet
Free Address	The number of free addresses in this subnet
Used Pct	The percentage of addresses in this subnet in use
Free Pct	The percentage of addresses in this subnet currently unused
Last Reset Time	The time of the last reset
Number of entries	The total number of entries

Field	Description
Declined	The number of addresses in this subnet that are declined
No. of entries	The total number of entries

25.17 subscribe-to

subscribe-to

Syntax

subscribe-to log-id *log-id*

Context

[Tree] (tools>perform>log subscribe-to)

Full Context

tools perform log subscribe-to

Description

This command subscribes the current CLI session to the specified CLI log. Log events for the specified log will be output in the current CLI session until the CLI session closes or an unsubscribe-from command is used.

Parameters

log-id

Specifies the log ID for which subscription is requested.

Values 1 to 101

Platforms

All

25.18 subscriber

subscriber

Syntax

subscriber *sub-ident-string* **sap** *sap-id* **sla-profile** *sla-profile-name* [**scheduler** *scheduler-name*] [**spi-sharing-type** *spi-sharing-type*] [**spi-sharing-id** *spi-sharing-id*]

subscriber *sub-ident-string* [**scheduler** *scheduler-name*] [**ingress** | **egress**]

Context

[Tree] (clear>qos>scheduler-stats subscriber)

Full Context

clear qos scheduler-stats subscriber

Description

This command clears scheduler stats by subscriber.

Parameters

sub-ident-string

Clears information for the specified subscriber name.

sap-id

Clears information for the specified SAP.

sla-profile-name

Clears information for the specified SLA profile name.

scheduler-name

Clears information for the specified scheduler.

spi-sharing-type

Clears information for sessions with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Clears information for sessions with the specified SPI sharing type and sharing identifier. The SPI group identifier is:

- an identifier when the sharing type is per-group
- an internal PPP or IPoE sharing identifier when the sharing type is a per-PPP or per-IPoE session

Values 0 to 4294967295

egress

Clears egress information for the subscriber.

ingress

Clears ingress information for the subscriber.

Platforms

All

Context

[Tree] (show>service>active-subscribers subscriber)

Full Context

show service active-subscribers subscriber

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays active subscriber information for a subscriber.

Parameters

sub-ident-string

Displays the subscriber ID of the active subscriber, up to 32 characters.

sap-id

Displays the physical port identifier portion of the SAP definition.

sla-profile-name

Displays the existing SLA profile name, up to 32 characters.

spi-sharing-type

Displays subscriber information for sessions with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Displays subscriber information for sessions with the specified SPI sharing type and sharing identifier. The SPI group ID is:

- a group id when sharing type is per-group
- an internal PPP or IPoE sharing id when the sharing type is per-PPP or per-IPoE session

Values 0 to 4294967295

detail

Displays detailed output.

mirror

Displays mirrored output.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber information for active subscribers.

Output Example

```
*A:eng-BNG-2# show service active-subscribers subscriber "user_1"

Syntax

subscriber *sub-ident-string* [{**ingress** | **egress**}] [{**detail** | **root-detail** | **thresholds** | **priority-info** | **depth**}] [**port** *port-id*] [**arbiter** {*name* | *root*}]

Context

[Tree] (show>qos>policer-hierarchy subscriber)

Full Context

show qos policer-hierarchy subscriber

Description

This command displays information about the policer hierarchy per subscriber.

Parameters

sub-ident-string

Displays information about the specified subscriber.

ingress

Displays ingress information about the specified subscriber.

egress

Displays egress information about the specified subscriber.

detail

Displays detailed information.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays threshold, parenting, rate, and traffic information related to a policer.

priority-info

Displays threshold information related to the root arbiter.

depth

Displays bucket depth, parenting, rate, and traffic information related to a policer.

port-id

Displays information about the specified port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values *slot/mda/port*[*.channel*]

name

Displays information about the named QoS arbiter.

root

Displays information about the arbiter root.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

subscriber

Syntax

subscriber *sub-ident-string* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}] [**detail**]

subscriber *sub-ident-string* **sla-profile** *sla-profile-name* **sap** *sap-id* [**scheduler** *scheduler-name*] [**detail**] [**spi-sharing-type** *spi-sharing-type*] [**spi-sharing-id** *spi-sharing-id*]

Context

[Tree] (show>qos>scheduler-hierarchy subscriber)

Full Context

show qos scheduler-hierarchy subscriber

Description

This command displays the scheduler hierarchy per subscriber.

Parameters

sub-ident-string

Displays the subscriber identification policy name.

scheduler-name

Displays the scheduler name.

ingress

Displays ingress SAP subscriber scheduler stats.

egress

Displays egress SAP subscriber scheduler stats.

detail

Displays detailed information.

sla-profile-name

Displays information for the specified sla-profile-name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

spi-sharing-type

Displays subscriber scheduler hierarchy information for sessions with the specified SLA Profile Instance sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Displays subscriber scheduler hierarchy information for sessions with the specified SLA Profile Instance sharing type and sharing identifier. The spi-sharing-id is:

- a group id when sharing type is per-group
- an internal PPP or IPoE sharing id when the grouping type is per-PPP or per-IPoE-session

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Table 628: Output fields: QoS scheduler hierarchy subscriber

Label	Description
Legend	Admin CIR/PIR: Specifies the configured value of CIR/PIR. Assigned CIR/PIR: Specifies the PIR/CIR rate given to a member by that parent level. Offered CIR/PIR: Specifies the offered load on that member. Consumed CIR/PIR: Specifies the amount of scheduler bandwidth used by this member.
PIR	Specifies the PIR rate.
CIR	Specifies the CIR rate.
S	Displays the scheduler name.
Q	Displays the queue ID and information.

subscriber

Syntax

subscriber *sub-ident-string* **sap** *sap-id* **sla-profile** *sla-profile-name* [**scheduler** *scheduler-name*] [**spi-sharing-type** *spi-sharing-type*] [**spi-sharing-id** *spi-sharing-id*]

subscriber *sub-ident-string* [**scheduler** *scheduler-name*] [{**ingress** | **egress**}]

Context

[Tree] (show>qos>scheduler-stats subscriber)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show qos scheduler-stats subscriber

Description

This command displays scheduler statistics information.

Parameters

sub-ident-string

Specifies an existing SLA profile string.

scheduler-name

Specifies an existing scheduler name.

ingress

Display only the policy displayed on ingress.

egress

Display only the policy displayed on egress.

sla-profile-name

Displays information for the specified sla-profile-name.

spi-sharing-type

Displays subscriber scheduler hierarchy information for sessions with the specified SLA Profile Instance sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Displays subscriber scheduler hierarchy information for sessions with the specified SLA Profile Instance sharing type and sharing identifier. The spi-sharing-id is:

- a group id when sharing type is per-group
- an internal PPP or IPoE sharing id when the sharing type is per-PPP or per-IPoE-session

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Output

The following output is an example of QoS scheduler-stats subscriber information, and Table 629: Output fields: QoS scheduler statistics subscriber describes the QoS scheduler-stats subscriber fields.

Output Example

```
A:D# show qos scheduler-stats subscriber RoutedCoHost1

Table 629: Output fields: QoS scheduler statistics subscriber

Label	Description
Scheduler	Displays the scheduler policy name.
Forwarded Packets	Displays the number of packets forwarded.
Forwarded Octet	Displays the number of octets forwarded.

subscriber

Syntax

subscriber *sub-indent-string* [**egress**] [**detail**]

Context

[Tree] (show>qos>agg-rate subscriber)

Full Context

show qos agg-rate subscriber

Description

This command displays the H-QoS aggregate rate limit per subscriber.

Parameters

sub-indent-string

Specifies the subscriber identification string of the subscriber.

egress

Displays egress SAP customer scheduler stats.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of H-QoS aggregate rate limit per subscriber, and Table 630: Output fields: H-QoS aggregate rate limit per subscriber describes the H-QoS aggregate rate limit per subscriber fields.

Output Example

```
*A:PE1# show qos agg-rate subscriber "sub1" egress

```

Table 630: Output fields: H-QoS aggregate rate limit per subscriber

Label	Description
AdminRate	Displays the configured aggregate rate in the subscriber profile.
OperRate	Displays the actual downstream rate.
Limit Unused Bandwidth	Indicates whether the **limit-unused-bandwidth** command is enabled to protect against exceeding the aggregated bandwidth
OnTheWireRates	Indicates whether the displayed rates are on-the-wire rates.
LastMileOnTheWireRates	Indicates whether the displayed rates are on-the-wire rates for the last mile only.

subscriber

Context

[Tree] (monitor>service subscriber)

Full Context

monitor service subscriber

Description

This command monitors statistics for a subscriber.

Parameters

sub-ident-string

Specifies an existing subscriber identification profile to monitor, up to 32 characters.

sap-id

Specifies the physical port identifier portion of the SAP definition.

Values

null	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id*	
dot1q	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *aps-id* | *pw-id*:[qtag1| cp-conn-prof-id]	
qinq	*port-id* | *bundle-id* | *bpgrp-id* | *lag-id* | *pw-id*:[qtag1 **cp**-*conn-prof-id*].[qtag2 | **cp**-conn-prof-id]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	ccag	keyword
	id	1 to 8
	path-id	a | b
	cc-type	.sap-net | .net-sap
	cc-id	1 to 4094
eth-tunnel	eth-tunnel-*id*[:*eth-tun-sap-id*]	
	id	1 to 1024
	eth-tun-sap-id	0 to 4094
lag-id	**lag**-*id*	
	lag	keyword
	id	1 to 800
pw-id	**pw**-*id*	
	pw	keyword
	id	1 to 10239
qtag1	* | 0 to 4094	
qtag2	* | null | 0 to 4094	
tunnel-id	**tunnel**-*id*.*private* | *public*:*tag*	
	tunnel	keyword
	id	1 to 16
	tag	0 to 4094

sla-profile-name

Specifies an existing SLA profile. The name can be a maximum of 32 characters long.

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

Default mode delta

rate

Displays rate-per-second for each statistic instead of the delta.

base

Monitor base statistics.

egress-policer-id

Monitors statistics for the policer.

Values 1 to 63

egress-queue-id

Monitors statistics for this queue.

Values 1 to 8

ingress-policer-id

Monitors statistics for this policer.

Values 1 to 63

ingress-queue-id

Monitors statistics for this queue.

Values 1 to 32

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber-information.

Output Example

```

subscriber

Syntax

subscriber *sub-ident-string* [**arbiter** {**root** | *name*}] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>arbiter-stats subscriber)

Full Context

monitor qos arbiter-stats subscriber

Description

This command monitors arbiter statistics for a subscriber.

Parameters

sub-ident-string

Specifies an existing subscriber identification policy name, up to 32 characters.

name

Specifies the name of the policer control policy arbiter.

root

Specifies the arbiter to which this queue would be feeding.

ingress

Displays arbiter name statistics applied on the ingress SAP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress

Displays arbiter name statistics applied on the egress SAP.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

subscriber

Syntax

subscriber *sub-ident-string* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

subscriber *sub-ident-string* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] **sap** *sap-id* **sla-profile** *sla-profile-name*

Context

[Tree] (monitor>qos>scheduler-stats subscriber)

Full Context

monitor qos scheduler-stats subscriber

Description

This command monitors scheduler statistics for a subscriber.

Parameters

sub-ident-string

Specifies an existing subscriber identification policy name, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

scheduler-name

Specifies an existing QoS scheduler policy name, up to 32 characters. Scheduler names are configured in the **config>qos>scheduler-policy>tier** level context.

ingress

Displays *scheduler-name* statistics applied on the ingress SAP.

egress

Displays *scheduler-name* statistics applied on the egress SAP.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

sap-id

Specifies the physical port identifier portion of the SAP definition.

sla-profile-name

Specifies the SLA profile belonging to the subscriber host, up to 32 characters.

Platforms

All

subscriber

Syntax

subscriber *sub-ident-string* [**arbiter** {*name* **|** *root*}] [**ingress** | **egress**]

Context

[Tree] (clear>qos>arbiter-stats subscriber)

Full Context

clear qos arbiter-stats subscriber

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears the arbiter statistics per subscriber.

Parameters

sub-ident-string

Specifies the subscriber identification policy name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

subscriber

Syntax

subscriber id *subscriber-id* [**statistics**]

subscriber all [**statistics**]

Context

[Tree] (clear>subscr-mgmt>host-tracking subscriber)

Full Context

clear subscriber-mgmt host-tracking subscriber

Description

This command clears the host tracking data for a subscriber.

Parameters

subscriber-id

Specifies subscriber ID, up to 32 characters.

all

Clears all host tracking data.

statistics

Clears statistical host tracking information for the specified subscriber ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

subscriber

Syntax

subscriber *sub-ident-string* [**arbiter** *name* | *root*] [**ingress** | **egress**]

Context

[Tree] (show>qos>arbiter-stats subscriber)

Full Context

show qos arbiter-stats subscriber

Description

This command displays the arbiter statistics per subscriber.

Parameters

sub-ident-string

Displays information about the specified subscriber, up to 32 characters for the 7950 XRS and VSR platforms and up to 64 characters for all other platforms.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

subscriber

Syntax

subscriber *sub-ident-string* [**sla-profile** *sla-profile-name*] [**ingress** | **egress**] [**detail**] [**port** *port-id*]

Context

Full Context

show qos policer subscriber

Description

This command displays the policer statistics per port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

sub-ident-string

Displays information about the specified subscriber, up to 32 characters for the 7950 XRS and VSR platforms and up to 64 characters for all other platforms.

sla-profile-name

Specifies the queue group name, up to 32 characters.

port-id

Displays information about the specified port.

Values *slot*/*mda*/*port*

eth-sat-id	**esat**-*id*/*slot*/*port*	
	esat	keyword
	id	1 to 20
pxc-id	**pxc**-*id*.*sub-port*	
	pxc	keyword
	id	1 to 64
	sub-port	a, b

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

25.19 subscriber-hosts

subscriber-hosts

Syntax

subscriber-hosts

Context

[Tree] (clear>service>id subscriber-hosts)

Full Context

clear service id subscriber-hosts

Description

Commands in this context clear information for a particular subscriber host.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-hosts

Syntax

subscriber-hosts [**sap** *sap-id*] [**ip** *ip-prefix/prefix-length*] [**mac** *ieee-address*] [**sub-profile** *sub-profile-name*] [**sla-profile** *sla-profile-name*] [**app-profile** *app-profile-name*] [**wholesaler** *service-id*] [**address-origin** *address-origin*] [**detail**] [**statistics**] [**spi-sharing-type** *spi-sharing-type*] [**spi-sharing-id** *spi-sharing-id*]

Context

[Tree] (show>service>id subscriber-hosts)

Full Context

show service id subscriber-hosts

Description

This command displays subscriber host information.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-prefix/prefix-length

Shows information for the specified IP address and mask.

Values *ipv4-prefix* — a.b.c.d (host bits must be 0)

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — [0..FFFF]H

d — [0..255]D

ipv6-prefix-length — 0 to 128

ieee-address

Displays information only for the specified 48-bit MAC address. The MAC address can be expressed in the form *aa*:*bb*:*cc*:*dd*:*ee*:*ff* or *aa-bb-cc-dd- ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

sub-profile-name

Displays an existing subscriber profile name to be associated with the static subscriber host. The subscriber profile is configured in the **config>subscr-mgmt>sub-profile** context.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sla-profile-name

Displays subscriber host information for hosts with the specified SLA profile name.

app-profile-name

Specifies an existing SLA app profile name, up to 32 characters.

service-id

Specifies the ID that uniquely identifies a service.

Values service-id: 1 to 214748364

svc-name: string, up to 64 characters.

address-origin

Specifies an address origin.

Values aaa, dynamic, static, bonding

detail

Displays detailed information.

statistics

Displays the HTTP redirect statistics for the host. The redirect statistics are divided into HTTP GET and HTTP response for redirection.

spi-sharing-type

Displays subscriber host information for hosts with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Displays subscriber host information for hosts with the specified SPI sharing type and sharing identifier. The SPI group ID is:

- a sharing ID when the sharing type is per-group
- an internal PPP or IPoE sharing ID when the sharing type is per-PPP or per-IPoE session

Values 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

25.22 subscriber-using

subscriber-using

Syntax

subscriber-using [**service-id** *service-id*] [**sap-id** *sap-id*] [**interface** *ip-int-name*] [**ip** *ip-address*[*/mask*]] [**mac** *ieee-address*] [**sub-profile** *sub-profile-name*] [**sla-profile** *sla-profile-name*] [**app-profile** *app-profile-name*] [**port** *port-id*] [**no-inter-dest-id** | **inter-dest-id** *intermediate-destination-id*]

Context

[Tree] (show>service subscriber-using)

Full Context

show service subscriber-using

Description

This command displays selective subscriber information using specific options.

Parameters

service-id

Specifies the ID that uniquely identifies a service.

sap-id

Displays the physical port identifier portion of the SAP definition.

ip-int-name

Shows DHCP statistics on the specified interface.

port-id

Indicates the SAP or SDP for which this entry contains information.

***ip-address*[*/mask*]**

Shows information for the specified IP address and mask.

ieee-address

Displays information only for the specified 48-bit MAC address. The MAC address can be expressed in the form *aa*:*bb*:*cc*:*dd*:*ee*:*ff* or *aa-bb-cc-dd- ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

sub-profile-name

Displays an existing subscriber profile name to be associated with the static subscriber host. The subscriber profile is configured in the **config>subscr-mgmt>sub-profile** context.

sla-profile-name

Specifies an existing SLA profile name.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-profile-name

Displays the profile of the specified application.

intermediate-destination-id

Indicates the intermediate destination identifier received from either the DHCP or RADIUS server, or the local user database.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of selective subscriber information.

Output Example

```

Field	Description
Matching Subscribers	The number of subscribers matching the search criteria

25.23 subscription

subscription

Syntax

subscription *subscription-id* [**paths**]

subscription

Context

[Tree] (show>system>telemetry>grpc subscription)

Full Context

show system telemetry grpc subscription

Description

This command displays the active telemetry gRPC subscriptions.

Parameters

subscription-id

Specifies the unique subscription ID or number that is assigned by the SR OS gRPC server to each active telemetry subscription.

paths

Keyword that indicates that the **show** command output includes all paths with the respective subscription ID information.

Platforms

All

Output

The following output is an example of the telemetry gRPC subscription information, and Table 633: Output fields: telemetry gRPC subscription describes the output fields.

Output Example

```
A:node-6>show>system>telemetry>grpc# subscription
===============================================================================
Telemetry gRPC subscriptions
===============================================================================

Table 633: Output fields: telemetry gRPC subscription

Label	Description
Subscription id	Displays the subscription ID
User	Displays name of the user who started the subscription
Destination	Displays the destination IP address
Port	Displays the destination port
Subscription mode	once — Short-lived subscription that transmits a single sample

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	stream — Long-lived subscription that transmits a sample at every interval
Encoding	Displays the encoding method used for telemetry notifications: bytes, json, json-ietf, proto
Notification count	Displays the notification count
Context count	Displays the context count
Notification bundling	Display the state of notification bundling. When enabled, additional statistics are displayed.
Path	Display the subscribed path
Path mode	Displays the path mode: on-change, sample, target-defined
Heartbeart interval	Displays the heartbeat interval
Finished samples	Displays the number of finished samples
Deferred samples	Displays the number of deferred samples
Total collection time	Displays the total collection time
Min collection time	Displays the minimum collection time
Avg collection time	Displays the average collection time
Max collection time	Displays the maximum collection time
No. of paths	Displays the total number of paths

Full Context

show system telemetry persistent subscription

Description

This command displays the active persistent subscriptions.

Parameters

subscription-name

Specifies the subscription name, up to 32 characters.

destinations

Indicates that the output includes all destinations with the respective subscription name.

paths

Indicates that the output includes all paths with the respective subscription name.

scale-paths

Indicates that the output includes all scale paths with the respective subscription name.

Platforms

```

Table 634: Output fields: persistent subscription

Label	Description
Subscription Name	Displays the name of the persistent subscription.
Administrative State	Enabled — The administrative state of the persistent subscription is enabled. Disabled — The administrative state of the persistent subscription is disabled.
Operational State	Up — The operational state of the persistent subscription is up. Down — The operational state of the persistent subscription is down. Transition — The persistent subscription is waiting for the **delay-on-boot** timer to expire.
No. of persistent Telemetry subscriptions	Displays the number of persistent telemetry subscriptions.
Oper Down Reason	Displays the reason for the operational down state.
Subscription Id	Displays the subscription ID.
Description	Displays the description information of the subscription.
Sensor Group	Displays the sensor group name.
Destination Group	Displays the destination group name.
Path Mode	Displays the path mode.
Sample Interval	Displays the sample interval.
Encoding	json — The encoding method used for telemetry notifications. bytes — The encoding method used for telemetry notifications.
Destination	Displays the destination IP address.
Port	Displays the destination port.
Router Instance	Displays the router instance.
Establishment Time	Displays the date and time of the destination establishment.
Retry Count	Displays the number of missed TCP keepalive probes before closing a TCP connection.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Operational Qos	Displays the QoS marking type.
Notification Count	Displays the notification count.
Total Notification Co*	Displays the total notification count.
No. of destinations	Displays the total number of configured destinations.
Path	Displays the path name.
Finished Samples	Displays the number of finished samples.
Deferred Samples	Displays the number of deferred samples.
Total Collection Time	Displays the total collection time.
Min Collection Time	Displays the minimum collection time.
Avg Collection Time	Displays the average collection time.
Max Collection Time	Displays the maximum collection time.
No. of paths	Displays the total number of configured paths.

Table 638: Output fields: service ID DHCP summary (VPLS service)

Label	Description
Sap/Sdp/Bgp-Evpn	The endpoint where DHCP snooping is configured: SAP ID, spoke SDP ID, mesh SDP ID, or BGP-EVPN (all EVPN destinations)
Snoop	Yes — The packets received from the DHCP clients were snooped No — The packets received from the DHCP clients were not snooped
Used/Provided	Used — The number of lease-states that are currently in use on a specific interface, that is, the number of clients on that interface got an IP address by DHCP. This value is always less than or equal to the 'Provided' field Provided — The lease-populate value that is configured for a specific interface
Arp Reply Agent	Displays whether or not there is proper handling of received ARP requests from subscribers
Info Option	Keep — The existing information is kept on the packet and the router does not add any additional information Replace — On ingress, the existing information-option is replaced with the information-option from the router Drop —The packet is dropped and an error is logged
Admin State	Indicates the administrative state

Output Example: (Layer 3 service)

```

===============================================================================
```

Table 639: Output fields: service ID DHCP summary (Layer 3 service)

Label	Description
Interface Name	Name of the interface where DHCP snooping is configured
SapId/Sdp	SAP ID or spoke-SDP binding of the interface
Arp Populate	Indicates if **arp-populate** (MD-CLI: **ipv4 neighbor-discovery populate**) is configured on the interface
Leases Per Interface/Per Sap Limit	Displays the number of active leases and maximum number of leases on the interface or SAP. A per SAP limit can be configured on group-interface SAPs only.
Info Option	Keep — Incoming DHCP discover/request without Option 82 information are processed by the DHCP relay agent as is, ignoring any configured option. For incoming DHCP discover/request with Option 82 information present, configured vendor specific options are merged with the existing Option 82 information before processing by the DHCP relay agent. Configured Circuit ID and Remote ID options are ignored. Replace — If present, remove all the Option 82 information from the incoming DHCP discover/request. Insert the configured DHCP options before forwarding to the DHCP server. Drop —Drop all incoming DHCP discover/request with Option 82 information present. Incoming DHCP discover/request without Option 82 information are processed, ignoring the configured options.
Admin State	The administrative state of DHCP snooping

Full Context

show router bgp summary

Description

This command displays a summary of BGP neighbor information.

