<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**level** *level-number number*

<b>Description</b>	List of IS-IS levels supported by this IS (router)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Tree</b>	<a href="#">level</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

**level-number** *number*

<b>Description</b>	Specifies the IS-IS protocol level to which these attributes are applied.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container for specifying authentication options that apply to the entire IS-IS instance or to an entire level.  The settings in this container only apply to PDUs without an authentication behavior specified at a more granular level.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**csnp-authentication**

<b>Description</b>	Container with options to control the authentication of CSNP PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication csnp-authentication</a>
<b>Tree</b>	<a href="#">csnp-authentication</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication csnp-authentication check-received</a> <i>keyword</i>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>strict Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>loose Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>disable This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication csnp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hello-authentication

<b>Description</b>	Container with options to control the authentication of Hello PDUs
--------------------	--

<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication hello-authentication</a>
<b>Tree</b>	<a href="#">hello-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication hello-authentication check-received <i>keyword</i></a>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• strict Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• loose Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• disable This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication hello-authentication generate <i>boolean</i></a>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**key**

<b>Description</b>	Container to specify the secret key and crypto algorithm to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication key</a>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**auth-password *string***

<b>Description</b>	The secret key.  The maximum string length is 25 characters, of which a maximum of 20 characters is the secret data and the remaining 5 characters, if provided, must be ' hash' (i.e. one whitespace plus the word hash). The trailing 'hash' keyword indicates that the secret data was already encrypted and this is the display version of that secret data, which is a hash of the original data. If the 'hash' keyword is omitted the string is assumed to be the actual secret data. Whenever the value of authentication-key is read by any management interface, from any datastore (candidate, running, state) the return value is always the encrypted value – i.e. with the trailing ' hash' characters included.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication key auth-password string</a>
<b>Tree</b>	<a href="#">auth-password</a>
<b>String Length</b>	1 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**crypto-algorithm *keyword***

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication key crypto-algorithm keyword</a>
<b>Tree</b>	<a href="#">crypto-algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>cleartext The authentication-key is encoded in plaintext.</li> <li>hmac-md5</li> </ul>

The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104).

- hmac-sha-256

The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104).The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### keychain *reference*

<b>Description</b>	Specifies a keychain to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication keychain</a> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### Isp-authentication

<b>Description</b>	Container with options to control the authentication of Link State PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication Isp-authentication</a>
<b>Tree</b>	<a href="#">Isp-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication Isp-authentication check-received</a> <i>keyword</i>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• strict</li> </ul>

Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.

- loose

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **generate** *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication lsp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **psnp-authentication**

<b>Description</b>	Container with options to control the authentication of PSNP PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication psnp-authentication</a>
<b>Tree</b>	<a href="#">psnp-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **check-received** *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication psnp-authentication check-received</a> <i>keyword</i>

<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>strict</b> Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• <b>loose</b> Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• <b>disable</b> This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**generate** *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication psnp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp-ls-exclude** *boolean*

<b>Description</b>	When set to true, topology and TE information related to this area or level should not be imported into the TE database in a format that supports export as BGP-LS routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">bgp-ls-exclude</a> <i>boolean</i>
<b>Tree</b>	<a href="#">bgp-ls-exclude</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**metric-style** *keyword*

<b>Description</b>	Specifies the metric style to be wide or narrow for the level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <b>metric-style</b> <i>keyword</i>
<b>Tree</b>	<a href="#">metric-style</a>
<b>Default</b>	wide
<b>Options</b>	<ul style="list-style-type: none"> <li>• narrow This enum describes narrow metric style</li> <li>• wide This enum describes wide metric style</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-preference**

<b>Description</b>	Specify the route preference (admin distance) for IP routes associated with the level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <b>route-preference</b>
<b>Tree</b>	<a href="#">route-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**external** *number*

<b>Description</b>	Specify the route preference of external routes carried in this level. By default the route preference of external L1 routes is 160. By default the route preference of external L2 routes is 165.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <b>route-preference external</b> <i>number</i>
<b>Tree</b>	<a href="#">external</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**internal** *number*

<b>Description</b>	Specify the route preference of internal routes carried in this level. By default the route preference of internal L1 routes is 15. By default the route preference of internal L2 routes is 18.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">route-preference internal</a> <i>number</i>
<b>Tree</b>	<a href="#">internal</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Per level statistics in an ISIS instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level had the correct auth type but failed to pass authentication validation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics authentication-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication-type-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level had an auth type field different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics authentication-type-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-type-failures</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### corrupted-lsps *number*

<b>Description</b>	Number of corrupted in-memory LSPs detected. LSPs received from the wire with a bad checksum are silently dropped and not counted. LSPs received from the wire with parse errors are counted by lsp-errors
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number statistics corrupted-lsps number</a>
<b>Tree</b>	<a href="#">corrupted-lsps</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### database-overloads *number*

<b>Description</b>	Number of times the database has become overloaded
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number statistics database-overloads number</a>
<b>Tree</b>	<a href="#">database-overloads</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### exceeded-max-sequence-number *number*

<b>Description</b>	Number of times the system has attempted to exceed the maximum sequence number
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number statistics exceeded-max-sequence-number number</a>
<b>Tree</b>	<a href="#">exceeded-max-sequence-number</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lsp-errors** *number*

<b>Description</b>	Number of received LSPs with parse errors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics lsp-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manual-address-drop-from-area** *number*

<b>Description</b>	number of times a manual address has been dropped from area
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics manual-address-drop-from-area</a> <i>number</i>
<b>Tree</b>	<a href="#">manual-address-drop-from-area</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-area-address-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level was received with a max area address field different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics max-area-address-mismatches</a> <i>number</i>
<b>Tree</b>	<a href="#">max-area-address-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**own-lsp-purges** *number*

<b>Description</b>	Number of times a zero-aged copy of the system's own LSP is received from some other node
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics own-lsp-purges</a> <i>number</i>
<b>Tree</b>	<a href="#">own-lsp-purges</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **sequence-number-skips** *number*

<b>Description</b>	Number of times a sequence number skip has occurred
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics sequence-number-skips</a> <i>number</i>
<b>Tree</b>	<a href="#">sequence-number-skips</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **spf-runs** *number*

<b>Description</b>	number of times a full SPF run has been performed on the level LSDB since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics spf-runs</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-runs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **system-id-length-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level was received with a system ID field length different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics system-id-length-mismatches</a> <i>number</i>
<b>Tree</b>	<a href="#">system-id-length-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Level debug trace options for IS-IS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace keyword**

<b>Description</b>	List of tracing options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">adjacencies</a></li> <li>• <a href="#">lsdb</a></li> <li>• <a href="#">routes</a></li> <li>• <a href="#">spf</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level-capability keyword**

<b>Description</b>	The level-capability of the intermediate system (router)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-capability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">level-capability</a>
<b>Default</b>	L2
<b>Options</b>	<ul style="list-style-type: none"> <li>• L1 This enum describes ISIS level 1</li> <li>• L2 This enum describes ISIS level 2</li> <li>• L1L2 This enum describes ISIS level 1-2</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level-database** *level-number number lsp-id string*

<b>Description</b>	Link State database
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string</a>
<b>Tree</b>	<a href="#">level-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**level-number** *number*

<b>Description</b>	Specifies the IS-IS protocol level to which these attributes are applied.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string</a>
<b>Range</b>	1 to 2
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lsp-id** *string*

<b>Description</b>	The value specifies the LSP Id and is given in the format as 6 octets of adjacency system-id followed by 1 octet Lan-ID and 1 octet LSP Number.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string</a>
<b>String Length</b>	20
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attributes**

<b>Description</b>	Enter the attributes context
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string attributes</a>
<b>Tree</b>	<a href="#">attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attached** *boolean*

<b>Description</b>	Set to true in the L1 LSP when the IS has a Level 2 adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes attached</a> <i>boolean</i>
<b>Tree</b>	<a href="#">attached</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**level1-is-type** *boolean*

<b>Description</b>	Set to true when the router participates in L1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes level1-is-type</a> <i>boolean</i>
<b>Tree</b>	<a href="#">level1-is-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**level2-is-type** *boolean*

<b>Description</b>	Set to true when the router participates in L2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes level2-is-type</a> <i>boolean</i>
<b>Tree</b>	<a href="#">level2-is-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload** *boolean*

<b>Description</b>	Set to true when the IS is in overload state and should be avoided for transit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes overload</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**checksum *string***

<b>Description</b>	The value indicates the checksum of contents of LSP from the SourceID field in the LSP till the end. The checksum is computed using the Fletcher checksum algorithm.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level-database level-number <i>number</i></a> <a href="#">lsp-id <i>string</i></a> <a href="#">checksum <i>string</i></a>
<b>Tree</b>	<a href="#">checksum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**defined-tlvs**

<b>Description</b>	List of defined TLV-s contained in LSP.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level-database level-number <i>number</i></a> <a href="#">lsp-id <i>string</i></a> <a href="#">defined-tlvs</a>
<b>Tree</b>	<a href="#">defined-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**application-specific-srlg [neighbor \*string\*](#)**

<b>Description</b>	List of application-specific SRLGs. TLV = 238.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level-database level-number <i>number</i></a> <a href="#">lsp-id <i>string</i></a> <a href="#">defined-tlvs</a> <a href="#">application-specific-srlg <a href="#">neighbor <i>string</i></a></a>
<b>Tree</b>	<a href="#">application-specific-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**neighbor *string***

<b>Description</b>	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level-database level-number <i>number</i></a> <a href="#">lsp-id <i>string</i></a> <a href="#">defined-tlvs</a> <a href="#">application-specific-srlg <a href="#">neighbor <i>string</i></a></a>
<b>String Length</b>	17

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**legacy** *boolean*

<b>Description</b>	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLV 138 or TLV 139.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <b>legacy</b> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**loop-free-alternate** *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <b>loop-free-alternate</b> <i>boolean</i>
<b>Tree</b>	<a href="#">loop-free-alternate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rsvp-te** *boolean*

<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <b>rsvp-te</b> <i>boolean</i>
<b>Tree</b>	<a href="#">rsvp-te</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sr-policy *boolean*

**Description** S bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* **sr-policy** *boolean*

**Tree** [sr-policy](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sub-tlvs

**Description** Enter the sub-tlvs context

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* **sub-tlvs**

**Tree** [sub-tlvs](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv4-interface-address *string*

**Description** The IPv4 address of the interface to the neighbor

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* [sub-tlvs ipv4-interface-address](#) *string*

**Tree** [ipv4-interface-address](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4-neighbor-address** *string*

<b>Description</b>	The IPv4 address of the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv4-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-interface-address** *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-neighbor-address** *string*

<b>Description</b>	The IPv6 address of the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**link-local-identifier** *number*

<b>Description</b>	A local identifier of the link
--------------------	--------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs link-local-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">link-local-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **link-remote-identifier** *number*

<b>Description</b>	A remote identifier of the link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs link-remote-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">link-remote-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **shared-risk-link-group** *number*

<b>Description</b>	List of SRLGs that apply to the adjacency with this neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs shared-risk-link-group</a> <i>number</i>
<b>Tree</b>	<a href="#">shared-risk-link-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **area-addresses** *string*

<b>Description</b>	Each item represents an area address advertised by the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs area-addresses</a> <i>string</i>
<b>Tree</b>	<a href="#">area-addresses</a>

<b>String Length</b>	2 to 38
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Authentication TLV. TLV type = 10
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## auth-data *string*

<b>Description</b>	The authentication data
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication auth-data</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-data</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## auth-type *keyword*

<b>Description</b>	Enter the auth-type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication auth-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">auth-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• cleartext</li> <li>• crypto</li> <li>• hmac-md5</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**extended-ipv4-reachability** *ipv4-prefix string*

<b>Description</b>	TLV specifying extended IPv4 Reachability information in the LSP. TLV type = 135
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">extended-ipv4-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### sub-tlvs

**Description** SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs](#)

**Tree** [sub-tlvs](#)

**Configurable** False

**Platforms** Supported on all platforms

### prefix-attribute-flags

**Description** This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs prefix-attribute-flags](#)

**Tree** [prefix-attribute-flags](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### external-prefix *boolean*

**Description** Set if the prefix has been redistributed from another protocol (or another IS-IS instance).

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs prefix-attribute-flags external-prefix](#) *boolean*

**Tree** [external-prefix](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**route-tag-32bit** *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-tag-64bit** *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**segment-routing-prefix-sid**

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**algorithm** *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">spf</a></li> <li>• <a href="#">strict-spf</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
--------------------	--

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid explicit-null <i>boolean</i>
<b>Tree</b>	explicit-null
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid local <i>boolean</i>
<b>Tree</b>	local
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid node-sid <i>boolean</i>
<b>Tree</b>	node-sid
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
<b>Tree</b>	penultimate-hop-popping
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### re-advertised *boolean*

**Description** If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid re-advertised](#) *boolean*

**Tree** [re-advertised](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sr-index-or-label *number*

**Description** An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid sr-index-or-label](#) *number*

**Tree** [sr-index-or-label](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### value *boolean*

**Description** If set then the Prefix-SID carries a value

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid value](#) *boolean*

**Tree** [value](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**extended-is-reachability neighbor string**

<b>Description</b>	Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 22
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs extended-is-reachability neighbor string</a>
<b>Tree</b>	<a href="#">extended-is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor string**

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs extended-is-reachability neighbor string</a>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric number**

<b>Description</b>	The default metric to reach this adjacent neighbor.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs extended-is-reachability neighbor string</a> <a href="#">default-metric number</a>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 22 and TLV 222
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs extended-is-reachability neighbor string</a> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **admin-group** *number*

**Description** A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs admin-group](#) *number*

**Tree** [admin-group](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **application-specific-link-attributes**

**Description** Application Specific Link Attributes. Sub-TLV = 16.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes](#)

**Tree** [application-specific-link-attributes](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **legacy** *boolean*

**Description** When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes legacy](#) *boolean*

**Tree** [legacy](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### loop-free-alternate *boolean*

**Description** F bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes loop-free-alternate](#) *boolean*

**Tree** [loop-free-alternate](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rsvp-te *boolean*

**Description** R bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes rsvp-te](#) *boolean*

**Tree** [rsvp-te](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sr-policy *boolean*

**Description** S bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sr-policy](#) *boolean*

**Tree** [sr-policy](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## sub-sub-tlvs

**Description** Enter the sub-sub-tlvs context

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs](#)

**Tree** [sub-sub-tlvs](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## admin-group *number*

**Description** A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group](#) *number*

**Tree** [admin-group](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## maximum-link-bandwidth *number*

**Description** The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth](#) *number*

**Tree** [maximum-link-bandwidth](#)

**Units** bytes-per-second

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### min-max-unidirectional-link-delay

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">min-max-unidirectional-link-delay</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### anomolous *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomolous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### max-delay *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>

<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ipv4-interface-address** *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor. Sub-TLV = 6.
--------------------	---

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs ipv4-interface-address <i>string</i>
<b>Tree</b>	ipv4-interface-address
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ipv4-neighbor-address *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 8.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs ipv4-neighbor-address <i>string</i>
<b>Tree</b>	ipv4-neighbor-address
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ipv6-interface-address *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor. Sub-TLV = 12.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs ipv6-interface-address <i>string</i>
<b>Tree</b>	ipv6-interface-address
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ipv6-neighbor-address *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 13.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs ipv6-neighbor-address <i>string</i>
<b>Tree</b>	ipv6-neighbor-address
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**link-msd**

<b>Description</b>	The maximum segment depth of the link to the neighbor. Sub-TLV = 15.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd</a>
<b>Tree</b>	<a href="#">link-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-info** [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-type** (*keyword* | *number*)

<b>Description</b>	MSD type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Range</b>	2 to 254
<b>Options</b>	<ul style="list-style-type: none"> <li>base-mpls-imposition-msd</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-value** *number*

<b>Description</b>	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-</a>

*reachability neighbor string sub-tlvs link-msd msd-info msd-type (keyword | number) msd-value number*

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **maximum-link-bandwidth** *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs maximum-link-bandwidth number</i>
<b>Tree</b>	<i>maximum-link-bandwidth</i>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **min-max-unidirectional-link-delay**

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs min-max-unidirectional-link-delay</i>
<b>Tree</b>	<i>min-max-unidirectional-link-delay</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs min-max-unidirectional-link-delay anomolous boolean</i>
<b>Tree</b>	<i>anomolous</i>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### max-delay *number*

**Description** Maximum forward-path delay (from the advertising router to the remote neighbor)

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay max-delay](#) *number*

**Tree** [max-delay](#)

**Units** microseconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### min-delay *number*

**Description** Minimum forward-path delay (from the advertising router to the remote neighbor)

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay min-delay](#) *number*

**Tree** [min-delay](#)

**Units** microseconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### segment-routing-adjacency-sid [sr-index-or-label](#) *number*

**Description** List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number*

<b>Tree</b>	<a href="#">segment-routing-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">adj-set</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">backup</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">ipv6-family</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">persistent</a> <i>boolean</i>
<b>Tree</b>	<a href="#">persistent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-</a>

	<a href="#">reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**segment-routing-lan-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of LAN Adj-SID sub-TLVs. Each describes the set of Adj-SIDs the router assigned to each of its LAN neighbors. Sub-TLV = 32.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>adj-set</b> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>backup</b> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>ipv6-family</b> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
--------------------	---

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> local <i>boolean</i>
<b>Tree</b>	local
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**neighbor-system-id** *string*

<b>Description</b>	IS-IS system-ID of the LAN neighbor
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> neighbor-system-id <i>string</i>
<b>Tree</b>	neighbor-system-id
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> persistent <i>boolean</i>
<b>Tree</b>	persistent
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> value <i>boolean</i>

<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**hostname** *string*

<b>Description</b>	Host name that advertised this LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs hostname</a> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-external-reachability** *ipv4-prefix string*

<b>Description</b>	TLV specifying external IPv4 Reachability information in the LSP. External reachability is typically routing information learned from another protocol. TLV type = 130
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-external-reachability ipv4-prefix string</i>
<b>Tree</b>	<i>ipv4-external-reachability</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-external-reachability ipv4-prefix string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric** *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-external-reachability ipv4-prefix string default-metric number</i>
<b>Tree</b>	<i>default-metric</i>
<b>Range</b>	0 to 63
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric-type** *keyword*

<b>Description</b>	The default metric type: internal or external.
<b>Context</b>	<i>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-external-reachability ipv4-prefix string default-metric-type keyword</i>
<b>Tree</b>	<i>default-metric-type</i>

<b>Options</b>	<ul style="list-style-type: none"> <li>• internal This enum describes internal route type</li> <li>• external This enum describes external route type</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability ipv4-prefix</a> <i>string</i> <b>down</b> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-interface-addresses** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Each item represents an IPv4 address configured on an interface in this IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-interface-addresses</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ipv4-interface-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-internal-reachability** [ipv4-prefix](#) *string*

<b>Description</b>	TLV specifying internal IPv4 Reachability information in the LSP. TLV type = 128
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-internal-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric** *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i> <a href="#">default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric-type** *keyword*

<b>Description</b>	The default metric type: internal or external.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i> <a href="#">default-metric-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">default-metric-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• internal This enum describes internal route type</li> <li>• external This enum describes external route type</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **ipv4-srlg neighbor** *string*

<b>Description</b>	List of SRLGs advertised by the router. TLV = 138.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **neighbor** *string*

<b>Description</b>	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ipv4-interface-address** *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i> <a href="#">ipv4-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv4-neighbor-address *string*

**Description** The IPv4 address of the neighbor

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level-database level-number number](#) [lsp-id string](#) [defined-tlvs ipv4-srlg neighbor string](#) [ipv4-neighbor-address string](#)

**Tree** [ipv4-neighbor-address](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### numbered *boolean*

**Description** When set, the interface to the neighbor is numbered. When unset it is unnumbered.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level-database level-number number](#) [lsp-id string](#) [defined-tlvs ipv4-srlg neighbor string](#) [numbered boolean](#)

**Tree** [numbered](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### shared-risk-link-group *number*

**Description** List of SRLGs that apply to the adjacency with this neighbor

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level-database level-number number](#) [lsp-id string](#) [defined-tlvs ipv4-srlg neighbor string](#) [shared-risk-link-group number](#)

**Tree** [shared-risk-link-group](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-interface-addresses** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Each item represents an IPv6 address configured on an interface in this IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-interface-addresses</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ipv6-interface-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-reachability** [ipv6-prefix](#) *string*

<b>Description</b>	TLV specifying IPv6 Reachability information in the LSP. TLV type = 236
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	An IPv6 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv6 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### external *boolean*

**Description** Reads true when the IPv6 prefix reachability is external (learned from another protocol).

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-reachability ipv6-prefix](#) *string* *external* *boolean*

**Tree** [external](#)

**Configurable** False

**Platforms** Supported on all platforms

### metric *number*

**Description** The metric to reach this IPv6 prefix.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-reachability ipv6-prefix](#) *string* *metric* *number*

**Tree** [metric](#)

**Range** 0 to 16777215

**Configurable** False

**Platforms** Supported on all platforms

### sub-tlvs

**Description** SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-reachability ipv6-prefix](#) *string* *sub-tlvs*

**Tree** [sub-tlvs](#)

**Configurable** False

**Platforms** Supported on all platforms

### prefix-attribute-flags

**Description** This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**external-prefix** *boolean*

<b>Description</b>	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags external-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### route-tag-32bit *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### route-tag-64bit *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### segment-routing-prefix-sid

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**algorithm** *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>spf</code></li> <li>• <code>strict-spf</code></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid penultimate-hop-popping</a> <i>boolean</i>
<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### value *boolean*

**Description** If set then the Prefix-SID carries a value

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid value](#) *boolean*

**Tree** [value](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ipv6-srlg [neighbor](#) *string*

**Description** List of IPv6 SRLGs advertised by the router. TLV = 139.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-srlg neighbor](#) *string*

**Tree** [ipv6-srlg](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### neighbor *string*

**Description** A neighbor, identified by its System ID and one octet to indicate the pseudonode number

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv6-srlg neighbor](#) *string*

**String Length** 17

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-interface-address** *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-srlg neighbor</a> <i>string</i> <a href="#">ipv6-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-neighbor-address** *string*

<b>Description</b>	The IPv6 address of the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-srlg neighbor</a> <i>string</i> <a href="#">ipv6-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**neighbor-address-included** *boolean*

<b>Description</b>	When set, the IPv6 neighbor address is included.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-srlg neighbor</a> <i>string</i> <a href="#">neighbor-address-included</a> <i>boolean</i>
<b>Tree</b>	<a href="#">neighbor-address-included</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**shared-risk-link-group** *number*

<b>Description</b>	List of SRLGs that apply to the adjacency with this neighbor
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-srlg neighbor</a> <i>string</i> <a href="#">shared-risk-link-group</a> <i>number</i>
<b>Tree</b>	<a href="#">shared-risk-link-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv6-te-router-id *string*

<b>Description</b>	A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 140.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-te-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### is-reachability [neighbor](#) *string*

<b>Description</b>	Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs is-reachability neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### neighbor *string*

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs is-reachability neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### default-metric *number*

**Description** The default metric to reach this adjacent neighbor.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs is-reachability neighbor](#) *string* [default-metric](#) *number*

**Tree** [default-metric](#)

**Range** 0 to 63

**Configurable** False

**Platforms** Supported on all platforms

### default-metric-type *keyword*

**Description** The default metric type: internal or external.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs is-reachability neighbor](#) *string* [default-metric-type](#) *keyword*

**Tree** [default-metric-type](#)

**Options**

- internal
- external

**Configurable** False

**Platforms** Supported on all platforms

### mt-ipv4-reachability [ipv4-prefix](#) *string*

**Description** TLV specifying multi-topology IPv4 reachability information in the LSP. TLV type = 235

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string*

**Tree** [mt-ipv4-reachability](#)

**Configurable** False

**Platforms** Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mt-id** *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### sub-tlvs

**Description** SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs](#)

**Tree** [sub-tlvs](#)

**Configurable** False

**Platforms** Supported on all platforms

### prefix-attribute-flags

**Description** This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs prefix-attribute-flags](#)

**Tree** [prefix-attribute-flags](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### external-prefix *boolean*

**Description** Set if the prefix has been redistributed from another protocol (or another IS-IS instance).

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs prefix-attribute-flags external-prefix](#) *boolean*

**Tree** [external-prefix](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a> <a href="#">node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a> <a href="#">re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**route-tag-32bit** *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-tag-64bit** *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**segment-routing-prefix-sid**

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**algorithm** *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>spf</code></li> <li>• <code>strict-spf</code></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
--------------------	--

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid explicit-null <i>boolean</i>
<b>Tree</b>	explicit-null
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid local <i>boolean</i>
<b>Tree</b>	local
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid node-sid <i>boolean</i>
<b>Tree</b>	node-sid
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
<b>Tree</b>	penultimate-hop-popping
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**value** *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**mt-ipv6-reachability** [ipv6-prefix](#) *string*

<b>Description</b>	TLV specifying IPv6 Reachability information in the LSP. TLV type = 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i>

<b>Tree</b>	<a href="#">mt-ipv6-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	An IPv6 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv6 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**external** *boolean*

<b>Description</b>	Reads true when the IPv6 prefix reachability is external (learned from another protocol).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The metric to reach this IPv6 prefix.
--------------------	---------------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mt-id** *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix-attribute-flags**

<b>Description</b>	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### external-prefix *boolean*

**Description** Set if the prefix has been redistributed from another protocol (or another IS-IS instance).

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs prefix-attribute-flags external-prefix](#) *boolean*

**Tree** [external-prefix](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### node-identifier *boolean*

**Description** Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs prefix-attribute-flags node-identifier](#) *boolean*

**Tree** [node-identifier](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### re-advertised *boolean*

**Description** Set when the prefix has been leaked from one level to another (upwards or downwards).

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs prefix-attribute-flags re-advertised](#) *boolean*

**Tree** [re-advertised](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### route-tag-32bit *number*

**Description** List of 32-bit administrative tag values associated with the IPv4 prefix.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs route-tag-32bit](#) *number*

**Tree** [route-tag-32bit](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** Supported on all platforms

### route-tag-64bit *number*

**Description** List of 64-bit administrative tag values associated with the IPv4 prefix.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs route-tag-64bit](#) *number*

**Tree** [route-tag-64bit](#)

**Configurable** False

**Platforms** Supported on all platforms

### segment-routing-prefix-sid

**Description** Carries a segment routing prefix SID

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid](#)

**Tree** [segment-routing-prefix-sid](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### algorithm *keyword*

**Description** Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <i>algorithm</i> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">spf</a></li> <li>• <a href="#">strict-spf</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### penultimate-hop-popping *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid penultimate-hop-popping</a> <i>boolean</i>
<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### re-advertised *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sr-index-or-label *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**value** *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**mt-is-reachability** [neighbor](#) *string*

<b>Description</b>	Each TLV encodes the identity of an adjacent IS neighbor in a specific topology. TLV type = 222
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">mt-is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** *string*

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**default-metric** *number*

<b>Description</b>	The default metric to reach this adjacent neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 16777215

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mt-id** *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 22 and TLV 222
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**admin-group** *number*

<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## application-specific-link-attributes

<b>Description</b>	Application Specific Link Attributes. Sub-TLV = 16.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes</a>
<b>Tree</b>	<a href="#">application-specific-link-attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## legacy *boolean*

<b>Description</b>	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes legacy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## loop-free-alternate *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes loop-free-alternate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">loop-free-alternate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rsvp-te** *boolean*

<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes rsvp-te</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rsvp-te</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**sr-policy** *boolean*

<b>Description</b>	S bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sr-policy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sr-policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**sub-sub-tlvs**

<b>Description</b>	Enter the sub-sub-tlvs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-group** *number*

<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### maximum-link-bandwidth *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### min-max-unidirectional-link-delay

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">min-max-unidirectional-link-delay</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">anomolous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomolous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-delay** *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### te-default-metric *number*

**Description** An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs te-default-metric](#) *number*

**Tree** [te-default-metric](#)

**Range** 0 to 16777215

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv4-interface-address *string*

**Description** The IPv4 address of the interface to the neighbor. Sub-TLV = 6.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs ipv4-interface-address](#) *string*

**Tree** [ipv4-interface-address](#)

**Configurable** False

**Platforms** Supported on all platforms

### ipv4-neighbor-address *string*

**Description** The IPv4 address of the neighbor. Sub-TLV = 8.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs ipv4-neighbor-address](#) *string*

**Tree** [ipv4-neighbor-address](#)

**Configurable** False

**Platforms** Supported on all platforms

**ipv6-interface-address** *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor. Sub-TLV = 12.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-neighbor-address** *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 13.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**link-msd**

<b>Description</b>	The maximum segment depth of the link to the neighbor. Sub-TLV = 15.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd</a>
<b>Tree</b>	<a href="#">link-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-info** [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **msd-type** (*keyword | number*)

**Description** MSD type

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs link-msd msd-info msd-type](#) (*keyword | number*) [msd-value](#) *number*

**Range** 2 to 254

**Options**

- base-mpls-imposition-msd

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **msd-value** *number*

**Description** A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs link-msd msd-info msd-type](#) (*keyword | number*) [msd-value](#) *number*

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **maximum-link-bandwidth** *number*

**Description** The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs maximum-link-bandwidth](#) *number*

**Tree** [maximum-link-bandwidth](#)

**Units** bytes-per-second

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**min-max-unidirectional-link-delay**

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">min-max-unidirectional-link-delay</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay anomolous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomolous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-delay** *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**segment-routing-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">adj-set</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">backup</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">ipv6-family</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **persistent** *boolean*

**Description** When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number* **persistent** *boolean*

**Tree** [persistent](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **value** *boolean*

**Description** If set then the Adj-SID carries a value

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number* **value** *boolean*

**Tree** [value](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **weight** *number*

**Description** The value represents the weight of the Adj-SID for the purpose of load balancing

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number* **weight** *number*

**Tree** [weight](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**segment-routing-lan-adjacency-sid sr-index-or-label number**

<b>Description</b>	List of LAN Adj-SID sub-TLVs. Each describes the set of Adj-SIDs the router assigned to each of its LAN neighbors. Sub-TLV = 32.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs mt-is-reachability neighbor string</a> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label number</a>
<b>Tree</b>	<a href="#">segment-routing-lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-index-or-label number**

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs mt-is-reachability neighbor string</a> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**adj-set boolean**

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs mt-is-reachability neighbor string</a> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label number</a> <a href="#">adj-set boolean</a>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**backup boolean**

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs mt-is-reachability</a>

	<a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <a href="#">number</a> <a href="#">backup</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <a href="#">number</a> <a href="#">ipv6-family</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <a href="#">number</a> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**neighbor-system-id** *string*

<b>Description</b>	IS-IS system-ID of the LAN neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-lan-adjacency-sid</a> <a href="#">sr-index-or-label</a> <a href="#">number</a> <a href="#">neighbor-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **persistent** *boolean*

**Description** When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **persistent** *boolean*

**Tree** [persistent](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **value** *boolean*

**Description** If set then the Adj-SID carries a value

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **value** *boolean*

**Tree** [value](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **weight** *number*

**Description** The value represents the weight of the Adj-SID for the purpose of load balancing

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **weight** *number*

**Tree** [weight](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**multi-topology**

<b>Description</b>	The Multi-Topology TLV, type 229.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology</a>
<b>Tree</b>	<a href="#">multi-topology</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**topology** [mt-id](#) *number*

<b>Description</b>	The list of multi-topology IDs that the router is participating in
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">topology</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mt-id** *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i>

<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attached** *boolean*

<b>Description</b>	Reads true when the topology is attached to Level 2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i> <b>attached</b> <i>boolean</i>
<b>Tree</b>	<a href="#">attached</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload** *boolean*

<b>Description</b>	Reads true when the topology is in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i> <b>overload</b> <i>boolean</i>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nlpid** *keyword*

<b>Description</b>	Each item represents a network layer protocol supported by the IS-IS Instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs nlpid</a> <i>keyword</i>
<b>Tree</b>	<a href="#">nlpid</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPv4 NLPID 0xCC corresponding to IPv4</li> <li>• IPv6 NLPID 0x8E corresponding to IPv6</li> <li>• CLNS NLPID 0x81 corresponding to CLNS</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**purge-oi** *string*

<b>Description</b>	This indicates System ID that originated a purge.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs purge-oi</a> <i>string</i>
<b>Tree</b>	<a href="#">purge-oi</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-capability**

<b>Description</b>	Allows a router to announce its capabilities within an IS-IS level or the entire routing domain. TLV = 242.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability</a>
<b>Tree</b>	<a href="#">router-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**leaked-down** *boolean*

<b>Description</b>	When true, the TLV was leaked down from Level 2 to Level 1 and must not be leaked back up to L2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability leaked-down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leaked-down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-id** *string*

<b>Description</b>	Router ID indicating the source of the TLV
--------------------	--

<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability router-id string</code>
<b>Tree</b>	<code>router-id</code>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **scope-is-domain-wide** *boolean*

<b>Description</b>	When true, the TLV MUST be flooded across the entire routing domain. When false, the TLV MUST NOT be leaked between levels.
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability scope-is-domain-wide boolean</code>
<b>Tree</b>	<code>scope-is-domain-wide</code>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **sub-tlvs**

<b>Description</b>	Sub-TLVs of TLV 242
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs</code>
<b>Tree</b>	<code>sub-tlvs</code>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **node-msd**

<b>Description</b>	Used to carry the provisioned SID depth of the router originating the capability TLV. Node MSD is the smallest MSD supported by the node on the set of interfaces configured for use by the advertising IGP instance
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs node-msd</code>
<b>Tree</b>	<code>node-msd</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-info** *msd-type (keyword | number) msd-value number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type (keyword   number) msd-value number</a>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-type** *(keyword | number)*

<b>Description</b>	MSD type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type (keyword   number) msd-value number</a>
<b>Range</b>	2 to 254
<b>Options</b>	<ul style="list-style-type: none"> <li>base-mpls-imposition-msd</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**msd-value** *number*

<b>Description</b>	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type (keyword   number) msd-value number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sr-algorithm**

<b>Description</b>	Advertises the IGP algorithms that the router is using
--------------------	--

<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-algorithm</code>
<b>Tree</b>	<code>sr-algorithm</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **algorithm** *number*

<b>Description</b>	List of algorithm types supported by the router. Algorithm 0 should always be in the list
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-algorithm algorithm number</code>
<b>Tree</b>	<code>algorithm</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sr-capabilities**

<b>Description</b>	Used to advertise its SR data plane capability and the range of MPLS label values each router uses for Segment Routing in the case where global SIDs are allocated.
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-capabilities</code>
<b>Tree</b>	<code>sr-capabilities</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **ipv4-support** *boolean*

<b>Description</b>	When true, the router is capable of processing SR-MPLS-encapsulated IPv4 packets on all interfaces
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-capabilities ipv4-support boolean</code>
<b>Tree</b>	<code>ipv4-support</code>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ipv6-support *boolean*

**Description** When true, the router is capable of processing SR-MPLS-encapsulated IPv6 packets on all interfaces

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs sr-capabilities ipv6-support](#) *boolean*

**Tree** [ipv6-support](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### srgb-descriptor [sr-index-or-label](#) *number range number*

**Description** List of Segment Routing Global Block descriptors

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label](#) *number range number*

**Tree** [srgb-descriptor](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sr-index-or-label *number*

**Description** An index representing the first value of the SRGB. The meaning (index or label) is determined from the length of the sub-tlv.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label](#) *number range number*

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### range *number*

**Description** The number of SRGB elements

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sr-local-block

<b>Description</b>	Used to advertise the range of labels the node has reserved for local SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block</a>
<b>Tree</b>	<a href="#">sr-local-block</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### srlb-descriptor [sr-index-or-label](#) *number range number*

<b>Description</b>	List of Segment Routing Local Block descriptors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Tree</b>	<a href="#">srlb-descriptor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sr-index-or-label *number*

<b>Description</b>	An index representing the first value of the SRLB. The meaning (index or label) is determined from the length of the sub-tlv.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**range** *number*

<b>Description</b>	The number of SRLB elements
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**te-router-id** *string*

<b>Description</b>	A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 134.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">te-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum-area-addresses** *number*

<b>Description</b>	The value indicates the maximum number of areas supported by the originator of the LSP. A value of 0 indicates a default of 3 areas.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">maximum-area-addresses</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-area-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pdu-length** *number*

<b>Description</b>	The value indicates the PDU length for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in the database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">pdu-length</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **pdu-type** *number*

**Description** The value indicates the PDU type for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in of the object packet-type.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* **pdu-type** *number*

**Tree** [pdu-type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **pkt-version** *number*

**Description** The value indicates the version of the ISIS protocol that has generated the Packet.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* **pkt-version** *number*

**Tree** [pkt-version](#)

**Configurable** False

**Platforms** Supported on all platforms

### **remaining-lifetime** *number*

**Description** The value indicates the remaining lifetime of this LSP and is a decrementing counter that decrements in seconds starting from the value as received in the LSP if not self-originated OR from `lsp-life-time` for self originated LSPs. When the remaining lifetime becomes zero, the contents of the LSP should not be considered for SPF calculation.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* **remaining-lifetime** *number*

**Tree** [remaining-lifetime](#)

**Range** 0 to 65535

**Units** seconds

**Configurable** False

**Platforms** Supported on all platforms

**sequence-number** *string*

<b>Description</b>	The value indicates the sequence number of an LSP and is a four byte quantity that represents the version of an LSP. The higher the sequence number, the more up to date the information. The sequence number is always incremented by the system that originated the LSP and ensures that there is only one version of that LSP in the entire network.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">sequence-number</a> <i>string</i>
<b>Tree</b>	<a href="#">sequence-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id-len** *number*

<b>Description</b>	The value indicates the length of the system-id as used by the originator.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">system-id-len</a> <i>number</i>
<b>Tree</b>	<a href="#">system-id-len</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**undefined-tlvs** *string*

<b>Description</b>	Undefined TLV-s as contents of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">undefined-tlvs</a> <i>string</i>
<b>Tree</b>	<a href="#">undefined-tlvs</a>
<b>String Length</b>	27 to 9190
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**version** *number*

<b>Description</b>	The value indicates the version of the ISIS protocol that has generated the LSP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">version</a> <i>number</i>
<b>Tree</b>	<a href="#">version</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-ecmp-paths** *number*

<b>Description</b>	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">max-ecmp-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**net** *string*

<b>Description</b>	ISIS network entity title (NET)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">net</a> <i>string</i>
<b>Tree</b>	<a href="#">net</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**oper-area-id** *string*

<b>Description</b>	The list of area IDs associated with this IS router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">oper-area-id</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-area-id</a>
<b>String Length</b>	2 to 38
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The value of the this object indicates the operational state of the destination.
--------------------	--

---

<b>Context</b>	<code>network-instance name string protocols isis instance name string oper-state keyword</code>
<b>Tree</b>	<code>oper-state</code>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>up</code> Component or process is operational</li> <li>• <code>down</code> Component or process is not operational</li> <li>• <code>empty</code> Component slot is empty</li> <li>• <code>downloading</code> Component is downloading image into memory</li> <li>• <code>booting</code> Component is booting downloaded image</li> <li>• <code>starting</code> Component image operational, application processes starting</li> <li>• <code>failed</code> Component or process has failed</li> <li>• <code>synchronizing</code> Component is currently being synchronized</li> <li>• <code>upgrading</code> Component is currently being upgraded</li> <li>• <code>low-power</code> Component is offline due to insufficient system power</li> <li>• <code>degraded</code> Component or process is in a degraded state</li> <li>• <code>warm-reboot</code> Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• <code>waiting</code> Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-system-id** *string*

<b>Description</b>	The ID for this instance of the Integrated IS-IS protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">oper-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload**

<b>Description</b>	Specifies isis routing instance behavior regarding overload
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-external** *boolean*

<b>Description</b>	When set to true, external (non-ISIS) routes continue to be advertised when the router is in overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload</a> <a href="#">advertise-external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-external</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-interlevel** *boolean*

<b>Description</b>	When set to true, L1->L2 and L2->L1 inter-level routes continue to be advertised when the router is in overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload</a> <a href="#">advertise-interlevel</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-interlevel</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### immediate

<b>Description</b>	Options for advertising an overloaded state immediately
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate</a>
<b>Tree</b>	<a href="#">immediate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### max-metric *boolean*

<b>Description</b>	When set to true transit links are advertised with a wide metric of 0xfffffe and a narrow metric of 0x3f
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate max-metric</a> <i>boolean</i>
<b>Tree</b>	<a href="#">max-metric</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### set-bit *boolean*

<b>Description</b>	When set to true, the Overload bit is set
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate set-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">set-bit</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### instance-is-in-overload *boolean*

<b>Description</b>	When set to true the IS-IS instance is currently in overload state.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload instance-is-in-overload</a> <i>boolean</i>
<b>Tree</b>	<a href="#">instance-is-in-overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**on-boot**

<b>Description</b>	Options for advertising an overloaded state whenever the IS-IS process restarts
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot</a>
<b>Tree</b>	<a href="#">on-boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-metric** *boolean*

<b>Description</b>	When set to true transit links are advertised with a wide metric of 0xfffffe and a narrow metric of 0x3f
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot max-metric</a> <i>boolean</i>
<b>Tree</b>	<a href="#">max-metric</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set-bit** *boolean*

<b>Description</b>	When set to true, the Overload bit is set
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot set-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">set-bit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Specifies the time that the router should remain in overload state after the IS-IS process restarts
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	60 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**poi-tlv** *boolean*

<b>Description</b>	When set to true, a TLV is added to purge to record the system ID of the IS generating the purge.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">poi-tlv</a> <i>boolean</i>
<b>Tree</b>	<a href="#">poi-tlv</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**restarting-neighbor-list**

<b>Description</b>	The list of neighbors that have restarted recently and that are currently being helped.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">restarting-neighbor-list</a>
<b>Tree</b>	<a href="#">restarting-neighbor-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** [system-id](#) *string*

<b>Description</b>	The list of neighbors that have restarted recently and that are currently being helped.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">restarting-neighbor-list</a> <a href="#">neighbor system-id</a> <i>string</i>

<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id** *string*

<b>Description</b>	The neighbor router's system ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">restarting-neighbor-list neighbor system-id</a> <i>string</i>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hostname** *string*

<b>Description</b>	The hostname of the neighbor, as learned by TLV 137.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">restarting-neighbor-list neighbor system-id</a> <i>string</i> <a href="#">hostname</a> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**segment-routing**

<b>Description</b>	Enter the segment-routing context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing</a>
<b>Tree</b>	<a href="#">segment-routing</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**mpls**

<b>Description</b>	Context used to configure SR-MPLS options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls</a>
<b>Tree</b>	<a href="#">mpls</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### dynamic-adjacency-sids

<b>Description</b>	Enter the dynamic-adjacency-sids context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids</a>
<b>Tree</b>	<a href="#">dynamic-adjacency-sids</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### all-interfaces *boolean*

<b>Description</b>	When true, IS-IS is instructed to assign a dynamic adjacency SID to all IS-IS interfaces in all levels, except for the interfaces configured with an adjacency SID assignment of 'none' or 'static'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids all-interfaces</a> <i>boolean</i>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### hold-time (*keyword* | *number*)

<b>Description</b>	Adjacency SID hold time that is applicable to dynamically allocated adjacency SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids hold-time</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">hold-time</a>
<b>Range</b>	1 to 300
<b>Default</b>	15
<b>Units</b>	seconds

<b>Options</b>	• none
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## sid-database

<b>Description</b>	Database of all prefix SIDs associated with the IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a>
<b>Tree</b>	<a href="#">sid-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## **prefix-sid** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number*

<b>Description</b>	List of prefix SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## **prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## **sid-label-value** *number*

<b>Description</b>	The MPLS label value associated with the SID.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **multi-topology-id** *number*

<b>Description</b>	The multi-topology ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **algorithm** *number*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **active** *boolean*

<b>Description</b>	When false, the prefix SID is inactive. It could be inactive for any of these reasons:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**prefix-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a prefix conflict within the scope of this IS-IS instance. This occurs when there are multiple entries for the same (prefix, multi-topology-id, algorithm). All the conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <b>prefix-conflict</b> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sid-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a SID conflict within the scope of this IS-IS instance. This occurs when the same SID has been assigned to different prefixes after first eliminating entries that have lost the prefix-conflict comparison. All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation SID entries associated with interfaces of this IS-IS instance are considered to have a lower numerical preference than remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <b>sid-conflict</b> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sid-out-of-range** *boolean*

<b>Description</b>	Reads true when a received prefix SID from another router has a SID index or label value that is not within the locally defined SRGB range of the network instance; the prefix SID entry will be inactive.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <b>sid-out-of-range</b> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-out-of-range</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### source-router system-id *string* level-number *number*

<b>Description</b>	The ISIS routers that provided the prefix SID. (Multiple in the case of redistribution.)
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> source-router system-id <i>string</i> level-number <i>number</i>
<b>Tree</b>	source-router
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### system-id *string*

<b>Description</b>	The system-id of an ISIS router that originated or redistributed the prefix SID
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> source-router system-id <i>string</i> level-number <i>number</i>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### level-number *number*

<b>Description</b>	The level of the LSP that advertises the prefix SID
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> source-router system-id <i>string</i> level-number <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**flags**

<b>Description</b>	Flags that characterize the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-</a>

	<i>value number multi-topology-id number algorithm number source-router system-id string level-number number flags node-sid boolean</i>
<b>Tree</b>	<i>node-sid</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### penultimate-hop-popping *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<i>network-instance name string protocols isis instance name string segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number multi-topology-id number algorithm number source-router system-id string level-number number flags penultimate-hop-popping boolean</i>
<b>Tree</b>	<i>penultimate-hop-popping</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### re-advertised *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached was propagated from another level or from another protocol.
<b>Context</b>	<i>network-instance name string protocols isis instance name string segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number multi-topology-id number algorithm number source-router system-id string level-number number flags re-advertised boolean</i>
<b>Tree</b>	<i>re-advertised</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### local-system *boolean*

<b>Description</b>	True when the system ID belongs to the local system.
<b>Context</b>	<i>network-instance name string protocols isis instance name string segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number multi-topology-id number algorithm number source-router system-id string level-number number local-system boolean</i>
<b>Tree</b>	<i>local-system</i>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### static-label-block *reference*

**Description** Reference to a static label block to use an SRLB.  
Configuration of this label block is mandatory in order to assign static adjacency SID labels.  
This label block is advertised as an SRLB in the router capabilities TLV.

**Context** [network-instance name string protocols isis instance name string segment-routing mpls static-label-block reference](#)

**Tree** [static-label-block](#)

**Reference** [system mpls label-ranges static name string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### static-label-block-status *keyword*

**Description** Status of the label block.  
The label block may show as unavailable if there is pending cleanup.

**Context** [network-instance name string protocols isis instance name string segment-routing mpls static-label-block-status keyword](#)

**Tree** [static-label-block-status](#)

**Options**

- available
- unavailable

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### statistics

**Description** Instance level statistics

**Context** [network-instance name string protocols isis instance name string statistics](#)

**Tree** [statistics](#)

**Configurable** False

**Platforms** Supported on all platforms

### **last-partial-spf** *string*

**Description** The elapsed time since the last time a partial SPF run was run on either the L1 or L2 LSDB

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [statistics last-partial-spf](#) *string*

**Tree** [last-partial-spf](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **last-spf** *string*

**Description** The elapsed time since the last time a full SPF run was run on either the L1 or L2 LSDB

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [statistics last-spf](#) *string*

**Tree** [last-spf](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **partial-spf-runs** *number*

**Description** The number of times a partial SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [statistics partial-spf-runs](#) *number*

**Tree** [partial-spf-runs](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

**pdu pdu-name keyword**

<b>Description</b>	List of PDUs processed by the IS-IS instance since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword</a>
<b>Tree</b>	<a href="#">pdu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pdu-name keyword**

<b>Description</b>	The PDU type that was processed
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• LSP Link State PDU</li> <li>• IIH IS-to-IS Hello PDU</li> <li>• CSNP Complete Sequence Number PDU</li> <li>• PSNP Partial Sequence Number PDU</li> <li>• Unknown Unknown PDU type</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dropped number**

<b>Description</b>	The number of PDUs that were received and dropped
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword dropped number</a>
<b>Tree</b>	<a href="#">dropped</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**processed** *number*

<b>Description</b>	The number of PDUs that were received and processed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">processed</a> <i>number</i>
<b>Tree</b>	<a href="#">processed</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received** *number*

<b>Description</b>	The number of PDUs that were received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">received</a> <i>number</i>
<b>Tree</b>	<a href="#">received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sent** *number*

<b>Description</b>	The number of PDUs that were transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">sent</a> <i>number</i>
<b>Tree</b>	<a href="#">sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spf-runs** *number*

<b>Description</b>	The number of times a full SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics spf-runs</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-runs</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### te-database-install

<b>Description</b>	When present, topology and TE information related to this protocol instance is installed into the TE database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">te-database-install</a>
<b>Tree</b>	<a href="#">te-database-install</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### bgp-ls

<b>Description</b>	When present, topology and TE information related to this protocol instance is installed into the TE database in a format that supports export as BGP-LS routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">te-database-install</a> <a href="#">bgp-ls</a>
<b>Tree</b>	<a href="#">bgp-ls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### bgp-ls-identifier *number*

<b>Description</b>	BGP-LS identifier value that is sent in the BGP-LS NLRI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">te-database-install</a> <a href="#">bgp-ls</a> <a href="#">bgp-ls-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">bgp-ls-identifier</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**igp-identifier** *number*

<b>Description</b>	Unique identifier of the IGP instance that is sent in the BGP-LS NLRI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">te-database-install bgp-ls igp-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">igp-identifier</a>
<b>Range</b>	0 to 18446744073709551615
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**timers**

<b>Description</b>	Container for IS-IS timers applicable at the instance level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsp-generation**

<b>Description</b>	Container with options for specifying LSP generation timer values
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation</a>
<b>Tree</b>	<a href="#">lsp-generation</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**initial-wait** *number*

<b>Description</b>	Time interval between the detection of topology change and when the new LSP is generated.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation initial-wait</a> <i>number</i>

<b>Tree</b>	<a href="#">initial-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	10
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-wait** *number*

<b>Description</b>	Specifies the maximum interval between two consecutive generations of an LSP.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation max-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait</a>
<b>Range</b>	10 to 120000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**second-wait** *number*

<b>Description</b>	Time interval between the the first and second LSP generation.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">second-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isp-lifetime** *number*

<b>Description</b>	Time interval in seconds that the LSPs originated by this IS (router) remain valid in the LSDB before they must be refreshed or else they are purged.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-lifetime</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-lifetime</a>
<b>Range</b>	350 to 65535
<b>Default</b>	1200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isp-refresh**

<b>Description</b>	Configure LSP refresh timers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-refresh</a>
<b>Tree</b>	<a href="#">lsp-refresh</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**half-lifetime** *boolean*

<b>Description</b>	When set to true, the LSP refresh interval is half the lsp-lifetime
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-refresh half-lifetime</a> <i>boolean</i>
<b>Tree</b>	<a href="#">half-lifetime</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interval** *number*

<b>Description</b>	Time interval in seconds since the last advertisement of its LSP when the router attempts to refresh the LSP. Must not exceed 90% of the lsp-lifetime. This value is ignored when half-lifetime is set to true.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-refresh interval</a> <i>number</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	150 to 65535
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spf**

<b>Description</b>	Container with options for specifying SPF timer values
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers spf</a>
<b>Tree</b>	<a href="#">spf</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**initial-wait** *number*

<b>Description</b>	Time interval between the detection of topology change and when the SPF algorithm runs.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers spf initial-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">initial-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-wait** *number*

<b>Description</b>	Specifies the maximum interval between two consecutive SPF calculations in milliseconds.
--------------------	--

The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers spf max-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait</a>
<b>Range</b>	10 to 120000
<b>Default</b>	10000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **second-wait** *number*

<b>Description</b>	Time interval between the the first and second SPF run. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers spf second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">second-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Instance level debug trace options for IS-IS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace keyword**

<b>Description</b>	List of tracing options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">trace-options trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• adjacencies</li> <li>• graceful-restart</li> <li>• interfaces</li> <li>• packets-all</li> <li>• packets-p2p-hello</li> <li>• packets-l1-hello</li> <li>• packets-l2-hello</li> <li>• packets-l1-psnp</li> <li>• packets-l2-psnp</li> <li>• packets-l1-csnp</li> <li>• packets-l2-csnp</li> <li>• packets-l1-lsp</li> <li>• packets-l2-lsp</li> <li>• routes</li> <li>• summary-addresses</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**traffic-engineering**

<b>Description</b>	Container with options for controlling the link-state advertisement of the TE properties of this network instance's TE interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering</a>
<b>Tree</b>	<a href="#">traffic-engineering</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**advertisement** *boolean*

<b>Description</b>	A setting of false means that no TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance. A setting of true means that TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering advertisement</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertisement</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**legacy-link-attribute-advertisement** *boolean*

<b>Description</b>	The advertisement mode for TE link attributes. A setting of true means that TE properties should be advertised in legacy mode as defined in RFC 8919 and RFC 8920.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering legacy-link-attribute-advertisement</a> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy-link-attribute-advertisement</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**transport**

<b>Description</b>	Enter the transport context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">transport</a>
<b>Tree</b>	<a href="#">transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsp-mtu-size** *number*

<b>Description</b>	Sets the maximum size of LSPs generated by this router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">transport lsp-mtu-size</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-mtu-size</a>
<b>Range</b>	490 to 9490
<b>Default</b>	1492
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**non-stop-forwarding**

<b>Description</b>	Enter the non-stop-forwarding context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis non-stop-forwarding</a>
<b>Tree</b>	<a href="#">non-stop-forwarding</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	Used to administratively enable or disable the IS-IS non-stop forwarding functionality.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis non-stop-forwarding admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## ldp

<b>Description</b>	Container for LDP configuration and state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### admin-state *keyword*

<b>Description</b>	Administratively enable or disable LDP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"><li>• enable</li><li>• disable</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### discovery

<b>Description</b>	Neighbor discovery configuration and operational state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery</a>
<b>Tree</b>	<a href="#">discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### interfaces

<b>Description</b>	The complete set of interfaces used for LDP Basic Discovery.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-holdtime** *number*

<b>Description</b>	The time interval for which a LDP link Hello adjacency is maintained in the absence of link Hello messages from the LDP neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces hello-holdtime</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Range</b>	15 to 3600
<b>Default</b>	15
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-interval** *number*

<b>Description</b>	The interval between consecutive LDP link Hello messages used in basic LDP discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	5 to 1200
<b>Default</b>	5
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**interface** *name reference*

<b>Description</b>	List of LDP interfaces used for LDP Basic Discovery.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface</a> <i>name reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**name** *reference*

<b>Description</b>	Reference to a specific subinterface that is bound to the network instance
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-holdtime** *number*

<b>Description</b>	The time interval for which a LDP link Hello adjacency is maintained in the absence of link Hello messages from the LDP neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">hello-holdtime</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Range</b>	15 to 3600
<b>Default</b>	15
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-interval** *number*

<b>Description</b>	The interval between consecutive LDP link Hello messages used in basic LDP discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	5 to 1200
<b>Default</b>	5
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv4**

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4</a>

<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### admin-state *keyword*

<b>Description</b>	Administratively enable or disable LDP discovery for IPv4 on a particular interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hello-adjacencies

<b>Description</b>	Container with a list of hello adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies</a>
<b>Tree</b>	<a href="#">hello-adjacencies</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### adjacency [lsr-id reference](#) [label-space-id reference](#)

<b>Description</b>	List of hello adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id reference label-space-id reference</a>
<b>Tree</b>	<a href="#">adjacency</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsr-id reference**

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-space-id reference**

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-holdtime**

<b>Description</b>	Container for hello holdtime state information.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id reference label-space-id reference</a> <a href="#">hello-holdtime</a>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**negotiated number**

<b>Description</b>	The holdtime negotiated between this LSR and the adjacent LSR.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id reference label-space-id reference</a> <a href="#">hello-holdtime negotiated</a> <i>number</i>
<b>Tree</b>	<a href="#">negotiated</a>

<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### neighbor-proposed *number*

<b>Description</b>	The holdtime value learned from the adjacent LSR.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime neighbor-proposed</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-proposed</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### remaining *number*

<b>Description</b>	The time remaining until the holdtime timer expires.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime remaining</a> <i>number</i>
<b>Tree</b>	<a href="#">remaining</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hello-received *number*

<b>Description</b>	The number of Hello messages received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-received</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hello-sent** *number*

<b>Description</b>	The number of Hello messages sent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-sent</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local-address** *string*

<b>Description</b>	Local address of the hello adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">local-address</a> <i>string</i>
<b>Tree</b>	<a href="#">local-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**remote-address** *string*

<b>Description</b>	Remote address of the hello adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">remote-address</a> <i>string</i>
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**last-oper-state-change** *string*

<b>Description</b>	The last time when the IPv4 oper-state changed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 last-oper-state-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-oper-state-change</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **oper-down-reason** *keyword*

<b>Description</b>	Reason for the LDP interface being down from an IPv4 perspective.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ldp-interface-admin-down</li> <li>• ldp-instance-oper-down</li> <li>• network-instance-subinterface-down</li> <li>• out-of-resources</li> <li>• unknown</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **oper-state** *keyword*

<b>Description</b>	Operational state of IPv4 on the LDP interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **statistics**

<b>Description</b>	Statistics objects.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## hello-message-errors

<b>Description</b>	Counters for received Hello message errors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-message-errors</a>
<b>Tree</b>	<a href="#">hello-message-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## bad-message-length *number*

<b>Description</b>	The number of Hello messages received with a bad message length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-message-errors bad-message-length number</a>
<b>Tree</b>	<a href="#">bad-message-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## bad-pdu-length *number*

<b>Description</b>	The number of Hello messages received with a bad PDU length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-message-errors bad-pdu-length number</a>
<b>Tree</b>	<a href="#">bad-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## bad-protocol-version *number*

<b>Description</b>	The number of Hello messages received with a bad protocol version
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-message-errors bad-protocol-version number</a>
<b>Tree</b>	<a href="#">bad-protocol-version</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### malformed-tlv-value *number*

<b>Description</b>	The number of Hello messages received with a malformed TLV value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-message-errors malformed-tlv-value number</a>
<b>Tree</b>	<a href="#">malformed-tlv-value</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hello-received *number*

<b>Description</b>	The number of Hello messages received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-received number</a>
<b>Tree</b>	<a href="#">hello-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hello-sent *number*

<b>Description</b>	The number of Hello messages sent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 statistics hello-sent number</a>
<b>Tree</b>	<a href="#">hello-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace-options**

<b>Description</b>	Configure event/packet tracing for one specific LDP interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace keyword**

<b>Description</b>	Specifies the trace information to be captured.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>reference</i> <a href="#">ipv4 trace-options trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-discovery Trace session related events</li> <li>• messages-hello Trace Hello packets</li> <li>• messages-hello-detail Trace LDP Hello packets with detailed output</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace-options**

<b>Description</b>	Configure event/packet tracing for all LDP interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace keyword**

<b>Description</b>	Specifies the trace information to be captured.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols ldp discovery interfaces trace-options trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-discovery Trace session related events</li> <li>• messages-hello Trace Hello packets</li> <li>• messages-hello-detail Trace LDP Hello packets with detailed output</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**dynamic-label-block reference**

<b>Description</b>	Reference to a dynamic label block
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols ldp dynamic-label-block reference</a>
<b>Tree</b>	<a href="#">dynamic-label-block</a>
<b>Reference</b>	<a href="#">system mpls label-ranges dynamic name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**dynamic-label-block-status keyword**

<b>Description</b>	Status of the label block. The label block may show as unavailable if there is pending cleanup.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols ldp dynamic-label-block-status keyword</a>
<b>Tree</b>	<a href="#">dynamic-label-block-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## graceful-restart

**Description** Attributes for graceful restart.

**Context** [network-instance name](#) *string* [protocols ldp graceful-restart](#)

**Tree** [graceful-restart](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## helper-enable *boolean*

**Description** Enable or disable graceful restart as a helper.

**Context** [network-instance name](#) *string* [protocols ldp graceful-restart helper-enable](#) *boolean*

**Tree** [helper-enable](#)

**Default** false

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## max-reconnect-time *number*

**Description** Specifies the maximum time interval, in seconds, that this router is willing to wait for the remote LDP peer to reconnect after an LDP communication failure.

**Context** [network-instance name](#) *string* [protocols ldp graceful-restart max-reconnect-time](#) *number*

**Tree** [max-reconnect-time](#)

**Range** 10 to 1800

**Default** 120

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**max-recovery-time *number***

<b>Description</b>	Specifies the maximum time interval, in seconds, that this router is willing to preserve its MPLS forwarding state after receiving the Initialization message from the restarted LDP peer.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">graceful-restart</a> <a href="#">max-recovery-time</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">max-recovery-time</a>
<b>Range</b>	30 to 3600
<b>Default</b>	120
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv4**

<b>Description</b>	Container for configuration and state related to the IPv4 address family.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**bindings**

<b>Description</b>	LDP address and label binding information.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a>
<b>Tree</b>	<a href="#">bindings</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**advertised-address**

<b>Description</b>	Enter the advertised-address context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">advertised-address</a>
<b>Tree</b>	<a href="#">advertised-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer** *lsr-id reference label-space-id reference*

<b>Description</b>	List of LDP peers towards which IPv4 address bindings have been sent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-address</a> <a href="#">peer lsr-id reference label-space-id reference</a>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsr-id reference**

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-address</a> <a href="#">peer lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-space-id reference**

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-address</a> <a href="#">peer lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ip-address** *string*

<b>Description</b>	The list of IPv4 address bindings sent to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-address</a> <a href="#">peer lsr-id reference label-space-id reference</a> <a href="#">ip-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**advertised-prefix-fecs** *fec string lsr-id reference label-space-id reference*

<b>Description</b>	List of IPv4 FEC-label bindings advertised to LDP peers.
<b>Context</b>	<a href="#">network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference</a>
<b>Tree</b>	<a href="#">advertised-prefix-fecs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**fec string**

<b>Description</b>	The prefix FEC value in the FEC-label binding, advertised in a Label Mapping message sent to a peer.
<b>Context</b>	<a href="#">network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsr-id reference**

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-space-id reference**

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**egress-lsr-fec** *boolean*

<b>Description</b>	When set true, the router is the egress LSR for the FEC (the FEC is locally originated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>egress-lsr-fec</b> <i>boolean</i>
<b>Tree</b>	<a href="#">egress-lsr-fec</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label** (*number* | *keyword*)

<b>Description</b>	Advertised label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label</b> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-status** *keyword*

<b>Description</b>	Enter the label-status context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label-status</b> <i>keyword</i>
<b>Tree</b>	<a href="#">label-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• released</li> <li>• withdrawn</li> <li>• withdraw-pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-type** *keyword*

<b>Description</b>	The label type of the advertised label.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <a href="#">label-type keyword</a>
<b>Tree</b>	<a href="#">label-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>pop</code> An advertised label that is programmed with a POP operation.</li> <li>• <code>swap</code> An advertised label that is programmed with a SWAP operation.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**received-address**

<b>Description</b>	Enter the received-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address</a>
<b>Tree</b>	<a href="#">received-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer** [lsr-id reference](#) [label-space-id reference](#)

<b>Description</b>	List of LDP peers from which IPv4 address bindings have been received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address peer lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsr-id reference**

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address peer lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id number</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-space-id *reference*

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address</a> <a href="#">peer lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ip-address *string*

<b>Description</b>	The list of IPv4 address bindings received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address</a> <a href="#">peer lsr-id reference</a> <a href="#">label-space-id reference</a> <a href="#">ip-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### received-prefix-fecs [fec](#) *string* [lsr-id reference](#) [label-space-id reference](#)

<b>Description</b>	List of IPv4 FEC-label bindings received from LDP peers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs</a> <a href="#">fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Tree</b>	<a href="#">received-prefix-fecs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### fec *string*

<b>Description</b>	The prefix FEC value in the FEC-label binding, learned in a Label Mapping message received from a peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs</a> <a href="#">fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### lsr-id reference

**Description** The LSR ID of the peer, as a portion of the peer LDP ID.

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fecs fec](#) *string* [lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number*

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-space-id reference

**Description** The Label Space ID of the peer, as a portion of the peer LDP ID.

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fecs fec](#) *string* [lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number*

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ingress-lsr-fec boolean

**Description** When set true, the router is an ingress LSR for the FEC.

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fecs fec](#) *string* [lsr-id reference](#) [label-space-id reference](#) [ingress-lsr-fec](#) *boolean*

**Tree** [ingress-lsr-fec](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label (number | keyword)

**Description** Received label value.

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fecs fec](#) *string* [lsr-id reference](#) [label-space-id reference](#) [label](#) (*number* | *keyword*)

<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">IPV4_EXPLICIT_NULL</a></li> <li>• <a href="#">IPV6_EXPLICIT_NULL</a></li> <li>• <a href="#">IMPLICIT_NULL</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **next-hop** [index number](#)

<b>Description</b>	List of ECMP next-hops towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <a href="#">string</a> <a href="#">lsr-id</a> <a href="#">reference</a> <a href="#">label-space-id</a> <a href="#">reference</a> <a href="#">next-hop</a> <a href="#">index number</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **index number**

<b>Description</b>	Label ID index entry
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <a href="#">string</a> <a href="#">lsr-id</a> <a href="#">reference</a> <a href="#">label-space-id</a> <a href="#">reference</a> <a href="#">next-hop</a> <a href="#">index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **interface** [string](#)

<b>Description</b>	The outgoing interface towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <a href="#">string</a> <a href="#">lsr-id</a> <a href="#">reference</a> <a href="#">label-space-id</a> <a href="#">reference</a> <a href="#">next-hop</a> <a href="#">index number</a> <a href="#">interface</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**next-hop** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP next-hop towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <a href="#">next-hop index number next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**not-used-reason** *keyword*

<b>Description</b>	The reason why the label mapping is not being used in the dataplane.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <a href="#">not-used-reason keyword</a>
<b>Tree</b>	<a href="#">not-used-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• non-ipv4-host-fec The received FEC is not a /32 IPv4 FEC prefix.</li> <li>• exceeds-multipath-limit The LDP multipath ECMP limit has been reached</li> <li>• exceeds-fec-limit The FEC limit has been reached</li> <li>• fec-unresolved The IP prefix FEC is unused because there is no resolving route matching the IP prefix</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used-in-forwarding** *boolean*

<b>Description</b>	Reads true if the label is used in forwarding and has been programmed for a push operation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <a href="#">used-in-forwarding boolean</a>
<b>Tree</b>	<a href="#">used-in-forwarding</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## fec-resolution

**Description** Container with options for controlling IPv4 prefix FEC resolution

**Context** [network-instance name string protocols ldp ipv4 fec-resolution](#)

**Tree** [fec-resolution](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## longest-prefix *boolean*

**Description** When this is set to true IPv4 prefix FECs can be resolved by less-specific IPv4 routes in the route table, as long as the prefix bits of the route match the prefix bits of the FEC; the IP route with the longest prefix match is the route that is used to resolve the FEC.

When this is set to false, IPv4 prefix FECs can only be resolved by routes that are an exact match of the FEC in terms of prefix length.

**Context** [network-instance name string protocols ldp ipv4 fec-resolution longest-prefix boolean](#)

**Tree** [longest-prefix](#)

**Default** false

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## last-oper-state-change *string*

**Description** The last time that the IPv4 oper-state changed.

**Context** [network-instance name string protocols ldp ipv4 last-oper-state-change string](#)

**Tree** [last-oper-state-change](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## oper-down-reason *keyword*

**Description** The reason for the LDP for IPv4 being operationally down

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ldp-admin-disabled</li> <li>• mpls-admin-disabled</li> <li>• no-system-ipv4-address System IPv4 address is used as the LSR ID. If this dependency is missing LDP is down.</li> <li>• net-instance-mgr-down</li> <li>• label-block-unavailable</li> <li>• no-resource Memory allocation failure</li> <li>• unknown Other failure reason</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**oper-state** *keyword*

<b>Description</b>	The operational state of LDP for IPv4
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing</li> </ul>

- Component is currently being synchronized
- upgrading
  - Component is currently being upgraded
- low-power
  - Component is offline due to insufficient system power
- degraded
  - Component or process is in a degraded state
- warm-reboot
  - Component or process is currently warm rebooting
  - This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
  - Component or process is currently waiting
  - This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **oper-up-to-down-transitions** *number*

<b>Description</b>	The number of times the oper state for IPv4 has transitioned from up to down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 oper-up-to-down-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-up-to-down-transitions</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **lsr-id** *string*

<b>Description</b>	Returns the value that is being used as the LDP LSR ID. Currently, this is always the router ID of the default network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp lsr-id</a> <i>string</i>
<b>Tree</b>	<a href="#">lsr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**multipath**

<b>Description</b>	Container with options to configure load-balancing over equal-cost paths
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp multipath</a>
<b>Tree</b>	<a href="#">multipath</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**max-paths** *number*

<b>Description</b>	Specifies the maximum number of next-hops used for load-balancing toward towards a given FEC
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp multipath max-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peers**

<b>Description</b>	Configuration and state related to peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers</a>
<b>Tree</b>	<a href="#">peers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer** [lsr-id](#) *string* [label-space-id](#) *number*

<b>Description</b>	List of peers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsr-id string**

<b>Description</b>	The LSR ID of the peer, to identify the globally unique LSR. This is the first four octets of the LDP ID. This leaf is used together with the leaf 'label-space-id' to form the LDP ID.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-space-id number**

<b>Description</b>	The Label Space ID of the peer, to identify a specific label space within the LSR. This is the last two octets of the LDP ID. This leaf is used together with the leaf 'lsr-id' to form the LDP ID.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**end-of-lib**

<b>Description</b>	Container with state information pertaining to sent and received End of LIB markers.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number end-of-lib</a>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv4-prefix-fecs**

<b>Description</b>	Enter the ipv4-prefix-fecs context
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number end-of-lib ipv4-prefix-fecs</a>
<b>Tree</b>	<a href="#">ipv4-prefix-fecs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**received** *boolean*

<b>Description</b>	When this is true, an End-of-LIB marker was received from the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">end-of-lib</a> <a href="#">ipv4-prefix-fecs</a> <a href="#">received</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sent** *boolean*

<b>Description</b>	When this is true, an End-of-LIB marker was sent to the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">end-of-lib</a> <a href="#">ipv4-prefix-fecs</a> <a href="#">sent</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">sent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**fec-limit** *number*

<b>Description</b>	The maximum number of FECs of all types combined that will be accepted from the peer. The value 0 implies no limit.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">fec-limit</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">fec-limit</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**fec-limit-exceeded** *boolean*

<b>Description</b>	Reads true when the peer has sent more FECs than the configured limit.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">fec-limit-exceeded</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">fec-limit-exceeded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**graceful-restart**

<b>Description</b>	Graceful restart operational state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer-reconnect-time** *number*

<b>Description</b>	The requested reconnect time.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">peer-reconnect-time</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-reconnect-time</a>
<b>Range</b>	10 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer-recovery-time** *number*

<b>Description</b>	The requested recovery time.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">peer-recovery-time</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-recovery-time</a>
<b>Range</b>	30 to 3600
<b>Default</b>	120
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer-restarting** *boolean*

<b>Description</b>	If true, the peer is currently in the process of restarting
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">peer-restarting</a> <i>boolean</i>

<b>Tree</b>	<a href="#">peer-restarting</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-advertisement-mode

<b>Description</b>	Label advertisement mode state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">label-advertisement-mode</a>
<b>Tree</b>	<a href="#">label-advertisement-mode</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### negotiated *keyword*

<b>Description</b>	Negotiated Label Advertisement Mode.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">label-advertisement-mode</a> <a href="#">negotiated</a> <i>keyword</i>
<b>Tree</b>	<a href="#">negotiated</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">downstream-unsolicited</a> Downstream Unsolicited</li> <li>• <a href="#">downstream-on-demand</a> Downstream on Demand</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### last-oper-state-change *string*

<b>Description</b>	Last time the peer state changed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">last-oper-state-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-oper-state-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**overload**

<b>Description</b>	Overload state of the session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <b>overload</b>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local-router-is-overloaded** *boolean*

<b>Description</b>	This router transmitted an overload TLV requesting that the peer stop advertising new FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">overload</a> <a href="#">local-router-is-overloaded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local-router-is-overloaded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peer-is-overloaded** *boolean*

<b>Description</b>	The peer has sent an overload TLV to this router requesting that we stop advertising new FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">overload</a> <a href="#">peer-is-overloaded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">peer-is-overloaded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**received-capabilities**

<b>Description</b>	Capabilities signalled by the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a>
<b>Tree</b>	<a href="#">received-capabilities</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**dual-stack-capability** *boolean*

<b>Description</b>	Dual stack capability. TLV 0x0701
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">received-capabilities</a> <a href="#">dual-stack-capability</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">dual-stack-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**dynamic-capability** *boolean*

<b>Description</b>	Dynamic capability advertisement capability. Indicates support for Capability messages. TLV 0x0506
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">received-capabilities</a> <a href="#">dynamic-capability</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">dynamic-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**entropy-label-capability** *boolean*

<b>Description</b>	Entropy label capability. TLV 0x0206
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">received-capabilities</a> <a href="#">entropy-label-capability</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">entropy-label-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**graceful-restart-capability** *boolean*

<b>Description</b>	Fault tolerance protection TLV 0x0503
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">received-capabilities</a> <a href="#">graceful-restart-capability</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">graceful-restart-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**make-before-break-capability** *boolean*

<b>Description</b>	Make before break capability. TLV 0x050A
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">make-before-break-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">make-before-break-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**multipoint-to-multipoint-capability** *boolean*

<b>Description</b>	Multipoint to multipoint FEC capability. TLV 0x0509
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">multipoint-to-multipoint-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">multipoint-to-multipoint-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**nokia-vendor-overload-capability** *boolean*

<b>Description</b>	Overload capability
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">nokia-vendor-overload-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">nokia-vendor-overload-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**point-to-multipoint-capability** *boolean*

<b>Description</b>	Point to multipoint FEC capability. TLV 0x0508
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">point-to-multipoint-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">point-to-multipoint-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**state-advertisement-control**

<b>Description</b>	State advertisement control capability. TLV 0x050D
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a>
<b>Tree</b>	<a href="#">state-advertisement-control</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv4-prefix-disable** *boolean*

<b>Description</b>	Indicates desire to not receive IPv4 prefix FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">ipv4-prefix-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4-prefix-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**ipv6-prefix-disable** *boolean*

<b>Description</b>	Indicates desire to not receive IPv6 prefix FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">ipv6-prefix-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-prefix-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**p2p-pseudowire-fec-128-disable** *boolean*

<b>Description</b>	Indicates desire to not receive P2P PW FEC 128 FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">p2p-pseudowire-fec-128-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">p2p-pseudowire-fec-128-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**p2p-pseudowire-fec-129-disable** *boolean*

<b>Description</b>	Indicates desire to not receive P2P PW FEC 129 FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities state-advertisement-control p2p-pseudowire-fec-129-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">p2p-pseudowire-fec-129-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**unrecognized-notification-capability** *boolean*

<b>Description</b>	Unrecognized notification capability. TLV 0x0603
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities unrecognized-notification-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unrecognized-notification-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**session-holdtime**

<b>Description</b>	Session holdtime state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime</a>
<b>Tree</b>	<a href="#">session-holdtime</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**negotiated** *number*

<b>Description</b>	Negotiated holdtime.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime negotiated</a> <i>number</i>
<b>Tree</b>	<a href="#">negotiated</a>
<b>Units</b>	seconds
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### peer-proposed *number*

**Description** Peer holdtime.

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number* [session-holdtime peer-proposed](#) *number*

**Tree** [peer-proposed](#)

**Units** seconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### remaining *number*

**Description** Remaining holdtime.

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number* [session-holdtime remaining](#) *number*

**Tree** [remaining](#)

**Units** seconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### session-state *keyword*

**Description** Representing the operational status of the LDP session.

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number* [session-state](#) *keyword*

**Tree** [session-state](#)

**Options**

- non-existent  
NON EXISTENT state. Transport disconnected.
- initialized  
INITIALIZED state.
- openrec  
OPENREC state.
- opensent  
OPENSENT state.
- operational

OPERATIONAL state.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### statistics

<b>Description</b>	Statistics objects.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### address-statistics

<b>Description</b>	Enter the address-statistics context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">address-statistics</a>
<b>Tree</b>	<a href="#">address-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ipv4

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">address-statistics</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### advertised-addresses *number*

<b>Description</b>	The number of IPv4 addresses advertised to a peer.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">address-statistics</a> <a href="#">ipv4</a> <a href="#">advertised-addresses</a> <a href="#">number</a>

<b>Tree</b>	<a href="#">advertised-addresses</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### received-addresses *number*

<b>Description</b>	The number of IPv4 addresses received from a peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics address-statistics ipv4 received-addresses</a> <i>number</i>
<b>Tree</b>	<a href="#">received-addresses</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### fec-statistics

<b>Description</b>	Enter the fec-statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics</a>
<b>Tree</b>	<a href="#">fec-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ipv4-prefix

<b>Description</b>	Enter the ipv4-prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics ipv4-prefix</a>
<b>Tree</b>	<a href="#">ipv4-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**advertised-fecs number**

<b>Description</b>	The number of advertised IPv4 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics ipv4-prefix advertised-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">advertised-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**received-fecs number**

<b>Description</b>	The number of received IPv4 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics ipv4-prefix received-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">received-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**received-messages**

<b>Description</b>	Inbound statistics.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a>
<b>Tree</b>	<a href="#">received-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**address number**

<b>Description</b>	The number of address messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages address</a> <i>number</i>
<b>Tree</b>	<a href="#">address</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **address-withdraw *number***

<b>Description</b>	The number of address-withdraw messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">address-withdraw</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">address-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **capability *number***

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">capability</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">capability</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **initialization *number***

<b>Description</b>	The number of initialization messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <a href="#">string</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">initialization</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">initialization</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **keepalive *number***

<b>Description</b>	The number of keepalive messages sent or received.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a> <a href="#">keepalive</a> <i>number</i>
<b>Tree</b>	<a href="#">keepalive</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-abort-request *number*

<b>Description</b>	The number of label-abort-request messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a> <a href="#">label-abort-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-abort-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-mapping *number*

<b>Description</b>	The number of label-mapping messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a> <a href="#">label-mapping</a> <i>number</i>
<b>Tree</b>	<a href="#">label-mapping</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-release *number*

<b>Description</b>	The number of label-release messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a> <a href="#">label-release</a> <i>number</i>
<b>Tree</b>	<a href="#">label-release</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-request** *number*

<b>Description</b>	The number of label-request messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-withdraw** *number*

<b>Description</b>	The number of label-withdraw messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-withdraw</a> <i>number</i>
<b>Tree</b>	<a href="#">label-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**notification** *number*

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">notification</a> <i>number</i>
<b>Tree</b>	<a href="#">notification</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total-messages** *number*

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">total-messages</a> <i>number</i>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### sent-messages

<b>Description</b>	Outbound statistics.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages</a>
<b>Tree</b>	<a href="#">sent-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### address *number*

<b>Description</b>	The number of address messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages address</a> <i>number</i>
<b>Tree</b>	<a href="#">address</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### address-withdraw *number*

<b>Description</b>	The number of address-withdraw messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages address-withdraw</a> <i>number</i>
<b>Tree</b>	<a href="#">address-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### capability *number*

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages capability</a> <i>number</i>

<b>Tree</b>	<a href="#">capability</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**initialization number**

<b>Description</b>	The number of initialization messages sent or received.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number statistics sent-messages initialization number</a>
<b>Tree</b>	<a href="#">initialization</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**keepalive number**

<b>Description</b>	The number of keepalive messages sent or received.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number statistics sent-messages keepalive number</a>
<b>Tree</b>	<a href="#">keepalive</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-abort-request number**

<b>Description</b>	The number of label-abort-request messages sent or received.
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id string label-space-id number statistics sent-messages label-abort-request number</a>
<b>Tree</b>	<a href="#">label-abort-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-mapping** *number*

<b>Description</b>	The number of label-mapping messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-mapping</a> <i>number</i>
<b>Tree</b>	<a href="#">label-mapping</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-release** *number*

<b>Description</b>	The number of label-release messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-release</a> <i>number</i>
<b>Tree</b>	<a href="#">label-release</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-request** *number*

<b>Description</b>	The number of label-request messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-withdraw** *number*

<b>Description</b>	The number of label-withdraw messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-withdraw</a> <i>number</i>
<b>Tree</b>	<a href="#">label-withdraw</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**notification number**

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages notification</a> <i>number</i>
<b>Tree</b>	<a href="#">notification</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total-messages number**

<b>Description</b>	The number of messages sent or received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages total-messages</a> <i>number</i>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**tcp-transport**

<b>Description</b>	Enter the tcp-transport context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a>
<b>Tree</b>	<a href="#">tcp-transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local-address string**

<b>Description</b>	Local address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport local-address</a> <i>string</i>

<b>Tree</b>	<a href="#">local-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**local-port** *number*

<b>Description</b>	Local port number.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">local-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**remote-address** *string*

<b>Description</b>	Remote address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">remote-address</a> <i>string</i>
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**remote-port** *number*

<b>Description</b>	Remote port number.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace-options**

<b>Description</b>	Configure event/packet tracing for one specific session.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace keyword**

<b>Description</b>	Specifies the trace information to be captured.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i> <a href="#">trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-all Trace all events</li> <li>• events-session Trace session related events</li> <li>• events-binding Trace binding related events</li> <li>• messages-all Trace all LDP messages</li> <li>• messages-all-detail Trace all LDP messages with detailed output</li> <li>• messages-initialization Trace LDP Initialization packets</li> <li>• messages-initialization-detail Trace LDP Initialization packets with detailed output</li> <li>• messages-keepalive Trace LDP Keepalive packets</li> <li>• messages-label Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets</li> <li>• messages-label-detail Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output</li> </ul>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **session-keepalive-holdtime** *number*

**Description** The time interval after which an inactive LDP session terminates and the corresponding TCP session closes. Inactivity is defined as not receiving LDP packets from the peer.