If confederations are not configured, that information is not displayed in the command output.

The "State” field displays the global BGP operational state. The valid values are:

- Up — BGP global process is configured and running.
- Down — BGP global process is administratively shutdown and not running.
- Disabled — BGP global process is operationally disabled. The process must be restarted by the operator. For example, if a BGP peer is operationally disabled, the state in the summary table shows the state 'Disabled’.

Parameters

all

Displays BGP peers in all instances.

family

Specifies the type of routing information to be distributed by the BGP instance.

Values ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mdt-safi, ms-pw, mvpn-ipv4, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6

name

Specifies the group name up to 32 characters.

ip-address

Specifies the IPv4 or IPv6 address

Values *ipv4-address* — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x[-interface]

x:x:x:x:x:x:d.d.d.d[-interface]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

interface — mandatory for link local address, up to 32 characters

dns

Displays the reverse DNS resolution of BGP neighbor.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of BGP summary information, and Table 642: Output fields: BGP summary describes the output fields.

Output Example

```

Label	Description
	configuration. An internal group is not the same as a configured BGP peer group.
Member Confederations	The configured members of the BGP confederation
Number of Peer Groups	The total number of configured BGP peer groups
Number of Peers	The total number of configured BGP peers
Total BGP Active Routes	The total number of BGP routes used in the forwarding table
Total BGP Routes	The total number of BGP routes learned from BGP peers
Total BGP Paths	The total number of unique sets of BGP path attributes learned from BGP peers
Total Path Memory	Total amount of memory used to store the path attributes
Total Suppressed Routes	Total number of suppressed routes due to route damping
Total History Routes	Total number of routes with history due to route damping
Total Decayed Routes	Total number of decayed routes due to route damping
Neighbor	BGP neighbor address
Name	DNS name of the BGP neighbor
AS (Neighbor)	BGP neighbor autonomous system number
PktRcvd	Total number of packets received from the BGP neighbor
PktSent	Total number of packets sent to the BGP neighbor
InQ	The number of BGP messages to be processed
OutQ	The number of BGP messages to be transmitted
Up/Down	The amount of time that the BGP neighbor has either been established or not established depending on its current state
State|Recv/Actv/Sent	The BGP neighbor’s current state (if not established) or the number of received routes, active routes and sent routes (if established)

Output

The following output is an example of MPLS label summary information.

Table 643: Output fields: MPLS label summary describes MPLS label summary output fields.

Output Example

```
*A:cses-V23>show>router>mpls-labels># show router mpls-labels summary
===============================================================================
Mpls-Labels Summary
===============================================================================
Static Label Range             : 18400
Bgp Labels Hold Timer          : 30
Segment Routing Start Label    : 0
Segment Routing End Label      : 0
Reserved Label Block Name      :
        test reserved-label
===============================================================================
```

Table 643: Output fields: MPLS label summary

Label	Description
Static Label Range	Displays the static label range.
Bgp Labels Hold Timer	Displays the BGP labels hold timer.
Segment Routing Start Label	Displays the segment routing start label.
Segment Routing End Label	Displays the segment routing end label.
Reserved Label Block Name	Displays the reserved label block name.

Full Context

show router isis summary-address

Description

This command displays IS-IS summary addresses information.

Parameters

ip-prefix[/prefix-length]

Displays the summary address information for a certain IPv4 or IPv6 address.

detail

Keyword to display detailed information.

Platforms

All

Output

The following output is an example of summary address information and Table 647: Output fields: IS-IS summary address describes the IS-IS summary address output fields.

Output example

```
A:node-2# show router isis summary-address

===============================================================================
Rtr Base ISIS Instance 0 Summary Address
===============================================================================
Address                                 Level    Tag        Algo  UPA
-------------------------------------------------------------------------------
1.1.1.2/32                              L1L2     None       0     Yes
1.1.2.0/24                              L1       None       N.A.  No
1.2.3.4/32                              L1L2     4294967295 128   No
-------------------------------------------------------------------------------
Summary Addresses : 3
===============================================================================
```

The following output is an example of detailed summary address information and Table 647: Output fields: IS-IS summary address describes the IS-IS summary address output fields.

Output example

```
A:node-2# show router isis summary-address detail

===============================================================================
Rtr Base ISIS Instance 0 Summary Address (detail)
===============================================================================
-------------------------------------------------------------------------------
Summary Address : 1.1.1.2/32

Advertise Route Tag     : N.A.
===============================================================================
```

Table 647: Output fields: IS-IS summary address

Label	Description
Address or Summary Address	Displays the IP address
Level	Displays the IS-IS level from which the prefix is summarized
Tag	Displays the tag number or displays as None if no tag number exists
Algo or Algorithm	Displays the flexible algorithm number if it exists
UPA	Displays if the summary is configured for the originating UPA when suddenly a summary member route disappears
Advertise Unreachable	Displays if advertise unreachable is enabled
Match Route Tag	When configured, displays the match route tag if it is applicable. When advertise unreachable is enabled, but no route tag is configured, this field displays as None. When advertise unreachable is disabled, this field displays as N.A.
Advertise Route Tag	When configured, displays the advertise route tag. When advertise unreachable is enabled, but no route tag is configured this field displays as None. When advertise unreachable is disabled, this field displays as N.A.

25.28 svlan-statistics

svlan-statistics

Syntax

svlan-statistics port *port-id* **all-svlans**

svlan-statistics port *port-id* **svlan** *tag*

Context

[Tree] (show>subscr-mgmt svlan-statistics)

Full Context

show subscriber-mgmt svlan-statistics

Description

This command displays S-VLAN statistics.

Parameters

port-id

Specifies the physical port ID in the *slot/mda/port* format of the S-VLAN.

Values

slot/*mda*/*port*		
lag-id	lag-*id*	
	lag	keyword
	id	1 to 800
pw-id	pw-*id*	
	id	1 to 32767

all-svlans

Displays statistics for all S-VLANs on the port.

svlan

Displays information about the S-VLAN.

tag

Specifies a valid S-VLAN identifier.

Values 0 to 4095

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of S-VLAN statistics information.

The collected statistics per outer VLAN tag, including the number of subscriber hosts is captured in the output.

Output Example

```
*A:Dut-C# show subscriber-mgmt svlan-statistics port 1/1/2 all-svlans
===============================================================================
Subscriber VLAN statistics for port 1/1/2 vlan 51

svlan-statistics

Syntax

svlan-statistics port *port-id* **all-svlans**

svlan-statistics port *port-id* **svlan** *tag*

Context

[Tree] (clear>subscr-mgmt svlan-statistics)

Full Context

clear subscriber-mgmt svlan-statistics

Description

This command clears Subscriber-VLAN statistics.

Parameters

port-id

Specifies the physical port ID in the *slot/mda/port* format of the S-VLAN.

all-svlans

Clears statistics for all S-VLANs on the port.

svlan

Clears information associated with the S-VLAN.

tag

Specifies a valid S-VLAN identifier.

Values 0 to 4095

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

25.29 switch-fabric

switch-fabric

Syntax

switch-fabric [**exclude-sfm** *sfm-list*]

switch-fabric high-bandwidth-multicast

switch-fabric failure-recovery

Context

[Tree] (show>system switch-fabric)

Full Context

show system switch-fabric

Description

This command displays switch fabric information. When an MDA is not provisioned in an XCM, no information is displayed relating to that MDA. To display the forwarding capacity and multicast planes corresponding to that MDA, regardless of whether an XMA is equipped, an **mda-type** must be provisioned for that MDA.

Parameters

sfm-list

Specifies the SFMs, listed as a comma-separated list of SFM numbers (1 to 16, depending on the platform), to exclude from the displayed switch fabric information.

Values *sfm-name* [,*sfm-name*...]

where *sfm-name* can be 1 to 16

high-bandwidth-multicast

Keyword to display the high-bandwidth multicast traffic tap allocations of the switch fabric.

failure-recovery

Keyword to display information about the automatic switch fabric recovery process. The SFMs are listed in numerical order and are shown only when the recovery process is in progress or has completed.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-e, 7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following outputs are examples of switch fabric information, and the tables describe the output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Output Example show system switch-fabric; Table 648: Output fields: switch fabric
- Output Example show system switch-fabric exclude-sfm; Table 648: Output fields: switch fabric
- Output Example show system switch-fabric high-bandwidth-multicast; Table 649: Output fields: switch fabric high bandwidth multicast
- Output Example show system switch-fabric failure-recovery (7750 SR); Table 650: Output fields: switch fabric failure recovery

Output Example show system switch-fabric

```

Table 649: Output fields: switch fabric high bandwidth multicast describes the switch fabric high-bandwidth multicast output fields.

Table 649: Output fields: switch fabric high bandwidth multicast

Label	Description
Slot/FP	Displays either the FP (uniquely identified by an IOM number and FP number) or a CPM letter.
Cap Min	Displays the minimum forwarding capacity of the slot and XMA/MDA as a percentage.
Cap Max	Displays the maximum forwarding capacity of the slot and XMA/MDA as a percentage.
Hbm	Displays high-bandwidth multicast traffic information, which can be used to avoid overlapping planes on FPs that have a lot of multicast ingress traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Grp	Displays high-bandwidth multicast groups for each FP.
Planes Hi | Lo	Displays plane information. When 2 FPs are in a different group, no plane overlap occurs.

Output Example show system switch-fabric failure-recovery (7750 SR)

switch-fabric

Syntax

switch-fabric

Context

[Tree] (tools>perform>system switch-fabric)

Full Context

tools perform system switch-fabric

Description

This command performs switch fabric operations.

Platforms

7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

25.30 switch-path

switch-path

Syntax

switch-path [**lsp** *lsp-name*] [**path** *path-name*]

Context

[Tree] (tools>perform>router>mpls switch-path)

Full Context

tools perform router mpls switch-path

Description

Use this command to move from a standby (or an active secondary) to another standby of the same priority. If a new standby path with a higher priority or a primary path comes up after the **tools perform** command is executed, the path re-evaluation command runs and the path is moved to the path specified by the outcome of the re-evaluation.

Parameters

lsp-name

Specifies an existing LSP name, up to 64 characters in length.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

path-name

Specifies the path name to which to move the specified LSP.

Table 651: Output fields: redundancy multi-chassis sync

Label	Description
Peer IP Address	Displays the multi-chassis redundancy peer.
Description	The text string describing the peer.
Authentication	If configured, displays the authentication key used between this node and the multi-chassis peer.
Source IP Address	Displays the source address used to communicate with the multi-chassis peer.
Admin State	Displays the administrative state of the peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Client Applications	Displays the list of client applications synchronized between SRs.
Sync Admin State	Displays the administrative state of the synchronization.
Sync Oper State	Displays the operation state of the synchronization.
DB Sync State	Displays the database state of the synchronization.
Num Entries	Displays the number of entries on local router.
Lcl Deleted Entries	Displays the number of deleted entries made at the local router.
Alarm Entries	Displays the alarm entries on the local router.
Rem Num Entries	Displays the number of entries on the remote router.
Rem Lcl Deleted Entries	Displays the number of locally deleting entries made by the remote router.
Rem Alarm Entries	Displays alarm entries on the remote router.

The following output is an example of multi-chassis sync peer information, and Table 652: Output fields: redundancy multi-chassis sync peer describes the output fields.

25.32 sync-database

sync-database

Syntax

sync-database [**peer** *ip-address*] [**port** *port-id* | *lag-id*] [**sync-tag** *sync-tag*] [**application** *application*] [**detail**] [**type** *type*]

sync-database [**peer** *ip-address*] [**sdp** *sdp-id*] [**sync-tag** *sync-tag*] [**application** *application*] [**detail**] [**type** *type*]

Context

[Tree] (tools>dump>redundancy>multi-chassis sync-database)

Full Context

tools dump redundancy multi-chassis sync-database

Description

This command dumps multi-chassis sync database information.

Parameters

ip-address

Dumps the specified address of the multi-chassis peer.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

port-id

Dumps the specified port ID of the multi-chassis peer.

Values

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port-id, *lag-id*	slot/mda/port		
	lag-id	lag-*id*	
		lag	keyword
		id	1 to 800
	pw-id	pw-*id*	
		pw	keyword
		id	1 to 32767

lag-id

Dumps the specified Link Aggregation Group (LAG) on this system.

Values

port-id, *lag-id*	slot/mda/port		
	lag-id	lag-*id*	
		lag	keyword
		id	1 to 800
	pw-id	pw-*id*	
		pw	keyword
		id	1 to 32767

sync-tag

Dumps the synchronization tag used while synchronizing this port with the multi-chassis peer, up to 32 characters in length.

application

Dumps the specified application information that was synchronized with the multi-chassis peer.

Values

dhcp-server	local DHCP server
igmp	internet group management protocol
igmp-snooping	IGMP snooping
mc-ring	multi-chassis ring
l2tp	L2TP
mld	multicast listener discovery
mld-snooping	multicast listener discovery snooping
srrp	simple router redundancy protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sub-host-trk	subscriber host tracking
sub-mgmt-ipoe	subscriber management for IPoE
sub-mgmt-pppoe	subscriber management for PPPoE
mc-ipsec	multi-chassis IPsec
python	Python cache
diameter-proxy	diameter proxy
pim-snpg-sap	protocol independent multicast snooping for SAP
pim-snpg-sdp	protocol independent multicast snooping for SDP

detail

Displays detailed information.

type

Displays information for the specified type.

Values alarm-deleted, local-deleted, global-deleted, omcr-standby, omcr-alarmed

sdp-id

Displays information for the specified SDP ID.

Values 1 to 32767

Platforms

All

Output

The following output is an example of sync database information.

Output Example

```
A:Dut-C# tools dump redundancy multi-chassis sync-database application

 <ip-address>         : a.b.c.d
 <port-id|lag-id>     : slot/mda/port or lag-<lag-id>
 <sync-tag>           : [32 chars max]
 <application>        : dhcp-server    - local dhcp server
                        igmp           - internet group management protocol
                        igmp-snooping  - igmp-snooping
                        mc-ring        - multi-chassis ring
                        mld            - multicast listener discovery
                        mld-snooping   - multicast listener discovery-snooping
                        srrp           - simple router redundancy protocol
                        sub-host-trk   - subscriber host tracking
                        sub-mgmt-ipoe  - subscriber management for IPoE
                        sub-mgmt-pppoe - subscriber management for PPPoE
                        mc-ipsec       - multi-chassis IPsec
 <detail>             :  - displays detailed information
 <type>               : alarm-deleted|local-deleted|global-deleted|
```

Context

[Tree] (clear>redundancy>multi-chassis sync-database)

Full Context

clear redundancy multi-chassis sync-database

Description

This command clears multi-chassis sync database information.

Parameters

ip-address

Clears the specified address of the multi-chassis peer.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x – [0 to FFFF] H
- d – [0 to 255] D

port-id

Clears the specified port ID of the multi-chassis peer.

Values *slot*/*mda*/*port*

lag-id

Clears the specified Link Aggregation Group (LAG) on this system.

Values lag-*lag-id*

all

Clears all ports and synchronization tags.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sync-tag

Clears the synchronization tag used while synchronizing this port with the multi-chassis peer. The synchronization tag can be up to 32 characters.

sdp-id

Specifies the SDP identifier.

Values 1 to 32767

application

Clears the specified application information that was synchronized with the multi-chassis peer.

Values The following are values for the 7750 SR and 7950 XRS:

all:	All supported applications
dhcp-server:	local dhcp server
igmp:	internet group management protocol
igmp-snooping:	igmp-snooping
mc-ring:	multi-chassis ring
mld-snooping:	multicast listener discovery-snooping
srrp:	simple router redundancy protocol
sub-host-trk	subscriber host tracking
sub-mgmt:	subscriber management

Values The following are values for the 7450 ESS:

all	All supported applications
igmp-snooping	igmp-snooping
mc-ring	multi-chassis ring
mld-snooping	multicast listener discovery-snooping
sub-host-trk	subscriber host tracking
sub-mgmt	subscriber management

Platforms

25.33 sync-database-reconcile

sync-database-reconcile

Syntax

sync-database-reconcile [**peer** *ip-address*] [**port** *port-id* | *lag-id* [**sync-tag** *sync-tag*]] [**application** *application*]

sync-database-reconcile [**peer** *ip-address*] [**sdp** *sdp-id* [**sync-tag** *sync-tag*]] [**application** *application*]

Context

[Tree] (tools>perform>redundancy>multi-chassis sync-database-reconcile)

Full Context

tools perform redundancy multi-chassis sync-database-reconcile

Description

This command provides the parameters to reconcile MCS database entries.

Parameters

ip-address

Specifies the IP address (in the form of a.b.c.d).

port-id

Specifies the port ID in the slot/MDA/port format.

lag-id

Specifies the LAG ID.

Values lag-id: **lag**-*id*
lag: keyword
id: 1 to 200

syn-tag

Specifies the syn tag up to 32 characters.

application

Specifies the application.

Values dhcp-server — Specifies the local DHCP server
igmp — Specifies the Internet group management protocol
igmp-snooping — Specifies igmp-snooping
mc-ring — Specifies multi-chassis ring
l2tp — Specifies L2TP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mld — Specifies multicast listener discovery

mld-snooping — Specifies multicast listener discovery-snooping

srrp — Specifies simple router redundancy protocol

sub-host-trk — Specifies subscriber host tracking

sub-mgmt-ipoe — Specifies subscriber management for IPoE

sub-mgmt-pppoe — Specifies subscriber management for PPPoE

mc-ipsec — Specifies multi-chassis IPsec

python — Specifies Python cache

diameter-proxy — Specifies diameter proxy

pim-snpg-sap — Specifies protocol independent multicast snooping for SAPs

pim-snpg-sdp — Specifies protocol independent multicast snooping for SDPs

sdp-id

Specifies the SDP ID.

Values 1 to 17407

Platforms

All

25.34 sync-if-timing

sync-if-timing

Syntax

sync-if-timing

Context

[Tree] (show>system>satellite>eth-sat sync-if-timing)

Full Context

show system satellite eth-sat sync-if-timing

Description

This command displays synchronous interface timing operational information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output is an example of Ethernet satellite synchronous interface timing information where it is the default case of using the first two uplink ports as sources into the satellite. Table 654: Output fields: system satellite timing describes the fields.

```
show system satellite eth-sat 1 sync-if-timing

Table 654: Output fields: system satellite timing

Label	Description
System Status	The system status
System Quality Level	The quality level being generated by the system clock
Quality Level Selection	The quality level selection status
Current Frequency Offset (ppm)	The offset that is applied within the central clock to align the local oscillator to the frequency of the selected input reference. The units for this value are parts per million (ppm). This value should not be misinterpreted as an indicator of the frequency accuracy of the output of the central clock. If the central clock is locked to a true Primary Reference Clock or Stratum 1 frequency reference, this value should report a number within the range [-5, +5] ppm.
Operating mode	The operating mode of the clock: automatic – no user configuration has been made to the clock configuration of the satellite, and it is operating with the default configuration manual – the user has modified the configuration in some way and all functionality must now be manually controlled
Reference Input 1/2	
Admin Status	down — Indicates **ref1** or **ref2** configuration is administratively shutdown up — Indicates **ref1** or **ref2** configuration is administratively enabled diag — Indicates the reference has been forced using the **force-reference** command
Rx Quality Level	The QL value received on the interface: • inv — SSM received on the interface indicates an invalid code for the interface type • unknown — No QL value was received on the interface
Quality Level Override	Indicates whether the QL value used to determine the reference was configured directly by the user
Qualified for Use	Indicates whether the reference has been qualified to be used as a source of timing for the node
Not Qualified Due To	The reason why the reference has not been qualified

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Selected for Use	Indicates whether the method is presently selected
Not Selected Due To	The reason why the method is not selected: • disabled • not qualified • previous failure • LOF • AIS-L • validating • on standby • ssm quality
Source Port	The source port for the reference

sync-if-timing

Syntax

sync-if-timing [*cpm-slot*]

Context

[Tree] (show>system sync-if-timing)

Full Context

show system sync-if-timing

Description

This command displays synchronous interface timing operational information.

Parameters

cpm-slot

Specifies the system CPM slot.

Values standby, A, B

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of sync-if-timing information, and Table 655: Output fields: system timing describes the output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output Example
The following system example shows:

- **sync-if timing**, or
- **sync-if-timing** "A" when the SETS reference on the active CPM-A locks to BITS A, or
- **sync-if-timing** "B" when the SETS reference on the active CPM-B locks to BITS A

Note:
The following output applies only to the 7750 SR-1e/2e/3e and 7950 XRS-16/20/40 platforms.

```
*A:Dut-B# show system sync-if-timing or show system sync-if-timing "A"

Table 655: Output fields: system timing

Label	Description
System Status CPM A/B	Indicates the present status of the synchronous timing equipment subsystem (SETS). Not Present — Only shown on systems without central clocks Master Freerun — The clock is in free-run because it hasn't had a qualified input reference to lock to Master Holdover — The clock was locked to an input reference but has lost all qualified input references and is in holdover. Master Locked — The clock is locked to an input reference Acquiring — The clock is training to a qualified input reference.
Reference Input Mode	Revertive — Indicates that for a re-validated or a newly validated reference source which has a higher priority than the currently selected reference has reverted to the new reference source. Non-revertive — The clock cannot revert to a higher priority clock if the current clock goes offline.
Quality Level Selection	Indicates whether the ql-selection command has been enabled or disabled. If this command is enabled, then the reference is selected first using the QL value, then by the priority reference order. If this command is not enabled, then the reference is selected by the priority reference order.
Reference Selected	Indicates which reference has been selected: • ref1, ref2 — (for all chassis) • BITS A, BITS B:

Label	Description
System Quality Level	Indicates the quality level being generated by the system clock.
Current Frequency Offset	This value indicates the offset that is applied within the central clock to align the local oscillator to the frequency of the selected input reference. The units for this value are parts per million (ppm). This value should not be misinterpreted as an indicator of the frequency accuracy of the output of the central clock. If the central clock is locked to a true Primary Reference Clock or Stratum 1 frequency reference, this value should report a number within the range [-5, +5] ppm.
Input Minimum Quality Level	The configured minimum acceptable QL to consider for use by the central clock.
Wait to Restore Timer	The configured timeout to use for the Wait to Restore timer.
Reference Order	ref1, ref2, bits — Indicates that the priority order of the timing references.
Reference Mate CPM	Data within this block represents the status of the timing reference provided by the Mate CPM. This will be the BITS input from the standby CPM.
Admin Status	down — The **ref1** or **ref2** configuration is administratively shutdown. up — The **ref1** or **ref2** configuration is administratively enabled. diag — Indicates the reference has been forced using the force-reference command.
Quality Level Override	Indicates whether the QL value used to determine the reference was configured directly by the user.
Rx Quality Level	Indicates the QL value received on the interface. • inv — SSM received on the interface indicates an invalid code for the interface type. • unknown — No QL value was received on the interface.
Qualified for Use	Indicates whether the reference has been qualified to be used as a source of timing for the node.
Not Qualified Due To	Indicates the reason why the reference has not been qualified: • disabled • LOS • OOPIR • OOF

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Selected for Use	Indicates whether the method is presently selected.
Not Selected Due To	Indicates the reason why the method is not selected: • disabled • not qualified • previous failure • LOF • AIS-L • validating • on standby • ssm quality
Source Port	Identifies the Source port for the reference.
Interface Type	The interface type configured for the BITS port.
Framing	The framing configured for the BITS port.
Line Coding	The line coding configured for the BITS port.
Line Length	The line length value of the BITS output.
Output Admin Status	down — The BITS output is administratively shutdown. up — The BITS output is administratively enabled.
Output Minimum Quality Level	The configured minimum acceptable QL to use for the BITSout signal.
Output Source	The source to be used to provide the signal on the BITS output port. line reference — unfiltered recovered line reference. internal clock — filtered node clock output.
Output Reference Selected	The reference selected as the source for the BITS output signal (ref1, ref2, or PTP).
Output Squelch	Indicates whether the squelch function for BITSout is enabled or disabled.
TX Quality Level	QL value for BITS output signal.

The following output is an example of synchronization interface timing information, and Table 656: Output fields: synchronization interface timing describes the output fields.

The following output is an example of a node locked to the active BITS input and directing the signal on ref1 to the BITS output.

```

Table 656: Output fields: synchronization interface timing

Label	Description
System Status CPM A	Indicates the system status of CPM A
Current Frequency Offset	Displays frequency offset in parts per billion (ppb)
Reference Input Mode	Indicates the reference input mode
Reference Order	Indicates the reference order
Reference Input 1	Displays information about Reference Input 1
Admin Status	Indicates the Admin status of Reference Input 1 down — Indicates the **ref1** or **ref2** configuration is administratively shutdown up — Indicates the **ref1** or **ref2** configuration is administratively enabled diag — Indicates the reference has been forced using the force-reference command
Qualified For Use	Indicates if the Reference Input 1 is qualified for use
Selected For Use	Indicates if Reference Input 1 is selected for use
Source Port	The source port information
Reference Input 2	Displays information about Reference Input 2
Admin Status	Indicates the Admin status of Reference Input 2 down — Indicates the **ref1** or **ref2** configuration is administratively shutdown up — Indicates the **ref1** or **ref2** configuration is administratively enabled diag — Indicates the reference has been forced using the force-reference command
Qualified For Use	Indicates if the Reference Input 2 is qualified for use
Selected For Use	Indicates if Reference Input 2 is selected for use
Not Selected Due To	Indicates the reason if Reference Input 2 is not selected
Source Port	The source port information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Interface Type	The interface type configured for the BITS port
Framing	The framing configured for the BITS port
Line Coding	The line coding configured for the BITS port
Line Length	The line length value of the BITS output
Output Admin Status	down — The BITS output is administratively shutdown up — The BITS output is administratively enabled diag — Indicates the BITS output has been forced using the **force-reference** command
Output Reference Selected	The reference selected as the source for the BITS output signal (ref1 or ref2)
TX Quality Level	QL value for BITS output signal
Quality Level Selection	Indicates whether the **ql-selection** command is enabled or disabled If this command is enabled, the reference is selected first using the QL value, then by the priority reference order. If this command is not enabled, the reference is selected by the priority reference order.
Input Minimum Quality Level	Indicates the minimum input quality level that the system clock can generate
System Quality Level	Indicates the quality level that the system clock can generate
Rx Quality Level	Indicates the QL value received on the interface inv — SSM received on the interface indicates an invalid code for the interface type unknown — No QL value was received on the interface
Wait to Restore Timer	Indicates whether the **wait-to-restore-timer** command is enabled or disabled

sync-if-timing

Syntax

sync-if-timing {**ref1** | **ref2** | **bits** | **bitsa** | **bitsb** | **gnss** | **gnssa** | **gnssb** | **synce** | **syncea** | **synceb** }

Context

[Tree] (clear>system sync-if-timing)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

clear system sync-if-timing

Description

This command individually clears (re-enables) a previously failed reference. As long as the reference is one of the valid options, this command is always executed. An inherent behavior enables the revertive mode which causes a reevaluation of all available references.

The timing options may vary depending on the platform because not all options are supported on all platforms.

This command also clears the Wait-to-Restore state of the reference so that it can be selected.

Parameters

ref1

Clears the first timing reference.

ref2

Clears the second timing reference.

bits

Clears the bits timing reference on the CPM.

bitsa

Clears the BITS port timing reference of CPM A for redundant systems with a BITS port on each CPM.

bitsb

Clears the BITS port timing reference of CPM B for redundant systems with a BITS port on each CPM.

gnss

Clears the GNSS port timing reference. This keyword is only supported on 7750 SR single-slot FP5 platforms.

gnssa

Clears the GNSS port timing reference for the CPM in slot A. This keyword is only supported on 7750 SR-2se platforms.

gnssb

Clears the GNSS port timing reference for the CPM in slot B. This keyword is only supported on 7750 SR-2se platforms.

synce

Clears the SyncE/1588 port timing reference. This keyword is only supported on single slot systems.

syncea

Clears the SyncE/1588 port of the CPM A timing reference. This keyword is only supported on platforms supporting redundant CPM.

synceb

Clears the SyncE/1588 port of the CPM B timing reference. This keyword is only suported on platforms supporting redundant CPM.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sync-if-timing

Syntax

sync-if-timing *reference*

Context

[Tree] (clear>system>satellite>eth-sat sync-if-timing)

Full Context

clear system satellite eth-sat sync-if-timing

Description

This command clears (re-enables) a previously failed reference on the Ethernet satellite.

Parameters

reference

Specifies to clear the first or second timing reference.

Values ref1, ref2

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

26 s Commands – Part IV

26.1 synchronization

synchronization

Syntax

synchronization

Context

[Tree] (show>redundancy synchronization)

Full Context

show redundancy synchronization

Description

This command displays redundancy synchronization times.

Platforms

All

Output

The following output is an example of redundancy synchronization information, and Table 657: Output fields: synchronization describes the output fields.

Output Example

```
A:ALA-1>show>redundancy# synchronization
===============================================================================
Synchronization Information
===============================================================================
Standby Status               : disabled
Last Standby Failure         : N/A
Standby Up Time              : N/A
Failover Time                : N/A
Failover Reason              : N/A
Boot/Config Sync Mode        : None
Boot/Config Sync Status      : No synchronization
Last Config File Sync Time   : Never
Last Boot Env Sync Time      : Never
===============================================================================
A:ALA-1>show>redundancy#
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 657: Output fields: synchronization

Label	Description
Standby Status	Displays the status of the standby CPM.
Last Standby Failure	Displays the timestamp of the last standby failure.
Standby Up Time	Displays the length of time the standby CPM has been up.
Failover Time	Displays the timestamp when the last redundancy failover occurred causing a switchover from active to standby CPM. If there is no redundant CPM card in this system or no failover has occurred since the system last booted, the value will be 0.
Failover Reason	Displays a text string giving an explanation of the cause of the last redundancy failover. If no failover has occurred, an empty string displays.
Boot/Config Sync Mode	Displays the type of synchronization operation to perform between the primary and secondary CPMs after a change has been made to the configuration files or the boot environment information contained in the boot options file (BOF).
Boot/Config Sync Status	Displays the results of the last synchronization operation between the primary and secondary CPMs.
Last Config File Sync Time	Displays the timestamp of the last successful synchronization of the configuration files.
Last Boot Env Sync Time	Displays the timestamp of the last successful synchronization of the boot environment files.

26.2 syslog

syslog

Syntax

syslog [*syslog-id*]

Context

[Tree] (show>log syslog)

Full Context

show log syslog

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays syslog event log destination summary information or detailed information on a specific syslog destination.

Parameters

syslog-id

Displays detailed information on the specified syslog event log destination.

Values 1 to 10

Platforms

All

Output

The following output is an example of syslog information, and Table 658: Output fields: log syslog describes the output fields.

Output example: syslog summary

```
A:node-2# show log syslog

===============================================================================
Syslog Target Hosts
===============================================================================
Syslog Name
Id     Ip Address                                    Port        Sev Level
 Below Level Drop                                Facility    Prefix
   TLS Profile
-------------------------------------------------------------------------------
Sunnyvale Server
1      10.1.1.2                                      514         emergency
 0                                                 local7      yes

Naperville Server
2      192.168.0.10                                  514         info
 0                                                 local7      yes

===============================================================================
```

Table 658: Output fields: log syslog

Label	Description
Syslog Name	The syslog name for the syslog destination
Id	The syslog ID for the syslog destination
Ip Address	The IP address of the syslog target host
Port	The configured port number used when sending Syslog messages
Sev Level	The Syslog message severity level threshold

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Below Level Drop	A count of messages not sent to the syslog collector target because the severity level of the message was above the configured severity. The higher the level, the lower the severity.
Facility	The facility code for messages sent to the syslog target host
Prefix	Yes — A log prefix was prepended to the Syslog message sent to the syslog host No — A log prefix was not prepended to the Syslog message sent to the syslog host
TLS Profile	The TLS profile name

The following output is an example of syslog information, and Table 659: Output fields: log syslog ID describes the output fields.

Output example: syslog ID 1 summary

```
A:node-2# show log syslog 1

===============================================================================
Syslog target 1 name Sunnyvale Server
===============================================================================
IP Address       : 10.1.1.2
Port             : 514
Log-ids          : none
Prefix           : TMNX
Facility         : local7
Severity Level   : info
Prefix           : yes
Below Level Drop : 0
Description      : N/A
TLS Profile Name : N/A
HOSTNAME         : node-2
TIMESTAMP Format : millisecond
Protocol Version : rfc3164
===============================================================================
```

Table 659: Output fields: log syslog ID

Label	Description
IP Address	The IP address of the syslog target host
Port	The configured port number used when sending Syslog messages
Log-ids	Events are directed to this destination
Prefix	The prefix string prepended to the Syslog message
Facility	The facility code for messages sent to the syslog target host
Severity Level	The Syslog message severity level threshold

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Prefix	Yes — A log prefix was prepended to the Syslog message sent to the syslog host No — A log prefix was not prepended to the Syslog message sent to the syslog host
Below Level Drop	A count of the messages not sent to the syslog collector target because the severity level of the message was above the configured severity. The higher the level, the lower the severity.
Description	The syslog server description
TLS Profile Name	The TLS profile name
HOSTNAME	A string-based name used for the syslog HOSTNAME field instead of an IP address
TIMESTAMP Format	The timestamp format used for the syslog TIMESTAMP field: • standard – the standard HH:MM:SS format is being used • millisecond – a format of HH:MM:SS.sss is being used. The 3 additional fractional second digits provide millisecond granularity.
Protocol Version	The version of the syslog protocol being used: • rfc3164 – The RFC 3164 syslog protocol is being used • rfc5424 – The RFC 5424 syslog protocol is being used

syslog

Syntax

syslog

Context

[Tree] (show>service>nat syslog)

Full Context

show service nat syslog

Description

This command enters the connect to display NAT syslog information

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

26.3 syslog-export-policy

syslog-export-policy

Syntax

syslog-export-policy *name* **associations**

syslog-export-policy *name*

syslog-export-policy

Context

[Tree] (show>service>nat>syslog syslog-export-policy)

Full Context

show service nat syslog syslog-export-policy

Description

This command displays information about syslog export policies.

Parameters

name

Displays information about the specified NAT syslog export policy.

associations

Displays where the **syslog-export-policy** is configured.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of syslog export policy information.

Output Example

```
*SR-OS-NODE-1# show service nat syslog syslog-export-policy <name>
===============================================================================
NAT syslog policy
===============================================================================
Description
Facility
Log prefix
Max tx delay (deciseconds)
MTU
Rate limit (pps)
Severity level
Includes
Last management change
-------------------------------------------------------------------------------
```

No. of syslog export policies:
```

Table 660: Output fields: syslog export policy displays syslog export policy field descriptions.

Table 660: Output fields: syslog export policy

Field	Description
Description	Displays the description for the syslog export policy.
Facility	Displays information about the facility. Valid values: kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Log prefix	Displays information about the log prefix.
Max tx delay (deciseconds)	Displays the time waited to aggregate multiple events info a single log message (event aggregation).
MTU	Displays information about the IP MTU of the syslog frame.
Rate limit (pps)	Displays the rate limit imposed on syslog frames sent toward the collector.
Severity level	Displays the syslog severity level. Valid values: emergency, alert, critical, error, warning, notice, info, debug
Includes	Displays the optional fields related to the flow that can be included in the flow log message.
Last management change	Displays the time and date of the last configuration change.
Router	Displays the routing instance from which the collector is reachable.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Source IP address	Displays the source IP address of the syslog frame.
Administrative state	Displays the administrative state of the collector.
Destination port	Displays the destination port of the collector.
IP address	Displays the IP address of the collector.
Syslog export policy	Displays the syslog export policy associated with this NAT policy.
No. of syslog export policies	Displays the number of syslog export policies configured in the system.

26.5 system-config

system-config

Syntax

system-config

Context

[Tree] (show>eth-cfm system-config)

Full Context

show eth-cfm system-config

Description

This command displays the ETH-CFM system-level configuration parameters under the **configure eth-cfm [{redundancy | slm | system}]** hierarchies and various system capabilities.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of ETH-CFM system-level configuration information.

Output Example

```
A:node-2# show eth-cfm system-config
===============================================================================
CFM System Configuration
===============================================================================
Redundancy
    MC-LAG Standby MEP Shutdown: false
    MC-LAG Hold-Timer          :   1 second(s)

Synthetic Loss Measurement
    Inactivity Timer           : 100 second(s)

ETH-CCM Grace-Period
    Transmit Enabled           : true

26.6 system-filter

system-filter

Syntax

system-filter [**chained-to**]

Context

[Tree] (show>filter system-filter)

Full Context

show filter system-filter

Description

This command shows system filter information.

Parameters

chained-to

Displays filters that chain to a given system filter.

Platforms

All

Output

No Parameters Specified — When no parameters are specified, the output is grouped for IPv4 and IPv6, and displays information about the active system filter and all filters with scope **system**.

The following output is an example of system filter information when no parameters are specified.

Output Example

```
*A:Dut-C>show>filter# system-filter

===============================================================================
IP system filters
===============================================================================
Filter-Id                    Active
-------------------------------------------------------------------------------
100                          Yes
65535                        No
-------------------------------------------------------------------------------
No. of IP system filters (total / active): 2 / 1
===============================================================================

===============================================================================
IPv6 system filters
===============================================================================
Filter-Id                    Active

Output Example

```
show eth-cfm system-info
===============================================================================
CFM System State Information
===============================================================================
ETH-CCM Grace-Period           : Inactive
===============================================================================
```

26.8 system-statistics

system-statistics

Syntax

system-statistics data-trigger

Context

[Tree] (clear>subscr-mgmt system-statistics)

Full Context

clear subscriber-mgmt system-statistics

Description

This command clears subscriber statistics at the system level.

Parameters

data-trigger

Clears data trigger statistics for all data trigger enabled SAPs in the system.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-statistics

Syntax

system-statistics

Context

[Tree] (clear>nat system-statistics)

Full Context

clear nat system-statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command clears NAT statistics at the system level.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

27 t Commands

27.1 tacplus

tacplus

Syntax

tacplus *server-index* **router-instance** *router-name*

tacplus *server-index*

tacplus *server-index* **service-name** *service-name*

Context

[Tree] (clear tacplus)

Full Context

clear tacplus

Description

This command clears TACACS+ server statistics.

Parameters

server-index

Specifies the index for the TACACS+ server.

Values 1 to 5

service-name

Specifies the service name, up to 64 characters.

router-name

Specifies the router instance, expressed as the router name or the service ID.

Values *router-name* — "Base", "management", "vpls-management"
vprn-svc-id — 1 to 2147483647

Default Base

Platforms

All

taii-type2-using

Syntax

taii-type2-using *global-id*[:*prefix*[:*ac-id*]]

Context

[Tree] (show>service taii-type2-using)

Full Context

show service taii-type2-using

Description

This command displays switch-point information using TAII.

Parameters

global-id[:prefix[:ac-id]]

Specifies the switch-point information using SAII-Type2.

Values

<global-id[:prefix*> : <global-id>[:<prefix>[:<ac-id>]]	
global-id	1 to 4294967295
prefix	a.b.c.d | 1 to 4294967295
ac-id	1 to 4294967295

Platforms

All

Output

The following output is an example of service switch-point information using TAII information.

Output Example

```
*A:Dut-E# show service taii-type2-using 6:10.20.1.6:1
===============================================================
Service Switch-Point Information

27.3 tail

tail

Syntax

tail [**lsp-id** *lsp-id*] [**tunnel-id** *tunnel-id*] [**source-address** *ip-address*]

tail ldp prefix *ip-prefix/prefix-length* [**source-address** *ip-address*]

tail statistics

Context

[Tree] (tools>dump>test-oam>lsp-bfd tail)

Full Context

tools dump test-oam lsp-bfd tail

Description

This command dumps information for BFD sessions on LSPs.

Parameters

lsp-id

Specifies an LSP for which to dump information.

Values 1 to 65535

tunnel-id

Specifies a tunnel for which to dump information.

Values 1 to 65535

ip-address

Specifies an IP address for which to dump information.

Values *ipv4-address* — a.b.c.d

ipv6-address — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ldp

Dumps LDP information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix/prefix-length

Specifies a source IP prefix for which to dump information, and the prefix length.

Values <*ipv4-prefix*>/32 | <*ipv6-prefix*>/128

ipv4-prefix — a.b.c.d

ipv4-prefix-length — 0 to 32

ipv6-prefix — x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

ipv6-prefix-length — 0 to 128

statistics

Displays global statistics for BFD-on-LSP sessions terminated by LSP tail-ends.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of tail information.

Output Example

```
A:bkvm33>tools>dump>test-oam>lsp-bfd# tail

27.4 targ-peer

targ-peer

Syntax

targ-peer [*ip-address*] [**detail**]

targ-peer [**detail**] *family*

targ-peer resource-failures [*family*]

Context

[Tree] (show>router>ldp targ-peer)

Full Context

show router ldp targ-peer

Description

This command displays configuration information for the targeted LDP peers.

Parameters

ip-address

Specifies the IP address of a targeted LDP peer for which to display information.

Values

ipv4-address -a.b.c.d	
ipv6-address:	x:x:x:x:x:x:x:x
	x:x:x:x:x:x:d.d.d.d
	x: [0 to FFFF]H
	d: [0 to 255]D

detail

Displays detailed configuration information.

family

Specifies a peer family for which to display information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values ipv4 or ipv6

resource-failures

Displays resource failure information for targeted LDP peers.

Platforms

All

Output

The following outputs are examples of LDP targeted peer information, and Table 661: Output fields: LDP targeted peer describes the output fields.

===============================================================================
```

The following table describes the LDP targeted peer output fields.

Table 661: Output fields: LDP targeted peer

Label	Description
Peer	The IP address of the peer.
Adm	Up — The LDP is administratively enabled. Down — The LDP is administratively disabled.
Opr	Up — The LDP is operationally enabled. Down — The LDP is operationally disabled.
Hello Fctr	The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors.
Hold Time	The hello time or hold time. The time interval (in seconds) that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor.
KA Fctr	The value by which the keepalive timeout is divided to calculate the keepalive time, for example, the time interval (in seconds) between LDP keepalive messages. LDP keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors.
KA Time	The time interval (in seconds) that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally, the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages).
Active Adjacencies	The number of active adjacencies (established sessions) associated with the LDP instance.
Auth	Enabled — Authentication using MD5 message-based digest protocol is enabled. Disabled — No authentication is used.
Passive Mode	The mode used to set up LDP sessions. This value is only applicable to targeted sessions and not to LDP interfaces. True — LDP responds only when it gets a connect request from a peer and will not attempt to actively connect to its neighbors. False — LDP actively tries to connect to its peers.
Auto Created	Specifies that a targeted peer was automatically created through service manager. For an LDP interface, this value is always false.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Creator	autorx — The autorx is the creator. autotx — The autotx is the creator.
No. of Peers	The total number of LDP peers.
Tunneling	Enabled — Tunneling is enabled. Disabled — No tunneling is used.
LSP	The LSP name.

27.5 targ-peer-template

targ-peer-template

Syntax

targ-peer-template [*peer-template*] [**community** *community*]

Context

[Tree] (show>router>ldp targ-peer-template)

Full Context

show router ldp targ-peer-template

Description

This command displays the configured parameters of a targeted peer-template.

Parameters

peer-template

Specifies a targeted peer template on this virtual router that participates in the LDP protocol up to 32 characters.

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

27.7 targeted-auto-rx

targeted-auto-rx

Syntax

targeted-auto-rx hold-time *seconds*

Context

[Tree] (clear>router>ldp targeted-auto-rx)

Full Context

clear router ldp targeted-auto-rx

Description

This command clears unneeded automatic T-LDP sessions on all applicable nodes. The operator must run this command during a specific time window on all nodes on which **auto-rx** is configured. The operator must also ensure that the configured **hold-time** value should be longer than the hello-timer value plus the time required to run the **clear** command on all applicable nodes. The configured **hold-time** value must be a non-zero value.

When the hold timer for this command is in progress, the operator can display the remaining timeout value by using the **tools dump router ldp timers** command.

This **clear** command is not synchronized to the standby CPM. Consequently, if the operator configures this command with a large **hold-time** value and a CPM switchover occurs during this time, the operator must reconfigure this **clear** command on the newly active CPM.

Parameters

hold-time

Specifies the time window during which this command must be run on all applicable nodes.

seconds

Specifies the hold timer value in seconds.

Platforms

All

27.8 tcp

tcp

Syntax

tcp sessions

tcp settings

tcp statistics

Context

[Tree] (tools>dump>system>cpm-http-redirect tcp)

Full Context

tools dump system cpm-http-redirect tcp

Description

This command displays the system level TCP session state information of the **cpm-http-redirect optimized-mode** for currently opened sessions. Specifically, the following are displayed:

- New: Syn received and Syn-Ack not sent
- SYN: Syn-Ack sent and waiting for Ack
- ESTABLISHED: Ack received and waiting for data
- FIN: FIN sent and waiting for Fin-Ack
- Delete: Sum of all currently open connections at this time, representing the connections to be deleted
- HTTP Response dropped: communication error; the redirect failed to be sent to the TCP layer

All current sessions are counted both in the state where they belong, such as 'New', 'Syn', 'Established', 'Fin', and in the sum 'Delete' count.

Parameters

sessions

Specifies system level TCP session state information of the **cpm-http-redirect** in **optimized-mode**.

settings

Specifies system level TCP session settings of the **cpm-http-redirect** in **optimized-mode**. These settings can be further controlled using **tools perform** commands.

statistics

Specifies system level TCP statistics of the **cpm-http-redirect optimized-mode** for all sessions.

Platforms

All

Output

The following output is an example of the sessions information.

Output Example

```
A# tools dump system cpm-http-redirect tcp sessions
===============================================================================
CPM HTTP Redirect TCP session information
===============================================================================
TCP sessions in new state                              : 0
TCP sessions in state SYN                              : 0
TCP sessions in state ESTABLISHED                      : 0
TCP sessions in state FIN                              : 0
TCP sessions in delete state                           : 0

===============================================================================
```

The following output is an example of the settings information.

Output Example

```
Dut-A# tools dump system cpm-http-redirect tcp settings
    data-retransmissions 1
    data-timeout 20
    established-timeout 100
    fin-ack-retransmissions 1
    fin-ack-timeout 15
    max-connections 500
    max-connections-per-host 20
    max-hosts 500
    syn-ack-retransmissions 1
    syn-ack-timeout 20
```

The following output is an example of the statistics information.

Output Example

```
A# tools dump system cpm-http-redirect tcp statistics
===============================================================================
CPM HTTP Redirect TCP statistics (only nonzero values shown)
===============================================================================
Packets forwarded                                      : 25

27.9 tcp-optimizer

tcp-optimizer

Syntax

tcp-optimizer *tcp-optimizer-name* [**isa** *mda-id*]

Context

[Tree] (show>app-assure>group tcp-optimizer)

Full Context

show application-assurance group tcp-optimizer

Description

This command displays the TCP optimizer information.