**Context** [network-instance name](#) *string* [protocols ldp peers session-keepalive-holdtime](#) *number*

**Tree** [session-keepalive-holdtime](#)

**Range** 45 to 3600

**Default** 180

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **session-keepalive-interval** *number*

**Description** The interval between successive transmissions of keepalive packets. Keepalive packets are only sent in the absence of other LDP packets transmitted over the LDP session.

**Context** [network-instance name](#) *string* [protocols ldp peers session-keepalive-interval](#) *number*

**Tree** [session-keepalive-interval](#)

**Range** 15 to 1200

**Default** 60

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **trace-options**

**Description** Configure event/packet tracing for all sessions (configured and dynamic).

**Context** [network-instance name](#) *string* [protocols ldp peers trace-options](#)

**Tree** [trace-options](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**trace keyword**

<b>Description</b>	Specifies the trace information to be captured.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">trace-options</a> <a href="#">trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-all Trace all events</li> <li>• events-session Trace session related events</li> <li>• events-binding Trace binding related events</li> <li>• messages-all Trace all LDP messages</li> <li>• messages-all-detail Trace all LDP messages with detailed output</li> <li>• messages-initialization Trace LDP Initialization packets</li> <li>• messages-initialization-detail Trace LDP Initialization packets with detailed output</li> <li>• messages-keepalive Trace LDP Keepalive packets</li> <li>• messages-label Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets</li> <li>• messages-label-detail Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**statistics**

<b>Description</b>	LDP instance level statistics
--------------------	-------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### fec-statistics

<b>Description</b>	Enter the fec-statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics fec-statistics</a>
<b>Tree</b>	<a href="#">fec-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ipv4-prefix

<b>Description</b>	Enter the ipv4-prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics fec-statistics ipv4-prefix</a>
<b>Tree</b>	<a href="#">ipv4-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### advertised-fecs *number*

<b>Description</b>	The number of advertised IPv4 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics fec-statistics ipv4-prefix advertised-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">advertised-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### received-fecs *number*

<b>Description</b>	The number of received IPv4 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">fec-statistics</a> <a href="#">ipv4-prefix</a> <a href="#">received-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">received-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## protocol-errors

<b>Description</b>	Enter the protocol-errors context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a>
<b>Tree</b>	<a href="#">protocol-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## bad-ldp-identifier *number*

<b>Description</b>	The number of notification messages sent to advise of a bad LDP identifier
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">bad-ldp-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-ldp-identifier</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## bad-message-length *number*

<b>Description</b>	The number of notification messages sent to advise of a bad message length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">bad-message-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-message-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**bad-pdu-length** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad PDU length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">bad-pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**bad-protocol-version** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad protocol version
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">bad-protocol-version</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-protocol-version</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**bad-tlv-length** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad TLV length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">bad-tlv-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-tlv-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**malformed-tlv-value** *number*

<b>Description</b>	The number of notification messages sent to advise of a malformed TLV value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">malformed-tlv-value</a> <i>number</i>
<b>Tree</b>	<a href="#">malformed-tlv-value</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### missing-message-parameters *number*

<b>Description</b>	The number of notification messages sent to advise of missing mandatory parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">missing-message-parameters</a> <i>number</i>
<b>Tree</b>	<a href="#">missing-message-parameters</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### session-rejected-bad-keepalive-time *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested keepalive time is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">session-rejected-bad-keepalive-time</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-bad-keepalive-time</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### session-rejected-no-hello *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because there was no matching Hello adjacency
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">statistics</a> <a href="#">protocol-errors</a> <a href="#">session-rejected-no-hello</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-no-hello</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**session-rejected-parameters-adv-mode** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested label advertisement mode is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors session-rejected-parameters-adv-mode</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-parameters-adv-mode</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**session-rejected-parameters-label-range** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested label range is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors session-rejected-parameters-label-range</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-parameters-label-range</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**session-rejected-parameters-max-pdu-length** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested Maximum PDU Length is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors session-rejected-parameters-max-pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-parameters-max-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**unknown-message-type** *number*

<b>Description</b>	The number of notification messages sent to advise of an unknown message type
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unknown-message-type</a> <i>number</i>
<b>Tree</b>	<a href="#">unknown-message-type</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **unknown-tlv** *number*

<b>Description</b>	The number of notification messages sent to advise of an unknown TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unknown-tlv</a> <i>number</i>
<b>Tree</b>	<a href="#">unknown-tlv</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **unsupported-address-family** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the FEC type is not IPv4
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unsupported-address-family</a> <i>number</i>
<b>Tree</b>	<a href="#">unsupported-address-family</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sessions-terminated-holdtime-expiry** *number*

<b>Description</b>	The total number of LDP sessions that were terminated due to keepalive holdtime expiry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics sessions-terminated-holdtime-expiry</a> <i>number</i>
<b>Tree</b>	<a href="#">sessions-terminated-holdtime-expiry</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total-discovery-interfaces** *number*

<b>Description</b>	The total number of IP subinterfaces on which basic LDP discovery is active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-discovery-interfaces</a> <i>number</i>
<b>Tree</b>	<a href="#">total-discovery-interfaces</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total-hello-adjacencies** *number*

<b>Description</b>	The total number of hello adjacencies that have been formed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-hello-adjacencies</a> <i>number</i>
<b>Tree</b>	<a href="#">total-hello-adjacencies</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total-peers** *number*

<b>Description</b>	The total number of LDP TCP sessions that are established.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">total-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**linux**

<b>Description</b>	Enables routing interaction with the Linux kernel
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux</a>
<b>Tree</b>	<a href="#">linux</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-neighbors** *boolean*

<b>Description</b>	Export neighbors to linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux export-neighbors</a> <i>boolean</i>
<b>Tree</b>	<a href="#">export-neighbors</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-routes** *boolean*

<b>Description</b>	Export routes to linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux export-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">export-routes</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**import-routes** *boolean*

<b>Description</b>	Import routes from linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux import-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">import-routes</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mld**

<b>Description</b>	Enable the mld context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld</a>
<b>Tree</b>	<a href="#">mld</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the MLD instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld admin-state keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-count** *number*

<b>Description</b>	The number of multicast groups which have been learned on this instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld group-count number</i>
<b>Tree</b>	<a href="#">group-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface** [interface-name](#) *reference*

<b>Description</b>	List of MLD interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld interface interface-name reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *reference*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the MLD protocol for this interface. Used to administratively enable or disable the MLD protocol on a routed subinterface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **counters**

<b>Description</b>	Global MLD counters.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters</a>
<b>Tree</b>	<a href="#">counters</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **error**

<b>Description</b>	Error message statistics.
--------------------	---------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters error</a>
<b>Tree</b>	<a href="#">error</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## bad-encoding

<b>Description</b>	Badly encoded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters error bad-encoding</a>
<b>Tree</b>	<a href="#">bad-encoding</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## bad-length

<b>Description</b>	Bad length.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters error bad-length</a>
<b>Tree</b>	<a href="#">bad-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## import-policy-drops

<b>Description</b>	Number of times we matched the host IP address or group or source addresses specified in the import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters error import-policy-drops</a>
<b>Tree</b>	<a href="#">import-policy-drops</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## local-scope

**Description** Link-local scope multicast group address.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters error local-scope](#)

**Tree** [local-scope](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## missing-router-alert

**Description** Router alert flag is not set.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters error missing-router-alert](#)

**Tree** [missing-router-alert](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## non-local

**Description** Non-local sender source IP address.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters error non-local](#)

**Tree** [non-local](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## out-of-memory-drops

<b>Description</b>	Number of times a join is dropped because we ran out of memory.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters error out-of-memory-drops</a>
<b>Tree</b>	<a href="#">out-of-memory-drops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## reached-maximum-number-group-sources

<b>Description</b>	Number of times a join is dropped because we reached the maximum number group-source combinations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters error reached-maximum-number-group-sources</a>
<b>Tree</b>	<a href="#">reached-maximum-number-group-sources</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## reached-maximum-number-groups

<b>Description</b>	Number of times a join is dropped because we reached the maximum number of groups.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters error reached-maximum-number-groups</a>
<b>Tree</b>	<a href="#">reached-maximum-number-groups</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## reached-maximum-number-sources

<b>Description</b>	Number of times a join is dropped because we reached the maximum number of sources per group.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference</a> <a href="#">counters error reached-maximum-number-sources</a>
<b>Tree</b>	<a href="#">reached-maximum-number-sources</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## reserved-scope

<b>Description</b>	Reserved scope multicast group address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference</a> <a href="#">counters error reserved-scope</a>
<b>Tree</b>	<a href="#">reserved-scope</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## unknown-type

<b>Description</b>	Unknown type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference</a> <a href="#">counters error unknown-type</a>
<b>Tree</b>	<a href="#">unknown-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## wrong-version

<b>Description</b>	Wrong version.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference</a> <a href="#">counters error wrong-version</a>
<b>Tree</b>	<a href="#">wrong-version</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## received

**Description** Received message statistics.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters received](#)

**Tree** [received](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## drops

**Description** Total number of dropped packets.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters received drops](#)

**Tree** [drops](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## general-queries

**Description** General Queries.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [counters received general-queries](#)

**Tree** [general-queries](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group-queries

<b>Description</b>	Group Specific Queries.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">mld</a> <a href="#">interface</a> <a href="#">interface-name</a> <a href="#">reference</a> <a href="#">counters</a> <a href="#">received</a> <a href="#">group-queries</a>
<b>Tree</b>	<a href="#">group-queries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group-source-queries

<b>Description</b>	Group and Source Specific Queries.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">mld</a> <a href="#">interface</a> <a href="#">interface-name</a> <a href="#">reference</a> <a href="#">counters</a> <a href="#">received</a> <a href="#">group-source-queries</a>
<b>Tree</b>	<a href="#">group-source-queries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## leaves

<b>Description</b>	Leaves.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">mld</a> <a href="#">interface</a> <a href="#">interface-name</a> <a href="#">reference</a> <a href="#">counters</a> <a href="#">received</a> <a href="#">leaves</a>
<b>Tree</b>	<a href="#">leaves</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## v1-reports

<b>Description</b>	V1 Reports.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">mld</a> <a href="#">interface</a> <a href="#">interface-name</a> <a href="#">reference</a> <a href="#">counters</a> <a href="#">received</a> <a href="#">v1-reports</a>
<b>Tree</b>	<a href="#">v1-reports</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## v2-reports

<b>Description</b>	V2 Reports.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters received v2-reports</a>
<b>Tree</b>	<a href="#">v2-reports</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## sg

<b>Description</b>	The number of (S,G)s
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters sg</a>
<b>Tree</b>	<a href="#">sg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## star-g

<b>Description</b>	The number of (*,G)s
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference counters star-g</a>
<b>Tree</b>	<a href="#">star-g</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**transmitted**

<b>Description</b>	Transmit message statistics.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters transmitted</a>
<b>Tree</b>	<a href="#">transmitted</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**errors**

<b>Description</b>	Transmission Errors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters transmitted errors</a>
<b>Tree</b>	<a href="#">errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**general-queries**

<b>Description</b>	General Queries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters transmitted general-queries</a>
<b>Tree</b>	<a href="#">general-queries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-queries**

<b>Description</b>	Group Specific Queries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters transmitted group-queries</a>
<b>Tree</b>	<a href="#">group-queries</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group-source-queries

<b>Description</b>	Group and Source Specific Queries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">counters transmitted group-source-queries</a>
<b>Tree</b>	<a href="#">group-source-queries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group-count *number*

<b>Description</b>	The number of multicast groups which have been learned on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">group-count number</a>
<b>Tree</b>	<a href="#">group-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### import-policy *reference*

<b>Description</b>	Apply an import policy. The length of the policy name should not exceed 32 characters.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">import-policy reference</a>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-group-sources** *number*

<b>Description</b>	MAX number of MLD group/source combinations for this interface, 0 means no limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">max-group-sources</a> <i>number</i>
<b>Tree</b>	<a href="#">max-group-sources</a>
<b>Range</b>	0 to 4096
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-groups** *number*

<b>Description</b>	MAX number of MLD Groups for this interface, 0 means no limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">max-groups</a> <i>number</i>
<b>Tree</b>	<a href="#">max-groups</a>
<b>Range</b>	0 to 4096
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-sources** *number*

<b>Description</b>	MAX number of MLD sources per group for this interface, 0 means no limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">max-sources</a> <i>number</i>
<b>Tree</b>	<a href="#">max-sources</a>
<b>Range</b>	0 to 512
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**membership-groups**

<b>Description</b>	List of MLD Membership information.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups</a>
<b>Tree</b>	<a href="#">membership-groups</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group** [group](#) *string*

<b>Description</b>	Multicast group membership.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group** *string*

<b>Description</b>	Multicast address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**expiry-time** *number*

<b>Description</b>	The time left before multicast group timeout.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group</a> <a href="#">group</a> <i>string</i> <a href="#">expiry-time</a> <i>number</i>
<b>Tree</b>	<a href="#">expiry-time</a>
<b>Units</b>	seconds

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**filter-mode** *keyword*

<b>Description</b>	Enter the filter-mode context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <b>filter-mode</b> <i>keyword</i>
<b>Tree</b>	<a href="#">filter-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>include In include mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter</li> <li>exclude In exclude mode, reception of packets sent to the given multicast address is requested from all IP source addresses except those listed in the source-list parameter.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-type** *keyword*

<b>Description</b>	Enter the group-type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <b>group-type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">group-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>static This group entry was statically configured.</li> <li>dynamic This group entry was learned by the protocol.</li> <li>bgp-smet This group entry was learned from a bgp SMET route.</li> <li>bgp-sync This group entry was learned from a bgp JOIN SYNC route.</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **last-reporter** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The last host address which has sent the report to join the multicast group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <b>last-reporter</b> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">last-reporter</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **mld-compatibility-mode** *keyword*

<b>Description</b>	Compatibility with older version routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <b>mld-compatibility-mode</b> <i>keyword</i>
<b>Tree</b>	<a href="#">mld-compatibility-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• 1</li> <li>• 2</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **source** [source](#) *string*

<b>Description</b>	Source addresses of multicast.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <b>source</b> <a href="#">source</a> <i>string</i>
<b>Tree</b>	<a href="#">source</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source *string*

**Description** Source address of multicast.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#) *reference* [membership-groups group group](#) *string* [source source](#) *string*

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### expiry-time *number*

**Description** The time left before multicast group timeout.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#) *reference* [membership-groups group group](#) *string* [source source](#) *string* [expiry-time](#) *number*

**Tree** [expiry-time](#)

**Units** seconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### forwarding-state *keyword*

**Description** Traffic forwarding state on this port.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#) *reference* [membership-groups group group](#) *string* [source source](#) *string* [forwarding-state](#) *keyword*

**Tree** [forwarding-state](#)

**Options**

- forward
- block

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source-type *keyword*

**Description** Enter the source-type context

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#) *reference* [membership-groups group group](#) *string* [source source](#) *string* [source-type](#) *keyword*

**Tree** [source-type](#)

**Options**

- static  
This group entry was statically configured.
- dynamic  
This group entry was learned by the protocol.
- bgp-smet  
This group entry was learned from a bgp SMET route.
- bgp-sync  
This group entry was learned from a bgp JOIN SYNC route.

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### up-time *number*

**Description** The time elapsed since this entry was created.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#) *reference* [membership-groups group group](#) *string* [source source](#) *string* [up-time](#) *number*

**Tree** [up-time](#)

**Units** seconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**up-time** *number*

<b>Description</b>	The time elapsed since this entry was created.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <a href="#">up-time number</a>
<b>Tree</b>	<a href="#">up-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**v1-host-timer** *number*

<b>Description</b>	The time remaining until the local router will assume that there are no longer any version 1 members.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">membership-groups group group</a> <i>string</i> <a href="#">v1-host-timer number</a>
<b>Tree</b>	<a href="#">v1-host-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state** *keyword*

<b>Description</b>	The operational state of the MLD interface. This simply tracks the operational state of the subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-version** *number*

<b>Description</b>	The operational MLD version on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">oper-version number</a>
<b>Tree</b>	<a href="#">oper-version</a>
<b>Range</b>	1 to 2
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**querier**

<b>Description</b>	Enter the querier context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">querier</a>
<b>Tree</b>	<a href="#">querier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	The address of the MLD Querier on the IP subnet to which this interface is attached.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">querier address string</a>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**expiry-time** *number*

<b>Description</b>	The time remaining before this querier is aged out.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">querier expiry-time number</a>

<b>Tree</b>	<a href="#">expiry-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**up-time number**

<b>Description</b>	The time since this querier was last elected.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">querier up-time number</a>
<b>Tree</b>	<a href="#">up-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**query-interval number**

<b>Description</b>	Interval at which the router sends the mld membership queries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">query-interval number</a>
<b>Tree</b>	<a href="#">query-interval</a>
<b>Range</b>	2 to 1024
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**query-last-member-interval number**

<b>Description</b>	Interval at which Group-Specific-Query packets are transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">query-last-member-interval number</a>
<b>Tree</b>	<a href="#">query-last-member-interval</a>
<b>Range</b>	1 to 1023

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### query-response-interval *number*

<b>Description</b>	Time to wait to receive a response to the MLD membership query from the host
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">query-response-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">query-response-interval</a>
<b>Range</b>	1 to 1023
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### router-alert-check *boolean*

<b>Description</b>	Enable or disable router alert checking for MLD messages received on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
<b>Tree</b>	<a href="#">router-alert-check</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ssm

<b>Description</b>	Container to configure Source specific multicast (SSM) options.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <i>reference</i> <a href="#">ssm</a>
<b>Tree</b>	<a href="#">ssm</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## mappings

**Description** A list of source specific multicast (SSM) mappings.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [ssm mappings](#)

**Tree** [mappings](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group-range [start string end string](#)

**Description** A Source Specific Multicast (SSM) mapping.  
This allows MLD v2 hosts to be able to join in SSM environments by translating MLD v1 reports into MLD v2 reports. The request in an MLD v1 join is sent toward the source address found by matching the multicast address.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [ssm mappings group-range start string end string](#)

**Tree** [group-range](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## start *string*

**Description** start of the group range.

**Context** [network-instance name](#) *string* [protocols mld interface interface-name](#)  
*reference* [ssm mappings group-range start string end string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**end string**

<b>Description</b>	end of the group range.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference ssm mappings group-range start string end string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source source string**

<b>Description</b>	Multicast source address list.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference ssm mappings group-range start string end string source source string</a>
<b>Tree</b>	<a href="#">source</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L
<b>Min. Elements</b>	1

**source string**

<b>Description</b>	Multicast source address.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference ssm mappings group-range start string end string source source string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**static-membership-groups**

<b>Description</b>	Container to configure static <S,G>s for this interface.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference static-membership-groups</a>

<b>Tree</b>	<a href="#">static-membership-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group-range [start string end string](#)

<b>Description</b>	Enter the group-range list instance
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference static-membership-groups group-range start string end string</a>
<b>Tree</b>	<a href="#">group-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### start string

<b>Description</b>	start of the group range.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference static-membership-groups group-range start string end string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### end string

<b>Description</b>	end of the group range.
<b>Context</b>	<a href="#">network-instance name string protocols mld interface interface-name reference static-membership-groups group-range start string end string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source** *source string*

<b>Description</b>	Multicast source address list.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference static-membership-groups group-range start string end string</a> <a href="#">source source string</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source** *string*

<b>Description</b>	Multicast source address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference static-membership-groups group-range start string end string</a> <a href="#">source source string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**starg**

<b>Description</b>	any source address (*,G)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference static-membership-groups group-range start string end string starg</a>
<b>Tree</b>	<a href="#">starg</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**version** *number*

<b>Description</b>	MLD Version
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name</a> <a href="#">reference version number</a>
<b>Tree</b>	<a href="#">version</a>

<b>Range</b>	1 to 2
<b>Default</b>	2
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## membership-groups

<b>Description</b>	List of MLD Membership information.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld membership-groups</a>
<b>Tree</b>	<a href="#">membership-groups</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group [group](#) *string*

<b>Description</b>	Multicast group membership.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group *string*

<b>Description</b>	Multicast address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source** *source string*

<b>Description</b>	Source addresses of multicast.
<b>Context</b>	<a href="#">network-instance name string protocols mld membership-groups group group string source source string</a>
<b>Tree</b>	<a href="#">source</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source** *string*

<b>Description</b>	Source address of multicast.
<b>Context</b>	<a href="#">network-instance name string protocols mld membership-groups group group string source source string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**blocked-interface** *interface-name string*

<b>Description</b>	Add a list entry for blocked-interface
<b>Context</b>	<a href="#">network-instance name string protocols mld membership-groups group group string source source string blocked-interface interface-name string</a>
<b>Tree</b>	<a href="#">blocked-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *string*

<b>Description</b>	Name of the interface on which this source is blocked.
<b>Context</b>	<a href="#">network-instance name string protocols mld membership-groups group group string source source string blocked-interface interface-name string</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### forwarding-interface *interface-name string*

**Description** Add a list entry for forwarding-interface

**Context** [network-instance name string](#) [protocols mld membership-groups group group string](#) [source source string](#) [forwarding-interface interface-name string](#)

**Tree** [forwarding-interface](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *string*

**Description** Name of the interface on which this source is forwarded.

**Context** [network-instance name string](#) [protocols mld membership-groups group group string](#) [source source string](#) [forwarding-interface interface-name string](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### oper-state *keyword*

**Description** Used to report operational state of the MLD instance.

**Context** [network-instance name string](#) [protocols mld oper-state keyword](#)

**Tree** [oper-state](#)

**Options**

- enable
- disable

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**query-interval** *number*

<b>Description</b>	Interval at which the router sends the mld membership queries
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld query-interval number</i>
<b>Tree</b>	<a href="#">query-interval</a>
<b>Range</b>	2 to 1024
<b>Default</b>	125
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**query-last-member-interval** *number*

<b>Description</b>	Interval at which Group-Specific-Query packets are transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld query-last-member-interval number</i>
<b>Tree</b>	<a href="#">query-last-member-interval</a>
<b>Range</b>	1 to 1023
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**query-response-interval** *number*

<b>Description</b>	Time to wait to receive a response to the MLD membership query from the host
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols mld query-response-interval number</i>
<b>Tree</b>	<a href="#">query-response-interval</a>
<b>Range</b>	1 to 1023
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**robust-count** *number*

<b>Description</b>	Tune MLD robustness to allow for expected packet loss. The robust-count variable allows tuning for the expected packet loss on a subnet. If a subnet anticipates losses, the robust-count variable can be increased.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld robust-count</a> <i>number</i>
<b>Tree</b>	<a href="#">robust-count</a>
<b>Range</b>	2 to 10
<b>Default</b>	2
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ssm**

<b>Description</b>	Container to configure Source specific multicast (SSM) options.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld ssm</a>
<b>Tree</b>	<a href="#">ssm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**mappings**

<b>Description</b>	A list of source specific multicast (SSM) mappings.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld ssm mappings</a>
<b>Tree</b>	<a href="#">mappings</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-range** [start](#) *string* [end](#) *string*

<b>Description</b>	A Source Specific Multicast (SSM) mapping.
--------------------	--

This allows MLD v2 hosts to be able to join in SSM environments by translating MLD v1 reports into MLD v2 reports. The request in an MLD v1 join is sent toward the source address found by matching the multicast address.

**Context** [network-instance name](#) [string](#) [protocols](#) [mld](#) [ssm](#) [mappings](#) [group-range](#) [start](#) [string](#) [end](#) [string](#)

**Tree** [group-range](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **start** [string](#)

**Description** start of the group range.

**Context** [network-instance name](#) [string](#) [protocols](#) [mld](#) [ssm](#) [mappings](#) [group-range](#) [start](#) [string](#) [end](#) [string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **end** [string](#)

**Description** end of the group range.

**Context** [network-instance name](#) [string](#) [protocols](#) [mld](#) [ssm](#) [mappings](#) [group-range](#) [start](#) [string](#) [end](#) [string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **source** [source](#) [string](#)

**Description** Multicast source address list.

**Context** [network-instance name](#) [string](#) [protocols](#) [mld](#) [ssm](#) [mappings](#) [group-range](#) [start](#) [string](#) [end](#) [string](#) [source](#) [source](#) [string](#)

**Tree** [source](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**Min. Elements** 1

### source *string*

**Description** Multicast source address.

**Context** [network-instance name](#) *string* [protocols mld ssm mappings group-range start string end string source source string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### trace-options

**Description** Enter the trace-options context

**Context** [network-instance name](#) *string* [protocols mld trace-options](#)

**Tree** [trace-options](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### trace

**Description** Tracing parameter flags

**Context** [network-instance name](#) *string* [protocols mld trace-options trace](#)

**Tree** [trace](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface

**Description** Enable tracing interface events.

**Context** [network-instance name](#) *string* [protocols mld trace-options trace interface](#)

<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all**

<b>Description</b>	Trace for all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld trace-options trace interface all</a>
<b>Tree</b>	<a href="#">all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name reference**

<b>Description</b>	Trace for interface with this name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld trace-options trace interface name reference</a>
<b>Tree</b>	<a href="#">name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name reference</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**packet**

<b>Description</b>	Trace MLD Packet types Only one type can be enabled at a time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld trace-options trace packet</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface**

<b>Description</b>	Enable interface filter for packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld</a> <a href="#">trace-options</a> <a href="#">trace packet interface</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all**

<b>Description</b>	Trace for all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld</a> <a href="#">trace-options</a> <a href="#">trace packet interface all</a>
<b>Tree</b>	<a href="#">all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name *reference***

<b>Description</b>	Trace for interface with this name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld</a> <a href="#">trace-options</a> <a href="#">trace packet interface name <i>reference</i></a>
<b>Tree</b>	<a href="#">name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld interface interface-name <i>reference</i></a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**modifier *keyword***

<b>Description</b>	Enter the modifier context
--------------------	----------------------------

---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld trace-options trace packet modifier</a> <i>keyword</i>
<b>Tree</b>	<a href="#">modifier</a>
<b>Default</b>	egress-ingress-and-dropped
<b>Options</b>	<ul style="list-style-type: none"> <li>• dropped Enable tracing for the packets which are dropped.</li> <li>• ingress-and-dropped Enable tracing for the packets which are sent or received.</li> <li>• egress-ingress-and-dropped Enable tracing for the packets which are sent, received or dropped.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L
 <b>type</b> <i>keyword</i>	
<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld trace-options trace packet type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Enable tracing of all MLD packets</li> <li>• query Enable tracing of MLD Query packets</li> <li>• v1-report Enable tracing of MLD version 1 Report packets</li> <li>• v1-done Enable tracing of MLD version 1 Done packets</li> <li>• v2-report Enable tracing of MLD version 2 Report packets</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ospf**

<b>Description</b>	Top-level configuration and operational state for Open Shortest Path First (OSPF)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf</a>
<b>Tree</b>	<a href="#">ospf</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**instance** [name](#) *string*

<b>Description</b>	List of OSPF protocol instances associated with this network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

**name** *string*

<b>Description</b>	The name of the OSPF instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address-family** *identityref*

<b>Description</b>	The address family that this instance supports. Only valid for OSPFv3.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">address-family</a> <i>identityref</i>
<b>Tree</b>	<a href="#">address-family</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv6-unicast</a> IPv6 unicast address family</li> <li>• <a href="#">ipv4-unicast</a> IPv4 unicast address family</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Used to administratively enable or disable the OSPF instance

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **advertise-router-capability** *keyword*

**Description** Scope to advertise router-capability.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [advertise-router-capability](#) *keyword*

**Tree** [advertise-router-capability](#)

**Options**

- false
- link
- area
- as

**Configurable** True

**Platforms** Supported on all platforms

### **area** [area-id](#)

**Description** The OSPF areas within which the local system exists

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#)

**Tree** [area](#)

**Configurable** True

**Platforms** Supported on all platforms

**area-id**

<b>Description</b>	the area identifier as a dotted-quad.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active-interfaces** *number*

<b>Description</b>	The number of active interfaces in this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id active-interfaces</a> <i>number</i>
<b>Tree</b>	<a href="#">active-interfaces</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**advertise-router-capability** *boolean*

<b>Description</b>	Allow router advertisement capabilities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id advertise-router-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-router-capability</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-bdr-rtr-count**

<b>Description</b>	The total number of area border routers reachable within this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id area-bdr-rtr-count</a>
<b>Tree</b>	<a href="#">area-bdr-rtr-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**area-range ip-prefix-mask** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the area-range context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Tree</b>	<a href="#">area-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-prefix-mask** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	ip-prefix with host bits set to 0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise** *boolean*

<b>Description</b>	Advertise summarized range of addresses to other areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">advertise</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-bdr-rtr-count**

<b>Description</b>	The total number of autonomous system border routers reachable within this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id as-bdr-rtr-count</a>
<b>Tree</b>	<a href="#">as-bdr-rtr-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**blackhole-aggregate** *boolean*

<b>Description</b>	Enables the creation of a blackhole for generated aggregates
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">blackhole-aggregate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">blackhole-aggregate</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-policy** *reference*

<b>Description</b>	Apply an export policy when summarizing from this area to other areas.. Summary LSAs for prefixes matching the policy will still be in the linkstate database but are not flooded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**full-spf-runs**

<b>Description</b>	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">full-spf-runs</a>
<b>Tree</b>	<a href="#">full-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**interface** [interface-name](#) *reference*

<b>Description</b>	List of OSPF interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *reference*

<b>Description</b>	Router logical interface name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administrative state of the OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-router-capability** *boolean*

<b>Description</b>	Allow router advertisement capabilities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">advertise-router-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-router-capability</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-subnet** *boolean*

<b>Description</b>	Advertise point-to-point interfaces as subnet routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">advertise-subnet</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-subnet</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container with authentication options that apply to all peers in this peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *reference*

<b>Description</b>	Reference to a keychain. The keychain type must be ospf
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">authentication keychain</a> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bad-packets**

<b>Description</b>	Bad packets counters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets</a>
<b>Tree</b>	<a href="#">bad-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## auth-failures

<b>Description</b>	The total number of OSPF packets received with an invalid authorization key since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets auth-failures</a>
<b>Tree</b>	<a href="#">auth-failures</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-area

<b>Description</b>	The total number of OSPF packets received with an area mismatch since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-area</a>
<b>Tree</b>	<a href="#">bad-area</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-auth-type

<b>Description</b>	The total number of OSPF packets received with an invalid authorization type since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-auth-type</a>
<b>Tree</b>	<a href="#">bad-auth-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-checksum

<b>Description</b>	The count of LS-as received with bad checksums.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-checksum</a>
<b>Tree</b>	<a href="#">bad-checksum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-dead-interval

<b>Description</b>	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-dead-interval</a>
<b>Tree</b>	<a href="#">bad-dead-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-dest-address

<b>Description</b>	The total number of OSPF packets received with the incorrect IP destination address since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-dest-address</a>
<b>Tree</b>	<a href="#">bad-dest-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-hello-interval

<b>Description</b>	the value of bad-hello-intervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-hello-interval</a>
<b>Tree</b>	<a href="#">bad-hello-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-length

<b>Description</b>	The total number of OSPF packets received with a total length not equal to the length given in the packet itself since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-length</a>

<b>Tree</b>	<a href="#">bad-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-neighbors

<b>Description</b>	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-neighbors</a>
<b>Tree</b>	<a href="#">bad-neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-network

<b>Description</b>	The total number of OSPF packets received with invalid network or mask since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-network</a>
<b>Tree</b>	<a href="#">bad-network</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-options

<b>Description</b>	The total number of OSPF packets received with an option that does not match those configured for this interface or area since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-options</a>
<b>Tree</b>	<a href="#">bad-options</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-packet-type

<b>Description</b>	The total number of OSPF packets received with an invalid OSPF packet type since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-packet-type</a>
<b>Tree</b>	<a href="#">bad-packet-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-version

<b>Description</b>	The total number of OSPF packets received with bad OSPF version numbers since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-version</a>
<b>Tree</b>	<a href="#">bad-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-virtual-link

<b>Description</b>	The total number of OSPF packets received that are destined to a virtual link that does not exist since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bad-packets bad-virtual-link</a>
<b>Tree</b>	<a href="#">bad-virtual-link</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bdr-id

<b>Description</b>	the value of BDR-id indicates the router ID of the backup designated router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">bdr-id</a>
<b>Tree</b>	<a href="#">bdr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dead-interval** *number*

<b>Description</b>	Time OSPF waits without receiving Hello packets before declaring a neighbor down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">dead-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">dead-interval</a>
<b>Range</b>	2 to 65535
<b>Default</b>	40
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dr-id**

<b>Description</b>	the value of DR-id indicates the router ID of the designated router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">dr-id</a>
<b>Tree</b>	<a href="#">dr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**events**

<b>Description</b>	the value of events indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">events</a>
<b>Tree</b>	<a href="#">events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-detection**

<b>Description</b>	Options related to methods of detecting BGP session failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">failure-detection</a>

<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-bfd** *boolean*

<b>Description</b>	Enables the use of BFD for liveliness detection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">failure-detection enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-interval** *number*

<b>Description</b>	Time between OSPF Hellos of this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	1 to 65535
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-type** *keyword*

<b>Description</b>	Interface type to broadcast or point-to-point
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">interface-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">interface-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• broadcast</li> <li>• point-to-point</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-enabled-time**

<b>Description</b>	the value of last-enabled-time indicates the sys-up-time value when ospf-if-admin-stat was last set to enabled (1) to run the ospf on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">last-enabled-time</a>
<b>Tree</b>	<a href="#">last-enabled-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-event-time** *string*

<b>Description</b>	the value of last-event-time indicates the value of sys-up-time when an event was last associated with this OSPF interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">last-event-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-event-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ldp-synchronization**

<b>Description</b>	Container with configuration options and state that pertains to the operation of LDP-IGP synchronization on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**disable**

<b>Description</b>	Disable LDP-IGP synchronization procedures on this interface, even if synchronization is enabled globally
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization</a> <a href="#">disable</a>
<b>Tree</b>	<a href="#">disable</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**duration** *number*

<b>Description</b>	The length of time that the IGP interface has been in sync or out of sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**end-of-lib** *boolean*

<b>Description</b>	<p>When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.</p> <p>When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency.</p> <p>This overrides the global/instance level setting.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hold-down-timer** *number*

<b>Description</b>	<p>The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.</p> <p>This overrides the global/instance level setting.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800

<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sync-state** *keyword*

<b>Description</b>	The current state of the interface with respect to LDP-IGP sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">ldp-synchronization sync-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">sync-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• wait-for-LDP-adjacency The IGP is waiting for the LDP adjacency to come up. The interface is being advertised with max-metric.</li> <li>• hold-down-timer-active The LDP adjacency has come up and the IGP has started the hold-down-timer, waiting for either end-of-lib or hold-down-timer expiry. The interface is being advertised with max-metric.</li> <li>• end-of-lib-received The IGP received end-of-lib and has switched to normal operation. The interface is being advertised with a normal metric</li> <li>• hold-down-timer-expired The IGP did not receive end-of-lib (or was configured to ignore it) but hold-down-timer has expired and normal metric is restored.</li> <li>• manual-exit A tools command was performed to exit ldp-sync. Normal operation is resumed, max-metric is removed.</li> <li>• disabled ldp-sync is not applicable on this interface</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **link-lsa-cksum-sum** *string*

<b>Description</b>	the value of link-lsa-cksum-sum indicates the 32-bit unsigned sum of the link-scope link-state advertisements' LS checksums contained in this link's link-state database. the sum can be used to determine if there has been a change in a router's link-state database, and to compare the link state database of two routers.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">link-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">link-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## link-lsa-count

<b>Description</b>	the value of link-lsa-count indicates the total number of link-scope link-state advertisements in this link's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">link-lsa-count</a>
<b>Tree</b>	<a href="#">link-lsa-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## local-ip-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	the value of local-ip-address indicates the IP address of this OSPF interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">local-ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">local-ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## lsa-filter-out *keyword*

<b>Description</b>	LSA flooding reduction
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">lsa-filter-out keyword</a>
<b>Tree</b>	<a href="#">lsa-filter-out</a>
<b>Default</b>	none
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• all</li> <li>• except-own-rtrlsa</li> <li>• except-own-rtrlsa-and-defaults</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### lsa-totals

<b>Description</b>	The number of LSAs of each type in this interface's database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-link-lsa

<b>Description</b>	The number of extended link LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">lsa-totals e-link-lsa</a>
<b>Tree</b>	<a href="#">e-link-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### link-lsa

<b>Description</b>	The number of link LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">lsa-totals link-lsa</a>
<b>Tree</b>	<a href="#">link-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### link-opaque-lsa

<b>Description</b>	The number of link opaque LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">lsa-totals link-opaque-lsa</a>
<b>Tree</b>	<a href="#">link-opaque-lsa</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## router-info-lsa

**Description** The number of link scoped router information LSAs in this interface's AS database.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *reference* [lsa-totals router-info-lsa](#)

**Tree** [router-info-lsa](#)

**Configurable** False

**Platforms** Supported on all platforms

## metric *number*

**Description** Explicit route cost metric that is applied to the interface

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *reference* [metric number](#)

**Tree** [metric](#)

**Configurable** True

**Platforms** Supported on all platforms

## mtu *number*

**Description** MTU for the OSPF to use on the interface. For OSPFv3 this must be minimum 1280. If the MTU defined here exceeds the actual IP-MTU of the interface, then the IP-MTU of the interface is used.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *reference* [mtu number](#)

**Tree** [mtu](#)

**Range** 512 to 9486

**Configurable** True

**Platforms** Supported on all platforms

## neighbor [router-id](#)

**Description** List of neighbors associated with this OSPF interface

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *reference* [neighbor router-id](#)

<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## router-id

<b>Description</b>	The router-id advertised by the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## address (*ipv4-address* | *ipv6-address-with-zone*)

<b>Description</b>	the value of address indicates the IP address of the neighbor associated with the local link.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> )
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## adjacency-state *identityref*

<b>Description</b>	Current OSPF Neighbor state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id adjacency-state identityref</a>
<b>Tree</b>	<a href="#">adjacency-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>down The initial state of a neighbor, indicating that no recent information has been received from the neighbor.</li> <li>attempt Utilised for neighbors that are attached to NBMA networks, it indicates that no information has been recently received from the neighbor but that Hello packets should be directly sent to that neighbor.</li> <li>init</li> </ul>

Indicates that a Hello packet has been received from the neighbor but bi-directional communication has not yet been established. That is to say that the local Router ID does not appear in the list of neighbors in the remote system's Hello packet.

- two-way

Communication between the local and remote system is bi-directional such that the local system's Router ID is listed in the received remote system's Hello packet.

- exstart

An adjacency with the remote system is being formed. The local system is currently transmitting empty database description packets in order to establish the primary/standby relationship for the adjacency.

- exchange

The local and remote systems are currently exchanging database description packets in order to determine which elements of their local LSDBs are out of date.

- loading

The local system is sending Link State Request packets to the remote system in order to receive the more recently LSAs that were discovered during the Exchange phase of the procedure establishing the adjacency.

- full

The neighboring routers are fully adjacent such that both LSDBs are synchronized. The adjacency will appear in Router and Network LSAs

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## backup-designated-router

<b>Description</b>	Advertised backup designated router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id backup-designated-router</a>
<b>Tree</b>	<a href="#">backup-designated-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## dead-time *number*

<b>Description</b>	The remaining number of seconds remaining in the neighbor's dead time interval
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">dead-time</a> <i>number</i>
<b>Tree</b>	<a href="#">dead-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## designated-router

<b>Description</b>	Advertised designated router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">designated-router</a>
<b>Tree</b>	<a href="#">designated-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-established-time *number*

<b>Description</b>	Time then OSPF neighbor was last established
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">last-established-time</a> <i>number</i>
<b>Tree</b>	<a href="#">last-established-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-event-time

<b>Description</b>	the value of last-event-time indicates the value of sys-up-time when the last event occurred that affected the adjacency to the neighbour.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">last-event-time</a>
<b>Tree</b>	<a href="#">last-event-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-restart-time**

<b>Description</b>	the value of last-restart-time indicates the last time the neighbor attempted restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">last-restart-time</a>
<b>Tree</b>	<a href="#">last-restart-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**optional-capabilities**

<b>Description</b>	Advertised Optional Capabilities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">optional-capabilities</a>
<b>Tree</b>	<a href="#">optional-capabilities</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**priority** *number*

<b>Description</b>	Router priority advertised by neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">priority</a> <i>number</i>
<b>Tree</b>	<a href="#">priority</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**restart-helper-age** *number*

<b>Description</b>	the value of restart-helper-age indicates the remaining time in the current OSPF graceful restart interval, if the router is acting as a restart helper for the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">restart-helper-age</a> <i>number</i>
<b>Tree</b>	<a href="#">restart-helper-age</a>
<b>Range</b>	0 to 1800
<b>Units</b>	seconds

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### restart-helper-exit-rc *keyword*

<b>Description</b>	the value of restart-helper-exit-rc indicates the outcome of the last attempt at acting as a graceful restart helper for the neighbor. none no restart has yet been attempted. in-progress A restart attempt is currently underway. completed the last restart completed successfully. timed-out the last restart timed out. topology-changed the last restart was aborted due to a topology change.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id restart-helper-exit-rc</a> <i>keyword</i>
<b>Tree</b>	<a href="#">restart-helper-exit-rc</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• in-progress</li> <li>• completed</li> <li>• timed-out</li> <li>• topology-changed</li> <li>• bfd-down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### restart-helper-status *keyword*

<b>Description</b>	the value of restart-helper-status indicates whether the router is acting as a graceful restart helper for the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id restart-helper-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">restart-helper-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-helping</li> <li>• helping</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**restart-reason** (*number* | *keyword*)

<b>Description</b>	the value of restart-reason indicates the OSPF neighbor's graceful restart reason.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">restart-reason</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">restart-reason</a>
<b>Range</b>	4 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• sw-restart</li> <li>• sw-reload</li> <li>• switch-red</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**retransmission-queue-length** *number*

<b>Description</b>	Enter the retransmission-queue-length context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">retransmission-queue-length</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmission-queue-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**state-changes** *number*

<b>Description</b>	total numer of OSPF state changes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">state-changes</a> <i>number</i>
<b>Tree</b>	<a href="#">state-changes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-mtu

<b>Description</b>	the value of bad-MT-us indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics bad-mtu</a>
<b>Tree</b>	<a href="#">bad-mtu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-nbr-states

<b>Description</b>	the value of bad-nbr-states indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics bad-nbr-states</a>
<b>Tree</b>	<a href="#">bad-nbr-states</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-packets

<b>Description</b>	the value of bad-packets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics bad-packets</a>

<b>Tree</b>	<a href="#">bad-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-seq-nums

<b>Description</b>	the value of bad-seq-nums indicates the total number of times when a database description packet was received with a sequence number mismatch since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics bad-seq-nums</a>
<b>Tree</b>	<a href="#">bad-seq-nums</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## duplicates

<b>Description</b>	the value of duplicates indicates the total number of times when a duplicate database description packet was received during the exchange state since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics duplicates</a>
<b>Tree</b>	<a href="#">duplicates</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## events

<b>Description</b>	the value of events indicates the number of times this neighbor relationship has changed state, or an error has occurred.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics events</a>
<b>Tree</b>	<a href="#">events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## Isa-install-failed

<b>Description</b>	the value of Isa-install-failed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">statistics Isa-install-failed</a>
<b>Tree</b>	<a href="#">Isa-install-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## Isa-not-in-Isdbs

<b>Description</b>	the value of Isa-not-in-Isdbs indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">statistics Isa-not-in-Isdbs</a>
<b>Tree</b>	<a href="#">Isa-not-in-Isdbs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## num-restarts

<b>Description</b>	the value of num-restarts indicates the number of times the neighbor has attempted restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id</a> <a href="#">statistics num-restarts</a>
<b>Tree</b>	<a href="#">num-restarts</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## option-mismatches

<b>Description</b>	the value of option-mismatches indicates the total number of times when a LS update was received with an option mismatch since admin-state was last set to 'enabled'.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id statistics option-mismatches</a>
<b>Tree</b>	<a href="#">option-mismatches</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-time** *number*

<b>Description</b>	the value of up-time indicates the uninterrupted time, in hundredths of seconds, the adjacency to this neighbour has been up.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor router-id up-time</a> <i>number</i>
<b>Tree</b>	<a href="#">up-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-count**

<b>Description</b>	The total number of OSPF neighbors adjacent on this interface, in a state of INIT or greater, since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">neighbor-count</a>
<b>Tree</b>	<a href="#">neighbor-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	the OSPF interface state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• down</li> <li>• loopback</li> <li>• waiting</li> </ul>

- point-to-point
- designated-router
- backup-designated-router
- other-designated-router

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## packets

<b>Description</b>	Packet counters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">packets</a>
<b>Tree</b>	<a href="#">packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## discarded

<b>Description</b>	The total number of OSPF packets discarded since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">packets discarded</a>
<b>Tree</b>	<a href="#">discarded</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## retransmits

<b>Description</b>	The total number of OSPF retransmits since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">packets retransmits</a>
<b>Tree</b>	<a href="#">retransmits</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-db-description

<b>Description</b>	The total number of OSPF database description packets received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-db-description</a>
<b>Tree</b>	<a href="#">rx-db-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-hello

<b>Description</b>	The total number of OSPF hello packets received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-hello</a>
<b>Tree</b>	<a href="#">rx-hello</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-ack

<b>Description</b>	The total number of link state acknowledgements received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-ls-ack</a>
<b>Tree</b>	<a href="#">rx-ls-ack</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-request

<b>Description</b>	The total number of link state requests (LS-rs) received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-ls-request</a>
<b>Tree</b>	<a href="#">rx-ls-request</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-update

<b>Description</b>	The total number of link state updates (LS-us) received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-ls-update</a>
<b>Tree</b>	<a href="#">rx-ls-update</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-total

<b>Description</b>	The total number of OSPF packets received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets rx-total</a>
<b>Tree</b>	<a href="#">rx-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-db-description

<b>Description</b>	The total number of OSPF database description packets transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets tx-db-description</a>
<b>Tree</b>	<a href="#">tx-db-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-hello

<b>Description</b>	The total number of OSPF hello packets transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">packets tx-hello</a>
<b>Tree</b>	<a href="#">tx-hello</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### tx-ls-ack

**Description** The total number of OSPF link state acknowledgements transmitted since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *reference* [packets tx-ls-ack](#)

**Tree** [tx-ls-ack](#)

**Configurable** False

**Platforms** Supported on all platforms

### tx-ls-request

**Description** The total number of OSPF link state requests (LS-rs) transmitted since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *reference* [packets tx-ls-request](#)

**Tree** [tx-ls-request](#)

**Configurable** False

**Platforms** Supported on all platforms

### tx-ls-update

**Description** The total number of OSPF link state updates (LS-us) transmitted since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *reference* [packets tx-ls-update](#)

**Tree** [tx-ls-update](#)

**Configurable** False

**Platforms** Supported on all platforms

### tx-total

**Description** The total number of OSPF packets transmitted since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *reference* [packets tx-total](#)

<b>Tree</b>	<a href="#">tx-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**passive** *boolean*

<b>Description</b>	Allow interface to be advertised as an OSPF interface without running the OSPF protocol
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">passive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">passive</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**priority** *number*

<b>Description</b>	Priority of the interface to apply in the designated router election on the subnet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">priority</a> <i>number</i>
<b>Tree</b>	<a href="#">priority</a>
<b>Range</b>	0 to 255
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**retransmit-interval** *number*

<b>Description</b>	Time before OSPF retransmits an unacknowledged LSA to a neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">retransmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmit-interval</a>
<b>Range</b>	1 to 1800
<b>Default</b>	5
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Enter the trace-options context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace**

<b>Description</b>	Tracing parameter flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**adjacencies**

<b>Description</b>	Enable tracing all BGP events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">adjacencies</a>
<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interfaces**

<b>Description</b>	Enable tracing all interface events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**packet**

<b>Description</b>	Trace OSPF Packet types Only one type can be enabled at a time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**detail**

<b>Description</b>	To enable detailed tracing. Includes both received and sent packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a> <a href="#">detail</a>
<b>Tree</b>	<a href="#">detail</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**modifier** *keyword*

<b>Description</b>	Enter the modifier context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>reference</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a> <a href="#">modifier</a> <i>keyword</i>
<b>Tree</b>	<a href="#">modifier</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ingress To enable tracing for the packets which are received.</li> <li>• egress To enable tracing for the sent packets.</li> <li>• in-and-egress To enable tracing for both sent and received packets</li> <li>• drop To enable tracing for the sent packets.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">trace-options trace packet type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Enable tracing of all OSPF packets</li> <li>• hello Enable tracing of OSPF Hello packets</li> <li>• dbdescr Enable tracing of OSPF database Descriptor packets</li> <li>• ls-request Enable tracing of OSPF link-state request packets</li> <li>• ls-update Enable tracing of OSPF link-state update packets</li> <li>• ls-ack Enable tracing of OSPF link-state Ack packets</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**transit-delay** *number*

<b>Description</b>	Time required to transmit an LSA on the interface, virtual link, or sham link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">transit-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">transit-delay</a>
<b>Range</b>	1 to 1800
<b>Default</b>	1
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	the value of type indicates the operational OSPF interface type.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>reference</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• broadcast</li> <li>• point-to-point</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-spf-run-time

<b>Description</b>	The sys-up-time when intra-area SPF was last run on this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id last-spf-run-time</a>
<b>Tree</b>	<a href="#">last-spf-run-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### lsa-filter-totals

<b>Description</b>	The number of LSAs not sent due to area policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-filter-totals</a>
<b>Tree</b>	<a href="#">lsa-filter-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### export-filtered

<b>Description</b>	The number of LSAs not sent due to area export policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-filter-totals export-filtered</a>
<b>Tree</b>	<a href="#">export-filtered</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## import-filtered

<b>Description</b>	The number of LSAs not sent due to area import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-filter-totals</a> <a href="#">import-filtered</a>
<b>Tree</b>	<a href="#">import-filtered</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## lsa-totals

<b>Description</b>	The number of LSAs of each type in this area's database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## area-opaque-lsa

<b>Description</b>	The number of NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">area-opaque-lsa</a>
<b>Tree</b>	<a href="#">area-opaque-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## asbr-summary-lsa

<b>Description</b>	The number of ASBR summary LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">asbr-summary-lsa</a>
<b>Tree</b>	<a href="#">asbr-summary-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-inter-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 E-inter-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-inter-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">e-inter-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-inter-area-router-lsa

<b>Description</b>	The number of OSPFv3 E-inter-area-router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-inter-area-router-lsa</a>
<b>Tree</b>	<a href="#">e-inter-area-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-intra-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 E-intra-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-intra-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">e-intra-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-network-lsa

<b>Description</b>	The number of OSPFv3 E-network LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-network-lsa</a>
<b>Tree</b>	<a href="#">e-network-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## e-nssa-lsa

<b>Description</b>	The number of OSPFv3 E-NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-nssa-lsa</a>
<b>Tree</b>	<a href="#">e-nssa-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## e-router-lsa

<b>Description</b>	The number of OSPFv3 E-router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-router-lsa</a>
<b>Tree</b>	<a href="#">e-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inter-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 inter-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals inter-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">inter-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inter-area-router-lsa

<b>Description</b>	The number of OSPFv3 inter-area-router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals inter-area-router-lsa</a>
<b>Tree</b>	<a href="#">inter-area-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## intra-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 intra-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-totals intra-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">intra-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## network-lsa

<b>Description</b>	The number of network LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-totals network-lsa</a>
<b>Tree</b>	<a href="#">network-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## network-summary-lsa

<b>Description</b>	The number of network summary LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-totals network-summary-lsa</a>
<b>Tree</b>	<a href="#">network-summary-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## nssa-lsa

<b>Description</b>	The number of NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id lsa-totals nssa-lsa</a>
<b>Tree</b>	<a href="#">nssa-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-info-lsa**

<b>Description</b>	The number of OSPFv3 router-info LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals router-info-lsa</a>
<b>Tree</b>	<a href="#">router-info-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-lsa**

<b>Description</b>	The number of router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals router-lsa</a>
<b>Tree</b>	<a href="#">router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	The number of area scope LSAs within this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-lsa-cksum-sum** *string*

<b>Description</b>	The 32-bit unsigned sum of the area scope LSA checksums contained in this area's link-state database. The sum can be used to determine if there has been a change in a router's link-state database, and to compare the link-state database of two routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals total-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">total-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**unknown-lsa**

<b>Description</b>	The number of unknown LSA advertisements in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals unknown-lsa</a>
<b>Tree</b>	<a href="#">unknown-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nssa**

<b>Description</b>	This command creates the context to configure the associated OSPF or OSPF3 area as Not So Stubby Area (NSSA).  NSSAs are similar to stub areas in that no external routes are imported into the area from other OSPF areas. The major difference between a stub area and an NSSA is an NSSA has the capability to flood external routes that it learns throughout its area and via an ABR to the entire OSPF or OSPF3 domain.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa</a>
<b>Tree</b>	<a href="#">nssa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-range** [ip-prefix-mask](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the area-range context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa area-range ip-prefix-mask</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">area-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-prefix-mask** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	ip-prefix with host bits set to 0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa area-range ip-prefix-mask</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise** *boolean*

<b>Description</b>	Advertise summarized range of addresses to other areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">advertise</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**originate-default-route**

<b>Description</b>	Enter the originate-default-route context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route</a>
<b>Tree</b>	<a href="#">originate-default-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**adjacency-check** *boolean*

<b>Description</b>	Default route to remove if there is no adjacency
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route adjacency-check</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adjacency-check</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type-nssa** *boolean*

<b>Description</b>	Generate a default route using NSSA-LSA type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route type-nssa</a> <i>boolean</i>

<b>Tree</b>	<a href="#">type-nssa</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **redistribute-external** *boolean*

<b>Description</b>	Enables the redistribution of external routes into the Not So Stubby Area (NSSA) or an NSSA area border router (ABR) that is exporting the routes into non-NSSA areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa redistribute-external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">redistribute-external</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **summaries** *boolean*

<b>Description</b>	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa summaries</a> <i>boolean</i>
<b>Tree</b>	<a href="#">summaries</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **stub**

<b>Description</b>	Enable the stub context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub</a>
<b>Tree</b>	<a href="#">stub</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**default-metric** *number*

<b>Description</b>	Defines the default OSPF metric for associated stub area
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	1 to 65535
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**summaries** *boolean*

<b>Description</b>	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub summaries</a> <i>boolean</i>
<b>Tree</b>	<a href="#">summaries</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-border-router** *boolean*

<b>Description</b>	This indicates whether this router is an area border router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area-border-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">area-border-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-border-router** *boolean*

<b>Description</b>	This indicates whether this router is an AS border router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">as-border-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">as-border-router</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## asbr

**Description** Configure the router as an ASBR (Autonomous System Boundary Router)

**Context** [network-instance name string protocols ospf instance name string asbr](#)

**Tree** [asbr](#)

**Configurable** True

**Platforms** Supported on all platforms

## trace-path (*number | keyword*)

**Description** Domain identity

**Context** [network-instance name string protocols ospf instance name string asbr trace-path \(number | keyword\)](#)

**Tree** [trace-path](#)

**Range** 0 to 31

**Default** none

**Options**

- none

**Configurable** True

**Platforms** Supported on all platforms

## backbone-router *boolean*

**Description** This indicates whether or not this router is configured as an OSPF back bone router.

**Context** [network-instance name string protocols ospf instance name string backbone-router boolean](#)

**Tree** [backbone-router](#)

**Configurable** False

**Platforms** Supported on all platforms

## export-limit

**Description** Enter the export-limit context

**Context** [network-instance name string protocols ospf instance name string export-limit](#)

<b>Tree</b>	<a href="#">export-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **log-percent** *number*

<b>Description</b>	Export limit at which warning a log message and SNMP notification are sent
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-limit log-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">log-percent</a>
<b>Range</b>	1 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **number** *number*

<b>Description</b>	Maximum number of routes or prefixes to be exported into IGP instance from route table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-limit number</a> <i>number</i>
<b>Tree</b>	<a href="#">number</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy to redistribute routes into OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-policy reference</a>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**extern-lsa-cksum-sum** *string*

<b>Description</b>	the value of extern-lsa-cksum-sum indicates the 32-bit unsigned sum of the LS checksums of the external link-state advertisements contained in the link-state database. This sum can be used to determine if there has been a change in a router's link state database, and to compare the link-state database of two routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">extern-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">extern-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**extern-lsa-count**

<b>Description</b>	the value of extern-lsa-count indicates the number of external LS-as (LS type 0x4005) in the link-state database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">extern-lsa-count</a>
<b>Tree</b>	<a href="#">extern-lsa-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**external-db-overflow**

<b>Description</b>	Enable the external-db-overflow context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow</a>
<b>Tree</b>	<a href="#">external-db-overflow</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interval** *number*

<b>Description</b>	Enter the interval context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow interval</a> <i>number</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	0 to 2147483647

<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**limit number**

<b>Description</b>	Enter the limit context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow limit number</a>
<b>Tree</b>	<a href="#">limit</a>
<b>Range</b>	0 to 2147483647
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**external-preference number**

<b>Description</b>	Configure the route preference associated with OSPF external routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-preference number</a>
<b>Tree</b>	<a href="#">external-preference</a>
<b>Default</b>	150
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**graceful-restart**

<b>Description</b>	Container for options related to OSPF graceful restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**helper-mode** *boolean*

<b>Description</b>	Enable or disable the OSPF graceful restart helper function. When this leaf is set, the local system supports retaining forwarding information during a neighbor router's restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart helper-mode</a> <i>boolean</i>
<b>Tree</b>	<a href="#">helper-mode</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**strict-lsa-checking** *boolean*

<b>Description</b>	Enter the strict-lsa-checking context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart strict-lsa-checking</a> <i>boolean</i>
<b>Tree</b>	<a href="#">strict-lsa-checking</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**instance-id** *number*

<b>Description</b>	The OSPF multi instance identity as defined in RFC6549 or RFC5838. Supported values are: For OSPFv2 it is between 0 and 31, default is 0. For OSPFv3 address-family ipv6-unicast it is between 0 and 31, default is 0. For OSPFv3 address-family ipv4-unicast it is between 64 and 95, default is 64.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-disabled-reason** *string*

<b>Description</b>	Reason why the disabled state was entered the last time.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-disabled-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">last-disabled-reason</a>
<b>String Length</b>	0 to 20
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-enabled-time** *string*

<b>Description</b>	the value of last-enabled-time indicates the value of sys-up-time when admin-state was last set to 'enabled'. when admin-state is set to 'disabled', the OSPF counters are stopped when admin-state is reset to 'enabled', the counters are reset to zero.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-enabled-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-enabled-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overflow-entered-time** *string*

<b>Description</b>	The value of last-ovrflw-entered-time indicates the value of sys-up-time the last time we entered overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overflow-entered-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overflow-entered-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overflow-exit-time** *string*

<b>Description</b>	the value of last-overflow-exit-time indicates the value of sys-up-time the last time we exited overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overflow-exit-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overflow-exit-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overload-enter-code** *keyword*

<b>Description</b>	the value of last-overload-enter-code indicates the condition which caused OSPF to get into overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-enter-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-overload-enter-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• spf-failed</li> <li>• boot-overload</li> <li>• manual-overload</li> <li>• sfm-overload</li> <li>• fib-add-fail</li> <li>• rtm-add-fail</li> <li>• rtr-adv-lsa-limit</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overload-entered-time** *string*

<b>Description</b>	the value of last-overload-entrd-time indicates the time at which the system last went into overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-entered-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overload-entered-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-overload-exit-code** *keyword*

<b>Description</b>	the value of last-overload-exit-code indicates the reason why OSPF came out of overload state the last time, since reset.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-exit-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-overload-exit-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• bgp-sig-recv</li> <li>• timer-expired</li> <li>• manual-exit</li> <li>• sfm-overload-done</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-overload-exit-time** *string*

<b>Description</b>	the value of last-overload-exit-time indicates the time at which the system last came out of overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-exit-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overload-exit-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ldp-synchronization**

<b>Description</b>	Enable LDP-IGP synchronization procedures on all P2P interfaces and all LAN interfaces with a single adjacency, except on interfaces where the functionality is explicitly disabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**end-of-lib** *boolean*

<b>Description</b>	When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.  When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hold-down-timer** *number*

<b>Description</b>	The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**lsa-totals**

<b>Description</b>	The number of LSAs of each type in this instance's AS database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### as-external-lsa

<b>Description</b>	The number of AS External LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals as-external-lsa</a>
<b>Tree</b>	<a href="#">as-external-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### as-opaque-lsa

<b>Description</b>	The number of AS opaque LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals as-opaque-lsa</a>
<b>Tree</b>	<a href="#">as-opaque-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-as-external-lsa

<b>Description</b>	The number of extended AS External LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals e-as-external-lsa</a>
<b>Tree</b>	<a href="#">e-as-external-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### router-info-lsa

<b>Description</b>	The number of AS scoped router information LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals router-info-lsa</a>
<b>Tree</b>	<a href="#">router-info-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-ecmp-paths** *number*

<b>Description</b>	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">max-ecmp-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**new-lsas-originated**

<b>Description</b>	The number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">new-lsas-originated</a>
<b>Tree</b>	<a href="#">new-lsas-originated</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**new-lsas-received**

<b>Description</b>	The number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">new-lsas-received</a>
<b>Tree</b>	<a href="#">new-lsas-received</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**opaque-lsa-support** *boolean*

<b>Description</b>	the value of opaque-lsa-support indicates the router's support for opaque LSA types. this object is valid only when version is 'version2'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">opaque-lsa-support</a> <i>boolean</i>

<b>Tree</b>	<a href="#">opaque-lsa-support</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Used to report operational state of the OSPF instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overflow** *boolean*

<b>Description</b>	The value of in-overflow-state indicates the current overflow state (true/false). This overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overflow boolean</a>
<b>Tree</b>	<a href="#">overflow</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload**

<b>Description</b>	Enter the overload context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Enter the active context
--------------------	--------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-ext-1** *boolean*

<b>Description</b>	Enter the overload-include-ext-1 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-ext-1</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-ext-1</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-ext-2** *boolean*

<b>Description</b>	Enter the overload-include-ext-2 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-ext-2</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-ext-2</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-stub** *boolean*

<b>Description</b>	Enter the overload-include-stub context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-stub</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-stub</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-on-boot**

<b>Description</b>	Enable the overload-on-boot context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-on-boot</a>
<b>Tree</b>	<a href="#">overload-on-boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Enter the timeout context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-on-boot timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	60 to 1800
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rtr-adv-lsa-limit**

<b>Description</b>	Enter the rtr-adv-lsa-limit context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload rtr-adv-lsa-limit</a>
<b>Tree</b>	<a href="#">rtr-adv-lsa-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**log-only** *boolean*

<b>Description</b>	Enter the log-only context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload rtr-adv-lsa-limit log-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">log-only</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **max-lsa-count** *number*

**Description** Enter the max-lsa-count context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload rtr-adv-lsa-limit max-lsa-count](#) *number*

**Tree** [max-lsa-count](#)

**Range** 1 to 4294967295

**Configurable** True

**Platforms** Supported on all platforms

### **overload-timeout** *number*

**Description** Enter the overload-timeout context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload rtr-adv-lsa-limit overload-timeout](#) *number*

**Tree** [overload-timeout](#)

**Range** 1 to 1800

**Configurable** True

**Platforms** Supported on all platforms

### **warning-threshold** *number*

**Description** Enter the warning-threshold context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload rtr-adv-lsa-limit warning-threshold](#) *number*

**Tree** [warning-threshold](#)

**Range** 0 to 100

**Default** 0

**Configurable** True

**Platforms** Supported on all platforms

**overload-rem-interval** *number*

<b>Description</b>	the value of overload-rem-interval indicates the time for which the system will be in overload state if OSPF is in overload state. the value of 0 implies that the system is indefinitely in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload-rem-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">overload-rem-interval</a>
<b>Range</b>	0 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload-state** *keyword*

<b>Description</b>	the value of overload-oper-state indicates whether or not the OSPF application is presently in overload state or not.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">overload-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• overload</li> <li>• no-overload</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ovld-lsa-limit-rem-interval** *number*

<b>Description</b>	the value of ovld-lsa-limit-rem-interval indicates the remaining time in seconds for which the system will be in overload state due to advertising router LSA limit exceeded. the value of 0 implies that the system is either not in overload or indefinitely in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ovld-lsa-limit-rem-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">ovld-lsa-limit-rem-interval</a>
<b>Range</b>	0 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**preference *number***

<b>Description</b>	Sets the route preference for OSPF sourced routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">preference number</a>
<b>Tree</b>	<a href="#">preference</a>
<b>Range</b>	1 to 255
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reference-bandwidth *number***

<b>Description</b>	<p>Configures the reference bandwidth that provides the basis for interface metrics based on link Bandwidth</p> <p>If the reference bandwidth is defined, then the cost is calculated using the following formula: <math>\text{cost} = \text{reference-bandwidth} / \text{bandwidth}</math></p> <p>When a large reference-bandwidth value is configured, a metric calculation may result in a value higher than the supported protocol cost value. If this occurs, OSPF automatically reverts to the maximum configurable cost metric.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">reference-bandwidth number</a>
<b>Tree</b>	<a href="#">reference-bandwidth</a>
<b>Range</b>	1 to 8000000000
<b>Default</b>	400000000
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**router-id**

<b>Description</b>	Enter the router-id context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">router-id</a>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**routes-submitted**

<b>Description</b>	the value of routes-submitted indicates the number of routes submitted to the route table manager (RTM) by this instance of OSPF.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">routes-submitted</a>
<b>Tree</b>	<a href="#">routes-submitted</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spf**

<b>Description</b>	SPF related information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf</a>
<b>Tree</b>	<a href="#">spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**avg-spf-run-interval** *number*

<b>Description</b>	the value of avg-spf-run-interval indicates the average time, in hundredths of seconds, of all the total SPF calculations performed by this OSPF router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf avg-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">avg-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ext-spf-runs**

<b>Description</b>	The total number of times that only the external portion of the SPF has been run since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf ext-spf-runs</a>
<b>Tree</b>	<a href="#">ext-spf-runs</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### full-spf-runs

<b>Description</b>	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf full-spf-runs</a>
<b>Tree</b>	<a href="#">full-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### incremental-ext-spf-runs

<b>Description</b>	The total number of incremental SPF runs triggered by new or updated external LS-as.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf incremental-ext-spf-runs</a>
<b>Tree</b>	<a href="#">incremental-ext-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### incremental-inter-spf-runs

<b>Description</b>	The total number of incremental SPF runs triggered by new or updated inter-area prefix or inter-area router LS-as.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf incremental-inter-spf-runs</a>
<b>Tree</b>	<a href="#">incremental-inter-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-ext-spf

<b>Description</b>	Information about the last external SPF run
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf</a>

<b>Tree</b>	<a href="#">last-ext-spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **interval** *number*

<b>Description</b>	the value of ext-spf-run-interval indicates the time, in hundredths of seconds, used to perform the most recent total external (not incremental) SPF calculation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf interval</a> <i>number</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **run-time** *string*

<b>Description</b>	the value of last-ext-spf-run-time indicates the value of sys-up-time when the external OSPF dijkstra (SPF) was last run.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf run-time</a> <i>string</i>
<b>Tree</b>	<a href="#">run-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-full-spf**

<b>Description</b>	Information about the last full SPF run
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf</a>
<b>Tree</b>	<a href="#">last-full-spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**extern-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the external LSA calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf extern-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">extern-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**inter-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the inter-area SPF calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf inter-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">inter-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**intra-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the intra-area SPF calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf intra-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">intra-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rtm-update-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the RTM updates.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf rtm-update-time</a> <i>number</i>
<b>Tree</b>	<a href="#">rtm-update-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**run-time** *string*

<b>Description</b>	the value of last-full-spf-run-time indicates the time at which the system last performed a full dijkstra (SPF) run.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf run-time</a> <i>string</i>
<b>Tree</b>	<a href="#">run-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the last SPF run completely.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf total-time</a> <i>number</i>
<b>Tree</b>	<a href="#">total-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-spf-run-interval** *number*

<b>Description</b>	the value of max-spf-run-interval indicates the maximum time, in hundredths of seconds, used to perform a total SPF calculation.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf max-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">max-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **min-spf-run-interval** *number*

<b>Description</b>	the value of min-spf-run-interval indicates the minimum time, in hundredths of seconds, used to perform a total SPF calculation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf min-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">min-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **spf-attempts-failed**

<b>Description</b>	The number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf spf-attempts-failed</a>
<b>Tree</b>	<a href="#">spf-attempts-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **timers**

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**incremental-spf-wait** *number*

<b>Description</b>	Delay time before an incremental SPF calculation is started
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers incremental-spf-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">incremental-spf-wait</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isa-accumulate** *number*

<b>Description</b>	Delay time for accumulating multiple LSAs before advertising them to neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers isa-accumulate</a> <i>number</i>
<b>Tree</b>	<a href="#">isa-accumulate</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isa-arrival** *number*

<b>Description</b>	Minimum delay between receipt of the same LSAs arriving from neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers isa-arrival</a> <i>number</i>
<b>Tree</b>	<a href="#">isa-arrival</a>
<b>Range</b>	0 to 600000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isa-generate**

<b>Description</b>	Enter the isa-generate context
--------------------	--------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate</a>
<b>Tree</b>	<a href="#">lsa-generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsa-initial-wait** *number*

<b>Description</b>	First waiting period between link state advertisements LSA originates
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate lsa-initial-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">lsa-initial-wait</a>
<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsa-second-wait** *number*

<b>Description</b>	Hold time between the first and second LSA generation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate lsa-second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">lsa-second-wait</a>
<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-lsa-wait** *number*

<b>Description</b>	Maximum time between two consecutive occurrences of an LSA being generated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate max-lsa-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">max-lsa-wait</a>

<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### redistribute-delay *number*

<b>Description</b>	Hold down timer for external routes that are redistributed in OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers redistribute-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">redistribute-delay</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### spf-wait

<b>Description</b>	Enter the spf-wait context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait</a>
<b>Tree</b>	<a href="#">spf-wait</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### spf-initial-wait *number*

<b>Description</b>	Initial SPF calculation delay after a topology change
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait spf-initial-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-initial-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **spf-max-wait** *number*

**Description** Maximum interval between two consecutive SPF calculations

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [timers spf-wait spf-max-wait](#) *number*

**Tree** [spf-max-wait](#)

**Range** 10 to 120000

**Default** 10000

**Units** milliseconds

**Configurable** True

**Platforms** Supported on all platforms

### **spf-second-wait** *number*

**Description** Hold time between the first and second SPF calculation

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [timers spf-wait spf-second-wait](#) *number*

**Tree** [spf-second-wait](#)

**Range** 10 to 100000

**Default** 1000

**Units** milliseconds

**Configurable** True

**Platforms** Supported on all platforms

### **total-exported-routes**

**Description** the value of total-exported-routes indicates the total number of routes exported into OSPF from the route table manager when an export policy is configured. value of total-exported-routes would be 0 when no export policy is configured.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [total-exported-routes](#)

**Tree** [total-exported-routes](#)

**Configurable** False

**Platforms** Supported on all platforms

## trace-options

<b>Description</b>	Enter the trace-options context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## trace

<b>Description</b>	Tracing parameter flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## adjacencies

<b>Description</b>	Enable tracing all BGP events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace adjacencies</a>
<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## graceful-restart

<b>Description</b>	Enable tracing all graceful-restart events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interfaces**

<b>Description</b>	Enable tracing all interface events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsdb**

<b>Description</b>	Trace OSPF LSDB events Only one type can be enabled at a time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace lsdb</a>
<b>Tree</b>	<a href="#">lsdb</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**link-state-id** *string*

<b>Description</b>	Enter the link-state-id context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace lsdb link-state-id</a> <i>string</i>
<b>Tree</b>	<a href="#">link-state-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**router-id** *string*

<b>Description</b>	Enter the router-id context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace lsdb router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace lsdb type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Enable tracing of all LSDB events</li> <li>• router Enable tracing of LSDB router LSA events</li> <li>• network Enable tracing of OSPF LSDB network LSA events</li> <li>• summary Enable tracing of OSPF LSDB summary LSA events</li> <li>• nssa Enable tracing of OSPF LSDB NSSA LSA events</li> <li>• external Enable tracing of OSPF LSDB events for External LSA</li> <li>• opaque Enable tracing of OSPF LSDB events involving opaque LSA</li> <li>• inter-area-prefix Enable tracing of OSPF LSDB events for inter-area prefixes</li> <li>• inter-area-router Enable tracing of OSPF LSDB events for inter-area routers</li> <li>• intra-area-prefix Enable tracing of OSPF LSDB events for intra-area prefixes</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**misc**

<b>Description</b>	Enable tracing all Config events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace misc</a>
<b>Tree</b>	<a href="#">misc</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**packet**

<b>Description</b>	Trace OSPF Packet types Only one type can be enabled at a time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace packet</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**detail**

<b>Description</b>	To enable detailed tracing. Includes both received and sent packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace packet detail</a>
<b>Tree</b>	<a href="#">detail</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**modifier** *keyword*

<b>Description</b>	Enter the modifier context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace packet modifier</a> <i>keyword</i>
<b>Tree</b>	<a href="#">modifier</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ingress To enable tracing for the packets which are received.</li> <li>• egress To enable tracing for the sent packets.</li> <li>• in-and-egress To enable tracing for both sent and received packets</li> <li>• drop To enable tracing for the sent packets.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type keyword**

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace packet type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Enable tracing of all OSPF packets</li> <li>• hello Enable tracing of OSPF Hello packets</li> <li>• dbdescr Enable tracing of OSPF database Descriptor packets</li> <li>• ls-request Enable tracing of OSPF link-state request packets</li> <li>• ls-update Enable tracing of OSPF link-state update packets</li> <li>• ls-ack Enable tracing of OSPF link-state Ack packets</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**routes**

<b>Description</b>	Enable the routes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace routes</a>
<b>Tree</b>	<a href="#">routes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dest-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the dest-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace routes dest-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">dest-address</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## spf

**Description** Enable the spf context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [trace-options trace spf](#)

**Tree** [spf](#)

**Configurable** True

**Platforms** Supported on all platforms

## dest-address (*ipv4-address* | *ipv6-address*)

**Description** Enter the dest-address context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [trace-options trace spf dest-address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [dest-address](#)

**Configurable** True

**Platforms** Supported on all platforms

## version *identityref*

**Description** The version that this ospf instance supports.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [version identityref](#)

**Tree** [version](#)

**Options**

- ospf-v2  
Version 2 of the OSPF protocol
- ospf-v3  
Version 3 of the OSPF protocol

**Configurable** True

**Platforms** Supported on all platforms

## pim

**Description** Enable the pim context

**Context** [network-instance name](#) *string* [protocols pim](#)

<b>Tree</b>	<a href="#">pim</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### admin-state *keyword*

<b>Description</b>	Administratively enable or disable PIM
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### database

<b>Description</b>	Database of PIM (S,G) (*,G), (*,*,RP)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database</a>
<b>Tree</b>	<a href="#">database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group [group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the group list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group (*ipv4-address* | *ipv6-address*)

**Description** Multicast group IP address

**Context** [network-instance name](#) [string](#) [protocols pim database group group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source (*ipv4-address* | *ipv6-address*)

**Description** Source IP address

**Context** [network-instance name](#) [string](#) [protocols pim database group group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### advertising-router (*ipv4-address* | *ipv6-address*)

**Description** Router address that advertised the route to the source

**Context** [network-instance name](#) [string](#) [protocols pim database group group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*) [advertising-router](#) (*ipv4-address* | *ipv6-address*)

**Tree** [advertising-router](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### current-forwarding-rate

**Description** Current forwarding rate for the entry in bps

Current forwarding rate being used by a source group(S,G) entry or (\*,G) entry for the traffic in bits per second (bps), where \* means any source entry.

<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">current-forwarding-rate</a>
<b>Tree</b>	<a href="#">current-forwarding-rate</a>
<b>Units</b>	bps
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### immediate-outgoing-interface-count

<b>Description</b>	Number of interfaces in the immediate outgoing interface list An outgoing list can be 'immediate' if it is built directly from the state of the relevant type as indicated by 'source-type'.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">immediate-outgoing-interface-count</a>
<b>Tree</b>	<a href="#">immediate-outgoing-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### inherited-outgoing-interface-count

<b>Description</b>	Number of interfaces in the inherited outgoing interface list An 'inherited' list inherits state from other types.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">inherited-outgoing-interface-count</a>
<b>Tree</b>	<a href="#">inherited-outgoing-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**inherited-rpt-outgoing-interface-count**

<b>Description</b>	Number of interfaces in the inherited outgoing interface list for (S,G,Rpt)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">inherited-rpt-outgoing-interface-count</a>
<b>Tree</b>	<a href="#">inherited-rpt-outgoing-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface** *name string*

<b>Description</b>	List of the PIM enabled interfaces for the entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">interface name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name** *string*

<b>Description</b>	Router interface name
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**flags** *bits*

<b>Description</b>	Set of lists to which this interface belongs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">interface name</a> <i>string</i> <a href="#">flags</a> <i>bits</i>

<b>Tree</b>	<a href="#">flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### join-or-prune-interface-count

<b>Description</b>	Number of interfaces on which the router received a Join or Prune message
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">join-or-prune-interface-count</a>
<b>Tree</b>	<a href="#">join-or-prune-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### keepalive-timer *number*

<b>Description</b>	Keepalive timer for (S,G)  It is applicable only for (S,G) entries. The (S,G) keepalive timer is updated by data being forwarded using this (S,G) forwarding state. It is used to keep (S,G) state alive in the absence of explicit (S,G) Joins.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">keepalive-timer number</a>
<b>Tree</b>	<a href="#">keepalive-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### local-rx-exclude-interface-count

<b>Description</b>	Number of interfaces in the local membership exclude interface list  Local membership is the result of the local membership mechanism (MLD) running on the interface. Exclude list contains interfaces which are not interested in receiving multicast traffic for this source group entry.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-rx-exclude-interface-count</a>
<b>Tree</b>	<a href="#">local-rx-exclude-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### local-rx-include-interface-count

<b>Description</b>	Number of interfaces in the local membership include interface list  Local membership is the result of the local membership mechanism (MLD) running on a interface. Include list contains interfaces which are interested in receiving multicast traffic for this source group entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-rx-include-interface-count</a>
<b>Tree</b>	<a href="#">local-rx-include-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### lost-assert-interface-count

<b>Description</b>	Number of interfaces on which the router lost assert
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">lost-assert-interface-count</a>
<b>Tree</b>	<a href="#">lost-assert-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### mrib-nh-address ([ipv4-address](#) | [ipv6-address-with-zone](#))

<b>Description</b>	Next hop address towards the RP
--------------------	---------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">mrib-nh-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address-with-zone</a> )
<b>Tree</b>	<a href="#">mrib-nh-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **mrib-source-flags** *bits*

<b>Description</b>	MRIB information about the source  If the entry is of type 'star-g' or 'star-star-rp', it will contain information about the RP for this group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">mrib-source-flags</a> <i>bits</i>
<b>Tree</b>	<a href="#">mrib-source-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **register-from-anycast-rp** *boolean*

<b>Description</b>	Register message received from anycast RP  Whether a register message for this source group combination was received from the anycast RP and not from the designated router connected to the source. It is not applicable when the value of source-type is 'star-star-rp' or 'star-g'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">register-from-anycast-rp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">register-from-anycast-rp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**register-state** *keyword*

<b>Description</b>	Register state kept at the source DR  When the host starts sending multicast packets and if there are no entries programmed for that group, the source DR sends a Register packet to the RP(G). Register state transition happen based on the register stop timer and the response received from the RP.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">register-state keyword</a>
<b>Tree</b>	<a href="#">register-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-info</li> <li>• join</li> <li>• join-pending</li> <li>• prune</li> <li>• null-join</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**register-stop-timer** *number*

<b>Description</b>	Time remaining before the register-state might transition to a different state  This timer has a non-zero value when the value of register-state is not 'no-info'.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">register-stop-timer number</a>
<b>Tree</b>	<a href="#">register-stop-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**resolved-by** *keyword*

<b>Description</b>	Routing table used to resolve this entry
--------------------	--

The value of this object will be 'multicast-route-table' if the source or Rendezvous Point (RP) is resolved by the multicast route table. The value of this object will be 'unicast-route-table' if the source or Rendezvous Point (RP) is resolved by the unicast route table. The value will be 'none' if the source or RP is unresolved.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">resolved-by</a> <i>keyword</i>
<b>Tree</b>	<a href="#">resolved-by</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• multicast-route-table</li> <li>• unicast-route-table</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **rp-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	IP address of the Rendezvous Point(RP)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">rp-address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">rp-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **rpf-neighbor-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	IP address of the RPF neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">rpf-neighbor-address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">rpf-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rpf-neighbor-interface-name** *string*

<b>Description</b>	Router interface on which the RPF neighbor exists
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">rpf-neighbor-interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">rpf-neighbor-interface-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rpt-rpf-neighbor-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The address of the RPF neighbor on the RPT
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">rpt-rpf-neighbor-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">rpt-rpf-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**s-g-rpt-prune-interface-count**

<b>Description</b>	Number of interfaces on which the router received (S,G,Rpt) prunes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">s-g-rpt-prune-interface-count</a>
<b>Tree</b>	<a href="#">s-g-rpt-prune-interface-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**sg-state** *keyword*

<b>Description</b>	Current state of the (S,G)
--------------------	----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">sg-state keyword</a>
<b>Tree</b>	<a href="#">sg-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• active</li> <li>• standby</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source-flags *bits*

<b>Description</b>	<p>SPTbit and PruneDesired state of the entry</p> <p>This object is applicable only for (S,G) entries,i.e., when source-type is 'sg'. The (S,G) 'spt-bit' is used to distinguish whether to forward on (*,*,RP) or (*,G) or on (S,G) state. It is updated when the (S,G) data comes on the RPF interface towards the source. 'rpt-prune-desired' is set according to the PruneDesired(S,G,rpt) algorithm.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source-flags bits</a>
<b>Tree</b>	<a href="#">source-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source-type *keyword*

<b>Description</b>	Type of this entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source-type keyword</a>
<b>Tree</b>	<a href="#">source-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• star-star-rp</li> <li>• star-g</li> <li>• sg</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### spt-switchover-threshold *number*

<b>Description</b>	Configured threshold in kilobits per second(kbps) for the group to which this (S,G) belongs  For a group G configured with a threshold, switchover to SPT for an (S,G) is attempted only if the (S,G)'s rate exceeds this configured threshold.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">spt-switchover-threshold number</a>
<b>Tree</b>	<a href="#">spt-switchover-threshold</a>
<b>Units</b>	kilobps
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### statistics

<b>Description</b>	Forwarding statistics for the database entry  These statistics are collected by the forwarding engine.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### discarded-packets

<b>Description</b>	Number of multicast packets that matched this entry but were discarded  For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">statistics</a> <a href="#">discarded-packets</a>
<b>Tree</b>	<a href="#">discarded-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## forwarded-octets

<b>Description</b>	Number of multicast octets that were forwarded to the interfaces in the outgoing interface list
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">statistics</a> <a href="#">forwarded-octets</a>
<b>Tree</b>	<a href="#">forwarded-octets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## forwarded-packets

<b>Description</b>	Number of multicast packets that were forwarded to the interfaces in the outgoing interface list
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">statistics</a> <a href="#">forwarded-packets</a>
<b>Tree</b>	<a href="#">forwarded-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rpf-mismatches

<b>Description</b>	Number of multicast packets that matched this entry but did not arrive on the 'rpf-neighbor-interface-name' interface
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">statistics rpf-mismatches</a>
<b>Tree</b>	<a href="#">rpf-mismatches</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**up-time number**

<b>Description</b>	Time elapsed since this entry was created
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">up-time number</a>
<b>Tree</b>	<a href="#">up-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**upstream-jp-state keyword**

<b>Description</b>	Upstream Join-Prune state  This is a result of sending PIM Join-Prune messages towards the source or the RP.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">upstream-jp-state keyword</a>
<b>Tree</b>	<a href="#">upstream-jp-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-joined</li> <li>• joined</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**upstream-jp-timer** *number*

<b>Description</b>	Time remaining before the router sends another Join message to its upstream neighbor
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">upstream-jp-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">upstream-jp-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**upstream-rpt-jp-state** *keyword*

<b>Description</b>	Upstream RPT Join-Prune state  (S,G,rpt) Joins and Prunes are (S,G) Joins or Prunes sent on the RP tree with the RPT bit set. To either modify the results of (*,G) Joins, or to override the behavior of other upstream LAN peers.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols pim database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">upstream-rpt-jp-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">upstream-rpt-jp-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-joined-star-g</li> <li>• not-pruned</li> <li>• pruned</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**upstream-rpt-override-timer** *number*

<b>Description</b>	Delay to triggered Join(S,G,rpt) messages to prevent implosions of triggered messages  If non-zero, it means that the router was in 'not-pruned' state and it saw a Prune(S,G,rpt) message being sent to RPF'(S,G,rpt). If the router sees a Join(S,G,rpt) override message being sent by some other router on the LAN while the timer is still non-zero, it simply cancels the override timer. If it does not see a Join(S,G,rpt) message, then on expiry of the override timer,
--------------------	---

it sends it's own Join(S,G,rpt) message to RPF'(S,G,rpt). A similar scenario exists when RPF'(S,G,rpt) changes to become equal to RPF'(\*,G).

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim database group group</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">upstream-rpt-override-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">upstream-rpt-override-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ecmp-balance** *boolean*

<b>Description</b>	Enables hashing balance for multicast streams  This command enables multicast balancing of traffic over ECMP links based on the number of (S, G) distributed over each link. When enabled, each new multicast stream that needs to be forwarded over an ECMP link is compared to the count of (S, G) already using each link, so that the link with the fewest (S, G) is chosen.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ecmp-balance</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ecmp-balance</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ecmp-balance-hold** *number*

<b>Description</b>	Hold period for ecmp balancing  This command defines a hold period that applies after an interface has been added to the ECMP link. It is also used periodically to rebalance if channels have been removed from the ECMP link. If the ECMP interface has not changed in the hold period and if no multicast streams have been removed, then no action is taken when the timer triggers. This parameter should be used to avoid excessive changes to the multicast distribution.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ecmp-balance-hold</a> <i>number</i>
<b>Tree</b>	<a href="#">ecmp-balance-hold</a>
<b>Range</b>	1 to 600

<b>Default</b>	1
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ecmp-hashing *boolean*

<b>Description</b>	Enables hashing for multicast streams  This command enables hash-based multicast balancing of traffic over ECMP links and causes PIM joins to be distributed over the multiple ECMP paths based on a hash of S and G (and possibly next-hop IP address). When a link in the ECMP set is removed, the multicast flows that were using that link are redistributed over the remaining ECMP links using the same hash algorithm. When a link is added to the ECMP set new joins may be allocated to the new link based on the hash algorithm, but existing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">ecmp-hashing</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ecmp-hashing</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface [interface-name](#) *reference*

<b>Description</b>	List of PIM interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">interface</a> <a href="#">interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *reference*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the PIM protocol for this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-interval** *number*

<b>Description</b>	Interval at which the router sends PIM assert messages
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">assert-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">assert-interval</a>
<b>Range</b>	1 to 300
<b>Default</b>	60
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**bfd-ipv4** *boolean*

<b>Description</b>	IPv4 BFD detection
--------------------	--------------------

The value of this object specifies whether Bi-directional Forwarding Detection (BFD) is enabled for IPv4 on this PIM interface.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">bfd-ipv4</a> <i>boolean</i>
<b>Tree</b>	<a href="#">bfd-ipv4</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **bfd-ipv6** *boolean*

<b>Description</b>	IPv6 BFD detection  The value of this object specifies whether Bi-directional Forwarding Detection (BFD) is enabled for IPv6 on this PIM interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">bfd-ipv6</a> <i>boolean</i>
<b>Tree</b>	<a href="#">bfd-ipv6</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **database**

<b>Description</b>	Database of PIM (S,G) (*,G), (*,*,RP) for the interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">database</a>
<b>Tree</b>	<a href="#">database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **group** [group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the group list instance
--------------------	-------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **group** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	Multicast group IP address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **source** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	Source IP address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **assert-metric** *number*

<b>Description</b>	The metric associated by the MRIB for the route towards the source or the RP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">assert-metric</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **assert-metric-preference** *number*

**Description** The preference associated by the MRIB for the route towards the source or the RP

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [database group group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*) **assert-metric-preference** *number*

**Tree** [assert-metric-preference](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **assert-rpt-bit** *boolean*

**Description** The value is 'true' if the RPT bit is set and 'false' when the RPT bit is not set

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [database group group](#) (*ipv4-address* | *ipv6-address*) [source](#) (*ipv4-address* | *ipv6-address*) **assert-rpt-bit** *boolean*

**Tree** [assert-rpt-bit](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **assert-state** *keyword*

**Description** The ASSERT state for this entry

Where multiple PIM routers peer over a shared LAN it possible for more than one upstream router to have valid forwarding state for a packet, which can lead to packet duplication. PIM does not attempt to prevent this from occurring. Instead it detects when this has happened and elects a single forwarder amongst the upstream routers to prevent further duplication. This election is performed using PIM Assert messages. Assert messages are also received by downstream routers on the LAN, and these cause subsequent Join or Prune messages to be sent to the upstream router that won the Assert.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">assert-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-info</li> <li>• lost-assert</li> <li>• won-assert</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-timer** *number*

<b>Description</b>	Assert time remaining  If the value of <code>assert-state</code> is 'lost-assert': the time remaining before the router transitions the <code>assert-state</code> to 'no-info'. If the value of <code>assert-state</code> is 'won-assert': the time remaining before the ASSERT message is resent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">assert-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-winner-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The ASSERT winner's interface IP address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-winner-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">assert-winner-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-winner-metric** *number*

<b>Description</b>	The ASSERT winner's metric associated by its MRIB for the route towards the source or the RP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-winner-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">assert-winner-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-winner-metric-preference** *number*

<b>Description</b>	The ASSERT winner's preference associated by its MRIB for the route towards the source or the RP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-winner-metric-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">assert-winner-metric-preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**assert-winner-rpt-bit** *boolean*

<b>Description</b>	The value is 'true' if the RPT bit is set and 'false' when the RPT bit is not set
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">assert-winner-rpt-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">assert-winner-rpt-bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**jp-rpt-pending-timer** *number*

<b>Description</b>	The time remaining before the router transitions the value of jp-rpt-state to 'no-info'  The timer is set when the (S,G,rpt) PIM Prune message is received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">jp-rpt-pending-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">jp-rpt-pending-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**jp-rpt-state** *keyword*

<b>Description</b>	The Join Prune Rpt state for this entry on the interface  PIM Join or Prune messages are sent by the downstream routers towards the RPF neighbor. (S,G,rpt) state is a result of receiving (S,G, rpt) JP message from the downstream router on the RP tree.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">jp-rpt-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">jp-rpt-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-info</li> <li>• joined</li> <li>• prune-pend</li> <li>• pruned</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**jp-rpt-timer** *number*

<b>Description</b>	The time remaining before the router transitions the value of jp-rpt-state to 'no-info'  The timer is started or restarted when a valid Join message is received. If the value of this object is zero and jp-rpt-state is in 'join' state, it means that
--------------------	--

the downstream router sent a holdtime of '0xffff'. In this case, jp-rpt-state will not transition until an appropriate cancelling of Join or Prune message is received from the downstream router.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">jp-rpt-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">jp-rpt-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### jp-state *keyword*

<b>Description</b>	The Join Prune state for this entry on the interface PIM Join or Prune messages are sent by the downstream routers towards the RPF neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">database group group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">jp-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">jp-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-info</li> <li>• joined</li> <li>• prune-pend</li> <li>• pruned</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### jp-timer *number*

<b>Description</b>	The time remaining before the router transitions the value of jp-state to 'no-info'  The timer is started or restarted when a valid Join message is received. If the value of this object is zero and jp-state is 'join' state, it means that the downstream router sent a holdtime of '0xffff'. In this case, jp-state will not transition until an appropriate cancelling of Join or Prune message is received.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">jp-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">jp-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **prune-pending-timer** *number*

<b>Description</b>	The time remaining before the router transitions the value of jp-state to 'no-info'  The timer is set when the PIM Prune message is received.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">prune-pending-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">prune-pending-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **rp-address** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	IP address of the Rendezvous Point(RP)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">rp-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">rp-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **source-type** *keyword*

<b>Description</b>	Type of this entry
--------------------	--------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">source-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• star-star-rp</li> <li>• star-g</li> <li>• sg</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**up-time** *number*

<b>Description</b>	Time elapsed since this entry was created
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference database group group</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">source</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">up-time</a> <i>number</i>
<b>Tree</b>	<a href="#">up-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**dr-priority** *number*

<b>Description</b>	DR priority value on this interface  The value of this object specifies the value sent in PIM Hello messages and used by routers to elect the Designated Router(DR).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <a href="#">reference dr-priority</a> <i>number</i>
<b>Tree</b>	<a href="#">dr-priority</a>
<b>Range</b>	0 to 4294967295
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**hello-interval** *number*

<b>Description</b>	Interval at which the router sends the PIM hello messages
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">hello-interval number</a>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	0 to 255
<b>Default</b>	30
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**hello-multiplier** *number*

<b>Description</b>	Number of hello multiplier to determine hold time  This command configures the multiplier to determine the holdtime for a PIM neighbor on this interface. The hello-multiplier in conjunction with the hello-interval determines the holdtime for a PIM neighbor. The formula used to calculate the hello-holdtime is: (hello-interval * hello-multiplier) / 10.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">hello-multiplier number</a>
<b>Tree</b>	<a href="#">hello-multiplier</a>
<b>Range</b>	20 to 100
<b>Default</b>	35
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4**

<b>Description</b>	IPv4 specific interface parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## counters

**Description** PIM Interface counters

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters](#)

**Tree** [counters](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-assert-errors

**Description** The number of errors while processing Assert messages received on this interface

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters rx-assert-errors](#)

**Tree** [rx-assert-errors](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-asserts

**Description** The number of PIM Assert messages received on this interface

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters rx-asserts](#)

**Tree** [rx-asserts](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-bad-checksum-discard

<b>Description</b>	The number of discarded messages due to bad checksum received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-bad-checksum-discard</a>
<b>Tree</b>	<a href="#">rx-bad-checksum-discard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-bad-encodings

<b>Description</b>	The number of PIM messages with bad encodings received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-bad-encodings</a>
<b>Tree</b>	<a href="#">rx-bad-encodings</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-bad-version-discard

<b>Description</b>	The number of PIM messages with bad versions received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-bad-version-discard</a>
<b>Tree</b>	<a href="#">rx-bad-version-discard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-candidate-rp-adv-no-router-alert

<b>Description</b>	The number of Candidate-RP Advertisements without router alert option received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-candidate-rp-adv-no-router-alert</a>

<b>Tree</b>	<a href="#">rx-candidate-rp-adv-no-router-alert</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-hellos

<b>Description</b>	The number of PIM hello messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-hellos</a>
<b>Tree</b>	<a href="#">rx-hellos</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-hellos-dropped

<b>Description</b>	The number of dropped Hello messages which were received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-hellos-dropped</a>
<b>Tree</b>	<a href="#">rx-hellos-dropped</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-invalid-join-prunes

<b>Description</b>	The number of invalid PIM Join Prune messages received on this interface A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a Invalid Join Prune notification is sent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-invalid-join-prunes</a>
<b>Tree</b>	<a href="#">rx-invalid-join-prunes</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-invalid-registers

**Description** The number of invalid PIM Register messages received on this interface  
A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a Invalid Register notification is sent.

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters rx-invalid-registers](#)

**Tree** [rx-invalid-registers](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-join-prune-errors

**Description** The number of errors while processing Join-Prune messages received on this interface

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters rx-join-prune-errors](#)

**Tree** [rx-join-prune-errors](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-join-prunes

**Description** The number of Join Prune messages received on this interface

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#)  
*reference* [ipv4 counters rx-join-prunes](#)

**Tree** [rx-join-prunes](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-neighbor-unknown

<b>Description</b>	The number of PDUs dropped due to unknown neighborship The number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-neighbor-unknown</a>
<b>Tree</b>	<a href="#">rx-neighbor-unknown</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-null-registers

<b>Description</b>	The number of PIM Null Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-null-registers</a>
<b>Tree</b>	<a href="#">rx-null-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-packets

<b>Description</b>	The number of multicast data packets received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-packets</a>
<b>Tree</b>	<a href="#">rx-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-register-errors

<b>Description</b>	The number of errors while processing Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-register-errors</a>
<b>Tree</b>	<a href="#">rx-register-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-register-stop-errors

<b>Description</b>	The number of errors while processing Register Stop messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-register-stop-errors</a>
<b>Tree</b>	<a href="#">rx-register-stop-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-register-stops

<b>Description</b>	The number of PIM Register Stop messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-register-stops</a>
<b>Tree</b>	<a href="#">rx-register-stops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-registers

<b>Description</b>	The number of PIM Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-registers</a>

<b>Tree</b>	<a href="#">rx-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-unknown-pdu-type

<b>Description</b>	The number of packets received with an unsupported PIM type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters rx-unknown-pdu-type</a>
<b>Tree</b>	<a href="#">rx-unknown-pdu-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sg-count

<b>Description</b>	The number of (S,G) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters sg-count</a>
<b>Tree</b>	<a href="#">sg-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### star-g-count

<b>Description</b>	The number of (*,G) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters star-g-count</a>
<b>Tree</b>	<a href="#">star-g-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## star-star-rp-count

<b>Description</b>	The number of (*,*,RP) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters star-star-rp-count</a>
<b>Tree</b>	<a href="#">star-star-rp-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-asserts

<b>Description</b>	The number of PIM Assert messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-asserts</a>
<b>Tree</b>	<a href="#">tx-asserts</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-hellos

<b>Description</b>	The number of PIM Hello messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-hellos</a>
<b>Tree</b>	<a href="#">tx-hellos</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-join-prunes

<b>Description</b>	The number of Join Prune messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-join-prunes</a>
<b>Tree</b>	<a href="#">tx-join-prunes</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-packets

<b>Description</b>	The number of multicast data packets transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-packets</a>
<b>Tree</b>	<a href="#">tx-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-register-stop-errors

<b>Description</b>	The number of PIM errors while trasmitting PIM Register Stop messages on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-register-stop-errors</a>
<b>Tree</b>	<a href="#">tx-register-stop-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-register-stops

<b>Description</b>	The number of PIM Register Stop messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 counters tx-register-stops</a>
<b>Tree</b>	<a href="#">tx-register-stops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**dr-address** *string*

<b>Description</b>	IPv4 address of designated router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 dr-address</a> <i>string</i>
<b>Tree</b>	<a href="#">dr-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-priority** *number*

<b>Description</b>	The operational value of DR priority on this interface  The value of this object specifies the value sent in PIM Hello messages and used by routers to elect the Designated Router(DR). This is the operational value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4 oper-priority</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-priority</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4-admin-state** *keyword*

<b>Description</b>	Administratively enable or disable PIM IPv4 address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv4-admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">ipv4-admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## ipv6

<b>Description</b>	IPv6 specific interface parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## counters

<b>Description</b>	PIM Interface counters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters</a>
<b>Tree</b>	<a href="#">counters</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-assert-errors

<b>Description</b>	The number of errors while processing Assert messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-assert-errors</a>
<b>Tree</b>	<a href="#">rx-assert-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-asserts

<b>Description</b>	The number of PIM Assert messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-asserts</a>

<b>Tree</b>	<a href="#">rx-asserts</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-bad-checksum-discard

<b>Description</b>	The number of discarded messages due to bad checksum received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-bad-checksum-discard</a>
<b>Tree</b>	<a href="#">rx-bad-checksum-discard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-bad-encodings

<b>Description</b>	The number of PIM messages with bad encodings received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-bad-encodings</a>
<b>Tree</b>	<a href="#">rx-bad-encodings</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-bad-version-discard

<b>Description</b>	The number of PIM messages with bad versions received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-bad-version-discard</a>
<b>Tree</b>	<a href="#">rx-bad-version-discard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rx-candidate-rp-adv-no-router-alert**

<b>Description</b>	The number of Candidate-RP Advertisements without router alert option received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-candidate-rp-adv-no-router-alert</a>
<b>Tree</b>	<a href="#">rx-candidate-rp-adv-no-router-alert</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rx-hellos**

<b>Description</b>	The number of PIM hello messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-hellos</a>
<b>Tree</b>	<a href="#">rx-hellos</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rx-hellos-dropped**

<b>Description</b>	The number of dropped Hello messages which were received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-hellos-dropped</a>
<b>Tree</b>	<a href="#">rx-hellos-dropped</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rx-invalid-join-prunes**

<b>Description</b>	The number of invalid PIM Join Prune messages received on this interface
--------------------	--

A Join Prune message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a Invalid Join Prune notification is sent.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-invalid-join-prunes</a>
<b>Tree</b>	<a href="#">rx-invalid-join-prunes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-invalid-registers

<b>Description</b>	The number of invalid PIM Register messages received on this interface A Register message is invalid when the RP address in the message is not the RP for the group specified in the message. If such a message arrives, a Invalid Register notification is sent.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-invalid-registers</a>
<b>Tree</b>	<a href="#">rx-invalid-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-join-prune-errors

<b>Description</b>	The number of errors while processing Join-Prune messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-join-prune-errors</a>
<b>Tree</b>	<a href="#">rx-join-prune-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-join-prunes

<b>Description</b>	The number of Join Prune messages received on this interface
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-join-prunes</a>
<b>Tree</b>	<a href="#">rx-join-prunes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-neighbor-unknown

<b>Description</b>	The number of PDUs dropped due to unknown neighborhood  The number of PIM messages (other than Hello messages) which were received on this interface and were rejected because the adjacency with the neighbor router was not already established.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-neighbor-unknown</a>
<b>Tree</b>	<a href="#">rx-neighbor-unknown</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-null-registers

<b>Description</b>	The number of PIM Null Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-null-registers</a>
<b>Tree</b>	<a href="#">rx-null-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-packets

<b>Description</b>	The number of multicast data packets received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-packets</a>
<b>Tree</b>	<a href="#">rx-packets</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-register-errors

<b>Description</b>	The number of errors while processing Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-register-errors</a>
<b>Tree</b>	<a href="#">rx-register-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-register-stop-errors

<b>Description</b>	The number of errors while processing Register Stop messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-register-stop-errors</a>
<b>Tree</b>	<a href="#">rx-register-stop-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### rx-register-stops

<b>Description</b>	The number of PIM Register Stop messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-register-stops</a>
<b>Tree</b>	<a href="#">rx-register-stops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-registers

<b>Description</b>	The number of PIM Register messages received on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-registers</a>
<b>Tree</b>	<a href="#">rx-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rx-unknown-pdu-type

<b>Description</b>	The number of packets received with an unsupported PIM type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters rx-unknown-pdu-type</a>
<b>Tree</b>	<a href="#">rx-unknown-pdu-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## sg-count

<b>Description</b>	The number of (S,G) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters sg-count</a>
<b>Tree</b>	<a href="#">sg-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## star-g-count

<b>Description</b>	The number of (*,G) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters star-g-count</a>
<b>Tree</b>	<a href="#">star-g-count</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### star-star-rp-count

<b>Description</b>	The number of (*,*,RP) entries on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters star-star-rp-count</a>
<b>Tree</b>	<a href="#">star-star-rp-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-asserts

<b>Description</b>	The number of PIM Assert messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-asserts</a>
<b>Tree</b>	<a href="#">tx-asserts</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-hellos

<b>Description</b>	The number of PIM Hello messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-hellos</a>
<b>Tree</b>	<a href="#">tx-hellos</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-join-prunes

<b>Description</b>	The number of Join Prune messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-join-prunes</a>
<b>Tree</b>	<a href="#">tx-join-prunes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-packets

<b>Description</b>	The number of multicast data packets transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-packets</a>
<b>Tree</b>	<a href="#">tx-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-register-stop-errors

<b>Description</b>	The number of PIM errors while trasmitting PIM Register Stop messages on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-register-stop-errors</a>
<b>Tree</b>	<a href="#">tx-register-stop-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-register-stops

<b>Description</b>	The number of PIM Register Stop messages transmitted on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">ipv6 counters tx-register-stops</a>
<b>Tree</b>	<a href="#">tx-register-stops</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**dr-address string**

<b>Description</b>	IPv6 address of designated router
<b>Context</b>	<a href="#">network-instance name string protocols pim interface interface-name reference ipv6 dr-address string</a>
<b>Tree</b>	<a href="#">dr-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-priority number**

<b>Description</b>	The operational value of DR priority on this interface  The value of this object specifies the value sent in PIM Hello messages and used by routers to elect the Designated Router(DR). This is the operational value.
<b>Context</b>	<a href="#">network-instance name string protocols pim interface interface-name reference ipv6 oper-priority number</a>
<b>Tree</b>	<a href="#">oper-priority</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6-admin-state keyword**

<b>Description</b>	Administratively enable or disable PIM IPv6 address family
<b>Context</b>	<a href="#">network-instance name string protocols pim interface interface-name reference ipv6-admin-state keyword</a>
<b>Tree</b>	<a href="#">ipv6-admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### maximum-groups *number*

<b>Description</b>	Limit the number of accepted (S, G) and (*, G) PIM join states on the interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">maximum-groups number</a>
<b>Tree</b>	<a href="#">maximum-groups</a>
<b>Range</b>	1 to 16000
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### neighbors

<b>Description</b>	Details about PIM neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors</a>
<b>Tree</b>	<a href="#">neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### neighbor [address](#) (*ipv4-address* | *ipv6-address-with-zone*)

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> )
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **address** (*ipv4-address* | *ipv6-address-with-zone*)

**Description** IP address of a neighbor router

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **dr-priority** *number*

**Description** The dr-priority value received on hello message  
This value indicates neighbor's DR priority which is received in the hello message. If the Hello Message did not contain the DR priority field, the value of priority will be '1'.

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*) *dr-priority number*

**Tree** [dr-priority](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **dr-priority-present** *boolean*

**Description** Indication of existence of DR priority on received hello message  
This value of indicates whether the DR priority field was present in the Hello message received from the PIM neighbor.

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*) *dr-priority-present boolean*

**Tree** [dr-priority-present](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### expiry-time number

**Description** The time until the expiry of this neighbor  
This value indicates the minimum time remaining before this PIM neighbor will be aged out.

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*) [expiry-time number](#)

**Tree** [expiry-time](#)

**Units** seconds

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### generated-id number

**Description** The Gen-Id value on the received hello message  
This value indicates a randomly generated 32-bit value that is regenerated each time PIM forwarding is started or restarted on the interface, including when the router itself restarts.

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*) [generated-id number](#)

**Tree** [generated-id](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### hold-time number

**Description** This value indicates the value of the hold time present in the Hello message

**Context** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference* [neighbors neighbor address](#) (*ipv4-address* | *ipv6-address-with-zone*) [hold-time number](#)

<b>Tree</b>	<a href="#">hold-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **join-attribute-support** *boolean*

<b>Description</b>	Existence of Join-attribute in the received hello message  This value indicates whether the Hello Message received from the neighbor contained the Join Attribute field.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">join-attribute-support</a> <i>boolean</i>
<b>Tree</b>	<a href="#">join-attribute-support</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **lan-delay** *number*

<b>Description</b>	The lan-delay value on received hello message  This value indicates the value of lan delay field present in the Hello message received from the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">lan-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">lan-delay</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **lan-delay-present** *boolean*

<b>Description</b>	Indication of existence of lan-delay on received hello message
--------------------	--

This value indicates whether the Hello message received from the neighbor contained the Lan Delay field.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">lan-delay-present</a> <i>boolean</i>
<b>Tree</b>	<a href="#">lan-delay-present</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **override-interval** *number*

<b>Description</b>	The override interval on the received hello message  This value indicates the value of the override interval present in the Hello message.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">override-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">override-interval</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **tracking-support** *boolean*

<b>Description</b>	Indication of existence of tracking-support on received hello message  This value indicates whether the T bit in the LAN Prune Delay option was present in the Hello message. This indicates the neighbor's capability to disable Join message suppression.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">tracking-support</a> <i>boolean</i>
<b>Tree</b>	<a href="#">tracking-support</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**up-time number**

<b>Description</b>	The time since when the neighbor has come up This value indicates the time since this PIM neighbor (last) became a neighbor of the local router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">neighbors neighbor address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">up-time number</a>
<b>Tree</b>	<a href="#">up-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state keyword**

<b>Description</b>	The operational state of the PIM interface This simply tracks the operational state of the subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing</li> </ul>

- Component is currently being synchronized
- upgrading
  - Component is currently being upgraded
- low-power
  - Component is offline due to insufficient system power
- degraded
  - Component or process is in a degraded state
- warm-reboot
  - Component or process is currently warm rebooting
  - This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
  - Component or process is currently waiting
  - This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4****Description**

IPv4 specific PIM parameters

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tx-register-ttl-drops

**Description** The number of TTL dropped data PDUs

The number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv4 counters tx-register-ttl-drops</a>
<b>Tree</b>	<a href="#">tx-register-ttl-drops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tx-registers

<b>Description</b>	The number of PIM Register messages transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv4 counters tx-registers</a>
<b>Tree</b>	<a href="#">tx-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## oper-state *keyword*

<b>Description</b>	The operational state of the PIM af instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv4 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

- Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6****Description**

IPv6 specific PIM parameters

### tx-register-errors

<b>Description</b>	The number of errors while transmitting Register messages
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv6 counters tx-register-errors</a>
<b>Tree</b>	<a href="#">tx-register-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**tx-register-ttl-drops**

<b>Description</b>	The number of TTL dropped data PDUs The number of multicast data packets which could not be encapsulated in Register messages because the Time To Live (TTL) was zero.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv6 counters tx-register-ttl-drops</a>
<b>Tree</b>	<a href="#">tx-register-ttl-drops</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**tx-registers**

<b>Description</b>	The number of PIM Register messages transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv6 counters tx-registers</a>
<b>Tree</b>	<a href="#">tx-registers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state** *keyword*

<b>Description</b>	The operational state of the PIM af instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ipv6 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> </ul>

- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state keyword****Description**

The operational state of the PIM instance

**Context**[network-instance name](#) *string* [protocols pim oper-state](#) *keyword***Tree**[oper-state](#)**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty

- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	IP prefix of the multicast group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim rendezvous-points static rendezvous-point address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **spt-switchover**

<b>Description</b>	Define shortest path tree (SPT) switchover threshold for multicast groups
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim spt-switchover</a>
<b>Tree</b>	<a href="#">spt-switchover</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **group prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Configure SPT switchover threshold for a multicast group prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim spt-switchover group prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	IP prefix of the multicast group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim spt-switchover group prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**threshold** (*number* | *keyword*)

<b>Description</b>	SPT switchover threshold in kbps
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim spt-switchover group prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">threshold</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">threshold</a>
<b>Range</b>	1 to 4294967294
<b>Units</b>	kilobps
<b>Options</b>	<ul style="list-style-type: none"> <li>infinity</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ssm**

<b>Description</b>	Source specific multicast (SSM) configuration
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ssm</a>
<b>Tree</b>	<a href="#">ssm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ssm-ranges**

<b>Description</b>	List of accepted source specific multicast (SSM) address ranges
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ssm ssm-ranges</a>

<b>Tree</b>	<a href="#">ssm-ranges</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group-range [ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Define an accepted SSM group range
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ssm ssm-ranges group-range ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">group-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	A multicast IP prefix for SSM group range
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim ssm ssm-ranges group-range ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### trace-options

<b>Description</b>	Enter the trace-options context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**trace**

<b>Description</b>	Tracing parameter flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**events**

<b>Description</b>	Enable the tracing of PIM events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events</a>
<b>Tree</b>	<a href="#">events</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all-event-types**

<b>Description</b>	Enable tracing for all events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events all-event-types</a>
<b>Tree</b>	<a href="#">all-event-types</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail *boolean***

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events all-event-types detail <i>boolean</i></a>
<b>Tree</b>	<a href="#">detail</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **group-address** (*ipv4-address* | *ipv6-address*)

**Description** The IP multicast group address for which to trace events

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events all-event-types group-address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [group-address](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **interface-name** *reference*

**Description** Enable interface event tracing for a specific interface

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events all-event-types interface-name](#) *reference*

**Tree** [interface-name](#)

**Reference** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **source-address** (*ipv4-address* | *ipv6-address*)

**Description** The source address for which to trace events

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events all-event-types source-address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [source-address](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**event-types**

<b>Description</b>	Enable tracing for selected event types only
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types</a>
<b>Tree</b>	<a href="#">event-types</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**adj**

<b>Description</b>	Enable tracing for adjacency events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types adj</a>
<b>Tree</b>	<a href="#">adj</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**asrt**

<b>Description</b>	Enable tracing for assert events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types asrt</a>
<b>Tree</b>	<a href="#">asrt</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail *boolean***

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types asrt detail <i>boolean</i></a>
<b>Tree</b>	<a href="#">detail</a>

<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP multicast group address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types asrt group-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types asrt source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### data

<b>Description</b>	Enable tracing for data events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types data</a>
<b>Tree</b>	<a href="#">data</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail** *boolean*

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types data detail</a> <i>boolean</i>
<b>Tree</b>	<a href="#">detail</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP multicast group address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types data group-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types data source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**db**

<b>Description</b>	Enable tracing for db events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types db</a>

<b>Tree</b>	<a href="#">db</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail** *boolean*

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types db detail</a> <i>boolean</i>
<b>Tree</b>	<a href="#">detail</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP multicast group address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types db group-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types db source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**intf**

<b>Description</b>	Enable tracing for interface events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types intf</a>
<b>Tree</b>	<a href="#">intf</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail** *boolean*

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types intf detail</a> <i>boolean</i>
<b>Tree</b>	<a href="#">detail</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *reference*

<b>Description</b>	Enable interface event tracing for a specific interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types intf interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface-name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**jp**

<b>Description</b>	Enable tracing for jp events
--------------------	------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types jp</a>
<b>Tree</b>	<a href="#">jp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail** *boolean*

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types jp detail</a> <i>boolean</i>
<b>Tree</b>	<a href="#">detail</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP multicast group address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types jp group-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace events event-types jp source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## msg

**Description** Enable tracing for msg events

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events event-types msg](#)

**Tree** [msg](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## reg

**Description** Enable tracing for register events

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events event-types reg](#)

**Tree** [reg](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## detail *boolean*

**Description** Enable detail tracing.

**Context** [network-instance name](#) *string* [protocols pim trace-options trace events event-types reg detail](#) *boolean*

**Tree** [detail](#)

**Default** false

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP multicast group address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">trace-options</a> <a href="#">trace events</a> <a href="#">event-types reg</a> <a href="#">group-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">group-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source address for which to trace events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">trace-options</a> <a href="#">trace events</a> <a href="#">event-types reg</a> <a href="#">source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**rtm**

<b>Description</b>	Enable tracing for rtm events
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">trace-options</a> <a href="#">trace events</a> <a href="#">event-types rtm</a>
<b>Tree</b>	<a href="#">rtm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**detail** *boolean*

<b>Description</b>	Enable detail tracing.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a> <a href="#">trace-options</a> <a href="#">trace events</a> <a href="#">event-types rtm</a> <a href="#">detail</a> <i>boolean</i>
<b>Tree</b>	<a href="#">detail</a>

<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## packet

<b>Description</b>	Enable the tracing of PIM packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## all-packet-types

<b>Description</b>	Enable tracing for all packet types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types</a>
<b>Tree</b>	<a href="#">all-packet-types</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## all-interfaces

<b>Description</b>	Enable packet tracing for all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types all-interfaces</a>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**egress** *boolean*

<b>Description</b>	Enable tracing for sent packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types egress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">egress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ingress** *boolean*

<b>Description</b>	Enable tracing for received packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types ingress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ingress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *reference*

<b>Description</b>	Enable packet tracing for a specific interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface-name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4 boolean**

<b>Description</b>	Enable tracing for PIM ipv4 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types</a> <a href="#">ipv4 boolean</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6 boolean**

<b>Description</b>	Enable tracing for PIM ipv6 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet all-packet-types</a> <a href="#">ipv6 boolean</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**packet-types**

<b>Description</b>	Enable tracing for selected packet types only
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types</a>
<b>Tree</b>	<a href="#">packet-types</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**asrt**

<b>Description</b>	Enable tracing for assert packets
--------------------	-----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types asrt</a>
<b>Tree</b>	<a href="#">asrt</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## all-interfaces

<b>Description</b>	Enable packet tracing for all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types asrt all-interfaces</a>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## egress *boolean*

<b>Description</b>	Enable tracing for sent packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types asrt egress <i>boolean</i></a>
<b>Tree</b>	<a href="#">egress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## ingress *boolean*

<b>Description</b>	Enable tracing for received packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types asrt ingress <i>boolean</i></a>
<b>Tree</b>	<a href="#">ingress</a>
<b>Default</b>	true
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *reference*

**Description** Enable packet tracing for a specific interface

**Context** [network-instance name](#) *string* [protocols pim trace-options trace packet packet-types asrt interface-name](#) *reference*

**Tree** [interface-name](#)

**Reference** [network-instance name](#) *string* [protocols pim interface interface-name](#) *reference*

<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**jp**

<b>Description</b>	Enable tracing for join-prune packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp</a>
<b>Tree</b>	<a href="#">jp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all-interfaces**

<b>Description</b>	Enable packet tracing for all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp all-interfaces</a>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**egress** *boolean*

<b>Description</b>	Enable tracing for sent packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp egress</a> <i>boolean</i>

<b>Tree</b>	<a href="#">egress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ingress** *boolean*

<b>Description</b>	Enable tracing for received packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp ingress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ingress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **interface-name** *reference*

<b>Description</b>	Enable packet tracing for a specific interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface-name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ipv4** *boolean*

<b>Description</b>	Enable tracing for PIM ipv4 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types jp ipv4</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Default</b>	true

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6** *boolean*

<b>Description</b>	Enable tracing for PIM ipv6 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types jp ipv6</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**reg**

<b>Description</b>	Enable tracing for register packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg</a>
<b>Tree</b>	<a href="#">reg</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all-interfaces**

<b>Description</b>	Enable packet tracing for all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg all-interfaces</a>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**egress** *boolean*

<b>Description</b>	Enable tracing for sent packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg egress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">egress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ingress** *boolean*

<b>Description</b>	Enable tracing for received packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg ingress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ingress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *reference*

<b>Description</b>	Enable packet tracing for a specific interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface-name</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface interface-name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4 boolean**

<b>Description</b>	Enable tracing for PIM ipv4 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg ipv4</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6 boolean**

<b>Description</b>	Enable tracing for PIM ipv6 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg ipv6</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**reg-stop**

<b>Description</b>	Enable tracing for register-stop packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg-stop</a>
<b>Tree</b>	<a href="#">reg-stop</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**all-interfaces**

<b>Description</b>	Enable packet tracing for all interfaces
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg-stop all-interfaces</a>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**egress** *boolean*

<b>Description</b>	Enable tracing for sent packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg-stop egress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">egress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ingress** *boolean*

<b>Description</b>	Enable tracing for received packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg-stop ingress</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ingress</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**interface-name** *reference*

<b>Description</b>	Enable packet tracing for a specific interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet packet-types reg-stop interface-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface-name</a>

<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim interface</a> <a href="#">interface-name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4** *boolean*

<b>Description</b>	Enable tracing for PIM ipv4 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg-stop ipv4</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6** *boolean*

<b>Description</b>	Enable tracing for PIM ipv6 packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim trace-options trace packet</a> <a href="#">packet-types reg-stop ipv6</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**route-table**

<b>Description</b>	Enter the route-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a>
<b>Tree</b>	<a href="#">route-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-unicast**

<b>Description</b>	The container for the IPv4 unicast routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route** [ipv4-prefix](#) *string* [route-type](#) *identityref* [route-owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	The IPv4 prefix associated with the route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The type of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-evpn</li> </ul>

## BGP Ethernet VPN (EVPN)

- dhcp  
IP (default) route added by DHCP.
- gribi  
A gRIBI route
- host  
A host route
- isis  
IS-IS
- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-owner** *string*

<b>Description</b>	The application name of the owner of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	An owner-assigned index value that is unique for each of the routes for a given prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active boolean**

<b>Description</b>	If set to true then the route is installed as the active route for the IP prefix in the FIB. A route can be inactive because there is a more preferred route for the same prefix or else its next-hops are unresolved.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the object
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-complexes string**

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-operation-type** *keyword*

<b>Description</b>	The last operation type that failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number fib-programming last-failed-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-failed-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-operation-timestamp** *string*

<b>Description</b>	<p>The date and time of the last operation to complete successfully.</p> <p>A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number fib-programming last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-operation-type** *keyword*

<b>Description</b>	The last operation type that completed successfully.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number fib-programming last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **pending-operation-type** *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number fib-programming pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**gribi-metadata** *binary*

<b>Description</b>	Metadata persistently stored with the entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">gribi-metadata</a> <i>binary</i>
<b>Tree</b>	<a href="#">gribi-metadata</a>
<b>String Length</b>	0 to 8
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this route by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	The next-hop-group indirection object used by this route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>

<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">next-hop-group-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **preference** *number*

<b>Description</b>	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **resilient-hash** *boolean*

<b>Description</b>	Set to true if the route is covered by a resilient-hash-prefix entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">resilient-hash</a> <i>boolean</i>
<b>Tree</b>	<a href="#">resilient-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-summary**

<b>Description</b>	Route summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a>
<b>Tree</b>	<a href="#">route-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** [ip-route-type-name](#) *identityref*

<b>Description</b>	Enter the route-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-route-type-name** *identityref*

<b>Description</b>	IP route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis</li> </ul>

- IS-IS
- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes** *number*

<b>Description</b>	Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route-summary route-type ip-route-type-name</a> <i>identityref</i> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-routes-with-ecmp** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">active-routes-with-ecmp</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes-with-ecmp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-failed-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">fib-failed-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">fib-failed-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resilient-hash-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">resilient-hash-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">resilient-hash-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-routes** *number*

<b>Description</b>	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">total-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-unicast**

<b>Description</b>	The container for the IPv6 unicast routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route** [ipv6-prefix](#) *string* [route-type](#) [identityref](#) [route-owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	The IPv6 prefix associated with the route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The type of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <i>ipv6-unicast route ipv6-prefix</i> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string id number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> <li>• local A directly connected route</li> <li>• linux IP route added by the linux kernel.</li> <li>• ndk1 Route added by an agent application using the NDK</li> <li>• ndk2 Route added by an agent application using the NDK</li> <li>• ospfv2 OSPFv2</li> <li>• ospfv3 OSPFv3</li> <li>• static Locally configured static route</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-owner** *string*

<b>Description</b>	The application name of the owner of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	An owner-assigned index value that is unique for each of the routes for a given prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	If set to true then the route is installed as the active route for the IP prefix in the FIB. A route can be inactive because there is a more preferred route for the same prefix or else its next-hops are unresolved.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the object
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-complexes** *string*

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string id number</i> <a href="#">fib-programming last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-operation-type** *keyword*

<b>Description</b>	The last operation type that failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string id number</i> <a href="#">fib-programming last-failed-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-failed-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• add The current or last operation was an attempt to create a new entry.</li> <li>• delete The current or last operation was an attempt to delete an existing entry.</li> <li>• modify The current or last operation was an attempt to modify an existing entry.</li> <li>• none There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-operation-timestamp** *string*

<b>Description</b>	<p>The date and time of the last operation to complete successfully.</p> <p>A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.</p>
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-successful-operation-type** *keyword*

<b>Description</b>	The last operation type that completed successfully.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **pending-operation-type** *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b></li> </ul>

- The current or last operation was an attempt to delete an existing entry.
- modify
  - The current or last operation was an attempt to modify an existing entry.
- none
  - There was no prior operation for this entry or there is no current operation that is in process

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **gribi-metadata** *binary*

<b>Description</b>	Metadata persistently stored with the entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">gribi-metadata</a> <i>binary</i>
<b>Tree</b>	<a href="#">gribi-metadata</a>
<b>String Length</b>	0 to 8
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-app-update** *string*

<b>Description</b>	The date and time of the last update of this route by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **metric** *number*

<b>Description</b>	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group** *reference*

<b>Description</b>	The next-hop-group indirection object used by this route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number next-hop-group-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **preference** *number*

<b>Description</b>	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resilient-hash** *boolean*

<b>Description</b>	Set to true if the route is covered by a resilient-hash-prefix entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">resilient-hash</a> <i>boolean</i>
<b>Tree</b>	<a href="#">resilient-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-summary**

<b>Description</b>	Route summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route-summary</a>
<b>Tree</b>	<a href="#">route-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** [ip-route-type-name](#) *identityref*

<b>Description</b>	Enter the route-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-route-type-name** *identityref*

<b>Description</b>	IP route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-evpn</li> </ul>

## BGP Ethernet VPN (EVPN)

- dhcp  
IP (default) route added by DHCP.
- gribi  
A gRIBI route
- host  
A host route
- isis  
IS-IS
- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-routes** *number*

<b>Description</b>	Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route-summary route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-routes-with-ecmp** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">active-routes-with-ecmp</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes-with-ecmp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-failed-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">fib-failed-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">fib-failed-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resilient-hash-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">resilient-hash-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">resilient-hash-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-routes** *number*

<b>Description</b>	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">total-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mpls**

<b>Description</b>	The container for the MPLS routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**label-entry** [label-value](#) *number*

<b>Description</b>	Enter the label-entry list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value</a> <i>number</i>
<b>Tree</b>	<a href="#">label-entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**label-value** *number*

<b>Description</b>	The MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value number</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**entry-type** *identityref*

<b>Description</b>	The entry type of the MPLS FIB entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value number</a> <a href="#">entry-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">entry-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ldp</a> Label distribution protocol</li> <li>• <a href="#">sr-mpls</a> Segment routing using MPLS dataplane, programmed by segment routing manager.</li> <li>• <a href="#">static-mpls</a> Locally configured static MPLS route.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this MPLS label entry by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value number</a> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	The next-hop-group indirection object used by this route. Applicable only if the operation is SWAP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry label-value number</a> <a href="#">next-hop-group reference</a>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-network-instance** *reference*

<b>Description</b>	If this ILM entry is for a pop label, and this label is at the bottom of the stack, the next forwarding lookup will be done in the referenced network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry label-value number</a> <a href="#">next-network-instance reference</a>
<b>Tree</b>	<a href="#">next-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**operation** *keyword*

<b>Description</b>	The forwarding operation associated with the MPLS label entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry label-value number</a> <a href="#">operation keyword</a>
<b>Tree</b>	<a href="#">operation</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• pop</li> <li>• swap</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of MPLS entries that are active in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">statistics</a> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop** [index](#) *number*

<b>Description</b>	Enter the next-hop list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	A system-wide unique identifier of a next-hop object (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**decapsulate-header** *keyword*

<b>Description</b>	Packets matching this next-hop are decapsulated by removing the specified header.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">decapsulate-header</a> <i>keyword</i>
<b>Tree</b>	<a href="#">decapsulate-header</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>gre</li> </ul> <p>The encapsulation header is a Generic Routing Encapsulation header.</p>

- ipv4  
The encapsulation header is an IPv4 packet header
- ipv6  
The encapsulation header is an IPv6 packet header
- mpls  
The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### encapsulate-header *keyword*

<b>Description</b>	Packets matching this next-hop are encapsulated by adding the specified header.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">encapsulate-header</a> <i>keyword</i>
<b>Tree</b>	<a href="#">encapsulate-header</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• gre The encapsulation header is a Generic Routing Encapsulation header.</li> <li>• ipv4 The encapsulation header is an IPv4 packet header</li> <li>• ipv6 The encapsulation header is an IPv6 packet header</li> <li>• mpls The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ip-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The next-hop IP address. Only populated when the next-hop type is indirect or tunnel or static-mpls. For a VXLAN tunnel this is the destination VTEP address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">ip-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ip-address</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-in-ip**

<b>Description</b>	Specifies details of the IP-in-IP header added to the packet. This is valid only when encapsulate-header is ipv4 or ipv6
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">ip-in-ip</a>
<b>Tree</b>	<a href="#">ip-in-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dst-ip** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Destination IP address to use for the encapsulated packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">ip-in-ip</a> <a href="#">dst-ip</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">dst-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**src-ip** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Source IP address to use for the encapsulated packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">ip-in-ip</a> <a href="#">src-ip</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">src-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mac-address** *string*

<b>Description</b>	The MAC address of the next-hop that has been provided directly. No value is populated if the next-hop IP is resolved by an ARP or IPv6 ND entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>

<b>Tree</b>	<a href="#">mac-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## mpls

<b>Description</b>	Enter the mpls context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## pushed-mpls-label-stack (*number* | *keyword*)

<b>Description</b>	The list of MPLS labels to push onto the packet when forwarding to this particular next-hop.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">mpls</a> <a href="#">pushed-mpls-label-stack</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">pushed-mpls-label-stack</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

## network-instance *reference*

<b>Description</b>	Indicates that the next-hop is another network instance. If this is specified but an IP address or interface is not provided, the meaning is that a new IP lookup should occur in the other network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### programmed-index *number*

**Description** The index assigned to the next-hop by the gRIBI client

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [programmed-index](#) *number*

**Tree** [programmed-index](#)

**Configurable** False

**Platforms** Supported on all platforms

### resolving-route

**Description** Enter the resolving-route context

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [resolving-route](#)

**Tree** [resolving-route](#)

**Configurable** False

**Platforms** Supported on all platforms

### ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

**Description** The prefix of the resolving route.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [resolving-route](#) [ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

**Tree** [ip-prefix](#)

**Configurable** False

**Platforms** Supported on all platforms

### route-owner *string*

**Description** The application name of the owner of the resolving route.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [resolving-route](#) [route-owner](#) *string*

**Tree** [route-owner](#)

**Configurable** False

**Platforms** Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The type of the resolving route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <i>next-hop index number</i> <a href="#">resolving-route</a> <i>route-type identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>aggregate</b> Locally configured aggregate route</li> <li>• <b>arp-nd</b> IP route added by ARP ND.</li> <li>• <b>bgp</b> Border Gateway Protocol version 4</li> <li>• <b>bgp-evpn</b> BGP Ethernet VPN (EVPN)</li> <li>• <b>dhcp</b> IP (default) route added by DHCP.</li> <li>• <b>gribi</b> A gRIBI route</li> <li>• <b>host</b> A host route</li> <li>• <b>isis</b> IS-IS</li> <li>• <b>local</b> A directly connected route</li> <li>• <b>linux</b> IP route added by the linux kernel.</li> <li>• <b>ndk1</b> Route added by an agent application using the NDK</li> <li>• <b>ndk2</b> Route added by an agent application using the NDK</li> <li>• <b>ospfv2</b> OSPFv2</li> <li>• <b>ospfv3</b> OSPFv3</li> <li>• <b>static</b> Locally configured static route</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## resolving-tunnel

<b>Description</b>	Enter the resolving-tunnel context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-tunnel</a>
<b>Tree</b>	<a href="#">resolving-tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The prefix of the resolving tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-tunnel</a> <a href="#">ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">ip-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-owner *string*

<b>Description</b>	The application name of the owner of the resolving tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-tunnel</a> <a href="#">tunnel-owner</a> <i>string</i>
<b>Tree</b>	<a href="#">tunnel-owner</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-type *identityref*

<b>Description</b>	The type of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-tunnel</a> <a href="#">tunnel-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>ip-in-ip</li> </ul>

	Tunnels with IP-in-IP encapsulation
	<ul style="list-style-type: none"> <li>• sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• sr-policy-mpls Tunnels setup using SR-POLICY.</li> <li>• vxlan Tunnels based on VXLAN encapsulation</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### subinterface *reference*

<b>Description</b>	The next-hop interface. Only populated when the next-hop type is direct.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <i>string</i> <a href="#">next-hop index</a> <i>number</i> <a href="#">subinterface</a> <i>reference</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### type *identityref*

<b>Description</b>	The next-hop type used by the datapath.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <i>string</i> <a href="#">next-hop index</a> <i>number</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• extract Next-hop will cause matching packets to be delivered to the CPM.</li> <li>• direct Next-hop was resolved by a local route - i.e. it is an address on a connected subnet.</li> <li>• discard</li> </ul>

Next-hop will cause matching packets to be dropped without ICMP generation.

- reject

Next-hop will cause matching packets to be dropped with ICMP generation.

- indirect

Next-hop was resolved by a non-local route - i.e. it is not an address on a connected subnet.

- mpls

An MPLS label will be pushed when forwarding to this next-hop.

- tunnel

Next-hop is a tunnel.

- broadcast

Next-hop will cause matching subnet-broadcast packets to be delivered to the control plane.

- redirect

Next-hop will redirect to another network-instance.

- interface-with-mac

Next-hop is associated with an outbound interface plus MAC address

**Configurable**

False

**Platforms**

Supported on all platforms

## vxlan

**Description**

Enter the vxlan context

**Context**

[network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) [number](#) [vxlan](#)

**Tree**

[vxlan](#)

**Configurable**

False

**Platforms**

Supported on all platforms

## destination-mac *string*

**Description**

VXLAN inner ethernet destination mac-address.

**Context**

[network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) [number](#) [vxlan](#)  
[destination-mac](#) *string*

**Tree**

[destination-mac](#)

**Configurable**

False

**Platforms** Supported on all platforms

### source-mac *string*

**Description** VXLAN inner ethernet source mac-address.

**Context** [network-instance name \*string\*](#) [route-table](#) [next-hop index \*number\*](#) [vxlan source-mac \*string\*](#)

**Tree** [source-mac](#)

**Configurable** False

**Platforms** Supported on all platforms

### vni *number*

**Description** VXLAN Network Identifier of the destination.

**Context** [network-instance name \*string\*](#) [route-table](#) [next-hop index \*number\*](#) [vxlan vni \*number\*](#)

**Tree** [vni](#)

**Range** 1 to 16777215

**Configurable** False

**Platforms** Supported on all platforms

### next-hop-group [index \*number\*](#)

**Description** Enter the next-hop-group list instance

**Context** [network-instance name \*string\*](#) [route-table](#) [next-hop-group \*index number\*](#)

**Tree** [next-hop-group](#)

**Configurable** False

**Platforms** Supported on all platforms

### index *number*

**Description** A system-wide unique identifier of a next-hop-group indirection object (system allocated).

**Context** [network-instance name \*string\*](#) [route-table](#) [next-hop-group \*index number\*](#)

**Configurable** False

**Platforms** Supported on all platforms

**backup-next-hop-group** *reference*

<b>Description</b>	The backup next-hop-group for the current group. When all entries within the next-hop group become unusable, the backup next-hop group is used if specified.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">backup-next-hop-group reference</a>
<b>Tree</b>	<a href="#">backup-next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the object
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-complexes** *string*

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">fib-programming last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-operation-type** *keyword*

<b>Description</b>	The last operation type that failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">fib-programming last-failed-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-failed-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• add</li> </ul>

- The current or last operation was an attempt to create a new entry.
- delete
  - The current or last operation was an attempt to delete an existing entry.
- modify
  - The current or last operation was an attempt to modify an existing entry.
- none
  - There was no prior operation for this entry or there is no current operation that is in process

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-successful-operation-timestamp *string*

<b>Description</b>	The date and time of the last operation to complete successfully. A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-successful-operation-type *keyword*

<b>Description</b>	The last operation type that completed successfully.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• add           <ul style="list-style-type: none"> <li>The current or last operation was an attempt to create a new entry.</li> </ul> </li> <li>• delete           <ul style="list-style-type: none"> <li>The current or last operation was an attempt to delete an existing entry.</li> </ul> </li> <li>• modify           <ul style="list-style-type: none"> <li>The current or last operation was an attempt to modify an existing entry.</li> </ul> </li> </ul>

- none  
There was no prior operation for this entry or there is no current operation that is in process

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### pending-operation-type *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• add The current or last operation was an attempt to create a new entry.</li> <li>• delete The current or last operation was an attempt to delete an existing entry.</li> <li>• modify The current or last operation was an attempt to modify an existing entry.</li> <li>• none There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### group-name-alias *string*

<b>Description</b>	The alias name associated with this next-hop-group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">group-name-alias</a> <i>string</i>
<b>Tree</b>	<a href="#">group-name-alias</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### next-hop [id](#) *number*

<b>Description</b>	Enter the next-hop list instance
--------------------	----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	A unique identifier of a next-hop member (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i>
<b>Range</b>	0 to 1023
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop** *reference*

<b>Description</b>	Enter the next-hop context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">next-hop</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resolved** *keyword*

<b>Description</b>	Set to true when the next-hop was resolved. This reads not-applicable for resolve=false next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">resolved</a> <i>keyword</i>
<b>Tree</b>	<a href="#">resolved</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> <li>• not-applicable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**weight** *number*

<b>Description</b>	The configured/programmed weight assigned to the next-hop within the group  This may be different from the actual weight used by the datapath, which changes depending on the next-hops that are up/down in the group. Traffic is balanced across the next-hops within the group in proportion of the actual weight.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**programmed-index** *number*

<b>Description</b>	The index assigned to the next-hop-group by the gRIBI client
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">programmed-index</a> <i>number</i>
<b>Tree</b>	<a href="#">programmed-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-id** *string*

<b>Description</b>	A identifier for the local network instance - typically used within associated routing protocols or signalling routing information in another network instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**segment-routing**

<b>Description</b>	Container with segment routing configuration options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a>
<b>Tree</b>	<a href="#">segment-routing</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## mpls

<b>Description</b>	Adding this container activates datapath support for SR-MPLS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## global-block

<b>Description</b>	Container with SRGB configuration that is applicable to all IGP protocol instances
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block</a>
<b>Tree</b>	<a href="#">global-block</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## label-range *reference*

<b>Description</b>	Reference to a static label range
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block label-range reference</a>
<b>Tree</b>	<a href="#">label-range</a>
<b>Reference</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## label-range-status *keyword*

<b>Description</b>	Status of the label block. The label block may show as unavailable if there is pending cleanup.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block label-range-status keyword</a>
<b>Tree</b>	<a href="#">label-range-status</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### local-prefix-sid [prefix-sid-index number](#)

<b>Description</b>	List of configured protocol-independent prefix SIDs associated with the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index number</a>
<b>Tree</b>	<a href="#">local-prefix-sid</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	4

### prefix-sid-index *number*

<b>Description</b>	An index to enumerate the different prefix sids
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index number</a>
<b>Range</b>	1 to 4
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface *reference*

<b>Description</b>	<p>Reference to the subinterface that owns the prefix(es) to be advertised.</p> <p>If ipv4-label-index is assigned a value then the primary IPv4 address of the referenced subinterface is advertised as a prefix SID.</p> <p>If ipv6-label-index is assigned a value then the primary IPv6 address of the referenced subinterface is advertised as a prefix SID.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index number</a> <a href="#">interface reference</a>

<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ipv4-label-index** *number*

<b>Description</b>	Label index to add to SRGB base.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">ipv4-label-index</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv4-label-index</a>
<b>Range</b>	0 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **ipv6-label-index** *number*

<b>Description</b>	Label index to add to SRGB base.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">ipv6-label-index</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-label-index</a>
<b>Range</b>	0 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **node-sid** *boolean*

<b>Description</b>	If set, the prefix SID(s) identity the router as a whole.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Default</b>	true

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## sid-database

<b>Description</b>	Database of all known prefix SIDs, local and remote.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a>
<b>Tree</b>	<a href="#">sid-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**prefix-sid** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [sid-label-value](#) *number* [protocol](#) *keyword* [protocol-instance](#) *number* [protocol-multi-topology](#) *number* [algorithm](#) *number*

<b>Description</b>	List of prefix SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## sid-label-value *number*

<b>Description</b>	The MPLS label value associated with the SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>

<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **protocol** *keyword*

<b>Description</b>	The protocol that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">mpls</a> <a href="#">sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• isis</li> <li>• direct</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **protocol-instance** *number*

<b>Description</b>	The instance ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">mpls</a> <a href="#">sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **protocol-multi-topology** *number*

<b>Description</b>	The multi-topology ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">mpls</a> <a href="#">sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **algorithm** *number*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**active** *boolean*

<b>Description</b>	When false, the prefix SID is inactive.  It could be inactive because it is involved in a prefix or SID conflict that occurred between different protocol-instance. It could also be inactive because datapath programming failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**prefix-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a prefix conflict that has occurred between protocols. This occurs when there are multiple entries in the SID database for the same prefix. All the conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">prefix-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sid-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a SID conflict that has occurred between protocols (after first removing inter-protocol prefix conflict entries). All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation local-prefix-sid entries are considered to have a lower numerical preference than
--------------------	---

remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">mpls</a> <a href="#">sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol</a> <i>keyword</i> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">sid-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## segment-routing-policies

<b>Description</b>	Container with segment routing policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a>
<b>Tree</b>	<a href="#">segment-routing-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## binding-sid

<b>Description</b>	Configuration and state related to the label block(s) used for the binding SIDs associated with SR policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">binding-sid</a>
<b>Tree</b>	<a href="#">binding-sid</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## static-assignment

<b>Description</b>	Container applicable to statically assigned binding SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">binding-sid</a> <a href="#">static-assignment</a>
<b>Tree</b>	<a href="#">static-assignment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-range** *reference*

<b>Description</b>	Reference to a static label range
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">binding-sid</a> <a href="#">static-assignment</a> <a href="#">label-range</a> <i>reference</i>
<b>Tree</b>	<a href="#">label-range</a>
<b>Reference</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-range-status** *keyword*

<b>Description</b>	Status of the label block. The label block may show as unavailable if there is pending cleanup.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">binding-sid</a> <a href="#">static-assignment</a> <a href="#">label-range-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">label-range-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**named-paths**

<b>Description</b>	Named paths used to specify SR policy segment lists
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths</a>
<b>Tree</b>	<a href="#">named-paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**path** [named-path-name](#) *string*

<b>Description</b>	Enter the path list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths</a> <a href="#">path</a> <a href="#">named-path-name</a> <i>string</i>
<b>Tree</b>	<a href="#">path</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### named-path-name *string*

<b>Description</b>	A unique name to identify the named path
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths path</a> <a href="#">named-path-name <i>string</i></a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hop *index number*

<b>Description</b>	Enter the hop list instance
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths path</a> <a href="#">named-path-name <i>string</i></a> <a href="#">hop index <i>number</i></a>
<b>Tree</b>	<a href="#">hop</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e
<b>Max. Elements</b>	4

### index *number*

<b>Description</b>	The index number of the hop. Hops are processed in ascending sequence.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths path</a> <a href="#">named-path-name <i>string</i></a> <a href="#">hop index <i>number</i></a>
<b>Range</b>	1 to 4
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### hop-type *keyword*

<b>Description</b>	Enter the hop-type context
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths path</a> <a href="#">named-path-name <i>string</i></a> <a href="#">hop index <i>number</i></a> <a href="#">hop-type <i>keyword</i></a>

<b>Tree</b>	<a href="#">hop-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>strict           <p>A strict hop is always one hop away from the previous hop (or from the head-end in the case of the first hop). TE DB translates each strict hop into an adjacency-SID label. To be resolved to an adjacency SID, a strict hop must be a non-local IP address on a connected subnet (representing the neighbor's interface address on this subnet) or it must be a loopback or system address of the directly-connected neighbor.</p> </li> <li>loose           <p>A loose hop can be any number of hops away from the previous hop (or from the head-end in the case of the first hop). TE DB translates each loose hop into a node-SID label. A loose hop can be any IP address of the remote router associated with the node SID, not just the IP address associated with the node SID itself.</p> <p>Note that the endpoint of the policy is implicitly considered to be a final loose hop. If the final configured hop (previous hop of this implicit loose hop) is unnecessary TEDB indicates this to SR policy manager and the adjacency SID or node SID of the final configured hop is omitted from the datapath programming.</p> </li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **ip-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	An IPv4 or IPv6 address that is a hop to be visited on the way to the destination
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths</a> <a href="#">path</a> <a href="#">named-path-name</a> <i>string</i> <a href="#">hop</a> <a href="#">index</a> <i>number</i> <a href="#">ip-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **policy-database**

<b>Description</b>	Enter the policy-database context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a>
<b>Tree</b>	<a href="#">policy-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**policy color number endpoint** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the policy list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database policy color number endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**color number**

<b>Description</b>	Color associated with the SR policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database policy color number endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**endpoint** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Policy endpoint IP address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database policy color number endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**candidate-path candidate-path-index number**

<b>Description</b>	SR policy candidate paths. This list includes local static policies, but only those that have both a color and endpoint.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database policy color number endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">candidate-path candidate-path-index number</a>
<b>Tree</b>	<a href="#">candidate-path</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**candidate-path-index** *number*

<b>Description</b>	Index to enumerate the different candidate paths for a (color, endpoint).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <a href="#">number</a> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**binding-sid** *number*

<b>Description</b>	The binding SID of the candidate path.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <a href="#">number</a> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <a href="#">number</a> <a href="#">binding-sid</a> <i>number</i>
<b>Tree</b>	<a href="#">binding-sid</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**discriminator** *number*

<b>Description</b>	Candidate path distinguisher
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <a href="#">number</a> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <a href="#">number</a> <a href="#">discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">discriminator</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**invalid-reason** *identityref*

<b>Description</b>	The reason why the candidate path is invalid. One of the following values:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <a href="#">number</a> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <a href="#">number</a> <a href="#">invalid-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>admin-disabled</li> </ul>

The candidate path is administratively disabled

- no-valid-segment-list

The candidate path has no valid segment lists

- no-binding-sid-label

No free labels in the label-range

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### originator *string*

**Description**

Identifier (concatenation of ASN and node-address) of the node that signalled/instantiated the candidate path on headend

**Context**

[network-instance name](#) *string* [segment-routing](#) [segment-routing-policies](#) [policy-database](#) [policy color](#) *number* [endpoint](#) (*ipv4-address* | *ipv6-address*) [candidate-path](#) [candidate-path-index](#) *number* [originator](#) *string*

**Tree**

[originator](#)

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### path-type *keyword*

**Description**

The candidate path type.