Parameters

tcp-optimizer-name

Specifies the name of the TCP validation policy, up to 32 characters.

mda-id

Specifies the slot number of an adapter card, in the format *slot/mda*.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of an AA group TCP optimizer policy, and Table 662: Output fields: AA group TCP optimizer policy and ISA MDA describes the output fields.

Output Example

```
A:node-2# show application-assurance group 1 tcp-optimizer "TO1"
===============================================================================
Application Assurance Group 1 tcp-optimizer "TO1"
===============================================================================
Description            : tcp-optimizer TO1
TCP Stack              : tcp-westwood
Initial CWND Size      : 9 MSS
Initial SS Thresh      : 48751 KB
DACK Timeout           : 200 ms
Session Filter Ref     : Yes
Network RTT Threshold  : None
High CPU backoff       : Yes

===============================================================================
```

Table 662: Output fields: AA group TCP optimizer policy and ISA MDA

Label	Description
Description	The description of the TCPO
TCP Stack	The stack of the TCP
Initial CWND Size	The initial congestion window size
Initial SS Thresh	The initial Slow Start threshold
DACK Timeout	The delayed acknowledgment timeout
Session Filter Ref	The session filter reference
Network RTT Threshold	The network Round Trip Time threshold
High CPU backoff	The configuration of the **configure application-assurance group tcp-optimizer high-cpu-backoff** command.
Buffer Utilization	The number of the buffers used
Session Filter Ref	The name of session filter that contains a reference to this TCPO policy
Cumulative Session Statistics	The summary of total stats related to TCPO
Active Sessions	The number of TCP sessions currently being optimized
Optimized Sessions	The number of TCP sessions that were optimized
Unoptimized Sessions	The number of TCP sessions that were not optimized due to various reasons (for example, unsupported options)
Abandoned Sessions	The number of TCP sessions that TCPO was started and later stopped before the session was terminated
Unsupported Packet	The number of TCP sessions that contained unsupported packets such as Fragmented SYN, a SYN that contains data, IPv6 extension headers, unsupported TCP options (fast-open and MP-TCP)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Packet Error	The number of TCP sessions that had packet errors
Inactivity	The number of TCP sessions that timed out due to inactivity
Existing Sessions	The number of TCP sessions that were not optimized since AA did not see the initial TCP handshake
No Buffers	The number of TCP packets that were not optimized due to lack of buffers
Low Network RTT	The number of TCP packets that were not optimized due to low network RTT
Resource Exhaustion	The number of TCP sessions that were either abandoned or not optimized because of resource exhaustion
Other	The number of TCP packets that were not optimized due other reasons such as Simultaneous open (both sides send a SYN), Ack-number mismatch in the SYN/ACK, additional traffic following the SYN, before the SYN/ACK, configuration change between SYN and SYN/ACK, received a RST after sending the SYN
Octets Received	The number of TCP octets /bytes received by TCPO policy
Packets Received	The number of TCP packets received by TCPO policy
Octets Transmitted	The number of TCP octets /bytes received by TCPO policy
Retransmitted	The number of TCP octets /bytes transmitted by TCPO policy
Packets Transmitted	The number of TCP packets transmitted by TCPO policy
Retransmitted	The number of TCP packets retransmitted by TCPO policy

```

Table 663: Output fields: TCP performance template

Label	Description
Name	Displays the name of the template field.
ID	Displays the ID of the template field.
Len	Displays the string length of the template field.
Mode	Displays the mode: • M — mobile gateway • R — residential • V — VPN • L — lightweight Internet
Dy	Displays whether the field is dynamic: • . — always included in this record type • * — can be dynamically included in this record type
Description	Displays the description of the template field.

tcp-session-parameters [*transport-peer-ip-address*]

Context

[Tree] (show>router>ldp tcp-session-parameters)

Full Context

show router ldp tcp-session-parameters

Description

This command displays information about the TCP transport session of an LDP peer.

Parameters

family

Specifies the family type.

Values ipv4, ipv6

keychain *keychain*

Specifies the authentication keychain name up to 32 characters in length.

transport-peer-ip-address

Specifies the source of the transport address.

Values <transport-peer-ip*> : ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D

Platforms

All

Output

Output Example

```
*A:Dut-A# show router ldp tcp-session-parameters

27.12 tcp-validate

tcp-validate

Syntax

tcp-validate *tcp-validate-name* [**isa** *mda-id*]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>app-assure>group tcp-validate)

Full Context

show application-assurance group tcp-validate

Description

This command displays TCP validation policy information.

When the *mda-id* parameter is included, only TCP validation policy information for the specified adapter card is displayed.

Parameters

tcp-validate-name

Specifies the name of the TCP validation policy. 32 characters maximum.

mda-id

Specifies the slot number of an adapter card, in the format *slot*/*mda*.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of TCP validation policy information.

Output Example

```
A:NOK# show application-assurance group 1 tcp-validate "test" isa 1/1
===============================================================================
Application Assurance Group 1 tcp-validate "test"
===============================================================================
Description      : (Not Specified)

27.13 te-database

te-database

Syntax

te-database [**adv-router** *adv-router*] [**neighbor** *neighbor*] [**detail**]

Context

[Tree] (tools>dump>router te-database)

Full Context

tools dump router te-database

Description

Commands in this context dump the traffic engineering database.

Parameters

adv-router

Dumps the attributes of a specified traffic engineering database advertising router.

Values ip-address, isis-system-id

neighbor

Dumps the neighbor of a traffic engineering database advertising router.

Values ip-address, isis-system-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail

Specifies additional detailed traffic engineering database information.

Platforms

All

Output

The following output is an example of traffic engineering database information.

Output Example

```
*A:Dut-F#  tools dump router te-database

tests

Syntax

tests [**session** *session-name*] [**test-id** *test-id*] [**test-type** {**dm** | **dmm** | **lmm** | **slm** | **twamp-light**}]

Context

[Tree] (show>oam-pm tests)

Full Context

show oam-pm tests

Description

This command displays a list of OAM-PM test types and associated test IDs. The output provides an ordered list by type and ID to help locate available test IDs that may be configured within a specific type. Filters are available to refine the output to the operational need. Multiple filters can be included to further refine the output. The combination of the filters is an AND function. All filters must be true to provide tests output.

Parameters

session-name

Displays the output by session name, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

test-id

Displays the output by test ID.

Values 0 to 2147483647

test-type

Keyword that displays the output by test type.

Values dm, dmm, lmm, slm, twamp-light

Platforms

All

Output

The following outputs are examples of OAM-PM test type information:

Table 665: Output fields: OAM-PM tests

Label	Description
Test Type	The OAM-PM protocol specific test: • SLM – indicates a test type of Synthetic Loss Message (SLM)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	• TWL – indicates a test type of TWAMP light
Test ID	The numerical value, between 0 to 2147583647, that is assigned to the protocol specific test The (**auto**) tag appears if the test ID was automatically assigned
Admin	The administrative state of the test: Up – the test has been enabled by configuration Down – the test was not enabled by configuration
Oper	The operational state of the test: Up – The test is administratively up and currently transmitting, attempting to transmit packets, or ready to transmit packets Down – the test is administratively down or an OAM-PM session has been configured with **session-type on-demand** and has not been enabled using the global CLI **oam oam-pm session start** command
TxE	no – no error detected yes – error detected
Sess Type	The session type: • proactive – the session is always on, with an immediate start and no stop • on-demand – the session has an immediate start and no stop, or a stop based on the offset.
Session	The name of the session, up to 32 characters

Full Context

tools dump application-assurance group tethering

Description

This command displays AA current subscribers' tethering statistics.

Parameters

detail

Specifies detailed tethering statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of tethering information.

Output Example

```
tools dump application-assurance group 1:1 tethering detail
===============================================================================
Application-Assurance tethering detail - Group 1:1
===============================================================================
          TTL            Expected       Flow Count

27.22 thresholds

thresholds

Syntax

thresholds [**type** {**alarms** | **hc-alarms** | **events** | **logs**}]

Context

[Tree] (show>system thresholds)

Full Context

show system thresholds

Description

This command displays system monitoring thresholds. The Threshold Events Log table only retains the last 201 entries.

Parameters

alarms

Keyword to display the threshold alarms.

hc-alarms

Keyword to display the threshold high capacity alarms.

events

Keyword to display the threshold events.

logs

Keyword to display the threshold events log.

Table 666: Output fields: system thresholds

Label	Description
Variable	Displays the variable OID
Alarm Id	Displays the numerical identifier for the alarm
Last Value	Displays the last threshold value
Rising Event Id	Displays the identifier of the RMON rising event
Threshold	Displays the identifier of the RMON rising threshold
Falling Event Id	Displays the identifier of the RMON falling event
Threshold	Displays the identifier of the RMON falling threshold
Sample Interval	Displays the polling interval, in seconds, over which the data is sampled and compared with the rising and falling thresholds
SampleType	Displays the method of sampling the selected variable and calculating the value to be compared against the thresholds
Startup Alarm	Displays the alarm that may be sent when this alarm is first created.
Owner	Displays the owner of this alarm.
Failed SNMP Polls	Displays the number of failed SNMP polls
Description	Displays the event cause
Event Id	Displays the identifier of the threshold event
Last Sent	Displays the date and time the alarm was sent
Action Type	log — An entry is made in the RMON-MIB log table for each event occurrence. trap — An SR OS logger event is generated. The SR OS logger utility then distributes the notification of this event to its configured log destinations, which may be CONSOLE, telnet session, memory log, cflash file, syslog, or SNMP trap destinations logs. both — Both an entry in the RMON-MIB logTable and an SR OS logger event are generated. none — No action is taken.
Owner	Displays the owner of the event

Context

[Tree] (show>isa>stats>ip-tunnel-stats throughput)

Full Context

show isa statistics ip-tunnel-stats throughput

Description

This command displays throughput statistics for the specified tunnel types and scope.

The following scopes are supported:

- per ISA
- per tunnel group
- per system

The statistics include the following information:

- total packet per second (encapsulated and decapsulated)
- encapsulated packets per second
- decapsulated packets per second
- total bits per second (encapsulated and decapsulated) in Mibits/s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- encapsulated bits per second in Mibits/s
- decapsulated bits per second in Mibits/s

Syntax notes:

- 1 Mibits/s, equals 2^{20} bits per second
- The bits per second counter is an integer which is a rounded down value from the measured value.

The system collects stats every 10 minutes for last the 24 hour per the wall clock. A current value is also included in the output. The value is an average derived value of 10 minutes. The start time indicates the starting timestamp of measurement. The sampling duration indicates the duration of measurement.

Parameters

tunnel-type

Displays the type of tunnel.

Values gre, ip-in-ip, l2tpv3

mda

Displays the ISA ID.

Values slot/mda

tunnel-group-id

Displays the ID of the tunnel group.

Values 1 to 16

type

Displays the type of breakdown counter.

Values bidir-pps, bidir-bps, encap-pps, encap-bps, decap-pps, decap-bps

count

Displays the number historical values to be included in the output.

Values 1 to 24

minutes

Displays the number of minutes of historical values to be included in output.

Values 1 to 1440

current

Displays only the current values.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vm-id	1 to 4

show-oid

Specifies to include the SNMP object identifier (OID) and the instance ID for the latest historical value in the output.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa statistics throughput ip-tunnel-stats** command.

Output Example

```
show>isa>stats>ip-tunnel-stats# throughput tunnel-type gre tunnel-group 1

Context

[Tree] (show>isa>stats>ipsec-stats throughput)

Full Context

show isa statistics ipsec-stats throughput

Description

This command displays IPsec throughput statistics for the specified scope.

The system collects statistics every 10 minutes for the last 24 hours per wall clock. A current value is included in the output.

This command supports following the scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The statistics include:

- The number of bidirectional encrypted and decrypted per second
- The number of encrypted packets per second
- The number of decrypted packets per second
- The number of bidirectional (encrypted and decrypted) bits per second (in Mibits/s)
- The number of bidirectional encrypted bits per second (in Mibits/s)
- The number of bidirectional decrypted bits per second (in Mibits/s)

Syntax notes:

- 1 Mibits/s equals 2^{20} bits per second
- The bits per second counter is an integer, which is a value rounded down from the measured value.

Parameters

mda

Displays information about the specified ISA.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

name

Displays information about the name of the IPsec GW up to 32 characters in length.

count

Displays information about the number of historical values to be included in the output.

Values 1 to 24

min

Displays information about the number of minutes of historical values to be included in output.

Values 1 to 1440

current

Displays information about the current value.

show-oid

Displays information about include SNMP OID and instance ID for the latest historical value in the output, for a specified type of counter.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa statistics ipsec-stats throughput** command.

Output Example

```
show>isa>stats>ipsec-stats# throughput tunnel-group 1
===============================================================================
STATISTICS FOR ISA TUNNEL GROUP 1
```

27.24 time

time

Syntax

time

Context

[Tree] (show>system time)

Full Context

show system time

Description

This command displays the system time and zone configuration parameters.

Platforms

All

Output

The following output is an example of system time information, and Table 667: Output fields: system time describes the output fields.

Output Example

```
A:ALA-1# show system time
===============================================================================
Date & Time
===============================================================================
Current Date & Time : 2006/05/05 23:03:13    DST Active            : yes
Current Zone        : PDT                    Offset from UTC       : -7:00
-------------------------------------------------------------------------------
Non-DST Zone        : PST                    Offset from UTC       : -8:00
Zone type           : standard
-------------------------------------------------------------------------------
DST Zone            : PDT                    Offset from Non-DST   : 01:00
Starts              : first sunday in april 02:00
Ends                : last sunday in october 02:00
===============================================================================
A:ALA-1#

A:ALA-1# show system time (with no DST zone configured)
===============================================================================
Date & Time
===============================================================================
Current Date & Time : 2006/05/12 11:12:05       DST Active      :     no
Current Zone    : APA       Offset from UTC :  -8:00
-------------------------------------------------------------------------------
Non-DST Zone    : APA       Offset from UTC :  -8:00
Zone Type           : non-standard

```

Table 667: Output fields: system time

Label	Description
Date & Time	The system date and time using the current time zone.
DST Active	Yes — Daylight Savings Time is currently in effect. No — Daylight Savings Time is not currently in effect.
Zone	The zone names for the current zone, the non-DST zone, and the DST zone if configured.
Current Time Zone	Indicates the process currently controlling the system time. SNTP, NTP, PTP or NONE.
Zone type	Non-standard — The zone is user-defined. Standard — The zone is system defined.
Offset from UTC	The number of hours and minutes added to universal time for the zone, including the DST offset for a DST zone.
Offset from Non-DST	The number of hours (always 0 to 1) and minutes (0 to 59) added to the time at the beginning of Daylight Saving Time and subtracted at the end Daylight Saving Time.
Starts	The date and time Daylight Saving Time begins.
Ends	The date and time Daylight Saving Time ends.

time

Syntax

time

Context

[Tree] (show time)

Full Context

show time

Description

This command displays the current day, date, time and time zone.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The time is displayed either in the local time zone or in UTC depending on the setting of the root level **time-display** command for the console session.

Platforms

All

Output

The following output is an example of time information.

Output Example

```
A:ALA-49# show time
Tue Oct 31 12:17:15 GMT 2006
```

27.25 timers

timers

Syntax

timers [**session** *ip-addr*[*label-space*]]

Context

[Tree] (tools>dump>router>ldp timers)

Full Context

tools dump router ldp timers

Description

This command dumps information for LDP timers.

Platforms

All

27.26 tls

tls

Syntax

tls

Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>system>security tls)

Full Context

show system security tls

Description

Commands in this context display TLS-related information.

Platforms

All

27.27 top-active-meps

top-active-meps

Syntax

top-active-meps [{**rx-sort** | **tx-sort**}] [**clear**]

Context

[Tree] (tools>dump>eth-cfm top-active-meps)

Full Context

tools dump eth-cfm top-active-meps

Description

This command displays and optionally clears the most active MEPs on the system.

Default

top-active-meps

Parameters

rx-sort

Sorts in the RX direction.

tx-sort

Sorts in the TX direction.

clear

Clears the current counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

27.28 top-flows

top-flows

Syntax

top-flows *protocols* [**clear**]

Context

[Tree] (tools>dump>cflowd top-flows)

Full Context

tools dump cflowd top-flows

Description

This command displays the top 20 (highest traffic volume) flows for IPv4, IPv6 or MPLS traffic types collected since the cflowd top-flow table was last cleared or initialized.

Platforms

All

Output

The following output is an example of cflowd top flow information, and Table 668: Output fields: tools dump cflowd top flows describes the output fields.

Output Example

```
1         2         3         4         5         6         7         8

Table 668: Output fields: tools dump cflowd top flows

Label	Description
Ingress	Displays the ingress interface ID
Src IP	Displays the source IP address of the flow (IPv4 or IPv6)
Egress	Displays the egress interface ID
Dest IP	Displays the destination IP address of the flow (IPv4 or IPv6)
Pr Proto	Displays the protocol type for flow
TOS	Displays the Type-of-Service/DSCP buts filed markings
Flgs	Displays the protocol flag markings
Pkts	Displays the total number of packets sampled for this flow (since stats were last cleared)
vRtr-ID	Displays the vRouter context the flow was sample in
S-Port Src Port	Displays the source protocol port number
Msk	Displays the route prefix length for route to source IP address
AS	Displays the Autonomous Systems number for the source route (the AS is either originating AS or peer AS depending on cflowd configuration)
D-Port Dst Port	Displays the destination protocol port number
Msk	Displays the route prefix length for route to destination IP address (Forwarding route)
AS	Displays the Autonomous Systems number for the destination route (the AS is either originating AS or peer AS depending on cflowd configuration)
Nexthop	Displays the next-hop address used to forward traffic associated with the flow

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Avg pkt size	Displays the average packet size of a sampled traffic associated with this flow (total number of packets sampled/total number of packets sampled)
Active	Displays the number of seconds the flow has been active

27.29 top-protocols

top-protocols

Syntax

top-protocols *protocols* [**clear**]

Context

[Tree] (tools>dump>cflowd top-protocols)

Full Context

tools dump cflowd top-protocols

Description

This command displays the summary information for the top 20 protocol traffic seen in the cflowd cache. All statistics are calculated based on the data collected since the last clearing of the cflowd stats with clear keyword for this command.

If the **clear** optional keyword is given, then the top-flows are displayed, and then this cache is cleared.

Platforms

All

Output

The following output is an example of cflowd top protocol traffic information, and Table 669: Output fields: tools dump cflowd top protocols describes the output fields.

Output Example

```
SR# tools dump cflowd top-protocols

The top 20 IPv4 protocols seen by cflowd are:
      Current Time: 08/29/2011 15:36:15
Last Cleared Time: 08/29/2011 15:35:08
Protocol ID     Total   Flows   Packets   Bytes   Packets   Duration   % Total
--------        Flows    /Sec     /Flow    /Pkt      /Sec      /Flow   Bandwidth
-------------------------------------------------------------------------------
UDP                2       0         6     100         0          6         75%
pr1                1       0         6      64         0          6         24%
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
-------------------------------------------------------------------------------
TOTALS              3       0         6      88         0          6        100%
```

Table 669: Output fields: tools dump cflowd top protocols

Label	Description
Protocol ID	Displays the IPv4 or IPv6 protocol type; this will either print the well-known protocol name or the decimal protocol number
Total Flows	Displays the total number of flows recorded since the last clearing of cflowd statistics with this protocol type.
Flows/Sec	Displays the average number of flows detected for the associated protocol type (Total flows/number of seconds since last clear)
Packets/Flow	Displays the average number of packets per flow (Total number of packets/total flows)
Bytes/Pkts	Displays the average number of bytes per packet for the associated protocol type (Total number of bytes for the associated protocol/total number of packets seen for the associated protocol)
Packets/Sec	Displays the average number of packets seen for the associated protocol type (Number of packets/time since last clear)
Duration/Flow	Displays the average lifetime of a flow for the associated protocol type (Number of seconds since last clear/total flows)
Bandwidth Total (%)	Displays the percentage of bandwidth consumed by the associated protocol type (Total protocol bytes/total bytes of all flows)

27.30 topology

topology

Syntax

topology [**ipv4-unicast** | **ipv6-unicast** | **ipv4-multicast** | **ipv6-multicast** | **mt** *mt-id-number*] [**lfa**] [**detail**] [**flex-algo** {*flex-algo-id* | **all**}]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>router>isis topology)

Full Context

show router isis topology

Description

This command shows IS-IS topology information.

Parameters

ipv4-unicast

Displays IPv4 unicast parameters.

ipv6-unicast

Displays IPv6 unicast parameters.

ipv4-multicast

Displays IPv4 multicast parameters.

ipv6-multicast

Displays IPv6 multicast parameters.

mt *mt-id-number*

Displays multi-topology parameters.

Values 0, 2, 3, 4

lfa

Displays loop free alternative (LFA) information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

detail

Displays detailed topology information.

flex-algo *flex-algo-id*

Displays information about the specified algorithm only based on the *flex-algo-id* filter.

Values 128 to 255

all

Displays topology information for all the flexible algorithms.

Platforms

All

Output

The following output is an example of router IS-IS topology output, and Table 670: Output fields: IS-IS topology describes the output fields.

tp-interface

Syntax

tp-interface *interface-num* [**clear**]

Context

[Tree] (tools>dump>router>mpls tp-interface)

Full Context

tools dump router mpls tp-interface

Description

This command displays MPLS-TP interface information.

Parameters

interface-num

specifies the MPLS-TP interface

Values 1 to 4294967295

clear

clears statistics after reading

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS TP interface information.

Output Example

```
1-2 (1/1/3) : State Up, Cnt/Tm - Dn: 1/000 00:30:11.150, Up 1/000 00:30:15.160
  MEP: ifNum 1 (Validate: Y), ais: Y (txCnt 0)
    ais - Flags: 0x1 (R), Timers:

tp-lsp

Syntax

tp-lsp [*lsp-name*] [**status** { **up** | **down**}] [**from** *ip-address* | **to** *ip-address*] [**detail**]

tp-lsp [*lsp-name*] **path** [**protecting** | **working**] [**detail**]

tp-lsp [*lsp-name*] **protection**

Context

[Tree] (show>router>mpls tp-lsp)

Full Context

show router mpls tp-lsp

Description

This command displays TP LSP information.

Parameters

lsp-name

Specifies the LSP name up to 64 characters in length. '*' is accepted as a wild card character.

path

Displays LSP path information.

protection

Displays LSP protection information.

up | down

Specifies the state of the LSP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS TP LSP information.

Output Example

```
*A:mlstp-dutA# show router mpls tp-lsp
path
protection
to <a.b.c.d>
<lsp-name>
 "lsp-32"  "lsp-33"  "lsp-34"  "lsp-35"  "lsp-36"  "lsp-37"  "lsp-38"  "lsp-39"
```

27.33 tp-lsp-egress-stats

tp-lsp-egress-stats

Syntax

tsp-lsp-egress-stats lsp *lsp-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>mpls tp-lsp-egress-stats)

Full Context

monitor router mpls tp-lsp-egress-stats

Description

This command monitors MPLS TP LSP egress statistics.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

seconds

Specifies the interval for each display, in seconds.