One of the following values:

**Context**

[network-instance name](#) *string* [segment-routing](#) [segment-routing-policies](#) [policy-database](#) [policy color](#) *number* [endpoint](#) (*ipv4-address* | *ipv6-address*) [candidate-path](#) [candidate-path-index](#) *number* [path-type](#) *keyword*

**Tree**

[path-type](#)

**Options**

- best

The candidate path is the best valid path but it does not have a protection policy with SBFDD enabled

- primary

The candidate path is the best valid path and it has a protection policy with SBFDD enabled.

- secondary

The candidate path is the second best valid path and it has a protection policy with SBFDD enabled.

- tertiary

The candidate path is the third best valid path and it has a protection policy with SBFDD enabled.

- other

The candidate path is invalid or else it is valid but without special designation as best, primary, secondary or tertiary.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### preference *number*

<b>Description</b>	Candidate path preference
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### protection-available *boolean*

<b>Description</b>	True when this (primary) candidate path is protected by another pre-programmed candidate path.  For a primary path to be protected all of the following conditions must be met:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">protection-available</a> <i>boolean</i>
<b>Tree</b>	<a href="#">protection-available</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### protocol-origin *keyword*

<b>Description</b>	Instantiation mechanism used to create the candidate path
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">protocol-origin</a> <i>keyword</i>

<b>Tree</b>	<a href="#">protocol-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• pcep PCEP used as signalling mechanism for the candidate path</li> <li>• bgp BGP used as signalling mechanism for the candidate path</li> <li>• local Management interface used for candidate path instantiation</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### segment-list [segment-list-index](#) *number*

<b>Description</b>	Enter the segment-list list instance
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### segment-list-index *number*

<b>Description</b>	Index to enumerate the different segment lists.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>
<b>Range</b>	1 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### invalid-reason *identityref*

<b>Description</b>	The reason why the segment list is invalid. One of the following values:
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <a href="#">string</a> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )

	<a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">invalid-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">unresolved-first-segment</a> The system is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s)</li> <li>• <a href="#">unresolved-named-path</a> The most recent query to TEDB about the named path (triggered by periodic re-optimization or initially) indicated that the named path is not viable.</li> <li>• <a href="#">maximum-label-stack-depth-exceeded</a> The resolution of the named path requires more labels than supported by the hardware datapath.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**oper-state** *keyword*

<b>Description</b>	Segment list operational state
<b>Context</b>	<a href="#">network-instance</a> <i>name string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <i>color number</i> <a href="#">endpoint</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">up</a> The segment-list is valid and belongs to a candidate path that is best, primary, secondary or tertiary and if SBFDF is enabled, the SBFDF session state is up.</li> <li>• <a href="#">sbfdf-down</a> The segment-list is valid and belongs to a candidate path that is primary, secondary or tertiary but the SBFDF session state is down (or in hold-down).</li> <li>• <a href="#">valid</a> The segment-list is valid but does not belong to a candidate path that is best, primary, secondary or tertiary</li> <li>• <a href="#">invalid</a> The segment-list is invalid and the reason will be provided</li> <li>• <a href="#">down</a> The parent candidate path is administratively disabled, or this segment list has been administratively disabled</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sbfd-session-id** *number*

<b>Description</b>	Sessions ID used to associate segment list to seamless-BFD session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>sbfd-session-id</b> <i>number</i>
<b>Tree</b>	<a href="#">sbfd-session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **segment** [segment-index](#) *number*

<b>Description</b>	Enter the segment list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i>
<b>Tree</b>	<a href="#">segment</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **segment-index** *number*

<b>Description</b>	Index to enumerate the different segments in a segment-list
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **segment-type-a**

<b>Description</b>	Segment identified by MPLS label
--------------------	----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i> <a href="#">segment-type-a</a>
<b>Tree</b>	<a href="#">segment-type-a</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sid-value** *number*

<b>Description</b>	MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i> <a href="#">segment-type-a</a> <a href="#">sid-value</a> <i>number</i>
<b>Tree</b>	<a href="#">sid-value</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**out-octets** *number*

<b>Description</b>	Number of octets forwarded by the segment-list, including packets matched by the binding SID and packets matching the tunnel entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics</a> <a href="#">out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>

<b>Default</b>	0
<b>Units</b>	byte
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### out-packets *number*

<b>Description</b>	Number of packets forwarded by the segment-list, including packets matched by the binding SID and packets matching the tunnel entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics</a> <a href="#">out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### valid *boolean*

<b>Description</b>	True when the candidate path is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">policy-database</a> <a href="#">policy</a> <a href="#">color</a> <i>number</i> <a href="#">endpoint</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">candidate-path</a> <a href="#">candidate-path-index</a> <i>number</i> <a href="#">valid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### protection-policies

<b>Description</b>	Container with protection policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a>
<b>Tree</b>	<a href="#">protection-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**policy** *protection-policy-name string*

<b>Description</b>	Enter the policy list instance
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing segment-routing-policies protection-policies policy protection-policy-name string</a>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**protection-policy-name** *string*

<b>Description</b>	A unique identifying name for the protection policy
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing segment-routing-policies protection-policies policy protection-policy-name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**hold-down-timer** *number*

<b>Description</b>	Specifies a hold-down timer value when seamless-bfd is enabled  This timer is started whenever the Sbfd session finishes a transition from up->down->up. While this timer is running the Sbfd session state stays in hold-down and the corresponding segment-list stays in sbfd-down state.  The default is 3 seconds.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing segment-routing-policies protection-policies policy protection-policy-name string</a> <a href="#">hold-down-timer number</a>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**revert-timer** *number*

<b>Description</b>	Specifies a revert timer value when seamless-bfd is enabled  The revert timer applies to a primary candidate path with a segment-list for which the Sbfd session has just completed the transition up -> down -> hold-down to up during a period where the candidate path has remained
--------------------	--

the primary path the entire time. While this timer is running traffic stays on the secondary (or tertiary) path, unless that secondary/tertiary path fails. When the timer expires, traffic reverts back to the primary path. If the Sbfd session failure is followed by an event that causes the primary path to be considered invalid any remaining time on the revert-timer is cancelled and another candidate path may be selected as the new primary path; there is no delay in switching over to this new primary path.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i> <a href="#">revert-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">revert-timer</a>
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## seamless-bfd

<b>Description</b>	When present, this node attempts to setup a seamless BFD session on every segment-list of every SR policy that uses this protection-policy, but only if that SR policy is a primary or secondary candidate path (or it is a tertiary path at a time when the secondary path is down). The transition of an Sbfd session from up to down is a trigger for rerouting traffic around a failed primary path.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i> <a href="#">seamless-bfd</a>
<b>Tree</b>	<a href="#">seamless-bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## desired-minimum-transmit-interval *number*

<b>Description</b>	The minimum interval between transmission of BFD control packets This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-receive interval value. This value is specified as an integer number of microseconds.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i> <a href="#">seamless-bfd</a> <a href="#">desired-minimum-transmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">desired-minimum-transmit-interval</a>
<b>Range</b>	10000 to 100000000

<b>Default</b>	1000000
<b>Units</b>	microseconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **multiplier** *number*

<b>Description</b>	The number of packets that must be missed to declare this session as down The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i> <a href="#">seamless-bfd</a> <a href="#">multiplier</a> <i>number</i>
<b>Tree</b>	<a href="#">multiplier</a>
<b>Range</b>	3 to 20
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **return-path-label** *number*

<b>Description</b>	The MPLS label to be used to by the far-end device to return the BFD message This label is added as the bottom value in the segment routing label stack and will be used by the far-end device to return BFD message to the originator. This value could either be a MPLS label or a binding SID that will be used at the far-end to match an appropriate polciy to return the traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i> <a href="#">seamless-bfd</a> <a href="#">return-path-label</a> <i>number</i>
<b>Tree</b>	<a href="#">return-path-label</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **static-policies**

<b>Description</b>	Enter the static-policies context
--------------------	-----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a>
<b>Tree</b>	<a href="#">static-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **policy** [static-policy-name](#) *string*

<b>Description</b>	Enter the policy list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **static-policy-name** *string*

<b>Description</b>	policy name
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **admin-state** *keyword*

<b>Description</b>	SR policy administrative state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**binding-sid** *number*

<b>Description</b>	The binding SID of the policy (candidate path). Amongst all static policies that have a configured binding-sid, each must have a unique value for this leaf. If no value is specified then no binding SID is allocated or programmed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <b>binding-sid</b> <i>number</i>
<b>Tree</b>	<a href="#">binding-sid</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**color** *number*

<b>Description</b>	Color associated with the policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <b>color</b> <i>number</i>
<b>Tree</b>	<a href="#">color</a>
<b>Range</b>	0 to 4294967295
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**description** *string*

<b>Description</b>	Description of the policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <b>description</b> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**endpoint** (*ipv4-address-excluding-all-zero* | *ipv6-address-excluding-all-zero*)

<b>Description</b>	Policy endpoint IP address
--------------------	----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">endpoint</a> ( <i>ipv4-address-excluding-all-zero</i>   <i>ipv6-address-excluding-all-zero</i> )
<b>Tree</b>	<a href="#">endpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **invalid-reason** *identityref*

<b>Description</b>	The reason why the candidate path is invalid. One of the following values:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">invalid-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">admin-disabled</a> The candidate path is administratively disabled</li> <li>• <a href="#">no-valid-segment-list</a> The candidate path has no valid segment lists</li> <li>• <a href="#">no-binding-sid-label</a> No free labels in the label-range</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **path-type** *keyword*

<b>Description</b>	The candidate path type. One of the following values:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">path-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">path-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">best</a> The candidate path is the best valid path but it does not have a protection policy with SBFDD enabled</li> <li>• <a href="#">primary</a> The candidate path is the best valid path and it has a protection policy with SBFDD enabled.</li> <li>• <a href="#">secondary</a></li> </ul>

The candidate path is the second best valid path and it has a protection policy with SBFDD enabled.

- tertiary

The candidate path is the third best valid path and it has a protection policy with SBFDD enabled.

- other

The candidate path is invalid or else it is valid but without special designation as best, primary, secondary or tertiary.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### preference *number*

<b>Description</b>	One valid candidate path is considered better than another valid candidate path for the same (color, endpoint) if it has a higher preference than the other path.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Range</b>	1 to 65535
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### protection-available *boolean*

<b>Description</b>	True when this (primary) candidate path is protected by another pre-programmed candidate path.  For a primary path to be protected all of the following conditions must be met:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">protection-available</a> <i>boolean</i>
<b>Tree</b>	<a href="#">protection-available</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**protection-policy** *reference*

<b>Description</b>	Enter the protection-policy context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">protection-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">protection-policy</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">protection-policies</a> <a href="#">policy</a> <a href="#">protection-policy-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**segment-list** [segment-list-index](#) *number*

<b>Description</b>	Enter the segment-list list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e
<b>Max. Elements</b>	1

**segment-list-index** *number*

<b>Description</b>	Index to enumerate the different segment lists for a static policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>
<b>Range</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**admin-state** *keyword*

<b>Description</b>	Used to administratively enable or disable a segment list
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### invalid-reason *identityref*

<b>Description</b>	The reason why the segment list is invalid. One of the following values:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">invalid-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unresolved-first-segment The system is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s)</li> <li>• unresolved-named-path The most recent query to TEDB about the named path (triggered by periodic re-optimization or initially) indicated that the named path is not viable.</li> <li>• maximum-label-stack-depth-exceeded The resolution of the named path requires more labels than supported by the hardware datapath.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### named-path *reference*

<b>Description</b>	Enter the named-path context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">named-path</a> <i>reference</i>
<b>Tree</b>	<a href="#">named-path</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">named-paths</a> <a href="#">path</a> <a href="#">named-path-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**oper-state** *keyword*

<b>Description</b>	Segment list operational state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>oper-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up The segment-list is valid and belongs to a candidate path that is best, primary, secondary or tertiary and if Sbfd is enabled, the Sbfd session state is up.</li> <li>• sbfd-down The segment-list is valid and belongs to a candidate path that is primary, secondary or tertiary but the Sbfd session state is down (or in hold-down).</li> <li>• valid The segment-list is valid but does not belong to a candidate path that is best, primary, secondary or tertiary</li> <li>• invalid The segment-list is invalid and the reason will be provided</li> <li>• down The parent candidate path is administratively disabled, or this segment list has been administratively disabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**re-optimization-timer** *number*

<b>Description</b>	<p>Sets the value of the re-optimization timer specific to the named-path.</p> <p>Whenever a named-path segment-list transitions from down to up this periodic timer is started. Every time it expires SR policy manager queries TEDB for the latest resolution detail. The result of this query can change the valid state of the segment list (valid -&gt; invalid or invalid -&gt; valid) or it can return a new SID list based on the current network topology.</p> <p>TEDB determines that a named path is invalid if any of the following applies:</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>re-optimization-timer</b> <i>number</i>
<b>Tree</b>	<a href="#">re-optimization-timer</a>

<b>Range</b>	3 to 600
<b>Default</b>	30
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **sbfd-session-id** *number*

<b>Description</b>	Sessions ID used to associate segment list to seamless-BFD session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>sbfd-session-id</b> <i>number</i>
<b>Tree</b>	<a href="#">sbfd-session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **segment** [segment-index](#) *number*

<b>Description</b>	Enter the segment list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>segment</b> <a href="#">segment-index</a> <i>number</i>
<b>Tree</b>	<a href="#">segment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e
<b>Max. Elements</b>	2

### **segment-index** *number*

<b>Description</b>	Index to enumerate the different segments in a segment-list
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <b>segment</b> <a href="#">segment-index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**segment-type-a**

<b>Description</b>	Segment identified by MPLS label
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i> <a href="#">segment-type-a</a>
<b>Tree</b>	<a href="#">segment-type-a</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**sid-value** *number*

<b>Description</b>	MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">segment</a> <a href="#">segment-index</a> <i>number</i> <a href="#">segment-type-a</a> <a href="#">sid-value</a> <i>number</i>
<b>Tree</b>	<a href="#">sid-value</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**out-octets** *number*

<b>Description</b>	Number of octets forwarded by the segment-list, including packets matched by the binding SID and packets matching the tunnel entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies</a> <a href="#">policy</a> <a href="#">static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics</a> <a href="#">out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>

<b>Default</b>	0
<b>Units</b>	byte
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**out-packets** *number*

<b>Description</b>	Number of packets forwarded by the segment-list, including packets matched by the binding SID and packets matching the tunnel entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies policy static-policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i> <a href="#">statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**valid** *boolean*

<b>Description</b>	True when the candidate path is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-policies</a> <a href="#">static-policies policy static-policy-name</a> <i>string</i> <a href="#">valid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**static-routes**

<b>Description</b>	Enable the static-routes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a>
<b>Tree</b>	<a href="#">static-routes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enter the admin-state context
--------------------	-------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	16384

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	Used to disable the static route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **installed** *boolean*

**Description** If set to true, this indicates that the static route was installed into the datapath. If this is false then there are 3 possible reasons: (a) the admin-state is disable (b) there is another IP route for the same prefix that has a superior preference (c) the next-hop-group has no resolvable next-hops

**Context** [network-instance name](#) *string* [static-routes route prefix](#) (*ipv4-prefix | ipv6-prefix*) [installed](#) *boolean*

**Tree** [installed](#)

**Configurable** False

**Platforms** Supported on all platforms

### **metric** *number*

**Description** IGP metric of the static route.

**Context** [network-instance name](#) *string* [static-routes route prefix](#) (*ipv4-prefix | ipv6-prefix*) [metric](#) *number*

**Tree** [metric](#)

**Default** 1

**Configurable** True

**Platforms** Supported on all platforms

### **next-hop-group** *reference*

**Description** Enter the next-hop-group context

**Context** [network-instance name](#) *string* [static-routes route prefix](#) (*ipv4-prefix | ipv6-prefix*) [next-hop-group reference](#)

**Tree** [next-hop-group](#)

**Reference** [network-instance name](#) *string* [next-hop-groups group name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

### **preference** *number*

**Description** Route preference with lower values indicating a higher degree of preference.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Range</b>	0 to 255
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### system-ipv4-address

<b>Description</b>	Container for displaying information about the system IPv4 address of the default network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a>
<b>Tree</b>	<a href="#">system-ipv4-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### oper-down-reason *keyword*

<b>Description</b>	The reason why the default network instance does not have a system IPv4 address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">system-interface-not-bound</a></li> <li>• <a href="#">system-interface-has-no-ipv4-address</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### oper-state *keyword*

<b>Description</b>	The operational state of the system IPv4 address binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">up</a> Component or process is operational</li> </ul>

- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**system-ipv6-address****Description**

Container for displaying information about the system IPv6 address of the default network-instance

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a>
<b>Tree</b>	<a href="#">system-ipv6-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-down-reason** *keyword*

<b>Description</b>	The reason why the default network instance does not have a system IPv6 address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">system-interface-not-bound</a></li> <li>• <a href="#">system-interface-has-no-ipv6-address</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	The operational state of the system IPv6 address binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">up</a> Component or process is operational</li> <li>• <a href="#">down</a> Component or process is not operational</li> <li>• <a href="#">empty</a> Component slot is empty</li> <li>• <a href="#">downloading</a> Component is downloading image into memory</li> <li>• <a href="#">booting</a> Component is booting downloaded image</li> <li>• <a href="#">starting</a> Component image operational, application processes starting</li> <li>• <a href="#">failed</a> Component or process has failed</li> </ul>

- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tcp

<b>Description</b>	State for TCP connections that have been established or could be established using the route tables of this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp</a>
<b>Tree</b>	<a href="#">tcp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**connection** [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number* [remote-address](#) (*ipv4-address* | *ipv6-address*) [remote-port](#) *number*

<b>Description</b>	List of TCP connections that are established or that are in the process of being established – i.e. excluding those in the LISTEN state. An entry in this list is transient in that it ceases to exist when (or soon after) the connection makes the transition to the CLOSED state.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">connection</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-address** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	The local IP address for this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-port** *number*

<b>Description</b>	The local port number for this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-address** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	The remote IP address for this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-port** *number*

<b>Description</b>	The remote port number for this TCP connection.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">remote-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">remote-port</a> <i>number</i> <a href="#">process-id</a> <i>number</i>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**session-state** *keyword*

<b>Description</b>	The state of this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">remote-port</a> <i>number</i> <a href="#">session-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">session-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• closed</li> <li>• syn-sent</li> <li>• syn-received</li> <li>• established</li> <li>• fin-wait1</li> <li>• fin-wait2</li> <li>• close-wait</li> <li>• last-ack</li> <li>• closing</li> <li>• time-wait</li> <li>• delete-tcb</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**listening-application** *local-address (ipv4-address | ipv6-address) local-port number*

<b>Description</b>	List of applications that are listening on a particular TCP port bound to the network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string tcp listening-application local-address (ipv4-address   ipv6-address) local-port number</i>
<b>Tree</b>	<a href="#">listening-application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-address** *(ipv4-address | ipv6-address)*

<b>Description</b>	The local IP address accepted by the application. An all-zeroes value for the ipv4-address means that any IPv4 address is accepted. An all-zeroes value for the ipv6-address means that any IPv6 address is accepted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string tcp listening-application local-address (ipv4-address   ipv6-address) local-port number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-port** *number*

<b>Description</b>	The local port number accepted by the application.
<b>Context</b>	<a href="#">network-instance name</a> <i>string tcp listening-application local-address (ipv4-address   ipv6-address) local-port number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
<b>Context</b>	<a href="#">network-instance name</a> <i>string tcp listening-application local-address (ipv4-address   ipv6-address) local-port number process-id number</i>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-opens** *number*

<b>Description</b>	The total number of times that TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics active-opens</a> <i>number</i>
<b>Tree</b>	<a href="#">active-opens</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attempt-fails** *number*

<b>Description</b>	The total number of times that TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times that TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics attempt-fails</a> <i>number</i>
<b>Tree</b>	<a href="#">attempt-fails</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**established-resets** *number*

<b>Description</b>	The total number of times that TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics established-resets</a> <i>number</i>
<b>Tree</b>	<a href="#">established-resets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-checksum-errors** *number*

<b>Description</b>	The total number of segments that are received as bad TCP checksum errors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics in-checksum-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">in-checksum-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-error-segments** *number*

<b>Description</b>	The total number of segments received in error (e.g., bad TCP checksums).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics in-error-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-segments** *number*

<b>Description</b>	The total number of segments received, including those received in error. This count includes segments received on currently established connections.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics in-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">in-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-rst-segments** *number*

<b>Description</b>	The total number of TCP segments sent containing the RST flag.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics out-rst-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">out-rst-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-segments** *number*

<b>Description</b>	The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics out-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">out-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **passive-opens** *number*

<b>Description</b>	The total number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics passive-opens</a> <i>number</i>
<b>Tree</b>	<a href="#">passive-opens</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **retransmitted-segments** *number*

<b>Description</b>	The total number of segments retransmitted; that is, the number of TCP segments transmitted containing one or more previously transmitted octets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics retransmitted-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmitted-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**traffic-engineering**

<b>Description</b>	Container with traffic engineering options for the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a>
<b>Tree</b>	<a href="#">traffic-engineering</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-groups**

<b>Description</b>	Container for configuring admin groups
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a> <a href="#">admin-groups</a>
<b>Tree</b>	<a href="#">admin-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**group** *name string*

<b>Description</b>	List of admin groups defined for this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a> <a href="#">admin-groups</a> <a href="#">group name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name** *string*

<b>Description</b>	The name of the admin group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a> <a href="#">admin-groups</a> <a href="#">group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **bit-position** *number*

**Description** The bit-position value for the admin-group.  
The value for the admin group is an integer that represents one of the bit positions in the admin-group bitmask.

**Context** [network-instance name](#) *string* [traffic-engineering admin-groups group name](#) *string* [bit-position](#) *number*

**Tree** [bit-position](#)

**Range** 0 to 31

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **autonomous-system** *number*

**Description** The autonomous system number of the network-instance, for protocols and pseudo-protocols that do not have their own configuration of AS number.

**Context** [network-instance name](#) *string* [traffic-engineering autonomous-system](#) *number*

**Tree** [autonomous-system](#)

**Range** 1 to 4294967295

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **interface** [interface-name](#) *reference*

**Description** List of routed subinterfaces that have associated TE information

**Context** [network-instance name](#) *string* [traffic-engineering interface](#) [interface-name](#) *reference*

**Tree** [interface](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *reference*

**Description** Name of a subinterface that is already bound to this network-instance that should have TE information associated with it

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference*

**Reference** [network-instance name](#) *string* [interface name](#) *string*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### admin-group *reference*

**Description** The list of admin-groups generically associated with the interface (not application specific)

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference* [admin-group](#) *reference*

**Tree** [admin-group](#)

**Reference** [network-instance name](#) *string* [traffic-engineering admin-groups group name](#) *string*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### delay

**Description** Container with options for assigning a TE delay value to the interface (not application specific)

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference* [delay](#)

**Tree** [delay](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **static number**

**Description** A statically configured delay value

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference* [delay static number](#)

**Tree** [static](#)

**Units** microseconds

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **srlg-membership reference**

**Description** The list of srlgs generically associated with the interface (not application specific)

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference* [srlg-membership reference](#)

**Tree** [srlg-membership](#)

**Reference** [network-instance name](#) *string* [traffic-engineering shared-risk-link-groups group name](#) *string*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **te-metric number**

**Description** The TE metric associated with the interface (not application specific)

**Context** [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *reference* [te-metric number](#)

**Tree** [te-metric](#)

**Range** 1 to 16777215

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv4-te-router-id *string*

**Description** A routable IPv4 address to identify the router uniquely in a TE domain.

**Context** [network-instance name](#) *string* [traffic-engineering ipv4-te-router-id](#) *string*

**Tree** [ipv4-te-router-id](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv6-te-router-id *string*

**Description** A routable IPv6 address to identify the router uniquely in a TE domain.

**Context** [network-instance name](#) *string* [traffic-engineering ipv6-te-router-id](#) *string*

**Tree** [ipv6-te-router-id](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### shared-risk-link-groups

**Description** Container for configuring SRLGs

**Context** [network-instance name](#) *string* [traffic-engineering shared-risk-link-groups](#)

**Tree** [shared-risk-link-groups](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### group *name string*

**Description** List of shared risk link groups defined for this network instance.

**Context** [network-instance name](#) *string* [traffic-engineering shared-risk-link-groups](#) [group name](#) *string*

<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name** *string*

<b>Description</b>	The name of the shared risk link group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**cost** *number*

<b>Description</b>	The cost of the SRLG to the computation algorithm
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <i>cost</i> <i>number</i>
<b>Tree</b>	<a href="#">cost</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**static-member** [from-address](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Static SRLG members
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <a href="#">static-member from-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">static-member</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**from-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address of the a-side of the SRLG link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <a href="#">static-member from-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**to-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address of the z-side of the SRLG link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <a href="#">static-member from-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">to-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">to-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**value** *number*

<b>Description</b>	Group ID for the SRLG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <a href="#">value</a> <i>number</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**tunnel-table**

<b>Description</b>	Enter the tunnel-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a>
<b>Tree</b>	<a href="#">tunnel-table</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## ipv4

**Description** The container for the IPv4 tunnels associated with the network instance.

**Context** [network-instance name](#) *string* [tunnel-table](#) [ipv4](#)

**Tree** [ipv4](#)

**Configurable** False

**Platforms** Supported on all platforms

## statistics

**Description** Enter the statistics context

**Context** [network-instance name](#) *string* [tunnel-table](#) [ipv4](#) [statistics](#)

**Tree** [statistics](#)

**Configurable** False

**Platforms** Supported on all platforms

## active-tunnels *number*

**Description** The total number of tunnels, belonging to this address family, that are active.

**Context** [network-instance name](#) *string* [tunnel-table](#) [ipv4](#) [statistics](#) [active-tunnels](#) *number*

**Tree** [active-tunnels](#)

**Configurable** False

**Platforms** Supported on all platforms

## inactive-tunnels *number*

**Description** The total number of tunnels, belonging to this address family, that are inactive (not programmed).

**Context** [network-instance name](#) *string* [tunnel-table](#) [ipv4](#) [statistics](#) [inactive-tunnels](#) *number*

**Tree** [inactive-tunnels](#)

**Configurable** False

**Platforms** Supported on all platforms

**total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, belonging to this address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">statistics</a> <a href="#">total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel** [ipv4-prefix](#) *string* [type](#) [identityref](#) [owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the tunnel list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">tunnel</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	The IPv4 prefix associated with the endpoint of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">tunnel</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** [identityref](#)

<b>Description</b>	The tunnel (encapsulation) type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">tunnel</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> </ul>

- sr-ospfv2  
Segment routing using MPLS dataplane, programmed by OSPFv2
- sr-ospfv3  
Segment routing using MPLS dataplane, programmed by OSPFv3
- sr-policy-mpls  
Tunnels setup using SR-POLICY.
- vxlan  
Tunnels based on VXLAN encapsulation

**Configurable** False  
**Platforms** Supported on all platforms

### **owner string**

**Description** The name of the application that submitted the tunnel to TTM  
**Context** [network-instance name](#) [string](#) [tunnel-table ipv4 tunnel ipv4-prefix](#) [string type identityref owner string id number](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **id number**

**Description** An owner-assigned index value that is unique for each of the tunnels terminating at a particular prefix.  
**Context** [network-instance name](#) [string](#) [tunnel-table ipv4 tunnel ipv4-prefix](#) [string type identityref owner string id number](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **encapsulation-type keyword**

**Description** The type of encapsulation used by the tunnel.  
**Context** [network-instance name](#) [string](#) [tunnel-table ipv4 tunnel ipv4-prefix](#) [string type identityref owner string id number encapsulation-type keyword](#)  
**Tree** [encapsulation-type](#)  
**Options**

- vxlan
- mpls

**Configurable** False

**Platforms** Supported on all platforms

## fib-programming

**Description** Container for state related to the FIB programming of the tunnel

**Context** [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string* [type identityref owner](#) *string* [id number fib-programming](#)

**Tree** [fib-programming](#)

**Configurable** False

**Platforms** Supported on all platforms

## not-programmed-reason *keyword*

**Description** The reason why the tunnel is not programmed

**Context** [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string* [type identityref owner](#) *string* [id number fib-programming not-programmed-reason](#) *keyword*

**Tree** [not-programmed-reason](#)

**Options**

- out-of-tunnel-resources

**Configurable** False

**Platforms** Supported on all platforms

## status *keyword*

**Description** The status of the tunnel programming

**Context** [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string* [type identityref owner](#) *string* [id number fib-programming status](#) *keyword*

**Tree** [status](#)

**Options**

- active
  - The tunnel is active and programmed into the datapath.
- inactive
  - The tunnel is inactive and not programmed into the datapath.

**Configurable** False

**Platforms** Supported on all platforms

**ip-in-ip**

<b>Description</b>	Enter the ip-in-ip context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">ip-in-ip</a>
<b>Tree</b>	<a href="#">ip-in-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**destination-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the destination of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">ip-in-ip destination-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the source of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">ip-in-ip source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this tunnel by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **metric number**

**Description** The metric of the tunnel.

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number metric number](#)

**Tree** [metric](#)

**Configurable** False

**Platforms** Supported on all platforms

### **next-hop-group reference**

**Description** Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number next-hop-group reference](#)

**Tree** [next-hop-group](#)

**Reference** [network-instance name string](#) [route-table next-hop-group index number](#)

**Configurable** False

**Platforms** Supported on all platforms

### **preference number**

**Description** The tunnel table preference.

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number preference number](#)

**Tree** [preference](#)

**Configurable** False

**Platforms** Supported on all platforms

### **vxlan**

**Description** Enter the vxlan context

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number vxlan](#)

**Tree** [vxlan](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **destination-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **destination-udp-port** *number*

<b>Description</b>	The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-udp-port</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-udp-port</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the local VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **time-to-live** *number*

<b>Description</b>	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">vxlan</a> <a href="#">time-to-live</a> <i>number</i>
<b>Tree</b>	<a href="#">time-to-live</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-summary

<b>Description</b>	Tunnel summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary</a>
<b>Tree</b>	<a href="#">tunnel-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-type *type identityref*

<b>Description</b>	Enter the tunnel-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary tunnel-type</a> <a href="#">type identityref</a>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## *type identityref*

<b>Description</b>	Tunneling encapsulation format
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary tunnel-type</a> <a href="#">type identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>• sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• sr-policy-mpls</li> </ul>

Tunnels setup using SR-POLICY.

- vxlan

Tunnels based on VXLAN encapsulation

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4</a> <a href="#">tunnel-summary tunnel-type type</a> <a href="#">identityref active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **inactive-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4</a> <a href="#">tunnel-summary tunnel-type type</a> <a href="#">identityref inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, using this encapsulation type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4</a> <a href="#">tunnel-summary tunnel-type type</a> <a href="#">identityref total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv6

<b>Description</b>	The container for the IPv6 tunnels associated with the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## active-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a> <a href="#">active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inactive-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a> <a href="#">inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, belonging to this address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a> <a href="#">total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel** [ipv6-prefix](#) *string* [type](#) [identityref](#) [owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the tunnel list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	The IPv6 prefix associated with the endpoint of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** [identityref](#)

<b>Description</b>	The tunnel (encapsulation) type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>• sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• sr-ospfv2</li> </ul>

Segment routing using MPLS dataplane, programmed by OSPFv2

- sr-ospfv3

Segment routing using MPLS dataplane, programmed by OSPFv3

- sr-policy-mpls

Tunnels setup using SR-POLICY.

- vxlan

Tunnels based on VXLAN encapsulation

**Configurable**

False

**Platforms**

Supported on all platforms

### **owner string**

**Description**

The name of the application that submitted the tunnel to TTM

**Context**

[network-instance name](#) *string* [tunnel-table ipv6 tunnel ipv6-prefix](#) *string type identityref owner string id number*

**Configurable**

False

**Platforms**

Supported on all platforms

### **id number**

**Description**

An owner-assigned index value that is unique for each of the tunnels terminating at a particular prefix.

**Context**

[network-instance name](#) *string* [tunnel-table ipv6 tunnel ipv6-prefix](#) *string type identityref owner string id number*

**Configurable**

False

**Platforms**

Supported on all platforms

### **encapsulation-type keyword**

**Description**

The type of encapsulation used by the tunnel.

**Context**

[network-instance name](#) *string* [tunnel-table ipv6 tunnel ipv6-prefix](#) *string type identityref owner string id number encapsulation-type keyword*

**Tree**

[encapsulation-type](#)

**Options**

- vxlan
- mpls

**Configurable**

False

**Platforms**

Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the tunnel
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**not-programmed-reason** *keyword*

<b>Description</b>	The reason why the tunnel is not programmed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">fib-programming</a> <a href="#">not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">out-of-tunnel-resources</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	The status of the tunnel programming
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id number</a> <a href="#">fib-programming</a> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">active</a> The tunnel is active and programmed into the datapath.</li> <li>• <a href="#">inactive</a> The tunnel is inactive and not programmed into the datapath.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-in-ip**

<b>Description</b>	Enter the ip-in-ip context
--------------------	----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number ip-in-ip</a>
<b>Tree</b>	<a href="#">ip-in-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **destination-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the destination of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number ip-in-ip destination-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the source of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number ip-in-ip source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-app-update** *string*

<b>Description</b>	The date and time of the last update of this tunnel by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The metric of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number metric number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number next-hop-group reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**preference** *number*

<b>Description</b>	The tunnel table preference.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number preference number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vxlan**

<b>Description</b>	Enter the vxlan context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number vxlan</i>
<b>Tree</b>	<a href="#">vxlan</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**destination-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**destination-udp-port** *number*

<b>Description</b>	The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-udp-port</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-udp-port</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the local VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**time-to-live** *number*

<b>Description</b>	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan time-to-live</a> <i>number</i>
<b>Tree</b>	<a href="#">time-to-live</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### tunnel-summary

<b>Description</b>	Tunnel summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel-summary</a>
<b>Tree</b>	<a href="#">tunnel-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### tunnel-type [type](#) *identityref*

<b>Description</b>	Enter the tunnel-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel-summary</a> <a href="#">tunnel-type</a> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### [type](#) *identityref*

<b>Description</b>	Tunneling encapsulation format
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">tunnel-summary</a> <a href="#">tunnel-type</a> <a href="#">type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ip-in-ip</a> Tunnels with IP-in-IP encapsulation</li> <li>• <a href="#">sr-isis</a> Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• <a href="#">sr-ospfv2</a> Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• <a href="#">sr-ospfv3</a> Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• <a href="#">sr-policy-mpls</a> Tunnels setup using SR-POLICY.</li> <li>• <a href="#">vxlan</a></li> </ul>

Tunnels based on VXLAN encapsulation

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type type</a> <a href="#">identityref active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **inactive-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type type</a> <a href="#">identityref inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, using this encapsulation type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type type</a> <a href="#">identityref total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	The type of network instance. The value of this leaf indicates the type of forwarding entries that should be supported by this network instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	default
<b>Options</b>	<ul style="list-style-type: none"> <li>• host A special routing instances that refers to the hosts network instance (i.e. the network namespace of PID 1)</li> <li>• default A special routing instance which acts as the 'default' routing instance for a network device.</li> <li>• ip-vrf A private Layer 3 only routing instance.</li> <li>• mac-vrf A private Layer 2 only switching instance.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**udp**

<b>Description</b>	State for UDP datagrams routed using the route tables of this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a>
<b>Tree</b>	<a href="#">udp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**listening-application** [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number*

<b>Description</b>	List of applications that are listening on a particular UDP port bound to the network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">listening-application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The local IP address accepted by the application. An all-zeroes value for the ipv4-address means that any IPv4 address is accepted. An all-zeroes value for the ipv6-address means that any IPv6 address is accepted.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">udp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-port** *number*

<b>Description</b>	The local port number accepted by the application.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">udp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <a href="#">number</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">udp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <a href="#">number</a> <a href="#">process-id</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">udp</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ignored-multicast-packets** *number*

<b>Description</b>	The total number of ignored multicast UDP datagrams.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">ignored-multicast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">ignored-multicast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-checksum-errors** *number*

<b>Description</b>	Increased when a received UDP packet has an invalid checksum.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">in-checksum-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">in-checksum-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-error-packets** *number*

<b>Description</b>	The total number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-no-open-ports-packets** *number*

<b>Description</b>	The total number of received UDP datagrams for which there was no application at the destination port.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">in-no-open-ports-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-no-open-ports-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	The total number of UDP datagrams delivered to UDP users.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-packets** *number*

<b>Description</b>	The total number of UDP datagrams sent from this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**receive-buffer-errors** *number*

<b>Description</b>	Increased when memory cannot be allocated to process an incoming UDP packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics receive-buffer-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">receive-buffer-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**send-buffer-errors** *number*

<b>Description</b>	Increased when memory cannot be allocated to send a UDP packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics send-buffer-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">send-buffer-errors</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **vxlan-interface** *name string*

<b>Description</b>	List of vxlan-interfaces used by this network-instance
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">vxlan-interface name string</a>
<b>Tree</b>	<a href="#">vxlan-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1

### **name** *string*

<b>Description</b>	Identifier of vxlan-interface used in this network-instance
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">vxlan-interface name string</a>
<b>String Length</b>	8 to 17
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **oper-down-reason** *keyword*

<b>Description</b>	The reason for the vxlan-interface being down in the network-instance
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">vxlan-interface name string</a> <a href="#">oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• vxlan-tunnel-down</li> <li>• net-inst-down</li> <li>• vxlan-if-default-net-inst-source-address-missing</li> <li>• vxlan-if-default-net-inst-source-if-down</li> <li>• vrf-type-mismatch</li> <li>• no-mcid</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state keyword**

<b>Description</b>	The operational state of this vxlan-interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">vxlan-interface name</a> <i>string</i> <b>oper-state keyword</b>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting</li> </ul>

---

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## 7.1 platform Descriptions

### platform

<b>Description</b>	Enclosing container for platform components
<b>Context</b>	<a href="#">platform</a>
<b>Tree</b>	<a href="#">platform</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis

<b>Description</b>	Top-level container for chassis configuration and state
<b>Context</b>	<a href="#">platform chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### clei-code *string*

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform chassis clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### failure-reason *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform chassis failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hw-mac-address** *string*

<b>Description</b>	The chassis MAC address Read from hardware, or derived from the systems UUID
<b>Context</b>	<a href="#">platform chassis hw-mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">hw-mac-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-boot-type** *string*

<b>Description</b>	The type of boot the chassis initialized from This field indicates what type of reboot occurred, whether it be warm, normal, or otherwise.
<b>Context</b>	<a href="#">platform chassis last-boot-type</a> <i>string</i>
<b>Tree</b>	<a href="#">last-boot-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform chassis last-booted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform chassis last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform chassis manufactured-date</a> <i>string</i>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform chassis oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> </ul>

- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### part-number *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform chassis part-number string</a>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### power

<b>Description</b>	Top-level container for chassis-wide power state
<b>Context</b>	<a href="#">platform chassis power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### control

<b>Description</b>	Top-level container for power usage of control modules
<b>Context</b>	<a href="#">platform chassis power control</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **peak number**

**Description** Peak power used  
**Context** [platform chassis power control peak number](#)  
**Tree** [peak](#)  
**Configurable** False  
**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **required number**

**Description** Power required to power on all present admin enabled components as part of power management  
**Context** [platform chassis power control required number](#)  
**Tree** [required](#)  
**Configurable** False  
**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **used number**

**Description** Used power  
**Context** [platform chassis power control used number](#)  
**Tree** [used](#)  
**Configurable** False  
**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **fabric**

**Description** Top-level container for power usage of fabric modules  
**Context** [platform chassis power fabric](#)  
**Tree** [fabric](#)  
**Configurable** False  
**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power fabric peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power fabric required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power fabric used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**fan-tray**

<b>Description</b>	Top-level container for power usage of fan-trays
<b>Context</b>	<a href="#">platform chassis power fan-tray</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power fan-tray peak number</a>

<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power fan-tray required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power fan-tray used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**linecard**

<b>Description</b>	Top-level container for power usage of linecard modules
<b>Context</b>	<a href="#">platform chassis power linecard</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power linecard peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power linecard required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power linecard used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**total**

<b>Description</b>	Top-level container for total power usage and capacity
<b>Context</b>	<a href="#">platform chassis power total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**capacity number**

<b>Description</b>	Total power capacity provided by all power supplies
<b>Context</b>	<a href="#">platform chassis power total capacity number</a>
<b>Tree</b>	<a href="#">capacity</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**peak number**

<b>Description</b>	Peak power used
--------------------	-----------------

<b>Context</b>	<a href="#">platform chassis power total peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power total required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power total used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rebooting-at string**

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform chassis rebooting-at string</a>
<b>Tree</b>	<a href="#">rebooting-at</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform chassis removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**secondary-mac-address** *string*

<b>Description</b>	MAC address programmed as a secondary terminating MAC address on every IP interface, across all network instances  If an IP packet is received on a routed subinterface and it arrives with a DMAC equal to the secondary-mac-address then it is terminated and forwarded exactly the same way it would be forwarded if it had arrived on this subinterface with a DMAC equal to the subinterface MAC address.
<b>Context</b>	<a href="#">platform chassis secondary-mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">secondary-mac-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform chassis serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**slots** *number*

<b>Description</b>	The number of line card slots supported by the chassis
<b>Context</b>	<a href="#">platform chassis slots</a> <i>number</i>
<b>Tree</b>	<a href="#">slots</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *string*

<b>Description</b>	The chassis type
<b>Context</b>	<a href="#">platform chassis type</a> <i>string</i>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**control** [slot](#) *string*

<b>Description</b>	Top-level container for control module configuration and state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**slot** *string*

<b>Description</b>	Slot identifier for the control module This is set to 'A' for systems without removable control modules.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**cgroup** [name](#) *string*

<b>Description</b>	List of cgroups present in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the cgroup, as defined by its directory location in the filesystem
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### cpuacct-statistics

<b>Description</b>	Top-level container for cgroup cpuacct statistics
<b>Context</b>	<a href="#">platform control slot string cgroup name string cpuacct-statistics</a>
<b>Tree</b>	<a href="#">cpuacct-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### system *number*

<b>Description</b>	CPU usage user system
<b>Context</b>	<a href="#">platform control slot string cgroup name string cpuacct-statistics system number</a>
<b>Tree</b>	<a href="#">system</a>
<b>Units</b>	useconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### user *number*

<b>Description</b>	CPU usage user mode
<b>Context</b>	<a href="#">platform control slot string cgroup name string cpuacct-statistics user number</a>
<b>Tree</b>	<a href="#">user</a>
<b>Units</b>	useconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### memory-statistics

<b>Description</b>	Top-level container for cgroup memory statistics
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics</a>
<b>Tree</b>	<a href="#">memory-statistics</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **anon number**

**Description** Amount of memory used in anonymous mappings such as brk(), sbrk(), and mmap(MAP\_ANONYMOUS)

**Context** [platform control slot string cgroup name string memory-statistics anon number](#)

**Tree** [anon](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **anon-thp number**

**Description** Amount of memory used in anonymous mappings backed by transparent hugepages

**Context** [platform control slot string cgroup name string memory-statistics anon-thp number](#)

**Tree** [anon-thp](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **current number**

**Description** The total amount of memory currently being used by the cgroup and its descendants. Read from memory.current

**Context** [platform control slot string cgroup name string memory-statistics current number](#)

**Tree** [current](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

**current-swap** *number*

<b>Description</b>	The total amount of swap currently being used by the cgroup and its descendants. Read from <code>memory.swap.current</code>
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics current-swap</a> <i>number</i>
<b>Tree</b>	<a href="#">current-swap</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**file** *number*

<b>Description</b>	Amount of memory used to cache filesystem data, including tmpfs and shared memory
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics file</a> <i>number</i>
<b>Tree</b>	<a href="#">file</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**file-dirty** *number*

<b>Description</b>	Amount of cached filesystem data that was modified but not yet written back to disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics file-dirty</a> <i>number</i>
<b>Tree</b>	<a href="#">file-dirty</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**file-writeback** *number*

<b>Description</b>	Amount of cached filesystem data that was modified and is currently being written back to disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics file-writeback</a> <i>number</i>

<b>Tree</b>	<a href="#">file-writeback</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **kernel-stack *number***

<b>Description</b>	Amount of memory allocated to kernel stacks
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">kernel-stack number</a>
<b>Tree</b>	<a href="#">kernel-stack</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **memory-events**

<b>Description</b>	Top-level container for cgroup memory events
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a>
<b>Tree</b>	<a href="#">memory-events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **high *number***

<b>Description</b>	The number of times processes of the cgroup are throttled and routed to perform direct memory reclaim because the high memory boundary was exceeded.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">high number</a>
<b>Tree</b>	<a href="#">high</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low number**

<b>Description</b>	The number of times the cgroup is reclaimed due to high memory pressure even though its usage is under the low boundary.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">low number</a>
<b>Tree</b>	<a href="#">low</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max number**

<b>Description</b>	The number of times the cgroup's memory usage was about to go over the max boundary
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">max number</a>
<b>Tree</b>	<a href="#">max</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oom number**

<b>Description</b>	The number of time the cgroup's memory usage had reached the limit and allocation was about to fail
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">oom number</a>
<b>Tree</b>	<a href="#">oom</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oom-kill number**

<b>Description</b>	The number of processes belonging to this cgroup killed by any kind of out-of-memory killer
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">oom-kill number</a>
<b>Tree</b>	<a href="#">oom-kill</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**slab number**

<b>Description</b>	Amount of memory used for storing in-kernel data structures
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics slab number</a>
<b>Tree</b>	<a href="#">slab</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sock number**

<b>Description</b>	Amount of memory used in network transmission buffers
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics sock number</a>
<b>Tree</b>	<a href="#">sock</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**clei-code string**

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform control slot string clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cpu index (keyword | number)**

<b>Description</b>	List of all CPUs in the system
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number)</a>
<b>Tree</b>	<a href="#">cpu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** (*keyword | number*)

<b>Description</b>	CPU index for each processor core on the system On a single-core system, the index should be zero. The 'all' index signifies an aggregation of the CPU utilization statistics over all cores in the system.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> )
<b>Options</b>	<ul style="list-style-type: none"> <li>all Index value indicating all CPUs in the system</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**architecture** *keyword*

<b>Description</b>	Architecture supported by the CPU
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">architecture</a> <i>keyword</i>
<b>Tree</b>	<a href="#">architecture</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>x86_64</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hardware-interrupt**

<b>Description</b>	Time spent servicing hardware interrupts
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">hardware-interrupt</a>
<b>Tree</b>	<a href="#">hardware-interrupt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">hardware-interrupt</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **average-15** *number*

**Description** The arithmetic mean value of this statistic over the last fifteen minutes

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword | number*) [hardware-interrupt](#)  
[average-15](#) *number*

**Tree** [average-15](#)

**Range** 0 to 100

**Configurable** False

**Platforms** Supported on all platforms

### **average-5** *number*

**Description** The arithmetic mean value of this statistic over the last five minutes

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword | number*) [hardware-interrupt](#)  
[average-5](#) *number*

**Tree** [average-5](#)

**Range** 0 to 100

**Configurable** False

**Platforms** Supported on all platforms

### **instant** *number*

**Description** The instantaneous percentage value

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword | number*) [hardware-interrupt](#)  
[instant](#) *number*

**Tree** [instant](#)

**Range** 0 to 100

**Configurable** False

**Platforms** Supported on all platforms

### **idle**

**Description** Time spent idle

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword | number*) [idle](#)

**Tree** [idle](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">idle average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">idle average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">idle average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">idle instant number</a>

<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**iowait**

<b>Description</b>	Time spent idle, waiting for an outstanding disk I/O request
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait</a>
<b>Tree</b>	<a href="#">iowait</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
--------------------	--

<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nice**

<b>Description</b>	Time spent running low-priority (niced) user processes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) nice</a>
<b>Tree</b>	<a href="#">nice</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) nice average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">nice</a> <a href="#">average-15</a> <i>number</i>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">nice</a> <a href="#">average-5</a> <i>number</i>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">nice</a> <a href="#">instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-interrupt**

<b>Description</b>	Time spent servicing software interrupts
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a>
<b>Tree</b>	<a href="#">software-interrupt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">software-interrupt</a> <a href="#">average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">software-interrupt</a> <a href="#">average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">software-interrupt</a> <a href="#">average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">software-interrupt</a> <a href="#">instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**speed** *decimal-number*

<b>Description</b>	Capable speed of the CPU
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">speed</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">speed</a>
<b>Units</b>	gigahertz
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system**

<b>Description</b>	Time spent executing at the system level This can otherwise be known as kernel time, and does not include time spent servicing hardware and software interrupts.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">system</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
--------------------	---

<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) system average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) system average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) system instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	Total CPU utilization
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **type** *string*

**Description** Model name of the CPU

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword* | *number*) [type](#) *string*

**Tree** [type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **user**

**Description** Time spent executing at the user level  
This can otherwise be known as application or user space time.

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword* | *number*) [user](#)

**Tree** [user](#)

**Configurable** False

**Platforms** Supported on all platforms

### **average-1** *number*

**Description** The arithmetic mean value of this statistic over the last minute

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword* | *number*) [user](#) [average-1](#) *number*

**Tree** [average-1](#)

**Range** 0 to 100

**Configurable** False

**Platforms** Supported on all platforms

### **average-15** *number*

**Description** The arithmetic mean value of this statistic over the last fifteen minutes

**Context** [platform control slot](#) *string* [cpu index](#) (*keyword* | *number*) [user](#) [average-15](#) *number*

**Tree** [average-15](#)

**Range** 0 to 100

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">user average-5</a> <i>number</i>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">user instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**disk name** *string*

<b>Description</b>	List of disks present in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i>
<b>Tree</b>	<a href="#">disk</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the disk, as defined by its physical location in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**model-number** *string*

<b>Description</b>	Model name of the disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">model-number</a> <i>string</i>
<b>Tree</b>	<a href="#">model-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**partition name** *string*

<b>Description</b>	List of partitions available on this disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i>
<b>Tree</b>	<a href="#">partition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**free** *number*

<b>Description</b>	Space free on the partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">free</a> <i>number</i>
<b>Tree</b>	<a href="#">free</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mount-point** *string*

<b>Description</b>	Path to where this partition is mounted
--------------------	---

<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">mount-point</a> <i>string</i>
<b>Tree</b>	<a href="#">mount-point</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mount-status** *keyword*

<b>Description</b>	Current mount status of this partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">mount-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mount-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ro Partition is currently mounted read-only</li> <li>• rw Partition is currently mounted read-write</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**percent-used** *number*

<b>Description</b>	Percentage of the partition in use
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">percent-used</a> <i>number</i>
<b>Tree</b>	<a href="#">percent-used</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**size** *number*

<b>Description</b>	Size of the partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">size</a> <i>number</i>
<b>Tree</b>	<a href="#">size</a>
<b>Units</b>	bytes
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **used number**

**Description** Space used on the partition

**Context** [platform control slot string disk name string partition name string used number](#)

**Tree** [used](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **uuid string**

**Description** UUID of the partition

**Context** [platform control slot string disk name string partition name string uuid string](#)

**Tree** [uuid](#)

**Configurable** False

**Platforms** Supported on all platforms

### **serial-number string**

**Description** Serial number of the disk

**Context** [platform control slot string disk name string serial-number string](#)

**Tree** [serial-number](#)

**Configurable** False

**Platforms** Supported on all platforms

### **size number**

**Description** Total size of the disk

**Context** [platform control slot string disk name string size number](#)

**Tree** [size](#)

**Configurable** False

**Platforms** Supported on all platforms

**statistics**

<b>Description</b>	Top-level container for disk statistics
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**read-per-second** *decimal-number*

<b>Description</b>	Indicates the amount of data read from the device per second
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics read-per-second</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">read-per-second</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**transfers-per-second** *decimal-number*

<b>Description</b>	Indicates the number of transfers per second that were issued to the device. A transfer is an I/O request to the device. Multiple logical requests can be combined into a single I/O request to the device. A transfer is of indeterminate size.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics transfers-per-second</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">transfers-per-second</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**utilization** *number*

<b>Description</b>	The current tps utilization of the disk, expressed as a percentage
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**written-per-second** *decimal-number*

<b>Description</b>	Indicates the amount of data written to the device per second
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics written-per-second</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">written-per-second</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• compactflash</li> <li>• ssd</li> <li>• hdd</li> <li>• usb</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-reason** *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">failure-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
--------------------	--

<b>Context</b>	<a href="#">platform control slot string last-booted string</a>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform control slot string last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform control slot string locator-state keyword</a>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform control slot string manufactured-date string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory**

<b>Description</b>	Top-level container for system memory state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a>
<b>Tree</b>	<a href="#">memory</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**free number**

<b>Description</b>	Memory available for system use
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a> <a href="#">free number</a>
<b>Tree</b>	<a href="#">free</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**physical number**

<b>Description</b>	Total physical memory available on this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a> <a href="#">physical number</a>
<b>Tree</b>	<a href="#">physical</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**reserved number**

<b>Description</b>	Memory reserved for system use
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a> <a href="#">reserved number</a>
<b>Tree</b>	<a href="#">reserved</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**utilization number**

<b>Description</b>	Total memory utilized
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory utilization number</a>
<b>Tree</b>	<a href="#">utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state keyword**

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot</li> </ul>

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **part-number** *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">part-number</a> <i>string</i>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **power**

<b>Description</b>	State related to power consumption and allocation for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **required** *number*

<b>Description</b>	The power budget required to enable this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power required</a> <i>number</i>
<b>Tree</b>	<a href="#">required</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	The power in use by this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**process pid number**

<b>Description</b>	List of system processes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid number</a>
<b>Tree</b>	<a href="#">process</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pid number**

<b>Description</b>	The process ID
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**args string**

<b>Description</b>	Current process command line arguments Arguments with a parameter (e.g., --option 10 or -option=10) should be represented as a single element of the list with the argument name and parameter together. Flag arguments, i.e., those without a parameter should also be in their own list element.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid number</a> <a href="#">args string</a>
<b>Tree</b>	<a href="#">args</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cpu-utilization** *number*

<b>Description</b>	The percentage of CPU that is being used by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">cpu-utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">cpu-utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-usage** *number*

<b>Description</b>	Bytes allocated and in use by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">memory-usage</a> <i>number</i>
<b>Tree</b>	<a href="#">memory-usage</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-utilization** *number*

<b>Description</b>	The percentage of RAM that is being used by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">memory-utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">memory-utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	The process name
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start-time** *string*

<b>Description</b>	The time at which this process started
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">start-time</a> <i>string</i>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**role** *keyword*

<b>Description</b>	Control module role, detailing active or standby state This field is not present on systems without removable control modules.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">role</a> <i>keyword</i>
<b>Tree</b>	<a href="#">role</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• standby</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-version** *string*

<b>Description</b>	Image version version running on this component  This version is the squashfs version, and may not represent the current per-application versions if versions have been modified after the system has been installed.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">software-version</a> <i>string</i>
<b>Tree</b>	<a href="#">software-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**temperature**

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**alarm-status** *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin field is <=2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature</a> <a href="#">alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	Represents the highest temperature of any sensor on this component  Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature</a> <a href="#">instant</a> <i>number</i>

<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **margin** *number*

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component  The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature margin</a> <i>number</i>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** *string*

<b>Description</b>	Control module type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">type</a> <i>string</i>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **fabric slot** *number*

<b>Description</b>	Top-level container for fabric configuration and state
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **slot** *number*

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>

<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**admin-state** *keyword*

<b>Description</b>	The administrative state of this component
<b>Context</b>	<a href="#">platform fabric slot number admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**clei-code** *string*

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform fabric slot number clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**failure-reason** *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform fabric slot number failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**last-booted** *string*

<b>Description</b>	The date and time this component last booted
--------------------	--

For components that do not boot, this is the time the component was last discovered by the active control module

<b>Context</b>	<a href="#">platform fabric slot number last-booted string</a>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **last-change string**

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform fabric slot number last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **locator-state keyword**

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform fabric slot number locator-state keyword</a>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **manufactured-date string**

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform fabric slot number manufactured-date string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform fabric slot number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. <b>Description</b>	The power in use by this component
<b>Context</b>	<a href="#">platform fabric slot number power used number</a>
<b>Tree</b>	<a href="#">used</a>

<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform fabric slot number removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform fabric slot number serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**temperature**

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform fabric slot number temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**alarm-status** *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin field is <=2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform fabric slot number temperature alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**instant number**

<b>Description</b>	Represents the highest temperature of any sensor on this component Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform fabric slot number temperature instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**margin number**

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform fabric slot number temperature margin number</a>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**type string**

<b>Description</b>	Fabric module type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform fabric slot number type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**fan-tray id number**

<b>Description</b>	Top-level container for fan module configuration and state
<b>Context</b>	<a href="#">platform fan-tray id number</a>

<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	Numeric identifier for the fan tray
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**clei-code string**

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform fan-tray id number clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-reason string**

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform fan-tray id number failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted string**

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform fan-tray id number last-booted string</a>
<b>Tree</b>	<a href="#">last-booted</a>

<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">manufactured-date</a> <i>string</i>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-reason** *keyword*

<b>Description</b>	Indicates the reason for the current state of this fan tray
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">oper-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>fault</b> Hardware fault detected</li> <li>• <b>eeeprom-invalid</b> EEPROM of this fan tray is either invalid or corrupt</li> <li>• <b>airflow-mismatch</b> The detected airflow of this fan tray does not match the system-calculated airflow direction  The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>up</b> Component or process is operational</li> <li>• <b>down</b> Component or process is not operational</li> <li>• <b>empty</b> Component slot is empty</li> <li>• <b>downloading</b> Component is downloading image into memory</li> <li>• <b>booting</b> Component is booting downloaded image</li> <li>• <b>starting</b> Component image operational, application processes starting</li> <li>• <b>failed</b> Component or process has failed</li> </ul>

- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Description</b>	The name of the ACL resource
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword</a> <i>acl resource name identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>input-ipv4-filter-instances</b> This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.</li> <li>• <b>input-ipv4-qos-multifield-instances</b></li> </ul>

This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv4-filter-instances-routed

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.

- input-ipv4-filter-instances-bridged

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- input-ipv6-filter-instances

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- input-ipv6-qos-multifield-instances

This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv6-filter-instances-routed

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- input-ipv6-filter-instances-bridged

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- if-input-ipv4-stats

Resource pool of stats entries available for ingress IPv4 ACLs

- if-input-ipv6-stats

Resource pool of stats entries available for ingress IPv6 ACLs

- if-output-ipv4-stats

Resource pool of stats entries available for egress IPv4 ACLs

- if-output-ipv6-stats

Resource pool of stats entries available for egress IPv6 ACLs

- if-output-cpm-stats

Resource pool of stats entries shared by egress IPv4/IPv6/MAC TCAM entries, and CPM-filter IPv4/IPv6/MAC TCAM entries

Egress Ipv4 -> uses single stat counter Egress Ipv6 -> uses single stat counter Egress MAC -> uses single stat counter Cpm Ipv4 -> uses two stat counters Cpm Ipv6 -> uses two stat counters Cpm MAC -> uses two stat counters

Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• ip-lpm-ipv6-shorter-routes           <p>Trident3: Reports the number of IPv6 entries with prefix length less than 65 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> <p>Tomahawk3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• ip-lpm-ipv6-longer-routes           <p>Trident3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> <p>Tomahawk3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• exact-match-entries           <p>Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.</p> </li> <li>• underlay-ecmp-groups</li> </ul>

Underlay ECMP group resources.

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources.

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources.

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

Underlay ECMP member resources.

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

Overlay ECMP member resources.

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

Underlay egress next-hop resources.

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

Overlay egress next-hop resources.

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

DGPP module ID resources.

DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly

spread across multiple network-instance interfaces) then 3 module\_ids are required.

- egress-vlan-translate-egress-vnis  
EGR\_VLAN\_XLATE\_1 resources.  
Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.
- egress-vlan-translate-local-bias-pairs  
EGR\_VLAN\_XLATE\_2 resources.  
Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries). These entries are used for local bias (ES pruning).
- level-1-ecmp-groups  
L1 ECMP group resources.  
ECMP FEC resources are divided into L1 ECMP FEC resources and L2 ECMP FEC resources. This counts the number of entries used in the L1 partition.
- level-2-ecmp-groups  
L2 ECMP group resources.  
ECMP FEC resources are divided into L1 ECMP FEC resources and L2 ECMP FEC resources. This counts the number of entries used in the L2 partition.
- level-1-ecmp-members  
L1 ECMP member resources.  
ECMP FEC member resources are divided into L1 and L2 resources. This counts the number of entries used in the L1 partition.
- level-2-ecmp-members  
L2 ECMP member resources.  
ECMP FEC member resources are divided into L1 and L2 resources. This counts the number of entries used in the L2 partition.
- level-1-non-ecmp-fecs  
L1 non-ECMP FEC resources.  
Non-ECMP FEC resources are divided into L1 and L2 resources. This counts the number of entries used in the L1 partition.
- level-2-non-ecmp-fecs  
L2 non-ECMP FEC resources.  
Non-ECMP FEC resources are divided into L1 and L2 resources. This counts the number of entries used in the L2 partition.

and every IPv6 route (regardless of prefix length) counts as 2 used routes.

Trident4: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC address resources.

Reports the number of entries used in the MAC lookup table. On TD3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- direct-next-hops

Direct next-hop resources.

Reports the number of entries, where 1 entry is used for every next-hop of an IP or MPLS route that is resolved directly to a local interface. This does not consider underlying ASIC resources.

- indirect-next-hops

Indirect next-hop resources.

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that is resolved by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources.

Reports the number of tunnel next-hop entries. For EVPN routes resolved by VXLAN, 1 entry is used for every <vni, vtep> pair. When a BGP IP route is resolved by an MPLS tunnel, 1 entry is used for every BGP next-hop of the route. This does not consider underlying ASIC resources.

- ecmp-groups

ECMP group resources.

Jericho2: Reports the used number of ECMP FECs, adding L1 ECMP FECs and L2 ECMP FECs.

Trident3: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups.

Trident4 and Tomahawk3: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources.

Jericho2: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs and L2 ECMP member FECs.

Trident3: Reports the used number of ECMP members, adding overlay and underlay ECMP members.

Trident4 and Tomahawk3: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources.

Trident3: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

Trident4 and Tomahawk3: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups  
LAG group resources.  
Reports the number of LAG resources used, including DGPP LAGs.
- lag-members  
LAG member resources.  
Reports the number of LAG member resources used, including DGPP LAG members.
- subinterfaces  
Subinterface resources.  
There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.
- mpls-next-hops  
One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.
- mpls-incoming-labels  
One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.
- tunnels  
Tunnel resources. One tunnel resource is used per VXLAN or MPLS tunnel endpoint.  
On TD3 and TD4 systems this equates to a DVP resource.

### Options

- arp-nd-entries  
IPv4 ARP and IPv6 neighbor discovery resources.  
Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent. This does not consider underlying ASIC resources.
- ip-hosts  
IP host route resources.  
Trident3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. In non-ALPM operation every remote /32 route also requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks  
Trident4 and Tomahawk3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.
- ip-lpm-routes  
IP longest prefix match route resources.  
Jericho2: Every installed IPv4 and IPv6 route counts as one used route.  
Trident3 and Tomahawk3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.  
Trident4: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.
- mac-addresses  
MAC address resources.  
Reports the number of entries used in the MAC lookup table. On TD3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- **direct-next-hops**  
Direct next-hop resources.  
Reports the number of entries, where 1 entry is used for every next-hop of an IP or MPLS route that is resolved directly to a local interface. This does not consider underlying ASIC resources.
- **indirect-next-hops**  
Indirect next-hop resources.  
Reports the number of entries, where 1 entry is used for every next-hop of an IP route that is resolved by a non-local route. This does not consider underlying ASIC resources.
- **tunnel-next-hops**  
Tunnel next-hop resources.  
Reports the number of tunnel next-hop entries. For EVPN routes resolved by VXLAN, 1 entry is used for every <vni, vtep> pair. When a BGP IP route is resolved by an MPLS tunnel, 1 entry is used for every BGP next-hop of the route. This does not consider underlying ASIC resources.
- **ecmp-groups**  
ECMP group resources.  
Jericho2: Reports the used number of ECMP FECs, adding L1 ECMP FECs and L2 ECMP FECs.  
Trident3: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups.  
Trident4 and Tomahawk3: Reports used number of ECMP groups.
- **ecmp-members**  
ECMP member resources.  
Jericho2: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs and L2 ECMP member FECs.  
Trident3: Reports the used number of ECMP members, adding overlay and underlay ECMP members.  
Trident4 and Tomahawk3: Reports used number of ECMP members.
- **egress-next-hops**  
Egress next-hop resources.  
Trident3: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.  
Trident4 and Tomahawk3: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
- **lag-groups**  
LAG group resources.  
Reports the number of LAG resources used, including DGPP LAGs.

- lag-members  
LAG member resources.  
Reports the number of LAG member resources used, including DGPP LAG members.
- subinterfaces  
Subinterface resources.  
There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.
- mpls-next-hops  
One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.
- mpls-incoming-labels  
One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.
- tunnels  
Tunnel resources. One tunnel resource is used per VXLAN or MPLS tunnel endpoint.  
On TD3 and TD4 systems this equates to a DVP resource.

### used-percent *number*

<b>Description</b>	The percentage of the resource that is currently used
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) datapath xdp resource name identityref used-percent number</a>
<b>Tree</b>	<a href="#">used-percent</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7250 IXR-10, 7250 IXR-10e, 7220 IXR-H2, 7220 IXR-H3

### pipeline-counters

<b>Description</b>	Top-level container for the packet counters associated with the different NPU sub-blocks.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters</a>
<b>Tree</b>	<a href="#">pipeline-counters</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### host-interface-block

<b>Description</b>	The ASIC host interface block subsystem that connects the NPU to the host CPU (on the CPM)
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block</a>
<b>Tree</b>	<a href="#">host-interface-block</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**packet-extraction**

<b>Description</b>	Packet extraction from the NPU towards the CPU
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block packet-extraction</a>
<b>Tree</b>	<a href="#">packet-extraction</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**extracted-octets number**

<b>Description</b>	The number of octets in Ethernet frames extracted towards the CPU from the pipeline; this includes packets that might be dropped (due to congestion or rate limiting) before reaching the final consuming application on the CPM
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block packet-extraction extracted-octets number</a>
<b>Tree</b>	<a href="#">extracted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**extracted-packets number**

<b>Description</b>	The number of Ethernet frames extracted towards the CPU from the pipeline; this includes packets that might be dropped (due to congestion or rate limiting) before reaching the final consuming application on the CPM
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block packet-extraction extracted-packets number</a>
<b>Tree</b>	<a href="#">extracted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**extraction-reason reason identityref**

<b>Description</b>	List of extraction reasons that are possible for the pipeline
--------------------	---

<b>Context</b>	<a href="#">platform</a> <a href="#">linecard</a> <a href="#">slot</a> <i>number</i> <a href="#">forwarding-complex</a> <a href="#">name</a> <i>keyword</i> <a href="#">pipeline</a> <a href="#">index</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">pipeline-counters</a> <a href="#">host-interface-block</a> <a href="#">packet-extraction</a> <a href="#">extraction-reason</a> <a href="#">reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">extraction-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **reason** *identityref*

<b>Description</b>	A reason for extracting the packet towards the host CPU
<b>Context</b>	<a href="#">platform</a> <a href="#">linecard</a> <a href="#">slot</a> <i>number</i> <a href="#">forwarding-complex</a> <a href="#">name</a> <i>keyword</i> <a href="#">pipeline</a> <a href="#">index</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">pipeline-counters</a> <a href="#">host-interface-block</a> <a href="#">packet-extraction</a> <a href="#">extraction-reason</a> <a href="#">reason</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-header-options</a> IPv4 header options are present in the packet.</li> <li>• <a href="#">ipv6-hop-by-hop-option</a> IPv6 packet with topmost next-header value of zero.</li> <li>• <a href="#">icmp</a> ICMPv4 packets with this router as destination.</li> <li>• <a href="#">icmp6</a> ICMPv6 packets including neighbor-solicitation and neighbor-advertisement messages.</li> <li>• <a href="#">icmp-redirect</a> Received IPv4 and IPv6 packets that should cause an ICMP redirect to be generated.</li> <li>• <a href="#">bfd</a> BFD and micro-BFD packets with this router as destination.</li> <li>• <a href="#">bgp</a> BGP packets; TCP port 179.</li> <li>• <a href="#">grpc</a> GRPC packets; TCP port 57400</li> <li>• <a href="#">ospf</a> OSPF packets; IP protocol 89</li> <li>• <a href="#">vrrp</a> VRRP packets; IP protocol 112</li> <li>• <a href="#">ldp</a> LDP packets; UDP port 646</li> <li>• <a href="#">dhcp</a></li> </ul>

- DHCP packets; UDP ports 67,68
- ip-other-terminating  
Any other IP packets that are locally destined
- ip-blackhole-icmp  
Traffic matched a blackhole route with generate-icmp=true
- ipv6-multicast  
IPv6 DA = FF01:0:0:0:0:0:1 or IPv6 DA = FF01:0:0:0:0:0:2
- ipv6-link-local  
IPv6 DA = FE80::/10 address
- ipv4-broadcast  
IPv4 packets were received with a subnet broadcast address or a limited broadcast and not recognized as another type
- ip-no-route  
IPv4 and IPv6 packets for which there was no route to the destination
- ip-header-errors  
IP version error, IP header checksum error, IP header length error, IP header total length error, IPv6 next-header is null, IPv6 SA is link-local while IPv6 DA is global
- ip-ttl-expired  
The IP packet is not destined for this router and it was received with TTL 0 or TTL 1
- mpls-ttl-expired  
The MPLS packet was received with MPLS label stack TTL 0 or TTL 1
- ip-arp-miss  
The IP DA itself or the next-hop of the route used to forward the packet has no ARP/IPv6 neighbor entry
- ip-arp  
The received frame is an ARP packet recognized by ethertype 0x0806
- lldp  
The received frame is an LLDP packet recognized by ethertype 0x88cc
- isis  
The received frame is an ISIS packet
- lacp  
The received frame is an LACP packet
- google-discovery  
The received frame is a GDP packet recognized by ethertype 0x6007
- capture-filter-copy  
Packets matching a capture-filter copy rule

- `cpm-filter-log`  
Packets matching a CPM-filter rule with log action
- `ingress-acl-log`  
Packets matching an interface IP filter rule with log action
- `egress-acl-log`  
Packet matched an egress ACL rule with log action.
- `ip-mpls-mtu-exceeded`  
The egress subinterface IP MTU or MPLS MTU (as applicable) is less than the size of the IP or MPLS packet that needs to be transmitted.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **extracted-octets** *number*

<b>Description</b>	The number of octets in Ethernet frames extracted towards the CPU from the pipeline; this includes packets that might be dropped (due to congestion or rate limiting) before reaching the final consuming application on the CPM
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block packet-extraction extraction-reason reason identityref extracted-octets number</a>
<b>Tree</b>	<a href="#">extracted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **extracted-packets** *number*

<b>Description</b>	The number of Ethernet frames extracted towards the CPU from the pipeline; this includes packets that might be dropped (due to congestion or rate limiting) before reaching the final consuming application on the CPM
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword pipeline index (number   keyword) pipeline-counters host-interface-block packet-extraction extraction-reason reason identityref extracted-packets number</a>
<b>Tree</b>	<a href="#">extracted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**qos**

<b>Description</b>	Enter the qos context
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**resource name *identityref***

<b>Description</b>	Enter the resource list instance
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword qos resource name identityref</a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**name *identityref***

<b>Description</b>	The name of the QoS resource
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword qos resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• classifier-profiles A classifier-profile resource is used every time a different combination of IPv4 DSCP classifier and IPv6 DSCP classifier is applied to an ingress subinterface of the 7250 IXR IMM. There are 16 of these resources and one is always used by the combination of the default IPv4 DSCP classifier and the default IPv6 DSCP classifier.</li> <li>• rewrite-profiles On the 7250 IXR, a rewrite-profile resource is used every time a different combination of IPv4 DSCP rewrite-rule and IPv6 DSCP rewrite-rule is applied to an egress subinterface of the 7250 IXR IMM. There are 32 of these resources.</li> <li>• rewrite-policies A rewrite-policy resource is used every time a different DSCP or MPLS traffic-class rewrite-rule policy is applied to an egress subinterface of the 7250 IXR IMM. There are 32 of these resources.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**free number**

<b>Description</b>	The number of resources that are unused and available
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name</a> keyword <a href="#">qos resource name identityref free number</a>
<b>Tree</b>	<a href="#">free</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *identityref*

<b>Description</b>	The name of the TCAM resource
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• if-input-ipv4 Resource pool of TCAM entries used by IPv4 ACLs applied as subinterface-input filters</li> <li>• if-output-ipv4 Resource pool of TCAM entries used by IPv4 ACLs applied as subinterface-output filters</li> <li>• if-input-ipv6 Resource pool of TCAM entries used by IPv6 ACLs applied as subinterface-input filters</li> <li>• if-output-ipv6 Resource pool of TCAM entries used by IPv6 ACLs applied as subinterface-output filters</li> <li>• cpm-capture-ipv4 Resource pool of TCAM entries used by IPv4 cpm-filter ACLs and capture-filter ACLs</li> <li>• cpm-capture-ipv6 Resource pool of TCAM entries used by IPv6 cpm-filter ACLs and capture-filter ACLs</li> <li>• system-capture-ipv4 Resource pool of TCAM entries used by IPv4 capture-filter ACLs and IPv4 system-filter ACLs</li> <li>• system-capture-ipv6 Resource pool of TCAM entries used by IPv6 capture-filter ACLs and IPv6 system-filter ACLs</li> <li>• system-capture Resource pool of TCAM entries used by IPv4 + IPv6 capture-filter ACLs and system-filter ACLs</li> <li>• capture-ipv4 Resource pool of TCAM entries used by IPv4 capture-filter ACLs</li> <li>• capture-ipv6 Resource pool of TCAM entries used by IPv6 capture-filter ACLs</li> <li>• if-output-cpm-ipv4 Resource pool of TCAM entries used by IPv4 egress ACLs and cpm-filter ACLs</li> <li>• if-output-cpm-ipv6</li> </ul>

- Resource pool of TCAM entries used by IPv6 egress ACLs and cpm-filter ACLs
- if-output-cpm
  - Resource pool of TCAM entries used by IPv4 + IPv6 egress ACLs and cpm-filter ACLs
- if-input-mac
  - Resource pool of TCAM entries used by MAC ACLs applied as subinterface-input filters
- if-output-cpm-mac
  - Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- policy-forwarding-ipv4
  - Resource pool of TCAM entries used by IPv4 policy-forwarding entries
- if-input-policer
  - Resource pool of TCAM entries used by ingress subinterface policer templates
- if-input-ipv4-qos
  - Resource pool of TCAM entries associated with IPv4 multi-field QoS classification entries, when applied to subinterface input
- if-input-ipv6-qos
  - Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input

**Configurable**

False

**Platforms**

Supported on all platforms

**free-dynamic number****Description**

The number of available and unused TCAM entries for the entry type, assuming that all the remaining unused TCAM slices would be dynamically allocated to this one type of entry (subject to chip level constraints on the placement of double-wide and triple-wide TCAM slice groups).

**Context**

[platform linecard slot number forwarding-complex name keyword tcam resource name identityref free-dynamic number](#)

**Tree**

[free-dynamic](#)

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D2L

**free-static number**

<b>Description</b>	The number of available and unused TCAM entries for the entry type, assuming that the number of dynamic TCAM slices that are currently allocated to the entry type remains constant at its current value.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref free-static number</a>
<b>Tree</b>	<a href="#">free-static</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**programmed number**

<b>Description</b>	The number of TCAM entries belonging to this resource that are currently programmed into hardware. When the number of programmed entries equals the number of reserved entries HW programming of this resource type has finished.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref programmed number</a>
<b>Tree</b>	<a href="#">programmed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**reserved number**

<b>Description</b>	The number of TCAM entries that are currently reserved in this resource pool. Reservation happens when a configuration change is committed. Reserved entries may not be programmed yet if the commit has just occurred.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref reserved number</a>
<b>Tree</b>	<a href="#">reserved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted string**

<b>Description</b>	The date and time this component last booted  For components that do not boot, this is the time the component was last discovered by the active control module
--------------------	--

<b>Context</b>	<a href="#">platform linecard slot number last-booted string</a>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change string**

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform linecard slot number last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**locator-state keyword**

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform linecard slot number locator-state keyword</a>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**manufactured-date string**

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform linecard slot number manufactured-date string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state keyword**

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform linecard slot number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**part-number string**

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform linecard slot number part-number string</a>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**power**

<b>Description</b>	State related to power consumption and allocation for this component
<b>Context</b>	<a href="#">platform linecard slot number power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**required number**

<b>Description</b>	The power budget required to enable this component
<b>Context</b>	<a href="#">platform linecard slot number power required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**used number**

<b>Description</b>	The power in use by this component
<b>Context</b>	<a href="#">platform linecard slot number power used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform linecard slot number removable boolean</a>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform linecard slot number serial-number string</a>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-version** *string*

<b>Description</b>	Image version version running on this component  This version is the squashfs version, and may not represent the current per-application versions if versions have been modified after the system has been installed.
<b>Context</b>	<a href="#">platform linecard slot number software-version string</a>
<b>Tree</b>	<a href="#">software-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**temperature**

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform linecard slot number temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**alarm-status** *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin field is <=2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform linecard slot number temperature alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**instant** *number*

<b>Description</b>	Represents the highest temperature of any sensor on this component  Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform linecard slot number temperature instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**margin** *number*

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component  The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform linecard slot number temperature margin</a> <i>number</i>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**type** *string*

<b>Description</b>	Linecard type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform linecard slot number type</a> <i>string</i>

<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **power-supply id number**

<b>Description</b>	Top-level container for power supply module configuration and state
<b>Context</b>	<a href="#">platform power-supply id number</a>
<b>Tree</b>	<a href="#">power-supply</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **id number**

<b>Description</b>	Numeric identifier for the power supply module
<b>Context</b>	<a href="#">platform power-supply id number</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **capacity number**

<b>Description</b>	The total capacity the power supply module can provide
<b>Context</b>	<a href="#">platform power-supply id number capacity number</a>
<b>Tree</b>	<a href="#">capacity</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **clei-code string**

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform power-supply id number clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-reason** *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">failure-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**input**

<b>Description</b>	Top-level container for power-supply input state
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**current** *decimal-number*

<b>Description</b>	Current input amperage for the power-supply
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">input current</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">current</a>
<b>Units</b>	amps
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**power** *decimal-number*

<b>Description</b>	Current input power for the power-supply
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">input power</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">power</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**voltage** *decimal-number*

<b>Description</b>	Current input voltage for the power-supply
<b>Context</b>	<a href="#">platform power-supply id</a> <a href="#">number</a> <a href="#">input voltage</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">voltage</a>
<b>Units</b>	volts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform power-supply id</a> <a href="#">number</a> <a href="#">last-booted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform power-supply id</a> <a href="#">number</a> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform power-supply id</a> <a href="#">number</a> <a href="#">manufactured-date</a> <i>string</i>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-reason** *keyword*

<b>Description</b>	Indicates the reason for the current state of the component
<b>Context</b>	<a href="#">platform power-supply id number oper-reason keyword</a>
<b>Tree</b>	<a href="#">oper-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-input/fault No power input, or other hardware fault detected</li> <li>• eeprom-invalid EEPROM of this power supply is either invalid or corrupt</li> <li>• airflow-mismatch The detected airflow of this power supply does not match the system-calculated airflow direction  The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform power-supply id number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

- Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **part-number** *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">part-number</a> <i>string</i>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number serial-number string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**temperature**

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number temperature</i>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**alarm-status** *boolean*

<b>Description</b>	Indicates if the temperature of this component is currently in an alarm state
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number temperature alarm-status boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The current temperature of this component
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number temperature instant number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *string*

<b>Description</b>	Power-supply type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number type string</i>

<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## redundancy

<b>Description</b>	Top-level container for platform redundancy
<b>Context</b>	<a href="#">platform redundancy</a>
<b>Tree</b>	<a href="#">redundancy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## active-module *keyword*

<b>Description</b>	Control module currently active
<b>Context</b>	<a href="#">platform redundancy active-module keyword</a>
<b>Tree</b>	<a href="#">active-module</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• A</li> <li>• B</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## failover-time *string*

<b>Description</b>	Date and time of the last control module failover
<b>Context</b>	<a href="#">platform redundancy failover-time string</a>
<b>Tree</b>	<a href="#">failover-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## synchronization

<b>Description</b>	Top-level container for redundancy synchronization
<b>Context</b>	<a href="#">platform redundancy synchronization</a>

<b>Tree</b>	<a href="#">synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **last-synchronization string**

<b>Description</b>	Last date and time a synchronization of system files occurred
<b>Context</b>	<a href="#">platform redundancy synchronization last-synchronization string</a>
<b>Tree</b>	<a href="#">last-synchronization</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **overlay**

<b>Description</b>	Top-level container for overlay synchronization
<b>Context</b>	<a href="#">platform redundancy synchronization overlay</a>
<b>Tree</b>	<a href="#">overlay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **last-synchronization string**

<b>Description</b>	Last date and time a synchronization of the overlay occurred
<b>Context</b>	<a href="#">platform redundancy synchronization overlay last-synchronization string</a>
<b>Tree</b>	<a href="#">last-synchronization</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **next-synchronization string**

<b>Description</b>	Next date and time a synchronization of the overlay will occur
<b>Context</b>	<a href="#">platform redundancy synchronization overlay next-synchronization string</a>
<b>Tree</b>	<a href="#">next-synchronization</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **synchronization-frequency** *number*

<b>Description</b>	Sets the frequency of overlay synchronizations This has no effect if overlay is not a configured synchronization mode. Changing this value results in the timer to the next synchronization being reset.
<b>Context</b>	<a href="#">platform redundancy synchronization overlay synchronization-frequency</a> <i>number</i>
<b>Tree</b>	<a href="#">synchronization-frequency</a>
<b>Range</b>	30 to 65535
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **state** *keyword*

<b>Description</b>	Current synchronization status
<b>Context</b>	<a href="#">platform redundancy synchronization state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• synchronized Standby control module is ready and synchronized</li> <li>• synchronizing Standby control module is currently synchronizing</li> <li>• not-ready Standby control module is not synchronized</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **resource-management**

<b>Description</b>	Container for managing resources in a system-wide context
<b>Context</b>	<a href="#">platform resource-management</a>

<b>Tree</b>	<a href="#">resource-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### tcam

<b>Description</b>	Container for managing the allocation of TCAM banks to different applications.
<b>Context</b>	<a href="#">platform resource-management tcam</a>
<b>Tree</b>	<a href="#">tcam</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### unified-forwarding-resources

<b>Description</b>	Container for managing Broadcom-specific UFT resources.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources</a>
<b>Tree</b>	<a href="#">unified-forwarding-resources</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D2L

### allocated-extra-ip-host-entries *number*

<b>Description</b>	The extra number of host entries that have been allocated from UFT shared banks.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources allocated-extra-ip-host-entries <i>number</i></a>
<b>Tree</b>	<a href="#">allocated-extra-ip-host-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D2L

### allocated-extra-mac-entries *number*

<b>Description</b>	The extra number of MAC address entries that have been allocated from UFT shared banks.
--------------------	---

<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources allocated-extra-mac-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">allocated-extra-mac-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D2L

### **alpm keyword**

<b>Description</b>	Controls the ALPM mode. If this is set to disabled then no UFT banks are allocated to ALPM. If this is set to enabled then 4 UFT shared banks are allocated to ALPM. If this is set to high-scale then 8 UFT shared banks are allocated to ALPM. This mode is not supported by 7220 IXR-D1.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources alpm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">alpm</a>
<b>Default</b>	disabled
<b>Options</b>	<ul style="list-style-type: none"> <li>• disabled</li> <li>• enabled</li> <li>• high-scale</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D2L

### **ipv6-128bit-lpm-entries number**

<b>Description</b>	Sets the value for num_ipv6_lpm_128b_entries, which affects IP FIB scale. H2/H3 range: 0-1024 D1 range: 0-4096 D2/D3 range: 0-8192
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources ipv6-128bit-lpm-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-128bit-lpm-entries</a>
<b>Range</b>	0 to 8192
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D2L

**requested-extra-ip-host-entries** *number*

<b>Description</b>	<p>The extra number of host entries that are desired.</p> <p>The number of UFT shared banks that are reserved for IPv4 and IPv6 host entries is given by: <math>\min(N/X, P-A)</math></p> <p>where: N = configured value of requested-extra-ip-host-entries X = the size of each shared bank, which is platform specific P-A = platform-specific number of shared banks, subtracting the ALPM banks</p> <p>requested-extra-ip-host-entries is interpreted in terms of IPv4 hosts (single-wide entries). IPv6 host entries are double-wide so 1 IPv4 host entry + 1 IPv6 host-entry counts as 3 entries.</p> <p>All UFT shared banks that are not reserved by ALPM and not reserved for extra IP host entries are used for extra MAC entries.</p> <p>On D1 the default value is 48K entries, which provides 3 shared banks, max is 96K. On D2/D3 the default value is 128K entries, which provides 4 shared banks, max is 256K.</p>
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources requested-extra-ip-host-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">requested-extra-ip-host-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D2L

**xdp-restart-required** *boolean*

<b>Description</b>	Reads true if the user has committed a change to one or more of the configurable values in the uft container but has not yet restarted XDP so the operational values are still the values initialized at the last XDP restart.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources xdp-restart-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">xdp-restart-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D2L

**resource-monitoring**

<b>Description</b>	Enter the resource-monitoring context
<b>Context</b>	<a href="#">platform resource-monitoring</a>
<b>Tree</b>	<a href="#">resource-monitoring</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**acl**

<b>Description</b>	Enter the acl context
<b>Context</b>	<a href="#">platform resource-monitoring acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**resource name *identityref***

<b>Description</b>	Enter the resource list instance
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name <i>identityref</i></a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name *identityref***

<b>Description</b>	The name of the ACL resource
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name <i>identityref</i></a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• input-ipv4-filter-instances This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.</li> <li>• input-ipv4-qos-multifield-instances This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.</li> <li>• input-ipv4-filter-instances-routed This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.</li> <li>• input-ipv4-filter-instances-bridged</li> </ul>

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- input-ipv6-filter-instances

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- input-ipv6-qos-multifield-instances

This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv6-filter-instances-routed

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- input-ipv6-filter-instances-bridged

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- if-input-ipv4-stats

Resource pool of stats entries available for ingress IPv4 ACLs

- if-input-ipv6-stats

Resource pool of stats entries available for ingress IPv6 ACLs

- if-output-ipv4-stats

Resource pool of stats entries available for egress IPv4 ACLs

- if-output-ipv6-stats

Resource pool of stats entries available for egress IPv6 ACLs

- if-output-cpm-stats

Resource pool of stats entries shared by egress IPv4/IPv6/MAC TCAM entries, and CPM-filter IPv4/IPv6/MAC TCAM entries

Egress Ipv4 -> uses single stat counter Egress Ipv6 -> uses single stat counter Egress MAC -> uses single stat counter Cpm Ipv4 -> uses two stat counters Cpm Ipv6 -> uses two stat counters Cpm MAC -> uses two stat counters

**Configurable**

True

**Platforms**

Supported on all platforms

**falling-threshold-log** *number*

<b>Description</b>	Sets the threshold that triggers the generation of a NOTICE log whenever the utilization of the ACL resource in any linecard/complex/core falls reaches this value in a falling direction
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name</a> <i>identityref</i> <a href="#">falling-threshold-log number</a>
<b>Tree</b>	<a href="#">falling-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	70
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rising-threshold-log** *number*

<b>Description</b>	Sets the threshold that triggers the generation of a WARNING log whenever the utilization of the ACL resource in any linecard/complex/core reaches this value in a rising direction
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name</a> <i>identityref</i> <a href="#">rising-threshold-log number</a>
<b>Tree</b>	<a href="#">rising-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	90
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**datapath**

<b>Description</b>	Container for monitoring datapath resources system-wide
<b>Context</b>	<a href="#">platform resource-monitoring datapath</a>
<b>Tree</b>	<a href="#">datapath</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**asic**

<b>Description</b>	Container for monitoring datapath resources that are specific to a subset of the chipsets supported by SR Linux.
--------------------	--

<b>Context</b>	<a href="#">platform resource-monitoring datapath asic</a>
<b>Tree</b>	<a href="#">asic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### resource [name identityref](#)

<b>Description</b>	List of ASIC-specific datapath resources
<b>Context</b>	<a href="#">platform resource-monitoring datapath asic resource name identityref</a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name [identityref](#)

<b>Description</b>	The name of the ASIC-specific datapath resource.
<b>Context</b>	<a href="#">platform resource-monitoring datapath asic resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ip-lpm-ipv4-routes</a> <p>Trident3: Reports the number of IPv4 entries in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of half-wide entries in all partitions (i.e. it assumes no IPv6 routes consume those entries). In ALPM mode, free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.</p> <p>Trident4 and Tomahawk3: Reports the number of IPv4 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• <a href="#">ip-lpm-ipv6-routes</a> <p>Reports the number of IPv6 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• <a href="#">ip-lpm-ipv6-shorter-routes</a> <p>Trident3: Reports the number of IPv6 entries with prefix length less than 65 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> <p>Tomahawk3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.</p> </li> <li>• <a href="#">ip-lpm-ipv6-longer-routes</a></li> </ul>

Trident3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

Tomahawk3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- exact-match-entries

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- underlay-ecmp-groups

Underlay ECMP group resources.

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources.

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources.

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

Underlay ECMP member resources.

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

Overlay ECMP member resources.

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

Underlay egress next-hop resources.

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

Overlay egress next-hop resources.

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

DGPP module ID resources.

DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module\_ids are required.

- egress-vlan-translate-egress-vnis

EGR\_VLAN\_XLATE\_1 resources.

Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries).

These entries are used for finding the egress VNI to be used for VXLAN packets.

- egress-vlan-translate-local-bias-pairs

EGR\_VLAN\_XLATE\_2 resources.

Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries).

These entries are used for local bias (ES pruning).

- level-1-ecmp-groups

L1 ECMP group resources.

ECMP FEC resources are divided into L1 ECMP FEC resources and L2 ECMP FEC resources. This counts the number of entries used in the L1 partition.

- level-2-ecmp-groups

L2 ECMP group resources.

ECMP FEC resources are divided into L1 ECMP FEC resources and L2 ECMP FEC resources. This counts the number of entries used in the L2 partition.

- level-1-ecmp-members

L1 ECMP member resources.

ECMP FEC member resources are divided into L1 and L2 resources.

This counts the number of entries used in the L1 partition.

- level-2-ecmp-members

L2 ECMP member resources.

ECMP FEC member resources are divided into L1 and L2 resources. This counts the number of entries used in the L2 partition.

- level-1-non-ecmp-fecs

L1 non-ECMP FEC resources.

Non-ECMP FEC resources are divided into L1 and L2 resources. This counts the number of entries used in the L1 partition.

- level-2-non-ecmp-fecs

L2 non-ECMP FEC resources.

Non-ECMP FEC resources are divided into L1 and L2 resources. This counts the number of entries used in the L2 partition.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### falling-threshold-log *number*

<b>Description</b>	Sets the threshold that triggers the generation of a NOTICE log whenever the utilization of the datapath resource in any linecard (if applicable) or forwarding complex or pipeline (if applicable) reaches this value in a falling direction
<b>Context</b>	<a href="#">platform resource-monitoring datapath asic resource name <i>identityref</i> falling-threshold-log <i>number</i></a>
<b>Tree</b>	<a href="#">falling-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	70
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### rising-threshold-log *number*

<b>Description</b>	Sets the threshold that triggers the generation of a WARNING log whenever the utilization of the datapath resource in any linecard (if applicable) or forwarding complex or pipeline (if applicable) reaches this value in a rising direction
<b>Context</b>	<a href="#">platform resource-monitoring datapath asic resource name <i>identityref</i> rising-threshold-log <i>number</i></a>
<b>Tree</b>	<a href="#">rising-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	90

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## xdp

<b>Description</b>	Container for monitoring datapath resources that are generic in concept.
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp</a>
<b>Tree</b>	<a href="#">xdp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## resource [name identityref](#)

<b>Description</b>	List of generic datapath resources
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp resource name identityref</a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name [identityref](#)

<b>Description</b>	<p>The name of the XDP datapath resource.</p> <p>Some of these resources may be software only (i.e. no correspondence to a hardware table).</p> <p>Some of these resources may depend on multiple HW tables and when the utilization is reported it represents an aggregated or summarized view.</p>
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>arp-nd-entries           <p>IPv4 ARP and IPv6 neighbor discovery resources.</p> <p>Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent. This does not consider underlying ASIC resources.</p> </li> <li>ip-hosts           <p>IP host route resources.</p> <p>Trident3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. In non-ALPM operation every remote /32 route also requires 1 entry. Every local host /128 route, and ND entry requires 2</p> </li> </ul>

entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks

Trident4 and Tomahawk3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources.

Jericho2: Every installed IPv4 and IPv6 route counts as one used route.

Trident3 and Tomahawk3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

Trident4: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC address resources.

Reports the number of entries used in the MAC lookup table. On TD3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- direct-next-hops

Direct next-hop resources.

Reports the number of entries, where 1 entry is used for every next-hop of an IP or MPLS route that is resolved directly to a local interface. This does not consider underlying ASIC resources.

- indirect-next-hops

Indirect next-hop resources.

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that is resolved by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources.

Reports the number of tunnel next-hop entries. For EVPN routes resolved by VXLAN, 1 entry is used for every <vni, vtep> pair. When a BGP IP route is resolved by an MPLS tunnel, 1 entry is used for every BGP next-hop of the route. This does not consider underlying ASIC resources.

- ecmp-groups

ECMP group resources.

Jericho2: Reports the used number of ECMP FECs, adding L1 ECMP FECs and L2 ECMP FECs.

Trident3: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups.

Trident4 and Tomahawk3: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources.

Jericho2: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs and L2 ECMP member FECs.

Trident3: Reports the used number of ECMP members, adding overlay and underlay ECMP members.

Trident4 and Tomahawk3: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources.

Trident3: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

Trident4 and Tomahawk3: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources.

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

LAG member resources.

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

Subinterface resources.

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EPF TCAM resources). This counts the utilization of those resources.

- mpls-next-hops

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- mpls-incoming-labels

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- tunnels  
Tunnel resources. One tunnel resource is used per VXLAN or MPLS tunnel endpoint.  
On TD3 and TD4 systems this equates to a DVP resource.

## 8.1 qos Descriptions

### qos

<b>Description</b>	Top-level container for QoS data
<b>Context</b>	<a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### classifiers

<b>Description</b>	Enter the classifiers context
<b>Context</b>	<a href="#">qos classifiers</a>
<b>Tree</b>	<a href="#">classifiers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### dot1p-policy *name string*

<b>Description</b>	Enter the dot1p-policy list instance
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name string</a>
<b>Tree</b>	<a href="#">dot1p-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### name *string*

<b>Description</b>	User-configured name for a 802.1p priority code point mapping policy The name 'default' is reserved for the system default dot1p mapping policy.
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**dot1p value number**

<b>Description</b>	Enter the dot1p list instance
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value number</a>
<b>Tree</b>	<a href="#">dot1p</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**value number**

<b>Description</b>	Enter the value context
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value number</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**drop-probability keyword**

<b>Description</b>	The drop probability to which the dot1p value is mapped
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value number</a> <a href="#">drop-probability keyword</a>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**forwarding-class (reference | keyword)**

<b>Description</b>	The forwarding class to which the dot1p value is mapped
--------------------	---

---

<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value</a> <i>number</i> <a href="#">forwarding-class</a> ( <i>reference</i>   <i>keyword</i> )

<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## multifield

<b>Description</b>	Container for multifield classification policies
<b>Context</b>	<a href="#">qos classifiers multifield</a>
<b>Tree</b>	<a href="#">multifield</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## ipv4-policy [name string](#)

<b>Description</b>	List of IPv4 classifier policies
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string</a>
<b>Tree</b>	<a href="#">ipv4-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## name [string](#)

<b>Description</b>	Name of the IPv4 classifier policy.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### entry *sequence-id number*

**Description** List of classifier rules.

**Context** [qos classifiers multifield ipv4-policy name](#) *string entry sequence-id number*

**Tree** [entry](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sequence-id *number*

**Description** A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries

**Context** [qos classifiers multifield ipv4-policy name](#) *string entry sequence-id number*

**Range** 1 to 65535

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### action

**Description** Container for the actions to be applied to packets matching the classifier entry.

**Context** [qos classifiers multifield ipv4-policy name](#) *string entry sequence-id number action*

**Tree** [action](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**drop-probability** *keyword*

<b>Description</b>	Assign matching packets to the specified drop probability level
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**forwarding-class** (*keyword* | *reference*)

<b>Description</b>	The forwarding class to which the DSCP value is mapped
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action forwarding-class</a> ( <i>keyword</i>   <i>reference</i> )
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>fc0 System default forwarding-class name for the FC with index 0</li> <li>fc1 System default forwarding-class name for the FC with index 1</li> <li>fc2 System default forwarding-class name for the FC with index 2</li> <li>fc3 System default forwarding-class name for the FC with index 3</li> <li>fc4 System default forwarding-class name for the FC with index 4</li> <li>fc5 System default forwarding-class name for the FC with index 5</li> </ul>

- fc6  
System default forwarding-class name for the FC with index 6
- fc7  
System default forwarding-class name for the FC with index 7
- fc8  
System default forwarding-class name for the FC with index 8
- fc9  
System default forwarding-class name for the FC with index 9
- fc10  
System default forwarding-class name for the FC with index 10
- fc11  
System default forwarding-class name for the FC with index 11
- fc12  
System default forwarding-class name for the FC with index 12
- fc13  
System default forwarding-class name for the FC with index 13
- fc14  
System default forwarding-class name for the FC with index 14
- fc15  
System default forwarding-class name for the FC with index 15

<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rewrite

<b>Description</b>	Rewrite actions associated with packets that match the classifier entry. Where a packet matches these criteria, the specified rewrite actions should be performed.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action rewrite</a>
<b>Tree</b>	<a href="#">rewrite</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**set-dscp** *number*

<b>Description</b>	Sets the 6-bit DSCP (differentiated services code point) value in the IP packet header.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action rewrite set-dscp</a> <i>number</i>
<b>Tree</b>	<a href="#">set-dscp</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**match**

<b>Description</b>	Container for the conditions that determine whether a packet matches this entry
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**destination-ip**

<b>Description</b>	Packet matching criteria based on destination IPv4 address
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match destination-ip</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match destination-ip address</a> <i>string</i>

<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**mask string**

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number match destination-ip mask string</a>
<b>Tree</b>	<a href="#">mask</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**prefix string**

<b>Description</b>	Match a packet if its destination IP address is within the specified IPv4 prefix.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number match destination-ip prefix string</a>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**destination-port**

<b>Description</b>	A packet matches this condition if its destination TCP or UDP port number matches the value or range that is specified  The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number match destination-port</a>
<b>Tree</b>	<a href="#">destination-port</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## operator *keyword*

**Description** Comparison operator  
eq = equal ge = greater than or equal to le = less than or equal to

**Context** [qos classifiers multifield ipv4-policy name](#) *string* [entry sequence-id](#) *number* [match destination-port operator](#) *keyword*

**Tree** [operator](#)

**Options**

- le  
Less than or equal.
- ge  
Greater than or equal.
- eq  
Equal to.

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## range

**Description** Container used to specify a contiguous range of TCP/UDP port numbers

**Context** [qos classifiers multifield ipv4-policy name](#) *string* [entry sequence-id](#) *number* [match destination-port range](#)

**Tree** [range](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## end (*number* | *keyword*)

**Description** The ending port number to include in the range

**Context** [qos classifiers multifield ipv4-policy name](#) *string* [entry sequence-id](#) *number* [match destination-port range end](#) (*number* | *keyword*)

**Configurable**

True

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**dscp-set** (*number* | *keyword*)**Description**

A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.

**Context**

[qos classifiers multifield ipv4-policy name string entry sequence-id number match dscp-set](#) (*number* | *keyword*)

**Tree**

[dscp-set](#)

<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D2L

### **first-fragment** *boolean*

<b>Description</b>	<p>Match the first fragment of an IPv4 datagram</p> <p>A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and the more-fragments bit is 1. It is not valid to configure this leaf without configuring a match value for the fragment leaf.</p>
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match first-fragment</a> <i>boolean</i>
<b>Tree</b>	<a href="#">first-fragment</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### fragment *boolean*

**Description** Match an IPv4 fragment  
A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and the more-fragments bit is 1 or if the IPv4 header indicates that the fragment-offset is greater than 0. A packet matches the false condition if it is unfragmented.

**Context** [qos classifiers multifield ipv4-policy name string entry sequence-id number match fragment boolean](#)

**Tree** [fragment](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### icmp

**Description** A packet matches this condition if its ICMP type and code matches one of the specified combinations  
The rule should also have a condition that the IP protocol equals 1 (ICMP) in order for this to be interpreted correctly.

**Context** [qos classifiers multifield ipv4-policy name string entry sequence-id number match icmp](#)

**Tree** [icmp](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### code *number*

**Description** Match if the ICMP code value is any value in the list  
Requires ICMP type to be specified because codes are type dependent.

**Context** [qos classifiers multifield ipv4-policy name string entry sequence-id number match icmp code number](#)

**Tree** [code](#)

<b>Configurable</b>	True

**source-ip**

<b>Description</b>	Packet matching criteria based on source IPv4 address
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-ip</a>
<b>Tree</b>	<a href="#">source-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**address string**

<b>Description</b>	Match a packet if its source IP address logically anded with the inverse of the mask equals this IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-ip address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**mask string**

<b>Description</b>	Match a packet if its source IP address logically anded with the inverse of this mask equals the configured IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-ip mask</a> <i>string</i>
<b>Tree</b>	<a href="#">mask</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**prefix string**

<b>Description</b>	Match a packet if its source IP address is within the specified IPv4 prefix.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-ip prefix</a> <i>string</i>

<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## source-port

<b>Description</b>	A packet matches this condition if its source TCP or UDP port number matches the value or range that is specified  The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number match source-port</a>
<b>Tree</b>	<a href="#">source-port</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## operator *keyword*

<b>Description</b>	Comparison operator  eq = equal ge = greater than or equal to le = less than or equal to
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number match source-port operator keyword</a>
<b>Tree</b>	<a href="#">operator</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• le Less than or equal.</li> <li>• ge Greater than or equal.</li> <li>• eq Equal to.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**range**

<b>Description</b>	Container used to specify a contiguous range of TCP/UDP port numbers
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-port range</a>
<b>Tree</b>	<a href="#">range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**end** (*number* | *keyword*)

<b>Description</b>	The ending port number to include in the range
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match source-port range end</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">end</a>
<b>Range</b>	0 to 65535

### tcp-flags *string*

<b>Description</b>	A logical expression using the &,   and ! logical operators and the TCP flag names: rst, syn and ack.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a> <a href="#">match tcp-flags</a> <i>string</i>
<b>Tree</b>	<a href="#">tcp-flags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### tcam-entries

<b>Description</b>	Information about the TCAM entries used to implement the ACL entry
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a> <a href="#">tcam-entries</a>
<b>Tree</b>	<a href="#">tcam-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### forwarding-complex [complex-identifier](#) *string*

<b>Description</b>	List of forwarding complexes in the system
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a> <a href="#">tcam-entries forwarding-complex</a> <a href="#">complex-identifier</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### complex-identifier *string*

**Description** A forwarding complex in the format (slot-number,complex-number).

**Context** [qos classifiers multifield ipv4-policy name \*string\* entry sequence-id \*number\* tcam-entries forwarding-complex complex-identifier \*string\*](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### input-total *number*

**Description** The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic.

For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.

**Context** [qos classifiers multifield ipv4-policy name \*string\* entry sequence-id \*number\* tcam-entries forwarding-complex complex-identifier \*string\* input-total \*number\*](#)

**Tree** [input-total](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### output-total *number*

**Description** The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic.

For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.

<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number tcam-entries forwarding-complex complex-identifier string output-total number</a>
<b>Tree</b>	<a href="#">output-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### single-instance *number*

<b>Description</b>	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot.  This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string entry sequence-id number tcam-entries forwarding-complex complex-identifier string single-instance number</a>
<b>Tree</b>	<a href="#">single-instance</a>
<b>Configurable</b>	False

### ipv6-policy *name string*

<b>Description</b>	List of IPv6 classifier policies
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string</a>
<b>Tree</b>	<a href="#">ipv6-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### name *string*

<b>Description</b>	Name of the IPv6 classifier policy.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### entry *sequence-id number*

<b>Description</b>	List of classifier rules.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### sequence-id *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### action

<b>Description</b>	Container for the actions to be applied to packets matching the classifier entry.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id number</a> <a href="#">action</a>
<b>Tree</b>	<a href="#">action</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**drop-probability** *keyword*

<b>Description</b>	Assign matching packets to the specified drop probability level
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**forwarding-class** (*keyword* | *reference*)

<b>Description</b>	The forwarding class to which the DSCP value is mapped
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action forwarding-class</a> ( <i>keyword</i>   <i>reference</i> )
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>fc0 System default forwarding-class name for the FC with index 0</li> <li>fc1 System default forwarding-class name for the FC with index 1</li> <li>fc2 System default forwarding-class name for the FC with index 2</li> <li>fc3 System default forwarding-class name for the FC with index 3</li> <li>fc4 System default forwarding-class name for the FC with index 4</li> <li>fc5 System default forwarding-class name for the FC with index 5</li> </ul>

- fc6  
System default forwarding-class name for the FC with index 6
- fc7  
System default forwarding-class name for the FC with index 7
- fc8  
System default forwarding-class name for the FC with index 8
- fc9  
System default forwarding-class name for the FC with index 9
- fc10  
System default forwarding-class name for the FC with index 10
- fc11  
System default forwarding-class name for the FC with index 11
- fc12  
System default forwarding-class name for the FC with index 12
- fc13  
System default forwarding-class name for the FC with index 13
- fc14  
System default forwarding-class name for the FC with index 14
- fc15  
System default forwarding-class name for the FC with index 15

<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## rewrite

<b>Description</b>	Rewrite actions associated with packets that match the classifier entry. Where a packet matches these criteria, the specified rewrite actions should be performed.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action rewrite</a>
<b>Tree</b>	<a href="#">rewrite</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**set-dscp** *number*

<b>Description</b>	Sets the 6-bit DSCP (differentiated services code point) value in the IP packet header.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action rewrite set-dscp</a> <i>number</i>
<b>Tree</b>	<a href="#">set-dscp</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**match**

<b>Description</b>	Container for the conditions that determine whether a packet matches this entry
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**destination-ip**

<b>Description</b>	Packet matching criteria based on destination IPv6 address
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match destination-ip</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match destination-ip address</a> <i>string</i>

<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**mask string**

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-ip mask string</a>
<b>Tree</b>	<a href="#">mask</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**prefix string**

<b>Description</b>	Match a packet if its destination IP address is within the specified IPv6 prefix.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-ip prefix string</a>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**destination-port**

<b>Description</b>	A packet matches this condition if its destination TCP or UDP port number matches the value or range that is specified  The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-port</a>
<b>Tree</b>	<a href="#">destination-port</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## operator *keyword*

**Description** Comparison operator  
eq = equal ge = greater than or equal to le = less than or equal to

**Context** [qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-port operator keyword](#)

**Tree** [operator](#)

**Options**

- le  
Less than or equal.
- ge  
Greater than or equal.
- eq  
Equal to.

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## range

**Description** Container used to specify a contiguous range of TCP/UDP port numbers

**Context** [qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-port range](#)

**Tree** [range](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## end (*number* | *keyword*)

**Description** The ending port number to include in the range

**Context** [qos classifiers multifield ipv6-policy name string entry sequence-id number match destination-port range end \(number | keyword\)](#)

---

<b>Tree</b>	<b>end</b>

True

**Platforms**

7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**tcp-flags string****Description**

A logical expression using the &amp;, | and ! logical operators and the TCP flag names: rst, syn and ack.

<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match tcp-flags</a> <i>string</i>
<b>Tree</b>	<a href="#">tcp-flags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## tcam-entries

<b>Description</b>	Information about the TCAM entries used to implement the ACL entry
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries</a>
<b>Tree</b>	<a href="#">tcam-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## forwarding-complex [complex-identifier](#) *string*

<b>Description</b>	List of forwarding complexes in the system
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## complex-identifier *string*

<b>Description</b>	A forwarding complex in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**input-total** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <b>input-total</b> <i>number</i>
<b>Tree</b>	<a href="#">input-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**output-total** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <b>output-total</b> <i>number</i>
<b>Tree</b>	<a href="#">output-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**single-instance** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot.
--------------------	--

This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.

<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <a href="#">single-instance</a> <i>number</i>
<b>Tree</b>	<a href="#">single-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **vxlan-default** *reference*

<b>Description</b>	Reference to the name of a DSCP mapping policy that applies to terminating VXLAN packets.
<b>Context</b>	<a href="#">qos classifiers vxlan-default</a> <i>reference</i>
<b>Tree</b>	<a href="#">vxlan-default</a>
<b>Reference</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **explicit-congestion-notification**

<b>Description</b>	Enable the explicit-congestion-notification context
<b>Context</b>	<a href="#">qos explicit-congestion-notification</a>
<b>Tree</b>	<a href="#">explicit-congestion-notification</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ecn-dscp-policy** *reference*

<b>Description</b>	Reference to the DSCP rewrite policy to use when DSCP rewrite is required as a side effect of ECN remarking.  This is required configuration in order to globally enable ECN on J2 platforms.
<b>Context</b>	<a href="#">qos explicit-congestion-notification ecn-dscp-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">ecn-dscp-policy</a>

<b>Reference</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## forwarding-classes

<b>Description</b>	Enclosing container for list of user-defined forwarding class names
<b>Context</b>	<a href="#">qos forwarding-classes</a>
<b>Tree</b>	<a href="#">forwarding-classes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## forwarding-class [name](#) *string*

<b>Description</b>	Enter the forwarding-class list instance
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## name *string*

<b>Description</b>	User-defined name of the forwarding class  The following forwarding-class names are the system-reserved default FC names on 7250 IXR systems: fc0 fc1 fc2 fc3 fc4 fc5 fc6 fc7  In addition to fc0-fc7, the following forwarding-class names are also system-reserved default FC names on FP5-c based platforms fc8 fc9 fc10 fc11 fc12 fc13 fc14 fc15
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## forwarding-class-index *number*

<b>Description</b>	Associates the forwarding class name with an index representing the forwarding-class-index. Forwarding classes with a higher forwarding-class-
--------------------	--

index are generally (subject to scheduler configuration) serviced more preferentially than forwarding classes with a lower forwarding-class-index.

For the system-reserved default forwarding classes: fc0 -> forwarding-class-index = 0 fc1 -> forwarding-class-index = 1 fc2 -> forwarding-class-index = 2 fc3 -> forwarding-class-index = 3 fc4 -> forwarding-class-index = 4 fc5 -> forwarding-class-index = 5 fc6 -> forwarding-class-index = 6 fc7 -> forwarding-class-index = 7 fc8 -> forwarding-class-index = 8 fc9 -> forwarding-class-index = 9 fc10 -> forwarding-class-index = 10 fc11 -> forwarding-class-index = 11 fc12 -> forwarding-class-index = 12 fc13 -> forwarding-class-index = 13 fc14 -> forwarding-class-index = 14 fc15 -> forwarding-class-index = 15

<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> forwarding-class-index <i>number</i>
<b>Tree</b>	<a href="#">forwarding-class-index</a>
<b>Range</b>	0 to 15
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## output

<b>Description</b>	Enter the output context
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> output
<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## multicast-queue *reference*

<b>Description</b>	Output queue for multicast packets within this forwarding class.
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> output multicast-queue <i>reference</i>
<b>Tree</b>	<a href="#">multicast-queue</a>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## unicast-queue *reference*

<b>Description</b>	Output queue for unicast packets within this forwarding class
--------------------	---

For the system-reserved default forwarding classes: fc0 -> unicast-queue = unicast-queue0 fc1 -> unicast-queue = unicast-queue1 fc2 -> unicast-queue = unicast-queue2 fc3 -> unicast-queue = unicast-queue3 fc4 -> unicast-queue = unicast-queue4 fc5 -> unicast-queue = unicast-queue5 fc6 -> unicast-queue = unicast-queue6 fc7 -> unicast-queue = unicast-queue7

<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> <a href="#">output unicast-queue reference</a>
<b>Tree</b>	<a href="#">unicast-queue</a>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## policer-templates

<b>Description</b>	Policer templates used for subinterface traffic metering.
<b>Context</b>	<a href="#">qos policer-templates</a>
<b>Tree</b>	<a href="#">policer-templates</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## policer-template *name string*

<b>Description</b>	List of policer templates.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i>
<b>Tree</b>	<a href="#">policer-template</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## *name string*

<b>Description</b>	The name assigned to the policer template.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**policer** *sequence-id number*

<b>Description</b>	The list of policer instances belonging to the template definition.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	32

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different policers in a template; policers with lower sequence-id numbers are evaluated before policers with higher sequence-id numbers
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**committed-burst-size** *number*

<b>Description</b>	Maximum CIR bucket depth in bytes.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">committed-burst-size number</a>
<b>Tree</b>	<a href="#">committed-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**committed-rate-kbps** *number*

<b>Description</b>	The committed information rate (CIR) of the policer, defined in kilobits (1024 bits) per second.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">committed-rate-kbps number</a>
<b>Tree</b>	<a href="#">committed-rate-kbps</a>

<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### exceed-action

<b>Description</b>	Container with options that specify the handling of packets that the policer has determined are exceeding (yellow)
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">exceed-action</a>
<b>Tree</b>	<a href="#">exceed-action</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### drop-probability *keyword*

<b>Description</b>	Recolor exceeding packets to the specified drop-probability level
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">exceed-action</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Default</b>	medium
<b>Options</b>	<ul style="list-style-type: none"> <li>• low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>• medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>• high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### forwarding-class [fc](#) (*reference* | *keyword*)

<b>Description</b>	The list of forwarding classes with traffic to be sent to the policer. If this list is not configured then all subinterface traffic is matched.
--------------------	---

<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number forwarding-class fc</a> ( <i>reference   keyword</i> )
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **fc** (*reference | keyword*)

<b>Description</b>	A forwarding class that has traffic to match to the policer
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number forwarding-class fc</a> ( <i>reference   keyword</i> )
<b>Options</b>	<ul style="list-style-type: none"> <li>• fc0 System default forwarding-class name for the FC with index 0</li> <li>• fc1 System default forwarding-class name for the FC with index 1</li> <li>• fc2 System default forwarding-class name for the FC with index 2</li> <li>• fc3 System default forwarding-class name for the FC with index 3</li> <li>• fc4 System default forwarding-class name for the FC with index 4</li> <li>• fc5 System default forwarding-class name for the FC with index 5</li> <li>• fc6 System default forwarding-class name for the FC with index 6</li> <li>• fc7 System default forwarding-class name for the FC with index 7</li> <li>• fc8 System default forwarding-class name for the FC with index 8</li> <li>• fc9 System default forwarding-class name for the FC with index 9</li> <li>• fc10 System default forwarding-class name for the FC with index 10</li> <li>• fc11 System default forwarding-class name for the FC with index 11</li> <li>• fc12 System default forwarding-class name for the FC with index 12</li> </ul>

	<ul style="list-style-type: none"> <li>• fc13 System default forwarding-class name for the FC with index 13</li> <li>• fc14 System default forwarding-class name for the FC with index 14</li> <li>• fc15 System default forwarding-class name for the FC with index 15</li> </ul>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### forwarding-type *keyword*

<b>Description</b>	The list of forwarding types, belonging to this forwarding-class, to match to the policer. If none are specified, this implies ALL forwarding types.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number forwarding-class fc</a> ( <i>reference</i>   <i>keyword</i> ) <a href="#">forwarding-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">forwarding-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unicast A packet is 'unicast' if the destination address is unicast and it matches an entry in the FIB</li> <li>• unknown-unicast A packet is 'unknown-unicast' if the destination address is unicast but it doesn't match any entry in the FIB and is therefore conventionally flooded</li> <li>• broadcast A packet is 'broadcast' if the destination address is a broadcast address.</li> <li>• multicast A packet is 'multicast' if the destination address is a multicast address On TD3 systems this includes multicast packets with a known destination/group address and multicast packets with an unknown destination/group address. On TD4 systems this only includes known multicast packets.</li> <li>• unknown-multicast Multicast packets with an unknown destination/group address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	5

**maximum-burst-size** *number*

<b>Description</b>	Maximum PIR bucket depth in bytes.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">maximum-burst-size number</a>
<b>Tree</b>	<a href="#">maximum-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**peak-rate-kbps** *number*

<b>Description</b>	The peak information rate (PIR) of the policer, defined in kilobits (1024 bits) per second.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">peak-rate-kbps number</a>
<b>Tree</b>	<a href="#">peak-rate-kbps</a>
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**violate-action**

<b>Description</b>	Container with options that specify the handling of packets that the policer has determined are violating (red)
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">violate-action</a>
<b>Tree</b>	<a href="#">violate-action</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**drop**

<b>Description</b>	Violating packets should be dropped immediately
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">violate-action drop</a>
<b>Tree</b>	<a href="#">drop</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### drop-probability *keyword*

**Description** Recolor violating packets to the specified drop-probability level

**Context** [qos policer-templates](#) [policer-template name](#) *string* [policer sequence-id number](#) [violate-action](#) [drop-probability](#) *keyword*

**Tree** [drop-probability](#)

**Default** high

**Options**

- low  
Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.
- medium  
Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.
- high  
Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### statistics-mode *keyword*

**Description** The statistics mode of all policers belonging to this template

**Context** [qos policer-templates](#) [policer-template name](#) *string* [statistics-mode](#) *keyword*

**Tree** [statistics-mode](#)

**Default** violating-focus

**Options**

- violating-focus  
In this statistics mode only 4 counters are provided: accepted-packets, accepted-octets, violating-packets, violating-octets
- forwarding-focus  
In this statistics mode only 4 counters are provided: committed-packets, committed-octets, exceeding-packets, exceeding-octets

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**queue-templates**

<b>Description</b>	Enter the queue-templates context
<b>Context</b>	<a href="#">qos queue-templates</a>
<b>Tree</b>	<a href="#">queue-templates</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**queue-template name string**

<b>Description</b>	List of queue templates that can be applied to egress queues or VOQ sets 7250 IXR-6/10 supports a maximum 8 queue-templates. 7220-D2/D3/D5/H2/H3 supports a maximum of 64 queue-templates.
<b>Context</b>	<a href="#">qos queue-templates queue-template name string</a>
<b>Tree</b>	<a href="#">queue-template</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	64

**name string**

<b>Description</b>	The name of the queue template The queue template with the special name 'default' is used when a queue-template reference is missing.
<b>Context</b>	<a href="#">qos queue-templates queue-template name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active-queue-management**

<b>Description</b>	Enable the active-queue-management context
<b>Context</b>	<a href="#">qos queue-templates queue-template name string active-queue-management</a>
<b>Tree</b>	<a href="#">active-queue-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ecn-slope** *ecn-drop-probability keyword*

<b>Description</b>	List of ECN slopes.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management ecn-slope ecn-drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">ecn-slope</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ecn-drop-probability** *keyword*

<b>Description</b>	The drop probability to which the ECN slope applies.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management ecn-slope ecn-drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>• medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>• high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> <li>• all All traffic, consisting of traffic marked low, medium and high drop-probability.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-probability** *number*

<b>Description</b>	<p>The maximum probability of marking a packet (at or above the max-threshold).</p> <p>On 7220-D2/D3/D5/H2/H3 max-probability has a limited set of discrete values: 1,2,3,4,5,6,7,8,9,10,25,50,75,100. The user is allowed to enter any value but the system will choose the next-highest value that is supported.</p> <p>A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0.</p>
--------------------	--

<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management ecn-slope ecn-drop-probability</a> <i>keyword</i> <a href="#">max-probability</a> <i>number</i>
<b>Tree</b>	<a href="#">max-probability</a>
<b>Range</b>	0 to 100
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **max-threshold-percent** *number*

<b>Description</b>	The percentage of the MBS that corresponds to the ECN maximum threshold parameter.  A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management ecn-slope ecn-drop-probability</a> <i>keyword</i> <a href="#">max-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">max-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **min-threshold-percent** *number*

<b>Description</b>	The percentage of the MBS that corresponds to the ECN minimum threshold parameter.  A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management ecn-slope ecn-drop-probability</a> <i>keyword</i> <a href="#">min-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">min-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**weight-factor** *number*

<b>Description</b>	Weight factor to use in the calculation of the current (average weighted) queue depth.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management weight-factor</a> <i>number</i>
<b>Tree</b>	<a href="#">weight-factor</a>
<b>Range</b>	0 to 15
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**wred-slope** [traffic-type](#) *keyword* [drop-probability](#) *keyword*

<b>Description</b>	List of WRED slopes.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">wred-slope</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**traffic-type** *keyword*

<b>Description</b>	The traffic type to which the WRED slope applies.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• tcp Refers to IPv4/IPv6 packets with a protocol/next-header indicating a value of 6.</li> <li>• non-tcp Refers to all packets that are not IPv4/IPv6 packets with a protocol/next-header indicating a value of 6.</li> <li>• all Refers to all traffic, whether it is TCP or non-TCP.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**drop-probability** *keyword*

<b>Description</b>	The drop probability to which the WRED slope applies.
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-probability** *number*

<b>Description</b>	<p>The maximum probability of dropping a packet (at or above the max-threshold).</p> <p>A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0</p>
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">max-probability</a> <i>number</i>
<b>Tree</b>	<a href="#">max-probability</a>
<b>Range</b>	0 to 100
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-threshold-percent** *number*

<b>Description</b>	<p>The percentage of the MBS that corresponds to the WRED maximum threshold parameter.</p> <p>A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0</p>
--------------------	---

<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">max-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">max-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **min-threshold-percent** *number*

<b>Description</b>	The percentage of the MBS that corresponds to the WRED minimum threshold parameter.  A slope is disabled by setting min-threshold-percent=100, max-threshold-percent=100 and max-probability=0
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">min-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">min-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **queue-depth**

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **high-threshold-bytes** *number*

<b>Description</b>	The queue depth that, when crossed in a rising direction, triggers a hardware interrupt and a recording of the current system time.  The default value of 0 disables the functionality.
--------------------	---

On IXR-6/10 this parameter applies to a set of VOQs (and therefore to unicast traffic only). On 7220-D2/D3/H2/H3 this parameter applies to a unicast queue only; the configuration of this leaf is ignored when the queue-template is attached to a queue with queue-type other than unicast.

On 7220-D2/D3 the threshold is rounded up the nearest multiple of 2048 bytes. On IXR-6/10 the threshold is rounded up to the nearest multiple of 4096 bytes. On 7220-H2/H3 the threshold is rounded up to the nearest multiple of 254 bytes.

<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">queue-depth high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220

### maximum-burst-size *number*

<b>Description</b>	<p>Maximum amount of shared buffer memory available to the queue.</p> <p>On IXR-6/10 this parameter applies to a set of VOQs. If the configured value is 0 or no value is configured the limit is 256 MB (268435456 bytes), however the use of 'alpha' may limit the effective value to less than 256 MB. A configured non-zero value sets a static limit without 'alpha'.</p> <p>On 7220-D2/D3/D5/H2/H3 this parameter applies to an egress queue and the default value of zero instructs the forwarding chip to apply its own limit based on 'alpha'. A non-zero value disables 'alpha'. The alpha value is 5 (0.25 multiplier of shared buffer space) for unicast queues and 4 (0.125 multiplier of shared buffer space) for multicast queues.</p> <p>Must be non-zero/non-default in order to add the active-queue-management presence container.</p>
<b>Context</b>	<a href="#">qos queue-templates queue-template name</a> <i>string</i> <a href="#">queue-depth maximum-burst-size</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-burst-size</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### queues

<b>Description</b>	Enclosing container for the list of user-defined queue names
--------------------	--

<b>Context</b>	<a href="#">qos queues</a>
<b>Tree</b>	<a href="#">queues</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

<b>Description</b>	The DSCP marking to be used for all packets associated with the FC, except those with a drop-probability-specific or profile-specific override.
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string map forwarding-class</i> ( <i>reference</i>   <i>keyword</i> ) <a href="#">dscp</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">dscp</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> </ul>

	<ul style="list-style-type: none"> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### **mpls-traffic-class-policy** *name string*

<b>Description</b>	Enter the mpls-traffic-class-policy list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string</a>
<b>Tree</b>	<a href="#">mpls-traffic-class-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **name** *string*

<b>Description</b>	User-configured name for an MPLS traffic-class rewrite policy.
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **map forwarding-class** (*reference | keyword*)

<b>Description</b>	Enter the map list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class (reference   keyword)</a>
<b>Tree</b>	<a href="#">map</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **forwarding-class** (*reference* | *keyword*)

<b>Description</b>	The forwarding class name
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> ( <i>reference</i>   <i>keyword</i> )
<b>Options</b>	<ul style="list-style-type: none"> <li>• fc0 System default forwarding-class name for the FC with index 0</li> <li>• fc1 System default forwarding-class name for the FC with index 1</li> <li>• fc2 System default forwarding-class name for the FC with index 2</li> <li>• fc3 System default forwarding-class name for the FC with index 3</li> <li>• fc4 System default forwarding-class name for the FC with index 4</li> <li>• fc5 System default forwarding-class name for the FC with index 5</li> <li>• fc6 System default forwarding-class name for the FC with index 6</li> <li>• fc7 System default forwarding-class name for the FC with index 7</li> <li>• fc8 System default forwarding-class name for the FC with index 8</li> <li>• fc9 System default forwarding-class name for the FC with index 9</li> <li>• fc10 System default forwarding-class name for the FC with index 10</li> <li>• fc11 System default forwarding-class name for the FC with index 11</li> <li>• fc12 System default forwarding-class name for the FC with index 12</li> <li>• fc13 System default forwarding-class name for the FC with index 13</li> </ul>

	<ul style="list-style-type: none"> <li>fc14 System default forwarding-class name for the FC with index 14</li> <li>fc15 System default forwarding-class name for the FC with index 15</li> </ul>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### drop-probability [drop-probability](#) *keyword*

<b>Description</b>	Enter the drop-probability list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> ( <i>reference</i>   <i>keyword</i> ) <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### drop-probability *keyword*

<b>Description</b>	A drop probability level within the FC for which a different remarking is desired.
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> ( <i>reference</i>   <i>keyword</i> ) <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### traffic-class *number*

<b>Description</b>	The MPLS traffic class marking to be used for this specific drop-probability
--------------------	--

<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> ( <i>reference</i>   <i>keyword</i> ) <a href="#">drop-probability drop-probability</a> <i>keyword</i> <a href="#">traffic-class number</a>
<b>Tree</b>	<a href="#">traffic-class</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **traffic-class** *number*

<b>Description</b>	The MPLS traffic class marking to be used for all packets associated with the FC, except those with a drop-probability-specific or profile-specific override.
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> ( <i>reference</i>   <i>keyword</i> ) <a href="#">traffic-class number</a>
<b>Tree</b>	<a href="#">traffic-class</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **scheduler-policies**

<b>Description</b>	Container for the list of configured scheduler policies.
<b>Context</b>	<a href="#">qos scheduler-policies</a>
<b>Tree</b>	<a href="#">scheduler-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **scheduler-policy** *name string*

<b>Description</b>	List of scheduler policies. A scheduler policy is a set of schedulers that are to be applied together. Each scheduler within a scheduler policy takes an input, and outputs it according to a scheduling discipline that is specified within it.
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i>
<b>Tree</b>	<a href="#">scheduler-policy</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **name** *string*

**Description** Name for the scheduler policy.

**Context** [qos scheduler-policies scheduler-policy name](#) *string*

**String Length** 1 to 255

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **scheduler** *sequence number*

**Description** List of defined QoS traffic schedulers.

**Context** [qos scheduler-policies scheduler-policy name](#) *string* [scheduler sequence number](#)

**Tree** [scheduler](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **sequence** *number*

**Description** Sequence number for the scheduler within the scheduler policy. Schedulers are processed from lowest sequence to highest.

**Context** [qos scheduler-policies scheduler-policy name](#) *string* [scheduler sequence number](#)

**Range** 0 to 1

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**input id string**

<b>Description</b>	List of input sources for the scheduler.
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**id string**

<b>Description</b>	User-defined identifier for the scheduler input
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**queue (reference | keyword)**

<b>Description</b>	The queue that is the input to the scheduler
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string queue (reference   keyword)</a>
<b>Tree</b>	<a href="#">queue</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unicast-0</li> <li>• unicast-1</li> <li>• unicast-2</li> <li>• unicast-3</li> <li>• unicast-4</li> <li>• unicast-5</li> <li>• unicast-6</li> <li>• unicast-7</li> <li>• multicast-0</li> <li>• multicast-1</li> <li>• multicast-2</li> <li>• multicast-3</li> </ul>

- multicast-4
- multicast-5
- multicast-6
- multicast-7
- queue-0
- queue-1

- queue-7
- queue-8
- queue-9
- queue-10
- queue-11
- queue-12
- queue-13
- queue-14
- queue-15

<b>Reference</b>	<a href="#">qos queues queue name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **weight number**

<b>Description</b>	For weighted round-robin schedulers, this leaf indicates the weight of the corresponding input.
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string weight number</a>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**priority keyword**

<b>Description</b>	Priority of the scheduler within the scheduler policy.
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler sequence number</a> <a href="#">priority keyword</a>
<b>Tree</b>	<a href="#">priority</a>
<b>Options</b>	<ul style="list-style-type: none"><li>strict</li></ul> <p>This scheduler term is considered as a strict priority term - such that packets that arrive in the queue are immediately serviced.</p>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## 9.1 routing-policy Descriptions

### routing-policy

<b>Description</b>	Top-level container for all routing policy configuration
<b>Context</b>	<a href="#">routing-policy</a>
<b>Tree</b>	<a href="#">routing-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### as-path-set *name string*

<b>Description</b>	AS Path regular expressions for use in policy entries
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>Tree</b>	<a href="#">as-path-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A name used to identify the AS path regular expression
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### expression *string*

<b>Description</b>	A regular expression where each AS number is an elemental term
<b>Context</b>	<a href="#">routing-policy as-path-set name string expression string</a>
<b>Tree</b>	<a href="#">expression</a>
<b>String Length</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**community-set** *name string*

<b>Description</b>	List of BGP community sets containing standard and large BGP communities
<b>Context</b>	<a href="#">routing-policy community-set name string</a>
<b>Tree</b>	<a href="#">community-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name used to identify the community set
<b>Context</b>	<a href="#">routing-policy community-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**member** (*bgp-std-community-type | bgp-std-community-regexp-type | identityref | bgp-large-community-type | bgp-large-community-regexp-type*)

<b>Description</b>	A standard BGP community value, regular expression or well-known name or else a large BGP community value or regular expression
<b>Context</b>	<a href="#">routing-policy community-set name string member (bgp-std-community-type   bgp-std-community-regexp-type   identityref   bgp-large-community-type   bgp-large-community-regexp-type)</a>
<b>Tree</b>	<a href="#">member</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>no-export Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFFFF01.</li> <li>no-advertise All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFFFF02.</li> <li>no-export-subconfed All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFFFF03.</li> </ul>
<b>Configurable</b>	True

<b>Platforms</b>	Supported on all platforms
<b>Min. Elements</b>	1

**policy name** *string*

<b>Description</b>	List of policy definitions, keyed by unique name These policy definitions are expected to be referenced (by name) in policy in import-policy and/or export-policy statements.
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name used to identify the policy
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**default-action**

<b>Description</b>	Actions for routes that do not match any policy entry
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i> <a href="#">default-action</a>
<b>Tree</b>	<a href="#">default-action</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp**

<b>Description</b>	Enter the bgp context
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-path**

<b>Description</b>	Modify AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path</a>
<b>Tree</b>	<a href="#">as-path</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prepend**

<b>Description</b>	Prepend a BGP AS number to the AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path prepend</a>
<b>Tree</b>	<a href="#">prepend</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-number** (*number* | *keyword*)

<b>Description</b>	The AS number to prepend to the AS Path attributes If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path prepend as-number</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**repeat-n** *number*

<b>Description</b>	The number of repetitions of the prepended AS number
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path prepend repeat-n</a> <i>number</i>
<b>Tree</b>	<a href="#">repeat-n</a>

<b>Range</b>	1 to 50
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove *boolean***

<b>Description</b>	Clear the AS path to make it empty.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path remove</a> <i>boolean</i>
<b>Tree</b>	<a href="#">remove</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace *number***

<b>Description</b>	Clear the existing AS path and replace it a new AS_SEQUENCE containing the listed AS numbers.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path replace</a> <i>number</i>
<b>Tree</b>	<a href="#">replace</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**communities**

<b>Description</b>	Modify BGP communities attached to routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp communities</a>
<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**add *reference***

<b>Description</b>	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
--------------------	--

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp communities add</a> <i>reference</i>
<b>Tree</b>	<a href="#">add</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove** *reference*

<b>Description</b>	Reference to a community-set name  The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp communities remove</a> <i>reference</i>
<b>Tree</b>	<a href="#">remove</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace** *reference*

<b>Description</b>	Reference to a community-set name  All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp communities replace</a> <i>reference</i>
<b>Tree</b>	<a href="#">replace</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-preference**

<b>Description</b>	Enter the local-preference context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp local-preference</a>

<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set number**

<b>Description</b>	The new value of LOCAL_PREF to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp local-preference set number</a>
<b>Tree</b>	<a href="#">set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**med**

<b>Description</b>	Enter the med context
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp med</a>
<b>Tree</b>	<a href="#">med</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**set (number | keyword)**

<b>Description</b>	The new value of the Multi-Exit Discriminator attribute value to write into the matching BGP routes. The route-table-cost option derives the MED from the route metric.
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp med set (number   keyword)</a>
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• route-table-cost</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**origin**

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp origin</a>
<b>Tree</b>	<a href="#">origin</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set** *keyword*

<b>Description</b>	The new value of the ORIGIN attribute to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp origin set</a> <i>keyword</i>
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">igp</a></li> <li>• <a href="#">egp</a></li> <li>• <a href="#">incomplete</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policy-result** *keyword*

<b>Description</b>	Select the final disposition for the route.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">policy-result</a> <i>keyword</i>
<b>Tree</b>	<a href="#">policy-result</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">accept</a> Policy accepts the route</li> <li>• <a href="#">reject</a> Policy rejects the route</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statement** [sequence-id](#) *number*

<b>Description</b>	Policy statements group conditions and actions within a policy definition. They are evaluated in the order of their sequence id.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement</a> <a href="#">sequence-id</a> <i>number</i>

<b>Tree</b>	<a href="#">statement</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### sequence-id *number*

<b>Description</b>	Number indicating when this policy statement should be evaluated relative to other policy statements  Lower numbered statements are evaluated before higher numbered statements.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement</a> <a href="#">sequence-id</a> <i>number</i>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### action

<b>Description</b>	Actions for routes that match the policy statement
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a>
<b>Tree</b>	<a href="#">action</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### bgp

<b>Description</b>	Enter the bgp context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### as-path

<b>Description</b>	Modify AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a> <a href="#">bgp</a> <a href="#">as-path</a>
<b>Tree</b>	<a href="#">as-path</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## prepend

<b>Description</b>	Prepend a BGP AS number to the AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp as-path prepend</a>
<b>Tree</b>	<a href="#">prepend</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-number (*number* | *keyword*)

<b>Description</b>	The AS number to prepend to the AS Path attributes If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp as-path prepend as-number</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## repeat-n *number*

<b>Description</b>	The number of repetitions of the prepended AS number
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp as-path prepend repeat-n</a> <i>number</i>
<b>Tree</b>	<a href="#">repeat-n</a>
<b>Range</b>	1 to 50
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove** *boolean*

<b>Description</b>	Clear the AS path to make it empty.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp as-path remove</a> <i>boolean</i>
<b>Tree</b>	<a href="#">remove</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace** *number*

<b>Description</b>	Clear the existing AS path and replace it a new AS_SEQUENCE containing the listed AS numbers.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp as-path replace</a> <i>number</i>
<b>Tree</b>	<a href="#">replace</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**communities**

<b>Description</b>	Modify BGP communities attached to routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp communities</a>
<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**add** *reference*

<b>Description</b>	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp communities add</a> <i>reference</i>
<b>Tree</b>	<a href="#">add</a>

<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove** *reference*

<b>Description</b>	Reference to a community-set name  The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp communities remove</a> <i>reference</i>
<b>Tree</b>	<a href="#">remove</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace** *reference*

<b>Description</b>	Reference to a community-set name  All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp communities replace</a> <i>reference</i>
<b>Tree</b>	<a href="#">replace</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-preference**

<b>Description</b>	Enter the local-preference context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp local-preference</a>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### set *number*

**Description** The new value of LOCAL\_PREF to write into the matching BGP routes

**Context** [routing-policy policy name](#) *string* [statement sequence-id](#) *number* [action bgp local-preference set](#) *number*

**Tree** [set](#)

**Configurable** True

**Platforms** Supported on all platforms

### med

**Description** Enter the med context

**Context** [routing-policy policy name](#) *string* [statement sequence-id](#) *number* [action bgp med](#)

**Tree** [med](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### set (*number* | *keyword*)

**Description** The new value of the Multi-Exit Discriminator attribute value to write into the matching BGP routes. The route-table-cost option derives the MED from the route metric.

**Context** [routing-policy policy name](#) *string* [statement sequence-id](#) *number* [action bgp med set](#) (*number* | *keyword*)

**Tree** [set](#)

**Options**

- route-table-cost

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**origin**

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp origin</a>
<b>Tree</b>	<a href="#">origin</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set keyword**

<b>Description</b>	The new value of the ORIGIN attribute to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action bgp origin set keyword</a>
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• igp</li> <li>• egp</li> <li>• incomplete</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policy-result keyword**

<b>Description</b>	Select the final disposition for the route.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">action policy-result keyword</a>
<b>Tree</b>	<a href="#">policy-result</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• accept Policy accepts the route</li> <li>• reject Policy rejects the route</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match**

<b>Description</b>	Match conditions of the policy statement
--------------------	--

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Configuration for BGP-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-path-length

<b>Description</b>	A BGP route matches this condition if the number of (unique) AS numbers in its AS_PATH matches this value or the range implied by the value+operator.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match</a> <a href="#">bgp</a> <a href="#">as-path-length</a>
<b>Tree</b>	<a href="#">as-path-length</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## operator *keyword*

<b>Description</b>	The comparison operator that applies to the value
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match</a> <a href="#">bgp</a> <a href="#">as-path-length</a> <a href="#">operator</a> <i>keyword</i>
<b>Tree</b>	<a href="#">operator</a>
<b>Default</b>	eq
<b>Options</b>	<ul style="list-style-type: none"> <li>• eq</li> <li>• ge</li> <li>• le</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**unique** *boolean*

<b>Description</b>	Count a repeated sequence of the same AS number as just 1 element
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp as-path-length</a> <a href="#">unique</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unique</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**value** *number*

<b>Description</b>	The number of (unique) AS numbers in the AS path
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp as-path-length</a> <a href="#">value</a> <i>number</i>
<b>Tree</b>	<a href="#">value</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-path-set** *reference*

<b>Description</b>	Reference to an as-path-set name A route meets this condition if it matches the regular expression
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp as-path-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">as-path-set</a>
<b>Reference</b>	<a href="#">routing-policy as-path-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**community-set** *reference*

<b>Description</b>	Reference to a community-set name A route meets this condition if has any community value matching a community member in the referenced community-set
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp community-set</a> <i>reference</i>

<b>Tree</b>	<a href="#">community-set</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**evpn**

<b>Description</b>	Container for match conditions that are specific to BGP EVPN routes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *number*

<b>Description</b>	An EVPN route meets this condition if the route-type field in the NLRI is one of the values provided in this list.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match bgp evpn route-type</a> <i>number</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Range</b>	1 to 5
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**family** *identityref*

<b>Description</b>	The name of an address family A route meets this condition if the prefix belongs to one of the indicated address families.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match family</a> <i>identityref</i>
<b>Tree</b>	<a href="#">family</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a></li> </ul>

- Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)
- evpn
  - EVPN routes (AFI = 25, SAFI = 70)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## isis

<b>Description</b>	Configuration for ISIS-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <a href="#">string</a> <a href="#">statement</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">isis</a>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## level *number*

<b>Description</b>	IS-IS route level
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <a href="#">string</a> <a href="#">statement</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">isis</a> <a href="#">level</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">level</a>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## route-type *keyword*

<b>Description</b>	An IS-IS IPv4 prefix is external if it is signalled in TLV 130 or TLV135 with RFC 7794 X flag=1. An IS-IS IPv6 prefix is external if the TLV 236/TLV 237 external bit = 1.
<b>Context</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <a href="#">string</a> <a href="#">statement</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">isis</a> <a href="#">route-type</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• internal</li> <li>• external</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ospf**

<b>Description</b>	Configuration for OSPF-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match ospf</a>
<b>Tree</b>	<a href="#">ospf</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-id**

<b>Description</b>	The area identifier as a dotted-quad.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match ospf</a> <a href="#">area-id</a>
<b>Tree</b>	<a href="#">area-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**instance-id** *number*

<b>Description</b>	OSPFv3 instance identifier
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match ospf</a> <a href="#">instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The OSPF route type.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match ospf</a> <a href="#">route-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">type-1-ext</a> The route has path-type type 1 external</li> <li>• <a href="#">type-2-ext</a></li> </ul>

The route has path-type type 2 external

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **prefix-set *reference***

<b>Description</b>	Reference to a prefix set name
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match prefix-set reference</a>
<b>Tree</b>	<a href="#">prefix-set</a>
<b>Reference</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **protocol *identityref***

<b>Description</b>	The route type to match
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement sequence-id</a> <i>number</i> <a href="#">match protocol identityref</a>
<b>Tree</b>	<a href="#">protocol</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> </ul>

- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **prefix-set** *name string*

<b>Description</b>	List of defined prefix sets
<b>Context</b>	<a href="#">routing-policy prefix-set name string</a>
<b>Tree</b>	<a href="#">prefix-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **name** *string*

<b>Description</b>	A name used to identify the prefix set
<b>Context</b>	<a href="#">routing-policy prefix-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **prefix** *ip-prefix (ipv4-prefix | ipv6-prefix) mask-length-range string*

<b>Description</b>	List of prefixes in the prefix set
--------------------	------------------------------------

<b>Context</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i> <a href="#">prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">mask-length-range</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ip-prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix in CIDR notation
<b>Context</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i> <a href="#">prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">mask-length-range</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mask-length-range** *string*

<b>Description</b>	The range of prefix lengths to match  Example: 10.3.192.0/21 through 10.3.192.0/24 would be expressed as prefix: 10.3.192.0/21, mask-length-range: 21..24.  Example: 10.3.192.0/21 would be expressed as prefix: 10.3.192.0/21, mask-length-range: exact
<b>Context</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i> <a href="#">prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">mask-length-range</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 10.1 system Descriptions

### system

<b>Description</b>	Enclosing container for system management
<b>Context</b>	<a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aaa

<b>Description</b>	Top-level container for AAA services
<b>Context</b>	<a href="#">system aaa</a>
<b>Tree</b>	<a href="#">aaa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting

<b>Description</b>	Top-level container for accounting
<b>Context</b>	<a href="#">system aaa accounting</a>
<b>Tree</b>	<a href="#">accounting</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting-method *reference*

<b>Description</b>	Ordered list of server-groups to use for accounting in the system If accounting fails with one method, the next defined method is tried -- failure of all methods results in the accounting request failing.
<b>Context</b>	<a href="#">system aaa accounting accounting-method <i>reference</i></a>
<b>Tree</b>	<a href="#">accounting-method</a>
<b>Reference</b>	<a href="#">system aaa server-group name <i>string</i></a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **event** *event-type identityref*

**Description** List of events subject to accounting  
**Context** [system aaa accounting event event-type identityref](#)  
**Tree** [event](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **event-type** *identityref*

**Description** The type of activity to record at the accounting server  
**Context** [system aaa accounting event event-type identityref](#)  
**Options**

- **command**  
Specifies interactive command events for AAA accounting

**Configurable** True  
**Platforms** Supported on all platforms

### **record** *identityref*

**Description** Type of record to send to the accounting server for this activity type  
**Context** [system aaa accounting event event-type identityref record identityref](#)  
**Tree** [record](#)  
**Options**

- **start-stop**  
Send start and stop records for user activities  
A start record is sent to the accounting server at the beginning of the activity, and a stop record at the end of the activity
- **stop**  
Send only stop records for user activities  
A stop record is sent to the accounting server when the user activity completes

**Configurable** True  
**Platforms** Supported on all platforms

**authentication**

<b>Description</b>	Top-level container for global authentication data
<b>Context</b>	<a href="#">system aaa authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-user**

<b>Description</b>	Enclosing container for admin user
<b>Context</b>	<a href="#">system aaa authentication admin-user</a>
<b>Tree</b>	<a href="#">admin-user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**failed-login-attempts** *number*

<b>Description</b>	Number of failed login attempts from the user
<b>Context</b>	<a href="#">system aaa authentication admin-user failed-login-attempts</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-login-attempts</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-login** *string*

<b>Description</b>	The date and time of the last login failure from this user
<b>Context</b>	<a href="#">system aaa authentication admin-user last-failed-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-login** *string*

<b>Description</b>	The date and time of the last successful login from this user
--------------------	---

<b>Context</b>	<a href="#">system aaa authentication admin-user last-successful-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## lockout

<b>Description</b>	Information relating to the lockout state of this user
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout</a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## active *boolean*

<b>Description</b>	Indicates if a lockout is active for the user  Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## end *string*

<b>Description</b>	Indicates the time at which the most recent lockout for this user ended or will end
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout end</a> <i>string</i>
<b>Tree</b>	<a href="#">end</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start string**

<b>Description</b>	Indicates the time at which the most recent lockout for this user started
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout start string</a>
<b>Tree</b>	<a href="#">start</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password string**

<b>Description</b>	The admin password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system aaa authentication admin-user password string</a>
<b>Tree</b>	<a href="#">password</a>
<b>Default</b>	\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ==
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**password-change-required boolean**

<b>Description</b>	Indicates if the user must change their password on next login
<b>Context</b>	<a href="#">system aaa authentication admin-user password-change-required boolean</a>
<b>Tree</b>	<a href="#">password-change-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username string**

<b>Description</b>	Assigned username for admin user
<b>Context</b>	<a href="#">system aaa authentication admin-user username string</a>
<b>Tree</b>	<a href="#">username</a>
<b>Default</b>	admin
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **authentication-method** *reference*

**Description** Ordered list of server-groups to be used during user authentication  
If authentication fails with one method, the next defined method is tried -- failure of all methods results in the user being denied access.