Values 3 to 60

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

27.34 tp-lsp-ingress-stats

tp-lsp-ingress-stats

Syntax

tsp-lsp-ingress-stats lsp *lsp-name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>mpls tp-lsp-ingress-stats)

Full Context

monitor router mpls tp-lsp-ingress-stats

Description

This command monitors MPLS TP LSP ingress statistics.

Parameters

lsp-name

Specifies the LSP name, up to 64 characters.

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

seconds

Specifies the interval for each display, in seconds.

Values 3 to 60

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

27.35 tp-tunnel

tp-tunnel

Syntax

tp-tunnel *lsp-name* [**clear**]

tp-tunnel id *tunnel-id* [**clear**]

Context

[Tree] (tools>dump>router>mpls tp-tunnel)

Full Context

tools dump router mpls tp-tunnel

Description

This command displays MPLS-TP tunnel information.

Parameters

lsp-name

specifies the LSP name, up to 64 characters

id tunnel-id

specifies the tunnel ID

Values 1 to 61440

clear

clears statistics after reading

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS TP interface information.

tp-tunnel

Syntax

tp-tunnel

Context

[Tree] (tools>perform>router>mpls tp-tunnel)

Full Context

tools perform router mpls tp-tunnel

Description

Commands in this context perform Linear Protection operations on an MPLS-TP LSP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

27.36 trace

trace

Syntax

trace [**name** *trace-name*]

Context

[Tree] (show>call-trace trace)

[Tree] (show>call-trace>ipoe trace)

Full Context

show call-trace trace

show call-trace ipoe trace

Description

This command displays information about all traces and associated parameters that are currently enabled on the system. Including the *trace-name* parameter limits the output to the specified trace only.

Parameters

trace-name

Specifies the name of the trace to be displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call trace information.

Output Example

```
Node# show call-trace ipoe trace
===============================================================================
Call trace trace
===============================================================================
Trace name  : default                           Type         : ipoe
SAP ID      :
IEEE address: 00:02:00:00:00:19
Maximum jobs: 1
===============================================================================
```

Table 671: Output fields: call trace IPoE trace describes call trace IPoE trace output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Table 671: Output fields: call trace IPoE trace

Field	Description
Trace name	The name of the trace profile
Type	The type of the call trace
SAP ID	The SAP ID of the session to match by this trace
IEEE address	The IEEE address of the session that matches this trace
Maximum jobs	The maximum number of call trace jobs that are started by this trace

trace

Syntax

trace *trace-name*

Context

[Tree] (clear>call-trace>ipoe trace)

[Tree] (clear>call-trace trace)

Full Context

clear call-trace ipoe trace

clear call-trace trace

Description

This command clears all trace jobs started by the specified trace. This command does not affect the trace command itself, and new jobs can still be executed for new sessions.

After a session is cleared, tracing for the session will not be restarted by any configured trace. Only explicitly starting a new trace with the **trace-existing-sessions** parameter can restart tracing for the session.

Parameters

trace-name

Specifies the configured name, up to 32 characters, of the trace.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

27.37 trace-profile

trace-profile

Syntax

trace-profile [**detail**]

trace-profile *profile-name*

Context

[Tree] (show>call-trace trace-profile)

Full Context

show call-trace trace-profile

Description

This command provides an overview of all configured profiles or details of a specific profile. If the detail option is specified the full information for all configured profiles are displayed.

Parameters

detail

Displays detailed trace profile information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of call-trace trace-profile information.

Output Example

```
Node# show call-trace trace-profile "default"
===============================================================================
Call-trace  trace profile
===============================================================================
Profile name              : default
Description               : none
Live output               : none
Format                    : pcap
Size limit                : 10 MB
Time limit                : 86400 secs
-------------------------------------------------------------------------------
Number of profiles : 1
===============================================================================
```

27.38 traffic-capture

traffic-capture

Syntax

traffic-capture detail url *file-url*

traffic-capture status

Context

[Tree] (tools>dump>app-assure>group traffic-capture)

Full Context

tools dump application-assurance group traffic-capture

Description

This command displays application-assurance traffic-capture information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

27.39 traffic-forward

traffic-forward

Syntax

traffic-forward tunnel-type *tunnel-type* [**type** *type*] **isa** *mda*

traffic-forward tunnel-type *tunnel-type* [**type** *type*] **esa-vm** *esa-id/vm-id*

Context

[Tree] (show>isa>stats>ip-tunnel-stats traffic-forward)

Full Context

show isa statistics ip-tunnel-stats traffic-forward

Description

This command displays traffic forward statistics for the specified tunnel-type on the specified ISA.

The statistics includes the following information:

- The number of bidirectional (encapsulated and decapsulated) packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- The number of encapsulated packets
- The number of decapsulated packets
- The number of bidirectional (encapsulated and decapsulated) kilobytes
- The number of kilobytes for encapsulated traffic
- The number of kilobytes for decapsulated traffic

In the output, 1 kilobyte equals 210 bytes.

Parameters

tunnel-type

Displays the type of the tunnel.

Values gre, ip-in-ip, l2tpv3

mda

Displays the ISA ID.

Values slot/mda

type

Displays the type of breakdown counter.

Values bidir-pkts, bidir-kbs, encap-pkts, encap-kbs, decap-pkts, decap-kbs

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show router statistics ip-tunnel-stats traffic-forward** command.

Output Example

```

traffic-forward

Syntax

traffic-forward [**type** *type*] **esa-vm** *esa-id/vm-id*

traffic-forward [**type** *type*] **gateway** *name*

traffic-forward [**type** *type*] **isa** *mda*

traffic-forward [**type** *type*] **gateway** *name* **dynamic-tunnel** *ip-address:port*

traffic-forward [**type** *type*] **tunnel** *ipsec-tunnel-name*

Context

[Tree] (show>isa>stats>ipsec-stats traffic-forward)

Full Context

show isa statistics ipsec-stats traffic-forward

Description

This command displays traffic forward statistics of the specified scope.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The statistics include:

- The number of bidirectional encrypted and decrypted packets
- The number of encrypted packets
- The number of decrypted packets per second
- The number of bidirectional (encrypted and decrypted) in kilobytes
- The number of bidirectional encrypted bits in kilobytes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- The number of bidirectional decrypted bits in kilobytes

1 kilobyte equals 2^{10} bytes

The start time indicates the starting timestamp of the measurement. The sampling duration indicates the duration of the measurement.

Parameters

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

name

Displays information about the name of the IPsec GW up to 32 characters in length.

mda

Displays information about the specified ISA.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

ip-address:port

Displays information about the IP address and port of the peer for dynamic tunneling.

ipsec-tunnel-name

Specifies the name of the static LAN-to-LAN tunnel up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show isa stats ipsec-stats traffic forward isa** command.

Output Example

```
show>isa>stats>ipsec-stats# traffic-forward isa 1/2

27.40 traffic-statistics

traffic-statistics

Syntax

traffic-statistics prefix *ip-prefix/ip-prefix-length*

traffic-statistics family *family*

traffic-statistics

Context

[Tree] (show>router>bgp traffic-statistics)

Full Context

show router bgp traffic-statistics

Description

This command displays BGP-LU traffic statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

prefix *ip-prefix/ip-prefix-length*

Displays statistics for the specified prefix.

Values ipv4-prefix:

- a.b.c.d

ipv4-prefix-length:

- 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x - [0 to FFFF]H
- d - [0 to 255]D

ipv6-prefix-length:

- 0 to 128

family *family*

Displays statistics for the specified address family.

Values label-ipv4, label-ipv6

Platforms

All

Output

The following output is an example of traffic statistics information.

Output Example

```
===============================================================================
 BGP Router ID:10.20.1.2        AS:100         Local AS:100
===============================================================================
-------------------------------------------------------------------------------
Prefix : 100.1.1.1/32
NextHop : 10.10.12.1
Ingress Label : 19105
Ingress Oper State : Unknown
Ingress packets  : 366992               Ingress Octets   : 96885888
Egress Label : 19105
Egress Oper State : Unknown
Egress packets   : 0                    Egress Octets    : 0
-------------------------------------------------------------------------------
-------------------------------------------------------------------------------
```

traffic-statistics

Syntax

traffic-statistics prefix *ip-prefix/ip-prefix-length* **[ingress** | **egress]**

traffic-statistics family {**label-ipv4** | **label-ipv6**} **[ingress** | **egress]**

traffic-statistics [ingress | **egress]**

Context

[Tree] (clear>router>bgp traffic-statistics)

Full Context

clear router bgp traffic-statistics

Description

This command clears BGP-LU traffic statistics.

Parameters

prefix *ip-prefix/ip-prefix-length*

Clears statistics for the specified prefix.

Values ipv4-prefix:

- a.b.c.d

ipv4-prefix-length:

- 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x - [0 to FFFF]H
- d - [0 to 255]D

ipv6-prefix-length:

- 0 to 128

ingress

Clears statistics on ingress data-path.

egress

Clears statistics on egress data-path.

family label-ipv4 | label-ipv6

Clears statistics for the specified address family.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

traffic-statistics

Syntax

traffic-statistics prefix *ip-prefix*/*ip-prefix-length* [**interval** *seconds*] [**repeat** *repeat*] [**absolute**| **rate**]

Context

[Tree] (monitor>router>bgp traffic-statistics)

Full Context

monitor router bgp traffic-statistics

Description

This command monitors BGP traffic statistics.

Parameters

prefix *ip-prefix/ip-prefix-length*

Clears statistics for the specified prefix.

Values ipv4-prefix:

- a.b.c.d

ipv4-prefix-length:

- 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x - [0 to FFFF]H
- d - [0 to 255]D

ipv6-prefix-length:

- 0 to 128

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

27.41 traffic-type

traffic-type

Syntax

traffic-type detail

traffic-type ip-family

traffic-type ip-protocol

traffic-type tls-family

Context

[Tree] (show>app-assure>group traffic-type)

Full Context

show application-assurance group traffic-type

Description

This command displays per traffic type statistics.

Parameters

detail

Displays detailed statistics.

ip-family

Displays IP family statistics.

ip-protocol

Displays IP protocol statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tls-family

Displays TLS family statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of traffic type information.

Output Example

```

27.42 transform

transform

Syntax

transform [*transform-id*]

Context

[Tree] (show>ipsec transform)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show ipsec transform

Description

This command displays information of the specified IPsec transform or lists all configured IKE transform information when the IKE transform ID is not specified.

Parameters

transform-id

Specifies an IPsec transform entry.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show ipsec transform** command.

Output Example

```
NODE# show ipsec transform
===============================================================================
IPSEC TRANSFORMS
===============================================================================
TRANSFORMID    ESPAUTH        ESPENCRYPTION   PFS         IPSEC

Full Context

show application-assurance group transit-ip-policy

Description

This command displays transit IP policy information.

Parameters

ip-policy-id

Displays information for the specified IP policy.

Values 1 to 65535

summary

Displays summarized information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

27.44 transit-path

transit-path

Syntax

transit-path [*path-name*] [**detail**]

Context

[Tree] (show>router>mpls>mpls-tp transit-path)

Full Context

show router mpls mpls-tp transit-path

Description

This command displays MPLS-TP tunnel information.

Parameters

path-name

Specifies the path name, up to 32 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of MPLS OAM transit path information.

Output Example

```
A:mplstp-dutC# show router mpls mpls-tp transit-path
<path-name>
 "tp-32"   "tp-33"   "tp-34"   "tp-35"   "tp-36"   "tp-37"   "tp-38"   "tp-39"

27.45 transit-prefix-policy

transit-prefix-policy

Syntax

transit-prefix-policy *transit-prefix-policy-id*

transit-prefix-policy summary

transit-prefix-policy *transit-prefix-policy-id* **summary**

Context

[Tree] (show>app-assure>group transit-prefix-policy)

Full Context

show application-assurance group transit-prefix-policy

Description

This command displays transit prefix policy information.

Parameters

transit-prefix-policy-id

Displays information for the specified transit prefix policy.

Values 1 to 65535

summary

Displays summarized information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

27.46 transport-mode

transport-mode

Syntax

transport-mode tunnel-type {**gre**} [**saved-key**] **esa-vm** *esa-id/vm-id*

transport-mode tunnel-type {**gre**} **isa** *mda* [**saved-key**]

transport-mode tunnel-type {**gre**} **tunnel-name** *tunnel-name* [**saved-key**]

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (clear>ipsec transport-mode)

Full Context

clear ipsec transport-mode

Description

This command clears transport-mode tunnels data.

Parameters

tunnel-name

Clears data associated with the specified tunnel, up to 32 characters.

mda

Clears all static tunnels terminated on the specified ISA.

saved-key

Clears the saved IKE and ESP keys for the specified tunnel.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trap-suppress

Syntax

trap-suppress *number-of-traps time-interval*

Context

[Tree] (tools>perform>router>mpls trap-suppress)

Full Context

tools perform router mpls trap-suppress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command modifies thresholds for trap suppression. The *time-interval* parameter is used to suppress traps after a certain number of traps have been raised within the *time-interval* period of time. By executing this command, there will be no more than *number-of-traps* within *time-interval*.

Parameters

number-of-traps

Specifies to the number of traps raised within a period of time before suppression occurs.

Values 100 to 1000, in multiples of 100

time-interval

Specifies the period of time before trap-suppression can occur, depending upon the number of traps received in that period of time.

Values 1 to 300

Platforms

All

Full Context

show ipsec ts-list

Description

This command displays IPsec traffic-selector list (TS-list) information.

Entering this command without a parameter will list all configured TS-lists.

Entering this command with the **association** parameter will list all IPsec gateways that use the specified TS-list.

Entering this command with the **local** or **local-entry** parameter will list all or specified local entries of the specified TS-list.

Entering this command with the **remote** or **remote-entry** parameter will list all or specified remote entries of the specified TS-list.

Parameters

list-name

The traffic-selector list name.

association

Displays all associations of the TS-list.

local-entry [1 to 32]

The entry ID of a local entry.

remote-entry [1 to 32]

The entry ID of a remote entry.

local

Displays all local entries.

remote

Displays all remote entries.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of TS-list information.

Output Example

Context

[Tree] (show>router>l2tp tunnel)

Full Context

show router l2tp tunnel

Description

This command displays L2TP tunnel operational information.

Parameters

statistics

Displays L2TP tunnel statistics.

detail

Displays detailed L2TP tunnel information.

ip-address

Displays information for the specified peer IP address.

Values The following values apply to the 7750 SR:

ipv4-address	a.b.c.d (host bits must be 0)
ipv6-address	x:x:x:x:x:x:x:x[-interface]
	x:x:x:x:x:x:d.d.d.d[-interface]
	x: [0 to FFFF]H
	d: [0 to 255]D
	interface: 32 characters maximum, mandatory for link local addresses

Values The following values apply to the 7450 ESS:

ipv4-address: a.b.c.d (host bits must be 0)

tunnel-state

Displays the operational state of the L2TP session.

Values closed, closed-by-peer, draining, drained, established, established-idle, idle, wait-reply, wait-conn

remote-tunnel-id

Displays information for the specified remote tunnel ID.

group-name

Displays L2TP tunnel information for the specified tunnel group.

assignment-id

Specifies a string that distinguishes this Layer Two Tunneling Protocol tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

local-host-name

Specifies a local host name used by this system.

remote-host-name

Specifies a remote host name used by this system.

policy-name

Displays the RADIUS accounting policy.

bl-state

Displays the denylist state of the L2TP session.

fo-state

Displays the failover state of the L2TP session.

recovery-state

Displays the recovery state of the L2TP session.

recovery-method

Displays the recovery method of the L2TP session.

srrp-instance

Specifies the SRRP instance identification.

Values 0 to 4294967295

behavior

Specifies the control message behavior.

Values handle, forward-to-mcs-peer

transport-type

Specifies that IP or UDP should be used as the transport type for the L2TP session.

Values ip, udp

remote-connection-id

Displays information for the specified remote connection ID.

tunnel-id

Displays information for the specified ID of a L2TP tunnel. In L2TP version 2, it is the 16-bit tunnel ID.

Values 1 to 65535

connection-id

Specifies the identification number for a Layer Two Tunneling Protocol connection.

Values 1 to 429496729

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel *tunnel-name*

Context

[Tree] (clear>router>l2tp>group tunnel)

Full Context

clear router l2tp group tunnel

Description

This command clears L2TP tunnel data.

Parameters

tunnel-name

Clears L2TP tunnel data associated with the specified tunnel, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel *connection-id*

Context

[Tree] (clear>router>l2tp tunnel)

Full Context

clear router l2tp tunnel

Description

This command clears L2TP data.

Parameters

connection-id

Specifies the L2TP tunnel connection ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel *tunnel-name*

Context

[Tree] (tools>perform>router>l2tp>group tunnel)

[Tree] (tools>perform>router>l2tp tunnel)

Full Context

tools perform router l2tp group tunnel

tools perform router l2tp tunnel

Description

Commands in this context configure performance tools for a specified L2TP tunnel.

Parameters

tunnel-name

Specifies the L2TP tunnel name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel *ipsec-tunnel-name*

tunnel

tunnel count

tunnel state *state*

Context

[Tree] (show>ipsec tunnel)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show ipsec tunnel

Description

This command displays IPsec tunnel information.

Parameters

ipsec-tunnel-name

Specifies the name of the tunnel up to 32 characters.

state

Specifies one of up, down, or limited

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel *ipsec-tunnel-name* [**temp-mtu**]

tunnel esa-vm *esa-id/vm-id* [**saved-key**]

tunnel isa *mda* [**saved-key**]

tunnel *ipsec-tunnel-name* [**saved-key**]

tunnel *ipsec-tunnel-name* [**stats**] [**saved-key**]

Context

[Tree] (clear>ipsec tunnel)

Full Context

clear ipsec tunnel

Description

This command clears static IPsec tunnel states.

Parameters

ipsec-tunnel-name

Specifies the name of the IPsec tunnel, up to 32 characters. If the **stats**, **saved-key** or **temp-mdu** parameters are not specified, the IPsec tunnel is cleared.

saved-key

Clears the saved IKE and ESP keys for the specified tunnel.

temp-mtu

Clears the temporary MTU from MTU propagation for the specified tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

stats

Clears the statistics counter for the specified tunnel.

mda

Clears all static tunnels terminated on the specified ISA.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16
	vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel [**type** {**rx** | **tx**}] [**prefix** *ip-address*] [**tunnel-id** *tunnel-id*]

tunnel [**prefix** *ip-address*] [**tunnel-id** *tunnel-id*] **leaf**

Context

[Tree] (show>router>bier tunnel)

Full Context

show router bier tunnel

Description

This command shows the BIER tunnel table used for MVPN.

Parameters

type

Keyword used to specify receive or transmit.

ip-address

Specifies a prefix in IP address format.

tunnel-id

Specifies a tunnel identifier.

Values 0 to 4294967295

leaf

Keyword used to specify the display of tunnel leafs.

Table 672: Output fields: BIER tunnel

Label	Description
Tunnel-id	The tunnel ID allocated for this tunnel
Type	The tunnel type, indicated if it is a terminating tunnel or an originating one
Oper	The operational status of the tunnel
SvcId	The service ID
No. of Leaves	The number of leaves associated with the tunnel if the tunnel type is tx or BFIR. This field represents the number of leafs associated with it. If the tunnel type is rx or BFER, this field is zero.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
BFR Prefix	The BFR prefix associated with the root of the tunnel
Bfr-ID	The BFR ID associated with the root of the tunnel
Mpls Label	If the tunnel type is tx or BFIR, this field represents the egress VPRN label allocated. If the tunnel type is rx or BFER, this field represents the ingress VPRN label allocated by the root.
Next-Proto	The next protocol value
Sub-domain	The sub-domain associated with the root of the tunnel

tunnel

Syntax

tunnel [**tunnel-id tunnel-id**] [**type** { **rx** | **tx**}]

tunnel [**tunnel-id tunnel-id**] **leaf** [**root-addr** *root-addr*] [**tree-id** *tree-id*]

Context

[Tree] (show>router>p2mp-sr-tree tunnel)

Full Context

show router p2mp-sr-tree tunnel

Description

This command displays details about the P2MP tunnel.

Parameters

tunnel-id

Specifies a tunnel identifier.

Values 0 to 4294967295

type

Specifies a tunnel type.

Values rx, tx

root-addr

Displays the root address.

Values a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tree-id

Specifies a tree identifier.

Values 0 to 4294967295

leaf

Specifies that the tunnel leafs are displayed.

Platforms

All

Output

The following output is an example of a P2MP SR tree tunnel table. Table 673: Output fields: P2MP SR tree tunnel provides the P2MP SR tree tunnel table descriptions.

Output Example

```
A:swsim100>file cf3:\ # show router p2mp-sr-tree tunnel

Total P2MP-SR-TUNNELS Tunnels : 2
===============================================================================
```

Table 673: Output fields: P2MP SR tree tunnel

Label	Description
Tunnel-Id	The tunnel ID allocated for this tunnel
Type	The tunnel type, indicated if it is a terminating tunnel or an originating one
Oper	The operational status of the tunnel
Num Leaves	The number of leaves associated with the tunnel
TreeId	The tree ID associated with the root of the tunnel
RootAddr	The address associated with the root of the tunnel
SvcId	The service identifier

tunnel

Syntax

tunnel [**in-label** *in-label*]

Context

[Tree] (tools>dump>router>sr tunnel)

Full Context

tools dump router segment-routing tunnel

Description

This command displays segment routing tunnel information.

Parameters

in-label

Specifies the filter to match against the ingress label.

Values 0 to 4294967295

Platforms

All

Output

The following outputs are examples of segment routing tunnel operational information, and the following table describes the output fields.

Output Example

```
*A:Dut-F#  tools dump router segment-routing tunnel

Table 674: Output fields: tunnel group

Label	Description
ISA Group	The ISA group ID
Admin State	The administrative state of the tunnel group
Oper state	The operational state of the tunnel group
Responder-Only	The tunnel setup under the specified tunnel group
Non-Active Members	The non-active ESA and ESA VM
Required Active Qty	The number of the required active members
Active Members	The active ESA and ESA VM
Reassembly (msecs)	The time of reassembly
ISA Chassis	The number of ISA chassis
Oper Flags	The operational status flag of the tunnel
Grp IPsec Tnls	The number of group IPsec tunnels
Grp IPsec Max Tnls	The maximum number of group IPsec tunnels

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Grp IP Tunnels	The number of group IP tunnels
Grp IP Max Tunnels	The maximum number of group IP tunnels
ISA Scale Mode	The number of tunnels on each ISA of the tunnel group
Statistics Collection	Specifies whether statistics collection is enabled
CPU Usage	Specifies whether the CPU usage of all the processes and protocols is enabled
Gw Traffic Forward	Specifies whether the traffic forwarded on the GW is enabled
IGP-Shared	Identifies a local node as a shared SID and is programmed in an ILM as such. An ILM can only be programmed once and has a single owner. When a node SID is shared, a local duplicate may exist between instances and the ISIS, OSPF, and OSPF3 protocols.

tunnel

Syntax

tunnel [{*ip-address* | *ipv6-address*}] [**detail**]

tunnel [{*ip-address* | *ipv6-address*}] **egress-stats**

Context

[Tree] (show>router>rib-api tunnel)

Full Context

show router rib-api tunnel

Description

This command displays RIB-API tunnel information.

Parameters

ip-address

Specifies the IPv4 address of the RIB-API tunnel up to 64 characters.

ipv6-address

Specifies the IPv6 address of the RIB-API tunnel up to 64 characters.

detail

Displays detailed RIB-API tunnel information.

egress-stats

Displays egress statistics of all instances for the specified RIB-API tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

All

Output

The following output is an example of RIB-API tunnel information.

Output Example

```
show router rib-api tunnel 10.20.1.5 egress-stats

tunnel

Syntax

tunnel {*ip-address* | *ipv6-address*} **preference** *preference* **client-tag** *client-tag* **egress-stats**

Context

[Tree] (clear>router>rib-api tunnel)

Full Context

clear router rib-api tunnel

Description

Clears the egress statistics of the specified RIB-API tunnel.

Parameters

ip-address

Specifies the IPv4 address of the RIB-API tunnel up to 64 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-address

Specifies the IPv6 address of the RIB-API tunnel up to 64 characters.

preference

Specifies the preference of the specified RIB-API entry.

Values 0 to 4294967295

client-tag

Specifies the client tag of the specified RIB-API entry.

Values 0 to 4294967295

egress

Specifies to clear the egress statistics.

Platforms

All

tunnel

Syntax

tunnel {*ip-address* | *ipv6-address*}

Context

[Tree] (tools>dump>router>rib-api tunnel)

Full Context

tools dump router rib-api tunnel

Description

This command configures the dump tools for RIB-API tunnel.

Parameters

ip-address

Specifies the IPv4 address of the RIB-API tunnel, up to 64 characters.

ipv6-address

Specifies the IPv6 address of the RIB-API tunnel, up to 64 characters.

Platforms

All

Output

The following output is an example of RIB-API tunnel route information.

tunnel

Syntax

tunnel *gre-tunnel-name* **stats**

tunnel *gre-tunnel-name* **temp-mtu**

Context

[Tree] (clear>ip tunnel)

Full Context

clear ip tunnel

Description

This command clears IP tunnel statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

gre-tunnel-name

Specifies the GRE tunnel name, up to 32 characters.

stats

Clears the statistics counter for the specified tunnel.

temp-mtu

Clears temporary MTU values from the MTU propagation for the specified tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Syntax

tunnel {*ip-address* | *ipv6-address*} **preference** *preference* **client-tag** *client-tag* **egress-stats** [**interval** *seconds*] [**repeat** *repeat*] [{**absolute** | **rate**}]

Context

[Tree] (monitor>router>rib-api tunnel)

Full Context

monitor router rib-api tunnel

Description

This command monitors the egress statistics of the specified RIB-API tunnel.

Parameters

ip-address

Specifies the IPv4 address of the RIB-API tunnel up to 64 characters.

ipv6-address

Specifies the IPv6 address of the RIB-API tunnel up to 64 characters.

preference

Specifies the preference of the specified RIB-API entry.

Values 0 to 4294967295

client-tag

Specifies the client tag of the specified RIB-API entry.

Values 0 to 4294967295

egress-stats

Specifies to monitor the egress statistics of the specified RIB-API tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays the absolute statistics of the specified RIB-API tunnel.

rate

Displays the rate-per-second statistics of the specified RIB-API tunnel.

Platforms

All

tunnel

Syntax

tunnel *name* [**destinations** | **sessions**]

Context

[Tree] (show>system>grpc-tunnel tunnel)

Full Context

show system grpc-tunnel tunnel

Description

This command displays gRPC tunnel information.

Parameters

name

Specifies the gRPC tunnel name, up to 32 characters.

destinations

Specifies to display gRPC tunnel destinations.

sessions

Specifies to display gRPC tunnel sessions.

Platforms

All

Output

The following output is an example of system gRPC tunnel tunnel information.

Table 676: Output fields: system gRPC tunnel name describes system gRPC tunnel tunnel output fields.

Output example

```
*A:dut-c# show system grpc-tunnel tunnel

===============================================================================
gRPC-Tunnel tunnels
===============================================================================
Name                                                  Admin   Oper   Sessions
-------------------------------------------------------------------------------
t1                                                  Enabled     Up          0
-------------------------------------------------------------------------------
No. of tunnels: 1
===============================================================================
Please provide output example
```

Table 675: Output fields: system gRPC tunnel tunnel

Label	Description
Name	Displays the name of the tunnel.
Admin	Specifies the administrative state (Enabled, Disabled).
Oper	Specifies the operational state (Up, Down, Tran).
Sessions	Displays the number of sessions of the tunnel.
No. of tunnels	Displays the number of tunnels.

Output example

```
*A:dut-c# show system grpc-tunnel tunnel "t1"

===============================================================================
gRPC-Tunnel tunnel
===============================================================================
Name                      : t1
Administrative State      : Enabled
Operational State         : Up
Oper Down Reason          :
Description               : (Not Specified)
Destination Group         : dg1
Operational Target Name   : dut-c
===============================================================================
```

Table 676: Output fields: system gRPC tunnel name

Label	Description
Name	Displays the name of the tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Administrative State	Specifies the administrative state (Enabled, Disabled).
Operational State	Specifies the operational state (Up, Down, Transition).
Oper Down Reasons	Displays the reason for the operational down state.
Description	Displays the description of the tunnel.
Destination Group	Displays the destination group of the tunnel.
Operational Target Name	Displays the operational target name of the tunnel.

tunnel

Syntax

tunnel count

tunnel *ip-tunnel-name*

tunnel state *state*

tunnel

Context

[Tree] (show>ip tunnel)

Full Context

show ip tunnel

Description

This command displays IP related tunnel information.

Parameters

ip-tunnel-name

Specifies the IP tunnel name, up to 32 characters.

state

Specifies the IP tunnel state.

Values up, down

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

27.51 tunnel-encryption

tunnel-encryption

Syntax

tunnel-encryption encryption-group *group-name* [**peer** *ip-address*] [**detail**] [**mka-session**]

tunnel-encryption encryption-group *group-name* [**peer** *ip-address*] [**statistics**] [**mka-session**]

tunnel-encryption [**detail**] [**mka-session**]

tunnel-encryption [**statistics**] [**mka-session**]

Context

[Tree] (show>anysec tunnel-encryption)

Full Context

show anysec tunnel-encryption

Description

Commands in this context display tunnel encryption information.

Parameters

group-name

Specifies the encryption group name, up to 32 characters.

ip-address

Specifies the IPv4 or IPv6 address.

Values

ip-address:	ipv4-address - a.b.c.d
ipv6-address :	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

detail

Keyword to specify the detailed tunnel encryption group information.

mka-session

Keyword to specify MKA session information.

statistics

Keyword to specify MKA statistical information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7750 SR-1, 7750 SR-12e, 7750 SR-s

Output

The following output is an example of the tunnel encryption information, and Table 677: Output fields: tunnel encryption describes the output fields.

Output Example

```
# show anysec tunnel-encryption detail

Context

[Tree] (show>isa tunnel-group)

Full Context

show isa tunnel-group

Description

Commands in this context display tunnel information.

Parameters

association

Keyword that displays association applicable to the specified tunnel group.

esa-vm

Displays information about the configured ESA and ESA VM.

Values

esa-vm:	*esa-id*/*vm-id*	
	esa-id	1 to 16

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vm-id 1 to 4

mda-id

Displays information about the specified ISA.

Values slot/mda

detail

Keyword that displays detailed ESA VM information.

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the tunnel group information, and Table 678: Output fields: tunnel group describes the output fields.

Table 678: Output fields: tunnel group

Label	Description
ISA Group	The ISA group ID
Admin State	The administrative state of the tunnel group
Oper state	The operational state of the tunnel group
Responder-Only	The tunnel setup under the specified tunnel group
Non-Active Members	The non-active ESA and ESA VM
Required Active Qty	The number of required active members
Active Members	The active ESA and ESA VM

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Reassembly (msecs)	The time of reassembly
ISA Chassis	The number of ISA chassis
Oper Flags	The operational status flag of the tunnel
Grp IPsec Tnls	The number of group IPsec tunnels
Grp IPsec Max Tnls	The maximum number of group IPsec tunnels
Grp IP Tunnels	The number of group IP tunnels
Grp IP Max Tunnels	The maximum number of group IP tunnels
ISA Scale Mode	The number of tunnels on each ISA of the tunnel group
SPI Range Index	The SPI range index assigned to the tunnel group
Statistics Collection	Specifies whether statistics collection is enabled
CPU Usage	Specifies whether the CPU usage of all the processes and protocols is enabled
Gw Traffic Forward	Specifies whether the traffic forwarded on the Gw is enabled
Member	The ESA VM members in the tunnel group
Weight	The weight of the ESA VM for tunnel load balancing
Hash Slots	The number of hash slots
Active	The active state of the ESA VM

Context

[Tree] (show>router>pim tunnel-interface)

Full Context

show router pim tunnel-interface

Description

This command displays PIM tunnel interface information.

Parameters

ip-int-name

Displays information about the specified IP interface name, up to 32 characters.

mt-int-name

Displays information about the Multicast Tunnel (MT) interface for a VPRN.

Values *vprn-id*-mt-*grp-ip-address*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

int-ip-address

Displays information about the interface IPv4 or IPv6 address.

grp-ip-address

Displays information about the IP multicast group address, or 0.

ip-address

Displays information about the source or RP IPv4 or IPv6 address.

type

Displays information about the type of entry.

Values starstarrp, starg, sg

detail

Displays detailed interface information.

family

Displays family information.

Values ipv4, ipv6

Platforms

Table 679: Output fields: tunnel member pool

Label	Description
ISA Tunnel Member Pool	The name of the ISA tunnel member pool
Description	The text description for the tunnel member pool
High Availability	The HA configuration of the tunnel member pool
Associated Tunnel Grps	The name of the tunnel groups this pool is associated with
Member	The ISA or ESA members associated with this tunnel member pool
Active In Group	The tunnel group that the MDA is active in
Last Config Change	The date and time of the last configuration change

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Weight	The weight of the ESA VM for tunnel load balancing
Hash Slots	The number of hash slots
Number of Configured Entries	The number of configured entries
Number of Active Entries	The number of active entries

27.56 tunnel-qos

tunnel-qos

Syntax

tunnel-qos [**detail**]

tunnel-qos remote-ip *ip-address* [**local-ip** *ip-address*] [**detail**]

Context

[Tree] (show>router>wlan-gw tunnel-qos)

Full Context

show router wlan-gw tunnel-qos

Description

This command displays tunnel-QoS resource information.

Parameters

ip-address

Specifies the IPv4 address of the access point that is the source IPv4 address in the tunnel header of received packets.

Values

ipv4-address: a.b.c.d

ipv6-address : x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

x - [0 to FFFF]H

d - [0 to 255]D

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-address

Specifies the IPv4 address of this system that is the destination IPv4 address in the tunnel header of received packets.

Values

ipv4-address:	a.b.c.d
ipv6-address :	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

detail

Displays detailed information.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of soft GRE tunnel QoS information.

Output Example

```
*A:Dut-C# show router 50 wlan-gw soft-gre-tunnel-qos

Context

[Tree] (show>isa>stats>ipsec-stats tunnel-setup-rate)

Full Context

show isa statistics ipsec-stats tunnel-setup-rate

Description

This command displays IPsec tunnel setup rate statistics of the specified scope.

The system collects statistics every hour for the last 24 hour period per wall clock. A current value is also included in the output.

This command supports following scopes:

- per system
- per ISA

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- per tunnel group
- per IPsec GW

The statics include the following setup rates:

- static tunnel
- dynamic LAN-to-LAN tunnel
- remote access tunnel
- all types of tunnel

The start time indicates the starting timestamp of measurement. The sampling duration indicates the duration of measurement.

Parameters

name

Displays information about the name of the IPsec GW up to 32 characters in length.

mda

Displays information about the specified ISA.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 24

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

type

Displays information about the specified tunnel type associated with this IPsec GW.

Values all, sl2l, dl2l, ra

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system once this parameter is specified.

show-oid

Displays information about the OID of the current statistical value.

esa-vm

Displays the ID of the configured ESA and ESA VM.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values	esa-vm:	*esa-id*/*vm-id*	
		esa-id	1 to 16
		vm-id	1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

27.59 tunnel-table

tunnel-table

Syntax

tunnel-table summary [**ipv4** | **ipv6**]

tunnel-table [*ip-prefix*[*/mask*]] [**protocol** *protocol*] **[alternative**] [**ipv4** | **ipv6**] [**detail**] [**instance** *instance-id*]

tunnel-table mpls-tp

tunnel-table [*ip-prefix*[*/mask*]] **sdp** *sdp-id*

Context

[Tree] (show>router tunnel-table)

Full Context

show router tunnel-table

Description

This command displays tunnel table information.

Auto-bind GRE tunnels are not displayed in the **show** command output. GRE tunnels are not the same as SDP tunnels that use the GRE encapsulation type. When the **auto-bind-tunnel** command is used when configuring a VPRN service, it means the MP-BGP NH resolution is referring to a core routing instance for IP reachability. For a VPRN service this object specifies the lookup to be used by the routing instance if no SDP to the destination exists.

Parameters

summary

Displays summary tunnel table information.

ip-prefix[/mask]

Displays the specified destination IP address and mask of the table tunnel.

Values for ipv4-prefix: a.b.c.d (host bits must be 0)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

for ipv4-prefix-le: 0 to 32

for ipv6-prefix:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

for ipv6-prefix-le: 0 to 128

ipv4

Displays only tunnel table information for IPv4 addresses.

ipv6

Displays only tunnel table information for IPv6 addresses.

protocol

Displays LDP protocol information.

Values bgp, bgp-epe, fpe, isis, ldp, mpls-fwd-policy, ospf, ospf3, rib-api, rsvp, sdp, sr-policy, sr-te, srv6-isis, srv6-policy, udp

Note:
It is possible that a specific platform only supports a subset of the above protocol values.

alternative

Displays backup route details.

detail

Displays detailed information.

instance-id

Specifies the IGP instance of the tunnel table

Values For isis — 0 to 127

For ospf — 0 to 31

For ospfv3 —

- 0 to 31 (when ospfv3 is used for IPv6)
- 64 to 95 (when ospfv3 is used for IPv4)

Note:
It is possible that a specific platform only supports a subset of the above values.

mpls-tp

Displays MPLS TP tunnel table information.

sdp-id

Displays information pertaining to the specified SDP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Values 1 to 17407

Platforms

All

Output

The following outputs are examples of tunnel table information, and Table 680: Output fields: tunnel table describes the output fields.

Output Example

Table 681: Output fields: tunnel table protocol detail

Label	Description
Destination	The destination address and mask of the route
NextHop	The next hop for the destination of the route
Tunnel Flags	The flags set for this tunnel
Age	The tunnel age
CBF Classes	The Class-Based Forwarding (CBF) classes for the tunnel
Owner	The tunnel owner
Encap	The tunnel encapsulation type
Tunnel ID	The tunnel (SDP) identifier
Preference	The route preference for routes learned from the configured peer or peers
Tunnel Label	The tunnel label
Tunnel Metric	The route metric value for the route
Tunnel MTU	The maximum transmission unit (MTU) of the tunnel
Max Label Stack	The maximum number of labels that can be added onto an existing MPLS header
LSP Weight	The LSP weight

27.60 tunnel-template

tunnel-template

Syntax

tunnel-template [*ipsec-template-identifier*]

tunnel-template *ipsec-template-identifier* **association** [**all**]

Context

[Tree] (show>ipsec tunnel-template)

Full Context

show ipsec tunnel-template

Description

This command displays IPsec tunnel template information.

Parameters

ipsec template identifier

Displays an existing IPsec tunnel template ID.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of the **show ipsec tunnel-template** command.

Output Example

```
*A:ALA-48>config>ipsec# show ipsec tunnel-template 1
===============================================================================
IPsec Tunnel Template
===============================================================================
Id      Trnsfrm1  Trnsfrm2  Trnsfrm3  Trnsfrm4  ReverseRoute      ReplayWnd
-------------------------------------------------------------------------------
1       1         none      none      none      useSecurityPolicy 128
-------------------------------------------------------------------------------
Number of templates: 1
===============================================================================
*A:ALA-48>config>ipsec#
```

27.61 tunnels

tunnels

Syntax

tunnels [**local-ip** *ip-address*] [**remote-ip** *ip-address*] [**isa-group** *wlan-gw-group-id*] [**member** [1 to 255]] [**summary**] [**detail**]

tunnels local-ip *ip-address* **remote-ip** *ip-address* **ue**

Context

[Tree] (show>router>wlan-gw tunnels)

Full Context

show router wlan-gw tunnels

Description

This command displays tunnel operation information.

Parameters

ip-address

Specifies the local IP address of this system that is the destination IP address in the tunnel header of received packets.

Values

ip-address:	ipv4-address - a.b.c.d
ipv6-address :	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H
	d - [0 to 255]D

ip-address

Specifies the remote IP address of the access point that is the source IP address in the tunnel header of received packets.

Values

ip-address:	ipv4-address - a.b.c.d
ipv6-address :	x:x:x:x:x:x:x:x (eight 16-bit pieces)
	x:x:x:x:x:x:d.d.d.d
	x - [0 to FFFF]H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

d - [0 to 255]D

wlan-gw-group-id

Specifies the identifier of the WLAN gateway ISA group that terminates GRE for this group interface.

Values 1 to 4

member

Specifies the identifier of this WLAN gateway ISA group member.

Values 1 to 255

summary

Displays a summary of the specified parameter.

detail

Displays detailed information.

ue

Displays information for the specified User Equipment.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of WLAN-GW tunnel information.

Output Example

Note:
The remote/local IP addresses are locally generated for VLAN tunnels.

```
show router 50 wlan-gw tunnels
===============================================================================

tunnels

Syntax

tunnels [**router** *router-name*] [**remote-ip** *ip-address*] [**local-ip** *ip-address*] [**encapsulation** *encap* [*encap*] [**qtag1** *qtag*] [**qtag2** *qtag*] [**ap-sap** *sap-id*] [**min-num-ue** *minimum*] [**max-num-ue** *maximum*] [**ap-mac-learn-failed** { **true** | **false**}] [**get-num-results**] [**addr-family** *family*] [**ue-type** *ue-type* [*ue-type*]]

Context

[Tree] (show>subscr-mgmt>wlan-gw tunnels)

Full Context

show subscriber-mgmt wlan-gw tunnels

Description

This command displays all the WLAN-GW tunnels matching the specified criteria. Unlike the similar command in the **show>router>vprn** context, this command also includes information on tunnels containing ISA-only UEs such as migrant, DSM and l2-wholesale.

Parameters

router-name

Specifies the name or ID of the router where the tunnel terminates.

ip-address

Specifies the IPv4 or IPv6 address indicating one, or both, of the tunnel endpoint IP addresses.

encap

Specifies up to three tunnel encapsulation types, for example GRE, L2TP, or VLAN.

qtag

Specifies the Q-tags specifying the l2-ap-delimiting tags.

sap-id

Specifies the SAP-ID of the l2-ap SAP.

minimum

Specifies the minimum number of UEs on the tunnel, after applying the UE type filter.

maximum

Specifies the maximum number of UEs on the tunnel, after applying the UE type filter.

ap-mac-learn-failed true | false

Filters the results to display only tunnels that have learned the AP-MAC (**false**) or have not learned the AP-MAC (**true**).

get-num-results

Displays the total number of tunnels at the end of each tunnel record.

family

Specifies the tunnel's IP family type (IPv4 or IPv6).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ue-type

Filters up to five display based on the presence of specified UE types and is used in conjunction with **min-num-ue** and **max-num-ue**.

Values migrant, dsm, l2w, esm, or xcon

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of WLAN-GW tunnels.

Output Example

```
Node# show subscriber-mgmt wlan-gw tunnels
===============================================================================
Access Point tunnels

No. of TWAMP-Light Reflector Prefixes: 2
-------------------------------------------------------------------------------
```

Table 682: Output fields: TWAMP light

Label	Description
TWAMP Light Reflector	
Admin State	The administrative state of the reflector Up — The server or prefix is administratively enabled (**no shutdown**) in configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
	Down — The server or prefix is administratively disabled (**shutdown**) in configuration
UDP Port	The UDP port that the reflector is listening on for test packets
IPv6 UDP Checksum 0	The processing of received IPv6 UDP checksum 0 packets is either allowed or disallowed
Up Time	The time since the server process was started, measured in days (d), hours, minutes, and seconds
Test Frames Received	The total number of TWAMP Light test packets received from Session-Senders on the reflector
Test Frames Sent	The total number of TWAMP Light test packets transmitted by the reflector to Session-Senders
Prefix	A list of prefixes from which the reflector allows TWAMP Light tests
Description	The configured description for the prefix

twamp-light

Syntax

twamp-light [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**delay** | **loss**]

Context

[Tree] (monitor>oam-pm>session twamp-light)

Full Context

monitor oam-pm session twamp-light

Description

This command monitors the IP Two Way Active Measurement Protocol Light (TWAMP Light) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

delay

Specifies the delay metrics are displayed.

Default delay

loss

Specifies the loss metrics are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Syntax

twamp-light

Context

[Tree] (show>oam-pm>stats>session twamp-light)

Full Context

show oam-pm statistics session twamp-light

Description

This command selects the session's TWAMP-light test for the statistical display.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

28.1 ue

ue

Syntax

ue [*ieee-address*] [**detail**]

Context

[Tree] (show>call-trace>wlan-gw ue)

Full Context

show call-trace wlan-gw ue

Description

This command gives an overview of either all traces or a specific trace on the WLAN-GW.

Parameters

ieee-address

Displays information about the MAC address of this UE.

detail

Displays detailed information about the job.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of traces of the UE being monitored.

Output Example

```
Node# show call-trace hosts
===============================================================================
Call-trace hosts

Context

[Tree] (show>subscr-mgmt>wlan-gw ue)

Full Context

show subscriber-mgmt wlan-gw ue

Description

This command displays User Equipment (UE) information.

Parameters

qtag

Displays information about the VLAN Q-tag present in the traffic received from this UE.

Values 1 to 4095

label

Displays information about the MPLS label present in the traffic received from this UE.

service-id

Specifies an existing service ID. If no *svc-id* is specified then it indicates that the interface is a network interface in the Base router instance.

Values {*id* | *svc-name*}

id: 1 to 2147483647

svc-name: Specifies an existing service name, up to 64 characters (*svc-name* is an alias for input only. The *svc-name*

© 2026 Nokia.

gets replaced with an id automatically by SR OS in the configuration)

service-set-id

Displays information about the Service Set ID (SSID) of this UE.

ip-address

Displays information about the IP address of the previous Access Point (AP) of this UE.

bridge-id

Displays specified HLE bridge domain information of this UE.

Values 1 to 4294967295

ieee-address

Displays information about the MAC address of this UE.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of WLAN-GW information.

Output Example

```
System# show subscriber-mgmt wlan-gw ue
===============================================================================
User Equipments
===============================================================================

ue

Syntax

ue [**wlan-gw-group** *wlan-gw-group-id*] [**mda** *mda-id*] [**next-index** *index*] [**summary**] [**detail**] [**bd** *bridge-id*] [**ue-mac** *ieee-address*] [**ue-vlan** *vlan*] [**state-description** *state*] [**tunnel-router** *router-instance*] [**tunnel-source-ip** *ip-address*] [**tunnel-destination-ip** *ip-address*] [**tunnel-type** *tunnel-type*] [**ue-ip** *ipv4-address*] [**dhcp6-addr** *ipv6-address*] [**slaac-prefix** *ipv6-address*] [**aggregate-summary**] [**soft-quota-exhausted**]

Context

[Tree] (tools>dump>wlan-gw ue)

Full Context

tools dump wlan-gw ue

Description

This command dumps User Equipment (UE) information.