**Context** [system aaa authentication authentication-method reference](#)

**Tree** [authentication-method](#)

**Reference** [system aaa server-group name string](#)

**Configurable** True

**Platforms** Supported on all platforms

### **exit-on-reject** *boolean*

**Description** Enable/disable exit-on-reject behaviour for authentication attempts  
With this behaviour enabled, when a reject is received from any server the system will not try further methods, and will reject the user authentication attempt. Default behaviour is to continue trying methods until one accepts the user, or the system runs out of methods to try.

**Context** [system aaa authentication exit-on-reject boolean](#)

**Tree** [exit-on-reject](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

### **idle-timeout** *number*

**Description** Set the idle timeout of all CLI sessions  
After the timeout is reached, the session is disconnected from the system.

**Context** [system aaa authentication idle-timeout number](#)

**Tree** [idle-timeout](#)

**Default** 600

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

**linuxadmin-user**

<b>Description</b>	Enclosing container for linuxadmin user
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user</a>
<b>Tree</b>	<a href="#">linuxadmin-user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**password *string***

<b>Description</b>	The linuxadmin password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$6\$c66a15569d3f5952\$kA2WPt9iqR5uMbaCUBNxsjKyXROQFdJtV1HX0CFY9wk7F326/yB3h.dERX9cH7YpeJ1N872hjzTb2tlaZFwwg0'.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user password <i>string</i></a>
<b>Tree</b>	<a href="#">password</a>
<b>Default</b>	\$6\$c66a15569d3f5952\$kA2WPt9iqR5uMbaCUBNxsjKyXROQFdJtV1HX0CFY9wk7F326/yB3h.dERX9cH7YpeJ1N872hjzTb2tlaZFwwg0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**username *string***

<b>Description</b>	Assigned username for linuxadmin user
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user username <i>string</i></a>
<b>Tree</b>	<a href="#">username</a>
<b>Default</b>	linuxadmin
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password**

<b>Description</b>	Top-level container for policies around user passwords
<b>Context</b>	<a href="#">system aaa authentication password</a>
<b>Tree</b>	<a href="#">password</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**aging number**

<b>Description</b>	Expire user passwords after this period A value of 0 means that the user passwords do not expire
<b>Context</b>	<a href="#">system aaa authentication password aging number</a>
<b>Tree</b>	<a href="#">aging</a>
<b>Range</b>	0 to 500
<b>Default</b>	0
<b>Units</b>	days
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**change-on-first-login boolean**

<b>Description</b>	Enable or disable a user being forced to change their password on first time login
<b>Context</b>	<a href="#">system aaa authentication password change-on-first-login boolean</a>
<b>Tree</b>	<a href="#">change-on-first-login</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**complexity-rules**

<b>Description</b>	Top-level container for password complexity rules
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules</a>
<b>Tree</b>	<a href="#">complexity-rules</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**allow-username boolean**

<b>Description</b>	Enable or disable using username as part of the user password
--------------------	---

<b>Context</b>	<a href="#">system aaa authentication password complexity-rules allow-username</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow-username</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### maximum-length *number*

<b>Description</b>	The maximum length of the password for local users, including admin and linuxadmin
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules maximum-length</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-length</a>
<b>Range</b>	1 to 1023
<b>Default</b>	1023
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### minimum-length *number*

<b>Description</b>	The minimum length of the password for local users, including admin and linuxadmin
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-length</a> <i>number</i>
<b>Tree</b>	<a href="#">minimum-length</a>
<b>Range</b>	1 to 12
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### minimum-lowercase *number*

<b>Description</b>	The minimum lowercase characters from (a-z) that the user password must include  A value of 0 results in no minimum-lowercase being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-lowercase</a> <i>number</i>

---

<b>Tree</b>	<a href="#">minimum-lowercase</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **minimum-numeric *number***

<b>Description</b>	The minimum numeric digits that the user password must include A value of 0 results in no minimum-numeric being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-numeric number</a>
<b>Tree</b>	<a href="#">minimum-numeric</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **minimum-special-character *number***

<b>Description</b>	The minimum special characters that the user password must include A value of 0 results in no minimum-special-character being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-special-character number</a>
<b>Tree</b>	<a href="#">minimum-special-character</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **minimum-uppercase *number***

<b>Description</b>	The minimum uppercase characters from (A-Z) that the user password must include A value of 0 results in no minimum-uppercase being enforced.
--------------------	---

<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-uppercase number</a>
<b>Tree</b>	<a href="#">minimum-uppercase</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **history number**

<b>Description</b>	Defines how many previous passwords a new password is matched against, such that a new password can't be one of the previous n passwords
<b>Context</b>	<a href="#">system aaa authentication password history number</a>
<b>Tree</b>	<a href="#">history</a>
<b>Range</b>	0 to 20
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **lockout-policy**

<b>Description</b>	Top-level container for lockout policy
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy</a>
<b>Tree</b>	<a href="#">lockout-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **attempts number**

<b>Description</b>	The number of failed login attempts that will lock the account A value of 0 means unlimited number of failed login attempts is allowed
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy attempts number</a>
<b>Tree</b>	<a href="#">attempts</a>
<b>Range</b>	0 to 64
<b>Default</b>	0
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **lockout number**

**Description** The time duration in minutes the user account will be locked out  
A value of 0 means that the user account will be locked out/disabled indefinitely

**Context** [system aaa authentication password lockout-policy lockout number](#)

**Tree** [lockout](#)

**Range** 0 to 1440

**Default** 15

**Units** minutes

**Configurable** True

**Platforms** Supported on all platforms

### **time number**

**Description** The time period in minutes within which the failed login attempts occur

**Context** [system aaa authentication password lockout-policy time number](#)

**Tree** [time](#)

**Range** 0 to 1440

**Default** 1

**Units** minutes

**Configurable** True

**Platforms** Supported on all platforms

### **session id number**

**Description** List of active sessions in the system

**Context** [system aaa authentication session id number](#)

**Tree** [session](#)

**Configurable** False

**Platforms** Supported on all platforms

**id number**

<b>Description</b>	System generated session ID
<b>Context</b>	<a href="#">system aaa authentication session id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication-method string**

<b>Description</b>	Authentication method that authorized the user (the server-group name or local)
<b>Context</b>	<a href="#">system aaa authentication session id number authentication-method string</a>
<b>Tree</b>	<a href="#">authentication-method</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**login-time string**

<b>Description</b>	Time the user logged in
<b>Context</b>	<a href="#">system aaa authentication session id number login-time string</a>
<b>Tree</b>	<a href="#">login-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**priv-lvl number**

<b>Description</b>	TACACS+ authorization priv-lvl (if TACACS+ authorization is enabled)
<b>Context</b>	<a href="#">system aaa authentication session id number priv-lvl number</a>
<b>Tree</b>	<a href="#">priv-lvl</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**remote-host string**

<b>Description</b>	Remote host of the session
<b>Context</b>	<a href="#">system aaa authentication session id number remote-host string</a>

<b>Tree</b>	<a href="#">remote-host</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**service-name** *string*

<b>Description</b>	Service name that called login for the session
<b>Context</b>	<a href="#">system aaa authentication session id number service-name string</a>
<b>Tree</b>	<a href="#">service-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tty-name** *string*

<b>Description</b>	Terminal type
<b>Context</b>	<a href="#">system aaa authentication session id number tty-name string</a>
<b>Tree</b>	<a href="#">tty-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	Username linked to the session
<b>Context</b>	<a href="#">system aaa authentication session id number username string</a>
<b>Tree</b>	<a href="#">username</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user** [username](#) *string*

<b>Description</b>	List of local users configured on the system
<b>Context</b>	<a href="#">system aaa authentication user username string</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	128

**username** *string*

<b>Description</b>	Assigned username for this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i>
<b>String Length</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**failed-login-attempts** *number*

<b>Description</b>	Number of failed login attempts from the user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">failed-login-attempts</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-login-attempts</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-login** *string*

<b>Description</b>	The date and time of the last login failure from this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">last-failed-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-login** *string*

<b>Description</b>	The date and time of the last successful login from this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">last-successful-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lockout**

<b>Description</b>	Information relating to the lockout state of this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout</a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Indicates if a lockout is active for the user  Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout</a> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**end** *string*

<b>Description</b>	Indicates the time at which the most recent lockout for this user ended or will end
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout</a> <a href="#">end</a> <i>string</i>
<b>Tree</b>	<a href="#">end</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start** *string*

<b>Description</b>	Indicates the time at which the most recent lockout for this user started
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout</a> <a href="#">start</a> <i>string</i>
<b>Tree</b>	<a href="#">start</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password** *string*

<b>Description</b>	The user password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string password string</i>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**password-change-required** *boolean*

<b>Description</b>	Indicates if the user must change their password on next login
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string password-change-required boolean</i>
<b>Tree</b>	<a href="#">password-change-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**role** *reference*

<b>Description</b>	List of roles to assign to this user The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string role reference</i>
<b>Tree</b>	<a href="#">role</a>
<b>Reference</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**ssh-key** *string*

<b>Description</b>	SSH public key(s) for the user (RSA)
--------------------	--------------------------------------

If defined, the user may login to the system over SSH with this key. This field includes the 'ssh-rsa' leader, as would normally be found in a SSH key.

<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string ssh-key string</i>
<b>Tree</b>	<a href="#">ssh-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

## authorization

<b>Description</b>	Top-level container for authorization configuration and operational state data
<b>Context</b>	<a href="#">system aaa authorization</a>
<b>Tree</b>	<a href="#">authorization</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## role [rolename](#) *string*

<b>Description</b>	List of local roles configured on the system
<b>Context</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>Tree</b>	<a href="#">role</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## rolename *string*

<b>Description</b>	Assigned rolename for this role
<b>Context</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>String Length</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## services *keyword*

<b>Description</b>	Services that members of this role are authorized for
--------------------	---

Services are additive, if a user is a member of multiple roles, the available services are merged.

<b>Context</b>	<code>system aaa authorization role rolename string services keyword</code>
<b>Tree</b>	<code>services</code>
<b>Options</b>	<ul style="list-style-type: none"> <li>• cli</li> <li>• gnmi</li> <li>• gribi</li> <li>• p4rt</li> <li>• json-rpc</li> <li>• ftp</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## tacacs

<b>Description</b>	Top-level container for configuration relating to TACACS+ interworking with roles
<b>Context</b>	<code>system aaa authorization role rolename string tacacs</code>
<b>Tree</b>	<code>tacacs</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## priv-lvl *number*

<b>Description</b>	<p>The TACACS+ priv-lvl to map to this role</p> <p>All roles matching each specific priv-lvl, and their lessers are merged together to create the final ruleset applied to the user.</p>
<b>Context</b>	<code>system aaa authorization role rolename string tacacs priv-lvl number</code>
<b>Tree</b>	<code>priv-lvl</code>
<b>Range</b>	0 to 15
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## server-group *name string*

<b>Description</b>	List of AAA server-groups in the system
--------------------	---

Each server group specifies a type, of which all servers must use. If using the 'local' type, then no servers may be specified.

<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i>
<b>Tree</b>	<a href="#">server-group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

### **name** *string*

<b>Description</b>	User defined name for the server group
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **priv-lvl-authorization** *boolean*

<b>Description</b>	Use TACACS+ priv-lvl based authorization If false, then authorization is skipped for TACACS+ users granting full admin access for those users.
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">priv-lvl-authorization</a> <i>boolean</i>
<b>Tree</b>	<a href="#">priv-lvl-authorization</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **server** [address](#) (*ipv4-address | ipv6-address*)

<b>Description</b>	List of AAA servers to use within this server-group Servers are tried in a round-robin fashion, with the first server always being tried if it is operationally available
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Max. Elements** 5

### **address** (*ipv4-address* | *ipv6-address*)

**Description** Address used to reach the server

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\)](#)

**Configurable** True

**Platforms** Supported on all platforms

### **name** *string*

**Description** User defined name assigned to the server

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) name string](#)

**Tree** [name](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

### **network-instance** *reference*

**Description** Reference to a configured network-instance used for reachability to the server

This network-instance must already exist in the system, and different servers within the same server-group may use difference network-instances for connectivity.

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) network-instance reference](#)

**Tree** [network-instance](#)

**Reference** [network-instance name string](#)

**Configurable** True

**Platforms** Supported on all platforms

### **oper-state** *keyword*

**Description** Details the operational state of the server

A server is defined as being down if it fails to respond before the timeout period, or if a path towards the server is not available.

<b>Context</b>	<code>system aaa server-group name string server address (ipv4-address   ipv6-address) oper-state keyword</code>
<b>Tree</b>	<code>oper-state</code>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enclosing container for server statistics
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## accounting-connection-failures *number*

<b>Description</b>	Number of accounting connection failures
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-connection-failures number</a>
<b>Tree</b>	<a href="#">accounting-connection-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## accounting-rejects *number*

<b>Description</b>	Number of accounting rejections
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-rejects number</a>
<b>Tree</b>	<a href="#">accounting-rejects</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## accounting-success *number*

<b>Description</b>	Number of accounting successes
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-success number</a>

<b>Tree</b>	<a href="#">accounting-success</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authorization-connection-failures** *number*

<b>Description</b>	Number of authorization connection failures
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics authorization-connection-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authorization-connection-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authorization-rejects** *number*

<b>Description</b>	Number of authorization rejections
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics authorization-rejects</a> <i>number</i>
<b>Tree</b>	<a href="#">authorization-rejects</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authorization-success** *number*

<b>Description</b>	Number of authorization successes
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics authorization-success</a> <i>number</i>
<b>Tree</b>	<a href="#">authorization-success</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**login-connection-failures** *number*

<b>Description</b>	Number of login connection failures
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address)</a> <a href="#">statistics login-connection-failures number</a>
<b>Tree</b>	<a href="#">login-connection-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**login-rejects** *number*

<b>Description</b>	Number of login rejections
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address)</a> <a href="#">statistics login-rejects number</a>
<b>Tree</b>	<a href="#">login-rejects</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**login-success** *number*

<b>Description</b>	Number of login successes
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address)</a> <a href="#">statistics login-success number</a>
<b>Tree</b>	<a href="#">login-success</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tacacs**

<b>Description</b>	Top-level container for TACACS+ server data
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address)</a> <a href="#">tacacs</a>
<b>Tree</b>	<a href="#">tacacs</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **port number**

**Description** The port number on which to contact the TACACS+ server

**Context** [system aaa server-group name](#) *string* [server address](#) (*ipv4-address* | *ipv6-address*) [tacacs port number](#)

**Tree** [port](#)

**Range** 0 to 65535

**Default** 49

**Configurable** True

**Platforms** Supported on all platforms

### **secret-key string**

**Description** The unencrypted shared key used between the system and server

**Context** [system aaa server-group name](#) *string* [server address](#) (*ipv4-address* | *ipv6-address*) [tacacs secret-key string](#)

**Tree** [secret-key](#)

**Configurable** True

**Platforms** Supported on all platforms

### **timeout number**

**Description** Set the timeout in seconds on responses from servers in this group

**Context** [system aaa server-group name](#) *string* [timeout number](#)

**Tree** [timeout](#)

**Range** 1 to 3600

**Default** 10

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### **type identityref**

**Description** AAA server type -- all servers in the group must be of this type

<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>tacacs</b> Specifies servers using the TACACS+ protocol Terminal Access Controller Access Control System (TACACS+)</li> <li>• <b>local</b> Specifies using Linux local methods This type cannot be combined with a server address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## app-management

<b>Description</b>	Top-level container for application configuration and state
<b>Context</b>	<a href="#">system app-management</a>
<b>Tree</b>	<a href="#">app-management</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## application [name](#) *string*

<b>Description</b>	List of all applications managed by the application manager
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i>
<b>Tree</b>	<a href="#">application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Unique name of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**author** *string*

<b>Description</b>	The author of the application
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">author</a> <i>string</i>
<b>Tree</b>	<a href="#">author</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cgroup** *string*

<b>Description</b>	Cgroup in with this application is started
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">cgroup</a> <i>string</i>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-action** *string*

<b>Description</b>	The action taken after 'failure-threshold' failures within 'failure-window' This action can be to reboot the system, wait forever, or wait for a predefined number of seconds
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-action</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-action</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-threshold** *number*

<b>Description</b>	How many restarts within 'failure-window' are required to trigger the failure action Setting this value to 0 will result in no action taking place on application restarts
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">failure-threshold</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-window** *number*

<b>Description</b>	Sliding window in seconds, over which to count restarts towards failure-threshold
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-window</a> <i>number</i>
<b>Tree</b>	<a href="#">failure-window</a>
<b>Range</b>	300 to 86400
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	Date and time the application instance last changed state
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-start-type** *keyword*

<b>Description</b>	Indicates the type of the most recent start or restart of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">last-start-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-start-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>warm <p>A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart</p> <p>This type results in less disruption to surrounding applications and functionality.</p> </li> <li>cold <p>A cold start indicates that the application will not leave state in IDB during a restart</p> <p>This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.</p> </li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**launch-command** *string*

<b>Description</b>	The command used to launch the application
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>launch-command</b> <i>string</i>
<b>Tree</b>	<a href="#">launch-command</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oom-score-adj** *number*

<b>Description</b>	OOM score adj value set for this application
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>oom-score-adj</b> <i>number</i>
<b>Tree</b>	<a href="#">oom-score-adj</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**path** *string*

<b>Description</b>	The directory where the application can be found
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>path</b> <i>string</i>
<b>Tree</b>	<a href="#">path</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pid** *number*

<b>Description</b>	Process ID of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>pid</b> <i>number</i>
<b>Tree</b>	<a href="#">pid</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**restricted-operations** *keyword*

<b>Description</b>	The operations that may not be manually performed on this application
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>restricted-operations</b> <i>keyword</i>
<b>Tree</b>	<a href="#">restricted-operations</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• restart This application may not be restarted manually</li> <li>• stop This application may not be stopped manually</li> <li>• start This application may not be started manually</li> <li>• reload This application may not be reloaded manually</li> <li>• quit This application may not be terminated manually</li> <li>• kill This application may not be terminated ungracefully manually</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**search-command** *string*

<b>Description</b>	The command used to search for the applications liveness
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>search-command</b> <i>string</i>
<b>Tree</b>	<a href="#">search-command</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**state** *keyword*

<b>Description</b>	Current state of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• running Application instance is running This is the normal, active state of an application</li> </ul>

- **waiting-for-config**  
Application instance is loaded, but has no configuration  
This state requires wait-for-config true within the applications YAML configuration. This results in the application being loaded into app-mgr, but not starting until the system receives configuration for it
- **error**  
The application has not started successfully, or has failed  
This state can be caused by an application hitting the restart backoff, or an application failing to start following triggering a system reboot
- **starting**  
The application has been asked to start  
All applications enter this state after initial execution, after which application manager will wait five seconds before checking their status. IDB connected applications may announce their state before this five second window has passed, resulting in them transitioning from this state faster than PID-monitored applications.
- **stopped**  
The application is not running  
This state is most likely caused by an operator action

**Configurable**

False

**Platforms**

Supported on all platforms

**statistics****Description**

Top-level container for application statistics

**Context**[system app-management application name](#) *string* [statistics](#)**Tree**[statistics](#)**Configurable**

False

**Platforms**

Supported on all platforms

**restart-count** *number***Description**

The number of times this application instance has restarted

**Context**[system app-management application name](#) *string* [statistics](#) [restart-count](#) *number***Tree**[restart-count](#)**Default**

0

**Configurable**

False

**Platforms** Supported on all platforms

### **supported-restart-types** *keyword*

**Description** Indicates the supported restart types for this application

**Context** [system app-management application name](#) *string supported-restart-types keyword*

**Tree** [supported-restart-types](#)

**Options**

- warm  
A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart  
This type results in less disruption to surrounding applications and functionality.
- cold  
A cold start indicates that the application will not leave state in IDB during a restart  
This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.

**Configurable** False

**Platforms** Supported on all platforms

### **version** *string*

**Description** The version of the application

**Context** [system app-management application name](#) *string version string*

**Tree** [version](#)

**Configurable** False

**Platforms** Supported on all platforms

### **yang**

**Description** Top-level container for application state related to YANG

**Context** [system app-management application name](#) *string yang*

**Tree** [yang](#)

**Configurable** False

**Platforms** Supported on all platforms

**modules** *string*

<b>Description</b>	YANG module names used by this application instance
<b>Context</b>	<a href="#">system</a> <a href="#">app-management</a> <a href="#">application name</a> <i>string</i> <a href="#">yang</a> <a href="#">modules</a> <i>string</i>
<b>Tree</b>	<a href="#">modules</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**source-directories** *string*

<b>Description</b>	Source directories searched for YANG modules to load These directories are used to load modules indicated in the modules leaf, and any modules imported/included within them
<b>Context</b>	<a href="#">system</a> <a href="#">app-management</a> <a href="#">application name</a> <i>string</i> <a href="#">yang</a> <a href="#">source-directories</a> <i>string</i>
<b>Tree</b>	<a href="#">source-directories</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container for protocol authentication options available system wide
<b>Context</b>	<a href="#">system</a> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *name string*

<b>Description</b>	List of system keychains
<b>Context</b>	<a href="#">system</a> <a href="#">authentication</a> <a href="#">keychain name</a> <i>string</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1024

**name** *string*

<b>Description</b>	The user configured name for the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active-key-for-send** (*keyword | reference*)

<b>Description</b>	Provides the key index of the currently active Keychain key
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">active-key-for-send</a> ( <i>keyword   reference</i> )
<b>Tree</b>	<a href="#">active-key-for-send</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none No send key is usable</li> </ul>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	<p>When set to disable, the keychain is inactive</p> <p>When a protocol refers to a keychain that is inactive, no authentication data is added to the outbound messages and/or all inbound messages with authentication data are dropped, depending on the context.</p> <p>A keychain is operationally disabled in a particular direction (send/receive) if:</p>
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	The user configured description for the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**expired** *boolean*

<b>Description</b>	The value of this object indicates whether the keychain is expired Expired can mean past end-time or prior to start-time.
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">expired</a> <i>boolean</i>
<b>Tree</b>	<a href="#">expired</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**key** *index number*

<b>Description</b>	List of keys in the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key</a> <i>index number</i>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	Each key in a keychain requires a unique identifier, the index value specifies this identifier
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key</a> <i>index number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**algorithm** *keyword*

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">algorithm keyword</a>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• cleartext The authentication-key is encoded in plaintext</li> <li>• md5 The authentication-key is used to generate an MD5 digest (RFC 1321)</li> <li>• hmac-md5 The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104)</li> <li>• hmac-sha-1 The authentication-key is used to generate a SHA1 digest using the HMAC algorithm (RFC 2104)</li> <li>• hmac-sha-256 The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104) The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits)</li> <li>• aes-128-cmac The authentication-key is used with the AES-128 encryption algorithm to generate a cipher MAC (RFC 4493)</li> <li>• aes-256-cmac The authentication-key is used with the AES-128 encryption algorithm to generate a cipher MAC (RFC 4493).</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication-key** *string*

<b>Description</b>	<p>The secret key</p> <p>The maximum string length is 25 characters, of which a maximum of 20 characters is the secret data and the remaining 5 characters, if provided, must be ' hash' (i.e. one whitespace plus the word hash). The trailing 'hash' keyword indicates that the secret data was already encrypted and this is the display version of that secret data, which is a hash of the original data. If the 'hash' keyword is omitted the string is assumed to be the actual secret data. Whenever the value of authentication-key is read by any management</p>
--------------------	--

interface, from any datastore (candidate, running, state) the return value is always the encrypted value – i.e. with the trailing ‘ hash’ characters included.

<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <i>authentication-key</i> <i>string</i>
<b>Tree</b>	<a href="#">authentication-key</a>
<b>String Length</b>	1 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## receive-lifetime

<b>Description</b>	Enter the receive-lifetime context
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">receive-lifetime</a>
<b>Tree</b>	<a href="#">receive-lifetime</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## end-time (*keyword* | *date-and-time*)

<b>Description</b>	The time at which the key becomes invalid for use in the receive direction The default is forever.
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">receive-lifetime</a> <a href="#">end-time</a> ( <i>keyword</i>   <i>date-and-time</i> )
<b>Tree</b>	<a href="#">end-time</a>
<b>String Length</b>	20 to 32
<b>Options</b>	<ul style="list-style-type: none"> <li>• forever Receive key does not expire (equivalent to infinite tolerance)</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## start-time *string*

<b>Description</b>	The time at which the key becomes valid for use in the receive direction
--------------------	--

If `send-and-receive` is true, this value is ignored. If `send-and-receive` is false the default is the Unix Epoch (Jan 1, 1970 00:00:00 UTC).

If there are multiple keys in the keychain the one used for checking received authentication information is the key with the most recent `receive-lifetime start-time` that is earlier than the current date and time and that has not exceeded its `receive-lifetime end-time` by more than 'tolerance' seconds

<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">receive-lifetime start-time</a> <i>string</i>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## send-lifetime

<b>Description</b>	Specifies the lifetime of the key for sending authentication information to the peer
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">send-lifetime</a>
<b>Tree</b>	<a href="#">send-lifetime</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## send-and-receive *boolean*

<b>Description</b>	When this is set to true (the default value), the specified <code>start-time</code> also applies to the receive direction  When set to false, router uses the specific <code>start-time</code> for the receive direction (asymmetric mode).
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">send-lifetime</a> <a href="#">send-and-receive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">send-and-receive</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**start-time string**

<b>Description</b>	The time at which the key becomes valid for use in the send direction The default is the Unix Epoch (Jan 1, 1970 00:00:00 UTC). If there are multiple keys in the keychain the one used for sending authentication information is the key with the most recent send-lifetime start-time that is earlier than the current date and time
<b>Context</b>	<a href="#">system authentication keychain name string key index number send-lifetime start-time string</a>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**tolerance number**

<b>Description</b>	Tolerance for receive keys If tolerance is Z then all receive keys remain valid up to the configured/ applicable end-time plus an additional Z seconds.
<b>Context</b>	<a href="#">system authentication keychain name string tolerance number</a>
<b>Tree</b>	<a href="#">tolerance</a>
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**type keyword**

<b>Description</b>	Specifies the intended use of the keychain The type constrains the set of crypto algorithms that are available to use with each key in the keychain. It is also used to ensure that this keychain is only used by protocols for which it is intended.
<b>Context</b>	<a href="#">system authentication keychain name string type keyword</a>
<b>Tree</b>	<a href="#">type</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• tcp-md5 Keychain intended to be used for TCP-MD5 authentication</li> <li>• isis Keychain intended to be used for authentication of IS-IS PDUs</li> <li>• ospf Keychain intended to be used for authentication of OSPFv2 messages</li> <li>• tcp-ao Keychain intended to be used for TCP-AO authentication</li> <li>• vrrp Keychain intended to be used for authentication of VRRPv2 messages</li> <li>• macsec Keychain intended to be used for key wrapping of SAK in a mka messages.</li> </ul>
----------------	--

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**usable** *boolean*

<b>Description</b>	The value of this object indicates if the keychain is usable for authentication
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string usable boolean</i>
<b>Tree</b>	<a href="#">usable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**banner**

<b>Description</b>	Contains configuration and state related to system banners
<b>Context</b>	<a href="#">system banner</a>
<b>Tree</b>	<a href="#">banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**login-banner** *string*

<b>Description</b>	Banner to display before a user has authenticated
<b>Context</b>	<a href="#">system banner login-banner</a> <i>string</i>

<b>Tree</b>	<a href="#">login-banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

<b>Description</b>	Banner to display after a user has authenticated
<b>Context</b>	<a href="#">system banner motd-banner</a> <i>string</i>
<b>Tree</b>	<a href="#">motd-banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**boot**

<b>Description</b>	Top-level container for configuration and state data related to booting the system
<b>Context</b>	<a href="#">system boot</a>
<b>Tree</b>	<a href="#">boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**autoboot**

<b>Description</b>	Top-level container for configuration and state data related to autobooting the system
<b>Context</b>	<a href="#">system boot autoboot</a>
<b>Tree</b>	<a href="#">autoboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable autoboot functionality
<b>Context</b>	<a href="#">system boot autoboot admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**attempts** *number*

<b>Description</b>	Sets the amount of executions to try autoboot, before rebooting the system
<b>Context</b>	<a href="#">system boot autoboot attempts number</a>
<b>Tree</b>	<a href="#">attempts</a>
<b>Range</b>	1 to 10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**client-id** *keyword*

<b>Description</b>	The client ID to use on outgoing DHCP requests
<b>Context</b>	<a href="#">system boot autoboot client-id keyword</a>
<b>Tree</b>	<a href="#">client-id</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• serial Use the chassis serial number as the client ID</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** *reference*

<b>Description</b>	Sets the interface to use for autoboot functionality
<b>Context</b>	<a href="#">system boot autoboot interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Default</b>	mgmt0
<b>Reference</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mode** *string*

<b>Description</b>	Ztp operation modes. One or more modes can passed
--------------------	---

<b>Context</b>	<a href="#">system boot autoboot mode</a> <i>string</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *string*

<b>Description</b>	The current operational status of the autoboot process
<b>Context</b>	<a href="#">system boot autoboot oper-state</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Sets the timeout for each attempt to autoboot
<b>Context</b>	<a href="#">system boot autoboot timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	200 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**image** *string*

<b>Description</b>	Ordered list of local images used to boot the system  This directly translates into boot configuration in grub, where the images are tried in the order specified by the user. Images are sourced via the internal SD card, and the value passed is the folder that contains the initramfs, kernel, and squashfs image. The search path for these directories is /mnt/nokiaos/<folder>
<b>Context</b>	<a href="#">system boot image</a> <i>string</i>
<b>Tree</b>	<a href="#">image</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

**bridge-table**

<b>Description</b>	system bridge-table information
<b>Context</b>	<a href="#">system bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-learning**

<b>Description</b>	Enter the mac-learning context
<b>Context</b>	<a href="#">system bridge-table mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-relearn-only** *boolean*

<b>Description</b>	The value of this leaf indicates that the system will not learn any new mac addresses, but will relearn any that are already programmed
<b>Context</b>	<a href="#">system bridge-table mac-learning mac-relearn-only boolean</a>
<b>Tree</b>	<a href="#">mac-relearn-only</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mac-limit**

<b>Description</b>	Bridge Table size and thresholds.
<b>Context</b>	<a href="#">system bridge-table mac-limit</a>
<b>Tree</b>	<a href="#">mac-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**maximum-entries** *number*

<b>Description</b>	Maximum number of mac addresses allowed in the system bridge-table.
--------------------	---

<b>Context</b>	<a href="#">system bridge-table mac-limit maximum-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **warning-threshold-pct** *number*

<b>Description</b>	Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%
<b>Context</b>	<a href="#">system bridge-table mac-limit warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **proxy-arp**

<b>Description</b>	system bridge-table proxy ARP entry information
<b>Context</b>	<a href="#">system bridge-table proxy-arp</a>
<b>Tree</b>	<a href="#">proxy-arp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-entries** *number*

<b>Description</b>	The total number of active proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics in-active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-origin** [origin](#) *keyword*

<b>Description</b>	The origin of the proxy entry installed in the table.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin</a> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-origin</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin** *keyword*

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin</a> <a href="#">origin</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> <li>• duplicate</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of active proxy entries.
--------------------	---

<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword active-entries number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword in-active-entries number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword pending-entries number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword total-entries number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics pending-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-arp statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**proxy-nd**

<b>Description</b>	system bridge-table proxy ND entry information
<b>Context</b>	<a href="#">system bridge-table proxy-nd</a>
<b>Tree</b>	<a href="#">proxy-nd</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of active proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics in-active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-origin** [origin](#) *keyword*

<b>Description</b>	The origin of the proxy entry installed in the table.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-origin</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin** *keyword*

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> <li>• duplicate</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of active proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword active-entries number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword in-active-entries number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword pending-entries number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics neighbor-origin origin</a> <i>keyword total-entries number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics pending-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of proxy entries.
<b>Context</b>	<a href="#">system bridge-table proxy-nd statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system bridge-table statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of macs that are active on the system.
<b>Context</b>	<a href="#">system bridge-table statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **failed-entries** *number*

**Description** The total number of macs, which have not been programmed on atleast one slot

**Context** [system bridge-table statistics failed-entries number](#)

**Tree** [failed-entries](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **mac-type** *type keyword*

**Description** The type of the mac in the system.

**Context** [system bridge-table statistics mac-type type keyword](#)

**Tree** [mac-type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **type** *keyword*

**Description** Enter the type context

**Context** [system bridge-table statistics mac-type type keyword](#)

**Options**

- static
- duplicate
- learnt
- irb-interface
- evpn
- evpn-static
- irb-interface-anycast
- proxy-anti-spoof
- reserved
- eth-cfm

**Configurable** False

**Platforms** Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of macs of this type on the system.
<b>Context</b>	<a href="#">system bridge-table statistics mac-type type keyword active-entries number</a>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">system bridge-table statistics mac-type type keyword failed-entries number</a>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of macs of this type , active and inactive, on the system.
<b>Context</b>	<a href="#">system bridge-table statistics mac-type type keyword total-entries number</a>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the system.
<b>Context</b>	<a href="#">system bridge-table statistics total-entries number</a>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## clock

<b>Description</b>	Top-level container for system clock configuration and state
<b>Context</b>	<a href="#">system clock</a>
<b>Tree</b>	<a href="#">clock</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## timezone *keyword*

<b>Description</b>	The timezone to use for the system Based on IANAs Time Zone database
<b>Context</b>	<a href="#">system clock timezone keyword</a>
<b>Tree</b>	<a href="#">timezone</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• Africa/Abidjan</li><li>• Africa/Accra</li><li>• Africa/Addis_Ababa</li><li>• Africa/Algiers</li><li>• Africa/Asmara</li><li>• Africa/Bamako</li><li>• Africa/Bangui</li><li>• Africa/Banjul</li><li>• Africa/Bissau</li><li>• Africa/Blantyre</li><li>• Africa/Brazzaville</li><li>• Africa/Bujumbura</li><li>• Africa/Cairo</li><li>• Africa/Casablanca</li><li>• Africa/Ceuta Ceuta, Melilla</li><li>• Africa/Conakry</li><li>• Africa/Dakar</li><li>• Africa/Dar_es_Salaam</li><li>• Africa/Djibouti</li><li>• Africa/Douala</li><li>• Africa/El_Aaiun</li><li>• Africa/Freetown</li></ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## configuration

<b>Description</b>	Top-level container for configuration and state data related to the system configuration
<b>Context</b>	<a href="#">system configuration</a>
<b>Tree</b>	<a href="#">configuration</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## auto-checkpoint *boolean*

<b>Description</b>	Configuration checkpoint will be automatically created after every successful commit (if set to true).
<b>Context</b>	<a href="#">system configuration auto-checkpoint <i>boolean</i></a>
<b>Tree</b>	<a href="#">auto-checkpoint</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## candidate *name string*

<b>Description</b>	List of configuration candidates currently active
<b>Context</b>	<a href="#">system configuration candidate <i>name string</i></a>
<b>Tree</b>	<a href="#">candidate</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Name of the configuration candidate
<b>Context</b>	<a href="#">system configuration candidate <i>name string</i></a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **started** *string*

**Description** Start date and time of the configuration session

**Context** [system configuration candidate name](#) *string* **started** *string*

**Tree** [started](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **type** *keyword*

**Description** Type of configuration candidate

**Context** [system configuration candidate name](#) *string* **type** *keyword*

**Tree** [type](#)

**Options**

- shared
- private

**Configurable** False

**Platforms** Supported on all platforms

### **username** *string*

**Description** User that started the configuration session

**Context** [system configuration candidate name](#) *string* **username** *string*

**Tree** [username](#)

**String Length** 1 to 255

**Configurable** False

**Platforms** Supported on all platforms

### **checkpoint id** *number*

**Description** List of current checkpoints present in the system

**Context** [system configuration checkpoint id](#) *number*

**Tree** [checkpoint](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	System generated ID for the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**comment** *string*

<b>Description</b>	User provided annotations associated with the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">comment</a> <i>string</i>
<b>Tree</b>	<a href="#">comment</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**created** *string*

<b>Description</b>	Date and time this checkpoint was created
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">created</a> <i>string</i>
<b>Tree</b>	<a href="#">created</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	User provided name of the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**size** *number*

<b>Description</b>	Size of the checkpoint configuration file
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">size</a> <i>number</i>
<b>Tree</b>	<a href="#">size</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tag** *string*

<b>Description</b>	Full system version that the checkpoint was generated on
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">tag</a> <i>string</i>
<b>Tree</b>	<a href="#">tag</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	Username that created this checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**version** *string*

<b>Description</b>	System version that the checkpoint was generated on
<b>Context</b>	<a href="#">system configuration checkpoint id</a> <i>number</i> <a href="#">version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**commit** *id number*

<b>Description</b>	List of configuration transactions
--------------------	------------------------------------

<b>Context</b>	<a href="#">system configuration commit id number</a>
<b>Tree</b>	<a href="#">commit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	System identifier for the commit
<b>Context</b>	<a href="#">system configuration commit id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**comment string**

<b>Description</b>	Operator provided comment associated with this commit
<b>Context</b>	<a href="#">system configuration commit id number comment string</a>
<b>Tree</b>	<a href="#">comment</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ended string**

<b>Description</b>	End date and time of the commit This field is not populated if the commit is in progress
<b>Context</b>	<a href="#">system configuration commit id number ended string</a>
<b>Tree</b>	<a href="#">ended</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name string**

<b>Description</b>	Name of the configuration candidate the commit was triggered from
<b>Context</b>	<a href="#">system configuration commit id number name string</a>
<b>Tree</b>	<a href="#">name</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**started** *string*

<b>Description</b>	Start date and time of the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">started</a> <i>string</i>
<b>Tree</b>	<a href="#">started</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	Current status of the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• validating</li> <li>• publishing</li> <li>• unconfirmed</li> <li>• checkpoint</li> <li>• save</li> <li>• complete</li> <li>• reverting</li> <li>• failed</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of configuration candidate the commit was triggered from
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• shared</li> <li>• private</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	User that started the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**idle-timeout** *number*

<b>Description</b>	The idle timeout of configuration candidates After this period of no activity, the candidate is emptied and removed from the system.
<b>Context</b>	<a href="#">system configuration idle-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">idle-timeout</a>
<b>Default</b>	10080
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	Date and time of the last successful commit Set to the time the configuration was loaded by management server, so is refreshed at boot time.
<b>Context</b>	<a href="#">system configuration last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-candidates** *number*

<b>Description</b>	The maximum number of combined private and shared candidates
<b>Context</b>	<a href="#">system configuration max-candidates</a> <i>number</i>
<b>Tree</b>	<a href="#">max-candidates</a>
<b>Range</b>	1 to 255
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-checkpoints** *number*

<b>Description</b>	The number of checkpoints kept by the system
<b>Context</b>	<a href="#">system configuration max-checkpoints</a> <i>number</i>
<b>Tree</b>	<a href="#">max-checkpoints</a>
<b>Range</b>	1 to 255
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**role** *name reference*

<b>Description</b>	List of roles configured in the system
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference</i>
<b>Tree</b>	<a href="#">role</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**name** *reference*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference</i>
<b>Reference</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rule** *path-reference string*

<b>Description</b>	List of paths to perform access control against
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference rule path-reference string</i>
<b>Tree</b>	<a href="#">rule</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	256

**path-reference** *string*

<b>Description</b>	Reference to a valid YANG path, in CLI notation This path may include keys, wildcards, ranges, and other management server supported constructs. Ranges will be expanded. The root path can be specified with '/'. E.g. / "/interface" "/acl ipv4-filter foo* description"
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference rule path-reference string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**action** *keyword*

<b>Description</b>	Action to allow for this path
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference rule path-reference string action keyword</i>
<b>Tree</b>	<a href="#">action</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• read This path may be read by the role</li> <li>• write This path may be written and read by the role</li> <li>• deny This path may not be read or written to by the role</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**session id** *number*

<b>Description</b>	List of configuration sessions currently active
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	System generated ID for the configuration session
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**exclusive** *boolean*

<b>Description</b>	Details if this session is running in exclusive mode
<b>Context</b>	<a href="#">system configuration session id number exclusive boolean</a>
<b>Tree</b>	<a href="#">exclusive</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the candidate the session is active on Set to 'default' if a non-named candidate is active
<b>Context</b>	<a href="#">system configuration session id number name string</a>
<b>Tree</b>	<a href="#">name</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**started** *string*

<b>Description</b>	Start date and time of the configuration session
--------------------	--

<b>Context</b>	<a href="#">system configuration session id number started string</a>
<b>Tree</b>	<a href="#">started</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of configuration session
<b>Context</b>	<a href="#">system configuration session id number type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• shared</li> <li>• private</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	User that started the configuration session
<b>Context</b>	<a href="#">system configuration session id number username string</a>
<b>Tree</b>	<a href="#">username</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dhcp-server**

<b>Description</b>	Configures the dhcp server
<b>Context</b>	<a href="#">system dhcp-server</a>
<b>Tree</b>	<a href="#">dhcp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Globally enable or disable the dhcp server Disabling this will disable all dhcp servers.
<b>Context</b>	<a href="#">system dhcp-server admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** [name](#) *reference*

<b>Description</b>	List of network instances to run a dhcp server in
<b>Context</b>	<a href="#">system dhcp-server network-instance</a> <a href="#">name</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *reference*

<b>Description</b>	Reference to a configured network instance
<b>Context</b>	<a href="#">system dhcp-server network-instance</a> <a href="#">name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance</a> <a href="#">name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv4**

<b>Description</b>	Enter the dhcpv4 context
<b>Context</b>	<a href="#">system dhcp-server network-instance</a> <a href="#">name</a> <i>reference</i> <a href="#">dhcpv4</a>
<b>Tree</b>	<a href="#">dhcpv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the dhcp server
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"><li>• enable</li><li>• disable</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the dhcp server is operationally available
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• up Component or process is operational</li><li>• down Component or process is not operational</li><li>• empty Component slot is empty</li><li>• downloading Component is downloading image into memory</li><li>• booting Component is booting downloaded image</li><li>• starting Component image operational, application processes starting</li><li>• failed Component or process has failed</li><li>• synchronizing Component is currently being synchronized</li><li>• upgrading Component is currently being upgraded</li><li>• low-power</li></ul>

Component is offline due to insufficient system power

- degraded

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

## options

**Description**

Enter the options context

**Context**

[system dhcp-server network-instance name reference dhcpv4 options](#)

**Tree**

[options](#)

**Configurable**

**Platforms**

Supported on all platforms

## bootfile-name *string*

**Description**

The name of the configuration file the client will use during booting - option 67

**Context**

[system dhcp-server network-instance name reference dhcpv4 options bootfile-name string](#)

**Tree**

[bootfile-name](#)

**String Length**

1 to 128

**Configurable**

True

**Platforms**

Supported on all platforms

**dns-server *string***

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client - option 6
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 options dns-server <i>string</i></a>
<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**domain-name *string***

<b>Description</b>	The domain name to return to the dhcp client that the client should use when resolving hostnames via the Domain Name System - option 15
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 options domain-name <i>string</i></a>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hostname *string***

<b>Description</b>	Host Name option of the dhcp client - option 12
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 options hostname <i>string</i></a>
<b>Tree</b>	<a href="#">hostname</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ntp-server *string***

<b>Description</b>	List of NTP Servers to return to the dhcp client - option 42
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 options ntp-server <i>string</i></a>
<b>Tree</b>	<a href="#">ntp-server</a>
<b>Configurable</b>	True

<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**router string**

<b>Description</b>	IPv4 address of the gateway for the dhcp client - option 3
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options router string</a>
<b>Tree</b>	<a href="#">router</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server-id string**

<b>Description</b>	IP address the dhcp server must match any address within the network_instance e.g. sub-interface primary address, loopback address, anycast gateway address in case of multihoming - option 54
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options server-id string</a>
<b>Tree</b>	<a href="#">server-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**tftp-server-address string**

<b>Description</b>	List of IP address of the TFTP servers the client will use to download bootfile/configuration script - option 150
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options tftp-server-address string</a>
<b>Tree</b>	<a href="#">tftp-server-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

**tftp-server-name string**

<b>Description</b>	FQDN of the TFTP server the client will use to download bootfile/configuration script - option 66
--------------------	---

<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options tftp-server-name</a> <i>string</i>
<b>Tree</b>	<a href="#">tftp-server-name</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## static-allocation

<b>Description</b>	Enter the static-allocation context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation</a>
<b>Tree</b>	<a href="#">static-allocation</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## host *mac string*

<b>Description</b>	Host name for static ip allocations
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i>
<b>Tree</b>	<a href="#">host</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## mac *string*

<b>Description</b>	Enter the mac context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ip-address *string*

<b>Description</b>	Enter the ip-address context
--------------------	------------------------------

<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">ip-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## options

<b>Description</b>	Enter the options context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options</a>
<b>Tree</b>	<a href="#">options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bootfile-name *string*

<b>Description</b>	The name of the configuration file the client will use during booting - option 67
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options bootfile-name</a> <i>string</i>
<b>Tree</b>	<a href="#">bootfile-name</a>
<b>String Length</b>	1 to 128
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dns-server *string*

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client - option 6
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options dns-server</a> <i>string</i>
<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**domain-name** *string*

<b>Description</b>	The domain name to return to the dhcp client that the client should use when resolving hostnames via the Domain Name System - option 15
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string options domain-name</i> <i>string</i>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hostname** *string*

<b>Description</b>	Host Name option of the dhcp client - option 12
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string options hostname</i> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ntp-server** *string*

<b>Description</b>	List of NTP Servers to return to the dhcp client - option 42
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string options ntp-server</i> <i>string</i>
<b>Tree</b>	<a href="#">ntp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**router** *string*

<b>Description</b>	IPv4 address of the gateway for the dhcp client - option 3
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string options router</i> <i>string</i>
<b>Tree</b>	<a href="#">router</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **server-id *string***

**Description** IP address the dhcp server must match any address within the network\_instance e.g. sub-interface primary address, loopback address, anycast gateway address in case of multihoming - option 54

**Context** [system dhcp-server network-instance name reference dhcpv4 static-allocation host mac string options server-id string](#)

**Tree** [server-id](#)

**Configurable** True

**Platforms** Supported on all platforms

### **tftp-server-address *string***

**Description** List of IP address of the TFTP servers the client will use to download bootfile/configuration script - option 150

**Context** [system dhcp-server network-instance name reference dhcpv4 static-allocation host mac string options tftp-server-address string](#)

**Tree** [tftp-server-address](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 2

### **tftp-server-name *string***

**Description** FQDN of the TFTP server the client will use to download bootfile/configuration script - option 66

**Context** [system dhcp-server network-instance name reference dhcpv4 static-allocation host mac string options tftp-server-name string](#)

**Tree** [tftp-server-name](#)

**String Length** 1 to 63

**Configurable** True

**Platforms** Supported on all platforms

### **statistics**

**Description** Enter the statistics context

<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **client-packets-discarded** *number*

<b>Description</b>	Total discarded dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 statistics client-packets-discarded number</a>
<b>Tree</b>	<a href="#">client-packets-discarded</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **client-packets-received** *number*

<b>Description</b>	Total received dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 statistics client-packets-received number</a>
<b>Tree</b>	<a href="#">client-packets-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server-packets-sent** *number*

<b>Description</b>	Total dhcp packets sent from DHCP server towards dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv4 statistics server-packets-sent number</a>
<b>Tree</b>	<a href="#">server-packets-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Container for tracing DHCP server operations instance
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace** *keyword*

<b>Description</b>	List of events to trace
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 trace-options trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• messages Capture all DHCP server messages sent and received</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv6**

<b>Description</b>	Enter the dhcpv6 context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6</a>
<b>Tree</b>	<a href="#">dhcpv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the dhcp server
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	Details if the dhcp server is operationally available
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting</li> </ul>

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## options

<b>Description</b>	Enter the options context
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv6 options</a>
<b>Tree</b>	<a href="#">options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dns-server *string*

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv6 options dns-server string</a>
<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

## static-allocation

<b>Description</b>	Enter the static-allocation context
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference dhcpv6 static-allocation</a>
<b>Tree</b>	<a href="#">static-allocation</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## host *mac string*

<b>Description</b>	Host name for static ip allocations
--------------------	-------------------------------------

<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 static-allocation host mac</a> <i>string</i>
<b>Tree</b>	<a href="#">host</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac *string***

<b>Description</b>	Enter the mac context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 static-allocation host mac</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-address *string***

<b>Description</b>	Enter the ip-address context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 static-allocation host mac</a> <i>string</i> <a href="#">ip-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**options**

<b>Description</b>	Enter the options context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 static-allocation host mac</a> <i>string</i> <a href="#">options</a>
<b>Tree</b>	<a href="#">options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dns-server *string***

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 static-allocation host mac</a> <i>string</i> <a href="#">options dns-server</a> <i>string</i>

<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## client-packets-discarded *number*

<b>Description</b>	Total discarded dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 statistics</a> <a href="#">client-packets-discarded</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-discarded</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## client-packets-received *number*

<b>Description</b>	Total received dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 statistics</a> <a href="#">client-packets-received</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## server-packets-sent *number*

<b>Description</b>	Total dhcp packets sent from DHCP server towards dhcp client(s)
--------------------	---

<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 statistics server-packets-sent</a> <i>number</i>
<b>Tree</b>	<a href="#">server-packets-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## trace-options

<b>Description</b>	Container for tracing DHCP server operations instance
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## trace *keyword*

<b>Description</b>	List of events to trace
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv6 trace-options trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>messages Capture all DHCP server messages sent and received</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dns

<b>Description</b>	Top-level container for DNS configuration and state
<b>Context</b>	<a href="#">system dns</a>
<b>Tree</b>	<a href="#">dns</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**host-entry** *name string*

<b>Description</b>	List of static host entries
<b>Context</b>	<a href="#">system dns host-entry name string</a>
<b>Tree</b>	<a href="#">host-entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of host entry
<b>Context</b>	<a href="#">system dns host-entry name string</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4-address** *string*

<b>Description</b>	IPv4 address for the host entry
<b>Context</b>	<a href="#">system dns host-entry name string ipv4-address string</a>
<b>Tree</b>	<a href="#">ipv4-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-address** *string*

<b>Description</b>	IPv6 address for the host entry
<b>Context</b>	<a href="#">system dns host-entry name string ipv6-address string</a>
<b>Tree</b>	<a href="#">ipv6-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** *reference*

<b>Description</b>	Reference to a configured network-instance to source DNS requests from
<b>Context</b>	<a href="#">system dns network-instance reference</a>
<b>Tree</b>	<a href="#">network-instance</a>

<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	Details the operational state of the DNS client
<b>Context</b>	<a href="#">system dns oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting</li> </ul>

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **search-list** *string*

<b>Description</b>	An ordered list of domains to search when resolving a host name
<b>Context</b>	<a href="#">system dns search-list</a> <i>string</i>
<b>Tree</b>	<a href="#">search-list</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **server-list** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of the DNS servers that the resolver should query
<b>Context</b>	<a href="#">system dns server-list</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">server-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

### **event-handler**

<b>Description</b>	Top-level container for configuration and state of event handler and event handling instances
<b>Context</b>	<a href="#">system event-handler</a>
<b>Tree</b>	<a href="#">event-handler</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**instance name** *string*

<b>Description</b>	List of all event handler instances An event handler instance consists of a set of paths to be monitored for changes, and a Python script to execute if changes occur.
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	20

**name** *string*

<b>Description</b>	A user-defined name for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**last-errored-execution**

<b>Description</b>	Operational state of the last errored execution of this instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">last-errored-execution</a>
<b>Tree</b>	<a href="#">last-errored-execution</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**end-time** *string*

<b>Description</b>	The time this instance last finished execution This timestamp includes any actions provided as output from the execution
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">last-errored-execution</a> <a href="#">end-time</a> <i>string</i>
<b>Tree</b>	<a href="#">end-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**input** *string*

<b>Description</b>	The input provided to the script
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">last-errored-execution</a> <a href="#">input</a> <i>string</i>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**oper-down-reason** *keyword*

<b>Description</b>	The reason this instance is or was in its last operational state
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">last-errored-execution</a> <a href="#">oper-down-reason</a> <i>keyword</i>

---

<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>admin-disabled</b> Event handler instance is admin-disabled</li><li>• <b>failed-to-compile</b> Event handler failed to compile the script, indicating that the script likely has a syntax error</li><li>• <b>exception</b> Event handler caught an exception in the last execution of the script</li><li>• <b>timeout</b> The last execution of the script did not complete before a timeout occurred</li><li>• <b>subscription-failed</b> Event handler was unable to subscribe to the provided paths</li><li>• <b>script-unavailable</b> Event handler was unable to find the script on the filesystem</li><li>• <b>script-error</b> The script returned something invalid</li><li>• <b>missing-function</b> Event handler was unable to find a function named <code>event_handler_main()</code> in the provided script</li><li>• <b>system-error</b> There was a failure in setting up the python environment</li><li>• <b>ephemeral-action-failed</b> Event handler was unable to perform a ephemeral-path action in the previous execution</li><li>• <b>cfg-action-failed</b> Event handler was unable to perform a cfg-path action in the previous execution</li><li>• <b>tools-action-failed</b> Event handler was unable to perform a tools-path action in the previous execution</li><li>• <b>state-action-failed</b> Event handler was unable to perform a state-path action in the previous execution</li><li>• <b>script-action-failed</b> Event handler was unable to perform a script action in the previous execution</li></ul>
<b>Configurable</b>	False

### **oper-down-reason** *keyword*

<b>Description</b>	The reason this instance is or was in its last operational state
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">last-execution oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>admin-disabled</b> Event handler instance is admin-disabled</li> <li>• <b>failed-to-compile</b> Event handler failed to compile the script, indicating that the script likely has a syntax error</li> <li>• <b>exception</b> Event handler caught an exception in the last execution of the script</li> <li>• <b>timeout</b> The last execution of the script did not complete before a timeout occurred</li> <li>• <b>subscription-failed</b> Event handler was unable to subscribe to the provided paths</li> <li>• <b>script-unavailable</b> Event handler was unable to find the script on the filesystem</li> <li>• <b>script-error</b></li> </ul>

The script returned something invalid

- missing-function

Event handler was unable to find a function named event\_handler\_main() in the provided script

- system-error

There was a failure in setting up the python environment

- ephemeral-action-failed

Event handler was unable to perform a ephemeral-path action in the previous execution

- cfg-action-failed

Event handler was unable to perform a cfg-path action in the previous execution

- tools-action-failed

Event handler was unable to perform a tools-path action in the previous execution

- state-action-failed

Event handler was unable to perform a state-path action in the previous execution

- script-action-failed

Event handler was unable to perform a script action in the previous execution

**upython-duration number**

<b>Description</b>	Time taken for the instance to return output
<b>Context</b>	<a href="#">system event-handler instance name string last-execution upython-duration number</a>
<b>Tree</b>	<a href="#">upython-duration</a>

<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **oper-state** *keyword*

<b>Description</b>	Details if this event handler instance is operationally available
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <b>oper-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting</li> </ul>

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system ftp-server network-instance name reference</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### admin-state *keyword*

<b>Description</b>	Enables or disables the FTP server in this network-instance
<b>Context</b>	<a href="#">system ftp-server network-instance name reference admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### oper-state *keyword*

<b>Description</b>	Details the operational state of the FTP server
<b>Context</b>	<a href="#">system ftp-server network-instance name reference oper-state keyword</a>

<b>Tree</b>	<b>oper-state</b>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**session-limit** *number*

<b>Description</b>	Set a limit on the number of simultaneous active FTP sessions
<b>Context</b>	<a href="#">system ftp-server network-instance name</a> <i>reference</i> <a href="#">session-limit number</a>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IPv4 or IPv6 address for the FTP server to listen on within the network-instance  Default behavior is to listen on '::', which will listen on all addresses for both IPv4 and IPv6. In order to listen on IPv4 only, this field should be set to '0.0.0.0'.
<b>Context</b>	<a href="#">system ftp-server network-instance name</a> <i>reference</i> <a href="#">source-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on FTP connections
<b>Context</b>	<a href="#">system ftp-server network-instance name</a> <i>reference</i> <a href="#">timeout number</a>
<b>Tree</b>	<a href="#">timeout</a>
<b>Default</b>	300
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**gnmi-server**

<b>Description</b>	Configures the gNMI server access API
<b>Context</b>	<a href="#">system gnmi-server</a>

<b>Tree</b>	<a href="#">gnmi-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Globally enable or disable the gNMI server. Disabling this will disable all gNMI servers.
<b>Context</b>	<a href="#">system gnmi-server admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**commit-confirmed-timeout** *number*

<b>Description</b>	Number of seconds to wait for confirmation. A value of 0 means commit confirmed is not used
<b>Context</b>	<a href="#">system gnmi-server commit-confirmed-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">commit-confirmed-timeout</a>
<b>Range</b>	0 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**commit-save** *boolean*

<b>Description</b>	Specifies whether to save startup configuration after every successful commit
<b>Context</b>	<a href="#">system gnmi-server commit-save</a> <i>boolean</i>
<b>Tree</b>	<a href="#">commit-save</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **include-defaults-in-config-only-responses** *boolean*

**Description** Specifies whether to include field default values in get/subscribe responses when using configuration only datastore (for example running/intended datastore)

**Context** [system gnmi-server include-defaults-in-config-only-responses](#) *boolean*

**Tree** [include-defaults-in-config-only-responses](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

### **network-instance** [name](#) *reference*

**Description** List of network instances to run a gNMI server in

**Context** [system gnmi-server network-instance](#) [name](#) *reference*

**Tree** [network-instance](#)

**Configurable** True

**Platforms** Supported on all platforms

### **name** *reference*

**Description** Reference to a configured network instance

**Context** [system gnmi-server network-instance](#) [name](#) *reference*

**Reference** [network-instance](#) [name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Administratively enable or disable the gNMI server

**Context** [system gnmi-server network-instance](#) [name](#) *reference* [admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable

<b>Configurable</b>	• disable True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the gNMI server is operationally available
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting</li> </ul>

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port** *number*

<b>Description</b>	Port the gNMI server will listen on for incoming connections
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">port number</a>
<b>Tree</b>	<a href="#">port</a>
<b>Range</b>	0 to 65535
<b>Default</b>	57400
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses the gNMI server will listen on within the network instance
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">source-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tls-profile** *reference*

<b>Description</b>	Reference to the TLS profile to use on the gNMI server
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">tls-profile reference</a>
<b>Tree</b>	<a href="#">tls-profile</a>
<b>Reference</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**use-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password authentication for every gNMI request
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">use-authentication boolean</a>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**yang-models** *keyword*

<b>Description</b>	Specify yang-models to be used when origin field is not present in the gnmi requests
<b>Context</b>	<a href="#">system gnmi-server network-instance name</a> <i>reference</i> <a href="#">yang-models keyword</a>
<b>Tree</b>	<a href="#">yang-models</a>
<b>Default</b>	native
<b>Options</b>	<ul style="list-style-type: none"> <li>• native</li> <li>• openconfig</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**rate-limit** *number*

<b>Description</b>	Set a limit on the number of connection attempts per minute
<b>Context</b>	<a href="#">system gnmi-server rate-limit number</a>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Range</b>	0 to 65535
<b>Default</b>	60
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**session-limit** *number*

<b>Description</b>	Set a limit on the number of simultaneous active gNMI sessions
--------------------	--

<b>Context</b>	<a href="#">system gnmi-server session-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Range</b>	0 to 65535
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **subscription id** *number*

<b>Description</b>	List of subscriptions
<b>Context</b>	<a href="#">system gnmi-server subscription id</a> <i>number</i>
<b>Tree</b>	<a href="#">subscription</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **id** *number*

<b>Description</b>	System generated ID for for the subscription
<b>Context</b>	<a href="#">system gnmi-server subscription id</a> <i>number</i>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **mode** *keyword*

<b>Description</b>	Subscription mode (ON_CHANGE, SAMPLE, TARGET_DEFINED, POLL, ONCE)
<b>Context</b>	<a href="#">system gnmi-server subscription id</a> <i>number</i> <a href="#">mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ON_CHANGE</li> <li>• SAMPLE</li> <li>• TARGET_DEFINED</li> <li>• POLL</li> <li>• ONCE</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**paths** *string*

<b>Description</b>	List of paths being subscribed to
<b>Context</b>	<a href="#">system gnmi-server subscription id number paths string</a>
<b>Tree</b>	<a href="#">paths</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**remote-host** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Remote host of the subscription
<b>Context</b>	<a href="#">system gnmi-server subscription id number remote-host (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">remote-host</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**remote-port** *number*

<b>Description</b>	Remote port of the subscription
<b>Context</b>	<a href="#">system gnmi-server subscription id number remote-port number</a>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sample-interval** *number*

<b>Description</b>	Time in seconds to provide updates to the remote host, set to 0 for all subscription modes except SAMPLE
<b>Context</b>	<a href="#">system gnmi-server subscription id number sample-interval number</a>
<b>Tree</b>	<a href="#">sample-interval</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start-time** *string*

<b>Description</b>	Time of the subscription creation
<b>Context</b>	<a href="#">system gnmi-server subscription id number start-time string</a>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user** *string*

<b>Description</b>	Authenticated username for the subscription
<b>Context</b>	<a href="#">system gnmi-server subscription id number user string</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user-agent** *string*

<b>Description</b>	User agent used for the subscription
<b>Context</b>	<a href="#">system gnmi-server subscription id number user-agent string</a>
<b>Tree</b>	<a href="#">user-agent</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on gNMI connections
<b>Context</b>	<a href="#">system gnmi-server timeout number</a>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	0 to 65535
<b>Default</b>	7200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace-options** *keyword*

<b>Description</b>	gNMI trace options
<b>Context</b>	<a href="#">system gnmi-server trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• request</li><li>• response</li><li>• common</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**unix-socket**

<b>Description</b>	Top-level container for configuration and state related to unix sockets
<b>Context</b>	<a href="#">system gnmi-server unix-socket</a>
<b>Tree</b>	<a href="#">unix-socket</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the gNMI server
<b>Context</b>	<a href="#">system gnmi-server unix-socket admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"><li>• enable</li><li>• disable</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the gNMI server is operationally available
<b>Context</b>	<a href="#">system gnmi-server unix-socket oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• up</li></ul>

- Component or process is operational
- down
- Component or process is not operational

<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**tls-profile** *reference*

<b>Description</b>	Reference to the TLS profile to use on the gRIBI server
<b>Context</b>	<a href="#">system gribi-server network-instance name</a> <i>reference</i> <a href="#">tls-profile</a> <i>reference</i>
<b>Tree</b>	<a href="#">tls-profile</a>
<b>Reference</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**use-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password authentication for every gRIBI RPC request
<b>Context</b>	<a href="#">system gribi-server network-instance name</a> <i>reference</i> <a href="#">use-authentication</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**rate-limit** *number*

<b>Description</b>	Set a limit on the number of connection attempts per minute
<b>Context</b>	<a href="#">system gribi-server rate-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Range</b>	0 to 65535

<b>Default</b>	60
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **session-limit** *number*

<b>Description</b>	Set a limit on the number of simultaneous active gRIBI sessions A session is defined as an individual RPC invocation, which could result in a single client generating multiple sessions.
<b>Context</b>	<a href="#">system gribi-server session-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Range</b>	0 to 65535
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on gRIBI clients
<b>Context</b>	<a href="#">system gribi-server timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	0 to 65535
<b>Default</b>	7200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **trace-options** *keyword*

<b>Description</b>	gRIBI trace options
<b>Context</b>	<a href="#">system gribi-server trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• request</li> <li>• response</li> <li>• common</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### unix-socket

<b>Description</b>	Top-level container for configuration and state related to unix sockets
<b>Context</b>	<a href="#">system gribi-server unix-socket</a>
<b>Tree</b>	<a href="#">unix-socket</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### admin-state *keyword*

<b>Description</b>	Administratively enable or disable the gRIBI service
<b>Context</b>	<a href="#">system gribi-server unix-socket admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### oper-state *keyword*

<b>Description</b>	Details if the gRIBI service is operationally available
<b>Context</b>	<a href="#">system gribi-server unix-socket oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting</li> </ul>

- Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**socket-path** *string***Description**

Path to the unix socket used by gRIBI

**Context**[system gribi-server unix-socket socket-path](#) *string***Tree**[socket-path](#)**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**tls-profile** *reference***Description**

Reference to the TLS profile to use on the gRIBI unix socket server

If none is specified, then TLS is not used.

<b>Context</b>	<a href="#">system gribi-server unix-socket tls-profile</a> <i>reference</i>
<b>Tree</b>	<a href="#">tls-profile</a>
<b>Reference</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **use-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password authentication for every gRIBI RPC request
<b>Context</b>	<a href="#">system gribi-server unix-socket use-authentication</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **information**

<b>Description</b>	Top-level container for system information configuration and state
<b>Context</b>	<a href="#">system information</a>
<b>Tree</b>	<a href="#">information</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **contact** *string*

<b>Description</b>	The system contact This field represents contact information for the person or group that maintains the system. This field is exposed via SNMP at the sysContact OID.
<b>Context</b>	<a href="#">system information contact</a> <i>string</i>
<b>Tree</b>	<a href="#">contact</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**current-datetime *string***

<b>Description</b>	The current system date and time
<b>Context</b>	<a href="#">system information current-datetime <i>string</i></a>
<b>Tree</b>	<a href="#">current-datetime</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**description *string***

<b>Description</b>	The system description  This field is system generated, and is a combination of the system host name, software version, kernel version, and build date. The template for this field is: SRLinux-<version> <hostname> <kernel> <build date>. This field is exposed via SNMP at the sysDescr OID.
<b>Context</b>	<a href="#">system information description <i>string</i></a>
<b>Tree</b>	<a href="#">description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted *string***

<b>Description</b>	The date and time the system was last booted
<b>Context</b>	<a href="#">system information last-booted <i>string</i></a>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**location *string***

<b>Description</b>	The system location  This field represents the location of the system, and is commonly used by inventory management systems to group elements together. This field is exposed via SNMP at the sysLocation OID.
<b>Context</b>	<a href="#">system information location <i>string</i></a>
<b>Tree</b>	<a href="#">location</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**version string**

<b>Description</b>	The system version This field represents the version of the management server
<b>Context</b>	<a href="#">system information version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**json-rpc-server**

<b>Description</b>	Configures the JSON RPC access API
<b>Context</b>	<a href="#">system json-rpc-server</a>
<b>Tree</b>	<a href="#">json-rpc-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state keyword**

<b>Description</b>	Globally enable or disable the JSON RPC server Disabling this will disable all JSON RPC servers.
<b>Context</b>	<a href="#">system json-rpc-server admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**commit-confirmed-timeout number**

<b>Description</b>	Number of seconds to wait for confirmation. A value of 0 means commit confirmed is not used
--------------------	---

<b>Context</b>	<a href="#">system json-rpc-server commit-confirmed-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">commit-confirmed-timeout</a>
<b>Range</b>	0 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **network-instance** [name](#) *reference*

<b>Description</b>	List of network instances to run the JSON RPC server in
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **name** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **http**

<b>Description</b>	Top-level container for the JSON RPC HTTP server
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http</a>
<b>Tree</b>	<a href="#">http</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the HTTP JSON RPC server This requires the JSON RPC server to be globally enabled
--------------------	--

---

<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the JSON RPC server is operationally available
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded</li> </ul>

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

### **port number**

**Description**

The port the HTTP JSON RPC server will listen on for incoming connections

**Context**

[system json-rpc-server network-instance name reference http port number](#)

**Tree**

[port](#)

**Range**

0 to 65535

**Default**

80

**Configurable**

True

**Platforms**

Supported on all platforms

### **session-limit number**

**Description**

The number of concurrent requests the server will allow. If a request comes in while this limit is reached, the request will block until another request is finished.

**Context**

[system json-rpc-server network-instance name reference http session-limit number](#)

**Tree**

[session-limit](#)

**Range**

1 to 100

**Default**

10

**Configurable**

True

**Platforms**

Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses the JSON RPC server will listen on within the network instance
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**use-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password authentication for every JSON RPC request
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http use-authentication</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**https**

<b>Description</b>	Top-level container for the JSON-RPC HTTPS server
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">https</a>
<b>Tree</b>	<a href="#">https</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the HTTPS JSON RPC server This requires the JSON RPC server to be globally enabled
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">https admin-state</a> <i>keyword</i>

## lACP

<b>Description</b>	Container for LACP.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lACP</a>
<b>Tree</b>	<a href="#">lACP</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## in-trap-to-cpu-packets *number*

<b>Description</b>	System level incoming Link Aggregation Control Protocol frames copied to CPU.  Cumulative of all Ethernet interfaces including all the copy-to-cpu LACP frames. LACP frames are identified by a destination MAC value of 01:80:c2:00:00:02, EtherType value of 0x8809 and slow protocol subtype 0x1.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lACP in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## in-tunneled-packets *number*

<b>Description</b>	System level incoming Link Aggregation Control Protocol tunneled frames.  Cumulative of all Ethernet interfaces including all the tunneled LACP frames. LACP frames are identified by a destination MAC value of 01:80:c2:00:00:02, EtherType value of 0x8809 and slow protocol subtype 0x1.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lACP in-tunneled-packets</a> <i>number</i>

<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**last-clear string**

<b>Description</b>	Timestamp of the last time the LACP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lacp last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**last-clear string**

<b>Description</b>	Timestamp of the last time the L2CP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**lldp**

<b>Description</b>	Container for LLDP.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp</a>
<b>Tree</b>	<a href="#">lldp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming Link Layer Discovery Protocol frames copied to CPU. Cumulative of all Ethernet interfaces including all the copy-to-cpu LLDP frames. LLDP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and EtherType value of 0x88cc.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**in-tunneled-packets** *number*

<b>Description</b>	System level incoming Link Layer Discovery Protocol tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled LLDP frames. LLDP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and EtherType value of 0x88cc.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp in-tunneled-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the LACP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**ptp**

<b>Description</b>	Container for Precision Time Protocol Peer-Delay protocol.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming Precision Time Protocol Peer-Delay frames copied to CPU.  Cumulative of all Ethernet interfaces including all the copy-to-cpu PTP frames. PTP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and Ethertype value of 0x88F7.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp in-trap-to-cpu-packets number</a>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**in-tunneled-packets** *number*

<b>Description</b>	System level incoming Precision Time Protocol Peer-Delay tunneled frames.  Cumulative of all Ethernet interfaces including all the tunneled PTP frames. PTP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and Ethertype value of 0x88F7.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp in-tunneled-packets number</a>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the PTP counters were cleared.
--------------------	---

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **total-in-discarded-packets** *number*

<b>Description</b>	System level incoming L2CP discarded frames. Cumulative of all Ethernet interfaces including all the discarded L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **total-in-packets** *number*

<b>Description</b>	System level total incoming L2CP frames. Cumulative of all Ethernet interfaces including the tunneled, discarded and copy-to-cpu L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **total-in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming L2CP copy-to-cpu frames.
--------------------	--

Cumulative of all Ethernet interfaces including all the L2CP frames that are copied to CPU. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **total-in-tunneled-packets** *number*

**Description** System level incoming L2CP tunneled frames.  
Cumulative of all Ethernet interfaces including all the tunneled L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-tunneled-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **xstp**

**Description** Container for Spanning Tree Protocols.

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp</a>
<b>Tree</b>	<a href="#">xstp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **in-trap-to-cpu-packets** *number*

**Description** System level incoming Spanning Tree Protocol frames copied to CPU.  
Cumulative of all Ethernet interfaces including all the copy-to-cpu Spanning Tree frames. Spanning Tree frames are identified by a destination MAC value of 01:80:c2:00:00:00 and LLC value 0x42.

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp in-trap-to-cpu-packets number</a>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **in-tunneled-packets** *number*

<b>Description</b>	System level incoming Spanning Tree tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled Spanning Tree frames. xSTP frames are identified by a destination MAC value of 01:80:c2:00:00:00 and LLC value 0x42.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp in-tunneled-packets number</a>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the xSTP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **lACP**

<b>Description</b>	Enter the lACP context
<b>Context</b>	<a href="#">system lACP</a>
<b>Tree</b>	<a href="#">lACP</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **system-id** *string*

**Description** The MAC address portion of the node's System ID. This is combined with the system priority to construct the 8-octet system-id

**Context** [system lacp system-id string](#)

**Tree** [system-id](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **system-priority** *number*

**Description** System priority used by the node on this LAG interface. Lower value is higher priority for determining which node is the controlling system.