The **summary** option displays a count of UEs per ISA and the **aggregate-summary** displays a count of matched UEs over the whole WLAN-GW.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display detailed UE information.

```
tools dump wlan-gw ue detail
```

Output example

```

28.2 uefi-vars

uefi-vars

Syntax

uefi-vars card *cpm-slot*

uefi-vars eth-sat *sat-id*

Context

[Tree] (tools>dump>system>security>secure-boot uefi-vars)

Full Context

tools dump system security secure-boot uefi-vars

Description

This command displays the secure-boot Unified Extensible Firmware Interface (UEFI) variables.

Parameters

cpm-slot

Specifies the CPM slot.

Values A, B

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sat-id

Specifies the Ethernet satellite ID.

Values 1 to 20

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

28.3 umh-pair-id

umh-pair-id

Syntax

umh-pair-id *pair-id* **revert-to-primary**

Context

[Tree] (tools>perform>service>id>mvpn umh-pair-id)

Full Context

tools perform service id mvpn umh-pair-id

Description

This command reverts a pair of PMSI from non-revertive standby-only mode back to primary mode.

Parameters

pair-id

Specifies the UMH pair ID.

Values 1 to 4294967295

revert-to-primary

Keyword used to revert the specified PMSI pair to primary mode.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

28.4 un-sid

un-sid

Syntax

un-sid [**mt** {**0** | **2**}] [**prefix** *ipv6-prefix*[/*prefix-length*]] [**adv-router** *system-id* | *hostname*] [**algo** *algo-id*]

Context

[Tree] (show>router>isis>srv6 un-sid)

Full Context

show router isis segment-routing-v6 un-sid

Description

This command displays IS-IS SRv6 uN SIDs.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified IP address and length.

Values *ipv6-prefix*[/*prefix*]: x:x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:x:d.d.d.d
x: [0 to FFFF]H
d: [0 to 255]D
prefix-length: 1 to 128

system-id* | *hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

Output

Table 683: Output fields: uN SID describes the uN SID output fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Use the following command to display uN SID information.

```
show router isis segment-routing-v6 un-sid
```

Output example

```
===============================================================================

  110::/96                           End PSP                       -      128
===============================================================================
```

Table 683: Output fields: uN SID

Label	Description
Prefix	Displays the prefix
AdvRtr	Displays the advanced router information
MT	Displays the MT information
Lvl/Typ	Displays the level or type information
SID	Displays the Segment ID
Behavior	Displays the behavior information
Flags	Displays the flag information
Algo	Displays the algorithm information

28.5 uni

uni

Syntax

uni [*port-id*]

Context

[Tree] (show>elmi uni)

Full Context

show elmi uni

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information about E-LMI mode, status, number of EVCs (SAPs) configured on the port for all of the ports on the service router.

Parameters

port-id

Displays UNI information for the specified port.

Values *slot*/*mda*/*port*

Platforms

All

Output

The following output is an example of elmi uni information.

Output example: show elmi uni

```
*A:Dut-C# show elmi uni

28.6 unicast

unicast

Syntax

unicast [**router** *router-instance* | **service-name** *service-name*]

Context

[Tree] (show>system>ptp unicast)

Full Context

show system ptp unicast

Description

This command displays unicast negotiation information.

Parameters

router-instance

Displays the information for the specified router instance.

Values router-name – Base

vprn-svc-id – 1 to 2147483647

service-name

Specifies the service name, up to 64 characters, that is used to identify the router instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following command displays Unicast information and Table 684: Output fields: PTP unicast describes the output fields.

```
show system ptp unicast
```

```

Label	Description
Router	The name or ID of the router instance
IP Address	The IP address of the PTP peer
Dir	The direction (transmitted or received) of the unicast negotiation packet
Type	The unicast negotiation packet type
Rate	The rate of packet transmission or reception
Duration	The duration of the packet transmission or reception interval, in seconds
State	The state of the negotiation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Time	The date and time that the negotiation state was changed
PTP Peers	The total number of PTP peers
Total Packet Rate	The total number of unicast negotiation packets transmitted and received per second

Full Context

show router unreachable-route-table

Description

This command displays the unreachable route table.

Parameters

ip-prefix[/prefix-length]

Displays routes only matching the specified IP address and length.

Values			
	ipv4-address/prefix:	ipv4-address	a.b.c.d (host bits must be 0)
	ipv4-prefix-length		0 to 32
	ipv6-address/prefix:	ipv6-address	x:x:x:x:x:x:x:x (eight 16-bit pieces)
			x:x:x:x:x:x:d.d.d.d
			x [0 to FFFF]H
			d [0 to 255]D
	prefix-length		1 to 128

ipv4

Displays information for IPv4.

ipv6

Displays information for IPv6.

longer

Displays information for the longer configuration.

exact

Displays information for the exact configuration.

protocol-name

Displays information for the referenced protocol.

instance-id

Displays information for the referenced instance.

all

Displays information for all of the unreachable routes.

Platforms

All

Output

The following output is an example of unreachable route table information, and Table 686: Output fields: unreachable route table describes the output fields.

unreachable-routes originated mt *mt-id-number* [**prefix** *ip-prefix*[*prefix-length*]]

Context

[Tree] (show>router>isis unreachable-routes)

Full Context

show router isis unreachable-routes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the unreachable routes originated by the router. The output can be filtered using family or IP prefix criteria.

Parameters

family

Keyword to display information about unreachable IPv6 or IPv4 unicast routes.

Values ipv4-unicast | ipv6-unicast

ip-prefix/prefix-length

Displays the unreachable routes based on a specific IP prefix, or a specific IP prefix and prefix length.

Values	ipv4-address/prefix:	ipv4-address	a.b.c.d (host bits must be 0)
	ipv4-prefix-length		0 to 32
	ipv6-address/prefix:	ipv6-address	x:x:x:x:x:x:x:x (eight 16-bit pieces)
			x:x:x:x:x:x:d.d.d.d
			x [0 to FFFF]H
			d [0 to 255]D
	prefix-length		1 to 128

mt-id-number

Displays the unreachable routes based on a specific Multitopology (MT) ID number.

Values 0 | 2

Platforms

Use subject to Terms available at: www.nokia.com/terms.

Parameters

log-id

Specifies the log ID from which cancellation is requested.

Values 1 to 101

Platforms

All

28.11 update-path

update-path

Syntax

update-path {**lsp** *lsp-name* **path** *current-path-name* **new-path** *new-path-name*}

Context

[Tree] (tools>perform>router>mpls update-path)

Full Context

tools perform router mpls update-path

Description

This command enables you to instruct MPLS to replace the path of a primary or secondary LSP. The primary or secondary LSP path is indirectly identified via the *current-path-name* value. The same path name cannot be used more than once in a given LSP name.

This command applies to both CSPF LSP and to a non-CSPF LSP. This command will only work when the specified *current-path-name* has the adaptive option enabled. The adaptive option can be enabled at the LSP level or the path level.

The new path must have been configured in the CLI or provided via SNMP. The CLI command for entering the path is

configure router mpls path *path-name*

The command fails if any of the following conditions exist:

- The specified *current-path-name* of this LSP does not have the adaptive option enabled.
- The specified *new-path-name* value does not correspond to a previously defined path.
- The specified *new-path-name* value exists but is being used by any path of the same LSP, including this one.

When you execute this command, MPLS performs the following procedures:

- MPLS performs a single MBB attempt to move the LSP path to the new path.
- If the MBB is successful, MPLS updates the new path

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

  - MPLS writes the corresponding NHLFE in the data path if this path is the current backup path for the primary.
  - If the current path is the active LSP path, it updates the path and writes the new NHLFE in the data path that causes traffic to switch to the new path.
- If the MBB is not successful, the path retains its current value.
- The update-path MBB has the same priority as the manual re-signal MBB.

Full Context

show router gtp uplink

Description

This command displays operational information related to the usage of GTP uplink interfaces (Gn, S2a, S2b) in this routing context.

Parameters

arec

Displays A-records.

snaptr

Displays Straightforward-NAPTR information.

srv

Displays SRV records.

apn-domain-string

Specifies the Access Point Name (APN) of this DNS cache entry.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of GTP uplink information.

Output example

```
Node# show router 10 gtp uplink mgw-address-cache
===============================================================================

Output

The following output is an example of uptime information, and Table 688: Output fields: uptime describes the output field.

Output example

```
A:ALA-1# show uptime
System Up Time         : 11 days, 18:32:02.22 (hr:min:sec)

A:ALA-1#
```

Table 688: Output fields: uptime

Label	Description
System Up Time	Displays the length of time the system has been up in days, hr:min:sec format.

28.18 url-filter

url-filter

Syntax

url-filter [*url-filter-name*]

url-filter *url-filter-name* **isa** *mda-id/esa-vm-id* [**detail**]

url-filter *url-filter-name* **web-service** [**profile** *profile-name*]

Context

[Tree] (show>app-assure>group url-filter)

Full Context

show application-assurance group url-filter

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays information about the configured url-filter policy along with some associated raw statistics. These output statistics are:

- Vlan Id: VLAN ID used by the aa interfaces
- Admin Status: Up / Down
- Oper Status: Up / Down
- Oper Flags: adminDown, no-aa-if, aa-if-down, icap-server-down
- Default Action: default policy action taken by the url-filter
- ICAP HTTP Redirect: HTTP redirect Policy
- AQP Referenced: Yes/No
- HTTP Request: Number of subscriber HTTP requests
- HTTP Errors: Impossible to send an ICAP request, this can be caused by either no TCP connection available, associated flow with a drop action due to another aqp policy, system resource exhausted
- ICAP Request: Number of ICAP request sent
- ICAP Errors: ICAP request timeout, unexpected ICAP response, internal TCP errors.
- Custom-x-header: Name of the custom-x-header, if configured. If it is not configured, the value is "Not Specified".

In addition to these counters the system counts the type of action taken by the url-filter policy (allow, block, redirect, default) as well as the type of responses received from the icap server (allow, block, redirect, late).

Parameters

url-filter-name

Specifies the name of the url-filter policy.

mda-id/esa-vm-id

Specifies the mda-id/esa-vm-id reference of the ISA card.

detail

Specifies detailed statistics related to the ISA card.

profile-name

Specifies the name of a configured profile for web service, up to 256characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of url-filter information, and Table 689: Output fields: web service URL filter describes the output fields.

URL filter show command output example

Label	Description
Category Id	The ID of the blocked or allowed category.
Category Name	The name of the blocked or allowed category.

28.19 url-list

url-list

Syntax

url-list *url-list-name*

Context

[Tree] (show>app-assure>group url-list)

Full Context

show application-assurance group url-list

Description

This command displays information about the configured URL list.

Parameters

url-list-name

Specifies the name of the URL list.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output are examples of show URL list information, and Table 690: Output fields: URL list describes the URL list show command output fields.

Output example

```
# show application-assurance group 1 url-list "allow-list1"
===============================================================================
Application Assurance Group 1 url-list "allow-list1"
===============================================================================
Description : Default Url-list object
Size : standard
Host Expressions : enabled
Admin Status : Up
Oper Status : Up
Oper Flags : <none>
File deployed to ISAs : Yes
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

```
-------------------------------------------------------------------------------
Upgrade Statistics
-------------------------------------------------------------------------------
Last Success : 06/19/2020 02:57:06
Deployed
File Name : cf1:/expr_15000.vm.only.expr
URL Entries : 15000 (100.00% full)
URL Characters : 249390 ( 5.08% full)
URL Host Expr Entries: 15000 (100.00% full)
Blank/Comment Lines : 60519
Last Attempt : 06/19/2020 02:57:06
Result : Success
```

Table 690: Output fields: URL list

Label	Description
Description	The description of the URL list
Size	[standard | extended] Size parameter for the URL list
Host Expressions	If the host is enabled or disabled
Admin Status	[Up | down] - Administrative status of the URL list
Oper Status	[Up | down] - Operational status of the URL list
Oper Flags	[admin-down | file-does-not-exist |invalid-file-format | too-many-urls | switch-over-error]
File Deployed to ISA	[Yes | No] - This flag describes if the file located in the compact flash is the one deployed in the ISA, in the event the file is overwritten and before the admin upgrade command is used this flag will display "No".
Upgrade Statistics	
Last Success	Last time the list was successfully upgraded
File Name	File name for the last successful upgrade
URL Entries	Number of URLs loaded at the last success and percentage to full
URL Characters	Number of characters loaded at the last success and percentage to full
URL Host Expr Entries	URL host expression entries
Blank/CommentLines	Number of blank or commented out lines
Last Attempt	Last time the operator tried to upgrade the list
Result	[Success | Failure]. Result of the last upgrade
File Name	File name for the last upgrade attempt

28.20 usage-monitor

usage-monitor

Syntax

usage-monitor app-group [*app-group-name*] **count**

usage-monitor application [*application-name*] **count**

usage-monitor charging-group [*charging-group-name*] **count**

usage-monitor count

usage-monitor status

Context

[Tree] (show>app-assure>group>aa-sub usage-monitor)

Full Context

show application-assurance group aa-sub usage-monitor

Description

This command displays per-subscriber usage-monitoring statistics.

Parameters

app-group-name

Specifies an application group name, up to 32 characters.

application-name

Specifies an application name, up to 32 characters.

charging-group-name

Specifies a charging group name, up to 32 characters.

count

Displays counters.

status

Displays the status.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

28.21 user

user

Syntax

user [*user-name*] [**detail**]

user [*user-name*] **lockout**

Context

[Tree] (show>system>security user)

Full Context

show system security user

Description

This command displays user account information.

If no command line options are specified, summary information for all users is displayed.

Parameters

user-name

Displays information for the specified user.

Default All users

detail

Displays detailed user information to the summary output.

lockout

Displays information about any users who are currently locked out.

Platforms

All

Output

The following outputs are examples of user output information, and Table 691: Output fields: system security user describes the output fields.

Output example

```

Table 691: Output fields: system security user

Label	Description
User ID	The name of a system user.
Users	
New Pwd	y — The user must change their password at the next login. n — The user does not need to change their password at the next login.
Access Permissions	The user can access: cc — console port CLI fp — FTP gr — gRPC li — LI nc — NETCONF sp — SCP/SFTP sn — SNMP sc — SSH CLI tc — Telnet CLI
Password Expires	The number of days after which the user must change their password.
Login Attempts	The number of times that the user has attempted to log in, irrespective of whether the login succeeded or failed.
Failed Logins	The number of unsuccessful login attempts.
Local Conf	y — Password authentication is based on the local password database. n — Password authentication is not based on the local password database.
Number of users	The total number of listed users.
User Configuration Detail	
new pw required	yes — The user must change their password at the next login. no — The user does not need to change their password at the next login.
cannot change pw	yes — The user does not have the ability to change their password. no — The user has the ability to change their password.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
home directory	The local home directory for the user for both console and FTP access.
restricted to home	yes — The user is not allowed to navigate to a directory higher in the directory tree on the home directory device. no — The user is allowed to navigate to a directory higher in the directory tree on the home directory device.
save when restricted	Whether configuration save operations are allowed when the user is restricted to home.
login exec file	The user's login exec file which executes whenever the user successfully logs in to a console session.
profile	The security profiles associated with the user.
locked-out	Whether the user is currently locked out, and, if they are locked out, how much time remains before the user can attempt to log into the node again.
SNMP Parameters	
auth protocol	The SNMPv3 authentication protocol.
auth key	The SNMPv3 authentication key.
privacy protocol	The SNMPv3 privacy protocol.
privacy protocol	The SNMPv3 privacy key.
group	The group for which the protocols apply.
Currently Failed Login Attempts	
Remaining Login Attempts	The number of login attempts remaining before the user is locked out.
Remaining Lockout Time (min:sec)	The number of minutes and seconds remaining until the lockout expires and the user can attempt to log in again.

With the introduction of the PKI on an SR OS (SSH server) the authentication process can be done via PKI or password. The SSH client usually authenticates via PKI and password if PKI is configured on the client. In this case, the PKI takes precedence over the password in most clients.

All client authentications are logged and display in the **show>system>security>user detail**. The following table lists the rules where pass and fail attempts are logged.

Table 694: Output fields: chassis power management utilization

Label	Description
SUPPLY	
Power Capacity	Indicates the total amount of power available to the chassis.
Safety Level	Specifies the configured Power Safety Level, which is a percentage of the worst case power consumption level.
Alert Level	Specifies the configured power level in watts, which causes the system to raise an alarm if the available power level drops below a set level.
DEMAND	
Fan	Specifies the amount of power used for the fan tray indicated.
IO Module	Specifies the amount of power used for the IO Module indicated.
CPM Module	Specifies the amount of power used for the CPM indicated.
Fabric Module	Specifies the amount of power used for the SFM indicated.
MDA Module	Specifies the amount of power used for the line card indicated.
Current Util.	Specifies the total amount of power used for all system elements.
Peak Util.	Specifies peak utilization starting from bootup.

utilization

Syntax

utilization [**sample-period** *seconds*]

Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>system>switch-fabric utilization)

Full Context

show system switch-fabric utilization

Description

This command displays information about switch fabric utilization.

Parameters

seconds

Specifies the sampling period, in seconds, for switch fabric utilization.

Values 10 to 300

Default 10

Platforms

7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

Output

The following output is an example of switch fabric utilization information, and Table 695: Output fields: switch fabric utilization describes the output fields.

Output Example: show system switch-fabric utilization

```
A:admin@node-2# show system switch-fabric utilization
===============================================================================
Switch Fabric Utilization (Sample period: 10 seconds)
===============================================================================
Slot/FP             Utilization
-------------------------------------------------------------------------------
 1/1                94%

29.3 vccv-bfd

vccv-bfd

Syntax

vccv-bfd [**session**]

Context

[Tree] (show>service>id vccv-bfd)

Full Context

show service id vccv-bfd

Description

This command shows whether VCCV BFD is configured for a particular service and information about the VCCV session state.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The **show>service>id>vccv-bfd session** command gives a summary of all the VCCV sessions. Using both the sdp-id and the vc-id parameters gives VCCV BFD session information about a specific spoke-SDP.

For services where auto-discovery and signaling are used (for example, BGP VPWS, VPLS, and BGP-AD VPLS), use the **show>service>id>detail** command to determine the sdp-id and vc-id parameters allocated by the system.

Parameters

session

Displays a summary of all VCCV sessions.

Platforms

All

Output

The following output is an example of VCCV BFD information.

Output Example

```
*A:Dut-C# show service id 1000 vccv-bfd session
===============================================================================

clear router igmp version

Description

This command clears the IGMP version on a specified interface or IP address.

Parameters

group-interface *interface-name*

Clears the IGMP version on the specified group interface.

group-interface all

Clears the IGMP version on all group interfaces.

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

host *ip-address*

Clears the IGMP version on the specified host.

host all

Clears the IGMP version on all hosts.

interface *ip-int-name*

Clears the IGMP version on the specified interface.

Description

Commands in this context display video information.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

29.6 video-group

video-group

Syntax

video-group [*video-group-id*] [**peak-last-hour**]

Context

[Tree] (show>isa video-group)

Full Context

show isa video-group

Description

This command displays ISA video group information.

Parameters

video-group-id

Specifies the ISA video group ID.

peak-last-hour

Displays the peak FCC/RET session and bandwidth for the current hour, the last hour, and the lifetime.

Platforms

7450 ESS, 7750 SR, 7750 SR-s

Output

The following are output examples for this command.

Output Example

```
A:SR-7/Dut-C# show isa video-group
===============================================================================
ISA Video Group
===============================================================================

view

Syntax

view [*view-name*] [**detail**]

Context

[Tree] (show>system>security view)

Full Context

show system security view

Description

This command lists one or all views and permissions in the MIB-OID tree.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

view-name

Specifies the name of the view to display output. If no view name is specified, the complete list of views displays.

detail

Displays detailed view information.

Platforms

All

Output

The following output is an example of system security views.

Table 697: Output fields: system security view describes system security view output fields.

Output Example

```
A:ALA-1# show system security view

Table 697: Output fields: system security view

Label	Description
View name	Displays the name of the view. Views control the accessibility of a MIB object within the configured MIB view and subtree.
OID tree	Displays the Object Identifier (OID) value. OIDs uniquely identify MIB objects in the subtree.
Mask	Displays the mask value and the mask type, along with the *oid-value* configured in the **view** command, determines the access of each sub-identifier of an object identifier (MIB subtree) in the view.
Permission	Included — Specifies to include MIB subtree objects. Excluded — Specifies to exclude MIB subtree objects.
No. of Views	Displays the total number of configured views.
Group name	Displays the access group name.

29.8 violators

violators

Syntax

violators [**port**] [**interface**] [**sap**] [**video**] [**sdp**]

Context

[Tree] (show>system>security>cpu-protection violators)

Full Context

show system security cpu-protection violators

Description

This command displays all interfaces, ports or SAPs with CPU protection policy violators. It also includes objects (SAPs, interfaces) that exceed the out-profile-rate and have the log-events keyword enabled for the out-profile-rate in the cpu-protection policy associated with the object.

Parameters

port

Displays violators associated with the port.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interface

Displays violators associated with the interface.

sap

Displays violators associated with the SAP.

video

Displays violators associated with the video entity.

sdp

Displays violators associated with the SDP.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following output is an example of CPU protection violators information.

Output Example

```
*A:SecuritySR7>config>sys>security>cpu-protection>policy# show system security

violators

Syntax

violators [**port**] [**interface**] [**sap**]

Context

[Tree] (clear>cpu-protection violators)

Full Context

clear cpu-protection violators

Description

This command clears the rate limit violator record.

Parameters

port

Clears entries for ports.

interface

Clears entries for interfaces.

sap

Clears entries for SAPs.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

violators

Syntax

violators enforcement {**sap** | **interface**} **card** *slot-number* [**fp** *fp-number*]

violators local-monitor {**sap** | **interface**} **card** *slot-number* [**fp** *fp-number*]

Context

[Tree] (tools>dump>security>dist-cpu-protection violators)

Full Context

tools dump security dist-cpu-protection violators

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command shows the nonconforming enforcement policers and local monitors.

Parameters

sap

-Indicates to display the violators associated with SAPs

interface

- Indicates to display the violators associated with router interfaces.

enforcement

Shows exceed and hold-down for Static and Dynamic Policers.

local-monitor

Shows state of dynamic policer allocation for Local Monitoring Policers.

card *slot-number*

The physical slot number for the card.

Values 1 to n (n is platform dependent)

fp *fp-number*

Identifies the instance of the FP (FastPath) chipset. Some cards have a single FP and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMAs).

Values 1 to 8

Platforms

All

Output

Table 699: Output fields: OSPF virtual link

Label	Description
Nbr Rtr ID	The router ID(s) of neighboring routers.
Area Id	A 32-bit integer which identifies an area.
Local Interface	The IP address of the local egress interface used to maintain the adjacency to reach this virtual neighbor.
Metric	The metric value associated with the route. This value is used when importing this static route into other protocols. When the metric is configured as zero, the metric configured in OSPF, default-import-metric, applies. This value is also used to determine the static route installed in the forwarding table.
State	The operational state of the virtual link to the neighboring router.
Authentication	Specifies whether authentication is enabled for the interface or virtual link.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Hello Intrval	Specifies the length of time, in seconds, between the Hello packets that the router sends on the interface.
Rtr Dead Intrvl	Specifies the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since the OSPF admin status was enabled.
Tot Rx Packets	Specifies the total number of OSPF packets received on this interface since the OSPF admin status was enabled.
Rx Hellos	Specifies the total number of OSPF Hello packets received on this interface since the OSPF admin status was enabled.
Rx DBDs	Specifies the total number of OSPF Database Description packets received on this interface since the OSPF administrative status was enabled.
Rx LSRs	Specifies the total number of Link State Requests (LSRs) received on this interface since the OSPF admin status was enabled.
Rx LSUs	Specifies the total number of Link State Updates (LSUs) received on this interface since the OSPF admin status was enabled.
Rx LS Acks	Specifies the total number of Link State Acknowledgments received on this interface since the OSPF admin status was enabled.
Tot Tx Packets	Specifies the total number of OSPF packets transmitted on this virtual interface since it was created.
Tx Hellos	Specifies the total number of OSPF Hello packets transmitted on this virtual interface since it was created.
Tx DBDs	Specifies the total number of OSPF database description packets transmitted on this virtual interface.
Tx LSRs	Specifies the total number of OSPF Link State Requests (LSRs) transmitted on this virtual interface.
Tx LSUs	Specifies the total number of OSPF Hello packets transmitted on this interface since the OSPF admin status was enabled.
Tx LS Acks	Specifies the total number of OSPF Link State Acknowledgments (LSA) transmitted on this virtual interface.
Retransmits	Specifies the total number of OSPF retransmits sent on this interface since the OSPF admin status was last enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Discards	Specifies the total number of OSPF packets discarded on this interface since the OSPF admin status was last enabled.
Bad Networks	Specifies the total number of OSPF packets received with invalid network or mask since the OSPF admin status was last enabled.
Bad Versions	Specifies the total number of OSPF packets received with bad OSPF version numbers since the OSPF admin status was last enabled.
Bad Areas	Specifies the total number of OSPF packets received with an area mismatch since the OSPF admin status was last enabled.
Bad Dest Addrs	Specifies the total number of OSPF packets received with the incorrect IP destination address since the OSPF admin status was last enabled.
Bad Auth Types	Specifies the total number of OSPF packets received with an invalid authorization type since the OSPF admin status was last enabled.
Auth Failures	Specifies the total number of OSPF packets received with an invalid authorization key since the OSPF admin status was last enabled.
Bad Neighbors	Specifies the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since the OSPF admin status was last enabled.
Bad Pkt Types	Specifies the total number of OSPF packets received with an invalid OSPF packet type since the OSPF admin status was last enabled.
Bad Lengths	Specifies the total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since the OSPF admin status was last enabled.
Bad Hello Int.	Specifies the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since the OSPF admin status was last enabled.
Bad Dead Int.	Specifies the total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since the OSPF admin status was last enabled.
Bad Options	Specifies the total number of OSPF packets received with an option that does not match those configured for this interface or area since the OSPF admin status was last enabled.

Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Retrans Intrvl	Specifies the length of time, in seconds, that OSPF waits before retransmitting an unacknowledged link state advertisement (LSA) to an OSPF neighbor.
Transit Delay	Specifies the time, in seconds, it takes to transmit a link state advertisement (LSA) on the interface or virtual link.
Last Event	Specifies the date and time when an event was last associated with this OSPF interface.
Tx Failures	Transmitted OSPF packets that are dropped due to resource shortage.

virtual-link

Syntax

virtual-link [**detail**]

virtual-link [**detail**] **database**

Context

[Tree] (show>router>ospf3 virtual-link)

Full Context

show router ospf3 virtual-link

Description

This command displays information for OSPFv3 virtual links.

Parameters

database

Displays the virtual link database.

detail

Displays operational and statistical information about virtual links associated with this router.

Platforms

All

Output

The following output is an example of OSPFv3 virtual link information, and Table 700: Output fields: OSPF3 virtual link describes the output fields.

Tx Failures	Transmitted OSPF packets that are dropped due to resource shortage.

virtual-link

Syntax

virtual-link *nbr-rtr-id* **area** *area-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>ospf3 virtual-link)

[Tree] (monitor>router>ospf virtual-link)

Full Context

monitor router ospf3 virtual-link

monitor router ospf virtual-link

Description

This command displays statistical OSPF virtual link information at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified neighbor(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

nbr-rtr-id

Specifies the IP address to uniquely identify a neighboring router in the autonomous system.

Values a.b.c.d

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

area-id

Specifies the OSPF area ID, expressed in dotted decimal notation or as a 32-bit decimal integer.

Values *ip-address*, 0 to 4294967295

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

29.11 virtual-neighbor

virtual-neighbor

Syntax

virtual-neighbor [**remote** *ip-address*] [**detail**]

Context

[Tree] (show>router>ospf3 virtual-neighbor)

Full Context

show router ospf virtual-neighbor

show router ospf3 virtual-neighbor

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays virtual neighbor information.

Parameters

remote *ip-address*

Displays the specified IPv4 or IPv6 address. This reduces the amount of output displayed.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

detail

Produces detailed information on the virtual neighbor. This option produces a large amount of data. It is recommended to use **detail** only when requesting information for a specific neighbor.

Platforms

All

Output

OSPF Virtual Neighbor Output

Table 701: Output fields: OSPF virtual neighbor describes OSPF virtual neighbor output fields.

Table 701: Output fields: OSPF virtual neighbor

Label	Description
Nbr IP Addr	The IP address this neighbor is using in its IP source address. On addressless links, this will not be 0.0.0.0, but the address of another of the neighbor's interfaces.
Nbr Rtr ID	Specifies the router ID(s) of neighboring routers.
Transit Area	Specifies the transit area ID that links the backbone area with the area that has no physical connection with the backbone.
Retrans Q Length	The current length of the retransmission queue.
No. of Neighbors	Specifies the total number of OSPF neighbors adjacent on this interface, in a state of INIT or greater, since the OSPF admin status was enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Nbr State	Specifies the operational state of the virtual link to the neighboring router.
Options	Specifies the total number of OSPF packets received with an option that does not match those configured for this virtual interface or transit area since the OSPF admin status was enabled.
Events	Specifies the total number of events that have occurred since the OSPF admin status was enabled.
Last Event Time	Specifies the date and time when an event was last associated with this OSPF interface.
Up Time	Specifies the uninterrupted time, in hundredths of seconds, the adjacency to this neighbor has been up.
Time Before Dead	Specifies the amount of time, in seconds, until the dead router interval expires.
Bad Nbr States	Specifies the total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since the OSPF admin status was last enabled.
LSA Inst fails	Specifies the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since the OSPF admin status was last enabled.
Bad Seq Nums	Specifies the total number of times when a database description packet was received with a sequence number mismatch since the OSPF admin status was last enabled.
Bad MTUs	Specifies the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since the OSPF admin status was enabled.
Bad Packets	Specifies the total number of times when an LS update was received with an illegal LS type or an option mismatch since the OSPF admin status was enabled.
LSA not in LSDB	Specifies the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since the OSPF admin status was enabled.
Option Mismatches	Specifies the total number of times when a LS update was received with an option mismatch since the OSPF admin status was enabled.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Label	Description
Nbr Duplicates	Specifies the total number of times when a duplicate database description packet was received during the Exchange state since the OSPF admin status was enabled.

Table 702: Output fields: virtual subnet

Field	Descriptions
Subscriber	The service identification that identifies the service in the service domain
Default router	The IP address of the default router received from either the DHCP or the RADIUS server
Subnet	The IP address of the subnet
SAP	The SAP associated with the service
No. of subnets	The total number of subnets for the service

29.13 vlan-aware-bundle

vlan-aware-bundle

Syntax

vlan-aware-bundle [*name*]

vlan-aware-bundle *name* **fdb** [**detail**]

vlan-aware-bundle *name* **evpn-mpls** [**detail**]

vlan-aware-bundle *name* **segment-routing-v6** [**detail**] [**destinations**]

vlan-aware-bundle *name* **vxlan** [**detail**] [**destinations**]

Context

[Tree] (show>service vlan-aware-bundle)

Full Context

show service vlan-aware-bundle

Description

This command displays VLAN-aware bundle information for the specified service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

name

Displays the bundle name.

detail

Keyword used to display detailed information.

destinations

Keyword used to display information about EVPN-MPLS, VXLAN, and SRv6 destinations.

Platforms

All

Output

The following output is an example of VLAN-aware bundle information and Table 703: Output fields: VLAN-aware bundle describes VLAN-aware bundle output fields.

Output Example

```
# show service vlan-aware-bundle

===============================================================
VLAN Aware Bundle
===============================================================
Bundle                          Service Id Eth Tag   Evi
---------------------------------------------------------------
bundle0                         1          1         1
                                2          2         2
                                3          3         3
bundle1                         4          4         4
                                5          5         5

Table 703: Output fields: VLAN-aware bundle

Field	Descriptions
VLAN Aware Bundle	
Bundle	The destinations bundle name
Service Id	The service ID number
Eth Tag	The Ethernet tag value
Evi	The EVI value
Number of entries	The total number of entries
Vlan-Aware-Bundle Summary	
MAC Entries	The number of MAC entries
EVPN-MPLS Destinations	The number of EVPN-MPLS destinations
EVPN-MPLS Ethernet Segment Destinations	The number of EVPN-MPLS ES destinations
VXLAN Destinations	The number of VXLAN destinations
VXLAN Ethernet Segment Destinations	The number of VXLAN ES destinations
SRv6 Destinations	The number of SRv6 destinations
SRv6 Ethernet Segment Destinations	The number of SRv6 ES destinations
Forwarding Database, Service <Id>	
ServId	The service ID
MAC	The associated MAC address
Source-Identifier	The id of the source MAC
Type/Age	The number of seconds used to age out TLS FDB entries learned on local SAPs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Descriptions
	Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. L — Learned - Dynamic entries created by the learning process. OAM — Entries created by the OAM process. P — Indicates the MAC is protected by the MAC protection feature. H — Host, the entry added by the system for a static configured subscriber host. D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease. Static — Statically configured. T — Trusted.
Last Change	The date and time of the most recent state changes
Transport:Tnl-Id	The tunnel type and tunnel ID of the FDB entry
No. of MAC Entries	The total number of MAC entries
BGP EVPN-MPLS Dest (Instance <nbr>)	
TEP Address	The TEP address
Transport:Tnl	The transport tunnel
Egr Label	The egress label
Oper State	The operational state
Mcast	The mulitcast value
Num MACs	The number of MACs
Oper Flags	The operational flags value
Sup BCast Domain	The Sup BCast domain value
Last Update	The date and time of the last update
BGP EVPN-MPLS Ethernet Segment Dest (Instance <nbr>)	
Eth SegId	The Ethernet segment ID
BGP EVPN-MPLS ES BMAC Dest	
ES BMAC Addr	The ES BMAC IP address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Descriptions
VPLS VXLAN	
Vxlan Instance	VXLAN instance value
VNI	The VNI
Creation Origin	The creation origin value
Assisted-Replication	The assisted replicaion mode
RestProtSrcMacAct	The restrict protected source MAC action
VPLS VXLAN service Network Specifics	
Ing Net QoS Policy	The ingress net QoS policy
Ingress FP QGrp	The ingress FP Q group
Ing FP QGrp Inst	The ingress FP Q group instance
VTEP security	The VTEP security status
MAC Learning	The MAC learning status
MAC Aging	The MAC aging status
Discard Unknown Source	The discard unknown source value
MAC address limit	The MAC address limit
Segment Routing v6 Instance <nbr> Service <nbr>	
Locator	The SRv6 locator name
Type	The SRv6 locator type
Function	The function
SID	The segment ID
Status	The status

29.14 volume

volume

Syntax

volume fields

Use subject to Terms available at: www.nokia.com/terms.

Context

[Tree] (show>app-assure>cflowd volume)

Full Context

show application-assurance cflowd volume

Description

This command displays the fields in the AA cflowd volume template.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AA cflowd volume template fields, and Table 704: Output fields: volume template describes the output fields.

Output Example

```
show application-assurance cflowd volume fields

===============================================================================

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hunt

Displays entries for the specified route.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
  - {*target* | *origin*}:*ip-address*:*comm-val*
  - {*target* | *origin*}:*asnum*:*ext-comm-val*
  - {*target* | *origin*}:*ext-asnum*:*comm-val*

29.22 vport

vport

Syntax

vport *name* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

vport *name* [**interval** *seconds*] [**repeat** *repeat*] **monitor-threshold**

Context

[Tree] (monitor>port vport)

Full Context

monitor port vport

Description

This command monitors Vport statistics.

Parameters

name

Specifies the Vport name, up to 32 characters.

seconds

Specifies the interval for each display, in seconds.

Values 11 to 60

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

absolute

When the absolute keyword is specified, the raw statistics are displayed without processing. No calculations are performed on the delta or rate statistics.

rate

When the rate keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

monitor-threshold

Displays the exceed count for the port-scheduler under Vport (if specified) or for a physical port.

Platforms

All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vport

Syntax

vport [*name*] [**statistics** | **associations**] [**monitor-threshold**] [**port-sched** | **hw-agg-shaper-sched**]

29.23 vrf-export-test

vrf-export-test

Syntax

vrf-export-test *policy-name* [*policy-name*...{up tp 15 max}] **prefix** *ip-prefix/ip-prefix-length* [**longer**] [**display-rejects**] [**display-rejects-only**] [**protocol** *protocol*]

vrf-export-test *plcy-or-long-expr* [*plcy-or-expr* [*plcy-or-expr*...{up tp 14 max}] **prefix** *ip-prefix/ip-prefix-length* [**longer**] [**display-rejects**] [**display-rejects-only**] [**protocol** *protocol*]

Context

[Tree] (show>router vrf-export-test)

Full Context

show router vrf-export-test

Description

This command tests an existing route policy, a chain of route policies, or a route policy logical expression in order to assess its effects as a VRF export policy. This is determined by identifying the routes that would be accepted or rejected after the complete evaluation.

Parameters

plcy-or-long-expr

Specifies up to 14 policy names or a long expression.

Values policy-name: a policy name, up to 64 characters

long-expr: a long expression, up to 255 characters.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

plcy-or-expr

Specifies the policy name or expression.

Values policy-name: a policy name, up to 64 characters

expr: an expression, up to 64 characters

policy-name

Specifies the policy name of an existing configured and committed policy, up to 64 characters.

longer

Matches prefixes with a longer prefix-length.

ip-prefix/ip-prefix-length

Specifies an IPv4 or IPv6 prefix/mask to be evaluated. The keyword **longer** may be specified to evaluate longer prefix matches (optional).

display-rejects

Displays routes that were rejected by the policy. If not specified, only a count of rejected routes is displayed.

display-rejects-only

Displays only routes rejected by the policy test.

protocol

Displays routes by the protocol type.

Platforms

All

Output

Output Example

vxlan detail

Context

[Tree] (show>service>id vxlan)

Full Context

show service id vxlan

Description

This command displays the VXLAN instance parameters. With **destinations** added, the command displays the VXLAN bindings autocreated or configured in a specified service. The service command can be filtered by VXLAN instance if the service has more than one instance. A VXLAN binding consists of the remote VTEP and the corresponding egress VNI, which together identify the service at the egress node. The command displays the number of MACs associated with each binding, as well as the operational status and whether the binding is part of the multicast list. The binding will be operationally down when the VTEP address is not found in the base routing table (that is, the VTEP address cannot be reached). A binding is part of a multicast list only if a valid BGP EVPN inclusive multicast route exists for it.

A VXLAN binding can be associated with the following types of multicast values:

- **BM**

  This value refers to the capability of the binding to send broadcast or multicast traffic to the remote VTEP. This binding type is set up to AR replicator nodes from a leaf node.

- **BUM**

  This value refers to the capability of the binding to send broadcast or multicast traffic to the remote VTEP. This binding type is set up to AR replicator nodes from a leaf node.

- **U**

  This value refers to the capability of the binding to send unknown unicast to the VTEP. This binding type is set up from leaf nodes to other leaf and RNVE nodes.

- **"-"**

  This value specifies that the binding can only be used for known unicast traffic.

Parameters

assisted-replication replicator

Displays all the discovered candidate AR replicators for the service and the replicator that has been selected by the leaf to send the BM traffic. The list of replicators is ordered by VTEP address and VNI. This command is only supported on nodes configured as leaf.

The "In Use" column indicates whether the replicator has been selected for the service. When selecting a replicator for the service, the candidate list is ordered by VTEP IP (lowest IP is ordinal 0) and VNI. A modulo function of the service ID and the number of candidate PEs will give the selected replicator for a specified service.

The "Pending Time" column shows the remaining seconds until the node starts sending the BM traffic to the replicator. This time is configurable by the *replicator-activation-time* parameter.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For services supporting EVPN multihoming, the command can also display ES destinations and VXLAN bindings. In this case, the user can filter the output by the ESI to view the VXLAN destinations that make up the ES.

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':',' ')

instance

Specifies the VXLAN instance.

Values 1, 2

detail

Keyword used to display detailed information.

oper-flags

Keyword used to display the operational flags.

Mcast	Displays the Mcast value.
Oper State	Displays the operational state.
L2 PBR	Displays the Layer 2 PBR value.
Sup BCast Domain	Displays the Sup BCast Domain value.

vxlan

Syntax

vxlan [*ip-address*]

Context

[Tree] (show>service vxlan)

Full Context

show service vxlan

Description

This command displays the VXLAN bindings auto-created in a specified service. A VXLAN binding is composed of the remote VTEP (VXLAN Termination Endpoint) and the corresponding egress VNI (VXLAN Network Identifier) to identify the service at the egress node. The command shows the number of MACs associated to each binding as well as the operational status and if the binding is part of the multicast list. The binding will be operationally down when the VTEP address is not found in the base routing table (the VTEP address cannot be reached). A binding will be part of the multicast list if a valid BGP EVPN inclusive multicast route exists for it.

A VXLAN binding can be associated with the following types of Mcast values.

- BM — Refers to the capability of the binding to send Broadcast or Multicast to the remote VTEP. This binding type is setup to AR Replicator nodes from a Leaf node.
- BUM — Refers to the capability of the binding to send Broadcast or Multicast to the remote VTEP. This binding type is setup to AR Replicator nodes from a Leaf node.
- U — Refers to the capability of the binding to send Unknown Unicast to the VTEP. This binding type is setup from Leaf nodes to other Leaf and RNVE nodes.
- "-" — Specifies that the binding can only be used for known unicast traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

ip-address

Specifies the remote VTEP address for the VXLAN binding.

Values ipv4-address: a.b.c.d

ipv6-address: x:x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:x:d.d.d.d

where:

x: [0 to FFFF]H

d: [0 to 255]D

vxlan

Syntax

vxlan [**clear**]

Context

[Tree] (tools>dump>service>id vxlan)

Full Context

tools dump service id vxlan

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command displays the number of times a service could not add a VXLAN binding or <VTEP, Egress VNI> due to the following limits:

- The per-system VTEP limit has been reached
- The per-system <VTEP, Egress VNI> limit has been reached
- The per-service <VTEP, Egress VNI> limit has been reached
- The per-system Bind limit: Total bind limit or vxlan bind limit has been reached.

Parameters

clear

Clears the per-system VTEP, per-system VTEP Egress VNI, per-service VTEP Egress VNI, and per-system Bind statistics.

Platforms

All

Output

Output Example

```
*A:PE63# tools dump service id 3 vxlan
VTEP, Egress VNI Failure statistics at 000 00:03:55.710:
statistics last cleared at 000 00:00:00.000:
      Statistic            |    Count
---------------------------+------------
                      VTEP |          0
             Service Limit |          0
              System Limit |          0
   Egress Mcast List Limit |          0
```

Full Context

show isa wlan-gw-group

Description

This command displays WLAN-GW group information, including WLAN-GW tunnels.

Parameters

wlan-gw-group-id

Displays information about the specified WLAN-GW group ID.

Values 1 to 4

associations

Displays information about associations for the specified WLAN-GW group ID.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

member member-id

Displays information about the WLAN-GW-specific status and basic statistics information about the specified member.

Values 1 to 255

type *type*

Displays a reduced output to only show statistics of the specified type.

Values packet-errors, host-errors, bd-errors, forwarding, reassembly, aa, radius, arp, dhcp, dhcp6, icmp, icmp6

non-zero-value-only

Displays a reduced output to only show statistics whose value is bigger than zero.

resource-statistics

Displays the resource usage on the specified group member.

statistics

Displays statistics information about the members of the specified WLAN-GW group.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ISA WLAN-GW group information.

Number of enabled interfaces	The number of interfaces associated with this portal that are administratively enabled
Triggered hosts	Triggered hosts are enabled or disabled on this portal
Last management change	The time of the most recent management-initiated change to this WPP portal

wpp

Syntax

wpp peer [*ip-address*] **statistics**

Context

[Tree] (show>redundancy>multi-chassis wpp)

Full Context

show redundancy multi-chassis wpp

Description

This command displays multi-chassis WPP information.

Parameters

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- d: [0 to 255] D

statistics

Displays statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wpp

Syntax

wpp peer [*ip-address*] **statistics**

Context

[Tree] (clear>redundancy>multi-chassis wpp)

Full Context

clear redundancy multi-chassis wpp

Description

This command clears multi-chassis WPP information.

Parameters

ip-address

Specifies the WPP IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

statistics

Clears the multi-chassis WPP statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

31 x Commands

31.1 x-interfaces

x-interfaces

Syntax

x-interfaces

Context

[Tree] (show>li x-interfaces)

Full Context

show li x-interfaces

Description

Commands in this context display information about the LI X1, X2, and X3 interfaces.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

31.2 x1

x1

Syntax

x1 lic *lic-name*

Context

[Tree] (show>li>x-interfaces>statistics x1)

Full Context

show li x-interfaces statistics x1

Description

This command displays X1 statistics.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

lic-name

Specifies the LIC name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

31.3 x2

x2

Syntax

x2 lic *lic-name*

Context

[Tree] (show>li>x-interfaces>statistics x2)

Full Context

show li x-interfaces statistics x2

Description

This command displays X2 statistics.

Parameters

lic-name

Specifies the LIC name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

31.4 x3

x3

Syntax

x3 lic *lic-name*

Context

[Tree] (show>li>x-interfaces>statistics x3)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Full Context

show li x-interfaces statistics x3

Description

This command displays X3 statistics.

Parameters

lic-name

Specifies the LIC name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

31.5 xiom

xiom

Syntax

xiom [*xiom*] [**detail**]

Context

[Tree] (show xiom)

Full Context

show xiom

Description

This command lists the XIOM modules in the chassis along with their administrative and operational states.

Parameters

xiom

Specifies the slot and XIOM module identifier.

Values	slot[/xiom]	slot: 1 to 7
		xiom: "x1" or "x2"

detail

Displays detailed information.

Platforms

7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Output

The following output shows XIOM information and Table 709: Output fields: XIOM describes the output fields.

Output Example: show xiom

```
A:Dut-O# show xiom
===============================================================================
Xiom Information
===============================================================================
Slot  Xiom    Provisioned Type                        Admin     Operational
                 Equipped Type (if different)         State     State
-------------------------------------------------------------------------------
1     x2      iom-s-3.0t:he3000g+                     up        up
2     x1      iom-s-3.0t:he3000g+                     up        up
===============================================================================
```

Table 709: Output fields: XIOM

Label	Description
Slot	The chassis slot number.
Xiom	The XIOM module number.
Provisioned Type	The XIOM type provisioned.
Equipped Type	The XIOM type actually installed.
Admin State	up - Administratively up. down - Administratively down (for example, shutdown).
Operational State	up - Operationally up. down - Operationally down.

xiom

Syntax

xiom *xiom*

Context

[Tree] (clear xiom)

Full Context

clear xiom

Description

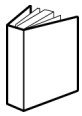
This command re-initializes the specified XIOM in a particular slot.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Parameters

xiom

Clears the specified XIOM.



Values		
	slot/xiom	slot: 1 to 6
		xiom: x1 or x2

Platforms

7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.