**Context** [system lacp system-priority number](#)

**Tree** [system-priority](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **lldp**

**Description** Top-level container for LLDP configuration and state data

**Context** [system lldp](#)

**Tree** [lldp](#)

**Configurable** True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Enable or disable LLDP at the system level

**Context** [system lldp admin-state keyword](#)

<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis-id *string*

<b>Description</b>	The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent
<b>Context</b>	<a href="#">system lldp chassis-id string</a>
<b>Tree</b>	<a href="#">chassis-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### chassis-id-type *keyword*

<b>Description</b>	<p>The source for the chassis identifier string</p> <p>It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.</p>
<b>Context</b>	<a href="#">system lldp chassis-id-type keyword</a>
<b>Tree</b>	<a href="#">chassis-id-type</a>
<b>Default</b>	MAC_ADDRESS
<b>Options</b>	<ul style="list-style-type: none"> <li>• CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737</li> <li>• INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> <li>• PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component</li> <li>• MAC_ADDRESS Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001</li> </ul>

- NETWORK\_ADDRESS  
Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value
- INTERFACE\_NAME  
Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863
- LOCAL  
Chassis identifier based on a locally defined value

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### hello-timer *number*

<b>Description</b>	System level hello timer for the LLDP protocol
<b>Context</b>	<a href="#">system lldp hello-timer <i>number</i></a>
<b>Tree</b>	<a href="#">hello-timer</a>
<b>Default</b>	30
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hold-multiplier *number*

<b>Description</b>	System level hold multiplier, used to define neighbor aging  This field defines how many hellos need to be missed before a neighbor is aged out.  This field also is used along with the 'hello-timer' field to define the TTL TLV in outgoing LLDPDUs.
<b>Context</b>	<a href="#">system lldp hold-multiplier <i>number</i></a>
<b>Tree</b>	<a href="#">hold-multiplier</a>
<b>Default</b>	4
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** [name](#) *reference*

<b>Description</b>	List of interfaces on which LLDP can be enabled
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *reference*

<b>Description</b>	Reference to the LLDP Ethernet interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enable or disable LLDP on the interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <b>admin-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor id** *string*

<b>Description</b>	List of LLDP neighbors on this interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <b>neighbor id</b> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id string**

<b>Description</b>	System generated identifier for the remote neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**capability name identityref**

<b>Description</b>	List of LLDP system capabilities advertised by the neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">capability name identityref</a>
<b>Tree</b>	<a href="#">capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name identityref**

<b>Description</b>	Name of the system capability advertised by the neighbor Capabilities are represented in a bitmap that defines the primary functions of the system. The capabilities are defined in IEEE 802.1AB.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">capability name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• OTHER Other capability not specified; bit position 1</li> <li>• REPEATER Repeater capability; bit position 2</li> <li>• MAC_BRIDGE MAC bridge capability; bit position 3</li> <li>• WLAN_ACCESS_POINT WLAN access point capability; bit position 4</li> <li>• ROUTER Router; bit position 5</li> <li>• TELEPHONE Telephone capability; bit position 6</li> <li>• DOCSIS_CABLE_DEVICE DOCSIS cable device; bit position 7</li> </ul>

- STATION\_ONLY  
Station only capability, for devices that implement only an end station capability, and for which none of the other capabilities apply; bit position 8
- C\_VLAN  
C-VLAN component of a VLAN Bridge; bit position 9
- S\_VLAN  
S-VLAN component of a VLAN Bridge; bit position 10
- TWO\_PORT\_MAC\_RELAY  
Two-port MAC Relay (TPMR) capability; bit position 11

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **enabled** *boolean*

<b>Description</b>	Indicates whether the corresponding system capability is enabled on the neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">capability name</a> <i>identityref</i> <b>enabled</b> <i>boolean</i>
<b>Tree</b>	<a href="#">enabled</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **chassis-id** *string*

<b>Description</b>	The chassis ID of the remote neighbor  The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">chassis-id</a> <i>string</i>
<b>Tree</b>	<a href="#">chassis-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **chassis-id-type** *keyword*

<b>Description</b>	The type of identifier used in the chassis-id field  This field identifies the format and source of the chassis identifier string. It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.
--------------------	--

<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">chassis-id-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">chassis-id-type</a>
<b>Default</b>	MAC_ADDRESS
<b>Options</b>	<ul style="list-style-type: none"> <li>• CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737</li> <li>• INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> <li>• PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component</li> <li>• MAC_ADDRESS Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001</li> <li>• NETWORK_ADDRESS Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value</li> <li>• INTERFACE_NAME Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863</li> <li>• LOCAL Chassis identifier based on a locally defined value</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **custom-tlv** [type](#) *number* [oui](#) *string* [oui-subtype](#) *string*

<b>Description</b>	List of custom LLDP TLVs from a neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">custom-tlv type</a> <i>number</i> <a href="#">oui</a> <i>string</i> <a href="#">oui-subtype</a> <i>string</i>
<b>Tree</b>	<a href="#">custom-tlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *number*

<b>Description</b>	The integer value identifying the type of information contained in the value field.
<b>Context</b>	<a href="#">system lldp interface name</a> <a href="#">reference</a> <a href="#">neighbor id</a> <a href="#">string</a> <a href="#">custom-tlv type</a> <a href="#">number</a> <a href="#">oui</a> <a href="#">string</a> <a href="#">oui-subtype</a> <a href="#">string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oui** *string*

<b>Description</b>	The organizationally unique identifier field from the custom TLV This field shall contain the organization's OUI as defined in Clause 9 of IEEE Std 802. The high-order octet is 0 and the low-order 3 octets are the SMI Network Management Private Enterprise Code of the Vendor in network byte order, as defined in the 'Assigned Numbers' RFC [RFC3232].
<b>Context</b>	<a href="#">system lldp interface name</a> <a href="#">reference</a> <a href="#">neighbor id</a> <a href="#">string</a> <a href="#">custom-tlv type</a> <a href="#">number</a> <a href="#">oui</a> <a href="#">string</a> <a href="#">oui-subtype</a> <a href="#">string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oui-subtype** *string*

<b>Description</b>	The subtype value defined by the OUI for this custom TLV The organizationally defined subtype field shall contain a unique subtype value assigned by the defining organization.
<b>Context</b>	<a href="#">system lldp interface name</a> <a href="#">reference</a> <a href="#">neighbor id</a> <a href="#">string</a> <a href="#">custom-tlv type</a> <a href="#">number</a> <a href="#">oui</a> <a href="#">string</a> <a href="#">oui-subtype</a> <a href="#">string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**value** *binary*

<b>Description</b>	A variable-length octet-string containing the value for this TLV
<b>Context</b>	<a href="#">system lldp interface name</a> <a href="#">reference</a> <a href="#">neighbor id</a> <a href="#">string</a> <a href="#">custom-tlv type</a> <a href="#">number</a> <a href="#">oui</a> <a href="#">string</a> <a href="#">oui-subtype</a> <a href="#">string</a> <a href="#">value</a> <a href="#">binary</a>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **first-message** *string*

**Description** Date and time of the first message from neighbor

**Context** [system lldp interface name](#) *reference* [neighbor id](#) *string* [first-message](#) *string*

**Tree** [first-message](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **last-update** *string*

**Description** Date and time of the last update from neighbor

**Context** [system lldp interface name](#) *reference* [neighbor id](#) *string* [last-update](#) *string*

**Tree** [last-update](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **management-address** [address](#) *string*

**Description** List of management addresses received from the remote LLDP neighbor

**Context** [system lldp interface name](#) *reference* [neighbor id](#) *string* [management-address](#) [address](#) *string*

**Tree** [management-address](#)

**Configurable** False

**Platforms** Supported on all platforms

### **address** *string*

**Description** The management address received from the remote LLDP neighbor  
The Management Address is a mandatory TLV which identifies a network address associated with the LLDP agent, which can be used to reach the agent on the port identified in the Port ID TLV.

**Context** [system lldp interface name](#) *reference* [neighbor id](#) *string* [management-address](#) [address](#) *string*

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	The type of management address referenced in the address field The enumerated value for the network address type identified in this TLV. This enumeration is defined in the 'Assigned Numbers' RFC [RFC3232] and the ianaAddressFamilyNumbers object.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">management-address address</a> <i>string</i> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPv4 Use IPv4 address for management address type</li> <li>• IPv6 Use IPv6 address for management address type</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**port-description** *string*

<b>Description</b>	The description of the port referenced in the port-id field The binary string containing the actual port identifier for the port which this LLDP PDU was transmitted. The source and format of this field is defined by PtopoPortId from RFC2922.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">port-description</a> <i>string</i>
<b>Tree</b>	<a href="#">port-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**port-id** (*string* | *binary*)

<b>Description</b>	The Port ID of the remote neighbor The Port ID is a mandatory TLV which identifies the port component of the endpoint identifier associated with the transmitting LLDP agent. If the specified port is an IEEE 802.3 Repeater port, then this TLV is optional.
--------------------	---

<b>Context</b>	<a href="#">system lldp interface name reference neighbor id string port-id (string   binary)</a>
<b>Tree</b>	<a href="#">port-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port-id-type** *keyword*

<b>Description</b>	<p>The type of identifier used in the port-id field</p> <p>This field identifies the format and source of the port identifier string. It is an enumerator defined by the PtopoPortIdType object from RFC2922.</p>
<b>Context</b>	<a href="#">system lldp interface name reference neighbor id string port-id-type keyword</a>
<b>Tree</b>	<a href="#">port-id-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>INTERFACE_ALIAS</b> Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> <li>• <b>PORT_COMPONENT</b> Port identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port component</li> <li>• <b>MAC_ADDRESS</b> Port identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order) associated with a port</li> <li>• <b>NETWORK_ADDRESS</b> Port identifier based on a network address, associated with a particular port</li> <li>• <b>INTERFACE_NAME</b> Port identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863</li> <li>• <b>AGENT_CIRCUIT_ID</b> Port identifier based on the circuit id in the DHCP relay agent information option as defined in IETF RFC 3046</li> <li>• <b>LOCAL</b> Port identifier based on a locally defined alphanumeric string</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-description string**

<b>Description</b>	The system description of the remote neighbor  The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software. If implementations support IETF RFC 3418, the sysDescr object should be used for this field.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">system-description string</a>
<b>Tree</b>	<a href="#">system-description</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-name string**

<b>Description</b>	The administratively assigned name of the remote neighbor  The system name field shall contain an alpha-numeric string that indicates the system's administratively assigned name. The system name should be the system's fully qualified domain name. If implementations support IETF RFC 3418, the sysName object should be used for this field.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">system-name string</a>
<b>Tree</b>	<a href="#">system-name</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state keyword**

<b>Description</b>	Details the operational state of LLDP on the interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty</li> </ul>

- Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	LLDP counters on each interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**frame-discard** *number*

<b>Description</b>	The number of LLDP frames received and discarded
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics frame-discard</a> <i>number</i>
<b>Tree</b>	<a href="#">frame-discard</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**frame-error-in** *number*

<b>Description</b>	The number of LLDP frames received with errors
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics frame-error-in</a> <i>number</i>
<b>Tree</b>	<a href="#">frame-error-in</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**frame-error-out** *number*

<b>Description</b>	The number of frame transmit errors on the interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics frame-error-out</a> <i>number</i>
<b>Tree</b>	<a href="#">frame-error-out</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**frame-in** *number*

<b>Description</b>	The number of LLDP frames received
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics frame-in</a> <i>number</i>
<b>Tree</b>	<a href="#">frame-in</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**frame-out *number***

<b>Description</b>	The number of LLDP frames transmitted
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics frame-out number</a>
<b>Tree</b>	<a href="#">frame-out</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear *string***

<b>Description</b>	Indicates the last time the counters were cleared
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tlv-discard *number***

<b>Description</b>	The number of TLV frames received and discarded
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics tlv-discard number</a>
<b>Tree</b>	<a href="#">tlv-discard</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tlv-unknown *number***

<b>Description</b>	The number of frames received with unknown TLV
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">statistics tlv-unknown number</a>
<b>Tree</b>	<a href="#">tlv-unknown</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**management-address subinterface string**

<b>Description</b>	List of subinterfaces to source management addresses from This list is sent in the management address TLV by LLDP.
<b>Context</b>	<a href="#">system lldp management-address subinterface string</a>
<b>Tree</b>	<a href="#">management-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subinterface string**

<b>Description</b>	Reference to the subinterface to source management addresses
<b>Context</b>	<a href="#">system lldp management-address subinterface string</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type keyword**

<b>Description</b>	Types of addresses sent in the management address TLV The enumerated value for the network address type identified in this TLV. This enumeration is defined in the 'Assigned Numbers' RFC [RFC3232] and the ianaAddressFamilyNumbers object.
<b>Context</b>	<a href="#">system lldp management-address subinterface string type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPv4 Use IPv4 address for management address type</li> <li>• IPv6 Use IPv6 address for management address type</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Global LLDP counters
<b>Context</b>	<a href="#">system lldp statistics</a>

<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**entries-aged-out** *number*

<b>Description</b>	The number of entries aged out due to timeout.
<b>Context</b>	<a href="#">system lldp statistics entries-aged-out</a> <i>number</i>
<b>Tree</b>	<a href="#">entries-aged-out</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

<b>Description</b>	The number of LLDP frames transmitted
<b>Context</b>	<a href="#">system lldp statistics frame-out number</a>
<b>Tree</b>	<a href="#">frame-out</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Indicates the last time the counters were cleared
<b>Context</b>	<a href="#">system lldp statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tlv-accepted** *number*

<b>Description</b>	The number of valid TLVs received.
<b>Context</b>	<a href="#">system lldp statistics tlv-accepted number</a>
<b>Tree</b>	<a href="#">tlv-accepted</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tlv-discard** *number*

<b>Description</b>	The number of TLV frames received and discarded
<b>Context</b>	<a href="#">system lldp statistics tlv-discard number</a>
<b>Tree</b>	<a href="#">tlv-discard</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tlv-unknown** *number*

<b>Description</b>	The number of frames received with unknown TLV
<b>Context</b>	<a href="#">system lldp statistics tlv-unknown</a> <i>number</i>
<b>Tree</b>	<a href="#">tlv-unknown</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-description** *string*

<b>Description</b>	Field detailing system description, including name and versions  The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software.
<b>Context</b>	<a href="#">system lldp system-description</a> <i>string</i>
<b>Tree</b>	<a href="#">system-description</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-name** *string*

<b>Description</b>	The systems administratively assigned name  The system name field shall contain an alpha-numeric string that indicates the system's administratively assigned name. The system name should be the system's fully qualified domain name.
<b>Context</b>	<a href="#">system lldp system-name</a> <i>string</i>
<b>Tree</b>	<a href="#">system-name</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options** *keyword*

<b>Description</b>	LLDP trace options
<b>Context</b>	<a href="#">system lldp trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• received</li> <li>• transmitted</li> <li>• common</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**load-balancing**

<b>Description</b>	Adjust system-wide ECMP load balancing options.
<b>Context</b>	<a href="#">system load-balancing</a>
<b>Tree</b>	<a href="#">load-balancing</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hash-options**

<b>Description</b>	Container for packet header fields and other inputs used in hashing calculations
<b>Context</b>	<a href="#">system load-balancing hash-options</a>
<b>Tree</b>	<a href="#">hash-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**destination-address** *boolean*

<b>Description</b>	Include the destination IP address in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options destination-address</a> <i>boolean</i>
<b>Tree</b>	<a href="#">destination-address</a>
<b>Default</b>	true
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **destination-port** *boolean*

**Description** Include the destination TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload

**Context** [system load-balancing hash-options destination-port](#) *boolean*

**Tree** [destination-port](#)

**Default** true

**Configurable** True

**Platforms** Supported on all platforms

### **hash-seed** *number*

**Description** A configured hash seed to override the default value of 0  
Different routers can be configured with different hash-seed values to minimize traffic polarization effects. This hash-seed is used by all hash-related CRC calculations including those that take IP header fields, those that take Ethernet header fields and those that take MPLS labels.

**Context** [system load-balancing hash-options hash-seed](#) *number*

**Tree** [hash-seed](#)

**Default** 0

**Configurable** True

**Platforms** Supported on all platforms

### **ipv6-flow-label** *boolean*

**Description** Include the IPv6 flow label in the hash calculation if the packet is an IPv6 packet  
It is expected that the IPv6 flow label value is written by the server or other host originating the flow and not changed by any intermediate switch or router.

**Context** [system load-balancing hash-options ipv6-flow-label](#) *boolean*

**Tree** [ipv6-flow-label](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

**mpls-label-stack** *boolean*

<b>Description</b>	Include the received labels (terminated and non-terminated) in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options mpls-label-stack</a> <i>boolean</i>
<b>Tree</b>	<a href="#">mpls-label-stack</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**protocol** *boolean*

<b>Description</b>	Include the IP protocol number in the hash calculation. For an IPv6 packet this is protocol value in the next-header field of the last extension header.
<b>Context</b>	<a href="#">system load-balancing hash-options protocol</a> <i>boolean</i>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** *boolean*

<b>Description</b>	Include the source IP address in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options source-address</a> <i>boolean</i>
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-port** *boolean*

<b>Description</b>	Include the source TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
<b>Context</b>	<a href="#">system load-balancing hash-options source-port</a> <i>boolean</i>
<b>Tree</b>	<a href="#">source-port</a>
<b>Default</b>	true

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**vlan** *boolean*

<b>Description</b>	Include the received VLAN ID in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options vlan</a> <i>boolean</i>
<b>Tree</b>	<a href="#">vlan</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**logging**

<b>Description</b>	System logging provides the interface to syslog services to setup output entities on a selection of log sources.
<b>Context</b>	<a href="#">system logging</a>
<b>Tree</b>	<a href="#">logging</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**buffer** [buffer-name](#) *string*

<b>Description</b>	Log files maintained in memory, non-persistent across system reboots These files are stored at directory <code>/var/log/srlinux/buffer</code> . Rotation into multiple files is available.
<b>Context</b>	<a href="#">system logging buffer</a> <a href="#">buffer-name</a> <i>string</i>
<b>Tree</b>	<a href="#">buffer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**buffer-name** *string*

<b>Description</b>	Base name of the file(s) to be stored in memory
<b>Context</b>	<a href="#">system logging buffer</a> <a href="#">buffer-name</a> <i>string</i>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### facility *facility-name* *keyword*

<b>Description</b>	List of facilities to source messages from
<b>Context</b>	<a href="#">system logging buffer</a> <i>buffer-name</i> <i>string</i> <a href="#">facility</a> <i>facility-name</i> <i>keyword</i>
<b>Tree</b>	<a href="#">facility</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### facility-name *keyword*

<b>Description</b>	Name of a Linux syslog facility
<b>Context</b>	<a href="#">system logging buffer</a> <i>buffer-name</i> <i>string</i> <a href="#">facility</a> <i>facility-name</i> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auth</li> <li>• authpriv</li> <li>• cron</li> <li>• daemon</li> <li>• ftp</li> <li>• kern</li> <li>• lpr</li> <li>• mail</li> <li>• news</li> <li>• syslog</li> <li>• user</li> <li>• uucp</li> <li>• local0</li> <li>• local1</li> <li>• local2</li> <li>• local3</li> <li>• local4</li> <li>• local5</li> <li>• local6</li> <li>• local7</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## priority

**Description** Narrows the capture to a given severity, a range or a specific set of severities

**Context** [system logging buffer buffer-name string facility facility-name keyword priority](#)

**Tree** [priority](#)

**Configurable** True

**Platforms** Supported on all platforms

## match-above *keyword*

**Description** At a given severity and above

**Context** [system logging buffer buffer-name string facility facility-name keyword priority match-above keyword](#)

**Tree** [match-above](#)

**Options**

- emergency
- alert
- critical
- error
- warning
- notice
- informational
- debug

**Configurable** True

**Platforms** Supported on all platforms

## match-exact *keyword*

**Description** Individually specified severities

**Context** [system logging buffer buffer-name string facility facility-name keyword priority match-exact keyword](#)

**Tree** [match-exact](#)

**Options**

- emergency
- alert
- critical

- error
- warning
- notice
- informational
- debug

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **filter** *reference*

<b>Description</b>	A set of all-matching criteria that messages must fulfill in order to be captured
<b>Context</b>	<a href="#">system logging buffer buffer-name string filter reference</a>
<b>Tree</b>	<a href="#">filter</a>
<b>Reference</b>	<a href="#">system logging filter filter-name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **format** *string*

<b>Description</b>	Text format of the output syslog messages, in legacy syslog \$template style
<b>Context</b>	<a href="#">system logging buffer buffer-name string format string</a>
<b>Tree</b>	<a href="#">format</a>
<b>Default</b>	%TIMEGENERATED:::date-rfc3339% %HOSTNAME% %SYSLOGTAG% %MSG:::sp-if-no-1st-sp%%MSG:::drop-last-lf%\n
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **persist** *number*

<b>Description</b>	Time in seconds to shadow the buffer to persistent storage  Setting this field to 0 results in the buffer not being persisted. A value other than 0 will result in the log being persisted to disk based on the configured value. Logs with a non-zero persist value are persisted automatically on rollover, or at the configured value.
<b>Context</b>	<a href="#">system logging buffer buffer-name string persist number</a>
<b>Tree</b>	<a href="#">persist</a>

<b>Range</b>	0   60 to 604800
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rotate number**

<b>Description</b>	Number of files to keep in rotation when a maximum file size is reached
<b>Context</b>	<a href="#">system logging buffer buffer-name string rotate number</a>
<b>Tree</b>	<a href="#">rotate</a>
<b>Default</b>	4
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rotations number**

<b>Description</b>	Number of file rotations occurred
<b>Context</b>	<a href="#">system logging buffer buffer-name string rotations number</a>
<b>Tree</b>	<a href="#">rotations</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**size string**

<b>Description</b>	Number of bytes an individual output file cannot exceed The field allows the 'K, M, or G' suffixes as shorthand. When reaching that size, a rotation happens and subsequent data is stored in a new file with the same base name.
<b>Context</b>	<a href="#">system logging buffer buffer-name string size string</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## match-exact *keyword*

<b>Description</b>	Individually specified severities
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a>   <a href="#">domain-name</a> ) <a href="#">facility facility-name</a> <a href="#">keyword</a> <a href="#">priority</a> <a href="#">match-exact</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">match-exact</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
----------------	--

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**filter** *reference*

<b>Description</b>	A set of all-matching criteria that messages must fulfill in order to be captured
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">filter reference</a>
<b>Tree</b>	<a href="#">filter</a>
<b>Reference</b>	<a href="#">system logging filter filter-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remote-port** *number*

<b>Description</b>	Transport port for syslog to use for messages sent to a remote server
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">remote-port number</a>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Default</b>	514
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Source address for syslog to use for messages sent to a remote server If no source address is provided, then packets will be sent to the remote server using the source address indicated by the routing table.
--------------------	--

<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **subsystem** [subsystem-name](#) *keyword*

<b>Description</b>	Entity or entities that may produce messages to be captured
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">subsystem subsystem-name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">subsystem</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **subsystem-name** *keyword*

<b>Description</b>	Reference to an available subsystem to source messages from
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">subsystem subsystem-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aaa</li> <li>• accounting</li> <li>• acl</li> <li>• app</li> <li>• arpd</li> <li>• bfd</li> <li>• bgp</li> <li>• bridgetable</li> <li>• chassis</li> <li>• debug</li> <li>• dhcp</li> <li>• ethcfm</li> <li>• evpn</li> <li>• fib</li> <li>• gnmi</li> <li>• gribi</li> <li>• igmp</li> </ul>

**Configurable**

True

**Platforms**

Supported on all platforms

## priority

**Description**

Narrows the capture to a given severity, a range or a specific set of severities

**Context**

[system logging remote-server host \(ipv4-address | ipv6-address | domain-name\) subsystem subsystem-name keyword priority](#)

<b>Tree</b>	<a href="#">priority</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match-above** *keyword*

<b>Description</b>	At a given severity and above
<b>Context</b>	<a href="#">system logging remote-server host (ipv4-address   ipv6-address   domain-name) subsystem subsystem-name keyword priority match-above keyword</a>
<b>Tree</b>	<a href="#">match-above</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match-exact** *keyword*

<b>Description</b>	Individually specified severities
<b>Context</b>	<a href="#">system logging remote-server host (ipv4-address   ipv6-address   domain-name) subsystem subsystem-name keyword priority match-exact keyword</a>
<b>Tree</b>	<a href="#">match-exact</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True

---

**Platforms** Supported on all platforms

### **transport** *keyword*

**Description** Transport protocol for syslog to use for messages sent to a remote server

**Context** [system logging remote-server host](#) (*ipv4-address* | *ipv6-address* | *domain-name*) **transport** *keyword*

**Tree** [transport](#)

**Default** udp

**Options**

- udp

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **maintenance**

<b>Description</b>	Top-level container for Maintenance Mode configuration
<b>Context</b>	<a href="#">system maintenance</a>
<b>Tree</b>	<a href="#">maintenance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **group name *string***

<b>Description</b>	List of user-configured maintenance groups
<b>Context</b>	<a href="#">system maintenance group name <i>string</i></a>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **name *string***

<b>Description</b>	Name of the maintenance group.
<b>Context</b>	<a href="#">system maintenance group name <i>string</i></a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **maintenance-mode**

<b>Description</b>	Container with options for activating and deactivating maintenance mode for this group
<b>Context</b>	<a href="#">system maintenance group name <i>string</i> maintenance-mode</a>

<b>Tree</b>	<a href="#">maintenance-mode</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### admin-state *keyword*

<b>Description</b>	<p>Enable or disable maintenance mode for this group</p> <p>The enable setting is blocked if there is another maintenance group with at least one BGP session in its scope that overlaps with this maintenance group and that other maintenance group is currently in maintenance mode.</p> <p>While a maintenance group is in maintenance mode it is not possible to modify the BGP configuration of its members.</p>
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">maintenance-mode admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### maintenance-profile *reference*

<b>Description</b>	Leaf reference to <code>/system/maintenance/profile/name</code>
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">maintenance-profile</a> <i>reference</i>
<b>Tree</b>	<a href="#">maintenance-profile</a>
<b>Reference</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### members

<b>Description</b>	Container for specifying the members of the maintenance group - i.e. the components that will eventually be taken out of service for repair or replacement.
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a>
<b>Tree</b>	<a href="#">members</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp**

<b>Description</b>	Container for specifying the BGP members of the maintenance group
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** [name](#) *reference*

<b>Description</b>	List of network instances with one or more peers to be placed in maintenance mode
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a> <a href="#">bgp</a> <a href="#">network-instance name</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *reference*

<b>Description</b>	A unique name identifying the network instance
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a> <a href="#">bgp</a> <a href="#">network-instance name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** *reference*

<b>Description</b>	List of BGP neighbors that belong to the network instance and that should be part of the maintenance group It is not necessary to list neighbors that are members of peer-groups that are already listed.
--------------------	--

If this list is empty and so is the group list, then the system interprets the meaning as ALL static and dynamic sessions belonging to the specified network-instance.

<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members bgp network-instance name</a> <i>reference</i> <a href="#">neighbor</a> <i>reference</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address   ipv6-address-with-zone</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **peer-group** *reference*

<b>Description</b>	List of BGP peer groups that belong to the network instance and that should be part of the maintenance group  If this list is empty and so is the neighbor list, then the system interprets the meaning as ALL static and dynamic sessions belonging to the specified network-instance.
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members bgp network-instance name</a> <i>reference</i> <a href="#">peer-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">peer-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **isis**

<b>Description</b>	Container for specifying the ISIS members of the maintenance group
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members isis</a>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **network-instances** *reference*

<b>Description</b>	List of network instances that should be part of the maintenance group.
--------------------	---

<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members isis network-instances reference</a>
<b>Tree</b>	<a href="#">network-instances</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**profile name** *string*

<b>Description</b>	Enter the profile list instance
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the maintenance profile
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp**

<b>Description</b>	Container for BGP policies used to achieve traffic draining
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-policy** *reference*

<b>Description</b>	A reference to the pre-configured routing policy to apply as an additional/final export policy on BGP sessions in the maintenance group
--------------------	---

<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp export-policy reference</a>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **import-policy reference**

<b>Description</b>	A reference to the pre-configured routing policy to apply as an additional/final import policy on BGP sessions in the maintenance group
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp import-policy reference</a>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **isis**

<b>Description</b>	Container for ISIS configurations.
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">isis</a>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **overload**

<b>Description</b>	Container for ISIS overload configurations.
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">isis overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**max-metric** *boolean*

<b>Description</b>	When set to true transit links are advertised with a wide metric of 0xfffffe and a narrow metric of 0x3f
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">isis overload max-metric</a> <i>boolean</i>
<b>Tree</b>	<a href="#">max-metric</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**set-bit** *boolean*

<b>Description</b>	When set to true, the Overload bit is set
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">isis overload set-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">set-bit</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**management**

<b>Description</b>	Enclosing container for options relating to management server
<b>Context</b>	<a href="#">system management</a>
<b>Tree</b>	<a href="#">management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**openconfig**

<b>Description</b>	Top-level container for options relating to OpenConfig
<b>Context</b>	<a href="#">system management openconfig</a>
<b>Tree</b>	<a href="#">openconfig</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**admin-state** *keyword*

<b>Description</b>	Enable or disable the OpenConfig management server This will disable OpenConfig throughout the system, and bring any gRPC servers that use it operationally down.
<b>Context</b>	<a href="#">system management openconfig admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**oper-state** *keyword*

<b>Description</b>	Indicates the operational state of the OpenConfig management server
<b>Context</b>	<a href="#">system management openconfig oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power</li> </ul>

Component is offline due to insufficient system power

- degraded

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## mirroring

**Description**

Top level container for configuration and operational state for mirroring

**Context**

[system mirroring](#)

**Tree**

[mirroring](#)

**Configurable**

True

**Platforms**

7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## mirroring-instance *name string*

**Description**

Mirroring instances configured on the local system

**Context**

[system mirroring mirroring-instance \*name string\*](#)

**Tree**

[mirroring-instance](#)

**Configurable**

True

**Platforms**

7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**Max. Elements**

8

**name** *string*

<b>Description</b>	A unique name identifying the mirroring instance
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	This leaf contains the configured, desired state of the mirroring instance.
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**description** *string*

<b>Description</b>	A user-entered description of this mirroring instance.
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mirror-destination**

<b>Description</b>	Configure mirror destination
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a>
<b>Tree</b>	<a href="#">mirror-destination</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### local *string*

**Description** Subinterface of type local-mirror-dest used as local mirror destination

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination local](#) *string*

**Tree** [local](#)

**String Length** 5 to 25

**Configurable** True

**Platforms** Supported on all platforms except 7250

### remote

**Description** Enable the remote context

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination remote](#)

**Tree** [remote](#)

**Configurable** True

**Platforms** 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### encap *keyword*

**Description** Enter the encap context

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination remote](#) [encap](#) *keyword*

**Tree** [encap](#)

**Options**

- l2ogre

**Configurable** True

**Platforms** 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### network-instance *reference*

**Description** network instance to initiate remote mirror tunnel

<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## tunnel-end-points

<b>Description</b>	Enter the tunnel-end-points context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points</a>

**dst-ipv6** *string*

<b>Description</b>	Remote mirror tunnel destination endpoint IPv6 address
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points dst-ipv6</a> <i>string</i>
<b>Tree</b>	<a href="#">dst-ipv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of the remote mirror tunnel
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading</li> </ul>

Component is currently being upgraded

- low-power

Component is offline due to insufficient system power

- degraded

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## mpls

**Description**

Container for system wide MPLS label management

**Context**[system mpls](#)**Tree**[mpls](#)**Configurable**

True

**Platforms**

7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**label-ranges**

<b>Description</b>	Container for managing MPLS label blocks
<b>Context</b>	<a href="#">system mpls label-ranges</a>
<b>Tree</b>	<a href="#">label-ranges</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**dynamic name *string***

<b>Description</b>	List of dynamic label blocks  When a client application binds its operation to a dynamic label block that client application is expected to just ask for the next available label within the dynamic label block.  At this time a dynamic label block cannot be shared by multiple different clients/protocols. Each protocol needing dynamic labels must have its own label block.
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name <i>string</i></a>
<b>Tree</b>	<a href="#">dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**name *string***

<b>Description</b>	The name of the dynamic label block
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name <i>string</i></a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**allocated-labels *number***

<b>Description</b>	The number of labels that are currently used in this block
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name <i>string</i> allocated-labels <i>number</i></a>
<b>Tree</b>	<a href="#">allocated-labels</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**end-label** *number*

<b>Description</b>	The ending label value of the label block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i> <b>end-label</b> <i>number</i>
<b>Tree</b>	<a href="#">end-label</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**free-labels** *number*

<b>Description</b>	The number of labels that are currently available and free in this block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i> <b>free-labels</b> <i>number</i>
<b>Tree</b>	<a href="#">free-labels</a>

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **index number**

**Description** Index number used to enumerate the clients

**Context** [system mpls label-ranges static name string user index number](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **protocol identityref**

**Description** The protocol associated with the client

**Context** [system mpls label-ranges static name string user index number protocol identityref](#)

**Tree** [protocol](#)

**Options**

- bgp  
The BGP/MP-BGP protocol carrying labels.
- ldp  
The label distribution protocol (LDP).
- sr-isis  
The IS-IS protocol with segment routing extensions
- sr-ospf  
The OSPFv2 protocol with segment routing extensions
- sr-ospfv3  
The OSPFv3 protocol with segment routing extensions
- sr-policy  
A pseudo protocol representing SR policies
- static-mpls  
A pseudo protocol representing static MPLS routes
- evpn  
The BGP/EVPN protocol carrying labels.

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**services**

<b>Description</b>	Container for system wide Services MPLS label management
<b>Context</b>	<a href="#">system mpls services</a>
<b>Tree</b>	<a href="#">services</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**mtu**

<b>Description</b>	Top-level container for configuration and state data related to the system MTU
<b>Context</b>	<a href="#">system mtu</a>
<b>Tree</b>	<a href="#">mtu</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**default-ip-mtu** *number*

<b>Description</b>	System default IP MTU in bytes including the IP header but excluding Ethernet overhead  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum IP MTU of 9398 bytes.
<b>Context</b>	<a href="#">system mtu default-ip-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">default-ip-mtu</a>
<b>Range</b>	1280 to 9486
<b>Default</b>	1500
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**default-l2-mtu** *number*

<b>Description</b>	System default Layer-2 MTU in bytes including ethernet overhead and VLAN tags but excluding 4-bytes FCS  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum L2 MTU of 9412 bytes.
<b>Context</b>	<a href="#">system mtu default-l2-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">default-l2-mtu</a>

<b>Range</b>	1500 to 9500
<b>Default</b>	9232
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **default-mpls-mtu** *number*

<b>Description</b>	System default MPLS MTU in bytes including the size of the transmitted label stack.
<b>Context</b>	<a href="#">system mtu default-mpls-mtu number</a>
<b>Tree</b>	<a href="#">default-mpls-mtu</a>
<b>Range</b>	1284 to 9496
<b>Default</b>	1508
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **default-port-mtu** *number*

<b>Description</b>	System default port MTU in bytes including ethernet overhead but excluding 4-bytes FCS  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum port MTU of 9412 bytes.
<b>Context</b>	<a href="#">system mtu default-port-mtu number</a>
<b>Tree</b>	<a href="#">default-port-mtu</a>
<b>Range</b>	1500 to 9500
<b>Default</b>	9232
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **min-path-mtu** *number*

<b>Description</b>	Sets the minimum path MTU to use when receiving an ICMP fragmentation needed message  This is controlled via the kernel min_pmtu option. In the event an ICMP fragmentation needed message is received by the kernel, the system will drop the session to this MTU to allow packets to traverse the entire path.
--------------------	--

---

<b>Context</b>	<a href="#">system mtu min-path-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">min-path-mtu</a>
<b>Range</b>	552 to 9232
<b>Default</b>	552
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## multicast

<b>Description</b>	System multicast information
<b>Context</b>	<a href="#">system multicast</a>
<b>Tree</b>	<a href="#">multicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## multicast-ids

<b>Description</b>	System multicast id information
<b>Context</b>	<a href="#">system multicast multicast-ids</a>
<b>Tree</b>	<a href="#">multicast-ids</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system multicast multicast-ids statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## current-usage *number*

<b>Description</b>	The total number of multicast ids that are in use on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics current-usage</a> <i>number</i>
<b>Tree</b>	<a href="#">current-usage</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum-ids** *number*

<b>Description</b>	Maximum number of multicast ids available in the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics maximum-ids number</a>
<b>Tree</b>	<a href="#">maximum-ids</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**multicast-id-user-type** *user keyword*

<b>Description</b>	The type of the user of multicast id in the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword</a>
<b>Tree</b>	<a href="#">multicast-id-user-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user** *keyword*

<b>Description</b>	Enter the user context
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-vrf</li> <li>• vxlan-interface</li> <li>• l2-proxy-arp-nd</li> <li>• mfib</li> <li>• mac-vrf-bgp-evpn</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**current-usage** *number*

<b>Description</b>	The total number of multicast ids that are in use on the system.
--------------------	--

<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword current-usage number</a>
<b>Tree</b>	<a href="#">current-usage</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-pending number**

<b>Description</b>	The total number of multicast ids pending allocation on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword total-pending number</a>
<b>Tree</b>	<a href="#">total-pending</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-pending number**

<b>Description</b>	The total number of multicast ids pending allocation on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics total-pending number</a>
<b>Tree</b>	<a href="#">total-pending</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name**

<b>Description</b>	Contains configuration and state related to system naming
<b>Context</b>	<a href="#">system name</a>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**domain-name** *string*

<b>Description</b>	The system domain name
<b>Context</b>	<a href="#">system name domain-name</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**host-name** *string*

<b>Description</b>	The system host name
<b>Context</b>	<a href="#">system name host-name</a> <i>string</i>
<b>Tree</b>	<a href="#">host-name</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance**

<b>Description</b>	Enable the network-instance context
<b>Context</b>	<a href="#">system network-instance</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**protocols**

<b>Description</b>	The routing protocols that are enabled for this network-instance.
<b>Context</b>	<a href="#">system network-instance protocols</a>
<b>Tree</b>	<a href="#">protocols</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp-vpn**

<b>Description</b>	Enable the bgp-vpn context
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn</a>
<b>Tree</b>	<a href="#">bgp-vpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp-instance id number**

<b>Description</b>	List of bgp-vpn instances configured in the system network-instance. Only one instance allowed in the current release.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number</a>
<b>Tree</b>	<a href="#">bgp-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**id number**

<b>Description</b>	The index of the bgp-vpn instance
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number</a>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-down-reason keyword**

<b>Description</b>	Reason for the system bgp-instance being down
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-loopback-address</li> <li>• no-esi</li> <li>• none</li> <li>• network-instance-oper-down</li> <li>• bad-rd-format</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### route-distinguisher

<b>Description</b>	Route Distinguisher (RD) of the bgp-vpn instance.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher</a>
<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### rd (*string* | *string* | *string* | *string*)

<b>Description</b>	Route Distinguisher (RD) of the system bgp-vpn instance. The RD is auto-derived as <ip-address>:0 where 'ip-address' is the ipv4 address associated to the subinterface lo0.1.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher rd (<i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>)</a>
<b>Tree</b>	<a href="#">rd</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### route-distinguisher-origin *keyword*

<b>Description</b>	Origin of the operational Route Distinguisher (RD) of the bgp-vpn instance. 'Auto-derived-from-system-ip:0' refers to the RD for the EVPN Ethernet Segment routes that is automatically allocated with the format <ip-address>:0 where 'ip-address' is the ipv4 address associated to the subinterface lo0.1.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher route-distinguisher-origin <i>keyword</i></a>
<b>Tree</b>	<a href="#">route-distinguisher-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-system-ip:0</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-target**

<b>Description</b>	Route Target (RT) of the system bgp-vpn instance.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target</a>
<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational export Route Target (RT) of the bgp-vpn instance.  'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target export-route-target-origin keyword</a>
<b>Tree</b>	<a href="#">export-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**export-rt** (*string | string | string | string | string | string | string | string | string | string*)

<b>Description</b>	Export Route Target (RT) in the system bgp-vpn instance.  When used for evpn ES routes as ES-import Route Target, the RT is auto-derived from the high-order 6-octet portion of the 9-octet ESI value. Note that the ESI value excludes the left-most byte, which is reserved for the ESI type. The RT is encoded into the ES-import extended community advertised along with the ES route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target export-rt (string   string   string   string   string   string   string   string   string   string)</a>
<b>Tree</b>	<a href="#">export-rt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**import-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational import Route Target (RT) of the bgp-vpn instance. 'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target import-route-target-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">import-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**import-rt** (*string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string*)

<b>Description</b>	Import Route Target (RT) in the system bgp-vpn instance. When used for evpn ES routes as ES-import Route Target, the RT is auto-derived from the high-order 6-octet portion of the 9-octet ESI value. Note that the ESI value excludes the left-most byte, which is reserved for the ESI type. The RT is encoded into the ES-import extended community received along with the ES route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target import-rt</a> ( <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i> )
<b>Tree</b>	<a href="#">import-rt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**evpn**

<b>Description</b>	Enable the evpn context
<b>Context</b>	<a href="#">system network-instance protocols evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**ethernet-segments**

<b>Description</b>	Enable the ethernet-segments context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments</a>
<b>Tree</b>	<a href="#">ethernet-segments</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**bgp-instance id reference**

<b>Description</b>	bgp global instances configured in net-instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference</a>
<b>Tree</b>	<a href="#">bgp-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1

**id reference**

<b>Description</b>	Enter the id context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference</a>
<b>Reference</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**ethernet-segment name string**

<b>Description</b>	Ethernet Segment configuration and state.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string</a>
<b>Tree</b>	<a href="#">ethernet-segment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1024

**name** *string*

<b>Description</b>	A unique name identifying the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string</a>
<b>String Length</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**admin-state** *keyword*

<b>Description</b>	Admin state of the ethernet segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**association**

<b>Description</b>	Enter the association context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association</a>
<b>Tree</b>	<a href="#">association</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**network-instance** *name string*

<b>Description</b>	network instance associated to this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **name** *string*

**Description** Enter the name context

### **add-time** *string*

**Description** The date and time when the designated-forwarder-candidate was added to the designated forwarder candidate list for this evi

**Context** [system](#) [network-instance](#) [protocols](#) [evpn](#) [ethernet-segments](#) [bgp-instance](#) [id](#) [reference](#) [ethernet-segment](#) [name](#) [string](#) [association](#) [network-instance](#) [name](#) [string](#) [bgp-instance](#) [instance](#) [number](#) [computed-designated-forwarder-candidates](#) [designated-forwarder-candidate](#) [address](#) (*ipv4-address* | *ipv6-address*) [add-time](#) *string*

**Tree** [add-time](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**designated-forwarder** *boolean*

<b>Description</b>	Indicates if this designated-forwarder-candidate is the designated-forwarder.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">computed-designated-forwarder-candidates</a> <a href="#">designated-forwarder-candidate</a> <a href="#">address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">designated-forwarder</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">designated-forwarder</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**designated-forwarder-activation-start-time** *string*

<b>Description</b>	Indicates the time at which the designated-forwarder activation timer started.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">designated-forwarder-activation-start-time</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">designated-forwarder-activation-start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**designated-forwarder-activation-time** *number*

<b>Description</b>	Indicates the number of seconds for the activation timer to run, for this node to become the designated forwarder for this bgp instance.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">designated-forwarder-activation-time</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">designated-forwarder-activation-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**designated-forwarder-role-last-change** *string*

<b>Description</b>	Indicates the time at which the designated-forwarder role was changed.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string bgp-instance instance number designated-forwarder-role-last-change string</a>
<b>Tree</b>	<a href="#">designated-forwarder-role-last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**autodiscovery-per-ethernet-segment-routes**

<b>Description</b>	Enter the autodiscovery-per-ethernet-segment-routes context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes</a>
<b>Tree</b>	<a href="#">autodiscovery-per-ethernet-segment-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes attr-id reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name string bgp-rib attr-sets attr-set index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**esi** *string*

<b>Description</b>	The Ethernet Segment Identifier encoded in the NLRI
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes esi string</a>

<b>Tree</b>	<a href="#">esi</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### ethernet-tag-id *number*

<b>Description</b>	The 32-bit Ethernet Tag ID encoded in the NLRI. The Ethernet Tag ID identifies a broadcast domain.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes ethernet-tag-id number</a>
<b>Tree</b>	<a href="#">ethernet-tag-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### neighbor (*ipv4-address* | *ipv6-address*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes neighbor (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### route-distinguisher (*string* | *string* | *string* | *string*)

<b>Description</b>	The route distinguisher encoded in the NLRI.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes route-distinguisher (string   string   string   string)</a>
<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vni number**

<b>Description</b>	The VXLAN Network Identifier
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes vni number</a>
<b>Tree</b>	<a href="#">vni</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**df-election**

<b>Description</b>	Enter the df-election context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election</a>
<b>Tree</b>	<a href="#">df-election</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**algorithm**

<b>Description</b>	Enter the algorithm context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm</a>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**manual-alg**

<b>Description</b>	Enable the manual-alg context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm manual-alg</a>
<b>Tree</b>	<a href="#">manual-alg</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**primary-evi-range** *start-evi number*

<b>Description</b>	evi range for this ethernet-segment
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">manual-alg</a> <a href="#">primary-evi-range</a> <a href="#">start-evi</a> <i>number</i>
<b>Tree</b>	<a href="#">primary-evi-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**start-evi** *number*

<b>Description</b>	start of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">manual-alg</a> <a href="#">primary-evi-range</a> <a href="#">start-evi</a> <i>number</i>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**end-evi** *number*

<b>Description</b>	end of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">manual-alg</a> <a href="#">primary-evi-range</a> <a href="#">start-evi</a> <i>number</i> <a href="#">end-evi</a> <i>number</i>
<b>Tree</b>	<a href="#">end-evi</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-type** *keyword*

<b>Description</b>	Operational Designated Forwarder algorithm type for this ethernet-segment.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">oper-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-type</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• default</li> <li>• preference</li> <li>• manual</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## preference-alg

<b>Description</b>	Enable the preference-alg context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg</a>
<b>Tree</b>	<a href="#">preference-alg</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## capabilities

<b>Description</b>	Enter the capabilities context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg capabilities</a>
<b>Tree</b>	<a href="#">capabilities</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## ac-df keyword

<b>Description</b>	Attachment Circuit influenced DF Election.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg capabilities ac-df keyword</a>
<b>Tree</b>	<a href="#">ac-df</a>
<b>Default</b>	include
<b>Options</b>	<ul style="list-style-type: none"> <li>• include</li> <li>• exclude</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**non-revertive** *boolean*

<b>Description</b>	Non Revertive mode. If set to true, the 'Don't Preempt Me' capability is advertised in the ES route.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">preference-alg</a> <a href="#">capabilities</a> <a href="#">non-revertive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">non-revertive</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-do-not-preempt** *boolean*

<b>Description</b>	Operational do-not-preempt value
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">preference-alg</a> <a href="#">oper-do-not-preempt</a> <i>boolean</i>
<b>Tree</b>	<a href="#">oper-do-not-preempt</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-preference-value** *number*

<b>Description</b>	Operational Preference value
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">preference-alg</a> <a href="#">oper-preference-value</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-preference-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**preference-value** *number*

<b>Description</b>	Preference that is used to elect the designated forwarder
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">df-election</a> <a href="#">algorithm</a> <a href="#">preference-alg</a> <a href="#">preference-value</a> <i>number</i>

<b>Tree</b>	<a href="#">preference-value</a>
<b>Range</b>	0 to 65535
<b>Default</b>	32767
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### type keyword

<b>Description</b>	Designated Forwarder algorithm type for this ethernet-segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	default
<b>Options</b>	<ul style="list-style-type: none"> <li>• default</li> <li>• preference</li> <li>• manual</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### interface-standby-signaling-on-non-df

<b>Description</b>	Enable the interface-standby-signaling-on-non-df context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election interface-standby-signaling-on-non-df</a>
<b>Tree</b>	<a href="#">interface-standby-signaling-on-non-df</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### timers

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### activation-timer *number*

**Description** Remaining activation timer per Ethernet segment

**Context** [system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election timers activation-timer number](#)

**Tree** [activation-timer](#)

**Range** 0 to 100

**Units** seconds

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### esi *string*

**Description** The 10-byte Ethernet Segment Identifier of the ethernet segment.  
ESI-0 or MAX-ESI values are not allowed. ESI values with bytes 1-6 all zeros are not allowed since they would produce a null ESI-import route-target.

**Context** [system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string esi string](#)

**Tree** [esi](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### ethernet-segment-routes

**Description** Enter the ethernet-segment-routes context

**Context** [system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes](#)

**Tree** [ethernet-segment-routes](#)

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### attr-id *reference*

**Description** Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes attr-id reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name string bgp-rib attr-sets attr-set index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**esi string**

<b>Description</b>	The Ethernet Segment Identifier
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes esi string</a>
<b>Tree</b>	<a href="#">esi</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**neighbor (ipv4-address | ipv6-address)**

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes neighbor (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**originating-router (ipv4-address | ipv6-address)**

<b>Description</b>	The IPv4 or IPv6 address of the originating router
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes originating-router (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">originating-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**route-distinguisher** (*string* | *string* | *string* | *string*)

<b>Description</b>	The route distinguisher encoded in the NLRI.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">ethernet-segment-routes</a> <a href="#">route-distinguisher</a> ( <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i> )
<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**interface** [ethernet-interface](#) *reference*

<b>Description</b>	Add a list entry for interface
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">interface</a> <a href="#">ethernet-interface</a> <a href="#">reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1

**ethernet-interface** *reference*

<b>Description</b>	Interface associated with the ethernet segment.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">interface</a> <a href="#">ethernet-interface</a> <a href="#">reference</a>
<b>Reference</b>	<a href="#">interface</a> <a href="#">name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**multi-homing-mode** *keyword*

<b>Description</b>	Multi-homing mode of the ethernet segment.  The state of this leaf can be different than the configured value in cases where the configured value is 'all-active' and the multi-homing mode advertised by the ES peers in the AD per-ES routes is 'single-active'. In this case, the state of this leaf will show 'single-active'.
--------------------	--

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string multi-homing-mode keyword</a>
<b>Tree</b>	<a href="#">multi-homing-mode</a>
<b>Default</b>	all-active
<b>Options</b>	<ul style="list-style-type: none"> <li>• all-active</li> <li>• single-active</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **next-hop** [l3-next-hop](#) ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	Enter the next-hop list instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1

### **l3-next-hop** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	Layer-3 next-hop associated with the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop (ipv4-address   ipv6-address)</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **evi** [start number](#)

<b>Description</b>	evi range for this ethernet-segment association
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop (ipv4-address   ipv6-address) evi start number</a>
<b>Tree</b>	<a href="#">evi</a>
<b>Configurable</b>	True

<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	1

**start number**

<b>Description</b>	start of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop (ipv4-address   ipv6-address) evi start number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-down-reason keyword**

<b>Description</b>	The reason for the ethernet-segment being down in the bgp-instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-disabled</li> <li>• no-nexthop-address</li> <li>• no-originating-address</li> <li>• no-associated-interface</li> <li>• associated-interface-oper-down</li> <li>• no-esi</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-esi string**

<b>Description</b>	The operational Ethernet Segment Identifier used in the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-esi string</a>
<b>Tree</b>	<a href="#">oper-esi</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-multi-homing-mode** *keyword*

<b>Description</b>	Operational Multi-homing mode of the ethernet segment. The state of this leaf can be different than the configured value in cases where the configured value is 'all-active' and the multi-homing mode advertised by the ES peers in the AD per-ES routes is 'single-active'. In this case, the state of this leaf will show 'single-active'.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-multi-homing-mode keyword</a>
<b>Tree</b>	<a href="#">oper-multi-homing-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all-active</li> <li>• single-active</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> </ul>

- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## routes

**Description**

**boot-timer** *number*

<b>Description</b>	Remaining time before running BGP EVPN multi-homing DF election algorithm
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers boot-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">boot-timer</a>
<b>Range</b>	0 to 6000
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**ntp**

<b>Description</b>	Top-level container for NTP configuration and state
<b>Context</b>	<a href="#">system ntp</a>
<b>Tree</b>	<a href="#">ntp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enables the system NTP client and indicates that the system should attempt to synchronize the clock
<b>Context</b>	<a href="#">system ntp admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system ntp network-instance reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details the operational state of the NTP client
<b>Context</b>	<a href="#">system ntp oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• up Component or process is operational</li><li>• down Component or process is not operational</li><li>• empty Component slot is empty</li><li>• downloading Component is downloading image into memory</li><li>• booting Component is booting downloaded image</li><li>• starting Component image operational, application processes starting</li><li>• failed Component or process has failed</li><li>• synchronizing Component is currently being synchronized</li><li>• upgrading Component is currently being upgraded</li><li>• low-power Component is offline due to insufficient system power</li><li>• degraded Component or process is in a degraded state</li><li>• warm-reboot</li></ul>

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of NTP servers to use for system clock synchronization
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address of the NTP server, may be either IPv4 or IPv6
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **iburst** *boolean*

<b>Description</b>	Indicates whether this server should enable burst synchronization or not. <code>iburst</code> , or initial burst, improves the time taken for initial synchronization by sending a burst of eight packets instead of the usual one, these packets are spaced by a two second delay.
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">iburst</a> <i>boolean</i>
<b>Tree</b>	<a href="#">iburst</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**jitter number**

<b>Description</b>	Measurement of the variance in latency on the network
<b>Context</b>	<a href="#">system ntp server address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">jitter number</a>
<b>Tree</b>	<a href="#">jitter</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**offset number**

<b>Description</b>	Estimate of the current time offset from the peer This is the time difference between the local and reference clock.
<b>Context</b>	<a href="#">system ntp server address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">offset number</a>
<b>Tree</b>	<a href="#">offset</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**poll-interval number**

<b>Description</b>	Polling interval of the peer
<b>Context</b>	<a href="#">system ntp server address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">poll-interval number</a>
<b>Tree</b>	<a href="#">poll-interval</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefer boolean**

<b>Description</b>	Indicates whether this server should be preferred or not All other things being equal, this host will be chosen for synchronization among a set of correctly operating NTP servers
<b>Context</b>	<a href="#">system ntp server address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">prefer boolean</a>
<b>Tree</b>	<a href="#">prefer</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**stratum number**

<b>Description</b>	Indicates the level of the server in the NTP hierarchy as number increases, the accuracy is degraded. Primary servers are stratum 1 while a maximum value of 16 indicates unsynchronized. The values have the following meanings: 0 unspecified or invalid 1 primary server (e.g., equipped with a GPS receiver) 2-15 secondary server (via NTP) 16 unsynchronized 17-255 reserved
<b>Context</b>	<a href="#">system ntp server address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">stratum number</a>
<b>Tree</b>	<a href="#">stratum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**synchronized** ([ipv4-address](#) | [ipv6-address](#) | [string](#))

<b>Description</b>	Address of the NTP server that the local client is synchronized to This field is set to 'unsynchronized', if the local client is not synchronized
<b>Context</b>	<a href="#">system ntp synchronized</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a>   <a href="#">string</a> )
<b>Tree</b>	<a href="#">synchronized</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**p4rt-server**

<b>Description</b>	Configures the P4Runtime service
<b>Context</b>	<a href="#">system p4rt-server</a>
<b>Tree</b>	<a href="#">p4rt-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**admin-state** *keyword*

<b>Description</b>	Globally enable or disable the P4Runtime service Disabling this will disable all P4Runtime sockets in all configured network-instances (including unix sockets).
--------------------	---

<b>Context</b>	<a href="#">system p4rt-server admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**client id number**

<b>Description</b>	List of active P4Runtime client sessions
<b>Context</b>	<a href="#">system p4rt-server client id</a> <i>number</i>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**id number**

<b>Description</b>	System generated ID for for the client
<b>Context</b>	<a href="#">system p4rt-server client id</a> <i>number</i>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**election-id string**

<b>Description</b>	Election ID of this client
<b>Context</b>	<a href="#">system p4rt-server client id</a> <i>number election-id</i> <i>string</i>
<b>Tree</b>	<a href="#">election-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**forwarding-complex**

<b>Description</b>	Enter the forwarding-complex context
--------------------	--------------------------------------

<b>Context</b>	<a href="#">system p4rt-server client id number forwarding-complex</a>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**id number**

<b>Description</b>	The P4Runtime ID of the forwarding complex for which this client has established itself  This is the value configured at /platform/linecard/forwarding-complex/p4rt/id, or a system derived default.
<b>Context</b>	<a href="#">system p4rt-server client id number forwarding-complex id number</a>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**location string**

<b>Description</b>	The normalized location for this forwarding-complex  This is the slot number and complex number separated by a '/', 0 indexed. For example '1/0', or '1/1' representing two forwarding complexes on slot 1.
<b>Context</b>	<a href="#">system p4rt-server client id number forwarding-complex location string</a>
<b>Tree</b>	<a href="#">location</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**primary boolean**

<b>Description</b>	Indicates if this client is the primary for the specified forwarding complex  Only a single primary per forwarding complex is supported
<b>Context</b>	<a href="#">system p4rt-server client id number primary boolean</a>
<b>Tree</b>	<a href="#">primary</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**remote-host** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Remote host of the client
<b>Context</b>	<a href="#">system p4rt-server client id number remote-host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">remote-host</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**remote-port** *number*

<b>Description</b>	Remote port of the client
<b>Context</b>	<a href="#">system p4rt-server client id number remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **port number**

**Description** TCP port the P4Runtime server will listen on for incoming connections

**Context** [system p4rt-server network-instance name reference port number](#)

**Tree** [port](#)

**Range** 0 to 65535

**Default** 9559

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **source-address (ipv4-address | ipv6-address)**

**Description** List of IP addresses the P4Runtime server will listen on within the network instance

By default the P4Runtime server will listen on all addresses in the network-instance.

**Context** [system p4rt-server network-instance name reference source-address \(ipv4-address | ipv6-address\)](#)

**Tree** [source-address](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **tls-profile reference**

**Description** Reference to the TLS profile to use on the P4Runtime server

**Context** [system p4rt-server network-instance name reference tls-profile reference](#)

**Tree** [tls-profile](#)

**Reference** [system tls server-profile name string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **use-authentication boolean**

**Description** Enable or disable the use of username/password authentication for every P4Runtime RPC request

<b>Context</b>	<a href="#">system p4rt-server network-instance name reference use-authentication</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**rate-limit** *number*

<b>Description</b>	Set a limit on the number of connection attempts per minute
<b>Context</b>	<a href="#">system p4rt-server rate-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Range</b>	0 to 65535
<b>Default</b>	60
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**session-limit** *number*

<b>Description</b>	Set a limit on the number of simultaneous active P4Runtime sessions A session is defined as an individual RPC invocation, which could result in a single client generating multiple sessions.
<b>Context</b>	<a href="#">system p4rt-server session-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Range</b>	0 to 65535
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on P4Runtime clients
<b>Context</b>	<a href="#">system p4rt-server timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	0 to 65535
<b>Default</b>	7200

<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **trace-options** *keyword*

<b>Description</b>	P4Runtime trace options
<b>Context</b>	<a href="#">system p4rt-server trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• request</li> <li>• response</li> <li>• common</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **unix-socket**

<b>Description</b>	Top-level container for configuration and state related to unix sockets
<b>Context</b>	<a href="#">system p4rt-server unix-socket</a>
<b>Tree</b>	<a href="#">unix-socket</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the P4Runtime service
<b>Context</b>	<a href="#">system p4rt-server unix-socket admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**oper-state** *keyword*

<b>Description</b>	Details if the P4Runtime service is operationally available
<b>Context</b>	<a href="#">system p4rt-server unix-socket oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### socket-path *string*

**Description** Path to the unix socket used by P4Runtime

**Context** [system p4rt-server unix-socket socket-path](#) *string*

**Tree** [socket-path](#)

**Configurable** False

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### tls-profile *reference*

**Description** Reference to the TLS profile to use on the P4Runtime unix socket server  
If none is specified, then TLS is not used.

**Context** [system p4rt-server unix-socket tls-profile](#) *reference*

**Tree** [tls-profile](#)

**Reference** [system tls server-profile name](#) *string*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### use-authentication *boolean*

**Description** Enable or disable the use of username/password authentication for every P4Runtime RPC request

**Context** [system p4rt-server unix-socket use-authentication](#) *boolean*

**Tree** [use-authentication](#)

**Default** true

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### ra-guard-policy *name string*

**Description** List containing RA Guard Policy and parameters

**Context** [system ra-guard-policy name](#) *string*

**Tree** [ra-guard-policy](#)

**Configurable** True

<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	64

**name** *string*

<b>Description</b>	RA Guard Policy name
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**action** *keyword*

<b>Description</b>	Describes the RA Guard Policy action for RA Messages matching the specified attributes. RA Messages no matching the specified attributes will be handled in the opposite manner.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">action</a> <i>keyword</i>
<b>Tree</b>	<a href="#">action</a>
<b>Default</b>	discard
<b>Options</b>	<ul style="list-style-type: none"> <li>• accept</li> <li>• discard</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**advertise-prefix-set** *reference*

<b>Description</b>	Reference to a prefix set to match advertised address within RA message
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">advertise-prefix-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">advertise-prefix-set</a>
<b>Reference</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**hop-limit** *number*

<b>Description</b>	Verifies the minimum advertised hop count limit. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">hop-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">hop-limit</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**managed-config-flag** *boolean*

<b>Description</b>	Causes the RA Guard policy to match IPv6 RA messages with the M (Managed address) flag set. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">managed-config-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">managed-config-flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**other-config-flag** *boolean*

<b>Description</b>	Causes the RA Guard policy to match IPv6 RA messages with the O (Other config) flag set. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">other-config-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">other-config-flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**router-preference** *keyword*

<b>Description</b>	Verifies that the advertised default router preference parameter value is equal to or less than the specified limit. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">router-preference</a> <i>keyword</i>
<b>Tree</b>	<a href="#">router-preference</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>high</li> </ul>

	<ul style="list-style-type: none"> <li>• medium</li> <li>• low</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### source-prefix-set *reference*

<b>Description</b>	Reference to a prefix set to match RA source address. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">source-prefix-set reference</a>
<b>Tree</b>	<a href="#">source-prefix-set</a>
<b>Reference</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### sflow

<b>Description</b>	Context to configure sFlow Agent parameters and report sFlow state
<b>Context</b>	<a href="#">system sflow</a>
<b>Tree</b>	<a href="#">sflow</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### admin-state *keyword*

<b>Description</b>	Administratively enable or disable sFlow for the system
<b>Context</b>	<a href="#">system sflow admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**collector** [collector-id](#) *number*

<b>Description</b>	List of sFlow collectors to which sFlow sample data is sent
<b>Context</b>	<a href="#">system sflow collector collector-id</a> <i>number</i>
<b>Tree</b>	<a href="#">collector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	8

**collector-id** *number*

<b>Description</b>	Specify the collector ID
<b>Context</b>	<a href="#">system sflow collector collector-id</a> <i>number</i>
<b>Range</b>	1 to 8
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**collector-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address for an sFlow collector
<b>Context</b>	<a href="#">system sflow collector collector-id</a> <i>number</i> <a href="#">collector-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">collector-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system sflow collector collector-id</a> <i>number</i> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**next-hop** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Specifies the active IP next hop used to reach the associated collector
<b>Context</b>	<a href="#">system sflow collector collector-id number next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**port** *number*

<b>Description</b>	Specifies the destination UDP port number to be used in sFlow packets
<b>Context</b>	<a href="#">system sflow collector collector-id number port</a> <i>number</i>
<b>Tree</b>	<a href="#">port</a>
<b>Default</b>	6343
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Specifies the IP address to be used as the source address in sFlow packets
<b>Context</b>	<a href="#">system sflow collector collector-id number source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sample-rate** *number*

<b>Description</b>	Specify sFlow sample rate This value is the rate at which traffic will be sampled at a rate of 1:N received packets.
<b>Context</b>	<a href="#">system sflow sample-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">sample-rate</a>
<b>Range</b>	1 to 2000000
<b>Default</b>	10000
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **sample-size** *number*

**Description** Specify sFlow sample size  
This value specifies the number of bytes the sFlow agent samples from each frame.

**Context** [system sflow sample-size](#) *number*

**Tree** [sample-size](#)

**Range** 256

**Default** 256

**Configurable** True

**Platforms** Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

**Description** Specifies the IP address to be used as the source address in sFlow packets

**Context** [system sflow source-address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [source-address](#)

**Configurable** True

**Platforms** Supported on all platforms

### **statistics**

**Description** Enter the statistics context

**Context** [system sflow statistics](#)

**Tree** [statistics](#)

**Configurable** False

**Platforms** Supported on all platforms

### **total-offered-packets** *number*

**Description** Total number of packets subject to sFlow sampling

**Context** [system sflow statistics total-offered-packets](#) *number*

**Tree** [total-offered-packets](#)

**Default** 0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-samples-taken** *number*

<b>Description</b>	Total number of sFlow samples taken
<b>Context</b>	<a href="#">system sflow statistics total-samples-taken</a> <i>number</i>
<b>Tree</b>	<a href="#">total-samples-taken</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-sent-packets** *number*

<b>Description</b>	Total number of sFlow packets sent to collectors
<b>Context</b>	<a href="#">system sflow statistics total-sent-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-sent-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**snmp**

<b>Description</b>	Top-level container for SNMP configuration and state
<b>Context</b>	<a href="#">system snmp</a>
<b>Tree</b>	<a href="#">snmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**community** *string*

<b>Description</b>	Enter the community context
<b>Context</b>	<a href="#">system snmp community</a> <i>string</i>
<b>Tree</b>	<a href="#">community</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **network-instance** [name reference](#)

**Description** List of network-instances to run an SNMP server in  
**Context** [system snmp network-instance name reference](#)  
**Tree** [network-instance](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **name** *reference*

**Description** Reference to a configured network-instance  
**Context** [system snmp network-instance name reference](#)  
**Reference** [network-instance name string](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Enables the SNMP server in this network-instance  
**Context** [system snmp network-instance name reference admin-state keyword](#)  
**Tree** [admin-state](#)  
**Options**

- enable
- disable

**Configurable** True  
**Platforms** Supported on all platforms

### **oper-state** *keyword*

**Description** Details the operational state of the SNMP server  
**Context** [system snmp network-instance name reference oper-state keyword](#)  
**Tree** [oper-state](#)  
**Options**

- up  
Component or process is operational
- down

- Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses for the SNMP server to listen on within the network-instance
<b>Context</b>	<a href="#">system snmp network-instance name</a> <i>reference</i> <a href="#">source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )

<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ssh-server

<b>Description</b>	Top-level container for SSH server configuration and state
<b>Context</b>	<a href="#">system ssh-server</a>
<b>Tree</b>	<a href="#">ssh-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance [name reference](#)

<b>Description</b>	List of network-instances to run an SSH server in
<b>Context</b>	<a href="#">system ssh-server network-instance name reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system ssh-server network-instance name reference</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## admin-state *keyword*

<b>Description</b>	Enables the SSH server in this network-instance
<b>Context</b>	<a href="#">system ssh-server network-instance name reference admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

<b>Configurable</b>	• disable True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details the operational state of the SSH server
<b>Context</b>	<a href="#">system ssh-server network-instance name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting</li> </ul>

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **protocol-version** *number*

<b>Description</b>	Protocol version in use by the SSH server
<b>Context</b>	<a href="#">system ssh-server network-instance name</a> <i>reference</i> <a href="#">protocol-version number</a>
<b>Tree</b>	<a href="#">protocol-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rate-limit** *number*

<b>Description</b>	Set a limit on the number of unauthenticated sessions to the SSH server after this number is met, the server will start dropping connection attempts
<b>Context</b>	<a href="#">system ssh-server network-instance name</a> <i>reference</i> <a href="#">rate-limit number</a>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses for the SSH server to listen on within the network-instance
<b>Context</b>	<a href="#">system ssh-server network-instance name</a> <i>reference</i> <a href="#">source-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on SSH connections
<b>Context</b>	<a href="#">system ssh-server network-instance name</a> <i>reference</i> <a href="#">timeout number</a>
<b>Tree</b>	<a href="#">timeout</a>
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**tls**

<b>Description</b>	Top-level container for TLS configuration and state
<b>Context</b>	<a href="#">system tls</a>
<b>Tree</b>	<a href="#">tls</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server-profile** *name string*

<b>Description</b>	List of configured TLS server profiles
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">server-profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the TLS server-profile
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>String Length</b>	1 to 247
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authenticate-client** *boolean*

<b>Description</b>	Defines if the server should authenticate the identity of connecting clients using the trust anchor
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">authenticate-client</a> <i>boolean</i>
<b>Tree</b>	<a href="#">authenticate-client</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**certificate** *string*

<b>Description</b>	Base64 encoded certificate to use with the private key this includes the '--BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certificate</a> <i>string</i>
<b>Tree</b>	<a href="#">certificate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**cipher-list** *identityref*

<b>Description</b>	List of ciphers to use when negotiating TLS with clients
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">cipher-list</a> <i>identityref</i>
<b>Tree</b>	<a href="#">cipher-list</a>
<b>Default</b>	ecdhe-rsa-aes128-gcm-sha256
<b>Options</b>	<ul style="list-style-type: none"> <li>• ecdhe-rsa-aes256-gcm-sha384</li> <li>• ecdhe-ecdsa-aes256-gcm-sha384</li> <li>• ecdhe-rsa-aes256-sha384</li> <li>• ecdhe-ecdsa-aes256-sha384</li> <li>• ecdhe-rsa-aes256-sha</li> <li>• ecdhe-ecdsa-aes256-sha</li> <li>• dhe-dss-aes256-gcm-sha384</li> <li>• dhe-rsa-aes256-gcm-sha384</li> <li>• dhe-rsa-aes256-sha256</li> <li>• dhe-dss-aes256-sha256</li> <li>• dhe-rsa-aes256-sha</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**key string**

<b>Description</b>	Base64 encoded key to use with the server certificate This includes the '-----BEGIN PRIVATE KEY-----', and '-----END PRIVATE KEY-----' header and footer The value is hashed, and only the hashed value is kept
<b>Context</b>	<a href="#">system tls server-profile name string key string</a>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trust-anchor string**

<b>Description</b>	Base64 encoded certificate to use as a trust anchor This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
<b>Context</b>	<a href="#">system tls server-profile name string trust-anchor string</a>
<b>Tree</b>	<a href="#">trust-anchor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace-options keyword**

<b>Description</b>	Management server trace options
<b>Context</b>	<a href="#">system trace-options keyword</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• request</li> <li>• response</li> <li>• common</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### warm-reboot

<b>Description</b>	Top-level container for warm reboot options
<b>Context</b>	<a href="#">system warm-reboot</a>
<b>Tree</b>	<a href="#">warm-reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### bgp-max-wait *number*

<b>Description</b>	<p>The maximum amount of time that BGP will wait to receive End of RIB markers from all peers and for all address families that were up prior to warm reboot (in all network instances).</p> <p>After this time elapses BGP declares that convergence has occurred and sends its own EOR markers to its peers.</p>
<b>Context</b>	<a href="#">system warm-reboot bgp-max-wait <i>number</i></a>
<b>Tree</b>	<a href="#">bgp-max-wait</a>
<b>Range</b>	0 to 3600
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## 11.1 acl Descriptions

### acl

<b>Description</b>	Top level enclosing container for ACL operational tools
<b>Context</b>	<a href="#">acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### cpm-filter

<b>Description</b>	List of CPM filters
<b>Context</b>	<a href="#">acl cpm-filter</a>
<b>Tree</b>	<a href="#">cpm-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ipv4-filter

<b>Description</b>	List of CPM IPv4 filter rules
<b>Context</b>	<a href="#">acl cpm-filter ipv4-filter</a>
<b>Tree</b>	<a href="#">ipv4-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### clear

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl cpm-filter ipv4-filter clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** [sequence-id](#) *number*

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl</a> <a href="#">cpm-filter</a> <a href="#">ipv4-filter</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl</a> <a href="#">cpm-filter</a> <a href="#">ipv4-filter</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl</a> <a href="#">cpm-filter</a> <a href="#">ipv4-filter</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl</a> <a href="#">cpm-filter</a> <a href="#">ipv4-filter</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-filter**

<b>Description</b>	List of CPM IPv6 filter rules
<b>Context</b>	<a href="#">acl</a> <a href="#">cpm-filter</a> <a href="#">ipv6-filter</a>
<b>Tree</b>	<a href="#">ipv6-filter</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl cpm-filter ipv6-filter clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry [sequence-id](#) *number***

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl cpm-filter ipv6-filter entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id *number***

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl cpm-filter ipv6-filter entry sequence-id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl cpm-filter ipv6-filter entry sequence-id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl cpm-filter ipv6-filter entry sequence-id number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-filter**

<b>Description</b>	List of CPM MAC filter rules
<b>Context</b>	<a href="#">acl cpm-filter mac-filter</a>
<b>Tree</b>	<a href="#">mac-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl cpm-filter mac-filter clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry [sequence-id number](#)**

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl cpm-filter mac-filter entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id *number***

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl cpm-filter mac-filter entry sequence-id number</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl cpm-filter mac-filter entry sequence-id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl cpm-filter mac-filter entry sequence-id number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ipv4-filter *name string*

<b>Description</b>	List of IPv4 filter policies
<b>Context</b>	<a href="#">acl ipv4-filter name string</a>
<b>Tree</b>	<a href="#">ipv4-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Name of the IPv4 filter policy.
<b>Context</b>	<a href="#">acl ipv4-filter name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** *sequence-id number*

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl ipv4-filter name</a> <i>string</i> <a href="#">entry</a> <i>sequence-id number</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl ipv4-filter name</a> <i>string</i> <a href="#">entry</a> <i>sequence-id number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl ipv4-filter name</a> <i>string</i> <a href="#">entry</a> <i>sequence-id number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all aggregate and per-interface statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl ipv4-filter name</a> <i>string</i> <a href="#">entry</a> <i>sequence-id number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**per-interface**

<b>Description</b>	Container for per-subinterface per-entry statistics
<b>Context</b>	<a href="#">acl ipv4-filter name</a> <i>string</i> <a href="#">entry</a> <i>sequence-id number</i> <a href="#">statistics</a> <a href="#">per-interface</a>

<b>Tree</b>	<a href="#">per-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### subinterface *name string*

<b>Description</b>	List of subinterfaces where the ACL is applied to either input or output traffic
<b>Context</b>	<a href="#">acl ipv4-filter name string entry sequence-id number statistics per-interface subinterface name string</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">acl ipv4-filter name string entry sequence-id number statistics per-interface subinterface name string</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### clear

<b>Description</b>	Reset the per-interface statistics associated with this particular entry and this particular subinterface to zero
<b>Context</b>	<a href="#">acl ipv4-filter name string entry sequence-id number statistics per-interface subinterface name string clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl ipv4-filter name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl ipv4-filter name string statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-filter name string**

<b>Description</b>	List of IPv6 filter policies
<b>Context</b>	<a href="#">acl ipv6-filter name string</a>
<b>Tree</b>	<a href="#">ipv6-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name string**

<b>Description</b>	Name of the IPv6 filter policy.
<b>Context</b>	<a href="#">acl ipv6-filter name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry sequence-id number**

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl ipv6-filter name string entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all aggregate and per-interface statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**per-interface**

<b>Description</b>	Container for per-subinterface per-entry statistics
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">per-interface</a>
<b>Tree</b>	<a href="#">per-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subinterface** *name string*

<b>Description</b>	List of subinterfaces where the ACL is applied to either input or output traffic
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">per-interface</a> <a href="#">subinterface name</a> <i>string</i>

<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface subinterface name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset the per-interface statistics associated with this particular entry and this particular subinterface to zero
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface subinterface name</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl ipv6-filter name</a> <i>string</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **mac-filter** *name string*

**Description** List of MAC filter policies  
**Context** [acl mac-filter name string](#)  
**Tree** [mac-filter](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **name** *string*

**Description** Name of the MAC filter policy.  
**Context** [acl mac-filter name string](#)  
**String Length** 1 to 255  
**Configurable** True  
**Platforms** Supported on all platforms

### **entry** *sequence-id number*

**Description** List of filter rules.  
**Context** [acl mac-filter name string entry sequence-id number](#)  
**Tree** [entry](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **sequence-id** *number*

**Description** A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries  
**Context** [acl mac-filter name string entry sequence-id number](#)  
**Configurable** True  
**Platforms** Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all aggregate and per-interface statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**per-interface**

<b>Description</b>	Container for per-subinterface per-entry statistics
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface</a>
<b>Tree</b>	<a href="#">per-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subinterface** [name](#) *string*

<b>Description</b>	List of subinterfaces where the ACL is applied to either input or output traffic
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface subinterface name</a> <i>string</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Enter the name context
--------------------	------------------------

<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface subinterface name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset the per-interface statistics associated with this particular entry and this particular subinterface to zero
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">statistics per-interface subinterface name</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl mac-filter name</a> <i>string</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## policers

<b>Description</b>	List of policers used by ACL entries
<b>Context</b>	<a href="#">acl policers</a>
<b>Tree</b>	<a href="#">policers</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policer** *name string*

<b>Description</b>	List of hardware policers
<b>Context</b>	<a href="#">acl policers policer name string</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the hardware policer
<b>Context</b>	<a href="#">acl policers policer name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl policers policer name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics associated with this particular policer to zero
<b>Context</b>	<a href="#">acl policers policer name string statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**system-cpu-policer** *name string*

<b>Description</b>	List of system CPU policers
<b>Context</b>	<a href="#">acl policers system-cpu-policer name string</a>
<b>Tree</b>	<a href="#">system-cpu-policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the system cpu policer
<b>Context</b>	<a href="#">acl policers system-cpu-policer name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl policers system-cpu-policer name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics associated with this particular policer to zero
<b>Context</b>	<a href="#">acl policers system-cpu-policer name string statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**system-filter**

<b>Description</b>	List of System filters
<b>Context</b>	<a href="#">acl system-filter</a>

<b>Tree</b>	<a href="#">system-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ipv4-filter

<b>Description</b>	List of System IPv4 filter rules
<b>Context</b>	<a href="#">acl system-filter ipv4-filter</a>
<b>Tree</b>	<a href="#">ipv4-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### clear

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl system-filter ipv4-filter clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### entry [sequence-id](#) *number*

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl system-filter ipv4-filter entry <a href="#">sequence-id</a> <i>number</i></a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### [sequence-id](#) *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl system-filter ipv4-filter entry <a href="#">sequence-id</a> <i>number</i></a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl system-filter ipv4-filter entry sequence-id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl system-filter ipv4-filter entry sequence-id number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-filter**

<b>Description</b>	List of System IPv6 filter rules
<b>Context</b>	<a href="#">acl system-filter ipv6-filter</a>
<b>Tree</b>	<a href="#">ipv6-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl system-filter ipv6-filter clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry sequence-id number**

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl system-filter ipv6-filter entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **sequence-id *number***

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl system-filter ipv6-filter entry sequence-id <i>number</i></a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl system-filter ipv6-filter entry sequence-id <i>number</i> statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **clear**

<b>Description</b>	Reset all statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl system-filter ipv6-filter entry sequence-id <i>number</i> statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **qos**

<b>Description</b>	Top level enclosing container for qos operational tools
<b>Context</b>	<a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**classifiers**

<b>Description</b>	Top level enclosing container for qos classifiers operational tools
<b>Context</b>	<a href="#">qos classifiers</a>
<b>Tree</b>	<a href="#">classifiers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**multifield**

<b>Description</b>	Top level enclosing container for qos multifield classifiers operational tools
<b>Context</b>	<a href="#">qos classifiers multifield</a>
<b>Tree</b>	<a href="#">multifield</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4-policy** [name string](#)

<b>Description</b>	List of IPv4 policies
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string</a>
<b>Tree</b>	<a href="#">ipv4-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the IPv4 policy.
<b>Context</b>	<a href="#">qos classifiers multifield ipv4-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-policy** [name string](#)

<b>Description</b>	List of IPv6 policies
<b>Context</b>	<a href="#">qos classifiers multifield ipv6-policy name string</a>
<b>Tree</b>	<a href="#">ipv6-policy</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the IPv6 policy.
<b>Context</b>	<a href="#"> qos classifiers multifield ipv6-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 12.1 bfd Descriptions

### bfd

<b>Description</b>	Top-level grouping for bfd operational commands
<b>Context</b>	<a href="#">bfd</a>
<b>Tree</b>	<a href="#">bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### micro-bfd-sessions

<b>Description</b>	Enter the micro-bfd-sessions context
<b>Context</b>	<a href="#">bfd micro-bfd-sessions</a>
<b>Tree</b>	<a href="#">micro-bfd-sessions</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### lag-interface *name string*

<b>Description</b>	Lag interface against which the clear command is to be executed
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string</a>
<b>Tree</b>	<a href="#">lag-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### name *string*

<b>Description</b>	Reference ID for associated lag interface Example: lag1 (Reference Interface lag1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string</a>
<b>String Length</b>	3 to 20

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### member-interface *name string*

<b>Description</b>	List of member-interfaces to be cleared
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string</a>
<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### name *string*

<b>Description</b>	Reference ID for associated interface Example: ethernet-2/1 (Reference Interface ethernet-2/1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string</a>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

<b>Description</b>	Clear the associated micro-BFD sessions Clearing a micro-BFD sessions causes the associated sessions to transition to a Down state
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**lag-interface** *name string*

<b>Description</b>	Lag interface against which the clear command is to be executed
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string</a>
<b>Tree</b>	<a href="#">lag-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**name** *string*

<b>Description</b>	Reference ID for associated lag interface Example: lag1 (Reference Interface lag1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string</a>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**member-interface** *name string*

<b>Description</b>	List of member-interfaces to be cleared
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string member-interface name string</a>
<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### name *string*

**Description** Reference ID for associated interface Example: ethernet-2/1 (Reference Interface ethernet-2/1).

**Context** [bfd micro-bfd-sessions statistics lag-interface name \*string\* member-interface name \*string\*](#)

**String Length** 3 to 20

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

**Description** Clear the BFD statistics associated with the micro-BFD sessions

**Context** [bfd micro-bfd-sessions statistics lag-interface name \*string\* member-interface name \*string\* clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### peer local-discriminator *number*

**Description** The list of local-discriminators associated with BFD

**Context** [bfd peer local-discriminator \*number\*](#)

**Tree** [peer](#)

**Configurable** True

**Platforms** Supported on all platforms

### local-discriminator *number*

**Description** BFD session local discriminator

**Context** [bfd peer local-discriminator \*number\*](#)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the associated BFD sessions Clearing a BFD sessions causes the associated BFD sessions ot transition to a Down state
<b>Context</b>	<a href="#">bfd peer local-discriminator</a> <i>number clear</i>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">bfd statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer [local-discriminator](#) *number***

<b>Description</b>	The list of local-discriminators associated with BFD
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-discriminator *number***

<b>Description</b>	BFD session local discriminator
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the BFD statistics associated with the BFD sessions
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number clear</i>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 13.1 interface Descriptions

### interface *name string*

<b>Description</b>	The list of named interfaces on the device.
<b>Context</b>	<a href="#">interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	References the configured name of the interface
<b>Context</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ethernet

<b>Description</b>	Enter the ethernet context
<b>Context</b>	<a href="#">interface name string ethernet</a>
<b>Tree</b>	<a href="#">ethernet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name string ethernet statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear interface ethernet statistics
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**include-members**

<b>Description</b>	Causes the member link ethernet statistics to also be cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics clear include-members</a>
<b>Tree</b>	<a href="#">include-members</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**radio**

<b>Description</b>	Enable the radio context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">radio</a>
<b>Tree</b>	<a href="#">radio</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**roe**

<b>Description</b>	Enter the roe context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">radio roe</a>
<b>Tree</b>	<a href="#">roe</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mapper-demapper** [mapper-demapper-id](#) *number*

<b>Description</b>	Enter the mapper-demapper list instance
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">radio roe mapper-demapper mapper-demapper-id number</a>
<b>Tree</b>	<a href="#">mapper-demapper</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mapper-demapper-id** *number*

<b>Description</b>	Enter the mapper-demapper-id context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">radio roe mapper-demapper mapper-demapper-id number</a>
<b>Range</b>	1 to 128
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **clear-stats**

<b>Description</b>	Clear stats for this mapper-demapper.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">radio roe mapper-demapper mapper-demapper-id number</a> <a href="#">clear-stats</a>
<b>Tree</b>	<a href="#">clear-stats</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **resource**

<b>Description</b>	Enable the resource context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">resource</a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **retry**

<b>Description</b>	Causes the specified lag to be reevaluate for missing system resources
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">resource</a> <a href="#">retry</a>
<b>Tree</b>	<a href="#">retry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear interface statistics
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## include-members

<b>Description</b>	Causes the member link statistics to also be cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a> <a href="#">include-members</a>
<b>Tree</b>	<a href="#">include-members</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## queue-statistics

<b>Description</b>	Enter the queue-statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">queue-statistics</a>

<b>Tree</b>	<a href="#">queue-statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**clear**

<b>Description</b>	Enter the clear context

**Configurable**

True

**Platforms**

Supported on all platforms except 7220 IXR-D1

**clear****Description**

Enter the clear context

**Context**[interface name](#) [string](#) [statistics](#) [queue-statistics](#) [queue](#) [queue-name](#) ([keyword](#) | [string](#)) [clear](#)**Tree**[clear](#)**Configurable**

True

**Platforms**

Supported on all platforms except 7220 IXR-D1

**subinterface** [index](#) *number***Description**

The list of subinterfaces (logical interfaces) associated with a physical interface

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**index number**

<b>Description</b>	The index of the subinterface, or logical interface number
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bridge-table**

<b>Description</b>	Enter the bridge-table context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-duplication**

<b>Description</b>	Enable the mac-duplication context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a>
<b>Tree</b>	<a href="#">mac-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-all-macs**

<b>Description</b>	Delete all learnt mac entries.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">delete-all-macs</a>
<b>Tree</b>	<a href="#">delete-all-macs</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## duplicate-entries

**Description** Enter the duplicate-entries context

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication duplicate-entries](#)

**Tree** [duplicate-entries](#)

**Configurable** True

**Platforms** Supported on all platforms

## mac [address](#) *string*

**Description** macs learnt on the bridging instance

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication duplicate-entries mac address](#) *string*

**Tree** [mac](#)

**Configurable** True

**Platforms** Supported on all platforms

## address *string*

**Description** Enter the address context

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication duplicate-entries mac address](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

## delete-mac

**Description** delete the duplicate mac address.

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication duplicate-entries mac address](#) *string* [delete-mac](#)

**Tree** [delete-mac](#)

**Configurable** True

**Platforms** Supported on all platforms

**mac-learning**

<b>Description</b>	Enable the mac-learning context

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">vrrp-group virtual-router-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">vrrp-group virtual-router-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## arp

**Description** Enable the arp context

**Context** [interface name string subinterface index number ipv4 arp](#)

**Tree** [arp](#)

**Configurable** True

**Platforms** Supported on all platforms

## delete-dynamic

**Description** Delete all dynamic ARP entries

**Context** [interface name string subinterface index number ipv4 arp delete-dynamic](#)

**Tree** [delete-dynamic](#)

**Configurable** True

**Platforms** Supported on all platforms

## neighbor [ipv4-address string](#)

**Description** Enter the neighbor list instance

**Context** [interface name string subinterface index number ipv4 arp neighbor ipv4-address string](#)

**Tree** [neighbor](#)

**Configurable** True

**Platforms** Supported on all platforms

## [ipv4-address string](#)

**Description** IPv4 address resolved by the ARP entry

**Context** [interface name string subinterface index number ipv4 arp neighbor ipv4-address string](#)

**Configurable** True

**Platforms** Supported on all platforms

**delete-dynamic**

<b>Description</b>	Delete one specific dynamic ARP entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**virtual-ipv4-discovery**

<b>Description</b>	Enter the virtual-ipv4-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a>
<b>Tree</b>	<a href="#">virtual-ipv4-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**address** [ipv4-address](#) *string*

<b>Description</b>	The list of Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4-address** *string*

<b>Description</b>	The virtual IPv4 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## statistics

**Description** Enter the statistics context

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [address ipv4-address](#) *string* [statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for the Virtual IP addresses

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [address ipv4-address](#) *string* [statistics clear](#)

**Tree** [clear](#)

**Configurable** True

<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor-discovery**

<b>Description</b>	Enable the neighbor-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a>
<b>Tree</b>	<a href="#">neighbor-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-dynamic**

<b>Description</b>	Delete all dynamic neighbor cache entries
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [ipv6-address](#) *string*

<b>Description</b>	Enter the neighbor list instance
--------------------	----------------------------------

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ipv6-address** *string*

<b>Description</b>	IPv6 address resolved by the ND cache entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **delete-dynamic**

<b>Description</b>	Delete one specific dynamic neighbor cache entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **virtual-ipv6-discovery**

<b>Description</b>	Enter the virtual-ipv6-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery</a>
<b>Tree</b>	<a href="#">virtual-ipv6-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### **address** [ipv6-address](#) *string*

<b>Description</b>	The list of Virtual IP addresses
--------------------	----------------------------------

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv6-address *string*

<b>Description</b>	The virtual IPv6 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

<b>Description</b>	Clears the statistics for the Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

<b>Description</b>	Clears the global statistics for all the Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## qos

<b>Description</b>	Enter the qos context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## input

<b>Description</b>	Enter the input context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">qos input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policers**

<b>Description</b>	Enter the policers context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">qos</a> <a href="#">input</a> <a href="#">policers</a>
<b>Tree</b>	<a href="#">policers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">qos</a> <a href="#">input</a> <a href="#">policers</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policer** [index](#) *number*

<b>Description</b>	The list of policer instances belonging to the template definition.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">qos</a> <a href="#">input</a> <a href="#">policers</a> <a href="#">policer</a> <a href="#">index</a> <i>number</i>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	The policer index
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">qos</a> <a href="#">input</a> <a href="#">policers</a> <a href="#">policer</a> <a href="#">index</a> <i>number</i>
<b>Range</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">qos input</a> <a href="#">policers</a> <a href="#">policer</a> <a href="#">index</a> <i>number</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 14.1 network-instance Descriptions

### network-instance *name string*

<b>Description</b>	Enter the network-instance list instance
<b>Context</b>	<a href="#">network-instance name string</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A unique name identifying the network instance
<b>Context</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### bridge-table

<b>Description</b>	bridge-table
<b>Context</b>	<a href="#">network-instance name string bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### mac-duplication

<b>Description</b>	Enable the mac-duplication context
<b>Context</b>	<a href="#">network-instance name string bridge-table mac-duplication</a>
<b>Tree</b>	<a href="#">mac-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-macs-type** *keyword*

<b>Description</b>	Type of duplicate mac entries to delete.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">delete-macs-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">delete-macs-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all</li> <li>• blackhole-only</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**duplicate-entries**

<b>Description</b>	Enter the duplicate-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a>
<b>Tree</b>	<a href="#">duplicate-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac** [address](#) *string*

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-mac**

<b>Description</b>	delete the duplicate mac address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-learning**

<b>Description</b>	Enable the mac-learning context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-all-macs**

<b>Description</b>	Delete all learnt mac entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">delete-all-macs</a>
<b>Tree</b>	<a href="#">delete-all-macs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**learnt-entries**

<b>Description</b>	Enter the learnt-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a>
<b>Tree</b>	<a href="#">learnt-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac [address](#) *string***

<b>Description</b>	macs learnt on the bridging instance
--------------------	--------------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-mac**

<b>Description</b>	delete the learnt mac address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**proxy-arp**

<b>Description</b>	Enable the proxy-arp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a>
<b>Tree</b>	<a href="#">proxy-arp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**duplicate**

<b>Description</b>	Enable the duplicate context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a>
<b>Tree</b>	<a href="#">duplicate</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## delete-all

**Description** Delete all entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate](#) [delete-all](#)

**Tree** [delete-all](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## entry [address](#) *string*

**Description** proxy-arp entry to delete

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate](#) [entry](#) [address](#) *string*

**Tree** [entry](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## address *string*

**Description** Enter the address context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate](#) [entry](#) [address](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## delete-ip

**Description** delete the proxy entry.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate](#) [entry](#) [address](#) *string* [delete-ip](#)

**Tree** [delete-ip](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**dynamic**

<b>Description</b>	Enable the dynamic context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a>
<b>Tree</b>	<a href="#">dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**delete-all**

<b>Description</b>	Delete all entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">delete-all</a>
<b>Tree</b>	<a href="#">delete-all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**entry** *address string*

<b>Description</b>	proxy-arp entry to delete
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**delete-ip**

<b>Description</b>	delete the proxy entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i> <a href="#">delete-ip</a>

<b>Tree</b>	<a href="#">delete-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## proxy-nd

<b>Description</b>	Enable the proxy-nd context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a>
<b>Tree</b>	<a href="#">proxy-nd</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## duplicate

<b>Description</b>	Enable the duplicate context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate</a>
<b>Tree</b>	<a href="#">duplicate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## delete-all

<b>Description</b>	Delete all entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate</a> <a href="#">delete-all</a>
<b>Tree</b>	<a href="#">delete-all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## entry *address string*

<b>Description</b>	proxy-nd entry to delete
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address *string***

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**delete-ip**

<b>Description</b>	delete the proxy entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i> <a href="#">delete-ip</a>
<b>Tree</b>	<a href="#">delete-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**dynamic**

<b>Description</b>	Enable the dynamic context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic</a>
<b>Tree</b>	<a href="#">dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**delete-all**

<b>Description</b>	Delete all entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic</a> <a href="#">delete-all</a>
<b>Tree</b>	<a href="#">delete-all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**entry [address](#) *string***

<b>Description</b>	proxy-nd entry to delete
--------------------	--------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic entry</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic entry</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**delete-ip**

<b>Description</b>	delete the proxy entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic entry</a> <a href="#">address</a> <i>string</i> <a href="#">delete-ip</a>
<b>Tree</b>	<a href="#">delete-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**icmp**

<b>Description</b>	Enter the icmp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp</a>
<b>Tree</b>	<a href="#">icmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	ICMP version 4 statistics
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True

---

**Platforms** Supported on all platforms

## clear

**Description** Resets all the YANG state counters under network-instance/icmp/statistics to zero

**Context** [network-instance name](#) *string* [icmp statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## icmp6

**Description** Enter the icmp6 context

**Context** [network-instance name](#) *string* [icmp6](#)

**Tree** [icmp6](#)

**Configurable** True

**Platforms** Supported on all platforms

## statistics

**Description** ICMP version 6 statistics

**Context** [network-instance name](#) *string* [icmp6 statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** Supported on all platforms

## clear

**Description** Resets all the YANG state counters under network-instance/icmp6/statistics to zero

**Context** [network-instance name](#) *string* [icmp6 statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## protocols

<b>Description</b>	The routing protocols that are enabled for this network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a>
<b>Tree</b>	<a href="#">protocols</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Enable the bgp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## group [group-name](#) *string*

<b>Description</b>	Enter the group list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">group</a> <a href="#">group-name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## group-name *string*

<b>Description</b>	The configured name of the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">group</a> <a href="#">group-name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## reset-peer

<b>Description</b>	Enable the reset-peer context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">group</a> <a href="#">group-name</a> <i>string</i> <a href="#">reset-peer</a>

<b>Tree</b>	<a href="#">reset-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	Hard reset only BGP peers in the peer-group that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">reset-peer peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**soft-clear**

<b>Description</b>	Enable the soft-clear context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear</a>
<b>Tree</b>	<a href="#">soft-clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	Soft reset only BGP peers in the peer-group that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-refresh** *keyword*

<b>Description</b>	The address family to refresh This is encoded in the ROUTE_REFRESH message. By default all families are refreshed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear route-refresh</a> <i>keyword</i>
<b>Tree</b>	<a href="#">route-refresh</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a></li> <li>• <a href="#">ipv6-unicast</a></li> <li>• <a href="#">evpn</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [peer-address](#) (*ipv4-address* | *ipv6-address-with-zone*)

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> )
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-address** (*ipv4-address* | *ipv6-address-with-zone*)

<b>Description</b>	The transport address of the BGP peer The peer-address must be a valid IPv4 unicast address or a valid IPv6 global unicast address. Sessions to a link-local IPv6 address are not supported.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reset-peer**

<b>Description</b>	Hard reset the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address</i>   <i>ipv6-address-with-zone</i> ) <a href="#">reset-peer</a>

<b>Tree</b>	<a href="#">reset-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## soft-clear

<b>Description</b>	Enable the soft-clear context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address   ipv6-address-with-zone</i> ) <a href="#">soft-clear</a>
<b>Tree</b>	<a href="#">soft-clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## route-refresh *keyword*

<b>Description</b>	The address family to refresh This is encoded in the ROUTE_REFRESH message. By default all families are refreshed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address   ipv6-address-with-zone</i> ) <a href="#">soft-clear route-refresh keyword</a>
<b>Tree</b>	<a href="#">route-refresh</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a></li> <li>• <a href="#">ipv6-unicast</a></li> <li>• <a href="#">evpn</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## reset-peer

<b>Description</b>	Enable the reset-peer context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp reset-peer</a>
<b>Tree</b>	<a href="#">reset-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	Hard reset only BGP peers that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">reset-peer</a> <a href="#">peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**soft-clear**

<b>Description</b>	Enable the soft-clear context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">soft-clear</a>
<b>Tree</b>	<a href="#">soft-clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	Soft reset only BGP peers that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">soft-clear</a> <a href="#">peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-refresh** *keyword*

<b>Description</b>	The address family to refresh  This is encoded in the ROUTE_REFRESH message. By default all families are refreshed.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">soft-clear</a> <a href="#">route-refresh</a> <i>keyword</i>
<b>Tree</b>	<a href="#">route-refresh</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a></li> <li>• <a href="#">ipv6-unicast</a></li> </ul>

	• evpn
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## igmp

<b>Description</b>	Enable the igmp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp</a>
<b>Tree</b>	<a href="#">igmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## counters

<b>Description</b>	Enter the counters context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp counters</a>
<b>Tree</b>	<a href="#">counters</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

<b>Description</b>	Reset IGMP counters for all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp counters clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## interface [interface-name](#) *string*

<b>Description</b>	List of IGMP interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i>

<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *string*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp</a> <a href="#">interface interface-name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### counters

<b>Description</b>	Enter the counters context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">counters</a>
<b>Tree</b>	<a href="#">counters</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

<b>Description</b>	Reset IGMP counters for this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">counters clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## membership-groups

<b>Description</b>	Enter the membership-groups context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">membership-groups</a>
<b>Tree</b>	<a href="#">membership-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

<b>Description</b>	Clear all IGMP memberships for this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">membership-groups clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group [group](#) *string*

<b>Description</b>	Multicast group membership.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## group *string*

<b>Description</b>	Multicast address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clear all IGMP memberships for this group on this interface.

**Context** [network-instance name](#) *string* [protocols igmp interface interface-name](#) *string* [membership-groups group group](#) *string* [clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## source [source](#) *string*

**Description** Source addresses of multicast.

**Context** [network-instance name](#) *string* [protocols igmp interface interface-name](#) *string* [membership-groups group group](#) *string* [source source](#) *string*

**Tree** [source](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## source *string*

**Description** Source address of multicast.

**Context** [network-instance name](#) *string* [protocols igmp interface interface-name](#) *string* [membership-groups group group](#) *string* [source source](#) *string*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clear all IGMP memberships for this group on this interface.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">membership-groups group group</a> <i>string</i> <a href="#">source source</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## version

<b>Description</b>	Enter the version context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">version</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

<b>Description</b>	Reset the IGMP operational version for this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp interface interface-name</a> <i>string</i> <a href="#">version clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## membership-groups

<b>Description</b>	Enter the membership-groups context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp membership-groups</a>
<b>Tree</b>	<a href="#">membership-groups</a>
<b>Configurable</b>	True

**group** *string*

<b>Description</b>	Multicast address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp membership-groups group</a> <a href="#">group</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**clear**

<b>Description</b>	Clear all IGMP memberships for this group on all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp membership-groups group</a> <a href="#">group</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source *source string*

**Description** Source addresses of multicast.

**Context** [network-instance name string protocols igmp membership-groups group group string source source string](#)

**Tree** [source](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### source *string*

**Description** Source address of multicast.

**Context** [network-instance name string protocols igmp membership-groups group group string source source string](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

**Description** Clear all IGMP memberships for this group on all interfaces.

**Context** [network-instance name string protocols igmp membership-groups group group string source source string clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### version

**Description** Enter the version context

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp version</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

<b>Description</b>	Reset the IGMP operational version for all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols igmp version clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## isis

<b>Description</b>	Enable the isis context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis</a>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance [name](#) *string*

<b>Description</b>	List of IS-IS protocol instances associated with this network-instance. Only a single instance is supported for now
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**name** *string*

<b>Description</b>	The name of the IS-IS instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** [interface-name](#) *string*

<b>Description</b>	List of IS-IS interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *string*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**adjacencies**

<b>Description</b>	Enter the adjacencies context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacencies</a>
<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all of the adjacencies on this interface
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string adjacencies clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ldp-synchronization

<b>Description</b>	IS-IS LDP-IGP synchronisation
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## exit

<b>Description</b>	Advertise the normal metric for all IS-IS interfaces, even if some are configured for LDP synchronization and ISIS is not in sync with LDP on these interfaces
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ldp-synchronization exit</a>
<b>Tree</b>	<a href="#">exit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## link-state-database

<b>Description</b>	The ISIS link state database
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string link-state-database</a>
<b>Tree</b>	<a href="#">link-state-database</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the contents of the LSDB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">link-state-database clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all of the IS-IS instance statistics to zero.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ldp**

<b>Description</b>	Operational tools commands for LDP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**discovery**

<b>Description</b>	Enter the discovery context
--------------------	-----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> protocols ldp discovery
<b>Tree</b>	<a href="#">discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## interfaces

<b>Description</b>	Enter the interfaces context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> protocols ldp discovery <a href="#">interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## interface [name](#) *string*

<b>Description</b>	Enter the interface list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> protocols ldp discovery <a href="#">interfaces</a> <a href="#">interface name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## [name](#) *string*

<b>Description</b>	Reference type to a specific subinterface of the form <interface-name>.<subinterface-index>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> protocols ldp discovery <a href="#">interfaces</a> <a href="#">interface name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## ipv4

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> protocols ldp discovery <a href="#">interfaces</a> <a href="#">interface name</a> <i>string</i> <a href="#">ipv4</a>

<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## clear

<b>Description</b>	Resets all the LDP instance state counters to zero
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## peers

<b>Description</b>	Enter the peers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers</a>
<b>Tree</b>	<a href="#">peers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## peer [lsr-id](#) *string* [label-space-id](#) *number*

<b>Description</b>	List of peers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer</a> <a href="#">lsr-id</a> <i>string</i> <a href="#">label-space-id</a> <i>number</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### Isr-id *string*

**Description** The LSR ID of the peer, to identify the globally unique LSR. This is the first four octets of the LDP ID. This leaf is used together with the leaf 'label-space-id' to form the LDP ID.

**Context** [network-instance name](#) *string* [protocols ldp peers peer](#) [lsr-id](#) *string* [label-space-id](#) *number*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### label-space-id *number*

**Description** The Label Space ID of the peer, to identify a specific label space within the LSR. This is the last two octets of the LDP ID. This leaf is used together with the leaf 'lsr-id' to form the LDP ID.

**Context** [network-instance name](#) *string* [protocols ldp peers peer](#) [lsr-id](#) *string* [label-space-id](#) *number*

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### reset

**Description** Reset the LDP session by closing the TCP connection and establishing a new one.

**Context** [network-instance name](#) *string* [protocols ldp peers peer](#) [lsr-id](#) *string* [label-space-id](#) *number* [reset](#)

**Tree** [reset](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

### statistics

**Description** Enter the statistics context

**Context** [network-instance name](#) *string* [protocols ldp peers peer](#) [lsr-id](#) *string* [label-space-id](#) *number* [statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## clear

**Description** Resets all the LDP instance state counters to zero

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) *string* [label-space-id](#) *number* [statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## reset-overload

**Description** Enable the reset-overload context

**Context** [network-instance name](#) *string* [protocols ldp reset-overload](#)

**Tree** [reset-overload](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## statistics

**Description** Enter the statistics context

**Context** [network-instance name](#) *string* [protocols ldp statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## clear

**Description** Resets all the LDP instance state counters to zero

**Context** [network-instance name](#) *string* [protocols ldp statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**mld**

<b>Description</b>	Enable the mld context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld</a>
<b>Tree</b>	<a href="#">mld</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**counters**

<b>Description</b>	Enter the counters context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols mld counters</a>

## ospf

**Description** Enable the ospf context

**Context** [network-instance name](#) *string* [protocols ospf](#)

**Tree** [ospf](#)

**Configurable** True

**Platforms** Supported on all platforms

## instance [name](#) *string*

**Description** List of OSPF protocol instances associated with this network-instance. Only a single instance is supported for now

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string*

**Tree** [instance](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 1

## name *string*

**Description** The name of the OSPF instance

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string*

**String Length** 1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area** *area-id*

<b>Description</b>	List of OSPF area
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a>
<b>Tree</b>	<a href="#">area</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-id**

<b>Description</b>	Enter the area-id context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** *interface-name string*

<b>Description</b>	List of OSPF interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *string*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## neighbors

**Description** Enter the neighbors context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbors](#)

**Tree** [neighbors](#)

**Configurable** True

**Platforms** Supported on all platforms

## clear

**Description** Reset all of the adjacencies on this interface

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbors clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## ldp-synchronization

**Description** Enter the ldp-synchronization context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [ldp-synchronization](#)

**Tree** [ldp-synchronization](#)

**Configurable** True

**Platforms** Supported on all platforms

## exit

**Description** Advertise the normal metric for all OSPF interfaces, even if some are configured for LDP synchronization and OSPF is not in sync with LDP on these interfaces

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [ldp-synchronization exit](#)

**Tree** [exit](#)

**Configurable** True

**Platforms** Supported on all platforms

## link-state-database

**Description** The OSPF link state database

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [link-state-database](#)

**Tree** [link-state-database](#)

**Configurable** True

**Platforms** Supported on all platforms

## clear

**Description** Clear the contents of the LSDB.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [link-state-database clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## manual-spf

**Description** Enter the manual-spf context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [manual-spf](#)

**Tree** [manual-spf](#)

**Configurable** True

**Platforms** Supported on all platforms

## run

**Description** Run a SPF calculation.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [manual-spf run](#)

**Tree** [run](#)

**Configurable** True

**Platforms** Supported on all platforms

**neighbors**

<b>Description</b>	Container for OSPF neighbors tools
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors</a>
<b>Tree</b>	<a href="#">neighbors</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear all OSPF neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [neighbor-id](#)

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors neighbor neighbor-id</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor-id**

<b>Description</b>	The neighbor's ip-address in case of OSPFv2, the router-id otherwise
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors neighbor neighbor-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset this neighbor in the OSPF instance
--------------------	--

<b>Context</b>	<code>network-instance name string protocols ospf instance name string neighbors neighbor neighbor-id clear</code>
<b>Tree</b>	<code>clear</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## overload

<b>Description</b>	Enter the overload context
<b>Context</b>	<code>network-instance name string protocols ospf instance name string overload</code>
<b>Tree</b>	<code>overload</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset OSPF instance overload status.
<b>Context</b>	<code>network-instance name string protocols ospf instance name string overload clear</code>
<b>Tree</b>	<code>clear</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<code>network-instance name string protocols ospf instance name string statistics</code>
<b>Tree</b>	<code>statistics</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all of the OSPF instance statistics to zero.
<b>Context</b>	<code>network-instance name string protocols ospf instance name string statistics clear</code>
<b>Tree</b>	<code>clear</code>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## pim

<b>Description</b>	Enable the pim context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim</a>
<b>Tree</b>	<a href="#">pim</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### interface-name *string*

**Description** Reference to a specific subinterface of the form <interface-name>.<subinterface-index>

**Context** [network-instance name](#) *string* [protocols pim neighbor interface interface-name](#) *string*

**String Length** 5 to 25

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### ipv4

**Description** IPv4 specific database

**Context** [network-instance name](#) *string* [protocols pim neighbor interface interface-name](#) *string* [ipv4](#)

**Tree** [ipv4](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

### clear

**Description** Clear the PIM database.

**Context** [network-instance name](#) *string* [protocols pim neighbor interface interface-name](#) *string* [ipv4](#) [clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv6**

<b>Description</b>	IPv6 specific counters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim neighbor interface interface-name</a> <i>string</i> <a href="#">ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**clear**

<b>Description</b>	Clear the PIM database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim neighbor interface interface-name</a> <i>string</i> <a href="#">ipv6 clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**ipv4**

<b>Description</b>	IPv4 specific database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim neighbor ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**clear**

<b>Description</b>	Clear the PIM database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols pim neighbor ipv4 clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

---

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## ipv6

**Description** IPv6 specific counters

**Context** [network-instance name](#) *string* [protocols pim neighbor ipv6](#)

**Tree** [ipv6](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clear the PIM database.

**Context** [network-instance name](#) *string* [protocols pim neighbor ipv6 clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## 15.1 platform Descriptions

### platform

<b>Description</b>	Top-level container for platform operational commands
<b>Context</b>	<a href="#">platform</a>
<b>Tree</b>	<a href="#">platform</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis

<b>Description</b>	Operational commands related to the chassis
<b>Context</b>	<a href="#">platform chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### reboot

<b>Description</b>	Trigger a reboot of the chassis
<b>Context</b>	<a href="#">platform chassis reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### cancel

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform chassis reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delay number**

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform chassis reboot delay number</a>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**force**

<b>Description</b>	Force a reboot of the chassis, overriding any synchronizations or other activities in progress  This option can be dangerous, and may result in a standby module booting on an older image if used after an image change
<b>Context</b>	<a href="#">platform chassis reboot force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**message string**

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform chassis reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**warm**

<b>Description</b>	Perform a warm reboot of the system  This option will perform checks against the current configuration, before prompting to confirm the reboot, and then rebooting the system without impacting the datapath - if a new image has been configured, this will upgrade the system.
<b>Context</b>	<a href="#">platform chassis reboot warm</a>
<b>Tree</b>	<a href="#">warm</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**force**

<b>Description</b>	Force a warm reboot of the system, overriding any validation, synchronizations or other activities in progress  This option can be dangerous, and may result in an outage - but can be used to support a fast reboot of the system.
<b>Context</b>	<a href="#">platform chassis reboot warm force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**validate**

<b>Description</b>	Validate that the system's current configuration and state supports a warm reboot operation
<b>Context</b>	<a href="#">platform chassis reboot warm validate</a>
<b>Tree</b>	<a href="#">validate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**control [slot string](#)**

<b>Description</b>	Operational commands related to control modules
<b>Context</b>	<a href="#">platform control slot string</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**slot [string](#)**

<b>Description</b>	Slot identifier for the control module
<b>Context</b>	<a href="#">platform control slot string</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## locator

**Description** Operational commands for the locator LED

**Context** [platform control slot](#) *string* [locator](#)

**Tree** [locator](#)

**Configurable** True

**Platforms** Supported on all platforms

## disable

**Description** Deactivates the locator LED for this component

**Context** [platform control slot](#) *string* [locator](#) [disable](#)

**Tree** [disable](#)

**Configurable** True

**Platforms** Supported on all platforms

## enable

**Description** Activate the locator LED for this component

**Context** [platform control slot](#) *string* [locator](#) [enable](#)

**Tree** [enable](#)

**Configurable** True

**Platforms** Supported on all platforms

## duration *number*

**Description** Sets the duration to activate the locator LED, after which it will disable automatically

**Context** [platform control slot](#) *string* [locator](#) [enable](#) [duration](#) *number*

**Tree** [duration](#)

**Range** 10 to 3600

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

## reboot

<b>Description</b>	Trigger a reboot of the control module
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## force

<b>Description</b>	Force a reboot of the control module, overriding any synchronizations or other activities in progress  This option can be dangerous, and may result in a standby module booting on an older image if used after an image change
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a> <a href="#">force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## [fabric slot](#) *number*

<b>Description</b>	Operational commands related to fabric modules
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## [slot](#) *number*

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## locator

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fabric slot number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## disable

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## duration *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fabric slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## reboot

<b>Description</b>	Reboot this component
<b>Context</b>	<a href="#">platform fabric slot number reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## fan-tray id number

<b>Description</b>	Operational commands related to fan modules
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## id number

<b>Description</b>	Numeric identifier for the fan module
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## locator

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fan-tray id number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## disable

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable**

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**duration *number***

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fan-tray id number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**linecard [slot number](#)**

<b>Description</b>	Operational commands related to line cards
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**slot *number***

<b>Description</b>	Numeric identifier for the line card
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**locator**

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform linecard slot number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**disable**

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**enable**

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**duration *number***

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform linecard slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**reboot**

<b>Description</b>	Reboot this component
<b>Context</b>	<a href="#">platform linecard slot number reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**redundancy**

<b>Description</b>	Top-level container for redundancy operational commands
<b>Context</b>	<a href="#">platform redundancy</a>
<b>Tree</b>	<a href="#">redundancy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**switchover**

<b>Description</b>	Trigger a redundancy switchover to the other control module
<b>Context</b>	<a href="#">platform redundancy switchover</a>
<b>Tree</b>	<a href="#">switchover</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**synchronize**

<b>Description</b>	Top-level container for manual synchronization activities
<b>Context</b>	<a href="#">platform redundancy synchronize</a>
<b>Tree</b>	<a href="#">synchronize</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**overlay**

<b>Description</b>	Force a synchronization of the overlay filesystem between the active control module and the standby This synchronizes all non-excluded directories in the overlay filesystem
--------------------	---

---

<b>Context</b>	<a href="#">platform redundancy synchronize overlay</a>
<b>Tree</b>	<a href="#">overlay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## system

<b>Description</b>	Force a synchronization of the system-required data between the active control module and the standby  This synchronizes images, configuration, checkpoints, and other system-required data
<b>Context</b>	<a href="#">platform redundancy synchronize system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## show-fabric-bandwidth

<b>Description</b>	Show fabric bandwidth
<b>Context</b>	<a href="#">platform show-fabric-bandwidth</a>
<b>Tree</b>	<a href="#">show-fabric-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

## 16.1 system Descriptions

### system

<b>Description</b>	Enclosing container for system management.
<b>Context</b>	<a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aaa

<b>Description</b>	Top-level container for operational commands related to AAA
<b>Context</b>	<a href="#">system aaa</a>
<b>Tree</b>	<a href="#">aaa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### authentication

<b>Description</b>	Operational commands related to authentication
<b>Context</b>	<a href="#">system aaa authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### session id *number*

<b>Description</b>	List of active sessions in the system
<b>Context</b>	<a href="#">system aaa authentication session id number</a>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	System generated session ID
<b>Context</b>	<a href="#">system aaa authentication session id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**disconnect**

<b>Description</b>	Disconnect the cli session, requesting the cli to terminate
<b>Context</b>	<a href="#">system aaa authentication session id number disconnect</a>
<b>Tree</b>	<a href="#">disconnect</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**user [username string](#)**

<b>Description</b>	List of local users including admin and linuxadmin
<b>Context</b>	<a href="#">system aaa authentication user username string</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**username [string](#)**

<b>Description</b>	Enter the username context
<b>Context</b>	<a href="#">system aaa authentication user username string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

**unlock**

<b>Description</b>	Unlock the user, This will change its lockout state into false
<b>Context</b>	<a href="#">system aaa authentication user username string unlock</a>

<b>Tree</b>	<a href="#">unlock</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-6e, 7220 IXR-D3L, 7220 IXR-D2, 7250 IXR-10, 7220 IXR-D1, 7250 IXR-10e, 7220 IXR-D3, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-D5, 7220 IXR-D2L

## app-management

<b>Description</b>	Operational commands related to app-management
<b>Context</b>	<a href="#">system app-management</a>
<b>Tree</b>	<a href="#">app-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## application *name string*

<b>Description</b>	List of all applications managed by the application manager
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Tree</b>	<a href="#">application</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Unique name of this application instance
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## kill

<b>Description</b>	Terminate the application instance ungracefully
<b>Context</b>	<a href="#">system app-management application name string kill</a>
<b>Tree</b>	<a href="#">kill</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## quit

<b>Description</b>	Terminate the application instance, requesting it to core dump
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">quit</a>
<b>Tree</b>	<a href="#">quit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## reload

<b>Description</b>	Reload the configuration of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">reload</a>
<b>Tree</b>	<a href="#">reload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## restart

<b>Description</b>	<p>Restart the application instance</p> <p>The best restart that is supported by the application is used if neither 'warm' or 'cold' is specified. If 'warm' restart is supported that will be used, or 'cold' if 'warm' is unavailable.</p> <p>A 'warm' restart will result in the application leaving its state in IDB during the restart, and recovering it post restart. This restart type results in less disruption to surrounding applications that would depend on the restarting applications state.</p> <p>A 'cold' restart will result in a normal stop/start of the application, including the purging of its state in IDB.</p>
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart</a>
<b>Tree</b>	<a href="#">restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## cold

<b>Description</b>	Perform a cold restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart</a> <a href="#">cold</a>

---

<b>Tree</b>	<a href="#">cold</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## warm

<b>Description</b>	Perform a warm restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> restart warm
<b>Tree</b>	<a href="#">warm</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## start

<b>Description</b>	Start the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> start
<b>Tree</b>	<a href="#">start</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Top-level grouping of operational commands related to application statistics
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> statistics
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear statistics for this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> statistics clear
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## stop

<b>Description</b>	Terminate the application instance gracefully
<b>Context</b>	<a href="#">system app-management application name</a> <i>string stop</i>
<b>Tree</b>	<a href="#">stop</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## boot

<b>Description</b>	Top-level container for operational commands related to booting the system
<b>Context</b>	<a href="#">system boot</a>
<b>Tree</b>	<a href="#">boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## cgroup

<b>Description</b>	Top-level container for query commands related to cgroup in the system
<b>Context</b>	<a href="#">system cgroup</a>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## configuration

<b>Description</b>	Top-level container for operational commands related to the system configuration
<b>Context</b>	<a href="#">system configuration</a>
<b>Tree</b>	<a href="#">configuration</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## candidate *name string*

<b>Description</b>	List of configuration candidates currently active
--------------------	---

<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i>
<b>Tree</b>	<a href="#">candidate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	The name of the candidate
<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the candidate from the system, discarding any changes This results in any users currently in the candidate being dropped back to running mode.
<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**checkpoint id** (*number | checkpoint-name*)

<b>Description</b>	List of current checkpoints present in the system
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Tree</b>	<a href="#">checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id** (*number | checkpoint-name*)

<b>Description</b>	System generated ID, or operator defined name for the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Configurable</b>	True

---

**Platforms** Supported on all platforms

## clear

**Description** Clear the checkpoint from the system

**Context** [system configuration checkpoint id \(number | checkpoint-name\) clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## load

**Description** Load candidate from saved checkpoint configuration

**Context** [system configuration checkpoint id \(number | checkpoint-name\) load](#)

**Tree** [load](#)

**Configurable** True

**Platforms** Supported on all platforms

## revert

**Description** Revert running system configuration to the saved checkpoint configuration  
This functions as a load and commit action.

**Context** [system configuration checkpoint id \(number | checkpoint-name\) revert](#)

**Tree** [revert](#)

**Configurable** True

**Platforms** Supported on all platforms

## confirmed-accept

**Description** Accepts an in progress commit and stops the confirmation timer

**Context** [system configuration confirmed-accept](#)

**Tree** [confirmed-accept](#)

**Configurable** True

**Platforms** Supported on all platforms

## confirmed-reject

<b>Description</b>	Rejects an in progress commit and stops the confirmation timer
<b>Context</b>	<a href="#">system configuration confirmed-reject</a>
<b>Tree</b>	<a href="#">confirmed-reject</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate-checkpoint

<b>Description</b>	Generate a checkpoint point based on the current running configuration
<b>Context</b>	<a href="#">system configuration generate-checkpoint</a>
<b>Tree</b>	<a href="#">generate-checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## comment *string*

<b>Description</b>	User provided comment to associate with the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint comment <i>string</i></a>
<b>Tree</b>	<a href="#">comment</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	User provided name of the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint name <i>string</i></a>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## rescue-clear

<b>Description</b>	Remove rescue configuration
<b>Context</b>	<a href="#">system configuration rescue-clear</a>
<b>Tree</b>	<a href="#">rescue-clear</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rescue-save**

<b>Description</b>	Save current running configuration as rescue configuration - rescue-config.json
<b>Context</b>	<a href="#">system configuration rescue-save</a>
<b>Tree</b>	<a href="#">rescue-save</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**save**

<b>Description</b>	Save current running configuration as initial (startup) configuration - config.json
<b>Context</b>	<a href="#">system configuration save</a>
<b>Tree</b>	<a href="#">save</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**session id number**

<b>Description</b>	List of configuration sessions currently active
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	System generated ID for the configuration session
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the session from the system, discarding any changes
<b>Context</b>	<a href="#">system configuration session id number clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**upgrade**

<b>Description</b>	Operational commands related to configuration upgrade
<b>Context</b>	<a href="#">system configuration upgrade</a>
<b>Tree</b>	<a href="#">upgrade</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**checkpoint id** (*number | checkpoint-name*)

<b>Description</b>	List of configuration checkpoints
<b>Context</b>	<a href="#">system configuration upgrade checkpoint id (number   checkpoint-name)</a>
<b>Tree</b>	<a href="#">checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id** (*number | checkpoint-name*)

<b>Description</b>	System generated ID, or operator defined name for the checkpoint
<b>Context</b>	<a href="#">system configuration upgrade checkpoint id (number   checkpoint-name)</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**file** *string*

<b>Description</b>	System file path to a json configuration file
<b>Context</b>	<a href="#">system configuration upgrade file string</a>
<b>Tree</b>	<a href="#">file</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## rescue

**Description** Rescue configuration  
**Context** [system configuration upgrade rescue](#)  
**Tree** [rescue](#)  
**Configurable** True  
**Platforms** Supported on all platforms

## startup

**Description** Startup (initial) configuration  
**Context** [system configuration upgrade startup](#)  
**Tree** [startup](#)  
**Configurable** True  
**Platforms** Supported on all platforms

## dhcp-server

**Description** Enable the dhcp-server context  
**Context** [system dhcp-server](#)  
**Tree** [dhcp-server](#)  
**Configurable** True  
**Platforms** Supported on all platforms

## network-instance *name string*

**Description** List of network instances to run a dhcp server in  
**Context** [system dhcp-server network-instance name \*string\*](#)  
**Tree** [network-instance](#)  
**Configurable** True  
**Platforms** Supported on all platforms

**name** *string*

<b>Description</b>	Network Instance
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv4**

<b>Description</b>	Enter the dhcpv4 context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a>
<b>Tree</b>	<a href="#">dhcpv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv6**

<b>Description</b>	Enter the dhcpv6 context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv6</a>
<b>Tree</b>	<a href="#">dhcpv6</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name string dhcpv6 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">system dhcp-server network-instance name string dhcpv6 statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## event-handler

<b>Description</b>	Top-level container for operational commands on event handler and event handling instances
<b>Context</b>	<a href="#">system event-handler</a>
<b>Tree</b>	<a href="#">event-handler</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance [name string](#)

<b>Description</b>	List of all event handler instances
<b>Context</b>	<a href="#">system event-handler instance name string</a>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	20

**name** *string*

<b>Description</b>	A user-defined name for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reload**

<b>Description</b>	Reload the Python script for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">reload</a>
<b>Tree</b>	<a href="#">reload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Top-level container for operational commands on event handler statistics
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear statistics for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**gribi-server**

<b>Description</b>	Tools relating to the gRPC Routing Information Base Interface (gRIBI) service
--------------------	---

<b>Context</b>	<a href="#">system gribi-server</a>
<b>Tree</b>	<a href="#">gribi-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**client id number**

<b>Description</b>	List of active gRIBI client sessions
<b>Context</b>	<a href="#">system gribi-server client id number</a>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**id number**

<b>Description</b>	System generated ID for for the client
<b>Context</b>	<a href="#">system gribi-server client id number</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**disconnect**

<b>Description</b>	Disconnect this client from the server
<b>Context</b>	<a href="#">system gribi-server client id number disconnect</a>
<b>Tree</b>	<a href="#">disconnect</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**I2cp-transparency**

<b>Description</b>	Enable the I2cp-transparency context
<b>Context</b>	<a href="#">system I2cp-transparency</a>
<b>Tree</b>	<a href="#">I2cp-transparency</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## dot1x

**Description** Enter the dot1x context

**Context** [system l2cp-transparency dot1x](#)

**Tree** [dot1x](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for the 802.1x Port based Network Access Control protocol.

**Context** [system l2cp-transparency dot1x clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## l2cp-total-statistics

**Description** Enter the l2cp-total-statistics context

**Context** [system l2cp-transparency l2cp-total-statistics](#)

**Tree** [l2cp-total-statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the global statistics for the L2CP protocols.

**Context** [system l2cp-transparency l2cp-total-statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## lACP

**Description** Enter the lACP context

**Context** [system l2cp-transparency lACP](#)

**Tree** [lACP](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for Link Aggregation Control Protocol.

**Context** [system l2cp-transparency lACP clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## lldp

**Description** Enter the lldp context

**Context** [system l2cp-transparency lldp](#)

**Tree** [lldp](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for Link Layer Discovery Protocol.

**Context** [system l2cp-transparency lldp clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## ptp

**Description** Enter the ptp context

**Context** [system l2cp-transparency ptp](#)

**Tree** [ptp](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for the Precision Time Protocol .

**Context** [system l2cp-transparency ptp clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## xstp

**Description** Enter the xstp context

**Context** [system l2cp-transparency xstp](#)

**Tree** [xstp](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## clear

**Description** Clears the statistics for all the Spanning Tree Protocols.

**Context** [system l2cp-transparency xstp clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D1, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## linuxmgr

**Description** Top-level container for operational commands related to Linux

**Context** [system linuxmgr](#)

**Tree** [linuxmgr](#)

**Configurable** True

**Platforms** Supported on all platforms

## wall

**Description** Display a message on all user terminals

**Context** [system linuxmgr wall](#)

**Tree** [wall](#)

**Configurable** True

**Platforms** Supported on all platforms

## message *string*

**Description** Message to display

**Context** [system linuxmgr wall message \*string\*](#)

**Tree** [message](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

## lldp

**Description** Top-level container for LLDP tools

**Context** [system lldp](#)

**Tree** [lldp](#)

**Configurable** True

**Platforms** Supported on all platforms

**interface** *name string*

<b>Description</b>	List of interfaces on which LLDP is enabled
<b>Context</b>	<a href="#">system lldp interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Reference to a LLDP Ethernet interface
<b>Context</b>	<a href="#">system lldp interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	LLDP interface statistics tools commands
<b>Context</b>	<a href="#">system lldp interface name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear interface LLDP statistics
<b>Context</b>	<a href="#">system lldp interface name string statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	LLDP global statistics tools commands
<b>Context</b>	<a href="#">system lldp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear global LLDP statistics
<b>Context</b>	<a href="#">system lldp statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**p4rt-server**

<b>Description</b>	Tools relating to the P4Runtime service
<b>Context</b>	<a href="#">system p4rt-server</a>
<b>Tree</b>	<a href="#">p4rt-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**client *id number***

<b>Description</b>	List of active P4Runtime client sessions
<b>Context</b>	<a href="#">system p4rt-server client id number</a>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**id *number***

<b>Description</b>	System generated ID for for the client
<b>Context</b>	<a href="#">system p4rt-server client id number</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**disconnect**

<b>Description</b>	Disconnect this client from the server
<b>Context</b>	<a href="#">system p4rt-server client id number disconnect</a>
<b>Tree</b>	<a href="#">disconnect</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-6, 7250 IXR-10, 7250 IXR-6e, 7250 IXR-10e

**packet-trace-base64**

<b>Description</b>	Tools command to report the forwarding behavior for a specified test packet (packet specified in base64 format)
<b>Context</b>	<a href="#">system packet-trace-base64</a>
<b>Tree</b>	<a href="#">packet-trace-base64</a>
<b>Configurable</b>	True
<b>Platforms</b>	All platforms except 7220 IXR-D5

**interface *string***

<b>Description</b>	References the configured name of the interface in which to inject the probe packet
<b>Context</b>	<a href="#">system packet-trace-base64 interface string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	All platforms except 7220 IXR-D5

**packet *binary***

<b>Description</b>	Packet content encoded in base64 string format
<b>Context</b>	<a href="#">system packet-trace-base64 packet binary</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	All platforms except 7220 IXR-D5

**sync**

<b>Description</b>	Top-level grouping for sync operational commands
--------------------	--

<b>Context</b>	<a href="#">system sync</a>
<b>Tree</b>	<a href="#">sync</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## ptp

<b>Description</b>	Grouping for ptp operational commands
<b>Context</b>	<a href="#">system sync ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## instance [instance-number](#) *number*

<b>Description</b>	Grouping for PTP instance operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-number</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## instance-number *number*

<b>Description</b>	Enter the instance-number context
<b>Context</b>	<a href="#">system sync ptp instance instance-number</a> <i>number</i>
<b>Range</b>	1 to 10
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## default-ds

<b>Description</b>	The default data set of the PTP Instance. In the context of the protocol, this data set is required for an Ordinary Clock or Boundary Clock
<b>Context</b>	<a href="#">system sync ptp instance instance-number</a> <i>number</i> <a href="#">default-ds</a>
<b>Tree</b>	<a href="#">default-ds</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D5

### statistics

**Description** Enter the statistics context

**Context** [system sync ptp instance instance-number number default-ds statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D5

### clear

**Description** Clears PTP statistics in the default-ds.

**Context** [system sync ptp instance instance-number number default-ds statistics clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D5

### time-recovery-engine

**Description** Enter the time-recovery-engine context

**Context** [system sync ptp instance instance-number number default-ds time-recovery-engine](#)

**Tree** [time-recovery-engine](#)

**Configurable** True

**Platforms** 7220 IXR-D5

### statistics

**Description** Enter the statistics context

**Context** [system sync ptp instance instance-number number default-ds time-recovery-engine statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D5

**clear**

<b>Description</b>	Clears all PTP statistics for PTP time recovery engine.
<b>Context</b>	<a href="#">system sync ptp instance instance-number number default-ds time-recovery-engine statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**ptp-port-ds** [port-number number](#)

<b>Description</b>	Grouping for PTP Port DS operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-number number ptp-port-ds port-number number</a>
<b>Tree</b>	<a href="#">ptp-port-ds</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-number** [number](#)

<b>Description</b>	Enter the port-number context
<b>Context</b>	<a href="#">system sync ptp instance instance-number number ptp-port-ds port-number number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-number number ptp-port-ds port-number number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**clear**

<b>Description</b>	Clears all PTP statistics for this PTP Port DS.
--------------------	---

<b>Context</b>	<a href="#">system sync ptp instance instance-number number ptp-port-ds port-number number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## clear

<b>Description</b>	Clears all PTP statistics for PTP.
<b>Context</b>	<a href="#">system sync ptp statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## tls

<b>Description</b>	Top-level container for operational commands related to TLS
<b>Context</b>	<a href="#">system tls</a>
<b>Tree</b>	<a href="#">tls</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate-csr

<b>Description</b>	Generates a certificate signing request and key pair Fields for the certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.
--------------------	--

<b>Context</b>	<a href="#">system tls generate-csr</a>
<b>Tree</b>	<a href="#">generate-csr</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **common-name** *string*

<b>Description</b>	The common name to use for the certificate signing request By default the common name is set to the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-csr common-name</a> <i>string</i>
<b>Tree</b>	<a href="#">common-name</a>
<b>String Length</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **country** *string*

<b>Description</b>	The country name to use for the certificate signing request The expected format is two characters long, e.g. 'US'.
<b>Context</b>	<a href="#">system tls generate-csr country</a> <i>string</i>
<b>Tree</b>	<a href="#">country</a>
<b>String Length</b>	2
<b>Default</b>	US
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **domain-names** *string*

<b>Description</b>	Domain names to add to the SubjectAlternativeName field within the certificate signing request These names are encoded as DNS:<name> within the certificate SAN.
<b>Context</b>	<a href="#">system tls generate-csr domain-names</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-names</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True

<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**email string**

<b>Description</b>	The email address to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr email string</a>
<b>Tree</b>	<a href="#">email</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-addresses (ipv4-address | ipv6-address)**

<b>Description</b>	IP addresses to add to the SubjectAlternativeName field within the certificate signing request  These addresses are encoded as IP:<ip> within the certificate SAN.
<b>Context</b>	<a href="#">system tls generate-csr ip-addresses (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ip-addresses</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**key-size number**

<b>Description</b>	The size of the private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr key-size number</a>
<b>Tree</b>	<a href="#">key-size</a>
<b>Range</b>	1024 to 16384
<b>Default</b>	4096
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**key-type keyword**

<b>Description</b>	The type of private key to generate for the certificate signing request
--------------------	---

---

<b>Context</b>	<a href="#">system tls generate-csr key-type keyword</a>
<b>Tree</b>	<a href="#">key-type</a>
<b>Default</b>	rsa
<b>Options</b>	<ul style="list-style-type: none"><li>rsa</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **locality string**

<b>Description</b>	The city or locality to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr locality string</a>
<b>Tree</b>	<a href="#">locality</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **organization string**

<b>Description</b>	The organization to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr organization string</a>
<b>Tree</b>	<a href="#">organization</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **organization-unit string**

<b>Description</b>	The organization unit to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr organization-unit string</a>
<b>Tree</b>	<a href="#">organization-unit</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spiffe-id** *string*

<b>Description</b>	A SPIFFE ID to use for the certificate signing request This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.
<b>Context</b>	<a href="#">system tls generate-csr spiffe-id</a> <i>string</i>
<b>Tree</b>	<a href="#">spiffe-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**state** *string*

<b>Description</b>	The state or province to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr state</a> <i>string</i>
<b>Tree</b>	<a href="#">state</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	The type of certificate to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	x509
<b>Options</b>	<ul style="list-style-type: none"><li>• x509</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**generate-self-signed**

<b>Description</b>	Generates a self signed certificate and key pair Fields for the self signed certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-self-signed</a>
<b>Tree</b>	<a href="#">generate-self-signed</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **common-name** *string*

<b>Description</b>	The common name to use for the certificate signing request By default the common name is set to the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-self-signed common-name</a> <i>string</i>
<b>Tree</b>	<a href="#">common-name</a>
<b>String Length</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **country** *string*

<b>Description</b>	The country name to use for the certificate signing request The expected format is two characters long, e.g. 'US'.
<b>Context</b>	<a href="#">system tls generate-self-signed country</a> <i>string</i>
<b>Tree</b>	<a href="#">country</a>
<b>String Length</b>	2
<b>Default</b>	US
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **domain-names** *string*

<b>Description</b>	Domain names to add to the SubjectAlternativeName field within the certificate signing request These names are encoded as DNS:<name> within the certificate SAN.
<b>Context</b>	<a href="#">system tls generate-self-signed domain-names</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-names</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**duration** *number*

<b>Description</b>	The time in which the certificate is valid
<b>Context</b>	<a href="#">system tls generate-self-signed duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	1 to 3650
<b>Default</b>	365
<b>Units</b>	days
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**email** *string*

<b>Description</b>	The email address to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed email</a> <i>string</i>
<b>Tree</b>	<a href="#">email</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-addresses** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP addresses to add to the SubjectAlternativeName field within the certificate signing request These addresses are encoded as IP:<ip> within the certificate SAN.
<b>Context</b>	<a href="#">system tls generate-self-signed ip-addresses</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ip-addresses</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**key-size** *number*

<b>Description</b>	The size of the private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed key-size</a> <i>number</i>
<b>Tree</b>	<a href="#">key-size</a>

---

<b>Range</b>	1024 to 16384
<b>Default</b>	4096
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **key-type** *keyword*

<b>Description</b>	The type of private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed key-type keyword</a>
<b>Tree</b>	<a href="#">key-type</a>
<b>Default</b>	rsa
<b>Options</b>	<ul style="list-style-type: none"><li>• rsa</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **locality** *string*

<b>Description</b>	The city or locality to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed locality string</a>
<b>Tree</b>	<a href="#">locality</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **organization** *string*

<b>Description</b>	The organization to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed organization string</a>
<b>Tree</b>	<a href="#">organization</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**organization-unit *string***

<b>Description</b>	The organization unit to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed organization-unit <i>string</i></a>
<b>Tree</b>	<a href="#">organization-unit</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spiffe-id *string***

<b>Description</b>	A SPIFFE ID to use for the certificate signing request This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.
<b>Context</b>	<a href="#">system tls generate-self-signed spiffe-id <i>string</i></a>
<b>Tree</b>	<a href="#">spiffe-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**state *string***

<b>Description</b>	The state or province to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed state <i>string</i></a>
<b>Tree</b>	<a href="#">state</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type *keyword***

<b>Description</b>	The type of certificate to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed type <i>keyword</i></a>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	x509
<b>Options</b>	<ul style="list-style-type: none"><li>x509</li></ul>
<b>Configurable</b>	True

**Platforms**

Supported on all platforms

## 17 tools tunnel

```
tunnel
+ vxlan-tunnel
  + statistics
    + clear
  + vtep address (ipv4-address | ipv6-address)
    + statistics
      + clear
```

## 17.1 tunnel Descriptions

### tunnel

<b>Description</b>	This model collects all config and state aspects of the tools-tunnel table in SR Linux.
<b>Context</b>	<a href="#">tunnel</a>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### vxlan-tunnel

<b>Description</b>	Enter the vxlan-tunnel context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel</a>
<b>Tree</b>	<a href="#">vxlan-tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vtep address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">vtep</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## 18.1 tunnel-interface Descriptions

### tunnel-interface *name string*

<b>Description</b>	In the case that the interface is logical tunnel interface, the parameters for the tunnel are specified within this subtree. Tunnel interfaces have only a single logical subinterface associated with them.
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>Tree</b>	<a href="#">tunnel-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### *name string*

<b>Description</b>	The name of the tunnel-interface. Valid options are: vxlan<N>, N=0..255
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>String Length</b>	6 to 8
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### vxlan-interface *index number*

<b>Description</b>	The list of vxlan-interfaces.
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number</a>
<b>Tree</b>	<a href="#">vxlan-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L
<b>Max. Elements</b>	16384

### *index number*

<b>Description</b>	The index of the vxlan-tunnel.
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number</a>
<b>Range</b>	0 to 99999999

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### bridge-table

<b>Description</b>	Enable the bridge-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### multicast-destinations

<b>Description</b>	Enter the multicast-destinations context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table</a> <a href="#">multicast-destinations</a>
<b>Tree</b>	<a href="#">multicast-destinations</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### destination [vtep](#) (*ipv4-address* | *ipv6-address*) [vni](#) *number*

<b>Description</b>	Enter the destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table</a> <a href="#">multicast-destinations</a> <a href="#">destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni</a> <i>number</i>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### [vtep](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table</a> <a href="#">multicast-destinations</a> <a href="#">destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni</a> <i>number</i>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **vni number**

**Description** VXLAN Network Identifier of the destination.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table multicast-destinations destination vtep \(ipv4-address | ipv6-address\)](#) [vni number](#)

**Range** 1 to 16777215

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **destination-index number**

**Description** A system-wide unique identifier of this vxlan destination object (system allocated).

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table multicast-destinations destination vtep \(ipv4-address | ipv6-address\)](#) [vni number](#) [destination-index number](#)

**Tree** [destination-index](#)

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **multicast-forwarding keyword**

**Description** The type of multicast data forwarded by this vxlan destination.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table multicast-destinations destination vtep \(ipv4-address | ipv6-address\)](#) [vni number](#) [multicast-forwarding keyword](#)

**Tree** [multicast-forwarding](#)

**Options**

- none
- BUM
- unknown-unicast
- broadcast-mcast

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**not-programmed-reason** *keyword*

<b>Description</b>	The reason why the destination is not programmed in the floodlist
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <b>not-programmed-reason</b> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-destination-index</li> <li>• multicast-limit</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**active-entries** *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on at least one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### mac-type *type keyword*

<b>Description</b>	The type of the mac on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics</a> <a href="#">mac-type type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### type *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics</a> <a href="#">mac-type type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### active-entries *number*

<b>Description</b>	The total number of entries of this type on the sub-interface
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics</a> <a href="#">mac-type type</a> <i>keyword</i> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on at least one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics mac-type type</a> <i>keyword</i> <b>failed-entries</b> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**total-entries** *number*

<b>Description</b>	The total number of macs of this type, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics mac-type type</a> <i>keyword</i> <b>total-entries</b> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**unicast-destinations**

<b>Description</b>	Enter the unicast-destinations context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations</a>
<b>Tree</b>	<a href="#">unicast-destinations</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**destination** [vtep](#) (*ipv4-address* | *ipv6-address*) *vni number*

<b>Description</b>	Enter the destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vtep** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vni number**

<b>Description</b>	VXLAN Network Identifier of the destination.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**destination-index number**

<b>Description</b>	A system-wide unique identifier of this vxlan destination object (system allocated).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">vni number</a> <a href="#">destination-index number</a>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac-table**

<b>Description</b>	Enter the mac-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">vni number</a> <a href="#">mac-table</a>
<b>Tree</b>	<a href="#">mac-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">vni number</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">vni number</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### failed-slots *number*

**Description** The list of slot IDs corresponding to the linecards that did not successfully program the mac

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations destination vtep](#) (*ipv4-address* | *ipv6-address*) [vni number](#) [mac-table mac address](#) *string* [failed-slots](#) *number*

**Tree** [failed-slots](#)

**Range** 1 to 8

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### last-update *string*

**Description** The date and time of the last update of this mac

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations destination vtep](#) (*ipv4-address* | *ipv6-address*) [vni number](#) [mac-table mac address](#) *string* [last-update](#) *string*

**Tree** [last-update](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### not-programmed-reason *keyword*

**Description** The reason why the mac is not programmed

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations destination vtep](#) (*ipv4-address* | *ipv6-address*) [vni number](#) [mac-table mac address](#) *string* [not-programmed-reason](#) *keyword*

**Tree** [not-programmed-reason](#)

**Options**

- mac-limit
- failed-on-slots
- no-destination-index
- reserved

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**type** *keyword*

<b>Description</b>	The type of the mac installed in the fib.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number mac-table mac address</a> <i>string</i> <b>type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <b>statistics</b>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**active-entries** *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac-type** *type keyword*

<b>Description</b>	The type of the mac on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics mac-type</a> <i>type keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics mac-type</a> <i>type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> </ul>

	<ul style="list-style-type: none"> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**active-entries** *number*

<b>Description</b>	The total number of entries of this type on the sub-interface
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**total-entries** *number*

<b>Description</b>	The total number of macs of this type , active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**es-destination** *esi string*

<b>Description</b>	Enter the es-destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i>
<b>Tree</b>	<a href="#">es-destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**esi** *string*

<b>Description</b>	The 10-byte Ethernet Segment Identifier of the ethernet segment. ESI-0 or MAX-ESI values are not allowed.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**destination-index** *number*

<b>Description</b>	A system-wide unique identifier of this vxlan destination object (system allocated).
--------------------	--

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">destination-index</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac-table**

<b>Description</b>	Enter the mac-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table</a>
<b>Tree</b>	<a href="#">mac-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac** [address](#) *string*

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-slots** *number*

<b>Description</b>	The list of slot IDs corresponding to the linecards that did not successfully program the mac
--------------------	---

<b>Context</b>	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table unicast-destinations es-destination esi <i>string</i> mac-table mac address <i>string</i> failed-slots <i>number</i>
<b>Tree</b>	failed-slots
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**last-update** *string*

<b>Description</b>	The date and time of the last update of this mac
<b>Context</b>	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table unicast-destinations es-destination esi <i>string</i> mac-table mac address <i>string</i> last-update <i>string</i>
<b>Tree</b>	last-update
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**not-programmed-reason** *keyword*

<b>Description</b>	The reason why the mac is not programmed
<b>Context</b>	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table unicast-destinations es-destination esi <i>string</i> mac-table mac address <i>string</i> not-programmed-reason <i>keyword</i>
<b>Tree</b>	not-programmed-reason
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-limit</li> <li>• failed-on-slots</li> <li>• no-destination-index</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**type** *keyword*

<b>Description</b>	The type of the mac installed in the fib.
--------------------	---

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac address</a> <i>string</i> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## active-entries *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**mac-type** *type keyword*

<b>Description</b>	The type of the mac on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **active-entries** *number*

**Description** The total number of entries of this type on the sub-interface

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [statistics mac-type type keyword active-entries](#) *number*

**Tree** [active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **failed-entries** *number*

**Description** The total number of macs of this type, which have not been programmed on atleast one slot

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [statistics mac-type type keyword failed-entries](#) *number*

**Tree** [failed-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **total-entries** *number*

**Description** The total number of macs of this type , active and inactive, on the sub-interface.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [statistics mac-type type keyword total-entries](#) *number*

**Tree** [total-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vtep address** (*ipv4-address* | *ipv6-address*) *vni number*

<b>Description</b>	Add a list entry for vtep
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Tree</b>	<a href="#">vtep</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**vni number**

<b>Description</b>	VXLAN Network Identifier of the destination.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**egress**

<b>Description</b>	Enter the egress context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">egress</a>
<b>Tree</b>	<a href="#">egress</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**inner-ethernet-header**

<b>Description</b>	Parameters of the inner VXLAN ethernet payload when the VXLAN tunnel is used in an ip-vrf.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">egress</a> <a href="#">inner-ethernet-header</a>
<b>Tree</b>	<a href="#">inner-ethernet-header</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**source-mac** *keyword*

<b>Description</b>	VXLAN inner ethernet source mac-address. Present when the VXLAN tunnel is associated with a ip-vrf network-instance.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">egress</a> <a href="#">inner-ethernet-header</a> <a href="#">source-mac</a> <i>keyword</i>
<b>Tree</b>	<a href="#">source-mac</a>
<b>Default</b>	use-system-mac
<b>Options</b>	<ul style="list-style-type: none"> <li>• use-system-mac</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**source-ip** *keyword*

<b>Description</b>	The ip-address that will be used as the source-ip for all vxlan traffic egressing this vxlan-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">egress</a> <a href="#">source-ip</a> <i>keyword</i>
<b>Tree</b>	<a href="#">source-ip</a>

<b>Default</b>	use-system-ipv4-address
<b>Options</b>	<ul style="list-style-type: none"> <li>• use-system-ipv4-address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## ingress

<b>Description</b>	Enter the ingress context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">ingress</a>
<b>Tree</b>	<a href="#">ingress</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## vni number

<b>Description</b>	<p>Ingress VXLAN Network Identifier of the VXLAN subinterface.</p> <p>The egress VNI is determined by the static egress-vni configured in the associated destination or by the dynamic egress-vni learned from the control plane.</p>
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">ingress vni number</a>
<b>Tree</b>	<a href="#">vni</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## oper-down-reason keyword

<b>Description</b>	The reason why the vxlan-interface is oper-down
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-failed</li> <li>• ingress-hash-failed</li> <li>• egress-hash-failed</li> <li>• other</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**oper-state** *keyword*

<b>Description</b>	The operational state of the vxlan-interface
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

**type** *identityref*

<b>Description</b>	The value of this leaf indicates the context in which the vxlan-interface will be used in.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">type identityref</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• routed Indicates subinterface is used in a routed context</li> <li>• bridged Indicates subinterface is used in a bridged context</li> <li>• local-mirror-dest Indicates subinterface is used in a mirroring destination SPAN context</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

## 19.1 tunnel Descriptions

### tunnel

<b>Description</b>	This model collects all config and state aspects of the tunnel table in SR Linux.
<b>Context</b>	<a href="#">tunnel</a>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### vxlan-tunnel

<b>Description</b>	Enter the vxlan-tunnel context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel</a>
<b>Tree</b>	<a href="#">vxlan-tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### statistics

<b>Description</b>	Container for vxlan-tunnel global statistics.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### in-discarded-packets *number*

<b>Description</b>	The total number of discarded ingress VXLAN packets. Ingress VXLAN packets can be discarded due to one of the following reasons:
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-discarded-packets number</a>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**in-octets** *number*

<b>Description</b>	The total sum of ingress VXLAN octets.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-octets number</a>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**in-packets** *number*

<b>Description</b>	The total sum of ingress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the vxlan tunnel counters were cleared.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**out-octets** *number*

<b>Description</b>	The total sum of egress VXLAN octets
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics out-octets number</a>
<b>Tree</b>	<a href="#">out-octets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **out-packets** *number*

<b>Description</b>	The total sum of egress VXLAN packets. . A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics out-packets number</a>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **vtep address** (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">vtep</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **address** (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address)</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **index** *number*

<b>Description</b>	The next-hop-group-id (system allocated) for resolving the VXLAN termination endpoint
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) index number</a>
<b>Tree</b>	<a href="#">index</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **last-change** *string*

<b>Description</b>	The date and time of the most recent change to the tunnel state
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2L

### **statistics**

<b>Description</b>	Container for vxlan-tunnel per VTEP (Vxlan Termination EndPoint) statistics.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **in-discarded-packets** *number*

<b>Description</b>	The number of discarded ingress VXLAN packets. Ingress VXLAN packets can be discarded due to one of the following reasons:
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-discarded-packets number</a>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **in-octets** *number*

<b>Description</b>	The number of octets encapsulated in ingress VXLAN packets.
--------------------	---

<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-octets number</a>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **in-packets number**

<b>Description</b>	The number of packets encapsulated in ingress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **last-clear string**

<b>Description</b>	Timestamp of the last time the vxlan tunnel counters were cleared.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

### **out-discarded-packets number**

<b>Description</b>	The number of discarded egress VXLAN packets. Egress VXLAN packets can be discarded due to one of the following reasons:
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-discarded-packets number</a>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**out-octets** *number*

<b>Description</b>	The number of octets encapsulated in egress VXLAN packets.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-octets number</a>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L

**out-packets** *number*

<b>Description</b>	The number of packets encapsulated in egress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-packets number</a>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D2L
